Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2443 BOMBAY, 11th JANUARY 1958 PRICE. Re. 1.50

FOREIGN INVESTMENTS IN INDIA

INDIA'S contribution to the success of the Allies in the Second World War had gained for it the status of a creditor country. That it has lost this status and become a net debtor has been well known for some time now. The publication of the Reserve Bank's *Survey of India's Foreign Liabilities and Assets* as at 31st December 1955 serves to highlight this transformation in the country's international investment position. Although this publication refers to the position two years ago, the heavy drop in foreign assets and the large borrowings abroad since then are so fresh in mind that a broad picture of the latest position clearly emerges. India's total foreign assets and liabilities as at the end of 1955 amounted, according to the Reserve Bank's survey, to Rs. 1,251.8 crores and Rs. 766.3 crores, respectively; as a result, it had a net creditor position to the extent of Rs. 485.5 crores. During 1956 and 1957, the foreign assets held by the Reserve Bank shrank by Rs. 437.53 crores and that despite large loans and grants from the United States and borrowings from the World Bank and the I.M.F. The Bank's report itself, therefore, briefly remarks that it is very likely that, by the end of 1957, India has already become a net debtor country. It is common knowledge that the great bulk of the sterling balances accumulated during the last world war and the favourable trade balance enjoyed during the Korean boom have been utilised for raising India's living standards and sustaining its growing population. But whether the investment of these resources has been wisely made and whether it is fetching satisfactory returns constitute another set of questions into which we need not go now, as the main purpose of this article is to review the Reserve Bank's survey under reference.

The Bank's first survey of foreign assets and liabilities related to the position as on 30th June 1948 and the second to that on 31st December 1953. The one under review is, therefore, the third survey. At the end of June 1948, India's foreign liabilities aggregated Rs. 178.1 crores in the official sector and Rs. 326.1 crores in the non-official sector, while its assets in these sectors were Rs. 1,939.6 crores and Rs. 69.1 crores, respectively, so that it was a net creditor to the tune of Rs. 1,504.5 crores. Five and a half years thereafter, that is, at the end of 1953, the excess of assets over liabilities had shrunk to Rs. 557.6 crores, mainly as the result of a fall in the foreign assets of the official sector to Rs. 1,206.6 crores and an increase in its liabilities to Rs. 249.6 crores. It may be noted here that, of the decline in the official sector's foreign assets during this period, some Rs. 300 crores represent assets transferred to Pakistan in terms of the Partition settlements and to the U.K. towards sterling pensionary liabilities. In the non-official sector, the liabilities rose to Rs. 476.8 crores and so also the assets to Rs. 66 crores. The downward trend in the creditor status continued in the two years ended 1955 but with a slight difference. While there was actually an increase in the net position of the official sector from a credit of Rs. 957.0 crores to Rs. 960.8 crores, the net debtor position of the non-official sector widened from Rs. 399.4 crores to Rs. 475.3 crores, thereby bringing down the extent of creditor status of the country to Rs. 485.5 crores. In other words, foreign private investments rose to an extent which more than neutralised the modest variations in the official sector's liabilities and assets. The exact position at the end of 1955 was that foreign liabilities in the official and non-official sectors were Rs. 209.9 crores and Rs. 556.4 crores, respectively; as against these, their assets were Rs. 1,170.7 crores and Rs. 81.1 crores. Thus, while the official sector was a creditor to the tune of Rs. 960.8 crores, the non-official sector was a debtor to the extent of Rs. 475.3 crores. The assets of the official sector mainly consisted of sterling balances, while its liabilities represented largely loans from the U.S. (Rs. 91.4 crores) and other foreign countries and international institutions. The non-official sector's assets comprised claims on the U.K. and Pakistan, as well as balances and small investments in other countries, while its liabilities represented business investments, loans and advances, and insurance.

Of the total liabilities of Rs. 556 crores in the non-official sector, foreign business investments aggregated Rs. 481 crores and other business liabilities Rs. 41 crores. A predominant portion of the Rs. 481 crores of business investments was accounted for by branch investments and equity holdings, the share of fixed-yield investments (preference shares and debentures) being only 3 per cent. of the total. Between branch investments and direct equity investments, the former accounted for more than half —Rs. 268 crores to be precise. A bulk of the direct equity investments was in the form of subsidiaries of foreign parent companies. The branches and subsidiaries together formed 95 per cent. of the direct foreign investments and over 80 per cent. of the foreign total business liabilities. Foreign capital invested in the country without any controlling interest, described as "portfolio investments" by the Reserve Bank, aggregated Rs. 69 crores (less than 15 per cent.), of which Rs. 55 crores were in equities and Rs. 14 crores in fixed-yielders (creditor capital). It will be seen from these figures that most of the foreign investments are in the form of risk capital and that more than half of them are not partnered by Indian capital. Where foreign capital controls and manages joint-stock companies, its ownership works out to 57 per cent. on an average; in several cases, foreign ownership is said to be close to 60 per cent.

A purposewise analysis of foreign private investments reveals that, out of Rs. 481 crores, well over a third—Rs. 163.3 crores to be precise—were in manufacturing activities, Rs. 102 crores in trading, Rs. 87 crores in plantations, Rs. 53 crores in utilities and transport, Rs. 20 crores in banking, and Rs. 19 crores in non-banking financial business. The share of mining was no more than Rs. 9.6 crores. About Rs. 26 crores were in various other industries. A countrywise analysis of investors in India discloses that Britain continued to hold the predominant position. Of the total foreign business investments aggregating Rs. 522 crores, the U.K.'s share was Rs. 402 crores or 77 per cent., made up of Rs. 135 crores in manufacturing, Rs. 75 crores in trading, Rs. 50 crores in utilities and transport, Rs. 9 crores in mining, Rs. 86 crores in plantations, Rs. 23 crores in financial and Rs. 24 crores in miscellaneous activity. It will thus be seen that British investors have participated in almost all lines of activity. This is, of course, due mainly to Britain's historical political relationship with India. Next to Britain ranks the U.S., but its investments in the non-official sector were no more than Rs. 45 crores, the bulk of which was in petroleum marketing and manufacturing. Then comes Switzerland, with an investment of a little over Rs. 7 crores, of which Rs. 5 crores were in manufacturing business. W. Germany had Rs. 2.6 crores and other countries Rs. 64.3 crores. Unlike in the case of the U.K. and the U.S., the investments of which were mostly "direct," the other countries' share was mainly portfolio investments and miscellaneous liabilities.

The chapter on the inflow of foreign business investments in the Reserve Bank's survey makes very interesting reading. It reveals that the gross increase in these investments between 1953 and 1955 was Rs. 61 crores. This includes revaluation of assets of the order of Rs. 22 crores, of which Rs. 20 crores represented revaluation of the assets of tea companies alone. Making allowance for this capital appreciation on paper and excluding Rs. 4 crores representing banking capital (which is mostly liquid), there was an increase of Rs. 35 crores in the non-banking investments. This figure reflects the net result of the various inward and outward capital movements, including the profits retained by the companies concerned. In other words, there was an average annual capital inflow of Rs. 17-Rs. 18 crores. This rate compares unfavourably with Rs. 24-Rs. 25 crores per annum in the period from 1st July 1948 to 31st December 1953. The fall in the influx of fresh foreign capital must have been far greater. In the context of the progressive increase in the incidence of taxation since the commencement of the first Five-year Plan, the frequent threats of nationalisation, the adoption of the policy of progressive Indianisation of "trading" activities, and the attacks made on

certain sections of foreign investors, especially in plantations, by some persons in authority, it is not surprising that the capital inflow was thus down. Since these adverse factors gathered fresh momentum in 1956, what with the reduction in the perquisites allowed to employees, the nationalisation of life insurance, the Imperial Bank of India and the Kolar Gold Mines, the rate of inflow during 1956 and 1957 must have been much less.

The Reserve Bank's survey further shows that there was a repatriation of Rs. 4 crores during 1954 and 1955 in plantation industry alone. An outflow of capital is shown in the older industries such as jute, coir and textile, as well as in automobiles and accessories, shipping, cigarettes and tobacco, and food products. On the other hand, modern industries such as medicine and pharmaceuticals, electrical goods, iron and steel products, machinery and machine tools received fairly sizable foreign capital. Petroleum (marketing as well as refining) industry alone accounted for an increase of about Rs. 27 crores in investments during the two years under review. As India needs more capital for developing this industry and as it is one of the few industries that have been attracting foreign capital all over the world, it is folly on the part of the powers-that-be to talk and act in a manner that will discourage the existing investors in oil from expanding their activities. Incidentally, the Bank's survey seems to suggest that foreign companies' additions to reserves were at a relatively lower rate as compared with that of Indian companies. This, too, is not surprising, when viewed in the light of taxation policy, especially section 23A of the Income-tax Act, which compels all closely controlled companies to distribute almost all their net profits and which affects the companies in the foreign sector more than those in the Indian sector. It was only last year that some relief under this section was given to manufacturing concerns and its effect on the transfers to reserves remains to be seen.

SALES TAX AND EXCISE DUTY

NO two fiscal measures have attracted more attention and been the subject of more widespread discussion than sales tax and excise duty. These two indirect taxes are among the important sources of revenue, the sales tax providing less than 20 per cent. of the revenues of the State Governments and the excise duty some 30 per cent. of the Central revenue. In many States, sales tax continues to evoke much opposition partly because the traders feel that it is too heavy a burden and partly because of the cumbersome administrative procedure involved in its collection. Excise duty, too, has been frequently opposed on the ground that the Central Government has been unable to resist the temptation of enhancing the rate of duty to a level at which consumer-resistance begins to operate in respect of the goods subject to the duty. And yet, no responsible public body has so far suggested that these two levies must be given up. Indeed, the commercial organisations have vied with each other not so much in demanding the withdrawal of the levies as in making constructive suggestions for reasonable rates and better administration.

Against this background, the two Bills—the one dealing with the imposition of additional excise duty in respect of certain commodities by way of replacement of sales tax on them and the other with the distribution of the proceeds of excise duty among States—which were passed by Parliament last month are of great assistance to the future of trade and industry in the country. The sales tax system has undergone several changes in recent years, though each change has been effected only after considerable public protest. For a long time, much uncertainty prevailed in the operation of the tax in the inter-State sphere. And this was not cleared until the Supreme Court, reversing its own earlier decision, held in 1955 in the *Bengal Immunity Co.* vs. *State of Bihar* that inter-State transactions were, by virtue of Article 286 of the Constitution, exempt from sales tax. The Union Government stepped into the breach caused by the disappearance of the State Governments in the sphere of inter-State sales tax. The Central Sales Tax Act, which came into effect from 1st July 1957, sought to vest in the Central Government the power to collect sales tax on inter-State transactions and distribute the revenue so collected among the States. The Act mitigated the hardship to which the traders had formerly been subject and also restored to the States the revenue which was in danger of being permanently lost by the Supreme Court's judgment.

Despite this change, public opinion has increasingly veered round to the replacement of sales tax by additional excise duty. The conference on sales tax, organised last year by the Federation of Indian Chambers of Commerce and Industry, suggested that, as an alternative to complete centralisation of sales tax, the scheme for replacing the tax by excise duty should be "extended to as many articles as possible, particularly to those on which at present a Central excise or customs duty is levied, except those articles which are mainly used as raw materials for manufacture of finished goods." It added: "Even in regard to those articles on which no excise is levied at present by the Centre, this scheme may be adopted and sales tax levied at one stage only and the proceeds distributed among the States on an agreed formula." It must, however, be admitted that complete replacement of sales tax by excise duty is neither advisable nor practicable. In effect, this was the conclusion reached by the Taxation Enquiry Commission which examined the suggestions for the reform of the sales tax system. The Commission was at some pains to point out how the resemblance between sales tax and excise duty was more apparent than real. It noted that "excise duties are collected from the manufacturer on his production even if there are no sales, whereas the sales tax is collected only when the manufactured goods are sold." Further, excise duties "are necessarily selective and the rates of duty are normally high, whereas the sales tax operates at different points of the trade channel, over a large number of commodities and in varying degrees of proximity to the final consumption and can, therefore, be levied at comparatively low rates."

It should thus be clear that both the tax measures, the excise duty and the sales tax, have their place in the fiscal armoury of the Central and State Governments and, further, that one cannot completely displace the other. Nevertheless, there is scope for fiscal experimentation in the direction of replacement of sales tax by excise duty in respect of a wide range of goods. This is precisely what has now been attempted by the Bill with the somewhat cumbrous title—the Bill "to provide for the levy and collection of additional duties of excise on certain goods and for the distribution of a part of the net proceeds thereof among the States and to declare those goods to be of special importance in inter-State trade or commerce." The Bill seeks to impose additional duties of excise in replacement of the sales tax levied by the Union and the States on sugar, tobacco and mill-made textiles and to distribute the net proceeds of these taxes, except the proceeds attributable to the Union territories, to the States. The Bill provides that the States which levy a tax on the sale or purchase of these commodities after 1st April 1958 do not participate in the distribution of the net proceeds and that these States should observe the ceiling rate for sales tax on these commodities imposed by section 15 of the Central Sales Tax Act.

The two issues which figured prominently in the debate on the Bill were the overall burden of the excise levy, particularly the impact of the levy on cloth, and the extension of the principle of replacement of sales tax by excise duty to other commodities. The Government has announced a temporary cut in the existing duty on medium variety of cloth from As. 2 to As. 1½ per square yard with effect from 14th December 1957; the concession is available till the end of March 1958. This concession is welcomed for the reason that it will facilitate the disposal of medium cloth stocks. Nevertheless, the total burden of the consolidated excise rates—that is, the existing rates plus the additional rate—is believed to be heavy especially on fine and superfine varieties. Yet another effect of the new levy is that the margin of advantage for the decentralised sector of the textile industry over the composite mills is widened by reason of the additional levy. It remains to be seen whether the Government will be induced to revise the basic rates as a measure of assistance to the cotton mill industry. As regards the demand for the application of the principle of additional excise levy to a larger number of commodities, the Union Finance Minister, Mr. T. T. Krishnamachari, revealed that the three commodities, namely, sugar, tobacco and mill-made cloth, were singled out for additional excise duty because they were suggested by the majority of the States. He added: "It may be that other commodities can be added. One member opposite mentioned coffee. There are other items, too, but the suggestion has necessarily to meet with the approval of the majority of the States." It would, however, appear that the Union Government, by using its good offices, has been able to get the States to agree to a uniform rate of sales tax on 16 commodities. This is a welcome development which should prove to be of benefit to the States themselves. For one important effect of uniformity in the rates of sales tax is that there will be no tendency to transfer business from a State where taxes are high to a State where they are low.

The scheme for the distribution of the proceeds of the additional duties is modelled after the pattern recommended by the Second Finance Commission. Broadly speaking, the scheme envisages the payment to the States of a sum equal to the revenue they now derive from the sales tax on these commodities and a percentage share in the balance remaining after such guaranteed amounts have been met. It may be mentioned in this connection that the Finance Commission, which was constituted in June 1956, was specifically asked by the Government in May 1957 to suggest a method for the allocation of the revenue from the additional excise duty on tobacco, sugar and mill-made textiles. The Commission must have faced a difficult task indeed in evolving a formula for the distribution of the revenue, considering that the statistics relating to the consumption of these commodities and other relevant factors are somewhat meagre. Naturally enough, the States insisted that, in any scheme of distribution of the levy, they must be guaranteed the revenue now accruing to them from the sales tax on these commodities. Discussing the principles which should govern the distribution among the States of the revenue from additional excise duty, the Commission observed:

"The net proceeds may be distributed in one of two ways. The guaranteed amounts of present income may be made the first charge on the revenue from these additional duties, the balance being distributed among all the States. Or, the net proceeds of these duties may be distributed independently of the guaranteed amounts, the Union making up the deficiency, if any, that may arise in the case of any State. We have come to the conclusion that the former method is preferable, as it ensures for every State its guaranteed amount plus some portion of any balance that may remain of the additional duties. Otherwise, it may happen that, while some States do not get from the distribution even the guaranteed amounts, others may receive sums in excess of the guarantee; in the former contingency, the Union will have to make good the deficiency. While it may be reasonable to expect that the proceeds of the additional excise duties will be greater than the total of the guaranteed amounts, we do not see any justification for placing upon the Central revenues any burden arising out of implementation of the guarantees. We have, therefore, decided that, out of the net proceeds of the additional duties, the guaranteed amounts should first be paid to the States and the balance be then distributed among them."

So much for the distribution of the proceeds of the additional excise duty. As regards the mode of distributing the excise duties as such, Parliament adopted a separate Bill which provides for reducing the share of the States from the present 40 per cent. of the net proceeds of Union duties of excise on matches, tobacco and vegetable products to 25 per cent. on these commodities as well as on coffee, tea, paper, sugar and vegetable non-essential oils. In other words, while the proportion of the excise revenue allocated to the States has been reduced, they are entitled to a share in the excise revenue in respect of a larger number of commodities. This change too follows the recommendation of the Finance Commission which, after ascertaining the views of the States, felt that it would be meeting the "general wish" of the States, if it widened "the range by increasing the number of duties to be shared." Accordingly, it decided that to the three duties which are at present shared, namely, the duties on matches, tobacco and vegetable products must be added the duties on sugar, tea, coffee, paper and vegetable non-essential oils. At the same time, it recommended the fixation of the States' share at 25 per cent. The States can certainly have no reason to feel sore over the reduction in the proportion of the excise duty allocated to them, for, as the Commission itself has pointed out, such reduction will be more than made good by the widening of the range of divisible duties.

NEWS IN BRIEF

AN agreement for the development of a network of roads in Nepal was jointly signed by India and Nepal with the United States on the 2nd inst.

Manganese ore reserves of approximately 2o0,000 tons in Udaipur and Banswara areas in Rajasthan State have been estimated by the Geological Survey of India. The reserves, which lie at a depth between 30 and 50 feet, contain 40 to 50 per cent. of manganese.

Letters designed to extend by another year the validity of the schedules attached to the trade agreement between India and U.S.S.R. were exchanged in New Delhi on the 3rd inst., between the representatives of the two Governments. The agreement, which was signed on 2nd December 1953, was valid for a period of five years.

The trade agreement between India and Italy, which expired at the end of last month, has now been extended till the end of 1958. Under the agreement Italy has agreed to treat India on a par with countries in the organisation for European Economic Co-operation. About 98 per cent. of imports to Italy from these countries have been liberalised.

A high-level Tourist Promotion Committee has been constituted by the Government of India to consider ways and means of increasing tourist traffic to India from abroad. The Committee will consider, in particular, suggestions made by various non-official and other agencies and ensure expeditious implementation of the suggestions that are found acceptable.

Asbestos cement products will continue to be licensed freely for export during the period from January 1958 to March 1959. Another trade notice says that it has been decided by the Government of India to release a special quota of potatoes for shipment to Ceylon up to 15th March 1958, by co-operative societies in the Bombay State from all ports in the State.

Czechoslovakia is expected to build two 4½-kilometre-long cableways in Burma and India. One cableway will go across the Central Burmese jungle near Thajetmjo, on the Irrawady river, to carry 150 tons of material per hour to a Burmese cement works. The other will be built near Kangsabati, in the Calcutta region, on the site of a large irrigation plant. Both cableways are to be installed by engineers of the Tramontaz factory at Chrudim, who have just returned to Czechoslovakia after a fact-finding visit to the two areas.

The Government of Bombay has constituted a Small-scale Industries and Handicrafts Board under the chairmanship of Mr. Mustafa Faki. The Board will advise the Government generally on small-scale industries and handicrafts and will, in particular, consider ways and means of promoting the growth of these industries by suggesting ways for meeting their financial needs, and make efforts to start more and more industries by creating favourable atmosphere and organising co-operative societies of these industries.

The Sindri Fertiliser Factory has exceeded its production target for 1957 by 1,833 tons. The total production of ammonium sulphate for the year was 3,838 tons which was slightly higher than that of the previous year. The monthly production of ammonia and ammonium sulphate touched a new height in December 1957, the figures being 9,363 and 32,891 tons, respectively, as against the previous record of 9,019 tons of ammonia in November 1955 and 32,397 tons of ammonium sulphate in October 1956. This gives the highest daily average of 302 tons for ammonium sulphate. The total production of ammonia for 1957 is also the highest yet achieved, being 95,081 tons.

A technical sub-committee to examine new schemes, grant extension to current schemes and formulate technical programme for vegetable oils research in India was constituted at the first meeting of the Joint Committee of the Indian Central Oilseeds Committee and the Council of Scientific and Industrial Research on 31st December last. The sub-committee comprising eight members, with Dr. Subramaniam, Director, Central Food Technological Institute, Mysore, as Chairman, decided that work should be carried out on 10 items, namely, oilseed milling, non-edible oils, solvent extraction, cottonseed oil, castor oil, fatty acids, animal fats, activated earths and carbons, surface-active agents and surface-protective coatings.

From Abroad

The Export-Import Bank of the U.S. has agreed to give a loan of $100 million to Brazil for rehabilitating its railway system. The money will be spent on U.S. equipment which include diesel locomotives and signal gear.

West Germany's steel output in 1957 is placed at 24.5 million tons, a six per cent. increase over the 1956 output of 23.2 million tons. The voluntary restriction imposed by the industry on exports of merchant bars and concrete reinforcing steel to 15,000 tons per month has been extended to the end of the current month.

The U.S. International Co-operation Administration is expected to help Indonesia to buy ships and replant rubber. Credits from the I.C.A. and funds from the Shipping Ministry's Budget will be used in payment of several ships, including a freighter ordered from Finland and passenger ships from West Germany.

Westinghouse Electric has announced the development of a new pump which circulates molten metal at temperatures up to 1,600°F. The pump can handle upto 5,000 gallons a minute. It is intended for use in nuclear reactor systems that use liquid metal coolants, such as sodium and bismuth. It is hermetically sealed to render it leak-proof.

The American Embassy in New Delhi is one of the five missions throughout the world to which the United States is planning to appoint a science attache. Others already earmarked for such an attache are Paris, Bonn, Stockholm and Tokyo. The attaches will be responsible for reporting on all aspects of scientific developments in the countries to which they are assigned.

For the sixth year in succession, America's scheduled airlines in 1957 had a fatality rate of less than one person for each 100 million passenger miles flown. According to the Civil Aeronautics Administration, there were 67 fatalities last year, making 1957 the second safest year in aviation history, even though an estimated 45 million persons were flown about 26,300 million passenger miles in domestic operations.

The American Census Bureau estimates that the U.S. commenced the new year with a population of 172.8 million, showing a net gain in population for the year of three million persons, that is, about 8,200 every 24 hours. The Census Bureau said that, during the year, there was a birth every 7½ seconds, a death every 20 seconds, an immigrant entering the country every two minutes, and an emigrant leaving every 20 minutes.

A Bristol Britannia airliner with 61 passengers and crew is believed to have smashed all records for the flight time of the trip from Mexico City to New York. The scheduled time for a piston-engined aircraft on this route is 6 hours and 45 minutes. A turbo-prop Britannia of the Aeronaves de Mexico passenger service did the flight on the 1st inst., in 5 hours 8 minutes. This was 17 minutes faster than the previous best time, which also was credited to a Bristol Britannia.

Ceylon has been offered technical assistance by the Soviet Union for expanding its food and natural rubber production with an agreement to buy rubber from the former on a mutually beneficial basis. The offer was made by a Soviet trade mission during preliminary discussions with the Ceylon Government. The Mission is presently engaged in carrying on detailed discussions with the various Ministries on the development of trade and economic relations between the two countries.

The recent tax increases by the French Government in furtherance of its austerity drive are expected to send up the price of a wide range of luxury and household goods in France. The Government has decreed a 2½ per cent. increase in the tax affecting imported and home-manufactured luxury products ranging from jewellery, beauty aids, radios and refrigerators to toys, fishing tackle, truffles and caviare. Increased stamp duties have put up the cost of passports, driving licences and similar documents.

The Canadian Government has protested to the United States over the restriction on imports of crude oil in the Pacific Coast area. According to the Canadian Finance Minister, the U.S. restrictions on Canadian oil imports were "an offence against the tenor and principles" of Canada-U.S. defence co-operation laid down in an exchange of notes between the two Governments as early as on 26th October 1950. The restrictions, according to him, were in "ill accord" with the *communique* issued after the N.A.T.O. summit meeting in Paris last month.

Apprehensions are entertained by mining circles in Kuala Lumpur that the economic impact on Malaya, consequent on the tin restriction scheme, might result in the retrenchment, within the next three months, of no less than 7,000 miners out of a total 40,000. Of all the mines, the 500 Chinese mines represented by the All-Malaya Chinese Mining Association are the hardest hit, according to the President of the Association. Anxiety in regard to this has been expressed by the Minister of Labour as well who is, accordingly, ordering an investigation into possible unemployment problems.

A report from Buenos Aires says that all assets of Mercedes-Benz in Argentina have been declared forfeited in favour of the Argentina Exchequer on the grounds of "offences against the law." Under the recently concluded German-Argentine agreement, the legal decision in regard to the Daimler-Benz subsidiary in Buenos Aires had been left to Argentina. The verdict is considered totally unjustified and it is understood that Daimler-Benz of Stuttgart will take all possible legal steps to get the order rescinded. The charges are that the subsidiary secured import licences far in excess of the amount foreseen in the original contract and that "excessive" profits were earned.

As from April 1958, the British Overseas Airways Corporation will introduce a new "economy" service on its North Atlantic routes, with fares some 20 per cent. below the normal tourist rates. Announcing this, the B.O.A.C. adds that between London and New York the rate will be £90 single and £162 return, and between London and Montreal £88 and £159 respectively. The reduction in fares, according to the B.O.A.C. follows the introduction of the £100 dollar allowance for British visitors to the dollar area, and will be an extra inducement for people wishing to visit North America as cheaply as possible. The new service is subject to Government approval.

Oil produced from the wells at Hassi-Messaoud in the Sahara region commenced flowing to the railhead at Touggourt on 31st December last. It is expected that about a week's time will be required to fill the 111-mile pipeline from deep in the Southern Algerian desert. Tanker wagons will take the oil to the Mediterranean port of Philippville. Initially about 600 tons a day will pass through the six-inch pipeline which will be raised to 1,200 tons by April. Eventually, with the aid of three pumping stations, the flow will be raised further to 1,800 tons a day. Plans are also ahead for the construction of a larger pipeline to the Mediterranean coast. Five wells in the Hassi-Messaoud field have reached the productive stage and two others are expected to become producers ere long. With two more boreholes reaching oil-bearing strata, the known extent of the oilfield has been revised to about 77 square miles.

PERSONAL

MR. Harold Macmillan, Prime Minister of the U.K., accompanied by Sir Norman Brook, Secretary of the British Cabinet, arrived in New Delhi on Wednesday on a four-day visit for discussions with Mr. Nehru.

Sir Henry Lintott, Under-Secretary of State for Commonwealth Relations, U.K., arrived in Bombay from London on Monday. He will be in the city for a few days.

Dr. M. H. Gopal, Professor of Economics in the University of Madras, has been elected President of the All-India Economic Conference scheduled to be held in Lucknow in December 1958.

Mr. Bishnuram Medhi, lately Chief Minister of Assam, has been appointed Governor of Madras in the vacancy caused by the death of Mr. A. J. John.

Mr. Owain Trevor Jenkins, Senior Managing Director, Messrs. Balmer Lawrie & Co., Ltd., Calcutta, was made a Knight by the British Government in the New Year Honours for his services to the British community in India.

Mr. J. R. Wilson, Deputy Chairman and Secretary of the Assam Branch of the Indian Tea Association, Calcutta, and Mr. M. S. Calderwood, Plantation Manager, Nagamallay Estate, Kerala, received the O.B.E. in the New Year Honours for their services to the U.K. community in Assam and South India, respectively.

"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *7th January*

Prospect of the New Year

In common with most other newspapers it has erstwhile been our custom, on the threshold of the New Year, to publish a review of the salient events of the year that has passed. On the present occasion we lack inspiration in that direction, for 1932 has been a melancholy year in almost every section of trade and commerce, and our review would be a rueful, if not positively a displeasing, reminder of adverse exchanges, emasculated credits, languishing industries, unproductive conferences, unsolved reparation and war debt problems, falling prices, unemployment, and the general infelicity, if not the insolvency, of nations. Far, far better will it be if we abruptly turn our backs upon the events of the past year and give our glances, hopefully if we can, to where our future lies. We may nevertheless ponder for a moment upon the fact that the autumn revival in business was somewhat encouraging, although it failed to act up to our fond anticipations. The gap between current levels of activity and those of a year ago has not yet been closed; but it has been greatly narrowed since midsummer. More important, perhaps, is the fact that the recent gains marked the first definite upturn since the spring of 1931 and the sharpest advance since the depression began. Accompanied, as it was, by the most pronounced rally in commodity prices since 1929 and by a very distinct improvement in financial conditions, the business expansion provided a basis for moderate optimism that had been almost wholly lacking since the closing months of 1931. General opinion at present leans toward the view that the winter months, while they may show some further progress, are not likely to bring sharp changes in the rate of business activity. The lack of any significant increase in bank credit, the recent irregularity in security and commodity prices, the absence of any strong seasonal influence during the winter, and the fact that the policies of incoming administrations cannot become known in detail for several months at least, are among the factors that tend to support this view. Added to these conditions is the acute political and financial unsettlement that still exists and the fact that certain international economic problems of the greatest urgency still await solution.

EARLIER GAINS IN EQUITIES PARED

HEAVY PROFIT-TAKING AT CLOSE

(From Our Own Correspondents)

BOMBAY, *23rd January*

THE share market on the whole fared well during the week under review. There was almost a boomlet in the earlier half of the week on strong speculative buying and short-covering, which lifted the leading scrips to levels not seen for sometime past. The rise in shares values, which touched their best levels for the week on Tuesday last, was noteworthy, in that it occurred without any support from the Life Insurance Corporation, which has been out of the market for the past few weeks. In the last two days, however, there was a slight reversal of the trend due to heavy profit-taking. Consequently, the closing rates today were well below the week's best levels. Nevertheless, over the week, almost the entire list shows perceptible gains.

With the attention of the market diverted to the enquiry now going on in the city into the investments of the L.I.C. in the Mundhra group of concerns, activity has thinned down and fluctuations are narrow.

The earlier cheerfulness was initiated by the announcement on Thursday evening last of a bonus issue by the Tata Iron and Steel Company (subject to Government sanction) in the ratio of one share for every five shares, out of the share premium account, in commemoration of the Company's golden jubilee. Though the gift was generally anticipated, it was greeted with a smart jump in Tata Steels as it was reported that the issue had the informal approval of the Government. Further, it raised hopes that the Indian Iron and Steel Company, which too collected a premium when it issued new capital last year, might also issue bonus shares. Reports of satisfactory movement of cloth from traders gave strength to textile shares. The most important news of the week was the announcement of the U.S. Government's offer to give loans to India aggregating $225 million to help the latter meet "the most crucial requirements of the second Five-year Plan during the next twelve or fifteen months." Roughly 70 per cent. of the loans would come from the U.S. Export-Import Bank and the balance from the President's Development Loan Fund. The loan programme would cover both the public and private sectors. It was also announced that India would be eligible for further assistance under the revolving system of credit offered by the Development Loan Fund. Good prospects of getting credit from West Germany, France and Japan and hopes of getting foreign private capital also infused strength to the market.

In the steel section, Tata Ordinaries rallied from Rs. 166.25 to Rs. 174.50, but profit-taking at the higher level caused a setback to Rs. 171.75 at the close. The new shares were marked up over the week by Rs. 7.50 to Rs. 165.50. Indian Irons advanced from Rs. 19.32 to Rs. 20.24 before finishing lower at Rs. 19.84.

In contrast to the dullness noted in the previous week, textile shares were somewhat lively this week and values hardened sizably. Bombay Dyeings came up from Rs. 50.70 to Rs. 52.30, but lost a part of the gain when they closed at Rs. 51.50. Centurys hardened from Rs. 392 to Rs. 401.25, only to react to Rs. 392. Kohinoors closed with a gain of Rs. 3.50 at Rs. 268.50, after touching a high of Rs. 273.50. Central Indias gained Rs. 2.50 to Rs. 86.50, Finlays Rs. 5 to Rs. 264 and Gokaks Rs. 3.50 to Rs. 160, while Indu Ordinaries showed no change at Rs. 9.64. Indore Malwas rose by Re. 1.50 to Rs. 119.50 and Morarjee Mills by Rs. 2.50 to Rs. 205. Mysore Spinnings jumped up by Rs. 4.50 to Rs. 99.50. New Greats put on a rupee at Rs. 223. Shree Niwas Cottons were better by Rs. 2.50 at Rs. 160. Standards were in request on reports of a bonus issue by the Company and rose by Rs. 11.50 to Rs. 404. Svadeshis looked up by Re. 1.50 to Rs. 170.50 and Tata Mills by Re. 1.75 to Rs. 40.50. Ahmedabad Advances closed with a gain of Rs. 4.50 at Rs. 112.50. Lakshmi Mills gathered Rs. 5 to Rs. 437.50 and Phoenix Rs. 10 to Rs. 126.25, while New Kaiser-I-Hinds were marked down by Rs. 2.50 to Rs. 83.50 and Sholapurs by Rs. 60 to Rs. 640.

Bank shares were steady with further gains in most scrips. Barodas were up by 25 nP at Rs. 106.25 and Central Banks (new) by 50 nP at Rs. 56.50, while Central Banks (old) shed 20 nP to Rs. 52.30. Bank of Indias were done Re. 1.75 higher at Rs. 135.25; their new shares were Re. 1 better at Rs. 136. Punjab Nationals provided the highlight of the section with a jump of Rs. 4 to Rs. 54, following the announcement of higher final dividend of Rs. 2.50 per share on the increased capital raised by the recent bonus issue. United Commercials also attracted good attention and rose by Re. 1.50 to Rs. 62.50.

In the insurance section, New Indias finished with a fractional loss of 25 nP at Rs. 49.25, while New Greats had business 12 nP higher at Rs. 17.12. Indian Mercantiles were marked up by 75 nP to Rs. 41.50 and Vulcans by 40 nP to Rs. 16.52.

Electricity shares were featureless and business was thin. Ahmedabad Electrics were a shade lower at Rs. 94.80. Bombay Suburbans and Surat Electrics were unchanged at Rs. 107 and Rs. 108, respectively. Tata Hydros held their ground at Rs. 113, while Tata Powers dropped Rs. 7.50 to Rs. 1,132.50. Andhra Valleys stood at Rs. 1,098.75.

Sugar shares came in for good attention. Belapurs were picked up Rs. 2.50 higher at Rs. 235. Phaltans put on Rs. 2.50 to Rs. 148 and Walchandnagars Rs. 3 to Rs. 273.75. Early in the week, cement shares came to the forefront, on expectations that the selling prices allowed to producers might be increased. A.C.C., for instance, shot up from Rs. 149.25 to Rs. 155, but the rise was not sustained in the latter part of the week. On profit-taking, the shares gave way to Rs. 152.75. The new shares gathered Rs. 2.70 to Rs. 80. Digvijays were well held at Rs. 135, while Ashokas rose by 24 nP to Rs. 8.12 and Dalmias by 48 nP to Rs. 10.24.

In the engineering and mining group, Alcocks were higher by Rs. 2.50 at Rs. 217.50. Tata Locomotives, after advancing from Rs. 138.50 to Rs. 144.50, finished at Rs. 141.25. Premier Constructions improved by Rs. 3.25 to Rs. 161.50. Larsen and Toubros were steady at Rs. 12.72 and Mahindra and Mahindras at Rs. 16.72. Shivrajpurs moved up by Rs. 2 to Rs. 87. Indian Coppers were steady at Rs. 2.86.

Among miscellaneous industrials, Bombay Burmahs (old) appreciated from Rs. 524 to Rs. 543.50 before receding to close at Rs. 534. The Partly-paids were better by Re. 1.25 at Rs. 202.50. National Rayons closed with a gain of Rs. 6.75 at Rs. 221.75, after touching a high of Rs. 225.25. Gwalior Rayons also looked up by 56 nP to Rs. 11.56. Killick Industries were marked up by Re. 1.50 to Rs. 158. Tata Chemicals put on 20 nP to Rs. 12.44 and Tata Oils Re. 1.75 to Rs. 36.75.

• • • •

Calcutta Stock Exchange

CALCUTTA, *22nd January*

A distinctly steady trend was noted on the Calcutta Stock Exchange during the week under review. The main contributing factor was last Thursday's announcement of the new U.S. loan of $225 million, the major portion of which would come from the U.S. Export-Import Bank, thereby raising distinct hopes of further assistance from this source in the future. Note was also taken of West Germany's possible willingness to accept payment for most of the steel plant equipment on a deferred basis. There was also a report which was very hopeful of India getting French and Swiss assistance. All these funds in foreign currency would keep the tempo of industrial progress, and the execution of the many projects would keep industrial concerns fully active. The possibilities in this regard made several scrips attractive possessions at the current rather lower levels during the week. Consequently, there was an enlargement in activity on the Exchange.

Other factors which aided the improvement in sentiment included the Congress's firm declaration to see the second Plan through despite difficulties and Mr. Nehru's speeches at Pragjyotishpur wherein he opposed any proposal to nationalise banks and industry on mere theoretical considerations. The Congress's general approval of the socialistic nature of last year's budget was only expected, but the fear whether this approval would result in further increase in taxation in the coming Budget was grimly entertained. Had it not been for this fear, the market should have attracted more funds during the week. Until a clearer picture in this regard came out—and this would not be until February-end—operators would proceed cautiously.

Sectionwise, the delay in loading and unloading in the port following labour trouble was a restraining factor, in general, and affected sentiment in the jute section, in particular, to some extent. However, earlier in the week the sentiment was better due to fair business that took place in hessian with U.S. buyers and hopes of further orders from them. While Kinnisons were better at Rs. 121, as against Rs. 110 previously, and New Centrals were fractionally higher at Rs. 12.19, Nationals closed at Rs. 24.95 after opening at Rs. 25.85 and falling to Rs. 23.75. Ganges were unchanged at Rs. 49, but Howrahs recovered to Rs. 13.81 from Rs. 13.00.

The delay in Government's decision on coal prices caused a considerable reduction in the volume of business in the coal section. Burrakurs were pushed down to Rs. 22.12 from Rs. 22.32, and at Rs. 16.75 Pench Valley lost one rupee.

Better advices from Bombay enlivened activity in engineerings. Indian Irons opened at Rs. 19.12 and rose to quote Rs. 19.90. Texmacos hardened to Rs. 16.50 from Rs. 16.30, while Jessop & Cos. were featureless at Rs. 20.75. Guest Keens, after being higher at Rs. 29.18, changed hands at Rs. 28.87 on profit-taking. Kumardhubis were quiet at Rs. 7.81, as were Braithwaites at Rs. 25.50. Richardson & Cruddas lacked buyers at Rs. 8.25.

In the miscellaneous industrials section, Dunlop Rubbers were a prominent feature for the rise to Rs. 21.87 from Rs. 21. Orient Papers spurted to Rs. 23.80 from Rs. 23.40. Indian Cables were better at Rs. 25.81, as were Calcutta Electrics at Rs. 13.69. India Steamships, on profit-taking, receded to Rs. 11.87 from Rs. 12.06. Calcutta Tramways, at Rs. 15.87 were up by 6 nP. In strong support Punjab National Banks rose from Rs. 50 to quote as high as Rs. 51.75.

• • • •

Madras Stock Exchange

MADRAS, *21st January*

A firmer trend prevailed on the Madras Stock Exchange yesterday when the market reopened after the *Pongal* holidays and also today. During the two-day session, the volume of business transacted was sizable with prices moving upward.

Tea shares in the planting section generally recorded a rise in prices as compared with those on the 10th inst. Parksides advanced by 50 nP to Rs. 15. Devasholas and Haileyburias improved by 25 nP each to Rs. 19 and Rs. 16.05, respectively. Kil Kotagiris hardened by 17 nP to Rs. 5.15. Periakaramalais and Peermades strengthened by 10 nP each, the former to Rs. 4.20 and the latter to Rs. 19.40. United Nilgiris were quoted at Rs. 15.50, as against Rs. 15.40 11 days before. Chembras put on 5 nP to Rs. 2.85. Blue Mountains were a shade better at Rs. 2.95. Among coffee shares, Coffee Lands improved by 25 nP to Rs. 28.75. Consolidated Coffees were quoted 15 nP higher at Rs. 23.40. Anaparais rose by 10 nP to Rs. 4.85, Kumergodes gathered 5 nP to Rs. 6.70. Sheveroys were better by 8 nP at Re. 1.82. In the rubber group, Nenmenys spurted by Re. 1.35 to Rs. 14.75. Vaikundams hardened by 50 nP to Rs. 27.50.

Trading in the textile section was very active and there was, as already stated, a smart rise in prices. Coimbatore Cottons rallied Rs. 15 to Rs. 170. Metturs spurted by Rs. 9.50 to Rs. 362.50. Lakshmis increased by Rs. 8.50 to Rs. 112.50 and Rajalakshmis by Rs. 8 to Rs. 80. Ranga Vilas advanced by Rs. 3 to Rs. 70. Janardanas gained Rs. 2.50 to Rs. 80. Buckinghams improved by a rupee to Rs. 157, Cannanores by Rs. 2 to Rs. 160, Travancore Rayons by 30 nP to Rs. 11.50, and Kotharis by 20 nP to Rs. 10.50.

Sugar shares evoked good support. Kirlampudis rose by a rupee to Rs. 41.50. Travancores gathered 40 nP to Rs. 9.50. E.I.Ds were better by 25 nP at Rs. 29. Jeypores increased by 10 nP to Rs. 131 and Deccans by 8 nP to Rs. 7.98.

Among miscellaneous industrials, Aluminium Industries advanced by 80 nP to Rs. 14. India Cements went up by Rs. 2.12 to Rs. 26.62. Andhra Cements were higher by 40 nP at Rs. 11.25. Orissa Cements strengthened by 25 nP to Rs. 12.60. Travancore Cements gained 20 nP to Rs. 7.20, F.A.C.Ts 10 nP to Rs. 5.35 and Parry's Confectioneries 5 nP to Rs. 3.40.

BOMBAY

IN continuation of the Prospectus of the Company published on 11th January 1958, the Board of Directors have the pleasure to state that the construction of the Factory Building is in full swing and the entire Hardboard machinery is expected to reach India by May 1958. Production of Hardboard also is expected to commence before the end of this year.

NEWS IN BRIEF

THE purchase mission which recently went abroad to buy new equipment for the Calcutta Port has placed orders to the tune of Rs. 2 crores with some foreign firms.

A 23-member committee has been appointed by the Government of Bombay, with the Minister for Housing as Chairman, to advise on matters relating to the housing activities undertaken through the Housing Board.

The Union Government is reported to have asked the State Governments to abolish the permit system of distribution of cement to the public. This further relaxation of control on the supply of cement has been ordered, following a steady improvement in the supply position of cement.

An industrial training institute is being established in Warangal, Andhra Pradesh, at a cost of Rs. 7 lakhs. The Institute, sanctioned under a scheme sponsored by the Union Labour Ministry, will start functioning from the next academic year and will admit 288 students for training in various crafts.

A conference of tea producers' and traders' associations in the country was held on the 16th inst. at Calcutta. The Conference discussed the question of relief for India's common teas and decided that a detailed memorandum, incorporating the decisions arrived at, be sent to the Union Commerce and Industry Ministry.

The Government of India proposes to set up a full-fledged small-scale industries development institute at Calcutta in co-operation with the Japanese Government. The proposed institute which is expected to be the biggest of its kind in the country, will be of great assistance in the development and promotion of small-scale industries in West Bengal through Japanese techniques.

A giant crane capable of lifting 275 tons is on its way from Britain to India for installation in the Tata Steel Works at Jamshedpur. The crane, made by the Horsehay Company, Ltd., of Wellington, Shropshire, is completely electrically driven by motors of over 1,000 h.p. It is a massive structure, having a span of 68 ft. 9 in. and an overall width of more than 50 ft. It is operated by one man seated in a cabin attached to its underside and will be used for transferring molten metal from the furnace into rows of ingot moulds.

The Government of India has issued a licence to a private concern to set up a paper factory at Mandya in Mysore State at an estimated cost of Rs. 3 crores. The raw materials for the manufacture of paper will be bagasse, which is now available in plenty at the Mandya sugar factory. The promoters of the Company are stated to have secured favourable terms from an American manufacturing concern for the supply of necessary machinery to set up the plant. The Government of Mysore has agreed to invest up to 10 per cent. in the share capital.

The Chittaranjan Locomotive Works proposes to manufacture steam locomotives with entirely indigenous components by 1961. By this time, the steel foundry at Chittaranjan and the three steel plants in the public sector, namely, Bhilai, Rourkela and Durgapur, will go into production and supply necessary castings and steel. The factory has been taking concerted measures to cut down imported components. In the first stage of this drive towards self-sufficiency, the cost of imported components was reduced from Rs. 2.5 lakhs to Rs. 1.3 lakh per engine. It has been slashed further to Rs. 50,000. The items now imported consist mainly of bar frames, boiler plates, tyres and axles.

The Japanese expert team's report on the exploitation of iron ore mines in three ore-yielding regions of the country will be submitted to the Union Government shortly. The report will give the necessary technical data and also recommend which of the three projects, namely, the Rourkela iron ore mines, the Balladila ore belt in Madhya Pradesh and the mines in Northern Orissa, should be developed first. The problem of port and railway facilities is linked to the iron ore development projects and reports on these aspects will be included in the Japanese report. The Japanese are expected to provide railway equipment, mining machinery and port equipment. A joint request by India and Japan for financial assistance will be made to the U.S. Government in March next.

The Engineering Export Promotion Council, Calcutta, has sent its fourth trade delegation to South-East Asian countries. The previous three delegations were sent to Burma in January 1956, to British East Africa, Ethiopia, and Sudan in January-February 1957 and to West Asian countries in August-September 1957. These delegations, it is said, have made useful studies and established contacts in the overseas markets which have been very helpful in developing India's export trade in engineering goods. The present delegation, which left Calcutta on the 17th inst., consists of Mr. B. S. Agarwal of the Jay Engineering Works Ltd. (leader), Mr. N. R. Pandit of Mysore Kirloskar Ltd., Mr. T. M. Desai of Cooper Engineering Ltd., Mr. C. R. Bondre of Kirloskar Oil Engines Ltd. and Mr. J. C. Kapur of Air Conditioning Corporation (Private) Ltd. (members). Mr. R. K. Singh is the Member-Secretary.

For some time now the Governments of India and the U.S.S.R. have been examining the possibilities of an air transport agreement between the two countries under which scheduled services could be established by airlines designated by the respective Governments. Certain preliminary exchanges have taken place and with a view to advancing these negotiations, it has been proposed that the two Airlines concerned should have discussions on various points of detail. The Air-India International team, headed by Mr. B. R. Patel, Vice-Chairman and General Manager, and assisted by Mr. V. G. Gadgil, Assistant Engineering Manager, Captain K. Vishwanath, Divisional Operations Manager (Central), Mr. A. F. Dubash, Commercial Manager, Traffic and Mr. G. Bertoli, Regional Traffic Manager, Continental Europe, accordingly plan to visit Moscow early in February. The talks will cover all commercial and technical aspects of the operation of the proposed air service, including such aspects as traffic rights, air navigational facilities, fuelling facilities, etc.

• • • •

From Abroad

A French delegation has arrived in Pakistan to conclude a trade pact with the latter.

The Standard Oil Company of California has ordered five tankers of 48,600 tons each from Danish shipyards. They are to be built between 1959 and 1960.

Talks between Indonesia and Japanese shipowners for the chartering of about 40 vessels have failed, as the ships were found unsuitable for Indonesian waters.

The Federation of Rhodesia and Nyasaland is seeking a loan of $25 million on the New York market. A mission from the World Bank will visit the Federation in March.

The Martin Company of Baltimore, U.S., has announced that its "package" power reactor was successful in its first test by achieving a self-sustaining nuclear reaction. The reactor is designed to be transported anywhere by cargo aircraft.

Russia's willingness to provide Yemen with a technical aid loan, equivalent to about £20 million, was seen in the visit of the ten-member Soviet technical mission to that country recently to study agricultural and mineral prospecting development schemes.

Production of vehicles by West Germany's ten main car companies aggregated 1,070,000 units in 1957. This was about 11.5 per cent. more than the output in 1956. Of these, Daimler-Benz alone produced about 125,000; half of this number was for export.

The congestion in the Colombo Port, which resulted in the cancellation of local tea auctions, has led the Ceylon Ministry of Trade and Commerce to release mid-country teas for London auctions without any restrictions for a short period.

Representatives of the British exporters of wool rugs, wastes, tops and yarns have decided to tender evidence before the Canadian Tariff Board in the hearing to be held in Ottawa on the 10th February for protection to the Canadian woollen industry.

Egypt has indicated its readiness to accept neutral arbitration in the assessment of Egyptianised British property. Such arbitration, however, will not be acceptable on claims arising out of the sequestrated property. The request by Britain to reopen financial talks is receiving Egypt's consideration.

The relationship between the State and local oil companies in Egypt will be placed on a new footing. In furtherance of this measure, a Committee has been appointed at the Ministry of Industry to study the present agreements and also to recommend new agreements within the next two months.

A Bill designed to impose a four-cent duty on copper imports whenever the indigenous price falls below 30 cents per pound is expected to be introduced in the U.S. Congress by members from the mining areas. In view of the fact that the present price is below this level, the duty is likely to take effect forthwith when the Bill is passed.

The Ford Motor Company has decided to cease production at its Ford Division assembly plant at Buffalo in New York State as, according to the Company, the plant there has become outmoded for the assembly of modern cars. Employees will be given the option of transfer to the Company's plant at Lorain, Ohio. Operation of the stamping plant at Buffalo will, however, continue.

A Bill imposing a levy of about ¾d. a lb. on tea exports, designed to finance the Ceylon Government's seven-year scheme for the rehabilitation of the tea industry, will be presented to the Ceylon Parliament before the end of this month. The scheme will benefit the small holders who have, in recent days, been put out of production due to delays in exports of tea from Colombo.

The British Overseas Airways Corporation has signed a £60,000,000 contract for 35 Vickers VC-10 jet airliners. The VC-10, which is expected to make its first flight in 1961, will be the biggest British airliner ever, capable of seating up to 150 passengers. The B.O.A.C. order, which does not include the cost of spares, is the biggest airline order ever placed in Britain. The B.O.A.C. has taken an option on 20 more VC-10s.

The Swedish Shipbuilding Association in a report states that ships launched and delivered at Swedish yards attained a new high in 1957, with the tonnage exceeding the annual average of the past few years by some 30 per cent. The number of ships launched amounted to 81, with an aggregate tonnage of 670,000 gross tons, while deliveries accounted for 82 vessels with an aggregate of 640,000 gross tons. Of the deliveries, 70 per cent. went to foreign owners, mainly Norwegian shipping companies, which received 32 vessels.

A reduction of 5s. a ton as from the 17th inst. on the spot bunker price of marine diesel fuel oil at all ports in the U.K., Europe, the Mediterranean, the Canary Islands and West Africa has been effected by the Shell Petroleum Company. It may be noted that only last month the prices of marine fuel and gas oils as also of marine diesel oil were lowered by a cut of 10s. a ton. The latest reduction reflects the persistent slackness in demand for bunker fuel. The reported high level of stocks and the slump in spot freight rates, resulting from the low level of shipping activity, are the factors responsible for the weakness in demand for marine fuels.

The group of Norwegian shipowners who, some time ago, had taken the initiative to start preparatory technical and scientific work on the construction of atom ships, has now formally constituted itself as a company under the name Rederatom. It has signed a contract with the Institute of Atomic Energy at Kjeller, near Oslo, for a two-year research programme in this field. Two million kroner (£100,000) will be spent on the work. The first aim of the company is to form a wholly Norwegian research group working on the problem of ship reactors. There are signs that in future there will be a brisk exchange of research material in the military field as well as in merchant shipping.

PERSONAL

MR. Rajeshwar Dayal, Ambassador of India to Yugoslavia, has been concurrently appointed Ambassador to Greece.

Mr. S. L. Kirloskar is the Chairman of the the Engineering Export Promotion Council, Calcutta, for the current year.

Mr. Shankar Prasad, I.C.S., at present Chairman of the Indian Airlines Corporation, has been appointed Director-General, Posts and Telegraphs.

Dr. Radhakrishnan, Vice-President of India, will leave on a three-week visit to the U.S. on 14th March in response to a number of invitations from that country.

Mr. Justice Koka Subba Rao, at present Chief Justice of the High Court of Andhra Pradesh, has been appointed a Judge of the Supreme Court, with effect from the date he assumes charge of his office.

Mr. Eugene R. Black, President of the World Bank, proposes to visit the Belgian Congo, the Union of South Africa, the Federation of Rhodesia and Nyasaland and Kenya, Uganda and Tanganyika in March and April.

The following are the members who have been elected to serve on the Committee of the Millowners' Association, Bombay, for 1958:

Sir Vithal Chandavarkar and Messrs. T. V. Baddeley, Krishnaraj M. D. Thackersey, Neville N. Wadia, G. D. Somani, Radhakrishna Ramnarain Ruia, M. L. Tapuriah, S. P. Jain, E. D. Sheppard, Pratap Bhogilal, Arvind N. Mafatlal, Naval H. Tata, Babulal Bubna, F. H. Kemple, E. F. Morrey, E. S. Vernon Jones, C. H. Campbell, Chandrakant Mulraj Khatau and Debiprasad Poddar.

The new Committee will begin to function after the annual general body meeting of the Association.

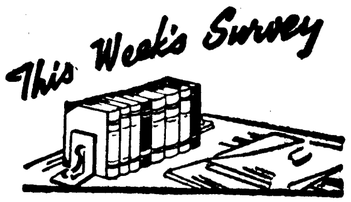
CALCUTTA, *21st January*

The Gold Standard

The adjustment of trade balances demanded an increase in the competitive power of debtor countries and accordingly a reduction in the gold prices of their goods. As long as these countries maintained their currencies at par, their domestic price level had to be reduced accordingly. Such a reduction is naturally a painful process, particularly as it has to be accompanied by a corresponding reduction in the income of the consuming classes of the population, if it is to have the desired effect upon the economic balance of the country. Few debtor countries with gold standard currencies have found it possible to effect, in this way alone, an equilibrium in their foreign transactions. By abandoning the gold standard and allowing the exchange value of their currencies to fall below gold parity, many countries have, however, managed to reduce considerably the gold prices of their products and at the same time keep down the domestic demand for consumers' goods, at least those of foreign origin. A similar adjustment has been attained by a fall in the exchange value of the currencies of countries which were not on the gold standard, such as China, Spain and Uruguay.



AIR FARES

THE majority of the members of the Air Transport Council, which was asked by the Government of India to study the general problem of fares and freight rates to be charged on the air services operated by the Indian Airlines Corporation, has recommended an increase in passenger fares. The suggested schedule of fares (per passenger-mile) is: one to 30 miles, As. 6-6; 31 to 100 miles, As. 5; 101 to 200 miles, As. 4-9; 201 to 500 miles, As. 4-6; 501 to 900 miles, As. 4-3 and 901 miles and above, As. 4. In making this proposal, the Council has suggested that the objectives of rate making should be "to stimulate the maximum economic volume of traffic to generate surplus revenues on high-density traffic routes which would offset, to the largest extent possible, the gap between costs and revenues on weak traffic routes and to sustain and promote air traffic by creating a preference for it on account of its inherent advantages." Further, the Council has suggested that the Corporation should have reasonable scope for experimenting with lower fares, in order to promote, sustain or develop traffic. Accordingly, it has suggested that the Corporation should have the discretion to reduce the fare levels within a range of 15 per cent. below the recommended scales.

The Council's suggestion for increasing the fares obviously stems from the consideration that the Corporation has been faced with mounting losses. During the year 1956-57, the Corporation's expenditure at Rs. 970.14 lakhs exceeded its revenue by Rs. 108.79 lakhs, the corresponding figures for the previous year being Rs. 928.00 lakhs and Rs. 119.40 lakhs; in 1954-55, the loss was Rs. 90.15 lakhs. Reviewing the prospects for the immediate future, the Corporation's annual report for 1956-57 points out that "we shall face a period of greater expenditure necessitated by our plans for expansion, modernisation of the fleet and other factors." The introduction of costlier aircraft, such as Viscount, is bound to push up the provision for depreciation to a much greater extent. Further, much of the expenditure on the development of new projects, it is stated, is an immediate commitment, whereas the corresponding returns in the form of an increase in traffic will take time to appear. The increase in the excise duty on petrol, it is estimated, will raise the operating expenditure by Rs. 30 lakhs. Besides, some States have announced a further levy of sales tax. The Corporation, however, has expressed the hope that "with the progressive modernisation of our fleet and development of additional traffic, we may, once the initial heavy expenditure on the introduction of new aircraft is offset by increased revenue, appreciably improve our financial prospects." Nevertheless, it should be clear that the immediate future does not hold out prospects for reduction in losses.

Against this background, it is difficult not to concede the Corporation's demand for an increase in fares, now endorsed by the Council. It is true that the increase means a heavier burden on passengers. But, as the Council points out, "to maintain fares at their current level or to reduce them to a lower level, would not help improve the Corporation's financial position and would only benefit those who can afford to pay more and are even willing to do so." After all, a large proportion of the passengers consists of those whose bills are paid by the Government or the companies on behalf of which they travel by air. Further, the fact that the current passenger fares of the Corporation's services are generally quite low as compared with those of domestic services of foreign countries indicates that there is scope for increasing the fares. It would be an unjust expedient to throw the entire burden of the loss on the taxpayer without making the passenger bear a reasonable part of the burden.

A minority of three members, in the course of a dissenting note, has, however, pointed out that "in India, high air fares carry the risk of destroying the comparative attraction for air travel and would result in a significant diversion of air traffic to the railways." This fear is probably an exaggerated one, if not entirely unfounded. Railway travel by first class is costly because of the incidental expenses involved, besides being irksome and time-consuming. It is, therefore, unconvincing to argue that there will be a significant diversion of traffic to rail travel. It is, however, true that the aim should be to keep air fares at a low level in order to make air travel more and more popular. But one wonders whether air travel could, at least in the immediate future, become a popular mode of travel. Since, for sometime to come only the higher income groups are likely to remain the mainstay of the Corporation, an increase or decrease in fares is not likely to make a substantial difference to the volume of traffic. In thus endorsing the Council's suggestion for an increase in fares, we would like to stress that the Government as well as the Corporation should continue to explore the scope for operational economies. This search should be continuous as well as comprehensive. And the benefit of any such economy should be passed on to passengers by way of better aircraft and increased facilities.

