KIPS FIRM

(From Our Own Correspondent)

MADRAS, 27th *January*

There was no notable change in the tanned hides and skins market during the week under review. Arrivals were small and demand exceeded supply. Prices ruled firm. E.I. tanners did not wish to part with stocks, because replacement costs were higher. Inland demand for lower grade hides was good and fancy prices were paid.

Though there has been good call for tanned goat skins from the Continent, importers are not keen to pay higher prices demanded at origin. Consequently, shipment business has been slow. As arrivals of common tannages sheep skins are very small, shippers think twice before offering lining sheep skins for shipment in two months and prefer to see the trend of the London public sales which are due to commence today.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 27th *January*

During the week under review, the hides and skins market presented a steady trend, despite heavy new arrivals. The volume of the fresh goods from the butcheries of the city had an appreciable rise, as is usual in the cold season of the year. The local tanners were the main buyers. There was keen demand for the upper grade buff, goat and sheep. The Madras dealers or even the country tanners were not as conspicuous in the market as in the previous week.

The latest quotations are: Wet salted cow, 1st grade Rs. 360, 2nd grade Rs. 320 and 3rd grade Rs. 300 per score; wet salted buff, 1st grade 1 lb. 4 ozs. to 1 lb. 8 ozs. and 2nd grade 1 lb. 10 ozs. to 1 lb. 12 ozs. per rupee; goat, 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; sheep skins, 1st grade Rs. 300 and 2nd grade Rs. 275 per 100 pieces.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 29th *January*

The firm trend of the cotton futures market witnessed towards the close of last week was arrested in the first two sessions of the week when it ruled distinctly easy, thanks to fears of Government intervention in the event of a further rise in prices which induced traders to be extremely cautious in their dealings, delay in release of export quota, and increasing arrivals of new crop Gujerat and Saurashtra cotton. The market, however, picked up strength on the 25th inst. There was fresh bull support, aided by strong spot advices following renewed mill buying and reports of continued improvement in offtake in piecegoods. Expectations of a considerable decline in Vijay and Surti crop this season also imparted strength to the market. Consequently, cotton futures values staged a recovery which gathered momentum in the subsequent two sessions. But today again, prices sagged as a result of renewed hedge pressure. A fair volume of switching from the maturing March position to the more distant May contract depressed the former.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 691, as against the previous close of Rs. 694.25, and after improving to Rs. 693.50, dropped to Rs. 685 on Friday. The contract firmed up to Rs. 696.50 yesterday. Opening at Rs. 696 today, it improved fractionally before closing at Rs. 693.25. I.C.C. Moglai Jarilla (May 1958) commenced the week at Rs. 684.50, and after declining to Rs. 681.50 on Friday, rallied to Rs. 690 yesterday. The contract opened today at Rs. 689, gathered Rs. 2 and finished lower at Rs. 688. The following table gives the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	29-1-57	*High*	*Low*	22-1-58
I.C.C. Moglai Jarilla (March 1958) ...	693.25	696.50	685	694.25
I.C.C. Moglai Jarilla (*May 1958*) ...	688	691	681.50	687.50

Activity in the spot section was dull earlier in the week as the mills had already covered their immediate requirements. Subsequently, however, mill buying broadened on news that the Vijay and Surti cotton crop would be smaller in the current season. Buying in Vijay, Surti and Broach styles was on a large scale. There was also keen interest in good quality Khandesh even at higher prices. In view of shortage of supplies of this cotton, some mills were forced to switch over purchases to Punjab staple styles.

In the export section, shippers' interest was at a low ebb, as foreign demand did not show any sign of revival. It is reported that the Government of India has decided to extend the validity of export licences issued in respect of Bengal *Deshi* up to the end of April next. These licences, it will be recalled, are due to expire on the 31st inst. Out of the quota of 50,000 bales of Bengals released in October last, the quantity sold so far is estimated at about 40,000. The slow progress is attributed to slackness in demand from traditional buyers, especially Japan. The extension of the validity period has been widely welcomed by the trade. The Export Advisory Council is scheduled to meet on 9th February at New Delhi. Informed quarters feel that no export quota announcement will be made until after this meeting.

In the foreign section, traders were inclined to await further import allocation for Sudan and Egyptian cottons. Some transactions were reported in B.P. 52 at Rs. 1,455. A sizable volume of business was reported done in Sudan XG3S and XG4S at 48.50d. and 45.50d. per lb., respectively. It is understood that Sudan has agreed to pass on the benefit of a 50 per cent. reduction in the export duty in November last to overseas buyers. The export duty, was slashed by 50 per cent. to 3.75d. per lb. by that country only after Indian mills utilised their special quota of 15,000 bales of Sudan cotton.

The Government of India has decided that import of American cotton under P.L.480 which was suspended on 30th November last would be resumed with immediate effect for the remaining quantity. On 21st June last, the Government of India announced that 60,000 bales of cotton with stapling 1-1/16 inch and above would be permitted to be imported from the United States under the P.L.480 aid programme. The Government suspended the import of this cotton on 30th November 1957 until further orders. Till 30th November last, the authorities had issued licences for the import of 48,000 bales of American cotton under P.L. 480. Thus the "balance quantity" amounted to 12,000 bales for which licences would be issued till the ceiling is reached. Meanwhile, it is notified that the quantity of one lakh bales of U.S. cotton eligible for import under P.L. 665 has been fully utilised, and that no further application for import licence will be entertained under this programme.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 640; Berar Jarilla 810; Khandesh 840; Oomra *Deshi* 700; Vijay 930; Hubli Laxmi 1,000; Jayadhar 780. *Delivery contracts*: Vijay 900; Bengal 600.

The Karachi cotton futures market depicted an easy trend during the week under review. Although the January contract, which went off the board on the 25th inst., at Rs. 78-5, received some support attributed to tender requirements prior to its expiry, there was a general absence of buying in other positions. Demand from overseas interests and domestic spinners continued to be slack, in the wake of increasing new crop pressure. Consequently, values staged a retreat. N.T.R.G. March delivery declined from Rs. 76-6 last week-end to Rs. 75-9 yesterday. In the spot section, barring *Deshi*

styles which were more or less maintained, most other varieties were quoted lower. The following are the latest available quotations in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind Deshi 70-8; Punjab *Deshi* 68; 4F Punjab *Roller* 77-4; S.G. 82-4; L.S.S. Punjab Roller 80; S.G 84-4; N.T. Roller 81 8; S.G. 88-4; 289F Punjab Roller 86-1; S.G. 93-12.

Cotton futures at Alexandria moved further downward, reflecting continued lack of overseas demand. Both the long-staple Karnak and the medium-staple Ashmouni contracts registered further fall in prices on tired bull liquidation, the drop in the former being more marked. Karnak January expired on the 25th inst; the last known quotation was 68.30 tallaris. In the spot market, however, premiums, except those for Karnak medium grades, which were easy, remained firm.

Export sales of cotton from the commencement of this season till the end of December aggregated 392,911 bales (of 720 lbs.) as compared with 267,316 bales in the corresponding period of the previous season. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: March 79.00 (84.05); May 80.25. *Ashmouni*: February 67.20 (69.10); April 67.50 (69.70).

A mixed trend was evident in the Liverpool cotton futures market during the week. There was pressure on near deliveries of American cotton contracts induced by weaker New York advices which resulted in a break in values, while the distant positions attracted some support and ruled firm. The buying in distant positions was attributed to fears of scarcity in tenderable cotton in the coming months. The mixed growth contracts ruled bearish, due to increased hedge pressure and absence of buyers. Sudan contracts ruled fully steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 25.15 (25.60); May-June 25.35 (25.95); July-August 25.65 (26.30); October-November 25.90 (26.50). *American cotton on mixed growth contract*: March-April 26.25 (26.85); May-June 26.50 (27.10); July-August 26.75 (27.40); October-November 26.90 (27.58). *Sudan*: January-February 32.55 (32.50); May-June 32.65 (32.60); July-August 32.65 (32.60).

Persistent long liquidation and hedge selling, prompted by the proposed farm legislation, resulted in a sharp setback in cotton futures values in the New York market. It was pointed out that, if the legislation were to materialise, it would result in lower price supports and higher acreage allotments. Slow movement of piecegoods and the possibility of more hedging against larger purchases of Government-owned cotton were the other bearish factors.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	28-1-58	21-1-58	14-1-58
Spot	36.15	36.25	36.35
March	34.78	35.14	35.47
May	34.97	35.30	35.69
July	34.78	35.29	35.48

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 29*th January*

The yarn market continued to rule easy during the week under review also. Transactions put through were limited with prices moving downward. Rayon yarns were subjected to selling pressure from stockists on reports that the rise in prices of rayon fabrics had not kept pace with that in yarn prices. In sympathy with rayon yarn and following slackness in enquiries from important consuming centres like the Punjab, Calcutta, Bhagalpur and Surat, staple fibre yarns also suffered a break in values. Cotton yarns ruled distinctly easy, due to lack of buying enthusiasm and reports of a downward revision in prices, especially of coarse counts, by a few spinning units.

Snia rayon yarn (120 dull cones) February delivery encountered selling and dropped Rs. 4 to Rs. 909. No transactions were reported in the April delivery this week also. In the spot section, 120 Japan and 150 Japan softened by 2 nP each to Rs. 5.25 and Rs. 5, respectively. 120 Italy and 150 Italy were both neglected at Rs. 5.25. Among indigenous yarns, National Rayons 120 bright cones first grade receded by 9 nP to Rs. 4.66. 150 bright cones first grade shed 4 nP to Rs. 4.15.

Staple fibre yarns (40×2) February delivery was subjected to heavy selling and slumped by Rs. 23 to Rs. 570. There were no transactions in the April delivery this week too. Spot (40×2) Centurys and New Greats lost 10 nP each, the former to Rs. 3.15 and the latter to Rs. 3. Citys retreated by 7 nP to Rs. 3.17. Kohinoors were quoted at Rs. 3.26. Among foreign yarns, Paramounts declined by 12 nP to Rs. 6.66. Fujis, however, advanced by 52 nP to Rs. 6.58.

In the cotton yarn section, ten counts Moderns receded by 12 nP to Rs. 14.50. Podars were neglected at Rs. 14. Twenty counts Moderns climbed down by 18 nP to Rs. 17.50. Gokaks were dull at Rs. 17.62. Among thirty counts, Indus lost 38 nP to Rs. 20.87. Forty counts Minaxis declined by 50 nP to Rs. 24.75. Gokaks and Moderns eased by 25 nP each to Rs. 25 and Rs. 25.25, respectively. Sixty counts Moderns decreased by 50 nP to Rs. 50.50. Raghuvamshis shed 25 nP to Rs. 52.75. Finlays changed hands at Rs. 61, same as last week. Eighty counts were stagnant, Mahendras being quoted at Rs. 69.75, Moderns at Rs. 72 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	29-1-1958	22-1-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia February	909.00	913.00
120 Japan (per lb.)	5.25	5.27
150 Japan (per lb.)	5.00	5.02
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.25	5.25
Staple fibre yarn (per case of 200 lbs.)—		
40×2 February	570.00	593.00
40×2 New Great (per lb.)	3.00	3.10
40×2 Century (per lb.)	3.15	3.25
40×2 City (per lb.)	3.17	3.24
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.00	14.00
20s Gokak	17.62	17.62
30s Indu	20.87	21.25
40s Minaxi	24.75	25.25
60s Raghuvamshi	52.75	53.00
80s Modern	72.00	72.00

OILSEEDS MOVE DOWN

(From Our Own Correspondent)

BOMBAY, 29*th January*

The easy trend noted in the oilseeds market last week gathered momentum during the week under review. In fact, the market ruled distinctly bearish, excepting on Saturday when there was a slight recovery in values. Castorseeds encountered selling induced by renewed offers from producing centres, particularly Hyderabad, following large arrivals of new crop. The reported sale of about 400 tons of castor oil to East Germany imparted some strength to the market on Saturday, but this was not sustained subsequently, since the Government was said to be in no mood to lower the export duty on castor oil. Groundnuts were depressed, thanks to unhelpful advices from Rajkot and Madras and weakness of sarson at Delhi and Agra. Reports from Madras stated that, due to keen competition from duty-free groundnut oil produced by small crushers, the big crushers who have to pay heavy excise duty were in a hurry to sell their stocks. The *vanaspati* makers withdrew from the scene, evidently in the hope of seeing still lower prices. Linseed lacked support, despite good export prospects. With the recent reported sale of linseed oil by Argentina to Russia, traders expected the U.K. and the Continent to buy Indian oil. It was actually stated that business in bulk Indian linseed oil had been put through with the U.K. at about Rs. 1,487 per ton c.i.f. January-February *shipment*. *Cottonseed also lacked support in the absence of any encouraging news.* Kardiseed came in for selling on fears of heavy tenders and nigerseed ruled dull.

Groundnut February contract was subjected to selling pressure and climbed down from Rs. 156.75 to Rs. 154.75 on Friday. After recovering to Rs. 156 on the following day, it relapsed to Rs. 153.12 today before finishing at Rs. 153.25. May position fell from Rs. 158.50 to Rs. 155.62 and, after rising to Rs. 157.12, dropped to Rs. 154.50 today. Bold ready receded by 75 nP to Rs. 30.75. Khandesh quality shed by a like amount to Rs. 31.50. Coramandal lost 62 nP to Rs. 31.50. Groundnut oil railway receipt fell by 44 nP to Rs. 16.75 and ex-mill by 37 nP to Rs. 17.

Castorseeds May delivery which stood at Rs. 139 last week-end moved down on persistent selling to Rs. 136.75 on the 24th inst. On Saturday, it attracted some attention of operators and rose by a rupee. The market turned bearish once again yesterday when the quotation fell to Rs. 135.75. Commencing at Rs. 136.25, it wound up at Rs. 137. The net loss over the week was Rs. 2. Ready Kandpur declined by 25 nP to Rs. 26 12. Madras quality fluctuated between Rs. 28.12 and Rs. 27.50 before closing at Rs. 27.37. Castor oil commercial receded by 31 nP to Rs. 14. B.S.S. was done at Rs. 15.75.

Linseed May contract gave way from Rs. 29.87 to Rs. 29.62 on Friday and, after recovering to Rs. 29.87 on Saturday, declined to Rs. 29.69 today before winding up better at Rs. 29.75. Bold ready, after improving from Rs. 29.37 to Rs. 29.50, eased to Rs. 29.37 today. Linseed oil lost 6 nP to Rs. 16.31.

Cottonseed February contract was subjected to selling orders and dropped Rs. 2.50 to Rs. 96.50 on the 24th inst. After recovering to Rs. 97 on the following day, it moved down to Rs. 94.75 today. May position decreased from Rs. 97.75 to Rs. 95.25.

Kardiseed bold ready was freely on offer at Rs. 17.75, as against Rs. 18.75 last week-end. Niger Madras shed 25 nP to Rs. 27 yesterday, but recovered to Rs. 27.25 today.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	29-1-1958	22-1-1958	15-1-1958
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	153.25	156.75	158.62

Ready	16.31	16.37	16.62

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR BEARISH

(From Our Own Correspondents)

BOMBAY, 29*th January*

Bearish conditions prevailed in the sugar market during the week under review and there was a drop in prices. Offtake was very slack, but arrivals were heavy, thanks to comfortable wagon position. As much as 23,600 bags of sugar actually arrived in the market during the week, as against 16,060 bags in the previous week. Reports from the interior suggested a fall of Re. 1 per bag in the ex-mill rates for Bombay-Deccan and North Indian sugar. The rates would have declined more markedly but for the delay in the issue of the monthly release which is expected to be announced definitely on Saturday.

Large grain sugar encountered selling and fell by Rs. 2 to Rs. 107-111 per bag, including the additional Central excise. Medium grain receded by a rupee to Rs. 104-106. Small grain was done lower at Rs. 103.50, as against Rs. 104.

* * * *

HAPUR, 27*th January*

Quietly easy conditions were noted in the sugar market during the past week. The factories were said to be running in full swing and were reported to be drawing enough cane for their needs. The announcement of the export policy was keenly awaited. A quiet trend was in evidence in the Muzaffarnagar market also, business for Saurashtra, Punjab and Delhi side being done at reduced rates. The other consuming centres evinced little interest and the rates for different varieties declined further by 6 nP to 25 nP per maund. The latest prevailing prices (crystal mill-delivery wholesale) were: Deoband (C-29) Rs. 37.12; Buland (B-29) Rs. 37; Mansurpur (C-29) Rs. 36.50; Shamli (B-29) Rs. 37.31; Dauarla (B-29) Rs. 36.81; Mawana (B-29) Rs. 37.12; Amroha (D-29) Rs. 34.25; Bijnore (E-29) Rs. 34.25; Simbhauli (E-29) Rs. 35.50.

Nervous selling by sugar mills resulted in a further fall in sugar prices in the Kanpur market where ex-mill prices dropped by 12 nP per maund, while spot quotations were lower by 25 nP per bag. No appreciable buying interest was evinced. Arrivals were put at 8,000 bags and outflow at 5,000 bags.

In sharp contrast to the depression in crystal sugar, the *khandsari* markets were lively. Buying cane upto Re. 1 per maund, as against the mill-gate of Re. 1.44 per maund, *khandsari* production is proving more profitable with no controls attached to the industry. The latest prevailing prices were Rs. 22 to Rs. 32 per maund. Daily arrivals averaged 5,000 maunds in the Muzaffarnagar market.

Despite reduced daily arrivals—average of 2,500 maunds—ready *gur* registered a fall, due to slack outside demand at higher rates and fall in prices in the mofussil areas. The local stocks swelled to 50,000 maunds and the week's offtake aggregated 25 wagon-loads. *Gur* was reaching here from nearby centres to be stored for covering up speculative transactions. The latest prevailing prices were: *Gur pansera* Rs. 11.44 to Rs. 11.62 and *balti* Rs. 12.25.

Ready *gur* also recorded a sagging tendency in the Muzaffarnagar market where arrivals were at an average of 7,000 to 8,000 maunds daily, the total arrivals since the beginning of the season being about 600,000 maunds. Prevailing prices were: *Chakku Minja* Rs. 13.50 to Rs. 14 and pansera Rs. 12 to Rs. 12.50. *Khandsari* was reported to be in good demand from Punjab and Rajasthan and prices varied between Rs. 23 and Rs. 32 per maund according to quality.

Future *gur* sagged down heavily. The latest quotations were near the worst level of the week. *Gur* fagun was done at Rs. 11.72 and *baisakh* at Rs. 12.44.

BLACK PEPPER DROPS FURTHER

(Messrs. Parekh and Co.)

BOMBAY, 29*th January*

Malabar black pepper continued to rule easy, in sympathy with New York and Singapore. Spot price in New York was marked down to $0.23 under soft advices from all the origins, while Singapore was weak at Str.$61 under pressure of unauthorised arrivals from Sumatra. The Central Government of Indonesia was reported to have officially allowed Sumatra to do direct and independent barter with Singapore till the end of February. It was also reported that the Indonesian Government had set aside 100 million *rupiahs* to aid national exporters. Dutch exporters having been refused export licences.

Arrivals on the coastal markets were reported to be heavy. Daily average at times stepped up the mark beyond 500 candies. Alleppey was reported quiet at Rs. 468½, Calicut at Rs. 475 and garbled at Rs. 82 for ready. Business in the primary market was mostly of covering nature. Investment buying was conspicuous by its absence, as bottom price was yet to be reached.

New York was reported buying sparingly, mostly afloats or shipments by the named steamers. The quantities involved, however, were limited and hardly went above 10 tons at a time. The price paid was not more than $0.21¼. Thanks to bulk purchases by Russia off and on inquiries for a sizable quantity from the East European countries, the price of Malabar was able to maintain its present level, in spite of seasonal pressure. The price for Malabar black in New York having been priced out, business in the line was discouraging from that source.

The future of the market appeared to be uncertain unless Sarawak new crop turned out to be poorer than last year, and there were further complications in Sumatra.

In the A.S.T.A. section February was done at as low as $0.21½, while March to June was nominally quoted at $0.21¼. Most of the prices in A.S.T.A.

were said to be nominal in the absence of price testing either by sellers or by buyers.

In delivery, prices were down to Rs. 460 for February and Rs. 465 for March with poor turnover, as neither professionals nor outsiders were interested in the operation for lack of new incentives.

Today's nominal quotations are: Ready Rs. 69 per Bengal maund, February Rs. 460-Rs. 465 and March Rs. 465-Rs. 470 per candy of 5¼ cwts.

DEMAND FOR TEA GOOD

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 23*rd January*

Approximately 900,000 lbs. were on offer in Sale No. 3 which was held on Tuesday, 21st January. Quality continued to show improvement, particularly amongst the low medium and medium teas. A rather better selection of high-grown teas were also on offer. There was a strong general demand for all types with prices following quality. Low medium and medium teas were 15 to 20 nP dearer. Good medium teas also advanced by a narrower margin. High-grown brokens were well supported at dearer rates, but high grown fannings were again a weak feature. Whole leaf grades met with keen competition, particularly flowery pekoes and pekoes. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.45
Low medium	1.70 to 1.80
Medium	1.85 to 2.20
Good medium	2.35 to 2.55
Quality	2.75 to 4.80

The average price of tea realised in Sale No. 3 was Rs. 2.29 per lb., as against Rs. 2.05 per lb. in the previous sale and Rs. 2.52 per lb. in the corresponding sale of 1957.

London Market—Sale of 20th January 1958:—Market dearer at top and bottom, but irregular in middle.

Sale of 21st January 1958.—Good demand. Colours and brighter liquoring dearer. Thin sorts tended easier.

Colombo Market.—Quality improving, but best sorts much lower. Ordinary highgrowns down 20c. mediums sometimes dearer with quality. All fannings dearer. Offgrades dearer.

Calcutta Market—Export.—Good general demand at easier rates. Commons low mediums 2 to 6 nP easier. Thin liquoring medium Assam B.O.Ps weakest feature. Whole leaf best Assam C.T.C. clean black grainy fannings well supported.

Internal.—20,000 dust. Fairly good general demand 2 to 4 nP below last. Better medium and best C.T.C. strongest and fully firm. 2,700 internal leaf. Fair demand at easier rates.

Export Quota.—The market declined rapidly and business was done at 13½ nP. There are now buyers at 14 nP and sellers at 14½ nP.

Forthcoming Auctions.—Sale No. 4 will be held on Tuesday, 4th February.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale 'C'*.—575,000 lbs. Very good demand, but prices irregular. Low medium and medium fully firm. Others occasionally easier.

TEA PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, 28*th January*

Offerings during yesterday's export sales amounted to 63,782 chests. There was fair general demand, but prices eased. C.T.C. teas declined by 20 nP, but fannings of this category received more attention than brokens. The best liquoring lots were sold at about valuations. Medium O.Fs showing bright cup quality advanced and were the strongest feature, while medium B.O.Ps lost by 10 to 20 nP. Plain and medium B.Ps and fannings registered a fall of 4 to 6 nP and 6 to 8 nP, respectively. However, the lots showing clean appearance were about firm. Legg cut teas eased by 6 to 8 nP, while Darjeelings were fully steady and rose above valuations. Keen competition was offered to whole leaf grades, prices of which were firm. The quotations were: best Assam C.T.C. fannings Rs. 2.40 to Rs. 2.50, best Assam C.T.C. B.P. Rs. 2.50 to Rs. 2.70 (nominal), clean black pekoe Rs. 2.35, medium fannings Re. 1.68 to Re. 1.72, medium B.P. Re. 1.60 to Re. 1.64, plain fannings Re. 1.60 to Re. 1.64, and plain B.P. Re. 1.52 to Re. 1.58.

Export quota changed hands at 13 nP and rose to 13½ nP before falling to 13 nP.

Conditions were easier during last week's sales for domestic consumption. Dusts offered aggregated 19,781 chests and demand was fair. The strongest features were the best liquoring C.T.Cs and the better mediums, which were firm. The more ordinary types, however, receded by 10 nP. Non-withers Dooars realised lower prices, the orthodox teas declining by 2 to 4 nP. The quotations were: best Assam C.T.C. Rs. 2.85 to Rs. 3.05, medium Assam C.T.C. Rs. 2.00 to Rs. 2.20, medium Assam grainy dust Re. 1.62 to Re. 1.64, and medium Dooars Re. 1.60 to Re. 1.62.

Leaf offerings amounted to 2,603 chests, and met with fair demand at easier rates.

The anxiety entertained by the tea industry in regard to the low prices which common teas were realising was voiced by the Chairman of the Dooars Branch of the Indian Tea Association at its annual meeting. He said that most gardens in the Dooars grew commons, and unless prices improved or Government accorded some tax relief or production costs came down, he apprehended many gardens in the Dooars would be faced with heavy losses. He deplored that they were being taxed out of existence and that their representations to Government for relaxation of the taxes fell on deaf ears. A drought during the second flush in the year had affected the crop and its quality.

JUTE STEADY

(From Our Own Correspondent)

CALCUTTA, 28*th January*

A bout of speculative enthusiasm led to a rise in prices of jute goods during the week under review, and raw jute also responded in sympathy, with a fractional improvement. The markets were closed on Thursday (Netaji's birthday) and Friday (Basant Panchami) being State Government holidays, and during these two days speculators attempted manipulations. Contrary to earlier anticipations, business with U.S. buyers was little during this week. Shipment figures in respect of both hessian and sacking goods up to 15th January have been below last month's. The end of the labour troubles in the Calcutta port was noted with satisfaction and, although they had not affected gunny shipments by any notable extent, the continuance of the strike would have had a serious impact on the gunny trade. A tender from Government for B. twills was called, and on rumours of further orders speculators rushed to the market. This pushed up prices. The gains recorded on Saturday were fully maintained yesterday also.

On Tuesday last, ready B. twills were steady at Rs. 104.75 following the Government call for tender for 13,000 bales of B. twills for January-February delivery. The April-July position improved impressively to Rs. 106.25 from Rs. 105.30. Ready 40" 10 oz. hessian was in the meantime unchanged and quiet at Rs. 39.80. On the following day, prices for the ready positions in these two constructions fell to Rs. 104.25 and Rs. 39.65, respectively. Apart from speculative trading, the market was featureless. On Saturday, however, prices gained to Rs. 107 and Rs. 40.20, respectively, and these rates were maintained yesterday. Prices in the New York market fluctuated within narrow limits. Stockists here were still anticipating substantial business from the United States, and they believed that American buyers were biding time. However, in the meantime, the process of transfer of hessian looms to the production of heavy goods is being continued, and a further decline in the proportion of hessian output to sacking is anticipated.

Raw jute prices displayed a firmer tendency. Sellers were reserved. More mesta changed hands than other varieties of jute. It was noted that the estimated raw jute production in 1957-58 at 4,088,000 bales, showed a fall of 200,000 bales or 4.7 per cent. compared to the last season. This fall was caused owing to adverse weather affecting the crops in Bihar and Uttar Pradesh. That efforts at the intensive cultivation have resulted in some success are indicated by the higher yield per acre in West Bengal, Assam, Orissa, and Tripura. Denoting the lower crop, arrivals so far have fallen below last year's. During the six months to December last, total arrivals were 3,232,350 bales, of which 413,650 bales were from Pakistan and 2,818,700 bales were of Indian origin. In the same period in 1956, arrivals of indigenous fibre were higher at 2,936,800 bales, but Pakistani jute that arrived was lower at 371,300 bales. However, as against the total arrivals of 3,232,350 bales during the six months ended December last, consumption in mills was only 3,042,300 bales, and since arrivals were more than consumption, and the same trend is expected to continue, no shortage is anticipated. During the week, Daissee bottoms improved to Rs. 30.25 from Rs. 29.75. Northern bottoms at Rs. 26.75 added 25 nP.

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, 27*th January*

The linseed market ruled quiet during the week. Although prices declined to some extent, there was some increase in trading. An improved demand for seeds from crushers resulted in a fair daily turnover, with sellers showing keen interest for forward delivery; ready goods were scarce. Oil prices remained unchanged, but some enquiries from local shippers led to an increased offtake of oil. Overseas prices were still quiet and no fresh export business was reported.

The latest available quotation for January-February is Rs. 21-14 per maund.

COARSE GRAINS FALL SHARPLY

(From Our Own Correspondent)

HAPUR, 27*th January*

Divergent trends were witnessed in the food-grains markets during the week under review. Thus, wheat and rice ruled quietly steady, while coarse grains receded sharply. Wheat prices were maintained at previous week's levels, at Rs. 15.62 per maund for average quality and up to Rs. 17.12 for farm produce. Daily arrivals from villages continued to be scanty and, as most of the demand was being met from stocks, local stocks with the trade was fast dwindling, the latest estimate being 15 *khaties*, as against 53 *khaties* a year before.

Rice registered fractional gains during the week, thanks to overall shortage in the country coupled with reports that sufficient quantity was not available for imports on easy terms. The local supply position was reported to be satisfactory. The latest quotations were: *Basmati* Rs. 28 to Rs. 31; *mainpuri* Rs. 24.25; coarse Rs. 20.50 per maund. Despite a gradual fall in the local gram stocks which was slowly moving to east U.P. on Government account, gram eased during the week on easy Punjab advices and in line with the appreciable fall in maize and *bajra* prices. Maize and *bajra* lost about 75 nP per maund, due to easy supply position, as maize was reaching here from Mainpuri and Farukahbad district and demand of these grains was declining. Other grains including barley and *bejhar* declined in sympathy. The latest quotations (in rupees per maund) were: *Gram* Rs. 10.87; barley 9.25; *bejhar* 9; maize 10.37; *bajra* 10.50; *guwar* 11.25; *jowar* 8.50 to 10.50.

Despite good offtake mostly in the form of pulses-*dal*, peas and *arhar* declined during the week in line with the general bearish trend in coarse-grains prices and good crop prospects. Peas stocks ran down by 4 *khaties* to 13 *khaties* and *arhar* stocks by 5 *khaties* to 43 *khaties*. Other pulses were steady during the week. The latest prices were: Peas *dara* Rs. 8.25; farm Rs. 9; peas *dal* Rs. 9.37; *arhar* Rs. 9.75; *arhar dal* Rs. 12.50; *urd* Rs. 16.62 to Rs. 18; *moong* Rs. 16 to Rs. 16.50; *masoor* Rs. 15 per maund.

Pulses futures declined during the week to be quoted on Monday at near the worst level of the week. Peas *jeth* was done at Rs. 8.66, *arhar jeth* at Rs. 10.26, *bajra fagun* at Rs. 10.81 and *urd baisakh* at Rs. 16.37.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Tori William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 163*)

offset Russian exports, on the one hand, and persistent decline in U.S. consumption, on the other. Secondly, the resources of the buffer stock were dwindling greatly as a result of the heavy purchases made in recent months—about 11,000 tons in the second half of 1957 alone—and, unless they were supplemented by more funds, it was thought that further large purchases of tin would not be possible. The creation of a special fund and further cutback in export quotas have imparted much strength to the world tin market and it is expected that prices will register a notable improvement over the floor level in the coming months. A section of opinion even apprehends a sizable deficit in supply in place of the current surplus. On the basis of the quotas now fixed for the six major producers and assuming that exports from Russia will be at an annual rate of 12,000 tons, the aggregate quantity of tin that will be available from all sources during 1958 is estimated at 120,000 tons, as compared with the 160,000 tons believed to have been consumed in 1957.

Notices

THE HIND BANK LIMITED
4, Brabourne Road
CALCUTTA—1

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Shareholders of the Company abovenamed will be held at the Registered Office of the Company at No. 4, Brabourne Road, in the town of Calcutta, on Wednesday, the 26th day of February 1958, at 3.15 p.m., to consider and, if thought fit, to pass the following as a Special Resolution, with or without modifications:—

"To amalgamate, sell or in any other manner deal with or dispose of the property, assets or undertaking of the Company or any part thereof for such consideration as the Company may think fit, and in particular for shares, debentures and other securities of any other Company having objects altogether or in part similar to those of this Company and in the event of amalgamation with or absorption in any such other Company to have such shares, securities or debentures issued or allotted to the shareholders of this Company."

Note: (i) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(ii) The Transfer Book of the Bank will remain closed from Wednesday, the 19th February 1958 to Wednesday, the 26th February, 1958, both days inclusive.

Explanatory Statement Required by Section 173 of the Companies Act, 1956 in Regard to the Special Business to be Transacted at the Meeting.

Your Directors have for sometime past been seriously considering the question of expanding the activities of the Bank. They feel that the best way of doing so would be to amalgamate with any other Bank. Proposals for amalgamating your Bank with the Bank of Baroda Ltd. is now under the active consideration of your Directors.

It has been pointed out that the Memorandum of Association of the Bank does not expressly authorise such amalgamation.

It is therefore proposed to alter the objects clauses of the Memorandum of Association of the Bank to make suitable provisions therefor.

The alterations to the Memorandum will be subject to the confirmation of the High Court and will not have effect except and in so far as it is confirmed by the High Court. An application will be made in due course in Court for confirmation of the alteration.

By Order of the Board,
S. D. PARDIWALLA,
General Manager.

CALCUTTA, *25th January*, 1958.

THE WEST COAST ELECTRIC SUPPLY CORPORATION, LIMITED
Registered Office:

MESSAGE TO BUSINESS MEN

THE oration of Mr. Jawaharlal Nehru, India's Prime Minister, at the inaugural function of the Golden Jubilee Celebrations of the Indian Merchants Chamber on Monday the 3rd inst., contained nothing new. The theme chosen by him, namely, that the rich should help the poor, is as old as human civilisation, a theme that is preached by all religions. He deliberately chose it, because he was addressing a vast gathering of business men whose occupation is, to use a trite, to make money. It was, of course, interesting to hear him on the age-old economic ethics. Evidently, his object was to convert his audience to the socialism of the Congress Party. But he was not impressive nor was he quite convincing. There was a staleness about his speech, inevitable because he has been saying almost the same thing for a long time now, especially since the Avadi session of the Congress Party, when the ideal of mixed economy was replaced by the socialist pattern of society.

Mr. Nehru applied his theme to both internal and international aspects. Internationally, he pleaded that the rich countries should help the poor countries in their efforts to raise their living standards. He generously acknowledged the economic assistance that is being rendered by the U.S., Russia and others. Nevertheless, he seemed to be disturbed by the growing disparity between the two and felt that more energetic steps should be taken to bridge this widening gulf. In this context, he was logically correct when he said that there was nothing wrong in underdeveloped countries accepting foreign assistance. But, at the same time, he did not forget to stress the point that every one of these countries must do its best to help itself.

Alluding to the methods to be followed by underdeveloped countries to abolish their poverty, Mr. Nehru reiterated his firm belief in democratic approach. He was fully aware of the achievements of Soviet Russia in a relatively short period of two to three decades; he described them as very remarkable. But he considered the price paid by the Russian people for this achievement as too heavy. He was definitely not in favour of that approach. While he wanted India to follow democratic methods, he was of the view that there was bound to be State intervention, in a large measure, in order to speed up the economic growth and to reduce disparities between the rich and the poor. Accordingly, the free enterprise system which was the basis of economic progress in the U.S. and Western Europe was not suited to a country like India, which, though economically poor, is a full-blooded democracy.

The foregoing account is the gist of what Mr. Nehru said on Monday this week. There can be no quarrel with this substance. But his detailed exposition of the theme contained certain remarks which gave away Mr. Nehru's imperfect understanding of the evolution of the so-called capitalist systems of the West during the past 25 or 30 years and of the present-day capitalism in India itself. One of the flaws in his knowledge of modern economic history is evident from his statement that the U.S., the U.K., and some of the Western countries had become great industrial powers even in the nineteenth century and that it had taken them 150 years to reach the position they hold now. This is a half-truth. For most of their achievements do not date back beyond 1900 and much of it has been after 1914. The industrial revolution of Russia was based on the scientific achievements of the West and it is only, of late, that Russia has been ahead of them in certain branches of science and technology. If Russia has invented Sputnik (artificial moon), Britain has to its credit ZETA (artificial sun) which promises to be more useful to humanity than Sputnik. An important point that is often overlooked by Mr. Nehru is that, today, the underdeveloped countries do not have to go through the trials and tribulations undergone by the industrialised Western world in industrial, scientific and economic research. They are, therefore, in a somewhat advantageous position as compared with that of the Western countries, say, at the beginning of this century or before the First World War. If only they follow the right techniques, a fairly rapid development, without sacrificing democratic principles, is not an impossibility. It is the lack of right approach that is making the economic development of India difficult. Unfortunately, Mr. Nehru and his colleagues in the Congress Party and the Government do not seem to realise this point.

In many respects, India today is where the U.S. was about four decades ago. Among the Asian countries, it is more developed than any other, excepting Japan. Viewed in terms of *per capita* income, this statement may not be correct, but it is true that India has more industries than others, a first class administrative service, a well-developed judiciary and a large number of *entrepreneurs* who have proved their ability to take risks and establish all types of industries. Its banking and insurance services are up-to-date and talented. It is well served by a good transport system, though such is not adequate. India has thus a rich background and a strong foundation on which a modern industrial structure can be built within a generation. It is not that backward or underdeveloped as our Prime Minister wants one to believe. And it owes that status to private enterprise. Given a reasonable amount of freedom and encouragement, private enterprise in India can certainly take the country forward in the economic sphere as its confrere has done in many parts of the Western world.

Mr. Nehru is not fair to the business men of this country, if he feels, as he seems to do, that they are not progressive, that they are diehards and that they are not quick enough to move with the times. Every community has its exceptions, not only in this country but throughout the world. The business community in India, too, has in its midst some black sheep and a few diehards. In fine, it is not free from blemishes. But, taken as a whole, it is a forward-looking community, conscious of the need to adapt itself to the changing *yuga dharma*, to quote Mr. Nehru's expression. Contrary to his belief, no responsible section of business community has asked for the system of *laissez faire*. It had realised long, long ago that this system was dead as the dodo. It has not objected to State intervention in the economic affairs of the country. It does not want the blind market forces to operate and has, in fact, supported the need for regulation of markets, with a view to restraining unhealthy speculative forces. It is in favour of constitutionalism and not economic anarchy, if that was what Mr. Nehru had in mind when he talked of blind market forces. In the initial years of constitutional government in this country, there was doubtless considerable opposition and outcry from the capitalists against legislative enactments designed to protect the interests of workers, consumers and investors and to prevent haphazard growth of industries. But all this is past history. They now quite realise that it is necessary for the State to legislate for strengthening and safeguarding economic freedom. What they object to are excessive control and undue interference by the State. Indeed, many an honest business man feels that, while the State has not hesitated to arm itself with extraordinary powers, it has

failed to exercise effective control over the erring members of their community.

The desire on the part of business men to ensure healthy economic growth, to observe sound code of conduct and to maintain amiable relations with workers is evident from several recent instances. Some credit for this must, of course, be given to the Congress Government, as it has prodded them from time to time to move in the right direction. But business men themselves are now more alive to their responsibilities than before. The following quotation from the welcome speech of Mr. Naval H. Tata, President of the Chamber, will bear out our contention:

"We should shed the innate tendency to keep ourselves aloof from activities which do not directly concern our business. We have to play our part in a dynamic and active manner in the wider sphere. Functional representation in Parliament having been abolished, some of us will have to come forward, stand for election in order to interpret our outlook and objectives in the Legislatures both in the Centre and in the States.

"In order to justify our existence as a dynamic and useful section of society, we shall have to adhere to a code of conduct and standards of business morality which would give us immunity from the propaganda against us and making us a target of class hatred because of our legitimate belief in profit motive. A proper assessment of our position in the organisation of society and readiness to adjust ourselves to the needs and requirements of a changing pattern of society are needed to claim for ourselves a lasting place as a contributory factor in the development of the national economy, enjoying the respect and the goodwill of all sections of the community."

This sentiment has been expressed ere now by several other prominent business men as well. While it is the duty of political thinkers and leaders like Mr. Nehru to guide the society along the right lines, it is also necessary for them to ensure that they themselves do not become outdated. It is also essential for them to see that, in their zeal to reform capitalism, they do not overshoot the mark. European history has enough evidence to prove that this danger is inherent in the type of socialist reform which the Congress Party has been carrying out in India during the last few years. It is recorded, for instance, that, in some countries, "where socialism remained pure and triumphed, it introduced collectivism which proved to be in practice (as it had been proved in theory by Liberal economists) incompatible with freedom." In others, the experiment in State socialism led to fascist or semi-fascist dictatorships. In this country, the stress at present is on co-operative socialism, and not on the individual's right to own property. Since leadership of co-operative movement is not spontaneously forthcoming from the people, co-operative socialism is tending to become a State-directed variety. Unless Mr. Nehru and his colleagues are extremely careful and take suitable steps to protect the individual's right to property, their reform may ultimately lead to collectivisation or some form of dictatorship.

Mr. Nehru was perfectly right, when he urged the people to reorientate their thinking on problems, whether political, economic or social, in the light of the emergence of the Sputnik Age. This advice is, however, more pertinent to the Congress Party, in particular, and politicians, in general, than to industrialists and business men. It is the former group which is thinking on outmoded lines. For instance, who talks of Ambar Charka during this ZETA Age? Who talks of replacing an international language like English with Hindi as the State language? Who says that, in the educational curriculum for children and youngsters, priority should be given to four or five languages, instead of to mathematics and science? Who is against modernisation of industries? Who gives priority to social services and unproductive capital expenditure, instead of to production of wealth? Who places distribution ahead of production? Certainly not business men.

At the conclusion of his welcome speech, Mr. Naval Tata hoped that the Prime Minister would give the audience a Message—he spelt it with a capital M—and he was sure that it would be "one of cheer and hope." Mr. Nehru responded to his wish by asking the business men to carry (what they complained to be heavy) the burden of taxation in good cheer and with the realisation that it was necessary for their own preservation. He contended that the poor masses could not be asked to pay more and there was no other way of financing the second Plan, except by taxing the rich. Not satisfied with saying all this, he paid a high tribute to Mr. T. T. Krishnamachari for his last budget in which he wrought a fiscal revolution. Remarking that "it is not possible to carry on in the old way and in the old groove in regard to taxation or other matters, if we are to face the challenges that are before us and the difficulties confronting us," he added: "A new approach was made in the last budget and it breathed fresh air which I appreciated completely." We do not think that this was the message for which Mr. Naval Tata, nor any other business man in the audience, had bargained. Equally out of place was Mr. Nehru's assertion, in reply to the frequent criticism that the second Plan was over-ambitious, that "we propose to be over-ambitious every time." This is bravado and not realism. The test for the soundness of any economic plan, it is needless to add, is what is practically possible. But the remarks of Mr. Nehru clearly show that he still does not realise the value of this simple test.

LANCASHIRE MAKES ANOTHER BID

THE millowners of Lancashire and the British trade union leaders seem to be bent upon securing some form of protection against imports of cloth into Britain. Mr. Harold Wilson, a Labour member of Parliament and a former President of the Board of Trade, has been giving powerful support to what appears to us as an unreasonable demand of Lancashire. The British millowners are seeking protection to safeguard their investments. That is but natural. But why should Mr. Wilson bother about it? The former Labour Government did not countenance it and the present Conservative Government, too, has been refusing to yield to the pressure from millowners and that for very good reasons. The reason is simple, party politics. Apparently, any stick is good enough for him to beat his political opponent with. Speaking at a party by-election meeting in the heart of the British cotton industry early this week, he attacked the Conservative Government on its policy of "do nothing" for this industry. The Government, he is reported to have said, "has shown every sign of having written off Lancashire." Not long ago, Mr. Wilson published a pamphlet outlining his programme for protecting the British cotton industry. There is nothing novel in it, the scheme being an extension of the basis and form in which the Dundee jute industry is sheltered from foreign competition. There is, however, a growing volume of protest against this system from consumers of jute goods and other interests in Britain. Mr. Wilson's plan has also certain features which may not appeal to Lancashire millowners. Nevertheless, they may stomach them, because the scheme will relieve them from the pressure of imported goods.

It has often been stated that the British Labour Party is more enlightened and progressive than the Conservative Party. It has also been claimed that the Labour Party is more sympathetic of the aspirations of the underdeveloped countries and that it has been feeling that the Conservatives ought to render more economic assistance to them than they have been doing during the past six years of their Government. We feel that Mr. Wilson's campaign against imported cotton goods is not in keeping with the traditions of his own party nor of its professions. For the countries that are going to be hit by it are India, Pakistan, and Hongkong, all of which are economic pigmies as compared with Great Britain, an industrial giant. Evidently, for Mr. Wilson, this is a case where charity begins at home. His party has to win at the polls. And the county of Lancashire has still lots of votes, despite the migration of some workers to other areas in Britain.

It is precisely for this reason that even the Conservative Government has been encouraging the British millowners to reach a friendly informal understanding with India, Pakistan and Hongkong. Two years ago, the former Tory Prime Minister, Sir Anthony Eden, put in a special word to Mr. Nehru, India's Prime Minister, about them. Other British Ministers also did a certain amount of lobbying with their Indian counterparts. There were also talks between the Indian and British millowners. As a result and out of a genuine desire to maintain Indo-British economic relations on a very friendly basis, the Indian millowners tentatively agreed to a ceiling to be placed on imports of Indian cloth into Britain, provided other exporters also were willing. It is stated that the Pakistan cotton industry, which was at one time very vehemently opposed to this arrangement, finally consented to it. We find it hard to believe this report. If, however, it is true, the Pakistan industry must have laid down some conditions and qualifications, about which we are not aware. So far as Hongkong is concerned, it is on record that it firmly turned down the proposals of Lancashire. Indeed, it gave no quarter to the overtures from Lancashire and, when the latter's representatives visited this Colony, they were given a cold reception. The determined stand by Hongkong has rendered the understanding hastily arrived at by the Indian millowners ineffective and has enabled them to ship to the U.K. more goods than the tentative ceiling.

That, however, is not the end of the story. A fresh move is being made by Lancashire to give effect to that understanding. And it is a clever one. A *Reuter* report from Manchester says that the British Government has advised the Cotton Board to request India and Pakistan to agree to a ceiling on their exports of cotton textiles to Britain on the assumption that imports from Hongkong will not exceed an agreed limit and that, if they do, both of them would be free from any obligations which they undertake. This report further says that, on the basis of this suggestion, which the British Government considers practicable, the Cotton Board has invited the leaders of cotton textile industries in India and Pakistan to Lancashire for a fresh round of discussions and to conclude an agreement. The proposal sounds rather odd. It is clear that Hongkong is still unwilling. Why should India and Pakistan decide among themselves what quantity of cloth Hongkong could ship to the U.K.? This is a ruse to isolate Hongkong and to commit India and Pakistan to a further step in the direction of limiting their market in Britain. Surely, India cannot be a party to it. Between the two countries of this sub-continent, India will have to pay a bigger price. Last year, India's share in Britain's imports of 416.29 million square yards of cotton goods was 182.12 million square yards, the corresponding figures for 1956 being 306.17 million square yards and 127.48 million square yards, respectively. Hongkong and Japan, too, were successful in increasing their exports to Britain, the former from 55.86 million square yards to 71.09 million square yards and the latter from 32.13 million square yards to 56.46 million square yards. The Indian millowners should, in our opinion, politely but firmly tell their British confreres "no" and turn down their invitation. The Government of India, too, should support them in this respect. If Britain still chooses to protect its cotton mill industry either through a quota system or through tariffs, it is welcome to do so. But that would mean the end of Commonwealth preference system and a strain on G.A.T.T.

We see no justification whatever for the demand of Lancashire cotton millowners. Britain is having overfull employment and its capital and labour in the cotton industry alike could easily find other more gainful sources of employment. India is, however, suffering serious unemployment and under-employment. India badly needs foreign exchange for implementing its plan for economic development and cotton textiles are one of the principal exchange earners. It cannot, therefore, afford to agree to a restriction being placed on such exports. We concede that Britain, too, needs foreign exchange. But it has several other exchange earners. Moreover, the amount of foreign exchange used by the British cotton textile industry is probably in excess of what it earns by way of exports. Much is made of the fact that, in 1957, imports of foreign cotton manufactures into Britain were almost equal to those of its exports. This is only a sentimental argument, for its total imports even then were only a fraction of its total production and domestic consumption.

The case for restriction on imports can have some relevance if there is any dumping. There is, however, no such thing so far as India is concerned. It is a question of clean, healthy competition. The Indian cotton mill industry is not enjoying any special favours from its Government, as will be clear from the heavy taxation to which it has been subjected and its adverse financial results for 1957. On the contrary, it is suffering from several handicaps, all arising from the unrealistic economic policies of the Government. The charge by British labour leaders and a section of the textile trade that India is subsidising its exports of cloth is, therefore, a myth.

MR. NEHRU'S NOTIONS ABOUT STOCK EXCHANGES WRONG

I.I.S.CO.—COTTON—COPPER—COFFEE

MARKET GOSSIP

THURSDAY, 5 P.M.

DOUBTS about the forthcoming Central budget have begun to assail the share markets. Mr. Nehru's remarks on taxation at the Golden Jubilee meeting of the Indian Merchants' Chamber on Monday have led many to adopt a cautious policy. These remarks, quoted in full on the next page, are disquietingly categorical. They clearly mean that one should not expect any relief in taxation. Hopes are still being entertained that the Prime Minister would not object to the frills—compulsory deposit scheme, dividend tax and bonus tax—being either removed or trimmed. That is probably the reason why there has been no heavy selling pressure yet and a marked fall in prices. The modest recession that has taken place is mainly the result of waning buying fervour which was quite perceptible during the past few weeks.

The observations made by Mr. Nehru at the aforesaid meeting on the place of Stock Exchanges constitute another instance of his lack of understanding of the details of our economic system. They are in marked contrast to the keenness with which Governments in other democratic countries watch the working of Stock Exchanges. When Wall Street slumped a few weeks ago, President Eisenhower sat up and took corrective measures. But, in this country, Mr. Nehru simply dismisses them as a horrid thing. This shows that the Stock Exchanges in this country should take some effective steps to educate public opinion. In this connection, we are glad to find that Mr. George Carvelho, Editor of Place Siddons and Gough's *Share Market Report*, Calcutta, has promptly stressed the need for explaining to the Prime Minister the functions and importance of Stock Exchanges to the national economy. In a letter to the Press, he pertinently observes:

"What is surprising is not his (Mr. Nehru's) description of these organisations as 'horrid places' because of the din that emanates from them. Many of those who pass along Lyons Range when the Stock Exchange is in full cry will share his disgust and wish that it were possible to devise some less nerve-racking and more dignified method of transacting share business. But would anyone suggest that fish markets serve no useful purpose, because of the unsavoury associations of Billingsgate? Even the assertion that market operators are motivated by the desire to 'get rich quick' may be allowed to pass, though this is a very human, perfectly normal and not necessarily anti-social urge. In fact, the whole world would be a much duller place, were it not for this universal desire to get rich quickly. Unfortunately, on the Stock Exchange, as elsewhere, there is an immense gulf between desire and accomplishment.

"But what is one to make of the statement that 'the Stock Exchange has nothing to do with the national economy?' If there is to be a private sector at all, as we have been repeatedly assured there should be, surely there must be joint-stock enterprises owned by shareholders. Does it not follow that there must be some organisation where the shares of joint-stock companies (and the bonds issued by Government) can be bought and sold at prices reflecting, through the market mechanism of supply and demand, the current estimate of their real worth? How many people would be willing to put their savings into shares and Government securities, unless their ready liquidity were thus assured?

"The utility of a Stock Exchange lies in the fact that it is a means of channelling savings into productive investment, that it functions as the economic barometer, faithfully reflecting the swiftly moving and changing current of opinion of economic conditions and prospects, that it is an essential element in the institutional framework of even the most attenuated private sector, and that it is a potent instrument of capital formation."

• • • •

It is common knowledge that the year 1957 proved to be one of the darkest for cotton textile mills. Caught between a fall in both demand and prices of cloth, on the one hand, and higher cost of production, on the other, the financial results of mills could not be anything but disappointing. Higher wage bill, caused by a rise in dearness allowance, enhanced price of cotton and heavy excise duty have all contributed to a steep rise in manufacturing costs. In the circumstances, the recommendations of the Directors of the two Brady group mills on the dividend distribution for the year ended 31st December 1957 should cause no surprise. The dividend on ordinary shares of New Great Eastern is to be passed over, though the 5½ per cent. preference dividend is being paid. It will be recalled that for 1956 a dividend of Rs. 10 per share was paid by this Company. The Directors of the New City Mill have, however, recommended a dividend of Rs. 5 per share of Rs. 100, but this represents a 50 per cent. cut from the 1956 dividend. It will be noted with interest here that this is the first time since 1937 that the New Great has had to skip the dividend. If a company with such a long dividend record has found it necessary to withhold the distribution, one can well imagine the extent to which the tax burden and higher manufacturing costs must have eaten into the earnings of the Mill. It is reliably learned that the New Great has actually suffered a loss, while the New City has managed to show a small profit. Indeed, the profit is said to have been so slender that even the lower dividend could be met only by a draft on the past reserves. It will be recalled that, even in the previous year, both the Companies had to supplement their profits by withdrawals from the reserves and adjustment of excess provisions made in earlier years, in order to pay a dividend of 10 per cent. for 1956.

Among the other Brady group's concerns, Empire Dyeing, Brady Engineering and G. Claridge and Co. are repeating their dividends, Empire Dyeing at Rs. 3 per share of Rs. 15, Brady Engineering at Rs. 3 per share of Rs. 60 and Claridges at Rs. 15 per share of Rs. 100. The dividend on the shares of W. H. Brady & Co., Ltd., has, however, been raised from Rs. 22-8 (per share of Rs. 150 each) to Rs. 25, the increase being in commemoration of the Golden Jubilee of the Managing Director, Sir Joseph Kay's connection with the Company.

Investors in the Indian Iron and Steel Co. Ltd., will note with gratification that the first phase of the Company's 1953 extension programme has been completed with the blowing in of one of the two new blast furnaces, each of which has a daily rated capacity of 1,200 tons of iron. The blowing-in ceremony was inaugurated on the 31st ultimo by Mr. Burke Knapp, Vice-President of the International Bank for Reconstruction and Development. The World Bank having played a very vital role in the financing of the Company's extension schemes, it was but proper that the ceremony should have been inaugurated by the Bank's Vice-President. The completion of the blast furnace, which is the largest so far erected in India, has taken nearly three years from the date the contract was placed with the manufacturers and has been done two months ahead of schedule. The cost of the blast furnace, together with the ancillary units, is estimated to exceed Rs. 8 crores, of which expenditure abroad accounts for about Rs. 3.5 crores and expenditure in India for Rs. 4.5 crores.

Simultaneously, a new 300-350 ton open hearth furnace, the largest in Asia, was also put on gas and this marked the first step towards raising steel production in India under the second Five-year Plan. Out of the 33,000 tons of iron available from the blast furnace, about 18,000 tons will be used, in the first instance, for conversion into steel in the open hearth furnace referred to above. The installation of these two furnaces will bring about a saving to the country in foreign exchange of Rs. 2.5 to Rs. 3 crores per month.

The long-awaited export quota announcement for cotton has at last been made. The Joint Chief Controller of Exports, Bombay, notified yesterday that it has been decided to release 50,000 bales of Bengal *Deshi* cotton for export. Export licences will be granted, as usual, to established exporters and registered dealers. Licences issued for this quota will be valid for shipment till 30th June 1958 to all permissible destinations. Those who were expecting a reduction in the current rate of export duty of Rs. 100 per bale are, however, disappointed, as no reduction has been made.

The quota was not unexpected. It was considered almost a certainty, following the recommendation of the Cotton Advisory Board, at its meeting on 10th January, that an additional 50,000 bales of Bengal *Deshi*, besides 25,000 bales of cotton of stapling ¾" and below (old crop), should be permitted for export during the current season. The Board of the East India Cotton Association also was said to have urged the Government of India to release the quota without any further delay. Nevertheless, the announcement caused a mild surprise, for the delay had led the majority of traders to believe that a final decision would be taken only after the Export Advisory Council, scheduled to meet at New Delhi during the weekend, also had its say on the matter.

With the present release, the total quota given so far this season amounts to 100,000 bales, consisting exclusively of Bengal *Deshi*. As compared with this, by the end of the first week of February last, 400,000 bales of cotton, comprising 100,000 bales of Bengals and 300,000 bales of other varieties, had been released for export. Export demand during the current season has been very slack. Foreign exchange difficulty of India's traditional customers like Japan has been the main factor responsible for the snail-pace of exports. Even the small quantity of 50,000 bales released as early as last October has not been fully absorbed and the Government has found it necessary to extend the validity of export licences due to expire on 31st January till the end of April. This is due partly to some of the quota holders' inability to book business. They are probably handicapped by lack of proper organisation, drive and contacts. It may be noted here that some of the quota holders have completely disposed of their shares. The absence of a brisk export demand is not, therefore, the only reason.

It is true that a quota in itself will not automatically boost exports. But it cannot be denied that proper timing of quota and other measures such as suitable modification of export duties can greatly help to derive the best possible result out of a bad situation. Viewed thus, the present announcement is welcome, especially as foreign demand is tending to revive.

Japan is understood to have allocated sterling for the import of 99,000 bales of Bengals and Pakistani *Deshi* cotton, out of which 15,000 bales have already been purchased. Foreign exchange for another 15,000 bales was expected to be released early this month. This would appear to be the reason why shippers were anxious for an early announcement of export quota. It was feared that, in the event of failure to make available adequate supplies to Japanese buyers at prices and deliveries comparable with that of Pakistan, Japan would naturally switch over its purchases to Pakistan cotton. Exporters have been arguing for some time that the export duty on Bengal *Deshi*, which at present is at the rate of Rs. 100 per bale, should be reduced. Certain quarters are, however, inclined to point out that the fact that, despite the fall in prices of Bengal *Deshi*, the demand for it has not revived, shows that price is not so decisive a factor affecting foreign demand as the availability of foreign exchange with the buyers. The Cotton Advisory Board seems to have taken this view, for, contrary to the general expectation, it did not recommend a reduction in export duty. The Board of the East India Cotton Association has, however, urged a reduction in export duty by 25 per cent., as, in its opinion, such a revision is necessary to stimulate exports. But the Government appears to have concurred with the former view, as it has decided to leave the present duty unchanged.

The supply position of Bengal *Deshi* appears to be comfortable and warrants further exports. Total supply this season is expected to be of the order of 382,291 bales comprising a carryover stock of 62,291 bales and an estimated crop of 320,000 bales. Expected mill consumption for the season is about 144,000 bales. Another 20,000 bales would probably be required for miscellaneous consumption purposes. Assuming that carryover stocks should remain unchanged at last year's level, the exportable surplus would amount to 156,000 bales. Since the quota already announced is 100,000 bales, a balance of 56,000 bales still seems to be available for export.

In order to stimulate exports of those short-staple, harsh cottons which are not used in this country, or in which there is a surplus over internal consumption, a bit of export promotion seems to be very necessary. India has lost many of its traditional markets in Western Europe. The U.S. has virtually dropped out of the list. This is because these countries have either turned to other sources of supply or have taken to synthetic substitutes. But the latter, experience has shown, do not possess the same qualities as cotton. The inherent quality of Indian short-staples in respect of the end-uses to which they are put, therefore, needs to be more widely published in foreign countries. Now that the U.S. has thrown open its doors to unrestricted entry of short-staple cotton, it seems advisable for India to make a wise bid to regain its former position in the U.S. According to an executive order issued by the President on 30th January 1958, the quota restrictions on imports of short-staple harsh cotton by the U.S. has been removed. The quota, which was originally imposed in 1947, limited the volume of imports into the U.S. to 70,000,000 lbs. annually. In the past years, the average annual imports were less than 20 per cent. of the quota. The quota has, therefore, been considered unnecessary and, as recommended by the Tariff Commission, rescinded. The U.S. is now free to import any quantity of short-staple harsh cotton.

Traders in non-ferrous metals are anxiously awaiting the publication of details of the new distribution scheme now being worked out by the Union Ministry of Commerce and Industry. Recently, the Ministry convened in New Delhi a meeting of the importers and actual users of non-ferrous metals. On the basis of the discussions at this meeting, the Ministry is reported to have formulated a scheme which envisages the continued import of non-ferrous metals by established traders subject to the condition that the metals so imported will be sold to actual users in the country in accordance with the Government's instructions and at a reasonable price. It is, however, not known whether the actual users will also be permitted to purchase metals abroad. The new scheme is expected to come into operation with effect from 1st April next. Meanwhile, the Government has asked importers and actual users to inform it, before the 15th inst., of the stocks held at present and the probable requirements in the future.

The aforesaid latest move of the Government to change the system of non-ferrous metals distribution would appear to be a sequel to the representation made by the consuming interests about the high level of prices. It is pointed out, for instance, that, on every cwt. of copper sold at about Rs. 170 to domestic users, the importers are making a profit of as much as Rs. 40. Similarly, the profit on the sale of other metals is high, being about Rs. 10 per cwt. on lead, Rs. 8 on tin and Rs. 7 on zinc. The average fair margin of profit, according to official circles, should not be more than 3½ per cent., that is, the difference between the imported cost and the actual selling price.

Pending the publication of exact details of the proposed change in the distribution of non-ferrous metals, the local market is currently ruling quiet. The latest available spot rates for the four important metals—copper, zinc, tin and lead—as compared with those a week and a fortnight before are given below:

(Rs. per cwt.)

	Latest available	*A week ago*	*Fortnight ago*
Copper (electrolytic ingots) ...	165	172	172
Zinc (electrolytic)	53	52½	52¾
Tin	128	127½	127½
Lead	65	65	65

(Continued on next page)

EQUITIES TURN QUIET

BUDGET FEARS REVERSE TREND

(From Our Own Correspondents)

BOMBAY, *6th February*

THE share market turned quiet during the week under review, after maintaining a steady tone in the previous four weeks. Apart from the pre-Budget caution, there were other factors which were responsible for the slight change in sentiment. They were: the Prime Minister's discouraging reference to the taxation policy of the Union Government in his speech inaugurating the Golden Jubilee celebrations of the Indian Merchants' Chamber, Bombay, the anxiety over the Chagla Commission's report, on which depends Mr. Krishnamachari's continuation in the Cabinet, uncertainty about the Railway Budget, particularly in respect of freight rates, and reports that the States would have to raise about Rs. 200 crores in the coming financial year by way of market borrowing, small savings and additional taxation.

Those who had held hopes that the coming Central Budget might bring some relief to industries and had accumulated lines on this expectation were taken by surprise by the Prime Minister's strong defence of Mr. Krishnamachari's tax proposals of last year. It was not possible to carry on in the old way and in the old groove in regard to taxation and other matters, the Prime Minister asserted, if the country were to face the challenges that were before it and the difficulties confronting it. Addressing the business men Mr. Nehru said: "It might be that a slightly additional burden was imposed on you or somebody. Well, what about it; what do you wish to be done. You want that those who are already taxed or bent down with the burdens to be taxed more and more and you less and less on the ground that you cannot find additional capital to invest. Is it justified on the masses and the people? It cannot be done."

The aforesaid observations of the Prime Minister were bearishly interpreted by the market as to mean that there would not be any relief in taxation in the coming budget.

Steel shares came in for heavy selling pressure. But for the support lent by a few operators, the recession in this section would have been more pronounced than indicated by the closing quotations. Tata Ordinaries declined from Rs. 173.75 to Rs. 169.25, before gaining ground at the close to Rs. 170.50. The new shares suffered a drop of Rs. 2.25 to Rs. 165.25. Weaker advices from Calcutta, on reports that an operator in the jute market was in difficulties, affected Indian Irons, pushing the shares down from Rs. 20.52 to Rs. 19.44. At the close, they improved to Rs. 19.64.

In the textile section, Bombay Dyeings fell from Rs. 51.60 to Rs. 50.30 and closed at Rs. 50.40. Centurys were marked down from Rs. 397.25 to Rs. 386.75. The closing was a fraction better at Rs. 387.25. Kohinoors closed with a loss of Rs. 3.50 at Rs. 266, after dipping to a low of Rs. 265.25. Central Indias were unchanged at Rs. 84, while Finlays lost Rs. 2.50 and Gokaks Rs. 4.50. Indu Ordinaries dropped 24 nP to Rs. 9.32 and Indore Malwas Re. 1.50 to Rs. 117. Khataus shed Rs. 4.75 to Rs. 148.75, while Models were unchanged at Rs. 177.50. Morarjee Mills declined by Re. 1.50 to Rs. 202.50 and New Greats by Re. 1 to Rs. 220. The news that the Company had passed over the ordinary dividend for the year ended 31st December 1957 came after the market closed. For 1956, the Company had paid a dividend of 10 per cent. New Citys was stagnant at Rs. 125. The dividend on ordinary shares of the Company for 1957 has been cut from 10 per cent. to 5 per cent. Phœnix Mills lost Rs. 6.25 to Rs. 120. Sassoon Spinnings were a shade lower at Rs. 30 and Sassoon Silks had business 72 nP lower at Rs. 6.52. Simplex improved early in the week from Rs. 160.50 to Rs. 163, but the gain was more than wiped out when the shares gave way to Rs. 159.50 at the close. Standards were maintained at Rs. 402, while Svadeshis declined by Rs. 3.50 to Rs. 167.50 and Tata Mills by Re. 1.75 to Rs. 39.

Bank shares moved in line with the general trend. Barodas were lower by 75 nP at Rs. 105.25, Centrals by Re. 1.50 at Rs. 51 and their new shares by 50 nP at Rs. 56. Bank of Indias were unchanged at Rs. 136, while their new shares were a rupee higher at Rs. 137. United Commercials lost Re. 1.50 to Rs. 59.

A spurt of Rs. 3.80 to Rs. 53.80 in New Indias was a feature in the insurance section. Scarcity of sellers and proximity of closure of transfer books for the issue of bonus shares were responsible for the rise in New Indias. Orientals had business at Rs. 3,980. Vulcans changed hands 12 nP lower at Rs. 16.52.

Business in electricity shares was small and movements in prices were narrow. Ahmedabad Electrics were a shade quiet at Rs. 94.70. Bombay Suburbans gained a fraction to Rs. 107, as also Surat Electrics to Rs. 107.50. Tata Hydros showed no change at Rs. 113.50, while Tata Powers rose by Rs. 2.50 to Rs. 1,130 and Andhra Valleys shed Rs. 5 to Rs. 1,090.

In the sugar group Belapurs dropped from Rs. 238 to Rs. 236 on Monday, but further recession was arrested and the shares closed at Rs. 236.50. Bhopals recorded a rise of Re. 1.72 to Rs. 21.52, following the enhancement of the dividend from Re. 1.50 per share (of Rs. 10 each) to Rs. 2 per share. Phaltans showed a fall of Rs. 2.75 to Rs. 148.25, while Walchandnagars were marked up by Re. 1.25 to Rs. 277.50. Among cements, Associated Cements reacted from Rs. 156 to Rs. 152.50, before gaining to Rs. 153.50 at the close. Digvijays lost a rupee to Rs. 135, while Andhra Cements gained Re. 1.24 to Rs. 12.24. Orissa Cements were quiet at Rs. 12.68. Jaipur Udyogs were steady at Rs. 11.80.

In the engineering and mining group, Alcocks presented an erratic trend. After moving up from Rs. 215 to Rs. 217.50, the shares dipped to Rs. 212.50, but regained to Rs. 215. Tata Locomotives gave way from Rs. 142 to Rs. 139.50. Premier Constructions suffered a loss of Rs. 2.50 at Rs. 139.50. Larsen and Toubros were held at Rs. 12.68. Shivrajpurs lost Rs. 2 to Rs. 92. Indian Coppers were fairly steady at Rs. 2.88.

Among shippings, Scindias moved down from Rs. 17.44 to Rs. 17.16 mid-week, but a recovery set in at this level, lifting the shares to Rs. 17.32 at the close. Great Eastern Shippings stood on balance 24 nP lower at Rs. 19.76. Premier Automobiles shed 20 nP to Rs. 86.30 and Hindustan Motors 16 nP to Rs. 6.08.

In the miscellaneous section, Bombay Burmahs (old) were erratic. After a dip from Rs. 540 to Rs. 534, the shares rallied to Rs. 546 yesterday on renewed hopes of a bonus issue. Today, however, they had a setback to Rs. 540.50. The partly-paids lost Re. 1.25 to Rs. 261.25. National Rayons drifted lower from Rs. 224.50 to a low of Rs. 213. A mild recovery at the close lifted them to Rs. 214.50. Gwalior Rayons were lower by 40 nP at Rs. 11.60. Tata Chemicals were a shade better at Rs. 12.84, while Hindustan Levers were quiet at Rs. 19.72. Tata Oils were marked down by 75 nP to Rs. 36.50. Killick Industries lost Rs. 3.50 to Rs. 154.

Calcutta Stock Exchange

CALCUTTA, *5th February*

Following the announcement of foreign exchange aid from several countries and the American proposal to help the tea industry with Rs. 3 crores for its rehabilitation, an improved trend was in evidence on the Calcutta Stock Exchange earlier in the week under review. However, the support was mainly speculative and was not thus sustained. On Friday, profit-taking intervened to reduce gains. On Monday, trading commenced on a steady note, but soon the Prime Minister's speech at the Indian Merchants' Chamber, Bombay, on the same day not only arrested the earlier steadiness but brought about a recession.

Mr. Nehru stated in Bombay that industrialists and business men might want lighter taxes, so that they could accumulate capital for re-investment. This would not be allowed. This exposition of official policy "killed" any lingering hope in the market for relaxation in taxes in the coming budget. Further, the strain of Mr. Nehru's speech was considered significant, and although the abolition of the much vexed company reserve deposit scheme was still anticipated in accordance with Mr. T. T. Krishnamachari's declaration while he was in the United States, market circles thought that the Prime Minister's aim was to prepare the commercial community for more burdens.

Madras Stock Exchange

MADRAS, *4th February*

The steady trend noted on the Madras Stock Exchange last week abated during the week under review. In fact, the market ruled easy. Business put through was restricted, with values of scrips moving generally downward. There were fears of additional taxation in State budgets in the coming year. The fears were based on reports that the States had to raise during 1958-59 an additional amount of Rs. 200 crores by way of taxes, loans and small savings in order to implement the plans fully. The sentiment of operators was also affected adversely by the Prime Minister's observations on private enterprise made at the Golden Jubilee celebrations of the Indian Merchants' Chamber in Bombay yesterday. Plantation shares encountered selling, despite encouraging advices from tea markets and hopes of an upward revision in rubber prices. It was reported that both the planters and the Indian Rubber Board had made representations to the Union Government, urging it to allow higher prices for rubber. Textiles were featureless, thanks to lack of buying enthusiasm. Electricity and banking shares lacked support. The sugar and miscellaneous sections, however, proved an exception to the general trend. Several counters evoked good support at enhanced rates.

Among tea shares in the planting section, Peermades dropped 30 nP to Rs. 19.10. Stanes Amalgamateds receded by 20 nP to Rs. 15.20. Ouchterlonys declined by 11 nP to Rs. 4.95. United Nilgiris shed 10 nP to Rs. 15.30. Blue Mountains and Waterfalls lost 5 nP each to Rs. 2.90 and Rs. 3.35, respectively. Chembras eased by 12 nP to Rs. 2.78. Among coffee shares, Coffee Lands moved down by 20 nP to Rs. 27.80. Consolidated Coffees lost 5 nP to Rs. 22.70. Sheveroys were a shade lower at Re. 1.87. Among rubber shares, Nenmenys fell by 55 nP to Rs. 14.25, Nilamburs declined by 50 nP to Rs. 13.25. Teekoys and Peninsulars receded by 25 nP each, the former to Rs. 6.40 and the latter to Rs. 19.25.

In the textiles section, Vasantas were pushed down by Rs. 7 to Rs. 271. Vijayakumars dropped Rs. 3 to Rs. 110. Coimbatore Spinnings declined by 75 nP to Rs. 67.75. Janardanas eased by 50 nP to Rs. 79.50, Maduras by 25 nP to Rs. 35 *cum-div.* and Cambodias by 10 nP to Rs. 10.10. But Coimbatore Cottons met with special buying support and put on Rs. 2 to Rs. 172. Bangalore Woollens were also well favoured, the quotation rising by a rupee to Rs. 173.

Among electricity shares, South Madras declined by 20 nP to Rs. 12.30. Kumbakonams were lower by 10 nP at Rs. 10.95. Ellores were neglected at Rs. 11.25 *cum-div.* The Directors of the Ellore Electric Supply Corporation have declared an interim dividend of 4 per cent. free of tax for the year 1957-58, as against 5 per cent. interim last year.

In the miscellaneous section, cement shares met with renewed buying support. India Cements advanced by 50 nP to Rs. 28. Travancore Cements improved by 45 nP to Rs. 8.20. Andhra Cements strengthened by 25 nP to Rs. 12.25. Spencers rose by 50 nP to Rs. 17.75. The Directors of Spencer & Co. Ltd., have declared a final dividend of 10 per cent. for the year ended 30th June 1957, making a total of 15 per cent., which is the same as that paid in the previous year.

MARKET GOSSIP

(Concluded from previous page)

It will be seen from the above figures that copper prices have suffered a sharp fall. This is in contrast to the distinct recovery noted in the world copper market of late, following the decision of the Anglo-American group of Rhodesian producers to cut back production by 10 per cent. in the year beginning from March next. This decision has followed similar cuts in the output of the big American mines in Chile (Kennecott and Anaconda), in accordance with the recommendation of the Chilean Government. A cut has been made by the two big Rhodesian Selection Trust mines, as also by the United States mines (Kennecott, Phelps Dodge and Anaconda), and the Belgian Congo producer (Union Miniere). As a result of all these cuts, the aggregate world output of copper outside the U.S.S.R. in 1958 is expected to be lower by more than 200,000 tons—one estimate places it higher at nearly 250,000 tons—as against the actual production of about three million tons in 1957 and 1956. This is only a rough estimate, because the precise effect of the cuts on the statistical position of copper cannot be assessed, in view of the fact that there have been some additions to capacity of a few mines. This much, however, can be said, namely, that the series of cutbacks now effected, together with the U.S. stockpile's offtake, will substantially reduce the gap (of about 200,000 tons) between the rate of output and actual consumption.

The world coffee market has become the venue of a tussle between the producers in Latin America and the consumers in the U.S. and Europe. While the producers are trying to hold off the surplus coffee from the market and to arrest a recession in prices, the consumers' resistance to prices is also equally strong. The consumers are restricting their purchases in the fond hope that the Mexico City agreement among the producers in the Western Hemisphere to restrict their exports, reached in October last, will break at any time, as they cannot afford to hold large stocks of coffee. Thus, the coffee producers' agreement will come under severe test in the next few months, if not weeks. But the producers do not seem to despair of the situation. Indeed, they have intensified their export quota scheme by again cutting exports by 15 per cent. for a further period of three months ending June 1958. The original agreement, it may be noted, was for a period of five months ending March next. There was a rumour that Guatemala, one of the signatories to the agreement, might withdraw from the scheme, but this was later denied. The latest step means that the main producing countries of the world are making an intense effort to keep off from the market a load of 15 per cent. of their supplies for a period of eight months.

The extension of the export quota scheme, however, does not solve the problem of excess production. It is expected that there will be a carry-over stock at the end of the current season amounting to 20 million bags, equivalent to nearly 50 per cent. of the world crop. It is this expectation, coupled with the fact that supplies from Africa, equivalent to 20 per cent. of the total world production, are still freely available, that makes the prospect of a fall in world prices promising and is encouraging the consumers to restrict their purchases. The efforts of the Latin American producers to persuade African growers to join their export restriction scheme have so far proved futile.

Meanwhile, the international conference of coffee producers, held in Rio de Janeiro on 20th January last, is reported to have reached a large measure of agreement on the setting up of an international coffee organisation to promote sales of coffee. The agreement has not been finalised, but, when finally formulated, it is expected to receive the support of most of the producing countries in Africa and Latin America. The reaction of the dealers and roasters in the U.S. and Europe to the conference has not, however, been very favourable. They feel that the producers in the Western Hemisphere are only trying to use the opportunity to bring the African producers also within their export restriction scheme. They aver that restrictive practices are no good for promoting increased consumption of coffee and that the remedy for the situation lies in allowing prices to fall by restoring free trading.

NEWS IN BRIEF

PRODUCTION of Indian razor blades last year is estimated at 365 million units, as compared with 265 million units in 1956.

The Railway Board has published a small brochure entitled *Railway Careers*, describing in brief the different types of jobs offered by the Indian railways, their future prospects, emoluments, educational and technical qualifications required, and age limits prescribed for recruitment.

The Committee set up by the Government of India to enquire into the working of the salt industry and recommend measures for its development has decided to issue a *questionnaire* to elicit information. The Committee has been asked by the Government to complete its work within six months.

The new Kalkaji wireless station was declared open by Mr. Lal Bahadur Shastri, Union Minister for Transport and Communications, on the 6th inst. Being one of India's largest foreign telecommunication centres, the new station constitutes another milestone in the rapid expansion of the overseas communications service.

The Government of India has extended the procedure for export of articles under claim of rebate of duty on excisable goods used in their manufacture to include mosquito nets as well. The procedure is already applicable to ready-made apparel, tents, sugar products, cotton bags, umbrella cloth, chaddars, pillow cases, table covers, embroideries, laces and tarpaulins.

The port of Karwar became a major port for ocean-going freighters on 31st January when the Turkish freighter *s.s. Haran* anchored for the first time in the harbour to load 11,000 tons of iron ore cargo for being exported to Czechoslovakia. Twelve barges of various stevedoring firms in Bombay are now in Karwar to transport iron ore cargo from shore to the Turkish ship.

The Indian delegation to the preparatory meeting for the Commonwealth Trade and Economic Conference will be led by Mr. B. K. Nehru, I.C.S., Secretary, Ministry of Finance, Department of Economic Affairs. The other members of the delegation are Mr. T. S. Swaminathan, India's Economic Minister in London, and Dr. I. G. Patel, Deputy Economic Adviser, Ministry of Finance. The preparatory talks will open in London on the 11th inst.

The first factory to manufacture glass syringes for the medical profession will go into production in India in April next. The factory is being set up at the Faridabad township, near Delhi, by the Hindustan Syringes Ltd., in collaboration with a Japanese concern, Tsubasa Glass Industry Company. The factory is expected to meet the country's full demand of glass syringes. The Japanese firm which has been producing syringes for 40 years is sending six technicians to train Indian workers.

The purchases of imported stores made by the Director-General of Supplies and Disposals has been reduced substantially with a view to saving foreign exchange, as well as to encouraging and developing indigenous production. The value of purchases of indigenous stores, however, has increased in keeping with the policy of encouraging such production. The purchases of imported stores during the period April to October 1957 amounted to only Rs. 16.80 crores, as compared with Rs. 83.51 crores in 1956-57.

The value of minerals produced during the first half of 1957 was over Rs. 57 crores as against Rs. 53 crores in the corresponding period of 1956. The increase was due partly to increase in the production of chromite, coal, copper ore, lead and zinc and salt and partly to higher prices of manganese ore. Coal, with an output of 21.6 million tons, was the leading commodity; the output represented an increase of nearly two million tons as compared with the first half of last year. Of the total value of Rs. 57 crores of minerals produced in the first half of 1957, manganese ore accounted for Rs. 6.9 crores, salt for Rs. 6.1 crores, gold for Rs. 2.5 crores, iron ore for Rs. 2.1 crores, mica for Rs. 1.9 crore, copper ore for Rs. 1.5 crore and ilmenite for Rs. 80 lakhs.

An Export Promotion Council for Sports Goods has been set up with the support of the Government of India with headquarters at Delhi. Dr. A. S. Sharma, Joint Development Commissioner for Small-scale Industries, Ministry of Commerce and Industry, is the Chairman of the Council. The representatives of the State Governments of West Bengal, Punjab, Uttar Pradesh and Bombay, the Delhi Administration and manufacturers and business men connected with the industry are expected to be represented on the Council. This is the tenth in the chain of export promotion councils sponsored by the Government to develop export markets for Indian products. The total annual production of sports goods in India is estimated at more than Rs. 1 crore. A small percentage of this production is exported. The sports goods industry is claimed to have vast potentiality for earning foreign exchange.

India and Japan signed on the 4th inst. a trade agreement under which the Governments of the two countries have agreed to accord each other most-favoured-nation treatment on a wide range of subjects. These include customs, tariffs, imports and exports and foreign exchange transactions; entry, stay, travel and residence of each other's nationals; all kinds of business and professional activities; and shipping and navigation. The agreement is valid for two years and will continue in force thereafter, subject to three months' notice. Two schedules appended to the agreement outline the major commodities in which trade is expected to be expanded. Among the items of exports from Japan are textile and fibre products, iron and steel and other metals, capital goods and machinery, chemicals and dyes, wood and paper products. Exports from India include agricultural products, agricultural raw materials, animal products, industrial raw materials, minerals and miscellaneous commodities.

From Abroad

The Japanese Government has ordered a sharp cut in the shipbuilding programme for the next financial year commencing from April.

Work on blue-prints for a 65,000 deadweight tons atomic-powered tanker is being stepped up by four Japanese shipyards. The plans are expected to be completed by next March.

The declaration that there should be a genuine link between the flag of a ship and the country of its registry has been supported by the United Kingdom Chamber of Shipping. The declaration is included in the U.N. Commission's proposals for an international conference in Geneva this month.

Americans contributed $6,820,560 last year to the Co-operative for American Remittances to Everywhere (C.A.R.E.), the private U.S. organisation which sends food and other relief supplies to needy persons in overseas nations. The 1956 contributions to the C.A.R.E. aggregated $5,647,820.

The volume of British merchant shipping lying idle in the U.K. ports for reasons other than repair at the end of January 1958 was the highest for the past twenty years, the exact figures being 80 vessels of an aggregate 375,026 gross tons. The task of finding suitable berths for laying-up further vessels is posing a new problem.

The discovery of an oilfield which may stand on a par in importance with the adjacent Edjele is indicated by the new oil strike tests at Zarzaitine in the Eastern Sahara. The Zarzaitine concession, which may prove to be one of the richest in Sahara, will rank in importance next to Hassi Messaond where reserves are estimated at up to 1,000 million tons.

The European Coal and Steel Community is expected to suffer a decline of about 250,000 tons in steel output in the first quarter of 1958. The estimated production is only 15.40 million tons, as compared with 15.63 million tons in the quarter ended October-December 1957. A major portion of the expected decline is centred in the exporting countries of Belgium and Luxemburg. This will, however, be neutralised to some extent by increases in France and the Netherlands.

An informal proposal for joint Japanese-Egyptian development of Egypt's oil resources has been made by the General Petroleum Company of Egypt to a group of Japanese business men and experts who are in Egypt to assess possible contributions to the Aswan High Dam construction. A preliminary survey of the areas owned by the Egyptian Company is being made by a geologist who is a member of the Japanese mission.

A new oil find by the Shell-BP Petroleum Development Company of Nigeria has been made at Soku in Eastern Nigeria, thirty miles West of Port Harcourt. This is the third oil-bearing region discovered by Shell-BP in Nigeria, where some £27 million has been spent in exploration activities. The two other oil-bearing areas are at Oloibiri, forty-five miles due west of Port Harcourt and at Afam, twenty miles north-east of that city.

Ceylon and a Soviet delegation have reached a provisional agreement for a trade pact which will be in the nature of a revolving credit with a limit of £300,000. A condition stipulated by Ceylon is that the settlement of debts incurred above the limit should be made in cash within one month. The Russians are now seeking instructions from Moscow as to what form the pact should take, whether it should be on a cash basis, as originally put forward by Ceylon, or on the revolving credit basis.

The Swedish Company, A.S.E.A., has secured a contract worth about £1 million for providing terminal equipment for the underwater cross-channel power cable linking British and French electricity systems. According to a spokesman of the Central Electricity Generating Board in London, the contract has been given to the above firm, since "no British company is able to manufacture the necessary equipment." Work in this connection is expected to commence shortly.

Thorny agricultural questions which stood as a stumbling block in the way of a wider European free trade area were discussed on the 30th ultimo at Brussels in strict secrecy by Government representatives from Britain, Denmark and the six Common Market nations. No *communique* was issued after the talks, since the talks were merely supposed to be a preparatory exchange of views for the forthcoming meeting of the Mandling Committee on the free trade area project due to be held in Paris on the 17th and 18th inst. While, according to conference sources, no new proposals were made by either side during the recent meeting, it was not thought unlikely that new and more decisive "tripartite" talks among Britain, Denmark and the European Common Market nations might take place before the Paris meeting this month.

The second World Fishing Vessels Congress, organised by the Food and Agriculture Organisation (F.A.O.), Rome, Italy, will be held at Rome in April 1959. Mr. Jan-Olof Traung, Chief of the Fishing Boat Section, Fisheries Division, F.A.O., has been appointed Secretary, and the agenda and programme are now being drawn up. It is expected that more than 300 participants will attend the Congress. These will be representatives of governments, naval architects, boat builders and other people concerned with the design and construction of fishing boats. The forthcoming Congress will review the technical developments and progress made in fishing boat design and construction since 1953 and will carry further the international exchange of knowledge, experience and ideas in this field.

PERSONAL

MR. Leopold Figl, Austrian Foreign Minister, would visit India during his trip to West Asia next spring.

Mr. Peter Haydan, Australian High Commissioner to India, who was away for five months, has returned to this country to resume his duties.

Mr. L. R. S. Singh, at present Ambassador of India to Brazil, has been appointed Chief Commissioner, Pondicherry. He will assume charge of his new assignment in May.

Mr. R. S. Kinsey and Mr. D. H. Twyford, both of the United Kingdom Export Credits Guarantee Department, arrived in Bombay this week on a fact-finding mission.

Mrs. Sumati S. Morarjee has been re-elected President of the Indian National Steamship Owners' Association for the second year, that is, 1958, in succession. She is the first woman President of any shipowners' organisation in the world.

Mr. B. G. Kakatkar, who has been acting as the Secretary of the Millowners' Association, Bombay, since April 1957, has now been confirmed in his post. He joined the Association in 1947. Mr. R. L. N. Vijayanagar, Acting Deputy Secretary, has also been confirmed in his post.

Dr. Per Jacobsson, Managing Director of the International Monetary Fund, arrived at New Delhi on the 6th inst. The object of his visit to India is to get a first-hand idea of the economic conditions and problems of this country. He is accompanied by Mr. B. N. Adarkar, India's Executive Director of the Fund. Dr. Jacobsson will be in Bombay from 12th to 18th February.

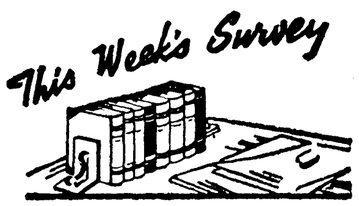
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *4th February*

A New Monetary Policy

The memorandum on monetary policy issued by the London Chamber of Commerce recently has created much interest and aroused widespread discussion. In the following article Mr. A. de V. Leigh, Secretary of the London Chamber, discusses the proposals. The London Chamber of Commerce starts from the premise that all trade is, in essence, barter—an exchange of goods and services; and that money was primarily invented to act as "honest broker" in order to facilitate such exchanges. Human beings want food, clothes, motor cars, ships. Modern scientific discovery enables us to have these things in vast abundance. We do not want money except for the purpose of exchanging it for these things; in fact, if one were on a desert island one would prefer a good strong pocket knife to a million pounds; especially if, as is the case with nine-tenths of our money, it had no physical existence, even in the form of paper, being merely bank money, transferable from account to account by cheque. Bearing these facts in mind, the "upside downishness" of our thinking on this subject will be realised when we consider the attitude of the nations towards their foreign trade. They say, in effect, if only we could export from our country to other countries a large volume of useful and desirable things, and receive nothing which is of any use to anybody in return, how prosperous we should be; we should have a favourable balance of trade. But it is agreed that one nation can only receive payment from others in goods or services, whether directly or through third parties. Economists would, no doubt, qualify this statement by adding "or gold"; but gold is, in fact, a commodity, and a peculiarly useless one at that. It is because gold has been taken out of its proper position as a metal, with qualities peculiar to itself like all other metals, put on a pedestal and worshipped as though it were the most desirable of all material commodities, that the world has conjured itself into the present ludicrous position of want in the midst of plenty.



JOINT MANAGEMENT COUNCILS

THE scope, composition and mode of functioning of the proposed joint management councils designed to secure the participation of labour in industrial management, was finalised at a two-day Seminar on labour-management co-operation held at New Delhi early this week. A model agreement, approved of by the Seminar, says that the object of the joint councils will be, among other things, to step up productivity in the interest of the establishment, the workers and the country generally and to impart to the employees a sense of participation in the enterprise. Mr. Nanda, Union Minister for Planning, Labour and Employment, characterised the scheme for the setting up of joint management councils as a "highly dynamic and vital issue." He added that the proposed councils might achieve a kind of transformation of the private sector along the lines envisaged by the Congress Party's goal of the socialistic pattern of society.

Most of the suggestions proposed by the last Indian Labour Conference in regard to the general principles on which the joint councils should function were accepted by the Seminar. It may be noted that, at present, only four concerns are trying the experiment of associating workers in management. It is indeed a happy augury that 30 more industrial undertakings have volunteered to do so.

A great deal of discussion took place over the relative functions of joint councils and the works committees which already exist in certain undertakings. The consensus of opinion was that, since joint councils would be working at the policy level, they could function without encroaching upon the field of the works committees. It was accordingly agreed that joint councils could be formed even where works committees were already functioning, though no rigidity in this matter was considered advisable. It was felt that in particular cases where works committees had done good work, their functions could be enlarged to embrace questions of policy, ordinarily the preserve of joint councils. Where, however, no works committees were in existence, the council might appoint a small sub-committee to handle routine matters like workers' grievances and welfare measures.

It was decided that the total membership of the councils might range between six and twelve and that decisions should be unanimous if they were to be valid. The trade unions and management should have equal representation. The former will elect half the members, the other half being nominated by the management. One non-employee member may be elected except where the management is agreeable to this limit being raised to two, which is the maximum. The councils should hold office for two years. The posts of chairman and vice-chairman should rotate between the workers' and management's representatives.

The councils, it was agreed, should administer welfare activities and supervise safety measures and schedules of work and holidays. They would be entitled to discuss and make suggestions with regard to the economic situation of the concern, production and sales programmes and the general running of the undertaking, methods of manufacture and work, annual balance-sheets and their explanations, long-term plans for expansion and such other matters as might be agreed upon. Doubts were raised during the discussion as to whether disclosure of certain types of information might not prejudice the interest of the concern. Clarifying the position, Mr. Nanda said that the councils should be entitled to get only that much information as was made available to the shareholders. It will be pertinent to bear in mind, in this connection, that, invariably, it is the management that decides the type and quantum of information to be made available to shareholders.

Mr. Nanda struck a note of realism when he said that a big idea like this might not find smooth sailing to start with. Much of the success of the scheme will depend upon the approach of labour and management to its working. It is not a mere set of rules that determine success but the spirit in which the scheme is implemented. It is well to bear in mind that association of workers in management is not the panacea for bad employer-employee relations, though it is no doubt true that a good participation machinery will contribute to cordial industrial relations. But, as successful participation itself is dependent upon good industrial relations, attention should be devoted to foster the latter too.

CHEMICAL INDUSTRY

The chemical industry holds a pride of place in the programme of industrial development under the second Five-year Plan, being important next only to the mineral and steel industries. Out of a total planned investment of Rs. 1,094 crores on all industries, the chemical industry alone accounts for Rs. 132 crores or 12 per cent. This outlay compares with only Rs. 26 crores made under the first Five-year Plan. Such a large provision for this industry is the result of the realisation that the industry has vast potentialities of expansion. It also reflects the fact that the fixed and working capital requirements of the industry are much larger than the average for all industries.

The progress of chemical industry in recent years has, no doubt, been very encouraging, inasmuch as the increase in production has more than kept pace with the performance of other industries. Despite this impressive performance, it is found that the installed manufacturing capacity of the chemical industry, as in many other industries, has not been fully utilised. The factors responsible for this state of affairs were analysed by Mr. Charat Ram, President of the Indian Chemical Manufacturers Association, at the seventeenth annual general meeting of the Association held at Calcutta this week.

The first and foremost problem of the chemical industry is the paucity of financial resources. Mr. Charat Ram pointed out that, while the initial gross fixed capital requirement per worker in the chemical industry was more than six times as high as that for all industries and the working capital requirements was 2.5 times the average for all industries, the ratio of net profit earned (after paying taxes) by the industry (in 1951-55) to net worth was only 3 per cent., as against an overall corporate figure of 7.9 per cent. The picture was even more depressing, he said, when this figure was compared with the corresponding figure (that is, the ratio of profit after taxes to net worth) of 17.6 per cent. for iron and steel industry, 10.6 per cent. for paper industry, and 11 per cent. for cement industry, a few of the other capital-intensive industries. Mr. Charat Ram also quoted from a recent survey by the Reserve Bank of India, which showed that the retained profits of chemical companies, included in the survey of 750 public limited companies, was only 1.2 per cent. of the pre-tax profits, as against 39 per cent. in respect of all the 750 companies. The corresponding figure for the steel industry was 66 per cent., for paper 55 per cent. and for cement 39 per cent.

Emphasising the fact that planning of the supply of capital was no less important than planning of the supply of raw materials, utilities, etc., Mr. Charat Ram pointed out, as an instance, that the capital requirement of the caustic soda industry alone, on the basis of the latest costs, was found to be of the order of Rs. 6 to 7 lakhs per ton-year, as against Rs. 3 to 4 lakhs per ton-year generally thought of. This would mean that a sum of Rs. 20 crores would be needed for achieving the Plan target of this product alone for the balance of the Plan period. Mr. Charat Ram was of the view that the capital needs for other chemical products were likely to be on a similar scale.

It is common knowledge that the geological resources of India are enormous and offer immense scope for the development of chemical industry. Mr. Charat Ram, therefore, seized the opportunity to impress upon the Minister for Industry, who inaugurated the proceedings, the need for proper development of the geological industries.

Given the necessary financial and raw material requirements, the chemical industry will provide a vast source of foreign exchange earning for the country, because the exportable items in the products of the industry are varied in character. Bleaching powder, bichromates, magnesium and calcium chlorides, Azo-dyes, calcium carbonate, animal glue, phenyl, D.D.T. and penicillin are only a few instances. This, however, will require, according to Mr. Charat Ram, a change in our approach to production capacities—that is, from planning for self-sufficiency only to planning for surpluses for export. At present, he said, even the planning for internal consumption became inadequate by the time the planned capacities matured. The increase in production of the exportable products could, he suggested, be achieved by expanding the capacities of the existing units, instead of setting up new units of production which would need far larger resources. In short, Mr. Charat Ram's exposition of the potentialities of the chemical industry suggests that fresh thinking on the development of the industry is called for.

STEEL FILES

It must be said to the credit of the engineers' steel files industry that, though it has been enjoying tariff protection only for the past 2½ years, it has endeavoured its best to give a good account of itself. This is the impression that we get after reading the speech delivered by Mr. K. R. Damle, I.C.S., Chairman, Tariff Commission, last week, while opening the public enquiry into the working of protection granted to the industry. The industry's claim for protection was first examined by the Commission in 1954 and, on the recommendation made by the Commission, protection was granted by levying specific rates of duties ranging from Rs. 7 to Rs. 34 per dozen on steel files and rasps of 4" to 18" size only; jewellers', watch-makers', other needle, mill tooth, rotary power and ampoule files were, however, excluded. The protection is, of course, to continue up to 31st December 1959, but the present enquiry is in accordance with the recommendation of the Commission for a review at the end of two years. Incidentally, certain manufacturers have represented that, as the industry is faced with severe competition from cheap files imported from Poland and other Continental countries, immediate relief is required.

The review of the progress of the engineers' files industry as made by Mr. Damle reveals that not only have the installed capacity and actual production gone up but there has also been a noticeable improvement in the quality of the product. The present aggregate rated capacity of the industry is estimated at 455,000 dozens on the basis of figures furnished by the units—the Development Wing of the Commerce and Industry Ministry puts it at 288,000 dozens—as against just 55,000 dozens at the time of the last enquiry (1954). The expansion in capacity has followed largely the increase in the number of units engaged in the manufacture of steel files, from two in 1955 to five at present. Of the five units, three are situated in Bombay (J. K. Engineers' Files, Hakimrai Jaichand, and John Baker and Sons) and two in Calcutta (Harbanslal Malhotra and Sons and Hindustan Files). It is understood that two more units—one in Delhi and the other in Bombay—have been licensed for the manufacture of files. With the coming into production of these units and the implementation of the expansion programme of existing ones, the industry's total rated capacity is expected to rise to about 800,000 dozens per annum.

Side by side with the expansion in capacity, the actual rate of output has also registered a marked increase. During the first ten months of 1957, production was of the order of 160,127 dozens, which compares very favourably with 154,629 dozens in the whole of 1956 and 44,219 dozens in 1955.

The quality of engineers' steel files produced in the country is stated to have improved considerably, thanks to the various steps taken by the manufacturers in the direction. The files produced by one firm in particular are said to have been well received by the market. Certain consumers, however, have contended that many of the domestic products are still inferior to the imported ones. Briefly, the defects pointed out are vulnerable teeth, poor cutting quality, incorrect depth of serrations, lack of uniformity in tempering and hardening, rapid wear out of files, and unsuitability of the files for use on harder steel alloys. Drawing attention to these defects, Mr. Damle did well to urge that the industry had a great responsibility in producing files of excellent quality at the lowest possible cost. It is common knowledge that steel files constitute a vital accessory in all engineering industries and, naturally, quality is of primary importance.

INDIAN MERCHANTS CHAMBER

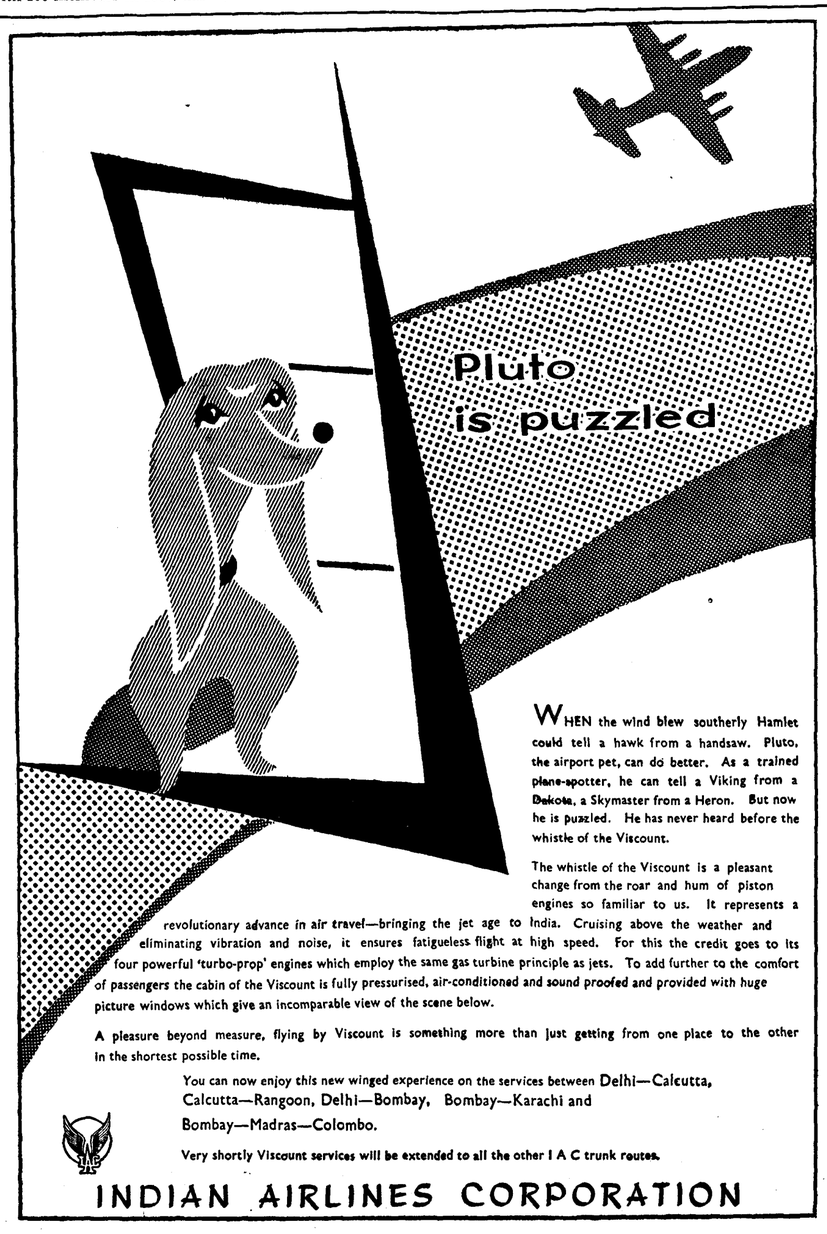
On the occasion of its Golden Jubilee celebrations, inaugurated by the Prime Minister, Mr. Jawaharlal Nehru, on Monday the 3rd inst., the Indian Merchants Chamber, Bombay, can certainly look back upon its career with considerable pride and satisfaction. Born 50 years ago—on 7th September 1907, to be precise—the Chamber has all along been serving the cause of industry, trade and commerce with steadfast devotion and energy. By such service, the Chamber has today carved for itself a unique place in the economic life of the country—as a unifying force "to foster industry and trade, develop commercial and industrial opportunities, encourage sound industrial practice, and create favourable public and Government support in matters relating to industrial or commercial interests." Indeed, the Chamber deserves every word of what the late Sardar Vallabhbhai Patel said many years ago: "As the Congress has played a useful part in creating an atmosphere of patriotism, the Chamber has also rendered immense service to the commerce and industry of the country."

How the Indian Merchants Chamber has marched step by step in achieving the objective of a premier commercial organisation in India's economic life will be evident from a brief narrative of the important landmarks in the history of the Chamber. Incidentally, it will be interesting to note that the Chamber, which made its humble beginning with 100 members in 1907, has grown into a live-wire organisation with its total membership today standing at 2,070, the number of associations afflicted to it being as many as 121, representing the entire section of trade, commerce and industry. The first few years of the Chamber were, as is only to be expected, devoted to the work of organisation. Even during this initial period, the Chamber spared no efforts to secure legitimate recognition and representation in important public and semi-public bodies such as the former Imperial Legislative Council, the Local Council and the Port Trust. When the First World War broke out in 1914, resulting in a dislocation of the normal forces of economy, the Chamber boldly grappled with the problems and offered to the Government constructive solutions on economic and political matters from the nation's point of view. The Chamber made an insistent demand for the appointment of Trade Commissioners in the leading countries which was, in fact, conceded by the Government. Trade Commissioners or Agents were appointed in eight countries and it is gratifying that this number stands today at 30.

While the progress in the earlier years was thus notable, it was not until the end of the First World War that the Chamber emerged as a full-fledged organisation of the business community. It brought to bear a high degree of scholarship and sound knowledge of economics in the consideration of the wide and varied problems generated by the war, particularly the controversial issues of State *vs.* private management of railways, rupee ratio, and embargo on bullion imports. The valiant battle the Chamber fought for gaining fiscal autonomy necessary for the rapid industrialisation of the country undoubtedly constitutes a glowing record in the history of this body. The Chamber might not have succeeded in achieving this aim in full measure, but it did succeed in bringing about a change in the attitude of the Government from one of indifference to that of discriminating protection in respect of Indian industries.

A new and significant chapter was added to the history of the Chamber after the Second World War began when the country as a whole was subjected to heavy strain on both economic and political fronts. The spate of legislative enactments, ordinances and regulations that continued to flow from the Central and Provincial Governments, shortage of wagons, requisition of supplies, scarcity of consumer goods, threat of inflation, acute food situation culminating in the Bengal famine which took a heavy toll of life, introduction of rationing and control over essential supplies, congestion in ports and railways, dislocation of normal business life, and many other pressing issues made the period one of hectic activity and serious concern for the Chamber. The Chamber had undoubtedly heavy responsibilities of assisting the maintenance of the lifelines of industry, trade and commerce, diminished and shrunk by all-round restrictions, resulting from India's forced participation in the

(*Continued on next page*)



WHEN the wind blew southerly Hamlet could tell a hawk from a handsaw. Pluto, the airport pet, can do better. As a trained plane-spotter, he can tell a Viking from a Dakota, a Skymaster from a Heron. But now he is puzzled. He has never heard before the whistle of the Viscount.

The whistle of the Viscount is a pleasant change from the roar and hum of piston engines so familiar to us. It represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets. To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.

Very shortly Viscount services will be extended to all the other I A C trunk routes.

INDIAN AIRLINES CORPORATION

SEMINAR ON LABOUR PARTICIPATION IN MANAGEMENT

CONSTITUTION AND FUNCTIONS OF JOINT COUNCILS

From Our Special Correspondent

NEW DELHI, *4th February*

DELHI LETTER

THE Indian Labour Conference, at its session in July last year, it may be recalled, reached the conclusion that as the employers were willing to introduce schemes of worker participation in selected industrial units on a voluntary basis, it was not necessary to undertake any legislation for the purpose for a period of two years. Following this decision, a labour-management co-operation seminar, in which representatives of over 30 units belonging to the public and private sectors participated, was held here at the end of last week. The Seminar laid down some general principles which should govern the constitution and functions of joint councils of management. These joint councils would consist of an equal number of representatives of management and of employees, not exceeding 12 in all. In the case of smaller undertakings, however, the membership would not be less than six.

The Seminar further decided that, where there was a representative union registered under a statute, that union should nominate the employee representatives on the joint council; where there was no law for the registration of unions as representative unions, but there was only one union well established, that union should nominate the employee representatives; where there were more than one well established and effective union, the joint council should be formed when the unions among themselves agreed as to the manner in which representation should be given to the employees. Here, the Seminar rejected the sound plea that the employees' representatives should be elected by the employees themselves, as the nominations made by the union or unions might not be acceptable to the employees and, as a consequence, there might not be smooth and effective working of the joint councils. The Seminar also decided that employees' representatives should be employees themselves—they could even be members of the supervisory and technical staff—but that, if the union or unions so desired, there could be one non-employee member or two such members through mutual agreement. Here, again, the sound view that there should be no *outsiders* (non-employees) on the joint council failed to receive support from the Seminar.

In the draft model agreement (between the employer and the trade union or unions) regarding possible establishment of a joint council, it was laid down that it would be the endeavour of the council to improve the working and living conditions of the employees, to improve productivity, to encourage suggestions from the employees, to assist in the administration of laws and agreements, to serve generally as an authentic channel of communication between the management and the employees and to create in the employees a live sense of participation. The council would be consulted by the management on such matters as administration of standing orders and their amendment when needed; retrenchment; rationalisation; and closure, reduction in or cessation of operations. The council would have the right to receive information on the general economic situation of the concern; the state of the market, production and sales programmes; the organisation and general running of the undertaking; circumstances affecting the economic position of the undertaking; methods of manufacture and work; the annual balance-sheet and profit and loss statement and connected documents and explanation; long-term plans for expansion; and such other matters as might be agreed to. The Council would also be entrusted with administrative responsibility in respect of administration of welfare measures; supervision of safety measures; operation of vocational training and apprenticeship schemes; preparation of schedules of working hours and breaks and of holidays; and payment of rewards for valuable suggestions received from the employees. All other matters like wages, bonus, etc., being subjects for collective bargaining, would be excluded from the scope of the council; at the same time, individual grievances would be excluded from its scope.

The Seminar's Committee which made recommendations on the size and composition of the joint council also discussed some other related matters and expressed its views thereon. It was felt that, since joint councils were to work at the policy level, they could function separately without encroaching upon the functions of the works committees; and that, where works committees were already working in units where joint councils were to be constituted, they should be allowed to continue. As for supply of information by the management on economic and financial matters concerning the company, it was felt that the information on questions affecting the relations of the company with its shareholders or managerial staff or concerning taxes or other matters of a confidential nature need not be supplied; in the same breath, however, the Seminar Committee felt that the non-supply of such information might lead to apathy and suspicion which might frustrate the very purpose of the council.

From the account, so far given, of the details of the scheme of labour participation in management, it may be noted that the reluctant agreement of private employers to the *nomination* by trade unions, of employee-representatives on the joint council and to the provision enabling the nomination of one or two *outsiders* as employee-representatives, and the likely (certain?) demand, by employee-representatives, for confidential information would, in all probability, render the scheme unworkable. He should be a rash prophet who would say that the proposed experimental scheme in 30 and odd selected industrial units would set an example in voluntary labour-management co-operation and pave the way for a wider voluntary movement covering all or most undertakings in the country. It looks as though the employers might try their best to work the scheme in spite of its drawbacks, for any failure on their part to do so would only invite regulatory legislation.

A Telling Illustration

This letter can usefully include a telling illustration, given by Mr. M. D. Dalmia in his presidential speech last week, at the annual dinner of the Delhi Factory Owners' Federation—an illustration which gives the lie to the general impression that profits earned by cotton mills make the rich richer and the poor poorer.

There is a mill (the name of which is not given) having a paid-up capital of Rs. 75 lakhs. The working capital employed is another Rs. 70 lakhs. The annual gross profits are Rs. 20 lakhs. These are called 'gross' profits, because the depreciation of machinery and equipment is yet to be deducted. In fact, it is wrong and misleading to include depreciation in profits under any name. If the depreciation is deducted from this figure, the profit, which is the real profit, is only Rs. 14 lakhs. At the present rate of income-tax, corporation tax and surcharge, about Rs. 7,20,000 have to be paid in taxes. Another Rs. 0.50 lakh has to be paid by way of Wealth Tax and the total payment in taxes works out to Rs. 7,70,000. The actual tax will work out differently in different cases. The remaining profit is Rs. 6,30,000 and if this is distributed to the shareholders another Rs. 40,000 will have to be paid as tax on distribution. The actual amount to reach the shareholders will be Rs. 5,90,000 only. How much tax the shareholders will pay on this income will depend on the number and financial status of shareholders but it may be safely assumed that Rs. 2,40,000 will have to be paid in taxes by the shareholders, leaving a net balance of Rs. 3.50 lakhs in their hands. On further study of the balance-sheet, it is found that Rs. 75 lakhs have been distributed to labour and staff by way of salary, allowances and bonus and about Rs. 5 lakhs to the selling agents and brokers for remuneration on sales and purchases effected through them and Rs. 75 lakhs to Government in the shape of excise duties. The real earning thus from the machines and materials will consist of five items: Rs. 3.50 lakhs for the shareholders; Rs. 75 lakhs for labour; Rs. 5 lakhs for selling agents and brokers; Rs. 86 lakhs for Government (Rs. 11 lakhs in the shape of taxes and Rs. 75 lakhs in excise duties); all totaling to Rs. 169.50 lakhs. If the shareholders of this concern, who are more than 50 in number, invest Rs. 75 lakhs in iron and bricks and invest Rs. 70 lakhs in stocks and stores and earn Rs. 3.5 lakhs after providing earnings of Rs. 166 lakhs to their Government and countrymen, is it an unequitable distribution? Are the shareholders, who float the company, undergo the risk of loss of millions in case of failure, nurse the concern like their own baby and manage it day and night with care and vigilance, not entitled to a return of even this much amount?

SURVEY

(Concluded from previous page)

war. In performing this task, the Chamber "carried on its best tradition of strengthening the Indian business community and creating feelings of unity and cohesion.

Another significant chapter was added to the Chamber's history in 1947 when India achieved independence. To the Chamber, independence was an opportunity for redoubled effort and dedicated service not only to the commercial community but to the country at large in the great task of rebuilding the tattered economy. Since then, the Chamber has been serving as an agency to assist and supplement the efforts of the political leaders in the arduous task of raising the living standards of India's teeming millions.

Apart from discharging its main function as the representative organisation of trade and industry, of disseminating informed views and opinion on current problems and placing the point of view of the business community before the authorities—Central and State—the Chamber has been endeavouring to be of assistance both to its members and to the general public in diverse directions. It has an information department which furnishes factual information on all matters concerning day-to-day business and industrial activities. It also assists in stimulating fresh and increased trade contacts. Issues involving points of legal doubts are sought to be clarified; enquiries regarding prospects for trade are adequately answered; the position and obligations under the various laws and regulations governing trade and industry are explained.

The Chamber also undertakes the work of arbitration and surveys. It has been authorised to issue certificates of origin in terms of the International Convention for the simplification of customs formalities. Further, the Chamber has a full-fledged measurement department functioning in the Docks for the purpose of measuring and weighing export cargo. The need for the spread of commercial and technical education was keenly realised by the Chamber and, in the establishment of the Sydenham College of Commerce, the Chamber had a big hand. The Chamber itself has been conducting examinations in such specialised subjects as accountancy, law and practice of banking, income-tax, company law, mercantile law, secretarial practice, insurance, business organisation and auditing. Not content with these, the Chamber now proposes, as Mr. Naval H. Tata, President of the Chamber, disclosed in the course of his address at the inauguration of the Golden Jubilee celebrations, to start a scheme for providing facilities for practical training in business methods and organisation. Under this scheme, the Chamber will take up every year a few commerce graduates and persons holding specialised degrees or diplomas for undergoing a period of apprenticeship, so that they will have an opportunity of acquiring a wider background of general knowledge. The Sir Ratan Tata Trust has been good enough to sanction a grant of Rs. 1 lakh to form the nucleus for the endowment for that purpose. About Rs. 5 lakhs are expected to be raised for the same from other sources. This scheme and the Chamber's move to set up a research department for an objective study of the current economic problems are highly commendable and deserve to be emulated by the other chambers of commerce in this country.

With these achievements of the past and having laid down great traditions, the Indian Merchants Chamber stands today fully equipped for serving the cause of industry, trade and commerce in a greater and more significant manner. The importance of a body like the Chamber is all the greater in the present context when, as Mr. Naval Tata rightly pointed out, "certain altruistic and ideological concepts" prevail and the "cloud of suspicion" hangs over the commercial community. While wishing the Indian Merchants Chamber Godspeed in its endeavours to to serve the future generations for many more years, we would like to offer one suggestion. The Chamber will do well to concentrate its attention more and more on tackling the economic problems of the region concerned, leaving the issues of national importance to be considered mainly by the apex body, that is, the Federation of Indian Chambers of Commerce and Industry. By doing so, the Chamber will not only avoid much duplication of work but also play a more positive role in bringing about such adjustments as may be conducive to the proper functioning of industry, trade and commerce in the region covered by it.

OUR DOMESTIC AIR FARES

THE COUNCIL'S REPORT

By "Rudderbar"

THE report compiled by the Air Transport Council (Indian Airlines Corporation's Fare and Freight Rates: May 1957) which was recently released to the public, is an excellently set out and informative document. The recommendations made will probably prove to be unpopular—higher fares on any form of public transport invariably receive a "bad Press"—but an upward revision of fares on our domestic air services is not only almost inevitable, it is probably justifiable.

The current air fares, when measured against those prevailing in Europe, are extremely modest. They compare, moreover, not unfavourably with fares on American and Australian routes where, for various reasons—not least the lower price of aviation fuel—the costs of operation are appreciably less. This is not to say that, if stringent economies were enforced, I.A.C.'s costs could not be substantially reduced—the Corporation's 'break-even' load factor, which is in excess of 80 per cent., provides sufficient evidence of *that*. The Council's terms of reference, however, did not include any examination of I.A.C.'s working. Its task, in effect, was to find means to raise additional revenue rather than to suggest ways of reducing costs.

Excise Rebate

There is, of course, an obvious means of reducing I.A.C.'s costs of operation—and that, too, without any effort on the part of the Corporation. The Government might grant a rebate on the excise duty paid in respect of aviation spirit. This duty is established at a fraction under Re. 1 per gallon of petrol, and boosts the Corporation's direct costs of operation by about Rs. 1 crore per annum. There is, moreover, a clear precedent for such a rebate; the private airlines benefited by an eight-anna rebate for some four years. This was later reduced to six annas and, finally, in January 1953, the concession was withdrawn *in toto*.

Not only is there a precedent, there is justification too for a rebate. This excise duty falls particularly harshly on air transport—as compared, that is to say, with other industries or forms of transport. Even a comparatively small air liner—a Dakota, for example—consumes more than a gallon of fuel every minute. Consider the case, then, of such an aircraft *vis-a-vis* a heavy road vehicle. The former, carrying a payload of two tons over a distance of 100 miles, costs the operator about Rs. 47 by way of petrol duty; the latter carrying a five-ton payload over the same distance, consumes about 12 gallons of petrol and costs in duty, therefore, only Rs. 12. Thus, for more than double the ton-miles produced, the road operator pays about a quarter of the duty paid by the air carrier. That, it will be conceded, seems to be a very inequitable distribution of this tax.

Whilst it would clearly be wrong for air transport to be exempt from any form of taxation which other industries pay, a substantial rebate is, just as clearly, admissible. With a rebate of eight annas per gallon, I.A.C. might reduce its annual deficit to about Rs. 50 lakhs. The Council has recommended a rebate (a recommendation which will receive, it is to be hoped, the consideration it deserves) and has based its further recommendations in respect of fares and freights, on the assumption—presumably—that some such rebate will be granted.

Social Aspect

Let us now examine the case for increased fares from another aspect—the 'social' aspect. Those who use our domestic air services represent an infinitesimal fraction of the total population (rather less, in fact, than 0.025 per cent.). It is clearly unjust that the taxpayer-at-large should be called upon indefinitely to subsidise the travel of this comparatively wealthy and privileged section of the people—and the annual reimbursement of I.A.C.'s losses by the Central Government does, for all practical purposes, amount to just *that*.

The Council, however, if we are to judge by the report, was not particularly impressed by this argument. It was more concerned to find additional revenue for I.A.C. "whilst stimulating the maximum volume of traffic." These aims, we are informed, "conform with both the social objective of a nationalised undertaking and, at the same time, sound commercial practice." The Council, in fact, justifies fare increases on other grounds.

"To maintain fares at their present level, or to reduce them to a lower level," the report reads, "would not help to improve the Corporation's financial position and would only benefit those who can afford to pay more and are even willing to do so. Continuation of the pre-nationalisation policy of low fares would mean maintaining the present high level of financial deficit ...."

Tapering Design

From the point of view of the public, this is little short of a damning indictment of nationalisation as a policy! Since the Council, however, was not concerned with this issue—and, in any event, probably didn't intend their words to be so construed—let us pass on to the actual method of achieving their aims which the Council has recommended. This is a single tapering design related to the cost structure. Short-haul, or short-sector routes are, for many reasons, more expensive to operate than long-haul, non-stop routes such as those from Calcutta to Bombay, Calcutta to Delhi, and Bombay to Delhi. Starting, then, by applying the highest fare to very short sector routes, the Council has drawn up a sliding scale of passenger fare rates. This commences with a maximum ceiling of 6.6 annas for sectors of 30 miles or less, and tapers to a ceiling of four annas for sectors of more than 900 miles. In both cases, of course, the figure mentioned is the rate per seat/mile. This means, in effect, that fares on the majority of the Corporation's routes (those between 200 and 700 miles) will rise by a quarter to half an anna per seat/mile.

Serious Flaw

Whilst this system may well produce additional revenue for I.A.C.—the Council's estimate in this respect is Rs. 15 lakhs—yet whether it is the best that can be devised or, for that matter, as logical as the Council insists, must remain a matter of opinion. There is, I suggest, at least one serious flaw—it penalises a certain class of traffic.

A study of I.A.C.'s route plan shows that almost all the short and very short sector routes (those between 50 and 200 miles in length) serve rural districts. The routes from Bombay to Saurashtra are cases in point, as are many of those from Calcutta to points in Assam and Tripura. The great bulk of traffic on these routes comprises those travelling on their own affairs—be those affairs of a family or business nature—and paying their own fares. On the other hand, the longer, non-stop routes (such as those already cited), are very largely patronised by a quite different class of traffic—Government officers "on duty" and representatives of commercial houses travelling "on firm's account."

Is it, then, equitable to charge the "little man," paying from his own pocket, at a substantially higher rate than the representatives of Government and "big business"? Moreover, as will readily be conceded, there is a considerable difference between the standards of comfort and catering on short-sector, rural routes (usually served by comparatively slow aircraft), and those enjoyed by the traveller on fast, non-stop services operated by Viscounts, Vikings, or Skymasters.

Why Not A Differential Fare?

An alternative method of raising additional revenue would be to apply a "fare differential," or surcharge, on services operated by faster and more comfortable aircraft. It is, of course, a matter of opinion but a fare differential of this sort would seem a more equitable arrangement—in that the higher fare is related to better value in respect of speed, comfort, and catering—and one, moreover, which is less likely to encounter "sales resistance." Government servants and the representatives of commerce and industry must travel—and, usually, by the quickest possible means. On the other hand, those travelling on their own account—save in exceptional circumstances, where surface travel is very difficult or very slow—may think twice before paying a higher air fare. They may prefer to travel by rail, or to curtail the number of pleasure or business trips which they normally make.

Whilst many of the Council's recommendations are, I suggest, open to criticism—and here, it is pertinent to observe, the Chairman himself and two members entered a minority "Minute of Dissent"—the report rendered is none the less valuable. It throws light on much that was obscure and provides the Government with a considerable amount of essential information. As a starting point for the reform of our present fare and freight tariff, it should serve a very useful purpose. For this—if for nothing more—we should be duly grateful to the Air Transport Council.

BRITAIN LEADS IN AIRPORT SAFETY

A number of "new and fascinating developments," which he said were essential if the United Kingdom were to maintain its lead as the safest country for the general control of and technical arrangements for its airports, were discussed by Mr. Harold Watkinson, British Minister of Transport and Civil Aviation, last week. Mr. Watkinson was initiating a debate on the latest report and accounts of British European Airways and British Overseas Airways Corporation in the House of Commons. Freedom of the air, he said, would be just as vital to Britain in the future as freedom of the sea has been to it in the past. Talks were being held to try to secure an easier and more expansive position for British civil aircraft.

A bilateral agreement had been reached with the Federation of Malaya, and he hoped soon to be signing an agreement with the Australian Government, including provision for routes via the Arctic and the Antarctic. There had also recently been signed an agreement with the Soviet Union and with Poland. A Czechoslovakian delegation was expected in London this week to discuss an air agreement, and talks were going on with Ghana, the Sudan, Ethiopia—and he hoped there would be other countries as well.

Discussing safety measures in civil aviation Mr. Watkinson described plans being made to build a number of new long-range radar stations which would give the controller power to "see" on his screen all aircraft in the vicinity of the airport with a complete picture of the surrounding traffic. The United Kingdom was also examining urgently the possibility of supplying controllers with electronic computers. Referring to the building of airport facilities, the Minister said: "What we are trying to do is to create the kind of ports and transit facilities that it has taken generations to build up in our docks and harbours." In the London area alone, the number of passengers handled has been 178,000 in 1938; 834,000 in 1948; and would be 4,500,000 in 1958. Mr. Watkinson also referred in his speech to "what may be the last big conventional aircraft"—the Vickers VC-10. A contract had been signed by British Overseas Airways for 35 of these, with an option for 20 more. It was obvious, he said, that the Corporation regarded them as "world-beaters."

MOVEMENT OF INTEREST RATES ABROAD

DEFINITE SHIFT TO EASY MONEY INDICATED

THE trend of interest rates in the principal money markets of the world during the past two weeks further confirms the impression that there is now a definite move towards easier money in many countries and that the current year may well see the end of the era of dearer money. This change, which stems from the recessionary tendencies in the international economic climate, is in distinct contrast to the rising trend in money rates noted only a year ago. The first three quarters of the past year witnessed a tendency for money to harden almost in all countries. Between February and September 1957, many important countries raised their Bank rates, the extent of increase ranging from ½ per cent. to 2 per cent. The U.K. was the country which pushed up its Bank rate by the latter figure to 7 per cent. and this was done as late as on 17th September 1957. Following this step, London earned the distinction of being one of the dearest money centres in the world.

Paradoxically enough, it was almost at about the same time the dearer money tide began to recede. West Germany cut its Bank rate by ½ per cent., from 4½ per cent. to 4 per cent. In fact, this cut was made a day before the U.K. stepped up its rate by 2 per cent. An explanation offered for this step by West Germany is that it was taken not for the purpose of checking any recession in German economy, but for checking the inflow of hot money from London. In short, it was a move by West Germany as a creditor country to help Britain, a debtor country. Not long thereafter another creditor country followed suit. Thus, in November, the U.S. Federal Reserve Banks lowered their rate from 3½ per cent. to 3 per cent. But, unlike in the case of West German action, this action was designed not to help Britain but to infuse confidence among the people of the U.S. and elsewhere that the U.S. Administration was well aware of the need for arresting deflationary development. Soon, however, fears of recession gathered further momentum and some countries began to experience a gradual setback in employment and production.

Further Fall in Interest Rates

These developments initiated a further fall in interest rates. Towards the close of last month, West Germany made a further cut of ½ per cent. to 3½ per cent. It was followed almost immediately by the Netherlands which reduced its rate from 5 to 4½ per cent. In Canada, too, where there is no fixed Bank rate—its rate is varied weekly in accordance with the trend of Treasury Bill rate—the latest rate, at 3⅞ per cent., is ½ per cent. lower than the peak level touched in the autumn of last year. The latest country to reduce its Bank rate is the U.S. On 21st January, one of the Federal Reserve Banks—the one in the Philadelphia district—sought and obtained the permission of the Federal Reserve Board at Washington to reduce the discount rate by ¼ per cent. from 3 to 2¾ per cent. Within a few days, seven other Federal Reserve Banks also followed suit. Earlier, that is, with effect from 16th January, the Federal Reserve Board had permitted the Stock Exchanges to reduce the margin requirements on listed stocks from 70 per cent. to 50 per cent., so that people could buy shares with a smaller cash-down payment.

The following table shows the trend of Bank rates in four countries, which have lowered their rates so far, as compared with that in the U.K.:

(Per cent.)

Country	*January, 1957*	*Highest rate in 1957*	*Latest*
U.S.	3.00	3.50	2.75* —3.00
Canada	3.92	4.06	3.90
Germany	5.00	5.00	3.50
Netherlands ..	3.75	5.00	4.50

** Only eight of the 11 Federal Banks have cut their rates till the time of writing.*

The downward trend in interest rate in the U.S. which began in November last does not seem to have been checked. On the contrary, it is gathering momentum. The 91-day Treasury Bill rate, which had averaged above 3½ per cent. during September-October and 3½ per cent. in December, has fallen below 2 per cent. to stand at 1⅞ per cent. by the end of January 1958. Other short-term interest rates also have retreated. In the New York market, the discount rate for prime bankers' acceptances, that is, commercial bills carrying a leading bankers' endorsement, has dropped to 3⅛ per cent. for 4-6 months and to 2⅝ per cent. for 90-day bankers' acceptances. These compare with 4⅛ per cent. and 3⅜ per cent., respectively, about three months earlier.

A more important development in the field of interest rates in the U.S. is the reduction made by a number of major commercial banks in the rate of interest on advances to business borrowers of the highest credit standing from 4½ to 4 per cent. This, it may be noted, is the first cut made in the last four years. The cut in this rate of interest, called the "prime rate," is considered to be a precursor to a general move to reduce the cost of bank credit in the U.S. Thus, within the last two months, the move towards cheaper money in the U.S. has gone a long way, though it gathered momentum only in the last two or three weeks.

Rsasons For Cheap Money Policy

The reversal of the dearer money trend (indicated above) in the U.S., Germany and Canada has been prompted by the necessity to stimulate, rather than discourage, new capital outlays and other forms of economic activity. This is proof positive of the fear of widespread economic recession and the need to arrest in good time any severe jolt to the economy. Though a few other countries, such as the U.K., Australia, New Zealand and Japan have not taken any steps to reduce interest rates—indeed, the rates of interest in the last mentioned two countries are probably the highest among the leading countries in the free world—their other actions indicate that they regard deflation, and not inflation, as the main danger.

So far as the U.S. is concerned, monetary weapon is not the only one that has been used by the authorities to stimulate business activity. They have used other weapons also. In the first instance, as already mentioned, the margin requirement on the New York Stock Exchange has been reduced from 70 per cent. to 50 per cent., thereby providing the investor and speculator greater facility to operate with more borrowed money and less of their own resources. This move is intended to stimulate, through the Stock Exchange, more confidence in industry and trade.

Yet another move, which is being seriously discussed by the U.S. Government at the time of writing and which may be taken any moment, is the easing of bank reserve requirements, in order to give additional impetus to the activity generated by the cheap money policy. There is a section of opinion in America which doubts whether the cheap money policy alone would be effective to achieve the objective in view. It is, therefore, considered necessary to relax, in addition, the reserve requirements of banks. The "bank reserve" weapon has not been used since the middle of 1954, when the reserve requirements were reduced, following the collapse of the post-Korean boom. The release of commercial banks' resources will, it is thought, provide the banks with additional funds, with which they can make larger advances to business.

It is, however, too early to see the effect of cheap money policy in stimulating business activity. The initial reaction of the business community would appear to be to run down its stocks and to postpone capital outlays in anticipation of a further fall in interest rates. Thus, the use of monetary weapon would appear to have, in the initial stage, made matters worse.

Consequent on the changes in the economic and financial policies in the U.S. and other countries, attention has now been diverted to London, which, as already pointed out, is one of the dearest money markets in the world. Speculation is rife whether Britain also will be forced to take a similar step, namely, cut its Bank rate and take other anti-deflationary steps. For any economic recession abroad cannot but have its repercussion on Britain. Already there are signs of such effects. There seems to have been a flow of some "hot" money to London, consequent on the widening of interest differential in favour of London. The flow of such funds into London has not yet gathered momentum to an extent as to warrant a change in the Government's tight money policy, but the danger is there. It is said that the movement of funds to London ever since confidence in sterling revived is no more than a few tens of millions of pounds. This slow pace of flow is attributed to the fact that the actual margin of profit in such transfer is much less than that indicated by the difference between the Treasury Bill rates in New York and London.

U.K. Bill Rate Declines

Nevertheless, it will not be right to say that the fall in interest rates abroad has not had any effect on money rates in London. In fact, there was a decline in the U.K. Treasury Bill rate last week to 6⅛ per cent., the lowest touched since the last Bank rate rise. The fall in Treasury Bill rate in the U.K. is due, it is said, to an increase in the demand for these bills on home account induced by fears of a possible cut in Bank rate, rather than to competition from foreign money. All the same, there is a strong section of opinion in London which feels that a cut in the British Bank rate, at least a technical reduction, is inevitable. Thus, writing in the *Financial Times*, London, "Lombard" observes:

"It would be an entirely different matter if confidence in sterling revived to the point where foreign holders of short-term money came to the conclusion that the risk of a major fall in the £'s value over the next few months had become slight—so slight that they would be justified in making outright switches of funds to this country for the sake of claiming the big additional return obtainable here when the exchange risk is not insured against. Then, money might begin to move in on such a scale that the reserves would be swollen in a disturbing way—disturbing because with the opening in mid-year of the period during which seasonal factors are running against the £, it is quite likely that the hot money would go home.

"It is not difficult to see that, in such circumstances, the U.K. authorities would come under considerable pressure to countenance a gradual reduction in short-term interest rates in this country. For quite apart from the reserves problem that would be created by a major inflow of hot money, such a development—by materially enlarging the volume of funds seeking employment in call money and bills in London—would make it difficult for them to wield their monetary controls with sufficient vigour to keep credit short.

"My own view is that, if things do look like turning out this way, the authorities should lose no time in staging an orderly retreat from dear money by bringing down the Bank rate. Their present anxiety to avoid creating the impression that they are wavering in their determination to press forward with the rehabilitation of sterling is understandable. But their ability to point to the fact that developments abroad really had necessitated an overhaul of the U.K. rates structure should make it possible to carry out such an adjustment while satisfying opinion abroad and at home that there was no intention to show the 'green light.'

"As there is the strongest of cases for reducing Bank rate, if this can be done without suggesting a basic departure from the disinflation policy, it would in any case be foolish to miss such an opportunity to make a 'technical cut.' It may not come again before the period of seasonal pressure on the £ opens."

Meanwhile, sterling continues to be in demand in London. The pressure of demand would have lifted the pound sterling to its official ceiling (in terms of U.S. dollar) of $2.82 but for the intervention of the Exchange Account as a seller, in order to prevent a too rapid rise in the value of £ sterling.

STATE BANK OF INDIA'S RUPEE TRAVELLERS CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SOME THOUGHTS ON EARNING CAPACITY OF TEXTILE MILLS

PRINCIPLES OF SOUND MANAGEMENT RECALLED

By Gamanlal C. Presswala

IT is generally acknowledged that the cotton textile industry in India is passing through bad times. In such times, it is natural for persons connected with the industry to devote their thoughts and resources for the improvement of its condition. As a matter of fact, helpful suggestions should always be welcome.

In August 1956, the level of prices of cotton textiles was remunerative and the textile trade was brisk. Even uneconomic units were able to function at that time. But the Union Government struck a cruel blow to the textile trade and industry by adopting certain financial measures in that month. The drastic increases in the excise duties on cloth were bad enough; but the psychological shocks given by the manner and method of announcements produced worse effects. The result is that one of the most important industries of the nation is in the grip of a crisis.

Uneconomic units are making losses; some of them have closed down and some others are thinking of following suit. Certain mills which were previously earning some profits find themselves on the margin, that is, they are just able to avoid losses. With further worsening of the situation, they too may have to go out of production, and some more units, which were better placed, may have moved to the dreaded margin. Thus, from the point of view of individual units, it should be their endeavour to remain on the right side of the danger line, and as far away as possible. This they can accomplish by an all out effort to lower costs, and to evolve efficient purchase and sales departments.

Raw Cotton

Cost of production is a factor of very great importance to a manufacturing concern. Raw materials, stores, labour, overhead charges, etc., go to make the cost structure. In case of a typical medium count mill, the main raw material, namely, cotton, constitutes almost half the cost of the finished product. Such a mill, having 1,000 looms and working two shifts, consumes cotton worth nearly a crore of rupees in a year these days. Thus, cotton is by far the biggest item of cost and should call for all the care and attention it deserves.

The cotton purchase organisation of a mill should, therefore, be as up to date and efficient as possible. A little slackness or negligence or lack of foresight and judgment can easily make a difference of a few lakhs in a total bill of Rs. 1,00,00,000 or thereabouts. For example, cotton suitable for a particular mixing may be available in, say, 10 different centres, and there may be small differences in prices ruling in these centres. It goes without saying that one should make purchases in places where it is cheapest. This sounds simple enough. But how many of the textile mills have the necessary organisation for putting this simple principle into practice? In the first place, a mill has to remain in constant touch with the producing centres. The information received should be properly adjusted by adding expenses, etc., and making allowances for waste to make the figures comparable. Then, it should be presented to the executive concerned in a proper form. Moreover, spinning results of comparable lots of cotton should also be before him when he makes selections. Thus, cotton purchase is a complicated matter, demanding very shrewd and scientific handling.

The timing of purchases and hedging is also very important. It has been observed that, when cotton arrivals to the marketing centres are very heavy, prices, especially in the forward market, go down considerably. Many a time, however, a mill cannot afford to wait till then, as, otherwise, it may not be able to pick up suitable lots. But purchases can also be made "on-call" basis and "calls" can be fixed when the forward market is favourable. Another variation is to make purchases in the forward market when prices are low and then square up the forward purchases as and when ready cotton is bought. This method is widely practised but it requires a deep study of forward markets and sound judgment. Otherwise, far from being profitable, it would bring losses.

Other items of expenses such as transport, insurance, godown expenses and interest charges should also be studied. For example, a certain type of cotton may be a little cheaper in the Punjab than a similar variety in a nearer centre. If all the expenses are added, perhaps the latter may be found cheaper. It should also be remembered that, in these days of high interest rates, carrying large stocks of cotton is pretty costly. If a mill maintains an average stock of cotton worth Rs. 30,00,000, it has to pay Rs. 1,65,000 per year by way of interest, calculating at 5½ per cent. per annum.

Stores and Accessories

Stores, spare parts and other accessories constitute another important item of cost. It has several aspects, namely, consumption of stores for running machines (such as lubricating oils, beltings, shuttles, bobbins, etc.), stores required in the manufacturing processes (such as sizing materials, colours, chemicals, etc.), spare parts needed for the maintenance and repairs of machinery and purchase and quantitative accounting thereof.

Consumption of stores should be strictly controlled. Wastages should be minimised. Many a time the management is under the impression that it is fully vigilant, but it should be remembered that there is always scope for improvement in such matters. In actual practice, it would be found that persons (in departments) authorised to issue stores, etc., hardly bother to ascertain first that each demand for stores is justified. Frequently, it is left to supervisors or jobbers, who might be quite good as supervisors or jobbers but possess little technical knowledge. Hence there is a possibility of uneconomic consumption of stores in such cases. At the same time, false economy in stores should be avoided; otherwise, the efficiency of machinery is likely to be impaired. The matter, therefore, demands technical knowledge to be handled properly and a special study of the stores consumption side.

Maintenance of comparative records of a few typical machines can yield useful information regarding normal requirements of stores and also regarding quality and life of items of different makes and brands. These records can also be used for finding out the optimum points of efficiency for various machines in relation to expenses on stores and spares. Managements should consider whether it would be in their interest to engage for each major department at least one assistant who has studied this question or to train up men for the same. No management can afford to ignore the fact that constant attention to repairs and maintenance increases productivity of machines as well as labour.

For buying stores, etc., at best possible rates, organisation of an efficient and honest stores purchase department is a "must." A mill of the type we are talking about spends Rs. 15 to 16 lakhs annually on stores, etc., these days. Foresight and efficiency of the purchasing authorities can make an appreciable difference in the annual bill.

Risk of Closed Circle

Where there is a system of having an approved list of merchants from whom quotations are invited, the management should guard against the possibility of formation of a closed circle, shutting out new elements and healthy competition. The approved list should be revised periodically, with a view to deleting undesirable names and adding new names. The possibility of being excluded from the approved list and addition of new names is likely to produce a wholesome effect on the merchants in their dealings with the concern. It would also be advantageous if, now and then, quotations are invited for bigger orders by newspaper advertisements. The purchasing authority has to guard against being misguided by departmental heads, some of whom are not totally disinterested. Here, again, a comparative record of stores consumption can serve as a check.

Wages and Salaries

Wages, salaries, dearness allowances and other benefits available to employees are an item of cost only next to cotton in value. Productivity of labour is as important as that of machines. In order to ensure high productivity of labour, first of all there should be an atmosphere of efficiency. Such an atmosphere has a tremendous psychological effect on the employees. Slackness is a contagious disease. It infects even the new recruits. Many Indian concerns are unable to produce that atmosphere. A tendency to make small economies which cannot be justified on grounds of efficiency and lack of consistency are common faults. Even if there is a temporary advantage, anything that goes against a high standard of efficiency should not be tolerated. If a management succeeds in creating an atmosphere of high efficiency, half the battle (as regards productivity of labour) will be won. New recruits will have the impression that inefficiency will not be tolerated and they will try their best to attain the required standard. Moreover, capable and ambitious men will be attracted to such a concern.

In these days of stringent labour regulations, recruitment of new personnel has far-reaching consequences. An industrial concern should exercise all the care it possibly can when new persons are engaged. It should try its best to see that undesirable men from the viewpoint of efficiency and other considerations do not get in. In this connection, it may be pointed out that, sometimes, appointments of new heads of departments bring in their wake men of their choice some of whom may be of doubtful value to the concern. They are mostly taken up either without the knowledge of the top executives or on considerations of expediency. But, after all, expediency is generally a temporary remedy and not unoften it proves worse than the malady. Such appointments should be cut down to the minimum.

Incentive for Workers

Provision of incentives has a definite place in promotion of efficiency amongst workmen. A definite policy of promoting the most deserving persons to higher posts (such as jobbers) whenever a vacancy occurs, is the least expensive method of providing an incentive. A few prizes of amounts attractive enough from the workers' point of view, judiciously devised, would also engender a competitive spirit amongst them. Over and above the attraction of money, the possibility of earning a name would drive them to put in their best. At any rate, the amount spent on prizes would be more than realised by improvement in efficiency and production. This idea can be applied with greater advantage to a group working under the same management by declaring prizes for best workers from different departments in the group. A system of setting up targets of efficiency or of production and rewarding those who reach the targets is a form of incentive which promotes efficiency amongst workers as a group. It is also highly suitable to the textile industry, as production and efficiency of various departments can be measured accurately.

Value of Costing

Nowadays, if any industrial concern does not have an efficient cost accounting section, its management (to put it mildly) should be considered as old-fashioned. The importance of cost accounting has by now been so universally acknowledged that it is not necessary to prove it by arguments.

The costing system should be simple and yet capable of giving the necessary information and guidance as regards costs at every stage of manufacture. Such a system of costing could expose wastages and inefficiencies in different stages of production. For example, costs could be taken out (in respect of each definite count manufactured) at (1) blow room stage, (2) mixing room stage, (3) drawing and inter stage, (4) ring spinning stage and so on upto the cloth folding stage. One or two typical machines may be selected from each department for the purpose. Even if the costs are taken only occasionally for certain periods, they would provide very useful data. Where there is a rise in the total cost, a comparison of statistics thus made available can show at which stage it has risen and which particular item of cost accounts for the rise. At first sight, it would seem that a very elaborate and expensive organisation would be required, but, if proper tables are devised and cards prepared, a small staff (after proper training) could easily do the work.

In many mills, production is the only criterion for measuring efficiency. A jobber, under whose care a certain number of looms run, is considered more efficient if the production of those looms is higher than that of other similar looms under another jobber. But at what cost is the production achieved? Production and cost ought to be related. One jobber may be showing more production but by using disproportionately more stores or more spare parts. If the cost (at the same stage) of the one is compared with that of another, one can easily know whether or not the extra amount spent to gain a little more production is justified. Similarly, the system would be also useful for finding the comparative advantages of two different types of machines engaged in the same process of manufacture.

But the greatest benefit that can be derived by adopting a system of costing by which accurate costs can be worked out is in respect of selection of most paying sorts (and rejection of unremunerative ones) for manufacture. It may be argued that we are already doing that. But are we taking out *exact* costs of even the major sorts that are manufactured? Even if the figures of costs under the present system of costing were inaccurate by a mere half an anna per yard, a unit would stand to lose quite large amounts. One simple illustration will bring home the truth of this argument. Supposing the cost of sheeting of a particular specification, calculated under the unscientific system of costing, is more than the actual cost just by a quarter of an anna and that of longcloth of a particular specification is shown less than the actual only by 4½ pies, the management is likely to come to wrong conclusions and something on the following lines can happen:

	Market rate	Cost according to unscientific system	Profit on 1 lakh yards
	Rs. a. p.	Rs. a. p.	Rs. a.
45" longcloth of a certain specification ..	0 13 7½	0 13 1½	3,125 0
40" sheeting of a certain specification	0 9 4½	0 9 3	781 4

In the above circumstances, the management would sell longcloth and not sheeting, as the former is more remunerative. But, since the actual cost is a little different as stated, the picture would be as under:

	Market rate	Actual cost according to scientific costing	Profit on 1 lakh yards
	Rs. a. p.	Rs. a. p.	Rs. a.
45" longcloth of the same specification	0 13 7½	0 13 6	781 4
40" sheeting of the same specification as above ..	0 9 4½	0 9 0	2,343 12

If the above position, which is the exact position, were before the management, they would have sold sheeting and not cloth. But, actually, they are making a profit of Rs. 781-4 only by selling longcloth, because they are under the impression that, thereby, they are making a profit of Rs. 3,125. We have taken a more simplified example just to show more clearly what can happen under an unscientific costing system, otherwise adjustments can always be made for a higher yardage of sheeting (as compared with longcloth) that can be produced on the same loom.

Since the drastic enhancement of excise duties, considerations of the incidence of excise duties should also receive due attention. The excise duties are on a square yard basis. A yard of sheeting 56 inches wide manufactured from 14s yarn and fetching, say, Re. 1-4 will attract twice as much excise duty as drill 28 inches wide, manufactured from the same yarn and fetching, say, Re. 1-6 per yard. This example illustrates the principle that, other things being equal, the incidence of excise duty is less heavy in respect of the more highly priced varieties made from the same count. And that is one of the reasons why some of the mills are producing costly varieties like gaberdine, satin duck, cord poplin, fancy dorias, lenos, etc. As a matter of fact, while selecting the sorts to be manufactured, costs, inclusive of the excise duties (that each sort would attract), should be considered.