SECOND PLAN

Mr. L. N. Birla, the well-known industrialist, attempted recently a critical appraisal of the present economic situation in the light of the imperative need to go ahead with the industrial programmes designed to augment national wealth. In the course of his presidential address at the All-India Commerce Conference, held at Nagpur on 30th December 1957, Mr. Birla outlined the concept of dynamic planning, stressed the importance of foreign capital and made a strong plea for augmenting internal resources and reducing the burden of taxation. The chief merit of Mr. Birla's address lies in the fact that it makes a realistic approach to the current economic problems, without getting lost in idle controversies of political or economic ideologies.

Mr. Birla rightly emphasised that, in dynamic planning, the accent should be on a "continuous effort towards augmenting resources for development." In India, however, the main emphasis of planning had been on the allocation of resources and their diversion from one sector to another without expanding the sources of wealth and revenue. Examining the lacunæ in Indian planning, Mr. Birla felt that little thought had been given to the development of resources for purposes of meeting the commitments under the Plan. Further, in spite of the fact that the entire success of the Plan hinged on the availability of foreign exchange, "apparently enough attention was not paid to this problem either by the Planning Commission or by the Government during all these years." This comment may appear harsh. But those who have watched the rapid deterioration of the foreign exchange position and the Government's failure to forecast this deterioration early enough or to take prompt and effective preventive measures will not dispute Mr. Birla's contention that the authorities concerned should have devoted more attention to the foreign exchange position from the very inception of the Plan.

The immediate problem is how best the gap in foreign exchange resources could be closed. How serious is the gap will become clear when it is realised that, in the next 18 months, foreign exchange to the tune of Rs. 700 crores will be needed even for implementing the "core" of the Plan. Mr. Birla declared that the Plan could not succeed, unless some effective ways were found to meet the foreign exchange shortage. In this connection, he stressed the importance of foreign capital. He said: "It is sometimes argued that participation of foreign capital may lead to foreign domination. This is a serious misapprehension. All other countries which have industrialised depended to a large extent on foreign capital." And they did not lose their freedom because of it. Mr. Birla then cited the instances of the U.S., Japan and West Germany where rapid industrial progress was made possible through large investments of foreign capital. It is obviously necessary to adopt realistic economic policies nearer home if foreign capital is to be attracted to this country. For one thing, foreign capital has many claimants who compete among themselves for attracting it. Secondly, foreign investors find the climate for investment favourable in their own countries, so that additional incentives are needed in order to make them venture abroad.

In our preoccupation with the need for stimulating the flow of foreign capital, we should not overlook the equally urgent need for giving a fillip to domestic savings. Indeed, the two issues are closely interrelated. For, as Mr. Birla himself pointed out, "we must have sufficient domestic investment before we can take advantage of external aid." Foreign business men can invest in India provided there is a "counterpart of internal investment to match." From this point of view, Mr. Birla did well to stress that the "overall burden of direct taxation measures has created a climate distinctly unfavourable to savings and investment." Again, indirect taxes are "creating buyers' resistance with the result that the demand for some goods is falling of." It should thus be clear that a reduction in the fiscal burden is indicated in the interests of both domestic and foreign investment.

PHARMACEUTICAL INDUSTRY

1958 may well turn out to be a "pharmaceutical year" for India, because it will witness, if the plans materialise, the establishment in the public sector of three major projects covering a wide range of the country's medical needs. This note of optimism was struck by Mr. Manubhai Shah, Union Minister for Industry, while inaugurating the tenth annual meeting of the Indian Pharmaceutical Congress held in the City recently. The three projects are: (1) complete manufacturing programme of basic intermediaries required for drug and chemical industries, (2) one or more units for producing a number of synthetic drugs, and (3) manufacture of antibiotics, alkaloids and vitamins. Necessary ground, we are told, has already been prepared for implementing the projects and the question of their location is being considered now.

The Government rightly attaches considerable importance to the development of pharmaceutical industry, in view of the very large requirements of drugs and pharmaceuticals in a country of the size and population of India. But one fails to understand as to why the State should take upon itself the task of setting up the aforesaid projects, instead of leaving it to the private sector which is quite capable of discharging the task not only more expeditiously but also at a cheaper cost. It must, of course, be admitted that the three projects in the public sector will, in turn, provide for the expansion and addition of plants in the private sector.

In the course of his address, Mr. Manubhai Shah recalled that, before independence, the Indian pharmaceutical industry consisted of mere bottlers and processors, while, after independence, a national drug policy had been laid down. This programme, according to Mr. Shah, depends on four vital factors. First, the major burden of producing primary and basic intermediates should obviously fall on the shoulders of the State. It is too big and complex an undertaking for any single individual or firm or group of firms. The gap between the needs and production of basic drugs, synthetic drugs, alkaloids, antibiotics and vitamins is growing, and this has to be filled by speedy State action. Secondly, complete integration and co-ordination of production programmes in the public and private sectors is necessary, so that all diverse and numerous ranges of vitamins, synthetic drugs, antibiotics, alkaloids, sulpha drugs and complexes are fully manufactured in the country in t shortest possible time. The private sector ha a big role to play in this field and all those who are capable of taking up as much of basic phased programmes as possible can do so. Thirdly, there should be strict standardisation and control on quality. Fourthly, prices of drugs should gradually be reduced and drugs of high standards and quality made easily available to the people at reasonably low prices through the latest techniques of large bulk production programmes.

Since the above policy was launched, the pharmaceutical industry has developed significantly. The total value of products manufactured by the industry is now estimated at Rs. 45 crores—Rs. 33 crores of indigenous components and Rs. 12 crores of foreign components—as against Rs. 22 crores ten years ago. The industry is expected to reach the production target of Rs. 70 crores worth of medicines set for it under the second Five-year Plan. Reassuring is the statement of the Minister that the Government would do its best to help the industry "in all possible ways."

The development programme drawn up for the pharmaceutical industry in the second Plan envisages that, so far as synthetic pharmaceuticals like saccharin chloramin-T, acetylsalicylic acid and sulpha drugs are concerned, progress will be in the direction of increased production, as well as development from basic primary organic chemicals and intermediate products in place of the present operations based on penultimate products. This industry is expected to derive considerable benefit from the steps taken to develop the manufacture of dyestuff intermediates which will provide several of its raw materials.

In respect of vitamins, the scope for the production of vitamin A from an indigenous raw material, lemon-grass oil, is under examination. As regards antibiotics, apart from the development planned in the public sector, efforts initiated by private enterprise to establish the production of penicillin are expected to bear fruit. Further, the existing units in the field are expected to make considerable progress in the conversion of what are now predominantly processing operations into genuine manufacture. Investment in the private sector of the pharmaceutical industry will be of the order of about Rs. 3 crores.

In the context of the present rising trend of population and poor standards of health, the need for ensuring adequate supplies of quality drugs and pharmaceuticals at as cheap a price as possible is very vital. This aspect must be specially stressed, because the cost of several drugs is very high and beyond the reach of the masses. The cost must be reduced if the demand for the drugs, particularly the essential ones, is to increase appreciably. There is also the need for maintaining at a high level the quality of the drugs produced in the country. Mr. Shah did well to suggest to the pharmaceutical congress the setting up of a committee of its members and professionals to go round the country, in order to keep a check on the quality of production of various medicines.

SUGAR EXPORTS

It will be recalled that the report of the Indian Industrial Delegation contains a note by Mr. S. S. Kanoria, one of the members of the delegation, on the prospects for exports of Indian sugar to the U.S. Describing this note as fantastic, our special correspondent at New Delhi observed, in the course of his despatch to our issue dated 14th December 1957, that it "betrays an amazing lack of realism where it says it would be extremely advantageous if India could enter the U.S. market."

Criticising this remark, Mr. G. L. Bansal, Secretary-General of the Federation of Indian Chambers of Commerce and Industries, says as follows in a communication addressed to us:

"May I draw your attention to a preceding paragraph of Shri Kanoria in the same report which reads as under:

'Cuba and the Philippines enjoy the lion's share of this quota, exporting about 4.5 million tons between themselves. By limiting quotas, the United States pays to these countries a price much higher than prevailing in the *world market* (italics mine), as is evident from the following figures.'

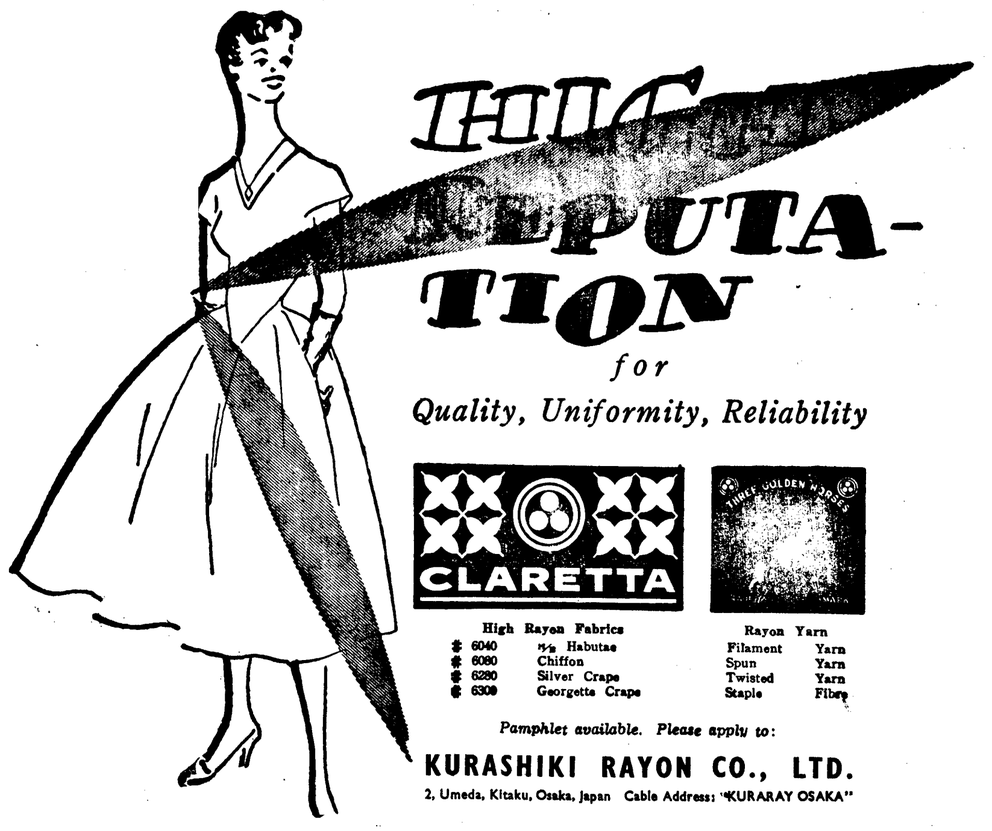
"Shri Kanoria then goes on to give in a table prices for shipments to U.S.A. and prices for shipment to the world market. The difference between these has ranged from 1.18 cent per lb. in 1952 to 2.02 cents in 1953 and 1.62 cent in 1956. It is to this difference that Shri Kanoria is referring when he says that higher freight costs on Indian sugar would be compensated by the lower f.o.b. prices prevailing in India as compared to those paid by the U.S.A. to Cuba and the Philippines. Shri Kanoria has been the President of the Indian Sugar Mills Association and his knowledge of the various aspects of the industry is acknowledged by everyone who has had anything to do with this industry in recent years. I only wish that your special correspondent had tried to read the very brief report as a whole rather than tear one sentence out of context and put a meaning to it which could never be intended and which, in fact, goes counter to all that has been said by Shri Kanoria."

In publishing Mr. Bansal's aforesaid criticism, it is only fair that we should add the explanation of our New Delhi Special Correspondent. He says:

"Mr. Kanoria's note on sugar exports to the U.S.A. was not only fully read but carefully read, too, in view of the recent controversy over sugar exports, before my comment was made thereon. This comment had necessarily to be brief for obvious reasons of space in an already long despatch on the Birla Delegation's Report. On the face of it, the very idea of trying to export sugar to a *distant* market like the United States appeared *fantastic* (extravagantly fanciful) and *unrealistic*, while markets *nearer* home were any day more inviting, if only for the reason that such well-nigh insuperable difficulties as those under the U.S. Sugar Act (which was designed to favour Cuba and the Philippines for some special reasons in the matter of both import quotas and prices) would not be there in the latter case. In any case, Mr. Kanoria's comparison of Cuban prices of *raw sugar* for shipment to the U.S. refineries and to the world market was not quite relevant, inasmuch as India could export, if at all, *only refined* (*white*) *sugar*.

"If Mr. Kanoria had given the ex-factory or market prices of refined sugar in the United States and compared them with the f.o.b. prices of Indian sugar, say, at Bombay, it would have been more realistic. Even here his case for exporting sugar to the United States could not have been sustained, for the f.o.b. price (after tax concessions) of U.P. sugar in Bombay would have been £48 to £49 per metric ton and its landed cost (including ocean freight) in the United States would have been £54 to £55 per ton at the time Mr. Kanoria wrote. At that time, incidentally, the international market price of refined sugar was about £36 per ton and, even if it had been assumed that the price in the U.S. market was about a third higher than in the world market, the price of Indian sugar in the U.S. market would still have been higher by about £7 per ton not including the dealer's margin. What special reason was there to suppose that the United States would agree to provide a sheltered market for Indian sugar at such a high price—higher than what she was probably paying for Cuban refined sugar?"

A programme for development of Co-operation for 1958-59 has been approved by the Executive Committee of the National Co-operative Development and Warehousing Board. The programme includes establishment of 2,600 large-sized societies. About 10,000 small-sized societies are also expected to be established or revitalised during the period. In addition, it is envisaged that 900 large-sized societies should construct godowns for storage of agricultural commodities, besides 390 godowns to be constructed by marketing societies. Among other co-operatives to be developed in 1958-59 will be 500 marketing and 29 processing societies. It is expected that this programme will provide employment for about 3,600 persons in managerial, supervisory and auditing capacities.



CONTROVERSY OVER UNION LANGUAGE

STATE BANK—PLAN FOR ROADS

From Our Special Correspondent

NEW DELHI, *7th January*

EVERY year New Delhi faces (or creates?) a major controversy, but somehow steers through it to a golden mean. In 1956, it was over the issue of States reorganisation; in 1957 it was over the twin questions of food and pruning of the second Plan; in the new year, it may well be over the problem of official language. With a parliamentary committee already examining the Kher Commission's Report, the stage is set for one more passionate controversy from which a compromise solution is most likely to emerge ultimately. It is perhaps in that hope that Mr. C. Rajagopalachari has entered the lists in a forceful and provocative manner. Although, in now pleading for the retention of English as the official language of the Union for all time, he has gone against his own previous case for having both English and Hindi as the official languages, his arguments (publicised in the capital) merit highlighting, in view of the importance of the problem to national unity.

DELHI LETTER

Rajaji Asserts

The starting-point of Rajaji's thesis is that, though 42 per cent. of the people of India speak Hindi in one dialect or another, the Hindi-speaking people are the hundred per cent. population of three or four States only and three-fifths of the sub-continent is wholly non-Hindi. As India is not a unitary State but a Union of States, the fact that the majority of States are non-Hindi cannot be ignored. While Hindi, as Union official language, may not hurt the regional languages or their literatures, it will harm the interests of non-Hindi *people*, because the Union Government's work cannot then be conducted efficiently, justly or with full advertence to their requirements. The Congress Working Committee's resolution which assures that no unfair treatment will be accorded to people not very well up in Hindi does not mean much, for that body is not the *deus ex machina* that will unravel and set right things resulting from Government policy. So Rajaji asserts: "I am saying and doing what I do in order to prevent a great error and to keep India together. Whatever the form of government a nation is under, injustice to large masses of its educated people and the consequent relegation of whole populations to the condition of chronic unshepherdedness is certain to lead to disunity, disaffection and disintegration.... The one and only sound argument for a change is that we should bring about language unity between administration and the people to the largest extent possible. But this argument applied in favour of Hindi completely breaks down in respect of the people of the South.... The area outside of *U.P., Bihar and Madhya Pradesh* is very large. We must fall back therefore on the regional languages and the State Governments to bring about this language unity between administration and people..... We must keep fairness as the yardstick for all Union policies, for fairness is the rockbottom of loyalty."

Rajaji thinks that it would be supreme folly to change over from English now or on any foreseeable date. There need be no shame, he says, in conducting the affairs of modern India in an international language that has the greatest vogue in the present age. It will be fully consistent with our broadminded outlook in all matters, he concludes. Two inferences are possible from Rajaji's thesis—one is that, if Hindi becomes the sole official language of the Union by 1965, the Government of India will *virtually* become the Government of U.P., Bihar and Madhya Pradesh, and the other is that the only language which now keeps the scales more or less even as between the educated classes of different States is English. It may be that this balancing role performed by English now will come to be performed by Hindi in the fullness of time. So, what is required is more time for the non-Hindi people to catch up with the Hindi-speaking people in the matter of learning that language. It is, therefore, expected by some that the Prime Minister, whose moderating influence may yet be a decisive factor, will throw in his weight on the side of those who want the deadline for the change-over to be extended beyond 1965. Perhaps an extended transition is the only compromise possible in the circumstances, where, if the objections of the non-Hindi areas cannot be ignored, the wishes of the Hindi areas have also to be respected. The Government of India cannot also ignore either the warning of the English Committee of the University Grants Commission that the change-over from English to an Indian language as the medium of instruction at the university stage should not be hastened or its recommendation that, even when a change is made in the medium of instruction after careful and adequate preparation (which, in the light of evidence tendered by universities, may well take several decades), English should continue to be studied by all university students. Whatever solution takes shape ultimately, there can be no denying that this controversy—perhaps the most crucial and vital so far—will throw up a lot of heat and dust in the process.

Banking

While inaugurating the Delhi Circle—covering Delhi, Punjab, Rajasthan and Western U.P. —of the State Bank of India last week, the Union Finance Minister referred to the stiff competition the Bank had to face from the Big Five private banks in the country, and added that it was holding its own against such competition. Discounting the occasional talks of nationalisation of the banking industry, Mr. Krishnamachari declared emphatically that private banking was inseparable from the private sector of industry and commerce which primarily depended on it for financing. The Finance Minister, however, appeared to favour the possible emergence of a smaller number of strong banks which could better control the movement of credit.

As for the operations of the State Bank in particular, the Finance Minister expected that, before 1958, the Bank's pilot schemes to serve the needs of small-scale industries would emerge from their pilot stage and become more dynamic. As for the decision to vest the agricultural credit operations in the hands of the Reserve Bank instead of handing them over to the State Bank as originally proposed, it was clarified by the Finance Minister to mean that the Reserve Bank might assume the primary responsibility but that the State Bank would have to play its full part in any scheme of financing agriculture and small-scale industries.

Roads

At the 22nd session, just held in the capital, of the Indian Roads Congress, Mr. M. S. Bisht, President, pointed out that, though the targets of the Nagpur Plan in terms of mileage (123,000 miles of hard surfaced and 208,000 miles of unsurfaced roads) would have been more than reached at the close of the second Plan, there would be several shortcomings such as unbridged river crossings, substandard road surfaces and road widths, etc. Although the amount of foreign exchange required for road projects, particularly in the construction of bridges, was modest, even that was not available.

With the targets of the Nagpur Plan about to be achieved, Mr. Bisht announced the salient features of the new plan, under formulation, for the next 20 years after the second Plan. These features are: No village should be more than three miles from a metalled road; no village should be more than one and a half miles from an unmetalled road; every town with a population of 2,000 in the plains, 1,000 in semi-hilly areas and 500 in hilly areas should be connected by a metalled road; all industrial and development centres, places of pilgrimage, places of historical importance, places of excursions for tourists and health resorts should be connected by metalled roads; all administrative units of a district such as tehsil headquarters, police outposts, etc., should be interconnected and connected to District Headquarters which in turn should be connected to adjacent District Headquarters.

Mr. Bisht, in conclusion, referred to a likely gap of 33 million tons (estimated by the Indian Roads and Transport Development Association) between the traffic offered and the traffic moved by railways and other means by 1961 and emphasised the need for providing alternative means of transport for movement of this traffic. In his view, to carry this traffic, the present road vehicle capacity *plus* the annual growth of road transport would not suffice. The solution, according to him, lay in speeding up the manufacture of goods vehicles within the country.

BRITISH ECONOMY

PROSPECT AND RETROSPECT

By Paul Barzau

BRITAIN has emerged from a year that was filled with an unusual confusion of good and bad economic phenomena. There were elements of crisis in 1957, reflected significantly in the fact that it closed with a 7 per cent. Bank rate and with gold and dollar reserves which would have been considerably depleted were it not for sums borrowed or otherwise secured from the International Monetary Fund and the Export-Import Bank.

On the other hand, there have been many elements of success in the economic history of the past year. Never before has British industry exported so much, either in value or in volume, as it did in 1957. The balance of payments for the first part of the year closed with a surplus of £125,000,000, and this tale of solvency is likely to have been continued right up to the end of the year.

Sterling, which was under severe pressure in the earlier part of the year, has made a substantial recovery. Soon after the increase in the Bank rate it rose above parity with the dollar, and has been looking that currency in the eye or slightly above it ever since.

External Factors

Looking back on the past year, the evidence of crisis has been financial and not industrial. The pressure on the pound and the need to take heroic remedial measures have been largely the product of external rather than domestic factors.

The strain on sterling has been part of the price paid by Britain for being a world banker. Certain countries in the sterling area have drawn heavily on their sterling reserves in order to meet substantial deficits in their balance of payments. India has been outstanding in this respect. Other countries, led by more speculative emotions, were withdrawing working balances from London in the earlier part of the year, driven, in some cases, by the continued repercussions of the Middle East crisis, in others by expectation of an increase in the exchange value of the German Mark.

These were movements for which no responsibility could be put on economic developments in Britain. They were the kind of consequence that is likely to attach to any currency which claims to finance more than one-half of the world's trade. They are a reminder of the need for larger reserves able to take the impact not merely of the normal seasonal ebb and flow of international payments, but of the occasional blow to international confidence imparted by political events.

It would, however, be idle to pretend that the whole of the difficulties that were encountered during the past year were of foreign or oversea manufacture. The need to raise the Bank rate was also, in part, called into being by continuing inflationary developments at home. There was still a tendency, particularly in the earlier part of the year, for remuneration to run ahead of productivity, and thus to make for inflation.

Anti-Inflationary Measures

Admittedly, all this occurred at a somewhat slower tempo than in the previous year. In 1956, wages in Britain rose by 7 per cent. while output was virtually stationary. During the past year we shall probably have paid ourselves about 5 per cent. more for producing 3 per cent. more goods than in 1956. The 7 per cent. Bank rate and its attendant measures can take a good part of the credit for this slowing down of the inflationary trend.

The Government has decided to eradicate the excessive pressure of demand which lies behind the continuing tendency towards inflation. Awakening to this need, the resolute character of the measures taken to restore complete confidence in sterling, both at home and abroad, stands out as a major event of the past year. The measures also hold great promise of reward in 1958.

Looking back on the industrial year and at the position from which Britain starts the year 1958, the picture in general is one which should give cause for satisfaction.

The steel industry in 1957 made new records with an output of 21,700,000 tons and exports of around 4,000,000 tons. During the past year the British motor car industry has broken all previous records for production and exports. In the closing months of the year it was exporting,

(*Continued on page 59*)

ECONOMIC TRENDS IN U.S.

"1958 WILL BE A HIGHLY COMPETITIVE YEAR"

NEW YORK, *2nd January*

SURVEYING the general business and economic conditions in the U.S. and discussing the outlook for 1958, the first National City Bank's *Monthly Letter* for January 1958 observes as follows:

"The holiday season has brought further evidence of business downtrend. Cutbacks in factory operations have been more marked than usual, as might be expected in a time of declining order backlogs, ample inventories, and conservative buying policies. Steel ingot output dropped below 70 per cent. of capacity in December, while leading automobile manufacturers laid off 90,000 workers over the holidays. More than seasonal curtailment is reported in some other lines. A last minute shopping rush brought Christmas sales to high totals, apparently equalling last year, but not up to retailers' hopes. Latest figures show unemployment and short time rising moderately, and personal income declining a little. There are few signs of early reversal of the trend.

"Expectations of increased Government spending seem to be borne out by unofficial estimates of next year's federal budget and by release of federal funds for housing and new defence contracts. As yet, however, there is little discounting of such anticipations. Increased unemployment insurance payments and other so-called 'automatic stabilisers' are at work cushioning the decline in income, but the predictions sometimes heard that rising consumer expenditures will, at a minimum, offset declining business spending have found little factual support.

"The disappointed Christmas hopes of retailers, despite sales that in fact were very good, typify much of 1957. All too often the year's results fell short of expectations. People who expected a fall pickup in consumer buying, a further stretch-out of record plant and equipment spending, or a revival of business ordering found that they had indulged in wishful thinking. As a result, and because it ended in a downtrend, 1957 may not get as much credit as it deserves for being a good business year. On the record, it was probably the best year in the nation's history.

"Latest figures indicate that, in 1957, the gross national product—the aggregate value of goods and services produced—set a new record by a sizable margin, as did personal income and consumer spending. Even aggregate corporate profits are not likely to wind up very far from the good 1956 level. If the final figures on Christmas sales confirm early indications, they will bring total 1957 retail sales up to the $200-billion mark for the first time—a 5 per cent. rise over 1956 and an immense volume of merchandise for any year. Construction rose to a new peak for the eleventh successive year, and business investment in new plant and equipment expanded to the unprecedented total of $37 billion. Altogether, more Americans were at work in 1957 and earning higher wages than ever before.

"Many of these records look less imposing, however, if allowance is made for the higher level of prices during 1957. Consumer prices averaged 3½ per cent. higher than in 1956, and wholesale prices were up 2.9 per cent. Gross national product will show some rise after allowance for price changes, but doubtless a slower rate of increase than in 1955 or 1956. Industrial production averages out about the same as in 1956. The overall purchasing power of consumer income is still likely to set a new record. If both prices and population growth are taken into account, however, there has been little increase in 'real' *per capita* disposable income since the last quarter of 1955.

"There were no strong cross-currents in the economy during 1957 as in 1956. In fact, there was no strong general movement in any direction—just a period of drifting followed by a gentle slide. What buoyancy there was in the early part of the year was largely due to the capital goods boom. When declining orders brought slackening in capital goods, overall business slackened with them. It has been unusual in the post-war period for major sectors of the economy to run out of steam at once, but it seems to be happening. Business inventories had gone about as high as they could without getting uncomfortable, and, until recently, the Federal Government was trying to cut back expenditures. Most backlogs of deferred demand are cleaned up, save for highways, schools, and some others. The future is even anticipated somewhat, as in certain types of industrial capacity. Significantly, the National Association of Purchasing Agents recently reported that, for the first time since the early days of World War II, no commodity was in short supply.

"Over the 12 years since the end of World War II, activity has been at high levels even during periods of adjustment. We have been making up the backlog of deferred demand inherited from a great depression and two wars, not only in tangible goods like factories and passenger cars, but also in the vital statistics of marriages, babies, and new household formation. Whole income groups have equipped themselves for a new, higher standard of living. A great deal of what we have considered 'normal' growth in the post-war period was really enhanced by this catching up process, and the real growth pattern is doubtless somewhat lower and slower than data of the past decade would indicate. In that respect, the sideways drift in 1957 and the downward adjustment now occurring may be steps toward a level from which continued long-term growth is more readily sustainable.

"No two business cycles are alike, but it may help in judging where the economy stands at present to compare the last two years with the experiences of 1947-49 and 1952-54.

"The most comprehensive measure of economic activity, gross national product, rose in the first three quarters of 1957 and, largely because of the continued rise in prices, may show little or no drop in the fourth quarter. Because of the wide scope of this indicator, its fluctuations over previous cycles have been relatively slight. In both the 1949 and 1953 dips, the reduction in gross national product was only 3 per cent. and the decline lasted a year or less.

"Industrial production, on the other hand, has already declined irregularly from a peak of 147 in December 1956 to 139 in November, or 5½ per cent. Three-quarters of the drop took place in the last three months of this period. In 1948-49 and 1953-54, production declined 10 per cent. in about a year.

"Unemployment has been consistently higher in the past two years than in the earlier periods shown. Part of this higher level of unemployment has consisted of the large numbers of youngsters and married women attracted into the job market by high wages. In November 1957, unemployment rose to 3.0 million, or 4.4 per cent. of the labour force.

"Some major differences of these earlier cycles from the present situation deserve mention. Consumer purchases remained high throughout both previous dips. However, purchasing power was stimulated by cuts in personal income taxes. Pent-up consumer demand for durable goods and homes also helped keep spending high. In both cycles, business inventories had drifted out of line with sales and needed adjustment. Finally, the reduction in Government defence spending after the Korean War was a major factor in the 1953-54 decline. Indeed, this drop, together with associated inventory cutbacks, accounted for virtually the entire 1953-54 recession.

"By way of contrast, in 1958 no tax cuts are in prospect and no backlogs remain to buoy consumer spending. On the other hand, inventories have been watched closely for some time now and do not appear to be out of line as much as in earlier periods. A major difference is the prospect for higher Government defence expenditures in 1958.

"Undoubtedly, the public reaction to the Russian satellites will touch off an increase in military expenditures during 1958—how much and how soon is another question. It would be premature to expect any substantial rise in outlays in early 1958. The cutbacks in conventional arms and manpower under way before Sputnik will still be pulling down the spending totals, and further economies are being sought to offset the increase in missile expenditures. The time necessary for research, testing, and putting new weapons into large-scale production will hold back any massive spending programme, no matter how willing Congress may be to appropriate funds.

"The most immediate impact of the shifting attitudes toward defence spending will come from stepping up the placement of defence contracts. These contracts start subcontracting and inventory accumulation—even plant and equipment spending —with direct and psychological effects going around the circle.

"Between the economy drive and the uncertainties of the shift from manned aircraft to missiles, the Defence Department has been holding back on its ordering. In 1956, obligations for major procurement and production exceeded expenditures for these purposes by $4.9 billion, but, in the first nine months of 1957, expenditures ran ahead of obligations by $2.1 billion.

"The promptness with which business firms adjust their inventories and the speed of the decline in plant and equipment spending will have much to do with the trend of the next few months and with determining how soon the economy is ready to rally and start a recovery. The amount and timing of fiscal and monetary measures to counteract recessionary trends are also vital but unknown elements in the 1958 outlook.

"One thing is certain: 1958 will be a highly competitive year. More than ever before, management's interest will be centered on cutting costs, improving efficiency, and turning out products designed and priced to attract the customer. Many industries are experiencing declines, but the fact that many of them have already gone through substantial adjustments in the past two years should help limit the size and duration of further adjustments. The prospect of an accelerated defence programme and the possibility of moderate but continued expansion in public works, home-building, and some other types of construction encourage belief that the second half year may see an end to the recession. In business plant and equipment expenditures, however, there is no precedent for expecting a fresh upturn in so short a time."

RECOVERY IN STERLING WELL KEPT UP

CHANCELLOR'S RESIGNATION HAS NO EFFECT—GOLD RESERVES RISE

THE outstanding development of the week in the U.K. was the unexpected resignation of the Chancellor of the Exchequer, Mr. Peter Thorneycroft, on the 6th inst., as a protest against the Government's "excessive" budget estimates for 1958-59. The Chancellor was not prepared to approve of estimates for the Government's current expenditure for next year at a sum higher than that which would be spent this year. Explaining the reasons for his disapproval of the Budget estimates, Mr. Thorneycroft, in the course of his resignation letter to the Prime Minister, said:

"In the sterling crisis of last summer, restriction was placed in money terms upon the level of public investment and of bank advances. The Government itself must, in my view, accept the same measure of financial discipline as it seeks to impose upon others. I recognise that, in order to achieve my aim, some combination of politically unpopular courses would have been necessary. I, nevertheless, regard the limitation of the Government expenditure as a prerequisite to the stability of the pound, the stabilisation of prices and the prestige and standing of our country in the world."

The excess of the Government's proposed expenditure in 1958-59 over that of the current year is only one per cent., having been reduced from a considerably larger excess in the estimates presented a few days earlier to the Cabinet. It is perhaps not the actual excess expenditure proposed to which Mr. Thorneycroft took exception, but the violation of the principle of keeping down Government expenditure, which among others, would, in the opinion of Mr. Thorneycroft, help maintain the stability of the pound sterling.

According to Lord Hailsham, Chairman of the Conservative Party, who announced Mr. Thorneycroft's resignation, the acceptance of the latter's suggestion would mean the scrapping of some of the best established social policies to which successive Conservative Governments had declared their adherence. He added that the Government did not believe that the whole future of sterling did, in fact, depend, or could be represented to depend, on marginal differences in the annual estimates, which would not amount to more than one per cent. of the Government's annual expenditure. The British Prime Minister, Mr. Macmillan, who was the Chancellor of the Exchequer before Mr. Thorneycroft came to hold that post, expressed, in the course of his reply to Mr. Thorneycroft's letter of resignation, the Government's determination to check inflation and to maintain the stability of sterling. A rigid application of Mr. Thorneycroft's formula, he added, would do more harm than good, if carried out immediately and without regard to any other consideration.

No Effect

The resignation of the Chancellor did not have any marked effect on the pound sterling which closed on Tuesday (the 7th inst.) at $2.81-1/32, that is, 7/32c. lower than the previous day's closing of $2.81¼, which was the highest level touched since August 1954. The latest quotation represents an increase of 5/16c. over the rate at which sterling ended the year 1957, namely, $2.80-15/16, which was itself the highest level since May 1956. The recovery of sterling which began in September last, when it dipped to a low of $2.78-3/16, has brought it to a level which is only 3/4c. below the Exchange Control's ceiling of $2.82. The pace of recovery gained momentum in recent weeks and this is attributed to the growing conviction that the pound sterling would not be devalued. It would appear that even the lingering doubts on this point have gone. The "shorts," who had built up an oversold position on such a contingency, would appear to have covered a considerable portion of their sales.

Ever since the U.K. Government announced their determination in September last to maintain the value of the pound sterling within the existing official parity rates at all costs and pushed up the Bank rate to as high as 7 per cent., sterling has been in demand. As already stated, the demand has been on a significantly large scale in recent weeks. Three reasons are attributed for this by "Lombard," the well-known columnist of the *Financial Times*, London. They are:

"One is that we are now beginning to feel the benefit of favourable seasonal influences affecting foreign exchange operations on trade account. At about this time of the year the sterling area's transfers to dollar countries in respect of payments for commodities fall to a low ebb, while payments by the dollar countries to the sterling area in respect of their purchases of sterling commodities tend to expand. Owing to the growing popularity among traders of the practice of hedging currency commitments in advance, these seasonal variations in foreign exchange activities of a trading character tend to be less well defined nowadays than they were in the past. And this year they have been further obscured as a result of the spectacular changes in commodity price levels—the demand for sterling against dollars on account of North American purchases of Australian, New Zealand and South African wool is, for instance, on a much smaller scale this year than usual. But the seasonal swing in the supply-demand relationship for sterling still represents a factor of some importance.

Second Reason

"A second reason for the recent expansion in the demand for the pound sterling lies in the fact that American money market rates have recently been falling so much more rapidly than U.K. rates that a situation has been created wherein there is a fairly substantial 'interest turn' to be gained by transferring money from New York to London—this after covering insuring against the exchange risk. Hitherto, the profit on such transfers has been too modest to induce American holders of short-term funds to consider making the switch. But now that it has widened to between ½ and ¾ per cent., some fairly large lines of foreign money are being tempted to seek investment in U.K. Treasury bills.

"But it is unlikely that the demand for sterling on these two counts would have been sufficient to give the pound sterling the strong appearance it has manifested of late, had it not been substantially reinforced by buying in connection with the liquidation of bear commitments in sterling. The fact is that—initially—neither the raising of the Bank rate from 5 to 7 per cent. nor the Government's announcement that it intended to fight inflation through control of the money supply carried much weight with foreign speculators—partly, no doubt, because both these weapons had been previously wielded by the U.K. authorities with some vigour without removing the threat to the pound sterling. Thus, although the bears did not for the most part continue to extend their positions in sterling after these measures were announced, they showed themselves to be in no hurry to liquidate the commitments they had already made. They argued, indeed, that it would not be possible to say that the devaluation threat to the pound sterling had been removed until it had been demonstrated that, one way or another, the U.K. authorities were going to put up a stop to the wage-prices spiral.

"Now many of them seem to have been persuaded that, if wage increases occur in Britain, they will be kept for a time to such modest proportions that the pound sterling should not be in any danger on this account during most of 1958. And many have accordingly decided that there is no point in incurring further expense and inconvenience in keeping bear positions in sterling in being."

The strength of sterling has been further reinforced by the further addition to the sterling area's gold and dollar reserves during December 1957. The reserves rose by $58 million during last month to $2,273 million at the close of the year. This increase follows the rise of $33 million in November 1957 and with this, the reserves have gone up by $423 million since the end of September when a low of $1,850 million was touched. At $2,273 million, the reserves show a gain of $140 million over the year, though they are still $108 million below the year's peak of $2,381 million touched at the end of June last.

If the dollar payments to and from the European Payments Union relating to earlier months are disregarded, the gain in reserves during December would have been higher still at $91 million. The aforesaid increase of $88 million in the reserves during December is calculated after taking into account payments of interest, as also a small repayment of capital, aggregating $15.5 million, made on various dollar loans. These comprise the quarterly instalment of $8 million due on 14th December on the Canadian interest-free loan, $5.5 million due on 31st December on two U.S. loans and $2 million which Britain had to pay as interest on the $104 million capital and interest payment deferred at the end of 1956.

During December, the U.K. had a provisional deficit of £6.1 million with the E.P.U., following a deficit of £1 million in November and a surplus of £9 million in October. The December deficit of £6.1 million will be settled this month by payment in gold to the extent of 75 per cent. and by adding the balance to the U.K.'s debt to the Union. The announcement of an increase in E.P.U. deficit caused a setback in the market value of the pound sterling on Saturday last, but the decline was more than made good before the close of the day.

INDIAN BANK COMPLETES FIFTY YEARS

BONUS SHARES TO BE ISSUED

THE fifteenth of August has, by a strange coincidence, proved to be a memorable day not only for the country as a whole but also for banking in South India. For it was on this day 50 years ago—15th August 1907—that the Indian Bank Ltd., the first banking institution in South India under wholly Indian ownership and management, commenced business. The idea to start the bank originated a few months earlier, that is, on 2nd November 1906. The certificate of incorporation under Act VI of 1882 was received on 5th March 1907 and the actual business commenced in a modest way on 15th August 1907. The golden jubilee of the Bank was celebrated two weeks ago in a fitting manner under the chairmanship of Dr. C. P. Ramaswami Aiyar one of the first Directors of the Bank. The function was inaugurated by Mr. H. V. R. Iengar Governor of the Reserve Bank of India, and the commemoration address was delivered by Mr T. T. Krishnamachari, Union Finance Minister

To start a bank at a time when public confidence had just been shaken by the collapse of the House of Arbuthnot—a trading firm which was doing extensive banking business in the Madras Presidency, a peculiarity of those days—was indeed an adventurous venture. The successful growth of the Bank during the last five decades to the premier position it occupies today among the banks in South India and a well-merited place in the Indian banking structure is an impressive testimony to the courage and vision of the small but influential and well respected band of men from various spheres of public life in the Madras State who faced the challenge and took the risk.

Severe Competition

This does not, however, mean that the growth of the Bank had been smooth. Far from it. For, as Mr. H. V. R. Iengar pointed out in his inaugural address, 50 years ago, when the Indian Bank was started, and even later, when other banks came into existence, national banks had to function under conditions of considerable difficulty. They had to stand very severe competition from banks (the Bank of Madras, the Bank of Bombay and the Bank of Bengal) which later became the Imperial Bank of India with prestige and authority which they derived from the fact that they were banks of the Government with enormous balance of Government funds. Indian banks had also to compete with exchange banks which also operated in India with tremendous prestige born of the fact that they were branches of banks located in London, capital of the British Empire.

Apart from competition from these old-established banks, the Indian Bank, along with other newly established banks, had to tide over a crisis which overtook banks in general in the years 1913 and 1914, just before the outbreak of World War I, and the great economic depression of the thirties. The fact that the Indian Bank successfully emerged from these tribulations and has come to be ranked among the leading banks of India is proof of the sound and cautious manner in which those in charge of the Bank's destinies guided its affairs. As Mr. T. T. Krishnamachari pointed out, "care and progress do not always go together; the Bank had managed to progress, as well as to be careful."

The Bank started with a modest authorised capital of Rs. 20 lakhs and a paid-up capital of Rs. 10 lakhs. Its popularity and successful working resulted in a small profit of Rs. 5,500 even in the first few months of its career in 1907. In the second year of its working, the Bank was able to pay a dividend of 4 per cent. per annum from the date of its incorporation. The first two decades constituted an arduous period for banks in general and the Indian Bank had necessarily to toe a cautious line in expanding its activities to upcountry centres, despite the insistent demand for opening more branches. Between 1908 and 1932 the Bank opened 15 branches in different parts of the Presidency, in addition to an office at Colombo.

The Bank's business showed steady progress. There was a steep rise in its deposits from 19 onwards and the Directors felt justified in slowly extending the business and increased the authorised capital from Rs. 20 lakhs to Rs. 50 lakhs in 1921. The outbreak of World War II quickened the pace of the Bank's prosperity. The Bank, however, carried on its business as usual in spite of the restrictions on trade, domestic a

TRADING IN YARNS DURING 1957

ART SILK YARNS STEADY

AN irregular trend was witnessed in the yarn market during the year 1957. Thus, while cotton and staple fibre yarns ruled depressed, art silk yarn was steady. The steadiness of art silk yarns was engendered by shortage of supplies in the wake of enlarged requirements of the weaving industry. It may be noted here that the production capacity of the industry has gone up quite markedly in recent years, but availability of yarn has not improved proportionately, owing to the continued low level of production and to the Government of India's policy of restricting imports of foreign yarns. The total quantity of art silk yarns actually produced during the ten months ended October 1957 was not more than 20.28 million lbs., which was, of course, higher than the 15.95 million lbs. produced in the corresponding period of last year. Imports during the same period were of the order of 33 million lbs. On this basis, the total supply of art silk yarn (excluding the previous year's carry over figures of which are not available) for the whole of 1957 may be estimated at approximately 64-65 million lbs., as against the estimated demand of 100 million lbs. Thanks to such a heavy shortage of art silk yarns, the production of rayon fabrics suffered a setback. During the first ten months of 1957, 185.84 million yards of fabrics were woven, as against 211.40 million yards in the corresponding period of 1956.

Notwithstanding the vast yarn requirements of the rayon weaving industry, the Government of India has been reducing the import quota for art silk yarn from time to time. After several cuts, the quota for the July-December 1956 licensing period was fixed at Rs. 4 per loom per shift. This was further reduced to Rs. 3 for the first half of 1957. Under the revised import policy for the July-September period, established traders were not given import licences at all; the mills were granted actual users' licences on the basis of Rs. 3 per loom per shift. The import policy for the half-year ending March next completely bans imports of art silk yarn, except for the scheme envisaging grant of import licences only against proved exports of art silk fabrics. Despite the sharp cuts in imports, art silk yarns did not register any appreciable rise in prices, because the offtake—domestic and foreign—of fabrics was at a low ebb and there was a switch-over by several mills to production of fabrics made out of nylon yarns.

Comfortable Supply

Cotton yarns, as already stated, ruled depressed during the year under review. The weakness must be attributed to the comfortable supply position in respect of yarn, rendered possible by the substantial expansion in output. The aggregate supply during the eleven months ended November 1957 was 1,635 million lbs. (inclusive of the carryover stock of 11 million lbs.), as against 1,524 million lbs. (inclusive of 8 million lbs. of carry-over stocks) in the same period of 1956. Excluding 1,156 million lbs. used by mills for weaving cloth, exported abroad and utilised for other purposes, the quantity of yarn available for consumption by handlooms and powerlooms was as much as 479 million lbs., which compares favourably with 417 million lbs. a year before. There was no doubt enlarged demand from the decentralised sector of the textile industry, which is reflected in the increase in production of handloom cloth and powerloom cloth from 1,509 million yards and 278 million yards in 1956 to 1,621 million yards (estimated) and 299 million yards (estimated), respectively, in 1957. But this was at lower prices. Nor were export enquiries encouraging, due to stiff competition from other countries, particularly Pakistan. During the six months ended December 1957, only about 20,000 bales of cotton yarn could be shipped, as against the export quota of 67,500 bales. If yarn prices did not suffer a sharper fall, it was because of the firmness of raw cotton prices. The wholesale price index (base: year ended 31st August 1939=100) of cotton rose steadily from 469 in January 1957 to 506 in September, while cotton yarns declined from 492 to 470, representing a drop of 7 to 10 per cent. over the year.

Staple fibre yarns were weak during the major part of the year. Supplies were quite large which sometimes tended to create even fears of overproduction, resulting in accumulations of stocks, whereas demand from consuming centres was slack. The total production of staple fibre yarn during the first ten months of 1957 was 16.12 million lbs., as compared with 14.69 million lbs. in the corresponding period of 1956.

The following table shows at a glance the trend of the yarn market during the year under review:

	2-1-57	Highest	Lowest	31-12-57
Art Silk Yarn	Rs.	Rs.	Rs.	Rs.
Forward (per 200 lbs.)—				
120 dull cones Snia	825.00	829.00	788.00	873.00
Ready (per lb.)—				
120 Japan	4.31	4.45	3.94	4.84
150 Japan	4.50	4.53	3.94	4.95
120 Italy	4.19	5.00	3.94	5.25
150 Italy	3.91	4.81	3.66	5.06
Staple Fibre Yarn				
Forward (per 200 lbs.)—				
40×2	648.00	656.00	525.00	550.00
Ready (per lb.)—				
40×2 New Great	3.42	3.42	2.87	2.99
40×2 Century	3.52	3.52	2.97	3.09
Cotton Yarn				
Ready (per 10 lbs.)—				
10s Modern	15.62	15.62	14.62	14.62
20s Gokak	19.09	19.09	17.62	17.62
40s Mimaxi	27.75	28.25	24.81	24.75
60s Raghuvamshi	56.62	58.00	52.00	51.75
80s Finlay	80.00	83.00	75.00	75.00

Art Silk Yarn

Art silk yarns began the year on a distinctly bullish note, thanks to New Delhi's curbs on imports during the six months January to June 1957. Imports of 120 and 150 bright acetate yarns were completely stopped. The overall import quota was cut from 25 to 15 per cent. The actual extent of the cut in the case of 120 deniers and 150 deniers was 5 per cent. and 2½ per cent., the revised quotas being 20 per cent. and 7½ per cent., respectively. The drastic reduction in imports let loose a buying spree in the market resulting in a marked rise in prices. The improvement, however, was not sustained, as, in the subsequent sessions, the buying fervour diminished on account of slackness in enquiries, occasioned largely by stringency in the money market. Forward delivery in Snia 120 dull cones, after advancing from Rs. 807 on 12th December 1956 to Rs. 828 on 9th January 1957, declined to touch the lowest level for the year of Rs. 788 on 29th May. It, however, recovered to Rs. 829 on 3rd July, following good buying support induced by fears of scarcity in supplies on account of the restrictions on imports. Thereafter, the prices gradually declined, the August contract standing at Rs. 796 on 27th August. Business in October contract commenced at Rs. 828 on 31st July. It steadily fell to Rs. 814 on 27th August. After recovering to Rs. 825, it moved down again, the closing rate at the end of October being Rs. 806. December delivery which stood at Rs. 822 on 16th October eased to Rs. 807 before finishing at Rs. 851 on 31st December. Business in February delivery commenced on 13th November at Rs. 796. The closing rate for this contract as on 31st December was Rs. 873.

Spot rayon yarns were subjected to alternate bouts of buying and selling during the year. The range of difference between the highest and the lowest levels touched was 51 nP to Re. 1.15 according to varieties.

Cotton Yarn

In the cotton yarn section, the decline in prices was particularly marked in finer and medium counts. Sixty counts Raghuvamshis stood at Rs. 56.62 per bundle of 10 lbs. at the beginning of the year and rose to Rs. 58 on 20th February. This level was maintained practically till 5th June. Subsequently, the price declined to Rs. 52 on 16th October at which rate it closed on 18th December. Forty counts Minaxis opened the year at Rs. 27.75 and, after moving up to Rs. 28.25 on 24th April, retreated to Rs. 24.81 on 13th November. Over the year, eighty counts Finlays lost Rs. 5.

During the year, the Government of India announced several measures designed to promote exports of cotton yarn. These included allotment to shippers of the unutilised cotton yarn export quotas of mills, permission for exports of cotton yarns up to 78 counts freely (within a ceiling of 5,000 bales), and the subsequent upward revision in the ceiling to 17,500 bales, together with the extension of the validity of shipment period by three months ended 31st December, and grant of a further export quota of 50,000 bales. These measures had no significant effect on prices, as demand for Indian cotton yarns from important consuming centres like Aden, East Africa, Ethiopia, Hongkong and Ceylon was poor.

Staple Fibre Yarn

The bearish tendency in staple fibre yarns was in evidence during the major part of the year and was more pronounced during the second half. Some of the measures taken by the Government to encourage production of yarn failed to impart strength to the market. Among these were (1) free exports of staple fibre yarn within a ceiling of 1.5 million lbs. during December 1957 period announced on 4th June (the validity of shipping bills for such export was extended for a period of one month from the date of passing instead of 15 days); (2) abolition of excise duty on staple fibre yarn with effect from 16th September, with a view to encouraging production as well as consumption and (3) assurance of Government that it would examining fixation of a flat uniform rate of rebate for staple fibre fabrics exported.

COTTON MILL STATEMENTS IN 1957

MANY COMPANIES ENJOYED FAVOURABLE CONDITIONS

From A Special Correspondent

MANCHESTER, 31st *December*, 1957.

MANCHESTER LETTER

RESULTS published by Lancashire textile firms during the past 12 months have, to a large extent, reflected the improvement in trade which took place in the autumn of 1956 and which was reasonably well maintained during the early months of the following year. Many companies have experienced more favourable conditions, despite some slackening in demand during the summer months. The spurt in activity, which occurred prior to the last wage advance for the operatives, gave an additional fillip to earnings which can be expected to maintain the better trend in reports published in the months ahead.

Few traders can be entirely satisfied with the situation, particularly the tendency towards small orders and short runs. Such activity, however, is a sign of the times in the present uncertain state of world commodity prices and economic affairs, and no change can be anticipated in the immediate future.

The average profit announced by 49 spinning mills during 1957 was £26,015 per company, as compared with an average of £21,077 for 49 firms in 1956 and £27,745 for 60 companies in 1955. The average dividend paid by 50 spinning mills in 1957 was 18.31 per cent., as against 16.64 per cent. for 52 firms in 1956.

Experience of Spinning Trade

The following table shows the experience of the spinning trade in this connection for the past 20 years:

Year	Companies	Average profit per company	Companies	Total paid-up ordinary share capital	Yearly average dividend per cent.
		£		£	
1938 ..	85	10,742	132	15,963,280	5.53
1939 ..	86	5,506	126	14,880,910	3.39
1940 ..	74	14,488	121	14,624,893	8.80
1941 ..	71	11,102	106	13,967,396	8.84
1942 ..	65	8,078	100	12,639,961	9.59
1943 ..	62	7,959	102	12,280,768	10.38
1944 ..	63	8,490	101	12,380,014	11.01
1945 ..	65	8,243	94	12,025,906	11.14
1946 ..	68	9,812	97	12,171,285	12.21
1947 ..	73	14,098	94	12,110,507	14.52
1948 ..	81	20,083	95	12,078,327	16.25
1949 ..	73	26,313	92	12,002,080	16.83
1950 ..	74	35,168	85	11,666,799	18.21
1951 ..	80	55,641	86	12,291,212	21.26
1952 ..	88	56,154	87	13,038,724	21.51
1953 ..	79	27,546	82	12,374,242	20.14
1954 ..	67	81,226	72	12,051,134	24.31
1955 ..	60	97,745	62	11,188,278	23.42
1956 ..	49	21,077	52	10,256,030	16.64
1957 ..	49	26,015	50	10,083,418	18.31

The average profit of 18 concerns which combine spinning and weaving was £69,197 per company in 1957, as compared with £50,233 in the previous year. The average dividend paid by these companies was 10.89 per cent., as against 12.53 per cent. For the whole of these 67 firms, the average profit was £37,616 in 1957, as against £28,693 for the same number of companies in 1956. The dividend for 68 firms was 16.37 per cent. on average, as against 16.62 per cent. in 1956.

These companies now have an aggregate credit balance aggregating £10,606,558, an average of £155,979. A year ago, 73 firms had credit balances amounting to £11,563,487, an average of £158,404. Once again, it can be pointed out to some of the outside critics of the industry that the reserves, particularly in the spinning trade, are substantial. Nor do they take into account the large sums which many farseeing managements have provided in the shape of modern machinery and the expense caused by the introduction of labour-saving devices and work-study systems.

Weavers' Problems

The situation of purely weaving firms in the trade has for long been unenviable. Their position between the highly organised spinning and doubling branches and the merchanting community, whose object must be to sell on the best possible terms, does not make for large margins. Their results continue to be the least encouraging of those sections where financial information is most readily available and, during the past 12 months, there has been a further decline in average profits.

An analysis of 24 weaving concerns shows average profits of £24,320 per company, as against £28,112 in the previous year, while dividends averaged 6.27 per cent., as against 9.60 per cent. Credit balances amounted on average to £101,011 per company, as compared with £91,048 a year previously.

The Combines' Year

Average earnings of the 14 large groups, several of which combine the various processes under one amalgamation, regained the level ruling in 1955 after the reduction in profits announced during the following year. Total earnings of these combines and their subsidiaries announced during 1957 amounted to £4,968,862, as against £3,399,939 in 1956. The average profit was £354,919, as against £242,853 in 1956 and £333,213 in 1955. The dividend distributed averaged 12.72 per cent., as against 13.23 per cent. in 1956 and 14.99 per cent. in 1955.

As in the case of a number of weaving firms, the directors of the combines have clearly decided to keep dividends relatively low and retain larger amounts for the purpose of greater liquidity. The credit balances of these 14 groups aggregated £9,052,067, as against £8,415,377, an average of £646,576, as against £601,098.

Only a limited number of capital changes occurred affecting cotton textile companies during the year. In four cases, scrip bonuses issued amounted to £1,099,526, including one of £809,533 by one of the bigger groups in the trad . Scrip issues during the previous year involved £334,401. There were more capital repayments, four companies distributing £560,037 to shareholders, whereas only one such development occurred in the previous year, involving £123,036.

Export Gap Widens

Exports of cotton goods gained a little in their battle with imports during November. Shipments of cloth, at 38,183,000 square yards, were the highest since July, while arrivals of foreign fabric failed to reach 30,000,000 yards. At the same time, the gap between the two is still relatively narrow; for the 11 months, exports of cotton cloth were 418,767,000 square yards and imports were 383,954,000 square yards. A year ago, shipments were 433,993,000 square yards and imports 382,656,000 square yards. Exactly half the gain of 100,000,000 square yards made by foreign producers in the British market is accounted for by the larger arrivals from India, which so far amount to 168,699,000 square yards. Imports from Hong Kong have increased by 13,000,000 square yards to 64,745,000 square yards and arrivals from Japan are more than 21,000,000 yards up at 52,139,000 yards. Purchases from a variety of unnamed foreign countries have increased fourfold as compared with 1955 and now amount to nearly 40,000,000 square yards.

A good deal of the reduction in exports can be attributed to the fall in cloth takings by Australia which accounts for nearly 10,000,000 yards. Many other consumers have absorbed very similar quantities to a year ago, a notable exception being the United States where shipments have declined from nearly 12,000,000 square yards to 8,339,000 square yards. After the slight revival in business with India last year, trade has fallen off and exports so far amount to only 5,588,000 square yards.

Progress in fixing up cotton yarn exports is still slow, although recent levels are being generally maintained. In November, exports were 2,972,964 lbs. and the total for the 11 months of the year was 35,009,942 lbs., an increase of more than 2,000,000 lbs. as compared with 1956. In contrast to the cloth situation, Australia has absorbed more yarn, shipments being 7,339,047 lbs., as against 5,766,691 lbs.

Safeguards Against "Dumping"

Just over a year ago, Lancashire traders were discussing the terms of the Anti-Dumping Bill which had been drawn up by the Government to protect British industry from the inroads of alleged "unfair" competition. A year later, the topic is still well to the fore in the minds of textile men, not only in connection with the European free trade area plan but also as a means of parrying the thrusts of Far Eastern rivals. It was made clear when the provisions of the Bill were published that, however hard legal minds worked to provide an unchallengeable definition of "dumping," it would be extremely difficult to offer a watertight system to prevent such practices from being employed to Britain's detriment. The terms of the legislation still offered scope to the ingenious opponent and there were complaints among industrialists that they were by no means free from exploitation.

While the majority of local traders are anxious about their prospects under the European plan, another threat has lately arisen to give them cause for alarm. The spotlight has

I.N.T.U.C.'S NINTH ANNUAL SESSION

ATTITUDE TO ECONOMIC PROBLEMS REALISTIC

TWO of the largest trade union organisations of India, the Congress-sponsored Indian National Trade Union Congress (I.N.T.U.C.) and the Communist-inspired All-India Trade Union Congress (A.I.T.U.C.) held their sessions in South India during the last fortnight. The I.N.T.U.C.'s ninth annual conference was held at Madurai in the Madras State, while the A.I.T.U.C. silver jubilee session was convened at Ernakulam in Kerala. These two organisations, owing allegiance to rival political parties having divergent political and economic convictions, had one thing in common—the desire to see the second Plan through. This was evident from the speeches made and the resolutions passed at these conferences. It is happy to note that even the extremist A.I.T.U.C., if one is to take the professions of its leaders at its face value, has taken a more responsible stand than was hitherto the case with that organisation in respect of the second Plan. Mr. Dange, General Secretary of the A.I.T.U.C., told the labour unions that their approach to the second Plan should be "absolutely different" and that they must make the Plan their own. He advised workers that strike should be the last weapon and that, even when it was resorted to, trade unions should always have in view the idea of settling disputes through negotiation. If the A.I.T.U.C. and the unions affiliated to it take these words of their leader seriously and are prepared to honour the obligations flowing from them, it augurs well for the future of industrial relations in the country.