Special Sorts

A concern can also score over others by manufacturing as much of its cloth in sorts which do not easily yield to comparisons with others in the market. Common sorts like longcloth, sheeting, mulls, can be easily compared as to quality and price with others and hence they are highly competitive and generally less paying. Fancy sorts with new designs and appealing to distinctive tastes defy comparisons. Moreover, in case of such varieties, price is often not a major consideration when the customers like them. Even in these days of high cost of living and slow offtake, it is said that some mills are not in a bad way, because they produce varieties which satisfy distinctive tastes.

Some advanced concerns believe in creating a demand for their special sorts rather than catering for a demand for common sorts. The chief reason for doing so is that the profit margin in the former is much higher. It, of course, requires a deep and thorough knowledge of the customers' tastes and of the market. Such concerns have not only market research departments but also publicity departments. When these departments work in co-operation with the technical staff of the weaving and designing departments, excellent results are shown.

Then there is the question of sales and distribution. Mills producing goods of high quality command a definite clientele and they can afford to have a chain of retail shops in prominent centres. The retail shops run by the mills themselves also serve as instruments of publicity. They keep their goods constantly before the eyes of the public. If these shops are run efficiently, they can contribute appreciably to the annual profits.

Interest Charges

Recently, the item of interest has acquired considerable importance. Many concerns which were depositors and lenders now find themselves as borrowers. Monetary stringency and high interest rates go to inflate the amount of interest they have to pay. Nowadays mills have to sell their goods on credit. Usually, two to three months' credit is given. Add to this the heavy stocks of cloth mills have to carry these days. If a medium mill is burdened with an additional stock of 2,000 bales, it will require nearly Rs. 18 lakhs of more finance. If a concern has to give credits to the tune of about Rs. 10 to 15 lakhs in addition to Rs. 18 lakhs locked up in stocks, it has to make arrangements for nearly Rs. 28 to 33 lakhs, interest on which amounts to Rs. 1.65,000 per year. The item of interest, therefore, requires to be watched.

It will be seen from the foregoing account that a textile unit's capacity to make profits is a resultant of several factors. It is not claimed that the points mentioned in this article are in any way novel. But it always pays to review one's position in relation to them. It would always be beneficial to examine the possibility of putting them into practice more effectively and more perfectly. And it is the degree of perfection achieved in practising the principles of sound management that is reflected in the capacity of a concern to earn profits.—*All Rights Reserved.*

EAST AFRICAN COTTON

In view of the current interest in East African cotton, an import allocation for which is awaited by the trade, the following latest estimate of the 1957-58 crop, quantity sold, and unsold balance of East African cotton will be of interest to our readers.

(In bales of 400 lbs.)

Variety	Estimated crop	Quantity sold upto mid. Jan.	Unsold balance
Usuku	2,500	2,000	500
Acholi/Lango ..	62,000	34,800	27,200
Bukhedi	21,000	11,000	10,000
Budama	19,000	7,200	11,800
Busoga	85,000	43,900	41,100
West Nile	8,000	1,800	6,200
Bunyoro	6,000	2,600	3,400
Masaka	5,000	1,400	3,600
B.P. 52	104,000	66,800	37,200
Kenya	8,000	2,600	5,400
Total ..	320,500	174,100	146,400

It may be noted that the latest estimate has been revised slightly upwards. The previous estimate was 310,000 bales. The 1956-57 crop aggregated 365,000 bales. The fall in production this season despite an increase of 3 per cent. in plantings, is attributed to unfavourable weather, especially heavy rains at picking time.

YARN AND CLOTH PRODUCTION

About 435 million yards of cloth came off the looms of cotton mills in India during the month of December 1957, as against 432 million yards in the previous month and 479 million yards in December 1956. Production of cotton yarn in the same month aggregated 152 million lbs., as against 149 million lbs. a month before and 155 million lbs. a year before.

During the whole of 1957, the cotton mill industry produced a total of 5,315 million yards of cloth and 1,779 million lbs. of yarn which compare favourably with 5,307 million yards and 1,671 million lbs., respectively, in 1956.

NEW SCHEME FOR LIMITING IMPORTS?

TEXTILE EXPORTS SUFFER SETBACK

From A Special Correspondent

MANCHESTER, *28th January*

MANCHESTER LETTER

A HINT that trade leaders in Lancashire have not given up the struggle to secure some relief from foreign cloth imports from Commonwealth sources was given by Mr. Roger Lee, in the course of some additional comments he made at the annual meeting of the Lancashire Cotton Corporation. As the discussions are still in a preliminary stage, details cannot yet be given, but it can be said that a new scheme is being reviewed at the instigation of one of the members of the delegation which visited the East last year.

Referring to the retained imports which still continue on an unrestricted scale, despite the efforts made to convince the Government that action should be taken and the endeavours to arrange voluntary limitation in the countries of origin, Mr. Lee's actual words were: "The industry will certainly continue its efforts and recently suggestions which might bring about a limitation of imports by other means have been made."

The Government's reluctance to act in this matter has been, and still is, a persistent aggravation to Lancashire traders. With the interest of their local industry at heart, to say nothing of their individual stake in the trade, they feel they have had a raw deal.

Expendable Or Not?

The authorities obviously take a very different view. It has never been openly stated that Lancashire textiles are regarded as expendable, but the longer a decision on imports is delayed the more recognisable becomes the official viewpoint. Putting aside any local pride in the historical achievements of Lancashire textiles, the inescapable facts of current economic conditions are manifest.

The textile industry in this country provides employment for a large number of people, both directly and indirectly. The mills and machinery represent substantial capital assets, but the amount of foreign currency used in the manufacture and distribution of cotton goods is very much in excess of that required by certain other trades whose progress the Government is clearly in favour of encouraging.

Not only is raw cotton itself an expensive item but many of the materials used in packing and processing textile goods call for expenditure of foreign exchange. So indeed does the importation of substantial quantities of cloth from India and other Commonwealth sources, but official opinion in Government circles obviously regards the maintenance of trade ties between these countries and Britain as more important than the prospects of a particular industry.

Any new scheme which is evolved to deal with the situation will have two hurdles to surmount. Overseas producers will have to be won over—and here Hong Kong seems to be the main stumbling block—while at home Government support will also need to be obtained. The President of the Board of Trade has indicated that an agreement between the various industries involved would receive official sanction, but the road ahead is strewn with pitfalls.

Twelve months ago, when assessing the overseas trade position, the fall in shipments of cotton cloth from Lancashire was the major factor, while imports had changed but little. The declining tendency in exports during 1957 persisted, but the quantity of arrivals increased enormously.

The final trade returns for the year can be estimated fairly accurately as the months pass by and do not burst like a sudden sensation on the industry. Traders were prepared for the grim picture which is illustrated in the following table, particularly as during two separate months in 1957 imports actually exceeded exports.

(Cloth in 000 sq. yards; yarn in 000 lbs.)

	Cotton cloth		Rayon, etc., cloth		Cotton yarn	
	Exports	Imports	Exports	Imports	Exports	Imports
1949 ..	903,578	348,800	160,708	51,600	82,061	1,960
1950 ..	822,473	286,920	189,568	55,280	70,986	14,480
1951 ..	864,375	376,640	217,206	99,240	65,481	31,720
1952 ..	710,813	179,680	149,794	29,280	35,722	7,280
1953 ..	709,905	98,640	176,826	44,400	41,920	3,360
1954 ..	637,378	267,167	175,256	67,331	40,431	10,721
1955 ..	554,504	299,470	133,747	65,415	35,563	14,010
1956 ..	474,150	306,173	120,822	74,249	35,822	16,794
1957 ..	455,762	416,292	111,215	73,579	37,636	14,737

The further drop in shipments of cotton cloth occurred in the later stages of the year, but there is nothing in the existing situation in the industry to suggest that this trend will be reversed in the months to come. Much of the difference between the 1956 totals can be accounted for by a fall of 9,000,000 square yards in shipments to Australia and reductions of about 4,000,000 yards each in exports to Sierra Leone, India, Pakistan and the United States. Among the few territories where Lancashire sold more cloth were South Africa, the Belgian Congo, and French West Africa.

Leading buyers were (in thousand square yards): Australia, 71,358; South Africa, 57,262; New Zealand, 33,889; Nigeria, 30,545; Rhodesia and Nyasaland, 25,049; the Gold Coast 22,977. These destinations and the order of importance by volume are the same as in 1956.

The continuation of the larger imports has brought the quantity of arrivals to a larger figure than ever before. The situation compared with 1951 when imports were also on a large scale is utterly different. Then, much more than half the volume of foreign arrivals was for processing and re-export following the introduction of the post-war scheme to bolster up Lancashire's inability to supply her customers due to labour shortages. Now an even larger proportion of overseas cloth is being retained in the home market in competition with locally-made products.

One of the few crumbs of comfort that can can be obtained from the 1957 Board of Trade returns is the fact that yarn exports increased, if only slightly. Since the sharp fall in these shipments in 1952, there has been little variation in the quantity of yarn sent abroad, but, last year, a small gain was recorded, the total of 37,636,492 lbs. being nearly 2,000,000 lbs. higher than in 1956.

More variation than usual took place in the amount of yarn absorbed by the different consuming areas. Australia increased her takings by 2,000,000 lbs., but there was a fall of 600,000 lbs. in shipments to India and a similar drop in exports to Pakistan. South Africa bought smaller supplies of yarn, but this was offset by larger shipments to New Zealand. Exports to Canada were 900,000 lbs. lower and those to Finland declined by more than 1,000,000 lbs. In contrast, sales to undesignated foreign countries improved by 2,500,000 lbs.

In the section devoted to rayon and synthetic fibres, the yarn export figures are certainly more encouraging. During 1957, the volume exported was 44,138,000 lbs., as against 36,157,000 lbs. in the previous year. The improvement stemmed from an increase of nearly 2,000,000 lbs. in shipments to Australia and a sharp gain in the quantity of yarn sent to various unnamed foreign countries which accounted for 11,745,000 lbs., as against 7,025,000 lbs.

Cloth produced from man-made fibres, however, did not make a satisfactory showing, shipments abroad being more than 9,000,000 square yards below the previous year. The losses incurred were spread over a number of countries, chiefly in Africa, but there was a further sharp improvement in sales to Rhodesia and Nyasaland, which rose from 17,629,000 square yards to 23,189,000 square yards, maintaining this market's place as Britain's best customer for this type of cloth.

India Steps up Supplies

So much has been said about the import situation for many years past that the figures largely speak for themselves. The rising trend in arrivals of grey cloth is largely the result of much bigger purchases from India which supplied 182,123,000 square yards last year, as against 127,482,000 square yards. Shipments from Hong Kong increased from 55,859,000 square yards to 71,095,000 square yards and those from Japan rose from 32,129,000 square yards to 56,465,000 square yards.

It is significant that a further increase in imports of finished goods took place, although the quantity involved at 44,358,000 square yards is small in relation to the arrivals of grey cloth. It must, however, be assumed that, as the facilities for processing loom state cloth in overseas markets improve, so will arrivals of such goods tend to broaden.

Plan For Cotton

Leaders of 240,000 Lancashire cotton operatives decided in Manchester this week to ask Sir David Eccles, President of the Board of Trade, to receive a deputation to discuss *Plan for Cotton*—the policy statement drawn up for the cotton trade unions by Mr. Harold Wilson, M.P.

Mr. Harold Bradley, Secretary of the United Textile Factory Workers' Association, said that Sir David had been asked to receive the whole Legislative Council. Support for the Plan, he added, was also to be sought from the Trades Union Congress and the Labour Party.—*All Rights Reserved.*

UTILISATION OF MOLASSES

BUTANOL TO BE EXTRACTED

ONE of the notable items included on the agenda for the eighth meeting of the Development Council for Sugar Industry, to be held at Nillikuppam, South Arcot district of Madras, on Tuesday next, relates to the manufacture of butanol—a basic chemical—from the waste molasses of sugar factories. The discussions will centre round the detailed scheme on research and pilot-plant trial as worked out at the National Sugar Institute, Kanpur. The Institute has examined the economics of the two processes for extracting butanol from waste molasses. One is the fermentation process by use of clostridium aceto-butylicum which, by use of molasses as a raw material, produces butanol and acetone simultaneously. The other is the synthetic process using ethyl alcohol as raw material.

The importance of the above scheme lies in the fact that its implementation will greatly ensure proper utilisation of molasses, a valuable by-product of the sugar industry. The fulfilment of the production target of 2.25 million tons set for the sugar industry in 1960-61 will result in a total output of 800,000 tons of molasses annually. A large part of the molasses will no doubt continue to be utilised to meet the expanding needs of the power and alcohol distilleries. Nevertheless, the utilisation of molasses for production of chemicals like butanol, which constitute the basic chemical for starting other industries, is very vital. Next to ethanol, the fermentation industry that has been developed in the industrially advanced countries is the production of butanol and acetone. The largest use for butyl alcohol is in the manufacture of its esters for use in the protective coatings, nitrocellulose lacquers, spray paints, dopes, etc. It is used as a dye solvent, plasticizer, thinner, brake fluid and raw material for synthetic rubber, as well as for antibiotic recovery, urea-formaldehyde resin and gasoline derivatives. Simultaneously, acetone is produced; this is an important solvent and serves as a raw material for the production of diacetone, plastics, artificial silk, paints, etc.

The need for adopting and developing the manufacture of butanol and acetone is obvious. The estimated demand for butanol is at present about 1,500 tons a year and is expected to go up to 3,000 tons in the near future. It is accordingly felt that there is scope for erecting two plants of five tons capacity per day in the country. Licence has already been issued for a synthetic plant of 2-3 tons capacity per day. This plant is expected to go into production in the current year. It is estimated that the cost of production by fermentation is Rs. 610 per ton of butanol, as against Rs. 800 by the synthetic process under similar conditions. In view of the scope for economy in the cost of fermentation process thus, it is considered desirable to develop the same in India where abundant supplies of molasses are available.

The scheme evolved by the National Sugar Institute envisages the adoption of bio-chemical process for producing butanol on a pilot-plant scale using cane molasses, the plant having in the initial stage a capacity of 100 gallons mixed solvents per day. From the pilot plant trial, necessary data can be obtained about the economics of the process to enable the setting up of a commercial plant by any *entrepreneur*. The pilot plant will be so designed as also to serve as a unit for the training of students for the production of ethyl alcohol and power alcohol at the Institute and try out other industrial processes involving rectification and distillation. The cost of the scheme is put at Rs. 3.2 lakhs for a period of two years. In the first year, preliminary work on pre-treatment of molasses, selection of suitable strains for optimum performance, preservation of culture, and designing of columns and fermenters for multipurpose use is proposed to be undertaken at an estimated cost of Rs. 25,000. In the second year, pilot plant trials for the manufacture of butanol at a cost of Rs. 2.95 lakhs will be conducted.

The total investment required for erecting a plant of 1,600 tons capacity (1,120 tons of butanol, 400 tons of acetone and 80 tons of ethanol) is put at Rs. 33.70 lakhs. The bulk of this, amounting to Rs. 25 lakhs, is accounted for by plant and machinery, the share of other items being Rs. 3 lakhs for boiler house, Rs. 3 lakhs for buildings, land, water-supply, etc., and Rs. 2.70 lakhs for working capital. About 11,000 tons of molasses are required to extract 1,600 tons of solvents on the basis that fermentation yield is 30 per cent. on sugars in molasses and 15 per cent. on weight of molasses. The personnel required is 40 labourers in shifts, 10 labourers (general) and 10 supervisory staff. The profit margin in the industry is estimated at Rs. 370 per ton of solvent or a total of Rs. 3.9 lakhs per year, representing about 12.7 per cent. return. How the advantages of the fermentation process for producing butanol from waste sugar molasses compare with those of the synthetic process are shown below:

Fermentation	*Synthetic*
Investment of Rs. 31 lakhs for 1,600 ton total solvent	Investment of Rs. 45 lakhs, if the investment of alcohol plant is also included, otherwise Rs. 35 to Rs. 36 lakhs, including auxiliary units
Production of acetone is secured simultaneously	Production or crotonaldehyde and acetaldehyde is available as an intermediate
Molasses consumption 10 tons per ton of butanol	The molasses equivalent of alcohol consumed is only 8 tons per ton of butanol
Low power consumption but larger steam consumption	Power consumption is large, if hydrogen generation and refrigeration are included
Waste disposal is difficult	No serious waste problem
Conversion of acetone which is a by-product to other important products like isopropyl alcohol and diacetone alcohol is possible, but there is no saving in investment costs on the subsidiary industries.	Investment on a number of subsidiary industries like acetic acid, butric acid, acetates, octanol, etc., will be considerably lower, due to availability of acetaldehyde
Estimated cost of production— Rs. 1,050 per ton	Rs. 1,120 per ton

Generally speaking the fermentation process is said to be more economic. The molasses cost at Rs. 20 per ton forms 18.5 per cent. of the cost of butanol production, while, under the synthetic process, alcohol at Rs. 300 per ton forms 40 per cent. of the cost of butanol.

(*Concluded from next column*)

debentures at a slightly higher rate of interest than the one charged on other loans given by the Centre to the States. If the Centre is worried about the collieries being efficiently managed, it can have a couple of its nominees on the Board of Directors of the Company just as it has on the boards of industrial companies in the private sector, such as the T.I.S.Co., T.E.L.Co., and I.I.S.Co., to which it has given loan assistance. In fact, the Andhra State Government offered to give representation to the Centre on the Company's Board. We think that the Union Government is quite unreasonable in the stand it has taken.

There are two good reasons why the expansion programme of the Singareni Collieries should be expedited. First, it reduces the railways' responsibility for carrying coal in the North to consumers in the South. Secondly, it involves a saving of Rs. 40 per ton in the cost of transhipment of coal to consumers in the Deccan and South India. According to Dr. Melkote, a former Minister of Hyderabad, if enough financial resources are made available, the target of 3 million tons set under the second Plan for the Singareni collieries can be raised even to 4 million tons. The coal reserves of this region are said to be so large that, even after increasing the output, they would last for 600 to 700 years.

FATALITY RATE IN MINES

The fatality rate due to accidents in mines in India during 1957 was the lowest ever recorded, according to provisional figures received from the Chief Inspector of Mines in India. Out of 630,000 workers employed in all mines, 254 persons were killed due to accidents during the year, as against 335 in 1956. The annual average of deaths caused by accidents for the previous five years was 392. The fatality rate per thousand workers in 1957 worked out to 0.40, which was 25 per cent. less than the 1956 figure of 0.53. The average figure for the previous five years was 0.67.

In coal mines, which employ about 350,000 persons, the reduction in the fatality rate was even greater. The number of persons killed as a result of accidents during 1957 was 179, as compared with 259 in 1956 and an annual average of 316 for the previous five years. The fatality rate per thousand persons employed in coal mines was 0.51 for 1957, which was 30 per cent. lower than the 1956 figure of 0.73.

SINGARENI COLLIERIES' EXPANSION SCHEME

NO CUT IN TARGET PLANNED

AN unfortunate controversy over the control of the Singareni Collieries Co., Ltd., between the Central Government and the Andhra State Government has created a problem for the latter in finding adequate finances for going ahead with the Company's expansion programme. It may be noted here that the Andhra State Government holds 88 per cent. of the shares in the Company and only a small percentage is in the hands of private investors. Strictly speaking, therefore, the Company is not a private enterprise. The State Government has complete control over the management of the collieries. In order to provide the bulk of finances required for the Company's expansion programme, which envisages the attainment of its target of output under the second Five-year Plan, the State Government had asked the Centre for a loan of Rs. 4 crores. The Central Government is said to be unwilling to lend this amount, unless the State Government allows it to hold two-thirds of the equity capital of the Company. The State Government, however, is not willing to allow the Central Government to come in as a shareholder, but only as a lender of loan capital. The result is that the State Government has to go ahead with its programme of expansion without the Centre's loan assistance by borrowing elsewhere.

A reference to this controversy was made by Mr. N. Sanjeeva Reddi, Chief Minister of Andhra Pradesh, a few days ago, while inaugurating the screening plant of the Singareni Collieries constructed at a cost of Rs. 24 lakhs. He said that he tried his best to impress on the authorities at New Delhi about the great necessity of granting the above loan. "Somehow it is our misfortune," he added, "that the Centre does not quite understand our problems and our difficulties. I have invited the Union Minister for Steel and Fuel to visit our collieries and see for himself what we have been doing here. If he visits us at least, the Centre will understand our actual work." The Chief Minister of Andhra disclosed that, if the Central Government failed to extend its help, the State Government would try some other sources like banks. He, however, asserted that the denial of a loan by the Centre would not be allowed to stand in the way of the implementation of the target. "We will find the necessary funds somehow or other," he affirmed, "and execute our expansion programme without any cut to achieve the target of 3 million tons by the end of the second Plan."

The Company's progress in recent years is indicated by the following figures of production and despatches:

(In tons)

Year	*Raisings*	*Despatches*
1950	1,162,506	N.A.
1951	1,207,233	1,107,775
1952	1,375,051	1,307,454
1953	1,271,861	1,169,438
1954	1,458,186	1,357,102
1955	1,526,570	1,462,112
1956	1,681,577	1,566,529

It is estimated that the production in 1957 has very nearly touched the target of 2 million tons fixed for 1958 under the original expansion scheme. The scheme was revised subsequently to attain a target of 3 million tons by 1961-62 at an estimated cost of Rs. 9 crores.

It is difficult to understand the dogmatic stand of the Central Government, insisting on its acquiring two-thirds of the share capital before giving loan assistance, particularly in a case, such as this, where the interest of the nation is of paramount importance. After all, the Company is not a private enterprise, for which the loan is sought. So long as it is in the public sector, what does it matter whether the State Government has control over it or the Central Government has? Why should the Centre insist on its acquiring control from the State Government, particularly when it is necessary to raise coal production in the country by every means more so when the new mines acquired by the Centre have not gone into production. By making available the necessary funds, the Centre is only helping an existing deserving unit within the public sector, a unit trend of production of which has been on the increase and reserves of which are said to be enormous and capable of being easily exploited. By giving a loan, the Centre will get a share in the fruits of this collieries' effort by way of interest. If necessary, the loan could be given in the form of

TREND OF RUBBER PRODUCTION

GROWERS' PLEA FOR HIGHER PRICE

THE statistics relating to production and consumption of rubber in India for the full calendar year 1957 are now available and they show a further widening of the deficit of domestic production, as compared with the requirements of rubber goods manufacturers which are steadily growing. Though the upward trend of production of raw rubber was kept up during the year, albeit at a slower pace, the consumption registered a much sharper rise, with the result that the shortfall has had to be closed with a substantially larger import of raw and synthetic rubber. The aggregate production during the year under review was 23,767 tons. This is no doubt a record for the indigenous plantations, but it is only 323 tons more than that attained in the previous year. What is more noteworthy is that the pace of increase in output has considerably slowed down during the past year, for the production had recorded an increase of 962 tons and 989 tons in 1956 and 1955, respectively.

This slowing down in the pace of increase in production is due to the fact that the output suffered a setback in the months of March, May, June, July and December, the most marked fall being in June when it shrank by nearly 50 per cent., as compared with the corresponding month of 1956 (consequent on the loss of tapping due to heavy monsoon and other causes), as will be noted from the following comparative table of monthly production and consumption:

(In tons)

	Production		Consumption	
	1957	1956	1957	1956
January	2,190	2,083	2,679	2,459
February	1,165	976	2,493	2,428
March	1,229	1,270	2,556	2,341
April	2,672	1,826	2,907	2,402
May	1,545	1,983	2,573	2,168
June	750	1,484	2,513	2,401
July	1,499	1,730	2,820	2,648
August	2,241	1,750	2,664	2,397
September	2,712	2,293	2,666	2,545
October	2,768	2,326	2,320	2,103
November	2,855	2,800	2,702	2,547
December	2,950	2,914	2,812	2,647
Total ..	23,767	23,444	31,765	28,996

It will be seen from the above table that the consumption of natural rubber throughout the year was higher than in the previous year, with the result that the total consumption in 1957, at 31,765 tons, was 2,769 tons more than that in 1956. This rise compares favourably with that of 1,453 tons noted in 1956. It will also be noted that the shortfall in output, as compared with consumption, which was 5,552 tons in 1956, widened to 7,998 tons during the past year. Consumption of synthetic rubber during the year was of the order of 3,032 tons, as compared with 2,409 tons in the previous year. Consequently, the imports of rubber had to be stepped up, the quantity of natural rubber imported during 1957 being 9,677 tons, as against 6,463 tons in the previous year. In addition, a large quantity of synthetic rubber also was imported, the data relating to which is not available.

The following table shows the progress of natural rubber production in the country since 1950 and how far it has been able to meet the growing requirements of the manufacturing industry:

(In tons)

Year	Production	Imports	Consumption	Stocks
1950 ..	15,599	1,082	17,735	6,281
1951 ..	17,148	6,921	22,427	7,779
1952 ..	21,863	3,851	21,061	10,351
1953 ..	21,136	272	22,378	9,221
1954 ..	21,493	3,371	25,487	8,687
1955 ..	22,482	3,839	27,543	7,454
1956 ..	23,444	6,463	28,996	8,311
1957 ..	23,767	9,677	31,765	9,955

It will thus be seen that, while production of natural rubber went up by 8,168 tons in the course of the past seven years, the consumption advanced by no less than 14,030 tons, with the result that over 30 per cent. of the requirements has had to be met by imports. The deficit in raw rubber in this country is expected to continue for some years to come, even after the replantation and extension programme of the Rubber Board bears full fruit. The Board's programme is expected to raise production to 40,000 tons in 1974, by which time the consumption of both natural and synthetic rubber would, on a conservative estimate, be double the internal production of raw rubber.

India is one of the fortunate few, among the various countries of the world, which has a rubber plantation industry co-existing with modern rubber manufacturing industry, and an almost unlimited field for expansion of both. The rubber plantations are over half a century old, while the rubber goods manufacturing industry is less than 40 years old. Despite this time lag, the manufacturing industry has made such rapid progress that its requirements of raw rubber have far exceeded the internal production. There is, therefore, a clear case for raising internal production on a very substantial scale, but the difficulties are many. In the first instance, it takes seven years for rubber trees to grow and reach the standard for tapping. Accordingly, unless there is planning in advance with a vision, the supply of raw rubber will not keep pace with the growth of demand. This important prerequisite was lacking among the authorities and, until a couple of years ago or thereabout, New Delhi paid no heed to the repeated requests from Coonoor for taking up the question of rehabilitation and development of raw rubber industry. The plans that were drawn by the planters as early as in 1947 were not even looked into by the Government. If only they had acted promptly even in 1950, the position in regard to supply of raw rubber would have been infinitely better.

Secondly, most of the area under rubber is made up of small estates. At the end of 1956, there were 34,500 estates under rubber with an area of over 231,000 acres. Of this, 50 per cent. of the acreage was covered by small holdings. The Government's policy even today is such that this defect is being aggravated instead of being remedied. "Penalise the big grower and patronise the small grower" is the keynote of this policy. There are no indications that the Government is inclined to give up this policy and to encourage the establishment of bigger estates. Further, most of the estates, particularly the small ones, are planted with low-yielding trees. The multiplication of small estates has, therefore, proved to be an impediment to increasing production on a large scale.

Thirdly, the law and order situation in Kerala, which accounts for 93 per cent. of rubber plantations in India, has of late deteriorated so much that thefts in rubber estates have been on the increase. Fourthly, the cost of production in rubber plantations, as in all other plantations, has gone up quite out of tune with the trend of production or the price fetched by the grower. The most important item of the costs is taxation on the estates. It is, therefore, not surprising that the Quilon Rubber Planters' Association has taken up the cause of rubber growers in Kerala and sought a revision of the statutory price of rubber.

In the course of a memorandum submitted to the Union Minister for Commerce and Industry recently, the Association has expressed its concern over the steady increase in the cost of production in the rubber estates. It points out that ever since the last revision of the statutory price of rubber in September 1955 to Rs. 155.75 per 100 lbs., the cost of production has mounted up considerably on account of various factors, among which are: (1) the rise in land tax, agricultural tax and sales tax, (2) the increase in price of manures and chemicals, (3) extension of provident fund scheme to workers in plantations, (4) the implementation of the Plantation Labour Act, (5) the increase in wages of women tappers, (6) the inevitable rise in wages on account of the rise in cost of living, (7) increase in salaries of staff members as a result of the recent agreement between the Planters' Associations and the staff associations, (8) the rise in wages of plantation workers by As. 2 per day agreed upon at the Plantation Tripartite Conference in December last, and (9) the imposition of various local taxes. Despite the increased wages and amenities to workers, the memorandum submits, there has been a fall in outturn or workload. The rubber growers argue, convincingly in our opinion, that the present price has no relation to the cost and require an urgent revision of the statutory price for their produce.

In Everyday Life **PHILIPS** help to make happier homes

INDIA'S homes are becoming much brighter and happier places to live in, thanks to modern home lighting and entertainment. And more and more people are coming to rely on Philips for light and music, for by supplying the very best Philips contribute so much to the happiness and comfort of the modern home. Whether it's glare-free lamps and fluorescent tubes, or gaily-coloured decoration lamps for festivals... whether it's the finest radios and record players which give you the music you love...or whether it's the handy 'Infraphil' that banishes your pains and helps your family to enjoy better health, Philips are happy to be part of your happy home.

INDIAN CHEMICAL MANUFACTURERS ASSOCIATION

SEVENTEENTH ANNUAL GENERAL MEETING

MR. CHARAT RAM'S PRESIDENTIAL ADDRESS

THE Seventeenth Annual General Meeting of the Indian Chemical Manufacturers Association was held in Calcutta on 4th February 1958. The meeting was inaugurated by Mr. Manubhai Shah, Union Minister for Industry. Speaking on the occasion, Mr. Charat Ram, President of the Association, dwelt at length on the problems of the industry. He laid stress, in particular, on the paucity of capital resources for the industry and on the need for developing the geological resources of the country to feed the chemical industry.

The following is the text of Mr. Charat Ram's speech:

"HON'BLE SHRI MANUBHAI SHAH, FRIENDS AND FELLOW DELEGATES,

"It is my privilege to welcome you, Sir, once again in our midst today, to inaugurate the Annual Session of our Association. We are conscious that you have fulfilled our hope expressed last year here on a similar occasion, that the inauguration of the annual session of the Indian Chemical Manufacturers Association by the Minister for Industries of the Government of India would become a precedent to be continued year after year. The chemical and pharmaceutical industry recognise in you one of themselves. We, particularly, value the consultation and confidence, which you and your Ministry have sought to foster between the industry and the Government, for it is only by co-operative effort that our national objectives can best be achieved.

General Review

"From the industry's point of view, the most notable event of the year was the desperate situation of foreign exchange resources resulting in practically a blanket ban on imports. It was a shock from which most of us are only now gradually recovering. The shock was not so much on account of the extent of the foreign exchange shortage, as on account of the sudden manner in which all of us appeared to be having to face it one fine morning, in a condition of complete unpreparedness. It would be futile to find fault with the planners of our economic future, ostensibly for the lack of forethought about such an eventuality, for mistakes are sometimes inevitable, particularly when we do not have the wealth of experience, fiscal and industrial, to guide us. What, however, would be tragic, nationally, is, if we were to draw no lesson from such failures, and they were repeated for the lack of an adaptable approach in views, ideas, and means of achieving our national objectives. As one in industry, I must say that I consider this desperate situation a blessing. It is a call to each one of us to bring forth the traditional resourcefulness of the private *entrepreneur* in meeting the needs of the country from indigenous production, what was met so far from imports. A vastly changed approach to work and philosophy of business is what is expected from us men of industry today.

"We have had another year of great upsurge in production all along the line and, consequently, of consumption too. This is a welcome trend, but it would be wise to acknowledge, that this year's progress has been achieved at the cost of great stresses on the economic foundations of industry. Faced with mounting raw material costs, pressing labour demands, labour welfare measures, increased railway freights, higher costs of capital goods and spares and higher interest rates, on the one hand, and a desire on the part of the Government to keep the prices low on the other, the industry has had to dip deeply into its operating margins and reserves. Disregarding this cost-price squeeze on the industry, increased taxation was imposed in the year, reducing greatly the resources of the industry. I should express a note of warning that another year or two of this type of operations would surely ruin the economic foundations of the industry and enfeeble it to a degree that it may not be able to meet the demands of production expected of it. I say so with all the greater emphasis, knowing that it is the Government's desire to strengthen the sinews of industry to the utmost, to enable it to play its necessary part in the development of the country's resources, and what has happened has been somewhat in spite of the Government's wishes.

"Mention must be made of the spectre of inflation that has been with us throughout the past year when compared to 1956 and 1955, even though there has been some downward adjustment in the latter part of the year. More, it bids to be with us indefinitely, if we do not make a determined bid to get rid of it. Over a year ago, the Prime Minister had warned that increased food production was pivotal to the entire Plan, and that there must be a near 40 per cent. increase in food output, if the Plan was not to be endangered. Sir, the real core of the Plan is not steel or transport, but food. I should be pardoned for saying that in this matter, the Government needs to make a critical reappraisal of the country's organisation, efforts and results, and without fear or favour make such shifts urgently as are needed. If food production is not increased and food prices not brought lower, it is no use hoping to meet the threat of inflation. Food accounts for no less than 60 per cent. of consumer expenditure, and even a slight rise in food prices affects greatly the consumer cost of living index all along the line. The food price-line, sir, has not only to be held but surely to be brought down.

Production

"The momentum of industrial production was not only maintained during 1957; it also acquired greater substance and speed. The general index of industrial production, which stood at 133 in 1956, rose to 149 in the first nine months of the year. Considering the strain, in view of the need to conserve foreign exchange resources, it is creditable that there was no diminution in the output of even those industries which depend on imported raw materials and components. An impressive range of new articles were manufactured for the first time during the year, such as sewing machine needles, hypodermic needles, automobile ancillaries like clutch and brake assemblies, synthetic detergents, raw materials for plastics, etc. Production increases in the chemical and pharmaceutical industries have more than kept pace with the performance in other sectors of the industry. The production of caustic soda, soda ash, sulphuric acid, superphosphate, chlorine, D.D.T., penicillin, pharmaceuticals, dyestuffs, etc., was all round higher. I should not burden you with the production statistics, as we are all familiar with them by now. Despite these impressive increases, there is considerable scope still for improving the utilisation percentage of the country's installed manufacturing capacity. For some unknown reason we continue to assess the capacity of the industry on the basis of 300/330 working days a year. Sir, in the chemical industry our target should be an effective utilisation of nearer 360 working days in the year. Given adequate emphasis on preventive maintenance by industry, I am confident that this is not difficult of achievement. This should give us more than a 10 per cent. boost in our output for little or no additional foreign exchange requirements.

"While on the subject of production, I should refer to the industries licencing policy of the Government. Instances have been brought to us, where applications for such items as chloroform, chloral-hydrate, aspirin, sodium salicylate, methyl salicylate, P.A.S., D.D.S., and gamapicoline have been disallowed on the ground that similar projects were under consideration for the public sector. Sir, we presume that the Government are interested now in putting their resources and energies into only those projects where initiative or finance is not forthcoming from the private sector. We place the case for the sanction of these small projects for your consideration.

"Supplies of the products of the chemical and pharmaceutical industry to the D.G.S. & D. form no mean part of the industry's production. We should not hesitate to place before you that, in spite of best efforts on all sides, dealing with the D.G.S. & D. continues to be on the whole a frustrating business, whether it is in the matter of testing of samples, or getting the goods approved, or receiving first and final payments. So long as this department will not change its basic approach and place its transactions on a normal commercial basis, and not deal with suppliers from a position of strength, no improvement could really be expected. It is easier to make supplies to scores of other parties, including the Government-controlled industrial companies, as they deal in a commercial manner, but not so with the D.G.S. & D. with whom time and money of the supplier are of no value. We have to suggest that purchases by the D.G.S. & D. should be made by specifications and not by 'brands,' that in all cases no less than 98 per cent. advance payment can be made by them, as the average rejection percentage could not be as much as 2 per cent., and that inspection at the works site would be of great assistance to both the suppliers and the indentors. Furthermore, the liability of the suppliers for the goods supplied should cease once the goods which have been approved are put on rail. Under the present rules, the contractor remains liable even for pilferages in transit.

"Easing of the problems of the pharmaceutical industry, arising out of the drugs and connected rules, would go a long way towards facilitating production. A complete uniformity in the enforcement of the Drugs Act in all the States is called for, and the Union Government should see that no State makes any local variations in matters connected with these Acts and rules. We believe that, at least in matters pertaining to industrial development, the country could be considered as one centrally administered unit, and that Industries and Excise Departments of the States would not attempt to consider themselves as law unto themselves.

"A special reference to the slow development of production in the superphosphate industry is called for, as there is a real danger of a great shortfall in the production of this industry against the targets of the second Plan. A production target for superphosphate of over 7 lakh tons in the remaining three years of the Plan period is to be reached, as against the current annual rate of production of over 1 lakh tons only. I had highlighted this problem last year also, stating that if the Plan target is to remain, not only a target, as was the case in the first Plan, a directed and purposive effort cannot be avoided. Production of superphosphate is dependent exclusively on its consumption. It is unfortunate that nitrogenous fertilisers are still considered a cure-all for our agricultural problems. Whereas almost without exception, the ratio of nitrogen to P_2O_5 used in other countries is 100 : 115, in India it is 100 : 30. Developing an effective system of subsidy as in the U.K., readjustment of railway freights on the same levels as for manures, and more liberal granting of *taqavi* loans are some of the measures which will prove of use in attaining the targets of production of superphosphates.

"Increase of superphosphate production acquires an infinitely greater significance in today's context of foreign exchange shortage. Imported nitrogen could be replaced by indigenously produced superphosphates in many areas, without affecting food production adversely, saving the drain on foreign exchange. A memorandum has been submitted in this matter to the Prime Minister by the Fertiliser Association of India, which could be usefully followed up in your Ministry.

Capital Requirements and Resources

"A reference has been made earlier to the cost-price squeeze and increased taxation which have reduced greatly the none too generous resources of the chemical industry. Chemical industries, sir, are capital-intensive.

"The initial gross fixed capital requirement per worker in the chemical industry works out to more than six times as high as the requirement for all the industries covered by the Census of Manufactures, i.e., Rs. 19,700 as against Rs. 3,200. Contrary to popular impression, the working capital requirements are also high in the chemical industries, the average for all the Census industries in 1954 being Rs. 2,800 per worker, as against Rs. 7,000 for the chemical industries. The second Plan targets call for a spurt in investment in the chemical industries from Rs. 26 crores in the first Plan to Rs. 132 crores in the second Plan period. And a serious problem of finance availability arises. Chemical industries earned only 3 per cent. after paying taxes on their net worth during the period 1951-55 as against an overall corporate figure of 7.9 per cent. When compared with other capital-intensive industries like steel, paper,

(*Continued on page* 251)

JAPAN MAKES A BOLD BID FOR SHARE IN MIDDLE EAST OIL BUSINESS

TERMS OF AGREEMENT WITH SAUDI ARABIA ANALYSED

[Recently, certain Japanese interests concluded an agreement with the Government of Saudi Arabia for exploring and producing oil in the offshore area over which Saudi Arabia has control. This is a daring venture on the part of Japan, in a region which has hitherto been the monopoly of British and American oil interests. The terms of the agreement are discussed in the article prepared by the **Petroleum Press Service** *and published here by special arrangement with it. The views expressed therein are those of the* **P.P.S.** *and not ours.—*Ed.]

NEGOTIATIONS have now been concluded between a Japanese company, the Japan Petroleum Company, and the Saudi Arabian Government for an oil concession in the offshore area beyond territorial waters of the Neutral Zone, over the whole of which the ruler of Saudi Arabia and the ruler of Kuwait have each an undivided half-interest. For practical purposes, it is necessary that the ruler of Kuwait should grant rights over his undivided half-interest before the agreement can become operable. The Japanese wish to conclude an agreement with Kuwait, but, meanwhile, other oil concerns, including Shell and the U.S. concern, Hunt International, are also negotiating with the ruler seeking a concession. The final outcome is uncertain, but the terms of the Japanese-Saudi Agreement as it stands at present reveal features which are novel and some of which suggest that the Japanese, with no experience in these matters, have been very compliant negotiators.

Briefly, the Company will be granted an exclusive exploration licence for two years, which may be extended for a further two years during which the Company must drill to a depth of at least 10,000 ft. if oil is not discovered before reaching this depth; an additional extension of six months may be made to enable promising drilling under way to be completed. On discovery of oil in commercial quantities, an exploitation lease will be granted for 40 years, and at least two rigs must then be maintained in use. An annual rental of U.S. $1½ million is payable in advance and on discovery a further total sum at the rate of $1 million a year from the effective date of the agreement until the date of discovery.

As soon as crude oil production averages 30,000 b/d over 90 days, the Company must construct within two years a refinery in Saudi Arabia, and when production averages 75,000 b/d for 90 days, it must construct within two years further refining capacity of not less than 30 per cent. of production. All possible highly priced products must be manufactured. Also a plant must be established for the manufacture of petrol-chemicals from natural gas. All excess natural gas beyond that utilised by the Company is the sole property of the Government.

Rights Under Agreement

At the third anniversary of the discovery of oil in commercial quantities and every five years thereafter, the Company shall relinquish 20 per cent. of any unexploited area to which the agreement refers. The Company may relinquish the whole agreement at any time on giving notice, of 60 days in the exploration period, and of 180 days in the exploitation period. Any dispute concerning the agreement is subject to arbitration and in default of agreement on the appointment of a referee for the arbitrators, the President of the Permanent Court of International Justice is to appoint one. The Company renounces any right of diplomatic recourse regarding any matter of rights under the agreement.

The agreement is characterised by several features meriting special remark. One is that the Company will operate as an integrated oil enterprise, and carry out production, refining, transportation and marketing, and that the Saudi Arab share of profits will extend to all these operations. But as the posting of prices at export points is envisaged in the agreement, it is apparently intended that some part of the production will be sold to third parties ex the Persian Gulf. The second feature is that, in addition to the rental payments, the Government will receive a royalty of 20 per cent. and will levy taxes, so that receipts from royalty and taxes will be equivalent to 56 per cent. of the Company's net income from all phases of operations inside and outside of Saudi Arabia, with a guaranteed minimum royalty of U.S. $2½ million a year. Payments are to be made in U.S. dollars or other currency selected by the Saudi Government. It is not known how the 56:44 division was arrived at to displace the conventional 50 : 50 division.

A third feature is that, after discovery of oil in commercial quantities, any Company to whom the concession is assigned must offer the Saudi Government for cash, shares of its capital stock to the extent of 20 per cent. of the initial and subsequent paid-up capital at issued value, which the Government may take up itself or for Saudi Arab subjects. The Government may nominate one-third of the Board of Directors. In the event of the Company acquiring a concession from the Sheikh of Kuwait, the above proportions would be halved. The management of the Company must be in Saudi Arabia and the books kept there. No rights under the agreement shall be acquired by a foreign Government or by any entity dependent on such nor may these be admitted as shareholders. (This contrasts sharply with Persia's grant to the Italian State entity AGIP.) The Company is committed to the expenses of salaries, buildings, living quarters, mosque and so forth for all guards, police, customs or quarantine officials, health department, postal services and other services which the Government may choose to appoint to the area.

Preference

Inside Saudi Arabia and the Concession Area, Saudis must be employed to a minimum of 70 per cent. of employees and labour, and outside of Saudi Arabia to 30 per cent. If not available, preference will be given to citizens of Arab States members of the Arab League, or other Arab States, and of other friendly States, in that order. In purchasing goods and materials preference must be given to the Saudi and other Arab countries and there is a prohibition against the Japanese company buying materials from countries which are unfriendly to Saudi Arabia. In case the Company's own tankers are not sufficient, preference in the hire of tankers must be given to Saudi-owned vessels.

A further feature is that the Japanese negotiators seem to have accepted, without realising their implications in practice, a number of onerous obligations which most oil companies would regard as quite unworkable and incompatible with managerial responsibility. For example, selling prices (posted prices must not be lower than other Persian Gulf prices for similar crude), must be agreed with the Saudi Government and the Government must be consulted at every stage of the whole operation, even apparently including the marketing arrangements; the number of barrels to be produced from each well or field must be the subject of consultation and all expenses and purchases of the Company must be supervised and examined by a committee composed of equal numbers of Government and Company representatives.

Only very great eagerness on the part of the Japanese private interests concerned to gain a stake somehow, somewhere in the Middle East could have led them to accept some of the foregoing conditions. On the other hand, the Saudi Arab Government is no doubt happy at the seemingly attractive terms which it has been able to extract from the Japanese group. The ultimate test of their attractiveness rests, however, on the rate of profit per ton and the volume of oil disposed of. It should be noted that the group does not include any Japanese oil concerns; it is made up of about 60 various concerns, including large consumers of oil such as steel and electricity companies and industrialists, and also banks, insurance companies and individuals.

Undoubted Promise

The undoubted promise of this part of the Persian Gulf has been enhanced by Aramco's recent discovery of a second offshore field at Manifa, 30 miles south-east of the Safaniya offshore field, which is only about 20 miles south of the frontier of the Neutral Zone to which this agreement refers. But against this must be set not only the very high cost of offshore drilling but the heavy burdens and day-to-day difficulties which the Japanese shoulder in the carrying out of this agreement. Even obtaining the dollars may not be easy. The Japanese interests can offer only very limited prospects of disposing of oil in Japan. Although consumption, now at about 11 million tons, is expected to rise sharply, arrangements are already in hand to meet this demand, including a big expansion of local refining capacity in Japan. Given the existing sharp local competition among the well-established importers and marketers, to force a way into the market could be an unremunerative business, particularly in the light of the big investments in the full range of facilities which would be required.

If this agreement were to become effective, would it lead to a review in other countries of payments under concession agreements where such revision is provided for? Not necessarily. It must first be seen if any oil is found and what profits there would be to divide. It is doubtful whether the divisible profits per ton from Japanese produced offshore oil, would, at least for some time to come, approach the present rate of profits from the onshore production in the already established areas of the Persian Gulf.

MODIFICATIONS TO U.K. THERMONUCLEAR ASSEMBLY

The Zero Energy Thermonuclear Assembly (ZETA) at Harwell, Berkshire, which has held temperatures of 5,000,000° C. for from two to five thousandths of a second, is now undergoing modifications. These are designed to boost existing temperatures—and possibly to double them by the end of the year. Among the alterations to ZETA will be additional condensers to increase the electrical discharges into the deuterium gas inside the doughnut-shaped tube. This will be a long way from the "break-even" temperatures of at least 100,000,000° C. When this is achieved, it will mean that input and output are level and any further increase of input power will produce a power "profit."

But many technical problems have still to be faced before this stage is reached, and it will be even longer before it is possible to build the first thermonuclear power station. Sir John Cockcroft put this development in the region of 20 years from now when he talked to the world Press last week.

The United Kingdom's progress in the field of thermonuclear reaction will be outlined at this year's international exhibition in Brussels, Belgium. A special exhibit organised by the Board of Trade on Britain's plan for industrial atomic power will be on show in the United Kingdom industrial pavilion. It will include a colour transparency of the Zero Energy Thermonuclear Assembly (ZETA) experimental research equipment at Harwell, Berkshire, and a text indicating the prospects (which ZETA is being used to explore) for harnessing power from the fusion of atoms of heavy hydrogen.

Viscount Chandos, Chairman of Associated Electrical Industries, which has been pursuing research similar to that done at Harwell, and a former British Cabinet Minister, said in Australia that the United Kingdom's recent advances in controlling thermonuclear power were the "most important thing that has happened in the material field since human beings have been on this planet." It was a far more important advance than the invention of the steam engine, and certainly more so than the *sputnik*. "The *sputnik*," he added, "was a wonderful achievement, but it has no practical application—and thermonuclear power has."

NEW PRODUCTS AND PROCESSES

Interconnecting Control Valves

WHERE a number of main control valves are used in the construction of pneumatically or hydraulically operated machinery the problem of providing interconnecting piping for supply and exhaust connections becomes acute, particularly where space is limited, and the pipe size is relatively large. Also, the user is faced with the necessity of expending a great deal of material and labour in providing these interconnections. A neat and economical solution can be found by grouping the control valves at a central point in such a way that these interconnections are eliminated. Baldwin Instrument Company, Ltd. have now introduced such a system, which is believed to be unique to the low pressure fluid power field. The valves, which may be fitted with manual, mechanical, electric solenoid or pilot operating mechanisms, are supplied as a multi-point "packaged unit." Any number of valves, up to a maximum of 12, can be embodied into a single unit. The supply and exhaust ports of all the valves are led into passages running the full length of the assembly, screwed connections being provided in special end pieces, which also provide facilities for mounting the assembly as a whole. Each end block contains one supply and one exhaust tapping, which are common to all valves. Tappings in each individual valve body provide fluid take off points for solenoid pilot heads, where these are used. Each main control valve is therefore an entirely independent unit from the functional point of view. This facilitates servicing and also dispenses with separate pilot supply piping. The drastic simplification which is effected may be gauged from the fact that no fewer than 15 connecting pipes are eliminated in the case of the eight-bank solenoid controlled pneumatic unit. To give an idea of the ultimate economy which can be realised by this system of construction, in the case of a 12-point double solenoid operated hydraulic unit the total number of interconnecting pipes is reduced from 84 to 2.

New Collet Saves Workshop Cost

A range of precision collets of an entirely new design—which combine the dimensional flexibility of a jaw chuck with the accuracy and high gripping power of a spring collet—is now available. They should bring substantial savings in time and money to all users of lathes and similar machine tools. Consisting of a set of 11 collets, the first range covers all diameters from ⅛ to 1½ inches in ⅛ in. variable stages. Other ranges will be introduced shortly. Each collet, known as a "Multisize Collet," has a powerful grip on a component, achieved by the action of accurately ground, wedged-shaped narrow blades which are radially spaced within the collet's tapered steel body. There are six or sometimes eight blades, depending upon the size of the collet. As an example of the collet's gripping strength and accuracy, very deep cuts can be taken on components without any risk of slip or vibration. Accuracy in machining is claimed to be within .0005 inch at four inches from the nose of the collet. Designed specifically for use with the collets is the Burnerd Collet Chuck, available in a number of different forms for mounting on various lathes and on other types of machine spindle noses. The collets and chucks are manufactured by F. Burnerd & Co., Ltd., London.

A Portable Under-reaming Tool

A portable hand-operated tool has been developed for widening (under-reaming) the bottom of a cast-in-place concrete pile at the Central Building Research Institute, Roorkee. Such piles are used with advantage in foundations for building, in black cotton soil and similar highly expansive clays. The under-reamed portion at the bottom acts as an anchor and prevents uplift of the footing when the soil swells with the increase in moisture. It also provides a greater bearing area resulting in an economy in materials. The under-reaming tool consists of simple structural steel sections. It has a central square guide rod with flats fixed at the upper end. The flats hold the cutting blades which can be widened out to the desired diameter by pressing the guide rod. When the rod is rotated, the blades also rotate. With the rotational effect of the blades the bottom of the pile hole widens out. To the lower end of the rod is fixed a cylindrical container for removing the soil cut out by the blades. The usual method of making cast-in-place concrete piles is by boring a hole of uniform diameter with a post hole auger. The under-reamer is next lowered in the hole and rotated, maintaining a uniform pressure on the handle and affecting the widening of the bottom of the hole. The desired diameter of the hole is obtained by pushing down the tool by a precalculated distance. The tool has been extensively tried at Poona, Powerkhera and Jabalpur in putting down under-reamed foundations. It can be fabricated in a light engineering workshop. Parties interested in undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, New Delhi.

Economic Engine for Locos

A highly economic engine for diesel locomotive with 50 per cent. efficiency has been developed by a group of scientists working at the Poly-technical Institute in Kharkov, U.S.S.R. This difficult task was solved in less than a year. The engine has a rated capacity of 3,000 horse-power while its per h.p. per hour fuel consumption is only 145 grams. The engine is not big and weighs 18 tons. It is claimed to be the first engine of this type where the energy of the exhaust gas from the cylinder is used to increase the engine's capacity. The surplus capacity of the gas turbine is added by means of a special device at certain operational regimes to the capacity of the crankshaft and it is this that accounts for the high efficiency achieved.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER

"EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration or damage of such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Railways Time Tables and Guide.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

INSURANCE IN MEXICO

TWENTY PER CENT. INCREASE IN LIFE BUSINESS A YEAR

ALTHOUGH insurance business in Mexico had a comparatively late start, its growth during the past two decades had been remarkable, the rate of expansion of business in recent years having been almost three times that of the national economy. The experience of Mexico shows, how the policy of leaving insurance, life as well as non-life, in private hands, with the Government exercising only regulatory powers, is conducive to a rapid expansion of business. This policy, while giving ample scope for private insurers to show initiative and enterprise in promoting business, has also enabled the channeling of a large proportion of the funds of the companies to socially beneficial and productive investments.

Predominance of Foreign Companies

Until very recently, foreign companies had a virtual monopoly of insurance business in Mexico. In 1900, for instance, only a single Mexican company operated in the field. In the next ten years four more companies entered the field. At the same time, foreign companies and agencies numbered as many as 40. This situation was the result of the comparatively small size of the national savings in Mexico, as well as the Government's policy which, apart from being at times excessively lenient to foreign companies, was largely indifferent to the matter of attracting national enterprise and capital to the insurance sector. Although the Code of Commerce of 1889 initiated Governmental regulation of insurance, it was not until 1910 that exclusive legislation on insurance was introduced. The enactment of 1910 is an important landmark in the history of insurance in Mexico. Still, it fell far short of an overall legislative structure on the basis of which to organise a national insurance system. In 1925-26, when the civil strife in the country came to a close, a general reform of the banking system was introduced and, simultaneously, an insurance law, embodying many regulatory provisions, was passed.

In 1935, a new law on insurance institutions was introduced. This law, while arousing dissatisfaction among foreign companies operating in Mexico, opened up new fields for the indigenous companies. From that year, the development of insurance companies and their influence on the capital market and the general economy of Mexico has been steadily increasing. Among the factors which contributed to the growth of insurance, particular mention may be made of the greatly enhanced confidence of the public in the national companies and the introduction by the latter of more attractive insurance plans. The expansion was also aided by the rapid recovery of the Mexican economy and the reorganisation of the credit system.

As a large number of persons are interested in the functioning of life insurance companies and huge sums of money are at their disposal, the Government has thought it necessary to intervene more decisively in the operations of the companies. The intervention is generally directed towards the conservation and protection of the funds of policyholders, vigilance over the organisation and operation of the companies, regulation of investments and securing of a growing contribution of insurance funds for national development. The Mexican Government would appear to have greatly succeeded in getting the companies to invest in Government securities. On 31st December 1956, according to Mr. Rafael Mancera, Sub-Secretary of Finance, Government of Mexico, the total value of Federal Government securities held by insurance institutions aggregated 72 million pesos, while another 322 million pesos worth of securities issued by the national credit institutions were also held by them. The Mexican Government realises that, for the development of the country, indigenous capital must support the nation's industry and agriculture. Insurance is recognised as having an important part to play in this respect, constituting as it does a financial mechanism by which the savings of the community are channeled to productive investments.

The pace of growth of insurance companies in Mexico could be gauged from the fact that on 31st December 1956, their 'technical' reserves aggregated 1.274 million pesos and their total assets were of the magnitude of 2,109 million pesos. The corresponding figures in 1950 were 523 million pesos and 765 million pesos respectively, 224 million pesos and 328 million pesos in 1945, and 83 million pesos and 119 million pesos in 1945. Insurance companies in Mexico constitute a constantly increasing source of demand for securities issued by the Federal Government and the national credit institutions.

Investment in Government Securities

Mexican legislation in respect of insurance aims at securing an increasing contribution of the investible funds of the companies to State investments. An amendment to the General Law of Insurance Institutions, effected in 1956, lays down that insurance companies should invest 5 per cent. of their technical reserves in bonds for housing projects issued by the national credit institutions. Besides, they have to keep an additional 5 per cent. invested in popular housing projects meant for lease. These are in addition to the requirement that 25 per cent. of the reserves should be invested in securities issued by the Federal Government or national credit institutions thus making a total of 35 per cent. compulsory investment in securities of public interest.

The Mexican Government gives all possible encouragement to the companies to expand the scale of their operations and strengthen their financial bases. As a result of this, the expansion of insurance business, as pointed out earlier, surpassed the rate of increase of the Mexican economy as a whole. Thus, while the national production in recent years increased by only 8 per cent. per annum, life insurance increased at the rate of 20 per cent. Premiums went up from 380 million pesos in 1951 to almost 800 million pesos in 1956. Total investments more than doubled from 850 million pesos in 1951 to 1,720 million pesos in 1956.

EXPORT RISK INSURANCE

Export risk insurance business in the U.K. reached a new record last year when goods declared as shipped under the export credit guarantee scheme reached a peak level of £485.4 million, as against £409.4 million in 1956, representing an expansion of 20 per cent. This compares with 6.5 per cent. increase in 1956. It is expected that, in 1958, the Export Credit Guarantee Department will be able to cover a larger volume of exports.

The rate of expansion in certain types of business was very much higher than the overall increase. For instance, medium-term business, which relates largely to capital goods and equipment sold abroad on credit terms up to five years, doubled in 1957. Deliveries of some of these goods will start only this year and this is expected to be reflected in an overall rise in the proportion of exports covered by credit guarantees to the total exports. In order to compete effectively with other exporting countries, the U.K. manufacturers are finding it increasingly necessary to give longer term credit to overseas buyers. Owing to the rising volume of business on longer credit terms, the amount outstanding to individual firms with substantial overseas orders has risen considerably.

New medium-term transactions put through in 1957 aggregated a record £156.6 million, as compared with £77.5 million in 1956 and £42.3 million in 1955. The number of short-term policies, with a duration generally of upto six months, current at the end of 1957, increased from 4,112 at the end of 1956 to 4,326, although their face value declined from £546.6 million to £518.6 million.

INSURANCE ORDINANCE IN PAKISTAN

An ordinance issued by the Government of Pakistan on 22nd January prohibits Pakistanis from placing insurance and any facultative reinsurance abroad without prior permission of the Controller of Insurance. The object of the ban is stated to be to conserve foreign exchange. The ordinance also empowers the Controller to control and regulate rates of premia charged on different classes of risks which is regarded as having become unrealistic with the passage of time. The system of collection of premium is also sought to be rationalised. According to a Press note issued by the Government, a provision has been made that no insurer shall undertake risks until premium in respect thereof is received or is guaranteed to be paid within a fixed period.

The Press note adds: "Insurance business in Pakistan has made marked progress since independence. The number of local companies has grown from seven in 1948 to 19 in 1956. The total assets of local companies and assets in Pakistan of foreign companies have also increased from Rs. 4.4 crores and Rs. 1.5 crores in 1948 to Rs. 20.5 crores and Rs. 9.4 crores, respectively, in 1956. While the (insurance) industry has shown signs of progress and growth Government had for some time past considered measures to curb malpractices that have crept into the industry.

The present ordinance was issued, it is stated, only after consultations with insurance companies and in pursuance of the recommendations of the Committee appointed in May 1957 to go into the premium rate structure and working of insurance agencies.

LIFE ASSURANCE BUSINESS IN BRITAIN

Preliminary figures issued by the British Life Offices' Association show that the new ordinary life sums assured by the life offices of the U.K. in 1957 amounted to £1,330 million, as compared with £1,190 million in 1956. This represents an increase of nearly 12 per cent., as against 11 per cent. in 1956 and 14 per cent. in 1955. Industrial life assurance (home-service) also reached a fresh peak, new sums assured so far notified having risen by £27 million to £330. The overseas contribution, which represents about 15 per cent. of new sums assured, has been fully maintained. These are global figures, but last year's rise in ordinary life sums assured would appear to owe more to individual contracts than to new group life cover.

STRENGTH AND STABILITY

STRENGTH AND STABILITY have made CHAMUNDI Cement the choice of leading Engineers and Contractors. Chamundi Cement has proved its unfailing service.

NEW PUBLICATIONS

Economic and Commercial Conditions in Burma. Prepared by the British Embassy in Rangoon. Published by H.M. Stationery Office, Kingsway, London, W.C. 2. Pages: 65. Price: 4s. 7½d.

THE book under review is a new volume in the series of overseas economic surveys published by H.M. Stationery Office, London. It reviews Burma's economic progress in the tenth year of independence and points the way to opportunities that still exist in this traditional market for British goods, despite its current complications. A comparison of the figures for the last four years shows that 1954, when the development programme got under way and before the foreign exchange savings had been used up, was the best post-war year for United Kingdom exports. Thereafter the effect of import controls in Burma has been increasingly felt, and has involved serious reductions in Burma's imports of hardware and the virtual cessation of private imports of motor vehicles from the United Kingdom. In fact, the total is only maintained at a respectable level by the needs of the development programme for machinery of various kinds, by the requirements of the armed services, and by the fact that drugs and chemicals and a few other items are still on open general licence.

Burma's is not yet a planned economy. It is, however, a country to which planning is being applied with much determination. Though hampered in various degrees by the foreign exchange shortage in 1955 many of the projects provided for in a succession of economic plans since independence have been completed. In the industrial field, schemes in the course of consideration include the development of an industrial area on the Hlaing River near Rangoon, and the construction of a saw mill to produce lumber for a furniture factory and joinery. Many other development projects are envisaged, although they cannot progress until more funds are available.

The survey deals at length with Burma's power resources, transport and communications without which industrialisation could not be achieved. It points out that Burma's communications and electrical plant were constructed under British guidance and with equipment made to British standards. Manufacturers from the United Kingdom start, therefore, with an initial advantage in bidding for the supply of goods under all sections of the communications programme, though for the present they face competition from goods that can be supplied from Japan under the reparations agreement at no cost to Burma or goods from "barter countries" supplied in exchange for Burmese rice.

The Eastern Economist Annual Number 1957. Editor: E. P. W. da'Costa. 52, Queensway, New Delhi. Price: Rs. 7.50.

The theme chosen in the above Number, namely, "India and China," is, indeed, quite interesting. It is a comparative economic assessment of the progress made by the two biggest countries in the world under entirely different political systems. Efforts would appear to have been made to present an objective review. The conclusion arrived at is that India has been true to its traditions in choosing its own forms of political and social thought, while China has been militant from almost the earliest times. A choice in favour of the Chinese form, the journal says, will be a denial of our past and "we would have injured ourselves morally had we chosen the Chinese way." Besides this study, the Annual Number also contains a blue supplement on the Indian economy in 1957. In the course of an editorial, *The Eastern Economist* takes a bearish, though by no means an alarmist, view of the present process of consolidation, with funds from banks heavily employed in industry. In its view, it is essential that there should be prudence and caution in both the public and private sectors and expressions of bravado or excessive optimism should be avoided.

"Capital"—Annual Review of Trade, Commerce and Industry. Editor: Mr. George Barrell. Capital (Private) Ltd., 5 Mission Road, Calcutta. Price: Rs. 5.

There are in this Number 33 interesting articles on several important economic subjects written by experts. One of the prominent contributors is Mrs. Ursula K. Hicks, who has outlined the principles on which the tax system should be based in an underdeveloped country. The author has sought to emphasise the fact that the tax system must combine in appropriate proportions the twin functions of revenue-raising and growth-stimulating. The position of foreign enterprise in the Indian tax structure has been explained in a rather long article by Mr. A. K. Roy, Secretary to the Union Ministry of Finance (Department of Revenue). Although the analysis is quite exhaustive and interesting, it is somewhat difficult to agree with the conclusion of Mr. Roy that the taxation of foreign firms is not as high or as inequitous as is sometimes made to appear. The progress made in the implementation of steel projects has been reviewed by Mr. S. Bhoothalingam. Mr. B. K. Nehru has analysed the causes for the fall in the foreign exchange reserves. The subjects covered by other articles include insurance, balance of payments, industrial finance, agriculture, jute, tea, cotton and coal industries, road and railway transport, etc.

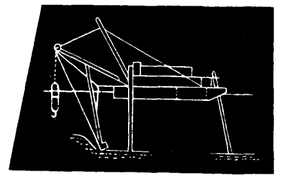
Indian Finance Annual and Yearbook 1957. Editor: C. Swaminatha Rangaswamy, Jr. 116, Lower Circular Road, Calcutta. Price: Rs. 10.

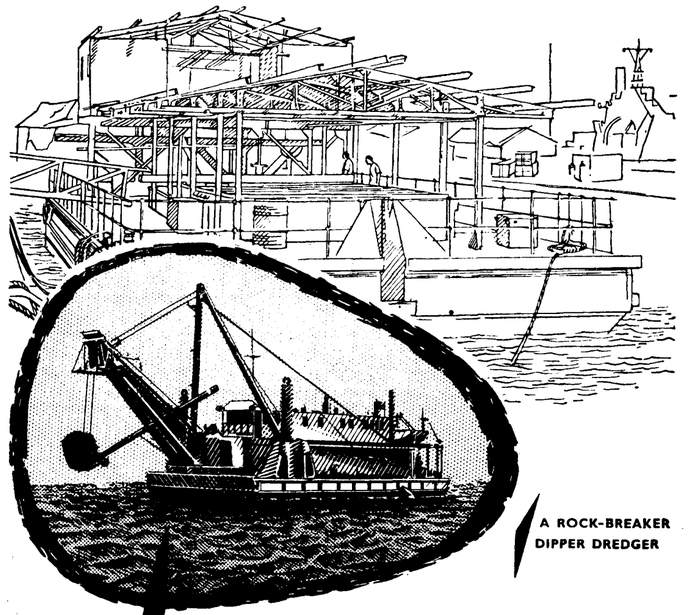
The recent developments in the different sectors of the Indian economy have been lucidly surveyed in several articles contributed to the *Indian Finance Annual and Yearbook* 1957. Particular mention must be made of three articles—"Private sector Ahead of Schedule" by Mr. G. L. Bansal; "Inflationary Threat in a Developing Economy" by Dr. D. Bright Singh and "Typical Taxpayer: Man in the Street" by Mr. K. V. Iyer. The problems pertaining to some of the leading industries, transport, agriculture and insurance have all been discussed adequately. There are two editorials—one on the need for courage and self-reliance and the other on foreign trade outlook. A special feature of the *Annual and Yearbook* is the inclusion of a section devoted to industrial profiles on individual companies such as National Carbon, Standard Batteries, Godrej and Texmaco.

Canada, 1957. An Official Handbook. Information Services Division, Dominion Bureau of Statistics, Ottawa. Price: $1. Pages: 317.

This neatly got-up handbook is a veritable mine of information about Canada, systematically arranged and attractively presented. Within the short compass of 317 pages, the publication offers the reader a snapshot of present-day Canada, set in statistical background and illuminated with excellent pictorial illustrations of the economic, social and cultural development of the country. Even a very casual perusal of the publication will impress the reader with the many-sided progress of Canada, its richly endowed resources, its dynamic economy and its democratic institutions and cultural achievements. It is a model of what a good handbook ought to be.

MAZAGON DOCK
helps to expand
INDIA'S PORT FACILITIES!





A ROCK-BREAKER DIPPER DREDGER

The shipbuilding and engineering experience of Mazagon Dock, famous for many years, is playing a vital part in the expansion plans of Indian ports. Several new vessels including dredgers, tugs and fire floats, now under construction at Mazagon Dock, will help further increase the facilities at Indian ports.

ASSOCIATED CEMENT COMPANIES LIMITED

TWENTY-FIRST ANNUAL GENERAL MEETING

CHAIRMAN, SHRI DHARAMSEY M. KHATAU'S PLEA FOR AN INCREASE IN CEMENT PRICE

SPEAKING at the Twenty-first Annual General Meeting of the Associated Cement Companies, Limited, the Chairman, Shri Dharamsey M. Khatau, observed that he did not propose to comment upon major developments during the year in the economic and industrial field. There were many subjects demanding urgent attention, he continued, "but the fact is that so much has been said by so many with such little effect upon the course of events, that it seems pointless to take up your time by adding to the impressive volume of constructive criticism on current affairs already available to those who care to listen."

Deficit Finance

Saying that he would, therefore, content himself with making one or two observations concerning deficit financing, Shri Khatau remarked: "The quality of deficit financing, unlike that of mercy which Shakespeare so lauded, is exceedingly strained, for it blesseth neither him that gives nor him that takes. That is to say, both the public as well as the Government ...are ultimately the sufferers, because deficit finance soon overreaches itself, as has already happened in this country. The most disquieting feature of our approach to deficit financing just at present is that while Government appear to have recognised its dangers, judging by the recent speeches of their leading spokesmen, there is still no evidence of the impact of this recognition either upon the assessment of the resources for the second Five-year Plan or, consequently, upon the magnitude of the Plan. The estimates of proceeds from taxation, from current surpluses of Central and State Governments, and from net borrowings whether by the issue of public loans or from small savings, continue to be overoptimistic with the result that (i) the projected Plan expenditure continues to be maintained at a level unattainable in terms of available resources; and (ii) the erroneous belief persists that, even at that level of expenditure, deficit financing will somehow be successfully kept at a low level. The truth is that the expected volume of funds is quite unlikely to materialise from the sources indicated, with the consequence that if the Plan expenditure is maintained so high as is still contemplated, a vast magnitude of deficit finance, with all that it entails in terms of overinvestment, runaway inflation, rising prices (especially agricultural and raw materials prices) etc., is inescapable." In these circumstances, the Chairman hoped that in the next budget there would be evidence of sober and conservative appraisement of external and internal resources on the one hand, and a grimly realistic rephasing of Plan expenditure, on the other, such as would minimise our reliance on deficit finance.

Production and Profits

Turning to the affairs of the Company, Shri Khatau observed that "the year under review had been one of mixed fortune: of distinct achievement, yet of poor reward." Though the Company produced and sold 250,000 tons more cement than in the previous year, paradoxically enough, there had been a slump in the Company's profits, owing to a sharp rise in the manufacturing costs due to factors outside the Company's control such as higher cost of coal, enhanced railway freights and terminal charges, higher cost of stores and spares, etc. Other adverse factors were a higher wage bill and an increased charge for depreciation. Further, the heavy incidence of taxation resulting from the increase in the rates of income-tax and corporation tax, and the imposition of the wealth tax had left very much lower profits to the Company.

Tariff Commission

Continuing, Shri Khatau said that the industry could not continue to operate and expand under those conditions and that Government had, therefore, directed the Tariff Commission to examine the cost of production of cement and determine anew a fair price to be paid to cement manufacturers. The A.C.C. had placed its case fully before the Commission for an increase in price, and hoped that Government would sanction such an enhanced price as would cover the rising costs of production and also to enable it not only to plough back a reasonable portion of profits for rehabilitation and modernisation but also to finance its expansion programme under the second Five-year Plan.

The Chairman pointed out that the increase in price asked for need not necessarily involve any increase in the present price of cement to the consumer f.o.r. destination. "Indeed," he added, "I would go so far as to say that it must not be so, both in the interests of the consumer and of the industry. As you know, we have to sell our entire output to the State Trading Corporation at Rs. 54.50 per ton f.o.r. works for neat (unpacked) cement, *plus* Rs. 1.50 for selling expenses, *plus* a packing charge which varies every quarter depending on the price of gunny bags and presently stands at Rs. 13.64 per ton. This makes a total of Rs. 69.64 per ton. But the State Trading Corporation sells the cement to the consumer at the controlled price of Rs. 117.50 f.o.r. destination. Allowing for the average incidence of railway freight from works to destination at a little over Rs. 15 per ton, and Rs. 20 per ton for excise duty, the State Trading Corporation is left with a net profit of about Rs. 12.50 per ton. As there is likely to be practically no further substantial import of cement which the State Trading Corporation would be required to subsidise so as to sell such imports at an equalised price, and as the losses on such small imports as may still have to come in to fulfil existing commitments will be only a fraction of the enormous profit which the State Trading Corporation has already amassed, there is no reason at all why the State Trading Corporation should any longer make any profit from cement. Furthermore, the present excise duty of Rs. 20 per ton includes the increase of Rs. 15 per ton imposed in May 1957, with a view to inhibiting the demand for cement. Thus, the present price of cement to the consumer includes two inflationary elements: a profit of Rs. 12.50 per ton for the State Trading Corporation and the enhancement in excise duty at Rs. 15 per ton. If now simultaneously with the refixation of the cement price for the producers, this 'loading' of Rs. 27.50 per ton already imposed on the consumer is taken off, there will, I may assure you, be no need to increase any further the present price of cement to the consumer."

Expansion

Shri Khatau then reported that the various expansion projects that the A.C.C. had in hand had made satisfactory progress. The extensions planned at the Kistna Cement Works had been completed, but the additional capacity could not be fully utilised during the year owing to transport difficulties in respect of raw materials. The extension work at Sindri and Chaibasa had also made good progress. He revealed that a flotation plant was to be installed at Chaibasa to enable the use of low-grade limestone. The extensions at Kymore and Shahabad were also well under way.

New Plants

The Chairman informed the shareholders that the A.C.C's new factory at Mancherial, which is to use the dry process of manufacture, would begin production in September 1958. He also announced that the Mancherial plant would be duplicated in preference to the immediate construction of a new factory at Porbandar, which would be taken in hand again, later.

Firebricks

Shri Khatau reported that the Katni Firebricks Factory, working at full capacity, not only met all the requirements of the A.C.C. but was in a position to sell some 7,000 tons of refractories to steel plants, other cement concerns and to any industrial undertaking using heat-resistant firebricks.

Silvicrete

The A.C.C's white cement—produced at Porbandar and marketed under the trade name of *Silvicrete*—was becoming increasingly popular.

Collieries

Raisings from the Company's two collieries at Nowrozabad and Kotma had been fairly satisfactory and certain new schemes to increase their output had been sanctioned.

Technical Training Institute

The Chairman continued: "The building, equipping and staffing of the Company's Technical Training Institute at Kymore was completed during the year and the first batch of 75 apprentices is now undergoing training.... Intended primarily for the sons and relatives of the Company's employees, the Institute offers the best available training in India for our purpose, and most of the trained technicians will, in due course, form part of the specially trained skilled personnel of our cement works.... The curriculum also aims at turning out good citizens and, I think, the Company may well regard the Institute with justifiable pride."

Finance for Expansion Projects

Speaking about the enormous capital outlay entailed by the Company's various projects of modernisation and expansion, Shri Khatau stated that the Company's requirements of working capital had increased appreciably, and would increase still further in the next few years with the increasing tempo of production. The funds that the Company had already raised, whether from internal resources or by borrowing or by offering large issue of equity capital, were totally inadequate for the purpose.

"Your Board has, therefore, decided," he said, "subject to the sanction of the Controller of Capital Issues, to make a further issue of debentures of Rs. 5 crores on suitable terms and at the proper time during the course of this year. The proceeds of this issue will, however, be utilised partly for our investment in the heavy engineering project which we may set up in collaboration with Messrs. Vickers Ltd. and Babcock & Wilcox Ltd., to which I made reference last year, and partly for our substantially increased working capital requirements in the context of our steadily increasing production. A part of the proceeds may also be used for our immediate needs of the expansion programme.

"Even so, the funds at our disposal including the proceeds of the proposed debenture issue and the further internal resources which will accrue over the next few years, will still remain insufficient to meet the heavy capital outlay implicit in our major expansion effort. Your Company has, therefore, represented to the Tariff Commission the urgent need for the grant of an adequate expansion allowance in addition to a rehabilitation allowance in the new price of cement to be fixed in the near future. I earnestly trust that this request will meet a sympathetic if not a generous response, both from the Tariff Commission and from Government, because it is quite plain that without such an allowance we shall be compelled to abandon many of the expansion plans and projects we have in view, for the simple reason that no further funds would be available from internal or external sources to finance them."

Austerity

Referring to the slowing down of the tempo of work on the Company's expansion projects as a result of the uncertainty of financial resources and difficulties in obtaining foreign exchange, the Chairman mentioned that a good deal of capital had been locked up in the form of large quantities of equipment and stores including steel. The liquidation of these was receiving priority attention and an 'austerity' drive had been launched "not only to abandon, postpone or prune the purchase of stores but also to minimise all other forms of expenditure."

Pakistan

The Chairman stated that the Company's two factories in Pakistan were operating satisfactorily, but that the return earned by the Company in Pakistan was very poor. The prices of coal, stores and other materials had sharply risen in that country, and the price increase sanctioned by the Pakistan Government in response to the Company's representation was altogether inadequate. In view of further increases in the cost of coal and other essential materials, the Chairman announced that the Company had again represented its case to the Pakistan Government. Shri Khatau also mentioned that the total incidence of income-tax, corporation tax and business profits tax in that country had risen from 56.25 per cent. to 62.50 per cent.

Labour-Management Relations

Turning to labour-management relations, the Chairman observed: "You will be glad to know that the improvement in our relations with our employees to which I referred with some satisfaction last year has been maintained during the year under review. Once again there were no strikes or stoppages of work to tarnish our record of round-the-clock production—a matter so vital for keeping down costs and for the fulfilment of the targets set under the second Five-year Plan. This is a sure index of growing goodwill and mutual trust, and augurs well for our future. I would like you to join me in according the full share of credit to our employees for their praiseworthy contribution to our joint endeavour.

"It was this atmosphere of harmonious industrial relations that encouraged us to initiate talks with our workers' representatives, with a view to reaching, if possible, a long-term agreement on an all-works basis. In the course of these negotiations it came to be appreciated, however, that one overall agreement, covering the variety of conditions at all our works, was difficult to achieve and that the purpose in view would perhaps be best served by negotiating individual unit-wise settlements.

"It gives me great pleasure to be able to report that after patient negotiations, we have now reached such three-year agreements with our workers' unions at six of our factories.

"The agreements include such important matters as wage grades, dearness allowance, house-rent allowance and leave facilities. Negotiations at some of the other works are still in progress, and I hope the day is not too distant when relations between labour and management at all A.C.C. works will be regulated by similar settlements.

"To my mind the signing of these six settlements is one of the most significant events within the A.C.C., because the spirit which has brought forth these agreements should certainly lead to better industrial relations in the coming years and consequently to greater prosperity for the Company and, in the same measure, for those who work in it."

Shares for Employees

The Chairman stated that 12,202 shares out of the new issue of 635,928 shares had remained unapplied for by the shareholders as at 31st October 1957. The Board had, therefore, decided to offer these 12,202 shares to the permanent employees of the Company at the face value of Rs. 100 *plus* the premium of Rs. 20 per share, and the consent of the Controller of Capital Issues had been obtained. Shri Khatau expressed the hope that this would not only enable the Company's employees to make a valuable investment but would also give them a greater stake in the prosperity of the Company. The Chairman added that the offer of shares would have to be confined to the Company's employees in India and would not be made to employees in Pakistan, because the State Bank of Pakistan had declined to grant necessary permission.

Bonus and Appreciation

The Chairman announced that the Board had decided to pay a bonus to all the employees in appreciation of their excellent work: to those employees drawing up to Rs. 1,000 per month by way of basic earnings a bonus equivalent to one-fourth of their basic earnings during the year; to those drawing over Rs. 1,000 a bonus equivalent to one-fifth of their basic earnings during the year. The Chairman concluded by recording the Company's warm appreciation of the wholehearted co-operation and sustained hard work put in by all members of the Company's staff during the year.

NOTE: *This does not purport to be a report of the proceedings of the Annual General Meeting which will be sent separately to shareholders on request.*

"I know the answer!"

Of course, he does—he knows that the paper for his books is made at the Titaghur Paper Mills.

ROLE OF TOBACCO IN INDIA'S ECONOMY

QUALITY MUST BE IMPROVED AND PRICES REDUCED

SEVERAL important decisions designed to improve the value of tobacco as a cash crop were taken by the Indian Central Tobacco Committee at its annual meeting held in Calcutta last week. The State Governments, for instance, were asked to enact legislation, on the lines similar to that in Madras and the Punjab, compelling the tobacco growers to take measures to control the root parasite, orobanche. Further, the Committee extended the period of operation of the scheme for improving indigenous tobacco in Uttar Pradesh, as well as the scheme for carrying out wrapper tobacco trials for high altitude at Vedasandur in Madras State. It also sanctioned four research schemes, (1) for evolving improved varieties of tobacco and better methods of cultivation in Kerala, (2) for undertaking research in the Vidarbha region of Bombay State, (3) for studying embryology and anatomy of tobacco in Andhra University, and (4) for supplying tobacco seedlings of improved strains to growers. Another decision of the Committee related to the upward revision in subsidy given to tobacco co-operative societies, from 50 to 70 per cent. of the recurring expenditure on the establishment of societies for a period of two years. A sub-committee was set up to undertake both the achievement audit of the research stations and the achievement-*cum*-efficiency audit of the Central schemes on tobacco research.

The aforesaid brief account will clearly bring out the importance attached to the need for improving quality. This is only as it should be. The problem facing tobacco cultivation in India is not so much of expansion of production as improvement in quality. Owing to unfavourable weather conditions in recent years, a large proportion of the crop turned out to be of low grade varieties and it was found difficult to sell it. This resulted in the accumulation of stocks and the consequent fall in prices. The Planning Commission has, therefore, done well in according the highest priority to the improvement in quality under the second Five-year Plan and an increase in output as such is not envisaged. The production target for tobacco to be reached in 1960-61 is fixed at 560 million lbs., same as the estimated production in 1955-56.

Target More Than Fulfilled

It is significant that the Plan target has already been more than fulfilled, the actual output of tobacco in 1956-57 being about 687 million lbs., as against 580 million lbs. in the previous year. The rise of as much as 107 million lbs. in production has been due partly to the increase in acreage and partly to the improvement in per-acre yield. The total area devoted to tobacco in 1956-57 was 1,022,000 acres, as against 921,000 acres in 1955-56. The all-India average per-acre yield was 672 lbs., which compares very favourably with 629 lbs. Incidentally, it may be noted that India is the third largest tobacco producing country in the world, the first two being the U.S. and China. The major centre of tobacco production in India is Andhra Pradesh, which accounts for over one-third of the total, followed by Bombay, Madras and Uttar Pradesh. The table below gives the acreage and production of tobacco in the different States during 1956-57:

States	*Area* (Thousand acres)	*Production* (Thousand lbs.)
Andhra Pradesh ..	390	291,200
Bombay	246	143,360
Madras	69	85,120
Mysore	110	40,320
Uttar Pradesh	47	33,600
West Bengal	39	22,400
Bihar	39	20,160
Assam	23	15,680
Rajasthan	21	11,200
Madhya Pradesh ..	16	8,960
Orissa	11	6,720
Punjab	5	2,240
Kerala	1	2,240
Delhi	1	2,240
Himachal Pradesh ..	2	1,120
Tripura	2	1,120
All India ..	1,022	687,680

Tobacco plays a vital role in the economy of India. Tobacco growing provides means of livelihood to thousands of persons, the aggregate return to growers being of the order of Rs. 40 crores per annum. Tobacco is one of the staple earners of foreign exchange. During 1956-57, nearly Rs. 14 crores worth of tobacco (about 100 million lbs.) was exported abroad; the principal buyers were the U.K. and the Continental countries. Of late, the U.S.S.R. and China, too, have been taking interest in Indian tobacco. The important varieties exported are flue-cured and sun-cured Virginia, white burley, sun-cured *natu* (country) and *bidi* tobacco, Virginia tobacco accounting for more than 75 per cent. of the total. Apart from earning for the country precious foreign exchange, tobacco is also one of the most important sources of revenue to the Governments—Central and State. The annual proceeds of the Union excise duty on tobacco alone come to about Rs. 36 crores per annum, which represent nearly 5.4 per cent. of the total Central Government revenue receipts (1957-58 budget estimate).

Exports of Tobacco

Exports of tobacco during 1956-57, as already stated, aggregated 100 million lbs., as against 93 million lbs. in 1955-56. While this improvement is notable, there is no denying the fact that, if any further headway is to be made with exports, the competitive capacity of Indian tobacco in world markets must be enhanced through improvement in quality and reduction in price. Indian tobacco, it is said, is facing stiff competition from Rhodesian tobacco. This is one of the commodities which will be adversely affected by the European Common Market. The proposed common tariff of 30 per cent. is higher than the rate now prevailing in the Benelux countries. In 1955-56, these countries took no less than 82 per cent. of India's total exports to Common Market countries. This aspect deserves to be emphasised in the present context when the cost of tobacco production is said to be increasing and quality is tending to go down. Alluding to this point, the Export Promotion Committee observed: "Attention has to be centred on producing as much high grade tobacco as possible. Though this is not entirely within the farmers' powers, if the outlook for exports is good, he will pay better attention to methods of cultivation." The Committee accordingly commended to the attention of the Government the following five suggestions:

(1) Export of tobacco should be allowed on a consignment basis.

(2) The Government must buy or rent godowns in important foreign centres consuming tobacco such as London, Brussels, Rotterdam and Hamburg and keep available there a ready supply of seasoned Indian tobacco. The advantage of this lies in the fact that, on account of the temperate climate obtaining there, tobacco will not deteriorate as it does in India.

(3) Priority should be given for the movement of tobacco from Guntur to Kakinada and Madras during March to June every year.

(4) Pre-shipment inspection of export consignments must be made compulsory, so that complaints regarding quality, etc., are obviated.

(5) Air-conditioned godowns and fumigation facilities must be provided at the ports at reasonable rates.

All these are very pertinent suggestions which deserve to be implemented. At the same time, steps should be taken to explore new markets for Indian unmanufactured tobacco.

To revert to the annual meeting of the Indian Central Tobacco Committee. Presiding over the meeting, Dr. B. N. Uppal, Agricultural Commissioner to the Government of India, estimated the surplus of Virginia tobacco available for export at about 100 million lbs. The estimate is based on the assumption that the annual utilisation of this variety in India for the manufacture of cigarettes is 30 million lbs., as against the total production of 132 million lbs. in Andhra Pradesh in 1956-57. Dr. Uppal disclosed that the Government of India had accepted all the major recommendations of the Tobacco Expert Committee which examined the question of rationalising the rates of excise duty. One of these recommendations was that, in order to provide a uniform and stable basis of assessment, the varieties of tobacco, which by reason of their physical form, are incapable of being used in the manufacture of *bidis*, should be assessed at a lower rate.

LAC PRODUCTION

The year 1957 witnessed a market setback in the production of lac in India. The final estimate of the *katki* lac crop for the year, for instance, places the aggregate yield at 193,000 maunds, which compares very unfavourably with 501,000 maunds in 1956 and 333,000 maunds in 1955. Similarly, the production of *aghani* (*kusmi*) lac was substantially lower at 29,500 maunds, as against 64,000 maunds and 61,000 maunds in the previous two years, respectively.

The reduction in the yield of *katki* and *aghani* lac has been accounted for practically by all the States, with the exception of Assam which has reported a slight improvement in the output of *katki* lac. The following table shows the trend of output of the two kinds of lac in the different States during 1957 as compared with 1956 and 1955:

(In maunds)

	1957	1956	1955
Katki lac:			
Madhya Pradesh	97,000	155,000	159,000
Bihar	35,000	200,000	80,500
W. Bengal	4,000	76,000	17,500
Bombay	35,500	51,000	57,000
Assam	10,000	7,000	7,000
Uttar Pradesh	5,000	5,000	5,000
Orissa	1,500	2,000	2,000
Other States	5,000	5,000	5,000
Total ..	193,000	501,000	333,000
Aghani lac:			
Madhya Pradesh	17,000	20,000	22,000
Bihar	7,000	30,000	26,250
W. Bengal	500	6,000	5,750
Orissa	4,000	6,500	6,000
Other States	1,000	1,500	1,000
Total ..	29,500	64,000	61,000

It will be seen from the foregoing table that the decline in the output of lac during 1957 was particularly steep in the States of Bihar, Madhya Pradesh and W. Bengal. Owing to an acute scarcity of brood lac in the infecting season in Bihar and W. Bengal, the number of trees infected was small and, consequently, the crop was poor. The *katki* lac crop in W. Bengal and Bihar was adversely affected by intense heat in the last summer season, coupled with a long spell of drought, which led to poor carryover of infection from the last *baisakhi* crop.

Despite the appreciable fall in the production of *katki* and *aghani* lac, the prices of this commodity have suffered a recession. Spot lac (shell pure T.N.) is now quoted in the Calcutta market at Rs. 77.50 per maund, as against Rs. 105 a year before and Rs. 123 in November 1956. The downward trend in prices has been due to slackness in business with foreign countries, thanks partly to the competition from Thailand. Reflecting this competition is the drop in the export prices of Indian lac; the average price per maund of lac sold abroad during the first seven months of 1957 was about Rs. 100, as against Rs. 138 in the corresponding period of 1956. The total quantity of lac actually shipped in the above period was 427,418 maunds valued at Rs. 427.31 lakhs, the figure for the same period in 1956 being 401,639 maunds valued at Rs. 553.34 lakhs.

COCONUT INDUSTRY

Although India claims the distinction of being the second biggest producer of coconut in the world, next only to the Philippines, it continues to be in deficit to the tune of 40,000 tons in terms of coconut oil. The rate of annual output is at present 130,000 tons of oil (the actual number of nuts produced is more than 4,000 million and the area covered by plantations is 1.58 million acres), as against the estimated demand of 170,000 tons, of which the consumption in the soap industry alone accounts for 55,000 tons. The demand is expected to rise by 80,000 tons by 1960-61 as a result of the rise in population and improvement in consumption standards. The increasing demand must be met in full by augmenting domestic output, for, otherwise, the country will be forced to import coconut oil from other countries entailing heavy foreign exchange expenditure. Mr. M. V. Krishnappa, Union Deputy Minister for Agriculture, did well, therefore, to urge, in the course of his address at the twenty-fifth annual meeting of the Central Coconut Committee held at Kozhikode on 28th January, that the coconut industry should bend its energies for achieving self-sufficiency within the minimum time possible. The research laboratories, Mr. Krishnappa declared, must become the arsenals for instructing farmers on new techniques in order that millions of farmers and cultivators might wage the production battle effectively. "Research workers," to quote him, "have to have an awareness of the urgency of the situation."

It is gratifying to be told that valuable results have already been obtained from coconut research done so far and that these are being passed on to the cultivators through periodicals and pamphlets. The Governments of the coconut-growing States, according to Dr. M. S. Randhawa, President of the Committee, have been investigating cultural and manurial problems, as well as those relating to diseases affecting the tree. The Central Coconut Committee was set up in 1945 and it took over the responsibility of the Indian Council of Agricultural Research regarding coconut research schemes. It appointed two experts to report on the existing state of coconut research in various parts of the country. On the basis of the report presented to it, the Committee decided to establish two central research stations. One was set up in 1948 at Kayankulam to investigate problems relating to pests and diseases. The other was set up in 1947 at Kasaragode to tackle research problems of a fundamental character, including breeding. These research stations are wholly financed by the Committee. Three regional research stations were started in 1947 in Travancore under the joint auspices of the Committee and the State Government. Since then, regional research stations have been established on the same basis in Orissa and Andhra Pradesh. Madras, Mysore and Assam will shortly have a regional coconut research station each.

The second Five-year Plan envisages a rise of 80,000 tons in terms of coconut oil production, from 130,000 tons in 1955-56 to 210,000 tons in 1960-61. The rise is expected to be achieved through the implementation of short-term and long-term measures. The short-term programme includes the establishment of demonstration centres to propagate improved methods of cultivation and protection of crop against pests and diseases. Under the long-term programme, the area under coconut will be raised by bringing suitable waste lands, development of nurseries for distributing superior varieties of plants, etc. It is also planned to augment the yield per tree from 30 to 45 nuts.

It will be interesting to know the actual progress made in these directions during the last 22 months. The Press version of Dr. Randhawa's speech does not, however, give any clear idea of the progress. All that is gathered is that the Central Government has made available to the Committee a grant of Rs. 38 lakhs for expanding the scope of work of the research stations and that it is extending to the Governments of coconut-growing States grants for financing development schemes calculated to step up output. It is not known whether the three sub-committees constituted at the previous meeting of the Central Committee—one to suggest ways of co-ordinating research on coconuts and arecanuts, another to chalk out programmes for conducting manurial trials at the regional research stations and the third to examine the question of organisation of technological research—have completed their findings.

ARECANUT SCHEMES

A notable point which has emerged from the deliberations of the Indian Central Arecanut Committee's annual general meeting held at Kozhikode recently is that any imposition of a ceiling on arecanut gardens will not be in the larger interests of the country. Readers are aware that India is spending every year foreign exchange of about Rs. 4 crores for importing arecanut, the quantity involved being about a million maunds. The domestic production is only 2.2 million maunds, which is sufficient to meet about two-thirds of consumption requirements. The need for enhancing production cannot, therefore, be stressed too strongly. The Committee is certainly justified in asking the authorities concerned to exempt arecanut gardens from the proposed ceiling on land and to fix the rent for these gardens at a fair level, keeping in mind the heavy cost involved in cultivation. The implementation of this suggestion, as also some of the decisions taken by the Committee, will doubtless go a long way towards achieving self-sufficiency in arecanuts. The decisions cover intensification of nursery programme under the various categories of schemes sponsored by it; need for accelerating the distribution of fertilisers and affording assistance to growers to take up irrigation of arecanut gardens; setting up of co-operative marketing societies in important arecanut-growing regions of Kerala; opening of sales branches in Bombay and Madras under the Federation of Arecanut Marketing Societies of Mysore; and establishment of a central arecanut research institute having two wings—one for agriculture and the other for technology—with a combined building programme at Vittal near Mangalore.

INDO-HUNGARIAN TRADE

The three-year old trade agreement between India and Hungary—concluded on 17th June 1954—has been extended for two more years, that is, up to the end of December 1959 with some adjustments. One such adjustment is that payments in respect of commercial and other transactions will be made in Indian rupees. It is said that steps will be taken to encourage exports to Hungary of consumer goods such as cotton, woollen and silk textiles, shoes and other leather goods, spices, coffee, tea, hydrogenated oils, handicrafts, shellac, jute goods, and tobacco and tobacco manufactures. Among the other important commodities are iron ore, mica, raw goat and sheep skins, cordage and ropes, paints and lacquers, and tapioca and its products. The goods which India will import from Hungary include metals, iron and steel and manufactures thereof, cutlery, hardware, implements and instruments, electrical goods and appliances, machinery of all kinds, chemicals, drugs and medicines.

The working of the Indo-Hungarian trade agreement has so far been quite smooth, as is indicated by the improvement in the value of trade between the two countries, from just Rs. 12 lakhs in 1953-54 to Rs. 1.15 crore in 1956-57. India had an adverse balance of trade with Hungary to the tune of Rs. 17 lakhs in 1956-57 and Rs. 33 lakhs in 1955-56, in contrast to the favourable balance of Rs. 9 lakhs enjoyed during 1954-55. This must be attributed to the large imports of iron and steel, which accounted for nearly 75 per cent. of Hungarian exports to India.

It is understood that East Germany has agreed to supply during 1958 about 60,000 long tons of fertilisers worth Rs. 1.65 crore to India on the basis of rupee payments. The supply comprises 50,000 tons of ammonium sulphate and 10,000 tons of chloride of potash. The State Trading Corporation is said to be negotiating with East Germany for another 10,000 tons of fertilisers. In the meantime, there are reports that East Germany has offered to make available to India 160,000 tons of ammonium sulphate worth Rs. 3 crores on easy payments during the years 1959 and 1960.

The International Netherlands Industries Fair will be held from 18th to 27th March next. Exhibitors from 23 different countries are expected to participate. The combined exhibit of Netherlands textile mills will be twice as large as last year with 100 participants. The group building machines and building materials occupies 22,500 sq. metres and the Shipbuilding section will be three times as big as in 1957.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a *single* chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto: Agriculture—Automotive — Aviation — Beverages — Ceramics — Chemical Processing — Cosmetics, Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning — Lumber — Machinery — Mining — Packaging — Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production ... improve products ... decrease operating costs ... and increase your sales.

BOMBAY BURMAH'S EARNINGS STEADY

PROFIT ON TEA LOWER BUT TIMBER YIELDS MORE

A STEADY trend is disclosed in the trading results of the Bombay Burmah Trading Corporation Ltd. (Secretaries and Treasurers: Messrs. Wallace & Co., Bombay) for the year ended 31st May 1957. The Company's earnings for the year under review have been fully maintained at the new record level established in the previous year. The aggregate trading profit from its various branches of business amounts to Rs 151.84 lakhs. This shows practically no change from Rs. 151.81 lakhs earned in 1955-56, which represented a rise of Rs. 27.65 lakhs over the erstwhile record of Rs. 124.16 lakhs in 1954-55. This performance of the Company is encouraging, especially as the tea industry in South India, one of the main sources of the Company's revenue, was in a bad way during the year under review, owing to high cost of production and fall in tea prices. In fact, even the trading profit from tea was appreciably less and, if this is not reflected in the total trading profit, it is because of the improvement in the earnings on the timber business.

The aggregate net profit, amounting to Rs. 52.38 lakhs, compares favourably with Rs. 49.10 lakhs for 1955-56 and Rs. 43.93 lakhs for 1954-55. This improvement is not due to any saving in the provisions for taxation or depreciation. On the contrary, the transfers to both these accounts are higher. Thus, the provision for taxation has been substantially raised from Rs. 48.40 lakhs in 1955-56 to Rs. 68.87 lakhs. A break-up of this enhanced tax provision shows that foreign tax takes up Rs. 19.30 lakhs (Rs. 17.45 lakhs), agricultural tax Rs. 12.35 lakhs (Rs. 5.80 lakhs), Indian income-tax and super-tax Rs. 34.71 lakhs (Rs. 25.15 lakhs) and wealth tax Rs. 2.50 lakhs (*nil*). The figures in brackets relate to the position in the previous year. The depreciation account also has received a larger sum of Rs. 30.36 lakhs as against Rs. 28.45 lakhs a year ago. The main reasons for the net profit being higher than in the previous year are two. There has been a marked rise in other income from Rs. 14.22 lakhs to Rs. 27.77 lakhs, an increase of over Rs. 24 lakhs. This improvement was due partly to a profit of Rs. 10.36 lakhs on sale of assets, as against *nil* and partly to better receipts by way of interest aggregating Rs. 16.02 lakhs, as against Rs. 7.33 lakhs in 1955-56. The other cause for the rise in the net profit is the impressive saving in the Secretaries' and Treasurers' remuneration (subject to adjustment) which has come down from Rs. 24.66 lakhs to Rs. 9.75 lakhs. A part of these additional incomes has been offset by a good increase in establishment and other expenses.

It will be noted from the foregoing account that the improvement in net profit is due more to non-trading activities than to trading activities pure and simple. Further, the profit on sale of assets is probably a non-recurring item. The Directors are, therefore, perfectly justified in not raising the dividend and in almost doubling the transfers to reserves from Rs. 8.58 lakhs to Rs. 16.70 lakhs. This consists of Rs. 8.26 lakhs to general reserve (being the estimated amount of development rebate allowable under the Indian Income-tax Act), Rs. 4.73 lakhs to fixed property reserve, Rs. 3.50 lakhs to investment reserve and Rs. 20,750 to provision for bad and doubtful debts.

The following comparative table brings out the salient features of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 31st May			
	1957	1956	1955	1954
Trading profit on—				
Timber	1,02.42	97.06	43.75	39.09
South Indian plantations ..	39.98	44.38	68.02	45.69
Namhsan tea factory ..	4.03	6.81	7.98	6.99
Sundries	5.41	3.57	4.41	0.56
Total trading profit	1,51.84	1,51.81	1,24.16	92.33
Other income	37.29	14.22	11.11	9.57
Establishment and other expenses	27.77	15.42	22.23	38.40
Secretaries' commission ..	9.75	24.66	20.30	16.84
Depreciation	30.36	28.45	26.39	18.92
Taxation	68.87	48.40	22.42	9.82
Net profit	52.38	49.10	43.93	17.91
Reserves	16.70	8.58	5.00	..
Dividend	34.24* (32%)	30.24 (32%)	28.35 (30%)	15.12 (16%)
Preferential dividend	..	10.50	10.53	2.86
Carry forward	1.83	0.39	0.02	0.57

* On the increased capital, raised by the issue of 10,000 ordinary shares of Rs. 125 each after the close of the accounting year.

It will be seen from the table that the trading results for each of the sections have not maintained the all-round uniform progress witnessed in 1954-55. While the profit from the timber section shows a progressive rise, that from the South Indian plantations and Namhsan tea factory disclose a decline. The sundries section, however, has fared better.

The dividend is proposed to be maintained at the rate of 32 per cent. for the previous year to which level it had been raised from 30 per cent. for 1954-55. It should, however, be remembered that the year's dividend is on a higher capital, raised by 10,000 ordinary shares of Rs. 125 each, issued after the close of the Corporation's accounting year but which, in accordance with the terms of the agreement, rank for dividend for that year. It may be noted that the scheme of arrangement for the extinguishment of the special rights attaching to the 100 founder shares of Rs. 2,500 each has received the necessary approval of the High Court, the Controller of Capital Issues and the Reserve Bank of India.

The Company has trading activities mainly in India, Burma and Thailand. Referring to its business in Burma, the Directors, in their report to shareholders state that the scope of dockyard working was expanded; the repair of small craft continued and, in addition, a start was made in the design and construction of timber and steel launches and in repair work to deep sea vessels. The plant for the manufacture of concrete pipes and similar articles came into full production during the year. Sales of Caltex lubricating oils and greases continued to expand. Erection of a plant for the manufacture of asbestos-cement sheeting began towards the end of the year.

For another year in succession, the Namhsan tea factory in Burma did not yield satisfactory results. The output of made tea dropped to 742,230 lbs. from 803,763 lbs. in the previous year. Sales totalled 729,040 lbs. at an average price of K.3.08, as against K.3.18 in the preceding year. Costs stood higher at K.2.65, as against K.2.54 per lb. Weather conditions were unfavourable and green leaf supplies were limited. Hence there was an increase in costs.

In Thailand, sale of teak logs and sawn produced from timber extracted under the old leases continued and the Company's stock was disposed of during the year at satisfactory prices. All machinery in the mill was dismantled and sold. The Company's share in the Joint Timber Company, Ltd., formed in April 1957, is 26 per cent. of the equity. The proposed company for the manufacture of high grade tapioca starch in conjunction with certain American interests was registered in August 1956 in the name of Thai Tapioca Ltd., with a capital of Tes. 1 million. The Company's share in the equity is 50 per cent, and it is responsible for the management of the business in Thailand at a remuneration of 5 per cent. of the gross receipts. Further finance has been provided by the Corporation in the form of loans. The factory started operation in October 1956 and production to the end of its financial year totalled 1,535 tons. The Company incurred initial losses, after charging depreciation for a full year during its first period of working.

Production and purchases of hardwood logs at the Company's branch in Wallace Bay (Borneo) reached a total of 83,692 tons, as against 65,750 tons in 1955-56. The mill started trial runs in October 1956 and, since that date, the required input capacity has been reached.

The trading profit from South Indian plantations at Rs. 39.98 lakhs falls very much below the record profit of Rs. 68.02 lakhs earned in 1954-55. The total production in the estates dropped to 5,677,690 lbs. from the record crop of 5,940,276 lbs. in 1955-56. Consequently, the unit cost per lb. of made tea rose from Re. 1.17 in 1955-56 to Re. 1.34. The average gross returns, however, were better at Rs. 2.46 per lb., as against Rs. 2.14 per lb. Production of the coffee estates in Coorg amounted to 14,465 cwts., as against 9,086 cwts. in 1955-56, with satisfactory results. Closing stocks were valued at Rs. 2.25 per point.

On the Company's holdings of land in the Usambaras in Tanganyika, a promising start has been made with the planting of tea and 250 acres had been planted by May 1957. The timber on the estates is being extracted, milled and sold.

A strong financial position is disclosed by the Company's balance-sheet as at 31st May 1957. The reserves and surplus aggregate Rs. 382.98 lakhs as against a paid-up capital of Rs. 94.50 lakhs. As stated earlier, the paid-up capital has since been increased by the issue of an additional 10,000 ordinary shares of Rs. 125 each. The provision for taxation stands at the high figure of Rs. 130.19 lakhs. The current liabilities amount to Rs. 272.96 lakhs. The gross block of the value of Rs. 460.48 lakhs has been written down to Rs. 272.39 lakhs. Additions to block account during the year were of the order of Rs. 79.06 lakhs. These are exclusive of buildings and machinery, etc., under erection shown at Rs. 27.37 lakhs. Investments in shares of subsidiary companies, other companies, Government securities and debentures, together with interest accrued, appear at Rs. 90.69 lakhs. Of these, the holdings in Government securities alone amount to Rs. 28.76 lakhs and those in debentures to Rs. 11.23 lakhs. It is to be noted that all the investments in debentures are only in those of oil refining companies which are considered to be excellent. The other current assets aggregating Rs. 491 lakhs include, among other things, stores at cost Rs. 43.38 lakhs, stock-in-trade of timber, tea, coffee and sundry trading stock Rs. 49.54 lakhs, sundry debtors Rs. 55.69 lakhs, loans and advances Rs. 106.56 lakhs and cash and bank balances Rs. 231.96 lakhs; a year before the last mentioned item stood at Rs. 153.51 lakhs.

The Rs. 125 fully paid-up shares of the Company are being currently quoted at Rs. 544 *cum-div.* (final div. Rs. 28.75). On an *ex-div.* basis the shares offer a yield of 7.76 per cent. per annum, free of tax.

A.C.C. ANNUAL MEETING

At the twenty-first annual general meeting of the Associated Cement Companies Ltd., held at Bombay on Friday, 31st January 1958, the shareholders evinced keen interest in the affairs of their Company. As usual, the meeting was well attended and about a dozen shareholders took an active part in the deliberations. They posed several questions on various subjects, from the outlook for the Company to the Company's contribution to the Congress Party's election fund. The Chairman, Mr. Dharamsey M. Khatau, in his speech, characterised the year under review as one of mixed fortune; of distinct achievement, yet of poor reward. He stated that though the Company produced and sold 2.5 lakh tons more cement than in the previous year, there was a fall in profits. This was the result of manufacturing costs rising so sharply as to more than offset the economies resulting from increased output and efficient working. Some of the shareholders who spoke on the occasion complained about the lower return on their investment but the consensus of opinion was that the management had done its best. Many appreciated its difficulties and there was a sense of satisfaction with the results achieved in 1956-57.

As regards the outlook for the Company, Mr. Khatau stated that much depended on the verdict of the Tariff Commission on the Company's plea for a higher ex-factory price to cover the increase in cost of production. He disclosed that the Tariff Commission had completed its examination of the Company's works costs and overall costs and that it would submit its report to the Government in a few days. He pointed out that the increase in price by a little over Rs. 5 per ton which the Company had asked for, need not necessarily involve any addition to the present price of cement to the consumer, as it could come out of the profit of the State Trading Corporation. The State Trading Corporation, it was revealed by the Chairman, was making a net profit of about Rs. 12.50 per ton. A part of the increase in the ex-factory price requested by the Company includes an allowance for financing expansion. The Chairman made it clear that, without such an allowance, the Company would be compelled to abandon many of the expansion plans and projects in view, for the simple reason that no further funds would be available from internal or external resources to finance them.

Several shareholders were highly critical of the activities of the State Trading Corporation and its interference in the working of the cement industry, one of the largest basic industries in the country. One shareholder denounced it as a sleeping partner, who was making huge profits without making any investments. Such dubious ways of making easy money, he remarked, had encouraged the Corporation to extend its sphere of influence more and more to other new industries. Some shareholders urged the management to proceed cautiously with its schemes of expansion. They contended that, when the return to shareholders was not guaranteed, there was no point in trying to fulfil the targets envisaged in the second Five-year Plan. They were also afraid that, at the prevailing high prices for cement, the demand for it would steadily slow down, creating a glut in the market and that, if such a situation were to arise, the Company would be faced with the task of carrying large unsold stocks.

The Chairman in his reply said that the management shared the fears of the shareholders on this point to some extent, since the element of price did influence the consumption trend. He, however, justified the past expansion schemes on the ground that they had been undertaken at strategic points where raw materials were in plentiful supply resulting in lower cost of production for cement. In future expansion, too, he assured the shareholders, great care and deliberation would be given. Shareholders also doubted whether the present economic climate was conducive to the raising of debenture capital. They thought that the rate of interest would have to be at least 6½ per cent. Besides, in the event of the industry getting nationalised at a future date, there was the danger of shareholders' interests being overlooked in preference to those of debenture-holders. Mr. Khatau counselled patience and stated that the terms of the debenture issue were yet to be finalised. As the sum to be raised was as large as Rs. 5 crores, the Company could not take chances. It would entrust the issue to big corporations for being underwritten and the shareholders could buy these debentures from such underwriters.

The Chairman made the important disclosure that the proposed heavy engineering project in collaboration with Messrs. Vickers Ltd. and Babcock & Wilcox Ltd. had been shelved for the time being, due to various difficulties which had arisen in the way of raising adequate capital. The project had been under negotiation for a long time. The raising of the British Bank rate and the present state of the investment market in India, following higher loads of taxation, together made it difficult for both sides to secure the necessary capital. It would, however, be considered again at a later stage if conditions were found to be more favourable.

Some members pleaded that the Directors should take every possible step to ensure that the shareholders got at least 6 per cent. on the capital invested by them. Mr. Khatau agreed with the suggestion in principle and observed that it would receive the Directors' consideration. He, however, added that much depended on the outcome of the Tariff Commission's recommendation on the Company's request for a higher selling price.

The other main points of Mr. Khatau's replies to the various questions were: (1) The decision to duplicate the Mancherial plant, in preference to the immediate construction of a new factory at Porbandar, was taken in view of the fact that the advantages which were expected to accrue for purposes of marketing from Porbandar disappeared when the State Trading Corporation took over the distribution of cement and payments were made f.o.r. works. (2) The losses shown by the Cement Marketing Company of India Ltd., a subsidiary of A.C.C., was merely a technical adjustment. (3) Advertisements were necessary to keep the public informed of the tempo of progress and the expenses incurred were only reasonable as compared with the turnover. (4) Jute bags were being used in preference to paper bags because they were liked by customers. (5) No further new issue of capital was contemplated. The capitalisation of the share premium account would be considered at the appropriate time. (6) The Life Insurance Corporation was made to the Congress Party, the general feeling was that the Company should support a party which would provide a stable government and that the Congress Party was considered as the only one that could do so. There was no pressure on the Company from any quarter to contribute to the Congress Party's election fund.

COMPANY REGISTRATION IN WESTERN REGION

Fifty-one companies with a total authorised capital of Rs. 14,52.50 lakhs were registered in the Western Region (comprising Bombay and Madhya Pradesh) under the Companies Act 1956 during the quarter ended 31st December 1957. Of these, three were public companies with an aggregate authorised capital of Rs. 11,00 lakhs, 46 private companies with a total authorised capital of Rs. 257.50 lakhs and the remaining two were guarantee companies. During the same period, 34 companies went into liquidation in this region.

In the Bombay State, three public companies with a total authorised capital of Rs. 11,00 lakhs and 44 private companies with a total authorised capital of Rs. 251.50 lakhs were incorporated. The number of guarantee companies registered was two. Of the 44 private companies, 13 companies related to processing and manufacturing (metals and chemicals), 12 to processing and manufacturing (general), seven to commerce (trade and finance), six to processing and manufacturing (foodstuffs and textiles, leather products thereof), three to personal and other services, two to agricultural and allied activities, one to construction and utilities. Of the three public companies, two related to transport, communication and storage and one to processing and manufacturing (metals and chemicals). The object of one of the two guarantee companies is the promotion of interest of cotton trade, that of the other being promotion of sports.

The number of private and public companies reported to have gone into liquidation during the period was 20 and 14, respectively. The names of nine public and 25 private companies were struck off the register under section 560 of the Companies Act 1956 and 18 companies (four public and 14 private) were finally dissolved during the quarter.

Forty-two cases were filed during the quarter against companies and/or directors and liquidators. Affairs of three public limited companies were under investigation by the inspectors appointed by Government on the basis of the complaints by shareholders and reports of Registrars.

In Madhya Pradesh, two private companies with a total authorised capital of Rs. 6 lakhs were registered during the quarter under review. Nine companies having a total paid-up capital of Rs. 97,500 were struck off the register, and two companies with a paid-up capital of Rs. 1,00,500 were dissolved after they were finally wound-up. Four convictions were secured during the quarter for various offences under the Companies Act.

Points From The Chair

Deficit Financing

"DEFICIT financing has curative and even tonic properties when taken in therapeutic doses; but like all poisons, it is fatal when administered in large quantities. The quality of deficit financing, unlike that of mercy which Shakespeare so lauded, is exceedingly strained, for it blesseth neither him that gives nor him that takes. That is to say, both the public as well as the Government that embark on this slippery slope are ultimately the sufferers because deficit finance soon overreaches itself, as has already happened in this country. The most disquieting feature of our approach to deficit financing just at present is that while Government appear to have recognised its dangers, judging by the recent speeches of their leading spokesmen, there is still no evidence of the impact of this recognition either upon the assessment of the resources for the second Five-year Plan or, consequently, upon the magnitude of the Plan. The estimates of proceeds from taxation, from current surpluses of Central and State Governments, and from net borrowings, whether by the issue of public loans or from small savings, continue to be overoptimistic; with the result, firstly, that the projected Plan expenditure continues to be maintained at a level unattainable in terms of available resources; and, secondly, that the erroneous belief persists that, even at that level of expenditure, deficit financing will somehow be successfully kept at a low level. The truth, however, is that the expected volume of funds is quite unlikely to materialise from the sources indicated, with the consequence that, if the Plan expenditure is maintained so high as is still contemplated, a vast magnitude of deficit finance, with all that it entails in terms of overinvestment, runaway inflation, rising prices (especially agricultural and raw materials prices), etc., is inescapable."

DHARAMSEY M. KHATAU,
Associated Cement Cos., Ltd.

Gold Price

"The problem of rising costs against a fixed price for its product is one which continues to reduce the profitability of gold mining, and indeed, to threaten the continued existence of certain units in the gold mining industry. In our own group, the most vulnerable mine is Rand Leases, where only an almost token profit-margin is being maintained, despite the most strenuous efforts to reduce the cost structure. In a world bedevilled by creeping inflation, the cost of producing gold continues to rise without the producer being compensated by an increase in the price of his product. The average cost of producing an ounce of gold in South Africa has risen since September 1949 from 135/2 to 179/2 in September 1957 and during the same period the purchasing power of an ounce of gold has progressively declined. It is difficult to believe that this disequilibrium can last much longer. The increasing spate of inflation throughout the world, and the almost desperate measures being taken by certain countries to resist it can only lead to a revaluation of currencies in terms of gold on a more realistic basis. The recent revival in the gold share market once again draws attention to the intrinsic merits of this class of investment—both for the high returns it is capable of yielding as well as for its attraction as a form of insurance against depreciating currency. That gold continues in its all-important role as the only acceptable medium for settling the international balance of payments, becomes more and more evident as problems in this field multiply. It is, therefore, astonishing for the visitor to the United States of America to form the impression that, generally, members of the American public still remain oblivious to the power for good which gold can wield internationally and hence, in the final analysis, to themselves as individuals."

S. G. MENELL,
Anglo-Transvaal Consolidated Investment Co., Ltd. (Johannesburg).

Refractory Project

"We have undertaken to set up the manufacture of bonded sillimanite bricks, if and when required by the Government to do so, provided there is sufficient demand for the product in the country. Sillimanite sold in India this year totalled only 358 tons, whereas the export was 4,476 tons. The Board is investigating the possibility of collaboration with overseas refractory manufacturers for setting up a refractory plant in India. Large capital investment is required for such an undertaking, as also a high degree of technical insight for such a project. The Refractory Project is being examined with all its commercial and economic aspects before the Board decides to undertake the same. We are all aware that our super refractory khasi sillimanite is incorporated in the refractory bricks made abroad, and imported for many vital purposes, such as (a) ceramic manufacturing, (b) glass making, (c) cement, (d) iron founding, (e) metal treating, and (f) steel making. In the Second Five-year Plan, these are just the industries for which priority is given by the Government of India. On the face of it, the establishment of a refractory plant in this country should save on costs as well as in foreign exchange."

C. F. SHAW-HAMILTON,
Assam Sillimanite Ltd., Gauhati.

COMPANY MEETINGS AND DIVIDENDS

THIRUMBADI RUBBER CO., LTD. Annual General Meeting, Kozhikode, 15th February 1958. Dividend: Re. 0.05 per share (5 per cent.). Transfer books remain closed from 8th to 15th February 1958, both days inclusive.

BISRA STONE LIME CO., LTD. Annual General Meeting, Calcutta, 21st February 1958. Dividend: Re. 1.75 per share. Transfer books remain closed from 7th to 21st February 1958, both days inclusive.

BOMBAY BURMAH TRADING CORPORATION LTD. Annual General Meeting, Bombay, 24th February 1958. Dividend: Rs. 28.75 per share (final) on old shares and Rs. 11.50 per share (final) on new shares, payable on 3rd March 1958. Transfer books remain closed from 7th to 28th February 1958, both days inclusive.

HINDUSTAN ELECTRIC CO., LTD. Annual General Meeting, Bombay, 24th February 1958. Dividend: Rs. 6.00 per share. Transfer books will remain closed from 11th to 25th February 1958, both days inclusive.

VICTORIA COTTON MILLS LTD. Annual General Meeting, Calcutta, 25th February 1958. Transfer books will remain closed from 12th to 25th February 1958, both days inclusive.

KESAR SUGAR WORKS LTD. Annual General Meeting, Bombay, 26th February 1958. Dividend: Rs. 7.00 per share, free of income-tax, payable on and after 1st March 1958. Transfer books will remain closed from 12th to 26th February 1958, both days inclusive.

ANGELO BROS., LTD. Annual General Meeting, Calcutta, 26th February 1958. Transfer books will remain closed from 12th to 26th February 1958, both days inclusive.

MARTIN BURN LTD. Annual General Meeting, Calcutta, 27th February 1958. Dividend Rs. 2.12 per share (includes a cash bonus of 62 nP per share). Transfer books will remain closed from 20th to 27th February 1958, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 14th March 1958. Dividend: *Nil*. Transfer books will remain closed from 7th to 18th March 1958, both days inclusive.

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Interim dividend of Re. 0.40 (4 per cent.) per share, free of tax for the year 1957-58. Transfer books will remain closed from 15th to 22nd February 1958, both days inclusive.

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Second interim dividend of 2½ per cent. free of income-tax on ordinary shares, for the year 1956-57. Transfer books will remain closed from 10th to 16th February 1958, both days inclusive.

SURAT ELECTRICITY CO., LTD. Ad-interim dividend of Rs. 2.50 per share, for the half-year ended 30th September 1957, payable on and after 25th February 1958. Transfer books remain closed from 7th to 24th February 1958, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Ad-interim dividend of Rs. 2.50 per share, for the half-year ended 30th September 1957, payable on and after 3rd April 1958. Transfer books remain closed from 7th to 24th February 1958, both days inclusive.

PHALTAN SUGAR WORKS LTD. Dividend: Rs. 12.00 per share (includes bonus) for the year ended 30th September 1957, payable on 12th March 1958. Transfer books remain closed from 7th to 21st February 1958, both days inclusive.

BALMER LAWRIE AND CO., LTD. Interim dividend of 5 per cent. free of income-tax, for the year ended 31st December 1957. Transfer books will remain closed from 14th to 28th February 1958, both days inclusive.

SOOM TEA CO., LTD. Interim dividend of Re. 1.50 (15 per cent.) per share, for the year ended 31st December 1957, payable on or after 6th February 1958. Transfer books remain closed from 3rd to 6th February 1958, both days inclusive.

DUFFLAGHUR TEA CO., LTD. Interim dividend of Re. 1.00 (10 per cent.) per share, for the year ended 31st December 1957, payable on or after 6th February 1958. Transfer books remain closed from 3rd to 6th February 1958, both days inclusive.

MADURA MILLS CO., LTD. Dividend of Rs. 2.25 per share (15 per cent.), for the year ended 31st December 1957.

INDIAN CABLE CO., LTD. Supplementary dividend of 4 per cent. per annum, on the ordinary shares, **for the year ended 31st March 1956. Transfer books will remain closed from 15th to 28th February 1958, both days inclusive.**

EARNINGS OF BISRA STONE LOWER

HINDUSTAN ELECTRIC'S PROGRESS SATISFACTORY

Bisra Stone Lime Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

In conformity with the provisions of the Companies Act, 1956, the Company's accounts are now being drawn up on an annual basis. The present statement of accounts is the first one to be prepared under the Companies Act, 1956 and for the future the Company's accounts will be closed and audited as at the 31st March each year.

Limestone.—Raisings increased slightly to 8,19,208 tons as compared with 8,04,487 tons in the previous year. Sales, however, were reduced slightly to 7,80,026 tons as compared with 7,84,662 tons. This sales reduction was mainly due to the reduced offtake of one of the Company's major customers.

The wagon supply position has not materially altered and whilst it can be considered to be fairly satisfactory it is still irregular and generally speaking below the actual requirements.

Dolomite.—Production has again increased to 49,795 tons from 36,950 tons in the previous period. Sales also recorded an increase from 39,901 tons to 51,656 tons.

Lime.—Output showed a slight improvement, the total quantity produced being 12,73,549 mds. Sales, however, increased considerably by 1,20,465 mds. to 12,65,697 mds. As in previous years sales and output continued to be affected by wagon supplies. Whilst these have improved, as will be evident from the increased sales, there is still room for considerable improvement.

Labour.—The year has been free of labour troubles and the agreement which was reached with the union in March, 1956 still continues to be in operation.

The profit and loss account after providing for all charges and making provision of Rs. 5,15,000 (Rs. 6,07,243) for taxation and Rs. 1,36,100 (Rs. 85,260) for depreciation, shows a profit of Rs. 3,31,813 (Rs. 6,78,237). To this amount is added the balance brought forward from the previous half-year of Rs. 20,179 (Rs. 9,142) making a total of Rs. 3,51,992 (Rs. 6,87,379). From this amount has to be deducted the amounts transferred to reserves as follows:—To general reserve Rs. 15,977 (*nil*), mechanisation reserve Rs. 1,25,000 (Rs. 3,50,000), tax contingency reserve Rs. 8,000 (Rs. 39,000) and to development rebate reserve Rs. 9,575 (Rs. 3,200). The interim dividend declared on 28th June 1957 on the ordinary shares at 87 (As. 14) naye Paise per share without any deduction for income-tax payable by the Company absorbed Rs. 87,000 (Rs. 87,500) leaving a balance available of Rs. 1,06,440 (Rs. 1,07,679). The directors propose to dispose of this amount as follows:—

By payment of a final dividend on the ordinary shares at 88 (As. 14) naye Paise per share without any deduction for income-tax payable by the Company Rs. 88,000 (Rs. 87,500) and by carrying forward Rs. 18,440 (Rs. 20,179).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	26,90,580
Reserves ...	30,51,407	Capital work-in-progress	1,50,409

Liabilities ...	16,24,307	Stores, spare gear, etc. ...	8,06,296
Profit and loss account ...	18,440	Debts, deposits and advances ...	19,37,319
		Investments	3,017
		Cash ...	2,06,945
Rs.	59,21,967	Rs.	59,21,967

Hindustan Electric Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Dharmsinh and Co., Bombay) submit the audited accounts of the Company for the year ended 30th April 1957.

During the year, the working of the Company showed a profit of [after providing Rs. 10,57,187 (Rs. 5,81,790) for depreciation] Rs. 10,54,982 (Rs. 5,23,602). To this has been added the amount brought forward from last year of Rs. 18,487 (Rs. 4,23,268) making a total of Rs. 10,73,469 (Rs. 9,46,870). The directors recommend the following appropriations:

To goodwill and rights at cost to be written off Rs. 2,40,000 (Rs. 1,22,940), preliminary expenses to be written off Rs. 26,800 (Rs. 12,911), to commission on shares to be written off Rs. 66,910 (Rs. 27,720), to provision for taxation including wealth tax Rs. 4,00,000 (Rs. 1,15,910), to dividend at the rate of 6 (6) per cent. per annum on 40,000 ordinary shares of the Company for the year ended 30th April 1957 Rs. 2,40,000 (Rs. 3,74,352 for the two years ended 30th April, 1955 and 1956), to dividend on 10,000 6 per cent. income-tax free cumulative preference shares and new issue of 10,000 6 per cent. income-tax free cumulative preference shares of the Company for the year ended 30th April 1957 Rs. 74,658 (Rs. 74,550) and leaving a balance of Rs. 25,101 (Rs. 18,487) to be carried forward to next year's account. The directors, after writing off Rs. 2,40,000 from goodwill and rights at cost, Rs. 26,800 from preliminary expenses and Rs. 66,910 from commission on shares and after making provision of Rs. 4,00,000 for taxation including wealth tax, recommend on reviewing the results for the year ended 30th April 1957 a dividend of 6 per cent. on the ordinary shares as well as a dividend of 6 per cent. on the preference shares of the Company for the year ended 30th April 1957. The year under review was marked by strengthening of oganization, consolidation and training of supervisory staff and workmen for manning of the works at considerable cost as to time and expenses.

During the year, the Company strengthened its financial position. More than adequate provision for taxation has been made for the year under review. Provision amounting to Rs. 10,57,187 has been made for depreciation in respect of their works. Regrouping under Companies Act, 1956 has been effected this year.

Howrah Works Transformer Division reconstruction was completed and the output of transformers increased during the year very substantially. For the first time in India, production of large capacity transformers with 66,000 volts commenced at the Company's Howrah Works. Work commenced in the beginning of April 1956 on construction of buildings of high tension switchgear division and on switchgear designs at Howrah Works.

Production at Faridabad Works No. 1 was established and the quality of products improved. Separate carpentry shop was added and cable drums production increased. Construction of buildings for Faridabad Works No. 2 was completed during the year. The erection of the plant and machinery was also completed during the year. Production of electric motors commenced from July-August 1956 and increased considerably during the year. A large number of electric motors designs and prototypes were developed, tested, finalised and put into production during the year.

The bulk of the capacity of Faridabad Works No. 3 was retained on care and maintenance basis. Part of it was utilised for the manufacture of patterns, jugs, tools and fixtures for Faridabad Works No. 2 and another part for manufacture of control panels. Faridabad Works No. 3 will commence manufacture of motor control gear including switches and starters after the designs and prototypes are finalised and the raw materials/components sources secured.

Construction of buildings for Faridabad Works foundry was taken on hand during the year and most of the plant and machinery was also received and the erection commenced towards the end of the year. Extensive housing facilities and allocation of quarters for employees were undertaken and completed during the year at Faridabad. Excavation of Mahi Canals and construction of Karad Dam were nearly completed by end of April 1957 and were completed in time, i.e., before 30th June 1957.

Demand for the products and services of the Company continued to rise. All the works of the Company are having orders extending over six months mainly from the Central and the State Governments. The number of personnel employed by the Company has further increased and all the works are doing considerable services for the progress of development projects under the second Five-year Plan.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	58,17,585	Block ...	60,18,798
Reserves ...	2,00,000	Stock-in-trade	13,87,961

Neelamalai Tea and Coffee Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co. (India) Ltd. (Madras) submitted the audited accounts of the Company for the year ended 30th June 1957.

The tea crop harvested during the season, was as follows:—

	Estimates, 1956-57	Crop harvested, 1956-57	Yield per acre, 1956-57	Crop secured, 1955-56
	Lbs.	Lbs.	Lbs.	Lbs.
Katary and Bhawani..	825,000	873,000	858	789,600
Sutton	475,000	495,000	1,068	401,810
Total ..	1,300,000	1,368,000	924	1,191,410

The expenditure on tea had exceeded the estimates by about Re. 0.18, owing to higher wages that had to be paid to the workers as from 24th October, 1956 and export duty and other charges on tea made in excess of the estimated crop. The average price realised was Rs. 2.15 per lb. of tea against Rs. 2.30 per lb. last year. The net price realised is considered satisfactory in view of the low prices and abnormal fluctuations in the tea market during the year.

Coffee Crop and Cost of Production.—The total coffee crop secured from the Company's estates amounted to 3,551.89 (207.33 from two estates) cwts. against an estimate of 3,905.00 cwts. The cost of production was 88.63 per cwt., against the estimate of Rs. 82.58 per cwt. of coffee. The entire crop was delivered to the pool and was valued at Rs. 180 per cwt.

The profit for the year under review amounted to Rs. 8,30,929 (Rs. 4,98,629) to which was added the balance brought forward from the previous year of Rs. 35,344 (Rs. 3,16,715) making a total of Rs. 8,66,273 (Rs. 8,15,344). Out of this, the directors have made the following appropriations:—

To reserve for taxation Rs. 4,15,000 (Rs. 1,50,000) and to 5 per cent. dividend for 1956-57 on preference shares Rs. 90,000 (Rs. 90,000) leaving a balance of Rs. 3,61,273 (Rs. 3,05,344) available for distribution, which the directors recommended being disposed of as under: To payment of 7½ (7½) per cent. dividend on equity shares amounting to Rs. 2,70,000 (Rs. 2,70,000) and to carry forward to next year Rs. 91,273 (Rs. 35,344).

Estimates for the season 1957-58:

	Tea Lbs.	Cost of production in Cents.	Coffee Cwts.	Cost of production in Rs.
Katary and Bhawani.	830,000	138.76	...	...
Sutton	485,000	133.67	30.00	170.93
Woolgooly	..	..	3,600.00	98.65
Total ..	1,315,000	136.88	3,630.00	99.25

Development.—As mentioned in the last report, the Katary and Sutton Estates had received permits for planting about 80 acres in tea and during the season about 41.06 acres of old coffee were planted in tea.

Machinery.—With the increasing scarcity of firewood in the Nilgiris, it was found necessary to install oil burning equipment for the tea driers on the Katary and Sutton Estates.

Plantation Labour Award.—As the shareholders are aware, employers of plantation labour in Madras State had appealed against the Plantation Tribunal Award in the Supreme Court in November, 1956. Since then efforts were made to bring about a settlement of the dispute with the workers and in April 1957 a final settlement with the workers was reached. According to the terms of this settlement, wages have been revised with effect from 24th October, 1956, as follows: For men Re. 1-11-6 per day, for women Re. 1-5-0 per day and for adolescents Re. 1 per day. Meanwhile, there was considerable labour unrest, "go-slow" and threats of strike on Nilgiri estates and the Workers' Unions were pressing for the implementation of the Plantation Labour Award *in toto*.

The directors are pleased to inform the shareholders that recently an agreement was reached with the Estates Staff Union over all the pending disputes. As per this, the estate staff will be receiving 20 per cent. increase in the basic wages as from the 24th October, 1956 and new pay scales will also be adopted from that date. In Coorg also the employers had to agree to a wage increase for the workers and the present wages, as from 1st April, 1957 are as follows: For men Re. 1.50 per day, for women Re. 1.12 per day and for adolescents Re. 0.95 per day.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	54,00,000	Block ...	67,02,252
Reserves ...	19,24,400	Stock-in-trade	8,92,156
Provision for taxation ...	8,26,614	Stores and spares, etc.	1,64,524

Rs.	90,64,282	Rs.	90,64,282

Shree Madhav Mills, Ltd.

The directors of the above Company (Chairman: Mr. H. D. Mundhra, Bombay) submit the audited accounts of the Company for the year ended 31st March 1957.

During the year under review, the Company encountered difficult trading conditions due to the poor offtake of cloth. The Company was throughout the year handicapped by a shortage of working capital. The results of the year's working showed a loss of Rs. 37,448, less credit received on account of an income-tax return of Rs. 11,064 which added to the debit balance of the profit and loss account brought forward from 1955-56 of Rs. 7,20,454 leaves the debit balance on the profit and loss account to be carried forward to the next year amounting to Rs. 7,46,838, the directors are making every effort to improve the financial position of the Company.

With reference to paragraph 2 (*a*) of the auditors' report regarding the loan of Rs. 1,00,000 to Richardson and Cruddas Ltd., the loan was given against a receipt duly executed by Richardson and Cruddas Ltd. The directors regret to inform that the loan has not yet been confirmed by Richardson and Cruddas Ltd., but the directors are actively pursuing the matter.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital* ...	22,50,000	Block ...	23,23,459
Reserves ...	1,51,190	Stock-in-trade§	60,47,432

The Transfer Books of the Corporation will be closed from 7th February 1958 to 28th February 1958, both days inclusive.

BOMBAY, *8th January* 1958.

As the lift to the Hall is of limited capacity shareholders should come in good time to avoid congestion.

THE BOMBAY BURMAH TRADING CORPORATION, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Corporation will be held at the Indian Merchants' Chamber Hall, Lalji Naranji Memorial Building, 76, Veer Nariman Road, Bombay 1, on Monday, the twenty-fourth day of February 1958, at half past four o'clock p.m. (Standard Time) or so soon thereafter as the Annual General Meeting of the Corporation to be held on the same day at half past three o'clock p.m. (Standard Time) shall have concluded, for the purpose of considering and if thought fit passing, with or without modifications, the following Special Resolutions and the following Ordinary Resolution, that is to say:—

As Special Resolutions

(I) That pursuant to Section 360 of the Companies Act 1956, approval be and is hereby accorded to the following contracts being entered into with The Bombay Company (Private) Limited, an Associate of Wallace & Company, the Secretaries and Treasurers of the Corporation, namely:

(*a*) The clearing and forwarding by The Bombay Company (Private) Limited of the Corporation's Tea from Cochin on such terms and conditions as may be prescribed from time to time by the Cochin Tea and Rubber Shippers' Association, for a period of five years from the date of this Resolution.

(*b*) Leave and licence for the Corporation to occupy two portions of the premises at No. 9, Wallace Street, Fort, Bombay, for an office and depot at a total compensation of Rs. 900 per mensem for a period of five years from the date of this Resolution, subject to earlier termination by either party giving six months' notice in writing to the other party.

(*c*) Leave and licence for the Corporation to occupy the ground floor and connected offices at the premises at No. 11, Nepean Road, Bombay, at a compensation of Rs. 400 per mensem for a period of five years from the date of this Resolution, subject to earlier termination by either party giving six months' notice in writing to the other party.

(II) That pursuant to Section 360 of the Companies Act 1956, approval be and is hereby accorded to contracts being entered into with The Bombay Company (Private) Limited, an Associate of Wallace & Company, the Secretaries and Treasurers of the Corporation, for the purchase from The Bombay Company (Private) Limited, and where necessary the installation by them, of electric cables and accessories, steel, insulating material, insecticides, tar and tar products, and engineering sundries, equipment and machines such as are dealt with in the regular course of The Bombay Company (Private) Limited's business and such as may be required from time to time for the Corporation's business, and provided that:

(i) the prices or amounts charged to the Corporation are at rates which are not less favourable to the Corporation than the market rates or which are otherwise reasonable, and

(ii) the aggregate value of all such supplies and services shall not exceed Rupees one lakh in any one calendar year.

(III) That pursuant to Section 359 of the Companies Act 1956, Messrs. Wallace & Company, the Secretaries and Treasurers of the Corporation, be and they are hereby authorised to retain any commission earned or to be earned by them as Agents of the Commercial Union Assurance Company Limited in respect of Accident and Miscellaneous insurance effected with the Corporation.

(IV) That pursuant to Section 359 of the Companies Act 1956, The Bombay Company (Private) Limited, an Associate of Messrs. Wallace & Company, the Secretaries and Treasurers of the Corporation, be and they are hereby authorised to retain any commission or other remuneration earned or to be earned by them in respect of goods or services supplied by them to the Corporation as Agents of the undernoted firms and Companies, provided that the prices or amounts charged to the Corporation are at rates which are not less favourable to the Corporation than the market rates or which are otherwise reasonable:

Name of Company	*Nature of Goods or Services*
British Paints (India) Limited	Paints, Stoving Enamels and Varnishes.
Shalimar Tar Products (1935) Ltd. ...	Tar Products.
Mysore Iron & Steel Works	Coal Tar.
Swaika Oil Mills ...	Linseed Oil.
Himalaya Rosin & Turpentine Mfg. Co.	Rosin and Turpentine.
Alsales Limited ...	Maxweld Fabric.
Hindustan Wire Netting Co. (Private) Ltd.	Wire Netting.
Martin Black & Co. (Wire Ropes) Limited	Wire Rope.

(V) That pursuant to Section 314 of the Companies Act 1956, Mr. Edward Stanley Vernon-Jones, a Managing Director of the Bombay Company (Private) Limited who are Associates of Wallace & Company, the Secretaries and Treasurers of the Corporation, be and he is hereby elected a Director of the Corporation.

(VI) That the following alteration be made in the Articles of Association namely:

The following Article shall be inserted after Article 106:

"106A. (1) Any general meeting may resolve that any amounts standing to the credit of the share premium account or the Capital Redemption Reserve Fund or any monies, investments or other assets forming part of the undivided profits (including profits or surplus monies arising from the realisation and (where permitted by law) from the appreciation in value of any capital assets of the Company) standing to the credit of the General Reserve, Reserve or any Reserve Fund or any other Fund of the Company or in the hands of the Company and available for dividend be capitalised

(*a*) by the issue and distribution as fully paid-up of shares, debentures, debenture-stock, bonds or other obligations of the Company, or

(*b*) by crediting shares of the Company which may have been issued and are not fully paid up, with the whole or any part of the sum remaining unpaid thereon.

Provided that any amounts standing to the credit of the share premium account or the Capital Redemption Reserve Fund shall be applied only in crediting the payment of capital on shares of the Company to be issued to members (as herein provided) as fully paid bonus shares.

(2) Such issue and distribution under (1)(*a*) above and such payment to credit of unpaid share capital under (1)(*b*) above shall be made to, among and in favour of the members or any class of them or any of them entitled thereto and in accordance with their respective rights and interests and in proportion to the amount of capital paid up on the shares held by them respectively in respect of which such distribution under (1)(*a*) or payment under (1)(*b*) above shall be made on the footing that such members become entitled thereto as capital.

(3) The Directors shall give effect to any such resolution and apply such portion of the profits or Reserve Fund or any other Fund or account as aforesaid as may be required for the purpose of making payment in full for the shares, debentures or debenture-stock, bonds or other obligations of the Company so distributed under (1)(*a*) above or (as the case may be) for the purpose of paying, in whole or in part, the amount remaining unpaid on the shares which may have been issued and are not fully paid up under (1)(*b*) above provided that no such distribution or payment shall be made unless recommended by the Directors and if so recommended such distribution and payment shall be accepted by such members as aforesaid in full satisfaction of their interest in the said capitalised sum.

(4) For the purpose of giving effect to any such resolution the Directors may settle any difficulty which may arise in regard to the distribution or payment as aforesaid as they think expedient and in particular they may issue fractional certificates and may fix the value for distribution of any specific assets and may determine that cash payments be made to any members on the footing of the value so fixed and may vest any such cash, shares, debentures, debenture-stock, bonds or other obligations in trustees upon such trusts for the persons entitled thereto as may seem expedient to the Directors and generally may make such arrangements for the acceptance, allotment and sale of such shares, debentures, debenture-stock, bonds or other obligations and fractional certificates or otherwise as they may think fit.

(5) Subject to the provisions of the Act and these Articles in cases where some of the shares of the Company are fully paid and others are partly paid only such capitalisation may be effected by the distribution of further shares in respect of the fully paid shares, and by crediting the partly paid shares with the whole or part of the unpaid liability thereon but so that as between the holders of the fully paid shares, and the partly paid shares the sums so applied in the payment of such further shares and in the extinguishment or diminution of the liability on the partly paid shares shall be so applied *pro rata* in proportion to the amount then already paid or credited as paid on the existing fully paid and partly paid shares respectively.

(6) When deemed requisite a proper contract shall be entered into in accordance with the Act and the Board may appoint any person to sign such contract on behalf of the members entitled as aforesaid and such appointment shall be affective."

As an Ordinary Resolution

(VII) That the commission payable to Jardine Matheson & Company Limited, the sole selling agents of the Corporation for timber in Hongkong, be and is hereby increased to a percentage not exceeding 5 per cent. on the c.i.f. value of sales in so far as such sales relate to

timber shipped from the Corporation's Wallace Bay branch.

By Order of the Board,

WALLACE AND COMPANY,
Secretaries and Treasurers.

9, WALLACE STREET,
FORT,
BOMBAY, 22*nd January* 1958.

Explanatory Notes under Section 173 (2) of the Companies Act, 1956

Special Resolution (I)

(*a*) The Corporation requires Agents for the clearing and forwarding of its Tea in Cochin. The Bombay Company (Private) Limited maintain an office and storage depot in Cochin, and for some years past have carried out the clearing and forwarding of the Corporation's teas there. It would serve the best interests of the Corporation to appoint The Bombay Company (Private) Limited Agents for this purpose at the usual rates fixed by the Tea and Rubber Shippers Association of which The Bombay Company (Private) Limited are a member. A draft of the proposed contract, and a schedule of current rates, have been sent to shareholders.

(*b*) and (*c*) For many years the Corporation have been in occupation, by leave and license of The Bombay Company (Private) Limited, of a portion of the premises at 9, Wallace Street, Bombay, for use as an Office and Store Depot, and of part of premises at 11, Nepean Road, Bombay, for the residential use of Corporation Officers. The compensation paid for such use and occupation is reasonable. It is desirable that the Corporation continue in occupation of these premises, and Section 360 of the Act requires the approval of this by Special Resolution.

Special Resolution (II)

The Corporation periodically requires, for use on its Estates and in its other business, electric cables and accessories, steel, insulating material, insecticides, tar and tar products, and engineering sundries, equipment and machines which need to be purchased from time to time at the prevailing market rates. The Bombay Company (Private) Limited are regular importers of certain well-known brands of these articles. In so far as such articles may be purchased by the Corporation from The Bombay Company (Private) Limited, who are Associates of Messrs. Wallace & Company, the Secretaries and Treasurers of the Corporation, approval of the Members of the Corporation is required by Special Resolution, under Section 360 of the Act, for such contracts.

Special Resolution (III)

Messrs. Wallace & Company are Agents of the Commercial Union Assurance Company Limited, and the Corporation effects Accident and Miscellaneous insurance with them. The commission paid is in accord with the standard practice for this type of business.

Special Resolution (IV)

Messrs. The Bombay Company (Private) Limited, Associates of Wallace & Company, the Secretaries and Treasurers of the Corporation, are Agents for:—

British Paints (India) Limited.

Shalimar Tar Products (1935) Ltd.

Mysore Iron & Steel Works

Swaika Oil Mills.

Hindustan Wire Netting Co. (Private) Ltd.

Martin Black & Co. (Wire Ropes) Limited.

and supply equipment and stores to the Corporation. The rates charged are not less favourable than normal market rates. Section 359 of the Companies Act, 1956 requires the Corporation's sanction by Special Resolution for The Bombay Company (Private) Limited to retain commission and remuneration earned by them.

Special Resolution (V)

Mr. E. S. Vernon-Jones has previously been a Member of the Board. It is considered desirable that the Board should receive the benefit of his knowledge and experience. He is a Managing Director and a shareholder of The Bombay Company (Private) Limited, the resident partners of Wallace & Company, the Secretaries and Treasurers of the Corporation.

Special Resolution (VI)

It is considered desirable to amend the Articles of Association so as to include an Article empowering the Corporation, should your Board so recommend, to capitalise part of the Corporation Reserve and other funds, to be used for the issue of Corporation Shares and other securities or for the part or whole extinguishment of the liability on partly-paid shares. Article 106A has been framed accordingly, having due regard to the rights of the partly paid shareholders as set out in the Special Resolution passed on the 27th February 1918 and confirmed on the 15th March 1918. The proposed alteration requires the approval by Special Resolution of the Members of the Corporation.

Ordinary Resolution (VII)

At an Extraordinary General Meeting of the Corporation held on the 12th November 1956 the Corporation *inter alia* approved the appointment of Jardine Matheson & Company Limited as sole selling agents of the Corporation's timber in Hongkong for a period of five years commencing from the 1st October 1956. The commission sanctioned by the Members of the Corporation at the aforesaid Meeting was 4 per cent. Owing to changes, since that date, in timber market conditions it is considered necessary to agree to an increase in the rate of commission from 4 per cent. to a percentage not exceeding 5 per cent. on the *c.i.f.* value of sales in Hongkong; and the Board recommend that this be approved by Members under Ordinary Resolution.

Note

(1) None of the present Directors is interested in any of these Resolutions.