Meeting at a time when a serious food shortage and other difficulties are staring the nation in the face, it is only natural that the two labour organisations, representing a substantial section of industrial workers, should discuss these problems as matters vitally affecting their members and the country as a whole. The basic problem confronting the country and dogging the planned development at every step was recognised as the problem of food shortage. Mr. Nanda, Union Minister for Labour, diagnosed the problem correctly when he observed, during the course of his inaugural address to the I.N.T.U.C. at Madurai, that food could not be treated as an isolated problem. He pointed out that it was part of the prevailing phenomenon in the country, namely, low productivity. The country's manpower, skill and resources, he observed, were not being put to the most effective use in many places. The country, therefore, experienced a slow increase of production and productivity. There are certain things which at the present stage of economic and technical knowledge the country cannot do. But it cannot be said, as Mr. Nanda rightly observed, that, with the natural resources and techniques available at present, this country could not have attained the position of being able to feed its people without dependence on outside sources. The obstacles with which labour and industry at the moment were faced have their origin largely in the same source. The difficulties encountered by the second Plan, Mr. Nanda was frank enough to admit, were due partly to the bigger dimension of the targets laid down and partly to the unfavourable turn of events about which nothing could be done. But the principal reason for the present embarrassment in respect of the implementation of the Plan, according to Mr. Nanda, was that "most of us have not yet attuned ourselves to the call of our great future to which destiny opened the door ten years ago when we gained our independence." Calling upon the workers to develop a wider outlook, Mr. Nanda exhorted them to bear in mind that their struggle for a better life could not be concerned solely with their immediate occupation and employer, but that they should extend their interests and attention to embrace the entire ensemble of social and economic factors which together formed the picture of the national economy.

Referring to the complexity of the problem of productivity, Mr. Nanda said that, while the workers might well be called upon to do more and better work and thus increase their own contribution, the problem of higher productivity was bound up with the whole set-up of social and economic arrangements, the level of public and industrial administration, the facilities for general and technical training and the emotional satisfaction provided for the workers and the kind of human and social relations evolved.

Proceeding, Mr. Nanda observed that a disturbing development in recent months was the loss of employment to a large number of workers in the textile industry. Fluctuations in the fortunes of an industry do occur at times. But, if these hazards were not reduced to the minimum, it had to be acknowledged as a failure of planning. This, according to Mr. Nanda, is in essence a problem of how to deal with uneconomic units in an industry. Unless they were segregated and special methods of treatment devised for them, their unhealthy influence on common standards and volume of employment could not be avoided. While this line of reasoning is sustainable to a degree, what is intriguing is how a Government which sets so much store on efficiency can go on subsidising inefficiency when it is found to exist in certain sectors which they patronise on ideological considerations. Moreover, the Minister does not appear to have paused to examine the basic factors that have led to unemployment among workers in the textile industry. Has the Government given adequate consideration to the baneful influence of the taxes piled one after another on mill cloth and the umpteen obstructions placed in the way of modernisation and expansion of cloth production? Who else are to be blamed for the unpleasant but logical consequences of unwise economic policies than those who fathered them?

Mr. S. R. Vasavada, President of the I.N.T.U.C., in his presidential address to the conference, stressed the need for higher production and called upon Government, employers and employees to co-operate in ending the race between prices and wages. He was very realistic when he advised workers that a mere increase in wages was not going to help them. What the workers wanted was not more money but more real wages. The only way of enhancing the purchasing power of workers, he averred, was to curb the rise in prices and this was possible only by improving production. He blamed the Government for the current food shortage and attributed it to the failure of the Government to give adequate attention to agriculture. He did well to remind the workers of the fundamental economic fact that a mere wage increase is not going to help them when wages and prices are chasing each other.

Mr. Vasavada suggested that all the social security schemes such as health and life insurance, provident fund, gratuity and old age pension should be incorporated in a comprehensive scheme which should be prepared and put into force. According to him, such a scheme was feasible and would not entail much additional cost either to the industry or to the workers.

Stressing the need for amicable settlement of disputes, Mr. Vasavada rightly pointed out that recourse to industrial courts and tribunals might terminate a dispute but did not establish or restore harmonious relations between the employers and the employees. Amicable relations were best maintained only when parties tried to see each other's point of view and reach an agreement or voluntarily submit their differences to arbitration. There is no doubt that this is the sound line of approach to the question of industrial relations. It is the excessive reliance on legal approach that has been responsible for the unsatisfactory industrial relations in this country.

Among other suggestions put forward by Mr. Vasavada are: (1) enhancement of the rate of contribution of employees to provident fund from 6¼ to 8¼ per cent., with a corresponding increase in the contribution of employers, and (2) the enactment of a National Housing Act, requiring all the States to establish Housing Boards or Departments.

FINANCIAL TRENDS IN SUGAR INDUSTRY

SUBSTANTIAL SHARE OF PROFITS PLOUGHED BACK

THE Association of Indian Trade and Industry, Bombay, must be complemented for the interesting study it has made about the financial trends in the sugar industry during the 17-year period 1937-54. The study makes available for the first time comprehensive data relating to the finances of 110 public limited companies owning 121 sugar factories. The aggregate cane-crushing capacity of these companies in 1954 was 101,610 tons per day (including that for two units situated in East Pakistan), accounting for over 70 per cent. of the entire industry's total installed capacity. The study excludes 54 companies owning 57 sugar factories having less than 30 per cent. of the total installed capacity. It may be noted here that sugar now ranks as one of the countries leading industries, next in importance only to cotton and jute textiles from the point of view of value of production. It is of a seasonal character, employing 135,000 workers in 1950-51 and 143,500 in 1955-56, and is expected to employ 30,000 more by 1960-61.

The Association's study clearly brings out the well-known fact that conditions in South India are more ideal for sugar growing than in North India. Thus, during the 17-year period ended 1954, the sugar industry grew faster in the South than in the North. The number of sugar companies covered by the study increased in North India from 53 in 1937 to 71 in 1954, whereas the number in South India doubled from 13 to 26. The production income of the Northern units increased by about 6 and a half times, from about Rs. 8 crores in 1937 to Rs. 51 crores in 1954, while the production income of the Southern companies in the same period increased by about 14 times, from Rs. 1.53 crore to Rs. 20.51 crores. Between 1937 and 1954, the share of companies in the South increased from 17 per cent. to about 30 per cent. in the case of production income and from 16 per cent. to 39 per cent. in the case of gross fixed assets. The higher proportion in the latter case reflects also the comparatively higher capital cost of the new companies due to inflated prices of plant and machinery. This shift in the industry's development in favour of the South is likely to be accentuated during the period of the second Plan, under which the majority of new mills are to be established in the South.

Superiority of South

"Financial results," according to the Association, "leave no doubt as regards the superiority of the South in matters of location. Since the prices of sugarcane and sugar are fixed on a uniform basis throughout India, the economic advantages of the South are reflected in the figures of relative profits, which, for the period as a whole, work out to about double the corresponding figures for the North. For instance, the ratio of profits before tax to total income for the whole period was 13.2 per cent. for the companies in the South, as against 6.4 per cent. for the companies in the North. The ratio of profits after depreciation and tax to net worth during 1937-54 was 11.4 per cent. for companies in the South, as against 7.6 per cent. in the North. The profits before depreciation and tax per ton of crushing capacity in 1954 were more than twice as much in the case of companies in the South as in the case of companies in the North."

There are two main reasons for the relatively greater success of the sugar industry in the South than in the North. One is that climatic conditions are more favourable in the South than in the North and the other is that it has been possible for the sugar factories in the South to have their own sugarcane plantations where they could raise cane on scientific lines by adopting modern mechanised methods of agriculture. This could be followed only on a limited scale in North India. But, as a result of the recent spate of land reforms, the South is unlikely to enjoy this advantage so far as future expansion is concerned.

It will be seen from the figures in the next column that the aggregate income of the companies (included in the study) from production of sugar and other sources after making adjustments for excise duties, cesses and changes in inventories rose by more than 7½ times, from Rs. 9.67 crores in 1937 to Rs. 75.66 crores in 1954. During the same period, the country's total sugar output increased by less than twice, from 900,000-1,000,000 tons in 1937-38 to 1,600,000 tons in 1954-55. The difference in the proportion of the two increases thus is due to the difference in the price of sugar which was more than thrice as much in 1954-55 as in 1937-38. But this expansion was largely the result of inflation the effect of which on production costs was heavy.

Profit and Loss

The profit and loss and appropriation account of the sugar companies under review is given in the following table:

(In crores of rupees)

	1954	1953	1952	1937
No. of companies	97	98	98	66
Income:				
Production (sales net of stocks, excise duty and cess)	71.77	67.90	82.58	9.22
Other income	3.89	4.78	4.44	0.44
Total income ..	75.66	72.68	87.02	9.66
Expenditure:				
Raw materials and stores ..	41.84	38.97	54.13	5.32
Repairs and renewals ..	1.07	1.02	1.05	0.13
Other manufacturing expenses ..	12.12	11.46	11.27	1.43
Wages, salaries, bonus, etc. ..	7.05	6.47	6.79	0.72
Managing Agents' remuneration ..	0.92	1.06	0.92	0.18

Undistributed profit	1.18	1.31	1.10	0.06

The cost of sugar manufacture and payments to workers and staff moved up, it may be noted, disproportionately to the growth in income. The share of total income absorbed by manufacturing expenses in 1962-54 was 73.5 per cent., as against 68.4 per cent. in 1937-39, the percentage share of employees rising from 6.6 to 8.6. Provision for income-tax also accounted for a rise, the percentage share being 2.9, as against 1.9. The other items of cost increased proportionately less and their share in the total income declined, the managing agents' remuneration falling from 1.7 per cent. in 1937 to 1.2 per cent. in 1954. As a result, the margin of profits (before depreciation and tax) was squeezed from 15.6 per cent. in 1937-39 to 9.9 per cent. in 1952-54. The percentage share of depreciation, dividend and undistributed profit declined from 6, 4.3 and 3.6 to 2.8, 2.7 and 1.5, respectively.

Another interesting conclusion arrived at by the Association's study pertains to dividend. The average of dividends distributed during the years 1937-54 was 4.2 per cent. of gross block and 4.9 per cent. of net worth (paid-up capital *plus* free reserves). The undistributed profit of the industry (carried to free reserves) was the most unstable item in the entire analysis, varying from Rs. 5 lakhs to Rs. 3.22 crores. On an average, for every 1 per cent. rise in gross profit after taxes over the previous year, there was a less than proportionate rise in dividends of 0.63 per cent. and a more than proportionate rise in transfers to reserves of 5.68 per cent. Similarly, for a fall in profits from the previous year of 1 per cent., there was a less than proportionate fall in dividends, only 0.22 per cent., but a disproportionately large fall in transfers to free reserves of 2.27 per cent. Thus, the elasticity of dividends to gross profit after taxes was less than unity at 0.63 and 0.22 per cent., while the elasticity of undistributed profit (transfers to free reserves) to gross profit after taxes was greater than unity at 5.68 per cent. and 2.27 per cent.

A chart in the Association's publication showing the year-to-year changes in profits after taxes, dividends and net retention discloses that the curve of dividends moves in line with the curve of profits after tax, where the curve of undistributed profits fluctuates widely, though moving in the same direction as the curve of profits, albeit much more steeply than the other two curves. Commenting on these fluctuations, the study remarks significantly:

"The behaviour of these curves over the period shows that dividends have a tendency to stabilise once they reach a certain level, rising slowly and falling still more slowly with profits; whilst undistributed profits tend to rise and fall fast with profits, getting the better part of surplus profits over the normal figure and bearing the brunt of maintaining dividends in case of a fall in profits. From this observation, one generalisation could be made which has relevance to policy matters. Any increase in profits due to increased prices or tax reliefs is likely to be used much more to strengthen the reserves of the industry than to increase the level of dividends, and any inroad into profits due to higher taxes or other causes would affect profit retention much more than dividends."

The book value of the gross assets of the 110 companies covered by the review in 1954 amounted to Rs. 118 crores, a rise of Rs. 98 crores as compared with 1937. Of this rise, gross fixed assets accounted for about 40 per cent., increasing from Rs. 14 crores to Rs. 53 crores, and inventories for 25 per cent., increasing from Rs. 4 crores to Rs. 38 crores. The improvement in assets was financed as follows:

	Per cent.
Internal sources, that is, depreciation and free reserves (including capitalised reserves)	44
Issue of new shares for cash ..	12
Debentures and loans	24
Current borrowing	20
Total ..	100

The net asset formation in the sugar industry during the period 1937-54 was Rs. 33 crores, which was divided evenly between net fixed assets and net current assets. The bulk of this, to the extent of 64 per cent., was financed from free reserves, the balance being the shares of new issues of shares for cash or other consideration. The net worth of companies advanced from Rs. 9 crores in 1937 to Rs. 42 crores in 1954; the sum of Rs. 42 crores comprised shares issued for cash (Rs. 19 crores) and free reserves (Rs. 23 crores). The assets structure of the industry showed a continuous shift towards working capital or current assets; the ratio of net fixed assets to net current assets fell from 1.9 : 1 in 1937 to 0.6 : 1 in 1954. The decline must be attributed to the stagnancy in fixed assets owing to the difficulty of obtaining machinery from abroad, on the one hand, and increase in the value of inventories due to higher prices of sugarcane, higher labour charges, higher taxation and increase in price of sugar, on the other. It also reflects fuller utilisation of installed capacity.

Capital Erosion

While the total capital (including free reserves aggregating Rs. 22.16 crores) invested in the sugar industry during 1937-54 amounted to Rs. 39.76 crores at 1954 prices, the total "real" capital formed (including net fixed assets of Rs. 13.16 crores) amounted to only Rs. 29.33 crores. The residual difference of Rs. 10.43 crores is regarded by the Association as "capital erosion." These calculations are based on three related assumptions. First, the book value in 1937 reflected correctly the real values in that year. Secondly, the 1954 prices were 300 per cent. of 1937 prices and the weighted average of 1937-54 prices was 200 per cent. of 1937 prices. Thirdly, prices will remain constant about the 1954 level in succeeding years. Commenting on the "capital erosion," the study observes:

"Capital erosion may be defined as the difference between the value of the real capital invested either by bringing in fresh funds or by ploughing back retained profits over a period of time and the value of real capital formed as a result of such investment during that period. It may be due to many causes, but, in this case, it appears to be due mainly to the faulty practice of calculating depreciation on fixed assets on historical rather than replacement cost basis, leading to an overestimation, and consequent overtaxation, of profits earned by the industry. The estimate given above is only a first approximation. A more accurate estimate is possible only if the exact amounts and the price indices of the various items of fixed and current assets added from year to year during the period are available. Technical surveys would yield still more accurate results."

As already quoted from the Association's study, there is statistical evidence to show that, on the basis of the present trend of appropriations, any increase in the earnings of the sugar industry due to tax relief or price increase will go mainly to augment the reserves of the industry and, to a smaller extent, to increase dividend distributions. In the case of 56 companies the accounts of which are available for each year of the period 1937-54, the co-relation between gross profit after taxes and allocation to free reserves is highly significant at 0.83. The regression of free reserves on gross profit after taxes is 0.42, while that of dividends is only 0.29. The correlation between gross profit after taxes and gross retained profit (depreciation *plus* free

PEGGING OUTPUT OF COKING COAL

PRESENT SYSTEM TO BE ABOLISHED?

IT is reported that the Government of India is considering the question of abolishing the present system of pegging production of metallurgical coal from the current year onwards, with a view to giving collieries adequate scope to develop their mines to meet the requirements of the steel plants by the end of 1958 and thereafter. It is stated that the system, if not wholly abolished, would at least be considerably modified. If these reports prove correct, it will mark a distinct change in the Government's policy of conserving valuable coking coals. For even in its latest report, namely, that for 1956-57, the Coal Board pointed out that, if pegging were to be removed, it would be difficult to check overproduction of coking and semi-coking coals. Uncontrolled production might, it added, create more difficult underground conditions and might not be in the best interest of conservation of coal. The Coal Board, therefore, advocated the planned and controlled increase in production of coking coals with different characteristics and was of the view that pegging would enable the exercise of such control. It is, therefore, hard to believe that the Government would agree to give up pegging. There is, however, no reason to believe that it would not agree to relax to a considerable extent some of the conditions pertaining to production of coking coal.

It may be noted, in this connection, that production of selected A and B grades coking coals has remained pegged from 1952 and that of grades I and II from 1953. Also, the production target for each grade has been gradually increased from 1954 onwards. The following are the pegged levels of output and actual production of all coking coals from 1953 onwards:

(In million tons)

Year	*Ceiling*	*Actual output*
1953	15.18	13.74
1954	14.38	13.61
1955	14.38	13.36
1956	15.41*	13.81
1957	16.00	—

*Excluding a further increase of 10 per cent. allowed as a special case for the year.

In answer to the criticism that the policy of pegging had been operating as a hindrance to increased production of coking coal, the Coal Board drew attention to the fact that the actual production during the last five years had been less than the ceiling fixed. It, however, recognised that the causes for the production being less than the ceiling were inherent in the mining conditions of many of the collieries where stowing was urgently necessary.

The Coal Board insisted that the policy of pegging production should be continued, because "the known and proved resources of coking coal are still limited." It added that coking coals were themselves of different characteristics and a proper blending was required to produce good metallurgical coke. In order to obtain a proper blend, the production of various types of coking and semi-coking coals had to be properly regulated.

A somewhat different view about the resources of coal in the country and the need for control over coal mining as a whole is, however, taken by Mr. D. C. Driver, Chairman of the Coal Consumers Association of India. In the course of his address at the annual general meeting of the Association held last month, Mr. Driver said that there was a revolutionary change in the outlook on coal resources and, in view of this change, the Government might consider favourably the relaxation of coal mining rules and regulations and the amendment of the Coal Areas Acquisition Act. Thus, Mr. Driver observed:

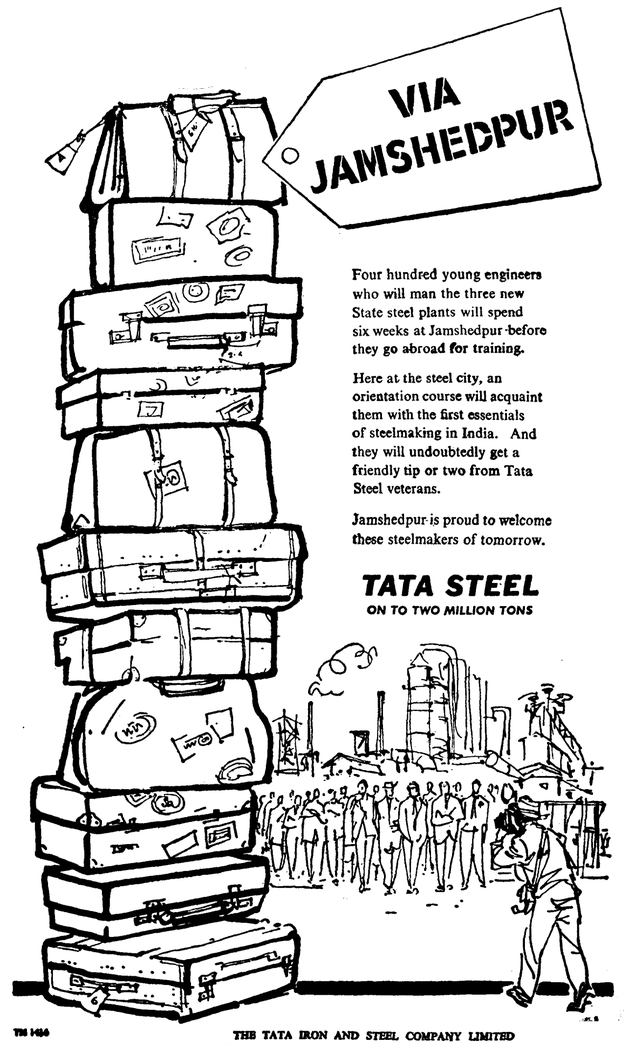
"In prospecting for coal, the realistic method of actually drilling the coal areas has been recently adopted by the Indian Geological Survey and the Bureau of Mines and the indications even in the preliminary stage of their survey are astonishing. Our previously estimated slender reserves of coking coal are indicated to be at least five times larger and the deposits of non-coking coal of good quality are enormous. Further drillings are expected to add to these estimates. This revolutionary change in the size of our reserves of good coal, coking and non-coking, alters fundamentally the outlook on Indian coal problems of conservation, distribution and transport and makes unnecessary the very rigid rules and regulations and legislation about the mining and opening of new mines and conservation of coal, etc., which were evidently based on the assumption that the reserves of our coking coal and good quality non-coking coal were very limited. The Government may, therefore, favourably consider relaxation of these rules and regulations and amendment of the Coal Areas Acquisition Act recently passed."

In view of the vast potentialities which the country's coal resources offer and the consequent increase in coal production proposed during the third and fourth Plans, Mr. Driver felt that there was no necessity for nationalising the existing collieries in the private sector. Elaborating his views on nationalisation, Mr. Driver said:

"The new finds in the public sector of the enormous deposits of coking and good quality non-coking coals disclosed by the drilling survey of our coalfields and the increase in the planned target of coal production in the third and fourth Plans to 100 to 120 million and 160 to 200 million tons, render nationalisation of the existing collieries in the private sector unnecessary, considering that, by the end of the third and fourth Plans, most of the important collieries in the private sector would be exhausted and production of the public sector would have exceeded the output of the private sector and the Government has been invested with adequate control to prevent any untoward activity in the private sector. Let the private sector, therefore, endure till its good coal is more or less exhausted in the next two or three decades and let alone its inferior coal to nationalise which serves no useful purpose."

It may pertinently be asked whether, while no notable progress has yet been made in the public sector during the current Five-year Plan, it would be possible for the target for coal in the second Plan to be achieved, let alone raising the output during the subsequent Plan periods. Mr. Driver was of the view that it might not be possible to reach the target within the second Plan period. As a result of several delaying factors and in view of the fact that it took six to eight years to develop a new mine, Mr. Driver pointed out, the production of 60 million tons per annum by the end of the second Plan period might be delayed by some 12 to 18 months. He added that most of the important new mines in the public sector would be worked by open-cast mining. In view of the vast potentialities for open-cast mining, Mr. Driver presumably thinks that the delay in achieving the target of 60 million tons might not go beyond the period of 12 to 18 months.

While on this subject, it may be noted that the problem of reaching the target for coal within the time specified was discussed at the recent meeting of the Coal Council held on 27th December last. The Council is reported to have come to the conclusion that, though there might be some shortfalls here and there, the overall production of coal envisaged in the second Plan would more or less be attained. The Council, it is further stated, was of the view that production would have to be kept up at a much higher level in the third Plan period. It, therefore, discussed steps to be taken immediately as part of the requisite forward planning. One of them pertained to collection of data for proving new coal reserves and meeting the requirements of technical manpower.



TEA PRICES IN LONDON MOVE UP

SHORT-TERM OUTLOOK DEPENDS ON SUPPLIES FROM CEYLON AND INDONESIA

RECENT developments in two of India's competitors in the world tea markets, namely, the flood havoc in Ceylon and the political upheavals in Indonesia are unfortunate, and it is not pleasant to say that their misfortunes constitute an indirect advantage, albeit short-term, for tea growers in India and elsewhere. But it is an undeniable fact that the repercussions of these on the statistical position and prices of tea have not escaped the attention of the markets the world over. In India, there were no auctions in the last two weeks of December. The first sale of 1958 in Calcutta for both export and domestic consumption began this week, but the results of these auctions are not available at the time of writing. The sale of dust teas in Cochin opened on the 2nd inst., and the demand was fairly good. Coloury medium dusts and best liquoring dusts were well supported and were dearer. Export sales for the current year have not commenced up to the time of writing. The tea markets in India have thus had no opportunity yet to reflect the developments in Ceylon and Indonesia.

Keen Bidding

Last week's auctions in London and Colombo, however, gave an indication of the direction in which the wind was blowing. Biddings were keen on expectations that supplies of plain teas to world markets during the next few months would be adversely affected, as a result of flood havoc in Ceylon and the political unrest in Indonesia. In addition, the accumulation of demand due to Christmas and New Year holidays and the absorption by blenders during these holidays of a large part of the heavy offering of C.T.C. teas which took place just before Christmas, also induced larger demand. Consequently, plain and medium teas were dearer by 2½d. per lb. (as compared with the prices at the closing sales for 1957) and quality teas fetched 4d. per lb. more. The following were the quotations at last week's auctions in Colombo, as compared with those at the end of 1957:

	1st sale of 1958	*Last sale of* 1957
	s. d.	*s. d.*
Low Grown B.O.P.'s	2 4½	2 2
Low Mediums	2 3½	2 1½
Good Mediums	2 10½	2 7½
Poorer Liquoring high growns ..	2 11	2 5½
Useful quality high growns ..	6 0 to 7 6	5 3 to 7 2½

The improvement in prices noted above has thus belied the earlier expectations of many dealers that the larger world production during 1957 would depress prices. In fact, for some weeks prior to the Christmas holidays, tea prices in London had been ruling steady and the surplus production of tea did not cause any recession in prices on account of several other intervening factors, such as the labour unrest in Colombo, following the dock labour strike in November, the occasional buying by Russia in several tea-producing countries and the uncertainty about supplies from Indonesia.

Position in Ceylon

It would, however, be unwise to conclude that the present improvement in prices would last for some months and mark a change for the better in the outlook for tea. A better assessment would, however, be possible only when the position in both Ceylon and Indonesia becomes clearer. So far as present indications go, the position in Ceylon is not so bad as it appears to be. An improvement in the labour situation has been reported. Further, the recent flood havoc is said to have not done any serious damage to the production of tea. It may be noted with interest here that the tea estates of Ceylon are mainly concentrated in the Central hills of the Island and the rain water drains down the hills to the coast. The consequent loss to estates from heavy rains can, therefore, be expected to be not heavy. It is possible that, owing to dislocation in transport, the marketing or shipment of tea might be delayed for some time, but, unless there is an undue delay, this may not have any serious repercussions, because there is already a heavy backlog of tea at the port awaiting shipment.

The main uncertain factor is thus the prospect of supplies from Indonesia. If there is a drop in production in that country, its two important customers, namely, the Netherlands and the U.S., may have to look to other exporting countries for their requirements. This, coupled with purchases by Russia, if they persist, may prevent any recession in prices.

So far as the statistical position is concerned, the latest figures of production in the main tea producing countries during 1957 indicate an increase of about 17 million lbs. (at 1,079.4 million lbs.) over that of 1956, as will be seen from the following comparative table:

(Million lbs.)

	1957	1956	1955
North India, up to November ..	509.5	538.6	525.8
South India, up to October ..	120.6	103.8	110.4
Pakistan, up to November ..	42.3	51.7	48.9
Ceylon, up to October ..	333.5	301.1	318.6
Indonesia, up to September ..	73.5	67.3	70.9
Total ..	1,079.4	1,062.5	1,074.6

It will be noted that the aggregate fall of 38.5 million lbs. in the North Indian and Pakistan crops has been offset to a large extent by the increases in the output of South India, Ceylon and Indonesia. It will also be noted that the output figure for Indonesia only up to September is available and the production data for the subsequent months will have considerable influence on tea prices elsewhere.

While assessing the outlook for tea in the next few months, one should not fail to take into account the abundance of common teas in world supplies. India and Indonesia produce mainly this variety and the output in the latter country is, therefore, of significance to Indian producers. Many of the gardens in India are selling their output below the cost of production and, if the world surplus continues, it is doubtful whether these producers will be able to get a better price. If Indonesian output were to suffer a decline, it is possible that Indian common teas will fetch a slightly higher price.

Long-term Factor

A more long-term factor on which the outlook for Indian teas depends is the improvement in the quality of teas produced. It is true that the internal market offers a vast field for absorbing the rising production of common teas. In this respect, India is more favourably placed than many other producing countries. Nevertheless, to depend on internal consumption and to allow production of more and more common varieties of tea is not in the best interest of India which needs an enormous amount of foreign exchange. But at the same time it has to be recognised that there are serious limitations to raising the production of finer teas. There are certain conditions, in addition to climatic and locational, over which man has precious little control, which are not conducive for producers to switch over to fine quality teas. The growing indiscipline among labour, rising wages, and steep increases in taxes, both at the Centre and the States, all make the investment in tea industry an unattractive proposition.

Now...
high-quality
ACC
FIREBRICKS

for Cement Kilns • Foundries
Smelting Furnaces • Boilers

FROM the ACC's Firebricks Factory at Katni, now expanded and modernised, come high quality refractories with medium, high and super alumina content to meet all your requirements.

Because of their great resistance to spalling and abrasion, these refractories ensure *long* and *trouble-free* service and *low maintenance cost*. Complying fully with the I.S. Specifications 6-1953 and 8-1953, ACC refractories are made to the shape, size and quality you require. They are *far more economical than* ordinary firebricks. And the ACC hallmark on them is your guarantee of high quality and dependability.

RAW MATERIAL SHORTAGE IN ENGINEERING INDUSTRY

SARDAR SWARAN SINGH'S ASSURANCE

THE present shortage in engineering raw materials, namely, pig iron and steel, continues to provide material for the speeches of the spokesmen of the industry. Last month, we drew attention to this aspect of the industry's problem in the course of a reference in these columns to the address delivered by Mr. M. G. Vohra, Chairman of the Engineering Association of India, Bombay region. The same problem has again figured prominently in the speech of Mr. R. M. Agrawal, President of the Engineering Association of India, at the annual meeting of the Association, held on 30th December 1957, at Calcutta. It is, however, gratifying to note that the Union Minister for Iron and Steel, Sardar Swaran Singh, who addressed the meeting, gave the assurance that in the matter of distribution of steel, the steel processing industries enjoyed the same priority as the 'core' of the second Five-year Plan, which, as is well known, enjoys a high priority.

The Minister's assurance is welcome for the reason that it recognises the importance of the engineering industries. For, as Mr. Agrawal pointed out, the engineering industry is the "backbone" of the country's economy and "in volume of employment, capital investment and production, the engineering industry today is a close second to the cotton textile industry and very soon it would surpass that industry to claim the first position in the country's economy." Referring to the "burning problem" of the shortage of raw materials for the industry, Mr. Agrawal rightly stressed that a cut in the supply of raw materials to industry was an "antithesis of progress." He added: "To my mind, import of raw materials is as high a priority item as, if not more than, food and certainly more important than anything else, even an electricity project, big heavy industries, many consumer industries." The shortage of raw materials, according to Mr. Agrawal, affects the big as well as the small engineering units. In this connection, he observed:

> "Many small factories have been depending upon cuttings and rejects of tinplates, plates, sheets, wires, rods, bars, etc., as their raw materials. Now all the big manufacturers of these items have started diverting them to other uses. Railways have also withheld supplies of these items to small fabricators or their associations, so that many factories have nothing to carry on with. I would urge that until such time as prime quality raw material is not adequately available to these small units also, diversion of their present source of raw materials should be postponed, in the national interest."

Although Sardar Swaran Singh appreciated the difficulties of the engineering industry, he naturally deplored India's continued dependence on imports for the essential raw materials of its engineering industries. He said that if the foreign exchange required to import, say, two million tons of steel, were used to purchase the equipment for a steel plant, it could easily generate a productive capacity of a million tons of steel annually. Nevertheless, in the matter of distribution of available supplies of steel the Government would see that the steel processing industries got the same priority as the core of the Plan. At the same time, he admitted that the foreign exchange position did not permit the Government to arrange for liberal imports of steel. He, however, hoped that essential categories of steel would be available.

Steel Supply

The Union Minister estimated that the total availability of steel was 3.2 million tons in 1956 as well as in 1957. The prospect for the supply in the immediate future, on the basis of the present estimate of the availability of foreign exchange, was not bright. The position in regard to pig iron, he said, was better in 1956 than in 1957. Thus, the total allocation of pig iron to foundries was only 256,000 tons in 1957, as against 402,000 tons in 1956. But, with the new blast furnace functioning in the Indian Iron and Steel Company at Burnpur in 1958, the total availability for allocation would be about 500,000 tons. He, therefore, thought that pig iron supply was likely to be easier in 1958 than in 1957. A similar increase in supply was possible in respect of steel from 1959. The Union Minister announced that the Government had decided to replenish the shortage of steel content in steel manufactures exported abroad to the extent of 133-1/3 per cent. He added: "Industrial units engaged in manufacturing goods for export need not thus have any great fear of shortage of raw material."

Economy in Steel

A notable development in the engineering industry is the formation of a co-operative organisation for the purchase of iron and steel. The Bombay Committee of the Engineering Association of India has established a new body called the Engineering Raw Material Consumers' Corporation which has been recognised by the Iron and Steel Controller as a "controlled stockist." It would appear that a similar organisation will soon be established in Calcutta also. While these efforts are commendable in themselves, the ultimate solution for the raw material problem lies in augmenting the supply through domestic production and/or imports. It is to be hoped that the programme for expansion of steel output in the public and private sectors will be completed early enough to relieve the shortage in the supply of steel. So far as the immediate future is concerned, no efforts should be spared to import essential raw materials. At the same time, the Government will do well to explore possibilities of economising the use of steel in the public sector. Perhaps, some of the projects which do not add significantly to production potential—say, certain elaborate building projects—could be given up or postponed in order that the steel saved thereby could be released for more essential uses.

U.S. ATOMS-FOR-PEACE PROGRAMME

The U.S., as is well known, has taken a commendable lead in developing the programme for the utilisation of atomic power for peaceful purposes and also in the establishment of the International Atomic Agency which could be of great assistance to underdeveloped countries in their efforts at utilisation of nuclear power. In this connection, it is gratifying to note that, in 1957, steady progress was made in the U.S. in extending the application of atomic energy to such diverse purposes as generation of electricity, medicine and industry. One of the most important events of the year was the initial starting of the atomic furnace at the Shippingport, Pennsylvania, electric power plant. A chain reaction was started in the plant's reactor on 2nd December, 1957. In addition to the Shippingport plant, four other power reactors were put into operation during 1957 under the U.S. Atomic Energy Commission's (A.E.C.) experimental power reactor programme. Apart from the A.E.C. programme, private United States electric power companies went actively ahead with the building and planning of nuclear electric power plants. A 5,000-kilowatt plant was completed at Vallecitos, California, by the General Electric Company, and other private firms began construction on three more plants in the States of Illinois, New York, and Michigan. Plans were announced during the year for the construction of ten or more nuclear electric power plants by utility companies. The Commission will assist in financing some of these plants. Mr. W. Kenneth Davis, Director of the A.E.C.'s reactor development programme, has predicted that, in 20 years, nuclear plants in the United States should be producing about 133 million kilowatts of electric power. This is about the same capacity as the total electric generating capacity in the United States at the present time. During 1957, U.S. companies worked on plans with eight other countries for the building of nuclear electric power plants—Belgium, Brazil, Cuba, Dominican Republic, Italy, Mexico, the Philippines and Peru.

A number of new research reactors were put into operation in the United States during 1957, and plans were made for the installation of others in the near future. The number of research reactors already in operation, being built or planned now is nearly 50. Construction of research reactors in other countries was also advanced during the year. United States companies completed construction of research reactors in Brazil, Denmark, the Federal Republic of Germany, the Netherlands and Japan. In addition, the 1955 Geneva Conference exhibit research reactor is now in operation as part of the Swiss nuclear research centre, and 18 other research reactors are being built or designed in the United States for delivery to other countries.

In the United States, the Atomic Energy Commission put into operation late in the year an engineering test reactor described as the "world's most powerful instrument for the development of nuclear power." The reactor provides the highest neutron flux—the number of nuclear fissions occurring per second—of any known reactor. Located at the A.E.C.'s National Reactor Testing Station in Idaho, the reactor will test materials used in reactors and other nuclear devices.

Extensive research and development work was carried on during 1957 to perfect the design of a reactor for use in preserving fresh foods by means of nuclear irradiation. At the same time, the U.S. Army Quartermaster Corps proceeded with construction of its Ionizing Radiation Centre at Lathrop, California, where the reactor is to be installed. The centre, first of its kind ever to be built for food irradiation, is expected to be in operation by the end of 1958.

Several important advances were made during the year in the field of nuclear ship propulsion. Arrangements were made in April last, for the design and construction of the nuclear propulsion plant for the first nuclear-powered merchant ship. This ship, to be named the *Savannah*, will use an atomic reactor to create heat and steam for turbine operation. In October last, plans were announced for building a second merchant ship to be propelled by a nuclear gas turbine power plant. These ships, according to the Atomic Energy Commission, are considered the forerunners of "eventual privately-owned and operated American nuclear-powered merchant marine."

During 1957, the A.E.C. continued its developmental work on reactors and power plants for aircraft. Reactor experiments on nuclear operation of turbojet engines were carried out at the National Reactor Testing Station, and additional research and development laboratories and testing facilities were built. In addition, a test airplane carrying the world's first known airborne reactor was put into service. Several U.S. aircraft manufacturing companies are doing development work on atomic planes, and continued progress has been reported.

In addition to advancing the development of atomic planes, the Atomic Energy Commission authorised studies of the application of nuclear power to rocket engines. The Commission announced in December 1957 that static testing of nuclear rocket propulsion would begin in late 1958.

The Commission continued to make numerous shipments of radioisotopes to other countries during 1957 for use in medicine, agricultural research and basic research. More than 50 countries have received these materials from the United States since September 1949, when overseas shipments were started. Radioisotope users in the United States increased from about 3,600 to well over 4,000 during 1957, including hospitals, clinics, physicians, research laboratories and industrial concerns.

In medicine the use of radioisotopes continued to expand, both in the United States and other countries. More than 1,200 medical institutions in the United States are now using these valuable materials, and many hundreds of physicians and medical research centres in other countries. In the field of agricultural research the Atomic Energy Commission continued its work to create large-yielding and disease-resistant food plants by the use of nuclear radiation, to improve fertilisers and their use, and to control insects.

Development of nuclear-powered merchant ships could come with unexpected rapidity, a leader of the British shipbuilding industry forecasts in a New Year review of how British yards are preparing for the future. Mr. J. A. Milne, President of the United Kingdom Shipbuilding Conference, says in a *Lloyd's List* annual review that vast sums of money are involved in the research on nuclear-powered ships. "It would be hazardous to forecast the outcome of these researches," he writes. But "if the nuclear-powered merchant ship is not, at the moment, just round the corner, either in this country or elsewhere, it is equally true that, as a result of work now being done, progress could well be unexpectedly rapid." Britain's general research effort, Mr. Milne claims, "compares more than favourably with that in any other shipbuilding country." The *Lloyd's List* review shows that Britain's trading fleet remains the greatest in the world. Orders with the United Kingdom shipbuilding industry are stated to be worth £1,000 million.

The P. R. Mallory Company of U.S. was recently presented with the Industrial Science Achievement Award of the American Association for the Advancement of Science. The firm received the honour for a new technique in powder metallurgy, that is, the manufacture of machine parts by compressing metal powder into shapes, then heating them. The process, named steelmet, is said to produce stronger iron and steel parts with less time and expense than by other powder metallurgy methods.

NEW PRODUCTS AND PROCESSES

New Technique for Uranium Prospecting

A NEW technique developed by the Australian Bureau of Mineral Resources in airborne prospecting for uranium, has recently been successfully tried out in test flights over Port Phillip Bay, Victoria. It will now be adopted for the first time in prospecting over the Broken Hill area in far western New South Wales. The improved method involves the use of two scintillographs, one fitted in the cabin of an aircraft and the other towed on a cable some two hundred feet below it. The standard practice, so far, has been to use scintillographs housed within the aircraft. Advantages of the new technique are: it helps considerably in distinguishing between broad areas of weak and insignificant radio-activity and small areas of high radio activity of possible economic importance; simultaneous recordings at two different levels make it easier to obtain an estimate of the grade of the surface radio-active deposit. The new technique may now make it possible for radio-active surveys by D.C.-3 aircraft to distinguish readily between the few anomalies that are worth following up and the larger number likely to be of no further interest.

Automation in Pottery

Automation has invaded the old craft of pottery-making, and firms in Australia, like many others in overseas countries, are finding it necessary to mechanise plants in order to retain their markets. A company in New South Wales, Star Machinery Pty. Ltd., of Alexandria, has designed special pottery-throwing wheels and ball mills lined with rubber and porcelain, for the industry. The semi-automatic machines produce saucers and small plates at the rate of one every six seconds. In the process the basic clays and additives are prepared in ball mills, digested in blungers and screened in vibratory screening equipment before passing on to filter presses and pugmills in preparation for presentation to the machine in the form of plastic lumps about cricket-ball size. Recently the company staged an impressive demonstration of the machines it makes, and potters from the local industry made various trade articles for public inspection.

Electronic Protection for Ships

For the first time an Australian ship has been fitted with an electronic device designed to prevent the growth of barnacles on the steel hulls of vessels. The equipment, manufactured by Amalgamated Wireless (Australasia) Ltd., has now satisfactorily passed the trial period of one year under seagoing conditions. During that time an important fuel saving of 236 tons was achieved as against the fuel consumption for a similar period prior to the installation of the device. This interesting electronic equipment develops in the steel hull of the ship supersonic sound waves which discourage marine growth which, as it accumulates, slows down a ship's speed considerably and necessitates regular dry-docking of the vessel for costly scraping of the hull. Also, it may not be necessary in future to paint the hull with anti-fouling compound which would represent a further saving of approximately £200 each time the ship is dry-docked.

Atoms for Heating Homes

Private homes of the future may have nuclear reactors in their basements where they now have furnaces, it was predicted recently by three nuclear chemical engineers of Alco Products, Inc., in the United States. These reactors would not only supply heat in winter, but would also provide power for air conditioning, electric lights and electric home appliances. Dr. A. Louis Medin, head of Alco's nuclear chemical technology division, said that the programme now under way in the United States to improve reactor technology would reduce present high costs.

"Painting" Strengthens Blood Vessels

A U.S. surgeon has developed a two-coat "paint" process to strengthen weakened blood vessels. The system was developed by Dr. Bertram Selverstone of Boston's New England Centre Hospital. A first latex coat is applied to the blood vessel with a modified artist's hair brush. The second coat, of plastic, is applied with surgical instruments. The twin-coated vessels can withstand pressures ten times above normal. The new system is designed to combat certain weaknesses in blood vessels to the brain. The weakness causes the vessels to bulge and when the vein breaks, the hemorrhage can cause death.

Improved Heat-Electricity Converter

A General Electric Company (U.S.) scientist, Dr. Voleny Wilson, has devised what is hailed as a new and highly improved technique for converting heat directly into electricity without using machines having moving parts. Dr. Wilson uses a special device—called a thermonuclear converter—which consists basically of two metal electrodes separated by gas at a low pressure. Intense heat is applied to one of the electrodes and this heat virtually "coils" electrical charges out of the hot electrode. These charges then travel over thin wire to the relatively cool electrode, and in so travelling their flow becomes electric current.

MOTOR INSURANCE TARIFF ENHANCED

THIRD PARTY RATES, HOWEVER, LOWER

THE new year does not appear to have begun well for motor car owners, for they have been called upon to pay 20 to 40 per cent. more by way of premium for automobile insurance from 1st January 1956. The latest addition to the already heavy burden of dearer petrol, higher repair charges and replacement costs is the result of the revision of the schedule of motor insurance premiums by the Tariff Committee of the Insurance Association of India. The Committee has evolved, for the first time, a new all-India motor tariff effective from 1st January. According to the new rating schedule, private car comprehensive cover rates for risks located in Bombay City and the Island of Salsette have been put up by 40 per cent., while the rates for Delhi and Calcutta have been raised by 40 per cent., and 20 per cent. respectively. The motor cycle comprehensive cover rates have also been enhanced by 40 per cent. The comprehensive rates for certain classes of commercial vehicles have been increased by 20 per cent., while those for miscellaneous and special type of vehicles have been reduced by 30 per cent. But, at the same time, "Third Party" and "Act Only" policy premiums for private cars, commercial vehicles and motor cycles have been reduced by 20 per cent. The revised rates will apply to all new business and renewals from the 1st inst.

Mounting Loss Ratio

The increase in comprehensive cover rates for motor cars and motor cycles by 40 per cent. in Bombay is said to have been necessitated by the mounting loss ratio. For Bombay, the ratio averaged about 73 per cent. during the three years ended 1955, as compared with 66 per cent. during the previous three years. It may be observed in this connection that, so far as Bombay City is concerned, the present enhancement is the third since 1949. The first was on and with effect from 1st April 1949 when rates were put up by 25 per cent. for both Bombay and the mofussil. This was based on the "own damage" loss ratios of 73 per cent. and 36 per cent. for Bombay and the mofussil, respectively, for the year 1946 and 73.61 per cent. and 52.76 per cent., respectively, for the year 1947. The second revision became effective from 1st January 1953 and represented a 25 per cent. increase in private car comprehensive rates for risks located in the Bombay City and Salsette, while the rates for the mofussil remained unaltered. "Third Party" and "Act Only" rates for both private cars and commercial vehicles were reduced by 25 and 40 per cent., respectively. The increase in the private car comprehensive rates for Bombay and Salsette in 1953 was necessitated by the average loss ratio of 66.24 per cent. for the three-year period 1949-51.

In spite of the increase in rates in 1949 and again in 1953, the loss ratio continued to be unfavourable for the insurers and the loss figure for the period 1953-55, on which the present increase of 40 per cent. for private car comprehensive cover in Bombay City and Salsette is based, averaged 73.33 per cent. The loss ratio for 1953 was 69.64 per cent., for 1954, 84.26 per cent. and for 1955, 65.83 per cent. The experience during the same period for the mofussil risks showed an upward trend, but, as it averaged only 47.66 per cent., the Committee did not feel that an increase was warranted. The experience in respect of motor cycle comprehensive risks for the three years 1953-55 was also very unsatisfactory, the average loss ratio being as much as 72.3 per cent. A 40 per cent. increase in the comprehensive rates was, therefore, felt necessary.

Third Party Rates

The experience in regard to Third Party and Act Only risks under all sections of tariff was very favourable during the period and the Committee considered that the rates for both these type of covers warranted a further reduction by 20 per cent. The rates have accordingly been reduced by 20 per cent.

The Committee has also made some alteration in scale and qualifying period for "no claim" discount in the case of private cars by way of mitigating the incidence of higher comprehensive rates. It was realised that the five-year period during which a private car owner could earn the maximum "no claim" discount was too long and the successive slabs of discount not sufficiently attractive for the owner to forgo petty claims. Accordingly, it was decided that the maximum "no claim" discount may be earned in three years instead of five. The rate of discount has been fixed at 15 per cent. for the first year of no claim, 25 per cent. for two consecutive years and 33⅓ per cent. for three consecutive years of no claim. Under the old scale, not only did it take five consecutive years to earn the maximum "no claim" discount but the latter could be forfeited for only one claim and one had to go through a further five-year period before earning the maximum. The shorter period of three years is designed to serve as an incentive for careful driving and for forgoing petty claims to earn the maximum "no claim" discount.

The rating basis has also been altered, since it was felt that, with the recent change in engine design, the existing method of rating based on engine horse-power had become unscientific. It was decided that, with effect from 1st January 1958, rating should be based on engine cubic capacity which was now recognised as the most modern and universally accepted basis of scientific rating.

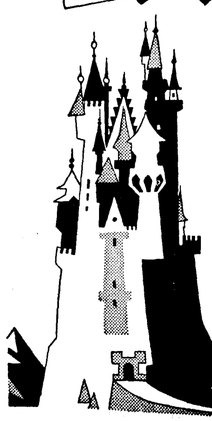
W.I.A.A.'s Protest

Motor car owners in Bombay have protested against the rise in premium rates. In a memorandum submitted to the Bombay Regional Council of the Insurance Association of India, the Western India Automobile Association, Bombay, has pointed out that, of late, motor car accidents were less as compared with commercial vehicles and that, therefore, the increase of comprehensive rates for private cars by 40 per cent. was unfair. Quoting statistics of accidents to substantiate its thesis, the Association pointed out the percentage of increase in motor car accidents in 1956 was only 17.5 over that of 1954, while, in the case of buses and lorries, it was 57.8, taxis 33 and motor cycles 45. There were 6,058 motor car accidents in 1954, 6,327 in 1955 and 7,118 in 1956, as against 3,601 bus and truck accidents in 1954, 5,031 in 1955 and 5,081 in 1956, 2,900 accidents involving taxis in 1954, 4,108 in 1955 and 3,856 in 1956. Accidents involving motor cycles numbered 397 in 1954, 460 in 1955 and 576 in 1956. Commenting on these figures, the Association observes: "While the figures thus show that the percentage increase in motor car accidents is comparatively less, the comprehensive premium rates for this class of vehicles are sought to be raised by 40 per cent., as against a reduction or a slight increase in premium for commercial motor vehicles which, it will be admitted, is unfair."

The Association has suggested that the "no claim" bonus should be raised to 50 per cent. in the third year, instead of 33⅓ per cent., as such an increase would, in its opinion, encourage careful driving and eliminate petty claims. It has been further suggested that those who are already receiving a rebate at the rate of 33⅓ per cent. should be charged premium at the existing rate only as long as they do not make any claim on the company.

Motor car owners need not be blamed if they feel that the new premium rate is burdensome, for, already, owing to a variety of factors, the motor bill is heavy enough. But there does not appear to be much that the insurance companies can do in the matter for the ever-increasing cost of damage claims have compelled them to raise the premium rates. It is common knowledge that the traffic in cities like Bombay, Delhi and Calcutta has increased enormously and accidents have been steadily mounting. The cost of repairs and replacements has also spurted to unheard-of levels and it is not an uncommon experience that, when an insurance company is to foot the bill, the latter is artificially inflated. However, as the insurance companies themselves seem to have realised, no amount of increase in premium rates is going to result in reasonable profits, unless a strict watch is kept on repairers' estimates. Despite the three revisions in the last nine years (including the present one), the loss ratio has shown no sign of coming down to a reasonable level. Informed quarters, therefore, suggest as a remedy that, in addition to a strict scrutiny of all repair bills and estimates, insurers must be more discriminating in their acceptances and observe the restraints which have been found necessary from experience. At the same time, every effort should be made by the authorities concerned to improve the chaotic road and traffic conditions which alone can be of any material help in reducing accidents and thereby the claims for damage.

NOW FLY TWA all the way TO Germany



Twice weekly, TWA Super-G flies all the way to Frankfurt in the heart of Germany—with frequent connections to Bonn, Bremen, Berlin, Dusseldorf, Hanover, Hamburg, Munich, Stuttgart and other German cities and all the important cities in Europe.

For those on their way to U.S.A., TWA has frequent non-stop Jetstream flights from Frankfurt to New York.

SILK AND ART SILK MILLS' ASSOCIATION LTD.

MR. D. N. SHROFF'S SPEECH AT ANNUAL GENERAL MEETING

GREAT SHORTAGE OF RAYON YARN IN NEAR FUTURE FEARED

THE problems facing the rayon weaving industry were discusssed by Mr. D. N. Shroff, Chairman of the Silk and Art Silk Mills' Association, in the course of his address at the Eighteenth Annual General Meeting of the Association held in Bombay on 23rd December 1957. He was of the view that it would take a decade before the requirements of the rayon weaving industry were met from indigenous sources and that the industry would, therefore, be dependent on foreign supplies of this raw material for a number of years.

The following is the full text of Mr. Shroff's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome this afternoon to the eighteenth annual general meeting of our Association. The annual report of the Directors and the audited balance-sheet and the income and expenditure account for the year ended 31st March 1957 have already been circulated. Before you proceed to adopt them, I would like to make a few observations on the events of the past year.

"We are meeting at a time when India is facing increasing difficulties of foreign exchange required to meet the targets laid down under the second Five-year Plan. The stress and strains that have resulted owing to India trying to go ahead fast with the development of the country, have manifested themselves in several facets of community life and have affected the industry and trade, for the past year witnessed far-reaching events in the direction of State ownership and a socialistic pattern of society.

"The second Five-year Plan is primarily intended to gear our economy to this goal and the resources of the entire country will have to be mobilised in order to achieve the development envisaged in the Second Plan. The private sector has to take stock of the greatly changed conditions and circumstances. It will have to play a role in line with the new economic thinking and I am confident that the private sector will rise to the occasion and make its proper contribution to the common goal laid before the nation. We, of the rayon weaving industry, shall have to concentrate our energies in effecting a radical change in the techniques of production and bringing down the costs, thereby playing our role in the task of nation-building.

Industry's Problems

"Turning to the problems facing the rayon weaving industry, I would like to state that the shortage of raw material, namely, the rayon yarn, has been the foremost problem for this industry since its inception. As a result, the productive capacity of the industry has never been fully utilised. As there was no production of rayon yarn until the middle of 1950, the industry was solely dependent on the imports of rayon yarn. During the growth and development of the rayon weaving industry, the supplies of rayon yarn have been inadequate, at times creating an acute shortage. Even today the position regarding the supply of rayon yarn is far from being comfortable. The indigenous production of rayon yarn is so inadequate compared to the total requirements of the industry, that the bulk of the yarn is imported and even then the needs of the industry are not fully met with. Inadequate supplies of rayon yarns and their high prices have been the problems that our industry has faced since its inception.

"During the Second World War, the shortage of the supplies of rayon yarn led to the virtual stoppage of the working of the industry. Even thereafter, the supplies of rayon yarn have been limited owing to the import control regulations. Except for a short period in 1949, and in 1951, when the imports of rayon yarn were put under O.G.L., this essential raw material has been subjected to considerable restrictions. The production of indigenous rayon yarn, which started in 1950, amounted to 20 million lbs. during the year 1956-57. The imports of rayon yarn during 1956-57 was of the order of 60 million lbs. Thus, the total availability of rayon yarn, that is imported *plus* indigenous production, during the year 1956-57 amounted to only 80 million lbs., thereby leaving a wide gap between the total availability and the actual requirements of the country, which have been estimated at 100 million lbs. per annum. As for the gap between the indigenous production and the requirements of the country, it can only be said that if the industry were dependent only upon the indigenous production, there would have to be immediate closures, for the indigenous production is a mere one-fifth of the requirements.

"Despite this fact, the import quota per loom per shift has been reduced by the Government from time to time thereby tightening the import control restrictions on this essential raw material required by the rayon weaving industry. Whereas in July-December 1955, the quota of Rs. 8.50 per loom per shift was allotted to the industry, during the subsequent licensing period of January-June 1956, the quota came down to Rs. 6.70 per loom per shift. This was further reduced during the July-December 1956 period when the quota of Rs. 6 per loom per shift was fixed; during January-June 1957 period, this was again brought down to Rs. 4 per loom per shift, and during July-September 1957 period, the quota per loom per shift was calculated at Rs. 3. This gradual reduction in quota did not stop even at this stage and during the current licensing period, quota of Rs. 2 per loom per shift has been granted to the industry. The present quota of rayon yarn is not at all adequate to keep the industry running. This has caused grave concern to the producers of rayon fabrics and has placed the industry under the threat of grave dislocation.

Capacity Has Increased

"On the one hand, there is a growing shortage of rayon yarn and, on the other, the productive capacity of the rayon weaving industry has considerably increased in recent years. The report of the office of the Textile Commissioner shows that, at present, there are 47,000 looms registered with them, as against 38,000 in 1954. This means that the rayon weaving industry's productive capacity is much more than 600 million yards which is the usual estimate, and this productive capacity cannot be fully utilised due to the shortage of yarn, thus limiting the actual production of rayon fabrics to about 400 million yards during the past year.

"Whilst the industry is suffering from such perennial shortage of raw material required by the industry, recently a systematic and inspired Press campaign is being waged against this industry. In this campaign, problems of growing accumulation of rayon fabrics have been attributed to the 'liberal' rayon yarn *import policy* of the Government of India, and, therefore, total ban on the imports of rayon yarn has been advocated. From what I have stated above, it is clear that such advocacy is without any foundation and is rather motivated by self-interest and is based on half truths and twisted facts.

"As a matter of fact, I foresee a great shortage of rayon yarn in the near future, especially in view of the fact that the indigenous production of rayon yarn is limited to coarse deniers and the demand of the industry regarding the different types of rayon yarn cannot be met with by the indigenous producers. It will rather take a decade before the requirements of the industry are met with from indigenous sources. Even under the second Five-year Plan, the Planning Commission does not envisage that the total requirements of the industry will be met with from indigenous sources. The rayon weaving industry will, therefore, be dependent for a number of years on the foreign sources for supply of raw material.

Reasonable Price for Yarn

"During the coming years, more plants for the manufacture of rayon yarn are to be set up in India and it is indeed a happy augury to develop our own resources for the manufacture of this essential raw material and thereby achieve self-sufficiency. However, it will have to be seen that the rayon weaving industry gets its essential raw material at a reasonable price. The indigenous rayon yarn industry owes its inception, existence and continuance to the rayon weaving industry. I would like to remind it that, owing to the great interdependence, the rayon weaving industry and the rayon yarn manufacturing industry will have to exist in an atmosphere of peaceful co-existence.

"I would now like to refer to the increasing burden of taxation on this nascent industry. From time to time, the Government has imposed unbearable burdens on the rayon weaving industry and our industry, being small-scale as it is, has been able to survive during all these years owing to the active co-operation and united efforts of all the members, and it is only with these qualities that we can face the various ordeals confronting the industry. Unfortunately, the industry has been treated on par with the cotton textile industry as regards taxation, when there is an urgent necessity that this industry should be treated as a light consumer goods industry.

Import Duty

"The import duty on rayon yarn is now levied denierwise at a specific rate per lb. This was a welcome change, inasmuch as the Government has accepted the principle that the industry had been advocating regarding the change in the basis of levy of import duty which was until then based on the market prices of rayon yarn, which were fluctuating. The effective rates of duty fixed by the Government are too high and the incidence of duty on the various types of yarn vary from 35 per cent. to 65 per cent. This advantage given by way of specific duty levied on the import of yarn has been offset owing to the higher rates of effective duty fixed on the imports of rayon yarn. The excise duty was also levied for the first time in the past year on the indigenous rayon yarn and the result of which is that the rayon fabric manufacturers have to bear the burden of this levy on the purchase of the indigenous rayon yarn.