(2) The Secretaries and Treasurers are interested in certain of the above resolutions as follows:

(*a*) In Special Resolutions Nos. 1, II and IV in that the contracting parties, The Bombay Company (Private) Limited, who are partners in the firm of Wallace & Company, are therefore Associates of the Secretaries and Treasurers.

A partner of Wallace & Company, the Secretaries and Treasurers, is also a substantial shareholder in The Bombay Company (Private) Limited and to that extent therefore the Secretaries and Treasurers are interested in the commission or remuneration earned by their Associates.

(*b*) In Special Resolution No. III as Agents of the Insurance Company therein mentioned, and

(*c*) In Special Resolution No. V inasmuch as Mr. E. S. Vernon-Jones is a Managing Director and shareholder of their Associates, The Bombay Company (Private) Limited.

(3) Documents or drafts thereof relating to these Resolutions may be inspected at the office of the Corporation on any working day during business hours.

(4) Any Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and such proxy need not be a member of the Corporation.

By Order of the Board,

WALLACE AND COMPANY,
Secretaries and Treasurers.

9, WALLACE STREET,
FORT,
BOMBAY, 22*nd January* 1958.

THE PHALTAN SUGAR WORKS LIMITED

MARTIN BURN LIMITED

NOTICE

THE ANNUAL GENERAL MEETING (BEING the Twelfth Ordinary General Meeting) of the Shareholders of Martin Burn Ltd. will be held on Thursday, 27th February, 1958, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1957, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend and Cash Bonus.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a special notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of the Companies Act, 1956, to move the following resolution at the meeting:—

   "That Mr. T. Leslie Martin be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from 20th to 27th February, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,

A. G. GIDLEY,
Secretary.

CALCUTTA, 1*st February*, 1958.

Note.—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 1st April, 1958, to those Shareholders so entitled whose names appear in the Company's books on the 27th February, 1958, or to their mandatees. No application for dividend warrants will be necessary.

Notices

UPPER GANGES SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of the Upper Ganges Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta, on Tuesday, the 25th February, 1958, at 2 p.m., for the following purposes:—

1. To receive and consider the Report of Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1957.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and, if thought fit, to pass, with or without modification, the following resolutions as Special Resolutions.

(*a*) "WHEREAS the East Indian Produce Co. Ltd., an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said company carry on business of acting as agents in the United Kingdom for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large scale and whereas their expenses of maintaining their office, as assessed, amount approximately to £40,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the company, would depend on the value of purchases effected and services rendered through the said company in relation to its total turnover in each year and whereas the said East Indian Produce Co. Ltd. are acting as Purchasing Agents of the Company for purchases of plant, machinery, chemicals and stores, etc., and rendering of services such as recruitment of technical personnel, etc., and are paid commission at various rates. NOW it is hereby resolved that the appointment of the East Indian Produce Co. Ltd. as Agents for the company to purchase, for and on behalf of the company, plant, machinery, chemicals and stores, etc., and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the company, be continued for a further period of three years with effect from 1st March, 1958 and that commission (1) for purchase of plant, machinery and stores, etc., upto 2½ per cent. of the invoice price of plant and machinery and upto 5 per cent. of the invoice price of stores, etc., subject to a maximum of £5,000 in respect of a single order irrespective of the amounts calculated on the percentage basis, (2) for recruitment of technical personnel, upto 20 per cent. of the gross salary payable to the technical personnel during the first year of service under company and (3) for execution of various matters referred and entrusted to them, the actual expenses incurred, the remuneration of the staff of the East Indian Produce Co., Ltd. apportionable to such work plus 50 per cent. commission of such remuneration, be paid by the company to the Agents, viz., The East Indian Produce Co., Ltd. in the manner sanctioned by the Directors of the Company."

(*b*) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the company with Orient Paper Mills Ltd., an associate of the Managing Agents of the company, providing for the sale of bagasse by the company to the said associate company on the terms and conditions set forth in the draft agreement produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

EXPLANATORY STATEMENT

Item 5(*a*): The East Indian Produce Co. Ltd., are an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company. They have been acting as buying agents of the Company since a long time and it is proposed that they continue as buying agents for a further period of three years in the manner and on the terms and conditions stated in the resolution. Shri K. K. Birla, a Director of the Company, is a shareholder in the East Indian Produce Co. Ltd.

(*b*) The Orient Paper Mills Ltd. approached the company for purchase of bagasse which they intend to use as raw material in the manufacture of paper and the Company has sufficient quantities of bagasse available for sale. As the Orient Paper Mills Ltd. is an associate of the Managing Agents of the Company, approval of the shareholders is necessary to enter into the required contract with them. The above resolution has, therefore, been circulated for obtaining the requisite sanction to enter into a contract with the said associate company. The draft agreement to be entered into with the said associate company can be inspected at the registered office of the company any time during business hours.

By Order of the Board,

NEW INDIA SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Annual General Meeting of the New India Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta, on Tuesday, the 25th February, 1958, at 3 p.m., for the following purposes:

1. To receive and consider the Report of Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1957.
2. To declare Dividends.
3. (*a*) To elect a Director in place of Shri P. D. Himatsingka who retires by rotation as well as under Section 280 of the Companies Act, 1956.

   In this connection the Company has received a special notice pursuant to section 281 read with section 190 of the Companies Act, 1956 from a shareholder

of the company and special notice is hereby given that the following resolution will be moved at the meeting:

"Resolved that Shri P. D. Himatsingka who retires by rotation and who has attained the age of 68 years be and is hereby re-appointed as a Director of the Company and that the age limit prescribed under section 280 of the Companies Act, 1956 shall not apply to him."

Shri P. D. Himatsingka has been on the Board of Directors of the Company since the inception of the Company and has rendered valuable services to the company as a Director. It is, therefore, in the interest of the Company that he should continue as a Director of the Company.

(b) To approve of the appointment of Shri N. C. Mehta, as a Director of the Company, who retires under section 280 of the Companies Act, 1956.

In this connection the company has received a special notice pursuant to section 281 read with section 190 of the Companies Act, 1956 from a shareholder of the Company and special notice is hereby given that the following resolution will be moved at the meeting.

"Resolved that Shri N. C. Mehta who has attained the age of 65 years be and is hereby re-appointed as a Director of the Company and that the age limit prescribed under section 280 of the Companies Act, 1956 shall not apply to him."

Shri N. C. Mehta is a man of wide experience and has been associated with the sugar industry since long. During the period of his Directorship he has rendered valuable guidance to the Company. It is, therefore, in the interest of the Company that he should continue as a Director of the Company.

4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and, if thought fit, to pass, with or without modification, the following Resolutions as Special Resolutions.

(a) "WHEREAS the East Indian Produce Company Ltd., an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said company carry on business of acting as agents in the United Kingdom for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large scale and whereas their expenses of maintaining their office, as assessed, amount approximately to £40,000/- per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the company, would depend on the value of purchases effected and services rendered through the said company in relation to its total turnover in each year and whereas the said East Indian Produce Company Ltd. are acting as Purchasing Agents of the company for purchases of plant, machinery, chemicals and stores, etc., and rendering of services such as recruitment of technical personnel, etc. and are paid commission at various rates. NOW it is hereby resolved that the appointment of the East Indian Produce Company Ltd. as Agents for the company to purchase, for and on behalf of the company, plant, machinery, chemicals and stores, etc. and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the company, be continued for a further period of three years with effect from 1st March, 1958 and that commission (1) for purchase of plant, machinery and stores, etc., upto 2½ per cent. of the invoice price of plant and machinery and upto 5 per cent. of the invoice price of stores, etc. subject to a maximum of £5,000 in respect of a single order irrespective of the amounts calculated on the percentage basis, (2) for recruitment of technical personnel, upto 20 per cent. of the gross salary payable to the technical personnel during the first year of service under company and (3) for execution of various matters referred and entrusted to them, the actual expenses incurred, the remuneration of the staff of the East Indian Produce Company Ltd. apportionable to such work plus 50 per cent. commission of such remuneration, be paid by the Company to the Agents, viz., The East Indian Produce Company Ltd. in the manner sanctioned by the Directors of the Company."

(b) "RESOLVED that the Directors be and they are hereby authorised to enter into an agreement on behalf of the Company with the National Bearing Company Ltd., an associate of the Managing Agents of the Company, providing for the lending of the services of Shri K. D. Churiwala, General Secretary of the Company, by the company to the said associate company on the terms and conditions set forth in the draft agreement produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

EXPLANATORY STATEMENTS

Item 5 (a): The East Indian Produce Company Ltd. are an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company. They have been acting as buying agents of the Company since a long time and it is proposed that they continue as buying agents for a further period of three years in the manner and on the terms and conditions stated in the resolution. DEMAND FOR MONEY PICKS UP

(From Our Own Correspondent)

BOMBAY, *5th February*

There was a broadening of demand for funds in the money market during the week under review, thanks to an improvement in crop movement. It was not, however, on such a large-scale, as is usually experienced at this time of the season. The supply of funds was also sufficient to meet the increased demand without much difficulty. Consequently, interest rates were well held at the previous week's levels. Thus, inter-bank call money continued to be bid at 3 per cent. among the Exchange banks and larger Indian banks and at 3¼ per cent. among the smaller banks. House money at call was placed at 4¼ to 4⅜ per cent. and short-term deposits were offered 4⅛ to 4⅜ per cent. for one to six months.

There was a further fall of Rs. 2.43 crores in notes in circulation during the week ended 31st January 1958, as seen from the Reserve Bank's statement for that week. Notes held in the Banking Department are up by Rs. 2.69 crores. Rupee securities and foreign securities show no variation, but there has been a decline of Rs. 2.14 crores in balances held abroad (in the Banking Department). In contrast to the sharp rise of Rs. 10.31 crores in the previous week, a fall of Rs. 4.29 crores is noted in Central Government deposits during the week under review. Deposits of other Governments have, however, gone up by Rs. 3.49 crores, and those of banks by Rs. 1.89 crores. On the assets side, loans and advances other than to Governments are up by Rs. 3.64 crores, of which advances to Scheduled banks against usance bills account for Rs. 2.84 crores.

The Scheduled banks' statement for the week ended 24th January 1958 shows a further sharp rise of Rs. 19.13 crores in demand deposits. Time deposits too have gone up by Rs. 7.09 crores and inter-bank borrowings by Rs. 3.24 crores. Borrowings from the Reserve Bank stand reduced by Rs. 10 crores. Advances have risen by Rs. 7.94 crores and bills purchased and discounted by Rs. 3.74 crores. While cash balances have enlarged by Rs. 12.20 crores, money at call and short notice are lower by Rs. 3.21 crores.

Barring a slight enquiry for short-dated loans, the Gilt-edged market was devoid of any interest. In the absence of any worthwhile business, variations in prices were few and far between. The demand for 4 per cent. 1967 and 1968 State loans was also on an attenuated scale. 3 per cent. 1986 Conversion Loan was on offer and declined by 5 nP to Rs. 71, but it soon regained to Rs. 71.05. 3 per cent. 1970-75 had sellers at Rs. 85.70. 3 per cent. 1966-68 was maintained at Rs. 91.65, 3 per cent. 1964 at Rs. 94 and 3 per cent. 1963-65 at Rs. 93.80. 3 per cent. 1959-61 was in demand, but the quotation was unchanged at Rs. 99.10. 3½ per cent. 1961 shed 5 nP to Rs. 99.65, while 3½ per cent. 1964 was unchanged at Rs. 97.75 and 3½ per cent. 1965 at Rs. 97.55. 3½ per cent. 1967 was featureless at Rs. 97.60. 3¾ per cent. 1967 was placed at Rs. 99.60 *ex*-voucher, as against Rs. 99.60 *cum*-voucher. 3¾ per cent. 1974 was marked down by 10 nP to Rs. 98.15 and 4 per cent. 1972 by a similar extent to Rs. 100. Among the State loans, 4¼ per cent. 1969 gained 10 nP to Rs. 99.90. 4 per cent. West Bengal 1968 gathered 5 nP to Rs. 98.05, Madras and U.P. 1968 to Rs. 97.45.

The persistent improvement in sterling in terms of the U.S. dollar gave further strength to the rupee during the week. Banks' selling rate for ready dollar was marked down from Rs. 475.50 to Rs. 475 per $100 and their buying rate from Rs. 472 to Rs. 471.75 per $100. In New York, spot sterling moved up from $2.81½-2.81⅝ to $2.81⅝-2.81¾. Three months' forward was, however, marked down from $2.79-3/16-2.79-5/16 to $2.79-1/16-2.79-3/16. Transferable sterling gained from 278.95-279.05 cents to 279.05-279.15 cents.

HIDES WELL SUPPORTED

(From Our Own Correspondent)

KANPUR, *3rd February*

There was no development worth noting in the hides and skins market during the week under review. New arrivals of buff were not as considerable as formerly. Upper grade cow was in strong demand and Madras dealers effected heavy purchases of upper grade goat and sheep. The country tanners were lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 320 to Rs. 330 and 3rd grade Rs. 210 per score; wet salted buff 1st grade 1 lb. 3 ozs. and 2nd grade 1 lb. 10 ozs. per rupee; goat 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces; sheep 1st grade Rs. 350 and 2nd grade Rs. 275 per 100 pieces.

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, *3rd February*

Quiet conditions prevailed in the linseed market during the week under review and prices declined further, while trading was fair. Demand from crushers appeared to have improved slightly and there was a moderate daily turnover, with buyers lowering their limits from day to day. Dull conditions prevailed in the oil market and enquiries were few and feeble. Shippers were out of the market with further lack of support from overseas buyers.

The latest quotation for February-March is [illegible] per maund.

BULLS IN GOLD PAY MARGIN

(From Our Own Correspondent)

BOMBAY, *5th February*

Once again, gold stole the show in the bullion market. A sharp rise in the price of this precious metal, resulting in the establishment of a new high level since September 1951, widening *budla* charges against sellers and the imposition of a margin of Rs. 7 per tola on the buyers, as the *budla* widened to over As. 12, were the highlights of the trading in the gold section during the week under review. Ready gold was pushed up to a peak of Rs. 113 and forward (February settlement) to Rs. 112-6 yesterday, but the closing rates today were a fraction below these peak levels. The carry forward charges in favour of buyers widened from As. 8 at the close of the previous week to As. 12 per tola early this week, and attracted the imposition of margin as mentioned above, but this did not deter the bulls from extracting still heavier carry forward charges, which widened further to Re. 1-1 per tola on the last day of the February settlement, that is, yesterday.

Silver too was firm, but the rise in price was not very marked. Nevertheless, the bulls in this metal had to pay in the same coin to the sellers a carry forward charge of Re. 1-1 per 100 tolas today, as against As. 12 a week ago.

The bullish trend in both the metals was inspired by the low floating stocks and good demand in the ready section. In silver, the arrival of Tibetan coins was on the decline and, in gold, besides the heavy drop in the influx of smuggled gold, the offering of Kolar gold was not made during the last four days.

Forward silver (February settlement) advanced from Rs. 187-15 to Rs. 188-15 before finishing at Rs. 187-12. The March settlement moved up from Rs. 188-11 to Rs. 189-13, but the closing was lower at Rs. 188-13.

Ready silver hardened from Rs. 187-11 to Rs. 188-15, but there was a recession at the close to Rs. 188-5. The ready metal, which was quoted at a discount of As. 4 under the February settlement on Wednesday last week, came to command a premium of As. 9 today. This reflected the decline in floating stocks and the better demand for the metal. The floating stocks of silver are estimated at 1,100 bars. The daily average arrivals were 10 bars, while the offtake was of the order of 25 bars per day.

Gold for forward delivery in February settlement appreciated from Rs. 111 to Rs. 112-7 before the settlement ran out at Rs. 112-6. March settlement gained from Rs. 110-8 to Rs. 111-7, but shaded off to Rs. 111-1 at the close today.

Ready gold gained over the week Re. 1-3 to Rs. 112-9, the highest level touched during the week being Rs. 113. The premium for ready position over the March settlement widened from As. 14 to Re. 1-8. The floating stocks of gold are placed at 15,000 tolas. The daily average arrivals and offtake were of the order of 2,500 tolas.

There was no change in silver prices at New York and in London after last week's reduction. New York silver stood at 88⅜c. In London, spot silver was quoted at 76½d. and forward 75½d. Gold, however, improved from 248*s.* 8½*d.* to 249*s.* 0½*d.*

The following comparative table shows at a glance the trend of the market during the week under review:

	5-2-58	Highest	Lowest	29-1-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES ARRIVALS SMALL

(From Our Own Correspondent)

MADRAS, *3rd February*

Arrivals of E.I. tanned hides and calf skins were of the usual small volume during the week. Prices ruled unchanged. Shippers were buying the arrivals steadily without allowing stocks to accumulate in the local market. Shipment business in F.A.Q. marks continued to be difficult. U.K. boot manufacturers were greatly resisting any increase on dressed kip leather, as they were able to get imported full chrome leather at comparatively cheaper prices. There was, however, selective call for premium class tannages, especially light weight kips, and prices improved by 1*d.* per lb. Heavier weights which were not in favour all these months were enquired after, and some business was put through. Demand for inferior cow hides was brisk for inland trade and prices hardened considerably.

In the tanned goat skins London public sales which commenced on the 27th ultimo, prices ruled unchanged on December levels, with the exception of 8/9 lbs. run and 9 to 12 lbs. rejections of superior tannages which realised 3*d.* to 9*d.* dearer, while 5/6 lbs. run sold 3*d.* lower. There was good attendance of the home trade and a good deal of pre-auction buying was done by French buyers. Common tannages were sold at low prices. Sales of tanned sheep skins are due to commence today.

In the local market, prices of tanned skins remained unchanged, and arrivals were meagre. Shipment business was small, as tanners were awaiting the results of the public sales in progress.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, *5th February*

The cotton futures market opened the week on a steady note and, after firming up the following day, relapsed again in the subsequent sessions. The firmness on Friday was due to heavy short-covering induced by fears that, owing to damage caused to the Vijay crop, supplies of tenderable quality would be scarce. Sentiment was also favourably affected by firm spot advices and encouraging reports from upcountry markets where prices hardened due to slackness in new crop arrivals. The downward revision in the unofficial crop estimate from 5.00 million bales to no more than 4.85 million bales also imparted strength to the market. Under the pressure of persistent buying, values firmed up. The firmness, however, proved short-lived. On Saturday, reaction set in which gathered momentum on Monday, on account of heavy upcountry selling and liquidation by local bulls on fears of the Forward Markets Commission's intervention if the rates were to rise above Rs. 700 and due to bearish survey results of Vijay February-March delivery contracts. The downward trend was accelerated further yesterday following persistent heavy liquidation to the tune of about 15,000 bales in Jarilla March alone. Traders were keen on switching over purchases to the distant May delivery. The spread between the two contracts was considerably narrowed to Rs. 4.50. Today the market ruled quiet.

I.C.C. Moglai Jarilla March opened the week at Rs. 693.50, fractionally higher than the previous close, and firmed up to Rs. 699 on Friday, but declined to Rs. 686 yesterday. Commencing today's session at this rate, the contract gained Rs. 2 before finishing at Rs. 687.50. The net loss over the week was Rs. 5.75. I.C.C. Moglai Jarilla May, after opening at Rs. 687.50, improved to Rs. 692 on the following day before declining to Rs. 681 yesterday. The contract opened at Rs. 682.50 and, after rising to Rs. 684.50, closed a rupee lower. The net loss over the week was Rs. 4.75. The following table indicates the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	5-2-58	*High*	*Low*	29-1-58
I.C.C. Moglai Jarilla (March 1958) ...	687.50	699	684	693.25
I.C.C. Moglai Jarilla (May 1958) ...	683.25	692	681	688

The East India Cotton Association has notified that the Forward Markets Commission has agreed to the change-over of the submission of statements of transactions by members of the Association from the daily to a weekly basis as an experimental measure for three months. This changed system would be reviewed by the Commission at the end of that period. Members are, therefore, required to submit weekly statements in duplicate in place of daily statements showing collectively particulars as to the sales and purchases effected in respect of hedge contracts of all delivery periods.

In the spot section, demand for good quality cotton was more or less maintained, although prices tended to look down. The principal long-staple varieties which attracted the attention of buyers were Vijay, Berar and Laxmi. Among short-staples Wagad, Mathia, Kalagin and Khandesh were in request. Arrivals of new crop Laxmi have just commenced and the quality is reported to be satisfactory. The reduced estimates of Vijay and Surti cotton have induced mills to go in for other qualities. It is reported that cotton crop in the Surat-Broach area has been widely affected by a type of pink boll-worm disease and the yield this season is now expected to be at least one-third less than the normal two lakh bales. So far, about 30,000 bales have come into the market from the northern Surat and Navsari and Bardoli areas. While a large quantity of cotton from the Zaghadia area has not yet been marketed, forward sales have been concluded for the Navsari and Bardoli types.

Activity in the export section was subdued. Only stray enquiries were noted for exportable styles. Prices of permissible varieties such as Bengals, Wagad, Kala, Oomra were lower. There is considerable disappointment over the delay in the announcement of an export quota.

Trading in the foreign section was at a standstill, as the licensing for import of cotton from both sterling and dollar areas remained suspended. There are reports that the Government of India is likely to permit import of 70,000-75,000 bales of new crop East African cotton shortly. It may be noted that business to the tune of about 80,000 bales is estimated to have been done already in this cotton, subject to the availability of licence.

It has been notified that the ceiling fixed for import of American cotton under P.L. 480 has been reached. It will be recalled that on 21st June 1957, a supplementary allocation of 60,000 bales has been released for import under this programme but issuance of licences had to be suspended on 30th November 1957 in order to facilitate quicker absorption of the quantity allocated under P.L. 665. The quantity, which was licensed till 30th November, when the suspension was announced, amounted to 48,000 bales. There was, thus, a quantity of 12,000 bales which remained to be licensed. The issuance of licences for this quantity was resumed on 25th January 1958. This small quantity has now been fully absorbed and thus, the licensing of American cotton remains suspended until a fresh allocation is announced.

The latest available spot quotation from Sewri —in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 625; Berar Jarilla 800; Khandesh 830; Oomra *Deshi* 680; Vijay 925; Hubli Laxmi 1,020; Jaydhar 780. *Delivery contracts*: Vijay 910; Bengal 568.

The easy trend noted in the Karachi cotton futures market last week gathered momentum during the early part of the [illegible] review,

thanks to persistent selling induced by continued slackness of foreign demand and poor domestic spinner interest. N.T.R.G. March and May contracts declined from Rs. 75-4 and Rs. 75-9 last week-end to Rs. 73-14 and Rs. 74-3, respectively, on the 31st inst. Some recovery ensued subsequently, following speculative support induced by reports that Japan would shortly make sterling allocation for the purchase of 15,000 bales of short-staple cotton. The recovery was also aided by higher New York cable advices. N.T.R.G. March improved to Rs. 74-8 and the May position to Rs. 75-2. In the spot section, barring *Deshi* which remained unchanged, most other varieties suffered a setback. The following are the latest available rates—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 70-8; Punjab *Deshi* 68; 4F Roller 76-13; S.G. 82-1; L.S.S. Punjab Roller 79-9; S.G. 83-9; 289F Punjab Roller 85-1; S.G. 94-1.

The Alexandria cotton futures market depicted an easy trend during the week. Upcountry fixings and tired bull liquidation found offtake limited. Consequently, values tended to move down. Spot premiums for better grades were maintained, while those for lower qualities declined. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 78.70; May 79.65. *Ashmouni*: February 67.15; April 67.65.

Cotton futures at Liverpool registered handsome gains. There was replacement buying by Commission Houses but offerings were limited. Near month deliveries were firm on trade covering, while American buying prompted by the reported consensus of opinion in Washington that there was little prospect of the Congress making any change in U.S. farm policy in the current season supported new crop positions. Yesterday, however, a mild reaction set in in American contracts which wiped out the earlier gains. The mixed growths contracts, however, were maintained. Over the week, Sudan contracts showed an improvement. The following are the latest available rates—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 25.30; May-June 25.28; July-August 25.60. *American cotton mixed growth contract*: March-April 26.37; May-June 26.56; July-August 26.75. *Sudan*: May-June 32.65; July-August 32.65; September-October 32.65.

The New York cotton futures market experienced a rally early in the week, owing to trade and Commission House buying based on the belief that there would be no increase in 1958 cotton acreage. Another bullish factor was the anticipation of a substantially higher mid-January parity price. The values, however, staged a retreat on the 1st inst. due to heavy selling following the announcement of the Department of Agriculture of the mid-January parity at 37.96 cents per lb. basis middling 1". Although this is higher than the December figure by 53 points, it was below trade expectations. The weakness of the market persisted till yesterday when there was some recovery.

According to the U.S. Department of Commerce cotton ginning report issued on 23rd January, ginnings prior to the 16th of January were 10,633,000 bales. Many quarters believe that the final crop may be close to this figure, as against the December estimate of 11,010,000 bales. During last season, ginnings prior to the 16th of January were 13,098,000 bales and the final ginnings 13,150,000 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	4-2-58	28-1-58	21-1-58
Spot	36.15	36.15	36.25
March	35.11	34.78	35.14
May	35.25	34.97	35.30
July	35.22	34.78	35.29

YARNS EASY

(From Our Own Correspondent)

BOMBAY, *5th February*

Barring rayon yarns which ruled firm, the yarn market depicted a distinctly easy trend during the week under review. The firmness in rayon yarns was aided by reports of growing scarcity in supplies of imported varieties. Offtake, of course, continued to be low, as the handlooms and powerlooms considered the present prices as being uneconomic. Staple fibre yarns were subjected to selling induced by hedge sales by stockists. Reports from upcountry centres also indicated that demand had gone down, resulting in a fall in prices. Cotton yarns were weak. There was slackness in enquiries from both weavers and shippers. Stocks with mills were said to be mounting up again and there were reports that some mills were actually thinking of reducing prices.

Snia rayon yarn (120 dull cones) February delivery attracted good attention of operators and rallied Rs. 10 to Rs. 919. There were no transactions in the April delivery this week also. In the spot section, 120 Japan and 150 Japan increased by 6 nP each to Rs. 5.31 and Rs. 5.06, respectively. 150 Italy put on 3 nP to Rs. 5.28. 120 Italy was fully steady at Rs. 5.25. Indigenous yarns, however, were easy, National Rayons 150 bright cones first grade declining by 7 nP to Rs. 4.08 and 120 bright cones first grade by 3 nP to Rs. 4.63.

Staple fibre yarns (40 x 2) February delivery encountered heavy selling and fell by Rs. 11 to Rs. 559. Business in the April delivery commenced on Friday at Rs. 574. Today's closing rate was lower at Rs. 571. Spot (40x2) New Greats receded by 5 nP to Rs. 2.95. Citys and Kohinoors shed 4 nP each, the former to Rs. 3.13 and the latter to Rs. 3.22. Centurys lost 3 nP to Rs. 3.12. Foreign yarns, however, evoked some support, Paramounts rising by 3 nP to Rs. 6.69 and Fujis by 2 nP to Rs. 6.60.

In the cotton yarn section, ten counts were neglected, Podars at Rs. 14 and Moderns at Rs. 14.50. Twenty counts were dull, Moderns being quoted at Rs. 17.50 and Gokaks at Rs. 17.62. Among thirty counts, Indus declined by 12 nP to Rs. 20.75. Forty counts Gokaks dropped 50 nP to Rs. 24.50. Minaxis and Moderns shed 25 nP each to Rs. 24.50 and Rs. 25, respectively. Sixty counts Finlays fell by a rupee to Rs. 60. Moderns lost 50 nP to Rs. 60. Raghuvamshis were quoted 25 nP lower at Rs. 52.50. Among eighty counts, Moderns decreased by 80 nP to Rs. 71.20. Mahendras eased by 25 nP to Rs. 69.50. Finlays were quiet at Rs. 75.

The following table gives the prices of rayon, stable fibre and cotton yarns quoted today, as compared with those seven days before:

	5-2-1958	29-1-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia February	919.00	909.00
120 Japan (per lb.)	5.31	5.25
150 Japan (per lb.)	5.06	5.00
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.28	5.25
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 February	559.00	570.00
40 x 2 April	571.00	—
40 x 2 New Great (per lb.)	2.95	3.00
40 x 2 Century (per lb.)	3.12	3.15
40 x 2 City (per lb.)	3.13	3.17
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.00	14.00
20s Gokak	17.62	17.62
30s Indu	20.75	20.87
40s Minaxi	24.50	24.75
60s Raghuvamshi	52.50	52.75
80s Modern	71.20	72.00

OILSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, *5th February*

The oilseeds market continued to rule generally depressed during the major part of the week under review and there was a further drop in prices. Some recovery was in evidence today, but this was due purely to technical considerations. Trading in the groundnut section was characterised by persistent pre-tender day liquidation in the maturing February contract. While the weak stockists were lightening their commitments, the bulls were trying to transfer holdings to May delivery. Offerings from upcountry centres were quite heavy, but demand from crushers was at a low ebb, thanks to the Government's reluctance to allow exports of H.P.S. groundnut and groundnut oil and delay in the release of export quota for groundnut oilcake. Linseed encountered selling by upcountry operators and, enquiries from export houses being poor on account of lack of overseas interest even at low rates, prices suffered a setback. Cottonseeds lost ground following bearish advices from the cotton market. Kardi and niger seeds also weakened on selling pressure. Castorseeds, however, proved an exception. There was good buying enquiry, induced by rivival of rumours of a possible cut in export duty on castor oil and prospects of purchases by Russia.

The oilseeds interests are greatly worried about the mounting stocks of groundnut and groundnut oil with the consequent fall in prices. In the course of a telegram sent to the Chief Controller of Exports, the Board of the Bombay Oilseeds and Oils Exchange Ltd. has vigorously pleaded for the release of some export quotas for H.P.S. groundnut kernels, groundnut oil and groundnut oilcake. The plea is based on the grounds that groundnut oil prices have declined considerably, that there are good crop reports of rapeseed and mustard seed, that the supply position of edible oils in the world is quite comfortable, and that internal stocks of edible oils are sizable. Referring in particular to H.P.S. groundnuts, the Board points out that it is a dollar-earning commodity; if exports of this commodity is not allowed. India will lose its traditional buyers, as they will turn to other sources of supply.

The Government of India has released a quota of 15,000 tons of coconut oilcake for export during the nine months ending September next. Exports against this quota will be licensed freely to all shippers on shipping bills supported by valid firm sale contract as hitherto upto the end of September 1958 or till the ceiling is reached, whichever is earlier. The maximum quantity that an exporter will be allowed to export from all the ports taken together is fixed at 500 tons. Requests for further allotments will be considered on *ad hoc* basis on completion of shipment of the maximum quantity of 500 tons, subject to the availability of the ceiling.

Groundnut February contract met with selling pressure and moved down from Rs. 153.25 last week-end to Rs. 151.25 on Monday, but recovered to Rs. 152.62 today. May contract fell from Rs. 154.50 to Rs. 152.75 before finishing at Rs. 154.37. Ready Coramandel dropped 63 nP to Rs. 30.87, Khandesh 50 nP to Rs. 31 and bold variety 25 nP to Rs. 30.50. Groundnut oil ex-mill declined by 25 nP to Rs. 16.75. Railway receipt eased from Rs. 16.75 to Rs. 16.44 before recovering to Rs. 16.75.

Castorseeds May contract advanced from Rs. 137 last week-end to Rs. 138 on Friday and, after receding to Rs. 136.50 on the 3rd inst., gradually rose to Rs. 137.87 today. Ready Madras recorded a gain of 63 nP to Rs. 28. Kanpur was higher by 13 nP at Rs. 26.25. Castor oil commercial picked up 12 nP to Rs. 14.12, while B.S.S. was fully maintained at Rs. 15.75.

Linseed May delivery came in for selling and declined by 94 nP to Rs. 28.81. Bold ready and February-March both dropped Re. 1.12 to Rs. 28.25. Linseed oil moved down from Rs. 16.31 to Rs. 15.56.

Cottonseed February contract decreased from Rs. 94.75 to Rs. 93.50 before finishing at Rs. 94.25. May position eased by Re. 1.25 to Rs. 93.50, but wound up higher at Rs. 94.25.

Kardiseed bold ready shed 50 nP to Rs. 17.25; on Monday, the rate was even lower at Rs. 16.87. Niger Madras was subjected to selling pressure and fell from Rs. 27.25 last week-end to Rs. 26.12 on the 3rd inst. Thereafter, it recovered slightly, today's closing rate being Rs. 26.25.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	5-2-1958	29-1-1958	22-1-1958
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	152.62	153.25	156.75
May 1958	154.37	154.50	158.50
Bold ready (per cwt.)	30.50	30.75	31.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR FIRMS UP

(From Our Own Correspondents)

BOMBAY, *5th February*

A distinctly firm trend was in evidence in the sugar market during the week under review, in contrast to the bearish undertone noted last week. Offtake of sugar was quite large, due partly to revival of demand from Southern India. But arrivals were comparatively small, being 16,200 bags, as against 23,600 bags in the previous week. The ex-mill quotations for Bombay-Deccan sugar were held firm, thanks to the small monthly release for factories in this region. This is attributed to the fact that these factories commenced crushing operations earlier and, therefore, received almost double the usual quantity for sale in free market in the previous release. It may be noted here that the Government of India has released a further quantity of 155,000 tons of sugar for free sale.

Large grain sugar fell by Rs. 2 to Rs. 109-Rs. 113 per bag, including the additional central excise duty. Medium grain dropped a like amount to Rs. 106-Rs. 108. Small grain declined by Re. 1-8 to Rs. 105.

* * * *

HAPUR, *3rd February*

Quiet conditions were witnessed in the sugar markets during the week. The Government has released a fresh quota of sugar for sale in the free market which improved the supply position in the market. The factories in this region were reported to be crushing to their maximum capacity, thanks to plentiful supplies of cane. Production of sugar up to 15th January amounted to 702,000 tons, as against 621,000 tons in the corresponding period last year. The total offtake, including quantities despatched for export was 372,000 tons and stocks with the factories as on 15th January stood at 761,000 tons. The Union Food Minister hinted this week that India would be able to export more sugar in the current year.

The sugar market in Muzaffarnagar ruled quiet, as the consuming centres did not show any appreciable bull support. Some business was done for Saurashtra and Punjab side at rates lower by 6 nP to 25 nP per maund.

The latest ex-mill delivery prices were:—Rampur (A-29) Rs. 37.37; Buland (B-29) Rs. 36.62; Deoband (C-29) Rs. 36; Iqbalpur (D-29) Rs. 35.62; Mansurpur (B-29) Rs. 37.62; Shamli (B-28) Rs. 36.81; Daurala (B-29) Rs. 36.87; Amroha (D-29) Rs. 34.25; Bijnore (E-29) Rs. 34.25; Meerut (D-28) Rs. 34.81; Simbhauli (E-29) Rs. 35.25.

Sugar markets at Kanpur also recorded a quiet trend. Some business to consuming centres was done at slightly lower rates.

The production of *khandsari* is increasing and is expected to touch a new high this year. The producers are in a position to buy cane upto Re. 1 per maund and, with no controls, production is proving more profitable. The prevailing prices are Rs. 23 to Rs. 32 per maund according to quality.

Ready *gur* ruled mostly quiet during the week. Outside demand is slack and stockists have begun purchases. Consequently, local stock has swelled to about 70,000 maunds. Daily arrivals average 2,500 to 3,000 maunds. Prices are:—*Pansear* Rs. 11.44 to Rs. 11.56; *balti* Rs. 11.75 per maund. While *gur* eased by about 25 nP per maund in the Muzaffarnagar market, due to slack outside support, *shakker* improved due to better demand from Rajasthan side. Prevailing prices there were: *Chakku Minja* Rs. 13.50 to Rs. 14.12; *Pansera* Rs. 12.50 to Rs. 12.75; *gur rusket* Rs. 7.50 to Rs. 9.50; *shakker dara* Rs. 14 to Rs. 15; *Masala* Rs. 15.50 to Rs. 17; *boora* Rs. 27 to Rs. 31.50; *khansari* Rs. 24 to Rs. 32 per maund.

Future *gur* moved both ways in active trading during the week. The latest quotations were near the opening level of the week at Rs. 11.69 for *fagun* delivery and Rs. 12.31 for *baisakh* delivery.

BLACK PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, *5th February*

Supported by bull purchases, Malabar black pepper showed improving tendency during the week. Indian exporters who sold to Russia and the U.S.A. for February shipment came out [illegible]

cover. They absorbed a greater part of the arrivals in all the primary markets, thus relieving the pressure, though temporarily. Daily arrivals in all primary centres averaged about 500 candies. New York was reported to be in the field and purchased a sizable quantity at $0.21¼ and $0.21½ for shipment during the first half of February.

Alleppey improved to Rs. 481½, while garbled at Cochin to Rs. 484½. Calicut, were pressure of arrivals was rather heavy, also showed harder tendency at Rs. 495.

New York, reflecting steadier advices from both India and Singapore, improved to $0.23¼, though no follow-through was noted on the part of grinders.

Singapore, after going down to Str. $61, improved to Str. $62 for Sarawak black special, while Lampong was being offered as distressed parcels in both Singapore and New York. A sizable quantity of Lampong was reported to have been sold in Singapore at Str. $58 to Str. $60 per picul ex-stock. The stock of Lampong and Muntok was reported to be heavy, as unauthorised arrivals were mounting from Sumatra, though that of Sarawak Black remained poor.

In the delivery section, price for March improved to Rs. 468 under pressure of short-covering by way of profit-taking.

In A.S.T.A., March shipment was done at $0.22, while April-May-June were quoted at $0.22½.

The future of the market depended upon the buying policy of New York. If the U.S.A. continued to support the market at about $0.21, the Indian market was likely to stabilise. However, trade in general awaited development from Lampong and Singapore.

Today's nominal quotations are: Ready delivery Rs. 67 per Bengal maund; March Rs. 468-Rs. 473 and April Rs. 473-Rs. 478 per candy of 5¼ cwts.

GOOD DEMAND FOR DUST TEAS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *30th January*

A little over 575,000 lbs. were on offer in Dust Sale 'C' which was held on Tuesday, 28th January. There was a very good general demand and prices for low medium and medium dusts were fully firm and occasionally dearer. Better sorts were rather irregular and prices were sometimes lower. The best highgrown types were scarce, but the limited quantity sold well.

The average price realised in Dust Sale 'C' was Re. 1.64 per lb., as compared with Re. 1.62 per lb. in the previous sale and Re. 1.96 per lb. in the corresponding sale of 1957.

London Market—Sale of 27th January 1958.—Lowest firm to dearer. Others good, though selective demand.

Sale of 28th January 1958.—Good general demand. Best and lowest often dearer.

Colombo Market—Sale of 27th January 1958.—Good demand. Lower rates broken grades. Some coloury mediums firm. Fannings generally steady, but best lower.

Sale of 28th January 1958.—Liquoring sorts dearer, particularly dusts. Plain tea easier.

Calcutta Market—Export.—Less general demand. Commons, medium brokens and fannings 2 to 8 nP lower. Best Assam C.T.C. whole leaf well supported at easier rates. Medium Assam B.O.P. with Plain liquors weakest feature. Flavoury Darjeelings sold well.

Internal.—20,000 Dust. Fairly general demand at easier rates. All orthodox 6 nP down. C.T.C. weakest 20 nP lower. 2,400 internal leaf. Fairly good general demand. Prices irregularly easier.

Export Quota.—It is understood that the Tea Board have recommended to Government a final release of between 5 per cent. and 6 per cent. of the best crop basis. This amounts to approximately 35 to 42 million pounds. Following this news the market was quiet, but there are now sellers at 15½ nP and buyers at 14½ nP.

Forthcoming Auctions.—Dust Sale 'D' will be held on Tuesday, 11th February.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 4.—1,350,000 lbs. Good, but irregular, demand with prices dearer for improved quality, but poor demand for best liquoring highgrown fannings."

EXPORT TEA RISES

(From Our Own Correspondent)

CALCUTTA, *4th February*

Sentiment during yesterday's tea export auctions was better, thanks to good demand in sales held in London last week. It was reported that tea stocks in the United Kingdom for the week ended 17th January were lower at 122 million lbs., as against 127 million lbs. in the previous week. This was taken as an indication of London showing more interest on Calcutta.

In the meantime, the Tea Board has forwarded the suggestion to release an additional quota for export to the Government of India for final decision in the matter. The quota accorded so far comes to a total of 397.4 million lbs., the country's total production amounting to 635 million lbs. The additional quota for which permission is likely to be accorded will be between 35 and 59 million lbs. The Board has also considered the interesting proposal to improve and rehabilitate the tea industry with American aid amounting to Rs. 3 crores. A condition attached to this offer is that part of the machinery required by the tea gardens will have [illegible] imported from the U.S.

Tea trade circles have noted the announcement that, for this month, the export duty will remain unchanged at 38 nP per lb. The price of tea for determining this has been taken as Rs. 2.99 per lb., as against Rs. 3.02 for the previous month.

Dusts offered during last week's internal sales amounted to 20,285 chests. Demand was fair at lower rates, despite the support given by the Middle East buyers. The sole exception to the general trend was Darjeelings, which were fully steady. C.T.C. Assams were very weak, the price easing by 20 nP. The few bright liquoring invoices, however, were steady. Dooars, commons and Assams of orthodox manufacture lost 6 nP. The quotations were: Best Assam C.T.C. Rs. 2.70 to Rs. 2.90 (nominal); medium Assam C.T.C. Re. 1.80 to Rs. 2.00; medium Assam grainy dust Re. 1.58 to Re. 1.60; medium Dooars Re. 1.56 to Re. 1.58.

Leaf on offer amounting to 2,427 chests met with fairly good demand at irregularly easier rates.

During yesterday's export sales, offerings aggregated 62,709 packages. There was good demand, and the feature was the keen attention paid to bright liquoring teas of all kinds. Low medium O.Fs rose above valuations, but plain and medium teas eased. A steady trend was in evidence in non-wither legg-cut fannings, and the lots which were bright in cup advanced. C.T.Cs, on the other hand, eased by about 10 nP, but the very best lots were fully steady. Whole leaf grades declined by 10 nP, with some withdrawals being reported. Darjeelings met with better demand than last week at lower rates, but the lots possessing stylish appearance of autumnal character realised higher prices. The quotations were: Best Assam C.T.C. fannings Rs. 2.30 to Rs. 2.40; best Assam C.T.C. B.P. Rs. 2.40 to Rs. 2.60; clean black pekoe Rs. 2.25 to Rs. 2.30; medium fannings Re. 1.66 to Re. 1.70; plain B.P. Re. 1.52 to Re. 1.56; medium B.P. Re. 1.58 to Re. 1.62; plain fannings Re. 1.60 to Re. 1.64.

Export quota changed hands at 14 nP and fell to 13½ nP.

SETBACK IN JUTE

(From Our Own Correspondent)

CALCUTTA, *4th February*

Business that was put through in jute goods during the week under review was not commensurate with availability of supplies and failed to maintain the level of prices. Heavy goods were subjected to profit-taking, and recent gains were lost. Hessian also was marked lower. Such a trend in goods naturally affected sentiment in raw jute, and despite the final all-India estimate of the 1957-58 crop showing a reduction, most varieties of raw jute were offered at lower rates with mills being reluctant to enter into commitments.

Shipments of jute goods during the last month were believed to have fallen. Up to 25th January, hessian shipments were only 13,000 tons, as against 19,000 tons in the corresponding period in December, and sacking shipments, at 16,000 tons, were lower by 8,000 tons. Lack of fair demand from overseas coupled with the labour troubles in the port contributed to the fall in shipments. Moreover, interest from the United States had been negligible, although business with that country was still anticipated. An increase in stocks of jute goods as at the end of January was believed to have occurred, and confirmation in this regard from the Indian Jute Mills Association was awaited with interest by buyers. As and when this would be made, prices would naturally be affected, and in this context the New York report that the near-term price outlook was bearish caused no surprise. In the meantime, a big order from the Government of India was still looked forward to.

Shippers covered for small quantities only. Since a large increase in stocks of sacking goods was anticipated as definite, shrewd operators hurried to take profit and this added momentum to the down-trend. As regards hessian, traders were earnestly looking forward for a change in the economic activity in the United States.

Early in the week under review, ready B. twills were higher at Rs. 106.65. Mills were keen sellers, and the large amount of offers which the higher rate attracted affected sentiment and, on Wednesday, the price moved down to Rs. 104.10. At this level, there was speculative business put through, but the profit-taking that followed pushed the rate down to Rs. 103.75 on Thursday. The sharp reaction to Rs. 102.40 on the next day followed rumours of a prominent operator being in difficulty to meet his commitments. By the week-end, the rate was as low as Rs. 102.70. At this stage, covering business was done, and the rate recovered to Rs. 103 yesterday. Ready hessian 40" 10 oz. opened at Rs. 39.95 and after moving down to Rs. 39.50 closed at Rs. 39.80.

Raw jute prices also fell. Sellers were anxious for business, but not much passed hands. In view of the fall in goods, mills anticipated further decline in raw jute prices. Also stocks with sellers were heavy. The latest quotations for February-March delivery for the different varieties of jute are:

	Middles Rs.	Bottoms Rs.
Pakistani:		
District	32.00	29.00
Northern	31.50	28.50
Indian:

Pucca bales 1st marks ... Rs. 165.00 ready per bale.

METALS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, *4th February*

The metal market ruled irregular during the week under review. Thus copper hardened further, zinc attracted good attention, lead was unchanged, and tin eased. From Rs. 169, electrolytic copper rose to Rs. 171, while, in contrast, in both New York and London, prices gave way. The easier trend in international markets was due to supplies exceeding demand. The Chilean decision to reduce output by 10 per cent. or 42,000 tons a year failed to have any effect. Trade circles feel that the Government will allow more time for established importers to establish their quotas in accordance with the current import policy. If this is not done, the Government should, it is pointed out, allow unrestricted imports of copper. The price in producing countries is going down and, if the trade is accorded facilities to import, an adequate stock can be built up and the Indian industries can be benefited by the lower trend in world prices. Electrolytic zinc advanced to Rs. 54.50 from Rs. 53.50, following higher advices from the London Metal Exchange. Local demand was little, and there was no anxiety over the stocks. Lead was unchanged but steady at Rs. 59. There were some Government inquiries, but commercial demand was negligible. From Rs. 528, tin gave way to Rs. 520 and this showed that the price was moving down in accordance with the quotation in Bombay, which, in view of the downward trend, attracted mofussil business.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *3rd February*

Quietly easy conditions prevailed in the foodgrain markets during the week under review. A heavy quantity of foodgrains is reaching the country from abroad and the chances of India getting additional one million tons from the U.S.A. under its relief programme are reported to be bright. Further negotiations with the U.S. Government for conversion of the unutilised balance of tobacco and cotton under P.L. 480 into wheat, it is said, are progressing satisfactorily.

Wheat average quality recorded a fall of 25 nP per maund during the week to be quoted now at Rs. 15.37, while farm quality continues to be quiet at Rs. 17, due to paucity of arrivals from producing areas. Most of the consumer demand was being met from stock with the result that local wheat stock ran down by three *khatties* to 12 *khatties*. The corresponding figure a month ago was 23 *khatties* and a year ago 52 *khatties*. Some rains received in the earlier part of the week have improved prospects of *rabi* crops.

Rice registered a slight fall, in line with the bearish trend of other grains. The latest prevailing prices were: *Basmati* Rs. 27.50 to Rs. 30.50; *mainpuri* Rs. 23.25; coarse Rs. 20 per maund.

Gram eased fractionally on easy Punjab advices, influenced by better crop prospects. Local stock ran down to three *khatties* to 24 *khatties*, the corresponding figure a month back being 41 *khatties*. Maize and *bajra* ruled quietly steady. Some quantities of maize were reported to have been despatched to the Punjab. Barley and *bejhar* recorded a sagging tendency, as recent rains proved very beneficial to standing crops. The week-end prices (in rupees per maund) were: Gram *Punjabi* 10.50; barley 9; *bejhar* 8.75; maize 10.87; *bajra* 11; *jowar* white 9 to 10.50; *guapar* 11.25; [illegible] 9.75.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. **E.** = **Accounts** published half-yearly. P. = Company has Preference shares. T. = Company has Debentures. **N.** = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M.—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
x—Port William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. y—New Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
The Interim dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

INDIAN CHEMICAL MANUFACTURERS ASSOCIATION

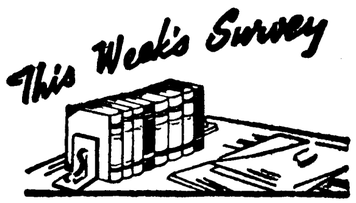
(*Concluded from page 223*)

cement, etc., the picture is truly depressing and must cause concern to all interested in the attainment of the investment targets of the chemical industries, as the following figures show:—

Industry	*Ratio of profits after taxes to net worth per cent.*
Iron and Steel	17.6
Paper	10.6
Cement	11.0
Chemicals	3.0

"According to a survey carried out by the Reserve Bank, the retained profits of 750 public limited companies were 39 per cent. of the pre-tax profits. In the chemical industries, sir, the comparable figure is only 1.2 per cent. This may be compared with the retention in the other capital-intensive industries, being 66 per cent. in steel, 55 per cent. in paper and 39 per cent. in cement.

"It will be obvious that the planning of the supply of capital is no less important than the planning of the supply of raw materials, utilities, etc. We had occasion lately to make an assessment of the capital needs of the caustic soda industry and were amazed to find that, as against the general idea of the capital requirement of Rs. 3/4 lakhs per ton-year of caustic soda, on the basis of latest costs, Rs. 6/7 lakhs per ton-year of caustic soda were needed, i.e., a total requirement of nearly Rs. 20 crores for meeting the second Plan targets for the balance of the Plan period. Capital needs for other chemical products are likely to indicate capital requirements on a similar scale. Capital costs are increasing at an average annual rate of 8 per cent. to 9 per cent., and a continuous adjustment in capital cost estimates has to be made of these increases, for the estimates we make in one year become out of date for another year. There are usually three sources of capital availability open to any business, viz., share capital, loan capital, and internal capital. Whatever the source of capital, however, business must provide for basic 'capital-charges' in its cost and profit structure, viz., depreciation, rehabilitation reserve, dividends, interest on loan, repayment of loan, and a fair net return on investment, and if we wish to avoid capital erosion, an acceptance of these capital charges in a realistic way will need to be made. It is not easy for any industry, and much less for the chemical industry, to raise capital in the share market these days. The procurement of capital, however, must be looked at very much in the same way as the procurement of raw materials or any other services, i.e., the cheapest source must be tapped. Sir, the use of 'internal capital' is the cheapest source of capital procurement, for there is no fixed charge for dividends as in the case of share capital, nor of interest on loan and provision for repayment of loan as in the case of loans. All this is not a matter of opinion, but a fact, and I have to commend that, if an objective study does uphold this conclusion, then the Government and the Tariff Commission should in their consideration of fair prices of products keep this aspect in view. For correct guidance as to the direction which our effort should take for tapping sources of capital for the chemical industry, we need to begin to visualise in a general way



CONCILIATION OR ADJUDICATION ?

IT is generally easy to take sides in controversies on social and economic policies. But when each of the two conflicting theories has equally strong and weak points to commend and condemn itself, and when it is propounded by persons considered as authoritative, a lot of confusion is bound to ensue among the public. A way out can, of course, be found in cases where a compromise or a synthesis of the two views is possible, but when the issue at dispute is one which admits of no compromise but requires a blunt 'yes' or 'no,' a choice is extremely difficult, if not impossible. Those who heard Mr. V. V. Giri, Governor of U.P. at present, an ex-Labour Minister of the Government of India and a person who has devoted the best part of his life to the cause of healthy trade unionism, and Mr. G. L. Nanda, Union Minister for Labour and an equally ardent worker for the cause of labour, expounding the case for voluntary and compulsory adjudication, respectively, at a symposium on "My Approach to Industrial Relations," organised by the Indian Institute of Personnel Management, must have surely found themselves in such a predicament. The Governor as well as the Minister convincingly argued out their respective points of view and both, having been intimately connected with the trade union movement, certainly know, more than anyone else, the full import of what they advocate.

The Governor's view is already well known as the "Giri approach." The case for eschewing compulsion by the State in the settlement of disputes between employer and employee was impressively brought out by him in his presidential address to the twelfth session of the Indian Labour Conference in 1953 and has been repeated many times since then. Mr. Giri was quite emphatic when he said at New Delhi this week: "If you would like to have good industrial relations, if you want differences and disputes to be settled at the level of the industry, adjudication has no place. Adjudication should be taken out of the Statute Book." He was of the view that so long as compulsory adjudication was present in the picture as a machinery for settling disputes, voluntary settlement could hardly succeed. Further, unless compulsory adjudication was totally removed from the Statute Book, lock, stock and barrel, he contended, the parties, during the period of mutual negotiations or voluntary arbitration, would not place all their cards on the table but would reserve the 'ace' for the final game of compulsory adjudication.

It is true that those who oppose this approach do not do so on principle. In fact, every one is agreed that internal settlement through mutual agreement is the best method of ironing out differences between employers and employees without unpleasant consequences. Only, their point of view is that, in the present context in India, having regard to the state of development of trade unionism, the existence of some diehards among employers, and the need for maintaining industrial peace, compulsory adjudication must remain in the picture as a last resort. They point out that trade unions in India are not strong enough to deal with the recalcitrant employers effectively and that much of the strength of the trade union movement today is due to the State support it enjoys.

It could not be that Mr. Giri was unaware of all this. Yet, he argued that it was compulsory adjudication that had cut at the root of the trade union movement, because when the workers found that there was a machinery other than their own unions that would settle their disputes they hardly recognised the need for unions. He, therefore, firmly maintained that the removal of compulsory arbitration would help in promoting solidarity among the workers as that alone would bring them the strength to bargain effectively.

Mr. Nanda, however, did not consider Mr. Giri's approach practicable at present. He felt that the course suggested by Mr. Giri would lead to a state of anarchy. He argued that a strong trade union movement should come into being first before the Government could take the risk of surrendering its power to refer disputes to compulsory adjudication. At the moment trade unionism had not yet reached a stage of maturity. It was in the process of growth and still depends for its strength and sustenance upon incitement of the workers. Until workers' education reached a stage when they would understand the implications of the points at dispute, he went on to add, it was difficult for the State to keep aloof from industrial disputes. Another aspect of compulsory adjudication, said Mr. Nanda, was that, in 99 per cent. of the cases, the reference to adjudication was at the instance of the workers. If the Government were to abdicate this power, he pointed out, the workers would charge the Government with having sided the employer. "I think," he averred, "a Labour Minister, as long as he wants to keep his job, cannot afford to do that." Mr. Nanda, however, agreed to place Mr. Giri's suggestion before the next Labour Conference and see whether the Conference would approve of the Government not using its powers for a period of six months or a year as an experiment.

Mr. Giri's approach is unassailable in principle. In fact, it should be the ideal to be aimed at and every effort should be made to reach it at an early date. The only question is whether it will work in India today without prejudicing rapid economic development. Mr. Giri is fully aware of this. That is why he has suggested that his specific medicine should be tried under certain safeguards to face critical situations should they arise. The suggestion of Mr. Nanda that this experiment could be tried for a predetermined short period of six or 12 months, however, is not the right approach to the 'Giri approach,' because once the parties know this condition those among them who are opposed to this solution will do everything possible to discredit it. Unless, therefore, the Government is prepared to take the plunge with a determination not to turn back, there is no point in taking the road shown by Mr. Giri.

AMBAR CHARKHA

Welcoming the downward revision in the Ambar Charkha programme, we observed only three weeks ago (*vide* page 72 of *Commerce* dated 18th January) that Ambar Charkha would not be able to meet, to any significant extent, the requirements of cloth in the coming years. The conclusion was amply supported by facts and figures indicating the none too satisfactory progress made in the implementation of the programme since its inception two years ago. Further details confirming its poor progress are now available. These reveal that the programme has been scaled down by nearly one half. Thus, as against the target of 180,000 charkhas fixed for 1957-58, the actual number distributed is expected to be not more than 115,000; it will be, we are told, still less at 100,000 in 1958-59. The budget allocation, it is gratifying to find, has been similarly halved, from Rs. 10 crores originally provided to Rs. 5 crores which is all the provision for the next year. Indeed, the authorities seem to be anxious "to consolidate what has been achieved rather than to march on a wide front."

Evidently, the authorities in charge of this programme have realised, though belatedly, that the Ambar Charkha does not satisfy any of the tests of economic efficiency, namely, those pertaining to cost of production, quality, wage-giving potentiality and fatigue factor. The cost of unbleached cloth woven from Ambar yarn is currently assessed at as much as Rs. 1.62 per square yard, a rise of 37 nP as compared with that originally envisaged. An attempt is no doubt made to counteract this factor by pooling Ambar *khadi* with the high-cost pure *khadi*. But even then, the result is not satisfactory. The pool price is Re. 1.87 per square yard, as against the price of Re. 1.62 for Ambar cloth; only the price of pure *khadi* is reduced from Rs. 2.12 to Re. 1.87. One can, of course, justify the high price, provided it means a decent wage to those engaged in production. But the fact is different. Despite subsidy, the average wage received by a person spinning Ambar yarn is said to be substantially below that earned by an unskilled worker in a village. It is not surprising to be told that the response to the Charkha has been mainly from the womenfolk, the men having generally taken to it only as a supplementary source of income. This is sought to be corrected by raising the rate of payment from 9 nP to 12 nP per hank of yarn. But even then, the wage earned by the worker will not be gainful. And how is this additional expenditure to be met except through increased subsidy? Apart from low wage, there is the high fatigue factor. In actual practice, we are told that one Ambar Charkha does not provide work for more than one person, the average number of days put in every year being just 200. But when the programme was initiated, it was thought that two persons would be provided with work for 300 days in a year. Another defect is that the quality of Ambar yarn lacks uniformity, although it compares favourably with pure *khadi* yarn.

All these shortcomings must be borne in mind in assessing the potentialities of Ambar Charkha, in particular, and in planning to meet the expanding requirement of cloth in the coming years, in general. It is needless to add that the same thing holds good equally with regard to the traditional *khadi* (non-Ambar) sector, the production of which is also highly uneconomic. The annual rate of output of cotton *khadi* is a bare 17 million square yards. Even this rate of output is maintained largely because of the patronage extended by the Governments through direct purchase—these account for nearly 50 per cent. of the total quantity produced—and grant of liberal rebates on sales of *khadi* cloth. Considering such a low level of output, the amount that is being spent on sales promotion of *khadi* is, indeed, excessive.

The foregoing analysis is not intended to suggest that Ambar Charkha and traditional charkha have no place at all in the country's economy. They do have a place, but it is a very much limited one than is sought to be given by their protagonists. Their utility is confined to the extent to which they provide employment to persons in regions where other opportunities of gainful employment are either totally absent or cannot be provided at a reasonable cost. The aim should be to minimise the money now being expended on these uneconomic means of production and devote larger sums to something more beneficial to the rural areas. There is undoubtedly plenty of scope for diverting skill, effort and money from the ungainful charkhas to such activities as agriculture, animal husbandry, land reclamation, afforestation, road building, and sanitation which will yield sustained results and permanent gains to the rural economy. It is high time our planners looked at the problem on these lines.

CEMENT INDUSTRY

The development programme of the cement industry was discussed at the meeting of the Standing Committee of the Central Advisory Council of Industries held at New Delhi on Monday last. According to reports in the daily Press, proposals for the establishment of 26 new factories and expansion of 29 existing units have been approved. If these schemes were to materialise, the total installed capacity of the cement industry would expand from 6.6 million tons at present to 15.3 million tons in 1960-61. This is very near the target of 16 million tons set in the second Five-year Plan. It is estimated that the capacity of the industry will go up to 8.4 million tons by the end of this year and to 10.5 million tons a year later.

It is, however, highly doubtful whether all the schemes sanctioned will, in fact, materialise. Although nearly two years have elapsed since the second Plan began, the progress actually made in the implementation of the expansion programme of cement industry has not been quite encouraging. The installed capacity of the industry during these two years has gone up by a bare 1.67 million tons, that is, from 4.93 million tons in 1955-56 to 6.60 million tons at present, and actual production from 4.49 million tons in 1955 to 5.50 million tons in 1957. The slow pace of progress must be attributed primarily to the increase in the cost of expansion. The investment actually required to raise the productive capacity by 10 million tons is now estimated at as much as Rs. 125-Rs. 150 crores, as against the Planning Commission's original estimate of Rs. 81.5 crores. Considering the recent tax policies of the Government, it is, indeed, too much to expect the cement industry to mobilise such vast capital resources. Moreover, the entry of the State Trading Corporation into the cement trade seems to have taken away some of the enthusiasm among the industrialists to venture further in this field. What is worse, there is also the shortage of foreign exchange needed for importing capital equipment and the continued rise in the prices of coal, rail freight, cesses, royalties, etc., over none of which the industry has any control.

In view of these factors the target of 15.3 million tons of installed capacity appears to be rather too high to be hit by March 1961. Even assuming that the target will be hit, two questions remain to be answered. First, will adequate rail transport capacity be available for promptly moving the additional production of

cement? And, secondly, will the demand for cement be maintained at such a level as to prevent unhealthy accumulation of stocks?

The last mentioned question, it is reported, was discussed by the Standing Committee at some length. That is only as it should be, for the target for the cement industry was originally fixed assuming that all the projects in the second Plan would be implemented. But now it is admitted even by the authorities that only the so-called "Core of the Plan" can be completed. Accordingly, some convincing reasons are required to believe that there will be sufficient outlet for 15 to 16 million tons of cement. The general view of the meeting, we are told, was that there was no justification at present to anticipate any fall in demand and, therefore, to think in terms of reducing the target. It was felt that the demand for cement from the various projects would pick up, as more steel became available and that in any case large quantities of cement would be required for the development of national roads. The Committee was inclined to believe that there was no reason to consider any adjustment of the target merely on the basis of temporary improvement in supply; even now, the stocks of cement with the factories were equal to less than five days' production.

In the course of discussions, some members urged the Government to relax further controls on the distribution of cement. Mr. Shanti Prasad Jain, for instance, suggested liberalisation in distribution of licences in the Bengal-Bihar region, so that cement could be made more easily available and prices brought down. Referring to the expansion programme, Mr. Jain, it is said, wanted priority to be given to the manufacture of slag cement. Another interesting bit of information was that the Government informed the Committee that the scheme for erecting a cement machinery plant by the A.C.C. in collaboration with two British firms was still in the field. It was stated that discussions were continuing on the subject and, even if this particular scheme failed to materialise, an alternative approach was possible. It will be recalled, in this connection, that, only a fortnight ago, the Chairman of the A.C.C., Mr. Dharamsey Khatau, informed his shareholders that the scheme had been shelved for the present. The Government is rather too optimistic in assuming that an alternative approach is possible. Even assuming that it is possible, the important question is: At what cost? It is needless to add that anything should be possible, if one were to disregard the cost aspect.

INDO-BELGIAN TRADE

A Belgian industrial delegation, sponsored by the Belgo-Indian Chamber of Commerce and Industry, is currently in India on a fact-finding mission. The delegation, which represents a cross-section of Belgian industries, is headed by Mr. Robert Desprechins, President of the Chamber. It will visit the major industrial centres of India and make a first-hand study of the economic and business conditions in this country. Members of the delegation have for some time been meeting industrialists, business men, and Government officials in this country to explore the possibilities of strengthening commercial relations between the two countries.

Although Belgium is one of the smallest countries of Europe, lacking in raw materials, except coal, and having no special advantages with regard to climate or soil, it has a highly developed industrial and commercial economy. Belgium stands at the cross-roads of European trade routes and this advantageous position, together with the industrious nature of its people and the sound economic and financial policies of the Government, have enabled it to develop many industries such as glass, chemical, cement, iron and steel, etc., which can compare with the best in Western Europe. The Belgian franc is one of the soundest currencies in the world. In fine, Belgium's economic importance is more than in proportion to its size in terms of either area or population. Its position among the nations of the world is determined by its role in international trade. It produces a wide range of industrial products, 40 per cent. of which finds its way to foreign markets. By virtue of its geographical position it is also a great conversion and transit centre.

India is already having a fairly large volume of trade with Belgium and there is much scope for expansion. In the year ended March 1956,

PRESIDENT STRIKES A NOTE OF SUBDUED OPTIMISM

EMPHASIS ON FOOD SELF-SUFFICIENCY SIGNIFICANT

From Our Special Correspondent

NEW DELHI, 11*th February*

DELHI LETTER

PARLIAMENTS Budget session heralding the third year of the second Plan opened yesterday in the background of speculations of a Cabinet crisis involving the reported resignation of the Finance Minister, Mr. T. T. Krishnamachari. The President's opening address to the session referred at the outset to the favourable turn on the foreign exchange front by way of a diminution in the rate at which India's foreign assets were falling. This was rendered possible by the Government's efforts to restrict imports in the last six months and to obtain extra foreign exchange through loans, arrangements covering specific projects, deferred payments for essential capital goods, and limitation of foreign exchange allocations to the most essential capital or consumption requirements. The President also claimed that the internal economy had taken a similar favourable turn by way of a slight fall in general prices in recent months, an easier credit position, an improvement in the resources of the banking system and only a moderate increase in the advances made by banks.

As for foodgrains production in 1957-58, the President did not specifically mention if it would be considerably less than in 1956-57 with its 68.7 million tons. It could, however, be inferred that the Government had taken into account the probability of a big fall in production in the 1957-58 agricultural year. The President's remarks that the damage to crops as a result of drought in certain parts of the country had been very disquieting and that the Government would be maintaining food reserves at adequate levels by further imports, were significant in this connection. But a hopeful factor in the situation is that the fall in rice production does not appear to be as much as it was originally estimated unscientifically in the drought-affected tracts of Bihar, Orissa, Uttar Pradesh and Madhya Pradesh.

Incidentally, the estimates of rice production made by the Planning Commission's Study Team are now further confirmed in the case of Bihar. According to the latest Bihar Government's estimate made through crop-cutting experiments by random sampling, the total output of rice in Bihar in 1957-58 is 2.20 million tons as against the Study Team's estimate of 2.24 million tons. According to the planning Commission's Adviser (Programme Administration), this bears out the approach of his Team's report that, "with a given pattern of cultivation, the yield of paddy in years of sub-normal rain is determined by the residual moisture in the fields at the time of flowering and this residual moisture would be of the same order as in previous years with a similar distribution of rainfall in September and the months following." In 1957-58, there was no rain in Bihar after the first week of September as in 1930, 1934 and 1950 and, in all these years, the total output was estimated at 65 per cent. of the normal. As conditions in the current year were about the same as in 1950, the estimate of 2.24 million tons of rice production was made on the basis of the total production in 1950. The results of the latest estimates in Madhya Pradesh, Uttar Pradesh and Orissa are not yet available. But the confirmatory estimates so far available go to show that the fall in rice production due to drought in the North Indian States could not have been substantial. In any case such loss of crop as there has been might well be compensated by some increase in production in the South Indian States. Be that as it may, the need for quick and reliable estimates of crop losses *as they take place* is obvious if the Government of India are not to be hustled or alarmed into financing relief operations or importing foodgrains on scales larger than are genuinely required.

In the latter context, the President's remarks that all possible efforts were being made to increase food production at a higher rate than hitherto and it was essential that self-sufficiency in food should be attained were hopeful indications of a renewed emphasis on the short-term question of increasing food production. The Planning Commission's goal of self-sufficiency in food by the end of the second Plan is now more or less settled, although it runs counter to the Ashoka Mehta Committee's thesis. The only question is whether increased resources could or would be made available for agricultural schemes of a short-term character. It is understood that a process of reorientation of agricultural schemes has been initiated, although it is too early to assess its possibilities. As for the recognition that, unless food production increases more substantially in the next three years, the economy cannot take further doses of deficit financing, it appears to be clearly there. The President's emphasis on food self-sufficiency is thus more than a pious wish.

As for industrial production, the President referred to its steady improvement and to the greater employment of domestic resources and skills as a consequence of the severe import restrictions which were necessitated by the foreign exchange crisis. The emphasis, in the President's address, on increased industrial production which would help reduce foreign exchange requirements as well as earn it was quite understandable. Whether the expected increase in industrial production will take place in the context of the just-announced policy of continued restrictions on imports of raw materials in the coming licensing period (April-September, 1958), is the question. Incidentally, with capital goods scheduled to be accorded a lower priority than industrial raw materials in the matter of imports in the next licensing period, it is again difficult to foresee if the approved schemes for 26 new cement factories and for expanding the existing units in this industry will be fully implemented in the next three years of the Plan. Here, too, there is the problem of adequate foreign exchange for the purpose. The Standing Committee of the Central Advisory Council of Industries which has just been informed about the cement schemes has, however, been told that "efforts are being made to secure the foreign exchange required."

Another highlight of the President's address was the reference to the process of "necessary adjustments in the Plan as a whole, having regard to the available resources." The Government would soon place before Parliament a picture of the "core of the Plan." This should help clear a lot of confusion on the score of pruning or rephasing of the Plan. In the context of the President's particular emphasis on "domestic savings which help to check inflation and provide the internal resources required for the fulfilment of our Plan tasks," it could also be inferred that deficit financing may not figure to the same extent as in the 1957-58 Budget. There are also other reports to that effect.

The Government of India has decided that schemes should be formulated for developing the cottonseed crushing industry exclusively on co-operative lines for the benefit of growers. The decision is a sequel to the recommendation made by the Oilseeds Crushing Industry Inquiry Committee. The Government feels that it is desirable to organise a network of village oilmen's co-operative societies throughout the country. Such societies can be formed in villages or compact groups of villages inhabited by a large number of oilmen. One of the main functions of the co-operative societies should be to ensure a continuous supply of raw materials to oilmen by stocking oilseeds in godowns soon after the harvest when prices are not very high. The societies should also buy oil and oilcakes produced by the members and arrange for the products to be sent to co-operative marketing societies or warehouses established by the Central and State Warehousing Corporations. In areas where a separate society cannot be formed, the oilmen should be enrolled as members of co-operative societies, the oilseeds required by them being supplied from godowns of a large-sized credit society. Similar facilities may be provided to them by marketing co-operatives. It is further recommended that the State Governments should remove the difficulties experienced by the co-operative societies by extending facilities to them for building godowns. Oilmen (*telis*) can also be helped to become shareholders of co-operative societies.

THE LIBERAL TORIES?

From Our Own Correspondent

LONDON, 1st *February*

LONDON LETTER

THERE is no doubt that the Government and their supporters are still feeling lost after sacrificing Mr. Thorneycroft on Mr. Butler's altar. The former Chancellor was regarded as a true right-wing Tory, prepared to carry his political convictions into the economic field. Most people cannot believe that a Chancellor of the Exchequer should resign over a mere £50 million out of a Budget total of around £5,000 million and whether they are right or not will only be established when the new Budget is actually announced. On the other hand, the power of a department over its Ministers is considerable and the Chancellor *plus* his Economic Secretary *plus* his Financial Secretary, once convinced that they must make a stand on the limit of Government spending and that to give way would show infirmity of purpose over the whole field of battle against inflation, would feel committed in loyalty to their permanent officials as well as to the cause in which they believed to stand by their decisions.

Mr. Thorneycroft no doubt expected to be able to stand aside and watch the Government muddling itself along on the edge of inflation through failure to follow his surgery. And the Government saw themselves as liberals not prepared to carry policies to extremes regardless of all factors. They would fight inflation but they would not kill the Welfare State—and so on. But here they reckoned without their right-wing. To the right the ex-Chancellor was a man prepared to give Tory economic policy its head and his departure seemed to them a sign of weakness. Now two things have happened to reassure the right. First, the new Chancellor is a man commanding the respect of all groups among Government supporters and when Mr. Heathcote Amory says he is going to fight inflation they feel there is more in those words than if spoken by any other member of the Government.

Next has been the attitude of the Minister of Labour over the London busmen's wages claim. He has refused the request for a Commission of Enquiry into the dispute—a request put forward by the Trades Unions in a sincere bid for peace—and will only agree into an enquiry into the relationship between the wages of all busmen throughout the country; such an enquiry, necessary and important though it is, would be very prolonged and the unions consider the suggestion as designed to procrastinate. The attitude of the Government in this matter is hard to understand in isolation: they appear to be courting industrial unrest and a serious strike which could spread through the whole transport industry. Why should they do this?

The explanation is the need to rally their own supporters that the exodus of the Treasury Ministers did not mean a softening in the Government's attitude towards claims for increased wages which are not accompanied by increases in production. It is not quite a case of letting Mr. Thorneycroft go and continuing the policies of Mr. Thorneycroft but at the moment it looks very near it!

But is the Opposition taking as much advantage of the confused situation as it might? Apparently not. They appreciate that it is not a case of too much money chasing too few goods, but of not enough goods being produced against the present quantity of money. Hence restrictive monetary policies may prove sterile until they plunge the country into deflation; while expansionist production policies will meet both the home problem and the export needs of the country. But how is the necessary impetus to production to be given by means other than inflationary ones? In short, the Labour Party has not yet risen to a solution of the problem which it has successfully analysed. The Labour Party must be able to do better than Mr. Thorneycroft—they must be able not merely to maintain the level of Government expenditure, but to reduce it and to apply the reduction to a boosting up of investment. And before Government expenditure is reduced severe political decisions must be taken: the Government did not dare face whittling away the Welfare State further—would the Labour Party attack and reduce the country's defence commitments?—*All Rights Reserved.*

LONDON LETTER—II

THE AFTERMATH OF A BANK RATE LEAK

From Our Own Correspondent

LONDON, *7th February*

THE famous enquiry into the alleged leak about the intention to raise the Bank Rate to 7 per cent. last September has had its findings debated in Parliament. Not surprisingly the true lessons to be drawn from the enquiry were intended to be ignored at the expense of the political display which each side saw fit to put on. The Government devoted their energies to attacking the Opposition for ever having suggested an enquiry and the Opposition retaliated by fully justifying their demand for one! The honours in terms of substance undoubtedly went to the Government, but, in terms of debating skill, the Opposition seemed to do rather better, with very little material to work upon.

It has been suggested that the somewhat cumbersome machinery of an enquiry should not be used in cases such as this, as a great many private persons are not only put to expense and inconvenience, but have had all manner of irrelevant details about their private lives dragged into the Court. On the other hand, it is impossible to take away from Parliament the right to demand the fullest information on substances which seem to them important and if, in the course of this demand, allegations under cover of Parliamentary privilege are made against members, then the only answer may be a judicial enquiry of the sort that was held in this case.

But the reasons, which made the Opposition suspicious that some personal advances had been gained at the time of the decision to raise the Bank Rate would hardly have arisen if the consultation of some Ministers, and in particular the Chancellor of the Exchequer, had not been so wide. There is the difficulty in this country that the Party machine operates outside the Parliamentary machine, but since the Parliamentary machine depends in the last resort on the Party machine to keep it in power or to return it to office, the Parliamentarians feel bound to keep in close touch with their political assistants outside Parliament. This is all very well on many matters in which sense of popular feeling is important, but is it necessary on economic matters where a great deal of expert knowledge is necessary in order to form a view, or where popular opinion is not involved?

On the other hand, it is very odd that there was no consultation of any kind with the Members of the Court of the Bank of England who are private bankers. Although the Bank is a nationalised institution, it has been thought desirable to retain the private Members of the Court, in order to give expert advice and, yet, when expert advice is needed, they are not consulted. In these circumstances, it would surely be far better to restrict the Members of the Court to the Senior Bank Officers and Treasury Officers and Ministers concerned, while outside City interests can always be consulted by setting up an Advisory or Consultative Committee which can be called together *ad hoc* when appropriate.

The third lesson and the most significant one is the need for a properly planned economic policy. It is most alarming to consider the haphazard way in which significant decisions such as that to raise the Bank rate—apparently as a result of the Commission Enquiry—are taken. The state of the country and the financial measures necessary to secure that state are discussed casually wherever the Ministers concerned may be, and out of this casual conversation and out of a good deal less casual conversation inside the Treasury and in the Cabinet, decisions are taken. But there is apparently no expert examination of the general economy of the country as the crisis develops—and after all the foreign exchange crisis which the country surmounted last autumn began far back in July. The Government was notoriously opposed to planning when it took over from its Socialist predecessors but it has carried its opposition too far if there is no up-to-the-minute appraisal of the country's affairs which can be considered by Ministers and their advisers at all times and form the basis for economic decisions. It seems clear that the country needs a little less of the casual outlook in the Government's approach to economic problems.—*All Rights Reserved.*

PRESENT-DAY ECONOMIC PROBLEMS

NEXT TWO OR THREE YEARS WILL BE CRITICAL, SAYS MR. J. R. D. TATA

ADDRESSING the Commerce Graduates' Association on some of the problems of the day, Mr. J. R. D. Tata said that he saw no alternative to a considerable re-phasing or curtailment of the second Five-year Plan. While agreeing that the Plan was not overambitious in relation to the needs of the people, Mr. Tata felt that the question of resources available could not be brushed aside. Reviewing the present economic situation, he said that, although the long-term prospects were good and he took an optimistic view of India's economic future, the situation today and during the next two or three years would be critical and must be faced boldly, however unpalatable the remedies might be.

Mr. Tata referred to the continued shortage of foodgrains and the consequent drain of foreign exchange on imports, the inflationary pressures which, though temporarily in check, continued to threaten the stability of the economy, the foreign exchange crisis, and the inadequacy of internal savings. In his opinion, all the symptoms of the present malady were directly or indirectly related to the excessive size of the second Five-year Plan in relation to resources. He observed:

"The original Plan visualised an outlay of Rs. 4,800 crores in the public sector alone, of which the foreign exchange component was estimated to be about Rs. 1,100 crores. This has proved to be a serious underestimate, and foreign exchange requirements are now estimated at Rs. 1,600 crores or more. The cost of the various Plan projects had also been underestimated and, if put through in full, the Plan will now cost something in excess of Rs. 5,500 crores. The so-called core of the Plan alone will cost Rs. 4,800 crores.

"On the other hand, the resources available seemed to have been substantially overestimated. Even under the original Plan, visible resources were only Rs. 2,400 crores or half the planned expenditure. Performance during the first two years of the Plan has indicated that approximately Rs. 1,000 crores less will, in fact, be available."

Mr. Tata warned that, if the Government insisted on pushing through with the Plan as it stood, without adopting draconian measures totally unsuited to a democracy, there would be a grave risk, on the one hand, of the country failing to meet its foreign obligations and, on the other hand, of a degree of inflation, brought about by excessive deficit financing, which would wipe out the benefits of the Plan to the people. Mr. Tata argued that the size of the second Plan or any other plan in the series of Five-year Plans was of no importance; a smaller step at this stage might, in fact, result in quicker progress towards the ultimate goal which alone was important.

Apart from a realistic revision of the Plan, while there was still time to achieve it, Mr. Tata advocated a sounder order of priorities than seemed to be embodied in the present Plan. As an example, he alluded to the fatal fascination which steel plants seem to exercise on the minds of Government and the planners, although, of all the projects in the Plan, steel plants would require the largest amount of foreign exchange and yield the lowest return in foreign exchange. There was a strong case, Mr. Tata said, even now for postponing the third steel plant and using part of the money thus

DICK'S
JOINTINGS
DICK'S "EAGLE" JOINTING
JS. 514
The Economical Jointing for General Steam Work.
DICK'S "DICKTORITE" JOINTING
JS. 528
For Highest Pressures and Superheat, Weak Acids, etc.
DICK'S "BESTORITE" JOINTING
JS. 501
For all Steam Pressures, Oils, Ammonia, etc.
Supplied in sheets 40 ins. square, in thickness from 1/32 in. upwards.
DICK'S "EAGLE" ASBESTOS MILL BOARD
JS. 520
FOR GENERAL UTILITY WORK
Supplied in sheets 40 ins. square, in thicknesses 1/16" and 1/8"
All Jointings marketed by Dick's Asbestos and Insulating Co. Ltd. London, are manufactured from the finest of materials, and the variety of types will be found to meet almost every Engineering and Industrial application.

William Blake.

VOL. XCVI. No. 2448 BOMBAY, 15th FEBRUARY 1958 PRICE: Re. 1.50

IMPORT POLICY REALISTIC

THE principles of austerity enunciated by Mr. Morarji Desai, Minister for Commerce and Industry, for determining the import policy for the half-year beginning from April next are unexceptionable, having regard to the serious foreign exchange situation confronting the country. Before referring to these principles, it will be appropriate to consider the latest foreign exchange position, so that they may be viewed in their proper perspective. A reference to this subject was made this week by both Mr. Morarji Desai, at the meeting of the Import Advisory Council, and President Rajendra Prasad, in his inaugural address to the current session of Parliament. Mr. Desai described the position as "serious," while the President merely said that there had been some improvement in the position; he did not use an adjective to indicate the state of affairs precisely. This is quite understandable because he was endeavouring to present the economic picture of India in a mild optimistic light. Mr. Desai, however, did not mince words. He candidly admitted that, though the position was better, it was still serious. That undoubtedly is the true picture.

It is, of course, correct to say that, since the last meeting of the Import Advisory Council in September 1957, the prospects of getting foreign assistance for implementing the second Plan have improved. There are today firm promises of help from the U.S., the U.K., West Germany, Japan, Canada and France. On a rough estimate, these aggregate about 270 crores. The World Bank is likely to give another Rs. 70 crores, that is, in the fiscal year 1958-59. There are also reports that the U.S. may be rendering some more assistance. But it must not be forgotten that the total of all these offers, some of which are yet to be finalised, constitutes only a fraction of the foreign exchange cost of the "core of the Plan" against which large commitments have already been concluded. The private sector also has sizable firm orders placed with foreign countries. These will materialise in the coming months. Another point that must be borne in mind is that, at present, the foreign balances to the credit of India are no more than Rs. 281 crores (as on 7th February 1958), as against Rs. 377 crores in the first week of September when the policy for the half-year now drawing to a close was discussed. This means that, during the past five months, the balances have shrunk by no less than Rs. 96 crores.

There has no doubt been a slowing down in the pace of depletion of the country's foreign balances. Thus, as against a fall of about Rs. 100 crores during July-September 1957, there was a drop of only Rs. 55 crores in the last quarter of 1957. In the month of January 1958, the rate of decline was even less, Rs. 14 crores, that is, at the rate of Rs. 42 crores per quarter. In the first week of February, it was only Rs. 2 crores, equivalent to Rs. 26 crores per quarter. Such comparisons, however, are misleading. The period from October to May is usually one when exports from India are brisk and the bulk of foreign exchange is earned. The reverse is true of the period from June to September. The seasonal exports may, therefore, be covering the effects of excessive imports on foreign balances. This is not to deny that the severely restrictive import policy adopted six months ago has begun to take effect. But the full impact of this policy will be felt only in the second half of this year. Meanwhile, the position has by no means improved to so perceptible an extent as to permit any relaxation in the present restrictions on imports. Mr. Desai was, therefore, quite justified in asserting: "The liberalising policy is dead. There is no question of liberalisation."

As the facts of the present situation warrant the continuance of a tighter policy, it is essential that there should be some well-thought-out principles for determining the basis on which the licences are to be issued for the coming half-year. It seems that Mr. Desai had done some thinking well in advance, for he stated the principles quite firmly and clearly. These are:

(1) Every request for imports should be justifiable on the strictest tests of essentiality.

(2) Every endeavour will be made by the Government to provide the industries with raw materials as adequately as possible. Nevertheless, industrialists should find ways and means of using indigenous substitutes for imported raw materials, stores and spares.

(3) Import of capital goods for new development has necessarily to be given a lower priority than the import of raw materials. "It is obviously undesirable," to quote the Minister, "to aim at an expanding capacity, if we are not able to get the utmost out of the existing installed capacity in the country."

(4) Consumer goods should rank very low in the list of priorities. "With every sympathy for the consumer," said the Minister, "there is a large number of things the import of which we simply will not be able to afford in the immediate future."

These are, indeed, sound principles on the basis of which a system of priorities for imports has to be evolved. When practised, they will, of course, hurt certain industries and trade and cause postponement of a number of contemplated new industries. These hardships are, however, inevitable, since the pace of development has to be related to the resources available. To ignore this fundamental criterion is to invite economic chaos. Accordingly, we have no hesitation to endorse the views of Mr. Desai on this point. We would only urge that the principles laid down by him should be made applicable uniformly to the public and private sectors alike.

The fervour with which a section of industrialists in this country pleads for the extension of the deferred payments system to a large number of projects, including those that are not in the Plan, and for a liberalisation of the conditions imposed by the Government for granting import licences under this system is simply amazing to us. Even the Minister (Mr. Manubhai M. Shah, who is said to have enthusiastically advocated this system at one time as a solution to the foreign exchange problem, has begun to see the danger of carrying it too far. Yet some business men, who ought to know better than this Minister, think very highly of it and want to adopt it on a wider scale. The cost of buying plant and machinery on the basis of deferred payment is very high and it is not known how the industries built on such credit will be competitive. That apart, no thought seems to be paid to the question whether India will be in a position to find enough foreign exchange to meet the liabilities as and when they materialise. There is little reason to think that, in the next three to five years, India's balance of payments position will become comfortable enough for discharging these obligations. Mr. Morarji Desai, therefore, did well in cautioning business men against resorting to deferred payments system on any large scale for getting over the foreign exchange hurdle. His brief observations on this subject bear reproduction. He said:

> "The scheme of allowing imports for capital goods on deferred payment terms is one which has only a limited scope. We should not and do not intend to mortgage our future by indiscriminate borrowing. The kind of schemes where deferred payment arrangements can be legitimately accepted are those where the projects, by their production, will either earn or save foreign exchange to pay for them when the instalments fall due. If this is not the case, then we should only undertake such development as we can finance out of our present resources. Otherwise, we shall be piling up liabilities for the future and this we certainly do not intend to do. Those who wish to proceed with a project on deferred payment terms must first satisfy Government that the project is one which is suitable for such financing and ascertain the kind of terms which will be acceptable."

It will be noted from the above extract that the Government is alive to the danger of deferred payments system landing the country in a situation quite damaging to its credit in the world. In fact, when the President of the Federation of Indian Chambers of Commerce and Industry reiterated his plea for a certain amount of relaxation in the conditions under which the Government agrees to imports under this system and observed that

there was no danger in doing so. Mr. Desai retorted by saying: "It will be defending doom. How will we pay for these liabilities in future?" The protagonists of suppliers' credit have not so far given any convincing reply to this question. A valuable contribution to this debate was made by Dr. P. S. Lokanathan when he remarked at the meeting of the Council that, in addition to the conditions imposed by the Government for permitting deferred payments agreements, it must be laid down that no such agreement should be allowed if it in any way affected the domestic resources required for implementing the essential projects. We had ourselves advocated this condition ere now, because we found that, backed by offers of deferred payment by some foreign industrialists, several requests were being made to the Government by Indian business men to establish certain types of industries which can very well wait for some more years and which, in any case, are not already covered by the second Plan.

Since the foreign exchange position continues to be extremely difficult and since it is not desirable to rely on deferred payments system to any large extent, a logical solution to the problem is to encourage the flow of foreign private capital to this country. Mr. Desai accepted this proposition in his speech at the meeting of the Council. Thus, he said:

"One of the possible methods of financing new projects is through the participation of foreign capital. If investment from overseas of a long-term character in the equity capital of a company is forthcoming to meet at least the foreign exchange necessary for the importation of plant and equipment for the project, we certainly do not have any anxieties on account of the foreign exchange situation. For this reason, Government have encouraged Indian industrialists to seek suitable foreign collaboration which, incidentally, brings in many advantages of a technical nature. At the same time, I must add that the fields in which foreign capital is most welcome are those which strengthen our economy and which develop new lines of production of items which we would otherwise import."

But what has the Government done to attract foreign capital? Scarcely anything. On the contrary, in the last three or four years, it has placed more impediments than incentives to get such capital. Much has been said on this subject and yet there are no indications that the authorities concur with this view. Will the coming Central budget belie this assertion, even partly?

EXPORT WITHOUT PROFIT?

A COUNTRY faced with a serious balance of payments problem has four principal ways in which it can solve it. These are (1) borrowings from abroad, both short-term and long-term, (2) import of private capital through adoption of suitable techniques, (3) restriction on imports, and (4) stimulation of exports. India has been trying all the four approaches with varying degrees of efficiency and with varying results. Broadly speaking, while the first two means fall under the sphere of finance, the third and the fourth come under trade. Both the groups, however, are interdependent, in that fiscal and monetary policies have a profound effect on the movement of goods and capital alike. Of the two means pertaining to trade, restriction on imports is a negative one and fairly easy to follow, while stimulation of exports is a positive but difficult solution. There has been quite a lot of talk and some action in this country about export promotion. Nevertheless, the country is far from the goal. The reason for this is to be found in the fact that the measures so far taken have been of a halting nature and, what is more, not all of them of the right type. This is not due to lack of right advice. Of that, there has been plenty. It is invariably the Government which has faltered in implementing several pertinent suggestions. It still does not seem to realise that the defect lies with it.

The speech made by Mr. Morarji Desai at the Export Advisory Council meeting held at New Delhi on the 9th inst. was disappointing, in marked contrast with the one delivered at the meeting of the Import Advisory Council on the previous day. It was disappointing because it was unrealistic. After recounting such promotional efforts as the granting of drawback of import duties and rebates of excises, the establishment of Export Risks Insurance Corporation, the constitution of Foreign Trade Board within the Commerce and Industry Ministry, and the Export Promotion Councils and after lauding the performance of the State Trading Corporation about which there can be and are two views, Mr. Desai observed:

"The time has come when there must be a reorientation of our thinking. Many industries complain of the shortages of raw materials which the cut in our import programme has caused. They must realise that foreign exchange is not something which Goverment can produce for them. It is they who earn it. Government can only ensure an equitable distribution of the foreign exchange which is earned. It is, therefore, my considered opinion that every industry in the country must try to export at least such quantities of its production as would pay for the raw materials which it needs to import. *This may mean selling without any profits abroad.* This will mean adherence to stricter standards of quality than the domestic market demands. This will mean, in other words, some sacrifice." (Italics ours.—ED.)

It is obvious that the Government cannot produce foreign exchange. It has to be earned through exports. But, surely, it is too much to expect every industry to earn the foreign exchange required to pay for the import of materials needed by it. If the Government takes such a view, it can never fully appreciate the importance of traditional export industries. None disputes the need for diversification of exports both area-wise and commodity-wise. But, in order to stress this point, it is not necessary to say, as the authorities have often been doing of late, that the scope for promoting exports of traditional items is limited. This attitude will unconsciously undermine in the official minds the value of these industries. There is already evidence of this tendency, as witness the manner in which the jute, tea and cotton mill industries are being neglected. The Government, of course, will protest against this statement by pointing to the assistance it is giving to cotton and jute mills for renovating their plant and machinery. But this help is nothing, as compared with the various burdens they have imposed on them under some pretext or other. In fact, there would have been no need for the type of assistance now being offered had it followed appropriate policies towards them during the last 10 years. More foreign exchange can be earned by fostering and nuturing the traditional export industries, as they have still profitable scope, than by trying to boost new industries which have yet to establish themselves firmly in their own soil. The Government, it may be noted, has not yet implemented the major recommendations of the Export Promotion Committee in favour of the old industries and there are no signs to show that it is keen on doing so.

Export promotion, it must be conceded, is not the task of Government alone. It is primarily the responsibility of manufacturers and their friends who take the role of exporters. It is their task to produce quality goods and find out markets. They should spare no effort in this direction. But to say that, in order to earn foreign exchange, they should sell their goods abroad even without any profits, is to stretch the conception of "sacrifice" too far. No business man will ever be interested in exporting anything which brings no profit to him. When one of them advised the Minister at this week's meeting of the Council to reduce the taxes on goods meant for export and also give other facilities, so that the country could earn more foreign exchange, he said he had to mind the revenue requirements of the Government. Surely, what is sauce for the goose is sauce for the gander, too. If the profits made in the domestic market are taxed heavily and if there is little or no profit on exports, how are the industries to exist, let alone expand? In fine, the proposition of Mr. Morarji Desai that business men must try to expand the export trade even if there is no profit in it is neither feasible nor desirable, as it is uneconomic.

BRITAIN, TOO, HELPS INDIA

IT is gratifying to find that Britain has not been slow in joining the list of countries that have come forward to help India out of its foreign exchange difficulties. First came West Germany, with an announcement, following the visit of Mr. T. T. Krishnamachari to that country, that it would be willing to facilitate postponement by India of certain payments on obligations already stemming from Indo-German economic relations and to help India complete some of the projects in the second Plan. The exact amount involved in this offer is yet to be determined and currently negotiations are going on at Bonn to decide it as well as the terms of credit. But it is generally expected that the amount will be of the order of Rs. 80 to Rs. 100 crores. Then came the U.S. with a loan of $225 million and a promise of further assistance in the near future. This was quickly followed by the news that both France and Japan were prepared to give credit to India of the order of Rs. 28 crores (25 billion francs) and Rs. 24 crores (18 billion yen), respectively. The terms of the loan from Japan are discussed on page 278 of this issue. It will be noted therefrom that it is a medium-dated loan on terms that are quite reasonable.

The French offer of assistance is part of an Indo-French agreement signed on 23rd January 1958 for economic and technical co-operation between the two countries. It must be noted here that what France has offered is not a direct credit nor is it a line of credit. It is something comparable to the export credit guarantee facilities which Britain has been offering through its Export Credits Guarantee Department to India and various other countries. All that it means is that, for one year, the French Government is prepared to guarantee its exporters payment on account of capital goods shipped to India for an aggregate risk of Rs. 28 crores. It is not an overdraft to India which the latter can draw on directly, but to the French exporters. Accordingly, the importers in India, whether they are in the public sector or in the private sector, should negotiate directly with the exporters in France the terms of the purchase, including the period of repayment of the credit and the rate of interest thereon. It will thus be noted that the assistance offered by France is only of limited value and of a nature which Britain has rendered to India all along and is doing so even today. We have been told on reliable authority that it is absolutely incorrect to say that the E.C.G.D. in Britain has exhausted the credit limit for India and that it is not taking up any fresh commitments pertaining to this country.

Close on the heels of the conclusion of credit arrangements with Japan last week comes the report that Britain has offered to credit India's account with a sum of £12 million which is due to the latter over a period of three years beginning from April next in annual instalments of £4 million. This sum is equal to about Rs. 16 crores. The Government of India has, as is only to be expected, accepted this offer with thanks. This arrangement has to be explained at some length in order to enable the reader to understand its usefulness better.

Some 10 years ago, that is, in 1948, India had transferred to Britain a large block of sterling balances in settlement of the pensions due to British personnel who had served this country. This was done by buying sterling annuities from the British Government. In 1955, this arrangement was reviewed and it was found, on an actuarial valuation of the pensions due, that India had overpaid Britain to the tune of £40 million. It was then agreed between the two countries that Britain should return this excess sum at the rate of £4 million per annum over a period of 10 years. Considering India's foreign exchange difficulties, Britain has come forward to make an advance payment of the annual instalments of the principal due in 1959, 1960 and 1961 in April next, when the 1958 instalment of £4 million falls due. Thus, in April next, India's sterling balances will be enriched by £16 million (about Rs. 21.33 crores), the extent of special assistance here being £12 million (about Rs. 16 crores).

This amount is, of course, not large, as compared with either India's requirements or Britain's capacity to give. Besides, only a part of the amount which is due to India in future is being paid. Nevertheless, its value should not be minimised. It comes at a time when India needs such assistance most and in a form which suits this country best. The amount will be paid straight into India's account with the Bank of England. It is thus of more immediate benefit to India than any of the recently announced agreements with other countries. Whereas these other agreements relate almost entirely to payments for future orders and are hedged in with conditions about the types of goods that can be bought, the sum which Her Majesty's Government is making available to India is freely convertible into any currency and can be used for payment of orders already committed, irrespective of whether they are for plant and machinery, or consumer goods or raw materials. Above all, the offer represents a further gesture of Britain's goodwill towards India which we have no doubt will be appreciated by all in this country. Let us hope that it is a harbinger of more direct help to India in the not distant future.

T.T.K. LEAVES THE GOVERNMENT

OUTLOOK FOR SUGAR EXPORTS—LEND-LEASE SILVER—EGYPTIAN COTTON

THURSDAY, 5 P.M.

AS these lines are read in print, Mr. T. T. Krishnamachari will have ceased to be the Finance Minister. He will have left the North Block of the massive Secretariat at New Delhi. The Prime Minister has accepted his resignation (formally submitted on the 5th inst. but orally conveyed much earlier) with great regret and has paid him a fine compliment. He has very good reason for doing so, for no one has done so much as Mr. Krishnamachari to give a practical shape to his concept of socialist patern of society. As a true lieutenant, T.T.K. has laboured hard to carry out his chief's directives and principles. The new pattern of taxation is T.T.K.'s work. Although he drew the inspiration from Prof. Kaldor, he went much further than the Cambridge economist. He has won for himself the unique distinction of being the first Finance Minister in the whole free world to enforce expenditure tax. This one act alone has earned for him a place in the fiscal history of the world. He will thus be remembered not only in India but also elsewhere in the world for a long time to come. If his tax pattern were to be effectively and thoroughly enforced, a big 'if' indeed, it would leave very few rich people in India, an objective very dear to Mr. Nehru's heart, though we are not certain whether it will achieve his other objective also equally well, namely, raising the living standards of the masses. To the credit of T.T.K., however, it must be said that, if the latter objective is not achieved in the foreseeable future, it cannot be attributed to his tax system alone, for there are many other stumbling blocks in the way for which he is not responsible.

MARKET GOSSIP

There is no doubt that Mr. Nehru has lost the services of an able colleague. Whatever may be his faults, T.T.K. is a dynamic figure, just the right sort to match the dynamism of Mr. Nehru himself. His adaptability is evident from the fact that, soon after piloting and placing on the Statute Book one of the worst types of "soak-the-rich" taxation proposals and putting all sorts of restrictions on private enterprise, he had the courage and self-confidence to go to America, the land of free enterprise, with the idea of selling India's case for economic aid from that country. And, as subsequent events have shown, he did achieve his object to a considerable extent not only in the U.S. but also in West Germany, where Dr. Erhard, a practical economist strongly in favour of free enterprise, is the Finance Minister. While on this mission, T.T.K. had to overcome the prejudices caused not only by his budget proposals but also by the foreign policy of India. Thus, T.T.K. is justifiably entitled to a large measure of credit and sympathy from his party and his chief both of whom he has loyally served.

T.T.K.'s bungling in the affairs of the Life Insurance Corporation is there. It will also go down in history along with his Wealth Tax, Expenditure Tax, and Compulsory Deposit system. It is common knowledge among his friends that he was very keen on becoming the Finance Minister, as he thought that it would give him wide scope to display his talents. It is a pity that Providence did not let him enjoy this privilege and power for a longer period. He has held this post for only a little over 17 months. Nevertheless, it has been a momentous period for him. The investors might have been hard hit, but that is their price for socialism. Only T.T.K. knows whether they would have recovered their capital losses quicker than is otherwise likely, if he had continued in office.

The job of Finance Minister under a Socialist Government of India which wants to run even before it has gathered enough strength to walk steadily is not an enviable one. He has to face a Parliament dominated by the leftists and outside the House a business community which believes in profit-motive and freedom from excessive State control. In such a set-up, no Finance Minister can be popular or successful. Further, the sphere of operation for the bureaucracy has grown enormously, thereby increasing the risk of failure in discharging one's duties.

We have always held that nationalisation of life insurance was one of the hastiest steps ever taken by the Congress Government. It was a crude, rash and cruel step. So far, events have not belied this contention. It has now claimed as its victim one of its ardent advocates and dragooned some of the finest and seniormost executives of the Government. The consequences are a sorry state of affairs. If Gandhiji were alive today, he would not have hesitated, after seeing all that has happened, to admit that nationalisation of life insurance was a Himalayan blunder.

* * * *

It is surprising that, even when crushing of sugarcane is in full swing and supplies are plentiful, prices of sugar continue to rule very high. As compared with the end of last season (31st October 1957), prices of this food article have registered a rise of about 6 to 7 per cent. Small grain sugar in Bombay is now quoted at Rs. 105½-Rs. 106 per bag, as against Rs. 99 on 30th October 1957. Similarly, medium and large grain are quoted higher at Rs. 106-Rs. 108½ and Rs. 109-Rs. 113, as against Rs. 100-Rs. 103 and Rs. 104-Rs. 109, respectively. Nobody has cared to find out as to why this anomalous position exists. Whatever be the reason, the upward trend in sugar prices in this country is in distinct contrast to the decline in prices noted in world markets. The latest available rate for Cuban raw sugar at New York is 3.65 cents per lb. (f.o.b. Cuba), a fall of 0.38 cent over a period of two months. Refined sugar is now being sold in London at £32 per ton, the quotation two months ago being £36.

Considering the continued maintenance of high prices in India at a time when world prices are falling, there are, indeed, no chances of India selling sugar abroad except at a sizable loss. An idea of this loss was given by Mr. T. C. Puri, I.C.S., Chairman of the Development Council for Sugar Industry, when he addressed the eighth meeting of the Council at Nellikuppam near Cuddalore, Madras State, on Tuesday this week. Mr. Puri revealed that, with the prevailing world prices, India could now export sugar only at a loss of £16 to £17 (Rs. 213 to Rs. 227) per ton, even after allowing for a full remission of excise duty and cane cess. He revealed that the Indian Sugar Mills Association had suggested two or three schemes in this connection and they were now under the consideration of the Government. Incidentally, Mr. Puri recalled that, last year, the sugar industry exported 174,000 tons of sugar and, due to a fortuitous rise in world prices early in 1957, most of the sales was made at a profit, but the profits so earned were now being used to meet losses on further exports.

On the basis of the aforesaid account, let us analyse the economics of sugar exports. Assuming that the total exports will be 200,000 tons—the Union Food and Agriculture Minister recently stated at Kashipur (U.P.) that "it is our desire to export 200,000-300,000 tons of sugar this year—and that the average price is about Rs. 440 per ton, the aggregate foreign exchange earned will work out to Rs. 8.80 crores." This is no doubt a sizable amount in the present context of the difficult foreign exchange situation. But the sacrifice involved far outweighs the foreign exchange earned. Thus, the actual loss of profit (at Rs. 220 per ton on the basis of the average of figures given by Mr. Puri) on exports of 200,000 tons of sugar will amount to as much as Rs. 4.40 crores. To this must be added the loss of Rs. 5.82 crores by way of remission of Union excise duty and of Rs. 1.02 crore by way of remission of cane cess. The total loss to the country will thus come to as much as Rs. 11.24 crores.

Judging from the recent developments on the world sugar front, the loss on sugar exports from this country may, in fact, be more than what is estimated at present. It looks as though even the currently ruling prices in the world market will not be held and there will actually be a further marked drop in prices. Cuba, the world's largest sugar-producing country, is today faced with the problem of disposing of huge stocks of sugar. The new crop sugar is expected to reach 5.5 million tons and, in addition, there is a carry-over of 680,000 tons. What is likely to make matters worse is the possibility of new crop sugar reaching the market earlier than usual. It is said that crushing of sugarcane in Cuba has been speeded up, in order to "reduce the risk of the cane being damaged by the rebels." Indeed, sugar is already beginning to pile up at the Cuban ports, while actual exports have not been quite encouraging. Up to 31st January last, Cuba is stated to have been able to sell just 870,000 tons of new crop sugar, as compared with over 1.1 million tons in the same period a year before. Naturally, the authorities in Cuba are anxious "to see sales going well." As a means to expedite sugar sales abroad, Cuba tempted Russia last week by offering a rebate of 0.2 cent per lb., if the latter were to conclude the second purchase of sugar within 20 days; the first purchase involving 100,000 tons at 3.65 cents per lb. was effected in the last week of last month.

The prospect of Russia taking advantage of the aforesaid rebate has, of course, imparted some steadiness to the world sugar markets and, if this expectation proves wrong, sugar prices may suffer a setback. Indications are that Russia will not be buying as much sugar from Cuba this year as in 1957. For a large part of the rise in the European beet crops in 1957-58 has occurred in Eastern Europe. The total of these crops is put at 15.8 million tons, which compares very favourably with 14.4 million tons in 1956-57. Meanwhile, Brazil remains a seller of sugar. The Brazilian Institute recently allocated a further quantity of 60,000 tons of sugar for export.

* * * *

The final consignment of 9 million fine ounces of alloy silver coins due to the U.S. from the Government of India in repayment of silver borrowed by India during the last war on Lend-lease basis was shipped from Bombay yesterday. With the despatch of this quantity, India has completely repaid its share of 172 million ounces of silver given by the U.S. Under the Lend-lease agreement, prepartition India got 226 million ounces of silver to be returned five years after the end of the emergency period. On partition, this liability was divided between India and Pakistan, the former's share being 172 million ounces. This quantity was due for repayment by the end of April 1957.

Except for 100 million ounces of India's obligation, an extension of two years is permitted by mutual agreement for the balance. The Indian Government, however, did not want an extension. In April last, it offered to make immediate arrangements for the shipment of approximately 50 million ounces of silver of the requisite fineness in the form of bars. For the balance of the silver, amounting to about 122 million ounces, it was prepared to pay in the form of quaternary alloy coins, as it did not have sufficient silver bullion. The U.S. accepted the offer. It also agreed to bear all the cost of handling, transportation and refining of these coins.

Accordingly, the shipment of the first instalment of 50 million ounces of silver (in bars) started on 24th April 1957. On that day, about 3 million ounces were actually shipped. The balance, of bullion as also of the coins, was despatched as and when shipping space was available. The last lot of 9 million ounces in the form of quaternary alloy coins was sent out this week. It will be interesting to note that, out of the 172 million ounces shipped, 80 million ounces were cleared through Bombay Port and the balance of 92 million ounces through Calcutta Port.

With the return in full of the U.S. Lend-lease silver, the bullion market is left guessing about the stocks of silver with the Government. These must be in the form of bullion, to some extent, old standard silver coins (the minting of which was stopped in 1941) and quaternary coins (the minting of which was stopped in 1947). It will be recalled that, in reply to a question in the Lok Sabha in November last, Mr. B. R. Bhagat, Deputy Minister for Finance, refuted a member's suggestion that the silver refinery plant, which was being set up in Calcutta, would be rendered superfluous, in view of the fact that the bulk of American Lend-lease silver was being repaid in the form of quaternary coins. The Minister added that, even after payment of the Lend-lease silver, there would be enough quaternary coins left in India to keep this mint busy for several years to come.

Leaving aside the standard silver coins which were minted up to 1941, about which complete data are not available, the total quantity of quaternary coins minted in India between 1941 and 1947 (both inclusive) is of the face value of about Rs. 153 crores. The silver content of this total works out to 287 million ounces. Out of these, rupee coins of the value of Rs. 48 crores and small coins (quaternary) of the value of Rs. 21 crores had been withdrawn up to the end of March 1957. In terms of silver content, this amounts to a withdrawal of 129 million ounces. At the beginning of the current financial year, there were still quaternary coins of the value of Rs. 84 crores in circulation, the silver content of which amounts to 158 million ounces. Thus, out of the silver amounting to 287 million ounces in the form of quaternary coins issued to the public, the Government has so far withdrawn 129 million ounces and repaid out of this 122 mihion ounces to the U.S. in the form of coins themselves, leaving still a large surplus of 158 million ounces in the form of quaternary coins to be withdrawn. Besides this, the Government has on hand 7 million ounces in the form of quaternary coins alone. Even assuming that 25 per cent. of the coins will not come back from circulation, there will still be, sooner or later, a surplus of about 118.5 million ounces in the form of coins in the hands of the Government. Of course, it will take several years for all these coins to be withdrawn.

Now that the Government of India has wiped out its Lend-lease silver liability, what will it do with the sizable surplus silver which it will get back in the course of the next few years, as and when these coins come back from circulation? Will the Government cash this silver or keep it idle? There is no need to answer this question now, because it will be topical only after some years. For the present, the payment of Lend-lease silver has only weakened the hands of the bears, as it has reduced the scope for raising the scare of the possibility of the Reserve Bank selling silver in the open market.

* * * *

Hopes are being expressed in cotton circles that the talks the Egyptian delegation is currently having in the city with the representatives of the cotton trade and industry will prove fruitful. The fact that the delegation's visit coincides with the time when the Government's cotton import policy announcement is anxiously awaited has given grounds for thinking that some agreement for the import of Egyptian cotton would be reached. Although the first reaction of the representatives of mills and the trade who met the delegation yesterday was not very encouraging, because the leader of the delegation, Dr. Chiati, pointed out that the Egyptian Government had decided not to give any discounts for its cotton, there was still a hope that some mutually satisfactory arrangement which would assure regular supplies of Egyptian cotton to India at reasonable prices would materialise after the delegation's talks with representatives of the Government at New Delhi. The delegation's attention was drawn to the fact that India's foreign exchange difficulties and higher prices of Egyptian cotton *vis-a-vis* Sudanese growths after the recent reductions in the reserve prices of the Sudan Gezira Board and the slash in export duty were the main factors responsible for the fall in India's offtake of Egyptian cotton. It was pointed out that, unless Egyptian prices were brought to parity with those of Sudan, Indian mills would not be in a position to go in for any substantial quantity. The delegation's attention was also drawn to the deterioration in the quality of Karnak cotton.

The sharp fall in purchases by Egypt's traditional customers, the competition of Sudan cotton and the larger crop expected this season have all combined to exert a downward pressure on cotton prices in Alexandria in recent weeks. Cotton being its staple export item, Egypt is anxious to accelerate its exports. It is true that exports so far in the current season have fared better than in the corresponding period of last season. But the larger crop of about 1,192,739 bales (of 720 lbs.), as compared with 960,000 bales in the previous season,

(*Continued on page 299*)

DULL TRADING IN SHARES

NARROW MOVEMENTS IN PRICES

(From Our Own Correspondents)

BOMBAY, 13*th February*

AS was generally expected, the Union Finance Minister's resignation was accepted today by the Prime Minister, following the verdict of the Chagla Commission. This development has had no effect on the share market, since it is generally conceded that Mr. T. T. Krishnamachari's exit does not mean any change in the Government's fiscal policy. The Prime Minister's speech at the Indian Merchants' Chamber's Golden Jubilee Celebrations last week has made that point clear. Even the hope that there would at least be no further taxation by the Centre is neutralised by the fear that there may be an increase in taxes at the State level, because the States have been asked to raise Rs. 200 crores in the coming financial year by way of market borrowing, small savings and additional taxation.

Now that Mr. Krishnamachari is out of the Cabinet, market circles are anxious to know who will be his successor, for they feel that the future for investment markets will depend much on him. This anxiety is reflected in the extreme dullness that characterised the trading today. Fluctuations in prices were confined to a very narrow range. Earlier in the week, too, the market was lethargic. With only two weeks to go for the Union Budget to be presented, operators' attention was diverted to the outcome of the Chagla Commission's report and the possible change in the Finance Ministership. There was no inclination among them to enlarge their commitments and trading was, therefore, thin. There was, however, no selling pressure and the undertone was steady.

In the steel section, Tata Ordinaries receded from Rs. 170.50 to Rs. 169.25 early in the week, following the announcement of a decline in output of saleable steel at Jamshedpur during January from 74,200 tons to 70,600 tons, but recovered to touch Rs. 172.25 yesterday. At the higher level, however, there was profit-taking and the shares dipped to Rs. 171. The new shares were better by 75 nP at Rs. 166. Indian Irons were first marked down from Rs. 19.64 to Rs. 19.48, but put up later to Rs. 19.88. At the close, there was again a drop to Rs. 19.76.

Textile shares ruled quiet, but the fall in prices was only small, despite the Commerce Minister's statement in Parliament ruling out the possibility of a reduction in excise duty on coarse cloth. The Minister added that the Government had no intention whatever of making any other concession to the textile industry at present. Bombay Dyeings dipped from Rs. 50.40 to Rs. 50.10, but came up to Rs. 50.70 yesterday. Today, they shaded off to Rs. 50.60. Centurys came down from Rs. 387.25 to Rs. 383.50 and, after a revival to Rs. 388.75, closed at Rs. 387. Kohinoors wound up Re. 1 lower at Rs. 265. Central Indias lost Rs. 2 to Rs. 82. Indu Ordinaries were dull at Rs. 9.24 Gokaks fell by Rs. 3.75 to Rs. 154.25 and Indore Malwas by Re. 1 to Rs. 116 Khataus shed Rs. 3 to Rs. 143.75 and Models Re. 1.25 to Rs. 176.25. Morarjees were steady at Rs. 203, while New Greats were marked down by Rs. 2 to Rs. 218. New Kaiser-I-Hinds declined by Rs. 4.50 to Rs. 81.50. Simplex were lower by a rupee at Rs. 158.50. Standards gave way from Rs. 402 to Rs. 399. Svadeshis dropped Re. 1.50 to Rs. 166 and Tata Mills 50 nP to Rs. 38.50. Ahmedabad Advances changed hands Rs. 6 lower at Rs. 119 and Colaba Mills Rs. 5 down at Rs. 51.

In the banks section, the announcement that a Bill to merge some of the State-associated banks with the State Bank of India would be introduced in Parliament in the current session, led to a demand for the shares of these banks. Jaipur Banks were prominent among them with a rise of Re. 1.50 to Rs. 38.50. Jodhpur Commercials attracted attention and gained 22 nP to Re. 1.46. Barodas were only a fraction lower at Rs. 105, as the merger of this Bank with the State Bank would be considered only later on. Central Banks were unchanged at Rs. 51, while their new shares were Re. 1 lower at Rs. 55. Bank of Indias were maintained at Rs. 136, while United Commercials gained 50 nP to Rs. 59.50.

In the insurance section, New Indias were placed at Rs. 40.25 *ex*-right, as against Rs. 53.80 *cum*-right a week ago. Indian Mercantiles gained Re. 1 to Rs. 42.50, while Jupiters were done 68 nP lower at Rs. 8.52.

Electricity shares presented a mixed pattern. While Ahmedabad Electrics gained 30 nP to Rs. 95, Bombay Suburbans were done 25 nP lower at Rs. 106.75. Tata Hydros ruled a shade better at Rs. 114, but Tata Powers and Andhra Valleys declined by Rs. 5 each to Rs. 1,125 and Rs. 1,085 respectively.

Sugar shares were featureless. Belapurs moved between Rs. 237 and Rs. 236 before closing at Rs. 236.50. Phaltons dropped Rs. 2 to Rs. 146.25 and Walchandnagars Rs. 2.50 to Rs. 275. Kesar Sugars were unchanged at Rs. 59.50, while Ravalgaon Sugars had business Rs. 2.50 higher at Rs. 130. Barring rise of Rs. 2 to Rs. 137 in Digvijay Cements, cement shares were extremely dull. Associated Cements came up to Rs. 155.50 early in the week, but reacted to Rs. 153.75 at the close. Their new shares were quoted at Rs. 138.50 *ex-div.*, as against Rs. 140.50 *cum-div.* a week ago. Orissa Cements closed with a loss of 12 nP at Rs. 12.56 and Jaipur Udyogs were done 20 nP lower at Rs. 11.60. In the engineering and mining group, Alcocks hardened by Re. 1.25 to Rs. 216.25. Tata Locomotives improved from Rs. 139.50 to Rs. 142.50, but most of the gain was wiped out when the shares closed at Rs. 140. Premier Constructions were lower by 75 nP at Rs. 159. Cooper Engineerings had business Rs. 4.20 lower at Rs. 90.80. Mahindras and Mahindras were marked down by 36 nP to Rs. 16.64. Shivrajpurs were a shade quiet at Rs. 91.50 and Indian Coppers at Rs. 2.84.

In the shipping and automobile group, Scindias were lethargic, moving between Rs. 17.40 and Rs. 17.20 and closing at Rs. 17.32 with no change over the week. Great Eastern Shippings were a fraction lower at Rs. 19.72. Hindustan Motors were dull at Rs. 6.04. Premier Automobiles dropped Re. 1.30 to Rs. 85.

Among other miscellaneous industrials, Bombay Burmahs (old) gave way from Rs. 540.50 to Rs. 534, but improved to Rs. 537.50 at the close. Their partly paids lost over the week Re. 1.25 to Rs. 200. National Rayons provided a notable exception to the general trend with a jump from Rs. 214.50 to Rs. 220. Towards the close, however, they were marked down to Rs. 217. Gwalior Rayons were a shade dull at Rs. 11.56. Tata Chemicals suffered a loss of 16 nP at Rs. 12.68 and Hindustan Levers 20 nP at Rs. 19.52. Dhrangadhra Chemicals had business Rs. 7 lower at Rs. 88. Tata Oils were quiet at Rs. 36.25 W. H. Brady shares were done at Rs. 275. Industrial Credit and Investment Corporations changed hands at Rs. 70.

* * * *

Calcutta Stock Exchange

CALCUTTA, 12*th February*

The Prime Minister's recent speech at the Indian Merchants' Chamber continued to restrict business on the Calcutta Stock Exchange during the week under review also. Even the President's encouraging speech to the joint session of Parliament failed to arrest the downtrend. His reference to the appreciable decline in balance of payments deficit should have normally raised hopes of more provision of imports of industrial raw materials in the import policy effective from 1st April, but the Commerce and Industry Minister in his speech earlier to the Import Advisory Council had left no ground for market circles to entertain any such hope. However, without the provision for more imports of raw materials and capital goods, market circles thought that it would be difficult even to implement the core of the Plan. But these thoughts did not result in any change in sentiment, since the moves in New Delhi were considered so uncertain that there were not many operators who desired to bank upon hopes and enter into commitments.

Although business put through in the coal section was small, a few shares recorded improvement. Thus, Burrakurs recovered to Rs. 22.25 from Rs. 21.87 a week ago, and Khatras Jherriahs picked up Rs. 2 to Rs. 55. On revival of interest South Karanpuras were pushed to Rs. 9.00 from Rs. 8.87 and Equitables to Rs. 24.37 from Rs. 24.06.

The weakness in the jute goods market was duly reflected in the jute share section. Agarparas realised Rs. 7, as against Rs. 7.12 previously. Birlas were lower at Rs. 13.94. Anglo-Indias eased to Rs. 129 from Rs. 130, and Indias to Rs. 94.50 from Rs. 95.50.

In minings, Indian Coppers, after realising Rs. 2.88, gave way to Rs. 2.85. Orissa Minerals earlier receded to Rs. 21.25 from Rs. 21.56, but subsequently rose to Rs. 21.62.

Engineering shares met with restricted support. Prices were lower. Indian Irons closed, at Rs. 19.70, after declining to Rs. 19.51 from Rs. 19.78 earlier. Texmacos improved to Rs. 17.10 from Rs. 16.85, but closed at Rs. 17.05. Jessops were steady at Rs. 22.12, and Kumardhubis were unchanged at Rs. 7.94.

A feature in the miscellaneous industrials section was that Indian Oxygens changed hands at Rs. 16.12, as against the issue price of Rs. 13.50. As stated, the offer was oversubscribed, and the official list closed on Friday last. The basis of allotment would be announced within the next week or two, it was stated. Another feature was the interest which Indian Cables received and the share quotation rose to Rs. 29 from Rs. 28.25. Martin Burns were fully steady at Rs. 25.25 and the announcement of 2½ per cent. dividend (same) for the year ended September last was received with satisfaction. Philips India received attention at Rs. 13.90.

Tea shares were featureless. Bishnaths were fractionally lower at Rs. 18.68. Patrakolas declined to Rs. 124 from Rs. 130.

* * * *

Madras Stock Exchange

MADRAS, 11*th February*

Easy conditions prevailed on the Madras Stock Exchange during the week under review also. Business put through continued to be restricted, with values generally moving further downward. For, operators adopted a cautious attitude, in view of Central and State budget uncertainties. Plantations lacked support, despite higher price realisations for quality teas at the recent Calcutta auctions. Barring a few select scrips, the textile section ruled subdued. There was selling induced by reports that the working results of several mills in the past year were not encouraging. Sugar, bank and miscellaneous industrials followed the general trend. Electricity shares, however, evoked some support at higher levels.

Tea shares in the planting section suffered a fall in prices following selling. Stanes Amalgamateds declined by 40 nP to Rs. 14.80. Haileyburias shed 22 nP to Rs. 15.90. Talayars receded by 20 nP to Rs. 8.20. Twyfords lost a like amount to Rs. 12.40. Nilgiris eased by 35 nP to Rs. 8, Ouchterloneys by 10 nP to Rs. 4.85 and Waterfalls by 3 nP to Rs. 3.32. Parksides, on the other hand, improved by 75 nP to Rs. 16.25 on special support. Chandramalais increased by 17 nP to Rs. 2.95. Among coffee shares, Consolidated Coffees came down by 50 nP to Rs. 22.20. Coffee Lands receded by 15 nP to Rs. 27.65. Sangameshwars were lower by 6 nP at Rs. 2.60. Kumergodes were neglected at Rs. 6.70, notwithstanding the decision of the Kumergode Estates Ltd., to enhance the dividend for the year ended 31st October 1957 to 25 per cent. as against 20 per cent. in the previous year. Among rubber shares, Nilamburs declined by 75 nP to Rs. 12.50, Midlands by 57 nP to Rs. 14.43 and Mercaras by 20 nP to Rs. 7.65. Cochin Malabars eased by 5 nP to Rs. 4.03. Puthutottams softened by 2 nP to Rs. 2.50.

In the textiles section, Coimbatore Cottons and Ramakrishnas were marked down by Rs. 10 each to Rs. 162 and Rs. 190, respectively. Rajapalayams and Rajalakshmis dropped Re. 1.50 each, the former to Rs. 133.50 and the latter to Rs. 78. Loyals moved down by Re. 1.25 to Rs. 37.50, reflecting disappointment over the cut in dividend from 7½ per cent. last year to 5 per cent. Hemalathas fell by 60 nP to Rs. 8.90. Lakshmis eased by 50 nP to Rs. 113 and Rayalaseemas by Re. 1.25 to Rs. 111. Vasantas lost a rupee to Rs. 270 and Kotharis 20 nP to Rs. 10.40.

Among sugar shares, Mysores dropped 75 nP to Rs. 37.50. Travancores eased by 25 nP to Rs. 9.95. E.I.Ds softened by 13 nP to Rs. 29.12. But United Breweries were well favoured, the quotation rising by a rupee to Rs. 178.

In the miscellaneous section, F.A.C.Ts declined by 35 nP to Rs. 5.10. Mysore Tobaccos decreased by 20 nP to Rs. 13. Mysore Chemicals shed 12 nP to Rs. 15 and Aluminium Industries 15 nP to Rs. 13.65. Mysore Chemical and Fertilisers dropped 70 nP to Rs. 6. Orissa Cements lost 10 nP to Rs. 12.70.

CEAT TYRES OF INDIA LTD.

A new rubber tyre manufacturing factory is to be started in Bombay, called the CEAT Tyres of India Limited. The Company will be floated by Tatas in collaboration with the well-known Italian industrial firm CEAT S.p.A. The new Company will have an authorised capital of Rs. 4 crores and a paid-up capital of Rs. 1.15 crore, of which 60 per cent. is to be subscribed by the Italian company and their associates and 40 per cent. by the public in India. This issue will be underwritten by the Investment Corporation of India Limited. In order to meet the shortage of foreign capital, the capital subscribed by CEAT and their associates will be in the form of imports of plants, machinery and structures for the factory.

CEAT S.p.A. is a well-known industrial company in Italy manufacturing cables and wires in Italy, France and Venezuela. CEAT GOMMA, one of the companies belonging to the CEAT group, will be suppliers of technical know-how to the new Indian company. They have a technical agreement with a well-known American company, The General Tyre and Rubber Company of Akron (Ohio), to exchange the most up-to-date technical know-how. The result will be that the CEAT Tyres of India will benefit from the technical know-how from both Italy and the United States.

CEAT GOMMA has already captured about 25 per cent. of the total markets for tyres and tubes in Italy. This company also sells tyres in Africa, experience which CEAT GOMMA has gained by the sale of tyres in different parts of the world in various climatic conditions will help the Indian company in manufacturing types of tyres best suited to conditions prevailing in this country.

LOANS FROM FOREIGN FINANCIAL INSTITUTIONS

The Income-tax Act exempts interest payable by an industrial undertaking in India on moneys borrowed by it under a loan agreement entered into with such financial institutions in any foreign country as may be approved by the Government of India by general or special order. The Union Government has approved, the following three financial institutions under this provision:—

1. International Finance Corporation, Washington, D.C.

2. The Export-Import Bank of Washington, Washington.

3. The Commonwealth Development Finance Company, Ltd., London.

The effect of this approval will be that interest payable on any loans granted by these three institutions to industrial undertakings in India will be exempt from income-tax; it will not be necessary to obtain fresh Government approval in respect of each such loan.

INDIAN OXYGEN ISSUE OVERSUBSCRIBED

The issue of 600,000 ordinary shares of the Indian Oxygen Ltd. offered recently by the British Oxygen Company, Ltd., was oversubscribed and the lists were closed on the 7th inst. It is stated that details of the basis of allotment will be made available within the next two weeks.

NEWS IN BRIEF

THE annual general meeting of the Indian Jute Mills Association will be held at the Royal Exchange, Calcutta, on Friday, 14th March 1958.

The Atomic Energy Commission will soon arrange for the mining of the extensive deposits of uranium near Ranchi in Bihar, according to its Chairman, Dr. Homi J. Bhabha. The geological survey in various parts of India has revealed several mineral deposits needed for atomic energy.

The Government of India has extended the procedure for export of articles under claim of rebate of duty on excisable goods used in their manufacture to include sugar candy powder as well. The rebate is already applicable to ready made apparel, tents, sugar products, cotton bags, umbrella cloth, chaddars, pillow cases, table covers, embroideries, laces, tarpaulins and mosquito nets.

The Government of India has abolished with immediate effect the export duty on manganese ore in which the manganese content expressed as metal, calculated as percentage of the moisture-free ore, is below 42 per cent. It has also reduced the existing duty on such manganese ore in which the manganese content is 42 per cent. and above, but does not exceed 44 per cent. to Rs. 10 per ton.

One of the biggest private omnibus operators in southern India, Messrs. T. V. Sundaram Iyengar and Sons Private Ltd. of Madurai, has placed an order for 30 Leyland Comet passenger chassis for its omnibus fleet. These chassis will have bodies constructed in the Company's own workshops at Madurai. In addition to these 30 Comets, the firm has also placed orders for six Leyland Royal Tiger Worldmaster chassis which are to be employed on its long-distance express motor-coach services.

The Company Law Administration has been transferred from the Finance to the Commerce and Industry Ministry with effect from the 7th inst. Created in August 1955, the Company Law Administration was dealing with stock exchanges and capital issues, in addition to administering the Company Law. Soon after Mr. T. T. Krishnamachari took over the Finance portfolio in September 1956, stock exchanges and capital issues were taken away from the Administration.

Occurrences of bentonite clay have been traced in India at Uttar Beini in Jammu, Hathi-ki-Dhani in Sheopargana of Jodhpur and Tinpahar in the Santhal Parganas of Bihar. Minor occurrences are also known at Dargama in Karauli and near Gajner in Bikaner. Bentonite is used in metal foundries as an ingredient of moulding sands, in oil drilling for thickening the drilling mud, in engineering works for stopping leakage and percolation of water, in laundries and in the ceramic industry.

A direct radio-telegraph and telephone service between India and Italy was inaugurated in New Delhi on the 6th inst. by the Union Minister for Transport and Communications. The Minister also formally opened the new wireless transmitting station of the Overseas Communications Service at Kalkaji in the suburbs of Delhi. The telegraph rates between India and Italy will be Re. 1.04 for ordinary word and 33 nP for the Press. The rates for radio-telephone calls will be Rs. 50 per unit call of three minutes; Rs. 16.11 for every additional minute and a report fee of Rs. 5.

A new development in the plastics industry has recently been announced by Messrs. R. A. Cole Private Limited of Bombay, who manufacture a rigid, synthetic foam building and insulation material called *Thermocole*, from a special grade of imported polystyrene. The company has now nearly completed erection of a plant near Bombay for the manufacture of this special grade of polystyrene, by the block polymerisation process. An imported styrene monomer will provide the basic material. The new plant will go into production by the end of February with an estimated output of 30 tons per month.

India had an adverse balance of trade to the extent of Rs. 19.53 crores during the month of October 1957. This estimate is subject to the adjustment in the value of certain consignments of Government stores which are excluded in the merchandise import figures. During the month under review, merchandise exports (excluding the transit trade of Pakistan and other overland frontier countries) aggregated Rs. 52.53 crores and re-exports Rs. 1.11 crore, while imports amounted to Rs. 73.08 crores. Exports (including re-exports) of currency notes accounted for Rs. 41 lakhs and current coins (excluding gold coins) for Rs. 1 lakh. Imports of gold were Rs. 9 lakhs, currency notes Rs. 4.60 crores and current coins (excluding gold coins) Rs. 1 lakh.

The production of crude mica in India during the third quarter of 1957 was 130,547 cwts., as against 125,445 cwts. in the corresponding quarter of the previous year, according to the Indian Bureau of Mines. This brings the total production for the nine months ended September to 441,142 cwts., representing an increase of 16,807 cwts. as compared with the corresponding period of 1956. Out of the 130,547 cwts. produced in the third quarter, Bihar, the leading producer of mica, accounted for 69,990 cwts., Rajasthan for 34.840 cwts. and Andhra for 23.560 cwts. As a result of dressing, 18,323 cwts. of sickle-dressed blocks and 2,098 cwts. of chillas were recovered by the mine owners in the quarter ended September 1957, as compared with 24,486 cwts. and 2,544 cwts., respectively, a year before.

The Ford Foundation has announced a grant of $2.2 million to the Government of India to help step up the growth of small-scale industries. Of this amount, $2,163,000 are for financing the expansion of small-industries development programme in the States and $70,000 for an intensive study of India's handicrafts industries by a team of experts. In addition to building small-scale industries service institutes in the States, plans under the grant call for establishment of 60 extension training centres throughout India. Two other centres are planned for the training of educated young men in skilled trades to qualify them for managerial and supervisory positions in small industrial enterprises. More than one-half of the Foundation's grant, namely, $1.28 million, will be used for machinery and equipment for new and existing facilities.

* * * *

From Abroad

Negotiations between a World Bank mission and Austria for a $12-million loan have reached a successful conclusion.

The Brussels Steel Cartel has announced a reduction in the prices of steel plates from $135 to $122 and of shipping plates from $177.50 to $155 per ton f.o.b.

Production of steel in the Netherlands in 1957 amounted to 1.18 million tons, as compared with 1.05 million tons in the previous year, an increase of 12.4 per cent. over the year. The rise in production during the last five years was 73 per cent.

Further negotiations for a direct air link between London and Moscow by British and Russian civil airlines will be resumed at Moscow by officials of two British European airways during this month.

The value of dollar imports into the U.K. last year aggregated £965 million. Of this sum, more than £9 million were accounted for by imports of films and gramophone records, while newspapers and magazines accounted for £840,000.

Under a loan agreement signed in Belgrade recently, the U.S. will deliver surplus farm goods worth $62.5 million (£22.3 million) to Yugoslavia. This agreement brings the total American economic aid to Yugoslavia, since 1950, to about $800 million (£285.7 million).

Production of coal in West Germany during January this year aggregated 11.97 million tons, as compared with 10.51 million tons in December and 11.83 million tons in January 1957. The daily output increased from 438,000 tons in December to 460,500 tons in January.

The gross earned incomes required at present by a married man with two children in the U.K. which, after deduction of tax, would equal the purchasing power of gross annual incomes of £1,000, £2,000 and £3,000 in 1938 are £3,621, £10,208 and £31,961, assuming that both the children are under twelve.

The three-day European Industrial Conference convened in London by the U.K. Council of the European Movement will be attended by more than 150 prominent European industrialists and trade union leaders. The Conference will be inaugurated on the 19th inst., by Mr. D. Heathcoat Amory, the Chancellor of the Exchequer. It will discuss specific problems connected with the establishment of a Free Trade Area for Europe.

The number of unemployed men in the Netherlands at the end of 1957, including those employed on relief works, was 103,924, as against 50,018 and 62,800 at the end of 1956 and 1955, respectively. There was a marked increase in unemployed men in December 1957, the number then mounting up to over 42,000. This was mainly due to the termination of seasonal work, notably in the building trade, agriculture and the foodstuffs and stimulants industries.

There is a strike in the West German textile industry, the number of strikers as on the 6th inst., being almost in the neighbourhood of 12,000. The strike is a sequel to failure of negotiations with the employers for a wage increase of 5d. per hour. It is possible that another 24,000 textile workers may swell the number of strikers. The movement is likely to spread to Westphalia also where weaving and spinning concerns have 100,000 in their employment.

West German synthetic textiles are beginning to feel the effects of competition from Japan. One result is the decision of *Glauzstoff-Courtaulds*, a German subsidiary of Courtaulds of Britain, to effect a reduction in working hours from 45 to 40 per week for its 3,300 employees. It is stated that cuts of up to 15 per cent. of output have been made by all leading staple fibre manufacturers during the last six weeks. The position, however, might improve when the proposed 8d. rebate concession on the staple fibre price of 4s. 11d. per kilo is granted by the West German Government.

Increased taxes, which will yield an extra Kr. 390 million (about £27 million) for defence purposes, have been announced by the Swedish Government on cigarettes, petrol, drink and other consumer goods. The tax on wines and spirits will go up by about 3s. a pint, petrol by about 4½d. a gallon. A packet of 20 of the cheapest cigarettes will cost about 4s. instead of about 3s. 6d. before. A new tax of about 2d. a lb. will be imposed on sugar. Prices of beer and mineral water will also go up. In addition, there will be an increase in electricity charges and a new 30 per cent. tax on lottery prizes.

PERSONAL

MR. A. K. Sen, Union Law Minister, will lead a six-man delegation to Geneva to attend a conference convened by the U.N. on the 24th inst., to codify the existing law of the sea.

The Rt.-Hon. Malcolm MacDonald, High Commissioner for the United Kingdom in India, left for London on the 5th inst., for consultations. He expects to return to India in April.

Mr. P. W. B. Wanklyn, Assistant Chief Mechanical Engineer at the Ebbw Vale Foundry in Wales, has been seconded for a period of three years to act as Chief Engineer of the Indian Steelworks Construction Company, Ltd., at Durgapur, West Bengal.

Mr. Frederick Blackmore Arnold, a former United Kingdom Trade Commissioner in Calcutta and Bombay who had served earlier in the Indian Civil Service, has been appointed Senior U.K. Trade Commissioner and Economic Adviser to the United Kingdom High Commissioner in Australia.

Prof. P. M. S. Blackett, of the Imperial College of Science and Technology, London, who is now in Bombay, will spend three weeks as a visiting professor at the Tata Institute of Fundamental Research. He will give a course of lectures on "Controlled Fusion Research."

Raja Surender Singh of Nalagarh, a former P.E.P.S.U. Minister and a member of the Foodgrains Inquiry Committee, has been appointed Agricultural Production Adviser in the Union Ministry of Agriculture. He will serve in an honorary capacity.

Mr. Brian G. Robbins, Secretary of the Institution of Mechanical Engineers, London, will visit India early next month on his way to Australia, where he will attend a Commonwealth conference of engineering institutions. It is expected that he will be in Delhi from 4th to 6th March and in Calcutta from 6th to 9th March. Mr. Robbins' visit to Calcutta is likely to coincide with that of Mr. T. E. Goldup, C.B.E., and Mr. W. K. Brasher, C.B.E., President and Secretary, respectively, of the Institution of Electrical Engineers, London.

"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 11*th February*

Road-Rail Controversy

The present state of road and railway competition in the major provinces of India and the possibilities of their future co-ordination and development are discussed fully in the Mitchell-Kirkness Report. During their investigations the two officers found, among other features, a want of balance in road development; shortcomings of railways as compared with motor transport in meeting the needs of the public; and complaints of excessive taxation from the motor transport industry. The report says that, as the result of existing motor competition, class I railways are losing about Rs. 190 lakhs a year. The greatest loss is in the United Provinces (Rs. 45 lakhs), the railway most seriously affected being the North-Western (Rs. 39 lakhs). In the face of a possible increase of competition from motor transport, it is suggested that, in many cases, the railways themselves should operate motor transport on parallel roads and that railways doing so should be protected from uneconomic competition from other sources. Dealing with the taxation of motor transport, the report says that independent taxation by different authorities is unsatisfactory. The most constantly recurring feature in the investigation has been the need for co-ordination over a wide range of subjects almost all of which are cut across by constitutional divisions; but the framers of the report assume that where common and co-ordinated action is agreed to be necessary constitutional adjustments will be possible. They draw attention to previous recommendations regarding the concentration of the functions of the Central Government in respect of all forms of communication and transport into one department, and they refer to the suggestions for some central advisory Board of Communications, the revival or creation of Provincial Boards of Communications, and the allocation to these of as wide a scope as possible. It has been suggested that in the event of a difference of opinion between the road and railway authorities it may be possible to take the matter to arbitration. Messrs. Mitchell and Kirkness think it highly desirable to provide for co-operation and co-ordination outside the headquarters of Government and they suggest that there might be divisional committees not only to advise on the control of motor transport but also within their sphere to be small counterparts of Boards of Communications.

MARKED INCREASE IN STERLING AREA'S GOLD AND DOLLAR RESERVES

HIGHEST LEVEL SINCE JULY 1956

THE opening month of 1958 has proved to be a promising one for the sterling area as a whole, in that it has brought about an increase of $131 million in the gold and dollar reserves of the area to $2,404 million at the end of the month, thanks to a further substantial inflow of gold and dollars. This is the biggest rise, attributable solely to trade and payments movements, during the last four years. It compares favourably with $88 million added to the reserves in December 1957 and $92 million in November of that year.

With this rise, the upward trend in gold and dollar reserves has been maintained for the fourth month in succession, the aggregate increase since the end of September, when a low of $1,850 million was touched, being of the order of $554 million. This addition has taken the reserves to the highest level since July 1956, when they stood at $2,405 million. Barring the July 1956 figure, the reserves are at their peak since August 1955, when they aggregated $2,457 million.

The successive additions to the sterling area's gold and dollar reserves during the past four months provide a clear vindication of the severe corrective measures taken in September last by Britain, for, as the following table shows, they are in refreshing contrast to the large deficits suffered in August and September last to the tune of $517 million in the aggregate:

(In million dollars)

	True dollar gain	*Actual change in reserves*	*Reserves at the end of period*
1957			
January-June	— 77	+248	2,381
July	— 32	— 14	2,367
August	—300	—225	2,142
September	—296	—292	1,850
October	+142	+243	2,093
November	+ 74	+ 92	2,185
December	+ 91	+ 88	2,273
January 1958 ..	+169	+131	2,404

It will be noted that the surplus of $243 million earned in October 1957, the first month after Britain began to tighten its belt, was much higher than that in January this year, but the October figure does not represent the correct picture. For it was arrived at after taking into account a sum of $250 million drawn from the Export-Import Bank—being the first drawing on the $500 million credit with the Bank—and the payment of $130 million to the European Payments Union in settlement of the September deficit. But for the Export-Import Bank credit, the surplus in October would have been only $123 million, while the corresponding figure for January this year is $147 million, if the sums of $13 million paid to the European Payments Union in respect of the December deficit and of $3 million paid to the creditors of the E.P.U. in bilateral settlements are taken into account.

The month of January has turned out to be a favourable month for Britain in its dealings with the European Payments Union also. It earned a surplus of £10.5 million with the E.P.U., in refreshing contrast to the successive deficits of £6.1 million and £1 million sustained in the preceding two months. Later this month, the U.K. will receive $22 million in part-settlement of January surplus. Consequent on this surplus, Britain has been able to turn the debit balance of $14 million (as at the beginning of January) to a credit balance of about $21 million with the E.P.U.

A notable feature of the surplus in the sterling area's reserves during January is that it was earned purely out of current earnings, without any abnormal receipts or any special transactions. This is mainly due to the large trade surplus which Britain is now enjoying. It is estimated that Britain's current balance of payments surplus may be twice as much as that a year ago, thanks, to a large extent, to the favourable movement in the terms of trade. It is true that the earnings of other sterling area countries have considerably dwindled on account of the fall in commodity prices in recent months. Britain's export earnings also have fallen, but the relatively sharper fall in import prices has, fortunately, enabled it to earn a surplus in its general balance of payments. This has contributed, in turn, to the strengthening of the reserves of the sterling area as a whole.

Another factor which must have contributed, to some extent, to the rise in the reserves during January is capital movement. Attracted by the high interest rates prevailing in London, some "hot" money must have flown in there, though the extent of flow could not have been more than a few million dollars, because of the general expectation that the Bank rate in Britain may be cut any time in tune with the fall in interest rates in many other countries.

The other factors which must have contributed to the rise in reserves are: (1) a reduction in the speculative positions against sterling and (2) the rebuilding of the ordinary working balances which were run down in last autumn, consequent on the restoration of the confidence in the pound sterling. The capital movements on these accounts constitute an unstable factor and cannot be relied upon to strengthen the reserves. These funds are liable to flow out as quickly as they came in and any small withdrawal will shake confidence and will only accelerate the pace of outflow.

As already stated, the sterling area's reserves have been considerably strengthened since September 1957 to almost the 1956 peak of $2,405 million (touched in July 1956). No doubt, this is due to a large extent, to the credit obtained from the I.M.F. and the Export-Import Bank and the loans obtained from these two bodies are to be repaid. It must also be borne in mind that in December last, the U.S. and Canada again waived the annual instalment of debt due to them. Nevertheless, for the first time since the middle of 1955, Britain stands well equipped and faces the prospect of a major rebuilding. Normally, this is the time of the year when the tide of commercial payments begins to move strongly in favour of sterling and Britain can, therefore, look forward to some more favourable months to strengthen its reserves. This confidence is reflected in the current firmness of sterling, which has come to stand at $2.81⅛, which is only ⅛c. short of the official ceiling of $2.82. It would have certainly crossed the upper limit of $2.82, but for the intervention of the Bank of England which readily supplied the market with sterling in order to prevent a too rapid rise in the rate.

It is, however, too early for Britain to take a complacent view of its present position. It must be said to the credit of the British authorities that they do not do so. This is evident from the fact that they are very reluctant to cut the Bank rate and are firmly refusing to allow wages to rise. Apart from the question of payments position with the dollar area, there could easily be a setback during the coming months in Britain's overall balance of trade. For it is not known how far the measures taken by the other sterling area countries to counter the damage done to their balance of payments positions by the fall in commodity prices would affect the U.K.'s general payments position. Many of these countries, particularly India, Pakistan, Australia and New Zealand, have taken steps to cut their spendings abroad through monetary measures and/or restriction on imports, in order to reduce the pressure on their foreign exchange reserves. It is likely that other countries also will follow suit. Since most of these countries have been getting the bulk of their needs from Britain, a drastic cut in their imports will naturally affect Britain's export trade adversely.

BANK OF ENGLAND

The question of the appointment of part-time directors to the Bank of England is to be reviewed by the committee which, under the chairmanship of Lord Radcliffe, is at present examining the working of Britain's monetary and credit system. Announcing this last week in the course of a two-day debate in the House of Commons on the report of the Bank Rate Tribunal, the Lord Privy Seal, Mr. R. A. Butler, as acting Prime Minister, said that Lord Radcliffe had agreed that the questions of tion could fall within his committee's terms of reference.

Mr. Butler added that the findings of the Bank Rate Tribunal had justified the trust which the Government must place in the Press, in the integrity of individual members of the Government and party officers, and in the honour of those against whom insinuations had been made.

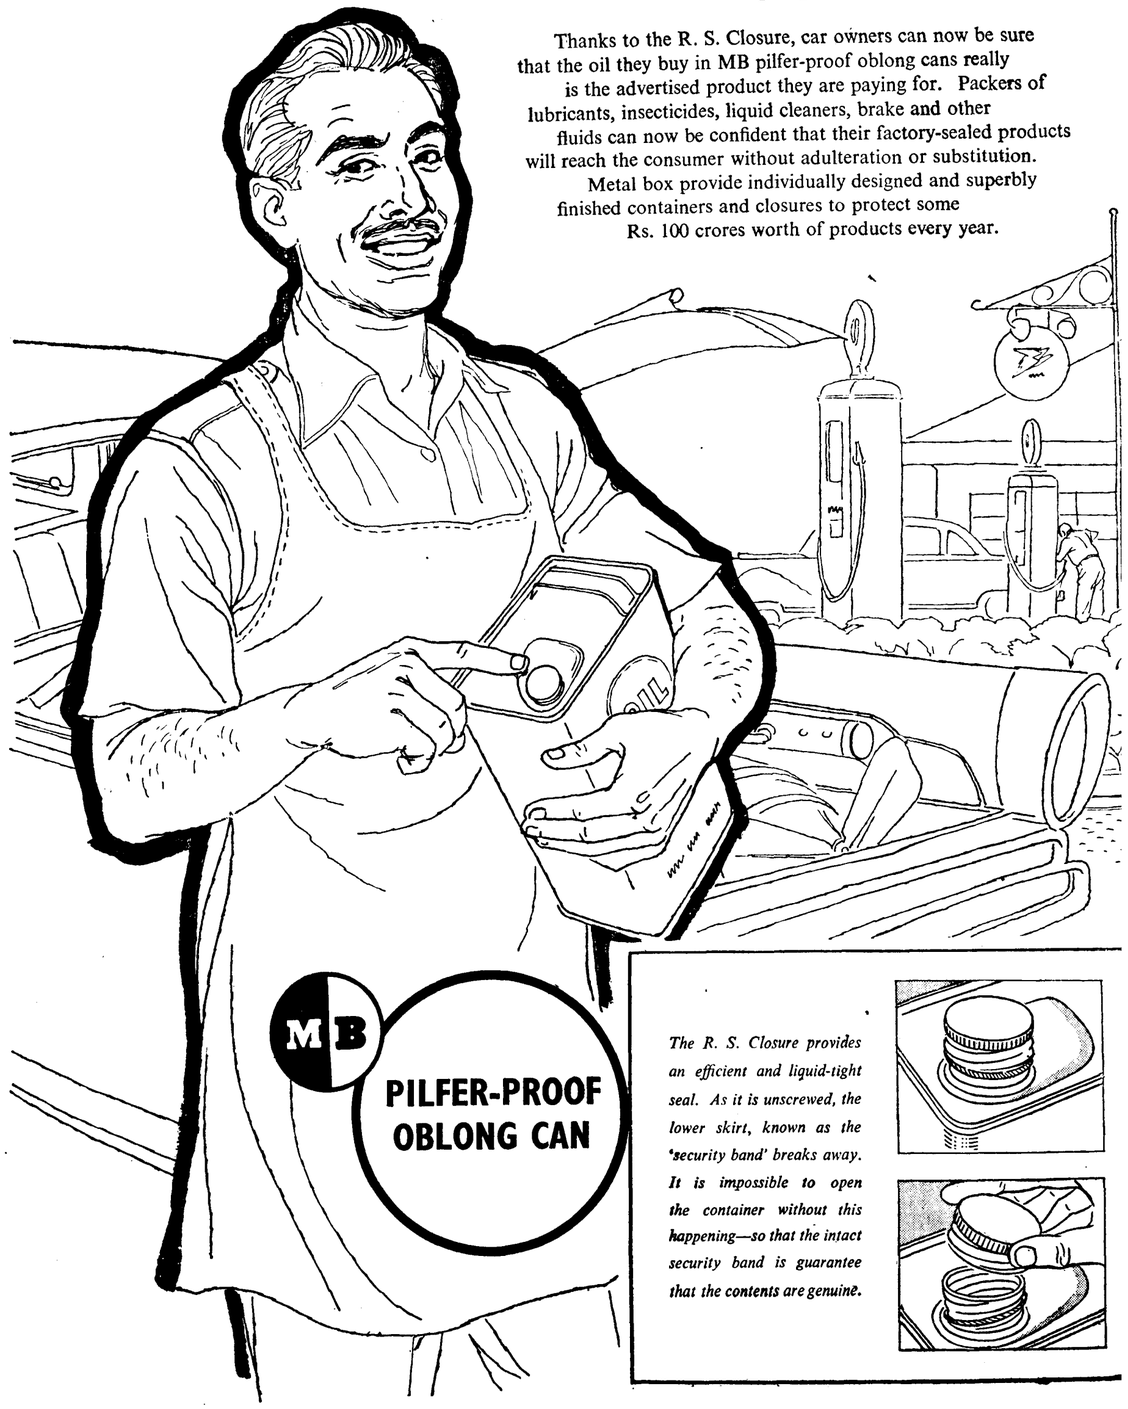
a pilfer-proof package for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.



The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

CHARGE AND COMPUTATION OF EXPENDITURE TAX

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

THE most controversial piece of legislation in recent years has been the Expenditure Tax. It is a novelty unknown in the fiscal legislation of the world. It was passed into an Act on 1st April, 1958. Let us briefly review its provisions so far as they deal with the charge and computation of the tax.

Charge

The tax is charged for every financial year commencing on and from 1st April 1958 at the rate or rates specified in the Schedule in respect of the expenditure incurred by any individual or Hindu undivided family in the previous year.

No expenditure tax is payable by an assessee for any assessment year if his income from all sources during the relevant previous year, reduced by the amount of taxes to which such income is liable under any other law for the time being in force, does not exceed Rs. 36,000.

In computing the year's expenditure, nothing in the Act shall require the inclusion of an expenditure for the spending or disbursing of which a liability had already been incurred and which has been subject of tax on any earlier year.

'Expenditure' means any sum of money or money's worth, spent or disbursed or for the spending or disbursing of which a liability has been incurred by an assessee, and includes amounts required to be included under the Act in taxable expenditure.

Inclusion

What are the amounts to be included in the taxable expenditure? They are:

(i) any expenditure incurred directly or indirectly by any person other than the assessee in respect of any obligation or personal requirement of the assessee or any of his dependants which, but for such expenditure, would have to be incurred by the assessee himself, provided the amount exceeds in aggregate Rs. 5,000 in any year;

(ii) if such an expenditure has been incurred by a dependant for the benefit of the assessee directly or out of the gifts, donation or settlement on trust or out of any other source created by the assessee, whether directly or indirectly.

The above does not cover or include any expenditure incurred by an assessee or any other person by way of customary hospitality or which is trivial or inconsequential in nature.

Exemptions

Expenditure referred to below are not to be included in the taxable expenditure:

(*a*) expenditure (capital or revenue) incurred wholly or exclusively for purpose of business, profession or vocation;

(*b*) expenditure incurred by the assessee, or on his behalf by his employer, wholly and necessarily in connection with the discharge of duties arising out of his employment;

(*c*) expenditure incurred by or on behalf of the assessee wholly and necessarily in connection with the discharge of any duties assigned by Government;

(*d*) expenditure by way of passage concession as referred to in section 4 (3) (via) of Income-tax Act;

(*e*) expenditure in connection with the acquisition of any immovable property, in construction, repair, maintenance or improvement of any immovable property belonging to him;

(*f*) expenditure by way of investment in deposits, loans, shares and securities or in bullion, precious stones or jewellery;

(*g*) expenditure incurred in the purchase of products of any cottage industries in India, books or works of art (subject to rules to be framed by the Central Government);

(*h*) expenditure by way of contribution as capital to a firm or other association of persons in consideration of a share on the profit;

(*i*) expenditure by way of repayment of a loan or other borrowing, or by way of payment of interest on the same, not being interest on loan or borrowing utilised for incurring expenditure liable to tax;

(*j*) expenditure by way of or in respect of any gift or donation or settlement on trust or otherwise for the benefit of any other person;

(*k*) expenditure for paying premiums in respect of any policy of insurance—

(i) on the life of the assessee or any other dependants;

(ii) for education or marriage of any dependants;

(iii) for insuring the health of the assessee or covering any accident which may befall him or any disability to which he may become subject;

(iv) covering any property (other than aircraft, motor vehicles or other transport vehicles) against loss or damage by fire or theft.

(*l*) expenditure in the purchase or maintenance of livestock;

(*m*) expenditure for any public purpose of a charitable or religious nature, not being incurred outside India;

(*n*) expenditure out of any allowance in the nature of entertainment allowance (*vide* section 7(2) (ii) of the Income-tax Act in respect of which income-tax is not payable);

(*o*) expenditure incurred outside India—

(i) from any source by an assessee who is not a citizen of India and who is a non-resident;

(ii) from any income or capital accrued or realised outside India by an assessee who is resident but not a citizen of India or by a citizen or Hindu undivided family which is not resident or not ordinarily resident in India.

(Resident or not ordinarily resident to be determined on the basis of the Income-tax Act.)

(*p*) expenditure by way of contribution to a provident, thrift or superannuation fund;

(*q*) expenditure, not being personal, incurred out of the sums guaranteed or assured by the Central Government as his privy purse for meeting expenses in respect of—

(i) maintenance of any member of his retinue, salaries, allowances and pensions to his staff or persons who retired from his firm;

(ii) maintenance of any building declared by the Central Government as his official residence under Tax Concession Order, 1950;

(iii) maintenance of any conveyance or animals for official purposes;

(iv) maintenance of any relatives dependant on him;

(v) performance of any official ceremonies.

The above expenses will be allowed having regard to the status and practice of the family, provided they are, in the opinion of the Expenditure-tax Officer, reasonable. The amounts so fixed must be with the previous approval of the Commissioner of Income-tax.

(*r*) expenditure by the assessee or any of his dependants, where the assessee is a Hindu undivided family, by way of election expenditure to any legislative, municipal, or other public authority in India to which he is a candidate, to the extent that such expenditure is not in excess of the limits fixed under any law for the time being in force relating to such elections.

Computation

How is the taxable expenditure to be computed? The taxable expenditure will be computed after making the following deductions and allowances:

(*a*) Any taxes, including the expenditure tax payable under this Act, duties, cesses, rates or fees paid to Government or local authority, except—

(i) taxes or fees in respect of any conveyance or other movable asset intended for the personal use of self and dependants;

(ii) customs duties on, or taxes on purchase of articles imported or purchased for personal use or of his dependants.

(*b*) expenditure lawfully incurred in respect of any civil or criminal proceedings to which he is a party;

(*c*) expenditure, if an individual, in respect of his own marriage or marriage of his dependants and if a Hindu undivided family, in respect of the marriage of the *karta* or any other member of the family subject to a maximum of Rs. 5,000 for each marriage;

(*d*) fourth-fifths of any capital expenditure incurred on purchase of furniture, household goods, motor cars and conveyance and any other articles for personal use of the assessee or his dependants;

The deduction of fourth-fifths of capital expenditure as above is often on the condition that for each of the four succeeding years, one-fifth of such expenditure shall be deemed to be incurred.

(*e*) expenditure on maintenance of parents subject to a maximum of Rs. 4,000;

(*f*) expenditure incurred—

(i) of individual in respect of his own or his dependants or parents' medical treatment;

(ii) of Hindu undivided family in respect of the medical treatment of the *karta* or any other member of his family;

maximum in case of individual and in case of Hindu undivided family which consists of *karta*, wife and children Rs. 5,000 and Rs. 10,000 of any other Hindu undivided family;

The unexpended portion of this allowance, the assessee is entitled to carry forward to the next year and the year immediately following.

If the assessee immediately before the commencement of this Act has been incurring a higher expenditure on the medical treatment of himself, his parents or his dependants, the Expenditure-tax Officer may, in any of the five years commencing from 1st April 1958, increase the allowance as he may think fit but not exceeding Rs. 20,000.

(*g*) any expenditure in respect of education of himself and his dependants or where he is a Hindu undivided family, any member of the family in any foreign country outside India subject to a maximum of Rs. 8,000 per year;

(*h*) a basic allowance—

(i) of Rs. 30,000 in case of individual;

(ii) of Rs. 30,000 in case of Hindu undivided family in respect of *karta*, his wife and children and a further allowance of Rs. 3,000 for every additional coparcener, provided the basic allowance for Hindu undivided family does not exceed Rs. 60,000 in any case.

(i) expenditure incurred in any foreign country where he is not a citizen of India but is resident in India, to the extent to which expenditure is not admissible under clause (*c*), (*e*), (*f*) or (*g*) subject to a maximum of Rs. 10,000;

If the assessee claims on or before making a return that, instead of deductions under clauses (*b*), (*c*), (*d*), (*e*), (*f*), (*g*), (*h*) and (*i*), as above, the deductions and allowance should be determined having regard to actual expenditure in the last three previous years immediately preceding the previous year, then, instead of the deductions and allowances permissible, there shall be allowed—

(*a*) a sum equal to 75 per cent. of the average annual expenditure for the said three years after taking into account exemptions; or (*b*) Rs. 75,000; whichever is less.

The limit of Rs. 75,000 will be progressively reduced by Rs. 5,000 every year commencing from the assessment year ending on 31st March 1960 in the 1959-60 assessment year.

This relief will cease to apply when the progressive reduction, if allowed, has the effect of bringing the limit so reduced to a figure below in aggregate the allowance and deductions permissible under clauses (*b*) to (*i*).

If an assessee has incurred any expenditure chargeable to tax in India and if in any foreign country he has paid tax under any law in force for the time being, relating to taxes on income, wealth or expenditure, he shall be entitled to a deduction from the expenditure chargeable to tax under this Act.

FRESH BID TO RESTRICT CLOTH IMPORTS

INDIA AND PAKISTAN INVITED FOR TALKS

From A Special Correspondent

MANCHESTER, *4th February*

MANCHESTER LETTER

A DISCLOSURE that representatives of the Indian and Pakistan cotton industries had been invited to come to the United Kingdom for further discussions on the question of cloth imports into this country was made in a statement issued by the Cotton Board this week. This interim report on the progress of negotiations on a topic which has probably been discussed more than any other in Lancashire over the past few years said that the Board's Standing Consultative Committee had been constantly at work to achieve a solution of the problem, but details of the negotiations had been kept secret in the industry's own interests.

The Board claimed that the recent imposition of restrictions on imports from China could be accepted as part of the results of their work. Since the delegation to India, Hong Kong and Pakistan in the early months of last year, the British Government had expressed its willingness to implement any agreement reached between the industries concerned by means of a system of import control designed to limit the volume of cloth retained for consumption in the home market. This applied to India and Pakistan, but the Government refused to take similar action in regard to a colonial industry such as that in Hong Kong.

Instead it was suggested that negotiations with the industries in India and Pakistan would still be practicable on the basis of the inclusion in agreements of a figure for imports from Hong Kong, which, if exceeded, would release the Indian and Pakistan industries from any obligations into which they had entered. Although this proposal fell short of the original hopes of the British representatives, invitations were sent last November to the Indian and Pakistan textile leaders, suggesting that discussions should be resumed on this basis. "The replies so far received are not without their difficulties but it is hoped that these can soon be solved," the statement added.

Co-operative Plan

A casual comment can sometimes produce a crop of consequences bringing results not always contemplated at the time of the actual remark. The reference to a new scheme for restraining cotton cloth imports made by Mr. Roger Lee nearly a fortnight ago has had both official and unofficial repercussions and traders have been plunged once more into controversy over cloth imports.

Despite the absence of official comment on the suggestion of a co-operative plan between producers and distributors, the general outline of the proposals is now widely known. Any final arrangement would presumably be open to modification, but the basic idea appears to centre on a limit being placed on the activities of importers according to their recent purchases of foreign goods. Any attempt to secure larger supplies of fabric from abroad would lead to a system of sanctions whereby merchants would have to pay more for any Lancashire cloth they wanted to distribute.

Supporters of the plan argue that it offers flexibility and could be adapted to meet the needs of the moment according to the productive capacity of the industry in Lancashire, so that imports could be regulated within recognisable limits. Their ingenuity is to be commended, as, for too long the Government has been urged to "do something" without any indication that Lancashire was prepared to act on its own behalf.

An obvious aspect of the situation is that, if merchants refused to import foreign cloth, no problem would exist. On this premise, the current scheme is founded, but there are many obstacles to be overcome. Even if the collaboration of leading merchant firms is secured, the multitude of small traders, many outside Lancashire, who handle imported goods may not be as co-operative. The threat of sanctions seems also likely to arouse the attention of those investigating restrictive practices.

Machinery Exports

Some reduction in the volume and value of British textile machinery shipped abroad last year is recorded in the annual figures, but earnings from this source were practically the same as in 1955. Exports amounted to 1,400,071 cwt., as against 1,606,889 cwt., the respective values being £43,215,590, as against £44,986,840.

A number of markets absorbed larger quantities of textile plant made in Lancashire and Yorkshire engineering works, but the amount taken by several former big buyers has lately declined substantially. India is now the only country taking more than 100,000 cwt. annually, exports being 266,591 cwt., as against 403,974 cwt. in 1956. Shipments to Pakistan have shown a steep decline in the past two years, the 1957 total of 84,236 cwt. comparing with 224,577 cwt. in 1955. A similar decline has occurred in trade with the Soviet Union, which has fallen from 193,328 cwt. in 1955 to 41,295 cwt. last year.

Although the quantities involved are not large, it is interesting to note that shipments of British textile plant to such markets as Hong Kong, Japan and several South American Republics are showing a distinctly upward trend, and Australia has become the second largest market with 91,899 cwt.

Exports of the various types of textile machinery have shown a uniform decline, although those for making synthetic fibres were only a little lower than in 1956. Plant used in preparatory processes amounted to 182,237 cwt., as against 220,284 cwt; spinning machinery exported aggregated 119,527 cwt., as against 125,751 cwt; looms and other weaving machinery accounted for 219,225 cwt., as against 266,102 cwt. and plant for various finishing processes for 89,340 cwt., as against 118,334 cwt.

Leaders of the Lancashire cotton unions are to ask the employers for compensation payments for mill workers who become redundant when mills close down. The executive committees of the Weavers' Amalgamation, the Operative Spinners, and the Cardroom Workers' Amalgamation have drawn up proposals which they hope millowners will be prepared to consider. A request for an early meeting will be sent off shortly to the employers' organisations.

Over the last five years, 200 Lancashire mills have closed down and many of the thousands of operatives affected have not been absorbed in other parts of the industry.

New-Style Furnishing Finish

A complete range of British-made furnishing fabrics which will neither shrink nor stretch are now retailing at shops throughout the country. The development is claimed as the most revolutionary in furnishings over the last quarter of a century and the most important since fast finishes were introduced. The range of 50 new designs of cottons, rayons, linens and mixture cloths is being introduced by Grafton. They will all have the Calpreta-fixt finish which guarantees non-shrink and non-stretch qualities.

A spokesman for the Calico Printers' Association, of which Grafton is a subsidiary, said that nearly all furnishing fabrics in the past had suffered from the disadvantage that they were liable to shrink on washing. At the same time, curtains compressively shrunk were liable to stretch under their own weight. Fabrics with the Calpreta-fixt finish, which is permanent, makes furnishing fabrics dimensionally stable and curtains and loose covers can be made to the correct size. They will retain the same fit throughout the fabric life.

It is claimed that the fabrics have a better "handle" and can be home-washed, laundered and dry cleaned with safety. They are non-absorbent to chlorine and, in addition, the wet strength of rayons is increased and in this way should reduce washing mishaps.

A C.P.A. spokesman said that, although they did not claim the finish made the fabrics crease-resisting, it gave them certain properties of crease resistance. Because of this, they were easier to iron and would not crush so easily.

The new finish, which follows long months of research at the Calico Printers' headquarters in Manchester, is a development of what is known as the resin finish. Fabrics undergoing "Calpreta-fixt" treatment will retail at from 11s. 6d. to 15s. 11d. a yard, about 1s. a yard dearer than comparable fabrics. This margin, however, can be offset against the smaller quantity of material needed since shrinkage has no longer to be allowed for.

Fabrics incorporating the new finish have attracted a great deal of attention in export markets. The C.P.A. spokesman said: "Our Australian distributors have allocated the whole of their import licence to the new furnishings and have promised all their next licence for the same purpose. New Zealand, too, is buying enthusiastically."

From Iraq, normally only a moderate market, an initial order has been received from one firm for £1,500 worth of furnishings. Other orders have been placed from New Guinea, Baghdad and Fiji, as well as one of almost £4,000 from Paris.—*All Rights Reserved.*

FREE WORLD COTTON PRODUCTION

LOWEST IN THE POST-KOREAN PERIOD

SUCCESSIVE reduction in the U.S. crop estimate and reduced carry-over at the start of the current season in that country have had a material effect on the supply position of cotton in the U.S. and, indeed, on the world position. According to the estimates of the International Cotton Advisory Committee, Washington, total free world production during the current (1957-58) season is estimated at 27.2 million bales (of 478 lbs.) of which the share of the U.S. is to be 10.9 million bales and that of other free world countries 16.3 million bales. This compares with a total outturn of 28.9 million bales last season, with the U.S. accounting for 13 million bales and the rest of the free world for the balance of 15.9 million bales. Carry-over stocks at the beginning of the season were of the order of 20.4 million bales. The U.S holdings aggregated 11.2 million bales and that of other free world countries amounted to 9.2 million bales. As against this, at the beginning of the last season, that is 1956-57, total free world carry-over stocks were higher at 22.1 million bales. Total supply for the current season is of the order of 47.6 million bales, comprising a crop of 27.2 million bales and stocks of 20.4 million bales, as compared with 51.0 million bales last season. It may be noted that the reduction in supply has occurred mainly in the U.S., from 27.5 million bales to 22.1 million bales, whereas in other free world countries it has shown an actual improvement by 2 million bales from 23.5 million to 25.5 million bales. Carry-over stocks in the U.S. declined from 14.5 million to 11.2 million bales and production from 13 million bales to an estimated 10.9 million bales.

As noted earlier, successive reduction in the U.S. crop has reduced aggregate supply in that country. The December crop report of the Department of Agriculture estimated production at 10.9 million bales, a drop of 778,000 bales from the previous estimate and 1.7 million bales less than the first crop estimate published in September and 2.1 million bales less than the previous season's figure. Acreage for harvest this season is now put at 13,561,000 acres, which is one per cent. below the September acreage estimate. Abandonment of acreage in cultivation on 1st July last is placed at 3.4 per cent. Yield, estimated at 390 lbs. per acre, is 23 lbs. under the November figure and 19 lbs. below last season.

Adverse Weather

The fall in production in the U.S. has been mainly due to adverse weather and reduced planting. In Texas and Oklahoma, rainy, damp weather, following late October frosts, caused the estimates for these two States to be lowered by a total of nearly half a million bales. Similar conditions prevailed over most of the central cotton belt, resulting in substantial crop losses. The reduced crop prospects have been reflected in ginning reports. Cotton ginned upto December aggregated 8 million bales as against 12.4 million bales a year ago, representing the smallest proportion of the crop ginned to the total on record to date. Ginnings upto the 16th of January were 10,633,000 bales. Many quarters believe that the final crop may be close to this figure. About 40 per cent. of ginnings was 1.1/16" staple cotton, the largest proportion of this staple length on record. The grade index of Upland cotton was significantly lower The proportion of Strict Middling and higher to the total ginned was considerably lower than a year earlier. Middling comprised a somewhat smaller proportion while the proportion of Strict Low Middling and lower white grades was slightly larger. Ginnings hitherto contained a greater than average amount of spotted cotton, about 20 per cent. The quality-wise breakdown of the carry-over on 1st August 1957 was as follows:

(In million bales)

Grade	Carry over August 1	
	1956	1957
Strict Middling and above ..	1.3	0.8
Middling	4.5	2.3
Strict Low Middling	4.1	2.3
Low Middling and below ..	2.1	1.3
Spotted	2.2	3.9
Others	0.2	0.6
Total ..	14.4	11.2

It is generally expected that all the C.C.C. stocks of higher grade cotton will be sold out well before the end of the season.

Further Fall in Stocks

Reduced production prospects in the U.S means that there will be a further significant decline in stocks at the end of the season. On the basis of the estimated total disappearance this season of 13.5 million bales in the U.S., comprising an estimated consumption of 8.5 million bales and prospective exports of 5 million bales. stocks are expected to decline to about 8.5 million bales by 1st August 1958, as against 11.2 million bales on the same date the previous year.

Early December last, cotton growers in the U.S. voted on the marketing quotas and acreage allotments for 1958-59 season and these were approved for both Upland and American-Egyptian cotton. The acreage allotment for Upland cotton next season will be 17.5 million acres, the same as in the current season. The national average per acre payment rate for the next season has been increased from this season's rate of $54.15 to $58.95. Under the Soil Bank programme, about 2.7 to 3.7 million acres are expected to be laid off, as compared with actual Soil Bank entries to the tune of 3 million bales in the current season. If this goal is achieved and provided there is no marked improvement in yield, a further reduction in cotton supply is indicated.

Production Outside U.S.

Aggregate free world production outside the U.S. is expected to increase slightly this season from 15.9 million bales to 16.3 million bales. As will be seen from the following table, production is expected to be higher in most producing countries.

World Cotton Production

(In 1,000 bales of 478 lbs.)

Country	1956-57	1957-58 (estimated)
United States	13,029	10,900
Other Free World	15,922	16,290
Of which :		
Mexico	1,800	2,000
Central America	383	354
India	4,180	4,300
Pakistan	1,400	1, 35
Egypt	1,498	1,804
Turkey	650	500
Syria	428	450
Sudan	620	500
Uganda	315	250
W. Europe	501	517
Brazil	1,340	1,250
Peru	450	450
Argentina	520	550
Others	1,837	1,930
Total free world ..	28,951	27,190
Communist countries	12,145	11,645
Total world ..	41,096	38,835

Production is higher in several countries. The Mexican crop is estimated to be around 2 million bales, 10 per cent. higher than last season. The second official estimate in Egypt put production at 1.8 million bales, as compared with 1.5 million in 1956-57. The crop in Syria estimated at 450,000 bales or more, will be an all-time record and the same is true of Tanganyika. Acreage in Pakistan is up slightly from last season and the first official crop estimate is 1,435,000 bales as compared with 1,400,000 bales in 1956-57. The Punjab crop has been affected by unfavourable weather but Sind N.T. is apparently higher than last season. In India, crop prospects are considered normal and reports from the main growing areas indicate satisfactory progress. But of late the crop estimate has been reduced.

Production is significantly down in Turkey, Uganda, Nicaragua, and the Sudan. Unfavourable weather has affected yield in Turkey and the crop is estimated at 500,000 bales, as compared with 650,000 bales last year. In Uganda bad weather has played havoc with yields so that, despite near-record acreage, production is expected to be no more than a quarter of a million bales this season. The marked decline in production in Nicaragua is the result of both reduced acreage and lower yields and the estimated crop of 150,000 bales will be the smallest for several years. Reports from the Sudan suggests that production may be materially less than last year's record. In South Brazil, acreage is believed to be significantly under last season but the chances are that there may be some improvement in yield per acre. Trade estimates are that there has been an increase of about 7 per cent. in cotton acreage in Argentina this season. Peruvian production may be lower as a result of the smaller extra long-staple crop this year.

Aggregate free world production this season is expected to be around 27 million bales. Although production in free world countries outside the U.S. will be higher, it will be more than offset by the reduction in output in the U.S. Total free world production will, therefore, be lower than last year's by roughly two million bales and the lowest since the post-Korean period.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration or damage of such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Railways Time Tables and Guide.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

PROSPECTS OF LARGE SUGAR EXPORTS NOT BRIGHT

PLEA FOR HIGHER CANE PRICES ILL-ADVISED

THE Government of India is expected to announce its decision on sugar exports "in a short time." This was disclosed by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, while speaking at the inaugural function of the new crushing plant of L. H. Sugar Factory, Kashipur, Tarai, Uttar Pradesh, on 30th January last. A scheme for exports of sugar, Mr. Jain said, was under the consideration of the Government and the Indian Sugar Mills' Association was being consulted. He added: "It is our desire to export 200,000-300,000 tons of sugar this year. .... There is one difficulty which is that the price obtaining for sugar outside India is much less than in this country. The Government is thinking as to how to overcome this difficulty."

While the final decision of the Government is awaited, it looks as though the chances of India exporting large quantities of sugar are completely bleak. The world sugar market continues to rule depressed, and the gap between world prices and Indian prices has markedly widened against India. The average price of sugar produced in India now stands at as high as Rs. 750 per ton, even after excluding the Union excise duty of Rs. 291.20, which compares very unfavourably with the quotation of Rs. 440 (£33) per ton prevailing in London. The low level of world sugar prices is expected to persist during the whole of the current year.

It is against the aforesaid background that one has to view the scheme for sugar exports. The most fundamental question is: How to make Indian sugar compete effectively in the world market. Instead of examining this issue, the representatives of sugar industry have been wasting their time and energy on debating the question of the agency which should handle the export business. Although discussions have been going on on this issue for many months now, the differences in approach among sugar millowners continue to be as sharp as before. Thus, a section of millowners wants the setting up of a monopoly central marketing organisation to distribute sugar not merely for exports but also for domestic consumption. Another section prefers an autonomous central organisation with membership being compulsory for all sugar mills which will pay a membership fee based on the production of each mill and also linked to the loss on exports. There is still another section which believes that exports of sugar should be handled individually by mills, that is, in the same manner as is being done in the case of textiles or any other commodity. In view of the continued sharp differences in approach, it remains to be seen how the Government of India will evolve a scheme which will be acceptable to all the sugar interests in the country.

Whatever may be the form chosen for handling export business in sugar, the fact remains that the export price of Indian sugar should bear comparison with that quoted by other countries. This can be ensured by lowering cane prices, refunding cess on cane in respect of exported sugar, simplifying excise formalities and granting concessions in freight rate for exportable sugar. The need for a reduction in the price of sugarcane is especially great, considering that the cane accounts for as much as 60 per cent. of the cost of sugar production.

When such is the state of affairs, it is highly deplorable that the Praja Socialist Party should continue to whip up the emotions of the cane growers of Uttar Pradesh and Bihar by urging them to ask for an upward revision in cane prices which are already high in all conscience. The P.S.P. recently convened at Meerut a conference of the presentatives of a number of cane co-operative societies in the Meerut division. Addressing the conference, Mr. Genda Singh accused the Central Government of partiality and said: "While it allows industrialists to sell their sugar in the open market, it forces growers to sell their sugarcane to the mills only at a price fixed by the Government. The Bihar Assembly had unanimously demanded that the price be fixed at Re. 1.75 (as against Re. 1.44) per maund. Even this is disregarded by the Government." The conference criticised the Government for having fixed the price of sugarcane at Re. 1.44 per maund for the next season (this is same as that in the past four seasons) without consulting the U.P. and Bihar Joint Sugarcane Board. Such consultation, according to the conference, was mandatory. The conference passed a resolution urging the Government to fix the cane price at Re. 1.75 per maund and to appoint a price fixation board as in Australia. It even warned that, if the Government hesitated to fulfil the demands, the action committee would be forced to advise the growers not to supply cane to the sugar factories.

The plea for enhancing the price of cane is most ill-timed, especially as the country is now trying to build up an export trade in sugar. With the exception of Japan, the price of sugarcane in India is the highest in the world. Indeed, one wonders if any other agricultural commodity pays the cultivator as much as sugarcane does. Any increase in cane price at this stage is bound to have the effect of diverting more land from food crops to cane crop. Even the existing prices have resulted in a substantial rise in the production of cane, particularly in areas supplying cane to the sugar mills. The all-India second estimate of cane (1957-58) puts the aggregate yield at 63.50 million tons and area at 4,784,000 acres, as against the adjusted second estimate of 58.99 million tons and 4,475,000 acres, respectively, in 1956-57. Surely, if the price offered for cane has not been economic, the growers would not have devoted a larger area to the cultivation of sugarcane. The maintenance of the old price for cane is itself more than equitable *inter se* between growers of cane and other farmers, as also in the general interests of the country's economy. Indeed, it is high enough to cause an imbalance in the pattern of crops. It must be noted that it is the factories that are being compelled to pay a fixed minimum price and that this compulsion is being exercised in order to protect the cane growers and not the factories. There is no doubt that, left to the free play of market forces, it is the cane grower who will suffer most. The socialists are, therefore, distorting the truth when they do propaganda among the cane growers to the effect that the price fixation is intended for the benefit of factories.

Irrespective of the quality of cane he supplies to the sugar factories, the grower gets Re. 1.44 per maund, thanks to the present defective system of fixing price of cane. How can such a system give any incentive to cultivators to grow better quality canes? It is not surprising that the recovery of sugar in cane has all along continued to be very low. The Praja Socialist Party of Uttar Pradesh and Bihar would serve the cause of cane growers better if, instead of pleading for enhanced cane prices, they were to advocate the introduction of the scheme for payment of cane on the basis of both weight and quality, as against weight alone as at present. Such a scheme will create quality-consciousness among growers, with the result that, in subsequent years, they can raise the sugar-content of their cane. Mr. Ajit Prasad Jain did well to stress the need for augmenting both the sucrose-content and the per-acre yield of cane. In this connection, he observed:

"It is a pity that no real attempt has so far been made to improve the quality of sugarcane. Excellent work has been done by the various research institutes in this country. But the record of the Coimbatore Institute is by far the most outstanding. In Egypt, there is now 97 per cent. of Coimbatore variety of cane grown, as compared with 3 per cent. of the Java breeds. It is, therefore, necessary that the millowners, peasants and cane development societies should plan and coordinate their development activities in such a manner as to get the maximum results. It is likely that the recovery from cane will be linked with the sugarcane price. No final decision has yet been taken, but this is one of the lines on which Government is thinking. It will be in the interest of all to improve the quality of cane and get the maximum price for it."

In the course of his address, Mr. Jain emphasised the importance of a co-ordinated development of both white sugar and *khandsari*. He sought to impress on the sugar millowners the fact that the *khandsari* industry played a notable role in the economy of the country. Mr. Jain also stressed that there should be some co-ordination between bonus, wages and welfare of workers employed in sugar mills. Incidentally, he stated that the Wage Board for sugar industry would determine the capacity of a factory to pay; it would find out everything and compile data that might be necessary to arrive at right conclusions.

WAGE BOARD FOR SUGAR INDUSTRY

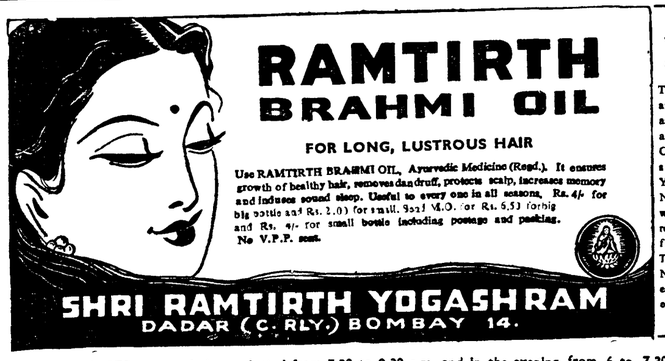
The Wage Board for Sugar Industry (Chairman: Mr. Bind Basini Prasad) held its first meeting at Lucknow on 31st January. At this meeting, the Board decided the procedure to be adopted for carrying on its work. Accordingly, before drawing up a *questionnaire*, the Board will address communications to all the central organisations of employers and employees to suggest the matters on which information should be collected. It will then visit a few typical sugar factories in the North and the South. This will be followed by the issue of a *questionnaire* to the interests concerned. The Board will also give hearing to the sugar mills in every zone and visit as many units as possible in each zone. The three specific questions discussed by the Board related to the following:

(1) The needs of the sugar industry in a developing economy, with particular reference to the special features of the industry and social justice to be kept in view while considering wages;

(2) the necessity for collecting family budgets of the class of persons from where workers for sugar industry is drawn; and

(3) the payment of bonus to workers. On the last-mentioned question, the Board resolved that, after hearing the parties, a formula should be evolved on the basis of which bonus may be paid.

The next meeting of the Board is expected to be held early next month.



RAMTIRTH
BRAHMI OIL
FOR LONG, LUSTROUS HAIR

Use RAMTIRTH BRAHMI OIL, Ayurvedic Medicine (Regd.). It ensures growth of healthy hair, removes dandruff, protects scalp, increases memory and induces sound sleep. Useful to every one in all seasons. Rs. 4/- for big bottle and Rs. 2.0) for small. Send M.O. for Rs. 5.5) for big and Rs. 2/- for small bottle including postage and packing. No V.P.P. sent.

MOVEMENT OF COAL

STUPENDOUS TASK AHEAD FOR RAILWAYS

ONE of the serious impediments in the coal industry's way to the production goal set for it under the second Five-year Plan is inadequate transport facilities for the movement of coal. It is true that transport has been given a high priority in the Plan and that for this purpose a sum of Rs. 1,125 crores, or 30 per cent. of the total Plan outlay, has been allotted for the development of railways alone. It is estimated that, with this allocation, it will be possible to provide for a net increase of 42 million tons in goods transport at the end of the current Plan period. The additional quantity of coal which the railways expect to move at the end of the Plan period is 18 million tons per annum, including 12 million tons of additional coal required for the steel plants. But, as against this, the additional coal that will require to be moved is expected to be as much as 23 million tons per annum. There will thus be a shortfall of 5 million tons per annum in the facilities available for the movement of coal. In other words, there will be heavy accumulation of the stocks at the pit-heads, which will, in turn, affect the production of coal.

Assuming that the coal production target for 1960-61 is 60 million tons, the net output (after excluding colliery consumption and coal moved otherwise than by rail) that will have to be moved by the railways is 55 million tons at the end of the Plan period. On this basis, the estimated wagon requirements year by year during the Plan period are as follows:

(No. of wagons)

Name of coalfield	Actual loading in 1955	Anticipated daily requirement				
		1956-57	1957-58	1958-59	1959-60	1960-61
West Bengal and Bihar	3,262	3,675	3,778	4,693	4,810	5,016
Windhya Pradesh	302	497	546	935	1,033	1,130
Singareni	175	216	227	308	329	349
Talcher	30	33	33	33	33	33
Madhya Pradesh	276	276	276	276	276	276
Total	4,045	4,697	4,860	6,155	6,481	6,804

There has, no doubt, been some improvement in the allotment of wagons during the last few years, thanks to the repeated representations made by the coal producers and the earnest efforts of railways to help them. Thus, in 1957, the daily average loading from West Bengal and Bihar Coalfieds (which account for 80 per cent. of the country's total output of coal) aggregated 3,667 wagons, as against 3,405 wagons in the previous year and 3,163 wagons in 1952. Barring the three months, June, July and August, the daily average loadings in all the months of 1957 were higher than those in the corresponding months of 1956, as the following comparative table shows:

	Average daily loading in				
	1953	1954	1955	1956	1957
January	3,118	2,874	3,169	3,281	3,583
February	3,054	2,865	3,208	3,230	3,586
March	3,211	3,061	3,215	3,204	3,726
April	3,111	3,111	3,191	3,403	3,780
May	3,093	3,092	3,145	3,246	3,587
June	3,033	3,118	3,130	3,410	3,354
July	3,033	3,351	3,234	3,590	3,576
August	3,020	3,558	3,475	3,824	3,794
September	3,222	3,598	3,393	3,280	3,847
October	3,351	3,432	3,478	3,437	3,982
November	3,208	3,263	3,361	3,568	3,689
December	2,886	3,145	3,141	3,384	3,556
Average for the year	3,112	3,206	3,262	3,405	3,667

It will be noted that the average daily loading suffered a serious drop in June last to 3,354 wagons, from a high of 3,780 wagons in April. Subsequently, it rose to a record high of 3,982 wagons in October, before declining markedly to 3,556 wagons in December.

It is true that the average daily loading for the year as a whole showed a rise of 400 wagons during the last two years, but the progress is not commensurate with the expansion in the output of coal. Further, we are now about to complete the second year of the Plan and the actual daily loading in 1957 at 3,667 wagons for W. Bengal and Bihar coalfields, is still well behind that of 3,778 wagons allocated for 1957-58. This shows that the leeway to be made up during the next three years is considerable and appears to be difficult of fulfilment. It should be noted here that, with the commencement of operation of some of the new coal mines in the public sector during the current year, the pace of production of coal will be accelerated during the coming years and coal loading will have to be keep pace with the increase in production, so that the industry will not be burdened with the mounting level of stocks. It will be seen from Table I above that an additional daily loading of 2,000 wagons will be required during the next three years for all coalfields and nearly 1,400 wagons for the West Bengal and Bihar coalfields alone. The railways have therefore, no cause for jubilation over their achievement in increasing the wagon allotment by 400 wagons per day during the last two years. It marks only a humble achievement as compared with the stupendous task ahead.

COAL PRODUCTION IN THE NETHERLANDS

The production of coal in the Netherlands during 1957 aggregated 11.38 million tons, as compared with 11.84 million tons in the previous year. Production reached a peak in 1952, but has been regularly decreasing ever since and in 1955 it fell below 12 million tons for the first time. The rather steep decrease in production during 1956 and 1957 was due to some special circumstances which had a slightly adverse effect on last year's labour output.

The coal production of 7.2 million tons in the State Mines was about 270,000 tons lower than in 1956. This decrease in production, combined with a steep rise in cost, will have an adverse effect on the operating results.

Further progress was made in the mechanical production of coal. Despite difficult geological conditions 30 per cent. of the total coal production was mined by mechanical methods (in 1956: 26 per cent.).

Good progress was made in completing the new shafts in the Emma, Hendrik and Maurits mines. The drill holes for the shafts in the new Beatrix mine were finished down to the coal formation. The washeries of the four mines were improved, as a result of which manual sorting of coal from crude coal will soon be a thing of the past.

The mine gas, which is drawn off in large quantities underground, was entirely absorbed in the State Mines' gas economy. Some 25 million cu.m. (883 million cu.ft.) of gas for consumption is now being annually obtained from the mine gas.

Coke production amounted to nearly 3 million tons, that is, slightly more than in the previous year.

COAL PRICE IN W. GERMANY

A threatened second increase in the price of Ruhr coal has been averted. Two coal-selling organisations have decided not to raise prices for the time being. The third such organisation made a similar announcement some time ago.

The West German price of coke and coal was increased by an average of eight per cent. on 1st October last.

BRITISH OVERSEAS AIRWAYS CORPORATION

TEA PRICES TEND TO DECLINE

SHARP FALL IN EXPORTS—CASE FOR CUT IN EXPORT DUTY ON COMMON TEAS

THE improvement in tea prices witnessed early this year, following the political upheaval in Indonesia and the flood havoc in Ceylon, seems to have yielded place to a downward trend. Barring the best quality teas, which are still sold well in London and Calcutta, thinner varieties have been ruling easy. In Colombo, even the best teas have struck a weak note. The auctions in London and Colombo reflect the uncertainty over the labour situation in Colombo harbour. Though the disruption in the movement of tea caused by the recent floods has been overcome, trading has not returned to normalcy, due to unsettled labour conditions in Colombo Port. This has resulted in a number of shipping lines boycotting the harbour until such time there is a distinct improvement in the situation.

The easier trend in tea prices at the London auction has affected the auctions in Calcutta, as will be seen from the following comparative table of prices in export sales:

	3-2-58	27-1-58	20-1-58	6-1-58
	Rs.	Rs.	Rs.	Rs.
Clean B.P.	2.25 to 2.30	2.35	2.35 to 2.40	2.30 to 2.35
Plain B.P.	1.52 to 1.56	1.52 to 1.56	1.58 to 1.62	1.58 to 1.62
„ Fgs.	1.60 to 1.64	1.60 to 1.64	1.66 to 1.70	1.68 to 1.72
Medium B.P.	1.58 to 1.62	1.60 to 1.64	1.66 to 1.70	1.64 to 1.68
„ Fgs.	1.66 to 1.70	1.68 to 1.72	1.76 to 1.80	1.78 to 1.82
Best Assam C.T.C. B.P. ..	2.40 to 2.60	2.50 to 2.70	2.60 to 2.80	2.60 to 2.80
„ Fgs.	2.30 to 2.40	2.40 to 2.50	2.50 to 2.60	2.50 to 2.60

A comparison of latest prices over those a year ago shows that, while Clean B.Ps. have maintained their price levels, Plain B.Ps. have suffered a drop of 42 nP per lb., Medium B.Ps. 48 nP per lb. and Best C.T.C. Assam B.P. 26 nP per lb. It will thus be noted that the plain and medium varieties are the worst affected. The average sale price realised in export auction No. 30 held in Calcutta on 27th January 1958 (the latest auction for which the average price is available) was Rs. 1.86 per lb., as against Rs. 2.22 per lb. obtained in the corresponding sale of 1956-57 season. The average price realised so far this season (upto and including sale No. 30) is Rs. 2.23 per lb., as against Rs. 2.51 per lb. in the corresponding period of the previous year.

World Price Drops

The world price of tea, fixed by the Government of India for the purpose of levying export duty shows an even more distinct fall from Rs. 3.94 per lb. fixed for February 1957 to Rs. 2.99 per lb. for the corresponding month this year. Despite this decline of 95 nP or As. 15 per lb. in the price of tea, the export duty has not been cut. On the contrary, it is even a shade higher than that levied a year ago. Thus, while an export duty of As. 6 per lb. (which in terms of the new currency works out to 37 nP) had been levied in February 1957, the duty for the current month is 38 nP. In other words, while the Government of India has not afforded any relief in export duty to tea growers, in consonance with the fall in tea prices, it is actually profiteering at the expense of the consumers at the rate of 1 nP per lb.

The impact of export duty on the offtake of tea from abroad does not seem to have been discussed by the Export Advisory Council, though Mr. Morarji Desai, the Union Minister for Commerce and Industry, pointed out that the only long-term solution to India's economic difficulties lay in the country's ability to produce and export more. Tea is the largest foreign exchange earner and it can continue to hold its place, provided it is given the necessary incentive. The main drawback in Indian tea production is that the bulk of it is made up of common teas, which are difficult to dispose of in foreign countries, particularly when they are made to bear the same rate of export duty as the quality teas. It has been suggested by some that the export duty should be levied on an *ad valorem* basis, depending on the quality of teas exported, instead of on a flat rate of duty on all teas. It is, no doubt, difficult, though not impossible, to fix the correct value of each grade of tea for enforcing the *ad valorem* duty. But a *via media* solution must be found to afford some relief to producers of common teas. A broad classification of tea can at least be made and the duty varied according to the quality of these groups. In this connection, the observations of the Export Promotion Committee on export duty on common teas can be recalled. The Committee said:

"Though India is the largest single producer of tea in the world, she has to meet keen competition from other tea producers like Ceylon and Indonesia. The competition is particularly keen in what the trade in India calls 'common teas'. The competition in this category of tea is likely to increase when the tea bushes planted in East Africa begin producing their full yield of nearly 100 million lbs. of tea a year between seven and ten years from now. Even at present, the landed cost of East African tea is reported to be about two shillings a lb. which is somewhat below the cost of production in many estates in North India. Therefore, in considering what possibilities there are of promoting exports of tea from India, we have to take into account production of tea by other producing countries, such as Ceylon and Indonesia and East Africa.

High Cost of Production

"Though we have generally been able to sell our tea, as witnessed by the fact that we do not always carry large stocks of unsaleable tea, a reduction of even 12 to 18 nP a lb. in the cost of production would make a substantial difference to the grower. Even though we can really never hope to compete with East Africa in cost of production, a measure of relief from the present high level of costs would be of assistance to tea exports. Apart from the plantation labour Acts, various taxes and levies inflate the prices of Indian tea. The taxes and levies which get reflected in our export prices are: (*a*) the tea cess at 4 nP per lb., (*b*) the Assam carriage tax and West Bengal *octroi* each at one anna per lb. and (*c*) the export duty which now stands at 6 annas a lb.

"The tea cess is of benefit to the tea industry itself. The two State taxes are important revenue resources for Assam and West Bengal. The export duty of 6 annas a lb. is not much of a burden on high quality tea. Therefore, the only means by which some assistance can be given to 'common' teas which have to face keen competition abroad is by a reduction in export duty. Unfortunately, there is no accepted definition of 'common' tea; but common tea being inferior tea, it should, perhaps, be possible to define it in terms of price. We have been told that, at the present level of prices, teas selling below Rs. 1.50 a lb. can be regarded as 'common' teas. We, therefore, recommend that all teas sold in the Calcutta auctions below Rs. 1.50 a lb. should benefit from a reduction in export duty to the extent of 12 nP a lb. Government will only have to ensure that, after the auctions, superior tea is not substituted and shipped. To this end, arrangements may be made for movement in bond of auctioned consignments up to the shipping stage."

It will be noted with interest that the Ceylon Government, which levies a flat rate of export duty of 65 cents per lb. on all teas, has decided to change it, by increasing the duty on high-grown teas and reducing that on medium-growns. The export duty on low-grown teas, however, has been kept unchanged. A flat increase on certain grades and a reduction on others has been decided, in view of the difficulties in enforcing an *ad valorem* duty. The extent of increase on the high-growns and the reduction on medium teas has, however, not yet been announced.

Exports Decline

The need for a reduction in export duty on common teas has now assumed greater urgency, because India is caught between a fall in the quantum of exports and a decline in prices, which is cumulatively affecting the foreign exchange earnings of the country. In 1956, India exported 523.56 million lbs. valued at Rs. 142.8 crores. In 1957, the foreign exchange earnings from tea must have been very much lower, because of the lower prices and the decline in the quantity exported. As will be seen from the table below, shipments from North-east India during 1957 fell from 436.06 million lbs. to 359.91 million lbs., while those from Cochin went up slightly from 80.18 million lbs. to 85.37 million lbs.

(In million lbs.)

	North India		South India	
	1957	1956	1957	1956

It may be noted here that, among exporters of tea in the world it was only India that lost ground last year; all its competitors had actually made some gains. Thus, tea exports from Pakistan have gone up from 51.41 million lbs. to 52.54 million lbs. During the ten months ended October 1957, Ceylon's exports of tea rose from 292.16 million lbs. to 327.04 million lbs., at which level they were only short of India's exports during the whole of 1957 by 32.9 million lbs. Similarly, Indonesian exports during the eight months ended August rose from 48.66 million lbs. to 52.63 million lbs. Why did India alone fare differently? It is for the Government of India to find out the answer, if it does not agree with the view that export duty was the main cause.

A scheme to set up a Company for importing tea directly from the countries of origin, chiefly India and Ceylon, is contained in the Tea Purchase and Importation Bill published by the Government of Ireland last week. The Bill also envisages the replacement of the war-time scheme operated by tea importers. The new Company to be formed will be composed of a committee nominated by the main body of wholesale importers. Blending will be done in Ireland itself and a register of tea traders will be maintained. It is thought in Dublin that the scheme will come into operation before 1st July next.

SHARP RISE IN STOCKS OF JUTE GOODS

SHIPMENTS FALL

TRADING in the jute goods market is at present dominated by "bears," who have seized the opportunity presented by several factors in their favour to depress the prices. Overseas interest is conspicuous by its absence, an indication of which is provided by the sharp fall in shipment of gunnies during January. There was heavy offering of jute goods last week by weak holders, following reports that a prominent operator failed to take delivery of his purchases. Though the panic caused by these reports ceased subsequently, when settlement was effected smoothly without any difficulty, the market has not yet regained confidence. Fears of a sharp rise in stocks of jute goods with mills, consequent on the fall in shipments during the past month, have also depressed sentiment, causing a slump in prices of gunnies.

Thus, ready hessian—40" 10 oz. stood at a low of Rs. 38.98 per 100 yards on Saturday last, having fallen from Rs. 39.80 on the preceding Monday. Likewise, sacking B. twills declined from Rs. 103.30 per 100 bags to Rs. 99.05. These are the lowest levels touched since August 1956 when they had dipped to Rs. 38.37 and Rs. 103.12, respectively. They also compare with the 1957 peak of Rs. 43.25 and Rs. 121.60, respectively, touched in the middle of October last. Since then, the general trend of prices of jute goods has been downward. It will thus be seen that, over the last 16 weeks, hessian—40" 10 oz. has lost Rs. 4.27 per 100 yards and sacking B. twills Rs. 22.25 per 100 bags. The relatively heavier fall in sacking is obviously due to the larger output of this variety of goods during the last few months, accompanied by a decline in offtake, resulting in a rise in stocks.

The fears of a sharp increase in stocks with mills at the end of last month, which is one of the factors for the present depression in the gunny market, have proved correct. Stocks at the end of January show a jump of 21,400 tons over the month to 96,400 tons. This rise is on top of an increase of 4,000 tons noted at the end of December, when the stocks expanded from 71,000 tons to 75,000 tons. The aggregate increase of 25,400 tons in the last two months has thus not only reversed the downward trend witnessed in the preceding five months, when stocks dwindled from 116,000 tons to 71,000 tons, but also lifted the stocks to the highest level since July 1957.

Stocks Variety-wise

The following comparative table gives a variety-wise analysis of the stocks, as at the end of the last three months and as at the close of January 1957.

Jute Goods Stocks

(In tons)

	As on 31st Jan., 1958	As on 31st Dec., 1957	As on 30th Nov., 1957	As on 31st Jan., 1957
Hessian	29,700	25,200	26,000	23,800
Sacking	53,500	38,400	35,200	67,700
Others	13,200	11,400	9,800	11,700
Total ..	96,400	75,000	71,000	103,200

As will be seen from the table, all the three main groups have contributed to the increase in stocks. The rise in hessian is of the order of 4,500 tons, the sharpest increase in any month since April last, and is in distinct contrast to the successive recession noted since June 1957, when hessian stocks began to decline from 42,400 tons and came down to a low of 25,200 tons at the end of December. The bulk of the increase in stocks at the close of last month is accounted for by sacking, which has gone up by no less than 15,100 tons to the highest level since July last. Such a sharp rise in sacking stocks has not occurred in any month in recent years. With this expansion, the proportion of sackings to total stocks has gone up from 51.2 per cent. at the end of December to 55.5 per cent. while that of hessians has declined from 33.6 per cent. to 30.8 per cent. Stocks of "other manufactures" have also gone up by 1,800 tons to 13,200 tons, thus maintaining the upward trend for the fifth month in succession. It will also be noted with interest that the stocks of these varieties have doubled themselves in the course of the past five months.

The substantial rise in stocks is presumably due to an increase in production during the month, accompanied by a decline in offtake. The data relating to production are not available at the time of writing, but figures of shipments indicate a sizable setback in offtake, as will be seen from the following table:

(In tons)

	Bags	Cloth	Total
Hessian—			
January 1958	1,541.2	22,098.3	23,639.5
December 1957	1,252.7	27,007.6	28,260.3
January 1957	5,755.6	33,450.7	39,206.3
Sacking—			
January 1958	23,344.6	436.1	23,780.7
December 1957	41,571.9	564.2	42,229.1
January 1957	29,082.1	2,297.5	31,379.6

These figures include coastal shipment and are gross figures based on shipping bills presented. The bulk of the shipments of jute goods being for export purposes, it will be cause for no small concern if the offtake by overseas consumers were to show a sizable setback.

WEST GERMAN EXPORTS OF JUTE CLOTH HIGHER

West German jute trade statistics for the nine months ended September 1957, show cloth exports at a slightly higher level, with imports lower, than in the corresponding 1956 period, reports the *Jute Bulletin* of the Indian Central Jute Committee. Exports of jute cloth from West Germany during January-September 1957, improved to 5,166 tons from 4,795 tons in the same nine months of 1956. The U.S. was the largest single outlet, taking 2,841 tons in 1957, as against 2,531 tons in 1956. Next in order came Switzerland with 827 and 835 tons, respectively. Sweden absorbed 514 and 510 tons.

Imports of jute cloth into West Germany during the period January to September 1957, aggregated 2,730 tons, as compared with 3,103 tons in the corresponding period of 1956. Hungary was the largest source of supply, accounting for 1,135 tons of West German imports during the first nine months of 1957 and 531 tons in the corresponding months a year ago. Imports from Belgium aggregated 652 tons, as against 355 tons, and those from France amounted to 407 tons, having declined from 1,587 tons. Imports from India amounted to only 395 tons, as compared with 230 tons.

METRIC SYSTEM FOR JUTE INDUSTRY

The jute trade and industry is to adopt metric system of weights and measures, on an optional basis, with effect from 1st July 1958. A decision to this effect was taken last week at a meeting of the representatives of the trade and industry, held under the chairmanship of Mr. A. P. Mathur, Jute Controller, Government of India. The operation of the metric system will, in the first instance, be confined to the purchases of raw jute by mills and sales of jute products by them. A committee, consisting of representatives of the jute trade, industry and officials, was appointed to deal with problems that will be encountered during the switch-over to the new system and ensure its smooth operation.

DUNDEE JUTE INDUSTRY'S FEARS

Fears for the position of the Dundee jute industry were expressed by Mr. George M. Thompson, M.P., at a conference convened recently in Glasgow by Scottish industrialists and trade union leaders to discuss the European Free Trade plan. Mr. Thompson said that the jute industry was not afraid of European competition so long as it was fair—free from hidden subsidies and so on. What Dundee did fear was that the granting of free trade would involve uncontrolled entry of cheap Indian jute goods which would knock Dundee out altogether. Successive Governments must honour the guarantees already given to the home industry.

HESSIAN AS COVERING FOR COTTON BALES

A hessian-polyethylene laminated fabric has proved to be the most promising among the experimental materials tried so far in field tests in the U.S. National Cotton Council's search for a satisfactory bale covering for lint cotton. The weight of the hessian cloth used in trial is 10 oz. This information is contained in the Central Jute Committee's monthly journal, the *Jute Bulletin*.

More tests are planned by the Council on a 12-oz. hessian with 6,000 to 8,000 bales of the 1957-58 cotton crop.

POWER POTENTIALITIES OF INDIA VAST

SHARAVATHI PROJECT—A MIGHTY VENTURE

By M. Hayath

MEMBER (HYDRO-ELECTRIC), CENTRAL WATER AND POWER COMMISSION

THE vast power potentialities of the Sharavathi Valley—there for all the world to see at the famous Jog (Gersoppa) Waterfalls—have attracted the attention of engineers and statesmen for many decades. Years ago, when a proposal to turn these resources—one of the greatest of nature's bounties—to good account reached Lord Curzon, he is reported to have turned it down, wary of its effect on the beauty of the falls, and left the following postscript to posterity:

"... If this question is brought up again—as in an age of rampant utilitarianism it is, I suppose, certain to be—I implore any successor of mine to pause before he gives his sanction to so great an outrage and if he remains in doubt then not to decide until he has paid a visit to the Falls himself. I can promise him one of the greatest sensations of his life—and the industrial development of the locality will once again be beneficially postponed."

This, however, was not to be. During the late forties, a relatively modest scheme for partial development of the potentialities of this river—the Mahatma Gandhi Hydro-electric Scheme, with an installed capacity of 120,000 kw. —was implemented single-handedly by the Mysore State Government. Work is now being formally inaugurated on the giant Sharavathi Valley Project conceived to meet the ever-growing demand for power in this region by utilising fully the potentialities of the last drop of water which this great river drains to the Arabian Sea, save that of the waters which will be let down from the large 178,000 m.c.ft. Linganamakki reservoir to follow its time-worn course over the falls and preserve its scenic grandeur. When the project is completed, ten mighty machines each rated at 89,100 kw., housed in a river-side power station about three miles downstream of the Falls will produce every year, at the incredibly low rate of less than three-fourths of a naya paisa per unit, about 4,500 million units of electrical energy—equivalent in energy value approximately 5.5 million tons of lignite, mining of which is now being initiated in the neighbouring State of Madras. The accelerating effect of the Sharavathi Valley Project on the entire economic development of the State of Mysore and areas of other States which are contiguous with it is bound to be considerable, all the more so because this State relies entirely on this cheap and bountiful source of power for all its requirements of electrical energy.

Enormous Potentialities

Large as it is, the Sharavathi Valley Project is only one of a chain of major hydro-electric schemes to harness the enormous potentialities of the west-flowing rivers of the State of Mysore. Long before the constructional activity on the Sharavathi Project has ceased, work would have to commence on some of the other projects, namely, the giant Kalinadi Project, (with a potential of over 646,000 kw. at 60 per cent. load factor) the Barapole Project (180,000 kw. at 60 per cent. load factor), the Varahi Project (150,000 kw. at 60 per cent. load factor), and the Bedti-Sonda-Aganashni group of stations (with a total power potential of about 630,000 kw. at 60 per cent. load factor). All these schemes are of the high-head type, utilising drops ranging from 1,400 ft. to 2,200 ft., and this is the main factor which contributes to the overwhelming economy of these projects—which can be implemented, though not perhaps at the same ultimate cost per unit, nevertheless at roughly the same order of economy as the Sharavathi Project. These vast power potentialities of the west-flowing rivers of Mysore, aggregating over two and a half million kilowatts of firm power, constitutes the most favourable factor for the overall economic development of the entire region.

The Sharavathi Valley Project will demonstrate, not only to the Mysore State but to the country as a whole, the great advantage of planning confidently for the future on the basis of development of its vast water power resources, as yet largely untapped. The present utilisation constitutes barely 2 per cent. of the availabe hydro resources of the country. Not so long ago, the most important question which arose at the time of implementation of power projects was whether there really was adequate ready demand for the amount of power to be made available. Often, lack of an immediate and compelling demand led to postponement of power development schemes, but it was invariably found that demands not only caught up with capacity in those regions but soon confronted the States with the spectre of power shortage.

Doubts about the growth of power demands are not heard as often now, and it is realised that, in the foreseeable future, power development would be limited not by demand but mainly by financial resources—both of capital and, more critically, of foreign exchange. Although manufacture of some of the equipment required for power projects is being initiated at the heavy electrical manufacturing plant, now being established at Bhopal, its output as planned at present would only meet a small part of the total requirements. The field of power development would, therefore, be critically dependent on imports of equipment for the foreseeable future. A maximum rate of development can be ensured only by carefully husbanding the limited foreign exchange, which the national economy can allocate to the power sector, and by utilising it on projects which yield the maximum benefits of power production for every rupee of foreign exchange. Of the alternatives available, hydro schemes, by far, require the least foreign exchange—these being required mainly for the generating plant and equipment, which forms only a small part of the total investment—those of the thermal and nuclear alternatives being higher in that order. On this and several other economic considerations, the future pattern of development, as can now be visualised, should, therefore, be based on almost complete reliance on hydro-electric resources in all regions located away from the coal-bearing areas of the country, with such pithead thermal generating stations as are required.

Utmost Importance

The availability of hydro-electric resources and their relative economy of development thus becomes a matter of utmost importance for the field of power development during the next two or three decades. In 1953, an assessment of hydro-electric resources capable of development on practical and economic considerations was launched by the Central Water and Power Commission. A preliminary survey regarded as a necessary first step in the systematic assessment of the country's resources was taken up on the basis of available data. The country was divided into six broad regions for facilitating the conduct of these surveys, (*a*) the west-flowing rivers of the Western Ghats, (*b*) the east-flowing rivers of Southern India, (*c*) the rivers of Central India, (*d*) the Ganga Basin, (*e*) the Brahmaputra Basin and (*f*) the Indus Basin in India. Reports prepared on the first five regions include, respectively, 26 schemes aggregating 3.7 million kw. at 60 per cent. load factor; 37 schemes aggregating 6.8 million kw. at 60 per cent. load factor, 51 schemes aggregating 12.98 million kw. (out of this, 7.4 million kw. is located entirely in Nepal) at 60 per cent. load factor; and 35 schemes aggregating to 13.27 million kw. at 60 per cent. load factor (out of this, 0.95 million kw. lies in Sikkim).

The current hydro-electric survey of India has revealed that the total utilisable hydro resources of this country would be of the order of 40 million kw. at 60 per cent. load factor, though the theoretical hydro potential of the country would be very much higher. These resources, contrary to some common notions, are fairly evenly distributed all over the country and are of sufficient magnitude to sustain power development in every region of the country during the next two or three decades. In addition to these resources which are located entirely within the territorial limits of India, there are vast potentials of the order of 7.5 million kw. in Nepal, 1 million kw. in Sikkim and the colossal potentialities of the Brahmaputra river in the sharp 'U' bend just beyond the frontiers of India and Tibet, where it is estimated that a potential of the order of 30 million kw. at 60 per cent. load factor can be developed on a run-of-the-river basis alone. These vast resources are so located that they command the major load centres of north and north-east India and these schemes could well be developed to the mutual advantage of the countries in which the resources lie and India.

Single-purpose Power Schemes

Another important conclusion of this survey is that the bulk of future hydro generation in this country would have to be derived from what may for practical purposes be called single-purpose power schemes located in the precipitous upper and in the middle reaches of the various river basins. On the basis of the latest cost estimates available, the prevailing capital cost per kilowatt of firm power of these schemes vary in the range of Rs. 600-Rs. 1,400, the representative average figure being Rs. 1,000, the corresponding costs of energy generation generally varying from 0.12 to 0.3 anna per unit. The conclusion has also been drawn from the survey that costs of future schemes would generally tend to the lower limit of the prevailing range of costs, due to the fact that they will mainly comprise schemes with very large power potentials relative to the proportions of their civil works. It is, therefore, expected that, during the next decade or two, 75 per cent. or more of the total requirements of electrical energy would have to be drawn from hydro resources for maximum economy. Thermal generation will form a steadily declining proportion of the total energy generation and will be confined to a few large-size mine-head stations utilising low-grade coals and middlings from washeries that are being established. Nuclear power stands in quite different category from thermal generation based on coal, as, without the attendant costs and problems of transport of fuel, it promises a more satisfactory alternative to meet demands for power, as they exceed the limits of hydro resources in areas where resources of solid fuels are several hundreds miles away. The large, unexploited and utilisable resources of hydro power can sustain a rapid pace of development for only about three decades. Nuclear generation, even if it is not competitive with hydro during this period, must nevertheless be resorted to on the scale required for experimentation, both to evolve a suitable indigenous type of station and to prepare the country with technical skills required for its local manufacture and commercial operation on the tremendous scale of expansion which would be required later when all the hydro resources are exhausted.

BURMA'S STATE-OWNED STEEL MILL

Burma's first State-owned steel rolling mill constructed in Ywama, Insein, has been completed. The process of making steel is to melt the scrap iron already collected in the electric arc furnace, to mould them into ingots and to roll down in various rolling mills into different sizes and products which would principally be required for the construction of dwelling houses in Burma. The initial programme of production of this mill would be:

Corrugated galvanised iron sheets, wire process material such as wire nails, wood screws, bolts, nuts, rivets, galvanised telegraph wires, barbed wires, etc. Rolled bars, such as angles, flats, rounds below 3 inches size. The total output of finished products would be about 16,000 tons and the value, according to the present market price, would be approximately K. 20 million.

This programme of production is based on running the main rolling mill on eight-hour shifts a day. When the Burmese workers have gained sufficient experience, it is proposed to run two eight-hour shifts, increasing the production to 31,000 tons of the value of about K33.5 million.

The making of steel in electric furnace, the handling of rolling mills and other steel making machineries are quite new to Burmese labour. The German and Indian engineers would be employed for stipulated periods and thereafter Burmese engineers and workers will take over the running of the whole project.

NEW PRODUCTS AND PROCESSES

Electronic Stethoscope

AN amplifying stethoscope for industrial use introduced by the firm of ARSONIC is claimed to permit "expensive noises" in machine tools to be detected before they reach the dangerous stage. Known as the Minear, it is fitted with a binaural head-set and contained in a 10 oz. chromium-plated case measuring 1 in. by 10 in. It will detect aural defect symptoms such as the sound of dry or cracked bearings and other mechanical moving parts; squeaks and groans set up by metal under stress; water, gas, or oil flowing in pipes or leaking under pressure; and most of the symptoms of mechanical defect which are usually audible only when it is too late for preventive action. Fitted with transistors for economy of space and operation, the stethoscope has a chromium-plated probe so designed that it can be easily held to, for instance, the crankcase of a large oil engine without fear of wandering. The probe is insulated to withstand high voltages (such as those experienced on sparking plugs) and to protect the operator. An on/off switch and thumb-operated volume control are incorporated, while the head-set sockets are situated at right-angles to the body of the instrument to prevent the cable becoming entangled with the apparatus under test. Power is supplied by an easily changeable standard Mallory battery with a life of 2,000 hours, and the instrument can be carried in the pocket.

Aluminium Welding

Today the welding of heavy gauge aluminium is invariably carried out by the use of a metal arc welding process in an inert gas atmosphere. A new U.K. development will, however, enable considerably thicker aluminium plate to be welded than has been possible hitherto. Previously the welding of metal plates of up to two inches thick—such as may be required in atomic energy plants—has only been possible with the aid of techniques involving a very large, or multiple, number of passes through the welding machines. This is because conventional leads have a limit of 350 amperes of current that could be handled. Since even greater thicknesses will be required in the future for the atom industry and other industries, the British Welding Research Association has developed a new design of welding lead which can handle electric currents of up to 650 amperes for use with conventional aluminium welding equipment. This equipment will enable aluminium one inch plates to be welded with only two passes through the welding apparatus at a speed of twelve inches of welds per minute. This is, it is claimed, a great improvement in terms of the number of "passes" required over previous performance. Special techniques are being developed for handling even thicker plates with a very small number of passes through the equipment, and for welding aluminium plates of considerably greater thicknesses of more than two inches.

Automatic Control Equipment for Sugar Production

Successful application of KENT *Universal* pH automatic-control equipment for the first and second-carbonatation processes is reported by the Barrah Factory Branch of the Champarun Sugar Co., Ltd. The equipment is supplied by W. H. Brady and Co., Ltd., KENT Representatives in India. The Barrah Factory reports that the final commissioning of the *Multelec Universal* glass-electrode pH recorder-controller was early in January 1957, and since then it has been giving continued satisfactory service to the close of cane-crop operations. Cleaning of the glass electrode was twice-daily routine, states the Factory, and a simple matter of merely wiping the electrode with a piece of cotton wool saturated in a weak solution of hydrochloric acid. Apart from that and the occasional descaling of the sample hopper, reference electrode and resistance thermometer, no other regular attention was necessary. A feature of the instrument, is that even when the glass electrode appears to be completely coated with scale, the instrument continues to maintain control of operations *to very close limits*. It has proved reliable and capable of continuous, prolonged operation with minimum attention. Pending the delivery of another KENT *Multelec* instrument, for the control of second carbonatation, the existing instrument was switched to that duty during early March last. Without modification or adjustment, it continued to give satisfactory service on this new duty. Here no scaling of the electrodes took place and the instrument operated continuously without attention.

New Water-resistant Cement

A new type of cement, known as Pectacrete which cannot get wet—even when submerged in water, it is claimed—has been developed in Britain. The cement can be left in standard paper bags in jungle conditions or monsoon rains without getting solid afterwards. This development means that major engineering and construction projects can soon go ahead without delays due to adverse weather. The product is being manufactured and marketed in bulk by a major British cement concern. The development is the outcome of an all-British research project initiated some eight years ago. In effect, each fine particle of cement is coated during manufacture with a water-repellent chemical, which will remain intact until broken by the abrasive action of mixing with sand or gravel. So effective is this coating that while normal cement increases its weight 63 per cent. after exposure to the atmosphere, the new-type, acid-resistant cement adds only 5 per cent. to its initial weight, the manufacturers claim.

EDUCATION OF WORKERS

VIEWS OF BRITISH TRADE UNION CONGRESS

VIGOROUS steps are currently being taken to elevate labour from the position of being a mere instrument of production to that of responsible participant, the latest one being the finalisation at New Delhi last week of the scope and functions of the proposed joint councils of management. The object, it is common knowledge, is to impart to workers a sense of belonging, to secure their willing and responsive co-operation and to foster cordial employer-employee relations necessary for the establishment of industrial democracy. In order to arouse the enthusiasm of labourers and to elicit their co-operation, it is necessary that they should be made aware of the social and economic transformation that is being aimed at and their vital role in engineering it. Workers should also be equipped to play their part effectively. It was this realisation that impelled the Planning Commission to lay particular emphasis on workers' education. Industrial democracy can flourish only under conditions of sound trade unionism and its informed membership. Unfortunately in India, there is a multiplicity of unions, organisationally weak, financially crippled and lacking proper leadership and guidance. The majority of unions are mere appendages of political parties, unduly militant and often springboards for political aspirants. It is not surprising, therefore, if some employers look at labour unions with suspicion and are inclined to take a legalistic rather than a problem-solving approach to issues at dispute. These defects cannot be rectified, unless workers are given the necessary education. They should also be trained in the techniques and principles of trade unionism, so as to enable them to understand the real purpose and functions of trade unions in a democracy.

The Government and the Planning Commission are fully aware of the imperative necessity for educating the ignorant workers. A sum of Rs. 50 lakhs has been allocated in the second Plan for this purpose. At present, facilities for education of workers are provided in the welfare centres run by State Governments or by statutory funds such as the Coal and Mica Mines Labour Welfare Fund. Literacy classes for workers are also being run by the social education societies. Workers' organisations such as the Textile Labour Association, Ahmedabad, are also running workers' education courses.

Facilities Inadequate

The available facilities are, however, limited in scope and character and are not capable of fully meeting the requirement. In January last year, the Government of India, in co-operation with the Ford Foundation, appointed an international team of experts to suggest specifically the steps to be taken for: (1) the education of union representatives in the principles and techniques of trade union organisation, management and financing, (2) education of union members for intelligent participation in union affairs, (3) education of union representatives in responsible and effective participation in management, (4) other aspects of workers' education. The team recommended that the implementation of workers' education programme should be entrusted to a semi-autonomous body —a Central Board, comprising representatives of trade unions, employers, Government and educational institutions. Its functions would be to lay down policy, administer the programme of education, allocate funds, inspect, and co-ordinate the working of the workers' education schemes. The team also suggested that, in order to ensure effective implementation of the programme, provision should be made for the training of teachers and programme administrators. In its view, two types of teachers are required, full-time teachers-administrators and those who have other responsibilities but could be called upon to teach part-time, as the programme developed. Presumably, in pursuance of this recommendation, the Union Ministry of Labour has evolved a new scheme for workers' education, the central feature of which is the training of a body of "teacher-administrators" who would be sent to different industrial centres, where they will, in their turn, train workers to be teachers. This is a step in the right direction and has come not a day too soon. As experience of other countries has shown, workers' participation in management would only degenerate into an extension to the management field of militant union activity, unless the workers and their representatives are given the necessary training.

This explains why the Government as well as trade unions of countries like Britain take a lively interest not only in the training of workers but also in the education of the younger generations who would be the workers of tomorrow. Indeed, one of the oldest standing committees of the British Trade Union Congress General Council is that which deals with public trade union education. As Mr. John Walton, a member of the British T.U.C. says, throughout, the T.U.C.'s interest in education has been to speed the development of full and equal opportunities for youngsters at school and college and for young workers needing part-time training. The latest view of T.U.C. on education, expressed to the Central Advisory Council for Education in England, stresses this theme, though it is adapted to the current age of scientific invention and technological advance.

Some of what the T.U.C. puts forward, says Mr. Walton, are already current educational practice in one form or another. Here the T.U.C.'s purpose is to seek its extension. In other ways, the T.U.C. urges new developments. All are, however, designed to realise the four broad aims which the T.U.C. advocates for the education of Britain's young people.

Broad Objectives

For the T.U.C., a modern system of education must prepare young people to live and work in a society of relatively swift social and economic change. It must secure for the community the best use of their skill and ability. It must help them to find satisfaction in their leisure, and, finally, it must enable them to play an effective part in the democratic conduct of political, economic, and social affairs.

A greater emphasis on general education and a raising of the school-leaving age from 15 to 16 are suggested by the T.U.C. It also proposes that, when young people have started work, their general education should be continued up to the age of 18 on any part-time courses they may take.

This question of the balance between general and specialised studies is one to which the Central Advisory Council is giving attention in its examination of the education of boys and girls between the age of 15 and 18. The T.U.C. believes that there is a danger that vocational training may now start too soon, and that, below the age of 18, it should be limited in scope and intensity without depriving those who can benefit of the chance to do so.

In many British firms today, there are schemes of training which provide for the release of young workers for technical education during working hours, and the number of day-release courses has been growing following consultations between education authorities and industry. The T.U.C. wants to see these arrangements for day-release classes extended for all young workers who are not apprentices and their syllabus so devised as to ensure continued general education. Most apprentices already have to attend courses leading to established qualifications.

"Sandwich" Course

Another educational provision for the young worker is the "sandwich" course, which offers the chance to leave the job for a period of full-time training. Such courses are already being extended as part of the Government's expanded provisions for technical education. While approving of this development, the T.U.C. is anxious to ensure greater flexibility in the educational opportunities open to young workers, and it suggests a system of maintenance grants so that larger numbers of young people can undertake full-time day courses or could participate in "sandwich" courses without requiring to be maintained by an employer for the period of the course.

The T.U.C. emphasises the need for colleges in every area which all young workers would attend part-time and which would provide for the continuation of general education. In time, these county colleges, as they are known, and other establishments of further education would bring their syllabuses into line so that general and vocational education throughout this stage might cease to represent separate claims on the time and energies of the young worker.

TRAINING YOUNG MEN FOR INDUSTRY

NATIONAL APPRENTICESHIP SCHEME

ONE of the many problems that confront an underdeveloped economy is shortage of skilled manpower. In the industrially advanced countries, facilities for the training of technical manpower are provided by the various industrial establishments themselves. But, in India, the position is different. Apart from a few apprenticeship schemes in the railways, ordnance factories and iron and steel industries as well as in some of the other industrial establishments, no opportunities exist. This may be due partly to shortage of equipment and finance, but it is mostly due to lack of enthusiasm and appreciation among the employers of the value of training a few young workers in their own establishments. Not many of them regard the trouble and expense involved in having apprentices as an investment, which yields a return in the long run. It has, therefore, become necessary for the Government to take the initiative in this matter.

Indeed, now that the development programmes call for exceptional efforts from industry, especially heavy industries, the matter of training of technical personnel has become one of great urgency. It is gratifying to find that the Government is fully aware of this need and has already taken the problem in hand. It has approached the problem from two angles, short-term and long-term. The short-term solution is the training within industry of workers already employed for higher and more skilled jobs. The required theoretical knowledge is imparted to them through evening classes either in the factory or in technical institutes. The long-term solution to the problem is the recruitment of juveniles under apprenticeship schemes in various industries. Besides ensuring a regular flow of skilled manpower needed by industry, such apprenticeship schemes open employment opportunities for the educated unemployed.

There are no up-to-date and reliable data on the extent of unemployment in India, but the National Sample Survey, a few years ago, revealed a broad picture of unemployment. It was greatest in urban areas and the incidence of unemployment was the highest in the age group 16-21. It was found that the unemployment situation was much more acute among literates than illiterates in urban areas and most acute among those who had studied up to matric and intermediate. The National Apprenticeship Scheme, as recommended by the Shiva Rao Committee on training and employment, affords an ideal opportunity for the employment of youths with the minimum of education, assuming that the scope for industrial workers will steadily grow.

Aims

The object of the National Apprenticeship Scheme, it may be noted, is to provide training for young persons with some educational background to become skilled craftsmen. These skilled workers can then be trained in the factories in due course to occupy higher posts which are bound to increase from the implementation of the second Five-year Plan. The training schemes that existed in the past were not scientifically organised. The trainee was left with a more experienced worker to learn what he could. Sometimes, the worker who gave instructions in the workshop was himself illiterate and so the theoretical aspect of training suffered. In order to remove these defects, the National Apprenticeship Scheme provides for a comprehensive and methodical programme.

Under this system, the Government selects suitable young men and arranges with employers to engage them as apprentices under contract for a fixed period of time. During this period, the employer is obligated to provide training facilities conforming to the standard agreed upon by the Training Authority, namely, the Apprenticeship Adviser. If related instruction cannot be imparted in the same workshop the apprentices are to be released, even during work hours if necessary, to attend courses at local technical schools. The apprentices are generally paid and provided with allowances and amenities such as hostels. The cost of these apprentices is borne by the Government.

On the completion of their course, the apprentices are tested and awarded certificates of proficiency by the National Council for Training in Vocational trades. The cost of the scheme is

ANOTHER FAVOURABLE YEAR FOR WORLD LABOUR

INFLATION AND UNEMPLOYMENT, MAIN ENEMIES TO BE GUARDED AGAINST

HIGHER employment, slightly increased purchasing power and extended social security schemes offset the ill-effects of the spurt in consumer prices and increased unemployment to make 1957 yet another favourable year for workers the world over. This is the considered view of Mr. David A. Morse, Director General of the International Labour Organisation. Employment in most of the countries, which reported to the I.L.O., was higher in late 1957 than in the previous year-end, though the rise was small and insufficient in several cases to absorb the increase in the available labour force. Social protection was extended and consolidated in many countries, including several in Western Europe. Wage rates continued to climb up and, in the majority of reporting countries, rose more than in proportion to the rise in prices thus resulting in enhanced purchasing power. The number of days lost during the year through industrial disputes approached their lowest post-war level, having been as low as 55 million, as compared with 73 million in 1956.

Consumer prices, however, registered their greatest advance for several years, threatening the standard of living of millions of persons on fixed or sluggish incomes and undermining the protection afforded by social security schemes. Consumer prices rose by 3.7 per cent. during the 12 months ended late 1957. The increase was greatest in South America. A number of Asian countries, which had previously suffered from severe inflation, effectively checked a rise in price during 1957. Economic recession augmented joblessness in a number of countries. As the new year dawned, labour was, therefore, required to be vigilant against two grim and relentless enemies, namely, inflation and unemployment.

Employment

The employment picture in 1957 was less favourable than it had been at the end of 1955 or 1956. Two-thirds (16 out of 24) of the countries providing recent information on employment trends showed increases over the preceding 12 months, but the median change among all reporting countries was an increase of only about 1 per cent. Unemployment was more prevalent at the end of 1957 than in years of the recent past. In some countries, both employment and unemployment increased, because the gain in employment was not sufficient to absorb the growing labour force. Half of the reporting countries (16 out of 32 which provided information on this point) had more unemployment in late 1957 than in late 1956, although in most countries the number of the unemployed was still relatively small.

Among the more gratifying declines in unemployment was a drop of nearly 200,000 in Italy in the 12 months ended October 1957. Countries experiencing rather large 12-month percentage increases and in which unemployment was assuming disquieting proportions included Canada and the Netherlands, in both of which unemployment doubled, Finland (82 per cent. increase in 12 months ending in December) and the United States (24 per cent., December). In regional terms, unemployment trends in North America aroused particular apprehension, not because the proportion of the labour force out of work was highest there but because the sharp increase in joblessness reflected an adverse economic trend which might have repercussions elsewhere.

The United States was experiencing an economic recession—mild, so far, and not expected to attain the proportions of a major depression, but providing sufficient cause for anxiety. Steel mills were operating at only a little more than half of their capacity at the end of the year, while the automobile industry, reacting to the disappointing sales of new models, was in the process of laying off several thousand workers. Other lines of activity were also adversely affected. Unemployment increased by about 900,000 between October and December and in the latter month stood at 3,400,000. Claims for unemployment insurance benefits were at record levels for recent years. Somewhat similar conditions appeared to exist in Canada, where the unemployed numbered 313,000 in November 1957, as compared with 147,000 a year earlier.

Unemployment decreased in most of the Western European countries during 1957. In the United Kingdom, however, the unemployed numbered 350,000 in November 1957, about 19 per cent. above the level of November 1956. Other increases were reported by Finland, as noted above, Sweden (43 per cent.), Belgium (34 per cent.), Norway (13 per cent.), and Switzerland (19 per cent.). An abnormally large year-end jump in unemployment in the Federal Republic of Germany, attributable in part to lay-offs in building construction, raised the number of unemployed to 1,200,000 (December) or 11 per cent. above the level of a year earlier. In most months of 1957 unemployment in Germany had been considerably lower than in 1956. Much concern was felt in Europe regarding the possible effects of the recession in the United States. Fear of inflation was still a powerful factor, however, and many countries maintained economic controls which had been introduced to discourage inflationary economic activities.

Reports on the employment situation in Eastern Europe are not available but indications of the level of industrial activity in that region suggest relatively full utilisation of the labour force, in some cases serious labour shortages.

In Asia and South America vast numbers of underemployed constitute a continuing economic and social problem which is not revealed by statistics of unemployment. The available information suggests a mixed picture. Israel, the Philippines, Japan and Burma, all reported good increases in employment or declining unemployment or both, although unemployment is still a serious problem in the latter three countries. India, faced with multiple economic problems, including a calamitous drought, reported 17 per cent. increase in job applications. Job applicants increased by about 16 per cent. in Ceylon but declined slightly in Pakistan. Very incomplete information from South American countries revealed no major swings in employment. Unemployment increased in both Australia and New Zealand but at the end of the year was still at a very low level.

Consumer Prices

Actual or potential inflation was a major concern of most nations during 1957 and prompted the application of numerous economic controls, particularly financial measures. Even at the end of the year, when unemployment was rising and other signs of recession were in evidence, inflation was regarded by many as the greater and more imminent danger. Despite some indications of slackening earlier in the year, consumer prices continued to climb up. Of 85 countries reporting price statistics during a 12-month period ending in the latter part of 1957, 73 showed increases and 12 decreases. The median change for all reporting countries was an increase of 3.7 per cent. This compares with a median increase of 3.0 per cent. in 1956.

Individual countries succeeded in bringing inflation largely under control. In Denmark, for example, consumer prices rose by only 2 per cent. during the 12 months ending October 1957 as compared with a rise of twice that magnitude during the preceding 12 months. Price increases were also checked in Australia and New Zealand. The previous sharp rise in Chile, Paraguay, Taiwan and South Korea was slowed considerably and an earlier increase in Viet-Nam was replaced by a decrease. Despite the improvement registered by some South American countries, however, that region accounted for six of the seven reported increases over 15 per cent. and continued as the area in which inflation was most pronounced. The 12-month rise in Bolivia at mid-year was 152 per cent., although it is reported that this runaway increase has since been slowed. Other major increases were reported in Argentina (31 per cent., November), Chile (20 per cent., November), Uruguay (20 per cent., August), and Colombia (19 per cent., November). The median increase among all reporting South American countries was 17 per cent.

Asia, which had previously shared with South America the foremost position in world inflation, abandoned this place in 1957 when price increases in several countries were effectively controlled. Indonesia (31 per cent., November) reported the largest 12-month gain, while the median among all reporting countries was 4.4 per cent.

Prices continued to rise in the United States (3.1 per cent., December) and Canada (2.5 per cent., November); and although these 12-month gains were moderate by world standards they were disquieting when viewed against the background of extraordinary price stability which both countries enjoyed from 1952 to 1955. With increased national resources being devoted to defence, many observers regarded inflation as a constant menace. Central America was an area of general price stability, with several countries reporting small decreases. Only Mexico (13 per cent., November) reported a substantial increase. The median increase for the region was 1.9 per cent.

Moderate price movements predominated in Western Europe, the median change among all reporting countries being an increase of 3.3 per cent. Substantial increases were reported, however, by Spain (13.8 per cent., October), the Netherlands (6.3 per cent., December), and Finland (8.5 per cent., December). Stern governmental measures were taken to restrict inflation in the United Kingdom, where among other things the discount rate was raised to 7 per cent. The price increase over the 12 months ending in November was 4.5 per cent. Consumer prices in France rose by 10.1 per cent. (December) after several years of comparative stability; they had mounted rapidly after the adjustment of franc exchange rates in late summer and appeared still to be increasing at the end of the year.

Wages

Money wages continued to rise during 1957, and in most countries exceeded the increase in consumer prices. The median increase in real wages in manufacturing industry appears to have been about 2.5 per cent., which corresponds with the median figure among reporting countries over a period of several years. Some of the increases, however, referred to hourly rates or earnings which were partly offset by reduced hours of work. In several countries real wages declined.

Of the countries for which statistics are available 16 provide evidence of an increase in real wages during the most recent 12-month period, most of the increases amounting to less than 5 per cent. These countries were: Austria, Colombia, Denmark, the Dominican Republic, France, Germany (F.R.), the Netherlands, New Zealand, Norway, Philippines, Puerto Rico, South Korea, Sweden, Taiwan, the United Kingdom, Yugoslavia. Figures from six countries—Argentina, Finland, Ireland, Israel, Japan and the United States—indicate that money wages rose less than consumer prices. In three countries the trend was inconclusive: Australia, Canada and Italy. In Canada, for example, real hourly earnings rose slightly, while real weekly earnings fell slightly.

Hours of work in industry declined in a number of countries in 1957, reflecting a general movement towards a shorter normal or legal work week, on the one hand, and reduced economic activity on the other.

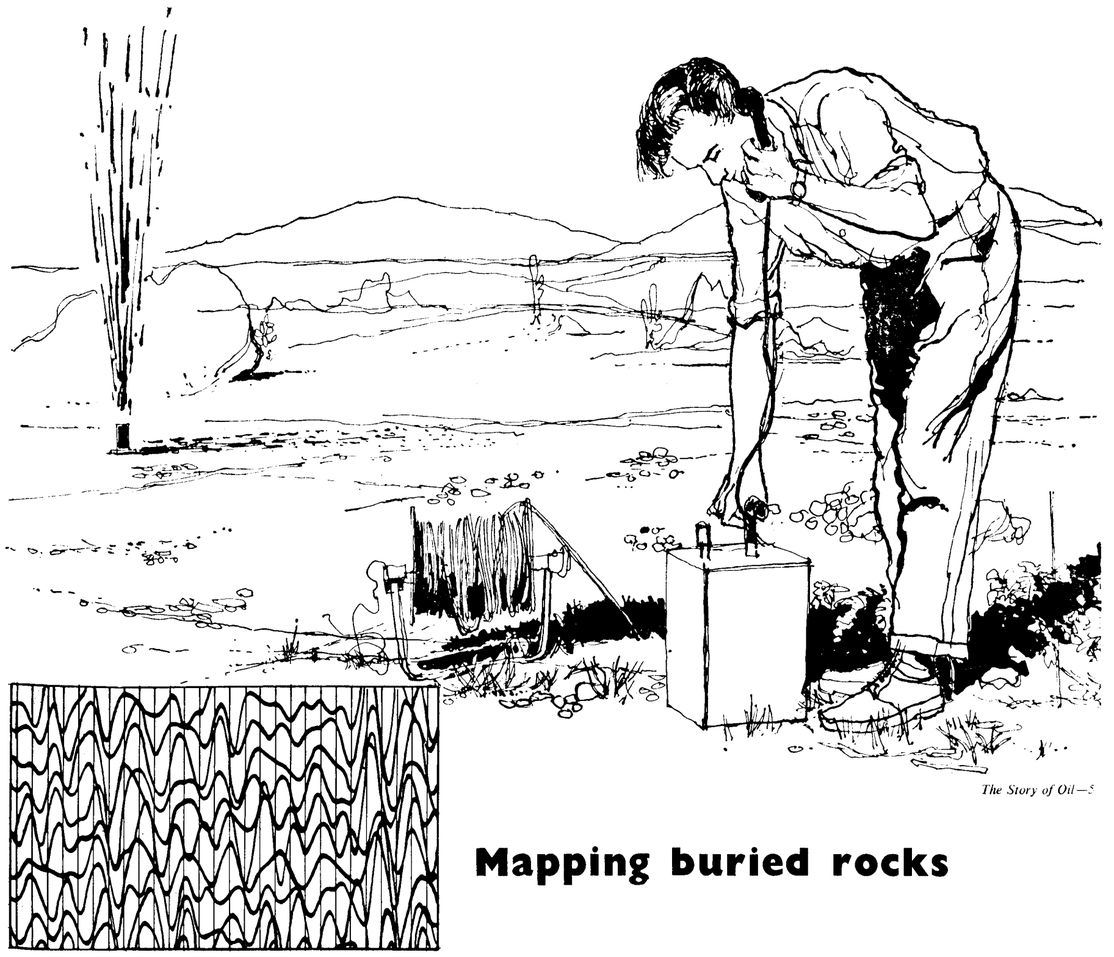
Social Security

Consolidation was the keynote of social security developments during 1957. Almost every country introduced some modification of its social security institutions, but in most countries the changes were limited to minor adjustments or to the progressive implementation of a phased programme.

Fear of erosion in the value of social security benefits through inflation continued to haunt social security planners and administrators in many countries. Experience has repeatedly demonstrated the tardiness and inadequacy of most remedies for this evil. Much thought and experimentation have been devoted to designing built-in defences against inflation and attention to this subject appears to have been intensified during 1957. Some countries adopted or were considering automatic adjustments of benefit rates, linked with movements in the consumer price index. A new device introduced in Denmark during 1957 enables insured persons to purchase voluntarily a state-subsidised deferred annuity, payments under which are intended to supplement the old-age pension. This supplement has been termed an "index contract" as its amount is directly linked with changes in the consumer price index.

The system of "productivity" or "dynamic" pensions introduced in the Federal Republic of Germany breaks new ground in this context.

(*Continued on page 299*)



The Story of Oil—5

Mapping buried rocks

Geophysics, which is the science of the earth's physical structure, aids the search for petroleum by making it possible to study the characteristics of rock layers buried deep in the earth's crust.

The geophysicist's main "tools" for this job are the gravity meter, the magnetometer, and the seismograph. The gravity meter and the magnetometer, as their names imply, measure the pull of gravity and the magnetic force of the earth. For the sedimentary rocks which may contain oil are lighter than others, and they are less "magnetic" than the harder rocks which never contain oil.

With the seismograph, the geophysicist can measure the intensity and timing of earth tremors. The men of a seismic crew bore a shallow hole in the ground, lower a charge of dynamite into it and set it off. The shock waves produced by this miniature earthquake travel down, hit the layers of rocks beneath and bounce back to the surface where they are recorded by the seismograph. The waves are reflected strongly from hard rock and less strongly from soft rock. The length of time they take to reach a particular layer and to return indicates the depth of the rock.

All this information is recorded in the form of wavy lines on a chart. By setting off explosions at a number of points it is possible to map the various buried rock formations with a fair degree of accuracy.

When all the results of a geophysical survey have been compared, it may be possible to locate a rock formation that might prove to be oil-bearing. But even if such a trap is found, the only way of proving whether or not it contains oil is by drilling a test well.

INDO-JAPAN ECONOMIC RELATIONS

TRADE AGREEMENT SIGNED—YEN CREDIT GRANTED

NEXT to Communist China, India and Japan are the largest countries in Asia with a population of about 385 million and 90 million, respectively. It is very vital for the peace and prosperity of the world that these two countries maintain utmost friendly relations—politically and economically. Viewed from this angle, the three agreements signed, in the course of last 10 days, between the two countries are, indeed, notable and together constitute a significant landmark in the history of Indo-Japanese economic relations. The agreements cover (1) trade, (2) supply of textile machinery on deferred payment basis and (3) grant of an 18 billion yen (Rs. 24 crores) loan by Japan to India.

Under the trade agreement entered into between India and Japan, which is to be valid for two years in the first instance, the most-favoured-nation treatment will be accorded to each other in respect of a number of subjects, including customs, tariff, imports and exports and foreign exchange transactions, entry, stay, travel, residence, all kinds of business and professional activities, and shipping and navigation. Japan, however, will not be entitled to claim the benefit of preference or advantages accorded by India to Commonwealth countries or of advantages accorded by India to adjacent countries in order to facilitate frontier traffic. A striking feature of the agreement is that each country undertakes that, if it establishes or maintains a State enterprise wherever located, or grants to any enterprise or agency exclusive or special privileges, such enterprise or agency shall not, in its purchases or sales involving either imports or exports, act in a manner that will nullify or impair any benefits accruing to the other under the agreement. To this end, such enterprise or agency shall make any purchase or sales solely in accordance with commercial considerations, including price, quality, availability, marketability and other conditions of purchases or sales and shall afford to the enterprises of the other country adequate opportunity in conformity with customary business practices to compete for participation in such purchases or sales.

Commodities Listed

The following are the exports from India to Japan and imports into India from that country:

Exports from India: Agricultural products (for example, spices palmyrah fibre, tea, tobacco, coffee beans, gums and resin and molasses sugar); agricultural raw materials (for example, raw cotton and cotton waste); animal products (for example, hides and skins and animal casings); industrial raw materials (for example, tanning materials and iron and steel scrap); minerals (for example, iron ore, manganese ore, salt, mica and coal); miscellaneous commodities (for example, sandalwood oil, lac and shellac, magnesite, opium and curry powder).

Imports into India: Textile and fibre products (for example, artificial fibre, yarn, artificial fibre fabrics and raw silk); iron and steel and other metals (for example, galvanised steel plate and sheets, other iron and steel mill products, aluminium rolled products, copper alloy rolled products and insulated electric wire); capital goods and machinery (for example, electrical machinery, ships, railway cars and parts and, industrial machinery); chemicals and dyes (for example, drugs and medicines, ammonium sulphate and urea, dyestuffs, caustic soda, cement, vegetable wax, camphor, menthol, crystal and peppermint oil); wood and paper products (for example, veneer and plywood, and newsprint).

Simultaneously with the signing of the trade agreement, India has agreed to withdraw at the earliest possible date invocation against Japan of Article 35 of the G.A.T.T. This Article it will be recalled, provides that, in certain cases, a contracting party may refrain from undertaking G.A.T.T. obligations towards an acceding contracting party. Notes to this effect were exchanged at Tokyo on the 4th inst. between Mr. K. B. Lall, Joint Secretary to the Union Ministry of Commerce and Industry, and Mr. Nobuhiko Ushiba, Director, Japanese Foreign Ministry's Economic Bureau.

While the trade agreement is of a general character and between the Governments of two countries, a specific agreement covering textile machinery has been entered into by the State Trading Corporation of India with the Japan Textile Machinery Industry Association, a trade body. The agreement enables India to make purchases of Japanese textile machinery on yen credit and repay within five years' deferred period with an annual interest of 6 per cent. The total value of purchases is expected to be about 4-6 billion yen (Rs. 5.3 to Rs. 8 crores). The purchase to be made forthwith will be 500,000 spinning spindles. The agreement is the revised version of the original plan providing for payments in pounds sterling which was shelved, as it was opposed by India.

More important than the aforesaid two agreements is the Indo-Japanese commercial treaty under which Japan has agreed to make available to India a credit of 18 billion yen (Rs. 24 crores) over a period of three years. The credit will be extended through the Japan Export-Import Bank. The rate of interest on it will be decided on the basis of the prevailing rate of interest charged by the World Bank at the time the credit line is availed off. Each loan under this agreement will have to be repaid within ten years from the date of its commencement. The credit will be utilised by India for purchases of such Japanese goods as railway equipment, hydro and thermal power generation and transmission and dam construction equipment, coal mining and processing equipment, ore mining and processing equipment, ships, port equipment, industrial machinery (inclusive of equipment for rayon pulp, fertiliser and caustic soda plants, etc.), and machine tools.

Quite Timely

The Japanese offer of credit to the tune of 18 billion yen (Rs. 24 crores) is quite timely and will help India, to some extent, in bridging the wide foreign exchange gap in the second Plan. Japan is one of the countries with which India has been continuously having trade deficit since the past three years, in contrast to the favourable balance enjoyed during the years 1952-53 and 1953-54, as the following figures will show:

(In crores of rupees)

	Exports	Imports	Balance
Year ended March—			
1953	31.18	15.82	+15.36
1954	23.16	13.06	+10.10
1955	16.10	20.57	— 4.47
1956	13.15	33.37	—20.22
April-December, 1956	20.39	34.21	—13.82

The adverse balance of trade with Japan is bound to widen still in the coming years for two reasons. First, the grant of most-favoured-nation treatment by India to Japan may help Japanese exporters to enlarge their business with India. Secondly, the purchases of goods by India in Japan will be larger in view of the requirements of the Plan. The Japanese credit will no doubt help India to meet a part of the foreign exchange needed for these large imports, but, in actual practice, it only means the postponement of payments for commitments now entered into with Japan. The real solution to the adverse balance of trade with Japan as, indeed, with any other country in augmenting India's exports. The accent should, therefore, be on stepping up the exports to Japan.

Sacrifice By Japan

Be that as it may, the terms of credit arrangement should be regarded as satisfactory. This is particularly so in regard to the period of repayment. Ten years are longer than what India has been able to get under the deferred payment scheme from any other country. In effect, it amounts to a medium-term loan from Japan. The basis for determining the rate of interest is also reasonable. The current rates of interest in Japan are very much higher than those charged by the World Bank. Indeed, Japan is one of the few countries in the world where money is very dear. The current Bank rate in that country is as high as 8.40 per cent., as against 7 per cent. in the U.K. and 3½ per cent. in West Germany. Now, the World Bank generally charges 5 per cent. (including 1 per cent. commission) for long-term (15 to 20 year) loans and a slightly lower rate of interest for medium-term (10 to 14 year) loans. If current trends continue, it looks as though 4 to 4½ per cent. may be the rate of interest on the 10-year credit which Japan has now agreed to give India. It is said by some that, in fixing the rate of interest, India should bear in mind that the rate charged by the World Bank includes what is called a commission of 1 per cent. which is credited to a special reserve meant for taking care of bad and doubtful debts and that, since no part of this loan will turn out to be bad for Japan, only the rate of interest excluding the commission should be taken into account. There, is, of course, great force in this contention, but, in pressing this point, it should not be forgotten that, even at the rate including the commission, the Japanese Government will be subsidising the loan to India to a considerable extent as compared with the rates prevailing in the Japanese money market. This is undoubtedly some sacrifice by Japan which deserves to be fully appreciated in this country.

FREE TRADE AREA: FRENCH COUNTER-PLAN

The effects of the association of overseas territories with the European Economic Community on other countries are now being assessed by the 15-nation Working Party of the G.A.T.T. The Party began a two-week session at Geneva on the 5th inst. to examine the effects on cocoa, coffee, tea, sugar, banana and tobacco markets. The second session of the Party will be held from 26th February to 8th March at which the Party will deal with hard fibres, cotton, oilseeds, vegetable oils, wood and timber.

The deliberations of the Working Party and the final decisions it will take are awaited with much interest. Meanwhile, informal talks on the problem of agriculture in the projected European free trade area held at Brussels ended on 30th January. The talks centred round the draft agreement put before the O.E.E.C. meeting early last month by Mr. Reginald Maudling, Britain's representative. It is understood that the draft agreement appeared to imply separate treatment of the subject of agriculture, while the Common Market countries were anxious that the two propositions should hang together. "The general conflict," to quote a report, "seems to be between the British agreement to co-operate in principles and the desire of the Six to work towards a common agricultural policy and to regard each step towards it as permanent."

Another complicated and most intractable issue overshadowing negotiations on the free trade area relates to the harmonisation of external tariffs, as, for instance, the prevention of any major decisions of trade to the benefit of the low-tariff countries in a free trade area which re-export manufactures produced from imported raw materials or semi-finished goods, such as grey cloth, paying little or no duty. The main difficulty here, it is said, arises from the fact that a wide range of raw materials, especially those from Commonwealth countries, enter the U.K. duty-free, while, under the terms of the Common Market Treaty, tariffs are already laid down or remain to be negotiated for a large number of raw materials. Yet another complicated issue relates to the demand that the six countries should enjoy equal rights with the U.K. in markets in which imperial preference applies.

It will be interesting to see how these outstanding problems are solved. In the meantime, a group of leading officials in France is busy finalising the French free trade plan which will be placed for discussion before the ensuing Maudling Inter-Ministerial Committee to be held next month. The French plan, according to a recent report from Paris, envisages a provisional agreement to reduce industrial and agricultural tariffs more gradually than in the Common Market, with wide escape clauses, coupled with a decision to narrow the difference between Common Market external tariffs and the various external tariffs of the free trade area partners, and a considerable measure of international control over social and fiscal policies.

There are thus two plans for free trade area, the French and the British, competing with each other. Commenting on the French plan, the *Financial Times* correspondent in Paris makes the following observations:

"Although British negotiations emphasise that they have no wish to split the Six, they are well aware that French suspicions and hostility towards the free trade area are not shared by all the partners, and seem confident that France will be eventually persuaded to come some way to meet the view of the non-Common Market countries.

"After one year of negotiation, any attempt to foretell the shape of an ultimate free trade area treaty is still largely guess work. It will have to be more "supra-national" than the U.K. would like, and less so than the French are demanding. It should provide for reductions in industrial tariffs in step with the Common Market, but would probably have to include wide escape clauses to be acceptable to the French. Most decisions on industrial trade are likely to be subject to the O.E.E.C's rule of unanimity, although there may be some case for majority decisions.

"National agricultural policies will doubtless come under much closer supra-national scrutiny than at present in O.E.E.C. (there could, for instance, be no more "dumping" of British eggs on the Continent).

"The 'peripherals' would join the free trade area from the beginning, but would get assistance with capital investment in their industries, and reduce their industrial tariffs much more slowly than the rest. Algeria would form a part of the area, receiving treatment analogous to that given to the 'peripherals'. No forecast can be made as yet about the position of overseas territories of the Six."

It is too early to say anything specific about the progress that will be made on these lines. It requires, as the correspondent rightly says, much give and take and months of work to prepare a document which will prove negotiable.

UPPER GANGES' RESULTS ENCOURAGING

DIVIDEND HIGHER—FINANCES SOUND

THE shareholders of the Upper Ganges Sugar Mills Ltd. (Managing Agents: The Cotton Agents Private Ltd., Bombay) have every reason to feel satisfied with the results of their Company for the year ended 30th June 1957. Their dividend has gone up from 30 per cent. for 1955-56 to as much as 50 per cent., a rate which only a few companies in India are able to pay in these days of heavy penal tax on dividend. It may be noted here that, two years ago, the dividend was only 25 per cent. Here is one more sugar company the results of which confirm that, despite heavy taxation on white sugar, the sugar industry fared extraordinarily well in the 1956-57 season.

The very handsome dividend reflects an all-round improvement in the Company's working during 1956-57. The average recovery of sugar was a record in the Company's history. Sales also made a rapid stride over those in the preceding year. Consequently, the Company's profit touched a high level not seen in recent years. The gross profit for the year at Rs. 45.26 lakhs represents an advance of Rs. 15.43 lakhs over that (Rs. 29.83 lakhs) for the previous year. It is, indeed, more than double the profit of Rs. 22.18 lakhs for 1954-55.

The following table shows the trend of the Company's progress in 1956-57 against the background of its results for the three preceding years:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sale proceeds	3,59.09	2,73.14	1,85.41	2,45.54
Closing stocks	1,31.90	1,55.43	1,12.24	52.86
Other income	2.68	3.43	6.24	9.12
Manufacturing and other expenses	2,46.70	2,46.84	2,08.25	1,66.73
Excise duty	40.28	42.72	20.60	26.12
Gross profit	45.26	29.83	22.18	41.56
Managing Agents' remuneration	3.84	6.26	5.44	8.23
Provision for—				
Depreciation	12.54	10.54	6.50	7.00
Taxation	18.50	7.90	5.75	11.75
Net profit	10.38	5.13	4.49	14.58
To reserves	5.50	2.08	1.00	11.00
Dividends—				
5% cum. preference	1.11	1.15	1.15	1.15
Ordinary	4.00 (50%)	2.40 (30%)	2.00 (25%)	2.00 (25%)
Carry forward	0.10	0.33	0.83	0.46

It will be noted from the table that the Government has been the largest beneficiary from the increase in the Company's earnings. Apart from the rise in excise duty, the provision for taxation has taken up the bulk of the increase in gross profit. From Rs. 7.90 lakhs, such provision has gone up to Rs. 18.50 lakhs. The increase here is Rs. 10.60 lakhs, which is equal to nearly two-thirds of that in the gross profit. The amount set apart for depreciation is higher by Rs. 2 lakhs at Rs. 12.54 lakhs.

The net profit at Rs. 10.38 lakhs is twice as much as that (Rs. 5.13 lakhs) for the previous year. The bulk of the improvement in the net profit has been utilised to strengthen the Company's reserves further. Thus, the allocation to reserves amounts to Rs. 5.50 lakhs, as against Rs. 2.08 lakhs in 1955-56 and a mere Rs. 1 lakh in 1954-55. Although the dividend is 50 per cent., the sum required to pay it is only Rs. 4 lakhs which is equal to only about 40 per cent. of the net profit and 9 per cent. of the gross profit. This point should be borne in mind by those critics of the private sector who may raise their eyebrows when they hear of the Company paying a 50 per cent. dividend on its ordinary capital. Another point which they should bear in mind is that, in the Company's capital structure, the ordinary dividend holds only a minor place. Out of Rs. 35 lakhs, the ordinary capital is a mere Rs. 8 lakhs, the balance of Rs. 27 lakhs being in 5 per cent. cumulative preference shares. A third point that requires to be noted in this context is that for several years now the Company has been following a policy of ploughing back a good part of its profit.

The Directors say that the working efficiency of the Company's sugar mills during the year was satisfactory. The quantity of cane crushed dropped from 12,154,737 maunds in the previous season to 10,832,726 maunds but the average recovery of sugar was high at 10.38 per cent., as compared with 9.72 per cent. and 9.69 per cent. in 1955-56 and 1954-55 respectively. Indeed, according to the Directors, the recovery of 10.38 per cent. achieved during the year was a new record in the Company's history, having stolen a march over the previous best at 10.01 per cent. in the 1946-47 season. It is interesting to hear that the Company sold 3,300 tons of sugar for export during the current year. A feature of the year's working, which is also partly responsible for the highly successful results, is that manufacturing and other expenses remained fairly steady at the previous year's level.

The Government of India enhanced the rate of excise duty on sugar from Rs. 5.62 per cwt. to Rs. 11.25 per cwt. with effect from 16th May 1957. It has also imposed an additional excise duty of Rs. 3.31 per cwt. in lieu of Central and State sale taxes as from 14th December 1957, which is much more than that warranted by the total burden of all sales taxes. The full effect of these additional tax burdens will be felt by the profits of the Company for the current year.

The Company's chemical department did not fare well during the year. This was due to the rise in the cost of production, occasioned by higher prices for chemicals and raw materials, enhanced wage bill and keen competition. The Directors report that the Government of India has granted to the Company a licence for the manufacture of power alcohol from molasses. Necessary steps have been taken to establish a well equipped distillery at Seohara. Erection of the plant and machinery is progressing satisfactorily.

The Company's factory is situated at Seohara in Bijnor district in U.P., on the Northern Railway. Its capacity is 2,575 tons of cane per day. Sugar is produced on double sulphitation process.

The Company's financial position, as disclosed by its latest balance-sheet, appears to be quite sound. Its reserves and surplus aggregate Rs. 34.84 lakhs, as against a paid-up capital of Rs. 35 lakhs. Of this, as already stated, only Rs. 8 lakhs are accounted for by ordinary shares of Rs. 10 each. Of the balance, Rs. 12 lakhs are in tax-free and Rs. 15 lakhs in taxable cumulative preference shares of Rs. 100 each, both carrying interest at 5 per cent. The current liabilities stand at Rs. 173.46 lakhs, of which secured loans from the State Bank of India amount to Rs. 119.14 lakhs and unsecured loans to Rs. 2.68 lakhs. The gross block of the value of Rs. 127.30 lakhs stands depreciated at Rs. 46.88 lakhs. Additions during the year were of the order of Rs. 11.81 lakhs. The current assets aggregate Rs. 196.42 lakhs and cover the current liabilities and provision for taxation by a comfortable margin. Of the above current assets, investments account for Rs. 7.07 lakhs, stock-in-trade for Rs. 131.90 lakhs, debts, deposits and advances for Rs. 39.37 lakhs and cash balances for Rs. 2.26 lakhs.

It will be seen from the foregoing data that the Company is undercapitalised. Its turnover, as well as its block account, point to the need for a bigger capital.

The Rs. 10 fully paid-up ordinary shares are nominally quoted at Rs. 35, at which rate, and on the basis of the latest dividend, the yield is 14.3 per cent. per annum.

(Concluded from next column)

acres (304.94 acres new clearings budded and 5 acres replanted budded) of immature rubber. The immature acreage includes 50 acres of rubber newly planted during the year on Thirumbadi estate. The total area including jungle reserves is 3,902.89 acres.

The paid-up capital of the Company, as per its latest balance-sheet as at 30th September 1957, remains unchanged at Rs. 9.15 lakhs, in ordinary shares of Re. 1 each. As against this, the reserves and surplus stand at Rs. 4.24 lakhs. The 7½ per cent. taxable debenture liability amounts to Rs. 5 lakhs. The gross block of the value of Rs. 22.40 lakhs, including additions during the year of Rs. 1.91 lakhs, has been written down to Rs. 21.02 lakhs. The current liabilities amount to Rs. 5.99 lakhs, against which the current assets aggregate only Rs. 3.36 lakhs.

The Re. 1 paid-up ordinary shares of the Company are currently quoted at Rs. 1.31 *cum-div.* On an *ex-div.* basis, the year's dividend means a yield of 3.97 per cent. per annum.

THIRUMBADI RUBBER EARNS LESS

DIVIDEND REDUCED

THE working of the Thirumbadi Rubber Company, Ltd. (Secretaries and Treasurers: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode, Kerala), during the year ended 30th September 1957 has yielded results which are not surprising, having regard to the difficult conditions experienced by the plantations as a whole in Kerala. Labour became not only costlier but also truculent. The incidence of taxation was pushed up steeply to confiscatory levels. As a result, the profit-margin of the plantation industry, including rubber, narrowed down. This trend is fully reflected in the accounts of the Company for 1956-57. Thus, there has been a substantial reduction in the Company's output of rubber and this, together with higher production costs, has led to a sizable reduction in the Company's earnings. It is true that the average sale price of rubber was also higher, but the increase was not such as to offset the effects of heavy decline in production in the face of rising costs. The cumulative effect of all this, so far as the shareholder is concerned, is a drastic cut in the rate of dividend. The Directors have declared a dividend of only 5 per cent. for the year under review, as against 12½ per cent. for the preceding two years. The allocation to reserves has also had to be cut to a nominal sum.

The gross profit at Rs. 2.16 lakhs has fallen by Rs. 1.58 lakhs from Rs. 3.74 lakhs for the previous year, which was a new record high for the Company. The net profit amounts to only Rs. 43,327 and makes a very unfavourable comparison with Rs. 2.16 lakhs for 1955-56 and Rs. 1.08 lakhs for 1954-55. In fact, the net profit for the year under review is the lowest for the past four years. The drop in net profit is due largely to the higher incidence of taxation. Despite the appreciable fall in the gross profit, as noted above, the provision for taxation at Rs. 1.11 lakhs shows practically no change from Rs. 1.14 lakhs provided a year ago. The transfer to depreciation, too, has been stepped up from Rs. 32,321 to Rs. 41,840. No amount has been provided for general reserve which was the recipient of a sum of Rs. 99,995 in 1955-56. Only a small provision of Rs. 690 has been made for doubtful debts.

The following comparative table brings out the progress of the Company during the past four years:

	For the year ended 30th September			
	1957	1956	1955	1954
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of rubber	10,12,446	11,09,446	3,64,037	3,54,647
Stocks	1,98,368	1,86,139	85,203	59,126
Other income	5,556	3,273	6,650	7,495
Expenses	8,14,247	8,31,840	2,70,428	2,62,350
Debenture issue expenses	15	7,800	..	..
Loss on sale of Government securities	..	..	326	..
Gross profit	2,15,969	3,74,015	1,85,136	1,58,918
Secretaries' and treasurers' remuneration	20,000	10,843	5,698	5,973
Depreciation	41,840	32,321	14,269	11,116
Taxation	1,10,802	1,14,308	56,800	48,671
Net profit	43,327	2,16,543	1,08,369	93,157
To reserves	690	99,995	25,000	25,000
Dividend	45,765 (5%)	1,14,413 (12½%)†	76,275 (12½%)	61,020 (10%)‡
Carry forward	23,927	27,055	24,920	17,826
Crop harvested (in lbs.)	582,616	813,698	323,000	315,000
Cost of production per lb.	Cents 128.58	Cents 98.66	Cents 79.13	As. 12.81
Average sale price per lb.	175.87	148.12	137.62	20.73

† On the increased capital of Rs. 9.15 lakhs, raised by the issue of 305,100 new ordinary shares of Re. 1 each.

‡ On the higher capital of Rs. 6,10,200, doubled during the year by the capitalisation of Rs. 3,05,100.

The main factor for the Company's decline in earnings, as stated earlier, was the marked fall in rubber production. The crop of rubber harvested by the Company in 1956-57 amounted to 582,616 lbs., representing a reduction of 231,082 lbs. from that for the previous season. The adverse result was accentuated further by the rise in production costs from 98.66 cents in 1955-56 to 128.58 cents per lb. The Directors say that the increase in cost of production was mainly due to the increase in staff salaries and labour wages and the additional cost of centrifuging, on the one side, and the shortfall in crop on the other. A redeeming feature, however, was the increase in the average sale price from 148.12 cents to 175.87 cents per lb. According to the Directors, the increase in the average sale price is a result of the higher price realised on centrifuged latex. The crop for 1957-58 is estimated at 700,000 lbs. and the cost at 102.58 cents per lb. f.o.b.

The Company's estate covers 1,924.39 acres of mature rubber (1,437.68 acres seedlings and 486.71 acres new clearings budded) and 309.94

(Continued in previous column)

EARNINGS OF MARTIN BURN DECLINE

DIVIDEND, HOWEVER, MAINTAINED

THE impressive rate of progress witnessed in the past few years in the working of Martin Burn Ltd. (Governing Director and Chairman: Mr. T. Leslie Martin, Calcutta) was not fully maintained in the year ended 30th September 1957. Its working in that year has been characterised by a fall in sale proceeds, as well as in profit. A drop in the Company's income from "other sources," chiefly from miscellaneous accounts and in the managing agency allowance and commission, has also contributed to the decline in profit. Nevertheless, the profit has been sufficient to maintain the dividends comfortably and also to allocate a modest amount to the reserves, though on a smaller scale than in the previous year.

The gross profit for the year under review at Rs. 101.20 lakhs is lower by Rs. 9.24 lakhs, as compared with Rs. 110.44 lakhs for the previous year, the fall being 8.36 per cent. only. In spite of this, the profit for 1956-57 should be considered quite satisfactory, since it is better than that for the previous years. It may be said, in this connection, that it was only in the previous year that the Company's profit exceeded the Rs. 1-crore mark for the first time. The profit for the year under review also is well above this mark.

The provision for taxation has taken up Rs. 50.50 lakhs, as against Rs. 51.50 lakhs in 1955-56, and that for depreciation Rs. 2.04 lakhs, as against Rs. 2.33 lakhs. After these allocations, the net profit works out to Rs. 40.07 lakhs which is substantially lower, as compared with Rs. 46.60 lakhs for the preceding year, though better than Rs. 37.53 lakhs for 1954-55 and Rs. 32.82 lakhs for 1953-54. The dividend, as stated earlier, is proposed to be maintained at 21¼ per cent., which is the same as that paid for the previous year. There is also no change in the mode of payment, since the distribution, as in the previous year, is in the shape of a dividend of 15 per cent. and a cash bonus of 6¼ per cent.

The lower earnings have, however, adversely affected the allocation to the reserves. Thus, at Rs. 6.63 lakhs it is even less than half of Rs. 14.17 lakhs provided in the previous year. While the transfer to the capital redemption reserve fund has been maintained at Rs. 2 lakhs, that to the general reserve has been cut from Rs. 7.50 lakhs to Rs. 3 lakhs. The provision for contingencies has been reduced from Rs. 3 lakhs to Rs. 1 lakh, as also the provision for doubtful debts from Rs. 1.67 lakhs to Rs. 63,521.

The progress of the Company during the past four years is indicated in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale proceeds	7,07.36	8,23.40	5,72.17	5,00.16

Ordinary	30.79 (D. 15% +B. 6¼%)	30.59 (D. 15% +B. 6¼%)	24.93 (D. 15% +B. 3¼%)	18.01 (D.12½% +B. 1¼%)
Carry forward	2.35	2.70	2.03	2.52

* On the increased capital, raised by a further issue of 30,000 five per cent. redeemable preference shares of Rs. 100 each.

It will be seen from the aforesaid table that the sale proceeds suffered a sizable fall of Rs. 56.04 lakhs, that is, from Rs. 8.23 crores to Rs. 7.67 crores. This is in marked contrast to the appreciable improvement of Rs. 2.51 crores noted in the previous year. Simultaneously, there has also been a fall in other income by Rs. 10.79 lakhs. The rise in closing stocks from Rs. 2.11 crores to Rs. 2.34 crores, reflects, to some extent, the difficult trading conditions obtaining in the market for the Company's products. Reflecting the fall in turnover is the substantial reduction in expenses from Rs. 8.22 crores to Rs. 7.65 crores.

The balance-sheet of the Company as at 30th September 1957 shows that its paid-up capital has been raised from Rs. 173.96 lakhs in 1955-56 to Rs. 205.23 lakhs. This increase is the result of the issue of 30,000 five per cent. redeemable preference shares of Rs. 100 each and of the conversion of convertible notes of the value of Rs. 2.54 lakhs. The capital now consists of 60,000 five per cent. redeemable preference shares of Rs. 100 each and 1,452,350 ordinary shares of Rs. 10 each. The reserves and surplus aggregate Rs. 92.94 lakhs. The current liabilities amounting to Rs. 595.63 lakhs include a provision for taxation at Rs. 199.30 lakhs. The gross block of the value of Rs. 50.72 lakhs, including an addition of Rs. 1.91 lakhs during the year, has been written down to Rs. 35.75 lakhs. This is inclusive of goodwill at cost of Rs. 25.18 lakhs. The current assets amount to Rs. 858.06 lakhs, of which investments in shares of companies account for Rs. 185.45 lakhs (market value Rs. 211.27 lakhs), stocks, stores and spares for Rs. 120.37 lakhs, work-in-progress for Rs. 135.78 lakhs, debts, deposits and advances for Rs. 388.29 lakhs and cash balances for Rs. 8.94 lakhs. The current assets cover the current liabilities and the provision for taxation by a substantial margin.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 25.12 *cum-div.* On an *ex-div.* basis, the yield works out to 9.26 per cent. per annum, free of income-tax.

Points From The Chair

Public Sector in U.K.

"IT is difficult to attempt any forecast of what lies ahead. In September our Government appeared at last to have grasped the nettle and decided to subordinate temporary popularity to the necessity of saving the country from the awful consequences of uncontrolled inflation and one must sincerely hope that recent events in no way indicate any relaxation of that policy. Even so, one must express doubt as to its lasting success unless a reduction, as opposed to a mere maintenance, of Government expenditure is achieved and unless the nationalised industries which play so large a part in the industrial and commercial life of the country are subjected to the same conditions as the private sector of the economy and made to pay their way; and if they are to pay their way their management must be put into the hands of men of the very highest calibre, properly paid and able to exercise their managerial skill without political interference. Because this may be difficult to put into practice gives no excuse for failing to deal with the question as of paramount urgency and importance for the future of our country."

SIR NUTCOMBE HUME,
The Charterhouse Investment Trust Ltd., London.

Nationalisation

"There is no economic argument which justifies nationalisation. The argument based on the need for public supervision has now lost its force. The Iron and Steel Board with its broadly based membership appointed by the Government has shown by its work that it is an effective instrument for the public supervision of the steel industry. Any arguments for nationalisation are based on the political theories of one party. Now that the costly consequences of the experiment in nationalisation have been experienced, it would have been thought that even the political justification had become seriously diminished. But, as has been pointed out by many critics, such policies once started force their own continuance because they contain within themselves the elements of dictatorship. I see no difference between such policies and the practice of communism in Soviet Russia where even the trade unions have been nationalised. It is sincerely to be hoped that the politicians who are journeying towards communism, while claiming to oppose it, will pause and reflect before they reach in their journey the point of no return."

SIR ANDREW MCCANCE,
Colvilles Limited, Glasgow.

Problem of Inflation

"As I see it, we in industry today are confronted with two alternatives in the face of mounting costs. The first alternative is to decide as a matter of policy to advance our prices step by step to keep pace with rising costs, but this alternative is little short of suicidal. Competition is daily becoming more acute and we are already finding that we are being undersold by foreign manufacturers in a number of our important markets. Further, price increases will undoubtedly aggravate this situation and lead to still further inroads being made into our markets by our overseas competitors. The second alternative is to resign ourselves to accepting as normal a lower margin of profit than that to which we have hitherto been accustomed, but this is no less fatal and merely defers the day of reckoning, for there has probably never been a time at which profits were more vital than now. With the increased difficulty in raising money from outside sources, companies must look more and more to their retained profits to finance new schemes of expansion and modernisation. This is an age of unparalleled advances in applied technology and it is vital, in the most literal meaning of that word, that we should be in the forefront of these developments, if we are to have any hope of continuing to place on the market a product that can compete in terms both of price and specification with the best that the world can offer."

GEORGE WILSON,
Raleigh Industries Ltd. (London).

COMPANY MEETINGS AND DIVIDENDS

PARASEA COLLIERIES LTD. Annual General Meeting, Calcutta, 21st February 1958. Dividend: Re. 0.50 per share, free of income-tax, payable on or after 28th February 1958. Transfer books remain closed from 14th to 21st February 1958, both days inclusive.

SRI PALAMALAI RANGANATHAR MILLS LTD. Annual General Meeting, Perianaickenpalayam, Coimbatore District, 21st February 1958. Dividend: Rs. 6.00 per share. Transfer books remain closed from 8th to 21st February 1958, both days inclusive.

NEW INDIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 25th February 1958. Dividend: Rs. 2.50 per share, free of income-tax payable on or after 10th March 1958. Transfer books remain closed from 15th to 25th February 1958, both days inclusive.

UPPER GANGES SUGAR MILLS LTD. Annual General Meeting, Calcutta, 25th February 1958. Dividend: Rs. 5.00 per share, free of income-tax, payable on or after 10th March 1958. Transfer books remain closed from 15th to 25th February 1958, both days inclusive.

RANEEGUNJE COAL ASSOCIATION LTD. Annual General Meeting, Calcutta, 25th February 1958. Dividend: Re. 0.75 per share. Transfer books remain closed from 13th to 25th February 1958, both days inclusive.

BHARAT SUGAR MILLS LTD. Annual General Meeting, Calcutta, 25th February 1958. Dividend: Re. 1.50 per share. Transfer books remain closed from 15th to 25th February 1958, both days inclusive.

KESAR SUGAR WORKS LTD. Annual General Meeting, Bombay, 26th February 1958. Dividend: Rs. 7.00 per share, free of income-tax, payable on and after 1st March 1958. Transfer books remain closed from 12th to 26th February 1958, both days inclusive.

ANGELO BROS., LTD. Annual General Meeting, Calcutta, 26th February 1958. Dividend: Re. 1.89 per share (includes bonus of Re. 0.55 per share). Transfer books remain closed from 12th to 26th February 1958, both days inclusive.

MARTIN BURN LTD. Annual General Meeting, Calcutta, 27th February 1958. Dividend: Rs. 2.12 per share (includes a cash bonus of 62 nP per share). Transfer books will remain closed from 20th to 27th February 1958, both days inclusive.

MCLEOD AND CO., LTD. Annual General Meeting, Calcutta, 28th February 1958. Dividend: Rs 8.00 per ordinary share and Re. 0.30 per deferred share. Transfer books will remain closed from 21st to 28th February 1958.

SPENCER AND CO., LTD. Annual General Meeting, Madras, 28th February 1958. Dividend: Re. 1.50 per share, free of income-tax (includes interim dividend of Re. 0.50 per share). Transfer books will remain closed from 21st to 28th February 1958, both days inclusive.

EASTERN INVESTMENTS LTD. Annual General Meeting, Calcutta, 28th February 1958. Dividend: Rs. 9.00 per share, payable on or after 7th March 1958. Transfer books remain closed from 15th to 28th February 1958, both days inclusive.

BHARAT COLLIERIES LTD. Annual General Meeting, Dalmianagar, 8th March 1958. Transfer books will remain closed from 1st to 8th March 1958, both days inclusive.

KOLHAPUR SUGAR MILLS LTD. Annual General Meeting, Kasaba Bavda, Kolhapur, 14th March 1958. Transfer books will remain closed from 7th to 14th March 1958, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 14th March 1958. Dividend: *Nil*. Transfer books will remain closed from 7th to 18th March 1958, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Madurai, 24th March 1958. Dividend: Rs. 2.25 per share. Transfer books will remain closed from 4th to 24th March 1958, both days inclusive.

NEW CITY OF BOMBAY MANUFACTURING CO., LTD. Dividend of Rs. 5.00 per share. Transfer books will remain closed from 21st February to 14th March 1958, both days inclusive.

COMPANY REGISTRATIONS

SHREE JAGDISH OIL INDUSTRIES PRIVATE LTD. (First Director: Mr. Vallabhdas Vasanji Maniwala.) Business: Extraction of oil from copra, cotton seeds and other oilseeds, etc. Authorised capital: Rs. 30,00,000. Private company. Address: 281-283, Narsi Natha Street, Bombay 9.

BORAWAKA AND SONS PRIVATE LTD. (First Director: Rao Bahadur Narayandas Soparidas Borawaka.) Business: Manufacture of sugar, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Rahala, District Ahmednagar.

R. J. SHAH AND CO. PRIVATE LTD. (First Director: Mr. R. J. Shah.) Business: Builders and constructors of roadways, etc. Authorised capital: Rs. 5,00,000. Private company. Registered office of the company will be situated in the State of Bombay.

PROFITS OF ANGELO BROS. LOWER

RESULTS OF RANEEGUNGE COAL BETTER

Angelo Bros., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Turner, Morrison & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st August 1957.

The profit for the year, after providing for depreciation, directors' fees and taxation, amounts to Rs. 5,65,415 (Rs. 7,41,914) to which is added the balance brought forward from last year of Rs. 3,35,874 (Rs. 3,43,960) making a total of Rs. 9,01,289 (Rs. 10,85,874). From this amount the directors recommend payment of a dividend of 12½ (12½) per cent. and a bonus of 5½ (7½) per cent. absorbing Rs. 5,40,000 (Rs. 6,00,000) leaving a balance to be carried forward of Rs. 3,61,289 (Rs. 3,35,874 after placing Rs. 1,50,000 to general reserve).

The liability for taxation which was provided for out of the previous year's profits has now increased as a result of the revised rates of income-tax and super-tax introduced by The Finance (No. 2) Act 1957 and also the introduction of The Wealth Tax Act 1957. As a result it is now necessary to set aside a sum of Rs. 1,25,000 to meet this additional liability and this has reduced the available profit for the current year accordingly.

Exports of shellac products from Calcutta were fully maintained at last year's level. In spite of this, and the official report of a relatively poor *Bysaki* crop, the market declined steadily throughout the year. Even the Suez crisis in November 1956, could not halt the downward tendency. T.N. was quoted at Rs. 126 at the beginning of the period and closed at Rs. 88 having touched Rs. 70.50 nP in July 1957. This decline was largely due to the U.S.A. purchasing a large part of their requirements from Bangkok, credit restrictions in the U.K., a general realisation that the *Bysaki* crop was much larger than the official report indicated and an abnormally large *Katki* crop. A steadily declining market introduced some trading difficulties but the gross profit was maintained. Sales and production were a little up on the previous year. Factory plant has been maintained at a high level of efficiency and economy.

Accounts in brief are as under:

Liabilities	Rs.	Assets	Rs.
Capital	30,00,000	Block ...	11,37,045
Reserves ...	36,20,717	Stock-in-trade	17,79,844

Liabilities ...	17,12,985	Stores and spare parts	4,00,873
Profit and loss account ...	3,61,289	Goods-in-process ...	84,251
		Debts, deposits and advances ...	30,37,750
		Investments	4,94,668
		Cash ...	14,56,341
Rs.	1,04,54,897	Rs.	1,04,54,897

Raneegunge Coal Association, Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

Coal raisings, despatches and stocks	*Year ended 31st March* 1955	1956	1957
	Tons	Tons	Tons
Raisings	3,44,281	3,49,758	4,31,402
Despatches ...	3,28,355	3,81,924	4,09,316
Stocks	53,207	21,041	43,127

Raisings over the year increased considerably to meet the target set by the Coal Board. Despatches were not according to the directors' expectation due to the pilot capacity not having been increased and kept in line with the increased production.

Coke manufacture: The Company manufactured during the year under review 6,693 tons of hard coke. 7,107 tons were despatched and 562 tons remained in stock.

Development and prospects: Re-opening permission has been received and raisings have begun from the Alkusa South Colliery. There is also an output from Kustore South Pits.

The Company's profit for the year ended 31st March 1957 after inclusion of Rs. 23,188 (Rs. 33,013) brought forward is Rs. 9,33,634 (Rs. 5,84,276). After making provision for taxation of Rs. 1,60,000 (Rs. 2,31,125) and adjustment relating to previous year of Rs. 14,612 (*nil*) there remains a balance of Rs. 7,59,022 (Rs. 3,53,151). From this balance the directors have placed to machinery replacement and development reserve Rs. 5,50,000 (Rs. 1,50,000) and recommend the payment of 88th dividend at Re. 0.75 (Re. 0.75) per share absorbing Rs. 1,79,963 (Rs. 1,79,963) leaving a balance to be carried forward of Rs. 29,060 (Rs. 23,188).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,99,500	Block ...	45,39,159
Reserves ...	25,66,361	Stock of coal	6,17,707
Provision for taxation ...	2,08,671	Stores ...	6,57,065
Liabilities ...	29,52,692	Debts, deposits and advances ...	22,98,593
Profit and loss account ...	29,060	Investments	16,507
		Cash ...	27,253
Rs.	81,56,284	Rs.	81,56,284

Kesar Sugar Works Ltd.

The directors of the above Company (Chairman: Mr. Tulsidas Kilachand, Bombay) submit the audited accounts of the Company for the year ended 31st July 1957.

The working of the year shows a profit of Rs. 7,70,144 (Rs. 2,19,951) after charging the amount of Rs. 48,99,292 (Rs. 29,88,277) for excise duty, Rs. 12,02,838 for cane cess and providing Rs. 2,46,329 (Rs. 5,19,547) for depreciation and Rs. 9,75,000 (Rs. 5,00,000) for taxation. After adding the balance of Rs. 7,033 (Rs. 27,926) brought forward from last year, the amount available or disposal comes to Rs. 7,77,177 (Rs. 2,47,877) which the directors recommend should be disposed as under:—

To payment of dividend at 5½ per cent. on preference shares Rs. 82,500 (Rs. 82,500) less income-tax Rs. 25,987 (Rs. 21,656), to dividend at Rs. 7 (Rs. 4) per share free of income-tax on ordinary shares of Rs. 50 each Rs. 3,15,000 (Rs. 1,80,000) and to transfer to general reserve fund Rs. 3,00,000 (*nil*), leaving a balance to be carried forward to next year's account of Rs. 1,05,664 (Rs. 7,033).

The Company's factory started operations from the 8th November 1956. The quantity of cane crushed was 64,14,866 maunds during 232 days of crushing as compared with 56,84,386 maunds crushed during the previous season. This was a record both for crushing and production and the sugar produced during the year under report was 6,17,238 maunds as against 5,44,492 maunds during the previous season. The recovery was 9.62 per cent. against 9.58 per cent. during the previous year. The result of the Company's working during the year under report has thus been satisfactory in all respects.

The acreage under cane during the current year is reported to be less than last year. Besides, owing to not quite favourable weather, the crop is not as satisfactory as last year. The factory started crushing for the current season on 15th November 1957.

Movement of sugar during the year under report was not quite adequate looking to the larger production, and the carry-over at the end of the year was very large

To remove the difficulties experienced by the Trade on account of varying rates and modes of sales tax on sugar in different States, the Government of India has recently levied an additional excise duty in place of sales tax. This additional duty however works out to be on an average higher than the sales tax. The excise duty on sugar was already doubled by the Government of India during the year and with the aforesaid further increase and with other direct taxes such as cane cess, sugar is now one of the most heavily taxed commodity of daily consumption. These high taxes are likely to affect the industry adversely.

During the year the production of the distillery suffered on account of the closure of the plant due to coal shortage. The working of the Power Alcohol plant was otherwise satisfactory and the manufacturing efficiency was maintained.

The Company's Chemical Factory has been able to maintain its production and also its sales even though it has to face competition from other manufacturers. The directors have also added to the line the manufacture of an electroplating *Chemical-Chromic Acid* and have developed its sale.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Block ...	29,52,684
Reserves ...	12,51,626	Machinery on hand pending installation	1,27,109

Forest Industries (Travancore) Ltd.

The directors of the above Company (Managing Agents: Messrs. Seshasayee Brothers (Travancore) Private Ltd., Alwaye, Kerala State, submitted the audited accounts of the Company for the year ended 31st March 1957.

The year's account shows a net loss of Rs. 3,73,366 (net profit of Rs. 3,39,558) after providing for depreciation on buildings, plant and machinery that were used during the year under report and after writing off to profit and loss account a sum of Rs. 6,17,820 as loss on obsolescence of machinery and equipments and Rs. 1,41,035 being loss on revaluation of stores. The reserve of Rs. 13,28,296 has been adjusted against the balance in the profit and loss account of Rs. 14,85,082 as required by the new Companies Act.

The efforts to dispose of the surplus machinery and stores have not been successful and the directors feel that nothing more than their scrap value could be realised, as indicated in previous reports and that revaluation on this basis has now become necessary to present a true picture of the Company's assets.

The royalty accounts with the Kerala Government have been finalised only upto 1952. The outstanding points like the expenditure for laying main roads inside the concession area as well as the arbitration on admissibility of further transport charges are still pending with the Government of Kerala.

The delivery of firewood to Fertilisers and Chemicals, Travancore Limited, during the year was 81,653 tons. The production of timber was 8,905 tons as against 6,645 tons last year. 7,083 tons of timber were sold inclusive of issues to saw mills.

The application for the reappointment of Messrs. Seshasayee Brothers (Travancore) Private Limited, as managing agents from 10th August, 1956 has been approved by the Government of India. The directors are grateful to the managing agents for forgoing their remuneration from November 1947 to the date of their reappointment. A sum of Rs. 14,187 has been provided in the accounts for the year under report towards remuneration to the managing agents for the period 10th August, 1956 to 31st March, 1957 on the basis of the revised managing agency agreement.

The directors have pleasure in mentioning that from January 1957 the clear-felling system of exploiting the forest has been restored and certain blocks are now being worked under this system.

The directors recommend for the shareholders' consideration the proposal to refund to the shareholders Re. 1.50 per share from out of the bank deposits, whereby the value of each share will be brought down from Rs. 4 paid-up to Rs. 2.50 paid-up. If this proposal is accepted arrangements can be made to put it into effect. Corresponding adjustments will be made in the issued, subscribed and paid-up capital of the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,92,400	Block ...	2,22,330
Liabilities ...	8,45,981	Stock-in-trade	1,52,839
		Stores and spare parts	96,836
		Debts, deposits and advances ...	12,03,315
		Cash ...	7,89,695
		Profit and loss account ...	3,73,366
Rs.	28,38,381	Rs.	28,38,381

Jaipur Udyog Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1957.

The year's working after providing all overheads, interest charges and donations shows a surplus of Rs. 40,80,802 (Rs. 45,45,731). Out of this provision has been made for depreciation of Rs. 20,00,000 (Rs. 20,21,602) leaving a balance of Rs. 20,80,802 (Rs. 25,24,129). To this is added amount brought forward from the last year of Rs. 55,609 (Rs. 1,22,699) making a total of Rs. 21,36,411 (Rs. 26,46,828). The directors are not making any recommendation about appropriation of the year's profit pending requisite consent from the Controller of Capital Issues for capitalisation of a portion of these profits and propose that the said amount of Rs. 21,36,411 (Rs. 55,609 after placing Rs. 4,00,000 to general reserve and paying a dividend of Re. 1.25 per ordinary share absorbing Rs. 18,75,000 and also the dividend on preference shares at 3 per cent. absorbing Rs. 3,16,219) be carried forward.

The Bank acts as Executor and Trustee under Wills and Settlements and undertakes Trustee business generally.

Every Description of Banking Business Undertaken.

T. R. LALWANI, *General Manager.*

The Company's second and third cement plants have been installed without raising any share capital but largely depending on borrowings besides the Company's own working surplus. In view of the tight money market, the directors did not consider it expedient to proceed with the cash issue of ordinary share capital although the consent of the Controller of Capital Issues had been earlier obtained by the Company for capital issues to the extent of Re. 1 crore. With a view to conserving the resources of the Company available out of its own working surplus for the expansion programme on hand, the directors have not recommended any cash dividend. An application has, however, been made to the Controller of Capital Issues for sanction of the issue of 3 lakhs ordinary shares, out of the aforesaid Capital Issue of rupees one crore, of Rs. 10 each, at par to the existing holders of ordinary shares in the proportion of one share for every five ordinary shares held, without any payment in cash, by capitalisation of Rs. 18,75,000 (representing 12½ per cent. of the ordinary capital) out of the Company's profit for the year under report and further capitalisation of Rs. 11,25,000 (representing 7½ per cent. of the ordinary capital) ad-interim out of the current year's working surplus. Further steps in this direction would be taken on receipt of requisite consent from the Controller of Capital Issues. Dividend on preference shares for the year under report is also proposed to be declared at that time.

The ex-works price of the Company's cement was reduced by the Central Government by Rs. 3.50 per ton with effect from 22nd September 1956. Due to increased borrowing for meeting capital expenditure there has also been a higher outgoing in interest by nearly Rs. 5 lakhs than in the preceding year. Profit during the year under report has to this extent been affected.

As from 1st July, 1956, cement from all the producers has been taken over for distribution by the State Trading Corporation under orders of the Government of India. The Government also fixed uniform f.o.r. destination price for sale of cement which provided a margin of about Rs. 12.75 per ton for subsidising imports. This margin is accumulating with the State Trading Corporation unutilised due to change in the import policy. The revision of the price of cement is under reference to the Tariff Commission. The industry has been expecting an interim report at least from the Tariff Commission to enable the Central Government take an early decision regarding the price recoverable by manufacturers. In the present context of the cement price providing very little margin (including depreciation) and dearth of other internal resources, the industry will be greatly assisted in meeting its difficulty for financing rehabilitation and expansion if the margin in price provided for subsidising imports is made available to the cement producers.

The Company could not due to shortage of power fully avail of the installed capacity of the second cement plant which was switched into operation in the last quarter of 1956. This capacity is being fully utilised with the coming into operation of the new power plant in August, 1957.

The third cement plant of 600 tons per day rated capacity has been switched into production in the month of November raising the annual installed capacity of the works to 6 lakhs tons of cement. Thus Sawai Madhopur with the Company's cement works is one of the two largest cement producing centres in the country and accounts for about 10 per cent. of the national cement production capacity.

The Company has since purchased a fourth cement plant with a daily rated capacity of 750 tons. Most of the machinery has already arrived at the Bombay Port and some at site. The expansion of the Company's power house is also in progress. It is hoped that this plant should be in operation by the end of 1958.

Accounts in brief were as under:—

McLeod and Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The profit for the year amounts to Rs. 18,34,046 (Rs. 31,89,815) to which must be added the profit on sales of investments Rs. 4,530 (Rs. 835), dividends forfeited Rs. 2,388 (Rs. 1,250) and balance brought forward from 1955 of Rs. 257,234 (Rs. 1,87,834) making a total of Rs. 20,98,198 (Rs. 33,79,734). From this amount must be deducted forfeited dividends paid of Rs. 350 (*nil*) and loss on sales of investments Rs. 55,695 (*nil*) leaving a balance of Rs. 20,42,153 (Rs. 33,79,734). Out of this sum there has been provided for taxation Rs. 10,00,000 (Rs. 10,00,000) and transferred to convertible notes redemption reserve Rs. 2,00,000 (Rs. 2,00,000) leaving a balance of Rs. 8,42,153 (Rs. 21,79,734) from which must be deducted the interim dividends for the year ended 31st December, 1956, on 10,000 5 per cent. cumulative first preference shares, subject to deduction of tax (gross) of Rs. 25,000 (Rs. 25,000) and on 40,000 5 per cent. cumulative second preference shares, without deduction of tax absorbed Rs. 1,00,000 (Rs. 1,00,000) leaving a balance of Rs. 5,92,153 (Rs. 19,29,734). Out of this balance the directors, on the 30th December, 1957, declared an interim dividend at 8 (22½) per cent. per annum or Rs. 8 (first and final dividend of Rs. 22.50) per share on 40,000 ordinary shares for the year ended 31st December, 1956, absorbing Rs. 3,20,000 (Rs. 9,00,000) and an interim dividend at 3 (17½) per cent. per annum or 30 nP (Re. 1.75) per share on 50,000 deferred ordinary shares for the year ended 31st December, 1956 absorbing Rs. 15,000 (Rs. 87,500) leaving to be carried forward Rs. 2,57,153 (Rs. 2,57,234 after placing Rs. 3,50,000 to general reserve and Rs. 3,35,000 to investment reserve). The directors do not recommend the payment of any further dividends in respect of the year ended 31st December, 1956. The accounts of the Company have been prepared in accordance with the Companies Act, 1956.