"The Government's proposal to increase the employers' contribution towards provident fund from the present level of 6¼ per cent. to 8⅓ per cent. and the employers' contribution under the Employees' State Insurance Scheme from the present level of 1¾ per cent. to 3½ per cent. will impose an additional burden on the industry.

"The latest burden in the shape of additional Central excise duty which has come as a replacement of sales tax on rayon fabrics, though welcomed in principle by the Association and the industry, has been too high, for, if the original rate of Central excise duty was 9 pies per square yard, that is, 5 nP, and it was compounded at the rate of Rs. 27, Rs. 18 and Rs. 10 per loom per month for the first, second and third shifts, respectively, the additional excise duty of 3 nP per square yard should be compounded at the proportionate rates which would work out to Rs. 16.20, Rs. 10.08 and Rs. 6.00 per loom per month for the first, second and third shifts, respectively. Moreover, as the industry will lose the benefit of making purchases against L and M forms under the Bombay Sales Tax Act, 1953, and obtaining the set-offs on purchases of raw materials, lubricants, chemicals, stores, etc., to be used in the manufacture of art silk fabrics, the financial burden on the industry will considerably increase.

State Sales Tax

"Nor will the increase in the financial burden relieve the procedural complications for about a year, since the sales and purchases of 'non-dutiable' stocks will have to be made according to sales tax laws prevalent in Bombay State before the announcement was made on 13th December 1957. In fact, there has arisen an impasse in the trade as the local and upcountry dealers do not desire to follow the complicated procedure, especially in view of the fact that several other States have so legislated that the 'non-dutiable' stock of rayon fabrics entering those States after 13th December 1957 will further be subject to the sales tax laws prevalent within the areas of those States. Bombay State being the main manufacturing centre of rayon fabrics, the position of the industry has become precarious and we trust that the Central Government will step in and insist upon uniform legislation in all States, and, more important, will exempt 'non-dutiable' stocks from all sales tax laws.

"The burden of taxation as described above is not yet complete and I would like to make a reference to the new tax structure that has come into existence this year in the shape of the deposit scheme, the wealth and expenditure taxes, in the wake of estate duty and the tax on capital gains. With a gift tax looming on the horizon, these measures are discouraging to the development of free enterprise. The acute shortage of raw material, diminishing quota of art silk yarn, owing to the changing import policy and the increasing incidence of taxation on rayon industry from time to time, have placed this industry in a paradoxical position.

Research

"I would now like to emphasise to the silk and rayon industry the foremost need of keeping the consumer in mind while designing and manufacturing its products. It is imperative that we should produce quality fabrics according to the standards desired by the consumer both in the internal and export markets. In this age of increasing competition, fabrics should be made available at competitive prices and the technological genius of the industry should devote particular attention to the creation of new fabrics. The industry will have to effect these improvements in processes and introduce varieties of fabrics with a wide range of useful properties. The need for technically qualified personnel by the industry is rather great and it is a matter of pleasure to learn that the Research Association has approached the Government of India for starting a full-fledged technical college for giving training in the technology of silk and man-made textiles. The matter is receiving the active consideration of the Bombay State Government and the Government of India.

"At this stage, I am happy to inform you that the manufacturers are taking keen interest in the export promotion of silk and rayon fabrics. The various facilities granted by the Government to assist the producers will enable the industry to build up sizable exports. Schemes have been initiated by the Government of granting import licences against the exports of fabrics and of granting prospective licences to the manufacturers for the exports of fabrics. As a matter of fact, there has been gradual rise in the export of silk and rayon fabrics and I am glad to inform you that the targets of our exports promised by the industry to the Government will be almost achieved.

"I would like to appeal to all members to develop export consciousness and make determined efforts to participate in the export promotion drive. I, therefore, desire that every member should enrol as an exporter thereby contributing even to a small extent to the export drive so as to earn the valuable foreign exchange. The export promotion scheme is open to both big and small units and the same concessions are granted to all alike. Our Association has taken the lead in establishing Export Promotion Council and I hope all members will endeavour to export the silk and rayon fabrics of our country.

Export

"The Export Promotion Council had adopted the slogan 'Export and Exist' because export is a recourse upon which we have to increasingly rely to obtain our raw material, despite the handicaps suffered in exporting our goods, owing to the international competition from well-established foreign countries. At the time of inauguration of the Textile Industries Fair, where our Association has a stall displaying the most beautiful and quality fabrics manufactured by our industry, the Hon'ble Shri Morarji R. Desai, Minister for Commerce and Industry, who visited our stall, said that he did not like the slogan 'Export and Exist,' but would like to suggest to the industry the slogan 'Export and Thrive.' I consider it an expression of the keen desire of the Hon'ble Minister to assist our industry in boosting up its exports, enabling it thereby to thrive and prosper and not only exist. I thank him, on your behalf, for giving us such an encouraging slogan and bestowing his blessing upon this industry.

"I would like to refer now to the problems pertaining to labour. During the year in question there were four major disputes that were concerning the Association and those were (1) the demand by the union for gratuity for employees in the silk textile industry, (2) the demand for change in the service conditions of clerical, technical and supervisory staff, (3) the demand for increase in dearness allowance and (4) the standardisation of wages. During the year in question, the Association has so far successfully dealt with all these labour disputes through the co-operation of you all, members, and I take this opportunity of expressing my gratitude for all the help that was extended to the Association for fighting these disputes.

"It cannot be disputed that the employee and the employer are the two wheels of the industrial chariot and, unless they move in unison, it will not be possible to do anything for the maintenance of peace, discipline and order in the industry; but, I am constrained to say that there is a sad deterioration of law and order at present in many parts of the country and also sometimes in the case of our industry, and law and order are essential to proper labour-management relations.

Unity Needed

"The industry today is passing through a great crisis and, unless all the members unite, it will be very difficult to pass through these difficult times. I would, therefore, take this opportunity to request the members that, whenever they find any difficulty in solving the disputes or in meeting the grievances of the labour, they should approach the Association.

"Before I conclude, I would like to express my sincere thanks for the active co-operation and guidance that I have received from my colleagues on the Board of Directors and on the various Committees. I would also like to express my appreciation of the conscientious and loyal manner in which the staff of the Association have performed their duties during the year.

"It remains for me to present to you the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st March 1957, and I now move the following resolution:—

"'RESOLVED that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st March 1957, together with the report of the auditors thereon, be and are hereby adopted.'"

"Dear Sirs ..."

This is an important letter for it may close a big deal, or open a new account. More letters, estimates, indents, ledgers, bills, cheques and receipts—all these add up to prosperity provided the essential raw materials are available. In business there is no more essential raw material than paper.

For 75 years The Titaghur Paper Mills Co. Ltd. have been among the largest producers of fine quality papers. The makers of Elephant Brand Papers remain as pioneers in the forefront of the Industry.

TITAGHUR PAPER

The Titaghur Paper Mills Company Limited, Calcutta-1

TP 1530 R

DELHI CLOTH AND GENERAL MILLS CO., LTD.

CHAIRMAN, SIR SHRI RAM'S SPEECH AT ANNUAL MEETING

EXPORT OF CLOTH AT COMPETITIVE PRICES SUGGESTED

SPEAKING to the shareholders of the Delhi Cloth and General Mills Co., Ltd., at the Sixty-ninth Annual General Meeting held on 20th December 1957, Sir Shri Ram, Chairman of the Company, stated that profits of the textile mills in India were lower in the year under review than they were in the year preceding it. The mill in Lyallpur, in common with the rest of the cotton textile industry in Pakistan, had also made lower profits.

For the chemical section of the Company, he said, this had been a year of growth and of better working. During the year under review, a new sulphuric acid contact plant designed by the Company's engineers and fabricated in the Company's workshops went into operation. This plant is the biggest of its kind to be manufactured inside the country, and it has been put up at a cost lower than that of comparable imported plants. In order to meet the country's requirements for active earth, the Company was planning to reach a daily production capacity of five tons from the present level of three tons a day. The sugar mills in Daurala and Mawana and the confectionery factory and the distillery have all worked well.

Continuing, Sir Shri Ram said:

"The overall results have been affected by the various taxation policies of the Government, such as the additional excise duties on textiles, the higher taxation on companies and the new wealth tax. In a sense, our difficulties are a part of the economic problems facing the country at large.

Food Problem

"The problem of food supplies remains with us, and its presence is casting a long and dark shadow across our economic horizons. The foreign exchange situation is still critical, and adequate solutions for it will probably need years of effort by all, and the exercise of discriminating skills in the future designing of our economic programmes, so that their import-content is within our exchange resources and their scale within the bounds of our internal resources.

"At the moment there is a lull on the price front, but it is a quietude at a level that is high, and being myself a firm believer in a low-price economy, I feel somewhat uneasy. In this context, I might refer to an aspect of our internal resource situation bearing on the working of private enterprise. Paradoxical as it might seem, the position is that, while the money market is easier this year than what it was last year, the creditworthy borrower is still unable to secure finance except at an exorbitant price, irrespective of the fact whether the money is required for industry or for operational finance. This has been very forcefully mentioned by the Industrial Delegation which went recently to the United States and Europe. The small savings scheme of the Government itself is not giving satisfactory results either. The Government alone can remove this self-defeating situation.

Crisis in Textile Industry

"Nearer home, the textile industry is in crisis. In May 1956, the stocks of unsold cloth were 168 million yards; while at the end of October 1957 the unsold stocks have piled to a level never before touched—587 million yards. As a direct consequence, realisations have been lowered and the liquid solvency of the cotton textile industry is in a state of impairment. I can do no better than present the data on bank advances to the cotton mill industry which have reached a very high level:

	(In crores of Rs.) 1955	1956	1957
Scheduled banks' advances to the cotton industry at the end of June in each year	69	73	107

"This burden of stocks carried unwillingly has been telling on all connected with the industry, and it is tragic that a few mills have closed down and some others have cut their shifts, and I am afraid that the steady growth of production, year after year, in the last few years is not likely to be maintained.

Mills Should Sacrifice

"I welcome the relief in excise duty on medium cloth announced by the Finance Minister a week ago, although the burden of excise duties on fine and superfine cloth still continues to be very heavy. At the same time, I realise that since the Government are committed to raising the maximum of internal resources for the National Plan, they may not be in a position to view the situation merely from the angle of the textile producer. The remedy, therefore, has to be found elsewhere. A fair part of the crisis, in my humble opinion, can be resolved by taking steps to export 300 to 400 million yards of cloth in the near future, even at sacrifice prices. The burden of the sacrifice should be shared equitably by the industry as a whole, since the resultant benefits of a market not oppressed by huge and rising stocks which are declining in value will be *generally* shared. I make this plea to fellow-industrialists once again, and in all humility. Its advantages do not stop at lowering stocks within the country, but in creating an appropriate psychology in the markets which have been fighting shy of their normal function of stock-holding since the successive unsettlements of the sharp rise in excise duties last year, of the 'flu epidemic, and of the confusion consequent upon the introduction, earlier in this year, of the inter-State sales tax. This will not only help the industry itself but also earn a fair amount of much-needed foreign exchange for the country. In a sense, the textile crisis is a dealer crisis, and the dealer will not be in a position to get free of the feeling of crisis so long as the once-accumulated stocks oppress the market by the sheer fact of their presence.

"In this context, as well as in the wider context of the nation's need for an expanded export effort, I will commend the suggestions made by the Export Promotion Committee. They have pointed to the stagnant condition of India's exports in a period of a significant rate of growth in world trade as a whole. Rightly, the Committee have stressed the role of the manufacturer, the exporter and of their organisations in developing larger exports, and the equally significant role of appropriate Government policy, measures and export-oriented organisations and media of publicity and information.

Worker Participation

"Gentlemen, there has been considerable talk in the course of this year about worker participation in management. As early as 1938, we, in this Company, decided to have an elected representative of the workers on the Board of Directors, as also an elected representative of other employees. We have not had cause to regret our decision, but its value as an educative step for our work-force in general has been extremely limited. Even works committees and production committees, all over the industry, have yet not been a success in the sense of providing a real feeling of belonging, of participation to all the constituents of the working family. So often these committees have become only 'demand' committees or mere platforms for the ventilation of all sorts of grievances—real, unreal and imaginary.

"Want of mutual confidence very unfortunately exists, and because it exists, it warps our understanding of the point of view of each other. And furthermore, it inhibits our willingness to talk, and to converse. And so disabled, we can hardly have the feeling of belonging, of being participants in a common cause. In my opinion, worker participation in management should be built up not from the top but from the work-floor upwards. Towards this end every effort must be made, both by the employer and by the employees, to render the works committees and production committees a living success, the educative effects of which are reflected over the larger mass of workers.

"I might even raise this to the larger national plane where we have to rely on our capacity to help ourselves. And the latter we cannot do if labour and capital, the two inevitable partners, do not pull together in the common national interest instead of following small-minded controversies and self-centred parochial interests, whether political or economic. In fact, it was good to hear labour leaders, even communists, and others rising to defend the second Five-year Plan and the democratic urges for progress which it embodies. Translated in the language of the workaday world, it means more production. And more production, in turn, implies a new, rich and rewarding co-operation between labour and capital—co-operation that is oriented to consumer interest in the broadest sense, and inclusive of the imperatively needed export orientation. And let us not forget that each one of us is a consumer as much as he is a worker.

Hard Work Needed

"There are exceptions—and I am happy that the exceptions are not very few in number—but there is an air of complacency whether inside our factories or inside other offices. Our notions of adequate personal performances are so puny, a mere fraction of our potential for performance. The urge to work hard is something which, we as a nation, have yet to acquire, although our traditions have always been informed by a sense of duty. The unions have to respond to the country's need for harder and harder work, because on them rests the responsibility of leading our workers not merely to a fair day's wage but also to a fair day's work.

"There are more holidays—other than the weekly rest day—in our country than in any other country in a similar stage of its development. I calculate that we can get up to seven per cent. more industrial production from the same set of basic equipment by judiciously pruning the excess of holidays from which we suffer.

"Some of these might appear drastic suggestions. Perhaps, they are. But to me, who is advocating them only in the larger interest, it seems that chronic diseases call for drastic remedies.

"Before I conclude, let me convey my thanks to all my colleagues, including the members of the staff and the workers.

"With these words, ladies and gentlemen, I move that the Directors' report and accounts be adopted."

FERTILISERS AND CHEMICALS, TRAVANCORE LIMITED

DR. JOHN MATTHAI'S SPEECH AT ANNUAL GENERAL MEETING

PERIOD OF DIFFICULTIES AND TEETHING TROUBLES COMING TO AN END

SPEAKING to the shareholders of the Fertilisers and Chemicals, Travancore Ltd., at their Thirteenth Annual General Meeting held at Alwaye on 28th December 1957, Dr. John Matthai, Chairman of the Company, dispelled the fears entertained by some of the shareholders about the future for their Company. He outlined at length the difficulties which this pioneering venture had to undergo all these years and which prevented it from declaring a dividend for the last 13 years except in respect of 1950. Dr. Matthai added that the Company was coming to the end of the period of difficulties and teething troubles.

The following is the full text of Dr. John Matthai's speech:

"GENTLEMEN,

"I have pleasure in welcoming you to this the thirteenth annual general meeting of the Company and presenting to you the accounts of the Company and the report of the Directors for the year ended 31st December 1956. As these have been circulated to all the shareholders, I presume they may be taken as read.

"Before I deal with the general working of the Company, I would like to explain the delay in holding this annual general meeting which normally should have been held before the 30th of September. As you are aware, this is a Government company under the new Companies Act, and for Government companies a more elaborate procedure has been laid down for audit. The auditors of a Government company have to submit a copy of their report to the Comptroller and Auditor-General of India who has the right to comment upon or supplement the audit report. Being the first audit under the new regulations, it has taken a longer time to go through the procedure than was originally, anticipated. I have no doubt that such delays will be eliminated and that it will be possible to present the accounts before the end of September in future.

"As you will have seen from the printed report, the working of the Company has resulted in a net profit of just over Rs. 8 lakhs for 1956. While this profit appears small compared to the capital invested in the Company, considering the difficulties that we encountered during the year, the results may be considered not unsatisfactory.

Many Difficulties

"At the outset, I would like to answer a question which perhaps is uppermost in your minds as shareholders, namely, why the Company has not been able to give any dividend for the last 13 years excepting the 2½ per cent. dividend declared for the year 1950. When I was invited a few months back to join the Board of Directors as its Chairman, the same question occurred to my mind. The answer to this question is briefly that the Company was a pioneering venture, inasmuch as it had to develop a process for the production of ammonia utilising firewood as the main raw material. The working out of the process involved many difficulties in the early stages. There were also other problems such as shortage of raw materials and periodic restriction of power supply which kept production at a low level. I believe we are coming to the end of the period of difficulties and teething troubles. Meanwhile, they have resulted in an accumulated loss of Rs. 45 lakhs. This is the main factor that prevented the declaration of a dividend during the last two years when we made some profit. The accumulated losses have been reduced to Rs. 23 lakhs by the working results of the last two years. It must be realised that this loss has been arrived at after providing Rs. 2.19 crores towards depreciation which is a liberal provision by any standard. In making this provision, your Directors were guided by the fact that measures for consolidating the position of the Company at this stage would be to the ultimate benefit of the shareholders.

"I would like to take this opportunity to dispel the fears that appear to be entertained by some of the shareholders about the future of the industry. Although no regular dividends have been declared, this factory has been able, since its inception, to produce and market about 2½ lakhs tons of ammonium sulphate and one lakh tons of superphosphate, thereby helping substantially to step up the food production in the country. By the manufacture and sale of the above fertilisers, as also industrial chemicals like ammonium chloride, sulphuric acid and ammonia, this company has also contributed its fair share in saving foreign exchange.

Current Year's Results

"This contribution by itself, I fully realise, will be poor consolation to shareholders who have patiently waited for a long time without any substantial return on the capital they have invested. The present indications are that, while the working results of 1957 may not show any perceptible improvement, the results of 1958 will enable the Company in some measure to fulfil its obligations to the shareholders. It is hoped by that time that the balance of the accumulated losses would have been wiped off. I may assure you that your Directors are fully alive to the situation and will do whatever lies in their power to remedy it.

"When the Company started commercial production from August 1948, ammonium sulphate was very much in demand in the country and, in spite of low production, it might have been possible to sell the product at a price which would have ensured a return on capital also. But being a material essential for food production in the country, we had to market our product by fixing prices in relation to comparable articles imported from abroad without duty. In this respect, this industry is placed at a disadvantage in comparison with other chemical industries in the country, as most chemical products, except fertilisers, are being sold in the country at prices which are in parity with the prices of imports plus duty ranging between 25 and 40 per cent.

Open Market Competition

"Since the commencement of production by the Sindri Fertiliser Factory from the year 1952, we were faced with the additional problem of having to compete in the open market with the product of a concern, which by its size and location is able to produce ammonium sulphate at a considerably lower cost. It may be asked why Sindri's production cost is lower than ours. As I indicated earlier, our factory was designed specially for the use of firewood in the manufacture of ammonium sulphate. We had to adopt this process owing to the non-availability of coal or coke near this area which naturally made the cost of production higher as compared with Sindri. In view of this handicap, your Managing Agents submitted a memorandum to the Government of India pointing out these difficulties.

"The Government of India, as a measure of immediate assistance, agreed to include the production of this factory in the Central Fertiliser Pool. They also appointed a committee headed by Dr. Nagaraja Rao, Chief Industrial Adviser to the Government, to investigate the reasons for the higher cost of production in this factory and to suggest ways and means of bringing it down. The Committee was also authorised to go into the costing of the product and to recommend a fair price for our product. The Committee went into the various aspects of production in this factory and arrived at a price based on the rated production. But since we could not sustain rated production due to reasons beyond our control, this price was not sufficient to cover our actual costs. I propose to take up the question of price with the Government of India and I hope to report to you the result at the next meeting.

Committee's Recommendation

"Under their terms of reference the Committee recommended an expansion of output for bringing down cost and putting the Company on a competitive footing. The specific recommendations included doubling the ammonia production and utilising the additional ammonia for increasing the ammonium sulphate production by 50 per cent. and for ammonium phosphate production. These measures, besides increasing the production and thereby bringing down costs, would also render production more diversified. Ammonium phosphate which will be manufactured for the first time in India will have the advantage of not having to face competition as in the case of ammonium sulphate. In the implementation of these measures, the Committee recommended production of hydrogen by the electrolytic process since new hydro-electric power stations have been set up in the Kerala State recently providing cheap power. They recommended also that, as a second stage, the present wood gasification plant which they found uneconomical in the present context should be replaced.

"The Government of India accepted the recommendations of the Expert Committee and a loan of Rs. 256 lakhs was sanctioned by the Industrial Finance Corporation for their implementation. Since the scheme was sanctioned, the position regarding foreign exchange became difficult and it became necessary for the Company to negotiate with foreign suppliers for deferred terms of payment for most of the equipment ordered. These negotiations have been successfully completed and I am glad to inform you that, as on date, orders for all the major plant and machinery have been placed abroad. Based on the promised dates of deliveries, we may hope to see the expanded plant in production before the end of 1959.

"I would now like to refer to the most important causes that contributed to the lower production during the year under review.

"As most of you may know, there was a mishap at the Pallivasal Power Station as a result of lightning which completely put that station out of operation. The accident was serious, but, as a result of organised effort on the part of the electricity department, the shutdown which could have extended over a month was shortened and the station brought back into commission in the course of three weeks. This mishap, however, resulted in the loss of production in our factory to the extent of practically one month.

Relationship With Labour

"A disturbing situation which developed during the year was the strike of our firewood transport contractors which lasted nearly forty-five days. Even though the factory did not have to suspend production as a consequence of the strike, its repercussions on labour generally led to a considerable lowering of production. The strained relationship that existed between the management and labour during the whole of the year has been a matter of concern and regret to us. The previous agreement with the Employees' Association which expired by the end of 1955 was followed by a fresh memorandum of demands involving large financial commitments. In spite of the best efforts on the part of your Directors, it was found impossible to come to an amicable settlement. The Government, therefore, referred the disputes for adjudication to the Industrial Tribunal which the Employees' Association, however, chose to boycott. A settlement was eventually arrived at on these demands in June this year and we are now endeavouring to bring about a better understanding with labour, so that we could work together to maximise production on which so much depends not merely for the Company but for the country. I am aware of the difficulties of labour, but obviously we cannot solve them if production is kept down. I would, therefore, appeal to all concerned for a determined and co-ordinated effort to increase production to the fullest extent possible.

"Before I conclude, I wish to express our grateful thanks to the Central Government and the Governments of Kerala and Madras for their support in overcoming the difficulties that confronted us during the year. I would also like to commend to you the good work done by the Managing Agents and the members of the staff during a particularly difficult year."

Note:—This is not the proceedings of the annual general meeting but only the speech of the Chairman.

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.

ANIL HARDBOARDS LIMITED

BOMBAY

(INCORPORATED UNDER THE COMPANIES ACT, 1956.)

PROSPECTUS

1. A copy of this Prospectus has been delivered for registration to the Registrar of Companies, Bombay, as required by Section 60 of the Companies Act, 1956.

2. "CONSENT of the Central Government has been obtained to this issue, by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them."

3. "A Licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

4. The list for Public Subscription will open at 10-30 a.m. on Tuesday the Fourteenth day of January 1958, and will close on Tuesday the Twenty-eighth day of January 1958, or earlier as may be decided by the Directors, but not before Saturday the 18th day of January 1958.

5. **Authorised and Issued Capital :—**

	Authorised Rs.	Issued Rs.
50,000 Ordinary Shares of Rs. 100 each	50,00,000	30,00,000
50,000 Preference Shares of Rs. 100 each	50,00,000	10,00,000
	1,00,00,000	40,00,000

6. Out of the total Issued Capital, 12,000 Ordinary Shares of Rs. 100 each having a total nominal value of Rs. 12 lacs have been subscribed by the Promoters and their friends and a sum of Rs. 50 per share has been paid thereon.

A further 3,000 Ordinary Shares having a total nominal value of Rs. 3 lacs are being reserved for issue to Messrs. Aktiebolaget Defibrator of Sweden against payment in cash.

The balance of the Issued Capital, viz. :—

15,000 Ordinary Shares of Rs. 100 each, viz. .. Rs. 15,00,000

10,000 8 per cent. Taxable Redeemable Cumulative Participating Preference Shares of Rs. 100 each, viz. .. .. .. Rs. 10,00,000

is offered for public subscription in terms of this Prospectus at par payable as follows :—

(*a*) On application .. .. Rs. 25 per share
(*b*) On allotment .. .. Rs. 25 per share

The balance of Rs. 50 in respect of each share either Ordinary or Preference will be payable in such calls as may be determined by the Directors provided that no call shall exceed Rs. 25 per share and that there shall be an interval of at least one month between two calls.

7. AN APPLICATION HAS BEEN MADE TO THE STOCK EXCHANGE, BOMBAY, FOR PERMISSION TO DEAL IN THE WHOLE OF THE ISSUED ORDINARY AND PREFERENCE SHARES AND IN DUE COURSE FOR AN OFFICIAL QUOTATION.

8. Applications for Preference and Ordinary Shares should be made on the respective Forms accompanying this Prospectus and delivered before the close of the subscription list to The Bank of India Ltd., at its Head Office at Mahatma Gandhi Road, Fort, Bombay or its Branch Offices at Ahmedabad, Amritsar, Bangalore, Bhuj (Kutch), Calcutta, Coimbatore, Delhi, Gandhidham (Kutch), Hyderabad (Deccan), Jamshedpur, Junagadh, Kozhikode, Madras, Nagpur, Poona, Rajkot, Surat, Sholapur and Veraval, together with a remittance of the amount payable on application.

9. Further copies of the Prospectus and the Application Forms will be available at the said Offices of the Bank, from the Brokers to the issue named below, from the Underwriters and from the Company's Registered Office. Where no allotment is made the deposit will be returned by cheque on a Bombay Bank and where a partial allotment is made the unutilised balance will be returned by cheque on a Bombay Bank. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted when due will render previous payments liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected at the Registered Office of the Company during office hours. The Share Certificates will be issued within 6 months of the date of allotment.

10. The following is a summary of the rights, privileges and restrictions attached to the Preference and Ordinary Shares of the Company and the limitations upon borrowings and the creation of further shares :—

The Preference Shares confer on the holders thereof the right to a fixed cumulative Preference dividend at the rate of 8 per cent. taxable per annum on the capital for the time being paid up on such shares and the right to an extra dividend, at 1 per cent. per annum on such paid-up capital if the dividend on Ordinary Shares is 10 per cent. or more but less than 15 per cent. and at 2 per cent. per annum if the dividend on Ordinary Shares is 15 per cent. or more. The Preference Shares shall have a right to rank in winding up both as regards capital and dividend upto the date of the commencement of the winding-up, whether declared or not, in priority to the Ordinary Shares of the Company.

TERMS OF REDEMPTION

The Preference Shares shall be definitely redeemable at par after the expiry of 10 years from their date of issue without any option to the Company, to redeem earlier or later.

VOTING

On a show of hands every member entitled to vote and present in person shall have one vote. His voting right on a poll shall be in proportion to his share of the paid-up equity capital of the Company. The holder of Preference Shares shall in respect of the Preference Share capital held by him have a right to vote as provided in Section 87 sub-clause (2) (*a*) and (*b*) of the Companies Act, 1956.

Where the holder of Preference Shares has a right to vote on any resolution his voting right on a poll shall be in accordance with provisions of Section 87 (2) (*c*) of the Act.

VARIATION OF RIGHTS

The special rights attached to any class of shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a Special Resolution passed at a separate Meeting of the holders of the shares of the class, but not otherwise.

RESTRICTION ON TRANSFER OF SHARES

The Directors may, subject to the right of appeal under Section 111 of the Act, at their own absolute and uncontrolled discretion, decline to register or acknowledge any transfer of shares.

SHARE CERTIFICATES

Every member shall be entitled without payment to one Certificate for all the Shares of each class registered in his name. If the Directors so approve and upon payment of such fee, if any, not exceeding As. 8 per Certificate as the Directors may from time to time determine in respect of each class of shares, a member shall be entitled to more than one Certificate for shares of each class.

BORROWINGS

Subject to the restrictions imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge its undertaking, property and uncalled capital or any part thereof and to issue debentures and other securities.

REGISTERED OFFICE OF THE COMPANY

1ST FLOOR, LAKSHMI INSURANCE BLDG., Sir Pherozshah Mehta Road, Fort, Bombay 1.

The consents in writing of the abovenamed Bankers, Solicitors, Auditors and Brokers, to act in their respective capacities have been filed with the Registrar.

OBJECTS OF THE COMPANY

12. The Company was incorporated on the 10th December 1956, generally for the purpose of carrying on all or any of the objects or purposes mentioned in its Memorandum of Association and particularly to carry on business as manufacturers of Hardboard and its by-products.

The main objects of the Company as contained in the Company's Memorandum of Association are:—

(a) To carry on business as manufacturers of hardboard and its by-products.
(b) To carry on business as manufacturers of and dealers in articles of any description made or prepared out of hardboard and its by-products.
(c) To buy, sell, grow, prepare for market, manipulate, import, export, and deal in wood of all kinds and/or by-products of wood of all kinds and to manufacture and deal in articles of all kinds in the manufacture of which wood or any by-product of wood is used.
(d) To buy, acquire, plant and work wood estates.

HARDBOARD TRADE AND INDUSTRY

13. At present there is no factory in India for the manufacture of Hardboard. It is estimated that there is an immediate minimum demand for 10,000 tons per year and that this will increase rapidly as indigenous supplies become available.

The licensed capacity of the factory is at present 6,000 tons per year but the plant being installed will be guaranteed capable of producing 8,000 tons and the layout has been arranged for subsequent expansion.

Hardboard is a relatively unfamiliar material in India at present, largely due to import restrictions. Ready availability will, it is confidently expected, not only increase the demand for existing uses but also widen the range of uses. The main uses at present are for:—

(1) Building Construction: Partitions, panelling ceilings, flush doors.
(2) Furniture: Counters and shop fittings, desk drawer bottoms, cabinet backs, file cases and holders.
(3) Vehicles: Panelling for interiors of motor-buses and railway-coaches.

PLANT AND MACHINERY

14. The Company has entered into an Agreement for supply of Plant and Machinery and erection of the Factory with Messrs. Aktiebolaget Defibrator, of Sweden, one of the leading manufacturers of Hardboard Plant in the world, on the following terms of payment:—

30 per cent. against shipping documents.
10 per cent. 11 months after main shipment.
20 per cent. 23 months after main shipment.
20 per cent. 35 months after main shipment.
20 per cent. 47 months after main shipment.

The Company has arranged for a guarantee of the deferred payments required by Aktiebolaget Defibrator to be provided by The Oriental Fire & General Insurance Co., Ltd., Bombay. The Guarantee Bond dated 26th October 1957, will be secured *inter alia* by a mortgage of the Company's fixed assets.

TECHNICAL ASSISTANCE

15. Aktiebolaget Defibrator have agreed to supply full technical services including the necessary technicians for erection and during the first two years of operation. They have also promised to arrange for the training of Indian personnel in a similar factory in Sweden.

IMPORT LICENCES

16. The Central Government has granted to the Company Licences for all the imported capital equipment needed for the new Plant and the requisite Letters of Credit have already been opened.

FINANCIAL REQUIREMENTS

17. The total cost of the proposed plant having a capacity to manufacture 8,000 tons of Hardboard has been estimated, including the Working Capital, as follows:—

	Rs.
Payable to Aktiebolaget Defibrator for Plant and Machinery, Spare Parts and Engineering Fees ..	40,20,000
Freight, Insurance, Customs Duty, etc.	5,55,000
Cost of Land, Railroad and Power Connection, etc.	2,90,000
Cost of Foundations, Factory Buildings, Labour Quarters, etc. ..	10,30,000
Cost of Erection. Local Fabrication, etc.	2,65,000
Working Capital, etc.	6,40,000
Rs.	68,00,000

SOURCE OF FUNDS

18. The total requirements of Rs. 68 lacs will be met as follows:—

	Rs.
(*a*) By the issue of Ordinary Shares	30,00,000
(*b*) By the issue of 8 per cent. Taxable Preference Shares	10,00,000
(*c*) Through Deferred Payments (arranged with the Suppliers) ..	28,00,000
Rs.	68,00,000

19. Hardboard can be manufactured from a variety of raw materials, prominent among which is the fibre from waste wood, firewood, etc., not suitable for use as building material in its natural state. Such material is available in ample quantities to meet all present and future needs of the factory from the forest areas of Bombay State and also from the West Coast. Exhaustive tests have been carried out on the timber species and qualities available from these areas by Defibrators and it has been established that they are extremely suitable for the production of high quality Hardboard. Special mention may be made of the commonly available in (*Terminalia Tomentosa*) which gives particularly good results. Sawmill waste will also provide an additional source of good quality raw material.

The Government of Bombay have agreed, in letter dated 18th October, 1957, to make available to the Company a minimum supply of 10,000 tons of fuel wood in the first year which will be raised to 20,000 tons in the fifth year, at market rates. Negotiations are in progress for the supply of fuel wood by the Mysore State Government also.

The Company has also concluded an agreement with S. S. Haldipur, a Private Contractor, for the supply of 7,500 tons of firewood of which 2,500 tons will be made available from January to May 1958, and 5,000 tons from October 1958, to May 1959. These supplies will be sufficient for the initial needs of the plant.

SITE

20. The plant will be located near Kanjur between Vikhroli and Bhandup on the Central Railway Main Line.

Agreements have been concluded for the acquisition of land measuring approximately 47,310 sq. yds. sufficient for the installation of plant and for stock piling for the present and future needs of the Company, as follows:—

(*a*) Jolly Brothers Private Ltd. have entered into an Agreement dated 5th March 1957, with Sir Mohamed Yusuf, Kt., for the sub-lease for a period of 999 years of lands measuring 34,000 sq. yds. at Kanjur for Rs. 42,500. The sub-lease remains to be executed.

(b) Jolly Brothers Private Ltd., have also entered into an Agreement dated 13th June 1957, with Messrs. Bhiwandiwalla Industries for the purchase of land measuring 2 acres 30 gunthas for Rs. 23,637.

By arrangement between the respective parties, the above sub-lease and purchase will be executed in favour of the Company, as the nominees of Jolly Brothers Private Ltd.

ELECTRICITY AND WATER SUPPLY

21. Arrangements have been made with the Tata Hydro-Electric Power Supply Company, Ltd., for the supply of electricity upto 1,000 kw., the maximum power that the Company will require.

Arrangements have also been made with the Bombay Municipal Corporation for the supply of water sufficient for all the needs of the factory.

PROFITS

22. The Directors having estimated the cost of production on a very conservative basis, are satisfied that after meeting all expenses, a substantial margin of profit will be available on the basis of the existing prices for hardboard prevailing in the market.

The Company will enjoy the special benefits available to new projects under the Income-tax Acts as regards Development Rebate, Depreciation Allowances, etc.

The Company will not be required to make deposits with Government as required by sub-section 10(2B) of the Income-tax Act in the immediate future, since under the Income-tax Allowances (Current Profits Deposit) Rules, 1957, the utilisation of the financial resources of the Company will be for an "approved purpose" as defined in Rule (2) of the said Rules.

Given the continuance of reasonable trading conditions, the estimated profits, after providing for the dividends on the Preference Shares and de-

AUDITORS' CERTIFICATE.

1. We have audited the Books of Accounts of Messrs. Anil Hardboards Limited, Bombay, and do hereby certify that the foregoing statement of Receipts and Payments made for the period, 10th December, 1956 to 11th December, 1957, of the Company is true and correct.
2. That the Anil Hardboards Limited since its incorporation on 10th December, 1956 and since obtaining a Certificate for commencement of business on 4th March, 1957, till 11th December, 1957, no business as such was carried on by the Company and that no profits were made.
3. That the Company has not declared any dividend since its incorporation.

BOMBAY, 14th December, 1957.

ferred payments in respect of the machinery and for allocations to reserves, should enable a dividend to be paid on the Ordinary Shares after the first full year's operation of the plant.

PRELIMINARY EXPENSES

23. Preliminary expenses, brokerage and underwriting commission payable by the Company are estimated at about Rs. 2,00,000. This amount includes the sum of Rs. 1,00,000 paid to Messrs. Jolly Brothers Private Ltd., for reimbursement of expenses incurred on investigations overseas and for technical services rendered.

MINIMUM SUBSCRIPTION

25. The minimum subscription in respect of the present issue upon which the Directors will proceed to allotment is Rs. 22 lacs. Subscription of this amount is assured by reason of the underwriting as mentioned herein.

This sum together with amounts subscribed by the Promoters, Manufacturers, and the amounts assured by Directors in terms of the Prospectus aggregating to Rs. 18 lacs will cover the immediate financial requirements of the Project.

This aggregate sum of Rs. 40 lacs raised by this issue, and already subscribed by the Promoters and Manufacturers will be utilised as follows:—

	Rs.
Payable to defibrator towards machinery, duty, freight and insurance ...	17,55,000
Cost of land, rail road, and power connection	2,90,000
Cost of erection, local fabrication, cost of foundation, factory building, labour quarters, etc.	12,95,000
Preliminary expenses	2,00,000
Working capital	4,60,000
Rs.	40,00,000

UNDERWRITING

26. Certain Directors of the Company in their personal capacities have satisfied The Industrial Credit and Investment Corporation of India Ltd., that they will apply for the 3,000 Ordinary Shares of the total nominal value of Rs. 3 lacs in terms of this Prospectus.

The Industrial Credit and Investment Corporation of India Ltd., Fort House, 221, Dadabhoy Naoroji Road, Fort, Bombay, 1, have agreed to underwrite 12,000 Ordinary Shares of Rs. 100 each and 10,000 Preference Shares of Rs. 100 each of the aggregate nominal value of Rs. 22 lacs. The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their underwriting obligations.

UNDERWRITING COMMISSION

27. Underwriting Commission at the rate of 2½ per cent. of the nominal value of the shares underwritten by them is payable to The Industrial Credit and Investment Corporation of India Ltd., in accordance with the terms of agreement contained in letter dated 23rd December 1957 from these Underwriters and the Company's acceptance thereof.

BROKERAGE

28. Brokerage will be paid by the Company to recognised Brokers and Banks at the rate of 1 per cent. on the nominal value of shares allotted in respect of applications bearing their stamps.

Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Ltd., on allotments in respect of applications made or procured by them provided that the relative forms of applications bear their respective stamps.

EXPENSES OF THE ISSUE

29. The expenses of the issue, other than brokerage and underwriting commission are estimated to amount to Rs. 1,00,000 and will be payable by the Company.

DIRECTORS' QUALIFICATION AND REMUNERATION

30. The number of Directors shall not be less than four nor more than twelve. The qualification of a Director shall be the holding of 50 Ordinary Shares in the Company of the total nominal value of Rs. 5,000. The remuneration of a Director for his services shall be such a sum as may be fixed by the Directors not exceeding Rupees Two hundred for each meeting attended by him. The Directors may allow and pay to any Director, who is not a bona fide resident in Bombay, and who shall come to Bombay for the purpose of attending a meeting, such a sum as the Directors may consider fair compensation for his expenses and loss of time in connection therewith in addition to his fee for attending such meeting.

If any Director, other than a Special Director, shall be called upon to go or reside out of Bombay on the Company's business, or otherwise perform extra services the Board may arrange with such Director for such special remuneration for such services, either by way of salary, commission, or the payment of a stated sum of money as they shall think fit, in addition to or in substitution for his remuneration above provided.

MANAGING AGENTS

31. Messrs. Jolly Industrial Agencies Private Ltd. have been appointed the Managing Agents of the Company by an Agreement dated 15th November 1957. The Managing Agents are a Private Limited Company with a Subscribed and Paid-up Capital of Rs. 1,00,000. The Government of India have approved their appointment as Managing Agents on the following conditions:—

(a) For a period of 15 years from the date of their appointment.

(b) On a remuneration of 10 per cent. commission on the net profits of the Company.

(c) A minimum remuneration in the absence of or inadequacy of profits at Rs. 12,000 per annum.

(d) Reimbursement of Expenses incurred on behalf of the Company.

NATURE AND EXTENT OF THE INTEREST OF THE DIRECTORS

32. The following Directors of the Company are also Directors in the Managing Agency Company:—

Shri G. R. Jolly, Shri K. L. Jolly — Directors of the Company are also Directors of the Managing Agency Company, and of Jolly Brothers Private Ltd., an associate of Managing Agency Co.

They are therefore interested in the said Managing Agency Agreement.

Mr. Arne Asplund, a Director of the Company, is also the Managing Director of Messrs. Aktiebolaget Defibrator of Sweden, with whom a Contract has been entered into for the supply of machinery.

33. The following is a statement of the names, addresses, descriptions and occupations of the signatories of the Memorandum and the number of shares subscribed for by them:—

Name of Subscribers	Addresses and Description of Subscribers	Number of equity Shares taken by each Subscriber
G. R. Jolly	198, Churchgate Reclamation, Fort, Bombay. Merchant.	5

CONSOLIDATED COFFEE ESTATES (1943) LTD.

MR. R. C. PATERSON'S SPEECH AT ANNUAL GENERAL MEETING

NEED FOR INCREASING CURING CAPACITY

ADDRESSING the shareholders of the Consolidated Coffee Estates (1943) Ltd. at their Fourteenth Annual General Meeting held at Pollibetta, Coorg, on 31st December 1957, Mr. R. C. Paterson, Chairman of the Company, welcomed the Coffee Board's proposal to introduce open export auctions. He, however, felt that a mere alteration in the marketing system would not be sufficient. The establishment of new blood in the field of curing was urgently needed, but the prohibitive capital cost of establishing new curing works and limitation of their scope acted as a deterrent to possible new-comers.

The following is the full text of Mr. Paterson's speech:

"GENTLEMEN,

"On behalf of my fellow-Directors I have pleasure in welcoming you here today on the occasion of the fourteenth annual general meeting of our Company.

"The Directors' report and audited accounts for the year ended 30th June 1957 have been with you for the requisite time and, with your permission, I shall take them as read. At the end of my speech I shall be glad to reply to any queries that may be raised.

"In addressing you a year ago, I opened my remarks by stating that the year 1955-56 had produced two records for our Company. For the first time, the total crop harvested had exceeded 2,000 tons and the gross profits were the highest for the Company to that date. These most solid achievements look rather meagre when compared with the results for the year under review. I indicated last year that we anticipated an Arabica crop considerably in excess of estimates, but the final results far exceeded our fondest expectations. At 2,453 tons harvested, the yield calculated on the total acreage under Arabica is 11.3 cwts. per acre. Allowing for the immature coffee which is not yet in full bearing, the real yield per acre would be even greater. One of our North Coorg properties, an estate of just over 242 acres, harvested an overall 18.5 cwts. per acre; on another property the average was 13.9 cwts. over 560 acres of Arabica coffee. These are substantial results by any criterion and our total Arabica crop harvested for the year was actually 1,076 tons higher than our previous best —an increase of over 78 per cent. It is true that, as our younger Arabica reaches full maturity our output should naturally increase, but the chief reason for the bumper crop harvested may be largely laid to climatic conditions which resulted in an exceptional set after satisfactory blossom showers in the spring of 1956. These and the fact that our coffee was healthy and in good heart rendered this large harvest possible.

"By the same token, the results from our Robusta have been barely average. An overall yield of a little under 6 cwts. per acre is certainly considerably below our target. Robusta is, however, ever a 'fickle jade' at blossom time, while the Company, of course, is carrying a fair percentage of Robusta which will not be in full bearing for some years. Be that as it may, the fact remains that, with the exception of spraying, our Robusta has received identically the same treatment as Arabica and has not responded in anything like the same manner.

Miscellaneous Crops

"Pepper, which five years ago, was a main item of profit, now assumes ever diminishing importance in our accounts. Our harvest was average, but selling prices were again poor, nor does there appear to be much likelihood of the market recovering.

"On the other hand, cardamom prices have persistently favoured the grower and we have been paying special attention in trying to improve their preparation for market so as to take advantage of the high premium which export grades can command.

"Climatic conditions in Coorg were conducive to successful paddy cultivation and our crop for 1956-57 was a good one. As in previous years, our entire production was held over as a strategic reserve for issue in case of need to our labour on a 'no-profit-no-loss' basis. We normally grow about four to five months' requirements and our paddy fields perform a most useful function in our economy. The harvest for 1957-58 season is now in full swing and the indications, I am glad to say, again favour a substantial crop. This, I would add, would apply generally throughout Coorg.

Accounts

"In presenting to you the accounts, the Pool Point has been valued at Rs. 2.50 a point, as against Rs. 2.37 (Rs. 2-6) for the previous year. Although prices realised at the export auctions conducted by the Coffee Board would appear to have been less favourable than for 1955-56, nevertheless, the most substantial exports of over 15,000 tons should make our valuation conservative. The system adopted by the Coffee Board in distributing sales over the full period of the year makes an accurate estimation of the final Pool dividend extremely difficult, and, as the accounts show, our valuation at Rs. 2-6 a point last year has actually produced surplus realisations brought into this year's accounts of over Rs. 13,43,000.

"The Company has taken advantage to redeem the existing 5½ per cent. debenture stock 1957-63 and this was repaid in full on the 1st of July after the closing of the books of the Company.

"Our expenditure has unavoidably gone up. This, in some measure, is due to the much larger crop handled. As from the 1st of April wages have been increased by 28 per cent. and, as at the 1st of May, the benefits of the Employees' Provident Fund Act have also been made applicable to plantation labour, adding an additional 6¼ per cent. to our wages bill. It is estimated that these increases alone cost the Company an extra Rs. 72,000 a month, or in a full year, say, approximately Rs. 9 lakhs. The increase under the heading of welfare expenses is largely accounted for by the subscriptions made to the Government under the Coorg Medical Scheme, although welfare itself in the form of larger maternity benefits and other measures has cost the Company considerably more.

"Depreciation charges, on the other hand, are lower and I would refer you to the note printed at the foot of the profit and loss account on pages 16 and 17 in the accounts. Since the formation of the Company in 1943, it has been the practice to charge depreciation at Central Indian income-tax rates on the original cost—at that time the question of agricultural income-tax did not arise. The practice has been continued up to now. Your Directors, however, have considered that, under present conditions, it is preferable to adopt the more usual system, as operated under the Income-tax Acts, of calculating depreciation on the written down value, and this method has been adopted in the accounts now before you. The rates used are those under the Mysore Agricultural Income-tax Act in regard to our estates and the Central Income-tax Act for our industrial and business assets.

"Under the new Mysore Agricultural Income-tax Rules, the special depreciation allowance of 20 per cent. for five years, which we received under the Coorg Act, has to be deducted in calculating the written down value of assets on which depreciation is now to be allowed and this in itself has made a very considerable difference in the charges we can now claim.

Taxation

"Provision for taxation is the most costly item and, for the first time in the history of the Company, the Revenue Department of Government now assume the role of major partners in our enterprise. The new Mysore Agricultural Income-tax Act becomes operative in the current assessment year. The maximum rate of tax is 40 nP, as against As. 5 or 31 nP under the previous Act. Provision in our accounts has not only been made at the rate of 40 nP for the current year but it also includes the shortfall on the previous year's provision. The provision under the Central Indian Income-tax includes the estimated liability for dividend tax on our 1955-56 dividend and also for wealth tax. In view of our successful harvest the Company will be able to absorb this liability, but in times of low average harvest taxation may well prove the most serious burden. In other respects, apart from the limiting of the special depreciation allowance of 20 per cent. to the first year only, the new Mysore Agricultural Income-tax Act would appear to have followed more or less on the lines of the old Coorg Act. The smaller depreciation allowances must act as a brake to the speedy capital development of the industry which must be completed, if we are to be able to compete in the world markets with foreign growers.

"The case made by the Central Board of Revenue that 25 per cent. of coffee income is industrial and, therefore, liable for tax has not yet been finalised. The test case which has been referred to in the Directors' reports for the past two years was recently transferred from Madras to the Mysore High Court and the appeal by the Central Board of Revenue has been dismissed. It is understood, however, that the Central Board of Revenue are now contesting another case before the Income-tax Appellate Tribunal in Madras.

"Now that the rate of agricultural income-tax is as much as 40 nP in the rupee, as against 51.5 nP under the Central Indian Income-tax Rules, even if the Central Board of Revenue gain their point the increase in liability for tax will be relatively small, particularly when it is considered that shareholders can obtain a refund of Central Indian income-tax which is not possible under the Mysore Agricultural Income-tax Rules. The main problem to the industry, therefore, really rests only on the question of backlog.

Labour

"It has not been an easy year in which to maintain the good relations with our labour which has been traditional in Coorg. In spite of difficulties, however, both sides have, I think, in a large measure succeeded. I indicated in my speech a year ago that the publication of what has been called 'the Madras Tribunal Award' could not but have considerable repercussions in Coorg and Mysore. Strange though it may seem, direct agitation on estates was conspicuous by its absence. In May this year, the Commissioner of Labour, Mysore Government, convened a conference between the labour unions and the employers' associations with himself as mediator, and after a conference extending over a few days a satisfactory solution was arrived at and an agreement registered under the Industrial Disputes Act, 1953. The assistance given by the Labour Commissioner and, in particular, the Hon'ble Minister for Labour, was, in my opinion, no doubt responsible for the success of the deliberations and the thanks of the industry are due to the Mysore Government.

"As mentioned earlier in this review, the rate of increment to labour wage was approximately 28 per cent. and having achieved this most substantial gain one might normally have expected a period of industrial peace on our coffee estates, but, I regret to say, the reverse has been the case. Coorg labour have never been what might be termed 'union-conscious,' but during the past five months the various union organisers have done their best to remedy this defect and our labour have been subject to constant propaganda. It speaks a great deal for the good sense of our employees that this onslaught has not resulted in any serious misunderstanding, particularly, when it must be emphasised that most labour organisers employ as their main advocacy abuse of the staff and management.

"A year ago, the Enquiry Commission's Report was news and, in fact, the greater part of my speech then was devoted to explaining the Company's position in relation to the many criticisms of the coffee-growing industry. So far the report has not yet been taken up by Parliament and it seems likely that it may be largely shelved. One of the most important features of the report was its radical recommendations for providing finance for a phased replanting programme of all coffee. A similar scheme was suggested for tea. In regard to the tea industry, it is understood that Government have satisfied themselves regarding the

MYSORE KIRLOSKAR LIMITED

CHAIRMAN, MR. T. SHAMANNA'S ADDRESS TO SHAREHOLDERS

THE Sixteenth Annual General Meeting of Mysore Kirloskar Ltd. was held at Harihar on 30th December 1957. Addressing the shareholders on this occasion, Mr. T. Shamanna, Chairman of the Company, referred to some of the difficulties which the Company, in particular, and industries, in general, were faced with, namely, inadequate supply of raw material, rail transport facilities and depreciation and rehabilitation allowances. He also requested the authorities concerned to see that any relief to industries provided by statutory measures was not negatived or denied in any other manner.

The following is the full text of Mr. Shamanna's speech:

"LADIES AND GENTLEMEN,

"It is my privilege and pleasure today to extend to you all a most hearty welcome to the sixteenth annual general meeting of your Company.

"The balance-sheet as at the 30th June 1957 and the profit and loss account for the year ended 30th June 1957, together with your Directors' report and the Auditors' report, have been already sent to you separately. I presume that you have gone through them and have acquainted yourselves with the details given therein. With your permission, therefore, I take the same as read.

"During the year under report the factory worked for only ten months, because there was a strike for two months. The statements of accounts give the figures also for the last year ended 30th June 1956 and this must have helped you in getting a fair comparative idea of the business done during the two years.

"Though there was a setback in production as a result of the strike, the despatches, that is, sales during the year 1956-57 show a higher figure at Rs. 54·43 lakhs, as compared with that of the previous year. This is mainly due to the drawing on the previous year's closing stocks.

"The additions to fixed capital expenditure amount to Rs. 6.92 lakhs, Rs. 4.08 lakhs being in respect of machinery and plant. This is in accordance with the policy of the management of steady development of the factory from year to year. This policy has been followed all these years.

Loan From I.F.C.

"As you must have seen from the Directors' report, the negotiations with the Industrial Finance Corporation of India, for a loan of Rs. 25 lakhs have been concluded and this loan is proposed to be drawn in suitable instalments spread over a period up to September 1958. The purpose of this loan is mainly to expand our existing lines and to take up the manufacture of Capstan and Turret lathes. I am glad to inform you that your factory has only recently, that is, on the 5th of this month, celebrated the 'switch-on' ceremony of the Capstan lathe at the hands of the Chief Minister of this State. It is a matter of pride for all of us to know that this lathe is 100 per cent. Indian, in that every part of it, including its design and drawings, is done in this factory.

"You are all aware that we are now passing through the period of the second Five-year Plan. Though greater emphasis is laid on industrial development under the second Five-year Plan, we are required to face at the moment the problems arising out of the foreign exchange difficulties. Our development plans are also to some extent required to be reconsidered and properly rephased to suit the altered conditions.

"Negotiations in securing foreign collaboration are at the final stage and the matter is now pending with the Central Government. It is to be hoped that the Central Government would be pleased to do their best in finalising this matter, which would go a long way in accelerating the speed of development of your factory.

Strike at Factory

"I have already referred earlier to the stoppage of work in your factory due to strike for about two months during the year under report. It has given a considerable setback to the normal working of the factory. It has certainly not helped anybody. However, the management have taken a constructive attitude and granted certain benefits like the raising of the dearness allowance, declaring an ex-gratia bonus of about a half month's wage recently. I would like to urge on the workmen of this factory to understand and appreciate this gesture on the part of the management and help themselves by co-operating with the management in raising production. Any strike results in totally closing the inward flow of wealth and endangers the position of the industry itself and this, in turn, is bound to create further difficulties which ultimately the workmen themselves have to face. If you want water from the well, you cannot obstruct the springs in the well. This is a plain proposition and does not admit of any controversy.

"The management has been alive to the needs of the workmen and has been doing its best in meeting their claims, consistent with the capacity of the Company to meet such claims.

Some Problems

"It is necessary to refer to some of the difficulties that your Company is required to face and I shall deal very briefly with them now.

"(i) *Raw materials*: The position of raw materials, particularly hard coke, was far from happy and continues to be a source of constant worry. There was no doubt some relief felt due to the imported pig iron. But the improvement in the supply position of a particular raw material is undone by the difficult position in respect of other equally important raw materials. The improvement in the supply position is not an all-round improvement and we are, therefore, required to face very difficult situations many a time.

"(ii) *Transport*: Rail transport has been another difficulty and though for some time it had shown some improvement, basically it still remains a problem and source of continued anxiety. It is to be hoped that the development plans of the railways would receive proper and urgent attention of the authorities concerned. Any relief in the transport situation could be secured only after the implementation of the development plans of the railways and till that time transport will continue to be a problem to be faced.

"(iii) *Depreciation and rehabilitation allowances*: The Central Government have provided for certain relief in the Indian Income-tax Act in respect of manufacturing concerns by granting certain extra depreciation allowances and also by providing for the development rebate. While the extra or additional depreciation allowances amount only to a temporary financial relief which gets itself nullified by lower depreciation in subsequent years, the development rebate allows only a partial relief, in that an amount to the extent of 25 per cent. of the original value of the machinery is allowed to be provided for over and above the full 100 per cent. depreciation. I have said that this relief is only partial for the following reasons:

"In the first place, it is available only in respect of machinery and not in respect of other assets. There is really no reason to make such a distinction between the machinery and other assets as the general rise in prices is almost common to most of the assets.

"Secondly, the allowance by way of the development rebate provides only for an additional quarter amount of the original cost of the asset, whereas the replacement cost of such assets is even more than three times of the original cost in most cases.

"Thirdly, the development rebate applies only to the new machinery that would be purchased from 1955 and thereafter and does not apply to the old machinery. While the need for replacement of the old machinery has been urgent and is to be done on a large scale, the relief in this regard, as provided in the Income-tax Act, is only a small fraction of the requirement.

Another Difficulty

"This is not all. There is another difficulty which industries have to face. What is provided as a relief under the Income-tax Act is almost totally negatived by the principles adopted by the Industrial Tribunals in recent days in calculating the surplus for awarding bonus to workmen. Both the capital and the labour can get the benefit, out of the industry, if any at all, only if the position of the industry is strengthened and not at the cost of the industry itself. Any statutory measures which are aimed at providing relief to the industry should not, therefore, be negatived or undone or denied in any other manner. I would only request those in authority to kindly give their urgent consideration to this matter.

"(iv) *Wealth tax and other measures*: The imposition of the wealth tax and the compulsory deposit of reserves with the Government has resulted in adding further difficulties in the way of the industries. If the industries are to meet these claims, they must expand their activities; but, on the other hand, the restrictions imposed on imports of machinery and other required goods, due to the foreign exchange problems, make expansion very difficult. Under the circumstances, the industries are now placed in the most unenviable position of not being able to expand, but, at the same time, being compelled to bear heavier and heavier burdens which are quite unrelated to their earnings in the year concerned. This aspect of the problem deserves the most urgent consideration by the authorities concerned. I take this opportunity to urge on them the need for giving their very sympathetic and immediate consideration to this important matter in the interest not only of the industry, in particular, but also in the larger interests of the economic development of the country as a whole.

Fresh Capital

"Ladies and gentlemen, I now wish to say a few words about the need for raising the capital of this Company. The question of raising the paid-up share capital of your Company has been engaging the attention of your Directors for sometime past. The matter still requires further detailed consideration and a decision in this respect will be taken by your Board as early as possible. I take this opportunity, however, to request you that should a decision for further subscription be taken you should extend the same co-operation as hitherto in subscribing to the new issue and also inducing your friends to subscribe to such issue. I may incidentally refer here to one of the conditions governing the loan of the Industrial Finance Corporation of India, that the last instalment of their loan, amounting to Rs. 5 lakhs, would be paid by them only if we raise funds to the extent of Rs. 5 lakhs either by way of share capital or by other means. Your Company has been doing in its humble way, whatever is possible in maintaining a steady and fair rate of dividend and this should encourage you to do your best in respect of the new issues. I do hope that you will stand by your Company and extend every help and co-operation.