Trading.—The profit for the year shows a substantial decline when compared with that of the previous 12 months, due chiefly to a large reduction in dividend income and lower earnings from the jute mills under the Company's management which were affected by the difficult conditions obtaining in the jute mill industry during the period under review. Commissions received from the tea companies recorded a satisfactory increase and the agency department results also showed improvement.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	95,00,000	Block ...	18,09,695
Reserves ...	82,86,900	Goodwill ...	20,00,000

Rs.	4,44,56,928	Rs.	4,44,56,928

Thacker and Co. Private Ltd.

The directors of the above Company (Chairman: Mr. L. Sawhny, Bombay) submitted the audited accounts of the Company for the year ended 31st March 1957.

The accounts after providing adequate depreciation on the fixed assets, provision for income-tax and bonus for the year show a profit on the year's working of Rs. 27,304 (Rs. 24,057) to which is added the balance brought forward from last year of Rs. 3,319 (Rs. 3,065), making a total of Rs. 30,623 (Rs. 27,122). Out of this the directors have made the following appropriations:—

To provision for employees' retiring gratuity Rs. 7,401 (Rs. 8,803), to provision for taxes for previous years Rs. 3,804 (*nil*), to plant reinstatement reserve Rs. 2,500 (*nil*) and to payment of a dividend at 10 (10) per cent. free of income-tax Rs. 15,000 (Rs. 15,000) leaving a balance to be carried forward of Rs. 1,918 (Rs. 3,319).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,37,521	Block ...	64,414
Reserves ...	1,35,855	Stock-in-trade	3,73,913
Provision for taxation ...	25,000	Stores ...	4,789
Liabilities ...	2,70,840	Work-in-progress ...	17,384
Profit and loss account ...	1,918	Debts, deposits and advances ...	1,87,880
		Cash ...	22,554
Rs.	6,70,934	Rs.	6,70,934

Tyroon Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 11,80,038 (Rs. 7,54,974) to which must be added the balance of profit brought forward from 1955 of Rs. 98,341 (Rs. 9,014), making a total of Rs. 12,78,379 (Rs. 7,63,988). From this amount must be deducted adjustment account Rs. 7,643 (Rs. 2,11,084), provision for taxation Rs. 4,35,424 (Rs. 2,96,200), amount written off stores for obsolescence (Rs. 217) and loss on farming Rs. 14,1[illegible] leaving a balance of Rs. 8,20,908 (Rs. 2,[illegible] interim dividend for the year ended 31st [illegible] 1956, at Rs. 2.00 (*nil*) per ordinary share, [illegible]d by the directors on 17th May 1957 ab[illegible]ed Rs. 1,04,000 (*nil*). The directors have set aside to buildings and machinery reserve Rs. 5,00,000 (*nil*) leaving an available balance of Rs. 2,16,908 (Rs. 2,54,341) which, the directors recommend, should be dealt with as follows:—

In payment of a final dividend for the year ended 31st December 1956, at the rate of Rs. 2.50 (Rs. 3.00) per ordinary share on 52,000 ordinary shares, absorbing Rs. 1,30,000 (Rs. 1,56,000) leaving to be carried forward Rs. 86,908 (Rs. 98,341).

Tea crop.—The saleable crop weighed out at 15,118 (15,693) maunds against an estimate of 16,000 maunds and was disposed of at an average price of As. 46.40 (As. 38.22) per lb. The smaller crop made in 1956 was due to earlier cessation of plucking under the I.T.A. Voluntary Crop Restriction Scheme. The final crop for season 1957 is expected to amount to 16,366 mds.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,20,000	Block ...	17,67,647
Reserves ...	21,00,250	Stock of tea	12,77,399
Provision for taxation ...	13,60,686	Stores and spare parts	3,76,020
Liabilities ...	12,18,910	Other assets ...	13,013
Profit and loss account ...	86,908	Stock of farm produce ...	13,584
		Debts, deposits and advances ...	1,54,817
		Investments	58,094
		Cash ...	16,26,180
Rs.	52,86,754	Rs.	52,86,754

Gannon Dunkerley and Co., Ltd.

The directors of the above Company (Governing Director: Mr. R. Morarka, Bombay) submit the audited accounts of the Company for the year ended 31st March 1957.

The net results of operations including all departments are as follows:—The profit for the year after providing for depreciation, taxation and bonus is Rs. 1,54,573 (Rs. 2,87,646) to which is added the balance brought forward as per last account of Rs. 1,57,746 (Rs. 6,14,285) making a total of Rs. 3,12,319 (Rs. 3,19,746 after providing Rs. 5,82,185 for taxation). The above results have been arrived at after making a provision of Rs. 3,50,000 (Rs. 5,82,185) for taxation raising the reserve to Rs. 14,75,000 which in the opinion of the directors is sufficient to cover all liabilities to taxation to date. The directors recommend a dividend at the rate of 6 (4½) per cent. which will absorb Rs. 2,16,000 (Rs. 1,62,000) leaving a balance of Rs. 96,319 (Rs. 1,57,746) to be carried forward to next year. A sum of Rs. 70,681 deducted from the sales as returns and expenses represents returns, claims, expenses, etc., relative to the sales of the year. The previous year's figures are strictly not comparable.

The year's working results have been better than last year's. The stringent import restrictions do not augur well for the trading department for the future. The Civil Engineering Department has a fair volume of contracts still to be completed.

The plans for setting up an engineering workshop for the manufacture of liquefied petroleum cylinders are proceeding ahead. Progress to a certain extent has been retarded in view of the import licence difficulties. The factory is expected to go into production before the next report is circulated to the shareholders.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,00,000	Block ...	12,27,536

Notices

W. H. BRADY AND COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-fifth Annual General Meeting of the Company will be held on Monday the 10th day of March 1958 at 10.30 a.m. (S.T.), at the Registered Office of the Company, "Brady House," 12-14, Veer Nariman Road, Bombay, to transact the following business:

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1957.
2. To sanction the payment of Dividend.
3. To appoint a Director in place of Mr. Jehangir P. Patel who retires by rotation in accordance with Article 156 and, being eligible, offers himself for re-election.
4. To appoint a Director in place of Mr. Nanabhoy Byramjee Jeejeebhoy who retires by rotation in accordance with Article 156 and, being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider, and if thought fit, to pass the following Resolution as a Special Resolution:

"Resolved that the Articles of Association of the Company be amended or altered in the manner following:

(a) *Article* 61: Delete the words 'whilst any member executing the transfer is, either alone or jointly with any other person or persons, indebted to the Company on any account whatsoever or'

(b) *Article* 186 (5): In the third line, between the words 'may' and 'be', the words 'have a right to allotment of or' should be inserted; and from the sixth line the words 'allotment of shares' should be deleted."

By Order of the Board,

JOSEPH KAY,
Managing Director.

BOMBAY, 7*th February* 1958.

Note:—(1) A member entitled to attend and vote is entitled to appoint a proxy, or where that is allowed, one or more proxies, to attend and vote instead of himself. A proxy need not be a member.

(2) Inspection of the existing Articles of Association of the Company showing therein the proposed alterations or amendments may be had at the Registered Office of the Company between the hours of 2-30 p.m. and 5 p.m. on any working day except on Saturdays and between 11 a.m. and 1 p.m. on Saturdays.

(3) The Transfer Books of the Company will be closed from Friday the 21st day of February to Friday the 14th day of March 1958, both days inclusive.

Explanatory Statement in respect of Item No. 6 as required by Section 173 of the Companies Act, 1956

Item No. 6—For various reasons it was necessary to apply to the Stock Exchange, Bombay, for officially listing the Company's ordinary shares. Before admitting the Company's ordinary shares to cash dealings on the Exchange, we were required to give an undertaking that certain changes, as detailed in the Resolution mentioned in this item, would be made in the Articles of Association of the Company in the next Annual General Meeting which your Directors did by their Resolution dated 23rd September 1957. The Company's shares are now officially listed in the Stock Exchange and to fulfil the Stock Exchange requirements and implement the said undertaking, the changes are necessary.

THE EMPIRE DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-eighth Annual General Meeting of the Shareholders of The Empire Dyeing and Manufacturing Company, Limited, will be held at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Fort, Bombay, on Monday the 10th March, 1958, at 12-15 p.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December, 1957.
2. To sanction payment of Dividend.
3. To appoint a Director in place of Mr. F. Edwards who retires by rotation in accordance with the Articles of Association of the Company and being eligible offers himself for re-election.
4. To appoint a Director in place of Mr. Kishore M. Premchand who retires by rotation and, being eligible, offers himself for re-election and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:

"Resolved that pursuant to Section 261 of the Companies Act, 1956, Mr. Kishore M. Premchand, an associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company (who by the Articles of Association of the Company and the Managing Agency Agreement are entitled to appoint two Directors), be and he is hereby re-appointed a Director of the Company liable to retire by rotation."

5. To appoint Auditors for the current year and to fix their remuneration.

Managing Agents.

BOMBAY, 6*th February* 1958.

Note:—1. A member entitled to attend and vote is entitled to appoint a proxy and, where that is allowed, one or more proxies to attend and vote instead of himself. A proxy need not be a member.

2. The Notice under Section 190 and referred to in Resolution No. 6 mentioned in the Notice is also available for inspection of the members at the Registered Office of the Company on any working day between 11 a.m. and 1 p.m.

3. The Transfer Books of the Company will be closed from Friday, the 21st February 1958, to Friday, the 14th March 1958, both days inclusive.

4. The dividend when declared will be made payable through the Bank of India Ltd., Bombay, on and after 24th March 1958. The Dividend Warrants will be posted to those shareholders whose names stand on the Register on the 14th day of March 1958.

Explanatory Statement Annexed to the Notice

Item No. 6.—Mr. N. B. Jeejeebhoy is a Director of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, who are authorised by the Articles of Association and the Managing Agency Agreement to appoint two Directors to the Board, retires by rotation. In accordance with Section 261 of the Companies Act, Mr. N. B. Jeejeebhoy cannot be appointed a Director of the Company liable to retire by rotation except by a Special Resolution and in respect of whom a Special Notice under Section 190 of the said Act has been received by the Company.

By Order of the Board,

W. H. BRADY & Co., LTD.,

JOSEPH KAY,
Managing Director,
Managing Agents.

BOMBAY, 6*th February* 1958.

THE NEW GREAT EASTERN SPINNING AND WEAVING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 84th Annual General Meeting of the Shareholders of The New Great Eastern Spinning and Weaving Company, Ltd., will be held at the Company's Registered Office, "Brady House," 12-14 Veer Nariman Road, Fort, Bombay, on Tuesday, the 11th March 1958, at 3 p.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1957.
2. To sanction the payment of Dividend on Preference Shares of the Company.
3. To appoint a Director in place of Mr. B. K. Daphtary whose term of office expires at this Annual General Meeting under Section 257 of the Companies Act, 1956 and, being eligible, offers himself for re-election.
4. To appoint a Director in place of Mr. K. M. Premchand, who retires by rotation and, being eligible, offers himself for re-election, and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:

"Resolved that pursuant to Section 261 of the Companies Act 1956, Mr. K. M. Premchand, an associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company (who by the Managing Agency Agreement are entitled to appoint two Directors), be and is hereby re-appointed a Director of the Company liable to retire by rotation."

5. To appoint a Director in place of Mr. N. B. Jeejeebhoy, who retires by rotation and, being eligible, offers himself for re-election, and to consider and if thought fit to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:

"Resolved that pursuant to Section 261 of the Companies Act 1956, Mr. N. B. Jeejeebhoy, an associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company (who by the Managing Agency Agreement are entitled to appoint two Directors), be and is hereby re-appointed a Director of the Company liable to retire by rotation."

6. To appoint Auditors for the current year and fix their remuneration.

By Order of the Board,

W. H. BRADY & Co., LTD.,

JOSEPH KAY,
Managing Director,
Managing Agents.

BOMBAY, 6*th February* 1958.

Note.—1. A member entitled to attend and vote is entitled to appoint a proxy and, where that is allowed, one or more proxies to attend and vote instead of himself. A proxy need not be a member.

2. The Notices under Section 190 and referred to in Resolutions Nos. 4 and 5 mentioned in the Notice are also available for inspection of the members at the Registered Office of th

Company on any working day between 11 a.m. and 1 p.m.

3. The Transfer Books of the Company will be closed from Friday, the 21st February 1958, to Friday, the 14th March 1958, both days inclusive.

4. The dividend when declared will be made payable through the Bank of India Ltd., Bombay, on and after 24th March 1958. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 14th day of March 1958.

Explanatory Statements Annexed to the Notice

Item No. 4.—Mr. K. M. Premchand is a Director of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, who are authorised by the Managing Agency Agreement to appoint two Directors to the Board, retires by rotation. In accordance with Section 261 of the Companies Act, Mr. K. M. Premchand cannot be appointed a Director of the Company liable to retire by rotation except by a Special Resolution and in respect of whom a Special Notice under Section 190 of the said Act has been received by the Company.

Item No. 5.—Mr. N. B. Jeejeebhoy is also a Director of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, who are authorised by the Managing Agency Agreement to appoint two Directors to the Board, retires by rotation. In accordance with Section 261 of the Companies Act, Mr. N. B. Jeejeebhoy cannot be appointed a Director of the Company liable to retire by rotation except by a Special Resolution and in respect of whom a Special Notice under Section 190 of the said Act has been received by the Company.

By Order of the Board,

W. H. BRADY & CO., LTD.,

JOSEPH KAY,
Managing Director,
Managing Agents.

BOMBAY, *6th February* 1958.

BHARAT COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE 13th Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Saturday the 8th March, 1958, at 12 noon, to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June 1957.

(2) To declare dividends on Preference and Ordinary Shares.

(3) To elect a Director in place of the retiring Director, Shri K. Khaitan, who retires by rotation under Article 106 of the Articles of Association. The retiring Director being eligible, offers himself for re-election.

(4) To elect a Director in place of the retiring Director, Shri Balabux Poddar, who retires by rotation under Article 106 of the Articles of Association. The retiring Director being eligible, offers himself for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. K. N. Gutgutia & Co., being eligible, offer themselves for re-appointment.

As Special Business

(To be proposed as an Ordinary Resolution):

"Resolved that with effect from the commencement of the Companies Act, 1956, consent of the Company be and is hereby given to the Board to contribute and/or subscribe to any national, political, charitable, benevolent, public or general and other object, Fund or Trust (not directly relating to the business of the Company or welfare of its employees) from time to time, such amounts as may be considered proper by them in excess of the limits laid down in Section 293(1)(e) of the Companies Act, 1956.

Further Resolved that the donations already made in excess of the limits prescribed under the Companies Act in Charity and Donation during the year ending 30th June, 1957, be and are hereby approved and confirmed."

Explanatory Note

According to the provisions of Section 293(1)(e) of the Companies Act, 1956, the Board of Directors of a company can make contributions to charitable and other funds not directly relating to the business of the Company or the welfare of its employees within the limit of Rs. 25,000 or 5 per cent. of its average net profits, whichever is greater. In some exceptional cases the donations may exceed the limit prescribed. In order that there may not be any contravention of the Act at any time, consent of the shareholders is sought to empower the Board of Directors to make donations as mentioned in the resolution.

During the year ended 30th June, 1957, the Company paid Rs. 37,490.56 nP towards Charity and Donation including Rs. 25,000 to Indian National Congress. Out of this amount Rs. 12,490.56 nP exceeds the limit of contribution as laid down under Section 293(1)(e) of the Companies Act, 1956, and the consent of the shareholders is, therefore, sought for approval and confirmation of the excess amount paid.

The Share Transfer Books of the Company will remain closed from 1st March, 1958 to 8th March, 1958, both days inclusive.

By Order of the Board of Directors,

For SAHU JAIN LTD.,

A. K. JAIN,
Managing Director,
Managing Agents.

DALMIANAGAR, *6th February*, 1958.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the meeting.

MADURA MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held in Pandyan Building, West Veli Street, Madurai, on Monday, the 24th March, 1958 at 4 p.m. The Share Transfer Books will be closed from 4th to 24th March, 1958, both days inclusive. It is recommended that:

1. All persons holding shares on blank transfers should immediately arrange to have the shares registered in their own names, as the Company will pay any dividend declared only to the person (s) in whose name the share stands on the date of declaration of dividend.

2. Shareholders desiring dividends to be paid to Banks or other Mandatees should register the mandates with the Company before 4th March, 1958.

3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LIMITED,
Managers.

MADURAI, *1st February*, 1958.

STATE BANK OF INDIA

NOTICE

THE THIRD ANNUAL GENERAL MEETING of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Friday, the 14th March 1958, at 4 p.m. (Standard Time), for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1957 and the Auditors' Report on the Balance Sheet and Accounts.

P. C. BHATTACHARYYA,
Chairman.

STATE BANK OF INDIA,
CALCUTTA, *24th January* 1958.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

Reg: Indian Railways Global Procurement Programme of Rolling Stock No. G.P. 12 (Supplement) 1957-58—Broad Gauge Diesel Shunting Locomotives 106 Nos.

THE RAILWAY BOARD, GOVERNMENT OF India, propose to obtain 106 Nos. Broad Gauge Diesel Shunting Locomotives from established and reliable manufacturers. Manufacturers in Europe, the United Kingdom and North America can obtain further details of design, specification, etc., from the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London, W-3. Manufacturers in other countries and their authorised agents in India of all foreign manufacturers can obtain the specifications from the office of the Research, Design and Standardization Organisation, Chittaranjan, on payment. Tender documents can be had from Research, Design and Standardization Organisation, Baroda House Annexe, New Delhi, on payment of Rs. 2 each.

Last date for receipt of offers is 12th May 1958.

H. D. SINGH,
Director, Railway Stores.

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

THE MINISTRY OF RAILWAYS, GOVERNment of India, propose to develop indigenous manufacture of Tokenless Block Instruments. The Railways' requirement is likely to be about 200 instruments each year during the next five years or so, but the Ministry of Railways can enter into firm commitment for 146 instruments only, at present, without any guarantee for further quantity against future requirements. The Firm may import some of these instruments, but if they are able to manufacture or assemble most of these instruments out of 146 instruments proposed to be ordered, it would be in their favour.

The Firms who are interested may obtain copies of their tender from Research Design Standardization Organisation, Baroda House Annexe, New Delhi, on payment of Rs. 2 each.

H. D. SINGH,
Director, Railway Stores,
Railway Board.

LABOUR UNIONS IN U.S.A.

"The labour movement in the U.S. differed substantially from that in other countries, in that the former was a fairly conservative movement, restricting itself primarily to better wages and shorter hours," observed Dr. James Washington Bell, a noted American professor of economics, during the course of his talk on labour movement in the U.S.A. at a seminar on American economy held in Bombay last week. Dr. Bell said that it was so because labour in America was well paid from the very beginning. There was no surplus labour at any time and it was easy to shift from unskilled to skilled jobs and from there to small business. Also, discontented workers, in the earlier days, could go west and settle down in agriculture.

The relative scarcity of labour and high wages, Dr. Bell said, were incentives to the employer to introduce technological and labour-saving devices which led to greater productivity and, in turn, to higher wages and better standards of living. Thus, wages, in real terms, increased fivefold from 1920 to 1950. At the same time, hours of work decreased from 70 to 40 a week. He added that at no time did labour in America consider itself an exploited group and this explained why there was no attempt to overthrow the "exploiters" in a revolution.

Initiating a discussion on income distribution in the U.S., Dr. Dexter Keezer, Vice-President of the McGraw-Hill Publishing Company, said that a great transformation had occurred in income distribution in the U.S. in the past 20 years which greatly reduced extremes of wealth and poverty and swelled the ranks of the middle class. In the case of working class, comprehensive social security benefits such as unemployment, old age and survivor's insurance have been supplemented by other benefits obtained under collective bargaining. Dr. Keezer said that more than 14 million employees in private industry, roughly a fifth of the total U.S. labour force, were now covered by private pension schemes.

DEMAND FOR MONEY BROADENS

(From Our Own Correspondent)

BOMBAY, *12th February*

Conditions in the short-term money market during the week under review indicated that the seasonal demand for bank credit was slowly gaining pace and the available supplies were growing short of requirements. Though there was no acute stringency in the market, the floating funds were fully utilised and, at times, banks had to seek accommodation from the Reserve Bank. The prevailing conditions are reflected in the expansion of Rs. 27.43 crores in notes in circulation, a shrinkage of Rs. 3.81 crores in deposits of Scheduled banks with the Reserve Bank and a rise of Rs. 6.49 crores in the Reserve Bank's loans and advances other than to Governments during the week ended 7th February. This increase in the Reserve Bank's lendings is on top of a rise of Rs. 3.64 crores in the preceding week, when Scheduled banks' advances to their clients increased by no less than Rs. 25.10 crores.

There was, however, no hardening of the interest rates. In the inter-bank call money section, Exchange banks and large Indian banks were keen borrowers at the self-same rate of 3 per cent. and smaller Indian banks at 3½ per cent. House money at call fetched no more than 4½ to 4¾ per cent. Short-term deposit rates were unchanged at 4½ to 4¾ per cent. for one to six months.

As already stated, the Reserve Bank's statement for the week ended 7th February 1958 discloses an increase of Rs. 27.43 crores in notes in circulation, the sharpest rise in any week since 6th December last. Notes held in the Banking Department are lower by Rs. 9.72 crores, with the result that total notes issued have gone up by Rs. 17.71 crores. This is covered by an increase of Rs. 20 crores in rupee securities and a contraction of Rs. 2.28 crores in rupee coin. There has been no change in foreign securities, but balances held abroad (in the Banking Department) have further dwindled by Rs. 2.33 crores. While deposits of the Central Government show only a fractional decline, those of other Governments and banks have gone down by Rs. 14.22 crores and Rs. 3.81 crores, respectively. Loans and advances to Governments have risen by Rs. 4.59 crores and other loans and advances by Rs. 6.49 crores. Of the later, advances to Scheduled banks against usance bills account for Rs. 1.84 crores. There has been a sharp reduction of Rs. 21.60 crores in investments.

A rise of Rs. 1.61 crores in demand deposits and of Rs. 5.69 crores in time deposits is disclosed by the Scheduled banks' statement for the week ended 31st January 1958. Borrowings from the Reserve Bank have also gone up by Rs. 3.70 crores. As against these main changes in the resources of banks, advances have increased by Rs. 12.63 crores and bills purchased and discounted by Rs. 12.47 crores. Investments stand reduced by Rs. 1.44 crores, while cash balances do not show any notable variation.

The Gilt-edged market was extremely dull during the week under review. Enquiries were confined only to a few short-dated Central loans and 4 per cent. 1967 and 1968 State issues. With the busy season gaining momentum, banks were out of the market and the demand from other institutional investors was scarce. The volume of business was extremely low. 3 per cent. 1986 Conversion Loan was stagnant at Rs. 71.05. 3 per cent. 1970-75 was on offer at Rs. 85.70 and 3 per cent. 1966-68 at Rs. 91.65. 3 per cent. 1964 was in demand and rose by 20 nP to Rs. 94.20. 3 per cent. 1963-65 gained 5 nP to Rs. 93.85. 3 per cent. 1959-61 and 1958 were well maintained at Rs. 99.10 and Rs. 99.75, respectively. 2½ per cent. 1961 was picked up 10 nP higher at Rs. 94.60. 3½ per cent. 1961 was unchanged at Rs. 99.65, 3½ per cent. 1964 at Rs. 97.75 and 3½ per cent. 1965 at Rs. 97.55. 3½ per cent. 1967 was on offer at Rs. 97.60 and 3¾ per cent. 1967 at Rs. 99.60. Among 4 per cent. State Loans, Madras 1967 gathered 10 nP to Rs. 97.50 and 1968 5 nP to Rs. 97.50. U.P. 1967 and 1968 gained 10 nP and 5 nP, respectively, to Rs. 97.50. Andhra 1967 was marked up by 5 nP to Rs. 97.20 and 1968 by 10 nP to Rs. 97.25.

In the foreign exchange section, the rupee held its ground in terms of the U.S. dollar, despite the further rise in sterling during the week. Banks were sellers of ready dollars at Rs. 475 per $100 and buyers at Rs. 471.75 per $100. In New York, sterling continued to gain strength, and spot sterling was knocking at the official ceiling of $2.82. The closing was done at $2.81¾-2.81⅞, as against $2.81⅝-2.81¾ a week ago. Three months' forward gained 1c. to $2.79½-2.79¾ and transferable sterling was marked up from 279.05-279.15 cents to 279.20-279.30 cents.

BASE METALS EASY

(From Our Own Correspondent)

CALCUTTA, *11th February*

In anticipation of relaxation of import control on essential raw materials in the next licensing period beginning from April, prices of base metals eased during the week under review. Market circles noted the Commerce and Industry Minister's satisfaction at the slowing down of the drain on foreign exchange, when he addressed the Import Advisory Council this week. Traders thought that Mr. Morarjee Desai's plea to manufacturers to find indigenous substitutes for 'imported raw materials' could not have also been directed at producers of metal products. For there could be no substitutes for metals, and India's production of metals is insignificant as compared to the needs. And without metals, there could be no development of industries. Traders hoped that the next import policy would make provision for more imports of metals.

Electrolytic copper fell to Rs. 164 from Rs. 169, despite existing shortage. Interest was limited and consumers were reluctant to enter into large commitments on expectations of more imports and a fall in price. However, stockists noted with satisfaction that, in both London and New York, a higher trend was in evidence. From Rs. 518, tin declined to Rs. 514. The rate thus touched the Bombay level. It would be remembered that, in view of the lower price in Bombay, mofussil orders which should have normally come to Calcutta were diverted to Bombay recently. Electrolytic zinc closed at Rs. 52.50, after opening at Rs. 54.50. Lead opened at Rs. 58.50 and, after easing to Rs. 57.50, recovered partially to Rs. 58. Demand was limited.

GOLD AT NEW HIGH LEVEL FOR PLAN PERIOD

(From Our Own Correspondent)

BOMBAY, *12th February*

The bullion market continued to present a bullish tone during the week under review, with both the metals recording further gains. Gold touched the highest level since July 1951. The scarcity of floating stocks, the good offtake in the ready section, and prospects of an expansion in demand after a month, when the marriage season would be in full swing, were all the main factors which inspired the bulls to dominate the market.

Silver continued to gain strength, despite the steady inflow of Tibetan coins during the week. In gold, there was good demand from Calcutta, Madras and several North Indian centres, where the price of the metal was higher than in Bombay. At higher levels, however, there was caution among buyers and they were inclined to book their profit. Consequently, the closing rates today of both the metals were below the week's best levels.

The increasing demand and the dwindling of stocks for the precious metals are indicated by the fact that the discount of Re. 1 at which ready silver was quoted below the March settlement early this month, was wiped out entirely during the past ten days. In gold, the premium of ready over forward widened from Re. 1-4 to Re. 1-10 on Saturday last, though it again narrowed a little to Re. 1-7 today.

Encouraged by these factors, the bulls began to dictate terms to the bears, as witness the fact that the carry forward charges in both the metals are in their favour. The charges in silver for transfer of business from March to April settlement, which were only As. 2 against the seller at the commencement of the April settlement last week, rose to As. 8 on Monday this week, before declining to As. 6 today. This is in contrast to the *budla* of Re. 1-2 which the bulls had to pay at the end of the February settlement. In gold, the *budla* charges, which were against sellers throughout the last settlement (at the end of which they had to pay as much as Re. 1-2), continued to be against them in this settlement also at As. 9.

Silver forward delivery (March settlement) improved from Rs. 188-13 to Rs. 189-10 on Monday. At the higher level, profit-taking ensued and the rate declined to Rs. 188-11 today. Just at the close, there was again a recovery to Rs. 189-5. The April settlement closed at Rs. 188-15, after moving up from Rs. 188-10 to Rs. 189-1.

Ready silver advanced from Rs. 188-5 to Rs. 189-9, but shaded off to Rs. 189-5 at the close. The floating stocks of silver are estimated at 1,000 bars. The daily average arrivals were 15 bars, while the offtake was of the order of 25 bars.

Forward gold (March settlement) gained from Rs. 111-1 to Rs. 112-11 before closing at Rs. 112-7. The April settlement moved up from Rs. 111-10 to Rs. 111-14.

Ready gold gained over the week Re. 1-5 to Rs. 113-14; the highest level touched during the week was Rs. 114-3. The floating stocks of gold are reported to be 10,000 tolas. The daily average arrivals were 4,000 tolas and the offtake was of the same order.

In New York, silver price was unchanged at 88⅛c, while in London, there was a rise of ¼d. The spot metal improved from 76¼d. to 76¼d. and the forward from 75¾d. to 76d. Gold was, however, marked down to 248s. 10¾d., after an initial rise from 249s. ¾d. to 249s. 2¼d.

The following comparative table shows at a glance the trend of the market during the week under review:

	12-2-58	Highest	Lowest	5-2-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

LINSEED RECEDES

(Messrs. A. Bradley and Co.)

CALCUTTA, *10th February*

Linseed and linseed oil prices declined sharply towards the middle of the week to Rs. 21 and Rs. 49-8, respectively. There was, of course, a slight all-round improvement subsequently, but the closing prices were still lower than those prevailing a week ago. Local demand was poor and there was lack of crushing parity. Exporters who were vainly offering linseed oil to the U.K. at £106 per ton earlier in the week later refused buyers' bids at £107.

The latest available quotation for February-March is Rs. 21-6 per maund.

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, *12th February*

The cotton futures market ruled bearish during the major part of the week under review. The release of 50,000 bales of Bengal *Deshi* for export, announced late on Wednesday last, failed to inspire enthusiasm among operators. This was due to the utter disappointment over the Government's refusal to allow export of cotton of staping 1" and below. At the meeting of the Export Advisory Council on Sunday, the Union Minister for Commerce and Industry categorically declared that no more cotton would be allowed for export. The mounting volume of new crop arrivals with the consequent drop in spot values and the reports of accumulations of cloth stocks after the recent brisk offtake also imparted weakness to the market. All these factors let loose a wave of selling and cotton futures values suffered a sharp recession. Yesterday, there was recovery induced by heavy short-covering which gathered further momentum today. Nevertheless, the closing rates stood lower than those at the end of last week.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 685, as against the previous close of Rs. 687.50, and succumbed to heavy selling which took the quotation down to Rs. 671.75 on Monday. The contract recovered to Rs. 674.75 yesterday. Opening today's session at Rs. 674, it spurted to Rs. 683.50 and closed at that rate. The net loss over the week was Rs. 4. I.C.C. Moglai Jarilla (May 1958) commenced the week Re. 1.75 lower at Rs. 681.50. Heavy selling depressed the quotation to Rs. 667.25 on Monday. The contract recovered to Rs. 670.50 yesterday and further to Rs. 676.50 today. The net loss over the week was Rs. 6.75.

The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	12-2-58	*High*	*Low*	5-2-58
I.C.C. Moglai Jarilla (March 1958) ...	683.50	685	671.75	687.50
I.C.C. Moglai Jarilla (May 1958) ...	676.50	681.50	667.25	683.25

Futures trading in cotton was resumed at Akola under the auspices of the Madhya Pradesh Commercial Exchange Ltd. with effect from Monday. The trading contract is styled as the Berar Cotton Contract with Fine M.G. Berar Jarilla, 23/32" as the basis. Important varieties of cotton grown in that region, namely, Cambodia, Buri-American, Parbhani American and Gaorani 6 and 12 are tenderable against the contract. Traders in Bombay have welcomed the new market.

Thanks to slackness in demand in the wake of heavy arrivals, the spot market ruled easy. Mill buying of domestic styles was on a very restricted scale, as they were following a hand-to-mouth policy, in view of budget uncertainty. Business was confined mostly to quality lots of Khandesh, Vijay, Laxmi Co 2 and other popular varieties.

Despite the release of export quota for Bengal *Deshi*, exportable varieties were neglected. Prices of Bengals, Wagad, Kala, etc. suffered a setback, reflecting poor export demand. Although foreign interest is subdued at present, a section of the trade believes that the whole quantity released for export can be disposed of before the end of June. It is said that Japan and France may announce sterling allocation for cotton imports and hopes are expressed that these two countries would lift substantial quantities of Indian cotton.

There was practically no activity in the foreign section. The trade is anxiously awaiting the announcement of cotton import policy. An Egyptian cotton trade delegation is currently in the city negotiating with the interests concerned about the sale of Egyptian cotton. The negotiations are expected to result in some agreement. A final decision in the matter will, of course, be taken only after the delegation discusses the question with representatives of the Central Government at New Delhi.

The following are the latest available quotations —in rupees per candy of 784 lbs.—from Sewri, the figures in brackets, being last week's closing rates:

Bengal *Deshi* 610 (625); Berar Jarilla 790 (800); Khandesh 815 (830); Oomra *Deshi* 630 (680); Vijay 925 (925); Hubli Laxmi 1,030 (1,020); Jayadhar 780 (780). *Delivery Contracts*: Vijay 900 (910); Bengal 570 (568).

The Karachi cotton futures market ruled fully steady during the week under review. Although there were sustained mill buying and good export enquiries, prices did not register any perceptible rise. This was due to reports that export of cotton from Pakistan so far had been lower by 200,000 bales, as compared with the corresponding period of the previous season. N.T.R.G. March improved from Rs. 74-8 last week-end to Rs. 74-12. May position was firm at Rs. 75-2. Spot values were maintained at more or less last week's levels. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 70; Punjab *Deshi* 67-8; 4F Punjab Roller 76-12; S.G. 82-4; L.S.S. Punjab Roller 79; S.G. 83-12; N.T. Roller 79-12; S.G. 87-12; 289F Punjab Roller 85; S.G. 95.

In contrast to the easy trend noted last week, the Alexandria cotton futures market depicted a firm trend during the week. The firmness was aided by hopes that the Egyptian trade delegation to India would succeed in concluding an agreement for sale of cotton. Buying support ensued as a consequence and prices moved up. There would have been a marked rise in prices but for lack of spinner interest and speculative sales made by stockists. The total exports of Egyptian cotton from the beginning of the season till 15th January aggregated 417,436 bales (of 720 lbs.), as against 310,632 bales in the same period last season. Actual shipments

till 29th January last were of the order of 279,474 bales, as compared with 209,185 bales a year before.

The latest available quotations—in tallaris per lb.—from Alexandria are given below, the figures in brackets being last week's closings:

Karnak: March 81.55 (78.70 ; May 82.15 (79.65). *Ashmouni*: February 68.60 (67.15); April 68.45 (67.65).

Cheerful conditions prevailed in the Liverpool cotton futures market during the week. The rise in support price for the 1958 crop, announced by the U.S. Department of Agriculture having induced good trade and Commission House buying and there was an increase in the prices of both American and American type contracts. Sudan contracts also evoked good support and values were marked up. The latest available quotations—in pence per lb.—from Liverpool are:

American cotton one inch staple contract: March-April 25.40; May-June 25.30; July-August 25.63. *American cotton mixed growth contract*: March-April 26.40; May-June 26.63; July-August 26.90. *Sudan*: May-June 32.90; July-August 33.00; September-October 33.25.

Cotton futures values at New York were maintained during the week. The price supports, for the 1958 crop has been raised to 81 per cent. of parity, as compared with 78 per cent. for the 1957 crop. The upward revision touched off a wave of buying which led to a hardening of rates. Yesterday, however, the market turned easy and values staged a retreat.

The Commodity Credit Corporation announced last week sales of 20,120 bales of cotton under the programme for unrestricted use. The total sales made thus far under that pogramme are understood to be 1,789,735 bales, of which 1,534,692 bales were sold since 1st August 1957.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	11-2-58	4-2-58	28-1-58
Spot	35.95	36.15	36.15
March	35.02	35.11	34.78
May	35.20	35.25	34.97
July	35.35	35.22	34.78

SUGAR RISES FURTHER

(From Our Own Correspondents)

BOMBAY, 12*th February*

The sugar market continued to present a firm trend during the week under review and there was a further rise in prices. Demand from Southern India, as well as from the mofussil areas, was quite encouraging, while arrivals of sugar into the market were small. The arrivals aggregated about 14,758 bags, as against 16,200 bags in the previous week and 23,600 bags two weeks before.

Small grain sugar advanced from Rs. 105 to Rs. 105½-Rs. 106 per bag, including the additional Central excise duty. Medium grain rose by As. 8 to Rs. 106¼-Rs. 107¼. Large grain was fully maintained at Rs. 109-Rs. 113.

The total production of sugar during the first 2½ months of the current season (from 1st November 1957 to 15th January 1958) amounted to 702,000 tons, as against 621,000 tons in the corresponding period of the previous season. The total offtake, including the quantities despatched for exports, was 372,000 tons and stocks with mills as on 15th January were 761,000 tons.

* * * *

HAPUR, 10*th February*

Sugar prices tended to go up towards the weekend, following good demand from consuming centres. The sugar export policy has not yet been announced by the Government. The trade and industry are keenly awaiting the same. Crushing in sugar mills is in full swing in west U.P. factories, as cane supplies are adequate.

Ready mill delivery sugar prices advanced by 19 nP to 25 nP per maund in the Muzaffarnagar market during the past week, as good business was done for Punjab, Delhi, Gujerat, Saurashtra and the south. Sufficient quantity had been sold by the factories out of the recently released quota of 155,000 tons for open sale.

The latest mill-delivery prices per maund are: Meerut (D-28) Rs. 35; Modinager (B-29) Rs. 36.50; Simbhauli (E-29) Rs. 35.37; Mansurpur (B-29) Rs. 37.62; Shamli (B-29) Rs. 37; Daurala (B-29) Rs. 36.81; Mawana (B-29) Rs. 37.12; Amroha (D-29) Rs. 34.62; Bijnore (E-29) Rs. 34.44.

Good demand from Madras side accounted for a rise of 25 nP in sugar prices at Kanpur during the week. Some factories had already disposed of their quota and demand from Saurashtra side was keen. The undertone was fully steady. The latest prevailing ex-mill delivery prices are: Maholi (AA-29) Rs. 37.25; Hardoi (AA-29) Rs. 37.50; Hardoi (A-29) Rs. 36.37; Motipur (B-29) Rs. 35.75; Rohtas (C-29) Rs. 36.50; Hargaon (D-28) Rs. 34.75; Kashipur (E-29) Rs. 34.37; Hargaon (E-29) Rs. 34.44.

There was a marked decline in *khandsari* arrivals during the week and prices moved up further and were now quoted up to Rs. 32 per maund.

Despite loading restrictions to Punjab and Gujerat sides, the two main consuming centres, ready *gur* improved fractionally during the week, due to stockists' support and in line with the appreciable advance in forward prices. Local arrivals averaged 3,000 maunds and stock was put at about 80,000 maunds. Forward delivery purchasers was keen to take delivery and sellers were building up stocks for such delivery. *Gur* was reaching here from outside for storage. Prevailing prices are: *Pansera* Rs. 12 to Rs. 12.12 and *balti* Rs. 12.19 per maund.

Gur prices also improved in the Muzaffarnagar market where daily arrivals averaged 5,000 maunds. The latest prevailing prices there were: *Chaku minja* Rs. 14.50 to Rs. 15.25; *khurpa risket* Rs. 7.50 to Rs. 8.50; *shakker dara* Rs. 14.50 to Rs. 15.50; *masala* Rs. 16.50 to Rs. 18; *khandsari* Rs. 24 to Rs. 32.25.

Futures *gur* recorded a strident advance during the week on continued bull support. The latest quotations were near the best levels of the week. *Fagun* and *baisakh* deliveries opened at Rs. 11.69 and Rs. 12.31 on Monday last and were quoted today at Rs. 12.25 and Rs. 12.94, respectively.

RAYON YARN STEADY

(From Our Own Correspondent)

BOMBAY, 12*th February*

Rayon and staple fibre yarns ruled steady during the week under review, while cotton yarns continued to encounter selling. There was good demand for rayon yarns from consuming centres, thanks to increasing offtake in rayon fabrics at higher prices. It was stated that the replacement of sales tax on cloth by an additional Central excise duty, the commencement of the marriage season and the declining demand for nylon textiles had led to enlarged buying of rayon fabrics by local and upcountry dealers. In sympathy with rayon yarns and on hopes of better offtake during the marriage season, staple fibre yarns also tended to look up. Even reports of the recent large sales by South Indian mills to Punjab and Calcutta markets at reduced prices did not have any effect on the market. Cotton yarns, as already said, ruled easy. Overseas enquiries continued to be at a low ebb, as there was persistent keen competition from Pakistan, China, Italy and France. There were also reports that several spinning mills were inclined to dispose of their stocks of yarn to handloom and powerloom factories at concessional rates.

Snia rayon yarn (120 dull cones) February delivery evoked good buying support and improved by Rs. 4 to Rs. 923. No transactions were put through in the April delivery this week also. In the spot section, National Rayons 150 bright cones first grade firmed up by 23 nP to Rs. 4.31. 120 bright cones first grade spurted by 18 nP to Rs. 4.81. Among foreign yarns, 120 Italy was fully steady at Rs. 5.25. 150 Italy, however, receded by 12 nP to Rs. 5.16. 120 Japan eased by 4 nP to Rs. 5.27. 150 Japan lost a naya paisa to Rs. 5.05.

Staple fibre yarns (40×2) February delivery attracted good attention of operators and rallied Rs. 10 to Rs. 569. April delivery advanced by Rs. 9 to Rs. 580. Spot (40×2) New Greats gained 5 nP to Rs. 3. Kohinoors gathered 3 nP to Rs. 3.25. Citys were better by a naya paisa at Rs. 3.14. Centurys were firm at Rs. 3.12. Foreign yarns, however, came in for selling. Paramounts declined by 9 nP to Rs. 6.60. Fujis lost 4 nP to Rs. 6.56.

In the cotton yarn section, ten counts were dull, Podars being quoted at Rs. 14 and Moderns at Rs. 14.50. Among twenty counts, Moderns were neglected at Rs. 17.50. Thirty counts Indus receded by 25 nP to Rs. 20.50. Among forty counts, Minaxis and Moderns shed 25 nP each, the former to Rs. 24.25 and the latter to Rs. 24.75. Gokaks were quiet at Rs. 24.50. Sixty counts Moderns dropped 50 nP to Rs. 59.50. Finlays declined by 75 nP to Rs. 59.25. Raghuvamshis were lower by 25 nP at Rs. 52.25. Among eighty counts, Moderns decreased by 20 nP to Rs. 71. Mahendras and Finlays were dull at Rs. 69.50 and Rs. 75, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	12-2-1958	5-2-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia February	923.00	919.00
120 Japan (per lb.)	5.27	5.31
150 Japan (per lb.)	5.05	5.06
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.16	5.28
Staple fibre yarn (per case of 200 lbs.)—		
40×2 February	569.00	559.00
40×2 April	580.00	571.00
40×2 New Great (per lb.)	3.00	2.95
40×2 Century (per lb.)	3.12	3.12
40×2 City (per lb.)	3.14	3.13
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.00	14.00
20s Gokak	—	17.62
30s Indu	20.50	20.75
40s Minaxi	24.25	24.50
60s Raghuvamshi	52.25	52.50
80s Modern™..	71.00	71.20

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 12*th February*

The bearish trend noted in the oilseeds market in the past three weeks abated during the week under review. In fact, the market put on a distinctly cheerful appearance. The categorical rejection of the plea for permitting exports of groundnut oil and H.P.S. groundnut by the Union Commerce and Industry Minister at this week's meeting of the Export Advisory Council has no doubt greatly disappointed traders. But there has not been any drop in prices. On the contrary, groundnut and groundnut oil prices have gone up. For there have been better buying enquiries for groundnut from crushers, thanks to increasing offtake in oil by *vanaspati* producers. Firmness of groundnut oilcake (expeller variety) following the release of 20,000 tons for export, the upward trend in sarson prices at Agra and encouraging advices from terminal markets in producing areas have also imparted much strength to the groundnut section. Castorseeds have been ruling firm, under the impetus of revival of rumours regarding cut in export duty on castor oil, good prospects of enlarged export business with the U.K. and the East European countries, and reports of small new crop arrivals in Hyderabad, the main producing centre. Linseed, too, is being well supported. Hopes are expressed that exports of linseed oil will be quite substantial in the coming months; the hopes are based on the reported decline in linseed production in the U.S. and Canada. Recently, some quantities of linseed oil—estimated at 200 to 300 tons—were reported sold to the U.K. at about Rs. 1,407 per ton. In sympathy with the general trend, cottonseed, kardi seed and niger seed ruled firm. The weakness of raw cotton during the major part of the week has had no effect on prices of cottonseed.

The Government of India has released, as already stated, 20,000 tons of groundnut oilcake (expeller variety) for export by established exporters who exported during any one of the three calendar years 1955, 1956 or 1957, on the basis of their past exports. The established shippers are asked to submit documentary evidence of their past exports immediately to the port licensing officers who will be issuing a trade notice in this behalf. The decision has been widely welcomed by traders and the price of groundnut oilcake has risen by over Rs. 10 to Rs. 242 per ton. The currently ruling price in the U.K. and Continental markets is reported to be about Rs. 363 per ton (c.i.f.).

Groundnut February contract met with excellent buying support and climbed up from Rs. 152.62 to Rs. 155. May position spurted by Re. 1.49 to Rs. 155.86. Bold ready strengthened by 37 nP to Rs. 30.87, Coromandel by 25 nP to Rs. 31.12 and Khandesh quality by 12 nP to Rs. 31.12. Groundnut oil ex-mill rallied 37 nP to Rs. 17. Railway receipt hardened by 25 nP to Rs. 17.12.

Castorseeds May 1958 contract advanced from Rs. 137.87 last week-end to Rs. 138.87 on the 8th inst. and, after remaining firm at Rs. 138.62 on the 10th and 11th inst., receded to Rs. 138.12 today. Ready Madras gathered 25 nP to Rs. 28.25. Kanpur rose from Rs. 26.25 to Rs. 28.87 before finishing at Rs. 26.50. Castor oil B.S.S. improved by 25 nP to Rs. 16. Commercial quality put on 19 nP to Rs. 14.31.

Linseed May contract evoked good enquiries and moved up from Rs. 28.81 to Rs. 29.37. Bold ready increased from Rs. 28.25 to Rs. 28.69 before closing at Rs. 28.62. February-March was done at Rs. 28.87, as against Rs. 28.25 last week-end. Linseed oil was well supported, the quotation rising from Rs. 15.56 to Rs. 15.62.

Cottonseed February contract attracted excellent attention of operators and climbed up by Rs. 2 to Rs. 97 before finishing at Rs. 96.25. May contract advanced from Rs. 95 to Rs. 97.50 today; towards the close, however, it was easy at Rs. 96.75.

Niger seed Madras recorded a gain of 25 nP to Rs. 26.50. Kardi seed bold ready was firm at Rs. 17.25.

Exports (in tons) of different oils from Bombay during the period from 1st January to 7th February were: Groundnut oil 104; linseed oil 2,921; castor oil 803; kardi oil 10; rape and mustard oil 3; niger oil 15; cottonseed oil 1,402.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	12-2-1958	5-2-1958	29-1-1958
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	155.00	152.62	153.25
May 1958	155.86	154.37	154.50
Bold ready (per cwt.) ..	30.87	30.50	30.75
Khandesh quality ..	31.12	31.00	31.50
Linseed—			
May 1958	29.37	28.81	29.75
Bold ready (per cwt.) ..	28.62	28.25	29.37
Castorseed—			
May 1958	138.12	137.87	137.00
Madras (per cwt.) ..	28.25	28.00	27.37
Cottonseed—			
February 1958	96.25	94.25	94.75
May 1958	96.75	95.00	95.25
Groundnut oil *			
Ex-mill ready (per quarter) ..	17.12	16.75	17.00
Castor oil †			
Commercial (per quarter)	14.31	14.12	14.00
Linseed oil †			
Ready	15.62	15.56	16.31

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

BLACK PEPPER ADVANCES

(Messrs. Parekh and Co.)

BOMBAY, 12*th February*

Malabar black pepper moved up further under the leadership of forward at Cochin which spurted from Rs. 86 to Rs. 87½ for February and from Rs. 87½ to Rs. 88¾ for March delivery. Ready garbled improved from Rs. 83¾ to Rs. 85½, thanks to buying by exporters who came in to cover their former sales when they saw that the market was developing a steadier undertone.

London was reported to have purchased at 177s., while New York raised its buying indication by about ¼ cent. Dealers there were buyers for February at $0.21¾. They were, however, unwilling to follow through the improvement.

Singapore improved to Str.$63, as arrivals from Sarawak proved lighter. Presently, Lampong was reported to be dominating Singapore, as the stock of Lampong and Muntok was comfortable.

Alleppey improved to Rs. 487½, while Calicut was down to Rs. 485. Arrivals at Cochin and Alleppey were light, while they were rather heavy in North Malabar. As a consequence, the quotations in Tellicherry area were comparatively cheaper. Most of the daily arrivals were absorbed. Floating stock in the hands of commission houses, therefore, remained almost the same as last week.

Future of Malabar black depended upon the attitude of New York buyers. Political news from Sumatra and the Middle East were all discounted.

In the A.S.T.A. section, April was quoted at $0.22, and April-May-June at $0.22¼. These prices were nominal, as they remained untested.

In the delivery section, prices improved to Rs. 472 for March and to Rs. 478 for April delivery.

Today's nominal quotations are: Ready Rs. 68 per Bengal maund; March Rs. 472-Rs. 477 and April Rs. 478-Rs. 483 per candy of 5½ cwts.

QUALITY TEA IN DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 6*th February*

Offerings in Sale No. 4, which was held on Tuesday, 4th February, amounted to 1,350,000 lbs. Quality continued to show improvement and there were some attractive high grown teas on offer. The sale opened quietly, but a good, although irregular, demand developed. Most types were dearer, following quality, but good medium teas occasionally sold below last rates. High grown brokens and whole leaf grades sold well, but high grown fannings were again a weak feature and often proved difficult of sale. Tippy teas were well supported, but whole leaf grades of below best quality were easier to buy. The following are the quotations:—

	1958
	Rs.
Plain B.P.	1.45
Low medium	1.65 to 1.75
Medium	2.00 to 2.20
Good medium	2.30 to 2.50
Quality	2.80 to 5.20

The average price realised in Sale No. 4 was Rs. 2.30 per lb., as against Rs. 2.29 in the previous sale and Rs. 2.59 in the corresponding sale of 1957.

London Market: *Sale of 3rd February* 1958:—Fully firm with a dearer tendency, particularly at the bottom.

Sale of 4th February 1958:—Generally slightly easier tendency accentuated where quality down.

Colombo Market: Quality improving, but prices considerably lower. High and medium lowgrown barely steady. Off grades generally lower.

Calcutta Market: *Export*:—Good general demand. Bright liquoring strongest. Plain medium broken and fannings 2 to 4 nP lower. Whole leaf grades 5 to 10 nP lower. C.T.C. except best, 10 nP lower. Flavoury Darjeelings sold well.

Internal:—20,300 dusts. Fair demand. Orthodox up to 6 nP easier. Darjeelings easier. Best C.T.Cs 20 nP easier. Medium C.T.C. 10 nP easier. 3,300 internal leaf. Good general demand occasionally dearer.

Export Duty:—Government announce that the "price of tea" for purposes of determining export duty is Rs. 2.99, as compared with Rs. 3.02 the previous month. Export duty remains unchanged at 38 nP.

Export Quota:—No official announcement has yet been made with regard to a final release. The market has been quiet and small business has been done at 14¼ nP.

Forthcoming Auctions:—Sale No. 5 will be held on Tuesday, 18th February.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale 'D'*:—775,000 lbs. Good general demand at irregularly 10 to 15 nP lower all round."

EXPORT TEAS IMPROVE

(From Our Own Correspondent)

CALCUTTA, 11*th February*

That the declining level of tea exports is causing concern to the Government of India is known in the market. Speaking at the meeting of the Export Advisory Council on Sunday last, Mr. Morarjee Desai, the Commerce and Industry Minister, said that earnings from tea exports in 1957, when final figures were available, would be much below 1956's earnings of Rs. 143 crores. The reasons he attributed for this were the lower world prices and the decline in the quantity exported. That India is unable to compete in foreign markets is widely known. Even at the present low prices of Indian tea, gardens are not making a reasonable profit, and producers of common teas have been continually representing that if relief is not afforded by way of reduction in taxes and the abolition of export duty, they would be compelled to close down.

The tea industry has been representing for long for relief in taxes. So far, these representations have fallen on deaf ears. The decline in exports is proof of the industry's apprehensions expressed a year ago that, if the Government of India did not come to the help of the industry, export earnings would fall and the position of the industry would be endangered. Labour charges are daily increasing, and the export duty levied has no relationship with current trends in the market.

The Commerce and Industry Minister said at the meeting of the Export Advisory Council that the position would improve with the forthcoming promulgation of the Tea (Distribution and Export Control) Order which would aim at the maintenance of supplies of good quality tea for export. The question asked in export trade circles is: Will the promulgation of this order alone produce wonders? Cannot the Government accord reasonable relief in taxation and abolish the export duty? If only some such practical steps are taken, the tea exports can improve; otherwise, foreign exchange earnings would continue to decline. When the subject comes up for discussion in Parliament, it is to be hoped that those representing industry there would put forth the present deplorable state of affairs in unmistakable terms.

During the internal sale held last week, dusts offered aggregated 20,302 chests and prices showed a declining trend. Among C.T.C. Assams, the best liquoring teas lost by 20 nP, and the brighter mediums by 10 nP. Orthodox teas from all districts eased by 6 nP, but the better liquoring kinds were about steady. The more fibrous plainer teas were irregular and easy. Darjeelings also shared the general market trend. The quotations were: best Assam C.T.C. Rs. 2.60 to Rs. 2.90, medium Assam C.T.C. Re. 1.70 to Re. 1.90, medium Assam grainy dust Re. 1.56 to Re. 1.58, and medium Dooars Re. 1.54.

Leaf on offer amounting to 3,390 chests met with a good general demand. Prices gained, with the green teas rising above valuations.

Offerings during yesterday's export sales amounted to 60,322 packages. There was an all-round improvement in demand with prices advancing. Quality of most offerings also showed an improvement. The more ordinary B.O.Ps were steady, and the brighter liquoring teas rose by 5 to 10 nP. The better medium O.Fs were pushed to rates far above valuations. The good black Dooars B.O.Ps rose by 4 to 6 nP, plain and medium B.Ps by 2 to 4 nP, and fannings by 4 to 6 nP. C.T.Cs were keenly competed for, but the poorer teas in this category lost 10 nP. The better medium teas tended to be dearer. Legg cut teas were unchanged, but the brighter liquoring lots rose steadily. Whole leaf grades met with competition. Darjeelings were fully steady, and such of the lots with flavour rose above valuations. The quotations were: best Assams C.T.C. fannings Rs. 2.50 to Rs. 2.70, best Assam C.T.C. B.P. Rs. 2.50 to Rs. 2.60, clean black pekoe Rs. 2.25 to Rs. 2.30, plain B.P. Re. 1.54 to Re. 1.56, plain fannings Re. 1.64 to Re. 1.68, medium B.P. Re. 1.60 to Re. 1.64, and medium fannings Re. 1 to Re. 1.76.

Export quota was steady at 16 nP.

SLUMP IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 11*th February*

During the week under review, there was heavy selling pressure on sacking goods, prices of which fell so markedly that operators seemed to have lost confidence in the future. There was no indication whatsoever that conditions would improve in the near future. Hessian was also affected, and American interest was very little. In fact, for some days it was conspicuous by its absence. It was reported that burlap stocks in the United States would be adequate to meet requirements up to the end of May. During the week, Russia called for tenders for hessian and hessian bags; this did not, however, change the market trend. As the Commerce and Industry Minister told the Export Advisory Council on Sunday last, Russian interest was on the wane. A few months ago, it was expected that Russia would lift substantial quantities. But this expectation has not yet come to pass. Unless the United Kingdom and West Germany, with whom, as Mr. Morarjee Desai said, India was running large trade deficits, allowed free flow of imports, expansion of exports was not possible. Another bear factor was the announcement of the stock position of jute goods as at the end of January. Although a rise in stocks had been anticipated and discounted, the rise was higher than earlier thought. The total of all goods, at 96,400 tons, was higher by as much as 21,400 tons compared to the figure at the end of December. The largest increase was recorded in sacking goods which, at 53,500 tons, were higher by 15,100 tons. Hessian rose by 4,500 tons to 29,700 tons and miscellaneous goods, at 13,200 tons, were higher by 1,800 tons.

As expected, gunny shipments in January were substantially lower in view of the labour troubles at the port. Sacking goods shipped amounted to 24,000 tons, as compared with 34,000 tons in December, and hessian to 23,000 tons, as against 28,000 tons. The market was still in the grip of the bad effects caused by the failure of a prominent operator to take delivery of his orders when they became due. During the week, however, he began to honour his commitments slowly, but weak holders were still nervous and continued to sell their stocks at whatever rates were offered. This selling pressure could not be absorbed by the market, and the price of sacking fell heavily. It was stated that the prominent operator, who had earlier failed to meet his commitments and caused a near-crisis in the market, was heavily committed in the forward positions. As to what would happen when the delivery period came cannot be guessed now. Moreover, Pakistani mills were offering keen competition in foreign markets in an attempt to reduce stocks.

Earlier in the week, some business was reported done with Russia in hessian and hessian bags. However, since this was for small quantities only, there was no effect on the market. Thus, ready hessian 40" 10 oz. remained unchanged at Rs. 39.80 on Tuesday last, while ready B. twills declined to Rs. 102.70 from Rs. 103.30. On the following day, prices were further affected in anticipation of an increase in stocks of goods. There was unloading by bulls, who attempted to reduce losses, and ready B. twills gave way to Rs. 101 and 40" 10 oz. hessian to Rs. 39.40. Small holders became nervous, and began to sell. Genuine business was also lacking. This was on Thursday when the representative constructions as above recorded a further loss at Rs. 100.30 and Rs. 39.05, respectively. At this stage, some business took place in hessian with overseas buyers, and this caused ready hessian 40" 10 oz. to recover to Rs. 39.15, but B. twills were unchanged at Rs. 100.30. At this stage, stock figures were released, and the steep increase in the sacking figure forced down the price of B. twills to Rs. 99.30 by the week-end. There was, however, a recovery to Rs. 100.12 yesterday. 40" 10 oz. hessian, which eased to Rs. 39.05 on Saturday, improved to Rs. 39.30 yesterday.

In accord with the slump in goods, raw jute prices also fell. Mills evinced little interest. The latest quotations for the different varieties of raw jute in the February-March delivery position are:

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 10*th February*

Trading in kips with the U.K. continued to be difficult. There was a gap of one to two pence between sellers and buyers. Arrivals were restricted and demand was brisk as a consequence. Top marks of cow hides and cow calf were in good request, and prices were a shade firmer than last week. There was good call for inferior grade cow hides for local trade.

Arrivals of tanned goat and sheep skins were small, and clearances slow, as buyers were not disposed to pay the pre-auction prices.

In the London tanned skins public sales, 80 per cent. of the goat skins offered were sold and 40 per cent. of sheep skins. Though the attendance was fair, the market for sheep skins was depressed with a very limited trade and prices recorded declines of 1*s.* to 2*s.* 6*d.* on December auction levels on all classes, except best parcels of semi primes which secured December prices.

Shipments during January 1958 were: To the U.K. 1,578 bales tanned cow hides, 127 tanned cow calf, 17 tanned buff hides, 193 tanned buff calf, 510 tanned goat, 585 tanned sheep skins; to the Continent: 4 bales tanned cow hides, 5 tanned cow calf, 5 tanned buff calf, 571 tanned goat, 171 tanned sheep skins; to the U.S.A.: 44 bales tanned buff calf, 32 tanned buff hides, 53 tanned goat skins; to Japan: 3 bales tanned goat and 60 bales tanned sheep skins.

KEEN DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, 10*th February*

Trading in the hides and skins market during the week under review was characterised by keen demand for all categories of goods. Wet salted buff was specially favoured at better prices. The main purchasers were the local tanners headed by Messrs. Cooper Allens. Both the Madras dealers and the country tanners were lukewarm: New arrivals, especially of goat and sheep, were considerable.

The latest available quotations are: Wet salted cow 1st grade Rs. 360, 2nd grade Rs. 340 and 3rd grade Rs. 260 per score; wet salted buff 1st grade 1 lb. 4 ozs. and 2nd grade 1 lb. 5 ozs. per rupee; goat 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade from Rs. 225 to Rs. 260 per 100 pieces.

FOODGRAINS QUITLY EASY

(From Our Own Correspondent)

HAPUR, 10*th February*

Quietly easy conditions were noted in the foodgrains market during the week. Although local stocks were fast dwindling, the trend of prices was bearish under the lead of coarse grains. Good crop prospect was the main easing factor. The credit squeeze by banks against foodgrains stocks also went a long way towards easing the supply position in the markets.

Wheat was mostly unchanged during the week, *dara* quality being quoted at Rs. 15.25 per maund and farm produce at Rs. 17. Local arrivals from producing areas continued to be scanty and stocks as a consequence ran down by one *khati* to 11 *khatties*, the corresponding figure last month being 20 *khatties* and a year back 48 *khatties*.

Rice recorded a slight fall during the week. The local supply position was reported to be satisfactory. The prevailing prices on Monday were: *Basmati* Rs. 27-Rs. 30; *mainpuri* Rs. 23.25; coarse Rs. 20 per maund.

An appreciable fall in gram prices in the Punjab influenced the local gram prices which eased fractionally. The local stock moved to east U.P. on State Government account to be sold as assistance to impoverished people there. The local gram stock was put at 20 *khatties*. Barley and *bejhar* continued to be depressed, due to slack demand, coupled with early good crop prospects. Maize and *bajra*, however, ruled *steady*. The latest prevailing prices (in rupees per maund) were: Gram 10 to 10.37; barley 8.75; *bejhar* 8.25; maize 10.94; *bajra* 11; *jowar* 8.75 to 10; *guwar* 11.25; oats 8.75; stocks (in *khatties*) were: Gram 20; maize 7; *jowar* 7; *bejhar* 12.

Despite good offtake aggregating 3 *khatties*, peas ruled depressed, thanks to good crop prospects and demand at only lower rates. It was reported that harvesting of early sown variety would begin shortly. *Arhar* continued to attract good demand at almost unchanged prices. Other pulses were quiet. The latest prices (in rupees per maund) were: Peas *dara* 8; farm 8.62; peas *dal* 9.25; *arhar* 10; *arhar dal* 12.87; *urd* 16.25 to 18; *moong* 15.75; *massoor* 13 to 14.25.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :— If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M.—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at Rs. 10½ on bonus shares, for the year 1955. • Including bonus.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K.—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each. For 1956 the dividend of Rs. 17·5 includes an interim dividend of Rs. 7·5 per share. In 1957 the shares of Rs. 200 each were sub-divided of Rs. 100 each. (k) Investments

MARKET GOSSIP

(*Concluded from page 255*)

seems to have necessitated vigorous efforts to step up exports.

In the past few seasons communist countries had been very substantial buyers of Egyptian cotton. Their technique of bulk purchases had given an artificial boost to the Alexandria market and Egyptian prices were consequently out of parity with those of comparable cotton. Egypt now seems to have been none too happy over purchases by communist countries, as the latter often resold cotton purchased from Egypt in European markets at prices below those quoted in Alexandria. It would also appear to be averse to bilateral trade arrangements and barter deals with communist countries. Egypt's traditional customers in the free world were not happy over its cotton sales policies. The practice of offering varying discounts to different buyers, according to the currency in which payments were made, caused dissatisfaction among those who had to pay higher prices.

Egypt is now anxious to regain its traditional customers and is willing to revert to normal business practices. India is a substantial buyer of Egyptian cotton and the latter occupies a prominent place in foreign cotton portfolio of Indian mills. During the first four months of the current season, that is, from 1st September to 31st December 1957, Indian mills consumed 25,537 bales (of 392 lbs.

VOL. XCVI. No. 2449 BOMBAY, 22nd FEBRUARY 1958 PRICE: Re. 1.50

MR. CHAGLA'S JUDGMENT CREDITABLE

THE Hon'ble Justice Mr. M. C. Chagla, assisted by Mr. Motilal C. Setalvad, the Attorney-General to the Government of India, has discharged the difficult task assigned to him creditably. His enquiry into the nature of investments made by the Life Insurance Corporation in the shares of six of the most important concerns belonging to Mr. Haridas Mundhra, who has now become a historical figure, is a complete success. In making this statement we are quite aware that it runs contrary to what seems to be a popular belief, namely, that Mr. Chagla has failed to discover the truth. But nowhere in his judgment, which runs into about 24 pages of closely stencilled foolscap sheets, do we find this admission by him. It is true that, at one stage when evidence was being taken and when the Attorney-General summed up his arguments, both Mr. Chagla and the Attorney-General had remarked that there were gaps in the evidence tendered by the witnesses, that there were some mysterious aspects to the transaction, and that they got the impression that some of the witnesses had not disclosed the full picture which they must have been aware of. Indeed, the Attorney-General had observed that the whole truth behind the package deal put through on 24th June 1957 had not come out. All this was at the time of enquiry, which is different from judgment. The two should not be confused. While remarks made when an enquiry is on may be of a casual nature, the judgment reflects the considered verdict of the judge. And it is the judgment that is important. On a careful study of Mr. Chagla's report, one will find that, on all the issues referred to him, his conclusions are clear and unqualified. It must be borne in mind, in this connection, that the terms of reference to him covered only a limited field and that the task assigned to him was that of a commission and not of a regular court. It must be further noted that this approach was chosen by the Government and not by Mr. Chagla. Accordingly, the right or wrong of the whole approach goes to the Government and not to the person constituting the Commission. We are glad that Prime Minister Nehru, who was very unwise in giving public expression to his unhappy reactions to the report of Mr. Chagla, has been candid enough to admit this point.

The first question which Mr. Chagla was called upon to decide was whether the L.I.C.'s purchases of shares of the Mundhra concerns were in accordance with normal business principles or practice. Mr. Chagla's verdict on this issue is a clear and unequivocal "no." The next question pertained to the propriety of the purchases. The answer to this question also is a straight one, namely, that it was not. In his report, the Judge has proved to the hilt that the investment was neither sound nor prudent, nor in accordance with business principles and that it was opposed to propriety on several grounds. He has also shown beyond doubt that the manner in which the investment was made was totally irregular, that the Chairman (Mr. G. R. Kamat) and the Managing Director (Mr. L. S. Vaidyanathan) of the L.I.C. had failed to exercise their power and judgment, that they did not take even the minimum precautions which they ought to have, and that they had meekly allowed themselves to be bossed over by Mr. H. M. Patel, the Principal Finance Secretary. Mr. Chagla has further shown that, for some ununderstandable reason, Mr. Patel took the initiative in putting through this deal with Mr. Mundhra, even though at that time he had ceased to be the Chairman of the L.I.C.

What was objectionable about this interference with the affairs of the L.I.C. was that it was unconstitutional. The Life Insurance Corporation Act provides a procedure which should be followed whenever the Government wants the Corporation to invest its funds in a particular fashion. This procedure was not followed by Mr. Patel when he "dictated" to the L.I.C. to buy the shares of Mundhra concerns. It is a moot point whether even Mr. T. T. Krishnamachari, the erstwhile Finance Minister, followed this procedure when he wanted the L.I.C. to buy "blue chips" with the two-fold objective of supporting the market and securing for the Corporation profitable outlets for its funds. If Mr. Kamat and/or Mr. Vaidyanathan had insisted upon the Finance Ministry giving written directives as a matter of Government's policy, they would have probably been less guilty than they are now, if not totally free from guilt. We are advisedly qualifying this remark, because there is now room for doubt, in the light of Mr. Chagla's observations, whether the Government has powers to give specific directives to the L.I.C. that it should go in for the shares of a particular company or a group of companies. Mr. Chagla's reading of Section 21 of the L.I.C. Act is that the "Government cannot direct the Corporation to buy shares of a particular concern or belonging to a particular individual and, therefore, Government could not ask the Corporation to buy these specific shares of Mundhra concerns."

Mr. Patel, too, would have escaped all the blame, had he obtained his Minister's consent in writing before proceeding to invest nearly a crore and a half rupees in the shares in question. And since he could not give any convincing explanation as to why he did not take this ordinary precaution, especially as he was making an extraordinarily risky investment, he too stands condemned. It is as clear as daylight that all these three officials have condemned themselves by committing a grave dereliction of duty. To say that Mr. Chagla has not brought out this point clearly is tantamount to admitting that one has not read his report properly or that having read it one wants to misrepresent what he has stated. It is, of course, true that Mr. Chagla has not awarded any penalty to those found guilty, but that was not the task assigned to him. It is for the Government to take appropriate steps. And it is heartening to be assured by the Prime Minister that the Government will follow up the findings of Mr. Chagla by a further enquiry to determine the type and degree of punishment that must be meted out to those who have risked the hard-earned money of the policyholders and misused the funds of a trustee institution. Until the outcome of this enquiry is known, one cannot say that Mr. T. T. Krishnamachari's responsibility in this matter is over. It is accordingly surprising that the Prime Minister should have said that, with the resignation of his post, Mr. Krishnamachari had paid his penalty and that that part of the chapter must be treated as closed. Can anyone confidently assert at this stage that the second round of enquiry, if conducted as truthfully as the first one, would not reveal that Mr. Krishnamachari's responsibility was something more than constitutional?

The third question to which Mr. Chagla was asked to find an answer was: Who was the person or persons responsible for the L.I.C.'s purchases? This was undoubtedly the most difficult of all the three questions, more so because the witnesses that appeared before Mr. Chagla were far from helpful to him in arriving at the truth directly. But some of them had said enough to enable him to spot where the responsibility lay. It was unquestionably clear that Mr. Kamat and Mr. Vaidyanathan only carried out the directives of the Finance Ministry, though it is a different issue whether they did so efficiently and in accordance with the procedure laid down under the provisions of the L.I.C. Act. So the issue boiled down to this: Whether Mr. Patel did the job on his own initiative and responsibility or with the concurrence of his Minister. The conclusion of Mr. Chagla is that Mr. Patel could not have acted on his own and that the erstwhile Finance Minister also was a party to it. After explaining at some length the reasons that brought him to this conclusion, Mr. Chagla unambiguously states: ". . . clearly, there is acquiescence on the part of the Minister in the part played by Mr. Patel in bringing about the transaction of 24th June" (when the package deal involving an investment of Rs. 1.24 crore was concluded with Mr. Mundhra).

On the issue of the Minister's constitutional responsibility also, Mr. Chagla has pronounced his verdict without mincing words. He avers that, constitutionally, the Minister is responsible for the actions of his subordinates. "In his case," to quote from Mr. Chagla's report, "Mr. Patel, who admittedly was acting as the Principal Secretary of the Minister, cannot be fastened with the responsibility of having effected this transaction in his own secretarial capacity. The Minister must fully and squarely accept the responsibility for what Mr. Patel did, and, if the transaction is improper and unjustified, although Mr. Patel may be actually responsible for the transaction, constitutionally the responsibility is that of the Minister." This is undoubtedly the correct position and, by accepting Mr. Krishnamachari's resignation, Mr. Nehru has upheld the best traditions of democracy, strengthened the foundations on which this country's liberal constitution rests and demonstrated to the world that India firmly believes in the democratic way of life. Indeed, Mr. Nehru has enhanced the prestige of the Congress Party by first ordering an enquiry into this episode and then by accepting all the main findings of the Chagla Commission, painful though they have been to him. Such acts of self-purification are absolutely necessary if a political party is to hold its own in a democratic society. They may be inconvenient and the initial cost may seem to be heavy. But it is worth all the trouble, for the ultimate gain will more than compensate the initial expenditure. In a case of this nature, the attitude of the leader of the Government should be: "No one is indispensable." But by publicly praising Mr. Krishnamachari and by making observations on his role in this unhappy deal which run counter to the findings of the Chagla Commission, Mr. Nehru seems to have overdone the display of his sense of loyalty, admiration and affection for his

colleague which might have been necessary to some extent on considerations of courtesy.

Mr. Krishnamachari's self-defence in the Lok Sabha was neither convincing nor dignified. His statement gives the impression that the Prime Minister should not have accepted his resignation, for he clearly differed from Mr. Chagla's views on the constitutional responsibility of the Minister. If that was his opinion, he should have had the courage of his conviction and refrained from resigning his post, leaving the choice to the Prime Minister and his other colleagues in the Cabinet. His plea that he was completely innocent does not cut ice, because all the circumstantial evidence is against him. He is not one of those Ministers who are unacquainted with business principles or practices. He has been a shrewd business man himself. He has also been keeping himself abreast of all the important developments in the business world. It is, therefore, hard to believe that he was not aware of the L.I.C.'s investment bungling about which the whole business world had been talking ever since it took place. So, even if he was not a party to it, he had sufficient time to find out what it was all about and to take suitable disciplinary action against the officials responsible for it. But the fact remains that, until the Lok Sabha forced his hands to institute an enquiry, he was stoutly defending the L.I.C.'s deal. Further, he took advantage of the technical loopholes in regard to short-notice questions to hide the deal from some of the inquisitive members of Parliament.

It has been proved beyond a shadow of doubt that the Reserve Bank, the State Bank, the Finance Ministry, and the Commerce and Industry Ministry were all aware of the questionable character of Mr. Mundhra. Mr. Krishnamachari himself seems to have known all about him. And yet no steps were taken by him to correct the mistakes made by the L.I.C. and his Principal Secretary, if mistakes they were. If the idea in making the investments in question was to save the companies concerned from the depredations of Mr. Mundhra, neither the Finance Ministry nor the L.I.C. took appropriate and timely steps to secure the control of these companies and to keep Mr. Mundhra out of them. On the contrary, Mr. Mundhra was allowed to remain in active charge of these concerns almost right up to the day when the deal came up for discussion in the Lok Sabha. The inaction of Mr. Krishnamachari till then and the laboured, varying and inconsistent explanations given by him from time to time do not bear out his claim that he was innocent or for the benefit of doubt. He squeals that the Commission was not fair to him and that he was not given enough opportunity to be heard. This type of argument on his part is the least convincing. What prevented him from making a clean breast of the whole thing to the Commission, from submitting to it a carefully prepared written statement, from requesting the Commission to give him another hearing or from appointing a counsel for himself at least the moment Mr. H. M. Patel chose Mr. K. M. Munshi to defend his interests?

The whole explanation of Mr. Krishnamachari in the Lok Sabha seems to be an afterthought to confuse the public and Parliament and to sidetrack their attention from the main issues and thereby save his skin. He must have by now noted that he has not succeeded in this attempt, for several Members of Parliament have exposed the hollowness of his contentions. Finally, if his plea of innocence is to be accepted, it will only mean that he was guilty of negligence and inefficiency in discharging his responsibilities as the Finance Minister. After all, the L.I.C. was his ward and, having thoroughly known all about the character of Mr. Mundhra, he ought to have firmly told Mr. Patel and the L.I.C., when the subject was broached to him, not to put a single *naye paisa* in the shares of any of the Mundhra concerns. Indeed, the more one thinks about this deal, the greater is the feeling that both Mr. Krishnamachari and Mr. Patel have sinned rather than been sinned against.

RAILWAY BUDGET

RAILWAY earnings continue to make good showing. Thanks to the increase in passenger and goods traffic, the revenue receipts maintain their upward trend. For 1958-59, according to the budget presented by the Union Minister for Railways, Mr. Jagjivan Ram, gross traffic receipts are placed at Rs. 407.48 crores, as against the revised estimate for 1957-58 of Rs. 384.40 crores. The revision of pay and allowances, together with increase in staff, accounts for an increase in ordinary working expenses which absorb Rs. 268.35 crores. After making the usual appropriation of Rs. 45.0 crores to the depreciation reserve fund and other charges, the net railway revenue is estimated to aggregate Rs. 76.92 crores, as against Rs. 65.90 crores (revised estimate) for 1957-58. The dividend for the general revenue is placed at Rs. 49.58 crores and the net surplus at Rs. 27.34 crores, as against the revised estimates of Rs. 44.24 crores and Rs. 21.66 crores, respectively.

The following table gives the actuals of revenue and expenditure for 1956-57, revised estimates for 1957-58 and the budget estimates for 1958-59:

(Rupees in crores)

	Actuals 1956-57	Revised Estimate 1957-58	Budget Estimate 1958-59
Gross Traffic Receipts ..	347.57	384.40	407.48
Ordinary Working Expenses	233.94	259.16	268.35
Net Miscellaneous Expenditure	9.92	14.01	16.99
Appropriation to Depreciation Reserve Fund ..	45.00	45.00	45.00
Payment to Worked Lines ..	0.33	0.33	0.22
Total	289.19	318.50	330.56
Net Railway Revenues ..	58.38	65.90	76.92
Dividend to General Revenues	38.16	44.24	49.58
Net Surplus	20.22	21.66	27.34

Clearly, heavier calls are being made on the Railways. During 1956-57, the first year of the second Five-year Plan, the total tonnage lifted was 124 million tons, as against 114 million tons in 1955-56 or an increase of 8.8 per cent. A further increase to the tune of 5.3 per cent. on the broad-gauge and 9.5 per cent. on the metre-gauge has taken place in the first nine months of 1957-58. This trend is bound to continue in 1958-59. With the expansion of steel industry, the increase in coal raisings and as a result of other factors, goods traffic is expected to move up by 9 per cent. over the 1957-58 level. This expectation is reflected in the estimate for goods earnings which are placed at Rs. 250.50 crores for 1958-59, as compared with Rs. 231.00 crores for 1957-58. Passenger earnings are also expected to advance from Rs. 120.90 crores in 1957-58 to Rs. 125.73 crores in 1958-59.

The Railways are in a happy position, in that they need not be apprehensive about any slackening in the demand for their services. But this is precisely a source of anxiety for the Administration as well as the business community. For both are anxious that the Railways should prove equal to the demand that is bound to be made on them. It is a pity that Mr. Jagjivan Ram, in his otherwise comprehensive speech, made no attempt at estimating the overall increase in traffic which is likely to develop and the Railways' ability to cope with it. It is true that the whole subject bristles with difficulties arising from statistical forecasting and the uncertainty about some of the development projects. Even so, considering how greatly the public is agitated over the continuing bottlenecks in transport and there is a widespread impression that the Railway Plan lacks clarity in respect of the overall outlay that the Administration may be expected to incur in the period of the second Plan, Mr. Jagjivan Ram might have devoted a part of his speech to an official clarification of the issues. Be that as it may, it is noteworthy that, as against the total allotment of Rs. 1,125 crores for the Railways under the second Five-year Plan, a sum of Rs. 179 crores was spent in the first year and Rs. 235 crores is expected to be spent in 1957-58. So far as 1958-59, the third year of the Plan, is concerned, the outlay has been placed at Rs. 260 crores. A major portion of this outlay will be absorbed by rolling stock (Rs. 87.95 crores), track renewals (Rs. 34.77 crores), traffic facilities (Rs. 63.37 crores), workshop (Rs. 14.62 crores) and electrification (Rs. 17.72 crores). A notable feature of the capital expenditure is the reliance on domestic sources of supply. For instance, out of the 255 locomotives to be procured in 1958-59, only 23 are to be obtained from abroad. Again, out of the rolling stock valued at Rs. 87.95 crores in the programme, no less than Rs. 60.17 crores are in respect of indigenous procurement. This has been made possible by the growth of domestic engineering industries. Mr. Jagjivan Ram estimated that 258 locomotives, 1,500 coaches and 16,800 wagons are likely to be produced in India during 1957-58, as compared with 234 locomotives, 1,236 coaches and 15,985 wagons in the previous year. He added: "The import of general service wagons was discontinued quite a long time ago and that of steam locomotives has also been stopped, except for a few required for the narrow-gauge lines. The development cell in the Board's office, working in collaboration with the development wing of the Commerce and Industry Ministry, is making continued progress towards development of further manufacturing capacity in the country."

Two factors have eased the difficult position of the Railways in relation to their development programme. In the first place, the loan from the World Bank has served to lessen the foreign exchange difficulties of the Railway Administration. The World Bank granted a loan of Rs. 42.84 crores which became effective from September 1957. It would appear that more than half of this amount has already been utilised and the balance is expected to be used up in the next few months. Apart from this loan, the Railways have received assistance from the Indo-American Technical Co-operation Programme and the Colombo Plan. Secondly, the shortages in critical raw materials, especially iron and steel, which developed last year, might have led to a slower tempo of development if the Railways had not taken prompt steps to augment supplies. The Railway Purchase Mission, which went abroad last year, was able to locate dependable sources of supply. The Mission entered into contracts for the supply of 530,000 tons of pig iron, steel track materials and wagon plates worth about Rs. 34 crores, deliveries against which are expected to be completed during 1958-59. Nevertheless, the Railway Administration should not relax its efforts at developing domestic sources of supply. At the same time, it should economise in the use of steel and other scarce materials, for which, according to some expert opinion, there is wide scope in the Railway development programme.

There need be no great jubilation over the absence of any proposal to raise fares and freights in the budget, considering that some, albeit limited, upward revision in freight will become inevitable when the Government implements the report of the Railway Freight Structure Enquiry Committee. It is a pity that, though the report was submitted to the Government over 10 months ago, the authorities have not yet announced their decision on the report. The Committee, on its part, must be congratulated on its having brought to bear on its complex task an essentially constructive attitude. Thus, while it has recognised that the Railways should have ample resources for their development, it has rightly insisted that all means of transport should be co-ordinated and that the "attitude that once prevailed among the Railway administrations of discouraging road traffic because of its competitive character, should be given up." It has further underlined the fact that, "at a time of shortage in railway capacity and expanding industrialisation, there may be the danger that the public sector, in its concern to achieve its targets, may utilise most of the railway capacity available and the private sector may suffer." Further, it has estimated that there will be a Rs. 300-crore gap between the revenue and expenditure of the Railways over the five years of the second Plan.

It is against this background that the Committee has formulated its suggestions for modification of the freight structure. The Committee has recommended a new pattern of legs for traffic both in smalls and in wagon-loads. It has suggested a regular and progressive increase through a percentage system of rates from the lowest class to the highest class to form an integrated scale of rates covering both class rates and wagon-load rates. The chief considerations which lie at the basis of the new scale of freights recommended by the Committee are:

"It should not bear too heavily on the long-distance traffic as compared with the burden on the short-lead traffic. It will be an all-inclusive one, enabling the abolition of the terminal and other charges. It should be so evolved as to cater for 'small' rates and wagon-load rates, suitably related to each other and with the existing disharmonies removed as far as possible. Lastly, the financial results of such a scale should be carefully considered and, to the extent possible, the gap of Rs. 300 crores may be bridged."

It is obviously conducive to the growth of trade and industry, on the one hand, and the expansion in the revenues of the Railways, on the other, that early decisions are reached on the Committee's report. Finally, the authorities should desist from imposing uniform supplementary charges on freights which, as the Committee has been at some pains to point out, is by no means a very satisfactory way of raising additional revenue, in that it restricts movement of goods and raises prices by increasing the cost of raw materials to the factories and of the transport of manufactured goods to consuming centres. A scientific and well-integrated freight structure is the primary need of an expanding economy.

BUDGET FEARS UPSET SHARE MARKET

NO "MAN-EATERS" IN PRIVATE SECTOR—WORLD OIL PRICES DECLINE

THURSDAY, 5 P.M.

THE share markets are having the usual pre-budget jitters. There has been a pronounced and all-round fall in the value of equities. The Tata Iron and Steel Company, Ltd., has received the Government's formal permission to capitalise the premium account and issue bonus shares in commemoration of its golden jubilee. This news had a steadying effect but only for a short while, because budget fears soon began to dominate the market. Hitherto, there was a complacent belief that there would be no increase in the burden of taxation this year, excepting for the introduction of a tax on gifts. But Mr. T. T. Krishnamachari's unwarranted attack on the private sector in the Lok Sabha on Tuesday by comparing it to a *man-eater* which has tasted blood has given rise to fresh misgivings amongst a section of operators. It took some time for market circles to understand the significance of this statement by the former Finance Minister. Mr. Krishnamachari was warning the Congress Party and the Government that the private sector was plotting for its downfall. In describing it as a man-eater which has tasted human blood, he was actually asking the Government not to give any quarter to it, if not to kill it before it is too late. Significantly enough, Mr. Nehru, who now holds the Finance portfolio, in addition to being the Prime Minister, instead of refuting his ex-colleague's insinuation against the private sector, seems to have taken the cue from him. For, while defending the nationalisation policy of the Government, he talked in a vein which gives the impression that he has been carried away by Mr. Krishnamachari. It is this realisation that has induced the operators to fear that the forthcoming budget will not contain any of the eagerly awaited relief to investors.

MARKET GOSSIP

Some are even apprehensive that fresh burdens may be imposed on investors, in addition to a gifts tax which is already discounted. This apprehension is based on a theory of human psychology. The theory is this: Mr. Krishnamachari has left the Government with bitterness and anger. It is human nature to give vent to this feeling by striking at somebody. There is little that he can do against the communists or his own party. He can wreck his vengeance only on the helpless private sector. He has already fired the first shot. Fortunately for him, the Prime Minister is a great admirer of his soak-the-rich fiscal policy. There are also reports that the budget for 1958-59, including the tax proposals, has already been prepared and that the budget which the Prime Minister will present eight days from now is T.T.K.'s budget. He must have already loaded it with enough ammunition to kill the "man-eater."

This theory sounds plausible, but it is to be hoped that it will not materialise. On calm reflection, the Prime Minister and his colleagues will doubtless realise that the private sector has an important part to play in the economic development of the country and that suitable conditions have to be created for attracting foreign capital and retaining such capital as is already here. They must not forget that one of the factors which have helped an adventurer like Mr. Mundhra to build up an industrial empire within a short period of five years was the Government's economic policy which has frightened a large section of foreign capital and induced it to flee from this country. They will do well to do some introspection now and think for themselves as to why foreign investors in such well-established concerns with a bright future as Jessops, Richardson Cruddas, B.I. Corporation, Angelo Bros. and Osler Electric Lamps decided to sell and get out. Even now a large number of foreign-owned concerns, especially plantations, are changing hands. It is stated that, between 1st July and 31st December 1957, four foreign-owned and/or controlled plantations, covering an acreage of about 2,500 in North East India, have gone into Indian hands. The point that we are trying to make here is that excessive taxation retards the growth of genuine *entrepreneurs* and gives room for adventurous types of business men to flourish.

Another point which the Central Government must bear in mind while framing the tax proposals is that taxation in India is already heavy and that Mr. Krishnamachari had given, according to some reliable reports, certain assurances when he was in the U.S., the U.K., and West Germany. These reports may or may not be true. We cannot vouch for their accuracy. But the authorities concerned with the budget must at least read the various speeches delivered by T.T.K. in the U.S. and draw up their proposals in keeping with the spirit of his statements.

* * * * *

Using a language which bears a strong family resemblance to the etymological extravagance of extremist political parties all over the world, Mr. Krishnamachari ended his speech in Parliament with a fling at the private sector which he termed the "man-eater," of which, he said, he was the "first victim." Since wrong phrases, like bad coins, have a tendency to circulate with astonishing rapidity, it is hardly surprising that the phrase has already found repeated echoes on the floor of the House. No one has stopped to think whether any, and if so what, gains have accrued to the private sector by the "Mundhra" affair. Surely, it cannot be contended that the private sector enjoys the spectacle of a ministerial resignation arising out of an opprobrious scandal. Nor can it be contended that this sector was in any way responsible for the scandal, or even for unearthing it effectively. It was a votary of the public sector who insisted upon a public enquiry. Mr. Krishnamachari's memory seems to have become shorter than the proverbially short public memory. The "man-eater" is nothing more than a figment of Mr. Krishnamachari's imagination. It certainly does not exist in the private sector. Indeed, a little reflection will convince him that the Congress, now turning pink, may find "man-eaters" enough, red in tooth and claw alike, in the ranks of the party whose colour it is imitating.

It was more uncharitable on the part of Mr. Krishnamachari to insinuate against the private sector in the manner he did. He might have resorted to this tactics in order to divert public attention from the serious charges levelled against him. But his complaint is a frivolous one. The loyalty of the private sector to the Congress Party is evident from the fact that it contributed liberally to the last election funds of this party. It did so not because it wanted to bribe the Congress Party, as the leftists baselessly allege, but because it was the only democratic party in the country that could form a stable government.

What is intriguing about the charge is that it ignores that, while the private sector might have its differences with the Government, it has never favoured excessive growth of bureaucracy which was the bane of the L.I.C. affair. After all, the Board of the L.I.C. did not consist of the best representatives of the private sector. The fact is that it was a board, as incompetent as it was powerless, directed by a bureaucracy which, as events have shown, was as powerful as it was unwise. But all this was part of the Government's studied indifference to the good advice that was given to it in the public interest which is best served by constituting boards with men of knowledge, integrity and experience for purposes of running public institutions. Even now, so far as the L.I.C. is concerned, it may not be too late to correct the mistake.

In any case, to blame the private sector for the whole bungling by the Administration or to allege that it derives some vicarious satisfaction through Government's mistakes which can only add strength to the anti-democratic elements in the country is to make too heavy a demand upon human credulity. A man who can believe that will believe anything.

* * * *

In a brief reference to the trend of sugar prices in India in these columns last week, we wondered why the prices were going up. One explanation offered by an esteemed reader is the additional Central excise duty of Rs. 6.62 per bag introduced on 14th December 1957 to replace the sales tax. But the increase in prices has been much more than this addition to the excise duty. It is so, at any rate so far as this part of India and Uttar Pradesh is concerned. Prices have been looking up even after the latest release of the monthly quota to the factories. Enquiries made in market circles reveal the existence of a strong belief that, in the forthcoming Central budget, the excise duty on sugar will be increased further, on the pretext that it is necessary in order to cover the loss that will be sustained on the proposed exports of sugar. If true, the increase in duty will have to be quite sharp indeed. Anyway, in anticipation of this burden, some speculators are alleged to have built up large stocks of sugar. This seems to be one of the reasons for the rise in sugar prices in recent days. Incidentally, the belief seems to have spread to the share market also, as witness the drop in the prices of sugar shares this week. Belapurs have lost Rs. 4.50, Walchandnagars Rs. 8.75 and Phaltans one rupee. The fear of the Bombay Government introducing a tax on agricultural incomes in its budget for 1958-59 has also been responsible for the fall in the value of these scrips.

* * * *

The National Council of Applied Economic Research at New Delhi, of which Dr. P. S. Lokanathan is the Director-General, has undertaken to do research on the managing agency system in India. The Council has already sent out two questionnaires to over 500 business houses and other interests. This study will be valuable for two reasons. First, Dr. Lokanathan himself is a specialist on this subject and, secondly, the future of the managing agency system will come up for review by the Government in 1960.

* * * *

Although some months have elapsed since the Government of India commenced discussions with the major oil marketing companies in the country on the question of making available petroleum products to consumers at reasonable prices, no final decision seems to have so far emerged. It will be recalled that, some time in February last year, the three foreign oil companies—Burmah-Shell, Stand-and-Vacuum and Caltex—sought the Government's permission to raise the prices of some petroleum products, following the steep advance in the f.o.b. costs and ocean freights, thanks to the Suez crisis.

TOWARDS A WORLD BANK

From Our Own Correspondent

LONDON, 15*th February*

LONDON LETTER

THE most interesting of this year's Bank speeches was made by the Chairman of Lloyds, Sir Oliver Franks, who concentrated entirely on the external problems of the sterling area. He pointed out that in every other year since 1947, except in the year 1953, there has been a sterling crisis. He thought it was no mere coincidence that 1953 should have been a year of recession in the U.K. and hence of deflation, while the year 1957, although marked by a very strong balance of payments, was a year of inflation. His conclusion was that the U.K. with its considerable international obligations was particularly vulnerable to the climate of world opinion regarding the international stability of sterling. In all this, the Chairman was not making any startling analysis but he then began considering the remedies for the awkward situation in which this country has been so commonly placed with a freedom which has not been seen among Bank Chairmen since the days of Mr. McKenna of the Midland Bank.

Two facts stand out. The first regarding the relationship of the U.K. with the sterling area shows that the U.K. fed into the sterling area over the 5½ years to mid-1957 £359 millions but on the other hand the rest of the sterling area added to its sterling balances no less than £289 millions. There is little in the internal relationships of the sterling area to act as a basic cause of weakness compared with the situation between the U.K. and non-sterling countries.

With non-sterling countries over the past 5½ years there was a drawing down of sterling balances by £372 millions and other capital payments of £304 millions. As a result of these large issues the total inflow of gold from the sterling area countries, £788 millions, resulted in a net addition to the gold stock over the whole period of only £16 millions! This figure is taken *before* the crisis of the late summer of last year. If a 6-year picture were taken the showing on gold account would have been worse still.

The purpose of this analysis by the Chairman of Lloyds was to defend the sterling area as a conveninent banking system for its members and to show up the weakness of the position of the U.K. in relation to the non-sterling world—in particular, the weakness of the size of the gold reserves in relation to the U.K.'s obligations. The point was made that whereas the world's greatest creditor countries, U.S.A. and Germany, held about one half of the world's gold reserves, the U.K., which finances about 40 per cent. of the world's trade, holds only 4 per cent. of the world's gold reserves. This was the problem recently analysed in detail by your correspondent in this column, but the Chairman of Lloyds' proposal for dealing with the problem can be summarised under three headings.

First, in order to avoid inflation in this country, the long-term level of interest rates should be maintained sufficiently high to discourage internal over-investment, while the short-term rate should be kept sufficiently low to discourage hot money from flowing in too indiscriminately and giving the country's rulers undue optimism!

Secondly, the creditor countries of the world had a particular responsibility if stable exchange rates were to be maintained. America had in recent years made substantial free issues to the world in terms of currency, but Germany in spite of several liberal acts was still pursuing policies appropriate to a country with negligible reserves. Either Germany had to lend far more than it was doing or it had to encourage expansionist policies internally, including higher wages, to even up its level of costs. If it failed to do these acts there would be nothing for it in due course but a revaluation of world currencies against the mark.

Lastly, the Chairman of Lloyds wanted to see the International Monetary Fund acting truly as a world bank; that is to say, a Bank whose own currency units would be accepted by all members as good as gold and a Bank empowered to lend in the same way as any domestic bank. The Bank of England for instance would then be permitted to raise credit with the I.M.F. to meet crises such as those of last year.

The so-called World Bank and the I.M.F. ought indeed to amalgamate, but if the I.M.F. as a Bank were to pursue the same policies as the present World Bank then there would be little hope of the new Bank being operated in the imaginative spirit necessary to cope with the special problems of the sterling area. It would, however, be a move in the right way.—*All Rights Reserved.*

DR. ERHARD'S VISIT POSTPONED

The West German Finance Minister, Dr. Erhard, who was to have visited this country early this month, is reported to have postponed the idea almost *sine die*. Apparently, he must have felt a little embarrassed at the predicament in which Mr. T. T. Krishnamachari and Mr. H. M. Patel were finding themselves ever since the L.I.C.-Mundhra deal brought them into the unsavoury limelight. It will be recalled that it was Mr. Krishnamachari who had invited Dr. Erhard to visit this country and the latter had readily agreed to do so.

SETBACK IN EQUITIES

NERVOUS SELLING TOWARDS CLOSE

(From Our Own Correspondents)

BOMBAY, *20th February*

A SUDDEN setback in equity prices since yesterday on heavy selling pressure was the main feature of the trading on the Stock Exchange during the week under review. There was a distinct change in sentiment, attributed to fears about the future of the private sector, following Mr. T. T. Krishnamachari's note of caution against the "very powerful sector" which was working against the Government policies, in his statement made in the Lok Sabha on Tuesday explaining his role in the Mundhra deal. This reference by the erstwhile Finance Minister was interpreted by the market as a hint that the Government's attitude towards the private sector would be more unhelpful. The market also interpreted bearishly the Prime Minister's remarks, in the course of his speech initiating the debate in the Lok Sabha on the Chagla Commission's report, regarding the Government policies in respect of the public sector. Making it clear that the Chagla enquiry had nothing to do with the broad principles or policies of the Government, Mr. Nehru remarked:

"It is not for such enquiries to criticise, commend or object to broad principles or policies which Parliament has laid down. There has been so much reference made in the Press and elsewhere about these broad policies, and an attempt made to run down these broad policies not only in regard to insurance but also generally in regard to the public sector. I feel it necessary to state quite clearly and positively that so far as the Government's policies are concerned in regard to increasing the public sector, they hold completely. There is not a shadow of doubt in our minds that these policies are right and should be pursued."

Fears were also entertained that the Budget might contain fresh taxation. The resulting decline in values brought them to the lowest levels for some weeks past.

Earlier in the week, trading was thin and undertone was a little quiet, due to the pre-budget caution. There was no inclination on the part of the operators to extend their commitments. The absence of any increase in fares or freights in the Railway Budget did not evoke any enthusiasm. The absence of any fresh tax proposals in the West Bengal and U.P. State Budgets to cover their Budget deficits of Rs. 1.76 crores and Rs. 4.54 crores, respectively, did not attract any attention, although fears were entertained in previous weeks that State Governments might introduce new tax measures to raise additional funds.

In the steel section, Tata Ordinaries moved narrowly early in the week between Rs. 170.25 and Rs. 171.75, but receded today to a low of Rs. 167.25. The closing was done at Rs. 167.50. The new shares suffered a loss of Rs. 2.25 at Rs. 163.75. Indian Irons gave way from Rs. 19.76 to Rs. 19.56 early in the week. After a recovery to Rs. 19.72 on Tuesday, the shares slumped to Rs. 19.20 today and closed at Rs. 19.24.

Textile shares suffered widespread losses. Depressing results of mills' working and the dim prospects of any relief in excise duty induced heavy selling in this section. Bombay Dyeings crept down from Rs. 50.60 to Rs. 49.90 before closing at Rs. 50. Centurys were marked down from Rs. 387 to Rs. 377, the lowest level for the year so far. Kohinoors shed no less than Rs. 7.50 at Rs. 257.50. Central Indias lost Re. 1 to Rs. 81 and Finlays Rs. 6 to Rs. 254. Gokaks declined by Re. 1.75 to Rs. 152.50, Indu Ordinaries by 36 nP to Rs. 8.88. Indore Malwas came under heavy pressure and lost Rs. 11.50 to Rs. 104.50. While Morarjee Mills were unchanged at Rs. 203, New Greats gave way from Rs. 218 to Rs. 213.50. Osmanshahis were lower by Rs. 5 at Rs. 46.50. Podars were placed at Rs. 141 *ex-div.*, as against Rs. 1.45 *cum-div.* a week ago. Shree Niwas Cottons were unchanged at Rs. 141, while Simplex Mills fell by Rs. 2.50 to Rs. 156. Standards declined by Rs. 9 to Rs. 390, Svadeshis by Rs. 4 to Rs. 162 and Tata Mills by Rs. 2.50 to Rs. 36.

A rise of Re. 1.50 to Rs. 106.50 in Barodas was a feature in an otherwise easy banks section. Central Banks dipped by 30 nP to Rs. 50.70 and their new shares by as much as Rs. 2.70 to Rs. 52.30. Bank of Indias were done Rs. 2 lower at Rs. 134 and United Commercials lost 50 nP to Rs. 59. Punjab Nationals were, however, better at Rs. 52.

In the insurance section, New Indias were quiet at Rs. 40. Orientals had business at Rs. 3,980.

Electricity shares were featureless. Ahmedabad Electrics were taken 20 nP higher at Rs. 95.20, while Bombay Suburbans were a shade quiet at Rs. 104 *ex-div.*, as against Rs. 106.75 *cum-div.* Surat Electrics were unchanged at Rs. 107.50, whereas Tata Hydros were picked up 75 nP higher at Rs. 114.75. Tata Powers lost Rs. 2.50 to Rs. 1,122.50 and Andhra Valleys Rs. 5 to Rs. 1,080.

Sugar shares moved in line with the general trend of the market. Belapurs were marked down from Rs. 236.50 to Rs. 232. Bhopals shed 24 nP to Rs. 20.76. Phaltans had business Re. 1 lower at Rs. 145.25. Walchandnagars declined by no less than Rs. 8.75 to Rs. 266.25. Cement shares were quiet. Associated Cements were done at Rs. 143 *ex-div.* and on a *cum-div.* basis the shares showed a loss of Re. 1.75. The new shares were unchanged at Rs. 138.50. Digvijays were steady at Rs. 137, but Orissa Cements lost 12 nP to Rs. 12.44. Ashoka Cements fell by 20 nP to Rs. 8.40. Dalmias by 24 nP to Rs. 10 and Jaipur Udyogs by 24 nP to Rs. 11.36.

Engineering and mining shares shared the general recession in prices. Alcocks dropped by Rs. 5 to Rs. 211.25 and Tata Locomotives by Rs. 2.50 to Rs. 137.50. Premier Constructions shed on balance Rs. 3.25 to Rs. 155.75. Larsen and Toubros were a shade better at Rs. 12.68. Shivrajpurs moved down by Re. 1.50 to Rs. 90. Indian Coppers were quiet at Rs. 2.80. Among shippings, Scindias improved from Rs. 17.32 to Rs. 17.52 before giving way to Rs. 17.32. Great Easterns were a shade lower at Rs. 19.68. Automobile shares were easy, Hindustan Motors shedding 12 nP to Rs. 5.92 and Premier Automobiles dropping Re. 1.50 to Rs. 83.50.

In the miscellaneous group, Bombay Burmahs (old) were marked down from Rs. 537.50 to Rs. 523 and their new shares from Rs. 200 to Rs. 198.75. National Rayons kept a steady front in the earlier half of the week, gaining from Rs. 217 to Rs. 218.75, but in the face of the general setback this improvement could not be sustained and the shares gave way to Rs. 215. Gwalior Rayons lost 20 nP to Rs. 11.36. Tata Chemicals dropped 28 nP to Rs. 12.40 and Hindustan Levers 12 nP to Rs. 19.40. Tata Oils were lower by 50 nP at Rs. 35.75 and Killick Industries by Re. 1.25 at Rs. 152.75. W. H. Bradys changed hands Rs. 8.75 higher at Rs. 283.75. Wimcos were steady at Rs. 170.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, *19th February*

Barring some activity in the speculative counters earlier in the week under review, trading on the Calcutta Stock Exchange was a dull and drab affair. The taking over of the Finance portfolio by Mr. Nehru from Mr. Krishnamachari, whose resignation was accepted on Thursday last, only increased the Budget anxieties in the market. Although it was believed that the Budget had almost been shaped by the former Finance Minister, judging from Mr. Nehru's recent utterances, it was feared that he might not give any relief in taxation. Grave doubts were also entertained whether the Prime Minister would withdraw the company reserve deposits scheme. Market men felt that the existing tax measures would be continued. With regard to the bonus share tax and the excess dividend tax, the market had earlier anticipated some relief; but during the week the majority of market men entertained doubts if this expectation would materialise on the 28th February. The discussions in Parliament over the Chagla report on the L.I.C.'s recent investments in the Mundhra concerns were keenly awaited, as these would have a bearing on the future investment policy of the L.I.C. on equities.

The announcement of an increase in production of jute goods restricted trading in jute shares. Until American interest in hessian revived, there was little prospect of a change in sentiment in the goods market. In the meantime, the accumulation of stocks would result in financial problems for the industry. The apprehension of labour troubles in Burnpur arrested the rise that followed speculative interest earlier in Indian Irons on the good news of opening of a second spun pipe at the Kulti works and a furnace in the works at Burnpur.

The absense of any increase in railway fares and freight rates in the Railway Budget presented in Parliament on the 17th inst. imparted some steadiness in the market yesterday.

Towards the close of the week, Mr. T. T. Krishnamachari's statement in the Lok Sabha explaining his part in the Mundhra deal, wherein he uttered a note of caution against "certain powerful interests" which were working against Government policies, created some fears in the minds of operators about the future of the private sector. This dampened even the little enthusiasm and caused a setback in prices.

Little interest was shown in coals. Bengals dropped from Rs. 233 to Rs. 231, while Burrakurs gained from Rs. 22.32 to Rs. 22.50. Central Indias, at Rs. 6.75, showed a rise of 22 nP and Naziras came to business at Rs. 6.37, as against Rs. 5.94 previously. West Bengals were done 6 nP lower at Rs. 5.19.

For reasons already stated, jutes searched lower levels. From Rs. 24, Nationals receded to Rs. 23.10 and Howrahs were quiet at Rs. 13.12. Ganges were marked down to Rs. 48.50, as were New Centrals to Rs. 12.87. India Jutes had business at Rs. 94.50. Kanknarrahs had sellers at Rs. 40.

Indian Irons opened at Rs. 19.77 and after rising to Rs. 19.88 were pulled down to Rs. 19.32. There were rumours of a likely issue of bonus shares by capitalising the Company's share premium reserves. These failed to evoke enthusiasm, in view of the labour troubles at Burnpur works. However, the market was hopeful that the Company would maintain its dividend at 10 per cent. In conformity with the general trend of the market Jessops sagged from Rs. 23 to Rs. 22.56. Texmacos were quiet at Rs. 16.90, while Indian Standard Wagons gave way to Rs. 94.50 from Rs. 101.

In minings, Indian Coppers recovered to Rs. 2.89, but subsequently sagged to Rs. 2.83. Orissa Minerals were better at Rs. 22.44.

* * * *

Madras Stock Exchange

MADRAS, *18th February*

A steady trend was witnessed on the Madras Stock Exchange during the week under review, barring textile shares which ruled easy due to renewed selling pressure. The steadiness was influenced by absence of any proposals for enhancing fares and freight rates in the Railway budget presented yesterday. Planting shares generally evoked good support induced by encouraging advices from tea markets and reports of better working of rubber companies. Even reports of disappointing performance at the first export sale in coffee when the Coffee Board had to withdraw 75 per cent. of the offer failed to have any effect. Bank, electricity and sugar shares also tended to look up. Business put through during the week was, of course, limited. For, owing to budget uncertainties, operators were not inclined to enter into large commitments.

In the planting section, the tea shares registered gains. Haileyburias improved by 10 nP to Rs. 16.00 and Highland by 17 nP to Rs. 12.00. Parksides rose by Rs. 2 to Rs. 18.25. Peermades advanced by 50 nP to Rs. 19.75. Periakaramalais were higher by 5 nP at Rs. 4.05. Devasholas rallied 65 nP to Rs. 19.65. Mysore plantations, however, receded by 7 nP to Re. 1.43. Nilgiris eased by 15 nP to Rs. 7.85. Nonsuch shed 5 nP to Rs. 19.35. United Nilgiris dropped 15 nP to Rs. 15.15. Among coffee shares, Coffeelands put on 22 nP to Rs. 27.87. Mysore Coffees gained 5 nP to Rs. 2.95. Anaparas, however, lost 5 nP to Rs. 4.95. Consolidated Coffees shed a like amount to Rs. 22.15. Shevroys eased by 7 nP to Re. 1.85. Puthuttotams were maintained at Rs. 2.50. Among rubber shares, Malankaras improved from Rs. 15 last week-end to Rs. 15.25. Kalpettas firmed up by 20 nP to Rs. 18.80. Cochin Malabars were higher by 7 nP at Rs. 4-10. Velimalais gathered 3 nP to Rs. 4.86.

In the textiles section, Buckinghams declined by a rupee to Rs. 157.50. Coimbatore Spinnings fell by Rs. 2.75 to Rs. 65.00. Dhanalakshmis eased by Rs. 2 to Rs. 203.00. Rangavilas receded by Re. 1.50 to Rs. 67.00 and Rajalakshmis by Re. 1 to Rs. 77.00. Janardanas lost 50 nP to Rs. 79.50 and Kotharis 15 nP to Rs. 10.25. Lakshmis eased by a rupee to Rs. 112. Maduras, however, were quoted higher at Rs. 34.75 *cum-div.* Rayalaseemas hardened by 25 nP to Rs. 111.25. Anglo-French spurted by Rs. 11 at Rs. 90.00.

Barring a few scrips, Sugar shares moved higher. United Breweries gathered a rupee to Rs. 179.00. K.C.P. (Defd.) put on Rs. 2 to Rs. 132. E.I.Ds were quoted 13 nP higher at Rs. 29.25. Cauverys and Deccans were maintained at Rs. 88.50 and Rs. 7.88, respectively.

INDIAN TOBACCO
(English Quarterly)

Containing articles and general information on tobacco cultivation, research, marketing, etc.

Annual Subscription Rs. 3/- Single copy nP 75

TOBACCO BULLETIN
(Statistical Quarterly in English)

Containing statistics on exports, imports, etc., and inland and foreign market reports.

Annual Subscription Rs. 2/- Single copy nP 50

***TAMAKU** (Gujarati Quarterly)
POGAKU (Telugu Quarterly)
and
TAMBAKU (Hindi Quarterly)

Annual Subscription for each **Rs. 1.50**
Single copy **nP 38**

Containing articles in popular language on tobacco cultivation, research, marketing, etc.

Advertisements are accepted for publication in all the quarterlies at nominal cost. Attractive terms for advertising agencies, booksellers and newsagents

TOBACCO DIRECTORY

Containing about 30,000 names and addresses of wholesale dealers, manufacturers, exporters, trade associations, importers of Indian tobacco in foreign countries, etc. Names arranged alphabetically and Statewise with comprehensive indices.

Single copy **Rs. 10/-** *plus* inland postage **Rs. 2/-**

20 per cent. Commission on 10 copies ordered in bulk.

NEWS IN BRIEF

INDIA exported 88,000 tons of coal to Pakistan during January 1958, as against 93,789 tons in the previous month.

The Madhya Pradesh Government has decided to establish a warehousing corporation with an authorised capital of Rs. 2 crores and paid-up capital of Rs. 10 lakhs.

The amount of income-tax settled by the Income-tax Investigation Commission that has so far been realised is placed at Rs. 10.21 crores and the remaining amount to be realised is Rs. 7.93 crores.

The Central Sales Tax Act 1956 will be extended to the State of Jammu and Kashmir. A Bill amending the Act was introduced in the Lok Sabha on the 14th inst. by the Deputy Minister for Finance.

The huge deposits of very high quality limestone found in the Nandi village lying 15 miles from Bhilai are expected to meet the requirements of the Bhilai steel plant for at least 35 years. The limestone quarries cover an area of about 686,700 square metres, the total capacity being estimated at 27,500 tons.

The Government of India has under consideration the recommendation of the Indian Council of Agricultural Research for raising the cess levied on exports of bones, bristles, butter, cereals (other than rice), manufactured tobacco, vegetables, wheat, wheat flour and raw wool from half per cent. to one per cent.

The Punjab Government is not favourably inclined towards introducing total prohibition in the State. This was disclosed by the Planning and Excise Minister in the State Vidhan Sabha on the 17th inst. According to the Minister, the Government does not propose extending the experiment of prohibition; there is no proposal to declare other districts dry.

An Indian delegation is already in West Germany in connection with the settlement of certain outstanding matters connected with the Rourkela steel plant. Under an interim agreement signed in December 1957, the West German Government had agreed to defer certain payments relating to the plant which fell due to German firms upto 15th February 1958. The present delegation is negotiating a final agreement for postponement of payments due to German firms under contracts for the delivery and erection of a steel plant and rolling mill and related construction work at Rourkela.

The Sub-Committee for Co-operative Sugar Factories, constituted by the Union Ministry of Food and Agriculture, held a meeting in Bombay on the 12th inst., Dr. D. R. Gadgil presiding. At this meeting, the Committee decided to recommend to the Central Government the formation of a national federation of all-India co-operative sugar factories and zonal federations for units located in a particular area. The Committee also discussed the question of technical and other assistance to be given to the various co-operative sugar mills, as well as the way in which they could be helped in the selection of technical staff and for the preparation and standardisation of accounts.

The U.P. Government has ordered all the 40 private electricity undertakings in the State to pay interim bonus to their workers for the years 1954-55, 1955-56, 1956-57 and 1957-58. The payment for the first three years will be made within four weeks of the order and for the year 1957-58 within a month of the finalisation and preparation of balance-sheets by the undertakings. The order follows the recommendation of a committee set up in accordance with the decision of the State Labour Tripartite Conference (Electricity) held in June last to find out a permanent basis for the payment of bonus and also to fix, on this basis, the bonus quantum payable by individual undertakings for the period or periods between 1954-55 and 1957-58.

The established importers of non-ferrous metals have been asked by the Government of India to supply, before the 28th inst., certain particulars required to enable the Government to review the supply position of non-ferrous metals. The information is to be supplied separately in regard to lead ingot, pig and scrap, zinc or spelter unwrought, tin block and tin scrap, copper (unwrought in the form of ingots), blocks, slabs, cakes, ties, bricks, blocks, billets, cathodes, blister bars, electrolytic wire bars and ingot bars. The information should cover the extent of quota established in value, the value and date of quota licences received, the quantity and value already imported and cleared up to the 20th inst., physical stock in hand on the 20th inst., the balance to be imported and monthly import programme, firm sale commitments made, with the name of the party, uncommitted balance quantity, and details of forward commitments.

The Indian Institute of Technology for the Western Region is expected to start functioning in Bombay from July next. This will be the second of the four such institutes planned by the Government of India, the first having already been established at Kharagpur. To start with, 100 graduates and 50 post-graduates will be admitted into the Institute for courses in civil, mechanical and electrical engineering, chemical engineering and metallurgy. When completed, the Institute will have 2,000 resident students and will be one of the biggest and most up-to-date institutions of its kind in Asia. It is said that the U.N.E.S.C.O. will contribute Rs. 1.5 crore for the equipment of the Institute and the Government of India will spend about Rs. 5 crores. More than 20 top U.N.E.S.C.O. experts will work in the Institute. Meanwhile, a team of 21 U.N.E.S.C.O. experts, headed by Dr. Martin Gvsky, has arrived in Bombay to help set up the Institute.

From Abroad

Representatives of the Russian Foreign Trade Organisation are now on a visit to Morocco to promote Russia's trade with that country.

The Federation of British Industries has urged the Chancellor of the Exchequer to lower taxation on company profit, reduce income-tax and cut the tax on petrol.

A fresh cut in the Federal Reserve Discount rate from the present level of 2½ per cent. is expected in the coming weeks. It is also likely to be followed by a reduction in the reserve requirements.

An advanced type of gas-cooled reactor, which is expected to provide valuable data for the application of nuclear power to marine propulsion, is being developed by the U.K. Atomic Energy Authority.

A German firm has undertaken to supply a part of the plant and machinery required by the Argentine steel works on a deferred payment basis. It is stated that it will accept payment in instalments over a period of seven years.

Brussels will be the headquarters of the administrative staff of the Common Market and Euratum Commissions for at least two years. The Commissions, however, will meet alternately in Brussels and Luxemburg.

The marketing interests of two independent Italian companies are being acquired by the British Petroleum. This will enable the B.P. to make a major entry into the Italian market for petroleum products.

The tariff insurance companies in Britain are contemplating a further increase in motor vehicle insurance premiums. It was only in July last that increases, ranging up to 33⅓ per cent. for car, motor cycle, commercial and agricultural vehicles, were effected.

Industrial production in the U.S. during January 1958 dropped to the lowest level since February 1955, with Federal Reserve Board's index declining to 133 per cent. of the 1947-49 average. This was the fifth consecutive month to witness a fall in the production index.

The Government of Ceylon, according to its Minister for Agriculture, has postponed the nationalisation of tea estates only for the time being. He reminded his countrymen that nationalisation was part of the Government Party's election manifesto and, therefore, required to be fulfilled.

The number of unemployed persons in the U.S. jumped up by 1,120,000 during January 1958 to reach a total of 4,494,000. This figure represents 5.8 per cent. of the labour force in the U.S. The number of employed people was 62.24 million, a drop of 2.16 million as compared with December 1957.

The formation of a new company, entitled the Australian United Acceptance, with a nominal capital of £A500,000, marks the first step in Australia's move to establish a Bill Market. The new company will engage in short-term financing and operate as a merchant banker along the lines of the discount houses in London.

Unemployment in Britain during January rose by 60,000 to 395,000, the highest figure to be witnessed since March 1953. Expressed as a proportion of the national labour force, however, the total of unemployed was only 1.8 per cent., which is practically the same as that in January and February 1957.

An industrial design division, aimed at preventing piracy of foreign designs by Japanese business men and promoting Japanese originals, will shortly be set up by the Japanese Ministry of Foreign Trade, which is said to hold the view that piracy of foreign designs has seriously impaired Japan's commercial reputation in international markets.

Due to accumulation of heavy stocks, manufacturers of tyres in the U.S. have cut their production. In the first few weeks of 1958 sales of tyres in the U.S. are reported to have declined by 20 to 25 per cent. below the level in the same period of 1957. The fall in the demand for tyre reflects the reduced level of activity in the motor industry.

The Finance Minister of Japan, Mr. Ichimada, favours the establishment of an Asian Bank with functions similar to those of the World Bank. This bank, according to him, should be established to help underdeveloped countries in Asia and be manned and organised by Asians. Japan is prepared to contribute an initial capital of 50,000 million yen.

PERSONAL

MR. Henry Cabot Lodge, U.S. Permanent Representative in the United Nations, left for Rome on Monday after a six-day tour of India.

Mr. J. Burke Knapp, Vice-President of the World Bank, left New Delhi on Monday last after a four-week visit to the country. During his stay, Mr. Knapp studied and discussed with the Government representatives India's development projects put down for aid by the Bank.

Mr. Wilhelm Billig, Polish Commissar for Atomic Energy, arrived in Bombay last week on a three-week tour of India at the invitation of the Union Government. Mr. Billig's itinerary in India includes visits to Madras, Delhi, Agra, Nangal and Chandigarh. He is accompanied by Prof. Marian Miesowicz.

Dr. Per Jacobsson, Managing Director of the International Monetary Fund, left for Calcutta on Tuesday this week after informal discussions with the Reserve Bank of India, prominent industrialists, business men, bankers, and representatives of trade associations on monetary and economic problems of India. He was accompanied by Mr. B. N. Adarkar, Executive Director for India, and Mr. J. S. Raj, Director of the Asian Department of the I.M.F.

A drop of 2 per cent. occurred in Britain's steel production during the month of January 1958. The production was at an annual rate of 21.17 million tons, as compared with 21.63 million tons in the corresponding month of 1957. The fall was largely due to a breakdown in a slabbing mill and, if allowance is made for this fact, production seems to have run at about the same level as a year before.

A sum of £126 million is proposed to be spent by the German Government by way of subsidies for farming in 1958 as compared with £101 million provided for under the "Green Plan" last year. Including other financial supports, State support for German agriculture will amount to over £250 million in the fiscal year 1958-59. During the five-year period 1953-58, it may be noted, subsidies to German farming aggregated well over £900 million.

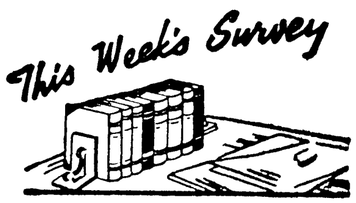
The French Government has announced new aids as part of its latest export promotion drive. Under this arrangement, promise rather than performance becomes the criterion for award of an "exporter's card"—a warrant entitling holders to export aid. Manufacturers have only to show their intention to export 20 per cent. of their production and they will be entitled to claim exemption from previous year's increased turnover tax on all or part of their production. They will also be allowed bigger and swifter depreciation allowances.

Britain expects to be producing more electricity from nuclear-power stations within eight years than the country's total consumption at the beginning of World War II, according to Sir John Maud, Permanent Secretary to the British Ministry of Power. Sir John pointed out to an audience in the U.S. that the British nuclear-power industry would have achieved in less than a decade what had taken the conventional electrical industry more than 60 years. He had no doubt that, in some years' time, hydrogen commercial power stations would be constructed which would, once and for all, free the world from the nightmare of fuel scarcity.

The first volume of the report of the Committee on Commonwealth Raw Materials has been completed and all Commonwealth Governments have agreed to its publication. It is a general survey and analysis of the Commonwealth's resources in raw materials. The Committee has made good progress with examining the question of its own scope and functions. This was a question remitted to it by the Commonwealth Prime Ministers' Conference last year, so that the Committee might consider how its activities could be extended "for the particular purpose of drawing attention to the economic resources of Commonwealth countries."

Plans have been finalised by the Japanese Overseas Technical Co-operation Company to develop shale oil deposits in Thailand in co-operation with indigenous *entrepreneurs*. The plan envisages an investment of $24 million, of which two-thirds will be provided by the Japanese company, mainly in the form of plant and machinery, and one-third by the Thai Shale and Oil Company. The funds required by the latter will be met from an American loan. The Japanese will retain the management control for a period of 25 years and the entire output of oil will be for consumption in Thailand. The project is expected to go into production in three years' time.

A three-day meeting of Commonwealth officials to prepare for the Commonwealth Trade and Economic Conference, in accordance with the recommendations made by Commonwealth Ministers at Mont Tremblant, Canada, last October, ended in London on the 13th inst. A statement issued by the Commonwealth Relations Office says that a provisional agenda for the ministerial conference was discussed and that recommendations in this regard would be made to the Governments concerned. Arrangements were made for preparatory work to be put in hand by Commonwealth Governments. Officials will meet again in London in June to concert arrangements. The time and place of the ministerial conference will be announced shortly by the Canadian Government.



LAND REFORMS

IT has been rightly recognised by the Government of India and the Planning Commission that, in a balanced, integrated approach to the central problems of economic development, land reforms have a special importance both because they provide the social, economic and institutional framework for agricultural development but also because their influence and impact extends far beyond the ambit of the rural economy. The twin objectives of land reforms, as stated by the Planning Commission, are: (1) to remove such impediments upon agricultural production as arise from the character of the agrarian structure, and (2) to create conditions for evolving an agrarian economy with high levels of efficiency and productivity. The view that the proposed land reforms were not conducive to the attainment of these objectives, but would only lead to depriving Indian agriculture of the advantages of both communism and free enterprise, was effectively put forward by Sardar Lal Singh, a member of the irrigation and power team of the Planning Commission and a former M.P. and Director of Agriculture of the Punjab. Addressing a convention of Southern State farmers at Bangalore on the 14th inst., Mr. Lal Singh said that he was not against the fundamental objectives of land reforms, but the Government's approach to the problems, according to him, was wrong, because it was based on sentiment rather than on a scientific study of the issues and the facts of the situation. The proposed reforms, if implemented, would, he said, lead to chaos and disorder in the countryside, leading ultimately to the urban *versus* rural struggle. The approach to land reforms, he urged, should be one of economic betterment of the tenants without creating class hatred, and elimination of the parasite class of landholders and modernisation of agriculture. When land reform enthusiasts were reminded of the evils and shortcomings of small farms, they at once pointed out to collective farming as the panacea of all ills, regardless of the experience in other countries where the experiment was a miserable failure.

Expressing himself against the fixation of ceiling on land holdings, Mr. Singh said that it was idle to expect increased yield by splitting commercial farms into tiny farms. There could not be the slightest justification, he asserted, for the Government to deprive such owners of land who were already making good use of them. Ceilings at low levels, Mr. Singh said, would automatically encourage transfer of rich productive land to rich people and poor land to poor people possessing little financial resources or ability to effect improvements. It would also discourage reclamation of waste land by private enterprise. This meant allowing waste land to remain idle for ever, as reclamation by the Government was found to be the costliest. He urged that sufficient inducements should be given to encourage the flow of free enterprise into the field of agriculture and pointed out that fixation of a low ceiling would not only not attract new talent but would drive away the existing one.

Wherever ceilings were imposed—in Russia, the U.K., etc.—it was always at fairly high levels which would permit modernisation of agriculture. He said that, under the proposed land reforms, even the biggest farmer would be left with only as much land as would yield an income of Rs. 3,600 a year for the whole family comprising five members. In other words, the wealthiest family in rural areas would be brought down practically to the level of a low-grade Government official or a shopkeeper, whereas there was nothing to prevent a person in an urban area owning crores of rupees worth of property. He added: "What a strange sense of justice, what a contrast in the two patterns of economy—for urban people, a capitalistic pattern and for rural people a socialistic and communist pattern with a vengeance."

Continuing, Mr. Singh rightly pointed out that the primary duty of the Government was to see that land was made to yield the maximum production and there was equitable distribution of the fruits of labour. To treat the problem in any other way, he said, was sure to lead the country to economic difficulties. Mr. Singh averred: "For the ruling party to suggest to put more people on land, only betrays lack of progressive outlook and bankruptcy of new ideas and is a crude attempt to conceal its incapacity to find new avenues and source of employment to the landless." Instead of spending the limited resources of the Government in preventing further devastation of the fertile lands or in reclaiming waste lands on which to settle the tenants or landless labour, was it wise on the part of the Government, Mr. Singh asked, to squander away its money in creating and financing a new landless and resourceless class comprising millions in a manner which would only satisfy their foolish, temporary, land-hunger, without improving their economic lot in the long run? The so-called land reforms, Mr. Singh pointed out, had already frightened people to such an extent that they were rapidly withdrawing their investment already made in agriculture, with the result that production suffered a severe setback.

Inaugurating the convention, Mr. B. Ramachandra Reddi, a former Member of Parliament, warned the Government that the drastic land reforms, if introduced, as contemplated, would only drive the wealthy farmers into urban areas in search of better occupations, comforts and facilities. He said that, while Russia had liquidated *kulaks* and introduced collective farming, and China had liquidated only the 'feudal' landlords but left intact the holdings under personal cultivation, and Egypt had fixed 200 acres as the ceiling in the Nile delta, the Congress Government in India wanted to reduce the size of holdings to 20 or 30 acres, fixing the size of the family at five members. He pertinently reminded the Government that land reform was a very difficult and complicated problem, calling for careful and judicious handling, lest it should lead to ruinous results.

In commending the aforesaid views to the attention of those who advocate extremist land reforms, including low ceilings on land, we would urge the authorities to bear in mind that the immediate task is to raise agricultural production and per-acre yields. This task is best carried out through modernisation of agriculture wherever possible, and adoption of better cultural practices. Clearly, it would be difficult for farmers owning small patches of land to adopt methods which involve high capital and recurring expenditure.

BOMBAY'S ECONOMY

No one really knows Bombay who does not know its sprawling hinterland, which cuts across linguistic and regional frontiers. The State Government faces the arduous task of integration and development of this large region. If it succeeds, it will make a most effective contribution to national economy and solidarity. And, in this adventure, it has a right to count upon the support of all sections of opinion. If they would subordinate—even if they are unwilling to abandon—their political predilections to the common task which faces the State, the national importance of the State's role would stand the best chance of being vindicated. Mr. Sri Prakasa, the Governor of the State, in the course of his address to a joint session of the Bombay Legislature on Monday, this week, outlined the great tasks that lie ahead and the solid achievements of the present ministry. It was necessarily a brief survey. But it served to indicate the broad lines of the State's approach to its many and admittedly complex tasks. Of these, the one challenging task which is now in an advanced stage of the process of completion is the integration of administrative services. Perhaps, few other States in India have inherited a more bewildering variety of laws, regulations, services and administrative procedures than the Bombay State. It is no small tribute to the administrative acumen of the original State that a large measure of integration has already been achieved. It is to be hoped that it will be completed soon and thereby pave the way for greater contact between the people and the administration.

In the context of the relatively underdeveloped state of the State's irrigation potential and the prevalence of food scarcity in certain districts, the authorities have done well to concentrate on minor irrigation works without relaxing their efforts at carrying out the major irrigation projects. A programme for the construction of 35,000 new wells and repairs to 28,000 old wells has been prepared. This is expected to be completed in the next three years, thereby bringing under irrigation 250,000 acres of land. Water rates have been fixed at attractively low levels. Seed farms are being established, one in each taluka. This programme will be completed before June next. Among the different regions, Vidarbha has received special attention with an additional allotment of Rs. 2.5 crores for that region. The programme of Community Development and National Extension Service has been extended during the last year to cover about 4.5 million of rural population in 68 blocks.

Being the government of a premier industrial State, the Bombay State Government has a special responsibility to nurse, foster and help develop the region's industries. Mr. Sri Prakasa stated that "steady progress in large-scale industries had been maintained during the year." It is not true, in our opinion, to make such an unqualified statement, because the cotton textile industry, the single largest industry of the State, remained depressed almost throughout the year. It has sustained heavy losses, with some of its units closing down. During the last few days, as many as three cotton mills could not even pay wages to their workers. It is also a well-known fact that unemployment in the textile industry and trade has been increasing since the beginning of last year. It is surprising that Mr. Sri Prakasa has made no mention of these developments. The number of licences issued during the year by the Union Government for the establishment of new units and expansion of existing concerns is 125 involving a capital investment of nearly Rs. 25 crores. It is not clear how many of these issues relate only to expansion of existing units and how many of them to establishment of new units. Nor is it clear whether any follow-up work has been done by the State in respect of the issues sanctioned by the Central Government. Be that as it may, the rate of progress in respect of large-scale industry is obviously less slow than what the large size of the State and its vast industrial potential would suggest. The Government will do well to investigate the causes for this relatively slow growth and take appropriate steps to speed up progress.

ALUMINIUM PLANT

It is now well known that the demand for aluminium is bound to increase greatly in the coming years. Apart from its use in utensilware industry, it has growing industrial applications. For instance, in recent years, its utilisation in the cable manufacturing industry has increased enormously. This trend is bound to continue with the increase in the pace of industrial progress. The Planning Commission has estimated that the demand for aluminium will increase to about 30,000 tons per annum by 1960-61, as against the present demand for about 20,000 tons and production of about 7,800 tons. Fortunately, there is vast scope for stepping up aluminium output, thanks to the existence of large deposits of bauxite in several parts of the country. Small wonder, then, that the Central and State Governments have taken considerable interest in establishing new aluminium units.

Among the States which have taken interest in setting up aluminium plants, mention must be made of Madras, Madhya Pradesh and Bombay. It would appear that the deposits of bauxite in Mettur, near Madras, are not sufficiently rich in metal content to justify immediate exploitation, while those in Amarkantak in Madhya Pradesh are described to be both large and rich in metal content. But the absence of communications seems to preclude the possibility of early exploitation of the deposits in Madhya Pradesh. Expert opinion seems to attach considerable importance to the exploitation of bauxite deposits in Udgiri area in Kolhapur district. Indeed, Mr. Jean Sabut, a French geologist who recently toured this country at the invitation of the Government of India to assess the various bauxite deposits in India and to suggest methods for their economic exploitation, is believed to have been favourably impressed by the bauxite deposits near Kolhapur. If a plant were set up in this area, it could be assured of the electric supply it would need from the Konya hydel power station which is scheduled to be completed in the next two years.

The Planning Commission is understood to be favourably inclined towards this project. The Bombay State Government also is known to be engaged in collecting all preliminary data. The State Government will do well to expedite this work which would pave the way for prompt decision on the establishment of an aluminium plant in this region. An important question is whether the plant should be in the public or private sector. The Industrial Policy Resolution lists aluminium under the Schedule B industries which may be set up both by the private sector and the State. Even so, the private sector which has been particularly active in initiating and developing all metal industries deserves to be assigned the role for expanding aluminium output in India. So far as the Bombay State Government is concerned, it is known to have pleaded for the grant of facilities to the private sector for the exploitation of even the minerals included in Schedule A of the Industrial Policy Resolution (State List). The Government should not find it difficult to induce private enterprise to take interest in the project and complete it at an early date.

SUGAR INDUSTRY

A phased programme for the adoption of metric system in the sugar industry as formulated by the special committee of the Development Council for Sugar Industry was accepted by the Council at its meeting held at Nellikuppam (Cuddalore), Madras, last week. Accordingly, the unit for expressing the weight of sugar and cane will be the quintal (100 kilograms) which, it is said, is the most appropriate unit, and the sugar factories will start conversions of weights to metric units during the 1958 off-season. It will be recalled that the standard packing of sugar is at present in bags of 2 maunds and 30 *seers*. This will be replaced by a bag of one quintal (100 kilograms), which is about three *seers* less than the present standard packing and, as such, will not create much difficulty in the changeover to the new system. Nevertheless, the Development Council has favoured the continuance of the existing units along with metric units for a fairly long period, that is, up to the end of the second Plan (1960-61); it has asked the Central and State Governments to amend all existing statutory rules, orders and notifications relating to the price of sugarcane, cess on cane, excise duty on sugar, etc., so as to incorporate both the units. It has also stressed the need for educating cane growers in the metric system.

Presiding over the meeting, Mr. T. C. Puri, I.C.S., Chairman of the Development Council, rightly stressed that standardisation in weights and measures was of very great significance and a welcome reform. He felt that the introduction of the metric system in sugar industry did not, fortunately, present any serious problem. Mr. Puri also rightly stressed that the scheme for payment of cane price on the basis of quality was of great importance to the future progress of the sugar industry on rational lines. Alluding to the question of sugar exports, he stated that India could sell sugar abroad only at a loss of £16 to £17 per ton, even after allowing full remission of excise duty and cane cess. Since this aspect has been discussed in our last issue (*vide* pages 255 and 268), it is unnecessary to go into it again.

In the course of his speech, Mr. Puri referred, in particular, to the replacement of States' sales tax on sugar by an additional excise duty of Rs. 2.43 per maund with effect from 14th December 1957, and observed:

"This would remove the diversity that existed in the matter of sales tax on sugar in the different States. While this measure will result in a substantial increase in the revenue earnings of the Government by checking evasion in the payment of sales tax, it should not mean any increase in the cost of sugar to the consumer. Due to easy supply position of sugar and Government policy of regulating releases from factories, the prices of sugar on the whole have remained at a reasonable level."

Many, however, will not agree with Mr. Puri when he says that the prices of sugar have remained at a reasonable level. For the present level of sugar prices is unduly high, thanks to the heavy impact of taxation—this accounts for as much as 34 per cent. of the price—and high cane prices. It may be noted here that the increase in excise duty in lieu of sales tax was much more than warranted. It has been estimated that the increase exceeded the incidence of sales tax by As. 3 per maund of sugar. Indeed, the ruling price is so high that it is beyond the means of a vast majority of the population, especially in rural areas. Since the replacement of States' sales tax by additional excise duty, the prices of sugar have registered a further appreciable rise as is borne out by the following table:

	Latest available	Before replacement of sales tax by excise duty
Bombay (per bag)—	Rs.	Rs.
Small grain	105-50	112
Medium grain	106-108	103-105
Large grain	109-113	106-110
Muzaffarnagar (ex-mill delivery prices per maund)—		
Bijnore (E29)	34.44	32.75
Daurala (B29)	36.87	34.12
Mowana (B29)	37.12	34.37
Amroha (D29)	34.02	32.56

The rise in sugar prices is ununderstandable, in that it has occurred, as we pointed out last week, even when crushing of sugarcane is in full swing and supplies are plentiful. Surely, it will be interesting to know as to why this anomalous position exists.

Be that as it may, in the course of his address, Mr. Puri gave a useful account of the

(*Continued on next page*)

GOVERNMENT OF ZANZIBAR

FOR SALE THE PASSENGER AND GOODS VESSEL

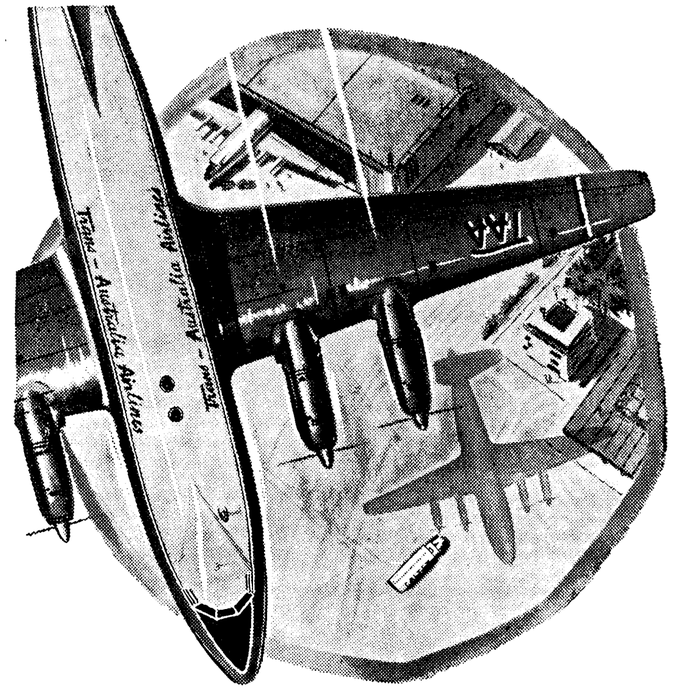
H.H.S. "AL HATHERA"

On the Instructions of the Government of Zanzibar TENDERS are invited by the undersigned for the purchase of His Highness's Ship "AL HATHERA" ex "KAFARU." Particulars :—Twin Screw Vessel built in December 1929 by Bow and McLackland & Co. Paisley. Tonnage Gross 279, net 101, length 125', breadth 25.1' and depth 10'. One single-ended oil burning Scotch boiler. Two triple expansion surface condensing engines. Cylinder diameter 22" by 35" by 57". Stroke 3'-3". Speed about 8 knots on consumption of about 8 tons of oil per day. Fitted with a hatch forward, length 10'-6", breadth 12' and capacity 70 tons approximately. Cargo capacity worked by one derrick capable of lifting 5 tons by a fitted steam winch. The vessel is also designed for deep sea towing from a self rendering steam winch aft. Oil bunkers are stowed in Port and Starboard wing tanks having a total capacity of 58 tons. Water capacity: fore peak 25 tons, after peak 25 tons and domestic peak 2 tons. Fitted with usual accommodation for Master and Officers amidships whilst the accommodation for the crew is situated forward. Can be seen afloat at Zanzibar Harbour where it is lying with a defective boiler.

2. For further information and inspection apply to the Port Officer, Zanzibar. The "AL HATHERA" is offered "as lies." The vessel to be removed within one month of the receipt of the notice of the acceptance of the tender. No responsibility will be accepted for the accuracy of the above Information. Nor can any responsibility be accepted by His Highness' Government for any costs incurred by the successful tenderer in obtaining a seaworthiness certificate. His Highness' Government does not bind itself to accept the highest or any tender.

3. Sealed tenders should be addressed to the Chairman, Central Tender Board, c/o Treasury, Zanzibar, marked "Tender for the purchase of 'AL HATHERA'" and sent by registered post so as to reach him not later than 10 a.m. on the 30th April, 1958.

A. C. C. ROBERTS,
Chairman,
CENTRAL TENDER BOARD, ZANZIBAR



International Panorama of Progress

Oasis for modern skypower

CALTEX

PETROLEUM PRODUCTS

Centuries ago, plodding caravans formed the link that joined peoples, made nations great. Today a new dimension in transportation—the air—has shrunk distances, brought the citizens of the world closer. By touching down at modern oases for refueling, giant transports traverse the earth, bringing increased commerce and other advantages of the air age wherever they go. Progressive airlines know that quality petroleum products are indispensable for economical, dependable operation. Caltex aviation fuels and lubricants send perishable cargoes to market... machine parts to industry... passengers to far-off places —faster than ever before. Through the power of petroleum, Caltex is playing its part in establishing a new pattern of prosperity in over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

T. T. K. DEFENDS HIMSELF ABLY

MORALE OF CIVIL SERVANTS UNDERMINED

From Our Special Correspondent

NEW DELHI, 18*th February*

DELHI LETTER

TO those inside and outside the Lok Sabha who might have thought till this afternoon that the Chagla Commission had said the last word on the alleged direct responsibility of the outgoing Finance Minister in the matter of the L.I.C. investments in the Mundhra concerns, Mr. T. T. Krishnamachari's statement, delivered in a stentorian voice and with transparent sincerity and emotion, must have come as a stunning surprise. But the statement, dignified as it was, was more than an essay at self-defence or vindication of his own standing, reputation and character: it almost amounted to a judicial pronouncement, coming as it did from the son of a former District Judge. With this last brilliant performance as a parliamentarian of fifteen years' standing, Mr. Krishnamachari dramatically left the 'arena' "with regret but without any sense of frustration," as he himself put it. And regret was writ large on many a forehead in the Lok Sabha galleries.

Although the outgoing Finance Minister was personally least affected by 'aspersions' on his character, he performed a self-ordained duty to uphold the prestige of the Government of India of which he was a member. And this could not have been done otherwise than by marshalling an array of facts to disprove the three grounds on the basis of which the Commission of Inquiry had fixed on him also the personal (as distinct from constitutional) responsibility for the L.I.C. investment transaction. These three grounds, incidentally, were: "that it is improbable that any secretary would have put through an unusual deal of this character without Ministerial concurrence; that there must have been some prior understanding in Calcutta to which the Minister was privy; and the absence of subsequent repudiation, from which could be inferred the Minister was privy; and the absence of subsequent acquiescence." After a detailed presentation of facts and arguments, Mr. Krishnamachari came to the conclusion that the findings recorded against him "are on the basis of a series of surmises and not on the basis of the evidence actually led."

As for constitutional responsibility, he had already accepted it by resigning his post, in order not to be accused of taking shelter behind the Principal Finance Secretary. Although he had, of his own volition, chosen to resign, he rightly raised the issue whether it would be possible for any Minister "to accept the dictum that he must take full responsibility for the acts of his subordinates without being permitted to say that his subordinates did not reflect his policy or acted contrary to his wishes or directions, as the quantum and character of this Ministerial responsibility have not been defined." The issue that Mr. Krishnamachari raised is one that has a direct bearing on the morale of the Civil Service which, according to his own testimony, "consists of many able and devoted public servants."

Effect on Secretaries

Not much of the morale of the permanent Civil Service which the British rulers left behind was there even before the L.I.C. sensation, what with the promotion, in many cases, of junior members of that Service over the heads of its senior members. Even the little morale there was before the L.I.C. enquiry appears to have been undermined now. The senior civil servants, it is said, are more disinclined than ever before to take responsibility for any decision of a substantial nature. Where the Secretary of a Department orally discusses with the Minister concerned some question awaiting a decision and follows it up by noting down the gist of the conversation for the Minister's initials, and where the Minister actually initials it, there will be no trouble for the permanent Civil servant and the Minister's responsibility in the matter will be clear, although there can conceivably be a joint error of judgment in respect of an individual decision. This is stated to be the best possible Secretariat practice which can safeguard the permanent interests of civilians serving a succession of inexperienced and hence suspicious Ministers who come and go. Where, however, the Minister concerned calls for no such note containing the gist of a discussion for his initials, there is bound to be trouble either for the Minister or for his Secretary or for both. Where a Minister is anxious to safeguard his own public reputation which is vitally important to him in a political sense and his Secretary is anxious to maintain his own integrity in the interests of a permanent career, there will be shirking of responsibility on either side and decision-taking in the matter of policy or programme implementation will become even more dilatory than now. A near-paralysis of the kind can hardly be suited to the exigencies of a welfare State which demands a high tempo of action-performance.

Railway Budget

It was a cheerful Railway Budget that was presented to the Lok Sabha yesterday. The cheer was to be seen in the absence of any proposal to increase passenger fares and in the expectation of better financial results in the year 1958-59 than in 1957-58. The Budget estimates gross traffic receipts at about Rs. 408 crores as against Rs. 384 crores of the Revised Estimate for 1957-58; and working expenses at Rs. 314 crores as against Rs. 304 crores in the current year. An estimated increase of Rs. 14 crores in net traffic receipts in the budget year over their revised estimate in 1957-58 is something heartening. It is even more heartening because net miscellaneous expenditure will have increased by only Rs. 3 crores and dividend to General Revenues and net gain or surplus will both have increased by as much as Rs. 5 crores and Rs. 6 crores respectively. The progress of the Railway Plan under the second Five-year Plan is also equally heartening. As against the total allotment of Rs. 1,125 crores for the Railway Plan, Rs. 179 crores was spent in the first year and Rs. 235 crores will have been spent in the current year and Rs. 260 crores is proposed to be spent in 1958-59. At this rate of progress in the first three years of the Plan, it is not unlikely that the balance (Rs. 450 crores) of the five-year financial target will have been fully reached in the last two years of the Plan.