"During the year under report, the management and the members of the organisation had to exert their utmost in facing many a difficult situation and the maintenance of the continued progress of your factory is in no small measure due to their efforts and they deserve your warm commendation.

"Ladies and gentlemen, I now thank you for the very patient hearing that you have given me.

"I now propose that the balance-sheet and the profit and loss account and the Directors' report be adopted."

EUROPEAN COMMON MARKET COMES INTO BEING

ITS IMPACT ON WORLD TRADE

WITH the coming into being of the European Economic Community—also called the Common Market—on the 1st inst., a new chapter has been added to the story of international trade. The Community comprises six countries of Western Europe—France, Germany, Italy, Belgium, Luxembourg and the Netherlands. The first meeting of the Community was held in Paris on Monday this week to decide on the location of headquarters for the Common Market, as also for the Euratom and the Coal and Steel Community. It has been agreed that, within two months after the first meeting, the Assembly of the Community must be convened and, within a further month, the Economic and Social Committee should hold its inaugural session. Meanwhile, the Governments of the six countries will have to appoint members of the Commission—the day-to-day executive—and the Court of Justice. Only after this has been done will the staff needed to man the various institutions be appointed. The coming months will thus see the setting up of the Common Market institution side by side with continuation of the free trade area negotiations.

What will be the impact of the European Economic Community on world trade? This is, indeed, a very pertinent question which has not so far been answered adequately, although several months have elapsed since the idea for the formation of the Community was first mooted. The Secretariat of the General Agreement on Tariffs and Trade (G.A.T.T.) has, therefore, done well to study the implications of the Community to world trade in the course of a Trade Intelligence Paper published in Geneva recently. The study is devoted to a discussion of two most important aspects. They are: (1) The decisive importance of the uninterrupted prosperity of Western Europe, in general, and the six countries of the Common Market, in particular, for the maintenance of a high level of international trade; and (2) the possible repercussions of the creation of a common market among six countries upon the trade in manufactures and primary products.

Key Importance

At the very outset, the G.A.T.T. Secretariat emphasises the importance of Western Europe and the six countries as export markets for the primary producing countries. The maintenance of prosperity and continued economic growth in Western Europe, it points out, is a matter of key importance to the world economy at large and, in particular, to those non-industrial areas which depend heavily on the proceeds of their exports. To quote it: "To the extent that the Common Market will actually speed up the rate of economic progress in the six countries and, if only to that extent, the average rate in Western Europe, it would clearly make an important contribution to the well-being of other parts of the world as well." Referring to the effect of preference or discrimination in periods of rising and falling trade values, respectively, the G.A.T.T. Secretariat observes:

"However probable such an effect may be in the long run, that is, once the Common Market will have been completed, it remains nevertheless true that, throughout the duration of the transitional period—the next 12 to 15 years—the establishment of the Common Market necessarily involves the granting of privileged treatment to some trading partners to the detriment of others. In this connection, the events of recent years indicate that such arrangements do not necessarily result in serious diversions of trade. The diversionary effect of such arrangements upon the channels of trade is strongest during periods of declining activity or falling prices and values, but is smaller, even negligible, during periods of continued buoyancy in business conditions."

The G.A.T.T. Secretariat has examined several recent examples of discriminatory arrangements. On the basis of this examination, it states that the prospective effect of the Common Market on individual commodities and countries differ widely. Generally speaking, however, it concludes that the Market is likely to be beneficial for world trade. In its opinion, "the adverse effects of inevitable discrimination during the transitional period would be kept to a minimum, if it can be reasonably assumed that the Common Market, during that period and after, will positively contribute to maintain and even to accelerate an uninterrupted growth of production in the six countries as a whole."

The review of the present (or recent) trade position of the Common Market countries as made by the G.A.T.T. Secretariat reveals that these countries are, first of all, predominantly exporters of manufactures, mainly to one another and the rest of W. Europe but also to North America, as well as to the non-industrial areas. Among the latter, the overseas territories and the overseas sterling area, especially the "rest of the world," are their most important markets. In addition, the six countries are importers of primary products, of which they trade heavily (to a value as high as 75 per cent. of their intra-trade in manufactures) amongst themselves. Although the bulk of their imports of such products comes from the non-industrial areas, their imports from the rest of W. Europe, which are of the same order of magnitude as those from North America, are by no means negligible.

Trade in Primary Products

Turning to trade in primary products, the G.A.T.T. Secretariat gives interesting details: The most important supplying area comprises the overseas territories (including Algeria and the French overseas departments). Together, they account for more than one-quarter of the total imports of the six from other countries (mainly on account of coffee, tea and cocoa, oilseeds, fats and oils, fruits and vegetables and cereals). North America, the next most important food supplier, furnishes mainly cereals and oilseeds, Latin America principally coffee and cereals, other W. Europe countries mainly meat, and the rest of the world fruits (Spain and Israel) and oilseeds. The overseas sterling area is of only minor significance. The food trade of the six countries with one another consists mainly of meat and fruits. About one-third of the value of raw materials and fuels received from outside the six countries is imported from the overseas sterling area, especially wool, rubber and petroleum. Main supplies from other W. European countries are wood and wood-pulp, iron ore, textile fibres and non-ferrous metals; from North America, cotton, non-ferrous metals, steel scrap and coal; and from the overseas territories, non-ferrous metals. Latin America furnishes cotton and some petroleum, and the rest of the world textile fibres and petroleum. In trade among the six countries, coal, petroleum products, non-ferrous metals and textile fibres are the largest items.

The G.A.T.T. Secretariat analyses next the effects of the Common Market on the prospective import requirements of primary products in the six countries. The analysis brings out certain interesting conclusions. These are indicated below:

The Common Market's net imports of fuels and raw materials in 1973-75 will exceed the requirements as estimated for the six countries in the absence of a Common Market by $50 million for each one-point increase in gross national product (additional to the 90 per cent. increase in G.N.P. previously assumed), it being understood, however, that the creation of Euratom will result in a reduction of fuel imports by about $700 million at a G.N.P. level exceeding that of 1953-55 by 90 per cent. In other words, the $700 million saving on fuel imports will be compensated by the effects of economic growth upon the requirements for imports of raw materials, if, as a result of the Common Market, the G.N.P. reached in 1973-75 a level of 103 per cent. instead of 90 per cent. above the figure for 1953-55.

In respect of foodstuffs, the Common Market's net import requirements will essentially depend on the effect which the common agricultural policy, as set out in the Rome Treaty (Article 39) in conjunction with the acceleration of economic growth that is expected from the Market, will have upon the rate at which the agricultural labour force will have declined. It will, at a G.N.P. level of, say, 220 per cent. of 1953-55, require a decrease in the agricultural labour force by 18 per cent. to maintain non-tropical food imports in 1973-75 at the same level as exports, by 22 per cent. to maintain net imports at the 1953-55 level, and by 25½ per cent. to bring them to twice that volume. A decline in the agricultural labour force of nearly 2 per cent. per annum has been witnessed in the last 15 years in the case of the United States. That decline is the more significant, as agricultural prices between 1935-39 and 1950-54 have risen about half again as fast as prices of other goods. It may, therefore, not be unreasonable to suppose that a similar decrease in the agricultural labour force is within the realm of possibilities in the Common Market and that net imports of food (and not only of coffee, etc.) may also make a substantial contribution to the improvement in the export prospects of the Market's traditional suppliers.

The association of the overseas countries and territories with the Common Market has also been examined in some detail by the G.A.T.T. Secretariat. According to the study, imports from the territories are now on the whole more expensive than imports from other sources to a degree, exceeding the tariff differential contemplated for tobacco, sugar, rubber and veneer. The cotton duty is to be *nil* and the duty on roundwood is as yet undetermined. The preference in respect of bananas will roughly compensate for the high price level of supplies from the French overseas territories to Germany and from Somaliland to Italy. In other cases, however, it will constitute a general inducement to expand production and trade. Finally, the preferential treatment with respect to coffee and cocoa will *prima facie* appear to be potentially the most effective, since it will apply to commodities which the territories are now in a position to supply on the whole more (and as regards coffee, even much more) cheaply than other suppliers. Coffee, cocoa and bananas are said to be the only instances where, according to present import unit values, the tariff differentials which will eventually apply to products from overseas territories and from other suppliers will constitute a net inducement to augment exports from the former sources.

INDO-NORWEGIAN TRADE

The validity of the trade agreement between India and Norway has been extended up to the end of December next. Under the agreement, India will continue to export to Norway tea, coffee, tobacco, jute goods, coir products, hydrogenated oils, shellac, mica, iron and manganese ores, woollen carpets, tanned hides and skins, cotton and woollen textiles, light engineering goods, plastic manufactures, hardware including cutlery, and sports goods. Among the commodities available for export from Norway to India are mechanical and chemical pulp, newsprint, aluminium manufactures including aluminium boats, galvanised and black steel pipes, testing machines, welding equipment, marine type diesel engines, machine tools, fishing vessels, calcium carbide, urea formaldehyde and miscellaneous machinery.

It is gratifying that the Government of Norway has agreed to include vegetable oils, manufactures of leather including saddlery and other harness etc., and oilseed cake and meal in the free lists for equipment, floor coverings including carpets, mats imports from India into Norway, when the balance of payments position makes it possible for the Norwegian authorities to do so. Meanwhile, the Government of Norway will give due consideration to applications for the grant of quotas to new importers who may wish to import goods from non-traditional sources of supply.

The move of Norway to encourage larger imports of Indian goods must be welcomed, considering the adverse balance of trade which India has with Norway. During the year 1956-57, the value of India's exports to this country aggregated not more than Rs. 51 lakhs, while its purchases were of the order of Rs. 3.37 crores.

Over 550 machines of different types, valued at nearly Rs. 50 lakhs, have so far been supplied to small industrialists under the scheme for supply of machinery on a hire-purchase basis for the development of small industries. The scheme, it will be recalled, was started in March 1956 and aims at the rapid development of small-scale industries by providing improved equipment which the *entrepreneur* cannot afford to purchase against cash payment. Industrial machinery, machine tools and spare parts are being supplied by the National Small Industries Corporation against a small initial payment, the balance being payable in easy instalments over a long period. These include general purpose machines like lathes, shaping machines, drilling machines and power press, welding machines, hobbing machines, grinding machines and power hammers. Some special purpose machinery items such as roller mills, machines to make bricks and tiles, plastic goods, nails, pins, barbed wires, shoes, rubber goods, iron washers and pencils are also being supplied. In order to meet the increasing demand for machinery under the scheme, the Corporation keeps in stock a large number of general purpose machines. Under another scheme, sewing machines are being supplied on hire purchase to people belonging to the low-income groups through Community Projects and Social Welfare Institutions. So far, over 1,000 sewing machines have actually been delivered to different applicants. The number of machines for which orders have been placed is more than 2,200.

The production of crude mica in India during the first half of 1957 aggregated 305,811 cwts., as against 298,890 cwts. in the corresponding period of the previous year, according to the Indian Bureau of Mines. Bihar, which is the leading producing State, accounted for 169,801 cwts. The output from Rajasthan and Andhra—the other major producing States—was 79,335 cwts. and 51,831 cwts., respectively. As a result of dressing, 53,750 cwts. of sickle-dressed blocks and 4,302 cwts. of chillas were recovered by the mine-owners in the half-year ended June 1957, as compared with 62,497 cwts. of sickle-dressed blocks and 5,090 cwts. of chillas during the same period last year.

A Dutch insurance firm, the Aurora Life Insurance Company of Amsterdam, has introduced a new inflation-proof insurance policy called Index Approximation Policy with effect from the 1st inst. According to the ingenious plan evolved by the Company, a new fund will be set up which can be drawn upon to strengthen the premium reserves, whenever it is necessary to raise the insured amount to catch up with an increase in the cost of living. Future premiums will be enhanced by a percentage similar to that by which the premium reserves are increased. The fund will be raised by means of profit shares to be allocated to the insured out of the profits.

Although it is not claimed that the system provides complete guarantee against every fall in the purchasing power of money, the Company holds that it will give almost complete compensation for a creeping inflation of about 2 per cent. per annum.

MARKED FALL IN A.C.C.'S PROFIT

EXPANSION PROGRESSING—DEBENTURE ISSUE CONTEMPLATED

A SUBSTANTIAL rise in production costs, mainly as a result of increased price of coal, enhanced railway freight rates and terminal charges, increases in wage rates and dearness allowance, higher prices of stores and spares and the high cost of expansion which is reflected in the higher charge for depreciation, all these have cumulatively contributed to a sizable fall in the profit margin of the Associated Cement Companies Ltd. (Managing Agents: Cement Agencies (Private) Ltd., Bombay) for the year ended 31st July 1957. The increases in the various items of cost referred to above were something over which the Company had no control. It may be asked whether the Directors did not take any steps to effect economies in production by improving the efficiency of the manufacturing units. They say they did but aver that the incidence of the rise in costs was so heavy that it negatived the benefits of increased production and economies effected. While the higher cost of production adversely affected the trading profit thus, its effect on the net profit was aggravated by the rise in direct taxation and the need for providing a larger sum for depreciation. The increase in the rates of income-tax and corporation tax, as well as the levy of wealth tax, has heavily cut into the distributable profit. The Directors have published an interesting chart which impressively shows at a glance the extent to which the profit margin has shrunk in the past seven years. While the ex-works selling price has remained unchanged at Rs. 56 per ton of unpacked cement, since 1949-50, the Company's cost and taxes payable by it have advanced from Rs. 47.43 per ton in 1949-50 to Rs. 49.58 in 1956-57. In other words, the profit margin has narrowed down from Rs. 8.57 to Rs. 6.42 per ton.

To mention the actual figures of profits now. The gross profit has declined for the second year in succession, after staging a progressive rise in 1953-54 and 1954-55. Thus, at Rs. 487.41 lakhs, it shows a fall of Rs. 59.35 lakhs from the profit for 1955-56 and as much as Rs. 101.02 lakhs from that for 1954-55. The serious nature of the impact of the rise in production costs on the earnings of the Company can be easily gauged when it is realised that all this has happened despite an increase in the sale of cement from 2,962,000 tons to 3,205,000 tons, that is, by 243,000 tons or about 8 per cent. Reflecting this rise in turnover, sale proceeds advanced from Rs. 22.13 crores to Rs. 22.63 crores. The income from other sources was better, but only slightly, by Rs. 1.12 lakhs at Rs. 53.92 lakhs. In other words, the Company's income was Rs. 23.17 crores in all, as against Rs. 22.66 crores, an increase of hardly Rs. 51 lakhs. Expenses, on the other hand, rose by no less than Rs. 124.91 lakhs to Rs. 18.56 crores. Of this rise, salaries, wages and benefits to employees alone accounted for Rs. 57.25 lakhs or nearly half.

In consonance with the fall in gross profit and in view of the larger allocations to depreciation and taxation, the net profit, too, has declined by as much as Rs. 75.52 lakhs to Rs. 177.86 lakhs. Depreciation has been provided with a larger amount of Rs. 156.04 lakhs, as against Rs. 133.64 lakhs, and taxation Rs. 117.45 lakhs, as against Rs. 116.99 lakhs. If the increase in the tax provision does not appear to be marked, it is probably because of the effects of the higher depreciation available on the large additions to block account during the year under review.

In view of the serious decline in profits, the allocations to reserves have been drastically cut, from as much as Rs. 128.88 lakhs to a mere Rs. 55 lakhs. The entire sum of Rs. 55 lakhs has been credited to reserve for plant reinstatement, which is the same as that in the previous year. The appropriations in the previous year, it may be noted, consisted, besides the transfer to plant reinstatement account, of Rs. 7.37 lakhs to general reserve, Rs. 32 lakhs to development reserve, Rs. 19.51 lakhs to reserve for deferred taxation and Rs. 15 lakhs to reserve for gratuities.

Lower profit has also meant a lower dividend. Indeed, the hope expressed in our last year's review of the Company's results that it should be possible for the Company to maintain the dividend at the modest rate of 10 per cent. per annum even on the increased capital has been belied. The dividend has been reduced to 9 per cent. from 10 per cent., at which level it had been maintained for the previous two years, after being raised from 8.5 per cent. for 1953-54. The year's dividend is on a higher capital of Rs. 15.79 crores, raised by a fresh issue of 614 891 equity shares of Rs. 100 each on which Rs. 50 per share had been called up. A dividend at the rate of Rs. 3.375 per share has been proposed for the new shares which rank for dividend only from 1st November 1956. This rate is in proportion to the 9 per cent. on the fully paid-up shares for the whole year.

The following comparative table shows at a glance the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st July			
	1957	1956	1955	1954
Sale proceeds of cement ..	22,62.79	22,13.47	21,23.05	17,12.78
Other income	53.92	52.80	36.08	49.71
Stocks	92.00	65.63	54.38	37.06
Expenses	18,55.97	17,30.76	15,80.12	13,43.23
Gross profit ..	4,87.41	5,46.76	5,88.43	4,24.12
Managing Agents' commission	36.06	42.75	51.56	32.96
Provision for—				
Depreciation	1,56.04	1,33.64	1,06.89	85.66
Taxation	1,17.45	1,16.99	1,89.28	1,34.00
Net profit	1,77.86	2,53.38	2,39.70	1,71.50
Excess provisions written back	12.30	..	..	..
Transfer to reserves ..	55.00	1,28.88	1,04.82	60.00
Dividend	1,35.51	1,27.18	1,27.18	1,05.11
	(9%)*	(10%)	(10%)	(8.5%)†
Carry forward	2.59	2.94	5.63	6.35

* On a higher capital of Rs. 15.79 crores.
† On the increased capital of Rs. 12.68 crores, raised by the capitalisation of Rs. 2.11 crores from the reserves.

As usual, the Company's annual report is replete with charts and diagrams which depict in an easily intelligible manner all the important information relating to the Company's working and progress. The chart on cement production shows that, in India, A.C.C. accounts for as much as about 54 per cent. of the total output and for about half of that in Pakistan. The one on "Where did the money go?" discloses that, of the money earned by the Company in 1956-57, 47.94 per cent. was spent on raw materials, depreciation, maintenance and other manufacturing charges, 12.38 per cent. on freight and 19.52 per cent. on employees. Of the balance, administrative charges constituted 5.32 per cent., taxes 6.68 per cent., reserves 2.34 per cent. and shareholders 5.82 per cent. The following comparative table shows the position in this respect during the last three years:

	1956-57	1955-56	1954-55	1953-54
	%	%	%	%
Raw materials, depreciation, manufacturing charges, etc. ..	47.94	40.30	36.11	45.27
Freight	12.38	18.65	19.47	18.46
Employees	19.52	18.60	17.52	16.83
Administration	5.32	4.62	5.39	4.34
Taxes	6.68	6.65	11.51	6.81
Reserves	2.34	5.57	4.11	2.61
Shareholders	5.82	5.61	5.89	5.68
	100.00	100.00	100.00	100.00

Referring to the Company's various schemes of expansion already put into execution and still under execution, the Directors observe:

"The Company has embarked upon a major programme of expansion, modernisation and rehabilitation as its contribution towards the achievement of the targets set by the Government for production of cement under the second Five-year Plan. These plans have, of course, to be executed at an abnormally accelerated pace. In consequence, the funds that the Company has already raised or proposes to raise for this purpose whether from its own resources, by further borrowings or by flotation of additional equity capital, would fall far short of requirements. The Company has, therefore, made out a case in its representation to the Tariff Commission for the grant of an adequate expansion and rehabilitation allowance in the price of cement. Meanwhile, the Company is applying to the Controller of Capital Issues for sanction to issue debentures to the extent of Rs. 5 crores to provide the additional resources required, partly for investment in the heavy engineering project which the Company may undertake in collaboration with Messrs. Vickers Limited and Babcock & Wilcox Limited, and partly for its immediate needs in relation to the expansion plans and for its eventual need for substantially increased working capital."

"The extension of the Kistna cement works, raising the yearly output of the factory from 0.90 lakh tons of cement to 2.55 lakh tons, was completed early in March 1957. Production and despatches have, however, suffered to a substantial extent on account of the inability of the Southern Railway to transport the requisite quantities of limestone from the quarries to the factory and the cement from the factory to the consumers. Recently, however, there has been some improvement in this respect. Extensions at Chaibasa and Sindri factories have made good progress and will result in raising in present capacities at each of these works by 1 lakh tons per annum. These extensions are expected to be completed by March and July 1958 respectively. In addition to the expansion of capacity at Chaibasa factory, a flotation plant is proposed to be installed there for beneficiation of the raw materials, which will extend the life of the factory by enabling it to use low grade limestone, which would otherwise have had to be rejected. It is expected that the flotation plant will be put into commission by February 1959.

"The construction work of the new cement works at Mancherial has also made satisfactory progress and the factory is expected to start production in September 1958. Extensions at Kymore and Shahabad works are also well under way. The annual capacity of these two factories will be raised from 3.60 lakh tons to 5.73 lakh tons and from 4.00 lakh tons to 5.65 lakh tons respectively, on completion of these projects. The work of construction of the technical training institute at Kymore works was completed during the year under report, and the first batch of trainees is at present undergoing training."

A broad idea of the Company's latest financial position can be had from the following synopsis of its balance-sheet as at 31st July 1957:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	15,80,87,225	Gross block ..	30,81,74,705
Reserves and surplus ..	9,64,44,268	Less—Depreciation ..	11,29,17,763
Welfare and endowment fund ..	1,05,635	Net block ..	19,52,56,942
Reserve for taxation ..	1,47,72,682	Machinery, electric motors, etc., in transit ..	85,20,518
Liabilities	13,63,65,615	Unallocated capital expenditure ..	69,67,755
		Stores, spares, etc..	13,16,58,276
		Stocks	91,99,900
		Debts, deposits and advances ..	3,22,95,882
		Investments ..	80,61,503
		Cash	1,38,84,513
Rs.	40,57,75,450	Rs.	40,57,75,450

The salient features of the Company's financial position are: (a) Notwithstanding the addition made during the year by the issue of fresh capital, the paid-up capital is well below the block account; (b) the reserves and surplus are equal to nearly 60 per cent. of the capital; (c) the current liabilities, heavy as they are, are adequately covered by floating assets; (d) of the gross block shown in the summary, additions made during 1956-57 were of the order of Rs. 3.34 crores (the deductions were only Rs. 27.56 lakhs); and (e) the large amounts under stores and book debts reflect the fast pace at which expansion is going on in the Company's activity.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 149 cum-div. On an ex-div. basis, the yield works out to 6.43 per cent. per annum.

COFFEE LANDS' PROGRESS STEADY

Coffee Lands and Industries (Mysore) Ltd. (Chairman: Mr. R. C. Paterson, Polibetta, Coorg) belongs to that group of plantation companies in the South which has reported very satisfactory results for the year ended 30th June 1957. With a record coffee production and higher price realisation, the earnings of the Company have made a marked advance over those for the previous year. Incidentally, it may be stated that the earnings in the previous year were, by themselves, a great improvement over those for 1954-55. Thus, the gross profit at Rs. 29.25 lakhs for 1956-57 is Rs. 10.16 lakhs higher than Rs. 19.09 lakhs for the previous year and Rs. 19.28 lakhs more than that for 1954-55.

The net profit also stands substantially higher at Rs. 16.57 lakhs, as compared with Rs. 11.68 lakhs and Rs. 5.40 lakhs for 1955-56 and 1954-55, respectively. It is noteworthy that the net profit is thus higher even after making a higher provision for taxation, namely, Rs. 9.33 lakhs, as against only Rs. 4.72 lakhs in the previous year. Of the latest provision, State agricultural income-tax takes up Rs. 7 lakhs, as against Rs. 3.45 lakhs and Union income-tax Rs. 2.33 lakhs, as against Rs. 1.27 lakhs. Depreciation account is provided with Rs. 1.18 lakhs, as against Rs. 1.27 lakhs. In view of the higher earnings, the allocation to the reserves has been stepped up from Rs. 6 lakhs to Rs. 9.50 lakhs. The entire allocation is for the general reserve. The dividend, too, has been raised to 40 per cent. from 25 per cent. for the previous year and 18 per cent. paid two years earlier.

The Company harvested a total of 947 tons of coffee during 1956-57. This is substantially higher than the estimated 745 tons. Of this crop, the share of arabica was 856 tons. The previous season's crop was of the order of 795 tons, with arabica taking the lead at 712 tons. Estimates for 1957-58 are 750 tons of arabica and 120 tons of robusta, or a total of 870 tons.

The paid-up capital of the Company as at 30th June 1957 remains unchanged at Rs. 28.41 lakhs, of which Rs. 18 lakhs are taken up by ordinary shares of Rs. 10 each and the balance by 5 per cent. tax-free cumulative preference shares of Rs. 100 each. Against this, the reserves and surplus aggregate Rs. 32.22 lakhs. The 5 per cent. debenture liability amounts to Rs. 3 lakhs. The gross block of Rs. 39.80 lakhs has been written down to Rs. 31.73 lakhs. The current assets, inclusive of cash and bank balances alone amounting to Rs. 16.76 lakhs, aggregate Rs. 63.22 lakhs, against which the current liabilities and the provision for taxation stand at no more than Rs. 31.32 lakhs.

The Rs. 10 fully paid-up ordinary shares are currently quoted at Rs. 28.75 ex-div., at which rate and on the basis of the latest dividend, the yield works out to 13.91 per cent. per annum.

SINGARENI COLLIERIES' EARNINGS LOWER

EFFECT OF LABOUR AWARD

DESPITE another record output of coal slightly in excess of the previous year's raisings, which were themselves a record, a satisfactory wagon supply for the movement of coal and cordial labour relations throughout the year, the earnings of the Singareni Collieries Company Ltd. (Secretaries and Selling Agents: Industrial Trust Fund, Government of Andhra Pradesh, Hyderabad-Dn.), for the year ended 31st December 1956 show a slight diminution. This was due to the effect of the award of the All-India Industrial Tribunal (Colliery Disputes) which became applicable with effect from 26th May 1956, unaccompanied by an increase in the selling price of coal until 5th July of that year. Even this increase in selling prices was inadequate to cover in full the rise in the wage bill. The loss in sales proceeds on this account was as much as Rs. 10.50 lakhs. Nevertheless, the Company's profit for the year, though slightly lower than the record profit earned in the previous year, is still the second best in its history. Another redeeming feature is that, in the previous year, the Company had to wipe out the remnants of loss carried over from 1953. With this liability now completely discharged, the Directors have found it possible to raise the dividend further to 10 per cent. from 7½ per cent. for 1955, to which level it had been stepped up from 7 per cent. for 1954. Again, with the present increase, the dividend has now exceeded the highest rate of 8 per cent. per annum declared for 1929.

The gross profit at Rs. 52.64 lakhs is short of the record profit of Rs. 53.40 lakhs made in the previous year by about Rs. 76,000. Despite this fall, it is Rs. 10.41 lakhs better than the previous record of Rs. 42.23 lakhs earned in 1954. After making a higher provision of Rs. 35.94 lakhs for depreciation, as against Rs. 32.12 lakhs, and Rs. 7.75 lakhs for taxation (including Rs. 1 lakh for wealth tax), as against Rs. 7.50 lakhs in the previous year, the net profit stands appreciably lower at Rs. 8.95 lakhs, as compared with Rs. 13.78 lakhs for 1955. The provision for payment of bonus to staff other than workers has been maintained at Rs. 1.75 lakhs, while the transfer to dividend equalisation fund has been reduced from Rs. 1.75 lakhs to Rs. 75,000. No amount has been transferred to workmen's compensation fund which received Rs. 1 lakh in the previous year.

The following comparative table brings out the essential features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds (net) ..	3,57.30	3,11.50	2,93.22	2,53.20
Colliery and other expenses ..	3,34.46	2,73.96	2,53.78	2,40.89
Gross profit	52.64	53.40	42.23	14.67
Depreciation	35.94	32.12	25.53	23.28
Taxation	7.75	7.50	7.70	..
Net profit (+) or loss (—) ..	+ 8.95	+13.78	+ 9.00	— 8.61
Refund of income-tax ..	..	..	..	1.47
Provision for bad and doubtful debts	..	..	0.05	..
To reserves	0.75	2.75	1.00	..
,, bonus (other than to workers)	1.75	1.75	1.50	..
,, dividend	6.32	4.74	4.42	..
	(10%)	(7½%)	(7%)	
Carry forward	0.21	0.07	4.47	— 6.49

The Company's output of coal during the year under review amounted to 16.81 lakh tons, having risen from 12.72 lakh tons in 1953, 14.58 lakh tons in 1954 and 15.26 lakh tons in 1955. This was due partly to better labour relations and partly to increase in the productive capacity of the collieries. This favourable trend in production was, however, more than offset by the sharp rise in working expenses from Rs. 273.96 lakhs to Rs. 334.46 lakhs. Of this rise of Rs. 60.50 lakhs, the wage bill and staff welfare expenses alone account for as much as Rs. 55.03 lakhs. Despatches of coal during the year amounted to 15.66 lakh tons, as compared with 14.62 lakh tons in 1955, 13.57 lakh tons in 1954 and 11.69 lakh tons in 1953.

The reserves and surplus of the Company as at the close of 1956 amount to Rs. 94.79 lakhs, as against a paid-up capital of Rs. 63.21 lakhs, all in ordinary shares of Rs. 10 each. The provision for taxation, including that for wealth tax, stands at Rs. 19.98 lakhs. The current liabilities (excluding employees' provident fund contributions amounting to Rs. 14.33 lakhs) aggregate Rs. 274.06 lakhs, of which Rs. 120.76 lakhs represent loans from the Government of Andhra Pradesh, secured by mortgage and hypothecation of the entire immovable and movable assets. The gross block of the value of Rs. 519.42 lakhs has been written down to Rs. 235.95 lakhs, the difference, namely, Rs. 273.47 lakhs being the total depreciation provided up to the end of the year of review. Additions to block account during the year were of the order of Rs. 46.44 lakhs. The current assets aggregate Rs. 220.43 lakhs and fall short of the current liabilities and the provision for taxation by a margin of Rs. 73.61 lakhs.

The Rs. 10 fully paid-up shares are being currently quoted at Rs. 12.15 cum-div. On an ex-div. basis, and taking the dividend at 10 per cent., the yield on the shares works out to 8.96 per cent. per annum.

Points From The Chair

Future of Industry

"I WOULD like to take this opportunity to dispel the fears that appear to be entertained by some of the shareholders about the future of the industry. Although no regular dividends have been declared, this factory has been able since its inception to produce and market about 22 lakh tons of ammonium sulphate and one lakh tons of superphosphate, thereby helping substantially to step up the food production in the country. By the manufacture and sale of the above fertilisers as also industrial chemicals like ammonium chloride, sulphuric acid and ammonia, this company has also contributed its fair share in saving foreign exchange. This contribution by itself I fully realise will be poor consolation to shareholders who have patiently waited for a long time without any substantial return on the capital they have invested. The present indications are that while the working results of 1957 may not show any perceptible improvement the results of 1958 will enable the Company in some measure to fulfil its obligations to the shareholders. It is hoped by that time that the balance of the accumulated losses would have been wiped off. I may assure you that your Directors are fully alive to the situation and will do whatever lies in their power to remedy it."

DR. JOHN MATTHAI,
Fertilisers and Chemicals, Travancore Limited.

Unenviable Position of Industries

"The imposition of the wealth tax and the compulsory deposit of reserves with the Government has resulted in adding further difficulties in the way of the industries. If the industries are to meet these claims, they must expand their activities; but, on the other hand, the restrictions imposed on imports of machinery and other required goods, due to the foreign exchange problems, make expansion very difficult. Under the circumstances, the industries are now placed in the most unenviable position of not being able to expand, but, at the same time, being compelled to bear heavier and heavier burdens which are quite unrelated to their earnings in the year concerned. This aspect of the problem deserves the most urgent consideration by the authorities concerned. I take this opportunity to urge on them the need for giving their very sympathetic and immediate consideration to this important matter in the interest not only of the industry, in particular, but also in the larger interests of the economic development of the country as a whole."

T. SHAMANNA,
Mysore Kirloskar Ltd.

Worker Participation in Management

"In my opinion, worker participation in management should be built up not from the top but from the work-floor upwards. Towards this end every effort must be made, both by the employer and by the employees, to render the works committees and production committees a living success, the educative effects of which are reflected over the larger mass of workers. I might even raise this to the larger national plane where we have to rely on our capacity to help ourselves. And the latter we cannot do if labour and capital, the two inevitable partners, do not pull together in the common national interest instead of following small-minded controversies and self-centred parochial interests, whether political or economic. In fact, it was good to hear labour leaders, even communists, and others rising to defend the second Five-year Plan and the democratic urges for progress which it embodies. Translated in the language of the work-a-day world, it means more production. And more production, in turn, implies a new, rich and rewarding co-operation between labour and capital—co-operation that is oriented to consumer interest in the broadest sense, and inclusive of the imperatively needed export-orientation. And let us not forget that each one of us is a consumer as much as he is a worker."

SIR SHRI RAM,
Delhi Cloth and General Mills Co., Ltd.

Demand for Cycles

"The bicycle being the main means of transport for the middle and poorer classes it is not surprising that the demand for bicycles has gone up and the estimate of the Tariff Commission has had to be revised. The Tariff Commission estimated that by the end of the second Five-year Plan, that is, 1960-61, about 1.5 million cycles will be required. In view of the fast growing demand, the Development Council for Bicycles which is in close touch with the market through the manufacturers who are members of the Council and through Government officials directly connected with the promotion of this industry, has estimated that this target will have to be revised to 2 million by 1960-61."

DR. A. RAMASWAMI MUDALIAR,
T. I. Cycles of India Ltd.

COMPANY MEETINGS AND DIVIDENDS

SHAHJAHANPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 14th January 1958. Dividend: Nil. Transfer books remain closed from 7th to 14th January 1958, both days inclusive.

PATNA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 14th January 1958. Dividend: Re. 1.00 per share, for the 15 months ended 31st March 1957. Transfer books remain closed from 2nd to 14th January 1958, both days inclusive.

MIRZAPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 14th January 1958. Dividend: Re. 0.90 (10 per cent.) per share, for the 15 months ended 31st March 1957. Transfer books remain closed from 7th to 14th January 1958, both days inclusive.

AGARPARA CO., LTD. Annual General Meeting, Calcutta, 15th January 1958. Dividend: Re. 0.25 per share. Transfer books remain closed from 2nd to 15th January 1958, both days inclusive.

BAGHMARI TEA CO., LTD. Annual General Meeting, Calcutta, 16th January 1958. Dividend: Rs. 2.50 per share. Transfer books remain closed from 3rd to 16th January 1958, both days inclusive.

BORMAH JAN TEA CO. (1936) LTD. Annual Geneing, Calcutta, 16th January 1958. Dividend: Re. 1.50 per share. Transfer books remain closed from 3rd to 16th January 1958, both days inclusive.

DIBRUGARH TEA CO., LTD. Annual General Meeting, Calcutta, 16th January 1958. Dividend: Rs. 3.00 per share. Transfer books remain closed from 3rd to 16th January 1958, both days inclusive.

TELOIJAN TEA CO., LTD. Annual General Meeting, Calcutta, 16th January 1958. Dividend: Rs. 3.50 per share. Transfer books remain closed from 3rd to 16th January 1958, both days inclusive.

BOMBAY SAFE DEPOSIT CO., LTD. Annual General Meeting, Bombay, 17th January 1958. Dividend: Rs. 26.00 per share. Transfer books remain closed from 27th December 1957 to 13th January 1958, both days inclusive.

CUTTACK ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Ranihat, Cuttack, 21st January 1958. Dividend: Re. 0.80 (8 per cent.) per share, for the 15 months ended 31st March 1957. Transfer books will remain closed from 14th to 21st January 1958, both days inclusive.

SHANGRILA FOOD PRODUCTS LTD. Annual General Meeting, Bombay, 24th January 1958.

KALPETTA ESTATES LTD. Annual General Meeting, Alleppey, Kerala State, 27th January 1958. Dividend: Rs. 2.00 per share (20 per cent.). Transfer books will remain closed from 21st to 27th January 1958, both days inclusive.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th January 1958. Transfer books will remain closed from 23rd to 29th January 1958, both days inclusive.

JAIPUR UDYOG LTD. Annual General Meeting, Sawaimadhopur, 31st January 1958. Transfer books will remain closed from 11th to 17th January 1958, both days inclusive.

NEW KAISER-I-HIND SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 31st January 1958. Transfer books will remain closed from 17th to 31st January 1958, both days inclusive.

ASSOCIATED CEMENT COS., LTD. Annual General Meeting, Bombay, 31st January 1958. Dividend: Rs. 9.00 per share, payable on and after 7th February 1958. Transfer books were closed from 4th to 30th November 1957, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of 3 per cent. for the year ending 31st March 1958.

UNITED ELECTRICAL INDUSTRIES LTD. Dividend of Re. 0.50 per share, for the year ended 31st December 1956.

CHRESTIEN MICA INDUSTRIES LTD. Interim dividend of 6 per cent. per annum on ordinary shares for the year ended 31st December 1956. Transfer books will remain closed from 15th to 25th January 1958, both days inclusive.

RELIANCE FIREBRICK AND POTTERY CO., LTD. Interim dividend of 10 per cent. per annum, for the period ended 28th February 1957. Transfer books will remain closed from 15th to 25th January 1958, both days inclusive.

ALEXANDRA JUTE MILLS LTD. Interim dividend of Rs. 5.00 per share, for the year ended 31st December 1957, payable on or after 15th January 1958. Transfer books were closed from 24th December 1957 to 7th January 1958, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Interim dividend of Re. 0.50 per share, for the period of 13 months ended 31st July 1957, payable on or after 15th January 1958. Transfer books were closed from 24th December 1957 to 7th January 1958, both days inclusive.

KELVIN JUTE CO., LTD. Interim dividend of Rs. 4.00 per share, for the 11 months ended 31st May 1957, payable on or after 15th January 1958. Transfer books were closed from 24th December 1957 to 7th January 1958, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Interim dividend of Rs. 3.00 per share, for the half-year ended 31st August 1957. Transfer books will remain closed from 27th January to 4th February 1958, both days inclusive.

PROFIT OF AGARPARA JUTE LOWER

RESULTS OF SOME McLEOD GROUP TEA COMPANIES

Agarpara Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1957.

After transferring Rs. 75,000 (Rs. 7,50,000) from general reserve, there is a balance of Rs. 2,33,736 (Rs. 3,59,690) at the credit of profit and loss account from which the directors recommend payments as follows:—

To payment of dividend on 10,000 preference shares at 7 per cent. per annum, free of income-tax Rs. 70,000 (Rs. 70,000), to payment of dividend on 6,00,000 ordinary shares at 2½ (5) per cent. per annum, free of income-tax Rs. 1,50,000 (Rs. 3,00,000) and, to carry forward to the next year Rs. 18,786 (Rs. 29,690).

In accordance with the provisions of the Indian Jute Mills' Association's working time agreement, the mills worked for 48 hours per week, with 5 per cent. of the looms sealed up to 15th July 1956. An additional 2½ per cent. of the looms were sealed with effect from 16th July 1956 and a further 5 per cent. from 17th September 1956.

Trading conditions were difficult throughout the year owing to the continuing disparity between the prices of raw jute and manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	66,99,502
Debentures ...	12,00,000	Stock of finished goods ...	34,93,137

		Cash ...	1,52,574
	Rs. 2,07,25,667		Rs. 2,07,25,667

Baghmari Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 5,42,581 (Rs. 2,81,449) to which must be added the provision for taxation overprovided in previous years now written back Rs. 45,000 (*nil*) and the balance of profit brought forward from 1955 of Rs. 36,051 (Rs. 93,058) making a total of Rs. 6,23,632 (Rs. 3,74,507). From this amount must be deducted adjustment account Rs. 12,588 (Rs. 16,770), provision for taxation Rs. 1,74,500 (Rs. 1,10,000), provision for wealth tax Rs. 5,500 (*nil*), amount written off stores for obsolescence, etc., Rs. 2,772 (Rs. 5,123) and provision for bonus to labour for 1956 Rs. 48,020 (Rs. 1,18,544 for 1953 and 1954) leaving a balance of Rs. 3,80,252 (Rs. 93,058). The interim dividend for the year ended 31st December 1956, at Re. 1.00 (*nil*) per share, declared by the directors on 17th May 1957 absorbed Rs. 55,000 (*nil*). The directors have set aside to buildings and machinery reserve Rs. 2,00,000 (*nil*) leaving an available balance of Rs. 1,25,252 (Rs. 91,051). The directors recommend payment of a final dividend for the year ended 31st December 1956, at the rate of Re. 1.50 (Re. 1.00) per share on 55,000 shares of Rs. 10 each, absorbing Rs. 82,500 (*Rs. 55,000*) leaving to be carried forward Rs. 42,752 (Rs. 36,051).

Tea crop.—The saleable crop weighed out at 10,453 (9,155) maunds against an *estimate of 9,500* maunds and was disposed of at an average price of annas 38.52 (33.90) per lb.

The estimate for season 1957 provides for a saleable crop of 10,060 maunds at a total revenue expenditure of Rs. 12,51,740.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,50,000	Block ...	11,22,937
Reserves ...	13,21,541	Stock of tea	7,06,379
Provision for taxation ...	4,39,808	Stores and spare parts	3,51,389
Liabilities ...	6,42,405	Stock of foodstuffs ...	823
Profit and loss account ...	42,752	Debts, deposits and advances ...	1,26,491
		Investments	53,180
		Cash ...	6,35,307
	Rs. 29,96,506		Rs. 29,96,506

Bormah Jan Tea Co. (1936) Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 2,54,257 (Rs. 4,46,007) to which must be added adjustment account Rs. 4,030 (*nil*) and balance of profit brought forward from 1955 Rs. 15,455 (Rs. 1,44,105) making a total of Rs. 2,73,742 (Rs. 5,90,112). From this must be deducted provision for labour and staff bonus for 1956 Rs. 44,178 (Rs. 1,50,324), provision for taxation Rs. 69,000 (Rs. 1,88,000), provision for wealth tax Rs. 5,700 (*nil*) and amount written off stores for obsolescence, etc., Rs. 2,736 (Rs. 5,533 adjustment account) leaving a balance of Rs. 1,54,128 (Rs. 2,46,455). This amount the directors recommend, *should* be dealt with as follows:—

In payment of a dividend at the rate of 6 per cent. for the year ended 31st December, 1956, on 1,000 cumulative preference shares of Rs. 100 each, absorbing Rs. 6,000 (Rs. 6,000), and in payment of a dividend at the rate of 15 (20) per cent. for the year ended 31st December, 1956, on 75,000 ordinary shares of Rs. 10 each, absorbing Rs. 1,12,500 (*Rs. 1,50,000*) leaving to be carried forward Rs. 35,628 (Rs. 15,455 after setting aside Rs. 75,000 for buildings and machinery reserve).

Tea crop.—The saleable crop weighed out at 6,480 (7,703) maunds against an estimate of 8,300 maunds and was disposed of at an average price of annas 38.84 (35.69) per lb. The *smaller crop made* in 1956, as compared with the preceding year, was due to severe caterpillar attack and earlier cessation of plucking under the I.T.A. Voluntary Crop Regulation Scheme.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,50,000	Block ...	7,21,052
Reserves ...	7,27,550	Stock of tea	5,41,568
Provision for taxation ...	2,65,540	Stores ...	2,35,368
Liabilities ...	4,02,977	Stock of foodstuffs ...	1,131
Profit and loss account ...	35,628	Debts, deposits and advances ...	2,46,661
		Investments	52,070
		Cash ...	4,83,905
	Rs. 22,81,695		Rs. 22,81,695

Dibrugarh Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 4,56,139 (Rs. 4,26,064) to which must be added the balance of profit brought forward from 1955 of Rs. 53,921 (Rs. 54,692) making a total of Rs. 5,10,060 (Rs. 4,80,756). From this amount must be deducted adjustment account Rs. 3,861 (Rs. 10,981), provision for labour bonus account, 1956 Rs. 39,279 (Rs. 1,28,854 for 1953; 1954 and 1955) provision for taxation Rs. 1,57,807 (Rs. 1,47,000) and amount written off stores for obsolescence, etc. Rs. 717 (*nil*) leaving a balance of Rs. 3,18,396 (Rs. 1,93,921). The interim dividend for the year ended 31st December 1956, at one rupee (*nil*) per ordinary share, declared by the directors on 17th May 1957 absorbed Rs. 45,000 (*nil*). The directors have set aside to buildings and machinery reserve Rs. 1,50,000 (Rs. 50,000). From the final available balance of Rs. 1,23,396 (Rs. 1,43,921) the directors recommend payment of a final dividend for the year ended 31st December 1956, at the rate of Rupees Two (Rupees Two) per ordinary share on 45,000 ordinary shares, absorbing Rs. 90,000 (Rs. 90,000) leaving to be carried forward Rs. 33,396 (Rs. 53,921)

Tea crop.—The saleable crop weighed out at 7,323 (7,245) maunds against an estimate of 7,250 maunds and was disposed of at an average price of annas 42.20 (37.88) per lb.

The estimate *for season 1957 provides* for a saleable crop of 7,200 maunds at a total revenue expenditure of Rs. 9,25,060.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,50,000	Block ...	8,60,865
Reserves ...	8,76,000	Stock of tea	6,95,582
Provision for taxation ...	5,06,791	Stores and spare parts	1,13,011
Liabilities ...	4,85,806	Debts, deposits and advances ...	94,554
Profit and loss account ...	33,396	Investments	52,070
		Cash ...	5,35,911
	Rs. 23,51,993		Rs. 23,51,993

Teloijan Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 5,69,843 (Rs. 4,64,322) to which must be *added* provision for taxation overprovided in previous years now written back Rs. 45,000 (*nil*) and balance of profit brought forward from 1955 Rs. 62,549 (Rs. 81,743) making a total of Rs. 6,77,392 (Rs. 5,46,065). From this amount must be deducted adjustment account Rs. 17,576 (Rs. 2,575), provision for taxation Rs. 2,05,500 (Rs. 1,99,137), provision for wealth tax Rs. 5,000 (nil), provision for labour bonus account, 1956 Rs. 50,250 (Rs. 1,32,187 for 1953 to 1955) and amount written off stores for obsolescence, etc., Rs. 85 (Rs. 117 being loss on demolished building) leaving a balance of Rs. 3,98,981 (Rs. 2,12,049). The interim dividend for the year ended 31st December, 1956, at Re. 1.50 (*nil*) per ordinary share absorbed Rs. 89,700 (*nil*). The directors have set aside to buildings and machinery reserve Rs. 1,25,000 (*nil*). There is a final available balance of Rs. 1,84,281 (Rs. 2,12,049) which, the directors recommend, should be dealt with as follows:—

In payment of a final dividend for the year ended 31st December, 1956, at the rate of Rs. 2.00 (Rs. 2.50) per ordinary share on 59,800 ordinary shares of Rs. 10 each, absorbing Rs. 1,19,600 (Rs. 1,49,500) leaving to be carried forward Rs. 64,681 (Rs. 62,549).

Tea crop.—The saleable crop weighed out at 9,653 (10,032) maunds against an estimate of 10,000 maunds and was disposed of at an average price of annas 40.55 (33.55) per lb.

The estimate for season 1957 provides for a saleable crop of 9,750 maunds at a total revenue expenditure of Rs. 11,95,926.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,98,000	Block ...	8,80,927
Reserves ...	11,98,874	Stock of tea	7,37,280
Provision for taxation ...	3,80,197	Stores and spare parts	2,46,504
Liabilities ...	6,65,350	Stock of foodstuffs ...	11,535
Profit and loss account ...	64,681	Debts, deposits and advances ...	3,15,630
		Investments	52,070
		Cash ...	6,54,156
	Rs. 29,07,102		Rs. 29,07,102

Sungma Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 3,61,018 (loss of Rs. 33,802) from which must be deducted: adjustment account Rs. 8,219, provision for taxation Rs. 69,618, amount written off stores for obsolescence, etc., Rs. 349, provision for bonus to garden labour and staff—1956 Rs. 8,618 and loss brought forward from 1955 of Rs. 33,802 leaving a balance of Rs. 2,41,414. The interim dividend for the year ended 31st December, 1956, at 75 naye Paise per ordinary share, declared by the directors on 17th May, 1957, absorbs Rs. 46,875 (*nil*). The directors have set aside to general reserve Rs. 1,24,182 (*nil*) amount the directors recommend, should be dealt with as follows:—

In payment of a final dividend for the year ended 31st December, 1956, at the rate of 75 naiye Paise per ordinary share on 62,500 ordinary shares, absorbing Rs. 46,875 (nil) leaving to be carried forward Rs. 23,482 (debit of Rs. 33,802).

Tea crop.—The saleable crop from Sungma and Turzum Estates weighed out at 4,725 (4,685) maunds against an estimate of 4,800 maunds and was disposed of at an average price of 57.55 (39.27) annas per lb.

The estimate for season 1957 provides for a saleable crop of 5,000 maunds at a total revenue expenditure of Rs. 8,81,458.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,25,000	Block ...	12,65,808
Reserves ...	6,98,767	Stock of tea	3,13,336
Provision for taxation ...	68,600	Stores ...	1,30,626
Liabilities ...	3,97,033	Other assets	24,030
Profit and loss account ...	23,482	Debts, deposits and advances ...	68,910
		Investments	2,824
		Cash ...	1,848
	Rs. 18,12,882		Rs. 18,12,882

Bombay Safe Deposit Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Forbes Forbes Campbell & Co., Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September, 1957.

The results for the year show a profit of Rs. 74,507 (Rs. 68,982). After providing for bonus to staff Rs. 4,500 (Rs. 4,300), staff gratuity fund (*nil*) and taxation (including Rs. 5,219 for accountancy year 1955-56) Rs. 41,500 (Rs. 32,000), the profit is to be added the net carry forward from 1956 of Rs. 339 (Rs. 157) making a total of Rs. 23,024 (Rs. 30,339). To this is to be added the amount transferred from reserve fund of Rs. 8,500 (Rs. 4,000) making available a sum of Rs. 31,524 (Rs. 36,339 including Rs. 2,000 transferred from renewals fund). From this amount the directors recommend the declaration of a *dividend of* Rs. 26.00 (Rs. 30.00) per share, free of income-tax, which will absorb Rs. 31,200 (Rs. 36,000) leaving a balance to be carried forward of Rs. 324 (Rs. 339).

The deposit was well patronised during the year under review and income slightly increased mainly from interest and dividends. But the regular expenses *mainly* under the heads of salaries and wages have also increased as well as special expenses having been brought about by the Companies Act, 1956.

Although the profit is slightly higher than last year, taxation has substantially increased, the additional tax on this year's profit as a result of the increased rates of taxation amounting to approximately Rs. 5,500. The profit available for dividend is therefore much reduced. Additionally, this year's accounts have had to carry the additional taxation levied with retrospective effect on last year's accounts, and partially on this account the directors have recommended the transfer of Rs. 8,500 from the reserve fund.

Towards the end of the year, 208 new lockers were installed and the directors are glad to say that satisfactory progress has been made in letting these additional lockers.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,40,000	Block ...	1,56,324
Reserves ...	63,857	Investments	1,76,286
Provision for taxation ...	39,007	Loans and advances ...	15,938
Liabilities ...	1,36,231	Cash ...	1,30,871
Profit and loss account ...	324		
	Rs. 4,79,419		Rs. 4,79,419

Bishnauth Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December, 1956.

The season's working resulted in a profit on revenue account of Rs. 16,73,076 (Rs. 12,71,362). After providing for depreciation amounting to Rs. 1,80,836 (Rs. 1,25,021), writing off development expenditure of Rs. 14,183 (*nil*) incurred during the year on tea estate, providing Rs. 4,82,193 for labour bonus for 1956 and Rs. 42,000 for staff bonus for 1956. After transferring the above profit, making various adjustments and setting aside Rs. 7,00,000 (Rs. 3,85,000) for taxation, the balance available on profit and loss account amounts to Rs. 11,51,326 (Rs. 4,79,359). From this amount it is proposed to transfer to general reserve Rs. 50,000 (*nil*), to repairs and renewals reserve Rs. 50,000 (*nil*), to staff account Rs. 25,000 (*nil*), to building reserve Rs. 50,000 (*nil*) and pay a dividend of 20 (20) per cent. for 1956 absorbing Rs. 6,60,000 (Rs. 3,30,000 on old capital) and to carry forward Rs. 3,16,326 (Rs. 1,49,359).

In 1956 the quantity of tea sold was 3,879,539 (3,765,852) pounds, the average sale price per pound being Rs. 2-11-114 (Rs. 2-7-14). The estimate for 1957 provides for a crop of 3,960,000 lbs. of tea at a cost of Rs. 74,65,700 at Re. 1.89 per lb.

Accounts in brief are as under:—

Liabilities	Rs	Assets	Rs.
Capital ...	33,00,000	Block ...	35,47,900
Reserves ...	15,33,333	Stock of tea	44,86,325
Provision for taxation ...	5,33,078	Stores and loose tools	7,66,784
Provision for bonus to staff and labourers	5,24,913	Debts, deposits and advances ...	5,62,014
Liabilities ...	36,24,703	Investments	3,36,211
Profit and loss account ...	3,16,326	Cash ...	1,33,119
	Rs. 98,32,353		Rs. 98,32,353

Deccan Sugar and Abkhari Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Parry and Co., Ltd., Madras) submitted the audited accounts of the Company for the year ended 31st May 1957.

The net profit for the year before providing for taxation was Rs. 26,54,871 (Rs. 21,08,865) upon which taxation (including an adjustment *in respect* of the *previous* year and a transfer to taxation equalisation reserve) amounts to Rs. 17,05,211 (Rs. 9,55,211) leaving a net profit, after taxation, of Rs. 9,49,660 (Rs. 11,53,654). To this should be added the surplus brought forward from last year amounting to Rs. 1,23,240 (Rs. 1,12,386) making the profit available for appropriation Rs. 10,72,900 (Rs. 12,66,040). Out of this amount the directors have made the following appropriations:

To *capital reserve* Rs. 30,000 (Rs. 45,000), to general reserve Rs. 3,00,000 (Rs. 5,00,000), to dividends, free of income-tax, for the year on preference share capital, 7 per cent. Rs. 49,000 (Rs. 49,000) and *on ordinary share capital* an interim dividend at 5 (5) per cent. Rs. 99,600 (Rs. 99,600) and a final dividend of 12 (10) per cent. on increased share capital Rs. 4,78,080 (Rs. 1,99,200) leaving a surplus to be *carried* forward to next year of Rs. 1,16,220 (Rs. 1,23,240 after placing Rs. 2,50,000 to dividend equalisation fund).

Reserves.—As at 31st May 1957 the capital and revenue *reserves* of the Company, excluding the taxation equalisation reserve, aggregated Rs. 23,30,720 as against Rs. 20,07,740 previous year.

Taxation.—Although this year the depreciation allowed for income-tax purposes equalled the book depreciation provided by the Company, the increased *rates of tax imposed* by the Finance Act 1957 *has necessitated* a further transfer of Rs. 2,20,000 to taxation equalisation reserve. In future years a considerable part of book depreciation charges will not be allowed for tax purposes and therefore the net profit of *the Company*, after taxation, would be adversely affected unless the Company could draw on the taxation equalisation reserve.

Review of Operations.—The purchase price of cane for the year remained *the same as* for the previous year. The Government of India continued their policy of controlled release of sugar. *Samalkot.*—The 1956-57 season started on 28th November 1956 and finished on 20th May 1957. During this period 1,16,881 (1,03,088) tons cane were crushed and 10,822 (9,778) tons sugar were produced—both records for the factory. The average recovery was 9.26 (9.48) per cent., a fall of 0.22 per cent. from that of the 1955-56 season, mainly due to climatic conditions. *Pugalur.*—The 1956 special season started on 1st August 1956 and finished on 5th October 1956. 53,797 (59,320) tons cane were crushed and 5,007 (5,762) tons sugar were produced at a recovery of 9.31 (9.71) per cent. The main season for 1956-57 started on 24th November 1956 and finished on 25th May 1957. 1,55,060 (1,27,696) tons cane were crushed and 15,402 (12,970) tons sugar were produced at a recovery of 9.93 (10.16) per cent. The quantity of cane crushed and sugar produced during 1956-57 main season are both records for the factory. The recovery in the two seasons, though slightly lower than last year, was satisfactory.

Financial Position.—The Company's financial position continues to be satisfactory and the excess of current assets over current liabilities and provisions amounted to Rs. 22.17 lakhs as at 31st May 1957 as compared with Rs. 19.88 lakhs last year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	26,92,000	Block ...	52,79,910
Reserves ...	47,43,760	Expenditure on plant and machinery etc. ...	2,85,689
Provision for taxation ...	22,10,000	Stocks ...	1,23,79,191
Liabilities ...	1,22,80,734	Raw materials and work-in-progress ...	1,78,284
Profit and loss account ...	1,16,220	Stores, etc. ...	13,92,725
		Debts, deposits and advances ...	11,03,207
		Investments	3,04,465
		Cash ...	6,19,243
	Rs. 2,20,42,714		Rs. 2,20,42,714

United Breweries Ltd.

The directors of the above Company (Chairman: Mr. Vittal Mallya, Bangalore) submitted the audited accounts of the Company for the 42nd year which ended on 31st March 1957.

The working of the Company for the year under review resulted in a profit of Rs. 1,21,343 (Rs. 1,15,569) to which was added the unappropriated profit brought forward from the previous year of Rs. 4,679 (Rs. 9,110) making a total of Rs. 1,26,022 (Rs. 1,24,679). The directors paid an interim dividend at Rs. 7.50 (Rs. 7.50) per share, without any deduction for income-tax payable by the Company, on 30th March 1957, absorbing Rs. 60,000 (Rs. 60,000) leaving an available balance of Rs. 66,022 (Rs. 64,679). From this the directors have paid a final dividend at Rs. 7.50 (Rs. 7.50) per share, without any deduction for income-tax payable by the Company, which absorbed Rs. 60,000 (Rs. 60,000) leaving a balance of Rs. 6,022 (Rs. 4,679) to be carried forward to the next year.

Operations: The demand for the Company's products continued to increase throughout the year under review and the new plant and machinery installed during the year helped considerably in meeting this increased demand. During the current year there has been a further sharp increase in the demand for the Company's beer due to a drastic reduction in the value of licences granted for the import of beer during the January-June 1957 licensing period and the complete suspension of the issue of import licences for beer since 1st July 1957. The Company is well equipped to meet this additional demand provided licences for the *import of the necessary* raw materials are available. The Company's beer is *now being sold* in all the principal cities in India, the quality being recognised as equal to that of the best imported brands. The Company was awarded a second prize in the British Empire and Commonwealth Bottled Beer Competition held in London in September 1957. Apart from the threat of total prohibition, the prospects appear to be very satisfactory.

Since the close of the year under review the licence for the bottling of McDowells *Aerated Waters* was terminated by agreement with the Company's subsidiary as the building housing the Factory was required by the Company in connection with its own expansion programme.

Subsidiary Company: The directors did not consider it necessary to make any provision in the Company's accounts for the net aggregate loss of Rs. 6,063 applicable to the Company out of the subsidiary's losses after deducting its profits for the years ended 31st December 1951, to 31st December 1955, as the losses incurred by the Subsidiary during the said period were adjusted in its own books without drawing on the general reserve of Rs. 3,24,000. During the aforesaid period the Company received a total of Rs. 3,05,293 by way of managing agency allowance and commission.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	1,75,006
Reserves ...	9,60,000	Stock-in-trade ...	4,35,324
Provision for taxation ...	91,143	Stores and spare parts	16,628
Liabilities ...	11,12,108	Debts, deposits and advances ...	95,469
Profit and loss account ...	6,022	Investments	20,26,395
		Cash ...	20,451
	Rs. 27,69,273		Rs. 27,69,273

Gwalior Rayon Silk Mfg. (Wvg.) Co., Ltd.

The directors of the above Company (Managing Agents: Birla Gwalior Private Ltd., Gwalior) submit the audited accounts of the Company for the year ended 31st March 1957.

The working of the Company for the year under review has resulted in a profit of Rs. 97,42,484 (Rs. 1,01,25,741) after providing for managing agents' commission for the year amounting to Rs. 1,38,931 (nil). This profit together with the balance of Rs. 1,06,74,790 (Rs. 5,49,049) brought forward from the previous year amounts to Rs. 2,04,17,274 (Rs. 1,06,74,790) out of which the directors have appropriated Rs. 1,32,00,000 (nil) which is equivalent to the normal depreciation and extra shift allowance up to 31st March 1957 leaving a balance of Rs. 72,17,274 (Rs. 1,06,74,790) to be carried forward.

The directors invite the shareholders' attention to the position with regard *to the adjustment* for depreciation and development rebate which issue is still open and the matter is not yet finalised. Thus the contention of the Company that no depreciation should be calculated, noted and given effect to for the purposes of the tax matter still stands. Subject to this, by way of a calculation for approximate loss in the value of fixed assets the directors have provided in the accounts a sum of Rs. 132 lakhs which is equivalent to the normal depreciation and extra shift allowance.

With effect from 1st December 1956, Government imposed excise duty of 2 annas per lb. on staple fibre and another 2 annas per lb. on staple fibre yarn, making a total incidence of 4 annas per lb. on staple fibre yarn, which proved to be a very heavy burden and made the manufacture of staple fibre yarn unremunerative. This contributed to the fall in the production of staple fibre yarn this year as compared to the last year. On the other hand, foreign staple fibre was imported in huge quantities during the years 1956 and 1957. These two factors adversely affected the demand for indigenous fibre very considerably and have resulted in huge accumulation of stocks with the factory. Thus although the extension of the staple fibre plant to increase the productive capacity to 40 tons of fibre per day was completed early this year, the production had to be curtailed to only 15 tons per day since October.

The directors have made strong representations to the Government for the removal of the excise duties at both the points and the stoppage of imports of foreign fibre. They are glad to say that no fresh import licences are now being granted. But the excise duty has been removed on yarn only. As staple fibre is a basic raw material like cotton, it is necessary that the excise duty on fibre also should be removed and the Company is making further efforts and representations in this respect.

The directors would like to explain the increase in the amount of stock-in-trade this year as compared to last year. In anticipation of the increased production of staple fibre, stocks of raw materials were laid out, but for reasons explained above, the increased production did not materialise.

The directors inform that the erection of the Pilot plants for the manufacture of *Rayon Grade Wood Pulp, Staple Fibre, Continuous Filament* and *Tyre Cord Yarns* has been completed and experiments are now being carried out on these plants.

The erection of the second extension is in progress and is expected to be completed by March next year. It is hoped that with the stoppage of further foreign imports, once the existing stocks are exhausted, it will be possible for the factory to go on full production of 55 tons per day after a few months.

The Company's weaving division at Gwalior is manufacturing wide range of quality fabrics, especially gents' suitings which are becoming quite popular with the public. The new velvet and tapestry looms have also started working.

Under the present circumstances when the factory is still running at a very low production, the directors do not consider it desirable to recommend any payment of dividend.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,00,000	Block ...	3,20,38,795
Reserves ...	2,25,000	Stock-in-trade	2,16,59,786

Announcement

CHANGE OF NAME

This is to announce that the name of the SUNDATTA COTTON-SEED UTILISATION LIMITED has been changed to:—

SUNDATTA FOODS AND FIBRES LIMITED

pursuant to the Certificate dated 19th December 1957 granted under the provisions of Section 23 of the Companies Act, *1956*, by the Registrar of Companies, Bombay.

New Citizen Bank House,
Palton Road, BOMBAY 1.

MALABAR STEAMSHIP COMPANY LTD.

SPEECH OF THE CHAIRMAN, MR. PRATAPSINH SHOORJI VALLABHDASS

ADDRESSING the shareholders of the Malabar Steamship Company, Ltd., at their Twenty-second Annual General Meeting held in Bombay on 9th December 1957, Mr. Pratapsinh Shoorji Vallabhdass, Chairman, made a plea to the Government of India for the inclusion of shipping in the core of the second Plan and to help the shipping companies to supplement their tonnage at a time when such tonnage was readily available at moderate prices.

The following are extracts from Mr. Pratapsinh's speech:

"GENTLEMEN.

"I have great pleasure in welcoming you all to the twenty-second annual general meeting of your Company. You have been supplied with copies of the balance-sheet and of the profit and loss account for the year ended 31st March 1957 which, I trust, you have read.

"It is satisfactory to note that the steady progress in the working of the Company has not only been maintained but improved upon in the year under report. The value of your fleet has increased from Rs. 88,44,931 to Rs. 1,71,75,659 through the addition of the s.s. *Janvda*; while your freight earnings have risen to Rs. 89,08,876, showing an increase of Rs. 30,85,538 over the previous year. Working expenses, as well as cost of upkeep, fuel, etc., have necessarily been higher, but after taking all these into account and providing for normal depreciation, the net profit earned by your Company came to Rs. 22,25,645 which, I hope, you will appreciate, is an indication of the careful and thrifty management of the affairs of the Company.

"In view of our sound financial position and the comparatively large surplus reserves accumulated by us, the extraordinary general meeting of the shareholders has resolved that a sum of Rs. 19,99,210 from the reserves be capitalised by the grant of one ordinary bonus share per every equity share held by the existing shareholders. Approval of the Controller of Capital Issues will be sought for the purpose. Your Directors also recommend payment of dividend on ordinary shares at 10 per cent. per annum, which I trust you will consider satisfactory.

Ships and Foreign Exchange

"The Export Promotion Committee, which has reported recently, has again recommended that it would not at all be unrealistic to plan for carrying 50 per cent. of our total overseas trade in our own ships within the next ten years and only then, we would be in a position effectively to diversify our exports and also develop new markets. Freight bills paid by India may be estimated at Rs. 200 crores per year and it would be possible to save half of it in case prompt measures are taken to give effect to the above recommendation of the Export Promotion Committee. India could then go forward with her future plans without begging for foreign aid. Even a five per cent. release of foreign exchange per year for purchase of ships out of Rs. 200 crores will relieve this country in the course of the next few years from the serious handicap under which Indian shipping is labouring today. Mere appointment of committees of enquiry will not and cannot do the trick. It has to be followed up by necessary action in time, if their labours are to bear fruit.

"The favourable prices at which modern-built cargo vessels are available at present may not continue long and I hope those in authority will realise that any foreign exchange released for purchase of vessels is an investment which saves immediately certain amount of freight payments going to foreigners and repays itself in the course of about five years after which it becomes a valuable permanent earner of foreign exchange.

"India's principal means of transport are four, namely, railways, airways, motor transport by road and ships. Of these, the first two are State-owned. Railways, moreover, have had a lead of nearly a century over modern Indian-owned steamships which are yet mainly run by the private sector. Our big brother, namely, railways, has claimed Rs. 1,125 crores out of the total amount of Rs. 1,385 crores provided for transport and communications under the second Five-year Plan. Not satisfied with this, it has since raised its estimated expenditure to Rs. 1,425 crores, and we are told by the Minister in charge of Railways that the higher revised estimates would not be affected by the present shortage of foreign exchange. The importance of an efficient railway service in the country's economy was recognised under British rule and will be readily accepted in free India as well. But in a well-planned scheme other essential transport services have also to be given due consideration. Railways do not earn or save foreign exchange. While Indian shipping concerns, including coastal shipping, for which it has become almost impossible at present to obtain exchange permits, may reasonably claim to save some foreign exchange. Inadequacy of Indian-owned ships over the coast may compel us to charter foreign tonnage for which charter hire will have to be paid in foreign currency.

Core of the Plan

"The Rail-Sea Co-ordination Committee has expressed the considered view that it is imperative that India must have a coastal tonnage of 420,000 tons by 1959. Our total tonnage is less than 300,000 tons and, unless active steps are taken forthwith to supplement it when such tonnage is readily available at moderate prices, the bottleneck in transport will continue to hamper the country's orderly progress for several years to come. I would, therefore, appeal to the Government of India and specially our Transport Ministry to see to it that shipping is included in the core of the second Five-year Plan having the same priority as railways and iron and steel. Further delay in tackling the problem of Indian shipping will keep us lagging further and further behind other advanced maritime countries. Consequently, the leeway to be made up will be so long that it will be impossible to make it up at any time in the future.

"If we remain indifferent and fail to acquire essential tonnage now, a much larger outlay will, I fear, be also required later on. In view of the declared policy of our Government for reservation of the coastal traffic to Indian-owned ships, India must have an adequate coastal fleet of her own to cater for all the needs of the country. The Government of India's announcement of July 1947 that India, like other important maritime countries, must adopt a dynamic policy with regard to shipping will be meaningless, if Indian-owned tonnage is found inadequate even to meet the country's coastal requirements after more than a decade.

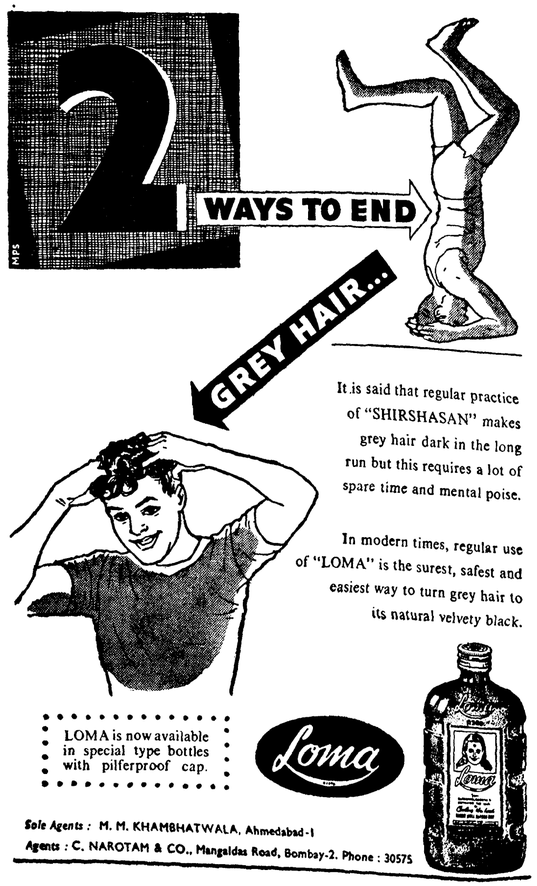
Capital Gains Tax

"The Government of India may be aware of the fact that an old steamer if sold cannot be replaced in these days except at a price several times higher than its selling price. Yet, Indian shipping companies are made liable to capital gains tax on the sale price and compelled to contribute larger amount from their scanty savings for replacement of old tonnage by better and more serviceable ships. Such a levy is unknown in any other maritime country and handicaps us in the acquisition of modern-built steamers.

"The development rebate of 25 per cent. granted to shipping companies in India is also far below that enjoyed by the more affluent British shipping companies and should in fairness to Indian shipping concerns be at least raised to that level, i.e., 40 per cent. Shipping in other countries are granted a number of concessions which Indian shipping do not enjoy. I appeal, therefore, to the Government of India to grant necessary relief to Indian shipping concerns to enable them to stand up in competition in the international shipping field.

"The Government of India are to be congratulated for attending to the improvement of facilities at the major Indian ports. The World Bank Mission recently visited Bombay and other ports to examine the extent of the loan required for the purpose. In other advanced countries, e.g., the United Kingdom, co-operation of national shipping interests is normally sought by the Government in such matters. I wonder why Indian shipping companies came to be ignored by our national Government. The latter should also have put forward suitable proposals for loan from the World Bank on behalf of Indian shipping for ports and shipping have to advance side by side and one cannot do without the other. I hope, in future, the Transport Ministry will not ignore the country's shipping interests in such consultations. The piece-rate system of payment introduced in the Bombay docks has proved beneficial to the workers and has expedited to a certain extent discharge and loading operations at Bombay. It is desirable that this wholesome practice is introduced at Calcutta, Madras and Cochin as early as possible in the interests of all concerned.

"Your Company's steamers the *Janeta* and *Januda* were useful to the Government to bring Burma rice to India. By October 1957, i.e., much before the end of the year, we successfully moved all the rice allotted to us. In view of this performance, we hope to receive a larger quota than 15 per cent. granted during 1957. Burma-India rice trade is more or less of the nature of coastal traffic and I venture to suggest that ships acquired by companies specially for overseas trade with Government loans at a lower rate of interest than that admissible for coastal steamers should not be allowed to cater for this traffic. For such competition will be somewhat unfair to coastal shipping."



CONSOLIDATED COFFEE ESTATES (1943) LTD.

(Concluded from page 34)

inaccuracy of the Enquiry Commission's conclusions and I am certain that when the time comes for investigation on this point in the coffee industry evidence will point to the same conclusion.

"In so far as this Company is concerned, our policies remain unaltered. Regeneration of existing areas continues as a normal part of our routine. Our balance resources are utilised to plant up our reserve jungle and former abandoned coffee.

Open Auctions

"The marketing of our coffee continues to be in the hands of the Coffee Board and, with the unexpectedly large crop harvested of 41,498 tons, their task must have indeed been a very difficult and unenviable one. It has long been realised that the present system of closed tenders, while adequate for the needs of the internal market, is a most unpopular method of marketing for foreign buyers. It is understood that the Board are proposing to introduce open export auctions. I am certain that this will be a step in the right direction, although its early effects may not be quite what we expect. This step should have been taken some four or five years ago when the quantity of coffee available for export was only nominal. It is never easy to change horses in mid-stream.

"The mere alteration in the marketing system will, however, not be sufficient to fulfil the requirements of the coffee industry. Curing capacity is now being taxed to the utmost. Our own works at Kushalnagar actually received 3,100 tons of the 1956-57 crop and did not complete its curing until the end of November. Although this works was only started in 1948, we have already reached over maximum capacity and cannot undertake any further substantial expansion. Other curing works are similarly placed.

"The establishment of new blood in the field of curing is urgently needed, but it would appear that the prohibitive capital costs of a new curing works and the limitation of its scope act as a deterrent to possible new comers. The quick preparation of coffee for the market will be of vital importance to the industry if and when conditions in the world markets become more competitive. Again, no market is complete without adequate buying organisations. What worked well under the system of sealed tenders may not be sufficient under conditions of open auctions. If satisfactory marketing for export is to be carried out, the market must be efficient in every respect and, with the prospect of a further recession in world prices, the coffee industry cannot afford the luxury of an inadequate marketing system.

Fertilisers

"The crisis in foreign exchange may well have unfortunate repercussions in our economy. The allotment of nitrogenous fertilisers for 1958-59 are to be cut by 45 per cent. and there is little chance of supplying the shortfall with organic manures. For example, the nitrogenous content of sulphate of ammonia is nearly seven times that of bonemeal or four times that of fish manure, and even if adequate supplies of organic fertilisers could be made available to the industry in Coorg, transport problems would undoubtedly completely defeat us. The disappearance of spare parts for spraying machinery and the difficulties of importing new equipment render more hazardous of success our constant battle against leaf disease.

"If we are to maintain our coffee trees in good heart, which is the fundamental in planting, we must be assured of adequate fertilisers and replacements of machinery to maintain our fleet of spraying equipment. That assurance at the moment seems somewhat lacking.

"The picking of our Arabica crop is now in full swing and we expect that we will about gather our estimates both in this and in Robusta. After such a large harvest last year a drop of 700 tons is not unreasonable; in fact, in comparison with our other years, the achievement of our estimates would be considered eminently satisfactory. It must, however, necessarily mean some considerable reduction in our total revenues in comparison with the year just ended.

"In conclusion, I would record our sincere thanks to the managers, staff and labour for the year's work; in particular, the managers whose efforts are so largely responsible for our success. In saying so, I would not belittle the good work of others. Success in planting is, however, dependent on sound organisation, administration and, above all, timing. Without a good team of managers, the co-ordination of our efforts would be lacking and results such as we have experienced for the past year would never be possible."

SUGAR

(Concluded from page 16)

reserves) is almost perfect at 0.97 and the regression of gross retained profit on gross profit after taxes is 0.71, indicating that a major proportion of any increase in gross profit after taxes was retained within the industry, to be added to depreciation or free reserves. In fine, the Association's analysis shows that, on the whole, the managements of sugar companies have been more anxious to plough back profits and expand their productive capacity than to distribute huge dividends. By implication this means that the present fiscal policy tantamounts to an unwarranted penalty on efficiency and prudence.

SALES TAX ON SUGAR STOCKS

In order to remove the difficulties experienced by dealers in regard to the disposal of stocks of sugar held by them on 12th December 1957, which is not liable to the additional duties of excise levied by the Government of India, the Government of Bombay has devised a scheme for the lump-sum advance payment of sales tax on these stocks. The scheme may be availed of by the dealers who are liable to pay sales tax and who voluntarily offer to pay it in advance.

According to this scheme, such dealers may make a lump-sum payment of their sales tax liability in respect of the said stocks of sugar, subject to certain conditions. The lump-sum shall be worked out on the basis of the percentage rates of the purchase price of sugar held in stock on the day on which the lump-sum payment is made. These rates are as follows:

In the old Bombay State area, the rate will be 3 per cent. of the purchase price of sugar on which only sales tax has already been paid and 6 per cent. where no tax has been paid;

in Saurashtra and Vidarbha, the rate will be 3 per cent. of the purchase price of sugar and in Marathwada the rate will be 5 per cent.;

as there is no sales tax on sugar in Kutch, the question of lump-sum payment does not arise.

Notices

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend of 3 per cent. on Ordinary Shares and 4 per cent. on Preference Shares has been declared by the Directors for the year ending 31st March 1958. The Dividend will be payable to those shareholders whose names appear on the Register of Members as on the 7th January, 1958, or to their Mandatees.

The Register of Members of the Company will remain closed from the 7th January, 1958, to the 14th January, 1958, both days inclusive.

By Order of the Board,
A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA-27, *23rd December*, 1957.

THE SVADESHI MILLS COMPANY LIMITED

IN PURSUANCE OF THE ORDER OF THE High Court of Judicature at Bombay dated the 1st July 1957 in the matter of the amendment of the Company's Memorandum of Association, the Svadeshi Mills Company, Ltd., announce that during the year ended 31st December 1957 the Company has made a contribution of Rs. 90,000 to the Indian National Congress.

For and on behalf of
THE SVADESHI MILLS CO., LTD.,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *2nd January* 1958.

THE TATA MILLS, LIMITED

IN PURSUANCE OF THE ORDER OF THE High Court of Judicature at Bombay dated the 1st July 1957 in the matter of the amendment of the Company's Memorandum of Association, the Tata Mills Limited announce that during the year ended 31st December 1957 the Company has made a contribution of Rs. 50,000 to the Indian National Congress.

For and on behalf of
THE TATA MILLS, LIMITED,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *3rd January* 1958.

THE BENGAL PAPER MILL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of the above Company has declared the following Interim Dividends on the undermentioned shares of the Company for the year ending 31st December, 1957, payable on or after 15th January, 1958, to those members whose names are registered in the Register of Members of the Company on 15th January, 1958. Dividend Warrants will be despatched to members and no application to the Company is necessary.

	Per cent.
Ordinary Shares	6
Cumulative Preference Shares (Free of Income-tax)	3½
'A' Cumulative Preference Shares (Free of Income-tax)	3½
'B' Cumulative Preference Shares (subject to deduction of Indian Income-tax)	3

Payment of these dividends is not to be regarded as an indication of the amount of final dividend, if any, which the Board may recommend. Any such recommendation can only be made when the final results of the year's working are known.

Notice is also hereby given that the Transfer Books and the Register of Members of the Company will be closed from 6th January, 1958, to 15th January, 1958, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *24th December*, 1957.

INDUSTRIAL APPLICATIONS OF STATISTICS

By G. K. Nayar, M.A., B.Sc.

STATISTICS is a science of comparatively recent origin and development. It has nevertheless made its mark in every field of human activity, such as agriculture, industry, animal husbandry, and other scientific studies. In the application of statistics, the Americans have gone much ahead; they have made statistical studies of even the private and personal affairs of their people such as love and sex life.

The science of statistics helps us to simplify masses of facts and figures and makes them easier to conceive and interpret. The human mind is incapable of grasping in its entirety all the measurings of considerable numerical data. With the aid of statistics, the relevant data can be sifted from the large mass of figures and presented in an easily assimilable form, by means of a few numerical values and graphs and charts. The manager of a factory, for instance, is not interested in a statement of production of individual machines. Being a huge mass of figures, it will be of little use to him. But, if the average production per machine per shift were calculated and if the maximum and minimum production figures together with standard deviation from the mean were evaluated, these few values would interest him considerably. Similarly, the measurements of sizes of one thousand customers are of no value to a manufacturer of ready-made clothes, unless the model size of clothes is known to him, on which he can base his production of the articles in question. The determination of the relevant figures like these involves certain statistical operations which, if carried out faithfully, would enable a producer to tackle the problems of production more realistically and scientifically than otherwise. Indeed the executives of large manufacturing firms are nowadays enabled by statistics to get at a glance information concerning any problem under investigation. Waste and inefficiency are thus eliminated and production is considerably increased. Thus, it is with the aid of statistics that the growth of a business firm can readily be traced over a series of years; and reasonable prediction can be made regarding the volume of business in future years.

Methods of Forecasting

In recent years, much work has been done in the development of methods of forecasting the volume of business and trade, again more in the United States of America than in any other country. Systematic forecasts of general business activity made both in Great Britain and the U.S. are based on the fluctuations in price index. The historical curves, carefully drawn are deemed to be a good device to know future trends. A slightly different method of forecasting, based on cyclical movement of statistical series relating to securities, market prices, production and bank rates, is also widely practised. Some of these series are looked upon as anticipators as a possible basis for prediction. Business men should not, however, rely heavily on statistical forecasts; but find it useful to consider them together with other information. For, as Mr. L. H. C. Tippett, Statistician to the Shirley Institute of London, referring to his experience in forecasting, says:

"Its achievement is useful but modest. The forecasts are frequently fairly near to the actual events but frequently also 'abnormal' conditions intervene to upset them."

These words of an experienced statistician are, no doubt, a warning to those who bank upon business forecasts as a sovereign remedy for getting rich quickly.

Any old traditional industry can do very well without science or statistics as long as it is worked on a small household scale. Such is, however, not the case when production is attempted on a large scale. In the early days, for instance, baking and brewing industries were purely household occupations, carried on by traditional methods; but, when tried on a large-scale thermometers, hydrometers and sacharimeters were introduced, and measurements, both quantitative and qualitative, appeared on the scene. Hence arose the need for statistical analysis. The next stage appeared when a change in the processes was found to be profitable. Using cheaper materials or shorter working hours was now deemed to be necessary; and mere rules of thumb ceased to be of any practicable value. Indeed the whole idea of scientific experiments arose from these trials. In order to improve a certain process of production, it became necessary to understand its scientific implications. This is the stage through which metallurgical industries have passed during the last century, and the old biochemical industries are now passing through. The textile industry in India is in the second stage.

The need of statistical knowledge in running a concern increases as the concern becomes larger and more complicated. One man can conduct the affairs of a small business with a few figures. But, as the scale of enterprise becomes larger, it becomes impossible for one man to have intimate knowledge of all parts. Hence the organisation is modified whereby men in central position work largely through statistical knowledge of the sections under their control. As more industries have fallen under the control of large combines, statistical knowledge has become increasingly important.

Production Planning

The planning of production in a large factory is now a part of scientific management and many firms now have a planning department to co-ordinate the activities of various departments. The requirements of the sales department with their delivery dates are translated into orders to the various production departments with intermediate delivery dates so arranged that the final products are delivered as required; these orders are translated into orders for raw materials, tools and labour and the whole activity is organised and timed so that the work flows without interruption. Moreover, in order to secure efficiency, the size of intermediate departments should be large enough to meet the demands upon them and yet not unnecessarily large. For this purpose, too, statistical returns and charts are required.

Statistics is equally useful in administration in providing measures of performance and efficiency. The work-load of various classes of workers is determined, and wastage of manpower is checked. Efficiencies, both man-wise and machine-wise are found out. Increase in man-efficiency sometimes diminishes machine-efficiency when more than one person works on the same machine. Such an increase of man-efficiency at the cost of machine-efficiency is not desirable. In a factory, average output per man-hour or per machine-hour and the percentage of the total materials wasted or spoiled are useful quantities. With the aid of such figures the operating efficiency of a concern can usefully be compared from time to time or from one section to another. The data do not aim at discovering the cause of inefficiency, if any, and much less do they show what to do to effect improvements; but they do serve as pointers showing where things are going wrong and where improvement may be sought. The task is no doubt tremendous, but the results more than justify the considerable expense and time involved.

A fairly recent development of the application of statistics is noticed in the field of quality control. Much of the modern industry is run on the lines of mass production. This involves making separately the standard parts of an article and then assembling them. If all parts were exactly alike, they would fit together exactly. The finished product would be exactly alike in character and quality and all would be well. But this does not happen. The raw materials vary largely in quality; important processing conditions such as atmospheric humidity and temperature also vary; the tools and machines used are in various state of wear and tear, and the operators, being mere human beings, can seldom be expected to work with perfect precision. The result of all this is that the products vary. Some components differ in size or shape from the standard so much that they fail to fit in in the final assembly; while some are too low in quality to give satisfactory performance. Hence arise a number of questions: what variations in quality or raw materials shall be allowed; must every component be inspected or only a sample; how much variation in quality may be regarded as normal. All these questions require for their answer a mixture of technical or statistical knowledge. The role of statistics lies in maintaining systematic records of quality, in ascertaining measures of variation, and in applying the theory of random sampling. This kind of use of statistics is extensively made in textiles, glass-making and engineering industries. The movement is spreading rapidly; and it is likely that statistics will one day be as widely used in technical control of industry, as it is now in commercial control and management.

Part to Play

Statistics also has a part to play in the development of policy. Its first part is that of calling attention to and describing the nature of economic or social problems. In the field of business and manufacture, enquiries that are usually made are: "Whether the sales of an article are decreasing?" "Are the costs of distribution in a certain area unduly high?" "Are there any undue losses in production because of the machines being stopped for repairs?" All these and many more are questions that must be answered statistically. The man of affairs often needs to know how the demand for an article is related to its price—the electricity of

(Continued on page 59)

The Engineering Export Promotion Council's participation in the International Trade Fair at Bangkok in December 1956 brought forth a spate of enquiries and revealed the great interest among our South East Asian neighbours in Indian engineering products. A Trade Delegation of the Council will leave for these countries this January and will gladly make contacts on your behalf with importers in South East Asia. Send in your proposals to:

DEMAND FOR MONEY PICKING UP

(From Our Own Correspondent)

BOMBAY, 8th January

The last three weeks under review witnessed fairly comfortable conditions in the short-term money market, though, during the last few days, the demand for bank credit showed signs of picking up. The movement of crop is said to have started sizably, but the consequent demand for credit was not heavy and banks were able to meet it without any difficulty. Earlier in the period under review, barring the call from banks for funds for window-dressing purposes, there was hardly any sign of activity in the market. Interest rates were well held at the previous levels, inter-bank call rate being stagnant at 2¾ per cent. Some business was reported to have been done at ¾ per cent. on 30th December, the last working day of banks for 1957. The rate among the smaller Indian banks stood at 3 per cent. House money at call continued to be bid at 4½ to 4¾ per cent., the latter rate being offered to large amounts. Short-term deposits fetched 4⅛ to 4⅜ per cent. for one to six months.

The Reserve Bank of India statement for the week ended 3rd January 1958 shows, as compared with that for the previous week, an expansion of Rs. 16.26 crores in notes in circulation. This rise has more than made good the net decline of Rs. 5.83 crores noted in the previous two weeks. Notes held in the Banking Department are only fractionally lower over the past three weeks. Total notes issued are, however, up by Rs. 9.54 crores and this is covered by a rise of Rs. 14.91 crores in rupee securities and a fall of Rs. 4.97 crores in foreign securities. The rise in the former occurred during the last two weeks only and the decline in the latter took place in the week ended 27th December 1957. The decline in foreign securities is accompanied by a fall of Rs. 6.42 crores in balances held abroad, so that the aggregate recession in foreign assets since 13th December 1957 is of the order of Rs. 11.39 crores. During the three-week period, Central Government deposits have shrunk by Rs. 3.03 crores, while that of other Governments have gone up by Rs. 3.13 crores. Deposits of banks have gone down by Rs. 10 crores. There has been a sharp rise of Rs. 15.49 crores in loans and advances other than to Governments, of which advances to Scheduled banks against usuance bills alone account for Rs. 10.57 crores. Investments are lower by Rs. 4.28 crores.

The Scheduled banks' statement for the week ended 27th December 1957, as compared with that for the week ended 6th December, discloses a rise of Rs. 2.74 crores in demand deposits and of Rs. 4.43 crores in time deposits. Inter-bank borrowings also have gone up by Rs. 5.62 crores and borrowings from the Reserve Bank by Rs. 9.88 crores. On the assets side, advances have jumped up by Rs. 21.99 crores, while bills purchased and discounted have declined by Rs. 6.47 crores. Investments stand strengthened by Rs. 5.27 crores, while cash balances have shrunk by Rs. 10.52 crores.

The turn of the year brought some cheer to the Gilt-edged market and there was a broadening of activity. The demand for short and medium dated Central loans and 4 per cent. 1967 and 1968 State loans which was in evidence for some weeks past broadened considerably during the last one week. Large parcels of these State loans were said to have changed hands at higher prices.

3 per cent. 1986 Conversion Loan had buyers at Rs. 71, but there was no change in the quotation. 3 per cent. 1970-75 had sellers at Rs. 85.70, that is ¼ per cent. lower than that three weeks ago. 3 per cent. 1966-68 rose by 15 nP during these three weeks to Rs. 91.40 and there were buyers even at that level. 3 per cent. 1964 was in demand at Rs. 93.90 and 3 per cent. 1963-65 15 nP higher at Rs. 93.65. 3 per cent. 1959-61 and 1958 were in request at Rs. 98.90 and Rs. 99.75, respectively. 3½ per cent. 1962 was marked up by 10 nP to Rs. 97.90. 3½ per cent. 1964 shed 5 nP to Rs. 97.70 and 3½ per cent. 1965 had sellers at Rs. 97.55 *ex*-voucher, as against Rs. 97.60 *cum*-voucher. Among the State loans, 4½ per cent. 1969 Bombay gained 5 nP to Rs. 99.75. 4 per cent. 1967 and 1968 Madras put on 10 nP each to Rs. 97.10. Andhra 1967 and 1968 were marked up by 45 nP each to Rs. 96.90 and U.P. 1967 and 1968 by 50 nP each to Rs. 97.

Since our last report, the rupee gained some strength in terms of the U.S. dollar, in consonance with the trend of sterling abroad. Banks' selling rate for ready dollars declined from Rs. 477 to Rs. 476.50 per $100 and their buying rate from Rs. 473.75 to Rs. 473 per $100. In New York, spot sterling improved from $2.80¼-2.80⅜ to $2.80¼-2.81. Three months' forward rose from $2.78⅛-2.78⅜ to $2.78⅛-2.78¼, while transferable sterling was unchanged on balance at 278.90-279 cents.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 6th January

The kip market rules firm. Tanners are not able to buy raw stocks in quantities or at U.K. tanned parity, due to severe competition from North Indian chrome tanners and Chinese tanners. Shipment business with U.K. has been limited and a fractional rise in prices has been paid by importers on selective purchases occasionally. As E.I. tanners do not have large stocks, the urge to sell has not been pronounced. Demand for lower grade cow hides for inland trade is brisk at attractive prices.

Arrivals of tanned cow hides and calves, as also buff hides and calves, have been restricted. Clearances by shippers is slow, on account of high prices demanded by sellers.

In the tanned skins section, tanners are in a well sold position and quote 3d. to 6d. above December levels which importers have declined to pay. Prices in the raw goat skins centres have advanced by over Rs. 50 per hundred skins, due to competitive buying.

The tanned sheep market—prime and semi-prime—ruled steady, while common tannages revealed a firmer tendency, due to short supplies.

Shipments during December 1957 were: To U.K. ports: 1,978 bales cow hides, 229 cow calf, 53 buff hides, 209 buff calf, 716 goat and 885 sheep; to the Continental ports: 4 cow hides, 20 cow calf, 11 buff calf, 642 goat and 270 sheep; to U.S.A. ports: 115 buff hides, 105 buff calf and 81 goat; to Japanese ports: 22 bales tanned sheep skins.

BULL SQUEEZE IN SILVER

(From Our Own Correspondent)

BOMBAY, 8th January

Trading in the bullion market during the last three weeks (since the date of our last report) was dominated by a bull squeeze in silver, which became strong during the closing days of the last (January) settlement. Induced by the shortage of floating stocks and by expectations that the sellers would not be able to give delivery, as also by hopes that the seasonal demand would soon pick up, some of the resourceful bulls forced prices up and exacted heavy penalty from the sellers. Forward silver (January settlement), therefore, touched on Monday last a peak of Rs. 190, which was Rs. 3 more than the 1957 high of Rs. 187. Ready metal came up to Rs. 189-8, which was, however, Re. 1-8 lower than the 1957 peak of Rs. 191. Gold, which was docile during the first two weeks, also became a little more active in the last one week and soared to a high of Rs. 109-8 for ready and Rs. 109-3 for forward (February settlement), the highest levels seen since 12th November last.

Today, however, silver suffered a sharp setback on bull liquidation induced by reports of heavy deliveries in the maturing settlement, following large arrivals from upcountry centres. This was reflected in the discount of As. 12 at which ready silver came to be quoted under the February settlement at the close, as against a premium of As. 14 which it commanded earlier in the day and as much as Re. 1-4 at one time yesterday. This sudden development affected gold also.

The extent of the bull squeeze in silver is reflected in the heavy *budla* charges which were demanded of sellers on the last day of business for the January settlement, that is, the 6th inst. Sellers had to pay as much as Rs. 2-2 on that day, as against only As. 9 a week earlier. It may be recalled that the carry forward charges, which were in favour of sellers at the close of the last settlement at Re. 1-4, turned against them on 27th December to one anna. Thereafter, the *budla* charges widened to as high as Rs. 2-2 against sellers on the 6th inst., as stated earlier. Consequent on the rise in *budla* charges, buyers in silver were asked to furnish a deposit of Rs. 500 per bar under by-law 33A. This was the first time after several months that bulls were able to dictate such heavy terms to the sellers, despite the fact that the seasonal demand has not been as encouraging as was once expected during this part of the year. Anyway, the bulls made a bold bid to exploit the situation presented by the low floating stocks in the city. Though they succeeded to some extent in their attempt, their calculations proved wrong with the unexpectedly large arrivals today. In fact, it is reported that they would not be able to take delivery of the entire quantity offered and have to make arrangements to carry over a large part of their purchases.

Silver for forward delivery (January settlement) moved up from Rs. 183-13 (on 18th December) to Rs. 190 on the 6th inst. before the settlement ran out at Rs. 189-13. The February settlement rose from Rs. 184-6 to a high of Rs. 188-4 yesterday, but reached at the close today to Rs. 187-7.

Ready silver was marked up from Rs. 183-3 to Rs. 189-8, before slumping today to Rs. 186-11. The floating stocks of silver are placed at 1,000 bars, as against only 600 bars a week ago. The daily average arrivals were of the order of 25 bars, while the offtake was only 15 bars per day.

Forward gold (January settlement) picked up from Rs. 108-3 to Rs. 108-8 on 24th December and, after a reaction to Rs. 107-7 on the 2nd inst., forged ahead to Rs. 108-5 before the settlement ran out on the 4th inst. The February settlement came up to a high of Rs. 109-3 from Rs. 108-1 on 18th December, but closed today at Rs. 108-11.

Ready gold gained from Rs. 108-13 to Rs. 109-8, before closing today at Rs. 109. The floating stocks of gold are reported to be 20,000 bars. The daily average arrivals were 2,500 tolas and the offtake also was of the same order.

The price of silver in New York, which was cut on 17th December from 89¾c. to 89¾c., was raised to 89¾c. on the 2nd inst. and further to 89¼c. on the 3rd. The London price, on the contrary, fell from 77⅞d. to 77¼d. for spot and from 77¼d. to 76⅞d. for forward. Gold also declined from 249s. 4d. to 249s. 1d. following the recovery of the pound sterling.

The following comparative table shows at a glance the trend of the market during the week under review:

	8-1-58	Highest	Lowest	18-12-57

COTTON FUTURES BUOYANT

(From Our Own Correspondent)

BOMBAY, 8th January

The cotton futures market began the new year on a distinctly bearish note, but picked up strength on the 4th inst. which persisted till the close today. The initial weakness was due to absence of buying support by spot houses in the wake of heavy arrivals of cotton, particularly Vijay, in upcountry centres. Further, the earlier reports of the damage to Saurashtra and Broach crop were said to be unfounded. There was renewed selling by bear operators and values of cotton futures moved downwards. On Saturday, the market experienced a recovery in prices, as a result of short-covering by professionals. The recovery gathered momentum in the subsequent three sessions. The bullish fervour of the market was fanned by four important factors—fears of deterioration in quality of Saurashtra cotton crop on account of adverse weather conditions, reported rise of five to ten points in prices in upcountry centres, steady improvement in cloth offtake, and fears of shortage of tenderable cotton. These factors induced good buying support and cotton futures prices moved up. Not only were the earlier losses completely made up but today's closing rates were higher than those on 31st December 1957.

I.C.C. Moglai Jarilla (March 1958) opened at Rs. 668½ on the 2nd inst. and dropped to Rs. 658 on Friday following reselling by bears. Thereafter, the contract gradually advanced to touch Rs. 680¾ today before finishing at Rs. 676. The net gain over the eight days ended today was Rs. 9¼. The trend of prices of the contract is indicated below:

(In rupees per candy of 784 lbs.)

	8-1-58	*High*	*Low*	31-12-57
I.C.C. Moglai Jarilla (March 1958) ...	676	680¾	658	666½

Influenced by the firm trend in the futures section, the spot cotton prices registered an improvement. There was enlarged mill demand for cotton, especially Berar and Khandesh. Vijay delivery provided a bright spot, thanks to rise in prices at Broach and short-covering by Bombay merchants at upcountry centres. Since the current price is higher by Rs. 30 at Rs. 865 as compared with the last clearing rate, a special clearing will be introduced in this contract.

Among exportable styles, Bengals evoked good enquiries induced by hopes of a further export quota in the near future. There are said to be about 25,000 bales of this cotton lying unsold against the quota released in October 1957. Japan has still not allocated sterling for import of cotton and, pending this allocation, the validity of shipping period should, cotton circles feel, be extended by at least three months, that is, up to the end of April next. Meanwhile, traders are awaiting the meeting of the Cotton Advisory Board to be held on the 10th inst.

In the foreign section, the issue of mill quotas for Sudan cotton out of the recent allocation of 30,000 bales is expected to undergo a change. It is understood that, before issuing individual allocation, the stocks of foreign cotton held by mills and also the quantity licensed in favour of mills out of previous allocation of Egyptian and Sudan cottons will be taken into account, apart from the average mill consumption in the past three sessions prescribed. Meanwhile, the shipping period in respect of East African lower varieties of cotton is reported to have been extended till the end of the month. The extension is, however, applicable only to cotton which remained to be shipped before the end of last month. An import allocation for higher qualities of East African cotton is expected to be announced shortly. It is learned that the unused P.L. 480 allocation for cotton under the Indo-U.S. trade agreement has been diverted to finance imports of foodgrains. The funds involved, it is said, covered the cost of about 300,000 bales of U.S. cotton originally programmed to be imported in equal quantities during the current and coming seasons.

The latest available spot quotations—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 595; Berar Jarilla 765; Khandesh 800; Oomra *Deshi* 710; Vijay 875; Hubli Laxmi 860, Jayadhar 750; *delivery contracts*: Vijay 865; Bengal 590.

A distinctly firm trend prevailed in the Karachi cotton market during the week under review. The firmness was aided by revival of overseas enquiries, especially from China and Japan. There was also good demand from indigenous spinning mills. Buying support ensued as a consequence and cotton values registered handsome gains. N.T.R.G. January delivery climbed up from Rs. 75-2 on 30th December 1957 to Rs. 77-5 yesterday. March position advanced from Rs. 75-11-6 to Rs. 76-10. The spot prices also recorded improvement. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton, the figures in brackets giving last week's prices:

Sind *Deshi* 71 (70); Punjab *Deshi* 69 (67-12); 4F Roller 80-2 (77-8); S.G. 84-1 (81-12); Punjab Roller 82-5 (80); S.G. 86-5 (84); 289F N.T. Roller 83-9 (81); Sind S.G. 90-1 (87-4); 289F Punjab S.G. 95-5 (92-4).

The Alexandria cotton market ruled easy during the week under review, with prices tending to decline. The free stocks of Egyptian cotton available for further export sales as on 15th December were 665,000 bales of 730 lbs. each. The bulk of this quantity comprised Ashmouni and Karnak varieties. Egypt is reported to have concluded a barter agreement with France for a value of one million Egyptian pounds. This agreement has reopened one of the principal traditional markets for Egyptian cotton. The latest available quotations—in tallaris per lb.—from Alexandria are given below:

Karnak: January 88.60; March 89.40. *Ashmouni*: February 71.95; April 72.40.

At the Sudan auctions held recently, buying interest was at a low ebb, in contrast to the active trading noted in the past four weeks. The unsold stocks of Gezira cotton are estimated at 222,559 bales, consisting of 96,059 bales of Sakel, 94,888 bales of Lambert, 20,500 bales of AL/WL and 11,112 bales of Kassala. In addition to these stocks, there is some private estimate and Tokar cotton to be sold.

The Liverpool cotton futures market put on a dull appearance, trading being confined almost entirely to professional interests. The near position tended to be firmer, reflecting the transfer of hedges into later deliveries. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 26.35; May-June 26.79; July-August 26.35; October-November 26.50; December-January 26.87. *American cotton mixed growth contract*: March-April 27.51; May-June 27.75; July-August 27.77; October-November 27.80; December-January 27.75. *Sudan Lambert seed contract*: January-February 33.80; May-June 33.90; July-August 33.90.

Steady conditions were in evidence in the New York cotton market during the week. Declines in forward deliveries were active, particularly through commission houses, with demand based on the growing belief that the loan rate for the next crop would be higher. The limited support was partly influenced by the increase in loan entries which for the latest reported week was the largest weekly total of the season. The aggregate ginnings of the current crop till 13th December 1957 were reported to be 9,200,665 bales. This figure, it is said, indicates that the final crop outturn may be even below 10.50 million bales, as against the official December estimate of 11.01 million bales. The Commodity Credit Corporation has sold a further quantity of 314,382 bales under the export programme at an average price of 28.30 cents per lb. for middling one inch cotton at average location. With this sale, the total quantity sold under the current season's export programme now comes to 4,429,198 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	7-1-58	31-12-57	24-12-57
Spot	36.45	36.40	36.55
March	35.80	33.75	36.14
May	36.02	35.92	36.25
July	35.98	35.78	36.03

CEILING FOR ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 8th *January*

The most important development of the week in so far as the yarn market is concerned was the announcement of the Government's export policy for cotton yarn and staple fibre yarn under the free licensing scheme (first-come-first-served basis) for the first half of 1958. As regards cotton yarns, exports up to 78 counts will be allowed freely within a ceiling of 60,000 bales, while the quota for exports of staple fibre yarn is fixed at 1.5 million lbs. The announcement failed to have any effect on the cotton yarn section, thanks to poor enquiries from handlooms and continued slackness in demand from overseas interests. Market circles felt that, with stiff competition from Japan, Pakistan and recently China, prospects of any considerable exports of Indian yarns were not bright. They noted that exports of yarns during the second half of 1957 were only about 20,000 bales, as against the export quota of 67,500 bales. Staple fibre yarns, however, reacted bullishly to the release of export quota and prices forged ahead. The market ignored reports of the recent large sales of 30s and 40/2 counts at very low prices effected by a leading upcountry mill in the wake of poor enquiries from consuming centres. In sympathy with staple fibre yarns and on reports of acute scarcity of stocks, particularly of the imported variety, rayon yarns ruled firm with a marked rise in prices of both foreign and indigenous yarns. Following the sharp rise in prices, offtake remained very limited and the stockists were able to secure satisfactory profits in their holdings. The silk weaving mills and handloom weavers were buying only small lots just sufficient for their immediate requirements, as they considered that the present prices were abnormally high and that they would not be able to realise satisfactory price for their products.

The buying spree in art silk yarn which started a fortnight ago continued unabated and there was a further sharp advance in prices. The quotation for 120 dull cones Snia yarn February delivery stood at Rs. 905 today—at one time, it had even touched Rs. 915—a rise of as much as Rs. 77 as compared with 18th December 1957. Following such a continuously steep increase in prices and with a view to preventing a further rise, the Yarn Merchants' Association and Exchange Ltd. fixed today a ceiling of Rs. 923 per case of 200 lbs. for the February delivery. It also imposed a penalty of Rs. 10 per case, if a seller failed to tender delivery in the contract. At the same time, the Association declared a special clearing today at Rs. 904 for Snia yarn and Rs. 576 for staple fibre yarn.

Snia rayon yarn (120 dull cones) February delivery met with excellent buying support and shot up by Rs. 32 to Rs. 905. There were no transactions in April delivery. In the spot section, 120 Japan rallied 35 nP to Rs. 5.19. 150 Japan advanced by 41 nP to Rs. 4.97. 150 Italy rose by 19 nP to Rs. 5.25. 120 Italy was firm at Rs. 5.25. Among indigenous yarns, National Rayons 150 Bt. cones first grade increased 13 nP to Rs. 3.89. 120 Bt. cones first grade spurted by 21 nP to Rs. 4.40.

Under the impetus of persistent bull support, staple fibre yarns (40 x 2) jumped by Rs. 26 to Rs. 576. No transactions were put through in the April position. Spot (40 x 2) New Greats improved by 18 nP to Rs. 3.12. Citys rose by 16 nP to Rs. 3.27. Kohinoors hardened by 14 nP to Rs. 3.26. Centurys gained 15 nP to Rs. 3.15. Among foreign yarns, Paramounts strengthened by 38 nP to Rs. 6.50. Fujis spurted by 32 nP to Rs. 6.44.

In the cotton yarn section, ten counts Podars declined by 13 nP to Rs. 13.37. Moderns were dull at Rs. 14.50. Twenty counts were neglected, Gokaks being quoted at Rs. 17.50 and Moderns at Rs. 17.62. Thirty counts Indus, however, were well favoured and rallied a rupee to Rs. 20.62. Forty counts Minaxis were dull at Rs. 24.75, as also Moderns at Rs. 25 and Gokaks at Rs. 24.50. Among 60s, Moderns and Raghuvamshi were unchanged at Rs. 59.50 and Rs. 57.75, respectively, while Finlays had support and put on 25 nP to Rs. 59.50. Eighty counts Mahendras were quiet at Rs. 69.75, Moderns at Rs. 72 and Finlays at Rs. 73.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	8-1-1958	31-12-57
Art silk yarn (per case of 200 lbs.)	Rs.	Rs.
120 dull Cones Snia February	905.00	873.00
December	—	851.00
150 Japan (per lb.)	5.19	4.84
150 Japan (per lb.	4.97	4.56
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.25	5.06
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 February	576.00	550.00
40 x 2 December	—	539.00
40 x 2 New Great (per lb.)	3.12	2.94
40 x 2 Century (per lb.)	3.15	3.00
40 x 2 City (per lb.)	3.27	3.11
Cotton yarn per bundle of 10 lbs.)—		
10s Podar	13.87	14.00
20s Gokak	17.50	17.50
30s Indu	20.62	19.62
40s Minaxi	24.75	24.75
60s Raghuvamshi	57.75	57.75
80s Modern	72.00	72.00

GROUNDNUT WEAK

(From Our Own Correspondent)

BOMBAY, 8th *January*

Since the last weekly report of the oilseeds market was published in these columns, the market experienced minor fluctuations in the last two weeks of December 1957. The year 1958 has, however, witnessed a notable decline in prices. This is attributed to heavy arrivals and the absence of export demand.

In the groundnut section, groundnut February 1958 delivery which closed last year at Rs. 159.12 opened the year 1958 still lower at Rs. 157.25. On the very next day it declined to Rs. 156.50. Heavy arrivals and weak upcountry advices tended to depress the market still further and the contract yielded ground to a low of Rs. 153.87 today. Groundnut bold receded from Rs. 32.12 towards the close of December to touch a low of Rs. 31.25. Groundnut oil changed hands at Rs. 17.37, as against Rs. 18.00.

In contrast to groundnut, linseed proved a steady spot in the local oilseeds market. This is said to be due to prospects in export business in oil in the United Kingdom. Linseed May 1958 closed the year 1957 at Rs. 31.37. It opened the year 1958 at Rs. 31.06 and improved to Rs. 31.25 on the 4th inst. On some profit-taking at the higher levels, it declined to Rs. 31.06 yesterday and still further to Rs. 31 today. Linseed bold ready was quoted at Rs. 30.62, as against Rs. 30.69 early in the week. Linseed oil was practically unchanged at Rs. 16.75.

It would appear that Indian castorseed is facing stiff competition from its Brazilian counterpart in the foreign markets. Castorseed May 1958 closed the year 1957 at Rs. 142.25. It opened lower at Rs. 141.50 on the 2nd inst. and was gradually hammered down to a low of Rs. 136.50 yesterday, though it recovered in today's dealings to close slightly higher at Rs. 137. Castorseeds Madras quality eased by Re. 1.13 to Rs. 27.87. Castor oil commercial moved down from Rs. 14.62 to Rs. 14.12.

Among other seeds, cottonseed February 1958 delivery was quoted at Rs. 95.25, as against Rs. 96.00 last week, kardiseed bold at Rs. 18.50, as against Rs. 19.62 and nigerseed Madras at Rs. 26.87, as against Rs. 26.62.

A quota of 5,000 tons each of nigerseed oil and kardiseed oil would be released for export during the licensing period January-June 1958. Announcing this, an Export Trade Control notice said exports against these quotas would be licensed freely on shipping bills as hitherto, duly supported by evidence of valid firm sale contract up to the end of September 1958 or till the ceiling was reached, whichever was earlier. Licensing of these oils would be stopped as soon as the ceilings were reached, the notice added.

The following table shows the closing prices of oilseeds and oils today as compared with those on 2nd January 1958 and 28th December 1957:

	8-1-1958	2-1-1958	28-12-1957
Groundnut—	Rs.	Rs.	Rs.
February 1958	153.87	157.25	159.00
Bold ready (per cwt.) ..	31.25	31.87	32.25
Khandesh quality ..	32.12	33.75	33.25
Linseed—			
May 1958	31.00	31.06	31.37
Bold ready (per cwt.) ..	30.62	30.69	31.00
Castorseed—			
May 1958	137.00	141.50	141.75
Madras (per cwt.) ..	27.87	29.00	29.37
Cottonseed—			
February 1958	95.25	96.00	96.25
Groundnut oil—			
Ex-mill ready (per quarter) ..	17.37	18.00	18.19
Castor oil—			
Commercial (per quarter) ..	14.12	14.62	14.69
Linseed oil—			
Ready	16.75	16.75	16.81

SUGAR MOVES DOWN

(From Our Own Correspondent)

BOMBAY, 7th *January*

The sugar market has been ruling extremely bearish since we reported last on 13th December. With the last Christmas monthly release, the sugar mills in Bombay-Deccan have received a quota of about 38,000 tons, the largest ever issued in a month's time. Following such a large release, arrivals have been heavy, while demand has not broadened. Consequently, sugar prices have suffered a setback. The fall would have been more marked but for some enquiries from the Malabar markets.

Large grain sugar is now quoted at Rs. 107-Rs. 111 per bag, including the additional Central excise, as against Rs. 110-Rs.115 three weeks ago. Medium grain declined by Rs. 2 to Rs. 105-Rs. 109. Small grain lost a rupee to Rs. 104.

Arrivals of sugar into the market in the past week aggregated 10,600 bags.

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 8th *January*

During the last three weeks of December 1957, we did not issue our usual weekly letter on Malabar black pepper, there being no new development worth reporting, particularly owing to intervening Christmas and New Year holidays.

During the week ending 8th January 1958, Malabar black pepper continued to yield ground with pressure of increasing arrivals of new crop. Daily new arrivals at Alleppey and Cochin averaged about 400 candies while, at Calicut, they were about 100 candies with prospect of further increase with the advance of the season. Prices at Alleppey sagged from Rs. 550 to Rs. 475, establishing a new low level. Garbled at Cochin came down from Rs. 95 to Rs. 82½ and Calicut to Rs. 505. Dealers in U.S.A. desisted from buying. Increased arrivals in Kerala, therefore, were not readily absorbed. Floating stocks continued to increase. A Russian steamer which was to lift 700 to 800 tons during the first week of January as part of about 2,000 tons sold to U.S.S.R. for shipments during December-January-February was delayed. As a result, exporters who were supporting the market off and on by their purchases against the sales to Russia withdrew and prices tumbled down. Heavy seasonal receipts added to the decline.

Malabar black is reported facing competition in New York market from Brazilian pepper too, though the quantity involved is reported to be limited. The general expectation that the demand from New York will develop during the first week of January did not materialise as spot continued to move down to $0.24½ after touching the highest at $0.26. Demand from grinders was very slow.

Singapore moved down to Str.$63 under pressure of selling of distressed parcels from Lampong. It was reported that Lampong was selling cheaper than Sarawak. Arrivals from Sarawak dwindled but those from Sumatra continued heavy in spite of trouble in Indonesia, as most of the holders in Lampong were bringing down their stock to Singapore.

In the A.S.T.A. section, business continued to be restricted. January-February-March was done at as low as $0.22. In the delivery section, prices moved down. February delivery is nominally quoted at Rs. 490. At the time of writing, small technical improvement was noticed owing to short covering but new buying at higher price remained absent.

The future of the market appears uncertain. If New York refuses to come out as a big buyer during the peak of the season, prices are likely to rule still lower. Weakness in ginger continued to exert psychological pressure.

Following are today's nominal quotations: Ready delivery Rs. 72 per Bengal maund and February Rs. 490-Rs. 495 per candy of 5½ cwts.

GOOD DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 3rd *January*

A quantity of 700,000 lbs. was on offer in Dust Sale 'A' which was held on Thursday, 2nd January. There was a very good demand which weakened slightly towards the close. Coloury medium dusts were well supported and were often 5 to 10 nP dearer. Other types were irregular and up to 5 nP easier. Best liquoring dusts sold well.

London Market.—*Sale of 30th December 1957*:—Market opened 3*d.* to 6*d.* dearer for Assams, but eased slightly at the close. Others irregularly one penny to 2*d.* dearer.

Sale of 31st December 1957:—Very strong demand. Best coloury sorts often one penny to 3*d.* dearer. Others irregular a few easier.

Colombo Market:—Very active demand. Considerably dearer, except plain UVA brokens and poor liquoring fannings.

Calcutta Market:—No sales this week.

Export Duty:—The Government of India announces that the price of tea for the purposes of determining the export duty for the month of January 1958 is Rs. 3.02, as compared with Rs. 3.35 the previous month. The duty remains unchanged at 38 nP.

Export Quota:—Since the New Year, there has been a firmer tendency and business has been done at 16 nP. At the time of writing there are sellers at 17 nP.

Forthcoming Auctions:—Dust Sale 'B' will be held on Thursday, 16th January. Sale 1 for Export will be held on 7th January and Sale 2 on 14th January.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale 1.*—1,700,000 lbs. Very good general demand, particularly for teas with improved quality which are considerably dearer. Others irregularly 10 to 15 nP lower except plain types which are about steady."

EXPORT TEAS STRONG

(From Our Own Correspondent)

CALCUTTA, 7th *January*

A small rise in demand was in evidence during the export auctions in tea held yesterday. Prices, however, did not show any improvement, in view of the poor quality of teas on offer.

Tea trade circles have noted with satisfaction the statement of Mr. D. M. Langton, Executive Director of the Tea Council of Canada, who was in Calcutta recently. Consumption in Canada is increasing. In 1956-57, India exported to Canada 20 million lbs., Canada's total imports amounting to 45 million lbs. During the current year, India's export to Canada is likely to increase by 500,000 lbs. Political troubles in Indonesia, it is thought here, may affect its tea exports. Although Indonesia's contribution to the world tea markets is insignificant—up to August last. Indonesia's shipments abroad aggregated 54 million lbs.—in the event of production there being affected, the world surplus will be less. Also, Russia has been buying more from Ceylon and India. These two factors together constitute an encouraging feature to the tea trade and may lead to an improvement in prices in auctions here.