A summary picture of the working results of different railways is given in the following table constructed from the more detailed figures found in the Explanatory Memorandum:—

(Figures in Rs. crores)

	Actuals 1956-57	Revised 1957-58	Budget 1958-59
Central Railway:			
Gross traffic receipts	69.5	71.3	75.4
Total working expenses	50.0	52.1	53.5
Net revenue	18.2	17.4	19.4
Eastern Railway:			
Gross traffic receipts	47.2	53.5	56.8
Total working expenses	40.4	41.3	42.2
Net revenue	5.9	10.8	13.3
Northern Railway:			
Gross traffic receipts	54.4	61.3	64.4
Total working expenses	43.2	47.1	48.7
Net revenue	9.1	11.8	12.8
North-Eastern Railway:			
Gross traffic receipts	29.1	31.8	22.2
Total working expenses	31.8	34.9	20.9
Net revenue	—3.6	—4.2	—0.1
North-East Frontier Railway:			
Gross traffic receipts	..	..	11.7
Total working expenses	..	..	15.4
Net revenue	..	..	—4.5
Southern Railway:			
Gross traffic receipts	50.0	53.5	55.8
Total working expenses	44.3	52.0	51.1
Net revenue	4.6	—0.2	2.3
South-Eastern Railway:			
Gross traffic receipts	42.0	49.4	53.2
Total working expenses	30.6	32.7	34.6
Net revenue	10.9	15.5	17.0
Western Railway:			
Gross traffic receipts	55.3	63.6	68.0
Total working expenses	39.0	44.3	47.0
Net revenue	14.7	17.1	18.6
Total for all Railways:			
Gross traffic receipts	347.6	384.4	407.5
Total working expenses	279.3	304.5	313.6
Net revenue	58.4	65.9	76.9

EXPORTS OF SHELLAC

The inaugural meeting of the Shellac Export Promotion Council (Chairman: Mr. C. R. B. Menon) was held at Calcutta on the 5th inst. Addressing the meeting, Mr. Nityanand Kanungo, Union Minister for Commerce, did well to urge the Council to take such steps as would impart stability to the shellac market. The prices of shellac are of late subjected to violent fluctuations. Although the quantum of shellac exports in 1957 was about the same as that in the last three years (500,000 to 600,000 cwts.), the value of exports was less by over Rs. 2 crores. One of the reasons for this, it is said, has been the withdrawal of two large concerns from the shellac trade and the consequent diminution of finances available for the trade. Violent fluctuations in prices and price levels in Thailand have also had their effect. Unless shellac prices are stabilised, adequate finance cannot be attracted to the trade and industry.

Mr. Kanungo also stressed the importance of producing higher grades shellac, so that their proportion in exports could be raised. In his opinion, attention to grading of quality, packing, due and meticulous performance of contracts are urgent. Equally urgent is the need for continuous research in order to find new and extended uses for shellac.

In the course, of his speech, Mr. C. R. B. Menon, Chairman of the Council, revealed that the Council's immediate objective was to secure an increase in prices to a level attractive to foreign importers and users of shellac and remunerative to the trade and industry. Another point made by him pertained to the immediate necessity of scientific and technical research on lac and the efforts made to find the various uses of shellac.

These are some of the most important tasks to which the Export Promotion Council will have to address itself in right earnest. It may be noted here that the scope for any quantitative improvement in exports is rather limited. For about 90 per cent. of the production of shellac is already being exported, the value of which is Rs. 10 crores a year. Owing to the relatively inelastic character of production, any sizable increase in exports is not to be expected in the near future.

(Concluded from previous page)

progress of the implementation of the expansion programme of the sugar industry. The review reveals that the entire targetted capacity for the second Plan has been licensed. Further licensing is being restricted to expansion in existing uneconomic units and establishment of co-operative factories as envisaged in the Plan as and when spare capacity becomes available by a revocation of licences already granted. Of the additional capacity licensed, a capacity of about 200,000 tons came into operation in 1956-57. This was due partly to the commencement of production of nine new sugar mills, including six co-operative factories, and partly to the completion of expansion programmes of 20 existing units. In the current season (1957-58), 12 new factories, including seven co-operative ones, are expected to go into production.

Mr. Puri revealed that the establishment of new capacity for sugar production had somewhat been retarded by foreign exchange difficulties. He, therefore, called upon the sugar industry to use more indigenous machinery. While few will dispute the need for developing sugar mill machinery manufacture in India, it must be emphasised that, till such time as there is quantitative and qualitative improvement in domestic production and cost is reasonable, the sugar industry will continue to have to depend on foreign supplies. Mr. Puri himself pointed out that machinery manufactured at home were not up to foreign standards. Incidentally, it may be noted that the production of sugar mill machinery in India has gone up; the value of production in the first half of 1957 was about Rs. 40 lakhs, as against Rs. 32 lakhs and Rs. 19 lakhs in the whole of 1956 and 1955, respectively.

The next International Course on Small-scale Industries, organised by the Foundation Training Courses and Research in co-operation with the Netherlands Universities Foundation for International Co-operation (N.U.F.F.I.C.), will commence on 4th November, 1958 and last until 30th April 1959. The course is open to all those who hold an engineering degree or who have a technical background. The tuition fee is 3,800 Dutch guilders (approximately Rs. 4,735); cost of board, lodging and out-of-pocket expenses estimated at 375 Dutch guilders (approximately Rs. 470) per month have to be borne by candidates. Students interested in the course can apply directly to the Registrar, International Course on Small-scale Industries, N.U.F.F.I.C., 27 Molenstraat, The Hague (the Netherlands), before 31st August 1958.

The Deputy Minister of Finance, Mr. B. R. Bhagat, replied in the affirmative to a question in the Rajya Sabha this week whether it was a fact that a private company had been floated for establishing cotton textile mill in Ethiopia. He also replied in the affirmative to a question whether the Central Government had permitted the company to raise capital in India.

AMERICAN LETTER

SEVERITY OF WINTER HITS PART OF U.S.

"EXPLORER" RESTORES SELF-CONFIDENCE

From Our Special Correspondent

NEW YORK, 12*th February*

PERHAPS the most dramatic development of recent weeks was the firing of the United States Army's "Explorer" rocket into orbit. Its scientific name is "1958 Alpha." It will be followed presumably by 1958 Beta and so on. I flew over the site of the launching a few hours before the firing and followed the event by radio.

It was quite dramatic. Normally, the dense air traffic from the Northeastern part of the U.S. to the South hinges on Wilmington, North Carolina, and then follows a straight line across the Atlantic Ocean to Miami International Airport in Florida. Not so that day, 31st January. The normal flight path is East of the chief missile station of the U.S. in the northern part of Florida and in direct firing range. Hence all air traffic was diverted inland. It caused delays and congestion.

What are the real effects of this new U.S. 1958 Alpha? Newspapers throughout this country took great pains to interview the proverbial "man in the street" on that subject. Answers were interesting. People in smaller communities who work for their daily bread in a relatively sheltered atmosphere, displayed only mild curiosity. In the big cities where exposure to international news is constant, the reaction was one of great relief and elation. The Soviet monopoly on outer space had been broken. The stock market went up. The country forgot for a while the well publicised recession which is being enjoyed in a sort of masochistic way.

Outside of the recession to which I shall revert later, the weather this year has wrought havoc in some of the southern states. I just concluded a tour of the most hard hit areas around the Gulf of Mexico.

It seems that this year was chosen to be geophysical year because of its unusual high incidence of sun spots which run in cycles. In other words, it was predicted to be one of the worst sun spots years in history. It is known from past experience that sun spots cause, seemingly, all sorts of disturbances, they disrupt radio communications and electrical apparatus, they cause unusual weather, but, as yet, science does not know why. All observation posts around the world are on the alert this year to gather as much data as possible for getting the answers.

The severity of the winter in this hemisphere is hard to believe. Northern New York State is buried under several feet of snow. The cold belt is extending far to the south to a lesser degree. The entire vegetable crop of Florida as well as its citrus fruit trees have been destroyed by frost. Tourist trade, normally one of the main sources of income at this time of the year, has been cut in half. Hence, the southern states are having a private slowdown and an emergency of their own which is not related to the overall recession in the U.S.

All sorts of State and Federal Government planning is now under way to alleviate the hardships caused by weather. Parallel to that, discussions are continuing at Washington as to what can and should be done to counteract the general slowdown in business. There is now much serious talk about a reduction in Federal income taxes. While the stimulating influence of such a move cannot be denied, it would no doubt mean another cycle of deficit financing by the Washington Government and another dose of inflation.

At this point, two observations seem to be in order. Although unemployment is well above 4 million (about 64 million are still gainfully employed), there is very little hardship, relatively speaking, owing to the enormous backlog of savings which have been built up in the preceding decade of prosperity.

Secondly, the general psychology is such that no orthodox ideas of a balanced Budget and "sound" Government finance, such as prevailed a year ago, will stand in the way of pump priming by whatever means, in order to avoid a business recession of some magnitude which could have profound domestic and international implications, socially and politically. This is a very broad statement, but, in my opinion, thoroughly justified by current sentiment throughout the U.S.

For the outside world, in general, and for India, in particular, it means that fears of severe repercussions should subside. The successful firing of the 1958 Alpha had a good deal to do with the new psychology. Opposition against talks on any level with Soviet Russia is lessening, presumably that now Washington and the Kremlin would be conferring as equals. Even John Foster Dulles seems to have softened his opposition. At any rate, President Eisenhower received the other day the new Russian Ambassador in an unusual lengthy audience. It created a good deal of optimism.

There is now talk of another, the third, cut in the discount rate by the Federal Reserve banks. Projections also are that required reserves of commercial banks are scheduled to be reduced in April. Mortgage money will be made more plentiful by shading the interest rate one quarter to one half of 1 per cent. in the spring.

Among other boosting factors for the U.S. economy is the prospect of heavier spending this year by state and local governments for goods and services. The boost will be by $3,000 million to $40,500 million, according to Commerce Department estimates. Spending by the Federal Government in Washington will be up by $2,000 million in 1958 to $52,000 million.

The $275,000 million debt limit under which the U.S. Treasury has operated heretofore will undoubtedly be raised by the current session of Congress, perhaps to $280,000 million. In the latest Federal refinancing, a surprise was created by including in the package of offerings a 3½ per cent. 32-year bond issue in an attempt to lengthen out the maturity of the outstanding debt.

The next refunding is not due until June and by then money market conditions may not be as favourable as they are at the present time.

Two major soft spots remain in the U.S. economy and they are interrelated. Steel production is down to slightly below 55 per cent. of the annual capacity of 140 million tons and the question is being raised whether or not it was wise over a period of years to add to capacity by huge capital investment. One of the major consumers of steel, the automobile industry, reported January car sales as totalling 400,000 units, or 90,000 below January 1957. Inventories rose 90,000 to 800,000 units, now in dealers showrooms.

There is much discussion at the moment of a possible automobile strike later this year. Current wage contracts call for yearly wage boosts. If the industry should decline to go through with these stipulations on the grounds of poor business, a walkout is a possibility. While it would aggregate temporary unemployment conditions in these manufacturing areas, such a strike would certainly cure surplus conditions and assure full time production for some time to come in the future.

A third major soft spot is the railroad industry which has been unable to cope with the competition from trucks and the airlines. Freight traffic has been declining and passenger traffic remains unprofitable. The recent suicide of Robert Young, Chairman of New York Central Railroad, highlighted this plight.—*All Rights Reserved.*

WAGES FOR COTTON MILL WORKERS—I

INDUSTRY DOUBTS WHETHER IT WILL SUSTAIN EVEN EXISTING LEVEL

THE Millowners' Association, Bombay, has submitted a very lucid and comprehensive memorandum to the Central Wage Board for the Cotton Textile Industry. Welcoming the appointment of the Board, the Association has sought to impress upon the Board the fact that the present wage structure of the mill sector was determined after exhaustive enquiries by impartial tribunals, including the Labour Appellate Tribunal, and that any change in this structure will have wide repercussions on the wage structures prevailing in almost all other industries. It has also "grave doubts" whether the mill industry will be able to sustain even the existing level of wages, let alone an increase in that level. In support of this contention, the Association has marshalled interesting and authentic facts and figures. It must be said to the credit of the Association that, in its memorandum, as well as in its replies to some of the questions included in the general questionnaire issued by the Board, it has examined the issue from the all-India point of view, though special stress is laid on the problems confronting the mills in Bombay City and Island.

At the very outset, the Association has made a comparison between the cotton mill industry's capacity to pay in the period 1957-58 and in today's conditions. The comparison clearly brings out three outstanding conclusions. First, there has been a definite fall in the capacity of the mill industry to make trading profit. Secondly, the portion of the profit retained by the industry has declined considerably in the altered rates and structure of taxation. Thirdly, the industry's need for retained profits for purposes of depreciation reserves and dividends has gone up, as a result of rise in prices.

To take first the conclusion that the industry's capacity to make trading profit has suffered a distinct setback. This is due to the continuous increase in excise duty and sales tax. The estimated annual revenue from the Union excise duty (excluding the additional excise duty) on mill-made piecegoods is now as much as Rs. 80 crores, which represents a rise of Rs. 67.5 crores as compared with the position when the duty was imposed for the first time in 1949. Side by side with rise in excise duty, there have been also increases in sales tax rates levied by the various States, the annual total proceeds from which come to about Rs. 20 crores; the States' sales tax has now been replaced by an additional Union excise duty. The impact of the heavy excise duty, in particular, has been so severe that several mills are reported to have incurred losses in the past year (1957); only a very small number has been able to make trading profits. Commenting on the position in respect of Bombay mills, the Association observes:

"The share of Bombay mills, which represent a little less than one-third of the country's installed capacity, in the increase in duty may be taken to be of the order of Rs. 11 crores, which is more than the gross trading profits made by Bombay mills in several recent years. Although it is often assumed that the entire excise duty and sales tax can be passed on to the consumer and any changes in these should not affect the profits, in actual practice, there is a limit to the price which the consumer is willing to pay for his cloth. It does not matter to him how much of that price is excise duty, how much is sales tax and how much is the middleman's commission. If after an increase in duty the total price remains the same or almost the same, obviously, a corresponding reduction must have taken place in the amount realised by mills."

The cotton industry has also been called upon to bear other additional burdens. The Bombay mills, for instance, are required to pay every year about Rs. 1.15 crore by way of higher dearness allowance and Rs. 70 lakhs as gratuity. If and when the proposed increase in contributions to employees' insurance and provident fund comes into effect, there will be additional annual burdens of Rs. 40 lakhs and Rs. 60 lakhs, respectively.

Coming to the next point, namely, a comparison of the trading profits retained by the industry, the rate of company taxation which was 43.4 per cent. hitherto has been raised to 51.5 per cent. (1957-58 budget proposal). This means that, with a gross profit of Rs. 100, the profit retained after tax has gone down from Rs. 56.60 to Rs. 48.50 or a drop of 14 per cent. This is not all. The mills have also to pay wealth tax of half per cent. on paid up capital and reserves. Then there is the tax on dividends, not to speak of the one on capitalisation of reserves. Incidentally, a reference may be made to the study of the Reserve Bank of India which reveals that, in the four-year period 1950 to 1953, the average proportion of profits after tax to net worth was 5.3 per cent. in the cotton textile industry. This was lower than the ratio for all industries (7.3 per cent.), as well as that for the other established industries such as jute textiles (7.5 per cent.), sugar (9.5 per cent.), paper (11.3 per cent.), and even closely controlled industries such as iron and steel (13 per cent.) and cement (10.8 per cent.).

As regards the third point, namely, the industry's needs for rehabilitation reserves, dividends, etc., one has to take into account the continuous rise in prices of all articles, including machinery. The amount required by the industry for rehabilitation of machinery and equipment, as calculated with reference to pre-1950 prices, is now utterly inadequate and the mills have to find more money for rehabilitation and modernisation. The total requirements of Bombay mills alone are believed to be over Rs. 150 crores, as against Rs. 72 crores estimated in 1947. In the case of dividends, it is recalled that the Labour Appellate Tribunal fixed 6 per cent. on the paid-up capital as fair dividend at a time when the Bank rate was 3 per cent. Considering the increase in Bank rate to 4 per cent. and the reduction in the value of the rupee, there is need for a higher return on the paid-up capital. There is also need for an upward revision in the return of 2 per cent. fixed on reserves used as working capital.

An idea of the extent to which the tax burden on the cotton mill industry has been enhanced in recent years can be had from the following table:

(In crores of rupees)

	1947-48	Present position
Income-tax and super-tax	10.60	10.30*
Wealth tax	Nil	1.00
Excise duty on cloth	Nil	72.00
Excise duty (import duty on staple fibre)	Nil	1.80
Excise duty on fuel oil	0.15†	0.30
Import duty on cotton	2.40‡	Nil
Export duty on cloth	4.00‡	Nil
Cess on cotton consumed	0.05	0.15
Railway freight	7.40	11.00
Provident fund (statutory)	Nil	6.25
Sickness insurance	0.15	1.00
Leave with wages	2.00	5.00
Festival holidays	Nil	0.40§
Sales tax on cloth, stores, etc.	11.00	21.00
Electricity duty	Nil	0.65¶
Municipal taxes	0.45	0.80§
Total	38.20	131.65

* Relates to 1954-55. † Represents import duty. ‡ Relates to 1948-49.
¶ Relates to Bombay State. § Relates to Bombay City.

It is clear from the above table that, as against Rs. 38 crores paid by the cotton industry as taxes and levies in 1947-48, it is paying today as much as Rs. 132 crores, which represents an increase of roughly 250 per cent. Besides the crushing burden of taxation, the cotton mills have also been paying higher and higher prices for cotton, stores and power supply. The prices of the two basic varieties of cotton, namely, Jarilia fine and Broach Vijay now stand at about Rs. 775-830 and Rs. 945-995 per candy, as against Rs. 570 and Rs. 661, respectively, ten years ago. Similarly, the average value of foreign cotton has gone up from Rs. 966 in 1947-48 to Rs. 1,702 (1955-56). The prices of almost all items have risen considerably since 1947, as is evident from the following table which gives the value of important stores per unit consumed by the industry:

	Unit	1947	1953
		Rs.	Rs.
Pickers	Gross	168.00	188.40
Buffers	"	37.10	146.30
Roller-skins	"	1,037.60	1,476.30
Shuttles	"	554.30	818.60
Picking bands	Lb.	5.50	8.60
Belting	1,000 ft.	1,417.50	2,205.20
Heads	800 eyes	2.60	4.20
Reeds	1,000 dents	4.20	6.20
Paper and paper boards	Tons	698.20	1,169.80
Vegetable oils	Cwt.	72.50	83.90
Colours and dyes	"	1,462.10	1,645.80
Bleaching powder	"	20.20	35.00
Zinc chloride	"	60.10	101.80
Caustic soda	"	378.20	789.90
Starches	Ton	633.90	855.30

Value for unit of stores is worked out by dividing the total value of stores by the total number of units consumed by mills. Figures relating to 1954, 1955 and 1956 are not available; the general index of prices has gone up from 393.9 in 1953 to 403.2 in 1956.

The power cost of the Bombay cotton mill industry has also risen since May 1953. A 2½ per cent. surcharge was imposed by the power company in the month on account of increased operating expenses and high cost of plant and equipment replacement. This was followed by a thermal surcharge of 15 per cent. in April 1954 which was later increased to 24½ per cent. in January 1956. In October 1957, the old schedule of rates-*cum*-surcharges was replaced by a new schedule, and the new rates are about 7 to 10 per cent. higher than the old rates, inclusive of surcharges.

The foregoing account indicates a definite and marked fall in the cotton mill industry's capacity to pay as compared with the 1947-54 period. The Millowners' Association accordingly points out that, if an adjustment is to be made in the wage structure on account of the change in the capacity of the industry to pay, that adjustment cannot be in the upward direction. The Association's observations on the present wage structure of the cotton industry judged against the background of the general economic conditions in the country and with reference to productivity will be dealt with in our next issue.

TEXTILE INDUSTRY IN BOMBAY

About 20,000 workers have been thrown out of employment in the textile industry and nearly 9,700 workers have been retrenched in Bombay. This was disclosed by Mr. Abid Ali, Union Deputy Minister for Labour, while replying to a question in the Lok Sabha the other day. Mr. Abid Ali disclosed that the Union Labour Ministry had set up an inter-departmental group to study the problems of the textile industry in Bombay and make suggestions in this regard. He admitted that the Union Minister for Labour and Employment had discussions on this problem with the Bombay Chief Minister recently. During the discussions, there was a general review of the situation in the textile industry arising out of the closure of shifts or establishments but no decisions were taken. Mr. Abid Ali stated that it was very difficult to measure precisely the changes in productivity but there was evidence that it had improved. According to him, in the cases of the units about which the Government had information, there had been closures because the units were uneconomic. Some of these units were losing, perhaps due to the accumulated effect of mismanagement in the past years and depreciation in the conditions of machinery.

CLOTH PRODUCTION TO STOCKS

The production of cotton cloth and yarn in the mills suffered a setback during the first month of the current calendar year, that is, January. The quantity of cloth that actually came off the looms in this month was about 433 million yards, as against 435 million yards in the previous month (December 1957) and 484 million yards in the corresponding month of last year (January 1957). The fall in cloth production followed a decline in the output of yarn which amounted to 147 million lbs., as against 152 million lbs. and 156 million lbs., respectively.

Owing to lower output of cloth and increase in domestic offtake, stocks with mills have decreased to some extent. At the end of January, the total stocks held with mills aggregated about 874.5 million yards (583,000 bales), as against 988.33 million yards (659,885 bales) a month before. They are, however, very much higher as compared with the stocks of 771.28 million yards (514,188 bales) held at the end of January 1957. The bulk of the 874.5 million yards consisted of the quantity lying unsold, the actual figure being 558.75 million yards (372,500 bales). The quantity sold but not taken delivery was 315.75 million yards (210,500 bales).

Economic Prosperity in

South East Asia

offers new markets for your goods

Now is the time to trade with South East Asia, because the people there can afford to buy your goods. The Indian Overseas Bank Ltd., with branches in several strategic centres has made a special study of this important, growing market. You can depend on them to help you solve your trading problems.

IOB 204

TREND OF TEXTILE OUTPUT IN PAST YEAR

CLEAR NATIONAL POLICY ON IMPORTS URGED

From A Special Correspondent

MANCHESTER, 11*th February*

MANCHESTER LETTER

BRITAIN'S spinning mills turned out 27,000,000 lbs. more cotton and rayon yarn last year than in 1956, but cloth output fell by over 26,000,000 yards. Cotton Board figures issued this week recorded total yarn production at 876,640,000 lbs., against 849,340,000 lbs. in 1956. Of this, purely cotton yarn output accounted for 622,360,000 lbs., as against 597,440,000 lbs.

Aggregate cloth production amounted to 2,287,170,000 yards, as compared with 2,313,620,000 yards in 1956. The drop in output was entirely in goods in the man-made fibres section, which aggregated 659,580,000 yards, as against 702,070,000 yards. Cotton cloth production increased from 1,611,550,000 yards to 1,627,590,000 yards.

Manpower in December reached the lowest level of the year, with a fall of 1,330 in the number of workers on the books of employers during the month. At the year-end, the labour force consisted of 241,160 operatives in spinning and weaving, as compared with 243,330 twelve months previously and the peak of 245,740 in February 1957.

A clear national policy decision on the treatment of all low priced imports of cotton goods from the East was demanded by Sir Raymond Streat, former Cotton Board Chairman, addressing the Oldham Junior Chamber of Commerce last week. The cotton industry, he declared, had shown the four virtues required to deal with inflation—energy, enterprise, sacrifice and restraint. Lancashire was willing to agree that Commonwealth countries should have free assess to a handsome share of its home market but there should be an agreed limit for an agreed period of years ahead.

"Our Indian and Pakistani competitors agree and would negotiate a limit," continued Sir Raymond. "What so far prevents a solution is that the Hong Kong millowners decline to negotiate and the Colonial Office declines to tell them that they should do so. The Government as a whole declines to tell the Colonial Office they should do so." This problem, left unsolved, could wreak lasting hurt on the cotton industry and indirectly could do more to destroy future prospects of Commonwealth economic co-operation than would a solution insisted upon by London, but of so considerate and generous a character that it would leave no rancour behind.

Commenting on the proposals for an Import Control Board, included in Mr. Harold Wilson's *Plan for Cotton*, Sir Raymond Streat said that this system was thoroughly bad, he observed: "We have bitter experience of the grievous effect of Government-held stocks of raw cotton in the United States. Trade cannot flourish where Government-held stocks, subject to political influence, hang over the market. I frankly do not believe the Labour Party in office would implement the proposal. No authoritative Labour spokesman has said they would."

Sir Raymond criticised leading personalities and organisations in the cotton industry for "too much groaning and moaning," and stated that speech-making, report-writing and resolution-drafting in the industry needed an overhaul. "We argue too much in terms of fear of a return to the acute problems of the inter-war economic depression," he added. "Lancashire has so many assets and strong points that the speaker or writer who attracts a gloomy headline should conclude that he is not equipped by temperament to be a spokesman for Lancashire and should impose a ban of silence upon himself. All Jeremiahs in the county should have their lips sealed."

Turning to current trends in the industry, the former Chairman of the Cotton Board struck a more optimistic note than is generally heard in the environs of the Manchester Royal Exchange these days. Admitting the hesitancy currently displayed by distributors, Sir Raymond said that the consumer at home was well employed and that there was no reason to suppose that any fewer cotton goods would be bought this year than last.

Supply Switches

Half the current cotton season has gone by and already the trend of imports of the raw material into this country can be gauged. American supremacy is still strongly marked, although the volume of supplies arriving is somewhat lower than at the same stage a year ago. It could hardly be expected that purchases of raw cotton would continue at such a high level, stimulated as they were last season by the policy of the United States Government in offering supplies for export at cheap rates. The continuation of this system has led to further substantial buying of the American product; the proportion of outside growths absorbed has again suffered, as the following comparison of arrivals of the raw material from different sources in recent seasons shows:

(In bales)

	First half			Total
	1957-58	1956-57	1955-56	1956-57
American	400,587	487,763	99,409	1,027,398
Mexican	92,668	71,021	69,730	105,059
Nicaraguan	7,687	2,712	1,388	24,458
Brazilian	9,942	32,500	85,006	38,236
Argentine	1,922	..	1,813	19,586
Peruvian	22,135	37,256	30,608	61,285
Egyptian	7	976	11,508	1,284
Sudan	68,375	113,803	101,243	146,396
East African	13,485	13,094	13,726	36,925
Nigerian	27,100	28,556	67,279	57,276
Congo	685	7,494	13,481	8,134
Turkish	27,110	16,302	497	26,144
Syrian	9,291	5,178	21,015	14,316
Pakistan	2,050	2,575	21,671	10,110
Indian	969	4,536	42,582	20,375
Russian	13,315	13,534	41,590	30,636
Others	60,542	30,617	52,717	61,829
Total	757,770	872,917	679,943	1,689,449

Over the years, the part played by different cotton producing areas must vary and current indications point to a swing away from the more traditional types grown outside the United States used in Lancashire. Purchases from India, Pakistan and several South American countries are now relatively unimportant and political developments have practically obliterated the spinning of Egyptian cotton. In some cases, adequate substitutes have taken the place of former favourites, but shipments from the Sudan have been affected during the past half-year by the rather curious price policy adopted by the Sudanese Government.

Mexican growers have gained a little at the expense of the United States, while a marked improvement has lately occurred in the use of Turkish cotton in Lancashire mills. An interesting commentary on the widespread nature of cotton growing throughout the world is the fact that arrivals of raw material from countries not specifically mentioned in the above list so far this season have doubled in quantity compared with a year ago.

Although imports during the past 18 months have shown a remarkable expanson, a large proportion of the supplies received have been absorbed by the mills. Stocks in first hands are probably larger than sometime ago, but the supplies held by merchants have not increased materially. The latest information on visible supplies at Liverpool, Manchester and afloat shows a total of 318,000 bales, as compared with the peak of 387,000 bales at the end of October last. The position 12 months ago was that visible supplies amounted to around 287,000 bales.

Stocks of the American staple accounted for 181,000 bales out of those at present on hand, whereas, towards the end of last year, there were at one time 227,000 bales available. Supplies of Sudanese cotton continue to arrive in fair quantities, there being at present 19,000 bales afloat and a further 11,000 bales is held in stock at Liverpool.

Financial Aid Plea

Mr. Frank Rostron, President of the Manchester Chamber of Commerce, compared current conditions in the Lancashire cotton industry to those ruling in 1951 in the course of his address at the annual meeting of members. The average number working in the third quarter last year, he said, barely exceeded 200,000 in spinning, doubling and weaving, whereas the figure in 1951 was 278,000. The last few months of 1957 did not bring a really satisfactory volume of new business and the outlook at the beginning of this year would have been more encouraging had the orders in hand been double what were, in fact, available.

To arrest this serious decline, Mr. Rostron said that, without some form of agreement or understanding with the overseas industries concerned, the Government would be faced with renewed pressure for some means to control duty-free foreign imports, perhaps on the lines of the action recently taken to check the flood of cloth from China.

While everyone agreed that there were many directions in which Lancashire must fend for herself, there were periods in the history of any industry when outside help was essential. "I feel there is a need for some generous long-term financial arrangement," he declared, "particularly in the weaving section, to enable manufacturers to re-equip with modern machinery and to employ new methods."—*All Rights Reserved.*

SCINDIA STEAM NAVIGATION COMPANY, LTD.

MR. DHARAMSEY M. KHATAU'S REVIEW OF COMPANY'S OPERATIONS

EXPANSION OF CAPACITY OF PORTS TO RELIEVE CONGESTION SUGGESTED

SPEAKING at the Thirty-eighth Ordinary General Meeting of the Scindia Steam Navigation Company, Ltd., held at Bombay on 19th February 1958, Mr. Dharamsey M. Khatau, Chairman, referred to the congestion in the ports of India and hoped that the good record established recently in the working at different ports would be continuously maintained. At the same time, he desired that the piece-rate system introduced in Bombay port should be extended to other important ports and that no effort should be spared in expanding the capacity of the major and the important minor ports, so that they could, in future, cope with the increased export-import trades and conveniently handle larger and deep-drafted ships.

The following are extracts from Mr. Khatau's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you to this, the Thirty-eighth Annual General Meeting of the Company. The Directors' report and the statement of accounts for the year ended 30th June 1957, have been in your hands for some time now and, with your permission, I will take them as read.

"In my speech I had informed you last year that the working results for the year 1956-57 would be satisfactory, compared with the previous year, and I am happy to be able to report that our expectations have been fully realised, as can be judged from the accounts already before you. I would invite your attention to the allocations proposed in the Directors' report with you and would clarify that the amount of Rs. 72 lakhs provided as special depreciation represents the amount by which our tax liability has been reduced on account of the development rebate allowed under the Income-tax Act in respect of new ships commissioned during the year under review. This, together with the amounts previously provided in this behalf, brings the total of special depreciation to Rs. 150 lakhs. Our gross earnings of freight have shown an increase of about 20 per cent., even though during the year under review the cargo lifted by your vessels was only 18.67 lakh tons, as against 19.15 lakh tons last year.

"In spite of enhanced and rising costs of operation, the improved results have enabled your Company to pay a dividend of Rs. 1.25 per share. You will also observe that we have added substantially to various reserve funds and these additions have strengthened the finances, which will be necessary for the modernisation and expansion of our fleet, to which I shall refer later this afternoon.

Coastal and Adjacent Trades

"With the lesser number of ships available for these trades, as compared to the previous year, due to sale of old units employed here, we carried less cargo during the year. The freight earnings, however, show an increase, due to larger imports of rice from Burma and due to the freight increase of 15 per cent. on general cargoes and coal as recommended by the Rail-Sea Co-ordination Committee to which I had referred last year. The freight earnings would have been better had the increase recommended by the Rail-Sea Co-ordination Committee been made effective by Government on salt cargoes carried by your vessels. The sanctioned increases in freight rates, referred to above, have helped us in meeting to some extent, the rising operating costs, but they still fall short of the request of 28 per cent. increase made by the coastal shipowners. Under these circumstances, it is not going to be easy not only for your Company but also for other shipowners engaged in these trades to meet with the rising spiral of operating costs and to provide even for a modest programme for replacement of old and uneconomic units presently employed. It is apparent, therefore, that it would be extremely difficult, if not impossible, for shipowners in these trades to provide for additional tonnage, which would be necessary to meet with the trade requirements as envisaged not only by the Rail-Sea Co-ordination Committee but also by the authors of the second Five-year Plan.

"As regards the West Coast (B.S.N. Line) trade catered for by the smaller vessels of your Company, I have nothing very hopeful to report, for, even though there is some improvement on the Bombay-Saurashtra sector, it is apparent that we have lost a good portion of our passenger and cargo traffic between Bombay and Karachi, due to passport and export-import restrictions between the two countries. Similarly, the passenger traffic between Bombay and Mormugao is not available, owing to our having to discontinue the services to and from Mormugao.

Overseas Trades

"With the addition of new and faster ships in the trade, it was expected that our liftings would increase proportionately. Unfortunately, however, owing to the closure of the Suez Canal, our voyages were longer with the result that our liftings increased only by about 5 per cent. The freight earnings have been higher than last year, due to freight increase during the year and to the Suez surcharge levied to cover increased costs due to deviation in the routing of ships.

"The India/U.S.S.R. Service, which we started last year, is still meeting with some operational difficulties which I would call 'teething' troubles. To meet the increased operating costs, we have requested the Government to increase the freight rates suitably and hope that an early decision will be taken.

"The India/West Africa service, to which I referred last year, has found favour with the exporters from the West Coast, as it provides regular direct sailings at lower rates. This new service has enabled us to cater not only for cargoes to West African ports but also to the cross trades between West Africa and Continental Mediterranean ports, thereby making an additional contribution to the foreign exchange resources of the country.

Operating Expenses

"In view of the greater number of 8 and 12 yearly surveys in 1956-57, as compared to the preceding year, repairs, surveys and dry-docking charges show a considerable rise over the preceding year. Our fuel bill shows a rise due to the deviation of some of the voyages via the Cape and the increased cost of fuel oil, consequent upon the Suez crisis, apart from the two extra voyages performed in the year under review. There is a small set off against these increases due to saving in the Canal dues. The implementation of the piece-rate scheme at Bombay has brought an increase in the stevedoring charges which, to some extent, could be set off against the improved despatch obtained.

"In view of the demand made by the National Union of Seamen of India for a rise in wages and for certain other benefits a ten per cent. increase in wages and certain benefits were agreed to be given to the seafarers as from 1st October, 1957, that is, in the current year, and this will cost us about Rs. 5 lakhs per annum.

Port Conditions

"Shipowners had to put up with considerable delays at some of the Indian ports, thereby losing a number of ship-days in a voyage, due not only to monsoon conditions but also to unphased imports of fertilisers, foodgrains, iron and steel and other Plan cargoes, which severely strained the resources of the ports like Bombay and Calcutta and nullified the advantage gained by the introduction of the piece-rate system in Bombay. The port congestion was further aggravated by the clearance and reopening of the Suez Canal which brought about a simultaneous arrival of ships via the Cape and via the Canal. The port congestion in India caused great concern to the members of the various Conferences abroad trading with India. These Conferences were seriously considering the question of levying a surcharge on freight to compensate themselves for losses due to such delays and it required most strenuous efforts on the part of Indian Lines to persuade the Conferences to stay action in regard to the imposition of surcharge. These efforts were very necessary, in view of the active steps taken by the port authorities and the Government to reduce the congestion and minimise delays to ships in ports. It is hoped that the good record recently established in the working at different ports will be continuously maintained. Early steps should be taken by the Government to introduce the piece-rate system, so effectively working in Bombay, at other important ports. Side by side, no doubt, efforts will be made by the authorities to augment and improve the handling equipment at various major ports. The Government, I am sure, will not spare any effort in expanding the capacity of major and important minor ports, so that they can, in future, cope with the increased export-import trades and conveniently handle larger and deep-drafted ships.

Tonnage Programme

"With the delivery of the six 17-knot ships from the Lubeck shipyard, we have now with us 44 ships aggregating 2,36,532 g.r.t. in all operating in the overseas, coastal and adjacent trades including also the seven smaller ships employed in the West Coast trade. Delivery of two ships ex the Vizag Shipyard has been considerably delayed and we now expect one of these to be handed over to us next month and the other in June this year. Two faster ships on order with the Lubeck Yard are expected to be delivered to us in 1959 and 1960. With the delivery of these new ships we hope to be able to cater to the requirements of the coastal, adjacent and the overseas trades by suitable adjustments. Such additional demand for space as we have to cope with particularly from the U.K.-Continent, we arrange to cover by chartering ships on a suitable basis.

"The question of providing the necessary tonnage to meet our requirements has been receiving our constant attention. As from May, 1955 to date we have acquired 14 ships in all and expect two more to be delivered to us in the next few months and a further two during the next two years. Even so, we shall have to replace the eight liberty ships and five ships presently employed in the coastal and adjacent trades, apart from any expansion of our fleet, to enable us to cater increasingly to the overseas trades of the country in which the Indian lines have so far had a very meagre share. Looking to the depressed state of the freight market and the easier position in regard to placing of orders for new tonnage, the present seems to be an appropriate time to acquire tonnage to provide for replacements and expansion. We have been planning to provide at least for our replacement programme. We have the necessary resources, but we are faced with the very tight position in regard to foreign exchange. We trust that, as a result of the efforts being made by our Transport Minister, it will be possible for the Government to release some foreign exchange for acquisition of tonnage.

Prospects for the Current Year

"You would perhaps like me to say a few words about the current year which is coming to a close shortly. With the improvement in working at ports our turn-round has improved and we expect more voyages to be completed due to our placing newer and faster ships in service. Our operating results as up to the six months ended 31st December 1957 have been satisfactory. We propose to provide regular coastal berthings for the carriage of general cargoes both from the West and East coast ports, and we expect improved earnings in the carriage of coastal cargoes. In regard to the carriage of rice from Burma to India aggregating four lakh tons in the current year, the rate of freight as agreed by the Government of India is far from economic. While the low rate awarded is, no doubt, the result of lower prevailing tramp freight, it particularly hits essentially Liner Companies like ours who have not hesitated in the past to carry rice cargoes at comparatively lower rates even when the tramp freights were at a high level.

"The persistent low level of tramp rates in the overseas trades has, however, affected the Liner rates on bulk cargoes like ores, fertilisers, oil-cake, bulk oil, scrap, etc., and the effect of this downward trend in rates will have some impact on the working results for 1958-59. The import restrictions and the delayed announcements in regard to export quotas also affect the availabilities of cargoes in the Liner trades. In view, however, of the positive foreign exchange earning possibilities manifest in the expansion of the export markets of these commodities, I am sure the question of the release of sizable quotas of these commodities is engaging the constant attention of the Government of India. With these steps and with the expansion of the trade in general as a whole, I would expect our Liner services to get reasonable support in years to come.

"We had the usual periodical conference of our Agents and Branch Managers early in December at Bombay when our various departments at the Head Office and the Management of the Company had full and frank discussions about the important developments affecting our various services. Particular advantage was taken during these discussions to place before our representatives our plans for further improvement in our services and, as a result of these joint deliberations, we have drawn up improved schedules of different services which are being given effect to during the current year. I have every hope that our joint deliberations will result in a better and more efficient working of our services as we progress from year to year.

Government and Shipping

"The year under review has seen a number of taxation and allied proposals being given effect to, with a view to augmenting the finances for the implementation of the second Five-year Plan. The Indian shipowners were considerably agitated over the introduction of the Wealth Tax and the effect of this tax on the competitive ability of Indian shipping in the international trade. A delegation of Indian shipowners presented the case of the shipping industry before the Select Committee of the Parliament and ultimately we were able to obtain the necessary exemption from the application of the provision of this Act to the shipping industry. I am sure, you will join with me in expressing our due debt of gratitude to Shrimati Sumati Morarjee who led the delegation and, particularly, to Shri M. A. Master for his able advocacy in the cause of Indian shipping before the Select Committee.

"The systematic disposal of our older and uneconomic ships is a natural outcome of planned modernisation of our fleet. The sale of such ships, however, brings us within the ambit of the Capital Gains Tax. Your Directors are alive to the fact that a ship is sold only to be replaced and that such replacement costs the Company at least 5 to 6 times the original cost of the vessel disposed of. We are, therefore, making every effort to impress upon the Government that the sale of such vessels is not with a view to encashing the 'Capital Gains' arising out of the transaction but only to replace and improve the general tonnage position of Indian shipping and that, therefore, shipping should be exempted from the imposition of the Capital Gains Tax.

"As on 1st January 1957, India had 124 ships of 517,300 g.r.t.; ten ships aggregating 69,017 g.r.t. were added during 1957. On 1st January 1958, there were under construction or on order twenty-three ships of 138,100 g.r.t. in Indian and foreign shipyards.

"Two second hand ships of 9,879 g.r.t. were purchased for delivery in 1958. With these acquisitions the Indian registered tonnage would reach a total of 159 ships of 734,296 g.r.t. By 1960-61 about 90,000 g.r.t. will be due to be scrapped or sold and India would, therefore, still need about 255,000 g.r.t. to reach the modest target of nine lakh g.r.t. as fixed by the Planning Commission. Viewed in the context of available finance and the foreign exchange resources of the country, the fulfilment of this objective would appear to be a stupendous task. It was, therefore, very heartening to hear the very encouraging and appreciative remarks from our Transport Minister, Shri Lal Bahadur Shastri, about the efforts made by the Indian shipowners in acquiring additional tonnage, when he addressed the general meeting of the Indian National Steamship Owners' Association in December last. He was not only fully appreciative of the difficulties that the Indian shipowners had to face as regards acquisition of tonnage but was further prepared to extend assistance to the Indian shipowners in this connection. I particularly value his very encouraging observations about the shipping development fund, reduction in the rate of interest on loans granted to shipping companies for the acquisition of coastal ships and the hopes that he has held out for an increase in the development rebate allowance. He was sympathetic also in regard to the question of foreign exchange. The Transport Minister further made certain proposals in regard to the availability of cargoes to be moved in Indian ships and we are happy to note that—thanks to his efforts and the co-operation of the other Ministries in the Government of India—a Shipping Co-ordination Committee has been constituted which would attend to this question and suggest steps that could be taken to enable the Indian shipowners to acquire additional tonnage. Indian shipowners are indeed very grateful for the sympathetic understanding of our difficulties and the steps taken to resolve the same. We are sure, with the presentation of the next budget, we may see further implementation of some of the proposals made.

Managing Agency Agreement

"As mentioned in the Report, the question of future Managing Agency of the Company is now in the final stage of discussion and the same will be placed before you for approval at an early date.

Bonus Shares

"I may inform you that, consequent on the receipt of the sanction of Controller of Capital Issues, allotment letters in respect of bonus shares are being got ready and will be sent to shareholders shortly."

OUTPUT OF SHIPS IN 1957

The world's shipyards launched 1,946 ships aggregating 8,460,000 gross tons during 1957, surpassing the previous year's output by 1,786,000 tons, the biggest increase over any single year in the post-war period, and establishing a new post-war record. The latest Lloyd's Register shipbuilding returns show that Japan has once again topped the list of shipbuilders with an output of 2,424,000 tons which is an improvement of 680,000 tons over the previous year and which is 1,000,000 tons higher than the output of U.K. which lost the lead to Japan in 1956. Germany continued in the third place with 1,230,000 tons launched, showing an increase of 230,000 tons over the previous year.

The following table gives the details of shipping launched in these countries and the world in the post-war period:

(In g.r.t.)

	World	Japan	U.K.	Germany
1946	2,114,702	N.R.	1,120,526	N.R.
1947	2,102,621	N.R.	1,192,789	N.R.
1948	2,349,743	N.R.	1,176,316	N.R.
1949	3,131,805	147,974	1,267,467	N.R.
1950	3,492,876	347,945	1,324,570	154,506*
1951	3,642,564	434,286	1,341,624	315,339
1952	4,385,578	608,373	1,302,548	520,172
1953	5,096,050	557,339	1,317,463	818,221
1954	5,252,631	413,405	1,408,874	963,114
1955	5,316,742	826,730	1,473,937	925,589
1956	6,673,701	1,746,429	1,383,387	1,000,498
1957	8,460,314	2,424,000	1,407,000	1,230,000

N.R.=No Returns. * Returns may not be complete.

At the end of 1957, 9,947,977 gross tons of shipping were under construction in world's shipbuilding yards. Of these, 2,345,408 tons were being built in the U.K., 1,589,280 tons in Japan, 939,537 tons in Italy and 928,087 tons in Germany. 49.1 per cent. of the total tonnage under construction represents tankers.

The U.K. has the largest amount, namely, 2,216,520 tons of the tonnage being built, for the registration under its flag. Other countries making large additions to their fleets are Norway with 1,103,953 tons, the "flag of convenience" countries Panama and Liberia with 941,307 tons and 840,050 tons, respectively, Japan with 556,930 tons, the Netherlands with 519,490 tons, France with 486,387 tons, Italy with 480,054 tons, the U.S. with 424,339 tons, Sweden with 379,778 tons and Germany with 343,522 tons.

As at the end of 1957, there were 11 ships with a total tonnage of 29,111 under construction in Indian yards. This included seven motorships comprising five vessels of between 4,000 and 6,000 tons and two vessels of between 2,000 and 4,000 tons and four small steamships of less than 1,000 tons each.

A report from New Delhi states that the French consultants of the Hindustan Shipyard will cease to function after June. A six-month notice for the termination of their contract is believed to have been given last month. This action is reported to have been taken, because of the dissatisfaction with the manner in which French collaboration at the shipyard has progressed so far.

Things seem to have come to a head last year when a ship built at Visakhapatnam was found to contain serious structural defects. The matter was raised in Parliament and Mr. Lal Bahadur Shastri, Minister for Transport, promised an enquiry.

A new foreign firm is likely to be chosen as consultants to the shipyard after discussions with several countries.

INDO-EGYPTIAN TRADE IN COTTON

LARGER IMPORTS IN THE OFFING?

IN spite of the earlier statement of Dr. Chiati, leader of the Egyptian trade delegation currently in India, that no price discounts will be offered for Egyptian cotton, the expectation still persists in cotton circles that Egypt will be prepared to make some concessions or provide some inducements to make its cotton attractive to Indian buyers. This belief stems from the anxiety of Egypt, as expressed by the delegation, to see that India lifted as much quantity of its cotton as possible. It is also strengthened by the fact that the supply of Egyptian cotton in the current season, namely, 1957-58, is substantially higher than in the previous season. According to the latest crop estimate, the current season's crop will be of the order of 1,842,746 bales (of 478 lbs.), as compared with 1,498,000 bales in the previous season. Stocks at the beginning of the season, that is, on 1st August 1957, was also higher at 440,000 bales, as against 305,000 bales on the corresponding date of the previous year. Export demand so far this season has, however, been more encouraging than last season and sales have registered a better showing. For instance, export sales till the 15th of January last aggregated 628,773 bales, as against 468,020 bales in the same period last season.

Nevertheless, it is true to say that Egypt has not yet recovered from the shock of the Suez crisis and has yet to regain its traditional markets. Vigorous efforts are being made to accelerate cotton exports and the delegation's visit to India is an instance thereof. Dr. Chiati, leader of the delegation, however, said that the delegation was purely on a goodwill mission, though it was naturally interested in enlarging trade between the two countries. Probably, he did not want to create the impression that they were unduly anxious to get rid of their cotton stocks.

While purchases by many of Egypt's European customers dwindled to a mere trickle, following the Suez crisis, India continued to take substantial quantities, though even its offtake was considerably less than that in earlier years. Import of Egyptian cotton, which was 279,381 bales (of 400 lbs.) in the 1953-54 season, declined to 218,933 bales in 1955-56 and still further to 54,327 in 1956-57. The monthly average consumption of Egyptian cotton by Indian mills also showed a downward trend. It declined from 23,260 bales in 1953-54 to 7,790 bales in 1956-57 and has been running at the rate of about 6,380 bales during the period September-December 1957 of the current season. The fall in Indian offtake of Egyptian cotton has been mainly due to the foreign exchange difficulties of India, the high price of Egyptian cotton and the availability of cotton of comparable quality at cheaper prices. The quality of Egyptian Karnak has also deteriorated of late.

The bulk purchases of Egyptian cotton by communist countries during the last and the previous season had artificially boosted the prices of Egyptian cotton. At this time last season, for instance, Egyptian Karnak Futures contract was quoting round 120 tallaris per lb., as compared with the quotation of around 80 tallaris per lb. at present. Although the price has thus come down considerably this season, it is still out of parity with that of Sudan, especially after the recent downward revision of the reserve prices of the Gezira Board and the cut in export duty.

Indian buyers consider Egyptian Karnak dearer than comparable Sudan cotton by about Rs. 200 per bale. In addition to this price advantage, Sudan cotton is also attractive to spinners in India because it is better marketed, and is of even-running quality, thanks to the very consistent classification adopted by the Sudan Gezira Board. An attraction offered by Egyptian cotton, from the Indian point of view, is that payment for it might be made in rupees while Sudans have to be paid for in sterling. But this payment advantage in itself is not sufficient to induce India to go in for larger quantities. Some discount, which would reduce the price spread between Sudanese and Egyptian cotton, is also necessary to make the latter attractive to Indian mills.

During the talks which the delegation had with the representatives of the cotton trade and mills in Bombay last week, it was made clear to the delegation that India could not purchase now as much as it used to buy in the past, because of the high price of cotton and foreign exchange difficulties. It was pointed out that this country could take more Egyptian cotton, in preference to Sudanese styles, only if the following terms were agreed upon:

(1) Egypt should give a discount for payment in rupees.

(2) It should reach a long-term agreement with India regarding payment for cotton imports. It was suggested, in this context that the possibilities of taking more Indian goods in return for cotton should be explored.

It would appear that the purpose of the delegation's visit to this country is to arrive at an agreement with the Government which would permit a separate quota for Egyptian cotton and bilateral clearing arrangement in Indian rupees so as to channel trade between the two countries in that currency. It seems likely that, within this framework, Egypt may agree to give some price concessions. According to knowledgeable sources, Egypt is inclined to give a concession of 15 per cent. in respect of Karnak and 20 per cent. for other varieties. The aforesaid arrangement will free Egyptian cotton from the uncertainties of import quota. But whether the Government of India would permit substantial quantities to flow in or whether it would put a ceiling remains to be seen. These questions might, doubtless, have been discussed at Delhi and the outcome of the parleys is awaited with interest.

NEW COTTON FOR GUJERAT

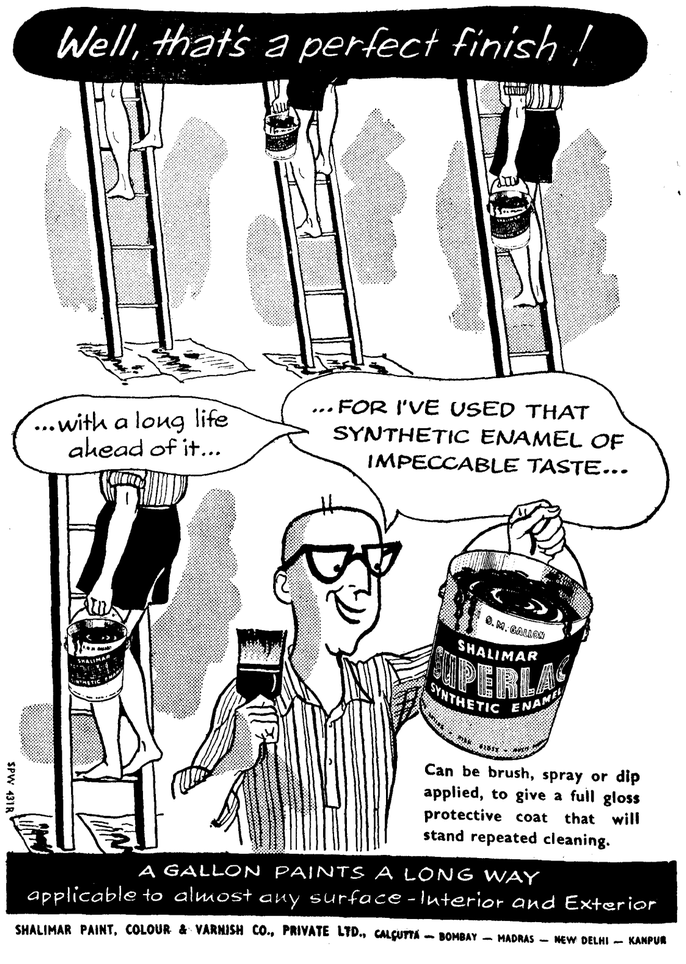
A new variety of cotton suited to the Mathio tract of Kathiawar has been evolved under the auspices of the Indian Central Cotton Committee, styled as C.J.73. It has a ginning return of 34 per cent. and a staple of ⅞"-15/16" and has been found capable of spinning up to 40 counts at the Technological Laboratory, Matunga. For an average yield of about 440 lbs. per acre, it is estimated to bring in a cash return of Rs. 258 per acre, as against Rs. 200 obtained for the previous improved strain known as 'Pratap' and Rs. 196 for the unimproved local Mathio.

Mathio cotton, which is one of the components of the commercial Dholleras grown in North Gujerat, was introduced as early as 1900. It is a coarse type of cotton of low spinning value. But its hardy and early maturing qualities made it popular and led to the extension of its cultivation. Tests were made to ascertain the suitability of similar early maturing Bengal type of cotton for the tract. As a result of these, a U.P. variety, C.520, which was better than the local Mathio, was released for general cultivation in the tract. This was the standard type for some time until an improved strain, Pratap, was introduced. Pratap possessed a staple of 25/32" to 27/32", with a ginning outturn of 32 per cent., and was capable of spinning up to 28 counts, as against the staple of 25/32", ginning percentage of 30 and spinning value of 16 counts of the local Mathio. Owing to its superior qualities, Pratap fetched, on an average, Rs. 80 more per candy of 784 lbs. of lint than Mathio. Its chief defect, however, lay in its low yield, particularly in drought years. The tract being characterised by irregular and uneven rainfall and long spells of drought, a better and hardier type of cotton was required to withstand the vagaries of the weather.

This object has been achieved by hybridising the old standard variety, C-520, and the Khandesh cotton, Jarilla, from which is derived the new strain C. J. 73. Tests have shown that this variety has distinctly better qualities than Pratap and is highly suited to the climatic and soil conditions of southern Kathiawar. It is capable of bringing in a net return of Rs. 58 more than Pratap and Rs. 60 more than Mathio.

Efforts are currently being made to multiply and distribute the seeds of this improved strain for general cultivation in the Mathio tract. It is estimated that the entire Mathio tract of southern Kathiawar and parts of Ahmedabad district extending over three lakh acres could be covered by this new variety. The monetary benefit to the cultivators growing it in preference to the local varieties is estimated to be as much as Rs. 150 lakhs.

Experiments conducted at the Cotton Research Station, Nanded (Bombay State), show that it pays to apply fertilisers to *Gaorani* cotton grown in the Marathawada area of Bombay State. The following recommendations are made in respect of manuring. Where a farmer cannot afford to give both nitrogenous fertilisers and phosphate, he should give 20 pounds of nitrogen per acre to cotton to get higher yields. Farmers who can afford to give both nitrogen and phosphate should include a leguminous crop (like groundnut or gram) in the cotton rotation, and give 30 pounds of phosphoric acid per acre to the legume and 30 pounds of nitrogen per acre to the cotton crop after the legume.



Can be brush, spray or dip applied, to give a full gloss protective coat that will stand repeated cleaning.

part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

'Newalls' Insulating Materials

REGULATION OF FORWARD TRADING IN "GUR"

COMMISSION'S PROPOSALS TURNED DOWN

THE Government of India has turned down the Forward Market Commission's recommendations that the regulatory provisions of the Forward Contracts (Regulation) Act 1952 be applied to *gur* and that forward trading be conducted through associations to be recognised under the Act. The Government has not given any convincing reasons in support of the rejection. All that it says is this: "The Government of India have carefully considered the recommendations made by the Commission and have come to the conclusion that there is no strong justification or special need for the time being to bring *gur* under the purview of the Forward Contracts (Regulation) Act 1952." This decision was announced as many as eight months after the Commission submitted its report (in May 1957). In fairness to the Commission and the public, the Government ought to have explained the reasons which have prompted it to come to the conclusion it has.

Forward trading in *gur*, it will be recalled, which was carried on in some places before the Second World War, was suspended during the war owing to restrictions imposed under the Defence of India Rules. When controls were lifted in 1947, forward trading became free and many commodity exchanges started *gur* futures. In January 1950, however, the Government prohibited futures trading in *gur* as part of a series of measures to bring down prices. The ban was continued till 7th January 1954, when, following the improvement in the supply position and easy trend in *gur* prices, the Government amended the Sugar and *Gur* (Futures and Options) (Prohibition) Order 1951, thereby restoring the freedom of forward trading in *gur*.

Case in Favour

Not being in possession of a detailed account of the reasons for the Central Government's decision not to bring *gur* under the purview of the Forward Contracts (Regulation) Act, for the present, it is not possible to comment on its action. But it seems to us, *prima facie*, that the Forward Markets Commission has argued the case in favour of its recommendations in a convincing manner. It may be noted here that, before submitting its report to the Government, the Commission had made a thorough study of the economics of *gur* industry, with particular reference to the part it plays in the country's sugar economy, the circumstances which warrant regulation of futures trading in *gur*, and the factors that will make such regulation most effective. The findings of the Commission clearly reveal that *gur* is a suitable commodity for futures trading and that there is need for bringing such trading under regulation.

It is, however, just possible that, in deciding as it has done, the Government was influenced by three factors. First, the Commission is already handicapped by shortage of senior staff. The Commission has not even sufficient members. It will not, therefore, be advisable to load it with more responsibilities. Secondly, the finances of the Government are being strained by the heavy development expenditure and as such it cannot afford to incur additional expenditure that will be involved in expanding the size of the Commission and its establishment. Thirdly, there have been no signs of unhealthy speculation being rampant in *gur* futures in recent years. It may be noted that the Government has stated that the need for controlling *gur* futures is not there for the time being. It may take up the matter any time in future, if the need arises.

Meets Requirements

Gur, as the Commission has rightly pointed out, generally meets the principal requirements for the successful operation of forward trading. The production of *gur*, for instance, is large and cannot easily be cornered. It has also a wide demand, so that no group of buyers is in a position to influence the prices to its advantage. The forces of supply and demand are uncertain enough to require a continuous assessment of their changing relationship through the medium of a futures market. The fluctuations in the price of *gur* are wide enough not only to attract speculative investors but also to induce the holders of ready stocks to insure themselves against risks arising thereupon. The existence of a number of flourishing futures markets at present shows that experienced operators are available in adequate numbers to deal in the commodity. Despite its varied characteristics, *gur* is capable of being graded into homogeneous lots.

The Commission is no doubt fully aware of the two defects in gur—(1) unsuitability for being stored for long without deterioration in its quality, especially in respect of colour, and (2) lack of well-defined and universally applicable standards. But it says that the defects need not be taken as insurmountable. For, according to it, the trade has, in practice, been able to overcome them in a large measure. Incidentally, the Commission emphasises the importance of measures designed to improve the keeping quality of *gur*, ensure proper storage and lay down standardisation of grades.

With regard to the need for regulating forward trade in *gur*, the Commission points out that such regulation will prevent people who have neither the means nor the technical knowledge and experience of futures trading from indulging in overtrading and speculation. Further, it will ensure fair trading practices in the forward markets. It will also help in evolving suitable standards in the trade by laying down appropriate trade descriptions in respect of quality for the stocks tendered against the contracts. Regulated forward markets can assist, too, in improving the quality of *gur*.

Trades' Reaction

It is interesting to hear that the representatives of some of the important associations such as Hapur and Muzaffarnagar feel that regulation of *gur* futures will make for healthy traditions in trade. Even the associations which think that there is no need for regulation since forward trading is going on smoothly are not opposed to regulation if the Government considers it desirable to have it. The Commission had received as many as 28 applications in response to its Press note inviting applications from associations desirous of being recognised for regulating forward trading in *gur*. These have been received from all the leading *gur*-producing States, except Madras and Andhra Pradesh which together account for about 11.2 per cent. of the all-India production.

A brief reference to the economics of the *gur* industry may now be made. The manufacture of *gur* is an important subsidiary cottage industry to the cultivators, since, generally, the cane growers themselves convert their cane into *gur*. In addition, the industry provides employment to about 41,000 persons (1951 census). The value of *gur* produced varies according to the prices prevailing; it was Rs. 70 crores in 1954-55 and as much as Rs. 140 crores in 1952-53 when the price was very high. Production is confined generally to the period between November and April which is the harvesting period of cane in most of the cane-growing tracts. *Gur* moves from the farms to the adjacent assembling markets more or less immediately after it is produced from where it then moves to the distributing and consuming centres from November to May.

Gur is used primarily as a sweetening agent. About 90 per cent. of the total output is used for consumption, mainly, for drinks, confectionery and domestic purposes. The balance is utilised for stock-feeding and for industrial purposes such as distilling, treating of tobacco and in the extraction of oil from gingelly seeds, especially in the South. It is also used for refining into sugar and *khandsari* when the price factor permits the same. Normally, *gur* costs about one-third to one-half the prices of sugar and as such is consumed by the poorer classes, particularly in rural areas. It is also preferred by some well-to-do people, as it is believed to be more nutritive than white sugar. In recent years, the consumption of *gur* has not shown any rise, while that of factory sugar has registered a definite and considerable increase.

Variations in Production

The production of *gur* shows marked variations from year to year, as the following figures will show:

Year	Production (Thousand tons)
1947-48	3,503
1948-49	2,764
1949-50	2,743
1950-51	3,254
1951-52	3,240
1952-53	2,705
1953-54	2,492
1954-55	2,714
1955-56	2,516*
1956-57	2,814*

*Estimated.

The wide fluctuations in the production of *gur* are due primarily to the variations in the area and yield of cane which, in their turn are influenced by such diverse factors as the cane growers' expectations of returns from alternative crops and climatic conditions. The relation between the price of *gur* and that of cane offered by sugar mills has also an important bearing on *gur* production, especially when there is a shortfall in cane output.

Since, the cane grower has the option of converting his cane into *gur*, high price of *gur* relatively to the price offered by sugar factories has the effect of drawing away cane supplies from production of sugar to manufacture of *gur*. When cane output is low, this factor may operate greatly to the detriment of sugar production. Since, however, this option to the cane grower is limited by the crushing capacity of the factories and also, in the case of areas away from the factories, by the expenses and difficulties of transporting cane over long distances, the price factor does not have much significance when cane supplies are relatively abundant or in areas which do not have easy access to crushing factories.

Cane Utilisation

On account of these factors, the proportions of cane devoted to *gur* and sugar vary from year to year. In 1953-54, cane production was the lowest in the post-war years. The fall was reflected in the lower production of both sugar and *gur*. However, due to remunerative prices of *gur* prevailing during the season, the proportion of cane devoted to *gur* increased from 53.52 to 55.82 per cent. over the previous year, whereas that of cane crushed by the factories declined from 25.36 to 22.19 per cent. In the next year (1954-55), there was an increase in cane production and, since the prices of *gur* were very low at around Rs. 10, there was a large diversion of cane to the factories. The proportion of cane devoted to *gur* during the year fell from 55.82 to 49.66 per cent., while that of the cane crushed by factories rose from 22.19 to 28.93 per cent.

To revert to the Forward Markets Commission's recommendations. The Commission suggested the establishment of regulated futures markets in *gur* at Hapur, Meerut, Agra, Muzaffarnagar and Delhi. The recognition, it was said, might be granted to the Chamber of Commerce, Hapur, the Kaiserganj Beopar Company, Ltd., Meerut, the Agra Merchants' Chamber Ltd., Agra, and to two associations to be newly constituted on a representative basis at Muzaffarnagar and Delhi. The Commission was of the view that recognition of the aforesaid associations should be for a period of three years in the first instance.

SUGAR EXPORT

Replying to a question in the Lok Sabha on Monday this week, Mr. A. M. Thomas, Deputy Minister for Food and Agriculture, revealed that the Government of India was considering the question of modifying last year's arrangements for the export of sugar. He recalled that, last year, the Indian Sugar Mills' Association held the monopoly of export. According to Mr. Thomas, the Association has suggested two schemes for the export of Indian sugar. One suggestion favours the establishment of an Indian sugar marketing corporation and the other the grant of quotas for each factory for export. These suggestions are being considered. The question of utilising the services of the State Trading Corporation for the export of Indian sugar is not ruled out and the Government is considering various suggestions in regard to this matter and no decision has been taken so far. The export of Indian sugar will depend on world market conditions. At present, the price of sugar in the world markets has gone down. Therefore, it is not possible to fix any target for exports. However, it will be Government's effort to export the maximum quantity.

COAL RESOURCES OF INDIA AMPLE

REMOVAL OF CEILING ON OUTPUT OF METALLURGICAL COAL URGED

THE speeches made at the annual meeting and dinner of the Mining, Geological and Metallurgical Institute of India held at Calcutta a few days ago suggest that there is an unanimity of opinion among the producers and consumers of coal that India's resources of coal are so ample that there is no need for any control over production of metallurgical coal. Another view that emerged from these speeches is that the problem is no longer one of paucity of resources, but one of providing proper facilities for exploitation of these resources and of proper utilisation of the coal produced. A third one is that a lot of coal is being wasted in the consumption of coal and that this can be avoided by proper control and economy.

Earlier estimates of India's reserve of metallurgical coal pointing to inadequate supplies *vis-a-vis* expected demand, were primarily responsible for the enactment of the Coal Mines (Conservation and Safety) Act and the establishment of the Coal Board for regulating stowing, blending, limitation of output, restriction on use, control of opening or re-opening of coking coal mines and control of mining methods as the principal means of conserving coal. The progress in this direction was somewhat slow and the Coal Board had, therefore, to take up more readily enforceable methods of conservation, namely, restriction on output, control of operation and regulation of mining methods in various ways. The pegging of output of coking coal, which was, in the first instance, confined to Selected A and B grades, was extended to Grades I and II also in 1953. Ever since the policy of conserving metallurgical coal was first mooted many years ago, a section of coal producers has been questioning the necessity for such drastic action as to peg production. Their opposition to pegging metallurgical coal has recently gained strength from the revised estimates of coal reserves in the country.

Estimated Reserves

The latest estimated reserves of coal are of the order of 43,000 million tons, of which Gondwana type of non-coking coal accounts for 37,000 million tons, tertiary type of non-coking coal for 4,000 million tons and good quality coking coal for 2,000 million tons. If the present rate of production remains unchanged, these reserves should last for 1,000 years. In an expanding economy, where the demand for coal is growing rapidly, the rate of production cannot be expected to remain static. With an increasing demand, coupled with the enforcement of economy and the substitution, wherever possible, with low grade coal, these reserves are estimated to last for at least 400 years. The Geological Survey of India and the Indian Bureau of Mines have undertaken extensive coal prospecting in new fields and in depths down to 4,000 feet below the surface. The results achieved so far by exploration of new coal seams are remarkable and have added appreciably to the known resources of India's coal wealth. The search for such new sources of energy as atomic power, the increasing use of inferior coals and utilisation of larger quantities of inferior coal for soft coke production in low temperature carbonisation plants are all likely to divert the consumption of better grades of coal to more economic channels.

As stated earlier, some of the coal producers have all along been opposed as much to the policy of pegging output of metallurgical coal as to the various other controls on the industry. In the circumstances, the recent report that the Government of India was considering the question of liberalising the pegging of metallurgical coal production was welcome to the industry. In fact, Mr. D. Hogg, Chairman of the Indian Mining Federation, proposing the toast of the "Mineral Industry of India" at the annual dinner of the Mining, Geological and Metallurgical Institute of India, expressed his gratification at this welcome change in the Government's attitude to pegging of coal production. Mr. D. C. Driver, Chairman of the Coal Consumers' Association, who replied to the toast of the "Mineral Industry of India," reiterated his earlier theory, put forward by him at the recent annual meeting of his own association, that the revolutionary change in the idea about coal resources of India, brought about by the preliminary survey of the Geological Survey of India and Indian Bureau of Mines and by the modern coal washing processes, had made the recent legislation on mines and minerals, namely, the Mines and Minerals (Regulation and Development) Act, out of date. This Act, it may be noted, was placed on the Statute Book only in December 1957. He was of the view that this legislation was based on the previous assumption of scarcity of good coal in India, coking and non-coking. "If this is the outcome of their preliminary survey," Mr. Driver added, "their final conclusions may demolish altogether the depressing myth of scarcity of good coal. It is, therefore, only fair that the Government should consider relaxation of their very rigid and strict mining rules and regulations and amend the recently passed Coal Areas Acquisition Act."

To revert to Mr. Hogg's speech, wherein he made a reference to the Mines and Minerals (Regulation and Development) Act of 1957. Mr. Hogg observed that control and regulation over development of minerals might be necessary for Government, but even over these matters it was necessary for the other members of the combination to be taken into Government's confidence when rules were framed under this Act. The Government of India has, under this Act, powers to modify the mining leases granted before 25th October 1949, so as to conform to the provisions of the Act and the rules made under the Act. This power, in the opinion of Mr. Hogg, is not in the interest of mining companies. "The economy of companies formed to carry out mining operations," he pointed out, "is based on the terms of the leases which they hold and changes cannot be made in these matters without very adversely affecting the economics of not only the companies concerned but also the industry as a whole and the prices of the raw materials produced and dependent manufactured goods."

The Act also confers powers on the Government to enhance or reduce the rates of royalty in respect of any mineral. Mr. Hogg hoped that the existing rates of royalty paid on coal would not be enhanced, particularly because the coal industry had always understood that the Government recognised that the factors relating to leases for coal were fundamentally different from other minerals, and that coal would be excluded from some of these rules to be framed. In this connection, Mr. Hogg drew the attention of the Government to the difference between royalty and tax. Thus, he said:

"Royalty is a fixed charge for the privilege of exploiting natural resources and is an item in the cost of production. If the rate of royalty is increased by Statute, without any increase in the value or quantity of the natural resources available to the lessee, it amounts to an arbitrary imposition on what might be a practically fixed gross income. If the rate of production increases, a larger total amount of royalty is paid irrespective of whether profits increase or fall. Tax, on the other hand, is based on earned income and varies according to profits. In other words, the basis of tax is the actual earning capacity, whereas the basis of royalty is circumstantial. Should Government exploit unalterable circumstances in his way?"

Transport Problem

While the confidence reposed by the Government in the private sector of the coal industry, by calling on it to raise production by 10 million tons during the second Plan period, has not been misplaced—as witness the increase of 3.5 million tons in coal output by private collieries in 1957 alone—much more can be achieved by this sector but for the many difficulties which stand in its way, one of the greatest being inadequacy of transport facilities. Mr. Hogg paid a tribute to the good job done by the railways in moving increased quantities of raw materials, particularly those required by the expanding steel industry and the new units which were coming up, and in meeting the demands for export ore. He, however, regretted that the actual movement still fell short of the needs. The shortage was particularly felt by the mineral industry, especially collieries served by the South Eastern Railway. Mr. Hogg was, however, of the view that the South Eastern Railway had already been strained to the extreme under the weight of the second Five-year Plan and its resources appeared to be too limited to cope with the additional burden which was yet to come. Giving an instance, Mr. Hogg said that the minimum guaranteed supply of wagons for the movement of coal by the South Eastern Railway in 1957 was 950 wagons per day, which it could not provide, while according to the coal industry the daily minimum requirement was 1,050 wagons during that year. The wagons requirements were likely to grow in 1958 and in the years to follow. While an increase in coal production in the collieries served by the South Eastern Railway was vitally required, Mr. Hogg felt that it was impossible for this railway, which was already over-strained, to find the number of wagons required and move them. One of the suggestions made by Mr. Hogg to release the strain on the South Eastern Railway was to re-group certain sections of the railways. Thus, he said, the Eastern Railway, which had the capacity to operate the adjoining sections of the South Eastern Railway, should take over these sections without the least possible delay. Though this would mean some administrative inconvenience, this problem appeared to be small, as compared with the major ones posed by the second Five-year Plan.

Economy in Coal for Combustion

That there is great scope for effecting economy in the use of coal for combustion purposes and that a large quantity of coal can be saved by proper stoking were emphasised by Mr. J. W. Whitaker, in his presidential address at the annual meeting of the Institute. The vast bulk of the coal in the country, Mr. Whitaker pointed out, was used for combustion, the other main uses being carbonisation and gasification. Most of the coal used for combustion was employed in steam raising, other combustion uses being cement manufacture, ordinary brick manufacture, making of glass, ceramics, refractories and the drying and curing of various goods. Of the present annual output of 40 million tons, 35 million tons were used in combustion and of the latter quantity about 25 to 30 million tons were used for steam raising, including locomotives. If some of the large plants, like modern thermal power plants and cement works, were excluded, Mr. Whitaker added, the consumption of other combustion plants would amount to 25 million tons per annum at an efficiency which was often below 50 per cent.

The general causes of inefficiency, according to Mr. Whitaker, were unintelligent stoking and improper adjustments of the primary and secondary air supplied to the furnace, with the result that the air supply was either excessive or insufficient. When the supply of air was excessive, the sensible heat carried away in the flue gases involved a great loss of heat and a lowering of the temperature in the heating zone. The result was that the rate of heat transference to the boiler was reduced and, in order to make good this loss, additional fuel would have to be consumed.

Insufficient supply of air or improper feeding of air to the furnace, on the other hand, Mr. Whitaker explained, caused an incomplete combustion and large losses, because the full calorific value of the fuel was not obtained. Insufficient or improper supply of air also produced large volumes of smoke which not only caused a further decline in efficiency but also affected the health of the community. Mr. Whitaker suggested that a great saving could be effected in the use of coal by giving proper instructions to the engineers-in-charge and stokers for intelligent stoking and adjustment of primary and secondary air supply to the furnace. There is a lot of truth in this statement of Mr. Whitaker and it is to be hoped that consumers of coal would pay serious attention to his suggestion. One of the causes for wastage in the use of coal is its relative cheapness. A higher price for coal will not, therefore, be a bad thing. Here is an angle from which the Boothalingam Committee could view the problem entrusted to it dispassionately.

COAL MINES PROVIDENT FUND

The rate of interest allowed to members of the Coal Mines Provident Fund on their accumulations for 1958-59 will be raised to 4 per cent. from 3¾ per cent. allowed for 1957-58. A decision to this effect was taken by the Board of Trustees of the Coal Mines Provident Fund at its meeting held at Dhanbad on the 5th inst. The interest, it will be recalled, has been progressively raised in recent years, from 3¼ per cent. in 1955-56 to 3½ per cent. in 1956-57 and to 3¾ per cent. in 1957-58. The rate of interest payable to members is determined on the basis of the accumulations to the fund and the earnings on their investments. The total accumulations in the fund as on 31st December 1957, amounted to over Rs. 11 crores. The total estimated income on the investment, including a sum of Rs. 42.05 lakhs in the reserve account and about Rs. 9.92 lakhs as revenue surplus in the adjustment account, as well as the amounts to be received up to the end of March 1958, is said to be Rs. 1.37 crores. The Coal Mines Provident Fund Scheme, which was introduced in May 1947, has a membership of about 331,000 colliery workers.

JUTE ACREAGE TO BE INCREASED IN THE COMING SEASON

RISE OF 25 P.C. IN CROP ENVISAGED

THE Central supervisory body for promotion of jute production, which met at Calcutta last week under the chairmanship of Mr. A. P. Mathur, Jute Controller, Government of India, has recommended increased sowings over a larger area during the year 1958-59 for raising output of jute in the coming season. It has, accordingly, fixed the target for the area to be cultivated under raw jute in 1958-59 at 2,076,000 acres, which represents an increase of 322,000 acres, or 18.4 per cent. over the current year's acreage of 1,754,000. The expansion in area under cultivation is expected to bring an additional output of raw jute of 1,045,000 bales (of 400 lbs. each). This will mean an increase of 25.8 per cent. in the output over the current year's final estimate of 4,088,000 bales to 5,143,000 bales.

The target of 2,076,000 acres fixed for next year, if achieved, will be the largest area sown since the partition of the country. In the first year after the partition, that is, in 1947-48 the area under jute in India was 652,000 acres and this was gradually expanded to 1,951,000 acres in 1951-52. Thereafter, there was a setback to 1,228,000 acres in 1953-54. In 1956-57, it rose again to 1,908,000 acres, but declined to 1.754.000 acres in 1957-58. The proposed output for 1958-59 will also be a record since 1946-47. The highest output achieved so far is 4.678,000 bales and that was in 1951-52. From this level, the production shrunk to 2,928,000 bales in 1954-55. The increase in output in the succeeding two years (to 4,288,000 bales in 1956-57) was wiped out to some extent by the fall in 4,088.000 bales in 1957-58.

The Central supervisory body for jute cultivation was set up last year to review periodically the progress made in jute production towards achieving the target of 5.54 million bales fixed for the second Five-year Plan. Similar bodies were also set up at the State level in the jute growing States. In recommending increased sowings now, the Central supervisory body points out that the acreage figure proposed by it represents the extreme limit for expansion of area. It has urged the jute growing States that they should direct their efforts towards achieving the production target more by improvement of the average yield per acre (which at present is very low and in the case of some regions actually shows a progressive downward trend) through adoption of improved cultivation methods than by bringing a larger area under cultivation.

The State-wise break-down of acreage and output targets fixed for 1958-59, as compared with the final forecasts for the current year, is given in the table below:

States	Area (in acres)		Production (in bales)	
	1958-59	1957-58	1958-59	1957-58
West Bengal and Cooch Behar	800,080	759,000	2,000,000	1,830,000
Tripura	50,000	19,000	160,000	55,000
Assam	380,000	349,000	1,173,000	1,094,000
Bihar	665,000	477,000	1,380,000	778,000
Orissa	125,000	94,000	300,000	208,000
U.P.	56,000	56,000	125,000	123,000
Total ..	2,076,000	1,754,000	5,143,000	4,088,000

As will be seen from the above table, the largest increase in both area and output (namely, 188,000 acres and 620,000 bales, respectively), is sought to be achieved in Bihar. With this increase, the area, as well as the output, will only be restored to the levels of 1956-57, from which there was a sharp setback in 1957-58. The increase in area in West Bengal will be 41,000 acres, from which an additional output of 170,000 bales is expected. In the case of Tripura, Assam and Orissa, the expansion in area will be 31,000 acres each, but the increase in output will vary—105,000 bales in Tripura, 84,000 bales in Assam and 92,000 bales in Orissa. In U.P., there will be no expansion in area, but the output will be raised by 2,000 bales.

On the basis of the proposed target of output for all the States, the yield works out to 2.48 bales per acre, as compared with 2.33 bales in the current year. It will by no means be a record, although the area and production targets are records, for it falls short of the highest yield of 2.66 bales per acre achieved so far in 1949-50. The yield of jute crop has not shown any steady trend even over a short period of two or three years, having fluctuated between 2.66 bales to 2.25 bales during the post-partition years. This is true of the pre-partition period and of Pakistan as well. The reasons for this fluctuation are weather and prices. If they are favourable, the yield improves and if not it declines. Nevertheless, it cannot be denied that the leeway to be made up to bring the yield in India on a par even with that in Pakistan is considerable. The task before the jute-growing States in raising the yield is by no means easy, for it depends not only on adoption of improved cultivation methods but on several other factors as well. All the same, there is immense scope for the State Governments to make a distinct contribution in this direction.

In fixing the increased targets for the various States, the Central supervisory body would appear to have laid emphasis on improved methods of cultivation, particularly the use of fertilisers. The favourable responsiveness of jute to treatment with nitrogenous fertilisers and the use of ammonium sulphate as a means of increasing yield were particularly stressed. Noting that the progress in application of fertilisers had been slow, the supervisory body recommended the intensification of efforts to popularise ammonium sulphate. In order to minimise delay in distribution and possible transport bottlenecks, a streamlining of the procedure for allocation of fertilisers by the Centre to the States was suggested. Accordingly, the States were directed to furnish statements, well in advance of a sowing season, specifying their requirements of fertilisers exclusively for jute crop and showing a monthly break-up. It was decided that, in the event of delay in despatching fertilisers from 1958-59 allotment, the States requiring immediate supply for jute could utilise the stocks of fertilisers carried over from 1957-58. Depletion of the common pool of fertilisers caused by such withdrawals for jute would be made good by the Centre later as early as possible.

The supervisory body also approved in principle of a scheme prepared by the Chief Jute Development Officer, Government of India, to enlist the assistance and co-operation of recognised seed dealers in multiplication of improved jute strains. The scheme envisages registering a chain of dealers who will multiply improved jute seeds through their own agencies under strict supervision of the State jute development staff.

JUTE GOODS OUTPUT HIGHER

The statistics of jute production for the month of January 1958, received last week soon after we went to Press, indicate that the sharp rise in stocks of jute goods with mills was not due entirely to drastic fall in shipments during the month. For there was a sizable increase in production also in that month. Thus, the output of mills in January 1958 went up by 5,500 tons to 98,300 tons, the expansion being shared by all varieties. This rise is on top of an aggregate increase of 9,300 tons in the previous two months and has taken the total production to the highest level since June 1956. As compared with January 1957, the output of mills shows an increase of 9,500 tons, as will be seen from the following comparative table:

Jute Goods Production

(In tons)

	January, 1958	December, 1957	November, 1957	January, 1957
Hessian	34,400	32,100	33,400	38,800
Sacking	57,300	54,700	53,200	43,500
Others	6,600	6,000	5,300	6,500
Total ..	98,300	92,800	91,900	88,800

The output of hessian has gone up by 2,300 tons to 34,400 tons, in contrast to the fall of 1,300 tons in the previous month, bringing it to the highest level since July 1957. The rise in sacking is of the order of 2,600 tons, thus maintaining the upward trend since August last. At 57,300 tons, the production of sacking represents the highest monthly output since May 1956. For the third month in succession, production of "other manufactures" has also gone up, with a rise of 600 tons in January.

The rise in production during the month under review is accounted for by the increase in the number of hours worked from 209 to 217.5. In January 1957, the working hours aggregated 212 only.

EXPORT QUOTA FOR TEA RAISED

SLIGHT INCREASE OVER 1956-57

THE Government of India has fixed the export allotment of tea for the current year, that is. 1957-58, at 460.9 million lbs. by a further release of quota to the tune of 67.7 million lbs. In April 1957. the Government made an interim release of 50 per cent. of the crop basis of estates, amounting approximately to 357.5 million lbs. In October last, a second interim release of 5 per cent., or 35.7 million lbs., was made bringing the total release to 55 per cent. of the crop basis, equivalent to 393.2 million lbs. The final release announced last week-end brings the total quota for the year to 460.9 million lbs., representing 63.4 per cent. of the crop basis for the year, which is estimated at 726.56 million lbs.

The Tea Board at its meeting held in the closing week of January was reported to have discussed suggestions for an additional and final quota of 35 to 59 million lbs. It is not known what was the quota recommended by the Board. The final quota now announced by the Government exceeds even the highest quota proposed at the Board meeting. This is evidently due to the fact that the crop basis at 726.56 million lbs., has turned out to be more than the earlier figure of 715 million lbs.

The total export quota for the current year at 63.4 per cent. or 460.9 million lbs., compares with 63.1 per cent, or 453.3 million lbs. allotted for the previous year. Though the International Tea Agreement is not in force now and there is no restriction on export allotment, the Government of India has only once exceeded the standard export quota of 135 per cent. or 470.13 million lbs. fixed under the now defunct international agreement; this was in 1955-56, when the allotment aggregated 480 million lbs. or 138 per cent., as will be seen from the following comparative table:

(In million lbs.)

Year	Quota under I.T.A.		Export allotment by Government of India	
	Per cent.	Quantity	Per cent.	Quantity
1950-51	130	452.72	130.0	452.72
1951-52	135	470.13	130.0	452.72
1952-53	135	470.13	130.0	452.72
1953-54	135	470.13	125.5	437.05
1954-55	135	470.13	133.5	464.91
1955-56	†	..	..	480.00
1956-57	†	..	..	453.30
1957-58	†	..	..	460.96

† I.T.A. not in force.

The increase in export allotment for 1957-58 over that for 1956-57 is of the order of only 7.66 million lbs., but it should be noted that even this higher allotment has been made, despite the fact that the tea crop this season has not recorded any increase. It is, on the contrary, a shade lower at 666 million lbs., as against 667 million lbs. in the previous season. The Government's decision to give a higher export allotment is presumably to provide a fillip to exports which have been lagging behind for some time now. Thus, in the calendar year 1957, the total shipments from India aggregated only 445.3 million lbs., having shrunk from 516.2 million lbs. in 1956. It is, however, doubtful whether the additional quota would bring any worthwhile expansion in exports. Most probably, a substantial part of the export quota will have to be carried forward unutilised to the next financial year. In 1956-57, for instance, the total export quota available (including the unused allotment of the previous year amounting to 85.53 million lbs) was 538.83 million lbs., as against which actual exports aggregated 492.2 million lbs. There was thus a shortfall of 46.6 million lbs., which if added to the current year's (1957-58) allotment of 460.9 million lbs. will mean a total quota of 507.5 million lbs. If the trend of exports during the current financial year is any indication, the quota for this year may be found to be in excess.

It may be mentioned in passing that the Plantation Enquiry Commission had advocated the abolition of the present system of issuing export quota and recommended that exports of tea should be regulated under the Import and Export Control Act, as for other commodities, subject to quantitative restriction on exports. The Government of India did not, however, accept this recommendation. It was of the view that the abolition of the export quota system would not be conducive to the best interests of the industry or trade. It, however, announced its desire to make such changes in the matter of allotment and transfer of quota as would eliminate or reduce abuses.

CAUVERY BRAND

STABLE BLEACHING POWDER

containing 33/33% available chlorine

1. IT IS MADE on a modern plant using a German process, specially licensed to us!
2. ITS LONG SHELF-LIFE is a special advantage to small users. CAUVERY brand STABLE BLEACHING POWDER is the ideal product for handloom weavers and hosiery manufacturers.
3. IT WILL PAY Corporations, Municipalities, Panchayat Boards and similar public bodies to specify CAUVERY brand STABLE BLEACHING POWDER for their purposes of preventive hygiene and environmental sanitation—nothing like it!
4. IT IS available in convenient 1/2 and 1 lb. packs for domestic use.

PROGRESS OF PUMP INDUSTRY

MR. M. M. SHAH URGES MANUFACTURERS TO KEEP ABREAST OF TECHNICAL DEVELOPMENTS

A WELL-DESERVED tribute to the rapid progress made by pump industry was given by Mr. M. M. Shah, the Union Minister for Industry, in the course of his address at the annual meeting of the Indian Pump Manufacturers' Association, held in New Delhi. The all-round progress made by the industry will be evident from the fact that not only production, as a whole, has been expanding but new types and sizes of pumps are being taken up for manufacture. Mr. Shah expressed his confidence that the country "would be able to be self-sufficient in respect of most of our pump requirements in the very near future" and would also be able to command a "good export market."

Between 1955 and 1956, the production of pumps of all varieties expanded from 34,441 to 46,861, though the value of the output fell somewhat from Rs. 68.88 lakhs to Rs. 63.72 lakhs. The estimated level of production in 1957 is 57,920 pumps, valued at Rs. 1.16 crores. It is confidently believed that the industry will be able to reach the target of 86,000 pumps, valued at Rs 1.72 crores, set for 1960-61 under the second Five-year Plan. As regards the market for pumps, the demand in respect of centrifugal pumps, according to Mr. C. N. Pradhan, President of the Association, appears to be satisfactory, though the demand for borehole turbine pumps has gone down considerably in the last few months. He said: "On a most optimistic estimate, the demand for borehole turbine pumps during the second Five-year Plan is not likely to exceed 1,000 per annum and, if this be so, the existing units will work hardly to half their installed capacity resulting in unhealthy competition to the detriment of the industry."

Developments

Reviewing the important developments in the last year in the sphere of the pump industry, Mr Pradhan drew pointed attention to the fact that the country had reached self-sufficiency in deep well turbine pumps and in centrifugal pumps upto 12" size and that special duty pumps used for cement and paper industry had been produced. Other developments are: (1) the manufacture of a few sizes and types of pumps used in chemical industry, (2) approval of the scheme for the manufacture of kerosene and petrol pumps; and (3) the drawing up of a scheme for the manufacture of low lift large capacity circulating water pumps in collaboration with a foreign manufacturer. Mr. Pradhan claimed that the domestic industry was capable of manufacturing large-size pumps for sewage and water works scheme. In this connection, he cited the example of one of the units which had developed the largest pumps so far produced, namely, 24" suction and 24" delivery size discharging 15,000 gallons per minute.

In the course of his speech Mr. Pradhan referred to a few difficulties which the industry had to face in implementing its manufacturing programmes. Thus, he complained of a certain tendency in some Government departments to formulate schemes based on specifications of existing pumps of foreign origin. This, he said, interfered with bulk production, because there is no ready market for such types of pumps. Further, some State Governments called for large tenders though their requirements were much below the figures specified in the tenders. Mr. Pradhan also urged the Government to be sympathetic to the requirements of raw materials for the industry such as pig iron and hard coke. He also criticised the import policy of the Government in relation to certain raw materials in that the licences which were based upon only three months' production of the importing units did not facilitate the import of reasonably large quantities of raw materials and indirectly compelled them to pay higher prices for small import orders placed with foreign suppliers.

Mr. Manubhai Shah, in the course of his reply to a few specific issues raised by Mr. Pradhan, stated that the import policy based on three-month data, was only a temporary phase designed to facilitate the change-over from the calendar year to the financial year. He said that the present policy was to issue licences on the basis of six-month requirements assessed on past production. As regards specifications by Government departments, he felt that it was good neither to follow too closely the specifications of foreign pumps nor to stick to existing varieties only. He added: "The best way for us is to keep abreast of the world trends in this direction, so that low-priced high quality and efficient pumps and engines are manufactured in the country." It is to be hoped that the industry, in consultation with the authorities and the Indian Standards Institution, will try to improve the quality and diversify the range of its production. The industry will then be in a position to increase its exports to foreign countries. Mr. Pradhan stated that the industry could "substantially" increase the export of pumps, provided it received Government assistance in the shape of concessional railway and shipping freights, priority in movement of export goods, tax-free allowances on export turnover and rebate in sales tax on intermediate material which goes into the manufacture of exported articles

For increasing the pace of the industry's technological progress, Mr. Shah made a number of useful suggestions. These included dissemination of research information among the different units in the industry, collection of production and other statistics, arranging technological discussions and the setting up of an up-to-date technical library. We commend these suggestions to the attention of the industry. At the same time, the industry should strive to fill in what Mr. Shah called the "major gaps" in its range of output. Thus, the domestic capacity for pumps such as those used in fire-fighting equipment, coal mining, city water supply, large lift irrigation and boiler feeding should be developed.

SPUN PIPE PLANT AT I.I.S.CO.

A new spun pipe plant went into production early this month at the Indian Iron and Steel Company's works. The production of spun iron pipes commenced for the first time in India at the Company's Kulti works in 1945 under an agreement with Messrs. Stanton Iron Works of the U.K. Originally, the plant was designed for production of pipes ranging in size from 3" to 12" in diameter and 12 ft. in length. Larger pipes up to 14" diameter and 18 ft. length were later on made in this plant. Construction of a second spun pipe unit commenced in 1956. The capacity of this plant is for pipes 16" to 27" diameter and 18 ft. lengths. Although the plant was ready a short while ago, it was necessary to postpone the operations for want of pig iron. The new plant is a modern unit employing the latest technical development. The cost of this unit with certain other ancillary plant is estimated at Rs. 1.40 crores.

The annual capacity (on two-shift basis) of the new unit, it is stated, is about 90,000 tons. It would help save foreign exchange to the tune of Rs. 8 crores per year. To begin with, the unit will work only one shift a day. The second shift will be started when the second new blast furnace at Burnpur Works is blown-in sometime in July-August 1958.

EUROPEAN STEEL OUTPUT

Data relating to Europe's steel production in the third quarter of 1957, appearing in the *Quarterly Bulletin of Steel Statistics*, published by the U.N.'s European Economic Commission (E.C.E.), show that production continues to be maintained at a high level. During the period under review, the U.K. increased its output by 6 per cent. over the level in the corresponding period in 1956. The relevant percentage increases for other countries are: West Germany 5, Italy 15, Luxembourg 2, Saar 3 and the Netherlands 15. The following table gives the production of steel in Europe as well as in U.S. and Japan in 1956, the first half of 1957 and the third quarter of 1957.

(In thousand metric tons—annual rate)

Country	1956	1957	
		First half-year	Third quarter
Total Europe	148,965	154,697	..
Of which :			
W. Germany	23,189	23,738	25,004
U.K.	20,991	22,646	20,580
France	13,399	13,858	13,556
Belgium	6,375	6,500	5,340
Italy	5,908	6,618	6,788
Poland	5,014	4,472	..
Czechoslovakia ..	4,882	5,144	..
Luxembourg	3,456	3,516	3,460
Saar	3,374	3,386	3,508
E. Germany	2,740	2,838	..
Netherlands	1,042	1,160	1,208
U.S.	104,524	109,920	98,416
Japan	11,106	12,998	12,992

RISE IN TRAFFIC ON RAILWAYS IN 1956-57

EARNINGS IMPROVE

REFLECTING the increase in agricultural and industrial production and the general improvement in the economy, the working of the Indian Railways in 1956-57 shows an increase in goods and passenger traffic and in receipts from such traffic. Goods traffic, according to the Railway Ministry's annual report for 1956-57, moved up by 8.77 per cent. and the number of originating passengers by 6.57 per cent. over the previous year. Gross traffic receipts increased from Rs. 315.56 crores to Rs. 347.57 crores, while ordinary working expenses increased by Rs. 20.99 crores to Rs. 233.94 crores.

The year under review is important for the reason that it was the first year of the second Five-year Plan. As compared with 1955-56, the last year of the first Plan, goods traffic showed an increase of as much as 10 per cent.—from 114 million tons to 124 million tons. Gross traffic receipts, as already stated, amounted to Rs. 347.57 crores, made up of Rs. 116.33 crores under passenger traffic and Rs. 203.96 crores under goods traffic, the balance of Rs. 27.28 crores being contributed by parcels and other miscellaneous sources of revenue. The ordinary working expenses during 1956-57 aggregated Rs. 233.94 crores. The operating ratio—that is, the ratio of working expenses (excluding suspense but including appropriation to depreciation reserve fund) to gross earnings—was 79.90 per cent., as against 81.95 per cent. in 1955-56. After meeting all the charges, including the appropriation to the depreciation reserve fund which was raised from Rs. 30 crores to Rs. 45 crores in 1955-56, the net revenue for the year was Rs. 58.38 crores, out of which Rs. 38.16 crores were paid to general reserves. The net surplus for the year amounted to Rs. 20.22 crores which was allocated to the Development Fund.

Goods traffic touched a new high of 125 million tons and 40,225 million ton-miles, breaking the previous year's record of 115 million tons and 36,472 million ton-miles. The number of originating passengers rose from 1,297 million in 1955-56 to 1,383 million in 1956-57. Passenger miles increased from 39,083 million to 42,194 million. Taking into account the non-revenue loadings (that is, loadings on railways' account), an average of 14,275 broad gauge and 8,670 metre gauge wages were loaded every day, as against the corresponding figures of 13,407 and 8,026 in 1955-56. Revenue loadings averaged 12,168 per day on broad guage and 7,819 on metre guage, as compared with 11,374 and 7,263 respectively in 1955-56. The net ton-miles per wagon-day increased from 541 to 570 on broad guage and from 203 to 210 on metre guage. Passenger train miles increased by 2.70 per cent. to 118.75 million and goods train miles by 4.85 per cent. to 86.64 million.

The total investment on all railways, as on 31st March 1957, amounted to Rs. 1,246.40 crores, of which Rs. 1,239.88 crores represented investment in Government railways. The total route mileage of all railways in India at the end of the year was 34,744, of which 34,291 miles were under Government management. A length of 115 miles was opened during the year. At the end of the year under review, 569.45 miles of lines were under construction.

Railway purchases during 1956-57 showed a significant increase over the previous year. The total purchases increased by 36 per cent. to Rs. 171.37 crores, of which the value of indigenous materials amounted to Rs. 125.82 crores. While most of the increase was on indigenous purchases, according to the Report, it was not possible to reduce imports "primarily because of increased purchases having to be made for workshop machinery, permanent way materials, specialised rolling stock, hardware and electric equipment not available in the country." Special efforts to cut down imports, however, continued to be made in order to save foreign exchange.

The Indian railways, as is well known, are the largest single employers in the country. As on 31st March 1957, the total staff on Government railways was 1,054,343, as against 1,024,828 on the corresponding date in 1956. Salaries, including allowances, provident fund and gratuity paid to the staff during 1956-57 aggregated Rs. 155.74 crores, as against Rs. 148.22 crores in the previous year. This increase, it is stated, is due to the increase in staff, annual increments and increase in contributions to provident fund and gratuity.

NEW PRODUCTS AND PROCESSES

Electronic Sentry

AN unusual new electronic system—essentially a burglar alarm but with many other uses as a control device in the home, and in retail establishments and industry as well—has been developed in the U.S. It employs compact sensing units, each with a detection radius of 25 feet. Attached to walls, buildings, poles or trees, and wired to a central panel, the sensors, it claimed, will protect all possible points of entry simultaneously through a three-dimensional pattern. The system can be connected to a centralised police warning system or may be hooked up to bells, horns, whistles or sirens. It will also turn on lights, open doors, raise or lower objects, operate cameras or recording equipment, and can do all this at once. In and about the home the equipment can also be set for monitoring applications, such as protecting small children at play outdoors. Working in reverse, it can signal when there is no activity in a specified area, so that if a child strays out of a sensor's range an alarm sounds to bring mother to the scene before the unattended child is in danger. Sensors also can be installed indoors to baby-sit when parents visit neighbours while children are asleep. If a child gets up out of bed and alarm goes off. In retail merchandising, claims the manufacturer, the system can be used in after-hours promotions to light and activate outdoor advertising or store front displays when someone walks or drives past, automatically resetting itself to repeat the performance for succeeding passers-by. Other possible applications, according to the maker, include operating various automated components and systems, warning people approaching hazards such as swimming pools and nuclear devices, and automatic garage door opening.

Hydraulic Sealing Machines

A Belgian firm, specialists in sheet-metal work and the construction of machines used in connection with that work, has evolved greatly perfected hydraulic sealing machines of particularly high performance, a fact which has caused them to be adopted by several European countries. These automatic machines—the S.R.H. type hydraulic sealing machine for round articles, the S.O.H. type for oval or polygonal articles—perform themselves, in a regular and perfect manner, the operations necessitated by double sealing and sealing and seaming at exceptional speed. Thus, the S.R.H. type machine seals and seams 600 pails per hour, working with certain dimensions, whilst with the other type of machine, it is possible to seal and seam 150 oval articles, working with the greatest dimensions. These machines, which can be used for the double sealing of drums, have been usefully complemented by a device which automatically injects the liquid joint which is made at the same time as the sealing is done. Thus, starting with the cylindrical body, the head and the bottom, the S.R.H. machine can, in less than a quarter of an hour, produce 400 tight drums of a diameter of 500 millimetres, 500 millimetres in height, of 1 millimetre sheet metal. In order to be able to produce larger drums (200 to 300 litres), the factory has built a much more powerful machine, of the S.F.H. type, which seals and tightens up to 200 2-millimetre sheet metal drums an hour.

Pump for Handling Corrosive Chemicals

A small air-operated pump of unusual design is now being made by a British firm from material which permits it to be used for extremely corrosive liquids. It is suitable for either laboratory or everyday plant use. All parts of the pump which come into contact with the liquid being handled are made from Imperial Chemical Industries' plastic material Fluon (polytetrafluorethylene). This material remains inert when in contact with nearly all chemicals and has been found to be of especial value in atomic energy plants when "difficult" liquids have had to be pumped. The pump is described as a positive displacement type which is operated by a patented air "motor" consisting of only two moving parts and an especial feature is that no matter in what position the pump's valve and piston come to rest it will start again as soon as air is supplied. The pump has a body machined from a solid block of Fluon; other parts coming into contact with the fluid are also made from solid Fluon. The manufacturers emphasise that sprayed or dipped coatings are not used. Maximum delivery of the pump when handling thin viscosity liquids is said to be 60 gallons per hour at delivery pressures up to 40 lbs. per square inch. Air consumption is stated to be extremely low.

Bendable Ceramics

Recent research which has been carried out in U.K. and U.S. laboratories has brought the practical use of bendable, or ductile, ceramic materials appreciably nearer. In one laboratory, for example, ceramics based on caesium bromide and lithium fluoride have been developed which, the scientists responsible for carrying out the research claim, should retain their ductility almost indefinitely. Most bendable ceramics, however, retain their ductility for only short periods of time after they have been made. In a few other cases they will retain this characteristic of workability only under certain conditions, such as being kept away from chemicals such as oxygen and nitrogen. The development of surface treatments, such as coating the ceramics with other ductile materials can, however, in some cases, it is claimed, provide an adequate protection against conditions that would otherwise destroy the flexibility of the ceramic materials. Materials being investigated for the production of these new ceramics include silver chloride, sodium chloride, magnesium oxide and potassium chloride. They will offer the chemical engineering and engineering industries the advantage of higher temperature resistance than can be obtained with metals.

INVESTMENT OF LIFE INSURANCE CORPORATION

CHAGLA COMMISSION'S CRITICISMS

THE Chagla Commission's report on the transactions of the Life Insurance Corporation relating to the purchase of shares in the Mundhra concerns, while maintaining that the transaction suffered from the serious blemish that it was effected without consulting the Investment Committee and was in contravention of the clear directions given by the Committee in respect of investments, has also made certain serious criticisms of the working of the Corporation, especially in respect of its investments. The Commission points out that not only was the wise and sound principle embodied in Section 21 of the Life Insurance Corporation Act, 1956, which was an ideal compromise between the autonomy of a statutory corporation and the control which must be exercised by the Government, was not adhered to, but even the solemn assurance given in Parliament by the then Finance Minister, Mr. C. D. Deshmukh, that Section 27-A of the Indian Insurance Act, 1938, which lays down the criteria for investment of the funds of the life insurance companies, would be made applicable to the Corporation was not carried out. These criticisms, coming as they do from a judge of the eminence of Mr. Chagla and being based on an objective and impartial study of the whole facts of the case, deserve utmost consideration. It is also imperative that, in view of the rude shock sustained by the public confidence in the Corporation, effective and immediate steps should be taken, along the lines indicated by Mr. Chagla, to remedy the defects, to restore confidence and ensure the safety of the policyholders' money.

Discussing the legal status of the Life Insurance Corporation, the Commission, in its report, observes that, according to the provisions of the Life Insurance Corporation Act, 1956, the Corporation is an autonomous body. It is independent of the Government and cannot be looked upon as merely one of the departments of the Government. In the investments the Corporation may make and in the investment policy it may pursue, it must be guided by its own officers and by the statutory committees set up under the Act. The only control that Government can exercise is, according to the Commission, under Section 21 of the L.I.C. Act, and that control is restricted to matters of policy involving public interest. The control can only be exercised by directions given in writing.

The Commission observes that there is good reason why Parliament provided that Government should not interfere with the working of the Corporation or try to control its actions except by means of the statutory direction to be given under Section 21. If the Government were to interfere with the working of the Corporation other than in the manner laid down in Section 21, the Corporation would have lost its autonomy. Further, the Commission adds, it was intended that the Government must take the responsibility for dictating to the Corporation what policy it should pursue in a particular matter and that policy could only become clear if it was embodied in a direction given in writing. Such a direction could then become a matter of discussion and debate in Parliament and in public.

Sound Principle Ignored

While leaving the Corporation complete independence to manage its own day-to-day administration and also giving it freedom to invest its funds in the interest of policyholders, the Government could only control its discretion when a question of policy involving public interest arose. The Government could not, for instance, tell the corporation that it should or should not invest in any particular shares, it could not tell the Corporation that it should help a particular industry, much less a particular individual; but it could tell the Corporation that it should invest its funds in certain industries which are essential for the successful working of the second Five-year Plan or to give effect to a particular economic or financial policy laid down by it. In the Commission's opinion, it was most unfortunate that the wise and sound principle laid down in Section 21 has not been adhered to. It observes that the evidence before it showed that there was a tendency on the part of the Finance Ministry to look upon the Corporation as a wing or branch of that Ministry and to issue orders to it in the belief that the Corporation were bound to carry out those orders. "If one thing is more important than any other," observes the Commission, "it is that the Chairman of the Corporation should be an independent official who is conscious both of his own position and the status of the Corporation under the Act." This salutary principle has been completely overlooked, says the Commission. The very first Chairman of the Corporation was Mr. H. M. Patel, who, while he held the office of the Chairman, continued to hold the office of the Principal Secretary of the Finance Ministry. It is not surprising, the Commission avers, that the clear dividing line between the functions of the Corporation and the power and authority of Government tended to be completely blurred. Mr. Patel cannot be blamed, adds the Commission, if he felt that, in administering the Corporation, he was doing nothing more than administering a department of the Government.

According to the Commission, it is very necessary that appointment to important offices in the Corporation should not be looked upon as merely the transfer of an officer from one department to another. There should be some security of tenure and a fairly long duration of office and it should also be impressed upon those who are appointed to these posts that they have to discharge their duty to the Corporation irrespective of whether their actions found favour with the Government or not.

Assurance Not Carried Out

Another serious criticism raised by the Commission is that Section 27-A of the Indian Insurance Act, 1938, was never brought into force. Section 27-A lays down what the approved investments are in which the funds of the Corporation may be invested and it is the general opinion that very salutary safeguards with regard to investments have been laid down in this Section. The intention of the Government in the first instance was not to make this Section applicable to the Corporation. But, as a result of the plea put in by Members of Parliament, the Government agreed to make it applicable. It will be recalled, in this connection, that Mr. Deshmukh stated in Parliament on 23rd May 1956 thus:

> ". . . I am saying that, in case the hon. member wants to make a point about investment, as he did yesterday or the day before yesterday in his speech, the Corporation should be obliged to adhere to the criteria which at present govern investments by a life insurance company in the private sector. I am prepared, therefore, to accept 27-A being added on in sub-clause (2) of Section 43."

The Commission observes that there is thus not only the assurance given by the then Finance Minister that Section 27-A would be made applicable to the Corporation and that the criteria laid down in that Section would be followed in making investments, but also the fact that that assurance took a statutory form inasmuch as sub-Section (2) of Section 43 cast a duty upon the Central Government, namely, that as soon as may be after the commencement of the Act, to make Section 27-A applicable to the Corporation, subject to such conditions and modification as may be specified. But this understanding has not yet been implemented in practice. The Commission also points out that no rules have been framed by the Government as contemplated by Section 6(2)(b) and in respect of which express power has been conferred under Section 48(2)(g) which provides for rules to be made with regard to the manner in which and the conditions subject to which investments may be made by the Corporation.

As regards the machinery to be employed by the Corporation in order to make investments, the Commission points out that, as the amount to be invested is extremely large, being as much as about Rs. 10 lakhs a day, it is obvious that investment should be made with the best knowledge available with regard to the Investment market. Under the regulations, the power to invest is conferred upon the Executive Committee of the Corporation. This power can only be exercised, after taking into consideration the advice of the Investment Committee. The latter has to advise the Corporation in matters referred to it relating to investment of its funds, but, inasmuch as the Executive Committee cannot act without taking into consideration the advice of the Investment Committee, all questions of investment must necessarily be referred to the Investment Committee.

The Commission says that it appears that, in practice, the Executive Committee did not consider the question of investment at all. In justification of this practice, Mr. G. R. Kamat, Chairman of the Corporation, had drawn the Commission's attention to a resolution passed by the Executive Committee on 19th February 1957 which said: "It shall be the responsibility of the Chairman to direct the purchase and sale of investments. In this he will be guided by the Investment Committee and he will make the investments, bearing in mind the recommendations of the Investment Committee." According to the Commission, it is extremely doubtful whether the Executive Committee could thus delegate its power to the Chairman. But, without going into legal technicalities, the Commission assumes that the practice followed by the Corporation with regard to investment was one authorised by law. The practice was that investments were considered by the Investment Committee and advice given. It is true that the Chairman or the Managing Director did make investments without previous consultation with the Investment Committee and then reported these investments to the Committee. The latter had laid down rules of guidance and had also advised that Section 27-A, as modified, should constitute a criterion for making investments and, in making day-to-day investments, the Managing Director or the Chairman had to keep the modified section and the rules of guidance in mind. The Commission observes that, so long as there was no departure from the principles laid down by the Investment Committee, there was no danger that any investment might be made by officials of the Corporation which would not be sound and prudent.

From an examination of the evidence before it, the Commission has come to the conclusion that the transactions in question were effected without consulting the Investment Committee and that they also contravened the directions given by it. The Committee had suggested modifications to Section 27-A and considered the Section 27-A as so modified as affording a broad basis for the investment policy of the Corporation. It also laid down rules of guidance regarding investments. The modified Section 27-A provides for investment in preference shares of a company which has paid dividends for five years immediately preceding or for at least five out of the six or seven years immediately preceding and in the ordinary shares of a company on which dividends of not less than 4 per cent. have been paid for the five years immediately preceding or for at least five out of the seven years immediately preceding. The rules of guidance laid down by the Committee had advised that investment in preference shares should yield at least 4½ per cent. net and in ordinary shares at least five per cent. According to the Commission, with regard to the three types of shares purchased by the Corporation, there was a clear departure from these provisions.

Modified Section 27-A

The modified Section 27-A also provides that the Corporation shall not, out of the controlled funds, invest or keep invested in the shares or debentures of any one company more than 30 per cent. of the capital of the Company, except with the prior permission of the Central Government. Says the Commission: "When we look at the result after the investment had been made in June 1957, the result is that, in the case of Osler Electric Company and Smith Stanistreet & Co., the limit of 30 per cent. was exceeded. It is sought to be argued that, it is open to the Corporation, under sub-Section (3) of the modified Section 27-A, to invest funds in unauthorised investments so also as the investment does not exeed 15 per cent. of the amount of its controlled fund. But such an investment in unauthorised shares can only be made on the advice of the Investment Committee and, inasmuch as no advice was taken, the Corporation cannot rely on this provision in modified Section 27-A." Referring to the bypassing of the Investment Committee, the Commission observes: "A statutory Investment Committee can serve no purpose if its advice is not taken into consideration and if it is treated purely superfluous to be consulted or not according to the sweet will of the Chairman or the Managing Director."

Discussing the purposes of the investment, which was the subject of enquiry, the Commission observes that, assuming that the transaction was entered into not to relieve Mr. Mundhra of his financial difficulties but to stabilise the

LIONEL EDWARDS PRIVATE LIMITED

WATER RATES IN INDIA

By R. A. Deshpande, B.A. (Hons.), Dip.Eco.Adm. (Delhi)

SITUATED as India is geographically, with tropical or sub-tropical climate, with practically no rain over a large part of the year and uncertain rains during the monsoon months, successful cultivation is not possible in many parts of the country without the aid of irrigation. The supply of irrigation waters to areas previously underdeveloped or to those which had an indifferent or precarious type of cultivation before, creates new problems. The cultivation of areas hitherto barren creates problems of colonisation, of land reforms, means of transport and communications and of charging suitable rates for irrigation. In this paper, we are mainly concerned with the question of fixation of the water rates for irrigation and other connected problems thereto.

Water flowing in natural streams and rivers is regarded as public property and it is the duty of the Government to arrange and control this public property for the greatest good of the community. From the individual cultivator's point of view, the requirements of an ideal system of irrigation would be that which delivers the water to him:

(*a*) At the site where it is required by him.

(*b*) At the time required by him.

(*c*) At the rates at which he can afford to pay.

(*d*) In the quantity adequate to his needs.

While conditions (*a*) and (*b*) are fulfilled in almost every established irrigation system, it is clear that the condition (*d*) can be fulfilled only under certain limitations. If the demand for water is more than the supply can afford, the water would have to be distributed on priority allocation or some sort of rationing system. While fixing water charges condition (*c*) is generally taken into consideration and it is the only important factor which determines the extent of water rates for irrigation.

The water thus supplied for irrigation purposes has to be charged for and the following systems are possible:

(i) A charge on the volume delivered.

(ii) A charge on the area irrigated.

(iii) A charge on the value of crops grown.

Present System

The present system of irrigation charges in India has developed differently in different States, with the result that there is multiplicity both in the principles and in the rates of assessment. A broad classification of these prevailing systems is, however, possible and is as under:

(i) Those payable by cultivators in return for the services of irrigation and thus forming an item in the cost of production and—

(ii) Those payable by the owners of the lands benefited in consideration of the increase in the value of the land.

Similarly, the existing systems of levying water charges may also be grouped into the following five groups:

(a) *Volumetric rate.*—This is a charge according to the quantity of water delivered.

(b) *Consolidated rate.*—This is a charge which is consolidated with the land revenue assessment and fixed on the settlement principles.

(c) *Differential rate.*—This is a charge which is fixed on the difference between dry and wet lands and their assessment thereon.

(d) *Occupier's rate.*—This is a fixed rate charged on the area actually irrigated and which usually varies with the nature of crop or crops.

(e) *Agreement rate.*—This is a charge based very much on the same lines as in (d) above but it is fixed by agreement for a period of years and paid for whether water is taken or not.

Each of these methods are discussed below in greater detail.

Volumetric Rates

Although the principle of levying a charge on the basis of the quantity of water consumed is generally accepted and has been made applicable to lift-irrigation schemes in Bombay, Uttar Pradesh and Bihar, the application of this system to lands under canals is found to be difficult. The main advantage claimed for this system is that it promotes the economical use of water while securing, at the same time, an adequate return to Government. But the experience of this system wherever it is worked has shown us that this system has not been a success as was assumed to be. A difficulty inherent in this system is related to the purely mechanical aspect of measurement. For it is not easy to devise a mode of reliable measurement which is not susceptible to malpractices on the part of petty officials. Besides, the success of the scheme is largely dependent on proper and effective arrangements for distribution of water between different landholders and for apportionment of costs between them. This is especialy difficult where the area irrigated consists of a number of small and scattered holdings. The working of this system in the Punjab where it was tried sometime ago has shown that it does not secure the principal advantage claimed in its favour, that of economy in the use of canal water. Moreover, as the principle was accepted that the volumetric rate should not exceed the value of water charges under the acreage system, Government derived no financial advantage. The volumetric system is, therefore, not suitable for canal irrigation. This, however, works well in the case of lift irrigation schemes, tube-wells, etc., and where the area irrigated is a compact block.

Consolidated Rate

This system obtains largely in areas commanded by older works in the States of Madras, Mysore and Hyderabad. The water rate is merged in land revenue proper and fixed on settlement principles. This system is discarded on all new works, as it does not afford a distinct classification of irrigation revenue and land revenue on a scientific basis. Besides, water rates cannot be revised at suitable intervals, as they are linked up with the revision of land revenue which usually takes place once in 30 years or so. Hence this system does not ensure adequate returns to Government. But this system can conveniently be applied to minor irrigation works, where levy of separate water charges is not desirable from administrative and economic considerations. In fact, in States like Bombay and Mysore the water rates for minor irrigation works are charged on the consolidated rate.

Differential Rate

Another system of water charge which has been condemned as unsound in theory and extremely clumsy is the differential rate system adopted in some of the older works in Andhra and Madras. The principle here is that, when a dry land is irrigated from Government sources, the water charge should correspand to the difference between wet rate and the dry rate of assessment of the corresponding land. The advantage claimed for this system is that it provides for a charge commensurate with the yield of land. But it involves a large number of complicated calculations which would not be easily comprehended by the village officers nor would it be intelligible to the cultivators. In view of these difficulties, there has been an increasing preference for a fixed rate system under which the water charge is fixed on a flat rate basis and which varies with the nature of crops grown, and category of irrigation facilities, etc.

Occupier's Rate

A system that is in general operation over the greater part of the country is the one where the charges are related to the nature of the crops and are fixed for the area actually irrigated. The rates for different crops are based mainly on the following four considerations:

(*a*) Quantity of water normally required by the crop.

(*b*) The scarcity or abundance of supply at the time,

(c) Value of the crop, and

(d) Economic capacity of the irrigators.

Concessional rates are provided in respect of certain crops like fodder crops, etc. There is, however, no variation in charge according to the distance of the land from the head of the supply, its productivity or its value. An objection usually raised against this system is that it is not conducive to the economy in the use of water. Besides, under conditions of competitive demand, it fails to secure optimum revenue to Government.

Agreement Rates

While the principle of "*no* water, no charge" is generally observed, agreement or lease systems of water rates have come to be adopted on certain works, as a result of the local conditions and requirements. In the deltaic regions of Orissa, West Bengal, parts of Bihar and Madhya Pradesh, where climatic conditions render it very doubtful whether the cultivator will in any particular season take water for his field or not, attempts have been made to induce him to take a lease for a period of years. For instance, in the area commanded by canals in Orissa, the present practice is to give long-term block leases, which often extend up to 10 years. Such leases are generally sanctioned where 95 per cent. of the net irrigable area of the block has been signed for. While long-term leases enable the cultivators to draw water from June to March for whatever crops are grown, seasonal leases are also given, usually for irrigation of the rice lands. Within the period of agreement of lease, the payment is compulsory so that the Government is not saddled with the cost of maintenance of works without realising of water rates, which a voluntary system under conditions of intermittent demand would involve. Under the long-term lease the cultivator is required to pay a lower charge and this concession encourages him to enter into a long-term agreement. This system has proved popular as is evident from the growing demand for such leases and from the extent of increase in the guaranteed area.

Deccan Canals

Another type of agreement rates obtains in the Deccan canals in the Bombay State where industrial concerns have secured the facility of regular supply of water which was to be guaranteed. For assuring such supply, the Government recovers a much higher water charge. The water rates charged in the case of Godavari and Krishna Projects in Madras are similarly on the basis of agreement rates.

In areas where water is taken on demand with special permission, "demand" or "occasional" rates are charged and they are usually considerably higher, sometimes nearly twice the agreement rates. Where canal water is utilised without proper authorisation, penal rates are imposed which are raised with the recurrence of such offence.

Rate of Return

An analysis of the various systems with reference to the actual net irrigation revenue and the percentage return on capital outlay discloses the following picture:

Name of the State	Total capital outlay on irrigation works (Direct and indirect)	Net irrigation revenue per year	Annual percentage return on capital outlay
	Rs.	Rs.	
Bihar	56,14,524	15,16,399	4.26
Bombay	8,02,997	3,18,927	4.17
Madras	20,53,82,469	1,28,07,267	6.24
Punjab	8,61,20,378	1,28,01,059	14.87
U.P.	34,00,46,863	1,88,52,707	5.54

(a) The irrigation revenue in States like the Punjab and Bihar where the system of "agreement rates" is in force, is the largest.

***(b)* The irrigation revenue in States like Madras where the "consolidated rate" is followed along with the "differential rate" is small as compared with its large capital outlay.**

(c) This clearly proves that the "agreement rate system" yields better irrigation revenue to Government than the other systems.

These systems may also be analysed from the point of cost of irrigation to the cultivators in the various States as under:

Name of the State	Total value of the crops raised in Rs.	Total irrigation revenue levied by the State Rs.	Percentage of cost of irrigation charges to total yields
Bombay	11,04,19,016	37,18,927	3.3
Madras	67,74,30,042	20,53,82,469	30.4
Punjab	34,35,46,942	8,61,20,378	28.2
U.P.	84,59,51,189	34,00,46,863	4.04

Thus it is seen that the cost of irrigation charges to the cultivators is as much as 30 per cent. in Madras, 28 per cent. in the Punjab and hardly 3 and 4 per cent. in Bombay and U.P., respectively. Thus there is greater scope for increase in the irrigational revenue in States like Bombay and U.P.

The project costs are now considerably more than in the past. The cost of maintenance is higher than before. Production increases considerably as a result of irrigation and a portion of the increased produce must be returned to meet the cost of maintenance. Existing water rates were, in many cases, determined years ago. There has since been considerable increase in the value of crops produced. Increases in water rates are, therefore, justified and it is necessary that the possibility is being explored by State Governments urgently.

Main Criterion

As a general principle, it is clear from the foregoing analysis that the system of levying of water rates should be such as to enable a economical and optimum use being made of canal waters and to promote conditions which will make maintenance and development of irrigation works possible on a larger scale than at present. The question is on what principles should such a water rate be fixed.

It is very difficult to make any general statement as to whether the water rate is a service charge or whether it includes an element of tax. In the case of more recent irrigation works, the water rates do not yield receipts even to cover the water-service costs but in some older works, e.g., in Hyderabad, Punjab, and Uttar Pradesh, the Government concerned realises some profits. The scale of water rates being largely dependent upon the economic and other circumstances of the area commanded by the works, it takes the character of a service charge in some areas and of a tax in other areas. Broadly, the assessment of water rates may be regulated according to the following three different principles:

1. No loss and no profit.
2. No profit and some loss.
3. Some profit and no loss.

No one principle can, however, be applied universally. Ordinarily, water rates must cover the maintenance charges, that is, the policy must be no profits but also no loss. But to this there would be several exceptions. A policy of no profit and some loss would be justified in the case of an irrigation work in the scarcity tract. On the other hand, a policy of some profit and no loss would be justified where an irrigation benefit has been provided for a fairly well off area.

The first Five-year Plan defines water rate thus:

"This is a charge dependent on the kind and extent of crops grown and is based on the quantity of water required by the crop and the advantage derived from use of it by the cultivator. It has no relation to the cost of supplying the water."

Maintenance Costs

Productive Irrigation works, that is, works from which net revenue can pay the interest charges on the capital investment, should not as a rule involve any loss to the general revenue. It is necessary that the water charges should be linked with the maintenance costs. The maintenance costs are of two types:

(i) Those which have to be incurred to keep the irrigation project in working order and

(ii) Those which have to be incurred to supply water to the cultivators.

Even where no water is taken, the maintenence costs of the former type have to be incurred by Government. Accordingly the water charges have to be of two varieties:

(i) A small charge covering the cost of repairs, establishment, drainage, etc., which has to be recovered from every landholder under the command of the irrigation project irrespective of his taking water or not.

(ii) An additional charge for the supply of water which will primarily cover the debt charges, overhead expenses, etc. This is to be levied on those who actually make use of the water from the project.

At present, in most States, the water rate which is recovered from the area actually irrigated is fixed with reference to the maintenance costs. Such a practice presents no difficulty where the demand for water is constant and the irrigated area does not vary from year to year. Where, however, water from the project is taken only to supplement the rainfall and, therefore, the demand varies according to the rainfall during a year, Government are put to much loss and fail to recover even the minimum costs of keeping the irrigation systems in working condition. The report on a system of compulsory water rates in the Tungabhadra Project provides an illustration in the shape of the Kurnool and Cuddapah canals, where, even after 75 years of their construction, the cultivators in the area are accustomed to taking water only if the rains fail. The Taxation Enquiry Committee was, therefore, constrained to recommend that "where irrigation is provided at great cost and the crops grown are such as can be irrigated with profit, the cultivators should be insisted to avail of the water facilities by prescribing a compulsory water rate, provided the cultivators should be given an assurance that water will be supplied to cultivators when required."

The compulsory charge should be a small fee relatable mainly to the minimum maintenance costs and not to the entire amount of water rate. In the Bombay State, a committee was appointed by the State Government in the year 1947 which examined the question of financial stability of irrigation works in the State. It recommended the imposition of a compulsory irrigation cess in the shape of a small fee to be paid by every landowner under the irrigable command of a canal system irrespective of whether the water was or was not used. The Irrigation Act of 1879 of the State has accordingly been amended and the compulsory levy of irrigation cess has been ordered with effect from 15th February 1954.

As the projects now under construction are considerably more costly than the projects executed in the past and also the cost of maintenance and operation is higher than before, it is necessary that, where the demand for irrigation fluctuates from year to year and available supplies are not fully utilised, a levy of irrigation cess should be imposed.

Other Factors

In determining the water rate which is payable by those who take water, the first principle should be, that the realisation from such a rate would at least cover the debt charges and overhead expenses on the project. While this should be the basic consideration, several other factors enter into the fixation of water rates. The more important of these are:

(1) Quantity of water supply.

(2) Value of crops grown.

(3) Extent of benefit realised by the cultivator, and

(4) Ability of the cultivator to pay.

In this context, it is worthwhile to refer to the U.P. Irrigation Rates Committee 1938, which examined this question. It says: "The value of the water is a function of the cost of supply and the increase in produce value from the land irrigated. The former determines the lowest financially sound and the latter, the uppermost permissible limit between which water rates can vary and a fair rate is one which yields adequate profit on the outlay on the one hand and offers sufficient inducement to the cultivators, on the other but prevents them from extravagant of waste."

In any system of water rates, the upper limit is naturally set by consideration of capacity to pay as revealed in the size of annual income, a cultivator is able to get from irrigated crop. But the determination of the income presents many administrative difficulties such as classification of lands into various categories, to correspond to the various degree of benefits conferred and also periodical valuation thereof. A simpler method of fixing the water rate is to determine them on the basis of the value of the crop grown. The practice in other countries conforms to this principle. A water rate which varies with the value on the market price of crops is also more equitable than a flat water rate. Further, a water rate that is linked to the crop provides scope for variation in the charges according to the quantity of water drawn, as water requirements vary considerably for different crops.

From the above analysis, it is obvious that, while fixing water rates for irrigation purposes, no single basis, which would meet the different conditions and differing requirements of the various States can be formulated.

Ploughing Back Principle

The scope and justification for the inclusion of a tax or profit element in the water rate arises in areas where the alternative cost of supply is higher than the rate fixed by the Government or where the area covered by the work is fairly developed and the irrigational facilities add further to this development. Because of the low cost of construction and maintenance of old irrigation works, water rates are much lower than in other areas and undue advantage from these low rates is derived by the individual cultivators. In such circumstances, the Government, according to the Taxation Enquiry Committee, is justified in increasing the water rates by adding an element of tax.

Water rates have long been fixed in the canal systems in the Punjab and Uttar Pradesh on the basis of securing for the exchequer a share in the additional yield derived by the cultivator from land over and above that of meeting the current costs of irrigation and interest on capital. The reinforcement of public revenues thereby has assisted in the past in the accelerated development of additional projects in those areas. Lately, such assistance to the development of new undertakings has assumed more specific forms, for example, by way of contribution to the current or capital costs of new projects as in the Punjab or a fund for extension of development activities in general as is done in U.P. This procedure is equivalent to the process as applied to the field of public enterprise of reinvestment, or ploughing back of profits which in private enterprise has been a principal means of financing development in recent years.

This suggests an approach to pricing policy for public undertakings somewhat different from what obtains generally in advanced countries. In some of these countries, where there is less emphasis on the revenue aspect of State undertakings, public enterprises mainly engage themselves in operating nationalised public utilities on cost basis. Their aim is mainly to provide cheaper and efficient service. As the Taxation Enquiry Committee rightly remarks, "A policy of 'no profit, no loss' may be appropriate in an advanced country and is, perhaps, the best to be hoped for in the earlier stages of working of some public enterprises here. But we do not recommend it as the long-term goal for public enterprise or as a permanent policy for most State undertakings in India." This should be the policy for fixing water rates for irrigation purposes also.

Concession in New Project Areas

A relevant consideration while framing water rates on new projects is the extent of concession or incentives to be provided in the water charges, particularly where it is the intention to develop irrigation. The need for such concessions arise because the materialisation of expected yields takes time and during that period added liability is imposed on the cultivator by way of cost of reclamation and of other measures for preparing the land for receiving irrigation water. There is even now in some countries the practice of providing free irrigation in the first or second year after opening of new canals or charging only a portion of the prescribed rate. The latter system is prevalent in Australia where the principle of sliding-scale assessment is applied to water charges. Thus, the rate is kept one-fourth in the first year, half in the second year and three-fourths in the third year and full in the fourth year. In Italy, a fixed reduction is made in water rates on lands brought under irrigation for the first three years.

It is desirable that, during the early developmental phase of irrigation, water rates should be low even if this involves some losses, with a view to encouraging the demand and widening the area, in order to ensure that the irrigation project functions to its optimum over a long period. In other words, the practice of "promotional pricing" in the initial phases of an irrigation project is calculated to obtain ultimately the best results.

Scope for Uniformity

Now the question usually asked is as to whether there should be uniformity in the water rates throughout the country or otherwise. The conditions of cultivators, the type of the soil irrigated, the class of crops grown, etc., vary from area to area and a rate which would be suitable for one tract would not be suitable for another.

To illustrate this point further, we will have to refer to the water rates of some important crops as assessed in some of the States. For example, the water rate for sugarcane in the State of Punjab varies from Rs. 9 to Rs. 11-1-6, whereas in the State of Madras, it varies from Rs. 7-8 to Rs. 12. In U.P., on the other hand, the rate for sugarcane ranges from Rs. 5 to Rs. 12. In Hyderabad, it used to vary from Rs. 27 to Rs. 35 and in Bombay it is between Rs. 40 and Rs. 60.

There is, however, need for reducing differences in the cost of water-supply in the same class of irrigation works within a State and between different States. Water rates within the same economic region should be uniform as far as possible.

Periodical Revision

The next problem in regard to the water rate pertains to the period for which the rate would remain in force. The practice at present followed in the various States in this country differs from State to State. In Bombay, for example, the water rates are revised at intervals of three to five years. In Madhya Pradesh, the rates are reviewed almost every year in

the Punjab and U.P., the rates have been revised at less frequent intervals. Rates fixed on a long-term basis give a feeling of security to the farmers and also import a degree of stability to irrigation revenue, and reduce administrative costs of collection. But such a system does not take into account the rise or fall in agricultural prices and particularly during a period of development, such a practice would deprive the Government of a legitimate increase in revenue. Hence, it is necessary that the water rates should be reviewed at reasonable intervals which should neither be too long nor too short.

Betterment Levy

Recently, many of the State Governments have started recovering betterment levy in addition to the usual water rates. It is, therefore, desirable to examine this question also, although it is related to water rates only indirectly.

What is a betterment levy? It is a matter of common knowledge that the introduction of canal irrigation is generally followed by an increase in the annual income and capital value of lands under the command of a project. If the entire development value is absorbed through water charges, there is absolutely no case for a further levy on the landowners. But as water rates constitute only a small part of the increased income and a considerable amount of unearned income still remains with the landowners, it is necessary that the State should claim a share in it.

Besides, the projects now under construction or likely to be taken up are considerably more costly than the projects executed in the past and, as such, the State Governments will have to find huge capital for financing these projects. The levy of betterment charges is precisely designed to meet expenses towards the cost of construction.

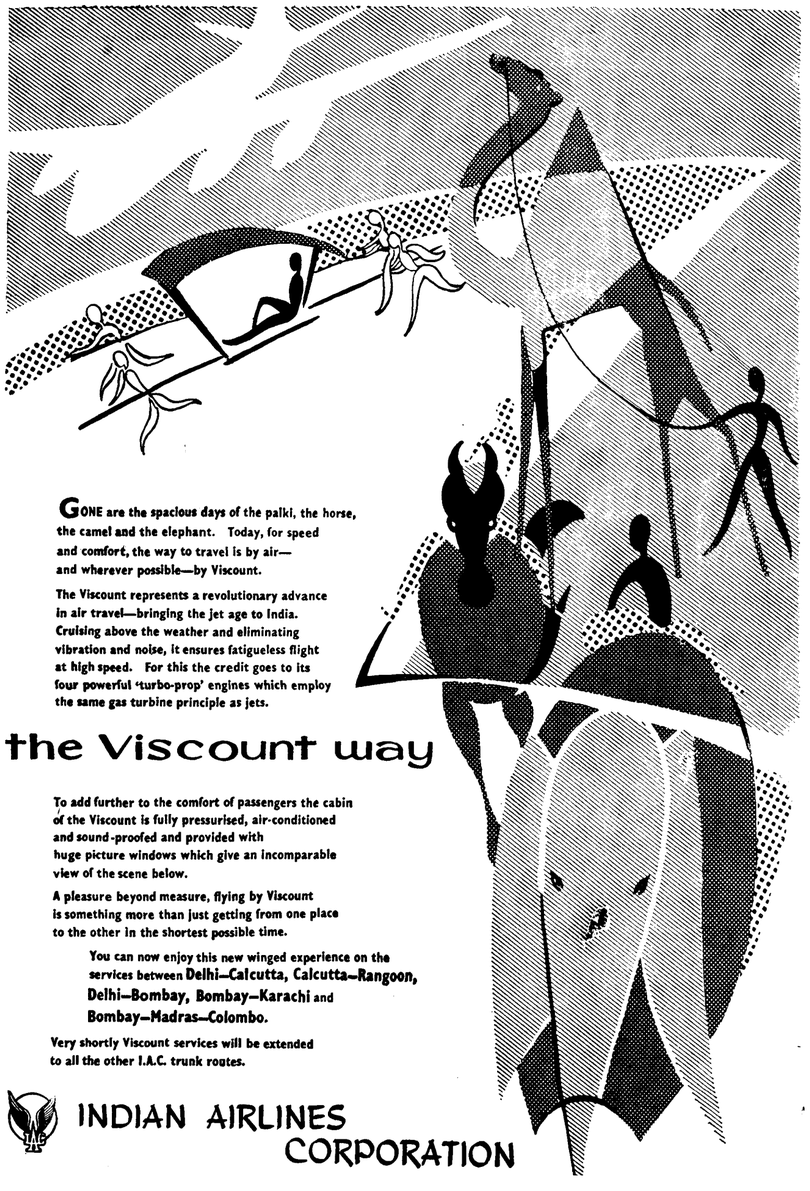
Betterment levy should be related to increase in value of land and being a capital levy should either be paid in lump sum or instalments spread over a period not exceeding 15 years. The State should also have power to recover it in the shape of land. This provision will be useful for acquiring land for community purposes, consolidation of holdings, and settlement of displaced persons and landless labourers.

The principle of betterment levy is now the accepted policy of the country. Legislation has already been passed in Assam, Andhra, Bombay, Madras, Punjab, Hyderabad, Mysore, P.E.P.S.U., Rajasthan, Himachal Pradesh and Orissa, and Bills have been prepared in Madhya Pradesh, Travancore-Cochin, Bihar and West Bengal. Although several projects have started supplying water in the various States, for example, the Bhakra Nangal, the Kakrapara, the Mayurakshi, etc., realisations have not commenced in any State. Legislation should, therefore, be passed immediately in States where this has not been done and necessary steps taken to commence realisations as soon as possible.

Administrative Problems

The supply of irrigation water to cultivators on a large scale and the recovery of water charges raises the question of administrative organisation needed for such a purpose. At present, in almost all States, all major irrigation works are in charge of Public Works Department or the Irrigation Department as the case may be. Maintenance and repairs of the canals and supplying water to the irrigators is done by the Irrigation Department. Demand statements for recovery of irrigation charges are prepared by this department and sent to the Revenue Department for recovery. The recovery is being done by the Revenue Department and the figures of actual recovery, arrears, etc., are communicated to the Irrigation Department. Even for submission of the proposals for levying the water rates, the Irrigation Department has to forward its proposals through the Revenue Department. In view of the expanded irrigation activities of the State, in the interests of administrative efficiency, it is time that the entire activities affecting the water rates right from the application of the cultivator to the payment of water charges should be placed under the Irrigation Department, as it would then be possible to review the whole position of revenue and expenditure of an irrigation project with more insight and imagination. This would not only afford better irrigation administration but also give relief to the Revenue

(Continued on page 330)



GONE are the spacious days of the palki, the horse, the camel and the elephant. Today, for speed and comfort, the way to travel is by air—and wherever possible—by Viscount.

The Viscount represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets.

the Viscount way

To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between **Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi** and **Bombay—Madras—Colombo.**

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

IMPACT OF INDUSTRIALISATION ON MAN

CONSTANT ADJUSTMENT OF ATTITUDES NEEDED

By F. R. Ginwalla

THE impact of industrialisation on the individual and the community involves human problems of various nature. I shall speak on some of these problems in the context of the two partnerships of Man with Man and Man with Nature. Industrialisation based on science represents a vast extension of man's power over nature. Industrialisation is becoming a necessity. For countries with a growing economy it is a dynamic factor enabling economic development to progress at a faster pace.

It is a common conviction that the purpose of industry is to produce happy communities and satisfied individuals. The ultimate objective of industry is the satisfaction of the material needs and desires of the world. Modern communications have made the world so small and the complexity of our modern civilisation has interlocked countries so closely that it is useless to look at the problems of any country in isolation from the rest. They react so quickly on one another.

The countries which have attained higher standards of living have recognised their responsibility in helping to raise the level of existence of their less fortunate neighbours. This is evident from the Colombo Plan, the Point Four Plan, and the operation of the World Bank. With the rapid progress of science and technology, there is an inevitable spread of industrialisation to meet the growing needs of the world. The vistas opened by the great achievements of science are overwhelming. Mankind is now able to increase enormously the energy resources at his disposal, thus providing him with the power to multiply industrial production, to fertilise the arid soil, to transform deserts into arable land, indeed to conquer poverty all over the world. Mankind has entered the atomic age of history. At the same time, the advance in technology during the past decade has brought about Industrial Revolution or the Age of Automation. It is a paradox of human destiny that the rapid advance in science and technology has been quickened so much by the catastrophe of war and by the threat of war that human nature has brought upon itself. Never before has man had it in his power to destroy in a fraction of a second all that centuries of human effort have achieved, never before has he known so clearly the limitations of human efforts and his dependence on nature and her ways.

We are privileged to live in a dynamic age. Today, with an expanding world economy and with the drive for greater production and productivity, there is a growing awareness that the resources of the world are not unlimited, and that, with the erratic distribution of nature's gifts among the nations, there is an inevitable community of interest between them. The material problems we are facing today can only be solved by co-operation between nations and on the individual level by the partnership of man with man, and the recognition of the human ties, and the human understandings which that implies. The nation of a developed country in spite of her stresses and strains should display a ready understanding and appreciation of the difficulties of her sister nation of a less developed country. The tendency that the "spirit is willing but the flesh is weak" must go. India has been making an effort to spread the message of international friendship and goodwill among other nations of the world. It should be appreciated that in the context of the size of the country like India and of the acreage available for cultivation, a reasonable degree of rural prosperity is possible only with an aggregate industrial establishment of considerable magnitude. In other words, there must be industrial establishment of considerable magnitude to support a rural prosperity. For instance, electric power cannot be made without generating equipment, the transport of people and goods without railroad and automobile vehicles; and increase in the food supply without the engineering and chemical industries to provide irrigation, tractors, agricultural machinery and fertilisers. Bridges, roads and houses cannot be built without steel and cement, and so on.

It is for these reasons India is asking other countries to give her adequate assistance to tide over her foreign exchange difficulties, and to carry out extensive developments as contemplated in the second Five-year Plan. We must, however, realise that life in industry can only reflect the community and nation, as a whole. We must not put too much emphasis on the shortage of foreign exchange and develop a sense of dependence on other nations. We must learn to help ourselves before we may expect others to help us. We have no reason to take a dim view of the future. Our country has made much progress in the field of welfare services and economic development. Much has been done in the last eight years and much more remains to be done.

The real trouble with us today is not the lack of material resources but the lack of realism and the lack of strong determination to do all that needs to be done in the larger interest of our country. It is not beyond our resources, for instance, to achieve self-sufficiency in food which does not depend upon imported machinery but on our own effort to make full use of the new irrigation facilities and new techniques. When labour has been asked to increase output and to refrain from putting forward fresh demands for higher wages in the larger economic interests of the country, it is appropriate that those who are engaged in corporate enterprise in the private sector should, on their part, display a sense of "economic discipline" and undertake a similar sacrifice to the extent it is possible by voluntarily sparing a little part of the profits to enable the country to march more rapidly on to the road of progress.

We want to enjoy as far as possible the same standard of material comforts, amenities, and security enjoyed by our brothers and sisters in other parts of the world. Our prosperity and happiness can be achieved only on the basis of balanced economy. In our country, the achievement of such a balanced economy requires that measures be taken simultaneously with the process of rapid industrialisation, to reduce the wide disparity in living standards and amenities between urban and rural communities. The productivity of which we hear so much nowadays is not an end in itself, but it should be attained in a way which would stimulate and not suppress the capacity of men and women engaged in an industry to enjoy a full and healthy life. Furthermore, the structure of industrialisation of our country should be based on a strong foundation of agricultural population whose purchasing power would provide a market for manufactured goods. It is significant that agriculture and industry are not incompatible but complementary in a balanced economy. It is said that the quality of a democracy is the reflection of the qualities of citizens. It is, therefore, significant that, as political democracy has developed, the State has become more conscious of its protective role, and, today, there is a good deal of legislation for the common good of the common man.

Many of the problems which confront us today are due to the speed at which things change in this age of ours. We are changing from an agricultural to an industrial community. Science and technology are changing both agriculture and industry. All these constant and rapid changes demand constant adjustment for the individual, for the community, for the industry, and indeed for the Government. The difficult task of uprooting the backwardness of centuries calls upon us to make a united effort with a courage of a fisherman fishing in the deep sea. New methods have to be found, ready to replace the old. In this context these lines of Tennyson are so significant:

> *"The old order changeth, yielding place to new,*
> *And God fulfils himself in many ways,*
> *Lest one good custom should*
> *Corrupt the world."*

Man's most pressing needs are entirely dependent on his partnership with nature. Nature has curious devices, eccentric habits and they have to be discovered by the method of trial and error by which mankind has always treaded its way through the puzzling world. Nature is not an easy partner and she does not reveal her secrets easily. The further we penetrate into nature's secrets, the more clearly we see ever-receding frontiers of knowledge, those illimitable vistas of the unknown, the great complexities of nature and her marvels. Certainly, man's understanding is a noble faculty, of quality and fabric more devine than any other of nature's works. With closer partnership with the wonders of nature, with closer fellowship of man with man and a better understanding of the human mind, there will come a new age with the mastery of the art of living, new satisfaction of spirit and new inspiration to work together for peaceful ends. It is God who works in us the goodwill and the good deed by which we may turn industry to the service of man and man to the glory of God.—*By Courtesy of A.I.R.*

WATER RATES IN INDIA

(*Concluded from page 328*)

Department which is overburdened with other development activities.

Another suggestion relates to the improvement of the organisational set-up for the determination of water rates. Although the present revenue from water rates is small, it is about Rs. 11 crores (as in 1953-54) for the whole of India, it is likely to increase in view of the many big river valley projects which are recently constructed and still under construction. It is, therefore, necessary that the water rates should be fixed after full consideration and the people should be satisfied that they are being charged at reasonable rates, particularly in view of the fact that there was much agitation recently in some of the States over the recent increase of water rates. Hence, a Water Rates Board should be created in each State and it should be entrusted with the question of fixation of water for the whole of the State. This would not only enable a closer scrutiny and examination but also satisfy the public opinion.

It is well recognised that a plural headed form of administrative authority permit a representation of more than one viewpoint in the formulation of policy. For example, when appointments are made to Boards rendering special or technical service to the public, it is advisable that appointees be of good standing in their professional field. The Board should be a functional Board, consisting of men who have specialised knowledge in the concerned fields. The determination of water rates is a technical function involving specialised knowledge. Hence, it is necessary that the members should have specialised knowledge in the respective branches of economic use of water to lands.

The problem of optimum use of available irrigation supplies has three broad aspects:

(1) *Agricultural.*—This consists in determining the optimum quantities of water required and the correct time of their application for growing a crop with a view to irrigating the maximum area and producing the maximum tonnage of crops with a given quantity of water.

(2) *Engineering.*—This consists of conveying to the field for purposes of irrigation, as large a portion by minimising losses in the canal, in the distributaries, watercourses, and in the field itself.

(3) *The financial or economic aspect.*—It is necessary that the water supply for irrigation purposes should also take into account the financial aspect, as well as the economic conditions of the irrigators. The water rate will have to be fixed after taking into account various considerations, including those of financial and economic conditions. The main consideration should be the optimum utilisation of available water supply.

Water Rates Board

Having the above three aspects in view, it is necessary that the Water Rates Board should consist of the three representatives who have specialised knowledge in the above three. It should consist of a chairman and two members, and should be a semi-autonomous Board charged with the work of utilisation of available water supply. It should fix the maximum and minimum water rates for each irrigation work and the subordinate officers should be given discretion to charge the actual rates for each irrigation work within the above permissible limits according to circumstances.