In the meantime, the tea trade and industry continue to urge the Government to change its attitude in regard to export duty and other levies. Mr. S. C. Dutta, Secretary of the Surma Valley Tea Planters' Association, declared here recently that the export duty for teas selling below Re. 1.75 per lb. should be abolished. He warned that, if this was not done, most gardens in the Cachar and Tripura areas would have to face a grim future. Prices of common teas were mostly below output cost and, of the realisation, approximately 56 nP per lb. was paid as export duty, excise duty, Assam road tax, West Bengal entry tax and tea cess.

An almost similar strain was focussed in the speech of Sir Richard Duckworth in his presidential address at the annual meeting of the Calcutta Tea Traders' Association held here. Sir Richard regretted that the Government of India had not so far paid any heed to the Export Inquiry Committee's recommendation to accord assistance to producers of common teas by reducing export duty. He also called for foresight on the part of producing countries to regulate exports by common agreement and thus eliminate the surplus problem in the larger interests of the industry.

During yesterday's export sales, offerings amounted to 61,988 packages. There was strong general demand and prices tended to rise. Orthodox fannings with a clean black appearance were particularly a popular feature. Fannings rose by 10 to 14 nP, medium brokens and commons by 8 to 10 nP, and teas for price by 6 to 10 nP. C.T.C. Assam were fully steady and fannings in this category were steadier. Non-wither Dooars rose by 10 to 20 nP, having met with keen competition. There was good demand for medium B.O.Ps. with any quality, but other kinds in this category were quiet and irregular. Medium O.Fs. were sold above valuations. Prices of well-made whole leaf grades and Darjeelings also improved. The quotations were: Best Assam C.T.C. fannings Rs. 2.50 to Rs. 2.60; best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80; clean black pekoe Rs. 2.30 to Rs. 2.35; medium fannings Re. 1.78 to Re. 1.82; plain B.P. Re. 1.58 to Re. 1.62; medium B.P. Re. 1.64 to Re. 1.68; and plain B.P. Re. 1.58 to Re. 1.62.

Export quota changed hands at 18 nP, subsequently sagging to 17½ nP.

JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 7th *January*

The three-week period under review (from 17th December 1957 to date) witnessed quiet conditions in the jute markets. Although the year 1957 ended with better statistical position in jute goods than in 1956, prices gave way, as support from overseas countries was not appreciable. Contrary to earlier expectations, there was no sign of the seasonal increase in the U.S. burlap consumption, which in November was as low as 63 million yards, representing a substantial fall of 12 million yards, representing a substantial fall of 12 million yards as compared with the previous month; million yards as compared with the previous month; in November 1956, U.S. consumption was as high as 81 million yards. The average monthly consumption in the eleven months ended November was only 69 million yards, as against 73.3 million yards in the corresponding period of 1956. Such a decline in consumption was attributed to an extension of the returnable bag programmes and expansion of the bulk handling methods. There were fears that, in view of the damage to agricultural crops, Australia would lift less sacking bags from India in the coming months. This possibility, it was thought would also extend to Burma, where the first jute mill of the country has gone into production. It has 520 looms, of which about half are being operated now. It is reported that Burma is planning to set up a second mill of this size.

Another disquieting news for the jute industry has been the reported possibility of Brazil attempting to export its surplus production. Stocks by the coffee industry consequent on lower exports. However, to begin with, it will be difficult for Brazil to find an export market, as most consuming countries use bags entirely different in specification as compared to Brazil's production. So, while Brazil's present heavy stocks may not find a ready market abroad, it is felt here that mills there can change their production to suit the needs of foreign markets. Competition from this source may not, therefore, be immediate, but trade circles realise that the possibility exists in the near future.

On 17th December, prices of jute goods recovered slightly, following heavy speculative buying in hessian, the 40″ 10 oz. advancing from Rs. 39.55 to Rs. 39.75. Ready B. twills were quoted at Rs. 106.35, as against Rs. 106.20 on the previous day. Hessian 40″ 10 oz. rose further to Rs. 39.85, but gave way subsequently to Rs. 39.50, while, on speculative selling, B. twills sagged to Rs. 105.65. Soon, some shipper business followed to raise hessian 40″ 10 oz. to Rs. 39.65 and B. twills to Rs. 106.25. Holiday considerations and lack of follow-up demand caused the prices of the above representative constructions to fall to Rs. 39.25 and Rs. 105.90, respectively, on the 28th. On Monday, prices were maintained at Rs. 39.35 and Rs. 106, following due date manipulations in the *fatka* market. Prices at Rs. 39.40 and Rs. 106.30 were steady on Thursday. Some bear-covering was in evidence on Friday last, but, in the absence of genuine business, hessian 40″ 10 oz. and B. twills sagged to Rs. 39.30 and Rs. 105.85, respectively. Selling pressure caused prices to fall further to Rs. 39.20 and Rs. 105 towards the week-end. Yesterday, B. twills fell to Rs. 104.75, with the eight oz. hessian being lower at Rs. 32.50.

Mills accorded fair support to the raw jute market. During the period under review, they purchased more than 500,000 maunds. In the bazar also, fair business was done by way of covering against contracts at higher rates. This incidently maintained the quotations. Good demand from mills resulted in small gains in prices. On 17th December, northern bottoms were quoted at Rs. 26.25 and, after a temporary fall to Rs. 26 immediately thereafter, rose to Rs. 27 towards last week-end. The rise would have been higher but for the reserve attitude of sellers who welcomed business and accepted offers of mills and other buyers. The latest quotations for the different varieties for the January-February delivery are:

	Middles	*Bottoms*

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 6th *January*

Quietly steady conditions prevailed in the foodgrains markets during the fortnight under review. Government circles view the food situation in the country for the year just begun with cautious optimism, which stems from the adequate programme of food imports backed by the concentrated activities within the country. The position regarding wheat imports in 1958 is roughly as follows:

Balance under P.L. 480 from the U.S.A.: 450,000—500,000 tons; aid under the Colombo Plan from Canada: about 110,000 tons; normal marketing import as required under P.L. agreement: 400,000 tons; an additional quantity of over 600,000 tons is also expected under the recent agreement that unused allocations under P.L. 480 agreement should be diverted to foodgrains.

The position in respect of rice is not so satisfactory because it has not been found possible to augment imports of rice due to foreign exchange difficulty and high prices in world markets. About 500,000 tons are expected from Burma and about 200,000 tons are held in stocks as balance for 1957.

The Government of India has decided to impose restrictions on exports of all foodgrains from Bihar and of rice from Madhya Pradesh and east U.P., as these areas were adversely affected by recent drought. Procurement of rice is being continued in Andhra and the Punjab and the State Governments have been authorised to fix procurement prices of rice in accordance with local conditions but between Rs. 15 and Rs. 17 per maund as recommended by the Asoka Mehta Committee.

Wheat at Hapur ruled quietly steady to be quoted now at Rs. 15.75 per maund for average quality, while farm quality was quoted upto Rs. 17.12 per maund. Arrivals from producing centres throughout the fortnight were small, the average being 50 maunds daily, and, as consumer demand was being met from stocks, local stocks of wheat ran down by 5 *khaties* to 21 *khaties*. The corresponding figure last year was 55 *khaties* and wheat average quality was then quoted at Rs. 16 per maund. The conditions of the standing wheat crop here is not very satisfactory due to want of winter rains.

Rice recorded an improvement of about a rupee per maund during the fortnight, due to reports of overall shortage in the country. The latest prevailing prices here were: *Basmati* Rs. 27 to Rs. 30; *mainpuri* Rs. 23.75; coarse quality Rs. 20 per maund.

Coarse grains continued to rule steady. Demand for maize and bajra was fairly heavy, due to seasonal consumption, and arrivals were being supplemented from east U.P. and the Punjab. Gram was mostly unchanged. The local stock of 40 *khaties* is mostly State Government-owned which is being diverted to east U.P. for sales at the subsidised prices. The corresponding last year stock of gram with the trade was 60 *khaties* when gram was quoted at Rs. 13-4 per maund. Other coarse grains were mostly unchanged and were now quoted at: Gram Rs. 11.25 to Rs. 11.44; maize Rs. 11.62; *bajra* Rs. 12.37; *jowar* Rs. 9.25 to Rs. 11; *guwar* Rs. 12; oats Rs. 10.50 and *mathi* Rs. 13.25 per maund.

Pulses recorded an easy trend, as demand for peas and *arhar* and *dals* was very slack and conditions of the standing crops were reported to be satisfactory. Other pulses ruled steady, due to poor local stocks. The prevailing prices were: Peas *dara* Rs. 9.37; farm Rs. 10.37; *arhar* Rs. 10.12; *peas dal* Rs. 11; *arhar dal* Rs. 13.50; *urd* Rs. 16.50 to Rs. 18; *moong* Rs. 15.25 to Rs. 15.50; *massor* Rs. 15 per maund.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 6th *January*

The sugar markets ruled depressed during the week, on account of poor buying interest and heavy stocks lying unsold in the markets. Crushing for the season is in full swing. The upward trend in production of sugar which aggregated 289,000 tons by the middle of December, as against 265,000 tons a year before, also acted as a dampening factor. Stocks with factories on that date stood at 492,000 tons. The problem of increase in export of sugar has been engaging the attention of both the Government and the industry for some time past, but, as there is disparity in prices here and abroad, export is not at all remunerative.

Mill delivery prices of sugar in the Kanpur market recorded a fall of about 50 nP per maund, but spot prices tended to move up following revival of buying enquiry for immediate loading at Kanpur for Saurashtra. Ex-mill trading was very slack. The Muzaffarnagar markets, on the other hand, attracted good demand from consuming centres at unchanged price levels.

Following a sharp increase in arrivals in the producing centres and poor buying support due to off season for marriages, *khandsari* prices ruled depressed during the week. Prices ranged between Rs. 26 and Rs. 31 per maund according to quality.

An easy trend was noted in the *gur* market during the week and the price sagged by about a rupee per maund to Rs. 11.75 per maund for *pansera* quality and Rs. 13 for *balti* quality. Outside demand was slack and was being diverted to other smaller centres where prices are more favourably low. Loading facilities have slightly improved during the week. Daily arrivals are now at an average of 4,000 to 5,000 maunds and total arrivals from the beginning of the season aggregated 240,000 maunds, the corresponding figure last year being 280,000 maunds. It is now safely gathered that *gur* production in the season will not be able to touch the previous year's figure due to the overall loss in the cane crop. Prices in the Muzaffarnagar market also sagged and were now quoted at: *Chaku Minja* Rs. 13.12 to Rs. 13.50; *khurpa* Rs. 12.27 to Rs. 12.50; *ladu* Rs. 12.25 to Rs. 12.62; *pansera* Rs. 12.37 to Rs. 12.50; *shakker dara* Rs. 13.12 to Rs. 13.75; *masala* Rs. 14 to Rs. 14.75 per maund.

LINSEED WELL MAINTAINED

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 6th *January*

Linseed prices have been fairly well maintained, but the market is rather stagnant and general conditions remain unchanged. Both buyers and sellers are reserved. Although supplies of seeds are a bit freer, the offtake of oil is poor and crushers are operating on a limited scale. The overseas market for linseed oil, while it is not recording much actual advance, has appeared more active with a few enquiries from buyers.

The latest available quotation for ready-January is Rs. 23 per maund.

COPPER SHOOTS UP

(From Our Own Correspondent)

CALCUTTA, 7th *January*

The feature in the metal market during the fortnight under review was the acute shortage for copper. In fact, there was nothing on offer and consumers were in difficulty as production was being affected. The shortage was a result of the restricted import licensing policy in force from October. A ship containing copper is anticipated in the next few days, and only after its arrival and clearance after customs formalities which would take a few days, the present stringency would ease. More ships containing consignments on actual user import licences are expected to reach the port in a week or two, but since the supply position has become one of hand-to-mouth, the shortage is not expected to ease by any noticeable degree. Electrolytic copper soared to Rs. 167 from Rs. 158 and the fire-refined material to Rs. 165 from Rs. 156. Prices on the London Metal Exchange also hardened following threat of strike in a Chilean mine and the announcement of a cut in domestic production by a big producing firm in the United States, effective from 1st January. A firm each in Canada and Peru was stated to be following suit. The cumulative reduction in output would amount to about 52,200 tons a year, it was stated. Immediately after this announcement custom smelters in the U.S.A. raised their price by half cent to 25 cents a lb.

Tin opened at Rs. 508 and after rising to Rs. 519 closed at Rs. 516. There was shortage for the ready material and this coupled with the restrictions on exports from producing countries recently imposed by the International Tin Council led to the uptrend. Electrolytic zinc rose to Rs. 54.25 from Rs. 52. The uptrend was in sympathy with steadiness in the market as a whole, as the supply position was satisfactory. Lead closed at Rs. 60.50 after opening at Rs. 58. Only small quantities changed hands.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
* New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
‡—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1955 are on shares of Rs. 200 each.
For 1956 the dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

BRITISH ECONOMY

(*Concluded from page 8*)

both in passenger cars and commercial vehicles, very close to one-half of what it was producing. This is the best possible evidence of the continuing competitive qualities of the British engineering industry.

Some notable victories have also been gained in the new field of atomic power plants, where British industry has secured a clear lead over all its competitors.

Aircraft Industry

On the other hand, the year ended on a note of considerable uncertainty in the aircraft industry. It has been hit by changes in the Government's defence plans and by a contraction in the total amount of work available. It is, however, tackling these difficulties by measures to secure closer collaboration and, in some cases, complete integration between the activities of various groups of companies. Technical co-operation between the Bristol Aeroplane and Hawker Siddeley groups is an instructive example of positive response to new difficulties and problems.

Looking into 1958, two major question marks emerge. One is the uncertainty concerning the business situation in the United States. This must cause certain doubts about the ability of British industry to maintain its exports to the dollar markets at the high level of 1957. The other is the fact that a low level of commodity prices must impair the purchasing power of some of the traditional markets to which Britain exports. There is, however, no parallel between the late 1950s and the late 1920s. The world is not plunging into a major depression.

British industry remains, by and large, competitive, and is likely to retain its fair share of world markets throughout the coming year.

BANKING

(*Concluded from page 10*)

foreign, incidental to the times. Since then, the capital of the Bank has been more than once increased, the authorised capital from Rs. 60 lakhs to its present level of Rs. 1 crore and its paid-up capital from Rs. 12.80 lakhs in 1941 to Rs. 65 lakhs. The Bank's deposits have grown considerably, the pace of expansion being more rapid in the last two decades; they have swelled nearly tenfold from Rs. 3.30 crores at the end of 1937 to Rs. 32.56 crores at the close of 1956.

The Bank's profit, which amounted to only Rs. 2.43 lakhs in 1937, rose to Rs. 23.45 lakhs in 1946. It, however, declined to Rs. 12.57 lakhs in 1949. Thereafter, there was a steady increase to a peak of Rs. 45.71 lakhs in 1956. In 1957, the year of its Golden Jubilee, the Bank can be expected to have shared in the general prosperity for banks and establish a fresh record in its profit. From the very inception, the Directors of the Bank have been following a prudent policy of conserving as much as possible, with an eye on giving an adequate return to the shareholders at the same time. Thanks to this policy the reserves stand, as at the end of 1956, at Rs. 90.50 lakhs, that is nearly 150 per cent. of the paid-up capital. The distribution to shareholders ranged from 10 per cent. to 12 per cent. for some years, but was raised to 14 per cent. in 1944 and maintained at that level till 1948. In 1949, it was reduced to 11½ per cent. and kept steady at 12 per cent. during 1950 to 1955. It was stepped up to 13 per cent. in 1956.

The Bank has expanded its branches from 16 in 1932 to 120 in 1956. They are spread over seven States of the Indian Union, with three in the Federated Malaya States, and one each in Singapore and Ceylon. Even as early as 1908, the Bank had resolved to enter the field of foreign exchange. A beginning was, however, made in 1935, but the outbreak of World War II and the resultant complications of international finance prevented any large measure of advance. Since 1952, the

Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. XCVI. No. 2444 BOMBAY, 18th JANUARY 1958 PRICE: Re. 1.50

MR. MACMILLAN VISITS INDIA

MR. Harold Macmillan, British Prime Minister, has come and gone, after spending four pleasant days in New Delhi, in the company of the Ministers of the Union Government and the President of India. As this is the first occasion that a Prime Minister of Britain has visited the country, it stands out as a notable event in independent India's career. The purpose of his visit was mainly to foster goodwill between the two countries and strengthen the Commonwealth bonds. In this he has succeeded remarkably. It is true that, at one time, there were genuine doubts whether India would continue to be a member of the Commonwealth for long. But they are part of history now. There is still a microscopic minority belonging to Congress and non-Congress parties which is critical of India's association with the Commonwealth. But the vast majority of all those who count has no doubt whatever about the value of this link voluntarily forged by India itself soon after it became free. In recent months, Mr. Jawaharlal Nehru has repeatedly stated that he was not for severing India's connection with the Commonwealth, because, as he rightly contended, it might aggravate tensions already prevalent in the world. There are no doubt differences between India and Britain in their outlook and approach to international problems, but they will not cease by India quitting the Commonwealth. The differences have also not meant any practical handicap to the pursuit of Commonwealth ideals, because they are honest ones between two friendly free countries. The warmth with which Mr. Macmillan was welcomed at New Delhi, the heart of India, must have convinced him of the high regard which this country has for the Commonwealth, in general, and Great Britain, in particular. It is a pity that Mr. Macmillan could not visit such key centres as Bombay, Calcutta and Madras. Had he done so, he would have had more visual evidence of this regard and of the great strides this country has made in the economic sphere.

Although it was primarily a goodwill visit, Mr. Macmillan must have taken this opportunity to discuss with Mr. Nehru and his colleagues the latest world political situation as well as the economic problems, especially those pertaining to India's development plan. It is significant that he had long talks with Mr. T. T. Krishnamachari, India's Finance Minister. It is learned from sources known to be reliable that these talks constituted a continuation of their discussions in London when the Finance Minister was there in October last. These, it will be remembered, covered a review of the general position of the sterling area, Indo-British trade and prospects of British help to India for implementing the latter's second Plan. The outcome of the latest talks with Mr. Macmillan is not known, but unofficial advices suggest that nothing tangible has materialised. The Finance Minister is said to be convinced that, in its present state of economy, Britain is not in a position to do anything more than it has been doing for India. The resignation of Mr. Peter Thorneycroft and his deputy from the Treasury just a day before the departure of Mr. Macmillan for India must have fortified this impression. Mr. Thorneycroft's reason for giving up his post was that he was unable to agree with the rest of his colleagues in the Cabinet that the U.K. Government could afford to spend, in 1958-59, a little more than its current level of expenditure. He thought that it could not afford to incur an additional expenditure of even £50 million. He could not have chosen a more appropriate time to dramatise Britain's incapacity (according to him) to carry higher financial burdens. Whatever might be the other inconveniences to Mr. Macmillan consequent upon Mr. Thorneycroft's resignation, it must have come to him as a blessing in disguise at least in one respect, namely, for convincing his Indian friends that Britain is genuinely not in a position to spare more savings for India.

Beyond expressing sympathy and goodwill and admiration for the progress which India has made during the past one decade under the guidance of its devoted leaders, Mr. Macmillan has given away nothing. He recalled the help which Britain is rendering to India in the form of know-how, as also the fact that even today British business investments in India were substantial and ten times greater than those of any other single country. He also drew attention to the private capital that has been flowing into this country from some of the British manufacturers to work in partnership with Indian capital and skill. It cannot be denied that all this assistance is highly valuable. Despite the repatriation of sizable capital from such traditional industries as jute, cotton textiles and plantations in recent years, the fact remains that the value of British investments in India is higher than before. The total of all British business investments as at the end of 1955 was Rs. 391.99 crores, as against Rs. 347.28 crores on 31st December 1953 and Rs. 209.95 crores on 30th June 1948. A good part of the increase during the seven and a half years may be due to revaluation of assets. Besides, there has been a substantial outflow of capital since the end of 1955. Nevertheless, it would appear to be true to say that the inflow of capital, including the net profits retained in business, has on the whole been in excess of the outflow. If this excess has not been as large as is needed by this country, the blame must be laid at the doors of our Government, the politicians and the Indian business men to some extent. They did everything possible to discourage the flow of fresh foreign capital and to encourage the flight of such capital which had already been invested. It is only of late that there is a better appreciation of the role of foreign capital in an underdeveloped economy such as India, but precious little is being done to translate this appreciation into vigorous action. On the contrary, even today the Government of India is following, for ideological reasons and fear of domination by foreign vested interests, a policy which does not give full scope for foreign capital even in those spheres where it is prepared to take the necessary risk.

Oil and fertilisers are typical instances of the aforesaid point. There may be some point in arguing that, in order to avoid in future unpleasant developments of the type witnessed in the Abadan oilfields in Iran, it is better to associate indigenous capital with foreign capital for the development of basic industries and, since not enough domestic private capital can be found for such participation, the State must go in partnership with foreign capital. This may be true in the case of oil to some extent, but not of fertilisers. Even in the case of oil, a *via media* could be found, given the will and mutual confidence, a solution which provides safeguards for the future without reducing the quantum of foreign and internal capital resources needed for carrying out the various development plans. Instead of going into partnership with foreign capital right from the beginning, the Government could, for instance, reach an understanding with foreign investors for participation at a later stage, say, after ten or fifteen years. Failure to do so has already cost the country heavily by way of loss of foreign exchange and higher capital cost.

While this journal fully recognises the faults on this side, it must at the same time point out that the present British Government has failed to move with the times in regard to the method of rendering economic assistance to underdeveloped countries. It has been enlightened enough to receive foreign capital on a Government-to-Government basis, but not so when it comes to giving capital to other countries. We wonder as to what would have been the position of Britain if the American and the Canadian Governments had, instead of giving it huge loans at low rates of interest and repayable in easy instalments, asked it to raise its requirements in their respective capital markets or given it the same advice which it is tendering to India now. At the Press Conference in New Delhi last week-end, Mr. Macmillan said that the best contribution that Britian could make to help India in the implementation of its second Plan was bank credits and partnership between British private capital and the Government of India on the lines already taking place. He approvingly quoted the instances of the Government of India's deals with the I.C.I. and Burmah Oil for the manufacture of industrial explosives and the development of Assam oilfields, respectively. When asked whether Britain could give a direct loan of £100 million to £200 million to India, Mr. Macmillan gave a firm negative reply. "You do not lend a man when you already owe him £300 million," was his answer. If this reply means anything, it is that, as India is still having £300 million by way of sterling balances, there was no point in its seeking a loan from Britain. But, a little over a year ago, his Government had no hesitation to run to the U.S. with a request for a credit of $500 million from the Government-owned Export-Import Bank and $1,300 million from the I.M.F. (most of the funds of which is American money), even though the U.K.'s foreign balances stood at about $2,000 million. Did the U.S. Government give a reply to the British Government on lines similar to the one given by Mr. Macmillan at New Delhi? It is high time the British Government revised its views on this question. Britain must raise the rate of its savings if it is to retain its status as banker for the sterling area and stall the Russian economic offensive in Asia

INDIAN ROADS

IT is becoming increasingly clear that roads and road transport should get top priority in the economic development of this country. No longer is it necessary to think in terms of road-rail competition. If it is to be rivalry, it should be healthy competition in giving adequate service to those who need transport. There can be no real rivalry in a sphere where the opportunities for service are almost limitless and the capacity for rendering it strictly limited. In the last few years, there has been a commendable change in the attitude of the Government towards roads, in general, and road transport, in particular. Thanks to the persistent publicity given to the cause of roads and road transport by such organisations as the Indian Roads Congress and the Indian Roads and Transport Development Association, the public as well as the Government have begun to show a greater awareness of the essentially constructive role which roads and road transport can play in the national economy. Massive support has been lent to this cause by the Union Minister for Transport, Mr. Lal Bahadur Shastri himself and by the Estimates Committee of Parliament.

It is heartening to note that this interest in roads and allied problems continues to be maintained. For one thing, such interest has a topical significance, for, as is now well known, railway transport by itself cannot lift all the traffic which will become available as a result of the implementation of the second Plan, so that it has to be strongly supplemented by road transport. Secondly, in the absence of continuous publicity to road problems, there is a danger that roads might again suffer from the neglect which has generally characterised official attitude towards this problem in the past. In any case, the road problems deserve to be placed squarely before the public from time to time, in order that the interest which has now been evinced in them may be translated into concrete action, resulting in development of roads and road transport. After all, the leeway to be made up in the sphere of roads is so great that roads deserve all the attention and finance that could be given to them. The average road mileage per sq. mile of area is 0.2 in India, as against 2.0 in the U.K., 3.3 in Belgium, 2.4 in France and 1.1 in the U.S. In recent weeks, this service has been done by the Federation of Indian Chambers of Commerce and Industry also. It convened, in December last, a conference on transport in which the Indian Roads and Transport Development Association participated in full. More recently, the Transport Users' Conference, which held its annual session in Patna this month, and the Indian Roads Congress, which met at New Delhi early in January, have done much to keep alive the road issues. These meetings have been followed by the seminar on low-cost roads and soil stabilisation which was held at New Delhi last week under the auspices of the U.N. Economic Commission for Asia and the Far East.

The economic benefits of a wide and efficient network of roads have been stressed often enough. Roads help open up the countryside and become the means whereby commodities and goods are easily bought and readily marketed. But the one aspect which deserves equal recognition is the sociological impact of roads on the life of a community. From this point of view, Dr. Rajendra Prasad, President of India, did well to stress, while inaugurating the Indian Roads Congress, that good roads enable not only human beings to travel quickly and goods or commodities to be transported swiftly but also traffic of ideas to flow through. Emphasising that "this social and cultural aspect" of roads was in no way less important than the economic aspect, he said: "I, therefore, consider the existence of good roads as a vital factor in determining whether our society can become an equalitarian homogeneous one or will continue merely as a conglomeration of social groups leading their own separate lives and maintaining different levels of social and economic development." It should thus be clear that roads are an important factor in facilitating national cohesion or what our Prime Minister has so often stressed, emotional integration of the country. It is this factor which invests roads with a national significance that cuts right across the more parochial, sectional, regional and linguistic interests.

It is against this background that one has to assess the progress of road construction in this country. The Nagpur Plan, formulated in 1942, set a target of 400,000 miles to be reached in 20 years. This target was reduced in the light of partition, the reduced figure being 331,000 miles. At the end of the first Five-year Plan, the mileage for metalled roads rose to 121,000, as against the Nagpur Plan target of 123,000, and the mileage of unmetalled roads to 195,000, as against the Nagpur Plan target of 208,000. At the end of the second Plan, the mileage for metalled and unmetalled roads is expected to rise to 143,000 and 235,000, respectively. Reviewing the developments in the construction of roads, Mr. M. S. Bisht pointed out, in the course of his presidential address to the Indian Roads Congress, that, though the target of the Nagpur Plan in terms of mileage would have been more than reached at the close of the present Plan, there would be several shortcomings such as unbridged river crossings, sub-standard road surfaces and road widths. Clearly, this is a very serious matter. There is no point in building roads, if they are broken up in shreds or disjointed and end in blind alleys which will just lead nowhere. It would appear that the chief difficulty in constructing the necessary bridges is the paucity of foreign exchange which is to be spent on importing certain essential equipment. Mr. Bisht deplored that, "though the foreign exchange required for road projects is modest, even that is not available." It is to be hoped that the Central and State Governments will ensure that the foreign exchange component of the bridges is reduced to a minimum and that the minimum exchange so needed is made available for their construction.

Far more important than foreign exchange is the availability of internal finance for road development. The amount set apart for road development in the second Plan is Rs. 290 crores. In order to bring home the enormous cost of road development, Mr. Shastri cited certain interesting figures. If the current Plan target of road construction were reached, he said, they would bring India's road system to a stage where no village in a well-developed area would be more than five miles from a main road and in an underdeveloped area more than 20 miles from such a road. He added: "If, however, we were to aim at bringing every village within three miles from the main road in a developed agricultural area, within nine miles in semi-developed area and forest area and 20 miles in underdeveloped area, it would involve an expenditure of something like Rs. 4,000 crores." This serves to show that roads are large consumers of capital. At the same time, it must be recognised that they constitute a necessary investment in a developing economy. Indeed, they are the basis of all development.

In view of the high cost of building roads, efforts have been made to find out how far the cost could be reduced. In many regions, a metalled road is often costly, particularly when stone is not available within their vicinity. Further, the available traffic may not be large enough to demand a full-fledged metalled road. What is necessary is to construct roads which, unlike earthen roads, would not become slushy in rain nor a heap of fluffy dust in dry weather and which would, at the same time, be less costly than metalled roads.

MUTUAL SECURITY

NOTHING illustrates the U.S. Administration's wider conception of defence than the phrase "Mutual security." A welcome feature of Mr. Eisenhower's budget message is the reiteration of the American stand that military security for the country extends to frontiers beyond the U.S. and includes activities other than the purely physical aspects of defence. "An effective system of military security," Mr. Eisenhower said, "requires closer economic co-operation through trade, investment, loans and technical assistance with nations throughout the free world, so that they can develop their resources and raise their living standards." He added: "To the degree that this economic co-operation strengthens the internal stability and ability of those nations to preserve their independence, the cause of a just and lasting peace will be advanced."

The *raison d'etre* of the U.S.'s non-military mutual security programme was neatly summed up by Mr. Eisenhower when he said that, "as a country blessed with great natural resources, modern industry and high productivity, we recognise the compelling humanitarian reasons for helping less fortunate people abroad as we help them at home." He pointed out that the progress of some less developed countries which were "understandably impatient" of progress would be dangerously slow without outside help, despite their best efforts. He added:

"If Western help is unavailable or inadequate, these countries may become dependent upon the Communist bloc. We are concerned that they strengthen their independence and find prospects for improved living standards within a free society. It is my earnest hope that other free governments will also enlarge their efforts in advancing the development, trade and well-being of developed countries. In addition, without economic progress, military security may prove illusory. People who see little improvement in their economic conditions may question the value of the freedom that our mutual defence efforts are intended to preserve. The events of the cold war re-emphasise the importance of our helping to insure that peoples of less developed countries have faith in their future."

The sentiments expressed above are reflected in the mutual security programme, the break-up of which is as follows:

(Fiscal years in millions of dollars)

	Budget expenditure		Recommended authority for 1959
	1958	1959	
Major National Security—			
Military assistance—			
Present programme ..	2,200	1,846	..
Proposed legislation ..	..	854	1,800
Defence support—			
Present programme ..	945	575	..
Proposed legislation ..	..	310	865
Total ..	3,145	3,085	2,665
International Finance—			
Development Loan Fund—			
Present programme ..	20	174	..
Proposed legislation ..	..	..	625
Technical Co-operation—			
Present programme ..	136	103	..
Proposed legislation ..	..	46	164
Special and other Assistance—			
Present programme ..	448	266	..
Proposed legislation ..	..	193	486
Total ..	604	788	1,275
Grand Total ..	3,749	3,868	3,940

In determining the amounts, included in the table given above, the authorities have taken into account the use of local currencies obtained as counterpart for dollar assistance and from sales of surplus U.S. farm products. International finance is estimated to require $1.3 billion of expenditure in 1959 or $156 million less than in 1958. The decline is attributed to the fact that the Export-Import Bank had made a substantial disbursement under a previously authorised loan to the U.K. The lending authority provided in 1955 for the Export-Import Bank, which is a limb of American economic policy, will be fully committed till 1959. In order to assure continuity in the Bank's operations and also to provide for possible emergencies, the budget message carries a request for $2 billion in new obligational authority. Similar authority for some $625 million is requested for the Development Loan Fund. Explaining the need for such a fund, Mr. Eisenhower pointed out how, "in many cases, urgent needs for economic development in less developed countries cannot be financed by the Export-Import Bank or by other sources such as the International Bank for Reconstruction and Development or private institutions." For the recipient countries, the loans given out of this Fund carry the advantage that they could be repaid in local currencies as well as dollars. The budget message also carries a request for $164 million of new obligational authority in 1959 to carry forward the U.S. programme of technical assistance and to make possible larger participation by the U.S. in the U.N. programme for similar assistance.

Economic aid to other countries, important as it is, is only one aspect of what the U.S. can do to stimulate material progress in other countries. A far more important consideration is that these countries must have freer access to the great American market. "Trade, not aid" has been a slogan used by many countries which have been disappointed by the continued existence of high tariffs in the U.S. Realising the essential validity of the demand for larger trade with the U.S., Mr. Eisenhower emphasised that, "in order to pay for imports and goods and services from the U.S., other countries must be able to export to us." He also pleaded for a steady reduction of "unjustifiable" trade barriers. In this connection, he welcomed the European Common Market which has already come into existence and the Free Trade Area still under discussion. So far as the U.S. is concerned, he suggested that the Reciprocal Trade Agreements Act, which is due to expire on 30th June 1958, should be extended for another five years, with some new authority for the President to negotiate "gradual and selective" tariff reductions. He added: "In addition, I recommend that the Congress delete a rider which in past years has been attached to the Defence Appropriation Act and which virtually prohibits normal competitive bidding by other countries on many defence contracts." It is to be hoped that these measures will be approved by the American Congress. There is no gainsaying the fact that they would go a long way towards restoring equilibrium in the U.S.'s trade with the rest of the world, besides promoting the cause of free and multilateral international trade.

JESSOP & CO. OUT OF MUNDHRA GROUP?

T.I.S.CO. BONUS—ASSAM OIL—WORLD COFFEE

THURSDAY, 5 P.M.

THERE have been no outstanding developments in any of the markets this week, except that a firm trend has come to prevail in all of them. In shares, there has been a sizable speculative activity in Indian Irons and Tata Steels, followed by a further rise in their value. In textiles, some have looked up, while others have declined a little. Miscellaneous industrials have been dull, barring a smart rise in the long-neglected Wimcos. Among the popular counters in this section, Bombay Burmahs and Belapurs have turned quiet. All commodity markets have staged a sizable recovery. Raw cotton has spurted, owing to continued encouraging reports from the cloth and yarn markets, revival of buying by mills and the Cotton Advisory Board's recommendation that 50,000 bales of Bengals new crop and 25,000 bales old crop unusable short-staples be exported. There are expectations of a relief in export duty on Bengals, in order to make them competitive. All oilseeds and oils also have climbed up. Here, too, there has been good enquiry in the spot on account of crushers and *vanaspati* makers. Rumours of a cut in the export duty on castor oil also are current. Prices of even groundnuts and groundnut oil, which were sluggish last week, have advanced, presumably in sympathy with the heavy rise in copra and coconut oil in the world markets. In the Bullion Exchange, both gold and silver have appreciated further, due partly to bull pressure and partly to better offtake. The short-term money market has all the signs of revival of the seasonal demand. Inter-bank call money rate, which had eased to 2¼ per cent., has become 3 per cent., with some borrowers paying even 3½ per cent. Term and House money rates are, of course, unchanged, but they did not go down when the supply of funds was plentiful during the past few weeks. Many bankers, however, still feel that the demand for bank credit in the current busy season will be much less than in the 1956-57 season, as imports are down and domestic economic activity is expected to remain perceptibly subdued.

MARKET GOSSIP

* * * *

Arrangements are now complete for holding the public enquiry into the investments of the Life Insurance Corporation in the shares of the Mundhra Group concerns. A spacious room on the second floor of the Council Hall House has been made available by the Bombay Government which has also spared the services of one of its officers, Mr. Nadkarni, to act as the Secretary of the Commission. It is said that the room can accommodate about 150 members of the public. The enquiry is scheduled to begin on Monday the 20th inst. So far, no organised attempt seems to have been made by the interested section of the public in Bombay, as well as Calcutta, to tender evidence before the Commission. Very few are said to be in possession of authentic details of the Corporation's purchases, though there appear to be many who can express an opinion on the merits of the L.I.C.'s investments in the shares mentioned in the terms of reference to the Commission. They, however, wonder whether it will be in order for them to go to the Commission and air their views on what the L.I.C. has done. Much will depend on the nature of the proceedings which the Commission is expected to outline on the opening day of the enquiry.

* * * *

Meanwhile, we have been asked by the authorities of Jessop and Co., Ltd., to inform the public that their Company, though it was at one time in the "Mundhra Group," is now entirely free from that influence. "Mr. Mundhra," we are told, "is no longer connected with the Company in any capacity." It is, however, not clear whether he is still a shareholder of the Company and, if so, what is the extent of his holding.

The latest position of the Company and the results of its working in the year ended 31st October 1957 were explained by Mr. S. S. H. Sitwell at its annual general meeting held at Calcutta last week. The text of his speech is published on page 98 of this issue. It will be seen therefrom that the Company's order book is full and that, if sufficient steel becomes available, it should be possible for the Company to report encouraging results in the next two or three years.

The main drawback lies in the Company's financial position. Including the sum of Rs. 12 lakhs provided from the profit for 1955-56, the Company's reserves and surplus aggregate about Rs. 70 lakhs, as against the paid-up capital of Rs. 121.98 lakhs. Nothing is yet known about the fate of Rs. 60.24 lakhs which had been advanced to Mr. Mundhra's nominee in November 1956 for the purchase of 217,000 ordinary shares of Richardson Cruddas Ltd. Further, the present market value of the investment of Rs. 65.06 lakhs in the shares of this latter Company earlier must be much less, as this scrip has depreciated considerably since 31st October 1956, the date of the latest balance-sheet with us. There are many other complications and it is hard to say as to what exactly are the losses incurred by the Company as a result of the muddle in which it finds itself, thanks to Mr. Mundhra. Even Mr. Sitwell is cautious when he says:

"There is no disguising the fact that your Company has suffered severe damage, but, to adopt medical terms, the wound is not mortal, bleeding was promptly stopped and the patient is on the road to recovery. However, the days of convalescence are frequently difficult ones and there is no exception in the case of your Company."

In the aforesaid circumstances, how is one to assess the intrinsic value of the Company's shares? The L.I.C. now holds 20 per cent. of the ordinary capital of Rs. 1.02 crore and 70 per cent. of the 5 per cent. cumulative preference capital of Rs. 20 lakhs. It is thus one of the largest shareholders of the Company, though it does not hold the controlling interest. Nevertheless, the L.I.C. was successful in getting things done the way it wanted at the last annual meeting of the Company, as will be evident from the following brief but authentic account of the proceedings of the meeting:

"When the meeting came to consider the dividend of 12½ per cent. (or Re. 1-4 per share) to be declared for the year in question, Mr. S. D. Srinivasan stated that the Life Insurance Corporation of India, which he represented, believed that, though the Directors had recommended a dividend, it would be in the better interests of the Company not to declare any dividend for the year ended 31st October 1956. He pointed out that, since the first few days of December, when the Directors had considered the question of dividend, there had been numerous disclosures and rumours concerning Mr. Mundhra and his associations and he felt that, while the Company had escaped from what might be called the Mundhra Group, the whole situation was still somewhat obscure. He, therefore, strongly recommended that the other shareholders should follow the lead of the Life Insurance Corporation and strengthen the hands of the Company by all means possible, one of which was to forgo the proposed dividend.

"Mr. Sitwell, on behalf of the Board of Directors, said that, while the Board had certainly considered it possible to declare a dividend and had made their recommendation accordingly, it was also true, as Mr. Srinivasan had said, that much had happened during the last few weeks and, though nothing had worsened the Company's position since then, the Board could not but agree that it was sound policy to conserve the resources of the Company to the fullest extent possible. The Board was grateful, he said, for the practical spirit of help shown by the Life Insurance Corporation.

"Mr. Srinivasan's recommendation was then discussed at the meeting and various views were expressed. Finally, Mr. Arratoon proposed and Mr. J. N. Banerjee seconded that the Company should declare the original dividend as recommended by the Board and shown in the Directors' report. This motion was put to the vote and was lost by a large majority, it being evident that other major shareholders present supported the views of the Life Insurance Corporation. No dividend, therefore, will be payable on the ordinary shares for the year ended 31st October 1956."

The move initiated by the L.I.C. was undoubtedly the best that could be done in the present circumstances. It will help the Company to meet at least a part of the losses it has suffered. The dividend which has now been given up, it may be noted, was a relatively modest one as compared with the 30 per cent. paid for 1954-55, when the Company was under the control of Mr. Mundhra. It would have absorbed Rs. 12.75 lakhs. It is to be hoped that the new management will, with the assistance of the experts of the L.I.C., work hard and soon place the Company on a sound footing.

* * * *

For some days past, there have been reports that the Directors of the Tata Iron and Steel Company, Ltd., would soon announce a bonus issue in commemoration of the Company's golden jubilee. This report has now turned out to be correct. An announcement by the Company this evening says that its Directors "have decided, subject to the Government's approval, to issue ordinary shares as fully paid-up bonus shares in the ratio of one share for every five shares held by utilising the premium received on new ordinary shares issued last year and a small amount out of the reserves." It is reliably understood that the management of the Company has already discussed this proposal with the Government and that the latter has informally agreed to sanction it. Accordingly, it is optimistically felt that the formal consent of the Government is only a question of time.

In order to carry out the aforesaid proposal, the Company will require a sum of about Rs. 3.84 crores. As against this, the premium amount on the new shares is a little over Rs. 3.78 crores. Accordingly, it will have to draw from the reserves about Rs. 6 lakhs on which it will have to pay the bonus tax, assuming that it will be retained in the next budget.

If, as stated above, it is true that the Government has been consulted in this matter and that it has no objection to the Company's move, it represents a welcome change in the Government's attitude towards investors and is in refreshing contrast to its refusal to permit an increase in the dividend of the Indian Iron and Steel Company, Ltd., in the last two years. Considering that the T.I.S.Co. issued the new shares at a premium of Rs. 30 per share under compulsion from the Government and the last instalment of the amount due on the new issue was collected only about six months ago, it is an agreeable surprise that it has agreed, albeit informally, to the capitalisation of the premium amount. In effect, it amounts to allowing the Company to pay a higher dividend. That is why we feel that this development marks a significant change for the better in the Government's policy. Will the Government now agree to the capitalisation of the premium collected by the Indian Iron and Steel Company, Ltd., also on its new shares?

It is in a spirit of "all's well that ends well" that the signing of the agreement between the Union Government and the Burmah Oil Company for the formation of the rupee company to exploit oil resources in Assam, announced this week, will be welcomed by all. Even so, this decision has taken so long in coming that it is difficult to resist the temptation of saying that it had better come earlier. The prospect of formation of this company has struck the headlines in the Press far too many times to make what in journalistic parlance is called 'lead' news. Perhaps, much oil has remained untapped in the bowels of the earth in Assam, while the prospective drillers sat discussing on the surface as to who should own the oil when it is struck. This loss of precious time has not done anybody any good. The best that could be said about the decision to form the company is that it might have been infinitely worse if it had not been taken. This is not saying a great deal in its favour, for, as we pointed out on an earlier occasion (*vide Commerce* dated 14th December 1957), there was no valid cause for the long and, what appeared till recently, interminable, delay in the formation of the company.

The agreement signed by Mr. K. K. Sahni, Joint Secretary, Ministry of Steel, Mines and Fuel, on behalf of the Government of India, and Mr. R. P. Smith, Managing Director of the Burmah Oil Company, on behalf of the Company and its subsidiary, the Assam Oil Company, provides for the formation of a new company, to be named Oil India (Private) Ltd., with an authorised capital of Rs. 50 crores, divided into 500,000 shares of Rs. 1,000 each. Two-thirds of the capital will be provided by the Burmah Oil Company, Ltd., and one-third by the Government of India. The new company, as is now well known, will take over the assets of the Assam Oil Company in the newly discovered oil areas of the Brahmaputra Valley where 36 deep wells, most of them good producers of oil, have already been completed. We have in our 14th December issue already drawn the attention of our readers to the broad features of the agreement. It is not, therefore, necessary to go into them here. It is to be hoped that the delay in reaching the agreement will be made up by expeditious work on oil exploration, production and related projects.

Coffee consumers the world over are watching with interest the outcome of the international conference of coffee producers to be held in Rio de Janeiro on Monday next. The main object of the conference is to discuss the prospects of increasing coffee consumption. The convening of the world conference has a special significance, in that it is being held within three months after the main coffee producers of the Western Hemisphere had signed an agreement (in October last) in Mexico City to cut exports of coffee by 20 per cent. during the five months ending March 1958, so as to keep off the world market a substantial part of the surplus production and thus to arrest the slump in coffee prices. Obviously, the conveners of the conference feel that the mere withholding of the surplus coffee will not do and that efforts should be made to raise consumption also.

It is stated that an attempt is likely to be made by the signatories to the Mexico City agreement to persuade the African producers, who account for about 20 per cent. of world output, to join the agreement. It remains to be seen whether the Africans will readily agree to join hands with the American countries and restrict their coffee exports, as they are getting the benefit of a rise in prices of their produce by remaining outside the Mexico City agreement. For, during the last two months, following the agreement, there has been a rise in coffee prices and African coffee has shared this increase. The price of Uganda robusta (grade 15), for instance, came to touch a high of £266 per ton in London a few days ago, as against £250 per ton in October last before the agreement. It is now being quoted at £263½ per ton. Moreover, some of the African producers are making a bold bid to capture the world market. Last year, for instance, Belgian Congo and Ruanda Urundi produced 52,000 metric tons of coffee worth £40.8 million and exported 97 per cent. of it.

The signing of the Mexico City agreement was not, however, the only factor responsible for the rise in the price of coffee. The purchases of vast quantities of coffee in the local markets by the Brazilian Coffee Institute, the additional restrictions imposed on exports by Colombia, the quality control measures adopted by Mexico on its exports and the political developments in Indonesia which have adversely affected shipments from there, have all contributed to the rise in prices.

Although the European and U.S. roasters have restricted their purchases ever since the implementation of the Mexico City agreement, a substantial part of whatever they need has been met from African coffee, which is easily available, while coffee from Central and South America are not readily obtainable, consequent on the export restriction scheme under the Mexico City agreement. Another result of this agreement is that the interest of roasters has been diverted more to lower grades and the price differential between the higher grades and the lower ones has narrowed down, particularly in robusta, where the gap has almost disappeared.

One cannot foresee how long the Central and South American producers can stick to their stocks and how long the present upward trend in prices will continue. Be that as it may, India, though not a large producer of coffee to influence world prices, should see that it gets the benefit of the present rise in prices. The Coffee Board has, in the meantime, allocated 7,903 tons of coffee out

SHARE MARKET DULL

STEELS, HOWEVER, FIRM

(From Our Own Correspondents)

BOMBAY, *16th January*

THE cheerful tone noted on the Stock Exchange in the opening week of the year failed to be sustained in the subsequent week. For, barring the steel scrips and a few miscellaneous counters, equities turned dull and movements in prices were narrow and somewhat erratic. Expectations of getting foreign aid, following Mr. Dulles' statement that the U.S. would give further financial aid to India to help the latter carry out its second Five-year Plan, renewed hopes of a bonus issue by the Tata Iron and Steel Company and encouraging advices from Calcutta were the main factors which kept sentiment intact. The buoyancy in textile shares noted in the previous week, following reports of good offtake in cloth, proved to be short-lived and activity in this section did not show any expansion this week. On the whole, equities presented a mixed trend, but changes over the week were small.

In the steel section, Tata Ordinaries opened on a buoyant note at Rs. 165.75, but soon drifted lower to Rs. 163.75 on Monday. Subsequently, they slowly gathered strength and closed today at Rs. 166.25. The new shares gained over the week Rs. 2 to Rs. 158. Indian Irons gave way from Rs. 19.12 to Rs. 19.04 before advancing to Rs. 19.32 at the close.

Textiles were a shade quiet. After dropping from Rs. 50.90 to Rs. 50.40, Bombay Dyeings came up to Rs. 50.90 and finished today at Rs. 50.70. Centurys declined early in the week from Rs. 394.50 to Rs. 391, but soon recouped to touch a high of Rs. 397.50 on Tuesday. Subsequently, they reacted to Rs. 392 on selling induced by rumours that the State Trading Corporation might take over sales of rayon. Kohinoors were extremely dull, moving between Rs. 265.75 and Rs. 262.75 before closing at Rs. 265. Central Indias shed a rupee over the week to Rs. 84, in contrast to the sharp rise of Rs. 9.50 in the previous week. Finlays provided a notable exception with a rise of Rs. 6 to Rs. 259. Gckaks were unchanged at Rs. 156.50, while Indu Ordinaries were a shade better at Rs. 9.64. Indore Malwas were featureless at Rs. 118. New Greats were marked down by a rupee to Rs. 222. New Kaiser-I-Hinds declined by a rupee to Rs. 86 and Shree Niwas by Rs. 4 to Rs. 140.50. Simplex were done Rs. 2.50 lower at Rs. 157.50 and Standards Re. 1.50 down at Rs. 392.50. Svadeshis shed Rs. 2 to Rs. 169, but Tata Mills were a fraction better at Rs. 38.75. Ahmedabad Advances declined by as much as Rs. 12 to Rs. 118 and Coorlas by Rs. 9.50 to Rs. 125. Vishnu Mills changed hands Rs. 7.25 lower at Rs. 93.75.

Bank shares were cheerful and sizable gains were recorded in many counters. Barodas were well maintained at Rs. 106 and Centrals at Rs. 52.50. Centrals (new) were, however, taken up Re. 1.20 higher at Rs. 56. Bank of Indias put on 50 nP to Rs. 133.50 and their new shares Re. 1.25 to Rs. 135. Punjab Nationals gained Re. 1 to Rs. 50 and United Commercials Re. 1.70 to Rs. 61. Bank of Jaipurs were done 50 nP lower at Rs. 37.

Business in insurance shares was restricted. New Indias were a fraction lower at Rs. 49.50, as also British India Generals at Rs. 12.76. Orientals had business at Rs. 3,980, as against Rs. 3,830 previously.

Electricity shares ruled steady. Ahmedabad Electrics were unchanged at Rs. 95, while Bombay Suburbans gained a fraction to Rs. 107 and Surat Electrics Re. 1.25 to Rs. 108. Tata Hydros held their ground at Rs. 113, but Tata Powers dropped Rs. 2.50 to Rs. 1,140. Andhra Valleys were, however, higher by Rs. 7.50 at Rs. 1,098.75.

Sugar shares were quiet, with losses over the week on reports that the prospects for sugar exports were not very bright. Belapurs receded from Rs. 233 to Rs. 231.25, but gained to close at Rs. 232.50. Phaltans declined by Rs. 2 to Rs. 145.50 and Walchandnagars by Rs. 2.25 to Rs. 270.75. Cement shares fared none too well, A.C.Cs reacting from Rs. 150.25 to Rs. 149.25. Their new shares were, however, better at Rs. 77.30. Digvijays were dull at Rs. 135. Dalmia Cements looked up by 36 nP to Rs. 9.76 and Jaipurs were steady at Rs. 12.04.

In the engineering and mining group, Alcocks were marked down by Rs. 2.50 to Rs. 215, while Tata Locomotives, after drifting lower from Rs. 138.25 to Rs. 137, gained, on interested buying, to Rs. 138.50. Premier Constructions showed no change at Rs. 158.25. Larsen and Toubros were featureless at Rs. 12.64. Shivrajpurs were steady at Rs. 85 and Indian Coppers at Rs. 2.84.

Among shipping and automobile shares, Scindias came up to Rs. 17.24, before closing at Rs. 17.16, as against Rs. 17.08 a week ago. The good performance of the Company during the year ended 30th June 1957 failed to have any marked effect on the shares. Great Easterns were dull at Rs. 19.96. India Steamships were, however, in the limelight, moving up from Rs. 10.88 to Rs. 11.92 on good investment support as also on reports that the shares had been listed in the forward section on the Calcutta Stock Exchange. Hindustan Motors were quiet at Rs. 5.68, as also Premier Automobiles at Rs. 87.

In the miscellaneous section, Bombay Burmahs (old) reacted from Rs. 528 to Rs. 521, but the loss was partially made good when the shares closed today at Rs. 524. National Rayons were quiet at Rs. 215. British India Corporations were weak at Rs. 3.82, following the Stock Exchange authorities' decision not to allow any forward transactions in this scrip. Tata Chemicals were quiet at Rs. 12.24, losing over the week 24 nP. Tata Oils were unchanged at Rs. 35, while Wimcos were in favour, rising by Rs. 6.25 to Rs. 171.25. Gwalior Rayons were dull at Rs. 11, while Hindustan Levers were steady at Rs. 20.

• • • •

Calcutta Stock Exchange

CALCUTTA, *15th January*

Trading on the Calcutta Stock Exchange during the week under review was on a distinctly cheerful note. The main factors contributing to such a trend were the higher advices from Bombay, improved prospects of India getting foreign aid, and expectations of relaxation of import policy relating to industrial raw materials. The higher output figures of the two steel units continued to cheer operators, and speculative scrips added sizable gains during the week.

The improvement in tea auctions held yesterday, as well as New Delhi's reluctance to bring plantations within the scope of the Factories Act, assisted sentiment in tea shares. The recovery in the prices of jute goods, coupled with the announcement of satisfactory statistical position of jute goods as on 31st December, was duly reflected in the jute section. Mr. Dulles's statement in Washington on Friday last wherein he indicated that the U.S.A. proposed to give assistance to India was the first official reaction to India's request for loan, and imparted general support mainly to miscellaneous industrials. Similarly, the New Delhi decision to form an autonomous National Productivity Council was also noted with cheer, as this move was aimed at increasing production. Note was also taken of the reduced withdrawal from sterling balances following the recent cuts in imports, and trade and industry hoped that this improvement would enable Government to review the import policy and announce increased quotas for the principal industrial raw materials, particularly metals and steel.

Jutes responded to selective enquiries. Expectations of more business with the U.S. led to interest being shown in shares of mills producing more hessian than sacking goods. Indicative of the general improved trend, Nationals hardened to as high a rate as Rs. 26.50, as against Rs. 23.50 early in the week. Yesterday, however, the rate fell to Rs. 24.70. Anglo-Indias were one rupee better at Rs. 136. Fort Glosters, after being higher at Rs. 286 for a time, gave way to Rs. 284, while Dalhousies were as low as Rs. 57.

In contrast to the general trend, coals failed to attract buyers' attention, Burrakurs being unchanged at Rs. 22. Bengals were unchanged for most part of the week at Rs. 228, but spurted to Rs. 230 yesterday.

The improvement in the cloth market was reflected in cotton textiles. Cawnpores advanced to Rs. 4.62 from Rs. 4.44, Dunbars to Rs. 125 from Rs. 124, and Basantis to Rs. 5.68 from Rs. 5.50. Among minings, Indian Coppers were earlier affected by reports of strike in the mines. The rate sagged to Rs. 2.74 before closing at Rs. 2.82.

In the engineering section, Jessops fell to Rs. 19.12 from Rs. 21.75, as shareholders at their recent meeting decided to forego the dividend of 12½ per cent. recommended by the Directors in respect of the year to October 1956. Subsequently, a recovery set in to raise the rate to Rs. 20.93 following the Chairman's disclosure that the Company's working during the subsequent year was quite satisfactory. Texmacos were better at Rs. 16.35. Guest Keens were steady at Rs. 28.56. Indian Irons opened at Rs. 18.77 and gradually recovered to Rs. 19.40, but sagged to close at Rs. 19.07 yesterday.

Teas received more attention. Hantaparas were lifted to Rs. 121 from Rs. 108 previously. Hasimaras were fully steady at Rs. 22.62, as were Bishnaths at Rs. 19.37. Brooke Bonds were taken to Rs. 15.75 from Rs. 14.

Several miscellaneous industrials added gains. India Steamships on active support hardened to Rs. 11.62 from Rs. 10.87. Martin Burns picked up to Rs. 25.37 from Rs. 24.25. F. & C. Oslers recovered to Rs. 2.12 from Rs. 1.87, while B.I. Corporations receded to Rs. 3.94 from Rs. 4.11. Dunlop Rubbers were pushed up to Rs. 20.75 from Rs. 20.37, while Hindusthan Motors sagged to Rs. 5.56 from Rs. 5.84. National Carbons, after being better at Rs. 24.31, closed at Rs. 24.12.

• • • •

Madras Stock Exchange

MADRAS, *14th January*

The Madras Stock Exchange had only three sessions during the week, as it remained closed with effect from the 11th inst., on account of *Pongal* holidays. During this brief period, the market presented a fully steady trend. The volume of business transacted showed an improvement and prices registered a modest rise. The steadiness was aided by expectations of some tax relief in the ensuing budgets of the Union Government and Kerala State. Plantation shares evoked good attention of operators, following reports of enlarged offtake of tea at higher prices at the recent auctions. Traders would appear to feel that the trend would continue in the coming months, thanks to dock labour trouble in Colombo and recent political situation in Indonesia which were regarded as deterrent factors to exports from these countries. The statement of the United Planters' Association of South India that disturbances and indiscipline were continuing in the Kerala plantations had no effect on the market. Textile shares also met with enlarged buying enquiries on hopes that the improvement in movement of cloth stocks held with North Indian mills would lead to better offtake of yarn produced by the Southern mills. Sugar and miscellaneous industrials, too, evoked good support and tended to move up.

Among tea shares in the planting section, Parksides advanced by 30 nP to Rs. 14.50. Haileyburias and Emerald Valleys gained 5 nP each to Rs. 15.80 and Rs. 6.65, respectively. Ouchterloneys were quoted at Rs. 4.90, as against Rs. 4.85 on the 7th inst. Kil Kotagiris were better by 6 nP at Rs. 4.98. Blue Mountains rose by 3 nP to Rs. 2.93. Chembras gathered 2 nP to Rs. 2.80. United Nilgiris, however, receded by 30 nP to Rs. 15.40. Mlamallays retreated by 25 nP to Rs. 29.75. Among coffee shares, Kumergodes moved up by 10 nP to Rs. 6.65. Savamalais gathered 5 nP to Rs. 4.10. Sangameshwars were a shade better at Rs. 2.48. Coffee Lands, on the other hand, shed 10 nP to Rs. 28.50. In the rubber group, Midlands improved by 25 nP to Rs. 14.85. Puthutottams and Nelliampathys added 5 nP each to Rs. 2.70 and Rs. 2.60, respectively. T.R. & Ts put on 2 nP to Rs. 6.05. Vaikundams spurted by 75 nP to Rs. 27 cr., following issue of bonus shares in the proportion of two shares for every five shares held.