This Board should also be empowered to act as a tribunal in case of disputes of assessment and recovery of irrigation revenue like that of the Board of Land Revenue. This Board should also be entrusted with the maintenance of "ways and means fund" for irrigation development, which the first Five-year Plan has recommended for immediate constitution in all the States. With the establishment of such a Board, the problems relating to water supply for irrigation purposes and other allied problems will receive proper and adequate attention and accelerate the tempo of irrigation development in the country.

Plan for Progress

Power and Plenty

Giant walls taming the rushing waters, irrigation channels bringing new life to barren soil, and heavy cables carrying a mighty surge of power throughout the country are today laying the foundations of India's economic self-sufficiency. During the Second Five Year Plan  electrification will be extended to 10,600 additional towns and villages and irrigation to an extra 21 million acres. Textile Machinery Corporation Limited is proud to play its part in this nation-wide endeavour to bring power to industry, light to village homes, food to the hungry and prosperity and happiness to the people. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

BALANCE OF PAYMENTS POSITION

LATEST AVAILABLE DATA ANALYSED

IT is common knowledge that the balance of payments position of India continues to be disquieting, thanks to the impact of heavy development expenditure under the second Five-year Plan and the unfavourable turn in food situation necessitating large imports from abroad. A broad picture of the extent of deterioration has been available from the trend of foreign currency reserves held by the Reserve Bank. The collection and presentation of detailed information on this subject naturally take some time. The latest period for which full particulars are available pertain to the half-year ended 30th September 1957, that is, the first half of the 1957-58 fiscal year now drawing to a close. These data are published in the Reserve Bank's monthly *Bulletin* for January 1958. According to these, the gap between current receipts and payments during April-September 1957 more than doubled, as compared with the corresponding half year of 1956-57, the exact figure being Rs. 298 crores, as against Rs. 126 crores. The main source of finance for this large deficit was chiefly the foreign exchange reserves which were drawn down by Rs. 174 crores. The two other important sources were P.L. 480 facilities and the standby credit of Rs. 34.5 crores from the International Monetary Fund.

The heavy deficit of Rs. 298 crores in the balance of payments during the six months ended September 1957 was due principally to the continued high rate of imports. The total of these imports (c.i.f.) aggregated as much as Rs. 622.2 crores, as against Rs. 476.8 crores in the same period a year before, or a rise of Rs 145 crores. The deficit was also due to some extent to a drop of Rs. 21.2 crores in exports -- they amounted to Rs. 267.1 crores, as against Rs. 288.3 crores—and a decline of Rs. 27 crores in invisibles (including official donations) from Rs. 62.6 crores to Rs. 57.4 crores. The decline in invisibles was accounted for entirely by official donations which were lower by Rs. 11.4 crores, while other invisibles such as transportation and investment accounts showed a rise of Rs. 6.2 crores as compared with the first half of 1956-57.

Assets Depleted

During the six months ended September 1957, receipts from official loans aggregated Rs. 27.9 crores. Of this, the share of drawings on World Bank was Rs. 16.2 crores, the balance of Rs. 11.7 crores representing receipts under the loan component of Technical Co-operation Administration and drawings under the Russian credit for Bhilai. Net receipts on other capital transactions (I.M.F. standby credit, receipts under P.L. 480 and private capital inflow) amounted to Rs. 80 crores. Thus, there was a net capital inflow of about Rs. 107.9 crores. This more than offset the payment arising from the loan granted to Burma, the repayment of World Bank loans, etc. But, as there was a huge deficit on the current account, as already noted, the net result was a contraction of Rs. 173.8 crores in the foreign exchange assets.

The following table shows India's overall balance of payments during the first half of 1957-58 as compared with the first and second half of 1956-57:

(In crores of rupees)

	Apr.-Sept., 1957	Oct.-Mar., 1956-57	Apr.-Sept. 1956
Imports (c.i.f.)—			
Private	383.5	404.3	391.6
Government	238.7	195.4	85.2
Total ..	622.2	599.7	476.8
Exports (f.o.b.)	267.1*	348.7	288.3
Trade balance	—355.1	—251.0	—188.5
Official donations	+ 6.5	+ 21.9	+ 17.9
Other invisibles (net)	+ 50.9	+ 62.5	+ 44.7
Current account (net)	—297.7	—166.6	—125.9
Errors and omissions	+ 16.0	— 15.2	+ 10.6
Official loans	+ 27.9	+ 48.5	+ 7.9
Other capital transactions (net) ..	+ 80.0	+ 43.8	— 22.1
Movement in reserves	+ 73.8	— 89.5	—129.5

* This figure excludes transactions relating to repatriation of lend-lease silver of Rs. 64.8 crores in April-June 1957 and of Rs. 9.6 crores in July-September 1957.

It will be seen from the above table that the entire increase of Rs. 145 crores in imports was accounted for by enlarged spending in the public sector. The imports on Government account in the period under review were higher by more than Rs. 153 crores as compared with the same period in 1956-57. Imports of the private sector, however, were actually lower by Rs. 8.1 crores, as a result of the various restrictive policies pursued by the authorities. The imports of Rs. 238.7 crores on Government account, the overwhelming portion of which represented foodgrains, were financed through foreign assistance received under International Association for Technical Co-operation Administration, Colombo Plan and P.L. 480 programmes, as well as the Bhilai credit of Rs. 82 crores. If the imports financed by aid are excluded, the rise in Government imports will amount to about Rs. 96 crores; most of this was development expenditure.

Exports Suffer a Setback

Export receipts, as already stated, suffered a setback during the first half of 1957-58, notwithstanding the Government policy of active export promotion. The measures adopted in the quarter of July-September 1957 included export quota for kardiseed oil, cotton sewing thread, etc., free licensing of certain iron and steel manufactures (steel pipe castings, for example), zoda cotton and cotton linters, reduction of duty on de-oiled groundnut meal, and abolition of duties on linseed oilcake, zoda cotton, yellow pickings and sweepings. Despite these measures, exports declined by Rs. 21 crores as compared with the corresponding period of last year and by as much as Rs. 82 crores if compared with the October 1956-March 1957 period. The decline in export earnings is attributed partly to seasonal factors and partly to the weakening of foreign demand consequent on the emergence of recessionary trends in world commodity markets. Even so, there is no denying the fact that the various burdens imposed on the domestic industry by the powers-that-be have been responsible to a great extent for the continued low level of exports. It was only last week that we emphasised in the course of an editorial that more foreign exchange could be earned by fostering and nurturing the traditional export industries, as they still had profitable scope, than by trying to boost new industries which had yet to establish themselves firmly on their own soil.

Imports and Exports

An idea of the imports (on private account) and exports of the principal commodities in the first half of 1957-58, as well as in the first and second half of 1956-57, can be had from the statement given below:

(In crores of rupees)

	Apr.-Sept., 1957	Oct.-Mar., 1956-57	Apr.-Sept., 1956
Imports (c.i.f.)			
Oils	39.3	40.9	43.5
Cotton—raw and waste	13.1	23.6	24.7
Jute—raw and waste	3.1	4.0	3.8
Dyes and colours	7.6	7.3	7.7
Chemicals	11.8	14.5	14.4
Cutlery, hardware, etc.	11.7	13.6	14.9
Electrical goods	13.3	13.3	11.5
Paper, pasteboard and stationery ..	7.1	7.0	7.5
Woollen yarns and manufactures ..	4.5	4.5	6.4
Rayon textiles	5.5	7.0	9.2
Machinery	85.6	80.0	71.2
Metals—iron and steel	52.0	59.7	59.7
Metals—others	19.1	10.9	17.3
Vehicles (excluding railway locomotives)	18.0	21.3	21.8
Exports (c.i.f.)			
Tea	38.4	91.4	57.0
Cotton—raw and waste	9.8	12.8	10.9
Vegetable oils	9.2	10.8	14.7
Hides and skins (raw)	3.6	4.3	3.2
Metallic ores (including manganese ore)	19.0	23.8	17.1
Jute manufactures	47.4	69.3	56.7
Cotton manufactures	39.2	43.5	36.7

The foregoing statement shows that the fall in private imports during the period under review was distributed over a wide range of items in the raw materials and consumer goods categories. The fall was particularly marked in the case of raw cotton, payments for which declined by as much as Rs. 10 crores to Rs. 13.1 crores. Imports of machinery, on the other hand, showed an increase over both the halves of 1956-57.

On the export side, the commodities affected most were tea and jute manufactures. In respect of tea alone, the decline was about Rs. 20 crores, being the combined result of a fall in volume as well as in prices. The price decline was caused by poor quality of production, which in turn was due to unfavourable weather conditions. Consequently, the offtake of all the principal consuming countries, namely, the U.K., the U.S.A. and Egypt, was appreciably lower during this period. The decline in the case of the U.K. appears to have resulted also from the recession in demand for stockpiling. The fall in U.S. burlap consumption by nearly 16 million yards from 428 million yards during April-September 1956 to 412 million yards during April-September 1957 (attributable perhaps to slackness of business activity) also affected to some extent Indian exports of jute manufactures which recorded a fall of nearly Rs. 10 crores. Competition from Brazil for castor oil, as also the generally higher quotations of Indian oils, adversely affected exports of vegetable oils which fell by some Rs. 5 crores.

Regional Pattern

The regional analysis of balance of payments in the first half of 1957-58 shows that the deterioration on current account manifested itself *vis-a-vis* all the major monetary areas, as is evident from the following table:

(In crores of rupees)

	April-Sept., 1957	Oct.-March, 1956-57	April-Sept., 1956
Sterling area	— 48.8	— 13.6	— 21.5
Dollar area	— 73.7	— 30.7	— 0.7
O. E. E. C.	—135.0	—107.3	— 94.6
Rest of non-sterling area ..	— 40.3	— 15.0	— 9.1
Total ..	—297.7	—166.6	—125.9

The deficit in balance of trade with sterling area rose sharply from Rs. 13.6 crores in the second half of 1956-57 to Rs. 48.8 crores in the first half of 1957-58, despite the reduction of Rs. 21.3 crores in imports (from Rs. 243.8 crores to Rs. 222.5 crores) from that area. This was largely attributable to a marked drop of Rs. 45.8 crores in exports and partly to a fall of about Rs. 10 crores in net invisible earnings. The payments position of the dollar area also showed a marked deterioration. From a position of near balance in the first half of last year, there was an appreciable deficit of Rs. 74 crores in the first half of this year, the total of imports and exports accounting for Rs. 137.0 crores (c.i.f.) and Rs. 50.3 crores (f.o.b.), respectively. For imports of foodgrains under P.L. 480 and T.C.A. programmes tended to rise. It is mentioned that, if normal imports were considered, the balance with the dollar area would reveal a small surplus. Official donations were lower at Rs. 5.4 crores, as against Rs. 20.0 crores and Rs. 17.5 crores in the previous two halves, respectively. The payments gap of Rs. 135 crores with the O.E.E.C. countries was the result of rising payments for imports of machinery, electrical goods, and drugs and medicines. Payments for some of the less essential consumer goods, such as cutlery, hardware, dyes and colours, were somewhat lower. The deficit of Rs. 40.3 crores in the transactions with the rest of the sterling area was due to increased payments for imports which aggregated Rs. 163.7 crores, as against Rs. 119.3 crores a year before. Most of this rise was in the commercial sector and was distributed over a wide range of commodities.

AUGMENTING EXPORT TRADE

At no time in the history of India's foreign trade had the need for augmenting exports been so urgent as it is today. The country is faced with a serious balance of payments problem and the only effective way of solving it lies in stimulation of exports. The need is all the greater, considering the growing competition in international trade and other developments such as the establishment of the European Common Market with the dependent territories as associate members. Viewed thus, Mr. Chinoobhai C. Javari, the retiring President of the All-India Exporters' Association, did well, indeed, to stress, when he addressed the tenth annual general meeting of the Association held in the City on Wednesday this week, that "the mere wish or desire for increasing our trade will not by itself help us, in the absence of organised efforts put in jointly by the industry, labour, trade and the Government." And he put forward several valuable suggestions designed to bring about an improvement on export front.

The suggestions of Mr. Chinoobhai fall into two categories—general and particular or specific. The former include the following:

(1) Uniformity in and simplification of States' sales tax laws;

(2) extension of the benefit of excise duty refund to small manufacturers and dealers using duty-paid materials in the goods exported, as well as relaxation of the vigorous procedure of identification and manufacture in an approved place;

(3) establishment, by the Government, of some machinery to review the progress made in export promotion and issue quarterly reports for the benefit of trade; the reports must incorporate useful suggestions invited from India's Trade Commissioners in overseas countries on questions such as market conditions, consumer preferences, improvements necessary to enhance the competitive capacity of goods, and defects hampering exports;

(4) setting up of permanent exhibitions of export goods in the major Indian Ports like Bombay, Calcutta and Madras;

(5) withdrawal of the demand for an execution of a bond and a bank guarantee from exporters with regard to the specific performance against import licences issued under the export promotion scheme; and

(6) avoidance of frequent changes in export duty on goods.

NEW CITY AND NEW GREAT COTTON MILLS SUFFER LOSSES

HEAVY TAXATION AND HIGHER COST

IT is now a well-known fact that the past calendar year was one of depression for the cotton mill industry. The reasons for this are also equally well known. The depression was created mainly by the Government. We say so without any qualification, because the Central Government went out of its way to curb the demand for cloth through both fiscal and monetary policies. Excise duties were pushed up to unheard of levels and restrictions were placed on bank advances against cotton goods. All this was done at a time when cotton prices moved up, wages rose and the purchasing power of the people was diminished by general inflation in the country. The cotton mills' profit margin, therefore, shrunk heavily. And their capacity to pay dividends was further adversely affected by the rise in direct taxation and the imposition of an annual capital levy, called Wealth Tax.

Viewed against the aforesaid background, it is not surprising that both the Brady Group cotton mills did not fare well in 1957. The New City of Bombay Manufacturing Company, Ltd., and the New Great Eastern Spinning and Weaving Company, Ltd., have both suffered losses, though not of the same magnitude. For the first time since 1937, New Great has had to pass over the dividend to its ordinary shareholders, while, in the case of New City, the dividend has been reduced by 50 per cent. of that paid for the preceding five years in succession, that is, from 10 to 5 per cent. In the case of both the companies, the Managing Agents have waived the commission due to them. The selling agents also have accepted a cut in their commission.

A comparative table showing the progress of these two Companies appears at the foot of these columns. It will be noted therefrom that the New City discloses a loss of Rs. 2.76 lakhs, as against a gross profit of Rs. 4.55 lakhs for 1956, to which level it had slightly receded from Rs. 5.12 lakhs for 1955. The net loss at Rs. 3.44 lakhs also makes unfavourable comparison with the net profit of Rs. 2.51 lakhs and Rs. 3.26 lakhs for 1956 and 1955, respectively.

The loss suffered by the New Great amounts to Rs. 9.55 lakhs. It may be stated in this connection that even the gross profit of Rs. 2.10 lakhs for 1956 (which was only a third of Rs. 6.32 lakhs for 1955) was the lowest in the Company's history since 1939. The net loss amounts to Rs. 9.85 lakhs, as compared with a net profit of about Rs. 68,000 for the previous year.

In the case of both the companies, no provision for depreciation has been made. Fortunately for them, adequate depreciation had been made in the past when profits were better. Consequently, the absence of any transfer to this account this year has not meant any setback to their financial position. Both have provided for wealth tax; in the case of New City it works out to Rs. 68,000 and in that of New Great Rs. 30,179.

The New City has declared a dividend of only 5 per cent. as against 10 per cent. for the past five years. While in the previous year the net profit had covered the dividend in full, this year even the attenuated dividend could be paid only by taking recourse to the reserves. Accordingly, the Directors have transferred a sum of Rs. 2.68 lakhs from the reserve for taxation and another Rs. 1.20 lakhs from the reserve fund, in addition to writing back Rs. 23,888 being the excess provision no longer required. The New Great also has dipped into its reserves to the tune of about Rs. 10.20 lakhs, that is, Rs. 2.99 lakhs from general reserve and Rs. 7.50 lakhs from the taxation reserve. The sum thus withdrawn has been used partly for payment of the preference dividend and partly for writing off of the year's loss. It will be interesting to note here that, during the year under review, this Company paid as much as Rs. 16.93 lakhs by way of excise duty on cloth. If only this duty had not been enhanced in September 1956, the Company would have shown a profit.

A satisfactory financial position is disclosed by the latest balance-sheets of both the Companies. The paid-up capital of the New City is Rs. 24 lakhs, which is supplemented by reserves and surplus amounting to Rs. 25.64 lakhs. The gross block of the value of Rs. 82.12 lakhs stands depreciated at Rs. 33.42 lakhs. The current assets aggregate Rs. 46.14 lakhs, of which cash balances alone at Rs. 10.94 lakhs, provide a sufficient cover to current liabilities and provision for taxation amounting to Rs. 29.92 lakhs in all.

The paid-up capital of the New Great stands at Rs. 38 lakhs. As against this, the reserves and surplus are of the order of Rs. 49.72 lakhs. The gross block of the value of Rs. 101.83 lakhs has been well written down to Rs. 38.46 lakhs. Against the current assets aggregating Rs. 63.59 lakhs, of which stock-in-trade and stores alone account for Rs. 56.33 lakhs, the current liabilities and provision for taxation amount to only Rs. 52.33 lakhs.

Some further progress was made during the year in the modernisation of the mills by additions to the spinning machinery. In the case of New Great, the building of the new folding department of the mill was completed towards the end of the year. The installation of the necessary ancillary equipment and the transfer of the requisite machinery will be carried out during the early months of 1958.

The Rs. 100 fully paid-up shares of the New City are currently quoted at Rs. 125 *cum-div.* On an *ex-div.* basis, the dividend for the year at 5 per cent. works out a yield of 4.17 per cent. per annum.

BRADY ENGINEERING REPORTS STEADY PROGRESS

The steady progress made by the Brady Engineering Company Ltd. (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) during the past few years was fully maintained in the year ended 31st December 1957. Both sale proceeds and earnings show a progressive rise year after year. This augurs well for the future of the Company. Indeed, the utility of a concern of this nature will become more apparent in the years ahead when the large complement of engineering implements required by the country have to be manufactured within the country itself. The gross profit for the year under review at Rs. 3.34 lakhs compares quite favourably with Rs. 2.61 lakhs for 1956 and Rs. 2.26 lakhs for 1955. Within three years, the gross profit has trebled. Thus, for 1954, it was no more than Rs. 1.10 lakhs.

The net profit at Rs. 77,065, however, stands lower, as compared with Rs. 1.13 lakhs for the previous year. This is due to the high incidence of taxation, for which a provision of Rs. 1.34 lakhs (including Rs. 14,000 for wealth tax), as against only Rs. 33,000 in the preceding year, has been made. The rate of wealth tax is only ½ per cent., but on the profit of even a young company such as the one under review it works out to 4.2 per cent. of the gross profit and 15 per cent. of the net profit before providing for this tax, but after other taxes, depreciation and Managing Agents' commission. The transfer to depreciation has been kept practically unaltered at Rs. 95,000. In view of the recession in net profit, the allocation to the general reserve has been pruned from Rs. 25,000 to Rs. 20,000. The dividend is, however, being repeated at the modest rate of 5 per cent. for the third year in succession. It may be noted here that the dividend for 1954 was only 2½ per cent.

The following comparative table sets out the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1957	1956	1955	1954
Proceeds of engineering work	10.38	8.92	7.53	3.64
Closing work-in-process	0.52	0.40	0.29	0.18
Expenses	7.31	6.52	5.53	3.02
Gross profit	3.24	2.61	2.26	1.10
Managing Agents' commission	0.28	0.19	0.17	..
Depreciation	0.95	0.96	0.85	0.42*
Taxation	1.34	0.33	0.05	0.42*
Net profit	0.77	1.13	1.19	0.26
To reserves	0.20	0.25	0.40	..
Dividend	0.75	0.75	0.75	0.37
	(5%)	(5%)	(5%)	(2½%)
Carry forward	0.04	0.22	0.09	0.06

* Includes Rs. 22,190 being tax paid for 1952 and 1953.

It will be seen from the above comparison that the Company's sale proceeds of engineering work show a visible improvement for every year of working. The Directors say that the business has again been of a general nature, but that a licence has recently been granted to the Company by the Government of India for the manufacture of pulley blocks and ancillary equipment. It is hoped that this will develop into a profitable line of business. Efforts are also being made to obtain other regular lines of business.

The paid-up capital of the Company as at 31st December 1957 stands unchanged at Rs. 15 lakhs, in 25,000 ordinary shares of Rs. 100 each, of which only Rs. 60 per share has been called up. Being a small concern still in its infancy, its reserves and surplus are modest in size, being no more than Rs. 2.39 lakhs. The gross block of a value of Rs. 15.31 lakhs has been well depreciated to Rs. 9.60 lakhs. The current liabilities amount to Rs. 2.75 lakhs. The current assets aggregate Rs. 10.54 lakhs, of which cash balances alone are of the order of Rs. 5.44 lakhs and equal to nearly twice the current liabilities and the provision for taxation. The financial position of the Company is thus quite satisfactory.

The Rs. 60 paid-up shares of the Company are currently quoted at Rs. 44 *cum-div.* On an *ex-div.* basis, the yield is 7.31 per cent. per annum.

APPOINTMENT OF MANAGING AGENT AS SELLING OR BUYING AGENT

Attention of all companies is drawn to the provisions of Sections 356 to 360 of the Companies Act 1956, which place some restrictions on the appointment of the managing agent of a company or his associate as the selling or buying agent of the company and also on the contracts between the managing agent or his associate and the managed company for the sale or purchase of goods or for the supply of services.

Under Section 361 of the Act, any contract relating to the matters dealt in the said sections, which was in force on 1st April 1956, will, in so far as the contract relates to any of the matters referred to in these sections, be deemed to be terminated on 1st March 1958, unless terminated on an earlier date.

If any company proposes to continue an existing arrangement or contract in respect of the matters, referred to above, after 28th February 1958, it will be well advised to take steps to ensure that it is modified on a fresh contract executed so as to conform to the requirements of Sections 356 to 360.

INDIAN BANK LTD.

The net profit of the Indian Bank Limited, Madras, for the year ended 31st December 1957, after providing for contingencies and paying bonus to staff and meeting other Golden Jubilee expenses aggregating nearly Rs. 12 lakhs is Rs. 32.02 lakhs, as compared with Rs. 45.71 lakhs for 1956. Out of this sum, the Directors have paid an *ad-interim* dividend at the rate of 5 per cent. and a bonus of 1½ per cent. (both free of income-tax), same as in the previous year, which absorbed Rs. 4.22 lakhs (Rs. 3.91 lakhs). The Directors, after making the other usual and necessary provisions for taxes, reserves and other funds totalling Rs. 28.25 lakhs (Rs. 31.05 lakhs) have recommended the payment of a final dividend at the rate of 5 per cent. and a bonus of 1½ per cent. (both free of income-tax), also same as for 1956, thereby maintaining the dividend and bonus for the year at 13 per cent. In addition, they have recommended the payment of a Golden Jubilee dividend of 2 per cent.

COMPANY NOTES

The Vaikundam Rubber Co., Ltd., has obtained the consent of the Controller of Capital Issues for the capitalisation of a sum of Rs. 2,51,430 and issue of bonus ordinary shares in the ratio of two shares for every five shares held by the existing shareholders.

The Jeypore Sugar Company has to capitalise a sum of Rs. 6,95,330 and to issue three ordinary shares for every 10 shares held, subject to the Government's sanction.

Kothari Textiles Ltd. has made a final call of Rs. 5 per share on the 242,000 ordinary shares of Rs. 10 each, the call money being payable on or before 7th March, 1958.

COMPANY MEETINGS AND DIVIDENDS

ARRAH-SASARAM LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 7th March 1958. Dividend: 4.425 per cent. per annum. Transfer books will remain closed from 25th February to 7th March 1958, both days inclusive.

SHAHDARA (DELHI)-SAHARANPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 7th March 1958. Dividend: 8.85 per cent. per annum. Transfer books will remain closed from 25th February to 7th March 1958, both days inclusive.

G. CLARIDGE & CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 15.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

EMPIRE DYEING & MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 3.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

W. H. BRADY & CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 25.00 per share. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

BRADY ENGINEERING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 3.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

NEW CITY OF BOMBAY MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 10th March 1958. Dividend: Rs. 5.00 per share, payable on and after 24th March 1958. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

INVESTMENT CORPORATION OF INDIA LTD. Annual General Meeting, Bombay, 10th March 1958. Transfer books will remain closed from 3rd to 10th March 1958, both days inclusive.

NEW GREAT EASTERN SPINNING & WEAVING CO., LTD. Annual General Meeting, Bombay, 11th March 1958. Dividend: *Nil*. Transfer books remain closed from 21st February to 14th March 1958, both days inclusive.

JUBILEE MILLS LTD. Annual General Meeting, Bombay, 13th March 1958. Transfer books will remain closed from 1st to 14th March 1958, both days inclusive.

LOYAL TEXTILE MILLS LTD. Dividend of Rs. 2.50 (5 per cent.) per share, for the year ended 30th June 1957. Transfer books will remain closed from 14th to 20th March 1958, both days inclusive.

T. STANES AND CO., LTD. Final dividend of Re. 1.00 (10 per cent.) per share, for the year ended 30th September 1957. Transfer books will remain closed from 15th to 29th March 1958, both days inclusive.

ANDHRA SUGARS LTD. Dividend of Re. 1.25 per share, for the year ended 30th September 1957. Transfer books will remain closed from 1st to 15th March 1958, both days inclusive.

KUMERGODE ESTATES LTD. Dividend of Re. 0.50 (25 per cent.) per share, for the year ended 31st October 1957.

BHOPAL SUGAR INDUSTRIES LTD. Dividend of Rs. 2.00 per share, for the year ended 30th September 1957, payable on 1st April 1958. Transfer books will remain closed from 8th to 22nd March 1958, both days inclusive.

SHREE CHANGDEO SUGAR MILLS LTD. Dividend of Rs. 2.25 per share, for the year ended 30th September 1957, payable on 1st April 1958. Transfer books will remain closed from 11th to 25th March 1958, both days inclusive.

COMPANY REGISTRATIONS

SHREE VALLABH GLASS WORKS LTD. (First Director: Seth Ratilal Nathalal.) Business: Manufacture of sheet glass, plate glass, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Sudamini Sadan, Block No. 2, "C" Road, Churchgate, Bombay 1.

INVEX PRIVATE LTD. (First Director: Mr. Jal D. Bomerwalla.) Business: Spinning and weaving of cotton and other fibrous substances. Authorised capital: Rs. 5,00,000. Private company. Address: Mustafa Building, Sir Phirozeshah Mehta Road, Fort, Bombay.

R. R. PAINT INDUSTRIES (INDIA) PRIVATE LTD. (First Director: Mr. Rat Shansinh Rai Sinh.) Business: Manufacturers and dealers in oils, paints and varnishes, etc. Authorised capital: Rs. 5,00,000 Private company. Address: 151-153, Khetwadi Road, Bombay 4.

REGE CINEFILMS PRIVATE LTD. (First Director: Mr. D. M. Ghia.) Business: Manufacture of films, photographic paper, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 198, Jamshedji Tata Road, Bombay.

QUESTION HOUR IN PARLIAMENT

Atomic Minerals Reserves

A SYSTEMATIC and detailed survey, including prospecting work, for estimating the reserves of atomic minerals including uranium and thorium is being carried out by the Atomic Minerals Division of the Department of Atomic Energy since 1950. This is a continuing process in all countries and India's effort is being progressively increased. The country's total reserves are presently estimated at approximately 30,000 tons of uranium and about 500,000 tons of thorium. About half of these reserves are found in the large deposits recently discovered in Bihar. Thorium has been found in plenty in Kerala. The present areas where both exploratory and drilling work for estimating the reserves of these atomic minerals is going on are in the States of Bihar, Rajasthan, Mysore, Andhra, Bombay, Madhya Pradesh, Madras and Uttar Pradesh.

—*Jawaharlal Nehru*

Foreign Capital

I do not see the possibility of any change in the present policy of the Government encouraging investment of foreign capital in India. The terms and conditions on which investment of foreign capital is encouraged has already been laid down in a policy statement, of which the House is aware. If there is to be any major change in the policy, the House will have an opportunity of discussing it.

• • • •

Industrial Delegation

I understand that the members of the Industrial Delegation, both individually and collectively, have been getting in touch with foreign private enterprise. I will not say anything has materialised so far. Perhaps, it is too early to expect anything to materialise. But one notable thing that has emerged from the discussions the Delegation had in the United States is a loan from the Export-Import Bank for a concern in Bombay. The Delegation has done something towards removing the apprehensions of foreign investors by indicating to them, as well as to foreign banks, the facilities that are afforded in India to private industrial investment.

• • • •

Sterling Obligations

It seems reasonably certain that no crisis in regard to honouring sterling obligations on account of imports will arise during 1958-59. Even if some such thing arises, there are some cushions available to meet that contingency. It is not possible to say accurately what is the extent of outstanding commitments on account of imports for last year. I had mentioned tied commitments to the extent of Rs. 990 crores. These have come down now to some extent.

• • • •

Estate Duty Arrears

The outstanding arrears of estate duty during 1956-57 stood at over Rs. 1.25 crore. The amounts of arrears in the preceding two years were Rs. 39,07,547 and Rs. 78,51,667, respectively.

—*T. T. Krishnamachari*

Compulsory Deposits

It is too early to assess fully the extent to which the objective of the compulsory deposits scheme has been achieved. The total amount deposited by the companies under the scheme in the year ended December 1957 was Rs. 348 lakhs.

• • • •

L.I.C. and Warehousing Corporation

The Life Insurance Corporation has not invested any amount in the shares of the Central Warehousing Corporation. The Investment Committee of the L.I.C. did not agree to the investment. The return on it would have been 3½ per cent., while the Act requires that the return should not be less than 4 per cent.

• • • •

Small Savings

The net collections from small savings between April 1957 and January 1958 amounted to Rs. 37.8 crores approximately, as against Rs. 44.8 crores in the corresponding period of the previous year. The continued rise in prices and the higher cost of living which reduce the capacity to save, particularly of the smaller people, increased propensity to invest in commodities rather than in securities, shift in income from urban to rural areas, and diversion of investments to commercial banks which offer higher rates of interest are responsible for the fall. The decline in savings has been chiefly in postal savings. There have been some difficulties in regard to these collections. The Government has from time to time gone into them and adjusted the rate of interest and taken other steps to increase the collections.

• • • •

Conversion Loan

The extent of depreciation that has taken place in the value of the 3 per cent. 1986 conversion loan of Rs. 248.91 crores approximately since its inception has been about 29 per cent. Prices of Government securities depend upon the conditions of the money market and the structure of interest rates prevailing from time to time. Fluctuations in the prices are, therefore, not unusual. So long as securities are held until maturity, no loss is involved. There has been no loss of confidence in the market.

• • • •

I.M.F. Loan

The main purpose of the present visit to India of the I.M.F. Managing Director is to acquaint himself with the financial and economic situation in India in a general way and there is no question of the Government negotiating with him any loan from the I.M.F.

—*B. R. Bhagat*

Water Resources

The total river water resources of India in a normal year are estimated at 1,356 million acre-feet. Of this, the river flow that can be utilised is estimated at about 450 million acre-feet. As many as 1,143,000 acres received *kharif* irrigation during 1957.

—*S. K. Patil*

New Shipping Company

I can give no indication as to when a final decision will be taken on the request for permission to float a new shipping company for operating a cargo service between India and the United States. The request for such permission has come from a private individual. I do not think there is any such declaration of policy as not to give encouragement to foreigners in such ventures.

• • • •

Merchant Shipping Law

It is expected to introduce in the current session of Parliament a Bill to amend and consolidate the law relating to merchant shipping. The Bill will contain suitable provisions for employment conditions of seamen.

• • • •

Development of Ports

The Mission on Ports sent by the World Bank has submitted its report to the Bank. The Government of India has no information as to the nature of the recommendations made in the report. It has, however, received an invitation from the Bank to send a delegation to negotiate the terms of the loan which the Bank is contemplating to give to the Calcutta Port Commissioners and the Madras Port Trust. The amount of loan applied for in respect of these two ports is Rs. 17.68 crores.

• • • •

Sethu Samudram Project

In view of the prevailing paucity of resources, the Government of India has decided that it is not possible to undertake the execution of the Sethu Samudram project in the second Five-year Plan period. The question of its inclusion in the third Plan will be considered in due course. The question of development of Tuticorin harbour which had been originally linked with the Sethu Samudram project, is being pursued separately.

—*Raj Bahadur*

Revision of Air Fares

The Indian Airlines Corporation has submitted proposals for the revision of passenger fares on the basis of the recommendations contained in the majority report of the Air Transport Council and these proposals are under consideration. The Corporation has not so far submited proposals for the revision of freight rates and the introduction of two classes for internal air travel which are being considered by it. The recommendations of the Air Transport Council in regard to other matters are still under consideration. The Government has seen certain comments in some newspapers to the effect that there should be no increase of fares for Assam, Manipur and Tripura, as there are special transport difficulties in the region. The difficulties have been kept in view. Even according to the recommendations made by the Airlines Corporation, the fares will be increased only in 21 routes, while they are to be decreased in 10 routes. They will remain constant in 25 routes.

—*Humayun Kabir*

Wheat Stocks

The Government had a stock of 800,000 tons of wheat on 25th January 1958. It has taken up with the U.S. Government the question of further supplies of wheat under the P.L. 480 Agreement. India has made arrangements to import some wheat from Canada on deferred payment terms. Besides this, Canada is giving some more wheat under the Colombo Plan. Some wheat is still to be imported from the U.S. under the P.L. 480 Agreement and talks are now going on for this supply.

• • • •

Rice Supply

Under India's current arrangement with Burma, 500,000 tons of Burmese rice are due to India in 1958. We shall have to manage with the limited import programme by meeting a part of the demand for rice by wheat.

• • • •

Co-operative Farming in Bombay

The Bombay Government is in general agreement with the policy laid down by the Planning Commission regarding introduction of co-operative farming. The State has set apart a sum of Rs. 44.50 lakhs for promoting co-operative farming. In 1956-57, 29 co-operative farming societies were organised and assistance amounting to Rs. 3.03 lakhs was granted. For the current year, a target of 25 societies is fixed, and a sum of Rs. 10.58 lakhs has been earmarked for the purpose.

—*A. P. Jain*

• • • •

Exploration of Minerals

The number of drills so far purchased by the Government for exploration of minerals other than petroleum is 113. Of these, 93 are being used in different areas for exploring coal, lignite, copper, magnesite, pyrites, gypsum and uranium ores. The present number of drills is not sufficient to meet all requirements; at least 50 more are needed. The main difficulties in acquiring the required number are lack of finance and foreign exchange.

—*K. D. Malaviya*

PHALTAN SUGAR RAISES DIVIDEND

EARNINGS OF PARASEA COLLIERIES LOWER

Phaltan Sugar Works Ltd.

THE directors of the above Company (Managing Agents: Messrs. Mafatlal, Apte and Kantilal, Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1957.

The accounts show that the profit for the year after providing Rs. 3,45,387 (Rs. 3,22,196) for depreciation, and Rs. 16,90,000 (Rs. 12,25,000) for taxation amounts to Rs. 13,53,258 (Rs. 11,82,919) to which is added the balance brought forward from the previous year's profit and loss account of Rs. 93,981 (Rs. 11,062) making a total of Rs. 14,47,239 (Rs. 11,93,981). The directors have made the following appropriations from this amount: to reserve for gratuity Rs. 1,00,000 (Rs. 2,00,000), to payment of a dividend of Rs. 9 (Rs. 9) per share, free of income-tax on one lakh ordinary shares Rs. 9,00,000 (Rs. 9,00,000) and to payment of a bonus of Rs. 3 (nil) per share free of income-tax on one lakh ordinary shares Rs. 3,00,000 (*nil*) leaving to be carried forward to next year's accounts Rs. 1,47,239 (Rs. 93,981).

Factory: The factory commenced sugarcane crushing on 12th October 1956 and stopped on 3rd March 1957. The sugarcane crushed during the season was 1,34,341 tons and the sugar manufactured was 1,62,004 bags with a recovery of 12.17 per cent. as against 1,25,008 tons of cane, 1,58,170 bags of sugar and 12.785 per cent. sugar recovery of the last season. The sugar recovery was lower than last year's due to the unseasonal rains and the consequential extended crushing season. The sugar manufactured was mainly of D-29 grade, (1,910 bags being of the C-29 grade) and was sold as per the Government Release Orders. At the close of the year the Company carried an unreleased stock of 30.3 per cent. of the year's production.

Estate: The standing crop as on the 30th September 1957 was 4,512 acres and 5 gunthas. Out of this, 2,013 acres of cane will be harvested for the crushing season 1957-58 and the seed for new cane plantation. 1,477 acres and 15 gunthas of cane crop will be carried over for the 1958-59 season leaving a balance of 1,021 acres and 30 gunthas of fodder and grain crop for the year 1957-58. The estate results were quite satisfactory, the average yield being higher than that of last year.

Income-Tax: The income-tax assessment of the Company is complete upto 30th September 1951. The provision for taxation made in the accounts is subject to completion of pending assessments.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,00,000	Block ...	49,57,313
Reserves ...	53,21,430	Uninstalled machinery	14,622

Liabilities ...	40,22,367	Crop-in-progress ...	29,93,339
Profit and loss account ...	1,47,239	Stores and spare parts	18,34,404
		Other assets	9,345
		Debts, deposits and advances ...	37,38,488
		Investments	2,06,594
		Cash ...	27,83,157
Rs.	2,11,30,888	Rs.	2,11,30,888

Parasea Collieries, Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Deepchand Kishenlall, Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The Company's profit for the year ended 31st December 1956 after providing Rs. 66,634 (Rs. 51,795) for depreciation and Rs. 5,000 (Rs. 1,33,671) for income-tax etc. is Rs. 35,242 (Rs. 1,69,819) to which is added the balance brought forward from last account of Rs. 61,987 (Rs. 55,518) making a total available for disposal of Rs. 97,230 (Rs. 2,25,337). The directors recommend payment of dividends on 8,000 preference shares at 5½ per cent. per annum less income-tax Rs. 32,450 (Rs. 48,675 including Rs. 16,225 for the half-year ended 31st December 1954) and on 83,400 ordinary shares at Re. 0.50 (Re. 1.00) per share free of income-tax Rs. 41,700 (Rs. 1,14,675) which includes Rs. 31,275 being dividend on ordinary shares at As. 6 per share for the half-year ended 31st December 1954) leaving a balance of Rs. 23,080 (Rs. 61,987) out of which Rs. 20,000 (*nil*) has been transferred to general reserve fund leaving Rs. 3,080 (Rs. 61,987) to be carried forward to next year's account.

Output and Despatches

(In Tons)

	For the year ended		
	1956	1955	1954
Raisings ...	1,01,941	1,11,481	92,458
Despatches ...	88,664	1,02,445	83,595
Stock after boiler consumption	5,719	3,131	3,117

During the year under review the output decreased as compared with the previous year due to the strike at the Colliery lasting for five weeks commencing from 3rd January 1956 as a result thereof the despatches also suffered. With the electrification of the Colliery, the coal cutting machine has been put into commission and is working satisfactorily.

South Parasea Collieries Private Limited in which the Company holds shares are progressing satisfactorily and the raisings of the said Colliery have increased considerably.

At 31st December 1956, the entire subscribed share capital of Messrs. Poddar Martin Mining and Minerals (Private) Limited being 200 shares of Rs. 1,000 each fully paid, were held in the name of this Company and its nominees. The net aggregate amounts of the profit of the subsidiary company (since it became subsidiary) not dealt with in the Company's accounts are for the year ended 31st December 1956. Rs. 97,597. No part of the profits of the subsidiary has been dealt with in this Company's accounts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,34,000	Block ...	14,12,776
Debentures	2,00,000	Stock of coal	74,344
Reserves ...	20,000	Stores and spare parts	79,341
Provision for taxation ...	3,22,930	Debts, deposits and advances ...	7,48,816
Liabilities ...	8,96,296	Investments	7,52,783
Profit and loss account ...	3,080	Cash ...	8,246
Rs.	30,76,306	Rs.	30,76,306

W. H. Brady and Co., Ltd.

The directors of the above Company (Managing Director: Sir Joseph Kay, K.B.E., Bombay) submit the audited accounts of the Company for the year ended 31st December 1957.

The result of the year's working, after providing Rs. 15,240 (Rs. 2,607) for depreciation and Rs. 16,50,000 (Rs. 11,50,000) for taxation, is a net profit of Rs. 9,24,377 (Rs. 11,49,243) which, together with the balance of Rs. 60,677 (Rs. 36,434) brought forward from last year's account, amounts to Rs. 9,85,054 (Rs. 11,85,677). The directors have placed to building replacement reserve Rs. 1,00,000 (Rs. 1,50,000) and transferred to gratuity reserve Rs. 60,000 (Rs. 1,00,000) leaving a balance of Rs. 8,25,054 (Rs. 7,35,677 after providing Rs. 2,00,000 to general reserve). From this amount the directors recommend the payment of a dividend, at the rate of Rs. 25 (Rs. 22.50) per share, free of income-tax. (This is Rs. 2.50 per share more than last year in appreciation of the managing director's 50th year of his connection with the Company) absorbing Rs. 7,50,000 (Rs. 6,75,000) leaving a balance to be carried forward to next year's account of Rs. 75,054 (Rs. 60,677).

The trading operations for the year showed results which may be considered very satisfactory but with the curtailment in imports of machinery and stores in which the Company deal, following the stringent import restrictions imposed by Government, it is anticipated that future prospects on this important side of the Company's business will be adversely affected.

The cotton textile industry with which the Company is so closely connected passed through a year which was full of difficulties. Owing to the poor results in the two cotton mills under the Company's management, viz., The New Great Eastern Spinning and Weaving Company, Ltd., and The New City of Bombay Manufacturing Company, Ltd., the Company agreed to forego its minimum managing agency remuneration for the year 1957 aggregating Rs. 85,000.

On the taxation account, owing to the increase in rates and also the wealth tax on companies imposed under the 1957 budget, the provision for tax in 1956 accounts was inadequate and in order to meet the shortfall an amount of Rs. 2,00,000 has been transferred from taxation reserve.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	3,39,979
Reserves ...	60,66,126	Stock-in-trade	65,21,574
Provision for taxation ...	11,72,792	Work-in-progress ...	8,33,937
Liabilities ...	51,28,045	Debts, deposits and advances ...	42,79,281
Profit and loss account ...	75,054	Investments	33,25,148
		Cash ...	16,42,098
Rs.	1,69,42,017	Rs.	1,69,42,017

Empire Dyeing and Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1957.

The accounts show a net profit on the year's working after writing off depreciation of Rs. 37,433 (Rs. 35,340) on machinery and plant, etc., setting aside Rs. 1,06,000 (Rs. 87,500) for taxation and charging the managing agents' commission amounting to Rs. 30,419 (Rs. 39,418) of Rs. 1,73,734 (Rs. 2,08,706) which together with the balance brought forward from last year's account of Rs. 6,930 (Rs. 8,224) gives an amount for disposal of Rs. 1,80,664 (Rs. 2,16,930). This amount the directors propose to dispose of as follows:—

To payment of a dividend of Rs. 3 (Rs. 3) per share on 60,000 shares of the Company, free of income-tax absorbing Rs. 1,80,000 (Rs. 1,80,000) and leaving to be carried forward to next year's account Rs. 664 (Rs. 6,930 after placing Rs. 20,000 to general reserve and Rs. 10,000 to staff gratuity fund).

The overall production achieved at the works during the year was slightly less than that of 1956 although income showed a small gain. Operating costs continue to rise and there appears to be little likelihood of lower charges in these directions for the immediate future. During the year a new gas singeing machine was received and arrangements for installation put in hand.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	5,79,386
Reserves ...	8,50,000	Stock-in-trade	88,454
Provision for taxation ...	2,56,060	Stores and spare gear	32,553
Liabilities ...	7,38,556	Debts, deposits and advances ...	4,82,500
Profit and loss account ...	664	Investments	2,20,429
		Cash ...	12,91,958
Rs.	27,45,280	Rs.	27,45,280

G. Claridge and Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1957.

The accounts after charging Rs. 75,000 (Rs. 39,162) for depreciation shows a net profit of Rs. 69,372 (Rs. 2,71,071) which together with an amount of Rs. 90,000 (*nil*) transferred from the provision for taxation and Rs. 29,379 (Rs. 28,308) brought forward from last year's profit and loss account, gives Rs. 1,88,751 (Rs. 2,99,379) and this amount the directors propose to dispose of as follows:—

To pay a dividend of Rs. 15 (Rs. 15) per share on 8,000 shares of the Company, free of income-tax absorbing Rs. 1,20,000 (Rs. 1,20,000) and to transfer to provision for gratuity and welfare Rs. 50,000 (Rs. 75,000) leaving a balance to be carried forward to next year's account of Rs. 18,751 (Rs. 29,379 after placing Rs. 75,000 to reserve for taxation).

During the year the turnover has increased but on the other hand, the cost of raw materials and wages has also risen steeply and due to keen competition now being experienced in the trade, the profit margins have been much lower.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	5,48,370
Reserves ...	10,37,840	Stock-in-trade	9,86,927
Provision for taxation ...	1,26,328	Work-in-progress ...	1,29,328
Liabilities ...	9,12,433	Stores and spare parts	35,647
Profit and loss account ...	18,751	Debts, deposits and advances ...	11,61,311
		Investments	12,289
		Cash ...	21,480
Rs.	28,95,352	Rs.	28,95,352

Roopacherra Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 49,422 (Rs. 1,54,543) to which must be added adjustment account of Rs. 13,644 (*nil*) and balance of profit brought forward from 1955 of Rs. 14,625 (Rs. 22,603) making a total of Rs. 77,691 (Rs. 1,77,146). From this amount must be deducted provision for taxation of Rs. 10,700 (Rs. 45,968) and amount written off stores for obsolescence, etc., Rs. 111 (Rs. 37,553 on account of adjustment account) leaving a balance of Rs. 66,880 (Rs. 93,625). From this amount the directors have set aside to buildings and machinery reserve Rs. 40,000 (Rs. 40,000). Further they recommend the payment of a dividend for the year ended 31st December, 1956, at the rate of Re. 0.50 (Re. 1.50) per ordinary share on 26,000 ordinary shares, absorbing Rs. 13,000 (Rs. 39,000) leaving to be carried forward Rs. 13,880 (Rs. 14,625).

The saleable crop weighed out at 7,105 (8,453) maunds against an estimate of 8,000 maunds and was disposed of at an average price of As. 31.06 (As. 25.97) per lb. The smaller crop made in 1956 was due to adverse weather conditions and earlier cessation of plucking under the I.T.A. Voluntary Crop Restriction Scheme.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,60,000	Block ...	5,08,465

THE BANK OF INDIA LIMITED

NOTICE

THE FIFTY-SECOND ANNUAL GENERAL Meeting of the Shareholders of The Bank of India Limited will be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Wednesday, the 12th day of March, 1958, at 4 o'clock in the afternoon, to transact the following business:—

1. To receive the Report of the Directors and the audited Balance-Sheet and Profit and Loss Account for the year ended 31st December, 1957.
2. To declare a Dividend.
3. To elect a Director in the place of Sir Joseph Kay, K.B.E., who retires by rotation, is eligible and offers himself for re-election and for that purpose to consider and if thought fit to pass the following resolution as an ordinary resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

   RESOLVED that Sir Joseph Kay, K.B.E., who has attained the age of 74 years and who retires by rotation, be and he is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.
4. To elect a Director in the place of Mr. Ramniwas Ramnarain, who retires by rotation, is eligible and offers himself for re-election.
5. To elect a Director in the place of Mr. Krishnaraj M. D. Thackersey, who retires by rotation, is eligible and offers himself for re-election.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and if thought fit to pass, with or without amendment, the following resolution as an ordinary resolution:—

   RESOLVED that:

   (a) The Auditors of the Company be and they are hereby authorised to restrict their audit to the accounts of the Company at its Head Office and not to audit the accounts at the Branches either within or outside India;

   (b) Notwithstanding the authority aforesaid, the Auditors shall be entitled at such times as may be agreed upon between themselves to visit for any one of them, at least once in every financial year, every Branch in India for test inspection and that a report on such test inspection shall be submitted to the General Manager of the Company and that for such work the Auditors shall be paid all out-of-pocket expenses that they may incur for travelling, board and lodging and otherwise and that such payment shall be in addition to the remuneration fixed for the said Auditors.

By Order of the Board of Directors,

T. R. LALWANI,
General Manager,
The Bank of India Limited.

BOMBAY, *6th February*, 1958.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. The instrument appointing a proxy and the Power-of-Attorney, if any, under which it is signed, should be deposited at the Registered Office of the Company not less than forty-eight hours before the time for holding the aforesaid Meeting, as provided by Article 79 of the Company's Articles of Association.

Note.—(*a*) The Transfer Books of the Company will be closed from Monday, 24th February, 1958, to Saturday, 15th March, 1958, both days inclusive.

(*b*) The Dividend, when sanctioned, will be payable on and from Wednesday, 19th March, 1958, to those shareholders whose names are on the Register of Members on 15th March 1958

(*c*) Dividend Warrants will be posted to shareholders at their registered addresses. Early intimation should be given to the Company of any change of address.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956

In conformity with the Companies Act, 1956, the following Explanatory Statement as required by Section 173 of the said Act, sets out material facts relating to items Nos. 3 and 7 mentioned in the accompanying Notice dated 6th February, 1958.

Item No. 3.—Sir Joseph Kay, K.B.E., who retires by rotation and is otherwise eligible for re-election, has attained the age of 74 years and hence he cannot be appointed a Director except by a resolution of which a special notice has been given in accordance with the requirements of Section 281 of the Companies Act, 1956. The Company has received such special notice from some members of the Company.

Sir Joseph Kay has been a Director of the Company since the year 1921. As a businessman of wide and varied experience closely associated for a long period with the Company, he has rendered very valuable services to the Company and it is in the interest of the Company that it should continue to receive the benefit of his services. Notice is given to the members of the said resolution which is commended for acceptance.

Item No. 7.—This resolution is on the same lines as Ordinary Resolution No. 3 passed at the Fifty-first Annual General Meeting of the Company held on 7th March, 1957. This resolution is proposed in order to meet the requirements of the Companies Act, 1956. The Board consider it desirable to place this matter again before the shareholders.

By Order of the Board of Directors,

T. R. LALWANI,
General Manager,
The Bank of India Limited.

BOMBAY, *6th February*, 1958.

DETAILS OF OIL MILL PLANT FOR SALE

1. 3 Nos. Giant Oil Expellers as per specification: Manufacturers: M/s. Steel Construction Co., Ltd., Bangalore City—capable of dealing with about 15 tons of shelled groundnuts per working day of 24 hours. Arranged for and driven through worm gearing of heavy construction consuming about 25 B.H.P. The frames of the machine are throughout of steel fabrication including the feed box and are fitted with Twin Steam-jacketed Tempering kettles with self-contained chain drive thus ensuring High Cooking capacity. The cage box, bars and worms are made of special steel and hardened to withstand heavy duty. The cone adjustment mechanism is of special trouble-free design avoiding all gears or clutches.

2. 4 Nos. Filter Presses with Pumps.

3. 1 Nos. Steam Boiler of the following specifications: Marshall No. 25 size, 25 H.P. Locomotive type multitubular Boiler constructed entirely of steel in strict accordance with the Indian Boiler Regulations for a working pressure of 150 lbs., and evaporating capacity of 1,950 lbs. per hour with accessories and 'Hayward Tyler' Horizontal 'Duplex' Steam Pump suitable for the above 25 H.P. Boiler.

4. 1 Mild Steel chimney.

5. 2 Nos. Kalyan Decorticators with Stone Separators.

6. 1 No. Rotary Pump with 25 H.P. motor.

7. 3 Nos. Settling Tank, 400 gallons capacity, with cover.

8. 4 Nos. Oil Storage Tanks, 400 gallons capacity, with lids.

9. Miscellaneous spare parts. Details will be furnished to the interested buyers, if General Manager, Mysore Sugar Company, Ltd., Mandya, is addressed.

Intending purchasers are requested to send their applications in a sealed cover within 8 days from the date of the publication of this notice.

V. HANUMANTHAPPA,
Secretary.
The Mysore Sugar Co., Ltd.,
Bangalore 2.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LTD.

NOTICE TO MEMBERS

THE TWENTY-FIRST ORDINARY GENERAL Meeting of the Members of The Alkali and Chemical Corporation of India, Ltd., will be held on Wednesday, 19th March 1958, at 3.30 p.m., at the Registered Office, 34 Chowringhee, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September 1957.

(2) To declare a Dividend on the Ordinary Shares.

(3) To elect Directors.

Notice

THE BHOPAL SUGAR INDUSTRIES LIMITED

THE FOURTEENTH ANNUAL GENERAL Meeting of the Shareholders of the Bhopal Sugar Industries Limited will be held on Saturday, the 22nd March 1958, at 4 p.m. (S.T.), at the Registered Office of the Company, Sehore, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit and Loss Accounts and Balance Sheet for the year ended 30th September 1957.
2. To declare Dividends on Preference and Equity shares.
3. To elect a Director in place of Shri Mohd. Hussein H. Premji who retires under the Articles of Association of the Company, but being eligible, offers himself for re-election.
4. To appoint a Director in place of Shri Manmohandas M. Amersey who retires under the Articles of Association of the Company and to consider and if thought fit to pass the following resolution of which a special notice as required by Section 281 of the Companies Act 1956 has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—

   "RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Shri Manmohandas M. Amersey who has attained the age of 67 years and who retires by rotation under the Articles of Association of the Company, be and is hereby re-appointed a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

5. To consider and if thought fit to pass the following resolution required by Section 359 of the Companies Act, 1956, the relative explanatory statement in respect of which as required by Section 173 of the said Act is annexed hereto:—

   "RESOLVED that Adverts Private Ltd., who are the Associates of A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., the Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration earned or to be earned by them at any time hereafter, in regard to any contracts for the purpose of publication of any notice, advertisement, circulars in daily newspapers, periodicals and/or journals entered into between this Company and the *Times of India, The Bombay Samachar* and other daily newspapers, periodicals and/or journals through the said Adverts Private Ltd."

6. To consider and if thought fit to pass the following resolution required by Section 360 of the Companies Act, 1956 as a "Special Resolution" the relative explanatory statement of which as required by Section 173 of the said Act is annexed hereto:

   "RESOLVED that the Company hereby approves of all sales, purchases or supplies or transactions already entered into or to be entered into between the Company and the associates of its Managing Agents, A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., in respect of goods in which they regularly trade or do business provided that the prices charged to the Company are at rates which are not less favourable to the Company than the market rates, or which are otherwise reasonable."

7. "RESOLVED that the Donations of Rs. 4.020 made during the year ended 30th September 1957 be and are hereby approved."
8. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
V. R. JHAVERI,
Secretary.

BOMBAY, *5th February*, 1958.

Note.—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and to vote instead of himself, and a proxy need not be a member of the Company.

(*b*) The Transfer Books of the Company will be closed from 8th March, 1958 to 22nd March, 1958 (both days inclusive).

(c) If Dividends on shares as recommended by the Directors are passed at the meeting, the payments will be made to those shareholders whose names are on the Company's Register on the 22nd March, 1958. The payments will be made on and after the 1st April, 1958.

(d) Shareholders are requested to intimate change, if any, in their registered address.

ANNEXURE TO THE NOTICE

(*Explanatory Statement as required by Section 173 of the Companies Act, 1956.*)

To

THE SHAREHOLDERS OF
THE BHOPAL SUGAR INDUSTRIES LTD.

Dear Sir/Madam:

Under the provisions of the Companies Act, 1956, the following explanatory statement as required by Section 173 of the said Act, sets out the material facts relating to the Special Business of the Company to be transacted at the Annual General Meeting of the Shareholders of the Company to be held on Saturday, the 22nd March 1958 at 4 p.m. (S.T.), at the Registered Office of the Company, Sehore, to transact the following business as stated in the accompanying Notice.

2. In respect of Item No. 4 of the said Notice, it is notified that Shri Manmohandas M. Amersey, who retires under the Articles of Association of the Company, has attained the age of 67 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of sections 190 and 281 of the Companies Act 1956. The Company has received such a special notice from a member notifying his intention to move the resolution as set out in the said item. Shri Manmohandas M. Amersey has been associated with the Company as a Director since the inception of the Company. He is a businessman of wide and varied experience and during the long period of his association with the Company he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed a Director.

3. In respect of Item No. 5 of the notice, it is notified that Messrs. Adverts Private Limited who are Associates of the Managing Agents are doing business as advertising agents for publication of notices and advertisements and circulars in various daily newspapers, periodicals, and/or journals such as the *Times of India, The Bombay Samachar*, etc. The Company gives notices, advertisements and circulars in the aforesaid publications through Messrs. Adverts Private Ltd., at rates which are not less favourable than those prevailing in the market. It is therefore necessary having regard to the provisions of Section 359 of the Companies Act, 1956 to pass the said resolution set out in the Notice in order that Messrs. Adverts Private Ltd., may retain any commission or remuneration earned or to be earned by them from newspapers, periodicals, etc., or from any other printing business entrusted to them by the Company.

4. In respect of Item No. 6 of the said Notice the Resolution has been put up in order to comply with Section 360 of the Act and to approve of transactions already entered into or to be entered into between this Company and the associates of its Managing Agents in respect of purchases or sales by this Company of various kinds of goods which it has been the practice to do so from them in the past.

The Resolution only authorises the Company to do so provided the prices charged to the Company by the Associates are at rates which are not less favourable to the Company than the market rates and which are otherwise reasonable.

5. In respect of Item No. 7 of the said Notice the donations of Rs. 4.020 have been made during the year ended 30th September 1957. The said donations are for charitable, public and useful objects and the Directors consider it is in the interests of the Company to make them.

By Order of the Board of Directors,
V. R. JHAVERI,
Secretary.

BOMBAY, *5th February*, 1958.

COMMERCE AND INDUSTRY

(*Concluded from page 332*)

The particular or specific suggestions made by Mr. Chinoobhai cover all the major items of export—cotton textiles, jute manufactures, tea, raw cotton, oils and oilcakes, and manganese and iron ore. Referring to cotton textiles, Mr. Chinoobhai drew special attention to the formidable competition from Japan, China, Hong Kong, Pakistan and even East European countries, establishment of cotton textile industry in several East and West African countries, as also in the other underdeveloped nations, and changing tastes of consumers in foreign markets. He urged the Government of India to formulate some incentive measures for those mills and exporters who endeavoured to augment exports of fine and superfine cloth. Incidentally, he emphasised the importance of improving our packings and samplings. With regard to exports of other commodities, Mr. Chinoobhai wanted intensive publicity campaign for jute goods and tea, timely announcement of export quotas for cotton, and grant of more transport facilities, reduction of export duty, and greater freedom to shippers and mineowners for manganese and iron ores.

INDIAN STANDARDS INSTITUTION

As much as 90 per cent. of the Indian standards formulated by the Indian Standards Institution were adopted by different Government purchase organisations as basis for placing orders during 1956-57, as against 77 in the previous year, according to the annual report of the Institution for 1956-57. The report speaks of the growing appreciation of the role of standards in the development of industry and trade. During the year, the Institution received 287 proposals for formulating new standards, of which 234 proposals were accepted and referred to different committees. Implementation of Indian standards by manufacturers and consumers also showed marked progress. Eighteen new licences for the use of standard certification marks on goods conforming to Indian Standards were granted to manufacturers. The goods covered such items as aluminium utensils, power conductors, cement, storage batteries, rectified spirit and the National Flag of India. Seven licences were renewed. During the year, 160 Indian standards were either published or were under print bringing the total number of Indian standards formulated so far to 919. Excluding 26 standards which were revised editions and 5 which were withdrawn, the total number of Indian standards available as on 31st March 1957 was 888.

The Institution took several steps to facilitate the introduction of the metric system of weights and measures. Three Indian standards for conversion factors and conversion tables, inter-conversion of values from one system to another, and conversion tables for ordinary use were issued during the year. Standards covering the vast range of industrial development were also formulated during the year. These included general engineering, bicycles, cutlery, sewing machines, textiles, handloom fabrics, textile mill stores, animal starches, dairy products, automobile vehicle parts, conductors, insulators and steel structurals.

The formation of two new Division Councils was another important feature of the working of the Institution during 1956-57. These Councils will specialise in standardisation relating to structurals and metals, as well as electrical materials required for the generation, transmission and consumption of electric energy.

The Institution has set itself a target of 800 Indian standards during the second Five-year Plan, after making an estimate of the demand that may arise during the Plan period due to rapid industrial expansion.

The Government of India has further enlarged the scheme of duty rebate on exports of hydraulic brake fluid. By a notification of import duty paid, the diacetone alcohol used in manufacture of hydraulic brake fluid for export was considerably simplified and a drawback of 95 nP on the export of each gallon of hydraulic brake fluid was notified. The scheme has since been reviewed and an element of rebate on account of the excise duty paid on castor oil used in the manufacture of hydraulic brake fluid has been added. The revised rate of drawback will be Re. 1.50 per imperial gallon of hydraulic brake fluid exported with effect from the 17th inst. The Government is also taking action separately to notify a rebate at the rate of Rs. 60.00 per ton on tinplate used in the manufacture of tinplate containers. This rebate will be admissible in respect of tinplate containers in which hydraulic brake fluid is exported, in addition to the rebate of Re. 1.50 per imperial gallon mentioned earlier.

A trade agreement was signed at New Delhi on the 14th inst. between India and Greece. It will be valid up to 31st December 1959, subject to mutual agreement. The main feature of the agreement is that, while Greece will treat India on a par with the countries in the Organisation for European Economic Co-operation, India will treat Greece on a par with the countries of the sterling area. The agreement provides for most-favoured nation treatment for ships belonging to either country, but this will not apply to any concessions accorded to national ships engaged in coastal trade.

The Government of Bombay has modified the procedure of distribution of steel and cement for residential constructions against permits. As a result, the Collectors of Districts will hereafter meet individual demands for cement exceeding five tons but up to 20 tons, while those up to and including five tons will be met by *mamlatdars or mahalkaris*, as the case may be. Indents for steel from villages and towns with a population up to 1,00,000 will be considered by the District Development Boards. Suitable increases in the allotment of steel for districts will be made to cater for increased demands with the local offices.

MONEY STEADY

(*From Our Own Correspondent*)

BOMBAY, *19th February*

There was no appreciable change in the conditions of the short-term money market during the week under review. While the supply of funds remained restricted, the demand for bank credit did not appear to have exerted any notable pressure on the available supplies, as was the case in the previous week. Banks were, therefore, not very keen borrowers in the market. Interest rates remained unchanged at 3 per cent. for inter-bank call money among the exchange banks and big Indian banks and at 3½ per cent. among the smaller Indian banks. House money at call was placed at 4¼ to 4⅝ per cent. Short-term deposits were bid at 4⅛ to 4⅝ per cent. for one to six months.

The Reserve Bank's statement for the week ended 14th February 1958 does not show any worthwhile variations in the Issue Department. Notes in circulation are lower by only Rs. 98 lakhs, while notes held in the Banking Department were higher by no more than Rs. 85 lakhs. In the Banking Department, deposits of the Central Government have declined by Rs. 5.70 crores, while those of other Governments have risen by Rs. 11.71 crores. Deposits of banks have gone down by a further Rs. 2.66 crores. Balances held abroad have dropped again by Rs. 1.81 crore, loans and advances to Governments by Rs. 2.41 crores and other loans and advances by Rs. 2.70 crores. Advances to Scheduled banks against usance bills are practically unchanged.

A substantial fall of Rs. 23.30 crores in demand deposits and a sharp rise of Rs. 18.90 crores in time deposits are disclosed by the Scheduled banks' statement for the week ended 7th February 1958. Inter-bank borrowings are lower by Rs. 4.96 crores, while borrowings from the Reserve Bank have gone up by Rs. 6.88 crores. A rise of Rs. 10.04 crores is noted in advances and of Rs. 1.22 crore in bills purchased and discounted. Cash balances are lower by Rs. 1.82 crore and money at call and short notice by Rs. 6.45 crores.

Barring some support extended by the Life Insurance Corporation, the Gilt-edged market was devoid of any interesting feature and business was thin during the week under review. The Corporation is reported to have placed sizable orders for purchase of 3 per cent. 1970-75 and 3 per cent. 1966-68 and some 4 per cent. State loans. This support from the Corporation kept the undertone steady. As for details, 3 per cent. 1986 Conversion Loan was lifeless at Rs. 71.05. 3 per cent. 1970-75 gained 5 nP to Rs. 85.75 following buying orders from the L.I.C. 3 per cent. 1966-65, for similar reasons, was marked up by 5 nP to Rs. 91.70. 3 per cent. 1959-61 was placed at Rs. 99.05 ex-voucher, as against Rs. 99.10 *cum-voucher* a week ago. 3 per cent. 1958 was maintained at Rs. 99.75 even after the payment of the half-yearly interest. 3½ per cent. 1964 had sellers at Rs. 97.75 and 3½ per cent. 1965 at Rs. 97.55. 3½ per cent. 1967 was on offer at Rs. 97.60 and 3¾ per cent. 1967 at Rs. 99.60. Among the State loans, 4 per cent. Madras 1967 and 1968 gained 10 nP each to Rs. 97.60. Andhra 1967 put on 15 nP to Rs. 97.35 and 1968 10 nP to Rs. 97.35. U.P. 1967 and 1968 were marked by 10 nP each to Rs. 97.60.

In the foreign exchange section, rupee held its ground in terms of the U.S. dollar, in consonance with the steady trend displayed by sterling abroad. Banks' selling rate for ready dollars was unchanged at Rs. 475 per $100 and their buying rate at Rs. 471.75 per $100. In New York, spot sterling, after shading off from $2.81⅞-2.81¼ to $2.81⅜-2.81⅝, regained to $2.81⅝-2.81¾. Three months' forward was unchanged at $2.79¼-2.79½, while transferable sterling gained from 279.20-279.30 cents to 279.40-279.50 cents.

LINSEED QUIETLY STEADY

(*Messrs. A. Bradley and Co.*)

CALCUTTA, *17th February*

The general tone of the linseed market has remained quietly steady and prices have moved within narrow margins. After advancing to Rs. 21-8 per maund, seeds gradually eased to Rs. 21-4 with only small-scale trading reported. Oil prices likewise improved to Rs. 51-8 in sympathy with a sudden advance in mustard oil, but later declined to Rs. 50-8 for ready delivery. Very little activity has taken place in linseed oil with shippers temporarily out of the market. Small sales are reported to have been made to the U.K. at around £107, but later indications are weaker.

The latest quotation for February-March is Rs. 21-4 per maund.

METALS IMPROVE

(*From Our Own Correspondent*)

CALCUTTA, *18th February*

Following better demand, prices of base metals recovered during the week under review. The recent conference which was convened by the Chief Controller of Imports and Exports at New Delhi and which was attended by metal importers and consumers has raised expectations that the Government would permit more imports of metals, particularly copper. From Rs. 163, electrolytic copper gained to Rs. 166. The rise was in accordance with the up-trend in both London and New York. There were reports which indicated that the American stock-pile in regard to copper would be reduced by 40 per cent. and that there was a possibility in American primary producers' price revision. Electrolytic zinc opened at Rs. 52.50 and closed better at Rs. 53. The rise was in accord with higher trend on the L.M.E. In fact, consumer demand in the local market was insignificant. Lead at Rs. 58, recorded a fractional rise by 50 nP. Tin changed hands at Rs. 513.

FORWARD TRADING IN BULLION TO CONTINUE

(*From Our Own Correspondent*)

BOMBAY, *19th February*

The notable development of the week under review in so far as the bullion market is concerned is the reported decision of the Government of India to maintain, for the time being, the *status quo* in regard to forward trading in gold and silver. (No official announcement has been made so far by the Government in this regard.) The question of regulating forward trading in bullion was examined by the Forward Markets Commission some time ago and it is reported to have recommended that forward trading in these two precious metals throughout India should be brought within the purview of the Forward Contracts (Regulation) Act 1952. It is also said to have recommended that futures markets in respect of gold and silver might be established in Bombay and Delhi and in respect of silver only in Jaipur and Calcutta. Forward trading in gold and silver is at present permitted freely all over the country, except in the city of Bombay, where it is regulated through the Bombay Bullion Association recognised by the Bombay Forward Contracts Control Act, 1947.

This reported decision of the Government of India means that a fresh lease of life to forward trading in Bombay under the Bombay Forward Contracts Control Act has been given. It, however, created a state of suspense in the market as to how long this *status quo* will be maintained. Presumably, the Government is either not able to make up its mind on the F.M.C's recommendations or has deferred a decision on account of its preoccupations.

The aforesaid report did not have any pronounced effect on the prices of the two metals. While silver maintained its upward trend and established fresh high levels, gold was subdued towards the close of the week. The bullish sentiment in silver gained strength from the scarcity of floating stocks and dwindling of arrivals of Tibetan coins during the week. A prominent operator from Calcutta is said to have taken advantage of this and built up a long position in the white metal. This is reflected in the widening of the *budla* charges from As. 4 to Re. 1-4 in favour of buyers.

Gold kept a steady tone for the major part of the week, but suffered a setback in the last two days, due to the weakness of the ready section, where the offtake shrunk considerably, resulting in a drop of Rs. 2 in ready gold from the peak of Rs. 114-9 touched early in the week.

Forward silver (*March settlement*) rallied from Rs. 189-5 to a peak of Rs. 192-10 yesterday. After dipping today to Rs. 191-9, it closed at Rs. 192. April settlement gained from Rs. 189-1 to Rs. 191-4, before finishing at Rs. 190-12.

Ready silver came up from Rs. 189-5 to Rs. 192-10 and closed at Rs. 192-4, that is, at a premium of As. 4 over the current settlement. The floating stocks of silver are estimated at 900 bars. The daily average arrivals were of the order of 10 to 12 bars, while the offtake was higher at 15 to 20 bars.

Gold for forward delivery (March settlement) rose early in the week from Rs. 112-7 to Rs. 113-1, but slided down to Rs. 111-14 at the close. The April settlement closed today at Rs. 111-9, after moving up from Rs. 111-15 to Rs. 112-8.

Ready gold finished with a loss of As. 10 over the week at Rs. 112-8. The floating stocks of gold are reported to be 10,000 tolas. While the daily average arrivals were 3,000 tolas, the offtake was no more than 2,000 to 2,500 tolas on an average.

In New York, silver was unchanged at 88¾c., while in London spot silver gained from 76½d. to 76⅝d. and forward from 76d. to 76⅛d. Gold also gained a little from 248s. 10⅜d. to 249s.

The following comparative table shows at a glance the trend of the market during the week under review:

	10-2-58	Highest	Lowest	12-2-58

GOAT SKINS EASY

(*From Our Own Correspondent*)

MADRAS, *17th February*

The kip market ruled steady during the week. Tanners were firm in their ideas, but U.K. importers were reluctant to pay the prices at origin, because dressers seemed to buy only for their specific requirements at current prices. Arrivals of kips into the Madras market were moderate and clearances good at unchanged prices. Tanners were not able to buy raw stocks in good quantities and reduced their output.

In the tanned skins section, prices of goat skins were a shade easier than last week, while sheep unchanged. There were several enquiries from the U.K. and the Continent, but exporters could not place business on account of the lower prices offered.

COTTON FUTURES WEAK

(*From Our Own Correspondent*)

BOMBAY, *19th February*

The bearish trend noted in the cotton futures market last week gathered momentum during the week under review, thanks to persistent long liquidation. Barring stray purchases at lower levels and some short covering, buying support was restricted. This was mainly due to the disappointment felt over the refusal of the authorities to permit additional exports of cotton, the gloomy outlook for textiles and the heavy accumulation of stocks with mills, the pressure of new crop arrivals and the consequent fall in spot values. The continued prevalence of monetary stringency has forced spinners to keep off the market. The fall in prices, however, would have been more marked but for the occasional support prompted by the fear that, with the approaching maturity date of the March contract, tenderable cotton would be scarce. The rumour that the Government was inclined to consider a downward revision of export duty on Bengal *Deshi* also imparted some strength to the market. Over the week prices came down sharply, the fall being steeper in the case of the March contract. This was because of the increased switch-over of purchases from that to the May contract.

I.C.C. Moglai Jarilla (March 1958) opened the week on Friday (the market having been closed on Thursday) at Rs. 679.50, as against the previous close of Rs. 683.50 and declined to Rs. 674 on the same day. The contract attracted some short-covering and replacement buying and improved to Rs. 683.50 the next day. It again faced heavy selling and eased to Rs. 672.50 yesterday. Opening at Rs. 675.50 today, the contract put on a fraction of a rupee to Rs. 676 before closing lower at Rs. 670.75. The net loss over the week was Rs. 12.75.

I.C.C. Moglai Jarilla (May 1958) followed more or less the same trend. Commencing the week lower at Rs. 673 and after improving to Rs. 677 on the 15th, the contract dropped to Rs. 658.50 yesterday. Today's opening rate for the contract was Rs. 672. It gathered Rs. 1.50 subsequently and closed lower at Rs. 669.25. The net loss over the week was Rs. 7.25. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	19-2-58	*High*	*Low*	12-2-58
I.C.C. Moglai Jarilla (March 1958) ..	670.75	683.50	670.50	683.50
I.C.C. Moglai Jarilla (May 1958) ..	669.25	677.00	668.50	676.50

The attention of the trade is currently focussed on the room rates for the maturing March contract which are to be fixed on the 22nd inst. The rates, it is common knowledge, will have an important bearing on the future price trend of the ruling contract. It is reported that, in response to protest voiced by a section of the trade, the Board of the East India Cotton Association (E.I.C.A.) has reorganised the Room Rate Committee with adequate representation to all interests concerned

In the spot market, increased arrivals and the consequent accumulation of stocks induced a break in values. Spinner demand for domestic styles was slack. Activity was on a very restricted scale, business having been mostly confined to good quality cotton. Due to the deterioration in quality of Surti styles, there was sustained demand for Laxmi, the price of which ruled firm. Short staples were practically neglected and values suffered a setback. Good demand was noted for Laxmi, Vijay, Khandesh, Berar 197/3, etc.

The controversy over the room rates for delivery contract fixed in the spot market has ended. The new Committee has lowered the rate for Vijay from Rs. 920 to Rs. 915 and for Moglai from Rs. 730 to Rs. 723 per candy. The controversy started as a section of the trade felt that the room rates fixed earlier were rather high and appeals were made against them.

There was no notable development on the export front. Business was almost negligible due to poor export demand. Rumours were current that the Government of India was likely to reduce the export duty on Bengal *Deshi*.

In the foreign section, activity was at a standstill as licensing of all types of foreign cotton stood suspended. Licensing could be resumed only after fresh import quotas are announced. The outcome of the Egyptian trade delegation's visit is awaited with much interest.

It has been announced by the U.S. State Department that the agreement between the U.S. and India concluded in 1956 to sell the former's agricultural surpluses to India had been modified to provide more wheat to India and less of cotton and other commodities. The total value of cotton to be shipped under the agreement would be reduced from $70 million to $42 million while that of wheat would be increased from $200 million to $225 million. The latest available spot rates—in rupees per candy of 784 lbs.—are given below, the figures in brackets being last week's closing quotations:

Bengal *Deshi* 600 (610); Berar Jarilla 780 (790); Khandesh 815 (810); Oomra *Deshi* 630 (630); Vijay 925 (915); Hubli Laxmi 1,040 (1,030); Jaydhar 780 (780). *Delivery Contracts*: Vijay 910 (900); Bengal 585 (570).

During a short week of only four trading days—the market remained closed for three days including Sunday, the 16th inst.—the Karachi cotton futures *market* ruled distinctly easy. Domestic spinner demand was at a low ebb and export inquiries were slack. The increasing pressure of new crop arrivals exerted a downward pressure on prices. In the absence of buying in the wake of increased hedge pressure the market registered a decline. N.T.R.G. March declined from Rs. 74-12 last week-end to Rs. 74-9-6 yesterday. The May

position dropped As. 6¼ to Rs. 74-11-6. The spot market was weak. *Deshi* styles were particularly easy. Sind *Deshi* came down from Rs. 70 last week to Rs. 68-8 and Punjab *Deshi* declined from Rs. 67-8 to Rs. 66-4. The following are the latest available spot quotations—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton prevailing at Karachi:

4F Roller 76; S.G. 81-8; 289F N.T. Roller 79-8; S.G. 87-12; 289F Punjab Roller 84-8; S.G. 93-8.

An easy trend was depicted by the Alexandria cotton futures market during the week under review. The easiness was attributed to the higher crop for the season forecast by the Ministry of Agriculture and the slow export demand. Both the long-staple Karnak and medium-staple Ashmouni contracts climbed down.

According to the third official estimate, Egyptian cotton production (less Scarto) this season is expected to aggregate 3,631,000 cantars, as against the previous estimate of 3,543,000 cantars. The final estimate is expected to be released in early April next.

The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: March 79.35 (81.35); May 80.25 (82.15). *Ashmouni*: February 67.15 (68.60); April 67.05 (68.45).

Due to the absence of buyer interest at the reserve prices, the Lint Marketing Board of Uganda has temporarily adopted the private treaty system of sales, as against its normal policy of marketing cotton by auctions. It was announced that the Board would offer from 10th instant up to 10,000 bales of Uganda cotton by private treaty. The Board has reserved the right to cancel or interrupt this programme without prior notice. The first sales made on the 10th inst. are reported to have covered 100 bales of Busoga for March-April delivery and 3,400 bales of B.P. 52 for April-May delivery.

Barring the near deliveries (March-April) of the American and American type contracts, cotton futures values in the Liverpool market registered a sizable decline during the week under review. The strength of the former was due to buying support induced by the fact that the maturity date was fast approaching. The dull tone of the yarn and cloth market, the uncertainty over U.S. cotton policy and probable farm legislations touched off a fair volume of hedge selling. Values eased as a consequence. The Sudan contracts, however, were maintained. The latest available quotations—in pence per lb.—from Liverpool are given below:

American cotton one inch staple contract: March-April 25.26; May-June 25.25; July-August 25.55; October-November 26.23. *American cotton mixed growth contract*: March-April 26.15; May-June 26.40; July-August 26.65; October-November 27.16. *Sudan*: May-June 32.90; July-August 33.00; September-October 33.25.

Cheerful conditions prevailed in the New York cotton market during the week. Commission House buying and short-covering induced by the higher support price for the 1958 crop announced last week and the belief entertained in certain quarters that no major change in farm policy will be put through in time to affect the next crop, resulted on a smart rally in prices. Reports that rains and freezing weather had halted work in cotton fields in the South West also imparted strength to the market.

Sign-ups under the Soil Bank Programme till the end of last month aggregated 3,266,304 acres, as compared with only 2,294,000 acres entered till 8th March last year. The last date for entries in the Soil Bank is reported to be 20th March.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	18-2-58	11-2-58	4-2-58
Spot	36.00	35.95	36.15
March	35.17	35.02	35.11
May	35.36	35.20	35.25
July	35.43	35.35	35.22

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 19th *February*

The yarn market presented a distinctly easy trend during the week under review. Rayon yarns were subjected to selling induced by expectations of improvement in supplies in the coming weeks. The expectations were based partly on the reported decision of the Central Government to grant to actual users an *ad hoc* supplementary licence for import of rayon yarn worth about Rs. 40 lakhs in the current half-year (October 1957-March 1958) and partly on hopes that the established importers might be given an import quota in the next licensing period (April-September). Rayon yarn prices, as a consequence, tended to move down. There would, indeed, have been a more marked fall in values but for enlarged demand from the Southern markets in the wake of scarce supplies. Staple fibre yarns also came in for selling, thanks to poor offtake from the important consuming centres, especially in the Punjab. Cotton yarns, too, encountered selling, owing to drop in raw cotton prices and slackness in demand from weavers.

The Government of India, as already stated, is understood to have decided to grant to actual users an *ad hoc* supplementary licence for import of yarn worth Rs. 40 lakhs in the current licensing period. This decision has been welcomed by the rayon weaving industry which had earlier urged the Government to allow imports in view of shortage of supplies. The licence now granted, however, is below the industry's expectation, the quantity involved being estimated at just 800,000 lbs., as against the industry's plea for import of about two million lbs. (Rs. 1 crore worth). Incidentally, it may be noted that imports of foreign rayon yarn have gone down considerably, as a result of the stringent restrictions imposed by the authorities. Imports of rayon yarn into Bombay port during the month of January were no more than 1,619,331 lbs., as against 2,521,472 lbs. in the previous month and 3,871,149 lbs. in the corresponding month last year. Following the issue of *ad hoc* import licence, the Silk and Art Silk Mills Association, it is said, has decided on a bulk purchase of yarn from abroad and the representatives of foreign firms have already been contacted.

Meanwhile, Mr. Gordhandas Jadavji, President of the Bombay Yarn Merchants' Association and Exchange Ltd., has addressed a communication to the Union Minister for Commerce and Industry, requesting the latter to grant an import quota to established importers in the ensuing licensing period (April-September 1958). In this letter, the President observes: "There has been deterioration in yarn trade day by day because of the restricted policy pursued by the Government for the import of art silk yarn through established importers. Granting of licences only to consumers directly would mean abolition of normal trade channel. It is only the established importers who can anticipate far ahead the requirements of the various types and qualities of yarn of the numerous types of consumers spread all over the country and who are also in a position to make bulk purchases on behalf of all these consumers and sell them as per their day-to-day requirements at competitive prices. The importers have also financed this business in the interest of actual users and, in many cases, have given short- and long-term credits as required by consumers big or small." It would appear that the Minister has assured sympathetic consideration of the request.

In the rayon yarn section, spot prices staged a retreat. 150 Japan dropped 12 nP to Rs. 4.93. 120 Japan fell by 5 nP to Rs. 5.22. 150 Italy receded by 4 nP to Rs. 5.12. 150 Italy was dull at Rs. 5.25. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade and 120 Bt. cones 1st grade declined by 6 nP each to Rs. 4.25 and Rs. 4.76, respectively. Snia rayon yarn (120 dull cones) February delivery was done at Rs. 924, as against Rs. 823, the improvement of Re. 1 being due to purely technical considerations in view of the fact that the contract would terminate shortly. April delivery was nominally quoted at Rs. 909.

There was a sharp fall of Rs. 2 in the quotation for 40 x 2 staple fibre yarn February delivery which stood at Rs. 567. April delivery was quiet at Rs. 580. Spot (40 x 2) Kohinoors shed 4 nP to Rs. 3.21. New Greats eased by 2 nP to Rs. 2.98. Citys lost a like amount to Rs. 3.12. Deals in foreign yarns were put through at reduced rates. Paramounts climbing down by 13 nP to Rs. 6.47 and Fujis by 9 nP to Rs. 6.47.

Among cotton yarns, forty counts encountered selling and gave way. Minaxis and Moderns declined by 25 nP each, the former to Rs. 24 and the latter to Rs. 25. Sixty counts also gave way, Moderns receding by 50 nP to Rs. 59 and Raghuvamshis by 25 nP to Rs. 52. Ten counts Podars slipped down by 25 nP to Rs. 13.75, while Moderns were neglected at Rs. 14.50. Eighty counts were dull. Mahendras being quoted at Rs. 69.50. Moderns at Rs. 71 and Finlays at Rs. 75. Among twenty counts, Moderns eased by 13 nP to Rs. 17.37. Indus were done at Rs. 16.87. Thirty counts Hinds were quoted at Rs. 20.25 and Gokaks at Rs. 20.50.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	19-2-1958	12-2-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia February	924.00	923.00
120 dull Cones Snia April	909.00	—
120 Japan (per lb.)	5.22	5.27
150 Japan (per lb.)	4.93	5.05
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.12	5.16
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 February	567.00	569.00
40 x 2 April	580.00	580.00
40 x 2 New Great (per lb.)	2.98	3.00
40 x 2 City (per lb.)	3.12	3.14
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	13.75	14.00
20s Modern	17.37	17.00
30s Indu	26.50	27.50
40s Minaxi	24.00	24.25
60s Raghuvamshi	52.00	52.25
80s Modern	71.00	71.00

GROUNDNUT STEADY

(From Our Own Correspondent)

BOMBAY, 19th *February*

Steady conditions were witnessed in the groundnut and castorseed sections of the local oilseeds market during the week under review. Apprehensions about the possible increase in excise duty on groundnut oil in the forthcoming budget and the consistent support lent by crushing and *vanaspati* interests were the chief factors responsible for the steadiness in the groundnut section. Lower crop arrivals served to improve the sentiment in the castorseed section. Despite somewhat discouraging foreign advices, linseed, in sympathy with groundnut and castorseed, remained steady. Poor arrivals have been reported at terminal centres in seeds marketing regions.

In the groundnut section, groundnut February opened the week at Rs. 156.62 and steadily improved to Rs. 157.75 on 18th inst., and was today taken up to Rs. 158.62. Groundnut May gained over the week Rs. 2.15 to close at Rs. 158.62. Groundnut Khandesh firmed up to Rs. 32.00, as against Rs. 31.12 last week, while groundnut bold was better at Rs. 31.75 as compared with Rs. 30.87. Groundnut oil was quoted at Rs. 17.62.

Castorseed May contract declined from Rs. 137.62 early in the week, to Rs. 136.50. In the latter half of the week, however, the contract firmed up and touched Rs. 139.37 today. Castorseed Madras and Kanpur changed hands at Rs. 28.37 and Rs. 27.12, as against Rs. 28.25 and Rs. 27.00 respectively, last week. Castor oil commercial ruled at Rs. 14.37 and B.S.S. at Rs. 16.12, as against Rs. 14.31 and Rs. 16.12 respectively, last week.

In the linseed section, linseed May contract opened the week at Rs. 29.56 and declined to Rs. 29.12 on the following day and still further to Rs. 28.94 on 16th inst. It, however, moved up to Rs. 29.12 on 17th inst., only to decline to Rs. 28.31 yesterday. In today's dealings, there was good support at lower levels and the contract improved to Rs. 29.31. Linseed bold was better at Rs. 28.69 and oil at Rs. 15.89.

Both kardi seed and niger seed were steady at Rs. 17.75 and Rs. 27.00 respectively.

The view that a certain unhealthy tendency has developed in the oil crushing industry following the introduction of the excise duty on vegetable non-essential oils has been expressed by the Vidarbha Chamber of Commerce, Akola, in the course of a memorandum. The Chamber points out that a large number of power-driven small baby expellers have been installed in the last two years by interests which seek to obtain the exemption from excise duty on the production and delivery of the first 75/125 tons of oil. The Chamber states that these power-driven baby expellers do not come under the purview of the Factories Act and hence create conditions of unfair and unhealthy competition. Among other measures, it advocates the abolition of the exemption in the excise duty or a modified system of excise duty whereby the duty will be collected at the first instance and a 10 per cent. refund given subsequently.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	19-2-1958	12-2-1958	5-2-1958
	Rs.	Rs.	Rs.
Groundnut—			
February 1958	158.62	155.00	152.62
May 1958	158.62	155.86	154.87

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.

SUGAR QUIET

(From Our Own Correspondents)

BOMBAY, 19th *February*

Quiet conditions prevailed in the sugar market during the week under review, in contrast to the firm trend noted in the last fortnight. The Union Food Ministry has announced additional releases to co-operative sugar mills in the Bombay-Deccan area. The announcement has come when the demand from Malabar Coast is less. Arrivals of sugar into the market have been quite large, the total for this week being 18,600 bags, as against 14,758 bags in the previous week. Meanwhile, there are strong rumours of a possible additional impost on sugar for domestic consumption, in order to meet the loss on exports. In anticipation of this increase, a well-known trader in Bombay is reported to have cornered substantial quantities of Deccan sugar.

Small grain sugar has declined from Rs. 105¾-Rs. 106 to Rs. 105¼ per bag, including the additional excise duty. Medium grain is quoted at Rs. 106-Rs. 108, as against Rs. 106¼-Rs. 107¼, and large grain at Rs. 109-Rs. 113, same as last week.

* * * *

HAPUR, 17th *February*

The sugar markets recorded a hardening trend, following good demand from all consuming centres, and prices rose further by about 25 nP per maund. Rumours that the excise duty on sugar would be enhanced in the coming Union Budget and reports that the crushing season would come to an end earlier than last year were the main influencing factors.

The sugar market in Muzaffarnagar ruled steady during the week under review, due to good demand from Punjab, Delhi, Saurashtra, Gujerat and the South. Mill delivery prices were higher by 12 nP to 50 nP per maund. The rise was particularly marked in small grain quality. It was reported that a large number of factories would close their season by the middle of April next and that the production in the current season would not touch last year's record level. The latest mill delivery prices were: Rampur (A-29) Rs. 37.50; (B-29) Rs. 36.75; Iqbalpur (C-29) Rs. 36.44; Amroha (D-29) Rs. 34.81; Meerut (D-28) Rs. 35.25; Modinagar (B-29) Rs. 36.87.

Sugar prices at Kanpur also ruled firm on good buying support from consuming centres. Budget proposals were anxiously awaited and traders were dealing cautiously.

Khandsari prices tended to harden, thanks to good demand from Madhya Fradesh side, and the producers were trying to conceal stocks, expecting some levy on *khandsari* in the ensuing budget. Prices advanced by about Rs. 2 per maund to be quoted at Rs. 26 to Rs. 33 according to quality.

Ready and future *gur* recorded a striden advance during the week, due to decreasing arri

vals in the main producing markets and higher outside advices. Crushing is expected to end earlier, owing to overall shortage of cane. Stockists are building up stocks in expectations of better prices in the off-season. Local daily arrivals average 2,500 maunds and stocks have swelled to about 105,000 maunds. Ready *pansera* is quoted at Rs. 13.12 to Rs. 13.50, and *balti* at Rs. 13.25 per maund.

Gur prices at Muzaffarnagar ruled steady on good demand from all sides and prices advanced by a rupee to Re. 1.50 per maund. Demand was being met, due to better loading facilities. *Shakkar dara* and *masala* advanced by Re. 1 per maund, while a gain of Rs. 2 was recorded in the prices of *khandsari*. Arrivals from the beginning of the season is roughly put at 700,000 maunds. Local stocks are put at 125,000 maunds, the corresponding figure last year being 275,000 maunds.

Future *gur*, after an early sharp advance, eased slightly towards the week-end on profit-taking sales. *Fagun* and *baisakh* deliveries, opened at Rs. 12.25 and Rs. 12.94 on Monday last, touched the highest of the season at Rs. 13.50 and Rs. 14.25 in mid-sesion, but declined to Rs. 13.32 and Rs. 13.92, respectively.

BLACK PEPPER FORGES AHEAD

(Messrs. Parekh and Co.)

BOMBAY, 19th *February*

Prices of Malabar black pepper continued to forge ahead during the week, following news of deterioration in the political situation in Sumatra and in sympathy with New York where ready stock remained at a low ebb, as the U.S.A. dealers persisted in their conservative buying policy for the past so many months. New York accepted all the offers from India at prices ranging from $0 22 to $0.23. Singapore improved to Str. $63. Russia and East European Countries were reported to be enquiring.

Forward market at Cochin experienced hectic fluctuations, owing to short-covering and fresh buying. Ready improved to Rs. 92 to come down to Rs. 89½, the week-end quotation being Rs. 91¼. March delivery jumped up to Rs. 93¾ and May to Rs. 95.

The future of the market depended upon the political situation in Indonesia. Pepper market having remained sluggish for some time past, short positions were created in India, Europe and New York and, until these were squared up, no sizable reaction was envisaged.

Alleppey improved to Rs. 518¾, while Calicut to Rs. 525. At the time of writing, the undertone is reported to be firm, as sellers are reserved and are waiting for new development in Sumatra. Though there is political upheaval in Central and South Sumatra, a pepper bowl in Indonesia is said to be unaffected so far.

In A.S.T.A. section, February was quoted at $0.23¾, while March-April at $0.23¼ and May-June at $0.23⅜.

In delivery section, March climbed up to Rs. 495 and April to Rs. 500 under pressure of short-covering and bull buying.

Today's nominal quotations are: Ready delivery Rs. 73 per Bengal maund; March Rs. 495-Rs. 500 and April Rs. 500-Rs. 505 per candy of 5¼ cwts.

USEFUL DEMAND FOR TEA DUSTS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 13th *February*

A total of 775,000 lbs. was offered in Dust Sale 'D', which was held on Tuesday, 11th February. There was a useful and general demand at lower rates. Commons and low mediums met with good support at 5 to 10 nP below last rates. Most other types declined by 10 to 15 nP per lb. High-grown dusts shared in the general decline.

The average price realised in Dust Sale 'D' was Re. 1.55 per lb., as against Re. 1.64 per lb. in the previous sale and Re. 1.95 per lb. in the corresponding sale of 1957.

London Market—Sale of 10th February 1958.—Fully firm any change sellers favour.

Sale of 11th February 1958.—Best slightly dearer. All others irregular, but generally easier.

Colombo Market.—Good demand. Very irregular. Low growns firm. Poor medium and high easier, but improved quality dearer. Fannings active and dearer. Poor offgrades lower.

Calcutta Market—Export.—60,485 packages. Demand was keener and more general, particularly for any better liquoring sorts."

Internal.—19,000 packages dust. Met good general demand. Plain liquoring up to 6 nP easier. C.T.C. Assams up to 10 nP easier. Middle East types well supported. Darjeelings with flavour dearer. 2,600 packages internal. Good demand at irregular rates.

Export Quota.—There has been a firmer tendency and the present quotation is 15-15½ nP. No further news is yet available regarding a final release.

Forthcoming Auctions.—Dust Sale 'E' will be held on Tuesday, February 25th.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"Sale 5. 1,300,000 lbs. Good general demand. Low medium and medium irregularly 5 to 10 nP lower. Good medium and best liquoring of improved quality sold well, but below valuations. While leaf strongest feature at higher prices."

BETTER DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, 18th *February*

The political troubles in Indonesia and the formation of a rebel Government which might affect tea exports from that country, and the labour situation in Colombo port, restricting shipments, were the main bullish factors which were reflected in the London auctions held last week. Demand visibly improved and the best teas were sold at hardening rates. Good support was accorded by Russia and Persian Gulf buyers during the last auctions held in Colombo. This caused an up-trend in prices at tea auctions held in Calcutta also and the higher quality teas moved up. It is expected that such a higher trend for the good teas would continue for the balance of the 1957 crop. The Government of India has announced the 1957-58 export allotment as being 460.96 million lbs. which is 63.44 per cent. of the crop basis estimated at 726.56 million lbs.

The prospect for the common teas has, however, not changed. It is feared that export demand in this category would be affected, as Africa is understood to be stepping up shipments of common teas. In the circumstances, it will not be surprising if tea gardens pay more attention to growing more quality teas by reducing the acreage under plain teas. For quality teas, the overseas market is expanding.

Offerings at yesterday's export sales amounted to 59,179 packages. There was a good, although not very general, demand. Plain teas sold readily, but at a discount of 2 nP to 4 nP for Fannings. Black leaf B.O.P's and O.F's however, met with a good demand at often dearer rates. Medium B.P's were about 4 nP lower, but there was a strong demand for Fannings which appreciated by about 4 nP while the brighter liquoring B.O.P's and O.F's frequently sold well above valuations. The better C.T.O. teas, especially Fannings grades, were keenly competed for at prices 20 to 30 nP above last rates. Those that were really bright in cup or which had autumnal character were particularly strong. The poorer types of C.T.C. teas, however, were again easier and often difficult of sale. Non-winter Legg cut teas were irregular and showed an easier tendency, although some invoices in this category realised more than brokers' valuations. Whole leaf grades were barely steady, any change being in buyers' favour. Darjeelings sold well, but generally below valuations, although a few of the best realised useful prices. The following are the quotations:

Clean Black Pekoe Rs. 2.25; Plain B.P. Re. 1.52 to Re. 1.56; Plain Fannings Re. 1.62 to Re. 1.66; Medium B.P. Re. 1.58 to Re. 1.62; Medium Fannings Re. 1.76 to Re. 1.80; Best Assam C.T.C. B.P. Rs. 2.70 to Rs. 2.90; Best Assam C.T.C. Fannings Rs. 2.80 to Rs. 3.00.

In the internal sales held last week, dusts offered aggregated 18,786 chests, the quality of some of which was better. There was good general demand, and prices generally added gains. Middle Eastern buyers accorded full support. Unwithered Dooars were sold above valuations. Prices for the plainer liquoring orthodox teas showing an improvement in quality advanced, while the balance of this category eased. The best liquoring and brighter medium C.T.C. Assams met with good demand, with the powdery grades receiving more attention. Among Darjeelings, the more ordinary kinds received no attention from buyers, but keen competition was offered to the flavoury lots. The quotations were: best Assam C.T.C. Rs. 2.80 to Rs. 3.10, medium Assam C.T.C. Re. 1.70 to Re. 1.90, medium Assam grainy dust Re. 1.56 to Re. 1.58, and medium Dooars Re. 1.54.

JUTE DEPRESSED

(From Our Own Correspondent)

CALCUTTA, 18th *February*

Depressed conditions continued to prevail in the jute markets during the week under review. The prices of both the finished product and the raw material, however, moved within narrow limits. American buyers showed only little interest, and the publication of higher production figures for the month of January increased the velocity of the chill wave. There was no knowing when the depression in the United States would end. Unless the economic recession there was arrested, it was believed here that burlap manufacturers in the U.S. would be reluctant to increase their stocks of hessian, and would be content in consuming the existing stocks. However, at current level, hessian stocks would not cause much of a problem to the market and to the mills, because in recent months, mills had transferred a proportion of hessian looms to sacking, in view of the better demand for heavy goods. At that time, demand for sacking was increasing, but this increase was not maintained subsequently and the result has been a heavy bulge in sacking stocks. Enquiries from Australia have been below expectations, in view of the failure of the grain crop there. There are, however, welcome signs of more buying for internal consumption, but the huge increase in stocks cannot be absorbed through this source.

In the last two months, sacking goods have increased on such a scale that they are having an impact on the market. Weak holders have become very nervous, and they have been unloading their holdings. During January, the total output was 98,300 tons, showing an increase by 5,500 tons. The increase was distributed as follows: miscellaneous constructions 600 tons, hessian 2,300 tons, and sacking 2,600 tons. Stocks at the beginning of the month were 75,000 tons, and thus the total availability of goods in January was in the order of 173,300 tons. Deducting the stocks at the end of the month, viz., 96,400 tons, sales aggregated to 76,900 tons which, it was noted, was considerably short of output. If the slackness in demand continues, the industry would have to consider measures to reduce output in line with demand. In the meantime, a redeeming feature is that shipments in the current month have proceeded satisfactorily. Hessian shipped up to 5th February was 11,000 tons and sacking 4,800 tons, as against 5,500 and 2,600 tons, respectively, in the same period in January. The higher figures have been due to shipments which were delayed as a result of recent labour troubles in the port and thus actually not due to any increase in demand.

On Tuesday last, there was a measure of speculative support following which ready B. twills recovered to Rs. 100.85 from Rs. 100.25 and 40" 10 oz. hessian to Rs. 39.45 from Rs. 39.30. On the following day, the price for B. twills rose further to Rs. 101.25 on speculative support. Had it not been for selling pressure at this level, the rise would have been more marked. This, coupled with absence of speculative support and genuine buying, pushed down hessian 40" 10 oz. to Rs. 39.35. At this stage, the output details in respect of the last month were announced. These forced down the quotations of B. twills to Rs. 101.00 and of hessian 40" 10 oz. to Rs. 39.35. However, at these rates there was revival of speculative interest, and several deals were put through on Thursday. On the next day, 40" 10 oz. hessian was better at Rs. 39.40, while speculative selling took down B. twills to Rs. 100. Genuine buying was confined to small quantities, and foreign buyers elected to wait and watch before entering into commitments. In view of the huge increase in stock and the decline in raw jute prices, they anticipated that prices would move down further to their favour in the coming few months. This expectation would materialise if the current low level of demand continued; but, at the same time, if the industry decided to take measures to reduce output by revising working hours, a steadier trend would certainly result. On Saturday, B. twills were quoted at Rs. 100.30 and hessian 40" 10 oz. at Rs. 39.40 with little business passing. The last two days witnessed a fresh setback. B. twills slumping to Rs. 99 60 today and hessian 40" 10 oz. to Rs. 39.20.

Raw jute prices fell in sympathy with the declining jute goods market. Mills showed only nominal interest in offerings. Mills were anticipating that import licences would be issued to them for importing Pakistani cuttings. These anticipations arrested the down-trend in cuttings in Pakistani markets, while they affected prices of indigenous jute of the lower variety. Daisee bottoms for February-March delivery declined to Rs. 28.00 from Rs. 28.25, while northern bottoms remained at Rs. 24.50.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 17th *February*

Steady to firm conditions were noted in the foodgrains market during the week under review. Absence of winter rains and strong westerly winds throughout the week have damaged the standing *rabi* crops and this has accounted for gains in the prices of all cereals. The Government of India is stepping up its food import programme and, according to revised estimates, the quantity of wheat expected to be imported this year is about three million tons, as against 2.4 million tons originally envisaged. A shortfall in imports of rice, however, is expected and the quantity to be imported is now likely to be about 500,000 tons, as against 700,000 tons estimated earlier. First shipments out of the 400,000 tons of wheat made available by Canada on long credit-terms have already arrived and the entire quantity is expected to be received within the next four months. The quantity of foodgrains to be procured internally is expected to go up from 150,000 tons to 316,000 tons.

Wheat at Hapur recorded modest gains, average quality being quoted at Rs. 15.62 per maund and farm produce at Rs. 17.25. Daily local arrivals continued to be scanty and, as demand was being met from stocks, local wheat stock ran down further by one *khati* to 10 *khatties*, the corresponding figure last year being 43 *khatties* when wheat *dara* was quoted at Rs. 16.62 per maund.

Rice also recorded some gains during the week, in line with prices of other grains, although local supply position was reported to be satisfactory. The latest prevailing prices were: *Basmati* Rs. 28 to Rs. 30.50; *mainpuri* Rs. 23.50; coarse Rs. 20 per maund.

Gram recorded an advance of about 50 nP per maund during the week on firm Punjab advices and poor stocks with trade. Gram stock mostly owned by State Government ran down by two *khatties* during the week, due to despatches to east U.P., and was now put at 18 *khatties*, as against 11 *khatties* a year before and 35 *khatties* a month before. Barley and *bejhar* improved fractionally during the week. The harvesting of *bejhar* will begin shortly. The standing crops have been adversely affected by strong gusty westerly winds. Maize and *bajra* improved slightly along with other foodgrains. The latest prices (in rupees per maund) are: Gram 10.62 to 10.84; barley 9.50; *bejhar* 9; maize 10.75; *bajra* 11.12; *jowar* 8.75 to 10; *guwar* 11.12; oats 8.87.

Pulses also recorded a hardening trend during the week, as strong winds had weakened prospects of peas and *arhar* crops. Outside demand was slack and stock position was mostly unchanged. Peas advanced by about 37 nP per maund, dara quality being quoted at Rs. 8.37 and farm quality at Rs. 8.87. Local peas stock was unchanged at 8 *khatties*. *Arhar* improved from Rs. 10 to Rs. 10.25 and local stock was put at 23 *khatties*, as against 24 *khatties* last weekend. Other pulses were mostly quiet. Prices were: *Urd* Rs. 16.25 to Rs. 17.75; *moong* Rs. 15.25 to Rs. 15.75; *massor* Rs. 13 to Rs. 14.75 per maund.

Pulses futures rose sharply during the week in line with ready prices, although the latest quotations were slightly lower than the best of the week due to profit-taking sales. Prevailing quotations were: Peas *jeth* Rs. 9.20; *arhar jeth* Rs. 10.75; *bajra fagun* Rs. 11.50; *urd biasakh* Rs. 16.44.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares for the year 1955.
‡ New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. F.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.
* Including bonus. (k) Investments.

MARKET GOSSIP

(*Concluded from page 303*)

Pending discussion and examination, the Government agreed, in May 1957, to an interim increase of As. 2 per gallon in the price of motor spirit and of As. 13 per eight gallons in the price of superior kerosene. This decision of the Government was subjected to most severe criticism in the inaugural session of Parliament after the last General Elections. Some members had contended that the existing prices of oil were very high and that the foreign oil companies were already making huge profits. They had urged the Government to obtain a reduction in the prices. In view of these criticisms, the Government began discussions with the oil companies on fixation of reasonable prices for petroleum products.

While hopes were being expressed that these negotiations would succeed, there came the reports in the Press towards the end of December 1957 that the Government of India was studying "the economics of nationalising" the oil distribution trade. To quote one of the reports:

"Prices of oil products in India are officially regarded as unreasonably high as compared to the prevailing rates in the neighbouring countries, including Ceylon and Pakistan. The disparity between the Indian prices and those in some European countries is stated to be even higher

VOL. XCVI. No. 2450 BOMBAY, 1st MARCH 1958 PRICE: Re. 1.50

MORE ON L.I.C.-MUNDHRA DEAL

BOTH Houses of Parliament have done full justice to the report of the Chagla Commission on the investments of the Life Insurance Corporation in the shares of the Mundhra concerns. There have been sharp differences of opinion on certain aspects of the Commission's findings, conclusions and advice between the Government members and non-Congress members. Although the formal resolution of the Government was carried by the majority it commands in Parliament, it seems to us that some of the valid criticisms remained unanswered effectively. Mr. Nehru, in particular, was far from convincing on many points. Indeed, at one stage, he was actually justifying the L.I.C.'s investments in question, though he was critical of the way in which they were done. If, basically, the investments were sound, if the mistakes that had been made were only of a procedural nature, and if there was nothing *mala fide* in the whole transaction, then, why all this pother?

There is a general impression in the country that the enquiry into the L.I.C-Mundhra affair is incomplete. The way in which Mr. T. T. Krishnamachari defended himself and was defended by Mr. Nehru, Mr. Pant and a few other members of the Congress Party has only strengthened this impression. There is, therefore, every justification for the demand voiced by some that the whole incident be probed into further by a Committee of Parliament with all the legal paraphernalia or in a regular court of law. This will give an excellent opportunity for Mr. Krishnamachari to vindicate his innocence and for Mr. Patel, as well as the other condemned officials, to explain their side of the case. It is now clear that all of them feel that they have been wronged. Will it be in keeping with the principles of justice and democracy to allow the persons concerned to nurse such a feeling of grievance? It has been argued that, with Mr. Krishnamachari continuing as Minister, the officials who tendered evidence must have been reluctant to tell the whole truth. Mr. Nehru, too, has repeatedly stated that, for want of experience in these matters, the Chagla Commission enquiry has turned out to be an imperfect and one-sided affair. He has also stated that "all the facts have not come out, either because those who knew them did not say all they knew or those who knew were not produced." In view of all this, the only remedy is to order a fresh enquiry at least into those aspects of Mr. Chagla's findings on which there is, it is contended, room for difference of opinion. A departmental enquiry, conducted by a senior civilian, as now proposed by the Government, will hardly be adequate for this purpose. For this enquiry will, in all probability, keep the ex-Finance Minister out of the picture. If so, it will be, as one Member of Parliament remarked, a play without the Prince of Denmark.

With all due deference to the Prime Minister and the Home Minister, it must be said that the impression which the Government spokesmen have created in the public mind is that, on the crucial question of both factual and constitutional responsibility of the Finance Minister, they have been unduly generous towards the erring Minister and that Mr. Nehru, in particular, has gone out of his way to rescue Mr. Krishnamachari, instead of taking a more detached and balanced view of the situation. Mr. Nehru has also failed to prove his statement that Mr. Krishnamachari's part was the smallest. There is, therefore, a lot of force in Pandit Kunzru's remark that Mr. Nehru has laid himself open to the charge that "he has placed personal loyalty above loyalty to facts." Mr. Nehru should have been graceful enough either to accept the verdict of an independent and impartial person like Mr. Justice Chagla, who had heard the case and sifted all the evidence tendered before him, or to refer the matter to another independent person for further examination. By doing neither and by praising Mr. Krishnamachari to the skies right from the time when the Chagla Commission was proceeding with its investigation, he has created the impression that Mr. Krishnamachari was being shielded for more reasons than one. This is in sharp contrast with the complete silence that was observed by the Prime Minister of Britain as well as by all his other colleagues when the Bank Rate Tribunal was in session. We have been tempted to make this comparison because of a similar comparison made by Mr. Nehru and Mr. Pant.

An important point that emerges from the replies of Mr. Nehru and Mr. Pant to the debate is this: Mr. Krishnamachari had given his general approval to Mr. Patel's proposal to invest in the shares of a few Mundhra concerns. But, at the same time, he had warned Mr. Patel to be cautious and careful as he had heard rumours of spurious shares of these concerns circulating in the market. In admitting this much of the story, both Mr. Nehru and Mr. Pant are really concurring with Mr. Chagla on the ex-Finance Minister's factual responsibility. And yet they vehemently differ from others when they pinpoint this issue. This kind of inconsistency in the arguments of such eminent persons as the Prime Minister and the Home Minister strikes one as rather strange. It is, of course, true that the caution given by the Finance Minister was *not followed* by the officials concerned, but that is a separate issue for which they should be rightly held responsible and suitably punished.

The Government has done well in accepting at least the non-controversial findings of the Commission without any qualification. Mr. Pant has roundly condemned the transaction as a "disreputable" one. But in all the debate, none has said as to how the loss the policyholders have now suffered could be made good. It has been proved beyond doubt that it was the Government which gave the directive to the L.I.C. to invest its funds in the shares of Mundhra concerns. The Government, of course, owns this monolithic monopoly corporation. But the funds of the L.I.C. are those of the policyholders. It has no right to use these funds the way it likes. The Government may be right in deciding to support big concerns such as the B.I.C., Jessops and Richardson and Cruddas, in order to prevent them from going to pieces owing to the activities of adventurers like Mr. Mundhra. But it should not use the funds of life insurance policyholders for such risky purposes, as they are trust funds. It should find other channels through which it can operate to realise such objectives. In fairness to policyholders, therefore, the Government should buy back the *investments in question from the L.I.C.* at cost price and hold them on some other account. This is essential, because the transaction in question vitally affects the interests of the *endowment* policyholders, who have taken life policies as an investment rather than as a mere cover against premature death. The resignation of the Finance Minister and the contemplated disciplinary action against the officials of the L.I.C. do not constitute any positive satisfaction to them. If the Government at least takes away these bad eggs from the investment basket of the L.I.C., it will be doing a lot to restore the confidence of policyholders. For the Government's folly, let the taxpayers as a whole pay and not the with-profit policyholders in particular.

Mr. Justice Chagla has brought out the weaknesses of the Government's policy towards the L.I.C. and its administration. He has briefly pointed out the lines on which the relationship between an autonomous body like the L.I.C. and the Government should be established and how the L.I.C. should be conducted if the grievous errors of the type investigated by him were not to be repeated. Mr. Nehru and Mr. Pant alike have given the solemn assurance that they will carefully consider the principles recommended by Mr. Chagla. One cannot expect the Government to do more than this for the present. Surely, it is the sovereign right of a constitutionally elected Parliament and the Government to decide the policy it wants to pursue. If these august institutions decide, in their wisdom, to depart from these recommendations and if the country suffers as a result, there is nothing that its citizens can do but to bear the consequences. One can, of course, commend the recommendations of Mr. Chagla for the acceptance of the Government and Parliament. But it is not right to demand of the Government that it should abide by them here and now, just because they form part of Mr. Chagla's report. If the speeches of the Prime Minister and the Home Minister on this question are carefully analysed, it will be found that they are in agreement with most of the recommendations of Mr. Chagla. There is, therefore, good reason to feel that the Government will approach the problem in a sensible manner. It certainly cannot go wrong, if it always bears in mind that the Life Insurance Corporation is a credit institution, that it holds the funds of the policyholders in trust and that it ought not to be made a tool in the hands of politicians for furthering their ambitions and pet ideologies.

ment and additional production. To the extent that a rigorous tax system lowers the tempo of economic activity by removing the incentive for saving and investment, it is bound to have inflationary consequences. The last budget inflicted a large variety of tax burdens, though each of them taken singly may not have been too burdensome. It is now time that the country was not only given a respite from additional taxation—this has been promised—but some realistic measures of fiscal reform which would provide the necessary incentives to help move the country forward to higher levels of industrial activity.

In this context, the Federation of Indian Chambers of Commerce and Industry did well to organise a conference on savings and investment. Addressing the Conference, which was held in Bombay this week, the President, Mr. Babubhai M. Chinai, made a closely-reasoned plea for fiscal reliefs in the interest of saving and investment. Mr. Chinai's main thesis was that "personal savings and corporate savings are rendered difficult on account of high taxation." Although in recent years some relief has been given in personal taxation, the Government has heaped upon the community other tax burdens which have had a disincentive effect both on the individual and the companies. The capital gains tax, the super-tax on dividends, the tax on bonus shares, the wealth tax and the expenditure tax are among the tax measures which have fallen thick and fast on the community and rendered it increasingly difficult for *entrepreneurial* classes and the management of companies to undertake fresh investment.

It is hardly surprising that these measures have led to a loss of confidence among investors and resulted in a heavy decline in equity values. The index of variable dividend industrial securities (Base: 1948-49=100) which stood at 126.19 in September 1956 declined to 114.5 before the end of the year and still further to 98.1 in the first half of December 1957; it now stands at 96.6 (as on 8th February, 1958). Mr. Chinai quoted some figures to show how the flow of internal and external capital has been arrested in recent months. In the period December 1956 to May 1957, the total increase in the paid-up capital of all companies was Rs. 13 crores, as compared with Rs. 18 crores in the corresponding period in 1955-56. Again, so far as the investment of foreign capital is concerned, it has been computed that the average inflow for the two years 1954 and 1955 was only Rs. 20 crores, as against the average annual investment of Rs. 25 crores in 5½ years ended December 1953. The consequences of unfavourable climate for investment and fall in equity values have been particularly disturbing. For, as Mr. Chinai rightly pointed out, many small investors have had a "good part of their life's savings wiped out" and it has become extremely difficult to raise new capital. Appropriately enough, Mr. Chinai called for fiscal reforms by way of exemption from wealth tax and capital gains tax for companies, abolition of the tax on bonus shares, reduction in the tax on excess dividends, and in personal income-tax and the withdrawal of the compulsory deposit scheme.

India's fiscal problems have now become a complicated subject, thanks to the fact that its taxation system is the work of many minds and reflects even contradictory concepts. From this point of view, the pamphlet, *The Case for Relief in Direct Taxation*, published by the Association of Indian Trade and Industry, is a most convincing document. The Association, which has a well-deserved reputation for comprehensive, analytical and objective reports on India's economic problems, in general, and fiscal problems, in particular, must be congratulated on producing a document which undertakes the very difficult task of evaluating India's fiscal system against an international background and indicating the possible lines of fiscal reform. The chief argument in the pamphlet, with which we have no hesitation in associating ourselves, deals with the imperative need for incentives. Thus, it says:

> "The general atmosphere of planning does create a climate favourable to a high level of economic activity and rapid industrial growth, but that by itself is not adequate—some motivating force is essential. Exhortation and appeal to altruism are feeble forces; incentive is the only known potent motive force of voluntary action in a democratic society in which coercion is ruled out. There is every advantage in entrusting the responsibility for developing trade and industry to non-Government organisations with their highly developed sense of frugality and capital-consciousness, which have proved their merit in these fields through centuries of experience. They should be enabled to garner the resources required for development."

The case for relief in direct taxation, as presented by the Association, rests on several solid grounds. In the first place, it points out that, whereas the Planning Commission fixed Rs. 45 crores a year as the target of additional revenue from new tax measures, the latest tax proposals imply a tax revenue of Rs. 90 crores a year on top of similar proposals designed to bring in Rs. 30 crores introduced earlier by Mr. Deshmukh. Secondly, the non-development expenditure of the Central Government shows an unplanned increase of Rs. 163 crores during the first two years of the second Plan. This figure exceeds the amount of Rs. 157 crores of additional tax revenues accruing to the Central Government during these two years. There has thus been a certain "frittering away of valuable resources forced out of the people through heavy taxation." Thirdly, the private sector has a particularly difficult role to play in economic development, in that it has to find resources to the tune of Rs. 2,400 crores for its own development, besides meeting the draft of Rs. 1,150 crores of additional tax revenue and of Rs. 1,200 crores of Government borrowing. Finally, the burden of taxation on corporate incomes (*vide* Table A on this page) and on personal income (*vide* Table B on the next) in India is the heaviest.

The chief merit of the publication lies as much in its statistical analysis of the problem as in the pertinent manner in which it has indicated the lines on which fiscal reform is best undertaken. Few will disagree with the conclusion reached by the study, namely, the complexity of the Indian tax system. It points out how "other countries make a choice between alternative taxes, but India seems to favour a simultaneous levy of almost all taxes prevailing elsewhere and has the unique distinction of levying the expenditure tax and enforcing a scheme of deposit of corporate reserves, which are without precedent in any part of the world." It says:

> "Countries like the U.K. and other Commonwealth countries do not levy taxes on capital gains or wealth. The U.S.A. (Federal) Government taxes capital gains but not wealth. The wealth tax is levied on individuals in West Germany, Norway, Sweden and the Netherlands, but along with it there is no surcharge on income earned from such wealth as in India. Wealth tax on companies is levied only in West Germany and Norway, but there, the rates of tax on corporate income are low. In India, there is a wealth tax on companies and also very high rates of taxes on their income and dividends. Moreover, Sweden and Norway have a maximum limit of 80 per cent. of income for the combined burden of taxes on income and wealth, and the maximum rates of tax on income in West Germany and the Netherlands are quite low so that they do not reach 80 per cent. of income even in the case of very high incomes up to Rs. 10,00,000. In India, however, there is no such maximum limit, and the combined rate of taxes on income and wealth exceeds 100 per cent. of income for individuals in the highest brackets."

To bring order into the fiscal chaos in this country is by no means an easy task. If the fiscal authorities realised that it is easier to place a bad tax on the statute book than to withdraw it, they would be more careful in attempting fiscal innovations. Without necessarily calling for radical changes in the fiscal system—there is a great deal to be said in favour of such a reform—the pamphlet makes a series of constructive suggestions designed to secure the twin benefits of reducing the burden of taxation and increasing the incentives available for investors and industrial managements. Accordingly, it has divided the possible relief measures that might be undertaken into three groups. In the first place, it insists that those tax measures must be pruned first which act as deterrents and are relatively unproductive of revenue. Such taxes include the tax on bonus shares, the compulsory deposit scheme and the expenditure tax. Secondly, it calls for introduction of such incentive measures as will not entail a serious loss of revenue. Such measures include the introduction of a ceiling on the combined burden of taxation and the facility for carrying forward of losses for an indefinite period. Thirdly, it favours the abolition of certain existing fiscal measures which are "relatively productive of revenue but have disproportionately adverse effects on incentives." To this class belongs such taxes as wealth tax on companies, taxes on income and excess dividend tax.

The study, in the course of its examination of the taxes in the first list noted above, argues that the tax on bonus issues is inequitable and cites, in this connection, the opinion of the Taxation Enquiry Commission and Mr. Kaldor. The scheme of deposit of corporate reserves, as it points out, is "without precedent in any part of the world." Referring to expenditure tax, the study says that, though the Government has fixed the rate of the tax at a level lower than the one suggested by Mr. Kaldor, it has kept the marginal rate of income-tax at 84 per cent., instead of at 45 per cent. as suggested by the tax expert. Pleading for its abolition, the study says that the tax was proposed as an anti-avoidance measure—as a cross-check against evasion of income-tax—but this could be secured by authorising the Department to demand the type of information now sought under the provisions of this tax.

Pleading for incentives which involve no substantial loss of revenue, the study argues that there should be a ceiling on the combined liability under income-tax and wealth tax; such liability, as in Norway and Sweden, should not exceed 80 per cent. of the income in any year. Besides advocating indefinite carry forward of losses, as against the present eight-year limit for claiming this benefit, the study makes two suggestions for modifying Section 23A of the Income-tax Act. Under this section, investment companies are compelled to distribute all their income on pain of paying a special penal tax. Since there is a dearth of financial institutions, this provision should be amended so as to permit genuine investment companies to retain at least the same percentage of income as non-manufacturing companies. Secondly, non-manufacturing companies are allowed to retain only 10 per cent. of their income, whereas industrial companies are allowed to retain 55 per cent. Since trading enterprises require larger finance to handle the increasing volume of industrial production, they should be allowed to retain a larger margin, say, 40 per cent.

Finally, the study advocates certain reliefs in taxation which, though they involve substantial loss in revenue, are necessary in the interests of providing incentives to industrial expansion. Thus, it emphasises the need for the removal of wealth tax on companies—the tax penalises poor and middle-class investors—and the wealth tax on industrial securities which leads to double taxation, once in respect of the company's net wealth and again in the hands of the individuals owning the shares. Finally, it pleads for a lowering of the burden of corporate taxation. This plea rests on the valid ground that the burden, besides being very high in itself, was raised last year by as much as one-fourth, from 43.4 per cent. to 56 per cent.

TABLE A

Percentage of Income paid by Corporations as Taxes on Income, Dividends and Wealth in selected countries

SHARE MARKET IN STATE OF SUSPENSE

BOMBAY BURMAH—NEW SHIPPING VENTURE

WORLD GOLD PRICE

THURSDAY, 5 P.M.

THE turnover in share markets has shrunk almost to a trickle. Prices have been moving within a narrow range. The Central budget, due to be presented tomorrow, has remained a secret till the time of writing. A feeling of suspense prevails, with everybody waiting to see what Mr. Nehru does as the Finance Minister. There is said to be neither a pronounced bull position nor a strong bear position at present. It is stated that some operators are on the long side, but that their outstandings are believed to be neither large nor of a very recent nature. The belief that there is not much of a short position suggests that no new fresh taxation of any magnitude nor any significant increase in the existing taxation is expected. Everybody has, of course, taken it for granted that a gifts tax will be introduced. Accordingly, the market has discounted this strong possibility. Many are expecting a *status quo* budget, with a realistic pruning of the second Plan. Some are still nursing the hope that even Mr. Nehru will not hesitate to show some gestures to the private sector by removing and/or readjusting those fiscal measures which yield very little return to the Government but have done considerable harm to the confidence of investors. Another expectation is that there will be some relief in the excise duty on cloth. The speculation is that the Government may either reduce the rates of duty or revise the basis of the charge. All these are only surmises and guesses. We wish to make this point very clear, in order to avoid possible charges of a leakage of the budget later.

MARKET GOSSIP

Mr. Nehru's observations on the investment policy of the Life Insurance Corporation have not upset the share markets very much. The reason for it is that he quickly corrected himself to some extent. On Thursday last, he seemed to have jumped at the suggestion of a Communist Member of Parliament that the L.I.C. could be used as a means for securing control over the concerns in the private sector. In fact, Mr. Nehru went so far as to say that this was one of the objectives of nationalisation of life insurance. This statement, of course, runs counter to the clear assurance given by Mr. C. D. Deshmukh as the Finance Minister at the time when the life business was taken over by the Government. Next day, somebody must have reminded Mr. Nehru about it. There were also prompt criticisms that his statement meant that the Government would be resorting to nationalisation through the backdoor. For on Friday, Mr. Nehru practically recanted. He said thus: "In the other House, Mr. Dange had said, 'why not nationalise Jessops? It is a gold mine.' I had replied, 'Why should I nationalise Jessops or others and pay heavy compensation?' It is a simpler thing for me to acquire the majority holding in it." Mr. Nehru then went on to say: "Now it is said that this means some kind of backdoor method of nationalisation. It has nothing backdoor about it. It is not our deliberate policy to nationalise corporations or companies by this way. Our investments in the L.I.C. are not meant to further this."

In an otherwise steady market, the shares of the Bombay Burmah Trading Corporation Ltd. have been ruling dull, but quiet. While shares over a wide front have staged a small recovery in the last few days, despite the Budget uncertainties, those of Bombay Burmah have not shown any change. Though the shareholders have been assured by the Company's Chairman that the question of issuing bonus shares would be considered after the Budget, they are not presumably impressed with the outlook for the current year. Although the results for 1956-57 might be considered satisfactory, particularly in the light of the very heavy increase in taxation and costs, the Chairman pointed out that it was not possible to hold out hopes of an equally satisfactorily profit for the current year.

Addressing the shareholders at the annual general meeting held on Monday this week, Mr. Pratapsinh Mathurdas, Chairman of the Company, said that the Scheme of Arrangement approved by the shareholders in February 1957 had cleared the way for a bonus issue, should this be thought desirable. "With your approval," Mr. Pratapsinh added, "the Articles of Association will now be amended so as to include an article empowering your Company to capitalise reserves and other funds for the issue of bonus shares. The Budget will be out soon and further consideration to this matter will be given after the taxation proposals are studied."

In view of the huge reserves of the Company, the shareholders submitted that the Directors should make up their mind on issuing bonus shares. It was suggested by them that bonus shares could be issued in the ratio of three new shares for every two shares held and that the liability on account of bonus tax should not stand in the way of the issue. The Chairman fully sympathised with this plea, but he drew their attention to the heavy tax burden which the Company would have to bear if their proposal to issue bonus shares in the ratio of 3 : 2 were carried through. Even after drawing the sum of Rs. 21.23 lakhs held in the share premium account and assuming that the present rate of bonus tax was kept unchanged at 30 per cent., the tax liability on the bonus issue would, the Chairman said, come to Rs. 27 lakhs. He asked the shareholders whether it was worthwhile giving away such a large amount as a gift to the Government. Though he was not hopeful of a revision of the tax liability, he said that it would be better to await the Budget.

The following summary of the Company's activities, as outlined by the Chairman, will give an idea of the outlook for the current year:

The Company's branch at Rangoon has continued to develop its industrial and trading activities. Though sales of concrete pipes (the production of which commenced in the past year) have been difficult so far, the market has been gradually built up and the offtake is expected to expand substantially when housing and other development schemes are implemented in Burma. In the Company's dockyard at Rangoon, there has been an increase in boat-building activity during the current year and deliveries have increased. The asbestos cement factory, the first of its kind in Burma, is expected to go into production within the next few months. The supply of green leaf to the Company's tea factory at Namshan (Burma) has become greatly restricted in the current year, on account of bad weather as well as competition from new factories. The close of the 1957 season marks the end of the Company's three-year selling arrangement with the Government of Burma. From April 1958, sales of the Company's products will be through normal market channels, but it will be some time before this new arrangement shows its full effect.

The sale of all timber extracted under old leases and the sale of the timber mill machinery mark a great change in the Company's activities in Siam. In the past two years, the Company's revenue from Siam stood at a very high level, as a result of the disposal of timber stocks on termination of the leases and closure of the mill, but the receipts in future from the Company's activities in Siam will not bear any relation to those received in the last two years. In order to make good the loss of revenue, the Company is actively pursuing various openings. Following the temporary permit received in October last, the extraction of timber by the Joint Timber Company, Ltd., in which the Company holds 26 per cent. of the equity capital, has been proceeding at a satisfactory pace, but the delay will preclude disposal of the output in the current financial year. The production of tapioca starch by Thai Tapioca Ltd., another joint venture in Siam, has reached the rated capacity of the factory and amounts to an average of over 400 tons per month.

The Company's tea crop in South India (Madras State) is expected to be satisfactory during the current year, provided weather conditions for the remainder of the year are reasonably favourable. In view of the current trends in world production and consumption, the Company's estates continue to concentrate on quality. The receipts per lb. remain above the average for the plantation industry in South India. The output from the Company's coffee estates is expected to be lower in the current year, following the record crop in the past year. The Company has recently purchased another estate in Coorg (Mysore State), increasing the bearing acreage by about 260 acres. Coffee prices for the 1956-57 crop are expected to be as satisfactory as those for the 1955-56 crop. It is difficult to finance the necessary capital expenditure under the Plantation Labour Act, on account of the increased burden of taxation and costs. An idea of the increased tax burden can be had from the fact that, besides capital gains tax, wealth tax and increased dividend tax, the Corporate income and super taxes have been revised from 43 per cent. to 51.5 per cent. and agricultural income-tax in Madras and Coorg from As. 5½ and As. 4 in the rupee to 45 per cent. and 40 per cent., respectively. Three-fifths of the Company's income from tea in Madras is subject to agricultural tax and the balance is subject to Central income-tax and super-tax. Income from coffee is, however, subject to agricultural tax only.

Some of the shareholders suggested that, in view of the uncertain conditions in some of the overseas countries where the Company operates, the Directors should think of expanding the Company's activities in India. The Chairman, in reply, said that the question had been engaging the attention of the Directors.

The inauguration of the Indian Overseas Shipping Company, Ltd., by His Excellency Mr. Sri Prakasa, Governor of Bombay, this week, marks a new venture in the field of Indian shipping. This company proposes to establish a regular and speedy cargo service between India and the U.S. For there is no Indian shipping company which runs this service now. There was a service run by the Scindia Steamship Company, Ltd., but this was suspended in 1947, as it was found unremunerative. Thus after a break of over 10 years, a new company has just decided to step into this field. The trade between the two countries constitutes 15 per cent. of India's total overseas trade, amounting to over Rs. 1,600 crores per annum, and is second only to that with the U.K. The Indian Overseas Shipping Company, Ltd. has thus plenty of scope for doing profitable service.

The Company has been sponsored by Mr. S. N. Haji, a former senior official of the Scindia Steam and at present Managing Director of the Varuna Syndicate Private Ltd., the Managing Agents of the Company. The Directors of the Company are: Yuvaraj of Porbandar, Nawab of Palanpur, Mr. K. D. Shah, Mr. Murarji J. Vaidya, Mr. Pratap Bhogilal and Mr. R. K. Mistry. Only a few days ago, the Company obtained the certificate for commencement of business and is expected to begin the service in three or four months. The authorised capital of the Company is Rs. 6 crores, out of which it is proposed to issue initially Rs. 1.50 crores. There will be no public issue of the share capital for the present, as the whole issued capital is being taken up by the promoters and their friends. It is the intention of the Company to purchase four fast vessels of 10,000 d.w.t. each with a speed of 17 knots. With this speed, each vessel will make more than three trips a year, thus enabling the Company to provide at least one steamer per month. The Company does not contemplate placing orders for new ships at present. It has decided to begin its operations by buying second-hand vessels of not more than five to six years old from the stocks of shipping companies abroad. The cost of each vessel is expected to be Rs. 1 to Rs. 1.10 crores and might even go down below Rs. 1 crore, if the current slump in the market for ships were to persist. The Company has already received offers from several countries to meet the cost of the ships on deferred payment basis.

The volume of Indo-U.S. trade is so great and promises to grow further that, even after allowing 50 per cent. of it to be catered by the U.S. ships, the rest will be enough for about 20 Indian vessels. The inward cargo is said to be very paying and will enable the Company to cover the cost of the ships in four or five years. On the outward voyage, the Company expects to carry tea, ore, jute goods, etc. As the trade with the U.S. originates and ends mostly with the east coast of America, the Company's service will be run via the Suez Canal. The Company does not propose to buy American Liberty ships, as their speed is only 9 knots. Such slow-moving vessels, in the opinion of its promoters, will be hardly remunerative. They point out that this was the reason why Scindias who were operating this service with Liberties had to suspend it.

The foregoing particulars go to show that the new shipping project has been well conceived. Shipping is, indeed, a very difficult business, especially for a country like India which accounts for only a tiny fraction of the world mercantile marine. Further, financially, Indian shipping has fared very badly in recent years and one thought that the days when private enterprise could enter this field afresh were over. We are glad to find that Mr. Haji, Mr. Murarji Vaidya and his friends have been courageous enough to belie this impression. We wish them all success in this bold and patriotic venture. They deserve all reasonable encouragement and support from the State and shippers.

World business recession in the last few months has once again brought to the fore the question of a rise in the U.S. official price of gold. In fact, there is a widespread belief in many parts of the world that it would be raised from the present level of $35 per ounce, as a step to combat deflationary trend. This hope would appear to be gaining ground even in the U.S., the country which has all along been opposed to South Africa's demand for a higher gold price, as witness the switch-over by American investors to Kaffir shares in the last few weeks. It is, however, doubtful whether the U.S. will agree to the suggestion to increase its dollar price of gold, particularly when the U.S. President has expressed his confidence that the business recession would prove short-lived. Even if the U.S. Administration is agreeable to such a proposal, it has to get the approval of the U.S. Congress, as it has no longer the powers to change the price of gold without the prior approval of the Congress.

An increase in world price of gold can be brought about in another way also, but this will

* Wealth-tax is levied in these countries only and not in the others.

EQUITIES STEADY

TEXTILES IMPROVE

(From Our Own Correspondents)

BOMBAY, *27th February*

AS usual, the pre-budget trading in the share market remained greatly restricted during the week under review. With the outstanding positions well squared up, the market on the eve of the Budget looked healthy and the sentiment was also better than a week ago. There was a small recovery in prices in most of the scrips, the rise being more conspicuous in textiles. Till a week ago, the market was somewhat jittery about the Budget, particularly in view of the Prime Minister's remarks made at the Indian Merchants Chamber's Golden Jubilee Celebrations, justifying the tax proposals of the former Finance Minister and indicating that there would not be any tax concession. The Prime Minister's subsequent statement in Parliament that the Government would adhere to its policy of extending the public sector also increased their anxiety.

During the last few days, however, there was a slight improvement in the sentiment. It came to be widely believed that, in view of the former Finance Minister's assurance that there would not be any major change in taxation during the rest of the second Plan period, and in view of the fact that Mr. Krishnamachari had almost finalised the Budget before he resigned, there would be not only no increase in taxes but a pruning in some of the existing levies. There was also an expectation that the period for which the cut in excise duty on medium cloth made in December was to be effective would be extended beyond 31st March 1958 and that a reduction in duty on coarse cloth would be made. This accounted for the modest gains in textile shares over the week.

In the steel section, Tata Ordinaries moved up from Rs. 167.50 to Rs. 170.25 before declining today to Rs. 168.75. At the close, there was a fractional recovery to Rs. 169.25. The new shares were marked up by Re. 1 to Rs. 169.25. Indian Irons gained from Rs. 19.24 to Rs. 19.64 but shaded off at the close to Rs. 19.52.

Among textiles, Bombay Dyeings gained from Rs. 50 to Rs. 51, but wound up a shade lower at Rs. 50.50. Centurys rallied from Rs. 377 to Rs. 385.25, but profit-taking pushed them down to Rs. 381.50 at the close. Kohinoors recorded a gain of Rs. 4.75 to Rs. 262.25. Central Indias were unchanged at Rs. 81. Finlays were, however, lower by Rs. 2 at Rs. 252, and Gokaks suffered a loss of Rs. 4.50 at Rs. 148. Indu Ordinaries were better at Rs. 8.96 and Indore Malwas recovered from Rs. 104.50 to Rs. 106. Morarjee Mills improved by Rs. 2 to Rs. 205, while New Greats gave way further from Rs. 213.50 to Rs. 211. Osmanshahis were maintained at Rs. 46.50. Simplex Mills advanced by Rs. 2 to Rs. 158 and Standards by Rs. 5 to Rs. 395. Svadeshis gained by Rs. 3 to Rs. 165 and Tata Mills by 75 nP to Rs. 36.75.

Bank shares were marked up generally, the most conspicuous being Bank of Barodas with a rise of Rs. 6.50 to Rs. 113, on expectations of a bonus issue in commemoration of the Bank's Golden Jubilee this year. Bank of Bikaners came to the limelight and were bid Rs. 5.24 higher at Rs. 23.24. Central Banks were marked up by Re. 1.80 to Rs. 52.50 and their new shares by Re. 1.70 to Rs. 54. Bank of Indias gained a fraction to Rs. 134.75, while their new shares moved down by Re. 1.50 to Rs. 135.50. Punjab Nationals had business at the self-same rate of Rs. 52. Union Banks gained 32 nP to Rs. 8 and United Commercials 50 nP to Rs. 59.50. Dena Banks changed hands 75 nP higher at Rs. 48.

Business in insurance shares was limited. New Indias were done 50 nP higher at Rs. 40.50 and Indian Mercantiles gained 50 nP to Rs. 43, while New Greats declined by 32 nP to Rs. 17.44.

The electricity section ruled quiet and most of the leading counters suffered losses. Ahmedabad Electrics shed 20 nP to Rs. 95 and Bombay Suburbans as much as Re. 1 to Rs. 103. Surat Electrics were done at Rs. 105.50 *ex-div.*, as against Rs. 107.50 *cum-div.* a week ago. Tata Hydros dropped Re. 1.75 to Rs. 113 and Tata Powers Rs. 17.50 to Rs. 1,105. Andhra Valleys were lower by Rs. 12.50 at Rs. 1,067.50.

Sugar shares were prominent with smart rise in prices. This was attributed to the absence of any levies on sugar farms in the Bombay budget, contrary to earlier fears. Belapurs jumped from Rs. 232 to Rs. 236 before closing at Rs. 234. Phaltans gained as much as Rs. 3.75 to Rs. 149 and Walchandnagars moved up by Rs. 4.25 to Rs. 270.50. Cement shares were steady, but no marked rise in prices was noted. Associated Cements moved within a narrow range between Rs. 144.50 and Rs. 143, before closing at Rs. 143.50. The new shares gained a fraction to Rs. 139. Digvijays recorded a rise of Re. 1.50 to Rs. 138.50, while Orissa Cements were a fraction lower at Rs. 12.36 and Jaipur Udyogs at Rs. 11.32. Ashoka Cements declined by 28 nP to Rs. 8.12.

In the engineering and mining group, Alcocks staged a rise of Rs. 3.75 to Rs. 215. Tata Locomotives advanced from Rs. 137.50 to Rs. 141.50, but finished lower at Rs. 139.50. Premier Constructions dropped 75 nP to Rs. 155. Larsen and Toubros were dull at Rs. 12.64, while Mahindra and Mahindras gained 60 nP to Rs. 17.24. Shivrajpurs were steady at Rs. 90.50 and Indian Coppers at Rs. 2.82. Shipping shares were featureless, but the undertone was steady. After improving from Rs. 17.32 to Rs. 17.60, Scindias gave way to Rs. 17.40. Great Eastern Shippings stood on balance a shade better at Rs. 19.76. Their new shares shed 76 nP to Rs. 13.24. In the automobile group, Hindustan Motors were a shade better at Rs. 5.96, while Premier Automobiles were lower by Re. 1 at Rs. 82.50.

In the miscellaneous group, Bombay Burmahs (old) were marked down from Rs. 523 to Rs. 518.50, following the none-too-optimistic note struck by the Chairman of the Company about the outlook for the current year at the annual general meeting held on Monday last. Subsequently, however, they recovered the earlier loss and closed at Rs. 523. National Rayons moved up from Rs. 215 to Rs. 217, but receded to close at Rs. 215.25. Gwalior Rayons were unchanged at Rs. 11.36. Tata Chemicals improved by 20 nP to Rs. 12.60. Tata Oils were steady at Rs. 36. Hindustan Levers moved up by 40 nP to Rs. 19.80, following the increase in dividend for 1957 to Re. 1.40 per share from Re. 1.25 paid for 1956. Killick Industries were dull at Rs. 152.50. W. H. Bradys were unchanged at Rs. 283.75. Voltas were a shade better at Rs. 113.75 and their new shares gained by Re. 1.50 to Rs. 110.

* * * *

Calcutta Stock Exchange

CALCUTTA, *25th February*

An easy trend was depicted by the Calcutta Stock Exchange during the week under review. Fresh investment support was lacking, while speculative interests preferred to await budget proposals. The volume of business, as a consequence, was greatly restricted. The statement of the Prime Minister, Mr. Nehru, in Parliament expressing approval of the policy of acquiring controlling interest in good private concerns with the funds of the Life Insurance Corporation, the remarks on the private sector made by Mr. T. T. Krishnamachari and the fears of additional burdens on companies in the ensuing Central Budget affected sentiment of operators. Jute shares came in for selling, thanks to the continued slump in gunny prices and the lightning strike in Calcutta port by a section of labour, loading gunny barges. Coal shares were affected adversely by the coal mine disaster at Asansol. Renewed labour troubles in Burnpur were mainly responsible for the easiness of Indian Irons.

Interest in coal shares was subdued. Bengals slumped from Rs. 231 last week-end to Rs. 205. Central Indias shed 16 nP to Rs. 6.59. Burrakurs were neglected at Rs. 22.50. Bharats were done at Rs. 6.50 *cum-div.*

Among jute shares, Unions were marked down by Rs. 2 to Rs. 106. India Jutes declined by 50 nP to Rs. 94. Nationals receded by 35 nP to Rs. 22.75. Howrahs were a shade lower at Rs. 13.12. New Centrals, however, gained 7 nP to Rs. 12.94 on special support.

In the mining group, Orissa Minerals dipped from Rs. 22.44 to Rs. 22.37. Indian Coppers were lower by 2 nP at Rs. 2.82. But Burmas were quoted higher at Re. 1.32, as against Re. 1.26 last week-end.

In the engineering section, Indian Irons were on offer at Rs. 19.55, as compared with Rs. 19.68 last week-end. Jessops eased by 31 nP to Rs. 22.25. National Irons were on offer at Rs. 6.75, as against Rs. 6.87 on the 19th inst. Brittanias were stagnant at Rs. 13.50. Texmacos, however, were better by 25 nP at Rs. 17.15.

Among miscellaneous shares, Dunlops shed 6 nP to Rs. 22. Indian Aluminiums were quiet at Rs. 12.75 and Rohtas at Rs. 16. Aluminium Corporations were done 25 nP lower at Rs. 9.62. B.I. Corporations eased by 5 nP to Rs. 3.75. Jardine Hendersons were marked down by Rs. 4.75 to Rs. 53. National Insulateds were unchanged at Rs. 24. But Indian Oxygen put on 6 nP to Rs. 16.

* * * *

Madras Stock Exchange

MADRAS, *25th February*

The Madras Stock Exchange ruled dull during the week under review. Transactions put through were limited. For operators were hesitant to extend their commitments either way, thanks to pre-budget uncertainties. Some were apprehensive that fresh burdens might be imposed on investors, while others thought that additional taxation, barring the imposition of gifts tax, was not likely. The general opinion, however, was that there would not be any relief to investors. Textiles met with persistent selling pressure on renewed reports of heavy accumulations of stocks with mills and announcements of lower dividends by some important mills. In the planting section, rubber shares encountered buying, induced by renewed hopes of higher prices for rubber. Tea and coffee shares were generally easy. Sugar and electricity shares were dull, although there were selective buying enquiries in a few scrips.

Among tea shares in the planting section, Devasholas receded by 15 nP to Rs. 19.50. Alageswars retreated by 13 nP to Rs. 2.45. Chandramalais eased by 8 nP to Rs. 2.90. United Nilgiris fell by 25 nP to Rs. 14.90. The Company has declared an interim dividend of 5 per cent. Ouchterlonys and Lucky Valleys lost 5 nP each to Rs. 4.85 and Rs. 10.75, respectively. Among coffee shares, Consolidated Coffees declined by 25 nP to Rs. 21.90. Anaparais receded by 15 nP to Rs. 4.80 and Bababudins by 13 nP to Rs. 10.12. But Coffee Lands spurted by 78 nP to Rs. 28.65 on excellent support following rumours that the Company was issuing bonus shares in the ratio of one for every four shares held. Rubber shares, as already stated, tended to move up. Cochin Malabars and Rajagiris improved by 25 nP each, the former to Rs. 4.35 and the latter to Rs. 14.45. Kalpettas jumped up by Re. 1.45 to Rs. 20.25. Highlands advanced by 10 nP to Rs. 12.10. Cowcoodys rallied 40 nP to Rs. 7.65. Puthutotams and Pullangodes gained 5 nP each to Rs. 2.55 and Rs. 1.68, respectively.

In the textile section, Vasantas were pushed down by Rs. 15 to Rs. 255. Coimbatore Murugans fell by Rs. 6 to Rs. 135. Coimbatore Pioneers dropped Rs. 4 to Rs. 233. Balasubramanias, Bangalore Woollens, Coimbatore Spinnings and Ranga Vilas eased by Rs. 2 each to Rs. 57, Rs. 172, Rs. 63 and Rs. 65, respectively. Lakshmis softened by a rupee to Rs. 111. Loyals declined by 40 nP to Rs. 37.10, reflecting disappointment of the cut in dividend from 7½ per cent. to 5 per cent., for the year ended 30th June 1957. Dhanalakshmis eased by Rs. 3 to Rs. 200 *cum-div.* The Company has declared only 10 per cent. dividend for the year ended 31st December 1957, as against 25 per cent. last year. Coimbatore Cottons were neglected at Rs. 160 *cum-div.* The Company has declared a dividend of only 9 per cent. for the year ended December 1957, as against 25 per cent. for the previous year.

In the sugar section, E.I.Ds improved by 15 nP to Rs. 29.40. Travancores were higher by 10 nP at Rs. 10. Deccans gathered 2 nP to Rs. 7.90.

Among miscellaneous industrials, Rallis dropped 75 nP to Rs. 28.50. Mysore Papers and Mysore Lamps declined by 25 nP each to Rs. 15.15 and Rs. 15, respectively. India Cements receded by 65 nP to Rs. 27.25. Orissa Cements lost 30 nP to Rs. 12.40. Mysore Tobaccos shed 20 nP to Rs. 12.90, and Travancore Cements 10 nP to Rs. 8.30. Textools, however, attracted attention and rose by 50 nP to Rs. 178.50.

HINDUSTAN LEVER LIMITED

The Directors of the Hindustan Lever Ltd. have decided to recommend at the annual general meeting of the Company, which will be held on 7th April 1958, the payment of a dividend of Re. 1.40 per share free of income-tax for the year to 31st December 1957, as against Re. 1.25 per share paid for 1956.

The net profit of the Company for the year amounted to Rs. 100 lakhs after providing Rs. 123 lakhs for taxation at current rates. This compares with the net profit of Rs. 61 lakhs earned in the previous year, making a provision of Rs. 162 lakhs for taxation. The 1956 taxation charge of Rs. 162 lakhs included a provision of Rs. 47 lakhs on account of the bonus issue made in October 1956.

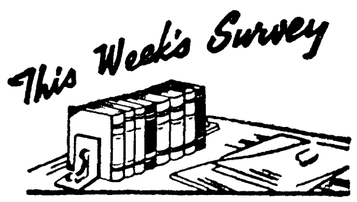
MARKET GOSSIP

(Concluded from previous page)

be a circuitous one. If business recession deepens and spreads to a number of countries and if these countries decide to reduce the value of their currencies in terms of gold, it would mean a corresponding appreciation of the dollar in terms of the other currencies. In such a contingency the U.S. would be compelled to reduce the value of dollar in terms of gold to the extent that the other countries bring down the value of their currencies in terms of gold. It is, however, too much to expect such a contingency at this stage.

It is also considered unlikely that an increase in world price of gold would come about, when the world output of this precious metal, particularly in the Soviet Union, is increasing and more and more gold is being offered by the U.S.S.R. in the London market. The world output of gold (excluding U.S.S.R.) in 1957, according to Samuel Montagu & Co., Ltd., the well-known bankers and bullion merchants of London, is estimated at 29.30 million ounces, as against 28.20 million ounces in 1956. It has thus maintained the upward trend noted in the preceding years. During the last six years alone, world production has gone up by 5.36 million ounces. The bulk of the world production is accounted for by South Africa, its output in 1957 being 17.03 million ounces (or 58.1 per cent. of the world total) as against 15.89 million ounces in 1956 (56.3 per cent.) and 11.52 million ounces in 1951 (48.1 per cent.). Canada comes next, albeit far behind, with a production of 4.38 million ounces, such having fallen from 4.54 million ounces in 1955. The U.S. accounts for 1.83 million ounces; its output also has declined from 1.86 million ounces in 1956 and 1.97 million ounces in 1953. No statistics of the output in the Soviet Union are available, but latest estimates place it at as high as that of South Africa.

The year 1957 saw a marked increase in turnover in gold markets. Messrs. Samuel Montagu & Co. estimate that the turnover in the London market alone expanded by over 25 per cent. The main feature of the year's trading in gold was the unprecedented volume of sales by the U.S.S.R., amounting to about 7.5 million ounces, as compared with the previous record of 4.3 million ounces in 1956. Another feature of the year was the large-scale operations by Central Banks. The activities of the Central Banks, other than the Bank of England, accounted for well over half the total turnover in the London market. Out of the total sales of new gold amounting to 37 million ounces in 1957, about 24 million ounces are said to have gone into the reserves of Central Banks, about 9 million ounces to hoarders and 4 million ounces for industrial consumption. It is, however, stated that the demand for hoarding purposes showed a marked decline. The greater part of this demand from Middle Eastern and Far Eastern markets was for India, which is still a paradise for smugglers of this precious yellow metal.



SIR JOSEPH ASPDEN KAY, K.B.E.

WITH India achieving maturity in the sphere of modern commerce, celebration of golden jubilee by some institution or other every year is not a rare event in the latter half of this twentieth century. But it is certainly a rare event when a man completes 50 years of active business life, all in one concern, and is still working hard for it. That, by any standard, constitutes a creditable record, of which the person concerned can certainly feel proud and can justifiably expect to be felicitated by his friends and colleagues. Seventy-three-year-old Sir Joseph Aspden Kay, K.B.E., Chairman of the company that owns *Commerce*, and Managing Director of Messrs. W. H. Brady & Co. Ltd., which controls and manages two cotton mills, a dyeing works, a big printing press, one of the largest and up-to-date sugar mills and sugarcane farms in India and a light engineering concern, is one of those few persons blessed by Providence to receive such an honour in life. On 21st February 1958, Sir Joseph completed 50 years of his connection with Brady & Co. And, on that day, he and Lady Kay were heartily congratulated by his friends and directors of the Company and its associate concerns, at a special function held at the Taj and attended by the elite of the Bombay business community, mostly the elders. Sir Homi Mody, who is three years older than Sir Joseph Kay, presided over the function.

Exactly fifty years ago from this week—on 21st February, 1908, to be precise—Sir Joseph signed his agreement with Messrs. Bradbury and Brady & Co., a partnership firm, which was dissolved three years later, its place being taken up by Messrs. W. H. Brady & Co., Ltd., first as a partnership and then, that is, two years later, as a public limited concern. He joined the firm as an assistant on a princely salary of Rs. 350 per month, subject to income-tax, rising by Rs. 50 per annum, which, however, enabled one in those days to command the comforts of life and maintain the standard of living expected of a member of a proud ruling race then. His first assignment in the firm was to reorganise the administration of the firm on efficient lines and give it a modern look. This he did with such great success that the partners of the firm soon made him a part of their concern and, as years went by, he grew with it. He became the Managing Director in 1922, following the retirement of Mr. Brady. It is interesting to note in passing that one of the conditions laid down in the first agreement with Sir Joseph (he was Mr. Joseph Kay then) contained three don'ts. These were: (1) he should not engage in any speculation; (2) he should not accept a loan from any person in India; and (3) he should not engage himself in any steeplechase or hurdle race without his employers' consent. Apparently, his employers were keen on ensuring not only his integrity but also the safety of his life.

Sir Joseph is one of the several Britishers who have spent their lifetime in this country to the mutual benefit of both. Through hard work and honest endeavour as an *entrepreneur*, he has doubtless become a rich man. But, at the same time, he has, through the fruits of his labour, enriched this country in several ways. He has seen two world wars and gone through many booms and depressions; in fine, he has witnessed the classical theory of business cycles in operation and, therefore, knows what they are. He believes even today that this theory is not as outdated as many seem to feel. He was neither carried away by overoptimism during years of boom nor allowed himself to be unduly oppressed by a feeling of pessimism during periods of depression. He has nurtured his concerns through bad and good times alike with faith in the future. He has followed a sound conservative financial policy, never overtraded, and always adopted a high degree of rectitude and integrity. All these fine qualities have paid him good dividends, the most important of which is the respect he commands as a grand old man of the British business community in India. He has been a great believer in Indo-British co-operation. He never insisted on having full controlling interest in his concerns and was always happy to work with the majority of Indian capital, provided those who put up the capital had the confidence in him to manage their concerns efficiently. As a director, or managing director, or chairman of a concern, he always bore in mind that his principal masters were the shareholders and as an employer he considered himself to be the trustee of his employees. Even during the worst of times, he did not retrench a single employee.

Sir Joseph has been director and chairman of several companies in Bombay, but these were not in such large numbers as to be affected by the relevant restrictive provisions of the new Companies Act. He could have obtained many directorships for the mere asking, but he firmly believed in the principle that the number of such positions should be kept down to a manageable proportion, so that one could discharge one's responsibilities in the letter and the spirit of the law. Apart from the seven companies that belong to his managing agency house, he has been connected as a director for several years now with two important joint-stock companies in India, the Bank of India and the Oriental Life. All the companies under the management of Brady & Co. are financially sound and strong and have been known in the commercial world for their honesty and efficiency. The credit for this mainly goes to Sir Joseph, who has been taking keen personal interest in their progress. Even now, when he is well past seventy, he regularly visits his mills three or four times a week and frequently travels to Belapur, which is about 280 miles from Bombay City, either by car or train, in order to inspect the sugarcane farm and the sugar factory of the Belapur Company, Ltd. Of all his achievements, the Belapur sugarcane farm and factory are, in our opinion, the best. One has to visit them to appreciate the enormous labour, thought and capital he has expended in raising an agro-industry on sound and scientific lines in an area which was once virtually a desert. Its original founders had given up the project as lost, but Sir Joseph saw a great future for it and went in. Events have proved that he was right. The Rs. 50 paid-up shares of this sugar company once went abegging at Re. 1 per share before he paid his close attention to the Company. They are now standing at Rs. 236, and that after the issue of quite a few bonus shares.

Another evidence of Sir Joseph Kay's faith in this country and his indomitable courage and confidence in the future is provided by the history of this journal which is still two years behind its golden jubilee. The original home of *Commerce* was Calcutta and, hardly had it completed 25 years of its existence than it ran into financial difficulties, apparently badly hit by the Great Depression of the 'thirties. It was, indeed, about to close down. But Sir Joseph Kay had the foresight to intervene and give it a fresh lease of life. He formed a public limited company in 1935 to acquire the ownership of *Commerce* and resume its publication from this City, the Gateway of India. In those days, when economic activity was still not free from depression, few business men would have had the courage to take over a sinking concern, and that too a newspaper. Even in the 'thirties, a weekly journal of decent size, giving sufficient reading matter, required a sizable capital and willingness to risk at least Rs. 2 lakhs, if not more, before the hope of making a modest profit could be established. And Rs. 2 lakhs was not a small sum in those days. Indeed, it will be difficult to find investors who are prepared to risk Rs. 2 lakhs in a weekly newspaper enterprise even in these days. Today, of course, a much bigger sum than this will have to be staked for this purpose.

Nineteen years after his arrival in India, that is, in 1927, Sir Joseph Kay was created a Knight Bachelor and honoured with a K.B.E. twenty-one years later. He richly deserved these honours, for he had rendered much valuable public service. It is said that "he is a true business man who devotes as much time to public service as he does to his own business." Sir Joseph is a great believer in this saying. Notwithstanding his heavy commitments in his own office, he devoted considerable time to social work, sports, defence and business associations. Thus, he served the Bombay Light Horse for 19 years, from which he retired in 1934 with the rank of Captain. He was President of the Bombay Gymkhana for 19 years, of the Western India Football Association for a decade, Chairman of Breach Candy Baths and is even now President of the Bombay Club right from 1931. He was Chairman of the Bombay Millowners' Association on three occasions, President of the Bombay Chamber of Commerce once, Vice-President of the Indian Central Cotton Committee for three years and of the E.I.C.A. once, besides being a Trustee of the Bombay Port Trust and Bombay Improvement Trust. He represented the employers at the International Labour Conference, Geneva, in 1923. He was a member of the Bombay Legislative Council in 1924 and 1926 and, as Chairman of the Back Bay Enquiry Committee, helped to instil in the Government of the day a sense of proportion to its grandiose scheme, now almost forgotten but then popularly known as the Lloyd Reclamation Scheme. There were enthusiasts of prohibition even in those days and, in 1927, as Chairman of the Prohibition (Finance) Committee, Sir Joseph presented a convincing report exposing the financial folly of the proposed social experiment. Of course, he then had no Rajaji nor Mr. Morarji Desai—to whom prohibition is more important than finance—to contend with. Sir Joseph was also a member of the Indian (then called Imperial) Council of Agricultural Research Such was the variety of public service rendered by this able and distinguished Britisher in India Though a Britisher, he was loyal to the country where he worked and always placed the interests of India above those of Britain. To give an instance. As the Chairman of the Bombay Millowners' Association, it fell to his lot to oppose the demands of Lancashire millowners for reducing the import duty on cotton textiles And this he did effectively and won the battle against his own countrymen.

Although Sir Joseph is critical of the present Government's economic policy and deplores the incentive-killing taxes and controls, he is optimistic enough to hope that wisdom will one day dawn upon those in whose hands the destiny of this country rests now. This is evident from the fact that, unlike many other British business men, he has not sold out his interests. Nor did he revalue his assets and inflate the capital, in order to repatriate a part, if not most, of them, even when such a practice was possible and actually in vogue a few years ago. It is no secret that quite a few Indian business men offered to take over his investments at attractive prices, but he refused them. It is to be hoped that his confidence in the leaders of this country and optimism about the future for it will be justified by the events to come.

SAFETY IN MINES

"Safety-first" is one of those principles which do not evoke public interest until its neglect leads to grievous loss of life. The recent explosion in the Chinakuri colliery, near Asansol, in which 182 workers perished in the blazing fire which developed in the pit, has shocked the press and the public into a new sense of urgency. The colliery itself is one of the most modernised of its kind in India, so that the tragic event serves only to show how accidents could take place even in the best regulated colliery. The judicial enquiry, which was promised by the Union Minister for Labour, Employment and Planning, Mr. G. L. Nanda, should throw some light on the antecedents and causes of this unfortunate accident, which has ended in such "human" waste and also inflicted considerable damage to property. An accident in a mine, especially if it arises from fire, puts the mine out of work for several weeks. The Chinakuri colliery, which belongs to the well-known Bengal Coal Company, Ltd., is not expected to resume operations for another three weeks. As a precautionary measure, an adjacent colliery has also been closed down. No estimate of the loss of output has been given. But it might be large, considering that the Chinakuri colliery alone employs about 2,000 workers. So far as the Company is concerned, the loss is said to be covered through adequate insurance.

The explosion was indeed one of the worst of its kind. Even so, it is easy enough for the authorities to yield to the temptation of setting up an elaborate committee to examine the safety conditions in the country's mines. But the fact is that, whereas, with the best will in the world, it may be difficult to prevent all accidents, there is little that a committee can do by way of addition to the knowledge of safety measures. All that is worth knowing about "safety" in mines is known. What is necessary is that the measures should be scrupulously implemented and that "safety" consciousness should be inculcated in all ranks of workers. From this point of view, the Government's decision to convene a conference of representatives of workers, employers and experts to discuss measures to enforce the use of safety devices in mines will be widely welcomed. Announcing this decision, in the course of his speech at the annual conference of the Indian National Mine Workers' Federation, held at Bhaga (Jharia) last week, Mr. Nanda said he would refrain from commenting on last week's mine disaster, since it would be a subject

of a judicial enquiry. He added: "At the moment, I can only give my pledge to the miners and their dependents that the question of their safety will constantly occupy my mind and claim my attention till all steps that are humanly possible have been taken." It is to be hoped that the conference on safety measures will meet at an early date and its decisions and suggestions will be realistic and enforced without delay.

The maintenance of "safety" is by far the most important of the functions in which workers can do much to ensure success. Addressing the conference of the National Mine Workers' Federation, the President, Mr. Michael John, rightly stressed the need for creating increasing "safety" consciousness in the industry. He pleaded for raising the rate of compensation to a level which would act as a deterrent to neglect of safety provisions. He pointed out that education of workers in safety measures and stricter vigilance by the Mines Department would also help in reducing the hazards of mining. In commending these suggestions to the Government, we would emphasise the need for more frequent "surprise" inspection of mines which would help infuse a sense of urgency about safety measures in those connected with their maintenance.

IMPORT TRADE

The continuing severely restrictive policy in relation to imports has evoked bitter criticisms from a section of the mercantile community. Voicing these criticisms, Mr. Shantilal M. Shah, the retiring President of the All-India Importers' Association, declared, in his speech at the annual meeting of the Association held in Bombay this week, that the import policy had created a great scarcity of foreign products which in turn had resulted in considerable increase in prices of such goods. He observed: "Acute scarcity or non-availability of goods does cause hardship and inconvenience to the consumers, and there is a limit to the measure of austerity and sacrifice that could be demanded from the people at a time. In this context, the continuance of drastic policy or whittling down or banning imports is not in the larger interests of the country, as it would eventually affect the rate of development itself."

While few would underrate the hardships and inconveniences that would arise from restrictions on imports, there is no denying the fact that they are inevitable. For the pace of development must be related to the resources available. As this journal pointed out only two weeks ago in the course of an editorial (*vide* page 253), the foreign exchange position is still serious enough not to permit any relaxation in the present restrictions on imports. Mr. Morarji Desai, Union Minister for Commerce and Industry, asserted at the recent meeting of the Import Advisory Council that the liberalising policy was dead and that there was no question of liberalisation.

Mr. Shantilal Shah, however, rightly stressed that it should be considered whether the continuance of the present drastic import policy was having adverse repercussions on, or prejudicing, the export promotion efforts. He also did well to emphasise that the established trade channels should be utilised for the distribution of products manufactured by the indigenous industries. This aspect must specially be stressed, because there is a strong tendency among Indian manufacturers to keep the distribution trade to themselves so that they can earn some additional profit. As we have ere now pointed out, if free enterprise and democracy are to survive, manufacturers should follow the policy of decentralisation of functions. They should let the distribution of what they produce to those business men who are prepared to specialise in that function. Incidentally, this will enable them to concentrate their time and resources on their primary function of production, leaving the task of marketing their products to other *entrepreneurs*.

The adverse effect of the growing tendency among manufacturers to keep the distribution trade to themselves has been further aggravated by the increasing encroachment and participation of the State Trading Corporation in actual trading. Mr. Shantilal Shah was justified in urging that any further extension of the Corporation's activities was unwarranted, especially into the spheres of trade which has been well established and functioning successfully through the established trade channels. Surely, the Corporation would, as he pertinently remarked, be rendering a great service to the economy of the country, if it were to confine its activities to spheres of a pioneering character designed to create new opportunities for the trade and also to activities which, by their very nature, are unsuitable for being handled by private individuals.

FINANCE FOR SHIPPING

Rupee finance and foreign exchange are still the chief bottlenecks in the way of a more energetic programme for the acquisition of ships. The long leeway which India has to make up in its tonnage cannot, however, be covered without expenditure of vast sums of money. Already, the sums allotted for shipping under the second Five-year Plan have been exhausted, though the target for tonnage set under the Plan has still to be reached. Reviewing the progress of shipping, Mr. Dharamsey M. Khatau, Chairman of the Scindia Steam Navigation Company, Ltd., in the course of his address at the annual meeting of the Company, held last week in Bombay, pointed out that India's registered tonnage was likely to reach 734,296 in the current year. By 1960-61, about 90,000 G.R.T. would be due to be scrapped or sold. India would, therefore, need about 255,000 G.R.T. to reach even "the low and modest target of *900,000 G.R.T.* as fixed by the Planning Commission." Mr. Khatau felt that, in the context of available finance and the foreign exchange resources of the country, the fulfilment of even this modest objective would appear to be a "stupendous" task.

The Government, on its part, has been particularly anxious to see that Indian shipping attains a higher status among the maritime nations. The country owes a great deal to the vision and constructive thinking of the Union Minister for Transport and Communications, Mr. Lal Bahadur Shastri, who has consistently evinced a sympathetic attitude towards the problems of Indian shipping. Mr. Khatau himself referred to Mr. Shastri's "very encouraging and appreciative remarks" at the recent annual general meeting of the Indian National Steamship Owners' Association where he expressed his willingness to extend the best possible assistance to Indian shipowners in the matter of acquisition of additional tonnage. Mr. Khatau said: "I particularly value his very encouraging observations about the shipping development fund, reduction in the rate of interest on loans granted to shipping companies for the acquisition of coastal ships and the hopes he has held out for an increase in the development rebate allowance."

The last budget has, by and large, imposed a severe burden on shipping companies. Nevertheless, it is gratifying to note that the Government eventually decided to exempt shipping companies from the operation of the wealth tax. Mr. Khatau was voicing the feelings of all those who have the good of Indian shipping at heart when he expressed his gratitude to Mrs. Sumati Morarjee, who led the delegation for presenting the case for Indian shipping before the Select Committee, and to Mr. M. A. Master for his "able advocacy" of the cause of Indian shipping. Although the shipping companies have now been exempted from wealth tax, there is another tax which is as oppressive in its incidence as the wealth tax might have been. It is the capital gains tax. Referring to this tax, Mr. Khatau said: "The systematic disposal of our older and uneconomic ships is a natural outcome of planned modernisation of our fleet. The sale of such ships, however, brings us within the ambit of the capital gains tax." It is to be hoped that the Government will grant the necessary fiscal relief at least in cases where the capital gains, arising from sales of ships, are reinvested for purposes of acquiring additional tonnage.

LOCKOUTS

It is unfortunate that a minor dispute between a section of workers and the management of the State-owned Hindustan Aircraft Limited, Bangalore, should have taken so unexpected and undesirable a turn as to force the closure of the factory and necessitate the intervention of the police. The situation deteriorated further and violent demonstrations by workers culminated in firing by the police, resulting in the death of one worker. It is deplorable that the trouble should have started on so flimsy a ground as the arrest of five workers on a charge of assaulting a co-worker. Reinstatement of 18 workers dismissed earlier by the management and withdrawal of suspension order against certain others are stated to be some of the demands of the workers.

One should not be accused of being cynical if one thinks that this incident, unfortunate in the extreme, should, nevertheless, serve to dispel the illusion entertained in some quarters that strikes and lockouts are exclusive phenomenons of the private sector and invariably due to the adamant refusal of the management to stoop to the just demands of labour. An undertaking owned by the Government, which has always taken a paternal attitude to labour, was forced to close its doors, because it found real danger in the factory for life and property. While not seeking to apportion the blame for this development, we would like to point out that it is, in part at least, the manifestation of an evil common among almost all sections of people in the present-day India, but endemic in the ranks of labour, namely, indiscipline. One wonders where this will lead the country to.

COHEN COUNCIL'S REPORT

The report of the Cohen Council (Britain) on Prices, Productivity and Incomes, published on the 21st ult., is a well-reasoned essay on the inevitability and the positive need for effective anti-inflationary policies to defend the value of the pound, safeguard Britain's competitive strength in export markets and prevent a fall in living standards. It is, in effect, an able vindication of the measures initiated last September by Mr. Peter Thorneycroft, the former Chancellor of the Exchequer, to curb inflation, including the putting up of the Bank Rate. The Council expresses almost unqualified approval of these measures and considers it justified and even as long "overdue."

The Council, it may be recalled, was appointed in August 1957, to keep under review changes in prices, productivity and incomes, including wages, salaries and profit, and to report thereon from time to time. It is a completely independent body comprising Lord Cohen (Chairman), Sir Dennis Robertson and Sir Harold Howitt.

The Council, in its report, observes that it is important for Britain, especially with its dependence on imported food and raw material and the consequent need for high exports, to avoid inflation, since it cannot count on its competitors indulging in that practice. It, therefore, suggests that the country's principal economic aim at the moment should be to halt, not merely moderate, the current inflation and that no branch of the Government expenditure should be held immune from possible reductions or limitations, except where covered by definite contracts. It maintains that Britain has, during the post-war period, pursued a number of objectives arising from the circumstances of the time, and in themselves desirable, but making, in the aggregate, a greater demand on the thrift and industry of its citizens than they have had the power or the will to satisfy. This has shown itself in an abnormal pressure of monetary demand for both consumer and capital goods and services which has been the main cause of the rising trend of prices and money incomes. This expansion, the Council maintains, has been assisted by a plentiful supply of money and by the pursuit of full employment policies. Increases in import prices also had an inflationary effect.

Although the main cause of rise in prices and incomes has been high demand, the Council points out that wage advances have chiefly been secured through the instrumentality of powerful trade unions. The habit of demanding large and frequent increases in monetary rewards grows by what it feeds on and might, according to the Council, be found to persist even after any technical justification for it in the state of the labour market has passed away. The report points out that a peace-time rise in price as big and prolonged as that experienced by Britain in the post-war period has no precedent in the last hundred years of its economic history. It is true that prices have been rising since 1934, but the rise since the end of the war has been exceptionally big and prolonged, averaging from four to five per cent. per annum. The cost of production has also followed an upward course. The Council estimates that, of the increase in the cost per unit of goods and services in 1956 over the 1946 figure, 49 per cent. is attributable to extra wages, 19 per cent. to extra profit and 19 per cent. to higher import prices and 13 per cent. to extra indirect taxes. The overall increase in production during the 1946-56 period is estimated, on an average, at about 3 per cent., whereas the rise in wages and salaries is estimated at just under 8 per cent. per year and the rise in profit income at just under 7 per cent. per annum. The Council points out that wages and profits had thus increased their share of the national income, while the share of dividends, rents and incomes of the self-employed has fallen. It warns that, if wage rates continued their spectacular rise of recent years, it would mean real hardship for large sections of the people and that the future employment and living standards of those who sought the rise would also be endangered.

It, therefore, strongly emphasises the need for maintaining stability in prices and is opposed to the trade union demands for higher wages. The Council, however, hopes that, if any increases are granted in 1958, they will be substantially below the average of the last few years in the interest of stable currency and rising production. It also points to the possibility, or even the desirability, of a larger volume of unemployment than at present. According to it, a free and flexible economic system cannot work efficiently without a perceptible margin of unemployment. Nobody should be surprised or shocked, the report of the Council, adds, if unemployment rises above the present rate of 1.8 per cent. If it should prove necessary to take action to maintain employment, the Council thinks that this should be done by stimulating exports rather than home investments. The Council feels that, in the present circumstances, it cannot recommend physical controls over investments and prices and opposes any form of subsidies. Nor does it suggest legislation enforcing dividend limitation or repeal of the Rent Act of 1957.

It may be mentioned that the Council was meant to be a fact-finding body. There was, however, a large section of opinion in Britain which felt that the real job of the Council should not be to find out the facts, as there was no doubt that the central point about the British economy was inflation. It was suggested that the Council might do better to drive home this point to the various interests.

It will be interesting to note the kind of reception the report has had in Britain. The reaction of employers and trade unions was in line with what was generally anticipated. The former have welcomed the report in its broad outline. But labour has condemned it in the strongest terms and rejected it outright. They have termed it as a document of "outdated and discredited" views on employment and investment. This is not surprising, because every one of its pet panaceas for the current ills of British economy was rejected and the Council even expressed itself in favour of a higher margin of unemployment. In fact, the trade union leaders from the outset opposed the very idea of setting up the Council, as they feared that its purpose might be to create some kind of super wage-claims court. Mr. Hugh Gaitskell, leader of the British Labour Party, observed that the Council had produced a "political tract, not a scientific report." According to him, it would not help solve the important question of how to combine full employment, economic expansion and stable prices.

Most trade union leaders point out that the Council's advice to restrict wage increases would lead to a deterioration in industrial relations. The immediate impact of the report is expected to be on the crucial arbitration cases which will decide the key to the outstanding wage claims during the next few weeks. The most important of these cases are the London busmen's 25*s*. a week claim, the railwaymen's £48 million a year claim and the miners 10*s*. a week claim. These three are regarded as the "pace-setters" for the four million workers currently in the wage queue, with demands aggregating £250 million a year. The Government's reaction to the Council's suggestions is not known at present. It is generally thought that the recommendations are likely to strengthen the Government's determination to continue stern measures against inflation even if it means risking clashes with the trade unions.

BOMBAY BUDGET

The budget estimates of the Bombay Government for 1958-59, presented by Dr. Jivraj N. Mehta, the Finance Minister, in the Legislative Assembly on Tuesday this week, clearly indicate that the Government is quite alive, unlike some of the other State Governments, to the need for adequate and proper efforts to mobilise internal resources for implementing the Plan successfully. By proposing a few measures of additional taxation yielding a total of Rs. 3 crores, the Finance Minister has endeavoured to convert the anticipated revenue deficit of Rs. 2.01 crores for the coming year into a surplus of Rs. 99 lakhs; the actual surplus will, of course, be less at Rs. 24 lakhs, since a sum of Rs. 75 lakhs is to be earmarked for credit to the State Road Fund. Dr. Mehta must certainly be congratulated on having chosen such measures of taxation as would not adversely affect industry and trade directly. These include taxes on passenger fares, motor vehicles, motor spirit and diesel oil used as fuel, consumption of electrical energy, stamp duty on instruments used for non-judicial purposes, and duty on entertainment tax. Only the first tax is a new one. The rest represent extension of the ruling rates in the original Bombay State to the portions added to it under the Bigger Bombay State. It is particularly gratifying to note that the budget does not include proposals for agricultural income-tax and levy of tax on trade and professions.

The deficit (before tax) of Rs. 2.01 crores on revenue account expected for 1958-59 compares very unfavourably with the sizable surplus of Rs. 5.57 crores in 1957-58 (revised). The deficit has occurred despite the improvement of Rs. 2.65 crores in revenue receipts, from Rs. 117.35 crores to Rs. 120.00 crores. But the improvement has been more than offset by the appreciable rise of Rs. 10.24 crores in expenditure which in 1958-59 is estimated at Rs. 122.01 crores, as against Rs. 111.77 crores in the current year. This rise, though it is spread over a number of heads, is generally due to larger provision for both Plan and Central-sponsored schemes.

The revenue deficit of Rs. 2.01 crores has been converted, as already stated, into a surplus of Rs. 99 lakhs by additional taxation. The additional taxation takes two forms, as already stated. First, there will be the imposition of a new levy on all passengers and luggage carried by stage carriages at such rates as would yield an amount equal to 10 per cent. of the inclusive amount of fares payable, except where such stage carriage plies exclusively within a municipal area. This levy is expected to yield a total of Rs. 1.80 crore. Secondly, it is proposed to unify taxes throughout the State generally along the lines and at the rates these taxes are being levied in the former Bombay State areas. The result is as under:

	Additional yield (Lakhs of Rs.)
Unification of motor vehicles taxation ...	15
Unification of sales tax on motor spirit and high-speed diesel oil (used as fuel) up to a maximum of 20 per cent. *ad valorem*	30
Uniform application of the present rates of stamp duty (in the former Bombay State) on instruments of conveyance of urban and rural movable and rural immovable property	25
Extension of the rates of duty on use of electrical energy to all the component units of the State	25
Extension of the rates of taxation on admission to places of entertainment other than the racecourse	25
Total ...	120

The aggregate additional taxation revenue thus comes to Rs. 3.00 crores. After crediting Rs. 75 lakhs to the State Road Fund, the balance of Rs. 2.25 crores will be utilised to wipe off the revenue deficit of Rs. 2.01 crores completely. There will thus be an actual surplus of Rs. 24 lakhs.

The capital expenditure of the Bombay Government in the coming year is expected to be higher by Rs. 7.67 crores at Rs. 48.23 crores (the revised estimate for 1957-58 is Rs. 40.56 crores). This includes the expenditure met from the State Road Fund but *excludes* that on State trading schemes and provision of Rs. 21.36 crores under loans and advances. The capital expenditure, according to the Finance Minister, will be met from loans from Central Government, share in small savings, as also by withdrawal from Funds like Development Schemes, Port Development and Reserve, Milk, State Road and Sugarcane Cess Funds. Attempts, we are told, will be made, in consultation with the Centre, to meet a part of the balance from open market borrowing of about Rs. 10 crores.

The net capital expenditure for 1958-59 (that is, including recoveries on capital account which are taken in reduction of capital expenditure) is put at Rs. 39.49 crores. After adjusting the revenue surplus of Rs. 24 lakhs and the sum of Rs. 18.99 crores under debt heads (including loans from the Centre but excluding open market borrowing), the overall deficit will amount to Rs. 20.26 crores. As a result of this deficit, the closing balance (inclusive of investments in treasury bills) with the State Government will be reduced from Rs. 38.85 crores at the end of the current month to Rs. 18.59 crores a year later. The reduction will, however, be less to the extent the State Government succeeds in raising the estimated open market borrowing of Rs. 10 crores.

The aggregate capital expenditure of the Bombay Government (*including* that on State trading schemes and provision of Rs. 21.40 crores for loans and advances) is estimated at Rs. 72.23 crores. Of this amount, "capital formation on economic services" account for Rs. 62.58 crores, the balance representing "capital formation for social services" (Rs. 5.4 crores) and non-developmental expenditure (Rs. 4.3 crores). The sources from which the major portion of the capital expenditure—amounting to Rs. 61.97 crores—is proposed to be met are (in crores of rupees): revenue surplus: 0.24; open market borrowing: 10.00; small savings 10.00; Central loans: 25.36; net receipts from funds and balances: 9.48; recoveries of loans and advances: 6.89. This leaves a gap of Rs. 10.26 crores in 1958-59, as against the budgeted gap of Rs. 17 crores in 1957-58 and the surplus of a little over Rs. 1 crore in the revised estimate.

BOMBAY PORT TRUST

The implementation of Five-year Plans, involving large-scale imports of capital goods, is reflected in a considerable increase in the activities of all major ports in India during the past year. And Bombay, as the key port connecting the industrially advanced countries of the West with the East, had to shoulder more than its normal share of this vastly expanded trade. It is, therefore, not surprising that the Administration Report of the Bombay Port Trust (Chairman: Mr. L. T. Gholap) for the year 1956-57 makes interesting reading. It sets out the details of enlarged turnover and volume of work in the Port's activities during the year under report, resulting in a larger surplus revenue than was originally anticipated in the revised estimates. The weight of cargo handled at the docks and bunders at 11.98 million d.w. tons was a new record for the port, such having exceeded the 1955-56 traffic by as much as 1.67 million d.w. tons. The growth in the port's activities in the recent past can be further gauged from the fact that, as against an aggregate 5.53 million d.w. tons handled in 1937-38, the volume of goods handled in 1954-55 was 7.58 million and 10.31 million tons in 1955-56. This has again risen during the year under review to the figure mentioned above. The overseas traffic in passengers, exclusive of passengers by country craft and harbour ferries, during 1956-57 and 1955-56 was: inward 69,558 and 72,201 and outward 76,988 and 92,931, respectively. Similarly, the coasting traffic during the above periods was: inward 385,418 and 375,316 and outward 382,485 and 403,262, respectively.

The general account for 1956-57 closed with a surplus of Rs. 233.10 lakhs, as against a surplus of only Rs. 141.33 lakhs envisaged in the revised estimates. The pilotage account likewise showed a surplus of Rs. 6.78 lakhs, as compared with the estimated surplus of Rs. 4.11 lakhs. So far as the general account is concerned, the improvement over the revised budget was due to an increase of Rs. 25.70 lakhs in receipts and a saving of Rs. 66.08 lakhs in expenditure. The increase in receipts was mainly under wet docks, due to higher recoveries of wharfage, demurrage charges, etc. The saving in expenditure was the result of the slow progress of repairs and maintenance and less expenditure than anticipated on other establishments.

The year under review also saw further progress in the various development schemes carried over from the first Five-year Plan. These include (*a*) the scheme for the modernisation of the Prince's and Victoria docks, (*b*) reconstruction of transit sheds in the Prince's and Victoria docks, (*c*) labour housing scheme, (*d*) electrical cranes for Ballard Pier and Alexandra Dock, (*e*) reorganisation of the electrical distribution system in the docks, (*f*) marine oil terminal, and (*g*) telecommunications, etc. With the addition of the dredger *Mayur*, the number of dredgers with the Port Trust increased to 7 and all of them were fully employed in maintaining the approach channels, docks, harbour wall berths, etc.

It is a pity that the Chairman has been compelled to record that the labour situation at the port continued to be "unsettled and there were a number of stoppages of work, some of them on flimsy grounds." Regarding labour welfare activities, nine welfare centres were conducted by the Labour Department at Port Trust residential settlements for workmen. Indoor and outdoor games and matches were organised at these centres. Open-air cinema shows, dramas, variety programmes, socials, excursions, celebrations, demonstrations, etc., were also arranged and co-operation was extended to local groups for recreational activities. These measures are welcome. It is to be hoped they will induce the dock labour to put forth its best in the discharge of its functions.

ECONOMIC STRENGTH OF WEST GERMANY

NOTION OF HIGH PROSPERITY ERRONEOUS

By A German Financial Correspondent

IT appears that many wrong notions are current abroad about the economic and financial capacity of the Federal Republic of Germany. The Federal Government is receiving an ever-increasing number of urgent requests to assist other nations economically or financially, to extend them help on a large scale for the development of their industrial potential, to mitigate their difficulties of balance of payments by making available to them foreign exchange or to accord them some amount of direct financial relief by taking over definite obligations. Obviously, these expectations are based on the belief that the Federal Republic enjoys an extraordinarily high level of prosperity and is, therefore, more than any other European nation, in a position to give assistance. To prove the point reference is usually made to the surplus in the German balance of payments and the foreign exchange reserves of the Federal Bank, the increase in the national production since 1948 and the surplus budgets of the last few years. Upon closer examination it will, however, be found that the common belief these phenomena point towards Germany enjoying a level of prosperity well above the average is not borne out by the facts.

The current German balance of payments position, cannot be allowed to continue either from the viewpoint of Germany's trading partners or from that of the Federal Republic; the Federal Government is, accordingly, constantly endeavouring to reduce, as far as it can, the surplus in the balance of payments. It is misleading, however, to take this surplus and the foreign exchange reserves as indications of affluency. With exchange rates remaining the same, the disequilibrium in the balance of payments is an unmistakable sign that the price levels in the countries concerned have followed different courses; this is essentially due to the fact that the individual countries have tried to achieve different economic objectives by different methods which have, in course of time, brought about a notable change in the respective competitive positions of the countries in international trade. The success of the Federal Republic during the last few years in keeping the internal price level relatively stable gave it a competitive advantage which led to increasing surplus in its balance of payments. In terms of production, the export surplus represents advance deliveries of goods by Germany to her trading partners and a considerable loss to the German economy for the time being.

Balance of Payments

The external trade position of the Federal Republic does not warrant a conclusion of extraordinary prosperity being drawn; on the contrary, the accumulation of foreign exchange reserves of the Central Bank is an indication of exceptional stringency of capital in the German economy. While foreign enterprises of other countries very often invest their export earnings in their business establishment overseas, in participating financially in local business, etc., the German enterprises are normally not in a position to do the same. The capital outlay of the German exporters is generally so insufficient that they are ordinarily obliged to convert their foreign exchange earnings into German Marks immediately, so that they can carry on production; to counteract the inflationary effect of this exchange, the Federal Government has to follow a restrictive credit policy which makes the shortage of capital still more felt. Suggestions to solve the problem of the German balance of payments by capital exports are not realistic, since they fail to take into account the notorious weakness of the German capital market.

There would still be justification in considering the amount of foreign exchange reserves as an evidence of extraordinary prosperity of the German economy if the national production, i.e., the current production of goods in the Federal Republic, had reached an extent far above the average. That, however, is not the case as a statistical comparison would show. The increase in national production in the period since 1945, particularly since the currency reform, has, of course, been abnormally high; from 1948 to 1955, the increase in national production in the Federal Republic was about 125 per cent., as compared with the average of hardly 40 per cent. for all the O.E.E.C. countries. In this context, however, such a comparison, obviously, is of no value, based as it is on the figures of a year when the German economy lay absolutely shattered, as a result of the war and dismantling of factories. A truer picture will emerge if the increase in national production *per capita* with reference to the base year 1938 is considered. It would be seen that, since 1938, the population of the Federal Republic has increased by about 30 per cent., whereas the increase in population in other countries has been relatively smaller and that the increase in national production in the Federal Republic has been much less than in the other countries. The following table gives the increase in the real national production per *capita* from 1938 to 1955 in the various countries:

	Per cent.
United States	73
France	40
Italy	24
Great Britain	21
All the O.E.E.C. countries: average	25
Federal Republic only	16

The economic situation of the Federal Republic becomes still more comprehensible if national production itself, i.e., the average quantity of goods available *per capita* for consumption (i.e., expenditure) and investment is compared with the other countries. For 1956, the following are the *per capita* figures based on gross *national production* at current prices:

	Dollars
United States	2,504
France	1,180
Great Britain	1,134
Belgium	1,120
Norway	1,040
Federal Republic of Germany	877
Netherlands	754
Italy	483

And, if the figures of the *per capita* consumption (i.e., expenditure) were considered, Germany's position would appear to be still worse than it is in the case of current production; figures for various countries for the year 1956 are as follows:

	Dollars
United States	1,592
France	812
Belgium	758
Great Britain	732
Norway	635
Federal Republic of Germany	521
Netherlands	445
Italy	328

It will be seen that, so far as *per capita* consumption is concerned, the Federal Republic is far below the average. The common contention, namely, that the low rate of expenditure has enabled the Federal Republic in the last years to invest at an extraordinarily high rate and therewith to achieve the high surplus in its balance of payments, does not take into account the peculiar position of the Federal Republic during its period of reconstruction. After all, the high rate of investment was absolutely necessary to catch up with the economic development in other West European countries. As is well known, as a result of the war, a substantial part of Germany's national wealth was destroyed and the whole structure of her economy disorganised. Accordingly the standard of living of the German people had sunk to below the bare existence level. For speedy reconstruction, great effort on Germany's part was necessary to supplement the foreign aid which was extended to her.

Moreover, the large influx of refugees from Germany's eastern territories and parts occupied by the Soviet Union into the already overcrowded Federal Republic made large-scale investments necessary to create new avenues of employment. The economic rehabilitation of the displaced persons whose influx still continues gains particular importance for social and political reasons in view of the proximity of the Federal Republic to the Eastern Bloc. Also, in view of the defence responsibilities that Germany will have to undertake in future, the investments during the last few years were an absolute necessity. Without the increase in national production achieved in the past, Germany would not be in a position to bear the expenditure that will have to be incurred in future on account of the setting up of her defence forces.

Like the comparison of the figures of national production, a comparison of the national wealth of the various countries would be equally instructive. Statistical data, incomplete though, shows that *per capita* wealth in the Federal Republic is considerably less than in other countries; this obviously is explained by the destruction during the war and the loss of German property abroad.

The following table of comparative *per capita* income of the member countries of the O.E.E.C. should also help to dispel the common misconception of a comparatively high level of prosperity being enjoyed by Germany.

Per capita *income in U.S. dollars*

	1956
United States	2,043
Canada	1,458
Sweden	1,178
Switzerland	1,144
Luxembourg	1,040
France	916
Great Britain	889
Norway	874
Denmark	826
Belgium	814
Federal Republic of Germany	692
Netherlands	612
Austria	488
Ireland	434
Italy	381
Greece	257
Portugal	201

The comparison shows that Germany occupies the eleventh place and is surpassed by France by 32 per cent. and Great Britain by 28 per cent.

It may also be pointed out that, after Great Britain, the Federal Republic is the most heavily taxed country in the free world. In the year 1956, the tax burden bore the following relationship to the gross national production at current price in the various countries:

	Per cent.
Great Britain	27.6
Federal Republic	27.3
Norway	27.0
Netherlands	24.8
France	23.3
United States	23.0
Italy	19.6
Belgium	17.0

Defence Expenditure

Taking into account social insurance, which is financed to a large extent by the national exchequer in Great Britain, and in the main through contributions in Germany, the two countries lead all others. The high rate of taxation in the Federal Republic is the result of the financial consequences of the war and the extra burdens due to the partition of Germany, its geographical situation and its immediate proximity to the Eastern Bloc (Berlin, areas bordering on Eastern Germany). From 1948 to 1957, the Federal Republic has spent about 145 billion DM. on social welfare to mitigate the effects of the war. If to that is added cost of, and relating to, occupation, the expenditure connected with the war would amount to about 200 billion DM. Payments following from the war still to be made (e.g., compensation for damages, reparation) are estimated to amount to 100 billion DM. approximately. Furtherance of social justice, elimination of economic conflicts and thus increasing the internal defensive strength of the country are the indispensable prerequisites of a military contribution for purposes of defence. Leaving aside the political importance of these items of civil expenditure, the rapidly increasing defence expenditure will, in the coming years, surpass all other items of national expenditure; in 1960, the defence expenditure will amount to almost half of the total expenditure of the Federal Republic.

For all the reasons given above, it would appear that it is erroneous to consider the economic expansion, the surpluses in the balance of payments and the budgets as indication of a particularly high level of prosperity in the Federal Republic. It is only now that a hard-working nation has, after considerable sacrifice, caught up economically with the other Western nations. The upward trend of development hitherto obtained will not continue in future; the rising curve of expansion will subside. The defence responsibilities to be fulfilled during the next years will strain the German economy to the utmost. In order to balance the budgets, additional sacrifices will be needed and an intensive utilisation of the economic means available required.

Notwithstanding what has been stated above, the Federal Republic is well aware of the fact that India expects an active assistance of the German economic potential in her industrial development. The Federal Government, for its part, is deeply interested in intensifying the economic and financial co-operation with India, but feels that it must be pointed out that the German contribution can be made only according to the economic and financial capacity of the Federal Republic.

LONDON LETTER

SCOPE FOR CONFIDENCE

From Our Own Correspondent

LONDON, *22nd February*

THERE are times when one must stop looking at the endemically gloomy side of the Nation's affairs, however much more sensational these may be, and seek consolation in some of the solid aspects of the U.K.'s economic life which tend to go unsung.

In spite of the depression afflicting the Stock Markets and the impression created by the investing classes that they no longer have as much money to spend as they did, there is much satisfaction to be gained from the latest statistics of industrial production which show that 1957 ended with a higher figure of output than any previous December (the index number was 141 based on 100 in 1948 and comparing with 136 for December in the previous year). Indeed, December made a better showing than any month last year excepting June, allowance being taken of course for seasonal factors. 1957 as a whole came out with a production figure of 139½, against the previous year's 136½. We are apt to forget that to increase industrial production in nine years by 40 per cent. is no mean effort.

The figures of progress in national income and investment are always issued rather tardily hence their lack of glamour, but though we are only now getting the picture for the third quarter of last year, it is very worthwhile taking note of it. Comparing the third quarter of 1957 with that of 1956, we know that the national income was running at an annual rate approaching £19,000 million and the increase was no less than 5 per cent. but, of course, inflation was at work over the year as well and all prices rose about 3 per cent. Allowing for price increase, the increase in the national income in real terms was still about 1½ per cent.

In real terms also, expenditure by consumers and exports also rose by 1½ per cent. In *money* terms personal incomes, after allowing for rather higher taxes, increased by 4½ per cent. but expenditure lagged behind this figure by no less than some £100 million which is adequate evidence of increased savings. Independent calculations which estimate personal savings, without allowing for increases in the value of stocks and for the depreciation in property, show that savings rose by £115 million and this was coupled with a continued fall in *Government*—both central and local—expenditure.

The Story of Oil—6

A major operation

Geological and geophysical surveys provide clues to the whereabouts of underground traps which *might* contain mineral oil. But there is only one way of proving whether or not oil is actually present. And that is by drilling a test well.

With all the skill and knowledge of modern science, the odds are still 20 to 1 against striking an oil-trap which justifies the heavy costs of exploration. For example, it may cost over a crore of rupees and take years of research before success is achieved. Yet only by taking these risks will new oilfields be discovered.

Drilling a test well is a tremendous undertaking in itself, involving great quantities of machinery, equipment and supplies. A typical well (10,000 or more feet deep) would probably need: a complete drilling rig, weighing about 200 tons, 15,000 to 17,000 feet of drill pipe, 14,000 to 16,000 feet of steel casing, 60 to 100 drilling bits, 500 to 1,000 tons of drilling-mud chemicals, 2,000 to 5,000 sacks of cement, 48,000 barrels of water, and 3,000 barrels of fuel oil. In addition, at least 125 skilled personnel comprising drillers, drilling crews, geologists, engineers, cementers, electricians and other technicians would be required for drilling the well.

It can take as long as a year to drill a deep test, and the result may be that the well strikes water, not oil; or it finds only a little oil, or even turns out to be dry. Then the mass of machinery and equipment is moved to another location and drilling begins all over again.

Assam Oil A full-scale petroleum industry

BOC

FUTURES TRADING IN BULLION

"STATUS QUO" TO BE MAINTAINED FOR THE TIME BEING

THE Government of India has decided to maintain the *status quo* for the time being in regard to futures trading in bullion, after carefully examining the recommendations of the Forward Markets Commission. The Government, which announced its decision last week, has not assigned any reasons why the existing arrangements should be allowed to be continued for the time being and why it does not desire to disturb the same. The wording "for the time being" in the Government's announcement, however, suggests that the Government has not altogether rejected the Forward Markets Commission's recommendations and it may take up the question again after some time. It is inexplicable as to why the Government has taken nine months to arrive at this decision.

The Commission itself took fifteen months to conclude its enquiry and submit its findings. It was in February 1956 that the Commission commenced its enquiry—the two main issues which it was asked to deal being (1) whether futures trading in the country was at all necessary and (2) the centres at which and the associations through which the futures trading (if found necessary) should be conducted. The report of the Commission was forwarded to the Government of India in May 1957. The Commission, after sifting the evidences both in favour and against futures trading in bullion, has come to the conclusion that "the advantage is, on balance, in favour of permitting futures trading in bullion on a limited scale, even if the case in its favour might not be as strong as in the case of agricultural commodities. The requirements of the situation would, however, be adequately met by providing the necessary facilities only at a limited number of centres and there was no need for continuance of all the markets in existence at present."

Commission's Recommendations

Accordingly, the Commission recommended that:

(1) Sections 15 and 18(3) of the Forward Contracts (Regulation) Act, 1952, might be applied immediately to gold and silver throughout the country, excepting the cities of Jaipur, Delhi and Calcutta, where these sections might be made applicable a few months later to enable existing associations to reconstitute themselves.

(2) Futures markets in respect of gold and silver might be established at Bombay and Delhi and in respect of silver only at Jaipur and Calcutta.

(3) Formal recognition might be granted under Section 8 of the Forward Contracts (Regulation) Act, 1952, to the Bombay Bullion Association Ltd., Bombay, in respect of gold and silver, and to the Bullion Association Ltd., Jaipur, in respect of silver only, when Section 15 was subsequently applied to Jaipur.

(4) The recognition of both these associations should be for a period of three years.

(5) Shri Mahalaxmi Bullion Exchange Ltd., Delhi, and the Calcutta Bullion Association, Calcutta, might be given an opportunity to reconstitute themselves into strong and representative associations on the lines indicated by the Commission within a period of three months, with a view to the eventual recognition to them under Section 6 of the Forward Contracts (Regulation) Act, 1952, in respect of gold and silver for the former and silver only for the latter.

The Commission is convinced that, if non-transferable specific delivery contracts in respect of gold and silver were permitted freely even after the application of Section 15 of the Forward Contracts (Regulation) Act, 1952 to these two metals, as is customary, it will give an impetus to the non-recognised associations to resort to illegal futures trading and would weaken the recognised association. Consequently, the Commission submits that the situation warrants the application of Section 18(3) of the Act to gold and silver, simultaneously with the application of Section 15 of the Act to these two commodities. After the recognised associations have been well established and trading has been properly organised, the Commission recommends, the question of the withdrawal of Section 18(3) of the Act in particular areas can be considered, if necessary.

India is the only country in the world where futures trading in gold and silver is carried on and is very popular, judging from the large number of centres where associations, small and large, are engaged in this type of business. At present, futures trading in bullion, in respect of both transferable and non-transferable specific delivery contracts, is permitted freely all over the country, except in the city of Bombay, where it is being regulated under the Bombay Forward Contracts Control Act, 1947. Futures trading in bullion is being carried on for many years past. Forward contracts in these two precious metals first came to be regulated in May 1943, when, under the powers conferred by Section 2 of the Defence of India Act, 1939, the Central Government notified that the date of delivery of bullion in a forward contract should not be later than 12 days from the date of the contract. This time interval was subsequently reduced to 5 days in August 1943 and still further to 2 days in September 1943, but was again increased to 7 days in January 1944. The restriction was, however, lifted with effect from 25th January 1946 and trading was again freely permitted thereafter.

The Bombay Forward Contracts Control Act, 1947 came to be applied to bullion in the city of Bombay in December 1948. Under the Act, all forward contracts in bullion, other than those entered into by, through or with the members of an association recognised under the Act, were made illegal. The Bombay Bullion Association Ltd. was the only association which received recognition in January 1949.

Need for Continuance

Although futures trading is prevalent in India for many years past, the need for its continuance has been the subject of controversy, particularly because it is prohibited in other countries of the world. This question was, therefore, discussed at some length by the Forward Markets Commission. In the first place, the Commission undertook a study of the question whether bullion fulfilled the principal requirements for the successful operation of a futures market and found that it satisfied most of these requirements. Thus, the Commission says in its report:

"First, there is a considerable amount of inter- and intra-State movement of bullion, because the seasons of its demand and supply vary in different parts of the country. In the country as a whole, therefore, there is a continuous trade in both these metals. Secondly, the jewellers, the *varakh* and *jari* manufacturers, and the dealers are required to hold large stocks of bullion to meet the seasonal demand and to absorb the seasonal supply, and need hedging facilities to cover their risks. Thirdly, the existence of a large number of futures markets in respect of gold and silver show that numerous professional operators are available to deal in these commodities and to bear the risk involved. Fourthly, bullion is one of the most standardised of all commodities and does not suffer from the complications created by varieties and sub-varieties. Lastly, the two metals combine large value with small bulk, reducing the problems of warehousing and transport to a minimum."

One of the main arguments in favour of abolition of futures trading in bullion is that the internal production is too meagre to allow the smooth working of a futures market. It is argued that an adequate volume of internal production should be regarded as an essential requirement of futures trading and that bullion does not fulfil this requirement. Since internal production of bullion is negligible and a very large proportion of the internal stocks are privately hoarded, it is pointed out, the market has to depend only on such stocks as might be dishoarded from time to time, and these are not adequate for the smooth working of a futures market.

Supply

Before going into the Commission's reply to this argument, it may be useful to analyse the supply position. The production of gold in India in the year 1956 amounted to 200,000 fine ounces, and formed only 0.71 per cent. of the total free world output at 28.1 million fine ounces. This represented a fall of 23,000 ounces from the production in 1953, consequent on the closure of the Oorgaum Gold Mines in Mysore in that year and the temporary closure of mining operations in 1955 due to labour troubles and the low grade of the ore mines. The production of silver in India during 1956 amounted to about 105,000 ounces and formed no more than 0.05 per cent. of the free world output of 230 million ounces.

Under the Foreign Exchange Regulation Act 1947, the import of gold is permitted only with the general or special permission of the Reserve Bank of India. The Reserve Bank has occasionally granted, under certain conditions, general permission for importing gold for purposes of transit, but no special permission to import gold on a commercial scale has so far been granted. Thus, the import of gold has been negligible as compared to the floating stocks in the country. Import of silver has also remained greatly restricted. In May 1956, however, with a view to facilitating Indo-Tibetan trade, the Government of India freely licensed the import of Tibetan silver coins against export of goods from India. The quantity of coins thus imported up to April 1957 is estimated at 20,000 bars. While import of gold through authorised channels has been practically nil during the past few years, unauthorised arrivals have been on a large scale, as the cost of foreign gold even after payment of heavy import duty is still below the Indian price and this has provided a strong incentive for smuggling. The value of gold smuggled into India is estimated roughly between Rs. 30 to Rs. 40 crores per annum. In the case of silver the incentive for smuggling is low, as the difference between the internal and external prices is small, after taking into account the heavy cost of transport. Thus, the trading in bullion depends for its supply of metals on internal production and existing hoards, as also on smuggling in the case of gold (which, however, has greatly dwindled in the last two or three years) and on imports of silver coins from Tibet.

Argument Dismissed

The Commission has dismissed the argument that an adequate internal production of gold and silver is a pre-requisite for the successful working of futures trading in the two metals. Thus, it says:

"The volume of internal production is important only because it alters, from year to year, the size of the stocks available for purchase of sale in the market and adds to the uncertainty in regard to the course of prices. From the point of the successful functioning of a futures market, it is, therefore, not the volume of internal production which is important, but the volume of marketable stocks of the commodity. In the case of bullion, appreciable stocks of both gold and silver appear to be always available in the market, despite the small volume of internal production and the large volume of hoarding, and the non-perishable nature of the metals enables the same stocks to be offered for purchase and sale over and over again. Since there are no restrictions on buying or selling bullion internally, the actual supply in the market fluctuates from day to day, depending on social and economic factors. The prices, consequently, move over a fairly wide range and the dealers and stockists seek to reduce their risks and safeguard their position by operations in a futures market. The Commission feels, therefore, that the lack of an adequate volume of internal production could not be a decisive ground for prohibiting futures trading."

Several other arguments are also advanced against permitting futures trading in bullion. First, the existence of futures trading, it is said, gives rise to excessive speculation and gambling and the existing associations are alleged to have mismanaged their affairs, involving their members in financial difficulties. In reply to this contention, the Forward Markets Commission says that "the evils of excessive speculation and gambling are not limited to futures trading in bullion alone and the Forward Contracts (Regulation) Act, 1952 was enacted precisely for restraining these evils and for confining futures trading within the limits in which it can perform an economic service to society." The Commission goes on to add that "the failure of some of the existing associations to manage their affairs on proper lines is also an argument for bringing them under regulation rather than for imposing a total ban on futures trading."

Other Arguments

The other arguments against futures trading are: (1) Futures markets act as an incentive to the hoarding of bullion, preventing thereby the investment of resources in developmental activities; (2) the existence of futures markets leads to the smuggling in of bullion, particularly gold, and (3) if the rest of the world can do without a futures market in bullion, there is no reason why such a market should be permitted in India. Replying to these arguments, the Commission says:

"The Commission is inclined to believe that the tendency to hoard bullion follows from a number of factors, amongst which the existence of a futures market is by no means the more important one. While the Commission is anxious to ensure that every step is taken to discourage the hoarding of bullion in the present stage of our economic development, it is also impressed by the considerations that the large numbers of people in rural areas who hold their meagre savings in gold and silver ornaments should not be put to loss when they have to dispose them off in times of depress.

"With respect to the smuggling in of bullion, the Commission is inclined to believe that its volume is not significant as compared to the float-

CAPITAL FORMATION IN CORPORATE SECTOR

HEAVY RELIANCE ON INTERNAL RESOURCES AND BORROWINGS

THE year 1956 was an important landmark in the industrial development of India, in that it constituted the first year of the second Five-year Plan, with its large emphasis on the industrialisation of the country and its programme for a fresh outlay of the order of Rs. 1,094 crores on the same, as against a new investment amounting to Rs. 327 crores envisaged under the first Five-year Plan and an actual outlay of only Rs. 293 crores. There was also an overall sharp rise in industrial production in that year, as indicated by the jump in the index number of industrial production (base 1951=100) from 122.1 for 1955 to 133.0 in the year under review. For many industries, it was a record year of production.

To take the industrial development in the private sector alone. The second Plan, as originally drawn, provides for a fresh outlay of Rs. 570 crores, in addition to an investment of Rs. 150 crores on replacement of plant, making a total outlay of Rs. 720 crores. This represents an average annual investment of the order of Rs. 144 crores. It is stated that, as against this proposed investment, the actual investment by the private sector during the first year of the second Plan amounted to Rs. 140 crores. The outlay in the public sector on development amounted to Rs. 761 crores. No official details of the sources of financing the large outlay in the public and private sectors are available yet.

A few months ago, the Reserve Bank of India made an analysis of the balance-sheets of 750 public limited industrial concerns relating to the six years 1950-55, which threw a flood of light on the manner in which the various industries were able to secure the finance they needed for both short-term and long-term purposes. The analysis disclosed that the brunt of providing industrial finance was borne by the companies' internal savings, namely, depreciation reserves, general reserves, taxation reserves, etc., these accounted for 60 per cent. of the total capital formation during the period. Borrowings came next with a contribution of 20 per cent., while the issue of share capital constituted a fraction (7 per cent.) of the total outlay. The aforesaid analysis brought out clearly the difficulty of even well established industries in raising fresh capital in the market for financing their development during the first Plan period. It was also found that the reliance on internal resources and borrowings brought a severe strain on the companies.

A fresh analysis of the balance-sheets of 513 public limited companies, whose accounts related to the periods ended during July 1956 to June 1957, made by the Reserve Bank and contained in the January 1958 issue of the Bank's *Bulletin*, shows that the problem of financing industrial development was no different during the first year of the second Plan period from that experienced in the first Plan period. Thus, fresh capital issues continued to contribute but a fraction of the total outlay during the year, while the other sources of finance, which are not normally utilised by companies to provide long-term finances, came again under severe strain. Such a trend poses an important question, namely, how long can the corporate sector continue to finance their development through borrowing? The position could not have been far different during 1957, considering that incentive for capital formation was completely sapped by the Government's fiscal policy. In the circumstances, it is not surprising that certain industrial houses have started calling for fixed deposits from the public by offering attractive rates of interest.

The companies chosen for the analysis can be taken as fairly representative, inasmuch as they account for 50 per cent. of the public limited sector, from the point of view of paid-up capital and total net assets. The Reserve Bank's study excludes financial institutions, Government companies, companies limited by guarantee and non-profit associations. The statistical analysis of capital formation in selected industries during the year is given at the foot of this page.

The Reserve Bank's analysis is not an exhaustive one giving the sources of finances of these companies. It, however, provides sufficient data to indicate the extent of capital formation and to show that the companies have had to find the bulk of their development finance from internal sources and borrowings. The Reserve Bank's study discloses that the private corporate sector continued to spend heavily on acquisition of fixed assets, especially on plant and machinery, and that a considerable part of the funds was locked up in current assets, that is, inventories, sundry debtors, etc. The rate of expansion in 1956 was exceptionally high as compared with any of the post-war years and most of the major industry-groups contributed to this accelerated growth of the industrial sector.

The total net assets of the 513 companies amounted to Rs. 1,060.5 crores in 1956, as compared with Rs. 889.9 crores in the previous year, thus recording an increase of 19.2 per cent. Of the increase of Rs. 170.6 crores in total net assets, which represents the total net capital formation during the year, as much as 50 per cent. is accounted for by cotton textiles, iron and steel and petroleum refineries alone, the aggregate rise in total net assets of these three groups of industries being Rs. 85.6 crores. The other noteworthy instances of industries where capital formation has been sizable are sugar (with Rs. 5.9 crores), jute textiles (Rs. 6.4 crores), transport equipment (Rs. 14.8 crores), machinery (Rs. 13 crores), cement (Rs. 5.8 crores), electricity (Rs. 3.9 crores), trading (Rs. 3 crores) and shipping (Rs. 6.5 crores). The only two industries where there has been a decline in total net assets are match industry (to the tune of 12.9 per cent.) and construction industry (10.7 per cent.).

The Reserve Bank's previous study relating to the first Plan period (contained in the September 1957 issue of the *Bulletin*) had shown that, during the five years, the corporate sector spent as much as 60 per cent. of the total capital formation on acquisition of fixed assets. This tendency to spend heavily on fixed assets not only persisted in 1956 but was on an exceptionally large scale. Thus, during the year under review, the gross fixed assets of the 513 companies amounted to Rs. 717.9 crores, as compared with Rs. 614.3 crores in 1955. This represented an annual rate of growth of 16.9 per cent. in 1956, as against 10.8 per cent. in 1955 and 8.3 per cent. in the first Five-year Plan period. Manufacturing industries recorded a very high rate of capital formation, while plantation companies and mining and quarrying companies showed a relatively lower rate. Iron and steel industry accounted for the largest investment on the fixed assets during the year, at Rs. 32.4 crores or a rise of Rs. 32.1 per cent. This outlay compares very favourably with the aggregate addition to fixed assets of Rs. 38.4 crores during the five years 1951-55. Cotton textile industry added Rs. 17.5 crores (an increase of 11.2 per cent. over the year) and petroleum industry Rs. 12.4 crores (or 33.4 per cent.). These three industries alone, thus, accounted for over 60 per cent. of the total gross investment on fixed assets by all industries represented by the 513 companies. It will be of interest to note that, among the major industries, the coal industry accounted for the lowest rate of gross fixed assets formation.

Out of the total gross fixed assets formation of Rs. 103.6 crores during 1956, investments in plant and machinery alone accounted for Rs. 74.7 crores or 72.1 per cent. The rate of increase in plant and machinery (gross) was 19.5 per cent. during 1956, as compared with 13.1 per cent. in 1955 and 9.6 per cent. during the entire first Plan period. The largest investment in this main fixed asset was made by the two iron and steel companies, which spent no less than Rs. 26.8 crores during the year. Cotton textile industry made an addition of Rs. 13.2 crores to its plant and machinery and petroleum refineries Rs. 10.3 crores.

The net fixed assets formation, the most significant indication of industrial expansion, recorded a phenomenal rate of 23.8 per cent. in 1956 (that is, from Rs. 341.4 crores to Rs. 422.7 crores), as compared with 13.9 per cent. in 1955 and 8.0 per cent. in 1951-55. The two iron and steel companies and the petroleum refineries were responsible, to a substantial extent, for the high rate of net investment of all industries put together.

The other assets of the 513 companies (the difference between the total net assets and the total net fixed assets) amounted to Rs. 637.8 crores in 1956, as compared with Rs. 548.5 crores in the previous year, plus showing an increase of 16.3 per cent. The growth of these assets, comprising business inventories, debtor balances, investments and cash, was only slightly lower than that (16.9 per cent.) in fixed assets.

As already pointed out, the study is not a detailed one, in that it does not provide a full account of the methods of financing the investment programmes. One, thing however, is clear from the available data; that is, the bulk of the funds have been found from depreciation reserves, retained profits and borrowings, while the contribution by share capital was relatively very small. Thus, the increase in paid-up capital was of the order of only Rs. 25.1 crores or 8.5 per cent. If the capitalisation of reserves made during the period is excluded (the separate data for which are not available), the rate of increase in capital would be still lower. Depreciation reserves contributed Rs. 22.3 crores. Thus, out of the total capital formation of Rs. 170.6 crores, increase in share capital and depreciation reserves accounted for only Rs. 47.4 crores. Obviously, the balance must have been found from retained profits and borrowings, as was the case during the first Plan period.

Capital Formation in Selected Industries During 1956

ESTIMATED U.K. EXPENDITURE

The British Government's total net estimates of expenditure for the coming financial year will amount to £4,260 million, according to a statement circulated by the Chancellor of the Exchequer, Mr. Derick Heathcoat Amory, on 18th February in answer to a parliamentary question. The figure excludes the Post Office estimate, which covers self-balancing expenditure. Mr. Heathcoat Amory has emphasised in his written answer that the total net estimates give effect to the Government's determination to insist on the greatest practicable economy in public expenditure, and, in fact, some cuts appear to have been made since the resignation of Mr. Peter Thorneycroft from the post of Chancellor of the Exchequer. They have, however, only marginally affected the grand total.

The two largest elements in Government expenditure are defence and social services, and it is in the latter field that the estimates for the coming year show material increases—in particular for education, health services, and National Insurance.

WAGES FOR COTTON MILL WORKERS—II

ANY CHANGE IN PRESENT LEVEL MUST BE RELATED TO RISE IN PRODUCTIVITY

LAST week, we referred in these columns to the "grave doubts" of the cotton mill industry whether it would be able to sustain even the existing level of wages, let alone an increase in that level, as brought out by the Millowners' Association, Bombay, in its memorandum submitted to the Central Wage Board for the Cotton Textile Industry. It is now proposed to deal with the Association's observations on the present wage structure of the cotton industry judged against the background of the general economic conditions and with reference to productivity.

The Association has sought to emphasise that an important enquiry such as the one relating to wages of nearly 800,000 workers has to take into account the economic conditions in the country and the requirements of development planning. Cotton mills constitute the single largest employers among the organised industries sector and, as the mills are scattered all over the country, any wage adjustment in this industry is bound to have wide repercussions on wages of all other industries. "Any increase in wages in the cotton textile industry," to quote the Association, "will make cloth dearer for the consumer and will raise the cost of living and with it the quantum of dearness allowance, even if one ignores the disappointment and resentment that will be caused to the general public who will not be able to purchase adequate quantities of cloth, in spite of a rise in national income." Further, an increase in wages for cotton workers will adversely affect the competitive capacity of Indian cloth in world markets which are tending to become more and more competitive. Incidentally, it must be borne in mind that cotton textiles constitute one of the staple earners of foreign exchange for the country. Alluding to this aspect, the Association has done well to draw attention to the following state of affairs:

"Indian mills are finding it extremely difficult to export goods in competition with Japan, the U.K. and Hongkong, because of a higher cost of production. Indian mills have an advantage over their competitors of cheaper cotton used in coarse and medium varieties, but even that advantage has narrowed down considerably, due to a rise in the price of Indian cotton, and what little margin is left is almost wiped out by our higher cost of production. Any further increase in cost will prove disastrous for the industry's efforts to earn foreign exchange."

There is considerable force in these observations of the Millowners' Association, as also in its view that, as compared with the average *per capita* national income, the wages of cotton mill workers, especially in Bombay, are disproportionately high. The annual income of an average working class family in the Bombay cotton mill industry comes to Rs. 2,046, as against the income of Rs. 1,088 for a family of four on the basis of the *per capita* income of Rs. 272. It must be noted here that the wages of the Bombay cotton mill worker have not remained static since the award of the Industrial Court regarding standardisation of wages in 1947, but have been continuously rising, as the figures below will show:

	1946 Rs.	1957 Rs.	December 1957 Rs.
Average basic wage ...	34.50	49.56	49.56
Average dearness allowance	35.37	74.09	81.11
Total ...	69.87	123.65	130.67

Apart from the increase in wages, the mill workers have been granted several other benefits such as employees' provident fund, retrenchment and lay-off compensation, improvement in working conditions under the Factories Act, introduction of schemes of gratuity, employees' State insurance scheme and paid festival holidays. The extent to which all these benefits have imposed a financial burden on the mill industry is indicated below:

	Cost per month per worker Rs.
Employees' State Insurance employers' contribution	1.50
Bonus	7.50
Provident fund	7.50
Gratuity	3.12
Leave with pay and four paid festival holidays	7.25
Retrenchment and lay-off compensation	5.75
Total ...	32.62

It will thus be seen that the monthly earnings per worker, together with the direct and indirect benefits, aggregate about Rs. 163.29 (December 1957) for 26 days. Indeed, the Association says that the average wage of the Bombay cotton mill workers is easily the highest as compared with wages of cotton mill workers in other centres of the industry and, with the exception of three or four industries, compares favourably even with such industries as engineering, petroleum, electrical machinery manufacturing and basic metal industries which employ highly skilled labour.

The increase in the general level of wages has been due to three factors. These are: (1) Extension of the standardisation of wages scheme to certain occupations which were included in Schedule III by the Industrial Court and which were given percentage increases; (2) improvement in the average monthly earnings of piece-workers during the period 1947-56 and introduction of standard piece rates for drawers-in, warpers and for certain types of reeling; and (3) fixation of rates of wages for workers in rationalised occupations and for workers working on new machines such as Barber-Colman, winding and warping machines, automatic looms and high-speed winding. While considering the third factor, it is important to note the following outstanding features:

Wage increases have been granted on a liberal scale in agreement with the Union.

There has been no increase in the workload of workers concerned. If at all, there would be some reduction.

With more mechanised machinery, less skill is required and, in many cases, wage increases had to be given on psychological grounds. Wage increases have been given to workers who have directly contributed to increased productivity and also ancillary labour working along with the workers in special occupations. In other words, the industry has shared the benefits of new improvements and productivity with the workers on a very liberal basis.

It is important to note that average monthly basic wages of occupations—rationalised and newly introduced—(covered in factor 3 work out at Rs. 61.62). The number of workers as stated above is only 10,283. If an average basic wage was worked out for only rationalised occupations in the industry, including four-loom and six-loom weavers, it comes to Rs. 69.50.

Commenting on the aforesaid three factors, the Millowners' Association observes:

"Of the three factors mentioned above, the first one has ceased to function, that is to say, standard rates have been fixed for all the occupations which were originally included in Schedule III of the Industrial Court's award. There is limited scope for further increase in the average earnings of piece-workers and, therefore, this factor will not help to raise the general level of earnings in the industry. It is the third factor which is very important from this point of view. Bringing in more occupations under the new scheme such as those of oilers, banders and card tenters would certainly raise the general level of wages in the industry."

The Association next stresses the fact that the wage increase since 1947 has been more than that warranted by the estimates of rise in labour productivity. It is calculated that the quantity of cloth produced per man-hour has gone up from 2.81 yards in 1948 to 3.24 yards in 1956, representing an increase of 15 per cent. But this increase is due primarily to improvement in working conditions, introduction of new machines, which require less number of workers and give more output, and changes in the character of production. If allowance is made for these factors, the 15 per cent. increase in productivity errs on the high side. "The increase in productivity," to quote the Association, "is not a measure of increase in workload, as a large portion of the improvement can really be attributed to the introduction of modern machinery. In fact, there has been a diminution in the work-loads, particularly of those who are working on the modern machines."

On the question of productivity, the Millowners' Association points out that, where increases in productivity are the direct result of greater effort on the part of workers and their acceptance of an increased workload, there should be a compensating upward revision in their wages, but, when higher productivity is not at all the direct result of workers' efforts, the workers cannot claim a disproportionately large share of the benefit of increased productivity. This benefit must be divided equitably among the worker, the management and the consumer. A proper share to management is essential to pay for the cost of creating the conditions which make increased productivity. It makes a special mention of the latest move of the Bombay cotton mill industry to share benefits of productivity with workers by introducing new systems of workload assessment and at the same time not disturbing the existing practices in different mills. The Association concludes that the wage level should not be a static one and that any changes in it should spring from improvement in productivity. It urges that the policy adopted by the cotton mill industry is a rational one and should be pursued with more vigour in order to raise the general level of wages in the industry.

From A Special Correspondent

MANCHESTER, 18*th February*

MANCHESTER LETTER

NOT only national but local interest has been centred on the result of the by-election in Rochdale in the heart of the cotton textile belt where the Government suffered a severe reverse. The Conservative candidate, far from holding the seat, was third in the poll being beaten by the Labour and Liberal representatives. "The Government has been warned"—that was the message from the Rochdale cotton employers after the result of the by-election was announced. Whether the abstention, or even active opposition, of a number of local textile traders had any marked effect on the polling or not, the disastrous drop in the Conservative vote was a certain indication of dissatisfaction with existing policies. The opportunity to show political reaction to the Government's languid attitude towards Lancashire's problems has not arisen before, but, if Rochdale is to be taken as an example, the voters of the country will take matters into their own hands when given the chance. Unhappily, the alternatives do not offer much encouragement.

Rigidity of controls, imposition of unimaginative restrictions and failure to appreciate the fundamental problems of the business man are all features of the Labour Party's plans. Keen opposition to all forms of restrictive practices, including the industry's price regulation schemes, is a major plank in the liberal programme.

Governments, of whatever political belief, are unlikely in the near future to relinquish their grip on economic developments and industrialists and workers will meet more interference in their affairs rather than less. In the case of Lancashire textiles, it may well be a matter of "out of the frying pan into the fire," whatever the result of the forthcoming electoral battles.

More Import Arguments

Now that imports are playing almost as important a part as exports in Lancashire's trading circumstances, it is scarcely surprising that new aspects of the situation appear nearly every week. Most of the arguments, both in favour and against the system of permitting duty-free imports, have been drained dry with continuous discussion, but there are still issues to be settled and points to be considered.

One of these is the restriction on the re-export of Japanese grey cloth to specific markets. This arrangement was introduced in a very different set of circumstances to those now ruling, when, soon after the war, Lancashire had the utmost difficulty in meeting her commitments to a number of Colonial and Empire territories, chiefly in Africa. What began as a temporary measure to cover particular needs has now grown out of all recognition. As the Cotton and Rayon Merchants' Association has pointed out to the authorities, no such restriction applies to Lancashire's Continental rivals, who are thus in a favourable competitive position. There will be widespread interest among producers and distributors on the outcome of the representations which have been made for the removal of this discriminatory system.

Meanwhile, the Government appears to be making plans in readiness for any possible agreement which Lancashire trade leaders can reach with their opposite numbers in Commonwealth countries as to a voluntary limitation on imports. Despite the fact that the response from the Indian sub-continent seems luke-warm in the extreme, organisations in Lancashire have been asked to draw up a scheme for dealing with a restricted inflow of cloth from abroad.

Employment Situation

Unemployment in Lancashire, Cheshire and the High Peak of Derbyshire is at its highest level since May 1953. The latest figures issued by the Ministry of Labour show that, following the customary seasonal trend, the number of unemployed rose by nearly 10,000 in the month to mid-January to a total of 58,657. The figure 12 months ago was 51,088 and, in May 1953, it was 60,646. The number of wholly unemployed adults rose last month by 6,451, including 5,636 men. Nearly half this increase was in the building and distributive trades, but most other industries were affected to some extent.

More short-time working was reported from the cotton, steel, and shoe and slipper industries and the register was swollen by 2,356 Christmas school leavers who had not taken up employment when the count was taken. Unfilled vacancies in the region number 29,659—one job for every two unemployed in the region.

Despite uncertainty and continued contraction in the Lancashire textile industry, many school leavers still take mill jobs; a reflection, perhaps, of the confidence Lancashire itself still retains in its future. Of the 9,900 pupils who left secondary modern schools in the principal cotton towns at the end of the Christmas term, 1,073—equal to 10.9 per cent.—started work in the mills during December and January. This compared with a percentage of 10.3 at the mid-summer term and 10.1 at the Easter term.

Collaboration Needed

An intensification of the co-operation between employers and workers to improve the operating efficiency in Lancashire mills was called for in Manchester by Mr. H. Pemberton, President of the Bolton Master Cotton Spinners' Association. If the industry was to progress, changes must be accepted and welcomed, he told the annual meeting. Thinking must be flexible and there must be a determination to try new methods; this appealed to employers as well as operatives. There was a far greater willingness than ever before to examine new proposals from the point of view of what was best in the long term interest of all connected with the trade.

"The trade unions and their members need not fear that arrangements modifying existing systems of work or weekly hours will jeopardise in any way what they consider to be their hard-won improvements in conditions," said Mr. Pemberton. "They are quite capable of protecting their own interests, but our joint concern must be to see that employment is available under fair and reasonable terms."

Synthetics in 1957

Although output of man-made fibres in this country increased by 3 per cent. in 1957 as compared with the previous year, there was a significant decline in production in each of the last two months of the year. Over the whole period, the quarterly average output was 124,000,000 lbs., a gain of over 3,000,000 lbs. per quarter on 1956 and 6,000,000 lbs. per quarter up on 1955.

Deliveries of continuous filament yarn also declined in the final quarter of last year, mainly as a result of smaller takings by the weaving industry. In contrast, supplies absorbed for industrial purposes actually rose by 16 per cent.

Staple fibre deliveries towards the end of 1957 also began to fall away. As compared with the same period 12 months previously, both cotton and woollen spinning mills took much small quantities, but other spinning systems accounted for an increase in takings. During the quarter deliveries to all sources amounted to 62,403,000 lbs., as against 68,154,000 lbs.

Rivalry in Furnishings

The important contribution to the export trade provided by furnishing cloths is stressed in the annual report of the Furnishing Fabric Federation. Competition must be faced, despite everdiminishing margins of preference with powerful Continental rivals, a situation which is only too common in many different branches of textiles. What many interests outside textiles seem to forget is that Lancashire's once vast overseas trade was based on a flourishing home market and should its foundations be destroyed by imports or other threatening factors, the whole edifice would undoubtedly crumble away.

The attention of many organisations representing traders who deal in overseas markets is frequently taken up these days in opposing applications for more protection made by textile producers in foreign lands, many of which have been substantial importers in the past. The report of the Furnishing Fabric Federation, while recognising the need for these countries to develop secondary industries, is critical of the breadth and level of protection asked for, which is "generally out of all proportion to their just requirements."

Calls for safeguards of this kind have lately become more frequent, especially in some of the larger Commonwealth markets. Australian producers have sponsored a claim, while import restrictions imposed by New Zealand from the end of last year are likely to cause some reduction in Lancashire's shipments to that important market.—*All Rights Reserved.*

STEPPING UP COTTON PRODUCTION

ROLE OF RESEARCH AND EXTENSION SCHEMES

THE need for concerted efforts to bring home to the cultivators the imperative necessity for adopting the latest methods of tillage, manuring, plant protection, etc., so as to improve output and yield per acre was stressed by Mr. A. P. Jain, Union Minister for Food and Agriculture in his address to the Seventy-seventh meeting of the Indian Central Cotton Committee held in Bombay on the 21st inst. Mr. Jain said that this could be done by practical demonstration of the superiority of such methods on cultivators' own fields. He rightly pointed out that only through improved yield could the target for cotton in the second Plan be achieved, as expansion of land under cotton would not be possible, except in Project areas. The cultivation of cotton under irrigated conditions, he added, would provide the means to increase the yield but such area was limited and formed only 10 per cent. of the total area under cotton. The emphasis should, therefore, be on yield. Given proper facilities, encouragement and right guidance, it was possible to augment production. The crux of the problem, according to the Minister, lay in the approach made to the cultivators. The improved methods recommended to the farmers should, according to him, be such as would be well within his capacity to adopt.

Emphasising the role of research, the Minister pointed out that there was no gainsaying the fact that, unless research and extension went hand in hand, progress would be retarded. He added that this matter was engaging the attention of the Government of India and the need to link up research with extension was also being impressed upon the State Governments. A Co-ordination Committee at the Ministerial level was also formed between the Ministries of Food and Agriculture and Community Development. The Central Cotton Committee had also constituted an Agricultural Extension Sub-Committee to make available the results of research to farmers.

Less Dependence on Imports

The Minister expressed the hope that, as a result of the research and development work being carried out by the Committee in the evolution and acclimatisation of longer staple cotton, superior foreign cotton, which were now being imported would, before long, be substituted by indigenous growths. At present, cotton of staple length 1-1/16" and above was allowed for import from the U.S. under the aid programme and imports from sterling area were confined to cotton of stapling 1.3/16" stapling and above. The staple length stipulation, the Minister said, was made with a view to encouraging the indigenous growth of cotton of stapling 1.1/16" to 1.3/16". Superior varieties approximating these standards were M.C.U1 and M.C.U2, already under cultivation in Madras, Indo-American strains 170-Co.2 and 134-Co. 2-M etc. The successful acclimatisation of Sea Island Andrews in Kerala clearly indicated, said Mr. Jain, that the country's dependence on Sudan and Egypt for 1.3/16" and above cotton could be reduced.

Mr. Jain also underlined the need for developing the facilities for marketing cotton. He pointed out that distress selling was still prevalent among cotton growers as they were always in need of ready cash. The National Co-operative Development and Warehousing Board and the Central Warehousing Corporation, he added, were designed to provide the much needed help to cultivators. The Minister said that it was proposed to grade the produce stored in the chain of warehouses to be constructed and issue receipts to the producer which could be discounted like any other negotiable instruments. The Minister said that the question of making available cleaner and purer cotton was as important as ensuring adequate supplies. Complaints were often heard of mixing cotton, watering of lint, etc. Several legislation had been passed in the various States. The Committee had also appointed Liaison Officers, who, the Minister hoped, would explain to the owners of ginning factories the provisions of the law and persuade them to abide by them.

Plan Target and Production

Presiding over the conference, Dr. M. S. Randhawa, President of the Committee reviewed the working of the Committee. Referring to production of cotton during the 1957-58 season, he noted that it fell below the plan target by 2 lakh bales. The target for production of cotton for 1957-58 was fixed at 54 lakh bales under the second Plan. Production for the year was estimated at present around 52 lakh bales. This was an improvement, as compared with the figure of 50.8 lakh bales in 1956-57. Unfavourable seasonal conditions were responsible for this shortfall below the target, particularly in Gujerat where the crop suffered as a result of prolonged drought. The measures being taken for increasing the production of cotton, Dr. Randhawa said, were extension in area, use of improved seed, application of manures and fertilisers, adoption of plant protection measures, provision of irrigation and adoption of improved cultural practices. The area was proposed to be extended by 464,000 acres, while the achievement reported was 377,000 acres. In Marathwada and Vidarbha regions of Bombay State, arrangements for the distribution of improved seeds were unsatisfactory. In Marathwada, the target for distribution of improved seed was 252,000 maunds, while the quantity distributed was only 46,387 maunds. For Vidarbha region, the target was 167,320 maunds while only 37,670 maunds were distributed. Similarly, in Mysore while the target was 225,500 maunds, only 117,043 maunds were distributed. In other States, particularly Punjab, Rajasthan and Bombay region of Bombay State, this work was satisfactory.

Irrigation

Reviewing the progress of irrigation, Dr. Randhawa said that the target for area to be provided with irrigation facilities had been fulfilled in the Bombay State. In Mysore, while an area of 105,000 acres was to be irrigated, irrigation was provided only to 32,999 acres. The total area under irrigated cotton throughout India in 1955-56 was 1.9 million acres, while the area to be brought under irrigation when the major irrigation schemes under the second Plan are implemented, is placed at 3.2 million acres. This indicated, he added, the urgent necessity for speedy implementation of the major irrigation projects which were a major factor in cotton production. Apart from the possibilities of increasing the yield per acre, it would also promote the cultivation of superior long staple cottons in the newly irrigated areas.

Dr. Randhawa noted that, practically, the entire area under American cotton in the Punjab had been sown in lines and the practice was becoming more popular in Rajasthan and the Uttar Pradesh. The aim, he said, was to encourage line sowing of cotton in all the irrigated areas in all the States. As regards distribution of fertilisers, he remarked that the progress was not uniform in all the States. The target for distribution of fertilisers was achieved only in the Punjab State. The target for Rajasthan was 3,000 tons of fertilisers, but only 750 tons were distributed. He went on to add that, while the fertilisers were being given as loan in kind in most of the States, no such facilities were provided by the Bombay Government in Bombay, Saurashtra and Kutch regions. There was need for similar facilities in the States of Madras and Rajasthan also.

Referring to the co-ordinated scheme on the development of Andrews variety of Sea-Island cotton, Dr. Randhawa said that the objective of the scheme was to bring an area of three lakh acres in the States of Kerala, Mysore and Assam under this variety of cotton. In spite of adverse weather conditions, this scheme made progress and the crop was raised on an area of 120 acres which would provide sufficient quantity of seed for 2,500 acres.

Regional Research

Dr. Randhawa observed that the concept of co-ordinated regional research stations on cotton, oilseeds and millets was an important advance in the field of agricultural research.

SUGAR OUTPUT IN CURRENT SEASON

TARGET OF 2.16 MILLION TONS WILL BE EASILY REACHED

ASSESSING the outlook for sugar production in the current season (1957-58), we observed in our last Annual Number that the target of 2.16 million tons fixed for the season by the Development Council for Sugar Industry would be easily reached. This view has more than been confirmed by reports of the highly satisfactory crushing operations in the sugar factories and the conditions obtaining in the sugar and *gur* markets. Full four months have elapsed since the current season commenced, but preliminary figures of output are available only for the first three months, that is, 1st November 1957 to 31st January 1958. According to these figures, the quantity of sugar produced by the mills aggregated 921,762 tons, as against 812,897 tons in the same period of the previous season, representing a rise of more than 13 per cent. On this basis and assuming that the present tempo of crushing will be maintained in the coming months, the total sugar production in the 1957-58 season will be well above 2.03 million tons produced in the previous season.

The continued upward trend in sugar output has been rendered possible largely by plentiful supply of sugarcane to the factories, thanks to the bumper crop. The all-India second official estimate of sugarcane for 1957-58 places the aggregate yield at 63.50 million tons, which compares favourably with the adjusted second estimate of 58.98 million tons for 1956-57, or an increase of about 7.5 per cent. In terms of *gur*, the output comes to 6.40 million tons, as against 5.95 million tons. The rise in output has been due in a large measure to the improvement in acreage. The total area sown to cane during 1957-58 is estimated at 4,784,000 acres, as against 4,475,000 acres in 1956-57. The per-acre yield of cane is also believed to be higher, albeit slightly, the all-India average being put at 13.3 tons, as against 13.2 tons.

The overall increase in current year's sugarcane production, as well as acreage has been shared mainly by Uttar Pradesh, the Punjab, Bombay and Madhya Pradesh. It is attributed to better climatic conditions as compared with last year. There would have been a more marked rise in production but for the damage to crop by drought in the eastern parts of Uttar Pradesh and Bihar and by heavy rains in some western districts of Uttar Pradesh.

"Gur" Prices

Rise in cane production does not necessarily mean that there will be a corresponding increase in the output of sugar, for the factories do not constitute the only outlet for cane in the country. They have a powerful competitor for the available supply of cane in the cottage sector that produces *gur* and *khandsari*. If the prices of the latter, especially of *gur*, are high, then the growers invariably divert their cane to the cottage sector rather than to the mills. Much, therefore, will depend on the trend of the *gur* markets. The *gur* markets have no doubt been ruling firm, but the rise in prices so far has not been big enough to tell on the flow of cane to the factories.

Side by side with the improvement in cane supplies, the crushing capacity of sugar mills has also gone up. In the past season (1956-57), nine new sugar factories, including six co-operative units, went into production and 20 existing units completed their expansion programmes. The total additional capacity thus coming into operations amounted to about 200,000 tons of sugar. During the current season, twelve new sugar mills, including seven co-operatives, are expected to go into production. Of these, six have already commenced working. Another ten existing units are also expected to complete their expansion schemes. The total additional capacity is put at 200,000 tons. There has also been an improvement in the efficiency of crushing plants of several mills, following the implementation of schemes relating to renovation.

In First Three Months

As a result of all the foregoing factors, the sugar production target of 2.16 million tons fixed for this season may be expected to be fulfilled. The actual output during the first three months of the season aggregated, as already stated, 921,762 tons, as against 812,897 tons a year before. The following table shows the State-wise comparative production of sugar during the first three months of the current season as compared with the corresponding period of the last season:

(In tons)

	1956-57	1957-58	Increase (+) or decrease (—)
Uttar Pradesh	421,536	447,674	+ 26,138
Bihar	135,941	139,384	+ 3,443
Bombay	100,280	139,501	+ 39,221
Andhra	56,679	61,728	+ 5,049
Mysore	23,593	51,230	+ 27,637
Punjab	17,981	33,137	+ 15,156
Madras	17,480	15,779	— 1,709
Madhya Pradesh	17,527	15,305	— 2,222
Kerala	10,445	7,029	— 3,416
Rajasthan	7,090	5,347	— 1,743
West Bengal	3,588	4,333	+ 745
Orissa	757	1,416	+ 659
Total ..	812,897	921,762	+ 108,865

It will be seen from the above table that the rise in sugar production during the first three months as compared with the same period a year before was of the order of 108,865 tons. The bulk of this rise—amounting to 82,996 tons—is accounted for by Bombay, Mysore and Uttar Pradesh. The increase is particularly marked in Bombay, being 39,221 tons.

Supply Comfortable

The anticipated sugar production of 2.16 million tons, together with the previous season's carryover of 458,000 tons, will give a total supply of as much as 2,618,000 tons, which is more than the quantity of 2,579,000 tons available in the previous season. Despite such a comfortable supply position and poor prospects of large sugar exports, prices of sugar have continued to move up in many parts of the country, the rise being more than what is warranted by the replacement of States' sales tax by additional excise duty with effect from 14th December last.

Be that as it may, the total despatches of sugar from the factories during the three months ended January 1958 amounted to 441,000 tons, as against 459,133 tons a year before. It may be noted here that the despatches do not contain any quantity meant for export, as no deals have so far been put through in the current season's sugar with foreign countries. In contrast, the figure of 459,133 tons despatched in the first three months of the 1956-57 season included some quantity despatched for exports. The closing stocks with factories as on 31st January 1958 aggregated 910,000 tons, as against 878,000 tons on the corresponding date in 1957.

BONUS FOR U.P. SUGAR LABOUR

All the workers employed in the 67 sugar mills of Uttar Pradesh during the 1956-57 season, including those who are no longer in the employment now, will be getting bonus aggregating Rs. 71.50 lakhs. This is in accordance with the State Government's order issued on 15th February. It will be recalled that, on the recommendations made by the State Tripartite Labour Conference (Sugar) held on 21st September 1957, a committee was constituted to investigate and report to the State Government on the question of paying bonus to sugar mill workers for the year 1956-57. The committee succeeded in bringing about an agreement between the representatives of employers and workers. It is as a sequel to this Committee's report that the U.P. Government has issued the aforesaid order.

The bonus will be distributed in proportion to each employee's earning during the 1956-57 season, subject to a maximum of three months' wages. Any amount paid as interim or advance bonus will be adjustable against that payable for the said season under the latest order. A factory shall not, however, be entitled to recover any amount already paid by it to its employees towards bonus, if such payment is in excess of the amount payable under the order. If a factory claims losses or meagre profits during 1956-57, making it unreasonable for it to pay the bonus, it will have the right to represent its case to a sub-committee presided over by the Labour Commissioner. The factories claiming exemption from payment of bonus are required to apply to the Chairman before the 10th inst. and the sub-committee will submit its report to the Government within six weeks.

The above order has been enforced for one year in the first instance. It may be extended from time to time if found necessary.

STATE OF JUTE INDUSTRY

MR. MICHELMORE NOT PESSIMISTIC

JUTE constitutes the second largest foreign exchange earner for the country. It is also one of the two major industries of vital importance to the economy of the North-east India, inasmuch as 95 per cent. of jute goods produced in India comes from this area. Notwithstanding the predominent position occupied by this industry as a valuable foreign exchange earner, it is subject to many problems and uncertainties, not the least of which is that it has become an easy victim of competitive world markets. This is indicated by the decline in both the quantum and value of exports in recent months, thus resulting in a drop in its contribution to the country's foreign exchange receipts. During the six months ended September 1957 (the latest period for which the figures of India's export earnings are available) the value of jute goods exported amounted to no more than Rs. 47.4 crores, having declined from Rs. 69.3 crores in the previous six months and Rs. 56.7 crores in the corresponding period of 1956.

The jute industry also plays a very vital role in the economy of West Bengal. Besides having the biggest capital stake, the industry provides direct employment to more than a quarter of a million people in and around Calcutta and provides a livelihood to many thousands of cultivators in the jute-growing district of West Bengal and other neighbouring States. However, the jute mills in Calcutta have been passing through a difficult time. Consequent on the over-production in 1956, the mills have suffered heavy losses, as the accounts of jute mills published in recent months have shown. This, coupled with the heavy borrowings by mills to finance their modernisation programme and inventories, has put a severe strain on their resources. The prices of gunnies, which had recovered from the low levels of 1956, have again sharply fallen recently and this means further heavy losses to mills. In the circumstances, the process of recovery cannot but be slow, particularly, when the current business recession in the U.S. is having its adverse effect on burlap consumption in that country.

Those who are closely connected with the jute industry do not, however, take a very gloomy view of the long-term prospects for the industry. Mr. W. H. S. Michelmore, the retiring President of the Bengal Chamber of Commerce, in his address at the annual meeting of the Chamber, struck a note of subdued optimism. He said that much had been done to eliminate the uneconomic units. Widespread rationalisation had been effected and several mills had been closed, so that their loom-hours could be worked by other mills on double shifts with greater economy. In general, Mr. Michelmore pointed out, the industry was in much better shape than it was even as recently as a year ago and the process continued.

Another favourable factor which induced Mr. Michelmore to take a hopeful view of the outlook for the industry was "its resiliency and its quick adaptability to new uses as well as to changes in market conditions and in the pattern of world trade." He said that "by intensifying its sales propaganda activities in established markets such as the U.S. and by building up new markets in the underdeveloped countries of Africa and the Far East, the industry is making every endeavour to maintain the level of exports." The erstwhile President of the Bengal Chamber was of the view that the demand for gunnies could be expected to go up in the years to come, provided the overseas markets were not affected by a general trade recession. Thus, he said:

"With output more in line with demand, there is no doubt that statistically it is now in a sounder position than it was a year ago. If the population of the world is to go on increasing at the rate of 30 million a year, and that largely in the grain-eating areas, which grain must be moved in sacks, the position is not one of unrelieved gloom, provided always that overseas markets are not adversely affected by a general trade recession."

One of the main difficulties of the industry is the high cost of raw jute in relation to the prices of manufactured goods. A lower level of raw jute prices is essential to the economic working of the mills and this in turn depends largely on the country achieving complete self-sufficiency in raw jute. Much progress has no doubt been made to this end. The Governments at the Centre and in the States are aiming at raising production. With the limited land available for cultivation of jute, attention has naturally been diverted to increasing the yield per acre. This has also produced some results with the rise in average yield from 2 bales per acre in 1956 to 2.4 bales in 1957. But this yield is much below that of Pakistan. The main impediment to achieving a higher yield is evidently due to the slackness in the distribution of fertilisers. And Mr. Michelmore pointed out that the fertilisers were now urgently required for this year's crop.

An important point made by Mr. Michelmore was that, while the jute and tea industries suffered from all the difficulties generated by the Five-year Plans themselves, such as rising internal prices, shortage of materials and increased labour costs, they did not have an upsurge of an increasing internal demand such as other industries were likely to enjoy. In view of this disadvantage, Mr. Michelmore felt that the Government must keep its finger very closely on the pulse of these two important industries.

There is a feeling in this part of the country that whereas the jute mills owned, controlled and managed by Indians fared better from the financial point of view than the British-owned and managed mills. Apparently, Mr. Michelmore had this complaint in mind, when he made the following observation:

"I sometimes hear allegations that a certain section of the jute mill industry is inefficiently managed; but it seems to me that an allegation of that sort gives quite an incorrect impression. It is true that, in recent years, some units in the industry have shown better results than others, but, if you look at the picture more closely, you will see that, for the most part it is the large units that have made money, whereas it is the small ones that have proved uneconomic in the difficult conditions which this industry faces today."

In other words, the question was, according to Mr. Michelmore, not so much of management, but of economic size. He contended that much was being done to remove this defect, as was indicated earlier.

ACTION AGAINST JUTE FIRMS

A report from Dacca says that the Central Pakistan Jute Board has taken action against four London and four Pakistani jute firms for allegedly helping to depress the local jute market through collusive sales at prices below the prevailing market rates or by entering into contracts booked through Calcutta in contravention of the ban on such contracts imposed by the Jute Board on 1st February 1954.

The four London firms have been blacklisted and dealings with them by Pakistani exporters have been prohibited. The Pakistani concerns' export licences have been cancelled, but contracts entered into by them with foreign buyers prior to 24th February will be honoured. The London Jute Association is stated to have objected to the action against the four foreign firms and is expected to approach the Central Government in this connection.

JUTE OUTPUT IN PAKISTAN

The East Pakistan Government has fixed the target of jute production for 1958-59 season at 5,500,000 bales, as against the estimated output of 5,750,000 bales in the current season. The total area of jute for the year will be 1,405,000 acres, as compared with 1,562,600 acres for 1957-58. This excludes two districts of Sylhet and Chittagong hill tracts. In fixing the above target, the Government has accepted the recommendation of the Jute Cultivation Advisory Board. It has also estimated the world demand of Pakistani jute during the next season at 5,700,000 bales. With the estimated carry-over of 600,000 bales or more from the current year, over 6,100,000 bales would be available during the next year for consumption in the international and home markets.

DESPATCHES OF JUTE GOODS SHRINK

EFFECT OF RECESSION IN U.S.

THE reports from Washington that the U.S. Government economists are of the view that business recession in their country will soon touch the bottom and that they do not expect a recovery for some months at least have focussed attention on the short-term outlook for the Indian jute industry. Industrial production in the U.S. during January dropped by 3 points to 133 per cent. of the 1947-49 average, the lowest level since February 1955. This was the fifth month in succession for which output recorded a fall. Though the U.S. President is confident that an upturn in business would take place next month and the Vice-President has assured that the Administration will not stand by and allow a recession to continue or unemployment to rise, top ranking economists do not see any evidence to back the U.S. President's optimism about a recovery in U.S. business.

The present economic recession is reflected in the figures of U.S. burlap consumption and stocks relating to January 1958. In that month U.S. consumption of burlap aggregated 71 million yards, which was the same as that in December 1957. Though there has been no decline in consumption, the absence of any increase is in distinct contrast to the rise of 8 million yards recorded in December and of 3 million yards in January 1957. This brings the total consumption in the first seven months of the current season 1957-58 to 481 million yards, which represents a fall of 57 million yards from the consumption in the corresponding period of 1956-57. This means an annual consumption of 825 million yards, as against the peak level of 884 million yards touched in 1956-57. This will be the lowest for the last three years.

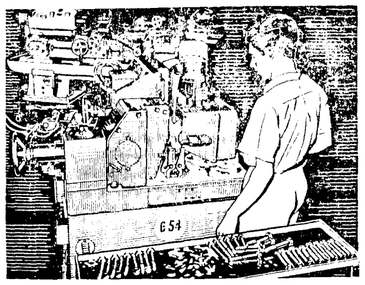
With consumption of burlap during January 1958 not having recorded any increase, stocks at the end of the month went up from 225 million yards to 240 million yards, thus maintaining the upward trend for the third month in succession, having risen from a low of 219 million yards at the end of October 1957. Stocks at the end of last month were, however, still much lower than those a year before, when they stood at 267 million yards. Though the increase in stocks during the last three months is of a seasonal nature, talks of a business recession in the U.S. have cast an uncertainty about the consumption of burlap in the coming months. The U.S. being the largest consumer of Indian burlap—it accounts for over 80 per cent. of the total imports of burlap into the U.S.—the outlook for jute industry depends on how far the U.S. authorities are successful in reversing the recession in business.

The statistics relating to despatches of gunnies by Indian jute mills during January also do not make encouraging reading. The total despatches (net) have declined from 88,087 tons in December 1957 to 75,528 tons in the following month. They are also lower than those made in January 1957, at 78,785 tons. The variety-wise break-up figures for export purposes and internal consumption are as follows:

(In tons)

	January, 1958	December, 1957	January, 1957
For export—			
Hessian	28,103	31,265	31,864
Sacking	26,215	30,273	28,605
Others	1,336	1,470	3,600
	55,654	60,008	64,069
For internal consumption—			
Hessian	1,911	2,000	2,514
Sacking	15,319	15,108	10,704
Others	2,644	1,971	1,498
	19,874	19,079	14,716
Total despatches—			
Hessian	30,014	33,265	34,378
Sacking	41,534	51,381	30,309
Others	3,980	3,441	5,098
	75,528	88,087	78,785

The fall in despatches is mainly accounted for by the setback in exports. At 55,600 tons, despatches for export purposes represent a drop of 13,400 tons from the December figure and are the lowest for any month in recent years. The bulk of this decline has occurred in sacking, the despatches of which have shrunk by 10,000 tons. As regards domestic consumption, there has only been a slight improvement of 800 tons, but this is in refreshing contrast to the fall of 1,300 tons in the previous month. Over the year, the despatches during January for internal consumption show a marked increase of 5,100 tons, which is encouraging.



all works managers know

That efficient production begins with good tools. It's not worth taking chances with cheaper but inferior equipment and stores. That's why for accurate *finishing, forming*—and maintenance of cutting tools, they use Grinding Wheels and Bonded Abrasive specialties manufactured by Carborundum Universal, which are equal to the best quality in the world.

RAILWAY FREIGHT ENQUIRY BODY'S REPORT REVIEWED

EMPHASIS LAID ON ROAD TRANSPORT FOR MOVING SHORT-DISTANCE TRAFFIC

IN a brief reference to the report of the Railway Freight Structure Enquiry Committee (Chairman: Dr. A. Ramaswami Mudaliar) which we made last week, we commended the Committee's constructive attitude towards the problems of railway freight structure and indicated some of the salient features of the Committee's report. The Committee, which was appointed in June, 1955, to review the freight rates structure on the railways, to examine the responsibilities of the railways as carriers and to suggest changes in the constitution, jurisdiction and rules of procedure of the Railway Rates Tribunal, had necessarily to examine and sift a large mass of data and evidence placed before it. The Committee's report and recommendations are based upon an impartial assessment of the financial needs of the railways, on the one hand, and the plea by the users of the railways for keeping the freight rates at as low a level as possible.

At the outset, the Committee has reviewed the evolution of the railway freight structure. It has dealt with the changes in freight introduced in 1922, the further refinements effected in 1936 and the ultimate standardisation and rationalisation effected by the 1948 revision. The revision in the freight structure made in 1948, as is well known, resulted in the introduction of the telescopic principle. This principle secures a gradual tapering in rates with the length of haul, taking into account the twin facts that, with the increasing distance of haul, (1) the cost of operation of the railways generally tends to be lower and (2) the capacity of traffic to bear more and more freight charge diminishes. The Committee feels that there is need for some revision in the telescopic structure. Thus, it says:

"In the telescopic system for through distance, which was adopted in the 1948 freight structure, the first and second legs are each of 300 miles in the case of class rates, with a third leg for distances beyond. For wagon-load scales also there are three legs, but of varying distances, as described in the previous chapter. There is a case for revising both the length of the legs and the number of legs that form the telescope. It has been pointed out that the average lead on railways is within 300 miles according to the annual reports of the Railway Board. A criticism has, therefore, been advanced that as most of the traffic moves within the first leg, both the leg and the rate were so designed as to get the largest amount of revenue from this leg. An analysis of the various commodities carried over the railways and the average distances that they travel shows that many important commodities travel over a far greater distance than 300 miles, and if 'smalls' are excluded and wagon-load traffic is taken separately into consideration, the average lead is as high as nearly 400 miles.

"From the sample survey of traffic moving within different zones, which was carried out by the Statistical Officers of the various railways at our instance and to which we refer in more detail later in our report, we have found that the average lead for several commodities is very much higher than 300 miles. For instance, the average lead for iron and steel division A, and iron pipes, is 580 miles, for tea over 600 miles, for electrical appliances 600 miles, for paints about 600 miles, and for asbestos cement products, it is as much as 1,000 miles. It has been a feature of all industrialised countries that as industries develop, movement of goods is over longer and longer distances; so that with the growing industrial activity in the country, the lead for most of the commodities may be longer than at present; at the same time, the regional development of industries may have an effect in the opposite direction."

First Leg

An important recommendation of the Committee is that the first leg of 300 miles should be split up into four legs—1 to 25; 26 to 75; 76 to 150 and 151 to 300. In suggesting this revision, the Committee has done well to emphasise the role of road transport. The Committee says:

"The railways are finding it difficult to cater for all the traffic that is forthcoming and as we examined the witnesses and the memoranda presented, we came to the conclusion that far greater emphasis was placed by the witnesses on the availability of railway facilities than on the burden of freight rates now charged. During the war, it was common experience that there was fierce competition among industrialists and traders to obtain wagons. Conditions are not very dissimilar at the present time and as the tempo of industrialisation increases under the second Five-year Plan we think that, in spite of the precautions that Government have taken and continue to take in securing more rolling stock and locomotives, there will be shortage of wagons. It must, therefore, be the deliberate policy of the authorities to discourage as far as possible short-distance traffic by rail and to encourage alternative modes of transportation over such distances."

The first leg of 1 to 25 miles, according to the Committee, is designed to avoid as far as possible traffic over short distances. It says: "Over this distance, it is possible to move traffic either by motor lorries or where good roads do not exist, by other means of transport." It also feels that, in many parts of the country, movement by motor lorries is possible over the next leg (26 to 75 miles) too.

Rates

Having established the legs for the telescopic system of freight rates, we have now to evolve a scale of rates to be applied to these legs. This scale of rates must take into account the existing rates for classes and wagon-load scales and should make an integrated pattern embracing both. In the new structure, it is desirable that the scale of rates should be on a regular progressive basis from the lowest to the highest class. The Committee considers that the simplest and most satisfactory method of achieving this increase would be to have one rate as a base and express all other rates as percentages of this rate. For this purpose, the Committee recommends a norm or a standard rate, to be called the Class 100 rate. It has taken the present class 9 as the most convenient norm and all other classes above and below class 9 and also the wagon-load scales have been expressed as percentages of the new class 100. It has shown what percentage each class will represent. It recommends that, for all commodities, there should be a wagon-load classification and a "smalls" classification. For a few commodities, for which separate "smalls" and wagon-load rates will have no special significance, the rate will apply on an "AQ" (any quantity) basis. There should be a relativity between the rates for wagon-loads and "smalls." The Committee has allowed an increase in the rates for "smalls" as compared with wagon-loads to the extent of some 15 to 36 per cent. and, on this basis, it has shown the pattern of the classification for wagon-loads and "smalls." Other recommendations made by the Committee include:

(1) The terminal charges as such should be abolished, but this fact should be taken into consideration in evolving the revised freight structure. (2) The additional short-distance charge is not justified. (3) The separate levy of transhipment charges and of ghat charges should be discontinued. (4) The minimum distance for charge should be raised to 25 miles and should apply only once (in bookings) whether the movement is over one or more railways. (5) The minimum weight for acceptance per package by goods train should be 20 seers and the charge should be based on 20 seers. (6) The overall minimum charge of Rs. 1-12-0 per ton for wagon-load consignments should be abolished.

Capacity

In considering the question of rates, the Committee has taken into account the imperative need for augmenting the carrying capacity of the railways. In this connection, the Committee says:

"According to the second Five-year Plan, the volume of goods traffic is expected to increase by 61 million tons (originating), i.e., from 120 million tons at the end of the first Plan to 181 million tons in 1960-61, while the increased capacity provided for and the improved efficiency expected to be secured will not enable railways to carry all the additional traffic anticipated or rather planned to be generated. More recent indications go to show that the estimate of 61 million tons of additional traffic expected is itself on the low side. Further, this does not take into account the increasing transport burden resulting from an increase in the lead of traffic, which generally characterises a period of rapid industrialisation. The prospect is, therefore, anything but reassuring. Against the background of planned development, shortfall in transport will mean idling and non-utilisation of scarce resources. Several witnesses appearing before us expressed serious misgivings about the adequacy of additional transport capacity that is being provided by the railways. The apprehension that very real difficulty may be experienced in the execution of the Plan, owing to transport shortages, is widespread."

Among other observations made by the Committee, mention must be made of the Committee's view that the annual allocation to depreciation fund at the present rate of Rs. 45 crores is insufficient. It emphasises the need for increasing this allocation. Further, it has come to the conclusion that "on the basis of the existing levels of rates and fares and after taking into account the additional traffic, which the railways are expected to carry during the second Plan period, there will be a total gap between revenue and expenditure of over Rs. 300 crores for the five years of the Plan period." Other considerations, which it has stressed in evolving a new scale are: (1) it should not bear too heavily on long-distance traffic; (2) it should be an all-inclusive one enabling the abolition of terminal and other charges; (3) it should, to the extent possible, help bridge the anticipated gap of Rs. 300 crores in revenue and expenditure. These factors, it is stated, have been taken into account by the Committee in recommending the following new scale:

(In pies per maund per mile)

(1) 1 to 25 miles—3.60; (2) 26 to 75 miles—1.40, (3) 76 to 150 miles—1.20; (4) 151 to 300 miles—1.05; (5) 301 to 500 miles—0.85; (6) 501 to 800 miles—0.70; (7) 801 to 1,200 miles—0.60; (8) 1,201 and over—0.50.

Risk Rates

As regards the question of the assumption of risk by the Railways in carriage of goods, the Committee recommends that practically for all commodities, rates should be quoted only at railway risk. At the same time, it suggests that there are a few commodities which may continue to be carried at owners' risk but in regard to which the railway risk rates may also be quoted. It has strongly urged that the existing classifications should be carefully examined with a view to removing the anomalies which have been pointed out. For this purpose, it has suggested the setting up of a specific committee. Finally, the Committee has recommended revised lower classification for commodities which deserve special considerations in the interest of industrial development or of preventing a rise in cost of living. These commodities include alcohol, certain acids, agricultural implements, caustic soda, charcoal fuel, coir, grain and pulses, jute, milk, salt, slates, tapioca, certain varieties of toys and vegetables. In regard to products of cottage industries, the Committee has recommended that a concession of 25 per cent. of the normal freight rates should be granted when these products are booked by recognised co-operative societies.

Concessions

The Committee, in the course of its examination of the question of granting freight concessions for underdeveloped areas, makes a few interesting observations. Thus, it says:

"We have dealt with the requests of industries for concession rates for carriage of raw materials or goods by railways. We have also received requests for such concessions on a slightly different ground both for large-scale industries and for cottage industries. It has been forcefully argued before us that there are many backward and underdeveloped areas in the country, where industrial development is urgently needed to raise the standard of living of the people, and that one method of ensuring this development would be by giving a stimulus of general freight rate concession to such industries. These requests have specially come from Assam, Rajasthan, the Malnad areas, the eastern districts of Uttar Pradesh and some other areas. It is pointed out that the policy of Government is not to concentrate development of industries in any particular areas in so vast a country as India, but to distribute and regionalise industries, so that the advantages of industrialisation

NEW PRODUCTS AND PROCESSES

New Cloth Pressing Process

A CLOTH pressing process which, it is claimed, will give a superior finish and will replace practices which have remained substantially unchanged for more than 60 years has been developed in Britain.

It is said to overcome the problem of giving heat treatment to as many as 20 pieces of cloth at a time, each of different textures and each requiring variable heat for unequal lengths of time. The equipment is reported to consist of portable electronically controlled units with numerous heating elements around each of which a length of cloth is folded and heat then sent through it. Each piece of cloth receives heat suited to its type and for the correct length of time. The heating elements each weigh 10 lbs., compared with the six plates of over 60 lbs. each which are used in the old steam "hot-plate" process. The old system of heating caused dry heat to be generated and the cloth was heated from the outside to the centre; in the new method moist heat is sent from the inside outwards and thus ensures a more even finish. It is stated that the new equipment is regarded as a step towards automation in the pressing procedure and that design work is now complete for equipment which will interpret the manufacturer's and customer's requirements, the texture of the cloth and required temperatures, and transfer the information to a punched card. Each piece of cloth will thus set up its own optimum conditions. According to the inventor of the new process, automation will not remove the traditional skill from the art of cloth finishing as skilled operatives will still be required to set up the cards. Once this has been done, the instructions will be carried out automatically and each operative will have a far wider range of finishes at his disposal.

Fatliquor

A process for making fatliquors in which Pongam oil—a non-edible oil available in abundance in South India—or Sardine fish oil is the basic raw material, has been developed at the Central Leather Research Institute, Madras. Fatliquors are oil-based products which emulsify easily with water to produce stable oil-in-water-type emulsions for use in leather processing. Their use imparts softness, pliability, tensile strength and other desirable physical properties to leather. They are particularly used in production of chrome-tanned leathers and box and willow sides for shoe uppers.

At present, Fatliquors based on Neats' Foot oil, fish oil or mineral oils, employed by the Indian leather industry, are imported under various trade names. Indigenous production is small. Present requirements are estimated at nearly 200 to 300 tons per annum, valued at Rs. 15 lakhs. The consumption is expected to rise to nearly 600 tons per annum with the progress of the leather industry during the second Plan. Fatliquors made in the laboratory have been tried in the model tannery of the Institute and also by several progressive leather manufacturers who have, after use in processing of shoe upper leathers, box and willow sides, full chrome or chrome retanned leathers, reported on the excellent properties of the product. The process consists in sulphonating the oil under optimum conditions to obtain a product which can be employed to produce emulsions for use. Several batches of nearly 100 lbs. each have been processed and conditions for large scale production have been standardised.

The equipment required, jacketed leadlined vessel fitted with stirrers, cooling arrangements, wooden vats, etc., could be easily fabricated in India.

Parties desirous of undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, New Delhi.

Timber Substitutes for Iron and Steel

The Forest Research Institute at Dehra Dun is reported to have succeeded in finding suitable timber substitutes for iron and steel. At present, only the stronger and more durable varieties of timber, like sal and teak, are being used as replacements for iron and steel. Scientists working on this problem at the Forest Research Institute have developed processes which will enable certain other and more common varieties of timber also to be utilised in this manner. The main weakness of timber lies in its vulnerability to attacks from insects and fungi. The Mycology Section of the Institute has, it is reported, succeeded in discovering chemicals, which when used as a coating on timbers, render it immune from these attacks. It has been found that chemicals like creosote and ascu possess just the properties needed for this purpose.

Novel Concrete

A new type of concrete which, it is claimed, produces a surface which does not need any finishing, plastering, or maintenance has been developed in Norway. The production of the concrete, which has been "tried out" on a number of new buildings in Norway, involves the incorporation of small stone pebbles into the cement during its preparation. While the surface of the concrete does not need, it is said, any finishing, artistic effects can be achieved by treating the surface with sand blasting. The development of the concrete is the result of work carried out by a Norwegian architect, Mr. Erling Viksjo and a Norwegian civil engineer, Mr. Svere, at Jystad in Oslo.

Resident Field Engineer

The unique
HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service*."

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend

The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

AVERAGE INCOME OF SOVIET WAGE EARNERS

STANDARD OF LIVING COMPARATIVELY LOW

THE pattern of distribution of the national income of the U.S.S.R., the percentage of consumer goods in the aggregate production, the structure and quantum of wage of the Soviet workers, the level of real earnings, etc., have for long remained, to the free world outside Russia, the more mysterious enigmas of the Soviet economy. Reliable and precise information regarding these factors, which provide an index of the material welfare of the Soviet citizens, are not generally available to the outside world. People outside Soviet Russia are naturally curious to know how their confreres within the Iron Curtain fared, the more so because it is proclaimed to the world that, unlike in capitalist countries, Soviet workers are not mere hires of capital but its real masters. In this connection, a reference may be made to an article in a recent issue of the Bulletin published by the *Institute for the Study of the U.S.S.R.*, Munich, which throws some light on the earnings of Soviet workers. It may be noted that the Institute, whose purpose is to present the free world an analysis of contemporary events in the Soviet Union, is a free corporation of scientists and men of letters.

The concomitant of Soviet economic development, Mr. F. S. Gaenko, the author of the article points out, has been an extremely high rate or compulsory accumulation of savings, including the maximum mobilisation of resources for industrialisation and the creation of strategic resources. This accentuation of capital goods production has been elevated to a low of socialism, a direct result of which appears to have been a clamp on wages and the consequent comparatively low standard of living of the Soviet citizens.

The annual reports issued by the Central Statistical Administration of the U.S.S.R. on Plan fulfilment asserts that, roughly, three quarters of the national income is destined for consumption. According to the author, this is not borne out by the figures for industry alone which present a different picture. In 1928, according to him, consumer goods production comprised 60.5 per cent. of all industrial output, as compared with 66.7 per cent. in 1913. In 1937, this dropped to 42.2 per cent. and by 1955 had declined to 29.4 per cent., indicating the progressive decline of the share of consumption goods in the aggregate production.

Workers and salaried employees, together with their families, comprise 58.3 per cent. of the Soviet population and their main—in many cases only—means of support is their earnings. Prior to World War II, wages made up approximately 68 per cent. of the population's income; but since 1930 no information on wages has been published. Western statisticians and economists, working with the meagre data available, have arrived at different figures for the average Soviet workingman's wage. An Austrian parliamentary delegation which visited Russia in 1955 estimated a Russian Workers' average wage at 900 roubles a month, presumably on the basis of the average wage paid in enterprises shown to foreign visitors. Mr. Maurice Allais, a famous French economist, estimated, on the basis of the annual subscription to the State loan, the average wages at 610 roubles a month. On the basis of the Soviet data available, the author estimates that the average wage in 1956 was somewhere between 700 and 800 roubles per month. The following table shows how wages and prices changed since 1940:

Trend of Soviet Wages and Prices
(1940=100)

	Average annual wage	Average monthly wage	Wage index	Real wage index	Index of prices of goods and services
1940 ..	4,100	341.7	100	100	100
1950 ..	..	..	..	126	..
1951 ..	7,550	629.2	184	..	..
1952 ..	8,079	673 3	197	..	..
1953 ..	8,241	686 8	201	165	122
1954 ..	8,446	703 8	206	174	118
1955 ..	8,699	724 9	212	175	121
1956 ..	8,960	746 7	219	182	120

It will be seen from the above table that the average annual wage more than doubled during the period 1940-56. The index of money wages, (1940=100), which was 100 in 1940, more than doubled to 201 in 1953 and increased still higher to 219 in 1956. The index of real wages improved from 100 in 1940 to 182 in 1956.

As for the family budget, food accounts for a very high share of expenditures. In 1913, it accounted for only 50 per cent. of the workingman's budget. It dropped to as low as 44 per cent. in 1927 before the upswing to reach the figure of 69.7 in 1957. As can be seen from the following table, the structure of expenditure has changed considerably since 1913:

Structure of Soviet Workers' Expenditure
(Percentage of total budget)

	1913	1927	1957
Food	50 0	43 8	69.7
Rent and utilities	20 0	17.0	2.3
Clothing	10 0	22 4	18.2
Recreation	3.6	4 0	5 5
Other household expenses..	7 0	4.2	2.6
Transportation	..	..	1.8
Aid to family	1 1	1 2	..
Miscellaneous	8.3	7.4	..

The budget for 1957 reveals, according to the author, a modest standard of living. It is pointed out that the amount allocated to rent, utilities and clothing is inadequate, the sum available for these items being determined not by probable needs but by the amount left after the essentials have been paid for.

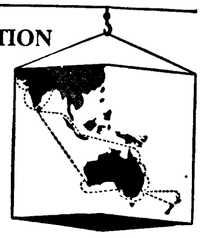
Precise information on the size of the Soviet family is not available. A post-war estimate made by S. N. Prokopovicz places it at 3.6 persons. The number of dependents per worker has been progressively declining from 1927 onwards. In 1952, the average number of dependents per worker was 0.91 although it rose to 0.97 in 1955.

The author makes an estimate of how much a worker would have to earn to support himself and his dependents. The absolute essentials, it is calculated, amount to 451 roubles per person, of which 384 roubles are for food and 67 roubles for other essentials. Each worker has to support 0.97 dependents. Hence the minimum amount required each month aggregates 451×1.97=888.5 roubles. Since deductions from earnings average 15 per cent., the ordinary worker's wages, it is said, would have to be no less than 1,045 roubles. The Table I above shows that wages average only 746.7 roubles a month which means that the Soviet wage earner receives only 72.4 per cent. of the minimum required to cover food and other essentials. It must be borne in mind that the average wage index gives only a rough indication of the true state of affairs because there is a large differential between maximum and minimum rates. The range is stated to be from 300 to 3,000-5,000 roubles.

The question inevitably arises as to how the average wage earners get the money to live? The answer, according to the author, is that they have to find a source of income over and above what they earn from their eight-hour day. Some work over-time at factories while the majority spend every spare moment working small private plots of land. Urban working families usually keep a cow, a goat and pigs and raise their vegetables on plots situated far outside the city limits. These private plots are a great help to workers and their families and the Soviet Government encourages town dwellers to develop them. The importance they attained can be judged from the fact that in 1955, 12 per cent. of the land sown to vegetables was accounted for by workers who also kept 15 per cent. of the cows and 12 per cent. of the hogs. In 1955, for instance, total area sown as workers' private plots aggregated 1.59 million hectares. The number of cattle owned were 7.6 million, hogs 6.5 million, sheep 3.8 million and goats 4.9 million.

The author concludes that the wage increases granted to low-paid workers, the increased pensions, the curtailment of working hours, increase in agricultural output, etc., which were forced on the Government by necessities, have slightly improved the workers' standard of living which nevertheless remains low. The low level is attributed to the rate of industrialisation and the nature of capital investments which are primarily aimed at developing the means of production.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI



Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1 000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

I.L.O. DIRECTLY HELPS SETTLEMENT OF DISPUTES

For the first time in its history, the International Labour Organisation (I.L.O.) was recently called upon to assist directly in setting a dispute between the workers and management of a railway undertaking of Southern Peru. It is common knowledge that, normally, the I.L.O. acts only in the international field. But in the summer of 1957, at the request of the Chairman of a Mediation Committee, transmitted through the Government of Peru, the I.L.O. Director-General sent one of his senior officials to help settling the dispute which had paralysed the country's most important railways and disrupted life in Arequipa province. The mediation efforts of the I.L.O. expert was a great success as his proposals were unanimously accepted by all the parties concerned and the dispute was amicably settled.

In April 1957, the unions representing some 3,500 railway men employed by the railway requested the company to pay wage increases ranging from 30 to 50 per cent., as well as other concessions regarding hours of work, overtime, family allowances, holidays, etc. After a brief and fruitless discussion of the issues involved between management and labour, the question was referred to the conciliation machinery of the Peruvian Ministry of Labour which also could not bring about an agreed settlement. The Government declared the strike illegal, proclaimed a state of emergency and called out the army to maintain law and order.

At this critical moment, on the initiative of the Mayor of Arequipa, a Mediation Committee was set up. In order to strengthen the Committee from the technical point of view and from the point of view of prestige, the Chairman of the Committee appealed to the Peruvian Government for technical assistance, indicating that the Committee would especially welcome the help of an I.L.O. expert. In response to the request of the Peruvian Government, the Director-General of the I.L.O. sent Mr. Pier Paolo Fano, Chief of the International Organisations Division of the I.L.O. as an adviser to the Peruvian Government and the Mediation Committee in connection with the settlement of the dispute.

As a result of exploratory interviews made by Mr. Fano, it was clear to him that the most important problem lay in getting to the root of the trouble which appeared to lie in the absence of regular machinery for discussion of labour conditions between labour and management. There was in the undertaking no standard conditions of employment and no satisfactory personnel policy, human relations and welfare measures. Bearing these and other related matters in mind and taking the lead from a resolution on industrial relations in the transport industry unanimously adopted by Governments' workers' and employers' representatives at the second session of the I.L.O.'s Inland Transport Committee in 1947, he made certain proposals. The proposals included the creation of three permanent joint committees, composed of representatives of the company and the unions concerned to deal separately with collective grievances, welfare problems and safety matters. It was also suggested that the company should, within one year, establish a uniform system of employment and promotion for its staff so as to eliminate the continuous difficulties and complaints caused by the lack of such a system; that it should appoint a qualified executive to deal exclusively with the problems of labour management and welfare, that it should improve the facilities for the airing of individual grievances and that more attention should be paid to the problems of human relations within the undertaking. As regards wages, it was proposed that the increase in wages granted to a section of the employees should be granted to all, as otherwise, it would be thought discriminatory and uniust. It was also suggested that the company should pay a Christmas bonus as the promise had already been made and also because that was the prevailing practice in most undertakings in that region. Regarding other claims concerning wages and hours of work, it was suggested that they should not be pressed by the workers, since they could more appropriately be discussed in connection with the proposed introduction of the uniform system of conditions of employment and production. As regards claims not concerned with wages and hours of work it was suggested that they should be referred by the Mediation Committee to the proposed joint committees in accordance with their respecive nature. It was also suggested that the company should take a number of welfare measures. Before submitting these suggestions to the Mediation Committee, the I.L.O. expert discussed them with representatives of the workers and the company. The Mediation Committee considered the proposals as the final basis for the settlement of the dispute and unanimously adopted them with the concurrence of the representatives of the company and the workers.

NEW PUBLICATIONS

Nationalisation and the Managerial Role. By J. V. S. Rama Sastri. Published by The Popular Book Depot, Lamington Road, Bombay 7. Pages : 119. Price : Rs. 6.00.

THE managerial function, as is well known, has acquired an influential status in economic society today. The author seems to hold the view that the actual owners of enterprise have not seriously lost the managerial functions. He admits, however, that there has been a wide dissipation of managerial process among a variety of persons connected with business. While the earlier chapters of the book deal with the management problems in general, the latter part is concerned with the problems of management in nationalised concerns. He also makes a comparative study of the managerial role obtaining in private enterprise and the public sector today.

The author discusses the essential functions of management illustrating how these functions are effected in actual practice. He discusses at length whether or not the managerial functions, as Burnham contends, rest solely with the men in charge of actual technical processes of production, the shareholders exercising little or no powers over the affairs of the company. In the third stage of his analysis, the author examines the dispersion of the managerial functions among the three groups—shareholders, directors and managing agents. He attributes this dispersion to the complexities of modern methods of production which have necessitated the managerial task of "policy decision and intelligent execution" to be performed by separate groups.

The latter part of his discussion deals with the position of the manager in nationalised industry, who is bereft of his fundamental task of policy decisions. The manager works within a rigid framework determined by the Government. The case for the nationalisation of basic industries in India has often been justified by illustrating the experience of another Welfare State, namely, the U.K. The author proceeds to point out that while, in Britain, nationalisation has had every chance of "emerging as the climax of a system of industrial control" it is bound to be considered an "abrupt step" in India.

There is a brief but thorough analysis of the managerial role in private enterprise and nationalised industry. The author also discusses the relative value of the chief forms of State enterprise—the departmental organisation, the public corporation, the joint-stock company and the "mixed" enterprise. Although the author admits that his aim is not to judge the rationale of nationalisation itself, it is noteworthy that he reaches the conclusion that the managerial function "seems to be weakened under the spate of nationalisation."

Iran : Published by Her Majesty's Stationery Office, Kingsway, London W.C. 2. Pages : 114. Price : 5s.

Iran probably has the greatest potentialities for development of all countries of the Middle East. Since the war it has been engaged in an ambitious development programme backed by growing oil revenues adequate to cover the country's needs. A detailed survey of economic conditions and information on sales methods and opportunities is given in a new edition of *Economic and Commercial Conditions in Iran* prepared by H.M. Counsellor (Economic) of the British Embassy, Teheran, and published for the Board of Trade by H.M. Stationery Office, London. The survey points out that since the settlement of the oil dispute, a considerable number of British firms have shown a remarkable and rewarding degree of interest in Iran. British exports in 1956 reached £26 million and are expected to exceed this total appreciably in 1957. It is hoped that many more firms will be attracted to this market.

The Seven-year Plan Organisation, which was set up in 1949 under the Seven-Year Plan Law, is now in its second period. For this second seven-year plan the Organisation is authorised to spend $350 million. This expenditure covers a variety of development projects such as roads, railways, harbours, airfields, agriculture, irrigation, municipal water and electricity supplies, the creation of new industries and the development of all types of social services. The survey gives details of the sales prospects for U.K. exporters of various commodities and equipment. For instance, diesel types of equipment, it is stated, are in particular demand because of the cheapness and availability of oil supplies. There is an immediate and growing demand for all kinds of contractors' plant and a boom in the building of dwelling accommodation, offices and shops.

Details of foreign trade regulations, statistics and economic and social data of many kinds are included in this survey.

Report and Proceedings of His Royal Highness The Duke of Edinburgh's Study Conference. Volumes I and II, Published by Oxford University Press, London. Pages: 676. Price : 42s.

The two volumes contain a complete account of the proceedings of H.R.H. The Duke of Edinburgh's Study Conference, held at Oxford in July 1956, and the speeches of the delegates from the different parts of the Commonwealth. They cover a large number of the problems of industrial countries having widely different economies and different levels of industrial development. Readers will find that the study conference has made a thoughtful and constructive contribution to the discussion on the most pressing problems of industrialisation. In view of the wide coverage of the report it is difficult to give here a brief summary of its contents. However, certain points highlighted in the report may be mentioned here. The report has as its background the thoughts and ideas of those who took part in the study conference, and throws a great deal of new light on the problems and opportunities created by industrialisation. Most of the speakers, who addressed the study conference, have emphasised that productivity, of which we hear so much nowadays, is not an end in itself and that it should be attained in a way which would stimulate and not suppress the capacity of men and women engaged in industry to enjoy a healthier and fuller life. All workers earn for security. They desire that management should take real interest in them. The report, therefore, emphasises that everything possible must be done to enable workers to give of their best under a good organisation. The need for the best possible human relations in industry has assumed increasing importance. Indeed, the life in industry can only reflect the community and nation as a whole.

The report is an invaluable source of information for those who are interested in the industrial field. It is a critical guide to the scientific study of the problems of industrial communities.

India's Five-year Plans—An Economic Analysis. By Prof. Dhiresh Bhattacharyya. Available at Udayan Granthagar, 41, Deb Lane, Calcutta-14. Price: Rs. 2.50.

This is the second edition of the publication brought out in 1956. The revised edition contains not merely an analytical framework of the two Five-year Plans but also a critical review of the achievements of the Plans up-to-date. Special attention is devoted to the study of capital formation, public and private sectors and full employment. There is also a thorough discussion of the Central Government's budgetary policy.

The main theme of the author is that the establishment of the socialist pattern of society can be achieved not by giving doles to the unemployed or by encouraging practices like copartnership in large-scale industries but by decentralising the industrial sector. Drawing particular attention to the financial aspect of the second Plan, he rightly points out that it will be very difficult to get even half of the planned expenditure of Rs. 4,800 crores through taxation, non-tax revenue surplus, deficit financing and external assistance. In his opinion, the investment pattern has little relation to the supply of available investible resources in the country and the scale of investment is very large as compared with the consumption propensities of the public.

Sell your goods where they are wanted most

South East Asia
offers new markets for your goods

Trade now with South East Asia, for the prosperous people there can afford to buy your goods. The Indian Overseas Bank Limited with branches in several strategic centres has made a special study of this important, growing market. 108 2868

Direction of International Trade (Annual Issue). Joint publication of the U.N. (Statistical Office), the I.M.F. and the World Bank. Pages : 333. Price : $2.50.

This is the fifth annual issue of *Direction of International Trade*, reporting annual trade-by-country data for the years 1938, 1948 and 1953-56. The table for each country shows the value in U.S. dollars of the country's exports to and imports from its trading partners during the years 1938, 1948 and 1953-56, as well as aggregates of the trade obtained by grouping the partners into monetary and geographic regions. Where the returns of a country showing its export and import trade in any period covered are not available, "derivative" figures obtained from the trade returns of other countries have been tabulated, providing an approximate indication of the magnitude and direction of the trade of the non-reporting country. The reconciliation of the totals distributed by country with the totals adjusted for general international comparison, included for the first time in the second annual issue is continued in this issue. The totals distributed by country are reconciled with the totals in U.S. dollars.

A special feature of the annual issue is the presentation of the summaries of the trade of the principal monetary areas of the world as measured by the reporting countries in each area. For those countries for which direct reports are not available, data derived from the trade returns of partner countries have been incorporated in the summaries to obtain complete coverage for each area shown. For comparison with these summaries in the indirect trade of each area as measured by all countries trading with the area is presented as a second set of summaries. Direct data of the area are used when necessary to obtain complete coverage by the reporting country.

Irrigation, Improved Seeds and Land Reclamation. Published by The Publications Division, Ministry of Information and Broadcasting, Government of India. Pages: 28. Price: Re. 0.25.

Even after completing the first Five-year Plan which had accorded a very high priority to irrigation and agriculture, the need for stepping up production of food and other cash crops continues to be pressing. It is not surprising that, in the second Plan, still greater emphasis has been laid on more irrigation facilities, use of better seeds and reclamation of culturable waste lands. These aspects have been explained in some detail in this book.

The first chapter of the publication gives information regarding the various irrigation schemes undertaken in the first Plan, as also those included in the second Plan. It deals even with the fundamental aspect, namely, the meaning of minor and major irrigation. The second chapter is on improved seeds. Until recently, there were no adequate facilities for multiplication of better seeds. If agricultural production is to be increased, it is essential that the nucleus of the seeds should reach every group of villages. The State has provided facilities like seed farm, seed store, etc. The publication furnishes useful information on these facilities. The third chapter is devoted to land reclamation, with particular reference to the Central Tractor Organisation, its achievements in the first Plan and its programmes under the second Plan.

INDIA'S CEMENT INDUSTRY

RAPID GROWTH IN A DECADE—SPECIAL FEATURES OF FUTURE EXPANSION

By Manubhai Shah

MINISTER OF INDUSTRY, GOVERNMENT OF INDIA

THE cement industry in India had a humble beginning. The first organised attempt to manufacture portland cement was made early in this century, when, in 1904, a small factory was established at Madras, using sea shells as a source of lime. The venture was short-lived, but a decade or so later, the industry revived and three factories were set up one each at Porbandar in Saurashtra in 1913, Katni in Madhya Pradesh in 1915, and Lakheri in Rajasthan in 1916. The out-break of war and consequential restriction on imports created favourable environments for the growth of the industry and, by 1918, the three factories were producing 85,000 tons of cement per year.

During the years of post-war boom, the Indian cement industry developed rapidly and, between 1919 and 1924, seven more factories came into existence. In 1920, the production of cement in India was 91,253 tons and imports were of the order of 150,000 tons. By 1930, the production had risen to 564,000 tons and so rapidly did the production outstrip demand that the industry was faced with the problem of selling its output. The Government of India referred the matter to the Tariff Board in 1925 to enquire into the working of the industry. The findings of the Board emphasised, *inter alia*, the need for co-operation amongst the manufacturing units. Accordingly, the Indian Cement Manufacturers Association was formed to regulate cement prices and to ensure proper delivery of quality cement to consumers.

The important events in the history of the Indian portland cement industry are the imposition of duty on imported cement by the Government of India in 1926, and the establishment in 1927 of the Concrete Association of India for purposes of giving free advice and assistance to the consumers of cement. In 1930, the Cement Marketing Company of India Ltd. came into being, in order to supervise the distribution and sale of the output of member companies.

The year 1936 was, perhaps, the most outstanding in the history of the cement industry, when Mr. F. E. Dinshaw brought under control of a single organisation all the ten existing factories and the Associated Cement Companies was formed. In the same year, the Dalmia Managing Agency, which controlled another group of factories in different parts of the country, was also instituted. Mr. Dinshaw's efforts and confidence in the industry were amply rewarded and nine new factories started production between 1936 and 1939. The production in the period 1936-40 was of the order of 1,700,000 tons per annum. By 1945, the production had increased to 2,150 000 tons, but, in 1947, the production fell to 1,440,000 tons as a result of partition of the country. In the period 1940-47, only two more factories came into production; one at Banjari in 1946 and the other at Chaibassa in 1947. The development of the industry in subsequent years, i.e. 1948-57, was rather phenomenal and 10 more factories came into production one each at Sevalia, Kottayam, Tirunelveli, Rajgangpur, Sawai Madhopur, Sika, Sindri, Churk, Dalmianagar and Bagalkot.

The progress in production of cement during the last ten years since Independence has been as follows:

Year	No. of factories	Production in tons	Percentage utilisation of installed capacity
1947	18	1,447,660	70
1951	22	3,195,142	90
1955	27	4,495,920	95
1957	28	5,598,000	86

Rated capacity now is 6.6 million tons and production in 1957 was 5.6 million tons giving 86 per cent. utilisation of the capacity.

Present Position

There are at present 29 cement factories, having an installed capacity of over 6.6 million tons per annum working in the country with both the dry and wet processes. Of these, 13 belong to the A.C.C. Group, 6 to the Dalmia-Jain Group and 10 of other industrialists. It is estimated that a capital of Rs. 35-40 crores is invested in the industry which gives direct employment to more than 30,000 people.

The annual consumption of the main raw materials based on production in 1957 is as follows:

Raw material	Quantity consumed
Limestone and clay	96 million tons
Gypsum ..	800,000 tons
Coal	3.4 million tons
Water	18-24 million gallons
Power	720 million KWH
Gunny bags	96 million nos.

Apart from limestone which is mainly used as a source of lime, sea shells, marl, chemical sludge are also used in large quantities as a source of lime in the manufacture of cement.

Demand

The Planning Commission, in their programme of Industrial Development for the period 1951-56, estimated the demand for cement at about 3.3 million tons by 1952-53 and 3.8 million tons by 1955-56, exclusive of the requirements for multi-purpose schemes and road construction. The total demand was estimated at 4.5 million tons by 1955-56. However, subsequent developments have shown that these estimates were on the conservative side and the demand for cement was substantially higher as would be evident from actual production as well as estimates of demands. The present annual estimated demand for cement is about 9 to 10 million tons. The Indian Institute of Public Opinion in their quarterly Economic Report (July 1954) have estimated the following trends in construction activity during the next seven years, i.e., 1954-61:

Classification of construction	Current expenditure: Rs. crores per year (current prices)	Rates of historical growth per cent. per year	Current rates of growth per cent.	Estimated rate of growth 1954-61 per cent.	Estimated annual expenditure 1961 at current (1954) prices Rs. crores
1	2	3	4	5	6
Urban Housing (Private) ..	100	1.05	2	2.5	118
Rural Housing (Private) ..	36	0.66	0.75	1	39
Public Sector (Corporate) ..	14	2	3	3.5	18
Private Sector (Corporate) ..	140	10	20	20	336
Total ..	290				511

The average rate of growth per year over the period 1954-61 comes to 10.9 per cent. This rate of construction activity is likely to boost up the demand for cement to a very much higher order. The demand by 1960-61 is estimated at 14 million tons for which a capacity of 16 million tons is considered necessary. In the third Five-year Plan, 1961-66, the demand for cement is expected to increase further to 20 to 25 million tons per annum and may even go upto 30 million tons per year, if the economy develops an integrated dynamism.

The industrial or social progress of a country is greatly reflected through the consumption of portland cement. The *per capita* consumption of cement in India is only 33 lbs., as against 594 lbs. in the United States, 649 lbs. in Germany, and 847 lbs. in Switzerland. The *per capita* consumption of cement in some countries is shown below:

Countries	Population in million	Consumption of cement in lbs. per head
Switzerland	4.925	847
Sweden	7.212	660
Germany	18 516	649
Norway	3 362	613
U.S.A.	172 000	594
Denmark	4 426	486
Ireland	2 933	453
France	43 046	451
U.K.	51 025	444
Netherlands	10 909	440
Italy	47 586	420
India	400 000	33

Expansion Programme

The capacity target for the cement industry under the second Five-year Plan is 16 million tons a year. Its present installed capacity is over 6.6 million tons per annum and new schemes and schemes for expansion with an additional annual capacity of 8.7 million tons has so far been approved. Of the total 55 new schemes, 29 are by way of substantial expansion of the existing factories, with an additional capacity of nearly 4.0 million tons per annum and 26 new factories with a total installed capacity of 4.7 million tons per annum. When these schemes are implemented, the capacity of the industry would have increased to over 15 million tons a year. In addition, three more schemes (one new and two expansions), involving a capacity of 0.74 million tons per annum, have since been considered by the Government. These would also be licensed shortly, pending completion of certain formalities. This would bring the total licensed capacity to about 16 million tons in the Cement Industry by 1960-61.

Some of the new and expansion schemes sanctioned have not been able to make satisfactory progress mainly on account of non-availability of limestone of suitable grade in close proximity of the site chosen and may, therefore, be revoked in the near future. The total capacity of such projects likely to be revoked is 2.1 million tons per annum. The Government have under consideration several substitute proposals for meeting the deficit gap in the capacity target.

The progress of the various schemes is reviewed from time to time and, according to the licences issued so far, the cement industry is expected to attain the following capacity in the next two-three years:

Existing capacity ... ... 6.634,000 tons

Year	Additional capacity likely to come into being	Progressive total
January-June 1958 ..	797,200 tons	7,331,700
July-December 1958..	1,990,000 tons	9,321,700
1959	3,117,000 tons	12,438,700
1960	1,693,000 tons	14,131,700
In 1960-61	1,176,000 tons	15,307,000

The requirements of foreign exchange for meeting the targets for cement production set out in the second Five-year Plan are estimated at Rs. 56 crores by way of capital equipment. Of this, import licences of a total value of Rs. 23 crores have been already granted. In addition, some parties have made arrangements of import of machinery on deferred payment terms for some of the capital goods. The foreign exchange requirements for some of the cement schemes, which are in advanced stage of implementation, have also been satisfactorily covered. Assistance of foreign exchange under T.C.M. Aid Programme to the extent of Rs. 3.6 crores has also been arranged. All these steps will cover *additional* capacity of 3.27 million tons per annum. It is now, therefore, necessary to arrange for import licences for capital goods and machinery for the balance capacity of 5.4 million tons per annum which is still left uncovered through import licences.

As already indicated, it is proposed to licence shortly three more schemes covering an additional capacity of 0.74 million tons over and above that of 15.3 million tons capacity approved under the Industries Act, making a total of 16 million tons. Besides, there are about 14 proposals pending. A close watch is being kept on the progress of each scheme and, in the light of periodic assessment of the actual implementation, it will be possible to approve proposals out of these pending schemes, in order to cover the target of 16 million tons by 1960-61. It is hoped that a major portion of the balance capacity will be covered through import licences during 1958.

Future Development