In the textile section, Lakshmis and Janardanas strengthened by Rs. 2, the former to Rs. 104 and the latter to Rs. 77.50. Rajalakshmis gained a like amount to Rs. 72. Ranga Vilas were higher by Re. 1.50 at Rs. 67. Bangalore Woollens, Buckinghams and Pankajas rose by a rupee each to Rs. 167, Rs. 156 and Rs. 45.50, respectively. Anglo-French improved by 50 nP to Rs. 77.50. Travancore Rayons gathered 45 nP to Rs. 11.20 and Loyals 25 nP to Rs. 38.

Sugar shares were well favoured. United Breweries and Kirlampudis gained a rupee each to Rs. 169.50 and Rs. 40.50, respectively. E.I.Ds hardened by 25 nP to Rs. 28.75. Deccans put on 12 nP to Rs. 7.90. Travancores gained 10 nP to Rs. 9.10.

Among miscellaneous industrials, F.A.C.Ts were marked up by a rupee to Rs. 5.25, on good buying support. Indian Aluminiums spurted by 48 nP to Rs. 13.10. India Cements advanced by 30 nP to Rs. 24.50. Spencers were higher by 25 nP at Rs. 17.

BANK PROFITS SLIGHTLY HIGHER

The two main factors which influence bank earnings during any year are the turnover of banks and the interest rates which prevail during the year. So far as 1957 was concerned, banks in India had a substantially larger volume of business than in 1956, thanks to the keen demand for credit during the major part of the year. They also raised their deposit resources, particularly time deposits, but they had to do it at a higher cost, in consonance with the general trend of money rates. Their cost of borrowing from other banks and from the Reserve Bank was also dearer. The increase in cost on this account was to a large extent met by a rise in their own lending rates, but the profit margin could not have been more than slender. It was, therefore, only through a larger turnover that banks were able to increase their profits during 1957. Though the preliminary results of working of banks for the past year, released so far, indicate that the profits for the year have established fresh record levels, the pace of increase in profits over the year is much less than that noted a year ago.

Bank of India

The working of the Bank of India Ltd. has resulted in a profit of Rs. 93.47 lakhs, as compared with Rs. 92.03 lakhs for the previous year and Rs. 84.91 lakhs for 1955. It will thus be seen that the pace of increase has considerably slowed down during the past year. The Directors have raised the provision for taxation from Rs. 28 lakhs to Rs. 30 lakhs, but they have not added anything to the reserve fund, which had received Rs. 8 lakhs from the previous year's profit. The dividend for the year has been maintained at 16 per cent. per annum, free of income-tax, made up, as in the previous year, of an interim dividend of 6 per cent. and a final one of 10 per cent. The dividend is, however, on a higher capital of Rs. 3 crores, raised in 1956 by the capitalisation of Rs. 50 lakhs and issue of bonus shares in the ratio of one share for every five, in commemoration of the Bank's golden jubilee. The bonus shares became entitled to dividend from 1957 onwards. The dividend distribution absorbs Rs. 48 lakhs, as against Rs. 40 lakhs in respect of 1956. The surplus left to be carried forward is Rs. 31.02 lakhs, subject to payment of bonus to staff, for which purpose a sum of Rs. 13.75 lakhs was utilised last year. After payment of bonus the surplus brought in to 1957 was Rs. 15.55 lakhs.

Bank of Baroda

The Bank of Baroda Ltd. is yet another bank to earn a record profit in 1957. The profit, at Rs. 43.85 lakhs, represents a rise of Rs. 3.95 lakhs over that for 1956. As in the case of the Bank of India, this increase does not compare very favourably with that of Rs. 10.25 lakhs noted a year ago. The provision for taxation has been raised from Rs. 15.75 lakhs to Rs. 21 lakhs and that for bonus to staff from Rs. 8.75 lakhs to Rs. 9.50 lakhs. The Directors have recommended a final dividend of 8 per cent. for the half-year ended 31st December 1957, same as that for the corresponding period of 1956, which, with the interim one of 6 per cent. makes a total of 14 per cent. for the year, to which level it had been raised last year from 12 per cent. paid for 1955. The dividend absorbs Rs. 14 lakhs, leaving a surplus of Rs. 4.11 lakhs to be carried forward, as against Rs. 4.76 lakhs brought in.

NEWS IN BRIEF

NEGOTIATIONS on a convention for the avoidance of double taxation between India and the Federal Republic of Germany, which lasted a week, have now ended in agreement on a good number of points. Some issues are, however, still left open for further consideration.

The fourth consignment of 3,500 tons of equipment comprising special bricks, clay and steel products from Russia for the Bhilai steel plant has arrived in Bombay. The freighter which had been chartered by the Russian Government is the second ship to be diverted to Bombay owing to congestion in the port of Visakhapatnam.

The next meeting of the Import Advisory Council will be held at New Delhi on 8th February 1958, when it will discuss the working of the current import policy and examine suggestions pertaining to the policy to be followed in the next half-year, namely, April-September 1958.

Consequent upon the revision of the initial rate of postage for inland letters for the first unit from 13 nP to 15 nP, a new postage stamp in the denomination of 15 nP in the current decimal coinage series of stamps for public use was introduced on 16th January. Another new stamp in the denomination of 90 nP, representing similarly the initial rate of postage for air mail letters to Europe, was also introduced on the same date.

The Government of Bombay has made arrangements for providing financial assistance and credit facilities to interested parties intending to start small-scale and cottage industries through the following agencies:—(1) The Bombay State Financial Corporation, Bombay; (2) the State Bank of India, Bombay and its sub-offices; (3) the National Small Industries Corporation (Private) Ltd., New Delhi; (4) the Director of Industries, Bombay; (5) the Director of Cottage Industries and Additional Registrar for Industrial Co-operatives, Poona; and (6) the Director of Fisheries, Bombay.

An Indian trade exhibition, designed to give visual publicity to the wide range of Indian export goods, will be held in Khartoum, capital of Sudan, for a fortnight from the middle of March. The exhibition which will be the first of its kind to be organised by India in the Sudan, will, besides promoting trade between the two countries, also demonstrate India's industrial progress since independence. It will be divided into five main sections dealing with machinery and engineering goods, semi-finished industrial goods and raw materials, agricultural products and general information on India.

Production of rice in Kerala is expected to increase by 345,000 tons by the end of the second Five-year Plan period, as against an estimated additional requirement of 1,400,000 tons. The present production of rice is put at 892,000 tons per year which works out to 6½ ounces per head of the population. On the basis of the present population, the State needs an additional 1,200,000 tons at the rate of 16 ounces per head. The population is expected to rise by 1,500,000 by the end of the second Plan period and to meet the needs of this increased population another 200,000 tons will be required.

Long-distance carrier telephone systems are being installed all over the country and an ambitious co-axial cable scheme connecting Bombay, Delhi and Calcutta at a cost of Rs. 8.5 crores is under execution, according to the Union Minister for Transport and Communications. The scheme will be completed within the second Plan period and will provide 960 speech channels, improving considerably the trunk traffic. A new technique of direct dialling has been introduced between Delhi and Calcutta which means that the trunk operator of the former can dial direct to the subscriber for whom the call is booked.

Five members of the 45-man Japanese Government technical mission which will finalise the Indo-Japanese project for the development of iron ore mines in Orissa arrived in Bombay on Friday last from Calcutta on a four-day visit to the city. Headed by Mr. S. Fujita of the northern section of the Japanese national railways, the five-member group comprising railway experts will make preliminary study of port and railway facilities in Bombay. Two other groups of technicians are now in India surveying iron ore mines and port and railway facilities in and around the country. Japan will partly finance the opening of the iron ore mines in Orissa, development of port facilities in Visakhapatnam and the construction of railway lines linking the port and the mines. The project is expected to cost between Rs. 15 crores to Rs. 25 crores.

From Abroad

Railway rates in Morocco have been increased by 12 per cent. This is expected to add 0.88 per cent. to the cost of living index.

Russia has offered to help Ceylon in establishing a factory for the manufacture of tyres, tubes and allied rubber products. This was disclosed by Mr. S. Padmanathan, Chairman of the Ceylon Rubber Research Board.

Australian manufacturers are said to be keen on establishing factories in Malaya in co-operation with indigenous capital. One Australian company has already announced its plan for setting up paint industry in Kuala Lumpur.

The Netherlands' deficit on the balance of payments account in 1957 is expected to be smaller than that in 1956. Interest rates in that country are tending to decline; the latest rate on Treasury Bills at 4¼ per cent. being lower than 4⅞ per cent. touched recently.

The British Automobile News Bureau has reported that more than 85,000 British cars were sold in the U.S. in 1957, as compared with 32,305 in 1956. According to it, British cars are now being sold by 1,600 dealers across the U.S.

The U.S. Natural Rubber Bureau estimates the total world production of all rubbers in 1958 (excluding the Soviet bloc) at 3,290,000 tons and consumption at 3,250,000 tons. It expects that the U.S. will supply 175,000 tons of synthetic to meet world demand in 1958.

The Federal Labour Office in Nuremberg states that the number of unemployed in West Germany rose by 733,750 to 1,212,866 in December, 1957. The increase was above expectations. Of this number, 72 per cent. was due to dismissals in the building industry.

The proposal to nationalise foreign-owned tea and rubber estates, banks and insurance companies, put forward by a section of the ruling party, was strongly opposed by the Ceylon Prime Minister, Mr. Bandaranaike, at a meeting of the Ceylon Government Parliamentary Group on the 7th inst.

A Bill to sell to private investors the State-owned Volkswagen concern, West Germany's largest car producer and exporter, has been tabled by Dr. Konrad Adenauer's Christian Democratic Party. It may be recalled that the same Bill was shelved in the last session of the Bundestag (Lower House), owing to lack of parliamentary time.

Production of gold in South Africa during 1957 touched a new high of 17,031,637 ounces, as compared with 15,892,935 ounces in 1956, which itself was far above the 14-year high of 14,602,267 ounces achieved in 1955. In terms of value, last year's output was about £213 million, as against £193 million in 1956, excluding a certain amount of miscellaneous production.

The annual report of the U.S. Shipbuilders Council shows that U.S. shipyards in 1957 had their busiest period in three years and that the outlook for 1958 is "reasonably good." During the first eleven months of 1957, orders were placed for 34 commercial vessels and for one survey ship. Of the 34 ships, 29 were tankers and four bulk carriers for service in the Great Lakes.

Following the lead given by the large corporations, American industry in 1957 extended profit-sharing to more of its employees, with a record number of new plans, notably in medium-sized companies. There are now more than 22,000 such plans in existence in the whole country. As many as 2,000 new profit-sharing plans were put into execution in the first three quarters of 1957 itself.

The Government of Malaya will be urged by the Malayan Mining Employees' Union to investigate into dismissals of staff by tin-mining companies and to ascertain whether there have been any "unjustifiable and arbitrary" dismissals. The reduction of staff by companies had been necessitated because of the restriction in output under the International Tin Agreement. A working committee has been constituted to investigate unemployment in the mines.

The value of the U.S. mineral output during 1957 was a record $18,300 million, which is $800 million more than in 1956. The increase in value was due almost entirely to higher prices for mineral fuels, particularly oil and natural gas. These higher values were enough to offset decline in production in most other minerals and drop in base metal prices. Natural gas and iron ore were the only major commodities to show sizable production increases.

The West German steel industry has placed its production target of crude steel for 1958 at about 26 million tons, as compared with a production of about 24.5 million tons in 1957 and 23.2 million tons in 1956. Presently, about 96 per cent. of the industry's productive capacity is being utilised. It is expected that output will increase at an annual rate of about 1 million tons in the next few years, in view of the fact that domestic requirements of steel are expected to rise to about 29.5 million tons by 1960.

The first Nigerian oilfield at Oloibiri, in the Eastern Region, started production less than 16 months after oil was first struck in September 1956. The Shell-BP Development Corporation at Lagos has announced that the first cargo of 1,200 barrels of crude oil arrived at the storage terminal at Port Harcourt, 65 miles from the oilfield, on Christmas Day. At present oil is being stored at Port Harcourt, until the full production of some 4,000 barrels a day is reached in February, when tanker shipments to Europe will begin.

The establishment of an Iraqi shipping concern which had been under consideration for some time has taken a definite shape following the approval by the Iraq Development Board of an authorisation of £1 million as capital for this project. The Ministry of Development has been authorised to place the amount at the disposal of this new national venture. At the request of the Iraqi Government, the World Bank had assigned an expert to study the project which is to provide sea-going transport facilities for Iraq's exports on a national level.

The East Central Nuclear Group and the Florida West Coast Nuclear Group of the U.S. have filed a proposal with the U.S. Atomic Energy Commission for a nuclear power plant of advanced design. The proposal calls for design, development, construction and operation of a high temperature, gas-cooled, heavy-water moderated, pressure tube reactor of 50,000 electrical kilowatts capacity. It would be designed as a prototype for a later 200,000 electrical kilowatt plant.

The Union Carbide Corporation of America has brought into operation a new plant at Lawrenceburg, Tennessee, which cuts the manufacturing time of industrial carbon products from eight weeks to less than eight minutes. The automated two-step method forms carbon products to shape in giant presses, while high electrical currents simultaneously heat the product to baking temperature. The process was made possible by a new method of mixing carbon flour and some form of tar or pitch as a binder. Initially, the new process will be used in the manufacture of carbon brick for furnace linings. It will eventually be extended to other carbon products.

Steel production in the United Kingdom aggregated 21.7 million tons in 1957, reaching the highest level ever attained. The increase in production was five per cent. above the 1956 output, according to the Iron and Steel Board. Though the above figure is a record, it is still three per cent. lower than the estimate of possible production made at the beginning of the year. The excess of exports over imports increased from 1.5 million tons in 1956 to 3 million tons last year. This was partly due to an increase of exports, and partly to reduced imports. The main reduction in imports took place during the first half of the year. Steel capacity available during 1958 is estimated to be sufficient to provide an output of 23.50 million ingot tons (for a 53-week year), but the Board points out that the actual production of most types of steel will depend on the level of demand.

PERSONAL

MR. Harold Macmillan, Prime Minister of the U.K., left New Delhi for Karachi on Sunday the 12th inst., after spending four days.

Sir Alexander Fleck, Chairman, Imperial Chemical Industries Ltd., arrived in Bombay from London last Saturday on a two-week visit to India.

Mr. Gopaldas P. Kapadia and Mr. Lalchand Hirachand have been elected President and Vice-President, respectively, of the Indian Merchants' Chamber for the year 1958.

Mr. M. K. Kripalani, at present Chief Commissioner, Pondicherry, has been appointed Ambassador of India to Brazil, in succession to Mr. L. R. S. Singh. He is expected to assume charge of his new assignment in June.

Dr. Hans Pedersen, a dairy expert attached to the F.A.O. Headquarters, arrived in Bombay from Rome on Tuesday. His visit is in connection with the second dairy project proposed to be undertaken in the city, and the Poona milk scheme.

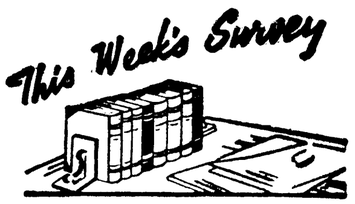
Mr. D. N. Shroff has been re-elected Chairman of the Silk and Art Silk Mills' Association Ltd., Bombay, for the seventh year in succession. Mr. M. S. Kapadia has been re-elected Vice-Chairman of the Association for the third year in succession.

Sir Owen Jenkins has been elected President of the United Kingdom Citizens' Association, central administration, for the ensuing year. The two Vice-Presidents elected are Mr. D. C. B. Pilkington, of Calcutta and Mr. S. Murray Scott of Bombay. Mr. D. Fordwood (Calcutta) has been appointed Honorary General Treasurer.

Mr. H. L. Murray, Managing Director of Mackinnon Mackenzie and Company (Private) Limited, has been elected President of the Bombay Chamber of Commerce and Industry for the year 1958-59, and will take office after the annual general meeting to be held in the second week of March 1958. Mr. Murray joined Mackinnons in 1928 and has served them in Bombay, Calcutta, Penang, Colombo and in East Africa. On completion of this last assignment he returned to Bombay at the beginning of 1956. He served as Vice-President of the Chamber during 1957-58.

Sir Harry Jephcott, Chairman of the Glaxo Laboratories Ltd., and Mr. H. W. Palmer, Managing Director of the Company, have arrived in Bombay, the headquarters of their Indian Company. They are expected to be in India for about two weeks.

Sir Harry has been Chairman of Glaxo Laboratories since 1945, and was also Managing Director until his retirement from that position early in 1956. He was appointed Chairman of the Council for Scientific and Industrial Research in 1956. Other public appointments held by him include the chairmanship of the Association of British Chemical Manufacturers (1947-48) and the presidentship of the Royal Institute of Chemistry (1953-55). During the last war, Sir Harry was adviser to the British Ministry of Food on manufactured foods, and visited the U.S.A. on behalf of the Ministry of Supply to report on penicillin production. He has been Chairman of the Council of the School of Pharmacy at London University since 1948 and is a Governor of the London School of Economics.



PRODUCTIVITY COUNCIL

THE Government of India's decision to set up an autonomous National Productivity Council is a reflection of its realisation of the importance of higher productivity as a means of increasing national output. The decision appears to be the outcome of the recommendation of the Indian Productivity Delegation to Japan which, in its report, strongly urged the establishment of a national council for undertaking a vigorous productivity drive. The I.L.O. productivity missions to underdeveloped countries have demonstrated how, with the simple application of modern industrial engineering techniques, productivity could be enhanced substantially without any additional capital outlay. It has been the experience of the missions that the existence of an official productivity organisation in the respective countries, backed by Government with qualified technicians and necessary administrative staff, is of major importance to the success of the missions' work. In Israel, the work of the productivity missions was a great success, because the Israel Institute of Productivity played a leading role in promoting productivity-consciousness among the people and effectively helped the missions in their tasks. It was in fact the staff of the Institute which did most of the work after they were imparted the necessary training. The absence of such an organisation in Pakistan proved to be the source of much waste of the expert's time and energies.

The National Productivity Council, to be set up shortly, is to be greatly welcomed. It will launch the campaign for increase of productivity initially in all spheres of industries, including large-scale, medium-scale, small-scale and light industries, and encourage and facilitate the establishment of local, regional and industry-wise productivity councils through which productivity services will be made available. The Council will have in it representatives of the national organisations and confederations of employers and labour, Government and representatives of other interests such as consumers, technicians, consultants, small industries and scholars. The total membership of the Council, of which the President will be Mr. Manubhai Shah, Union Minister for Industry, will be 60. The Government, employers and labour will have equal representation on the Council. It will elect a Governing Body in which the interests represented in the Council will be present in similar proportion. Dr. P. S. Lokanathan, Director of the National Council of Applied Economic Research, will be the Chairman. The Governing Body will elect two Vice-Chairmen, one each from among employers and labour representatives.

The productivity seminar held in New Delhi in November last had made certain recommendations regarding the general principles on which productivity drive in the country should be based. These principles have been generally accepted by the Government. For increasing the national wealth and *per capita* income and for improving the standard of living, according to the seminar, the people must first be made aware of the significance of higher productivity as the means of achieving the objects. It is, therefore, necessary to create among labour, management and the general public an attitude receptive to the idea of productivity thus ensuring a favourable climate of opinion which would facilitate the introduction and application of modern techniques for increasing productivity.

In a campaign for productivity, full co-operation of the employers, Government and other interests is indispensable. For ensuring this co-operation, certain broad principles on which the productivity campaign should be based were also outlined. It was stressed that, in the productivity drive, the objective should be to increase production and improve quality by employing better techniques which aim at efficient and proper utilisation of the available resources of men, machines, materials and power, raise the standard of living of the people and improve the working conditions and welfare of labour, taking into account the social implications of these changes. It was laid down that there should not be any intensification of workers' burden through increased work-load and speed-up. Other points made were: (1) specific measures should be taken to obviate the possibility of any unemployment, (2) benefits of productivity should be equitably distributed among capital, labour and consumers and that higher productivity should lead to the renewal and expansion of plant, machinery and equipment, (3) in order to achieve improvement in productivity in all sectors, productivity drive may eventually be launched in all the spheres of the economy. It was emphasised that, as increase in productivity could not be achieved without the fullest co-operation between management and labour, a proper climate of labour-management relation should be created through encouragement of joint consultations, participation of labour in management and promotion of mutual understanding.

GRADUATE UNEMPLOYMENT

How many of our university graduates get employment in Government and what proportion of them obtains jobs in the private sector? How long fresh graduates have to remain unemployed before securing jobs? Among the unemployed, what proportion are graduates in Arts and Commerce? What percentage of jobless men are graduates in Science? What is the incidence of unemployment among graduate women? These are questions which are highly relevant to a correct appraisal of the unemployment situation in India and availability of data concerning them will greatly facilitate employment planning in the country. But data regarding such questions, if at all available, are very inadequate and unreliable. In countries like Britain, independent bodies like the P.E.P. (Political and Economic Planning) have undertaken detailed surveys of graduate employment in Government and industry with a view to throwing much useful light on the pattern of employment and salary structure of graduates. In India, no such inquiry seems to have been made into the anatomy of unemployment. In the absence of reliable data regarding the magnitude and nature of unemployment among graduates, it is very difficult to estimate the dimension of the problem and plan the remedies accordingly.

Recently, the Manpower Division of the Directorate of Employment Exchanges, Union Ministry of Labour and Employment, however, undertook a study, of the pattern of unemployment among university graduates. The study, the first of a series being undertaken by the Ministry, revealed certain interesting details, though it covered only a limited area. The analysis was made on the basis of registration details supplied by 151 Employment Exchanges in the country regarding graduates seeking jobs through them. Particulars of 26,297 graduates were received and a detailed analysis was made of 25,785. It was found that the problem of unemployment among graduates was more widespread in West Bengal, Uttar Pradesh, Bombay and Delhi than in other States. Of the total number seeking employment, 24,425, or 92.8 per cent., were men and 1,872, or 7.2 per cent., women. It was found that the highest incidence of unemployment among women graduates was in Kerala.

The study revealed that 84 per cent. of the unemployed graduates held Bachelor's degree in Arts, Science or Commerce. Of this, 48.5 per cent. were B.As, 22.7 per cent. B.Scs and 12.8 per cent. B.Coms. In order to examine the relative incidence of unemployment among various degree holders, the annual outturn from universities was taken into consideration, as it provided an indication of the aggregate addition to the labour force every year. Comparing this with the percentage of unemployed registrants degree-wise, it was found that unemployment was relatively higher among those holding B.Com and B.Com. (Hons.) degrees than those with B.Sc. and B.A. degrees. It was also found that unemployment among M.Coms. was more acute than among M.Scs and M.As.

Of the total number of unemployed graduates, only 2.3 per cent. had secured first class, 24.8 per cent. second class and 72.9 per cent. third class. An analysis of the age composition of the unemployeds showed that 65.4 per cent. were below 25 years, 31.2 per cent. between 25 and 35. The remaining 34 per cent. were 35 and above. About 76.7 per cent. of the unemployed graduates had no previous employment. Only 23.3 per cent. reported previous employment. A high proportion of B.As and B.Coms had previous employment, as compared with B.Scs.

Analysis of the nature of employment sought by candidates revealed that those registered for clerical jobs were as much as 60.4 per cent. Nearly 95 per cent. of them were Bachelors in Arts, Science or Commerce. 19.5 per cent. wanted professional and technical jobs, whereas 15.7 per cent. required administrative and executive jobs. The remaining 4.4 per cent. sought other types of jobs.

FOOD PROBLEM

After nearly seven years of continued economic planning and development, the country seems to be coming back to an era of controls and rationing in the sphere of foodgrains. In the past few months, there have been persistent reports of scarcity pockets and soaring prices of foodgrains from different parts. The Governments of several States have already set up machinery for controlled distribution of food and the Centre is endeavouring to secure as much food as possible from abroad, entailing much precious foreign exchange. Indeed, the country finds itself today in a great food muddle from which it could have certainly been saved if there had not been false optimism about the food position and the second Plan had been drawn up on more realistic lines. It is, of course, true that the recent unexpected natural calamities of excessive floods in some parts and drought in some others have largely upset the food balance of the country. But there is no denying the fact that the authorities failed to make provision for such unforeseen contingencies. They did not care to replenish the Government godowns as and when they got emptied.

Be that as it may, it is somewhat comforting to be told by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, that the food situation is not at all depressing. Talking to Press men at Gorakhpur the other day, Mr. Jain stated that he had well fortified himself against the worst that might yet happen on the food front. He revealed that stocks of foodgrains had started arriving from Canada—these had been obtained partly on a deferred payment basis and partly under the Colombo Plan—and Burma (necessary sterling had already been arranged), and those from Vietnam and other countries had already reached India. The Central and State Governments together had at present over one million tons of foodgrains. Imports would continue and there would be no difficulties of foreign exchange. The general outlook of *rabi* crops, he said, was quite encouraging and the situation would considerably ease by March or April.

The large-scale imports of foodgrains from abroad may no doubt help alleviate the shortage for the time being, but the real, permanent solution to the food problem lies in raising output. The approach that India should go on importing food year after year is, as the Prime Minister rightly declared when he addressed the sixth meeting of the National Development Council's (N.D.C.) Standing Committee, an approach of defeat. He did not consider as practical, reasonable or logical the question of importing food for a long time to come, for he said: "If we function at that rate, even our rate of progress will be so slow that our great-grandchildren will be drawing up some wretched five-year Plan for another six inches of growth." The Prime Minister, therefore, urged a more dynamic approach to food production, and observed:

"I am convinced that the potential for India's food production is enormously greater than is commonly reckoned. It runs into hundreds of times. It is quite extraordinary how pessimistic we are about our capacity and about the capacity of the country. Naturally, food production does not increase by itself. It requires organised effort. Therefore, the fault is in ourselves, not in our stars. The fault is in the steps we take or the inadequacy of the steps, whatever they may be. The basic approach to the problem of increasing food production is through the Community Development movement, which has created an organisation that can help us very greatly. It can help us if it is fully utilised and directed properly.

"We should increase it (food production) mainly through intensive methods, not extensive methods. Intensive methods should be applied where water is available, where either irrigation is available or there is assured rainfall. Such areas amount to 100 million acres in the country and an increase in production of 50 to 60 per cent. should be secured there during the second Plan. This concentrated, intensive work can only be done by individual approach, by horticultural methods as it were, like the methods they use in Japan and China."

This is, indeed, a very correct assessment of the whole problem of augmenting the production of foodgrains, as well as of other agricultural commodities. The Standing Committee of the N.D.C. did well to give due thought to the different aspects of the agricultural programme. The discussions at the meeting revealed that, though there has been much fuller utilisation of the irrigation potential of major and minor schemes in recent months as compared with the position that obtained in March 1957 when the unutilised potential exceeded three million acres, there is nevertheless considerable time lag between the completion of projects and their utilisation. The lag is attributed to the failure to construct distributaries and field channels and, in some cases, to shortage of steel which has delayed installation of shutters and sluice gates. The Standing Committee emphasised that, in the Community Project areas, it should be the responsibility of the project authorities to have village channels constructed through local voluntary labour. Elsewhere, the State Governments should secure the construction of such channels and, if need be, spread the recovery of dues over a long period. After considering the relative yields per acre of rice and wheat in different States, the Committee asked the Planning Commission to take two steps: (1) to set up a special study group to examine the disparities in average yield in different parts of the country and to analyse as precisely as possible the reasons for these disparities; (2) to arrange for an examination of the existing agricultural statistics in respect of both area and production.

Summing up the discussions on the agricultural production programme, the Prime Minister struck a note of realism when he said that it was wasteful to spend large sums of money and then fail to derive full profit from them. In particular, he alluded to the tendency to think in terms of big projects and emphasised that the whole outlook should now be of availing ourselves of the existing resources to the fullest extent. There is considerable force in this observation, as also in his statement that due importance should be attached to programmes such as soil conservation, green manuring and development of subsidiary foods. Alluding to the co-operatives, Mr. Nehru said: "The co-operative movement is essentially a movement for human beings working together and building themselves up. This can only happen if responsibility is cast upon them. Care should be taken to see that the tendency to increase the number of petty officials is checked." These remarks are, indeed, very pertinent and deserve to be pondered by those protagonists of the co-operative movement who are all out to foster the movement through excessive official patronage and, possibly, some compulsion.

UNITED STATES' BUDGET

Military preparedness, coupled with an emphasis on economic development of the backward countries, forms the keynote of the budget message of President Eisenhower to the U.S. Congress delivered this week. It is of the utmost importance to the free world that the U.S. must be strong, both materially and morally, in order that it may discharge the obligations which the rest of the free world expects it to bear and which it has so bravely and cheerfully borne all these years. From this point of view, it is noteworthy that Mr. Eisenhower, in his budget message, has taken account of the need for promoting technological advancement in the U.S. as well as for facilitating and speeding up the economic progress of the rest of the free world. In effect, the budget reflects American determination to be prepared to meet any challenge to freedom and the international idealism which has for long guided its foreign economic policies.

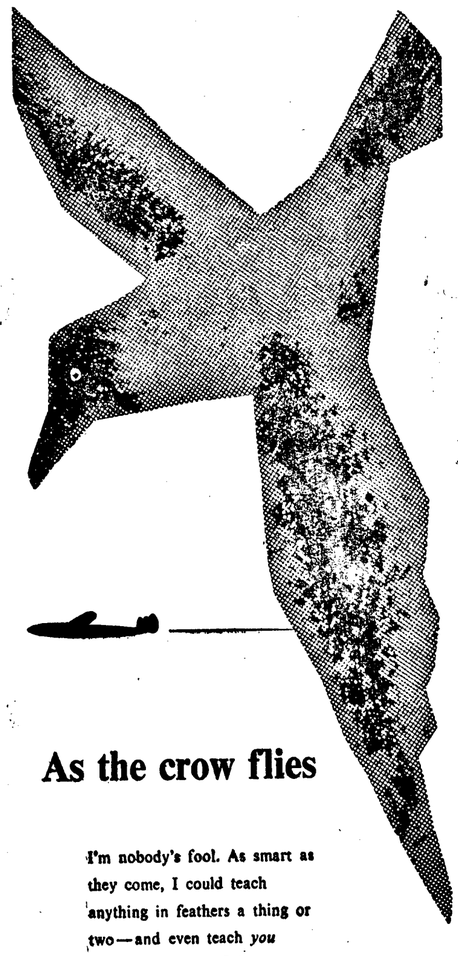
The estimated budget totals, for the current fiscal year and for the fiscal year 1959, as given by Mr. Eisenhower, are compared with actual results of earlier years in the following table:

(In thousand million dollars)

	Actuals		*Estimate*	
	1956	1957	1958	1959
Budget Receipts ...	68.1	71.0	72.4	74.4
Budget Expenditure	66.5	69.4	72.8	73.9
New Obligational Authority ...	63.2	70.2	74.4	72.5

It will be seen from the table above that the fiscal year 1958 will end in an estimated deficit of 0.4 billion dollars, while a surplus of 0.5 billion dollars is anticipated for the fiscal year 1959. The current estimate of receipts for the fiscal year 1958 is higher than in previous years. Even so, Mr. Eisenhower revealed that it is "somewhat smaller than earlier expectations, reflecting readjustment currently taking place in an economy following the rapid growth of the past several years." Budget expenditure is grouped under categories of protection, civil benefits, interest and general Government expenditure. A major share of the expenditure is accounted for by protection which includes expenditure for major national security and for international affairs and finance. This item will absorb 64 per cent. of the estimated total 1959 budget expenditure. The $47.1 billion (a billion=1,000 million) estimated to be spent on protection in the fiscal year 1959 is higher than in any year since 1955. Explaining the importance of protection, Mr. Eisenhower said: "Our security is an integral part of the entire free world. In addition to strengthening our own defence, we must improve the effectiveness of our partnership with our allies." Civil benefits, which include labour and welfare, will absorb $16.4 billion in the 1959 budget or 22 per cent. of the total. The estimate of 1959 expenditure for interest is $7.9 billion and expendiure for general Government $1.4 billion.

Among significant allocations, mention must be made of the increased allotment to the Atomic Energy Commission which, in the fiscal year 1959, will receive $2,550 million or $250 million more than the estimated expenditure for 1958, which, in turn, was $310 million above the total in 1957. "These increases," Mr. Eisenhower said, "reflect our determination both to increase the tempo of progress in achieving a greater nuclear military capability and to press ahead in our successful development of the peaceful applications of atomic energy." The total expenditure on the development of missiles will be $4.3 billion in 1958, and $5.3 billion in 1959, as compared with $3 billion spent in 1957 and $1.7 billion in 1956. In missile technology, there will be a marked shift of emphasis from earlier initial weapons to the more advanced types. The longer-range missiles will account for nearly half the missile programme for 1959. This programme includes construction of naval vessels and equipment. Most of the ships under this programme, it is stated, will be new types, including the first nuclear-powered frigate. Expenditure on research and development under the defence budget will amount to $2,256 million in 1959 or 50 per cent. more than in 1958. This increase obviously reflects the Administration's determination to win the race in applied science and technology, which is of incalculable significance to military and material advancement.



As the crow flies

I'm nobody's fool. As smart as they come, I could teach anything in feathers a thing or two—and even teach *you* when it comes to flying.

But A-I.I.—they're a different proposition! Like me, they too fly swift and straight. And although I hate to admit it, they're a trifle faster than I am. So let them fly your goods to Tokyo. Air-India flies to Bangkok, Hong Kong and Tokyo twice a week— Every Sunday and Thursday. Fly as the crow flies. Be first on the market.

BRITISH PRIME MINISTER ON INVESTMENT PROSPECTS

FALL IN FOOD PRODUCTION EXAGGERATED?

From Our Special Correspondent

NEW DELHI, *14th January*

DELHI LETTER

NEW DELHI extended last week a warm welcome to Mr. Harold Macmillan, the first British Prime Minister ever to visit this country. His visit probably also symbolised the first serious attempt by Britain to force the Commanageable in a way that force making for peace in the world. Beyond this, the visit had also the significance that it gave the British Premier the opportunity to clarify Indo-British economic relations. In a broadcast over the All-India Radio, Mr. Macmillan pointed out that, in the first five years of India's independence, British investment in India was 10 times greater than that of any other single country and the total of such investment today represented about 82 per cent. (Rs. 400 crores) of the total foreign business capital in this country. Incidentally, he referred to the fact that, during the period 1946 to 1955, the United Kingdom provided nearly three-fourths of the foreign capital investment in Commonwealth countries within the sterling area. Mr. Macmillan emphasised the point that, despite the drain on her resources in the last two wars, Britain still remained by far the largest source of capital for economic development in the Commonwealth.

Subsequently at a Press conference, Mr. Macmillan said that the best contribution that Britain could make to India's second Plan was through provision of bank credits and partnership between private British industry and the Government of India, which was already taking place, and by a sufficiently flexible policy to enable India to draw from her sterling balances. He, however, hoped that, as a result of American and West German assistance, India would be able to get through without drawing too much from the sterling balances. Mr. Macmillan explained this by saying that he had partly in mind the effect of too much withdrawal from the sterling reserves on the value of Indian currency and partly the effect on the sterling area in general. The banker's liabilities would be very great if all customers were to draw all their money on the same day, he said. Mr. Macmillan ruled out the possibility of any British loan of £100 or £200 million to India. At the same time, he added that membership of the sterling area ensured a flexible system of advances and it was for India to decide the quantum of her sterling reserves. And he concluded with the cryptic remarks: "You do not lend a man when you already owe him 300 million pounds."

Food Production

Although it is too early to have full estimates of foodgrains production in the agricultural year 1957-58, it would appear from the report of the Study Team (led by Mr. M. S. Sivaraman, Adviser, Programme Administration, Planning Commission) on crop failure in Bihar, Orissa and eastern Uttar Pradesh that the previous estimates—made by the State Governments concerned—of loss in output were exaggerated. The Team's finding in respect of Bihar is as follows:

"The State Government has estimated the damage to the crop at 56.5 per cent. and the production of winter rice at 1.5 million tons on the basis of a peak production of 3.475 million tons in 1956, whereas the average production of both winter and autumn rice is 2.86 million tons. As the conditions are similar to those obtaining in 1932, 1935 and 1950 when the estimated yield of winter rice was 65, 64 and 65 per cent., respectively, of the normal crop production, this year's outturn may also be about 65 per cent. of the normal crop and the outturn of autumn and winter paddy may be about 2.24 million tons as in 1950. The loss of crop this year will, therefore, be about 6 lakh tons and not 19.6 lakh tons."

In respect of Orissa, the Study Team has given the finding as follows:

"The State Government has estimated the damage to crops at 6 to 10 lakh tons of rice on the basis of visual impressions formed by the local staff. In 1954, which is said to be a year of severe drought, the outturn was estimated to be 6 annas or less and the actual total output of paddy in terms of rice then was 2.179 million tons as against a yearly average of 2.140 million tons. The State Government's estimate of crop this year is 6 annas and as such the production is not likely to be different from that in 1954."

The Team's finding in respect of eastern Uttar Pradesh is:

"The State Government has estimated the yield of rice in the eastern districts at 5.12 lakh tons against a normal of 10.19 lakh tons. In 1951, which is said to be a year of severe drought with a similar pattern of distribution of rainfall, the actual outturn was found to be 7.77 lakh tons. It is likely that the production of paddy in the eastern districts this year will be of the same order."

Beating the Drought

Two of the recommendations of the Study Team merit highlighting for the reason that they involve cheap and simple methods of increasing production or of preventing loss of output in conditions of drought. These recommendations may be summarised thus: Every effort should be made to exploit the possibilities of using underground water wherever possible through open wells, wells with borings and small tube-wells. At the same time, a mass approach to the problem of lifting water through simple inexpensive contrivances like bullock-operated pumps which can directly pump from small tube-wells with equipment of a type which can be made by the village artisans should be seriously taken up. The programme for incorporation of organic manures like green manure or composts which would conserve soil moisture and improve crop yields should be extensively taken up and it is possible to do this within two years if an earnest effort is made to plant perennial shrubs and use green manure by raising seeds on the borders of fields. Simple measures like raising the height of bunds of paddy fields to store more of rain water and putting up bunds around *rabi* fields in areas not subject to inundation should be popularised.

The Governments of India and Czechoslovakia have reached an agreement on the terms of payment for the foundry and forge project, which will supply heavy castings and forgings needed by the proposed heavy machine building plant for the construction of which an agreement has been concluded with Russia. The project will cost Rs. 30 crores, of which Rs. 16.5 crores in foreign exchange will be financed by the Czech Government, to be payable in instalments after 1st April 1961. The Government of India will pay during the period ending 31st March 1961, a sum not exceeding Rs. one crore to the Czech Government, in order to enable the latter to make purchases of Indian goods for export to Czechoslavakia. The project will be completed in two stages. The first stage, with an installed capacity of 22,000 tons per annum, will be completed in 1962. The final stage, with a capacity of 45,000 tons, is scheduled to be finished by 1964.

STERLING AS A WORLD CURRENCY—I

From Our Own Correspondent

LONDON, *6th January*

LONDON LETTER

WHEN Lord Keynes saw his dream of an International Monetary Fund come true, with its own inset of account, the Bancor, he thought the world was set for an international currency, elastic and manageble in a way that gold could not be. Sterling would not have to bear the burden of being a world currency and Britain and the world would have got away from that crippling "barbarous relic" —gold.

Alas! That the reality has been far different: bancors have turned out to be dollars, dollars have turned out to be gold, gold reigns supreme and sterling and the sterling system remain as inexorably tied to it as in the heyday of the maligned gold standard. It is not, therefore, surprising that, whenever sterling hits a crisis, as it did this summer, voices of rebellion should be raised to demand an end to this gold-anchored sterling system. They would like Britain to throw in her hand as an international banker and restrict the convertibility of sterling, so that international speculation in the pound would no longer be possible.

The reason for this attitude is entirely understandable. If Britain is keeping her own payments in balance, why on earth should the country be set by the ears—Bank rate go up to 7 per cent., credit be restricted, unemployment allowed to grow, production be damped down and a general air of crisis engendered by foreign gentlemen who take it into their heads to have a flutter with the pound?

Sterling Area

The function of sterling and the future of the international pound are at the moment widely debated—the more freely since the current confidence in sterling means that discussion does not create despondency. The London *Economist* has made an analysis of the sterling system and concluded that it is not desirable either to seek to fund the sterling balances or to drop support of the transferable sterling rate (it is, of course, the Bank of England support of this rate that makes transferable sterling in practice convertible sterling). That journal's conclusion is that nothing can be done by way of control in any form and that "plainly, the principal support for sterling must come from Britain's own domestic and current trading surplus." As for the Commonwealth, it admits nothing more than the *toleration* of "informal agreements with newly independent countries about the pace of rundown of their balances" and the only glimmer of an appreciation of the basic problem is the recognition that "there is certainly need for a greater sense of common purpose among the sterling creditors." Yet this is the clue to the whole problem, as this and subsequent "Letters" will show.

But before analysing the problem confronting sterling, it would be as well to dispose of two lines of thought. The first is the suggestion that the International Monetary Fund should come to the reserve by providing more funds to replace sterling internationally. This takes us back to Keynes' dream: by all means let the I.M.F. reconsider the first principles of its reason for existence, but the I.M.F., in this context, means America and that country, lost in admiration of its own productive and exporting powers and impressed by the recent development of European countries such as Germany and Belgium, who have subscribed to the principle of rugged individualism, is suspicious of developments of international banking which would savour of a right to dollars by countries which have no such right! Besides, would they let international units (which buy dollars) go to Red China or the Iron Curtain countries?

Gold Value

It is also unprofitable to hope that gold might be upvalued, so that everybody's gold reserves would buy much more of everybody's currencies. This idea, popular outside the United States, makes no appeal to Americans who are again suspicious that it would mean giving dollars away. After all, Russian gold would also buy more American goods—and at no greater cost. Besides, the upvaluation of

(Continued in previous column)

(Concluded from next column)

gold would not resolve the basic problem of the United Kingdom. It would, of course, be helpful—if considerable enough—by raising the sterling and dollar value of the reserves in relation to this country's sterling liabilities. Theoretically, it could be carried so far (say, by a trebling of the price of gold) that the whole of the sterling balances could be paid off or gold be earmarked to pay them off on demand. But such a devaluation of all currencies in terms of gold would set up a world-wide inflation on a scale obviously to wipe out, in terms of goods, the increases in reserves. So that Britain would have got herself out of her liabilities merely by cheating her creditors, and the fact that every other debtor had done likewise would hardly make the device more creditable. So that while a modest upvaluation of gold would be helpful—whereas a large one would do more harm than good—it would not avoid the need for a country aspiring to continue as an international banker to make arrangements to put its business on a sound footing. And that is the need of Britain and the whole sterling area today.—*All Rights Reserved.*

AMERICAN LETTER

ONLY A MILD RECESSION EXPECTED

BABY BOOM SHOWS NO SIGNS OF ABATEMENT

From Our Special Correspondent

NEW YORK, *8th January*

MANY problems are being debated, at this time, with great fervour in the United States. On top of the list, perhaps, is the question whether or not President Eisenhower should meet with Soviet leader Nikita Kruchshev. Nearly all U.S. observers who returned from Moscow say that the Kremlin's offer and desire for such a meeting is genuine.

There seem to be great stresses within the Soviet Union itself. The harvest was poor and Mr. Kruchshev is determined to better the lot of the Russian consumer. This, however, is possible only by cutting down on armament expenditures. Peaceful co-existence, in the opinion of these observers, therefore, is in the Kremlin's interest. Prime Minister Macmillan of Great Britain seems to argue the same point.

So far, there has been no positive reply from Washington. Secretary of State Dulles seems to argue that this is no proof of Soviet sincerity and he is, apparently, opposed to further meetings. Part of this attitude may be caused by the many frustrations the Secretary received at the hands of Soviet leaders both in the Middle and Far East.

On the more cheerful side, Secretary of Commerce Sinclair Weeks asserted the other day that the present downturn in business would be nothing more than a "mild dip," to be followed by a climb later in 1958. "The 12-month outlook is better," he said, "than nail-biting pessimists think." He cited three major plus-factors, namely, stepped-up defence orders, a rapidly growing highway construction programme and continued population growth.

Baby Boom

The latter point was the subject of an elaborate study by the U.S. Census Bureau. Somewhere in the U.S., a baby was born every 7½ seconds in 1957. Taking into account population fluctuation caused by deaths, immigration and emigration, this country's population scored a net gain of one per every 11 seconds. The U.S. entered 1958 with a population of 172.8 million, up 3 million from last year. It is a jump of almost 100 million since the start of this century.

The baby boom has been prevailing since the last war and shows no signs of abatement. It offers long-range encouragement and almost insures expansion of vital lines of endeavour for many years to come.

The first part of January saw no unexpected changes in the business picture. Termination of holiday employment brought about an increase in unemployment insurance claims which at the turn of the year were larger than for some time past, but not alarmingly so.

Automobile output was 6.1 million cars in 1957. It was the fourth largest output year in the history of the U.S. Prognostications are that, for 1958, the figure will probably be 6 million cars, if only for replacement of worn-out vehicles.

The financial picture has brightened somewhat since my last despatch. The stock market has recovered from year-end tax selling and has turned in several excellent trading sessions at which higher prices were prevailing. The reduction of the discount rate by the Federal Reserve banks injected new life into the bond markets. Thus, many paper portfolio losses were offset. Year-end bank statements were good. They showed higher earnings than in 1956 and most of the major balance-sheet items were up for the year as well.

Wage Demands

Farm prices and most other items seem fairly stable and no undue movements are expected in the near future. The only pressure for higher prices which may arise comes from continuing demand for higher wages by labour unions. There is no reason to assume there will be any let-up in such demands.

However, the present session of Congress is likely to tackle the labour problem as a whole and demand several revisions in existing statutes. Those proposed at this time include reporting of labour pension fund resources publicly and the holding of secret elections of union officials at least once every one, two, three or four years. The secret ballot is held to be important in diminishing the hold labour leaders have over their membership.

Savings have held up well, but they may decline as unemployment increases and demands are made upon backlogs. How high savings should be is a much debated question. While they have gone up in dollar amounts steadily, they have been dropping, however fractionally, in terms of incomes. With higher costs and more expensive machinery every day, more money is required to keep the industrial machinery going and, if private savings are insufficient, industry would have to rely on the seemingly inexhaustible Government funds which would mean a further step in the direction of socialism.

Foreign Events

In the perspective of a slightly declining economy at home, U.S. public opinion has viewed foreign events with greater gravity than it might have otherwise. Developments in France, for example, cause considerable concern. The Algerian war has not been resolved and continues as a great drain on the country's economy. The contention that Algeria is part of continental France is, of course, untenable in Africa, and there seems no way of resolving the dilemma.

The feeling here is that, unless there are immediate and rapid improvements in the areas of Algeria and French domestic finances, a *coup d'etât* must be expected either by the extreme right or the extreme left. The effects such an event would have on N.A.T.O. cannot be predicted, of course.

President Eisenhower's appearance at Paris was a valiant gesture, but it does not change the increasing sentiment of a prosperous continent of Europe to seek their own salvation, perhaps in neutrality, rather than to be pawns between the two giants of the East and the West. Whether such a course is possible remains to be seen.

The Middle East continues as another trouble spot, The Afro-Asian conference at Cairo was another Soviet propaganda success and the Government crisis in Israel portrayed vividly the dangers ahead. The Eisenhower doctrine which was designed to protect the Arabs from Soviet domination, it is generally held here, has backfired by an unrealistic approach for which Secretary Dulles is blamed.

There is now an attempt being made at Washington to make drastic personnel changes. There are no hints, at this time, that this would include the Secretary of State. But there seems to be a more realistic viewpoint in the Treasury since Mr. Humphrey left and some attempts are being made to cope with realities rather than to adhere to resolutions, noble in purpose, such as a balanced Budget, the integrity of the dollar and other cliches.

Another shock to American nerves was news from Indonesia where Russia appears to be making headway, too. The U.S. faces a real dilemma. Indonesia asked for arms. This was rejected for fear of alienating the Netherlands N.A.T.O. ally. Now it looks Indonesia might get the weapons anyway—from Iron Curtain countries.—*All Rights Reserved.*

NEW U.N. AID FUND

Moves are under way in the U.N. headquarters for establishing a new U.N. technical aid fund that was unanimously approved by the General Assembly last December. Mr. David Owen, Executive Chairman of the U.N. Technical Assistance Board said that he would consult his field representatives on the matter during a six-week trip to Asia, the Middle East and Europe. The first meeting of the 16-nation Preparatory Committee that is to plan for the new special fund will take place shortly.

The Assembly outlined the general character of the fund, but left to the Preparatory Committee the task of defining the kinds of assistance it is to provide, recommending the organisational and administrative machinery needed and ascertaining the contributions which governments are willing to make. The Preparatory Committee is to report later this year to the Economic and Social Council which will in turn report to the Assembly next autumn for final action in establishing the fund. The idea of the special fund was put forward by the United States in a proposal for the U.N. to triple its present rate of providing technical assistance, up to $100 million or more.

"I know the answer!"

INTERNATIONAL MONETARY SITUATION

PEOPLE ALL OVER THE WORLD ARE TIRED OF INFLATION

Dr. Per Jacobsson

MANAGING DIRECTOR, INTERNATIONAL MONETARY FUND

I HAVE just returned from a journey to Europe where I visited France, Switzerland, Finland and Sweden—and in each case paid close attention to the monetary problems. Four months earlier I had made a journey to a number of Latin American countries in connection with the Buenos Aires Economic Conference in August, visiting besides the Argentine, Brazil, Chile and Peru.

Now there are, of course, many differences between the older European and the younger Latin American countries, but, in one respect, I found a pronounced similarity: in Latin America, as in Europe, I found that the people in general are getting increasingly tired of inflation. This does not only mean that they dislike rising prices; that they have done for quite a time. But it means that now they begin to recognise the reasons for the price increases, and thus to feel that stable money is something worthwhile striving for, even something worthwhile making sacrifices for. It is this feeling that has made it possible for the authorities to take steps to defend the currency which only a few years ago would have been politically unthinkable. Thus, the Bank of England has raised the Bank rate to 7 per cent., which is the opposite to cheap money. In Finland, the official discount rate is as high as 10 per cent., which it also is in France for any commercial bank that exceeds by more than 10 per cent. the quota of re-discounting allotted to it by the Bank of France.

Latin America

As far as Latin America is concerned, it is interesting to find that the fall in the prices of most of the products which these countries sell, leading to difficulties in their balances of payments, has *not* diminished their desire for currency stability, but in several cases has led them to take more decisive steps in their struggle against corrosive inflation.

There seems to have been a change in the climate of opinion almost all over the world. People begin to realize that an inflationary credit expansion may, for a while, even perhaps for a few years, finance new enterprise but that when people wake up to the fact that their money has a constantly diminishing value, as they inevitably do, they will then stop saving. Credit expansion can be no substitute for savings: a reliable currency is the only true basis for sustained investments. The experiences of Germany and Italy—two countries which have carried out cautious monetary policies—prove beyond doubt that, in our days, with so many inventions to be exploited and so many houses and hospitals, schools and roads needed for a growing population, the difficulty is not to find outlets for the available savings but rather to increase the flow of savings in each country in order to sustain the desirable level of investments. Let us note, in passing, that the Russians know this and, indeed, have put into practice a careful non-inflationary monetary policy. In a speech the other day in Kiev, Mr. Kruschev even apologised for the fact that, since 1954, there had been no further price cuts in Russia.

I have started with these more general observations, for it is against the background of an increasingly widespread wish to get rid of inflation and to restore orderly monetary conditions that recent action by Governments and central banks has to be examined.

Nasty Corners Passed

If we cast our minds back over the last 18 months, we find that the world has successfully turned two nasty corners in the monetary field.

The first great difficulty that was encountered was in connection with the Suez crisis, which led in particular to a run on sterling. As you know, the International Monetary Fund in December 1956 granted assistance to Great Britain to the tune of $1,300 million ($561 million as a drawing and $739 million in the form of a stand-by, i.e., a line of credit, which has in fact not been drawn upon). Together with other measures, this assistance helped to arrest the run on sterling, and it also enabled the British to avoid going back on the liberalisation of trade which had been attained. It is often said that the Suez crisis was more easily overcome than anybody had expected; *maybe* it would not all have gone so relatively smoothly had it not been for the assistance from the International Monetary Fund.

The second difficulty occurred in the summer of 1957, when there arose a state of acute tension over certain European exchange parties. There were rumours about a revaluation of the German mark and a possible devaluation of other currencies, including perhaps a widening of the margin for the official quotations of the pound sterling. Fortunately, remedial measures were taken by the countries concerned. The official discount rate was increased in France, Great Britain, the Netherlands and Sweden; and at about the same time, it was reduced in Germany according to the rule that those who lose gold and foreign exchange shall increase their interest rate, while those who gain reserves should lower their interest rates. In addition, the annual meeting of the International Monetary Fund in Washington in September this year became the occasion of statements by the representatives of, in particular, Great Britain and Germany, that no alterations would be made in the exchange parities. It seems that these Statements were believed by the markets, for the fact is that, from that time, the German reserves ceased to increase, while funds began to flow back to London. In the middle of December, transferable sterling was quoted at $2.79=£1, the highest rate since April 1954, and *well* within the margin for the official quotations of the pound sterling ($2.78 to $2.80). The pound sterling is in fact convertible for all foreign holders at rates within the official margins.

German Marks

In the case of the German mark, the turnaround was equally spectacular. During the first nine months of 1957, the German gold and foreign exchange reserves had increased by as much as DM5.7 milliard—three-fifths of which occurred in the third quarter (July to September 1957). But, by the middle of December 1957, the same reserves of the Bundesbank were no higher (in fact, slightly lower) than they had been three months earlier.

The speculative positions taken in the markets as a result of the uncertainties with regard to the pound sterling and the German mark in the summer of 1957, probably reached an amount well above $700 million, one way and another. Some of these positions are probably still outstanding—their reversal will presumably take some time. By November the pound had passed its seasonally weak period of the summer and early autumn, and had returned to its normal strength—as was to be expected at this time of the year, this being now shown in the market quotations.

Before I turn to some other currencies, it may, perhaps, be well to say a few words about the present prospects of the pound sterling and of the German mark. There can be little doubt as to the determination of the British authorities to stop inflation and safeguard the value of their currency. Since the end of 1949, the money supply in Great Britain has only risen in all by about 11 per cent., which is much less than in any other country in the world (except Denmark). The banks continue to reduce advances, and the Government has declared that it will not increase the total investments of the nationalised industries above the level attained this year. There has been a moderation in the rate of expansion in private industry which can be characterised rather as a levelling-off than as a setback. There is little unemployment, but not quite so strong a demand for labour as there was previously.

Horatius at the Bridge

It has been the declared policy of the Government to prevent a general rise in prices, and as part of that policy there has to be, at least for the time being, no marked increase in wages. Some labour unions have made demands for substantial increases, but it seems that, in practice, there is a tendency to be more moderate. Perhaps, the workers, and their leaders, feel that public opinion would be strongly averse to violent industrial disputes and, indeed, not approve a policy of wage increases which would result in higher prices. It seems that no labour union is anxious to be the first to press its claim. I have been told that the situation reminds one of two lines in Macaulay's poem *Horatius at the Bridge*: "Those behind cried forward, and those before cried back."

As things stand now, the British seem to be able to master their internal cost and price problems, but what about the burden of sterling balances? To finance its development schemes, India has, over the last year, drawn down its sterling balances and other countries will presumably do the same. But Great Britain is a banker for many countries, and it is unlikely that the net annual withdrawals will be very large. When it is a question of making provisions against such withdrawals, and in general to provide savings for overseas and other investments, it is inevitable that the question of economies in the budget will arise. Sometimes, it is technically and politically easier to compress the volume of investments financed through the budget than to cut current Government expenditure, although a cut in such current expenditure would be preferable from many points of view.

In dealing with the British problems, one has always to remember that a country's capacity to master its problems does not so much depend upon how difficult those problems are as on the determination, patriotism and ingenuity with which the authorities and the public face the task before them, so that the appropriate solutions are found. As it is, the sterling balances serve for the countries who own them as a buffer against serious embarrassment in the field of foreign trade, especially in a period of recession with an appreciable decline in the prices of raw materials and foodstuffs.

Continent: Germany

It is all to the good that a country in Germany's exposed position should have a strong currency and substantial gold and foreign exchange reserves, but now that such a position has been reached, it is not in the interest of Germany or anybody else that the reserves should continue to increase at a rapid rate. But is it to be expected that the cessation of the increase during the last quarter of 1957 will be continued in 1958?

Undoubtedly, Germany has a strong export position, being still able to sell many products at relatively low prices, but this is not the whole story. There has been a quite pronounced expansion in the money volume in Germany (by perhaps 15 per cent. in one year), reflecting in a large measure the higher wages and the increased social benefits. Further, the public authorities are no longer adding to their cash reserves but drawing on the funds already accumulated to finance a budget deficit. Moreover, the Bundesbank has not by any means completely offset the combined expansionary effect of the budget deficit and the foreign exchange surplus. These factors should help to reduce the current German surplus in the balance of payments, but it is still possible that Germany will, nevertheless, continue to earn a substantial, though reduced, surplus. The German authorities, therefore, still have every reason to consider what credit measures they can take, or what other facilities they can grant, in order to lessen, as far as possible, the strain for other countries. It is hardly to be expected that the question of the possible revaluation of the German mark will be raised again; so, on that score, there should be less embarrassment.

Netherlands

The Netherlands, too, has had its difficulties this summer. The guilder was under pressure, but, with an increase in the official discount rate and a series of other measures taken, the trend has been reversed, the Dutch currency being apparently strong enough to remain rather unaffected by the recent happenings in Indonesia.

France

As far as France is concerned, one of the main difficulties of recent years has been the effort to do too many things all at the same time. Everybody knows about the struggle in Algeria, which is, of course, costly, although it is hard to estimate what the exact costs are, especially as

there are some offsetting items. But it is, perhaps, less well known that France in recent years has become a highly dynamic country, making large forward strides in developing its industry and agriculture. This dynamism finds its expression also in the birth rate, which in the last two or three years in France has been even higher than in Italy. The growing population has, of course, added to the demands for more houses, schools and hospitals. Taken together, the resources devoted to these various purposes have substantially exceeded the genuine savings available in France. Internally, therefore, part of the financing has been met by credit creation, with the result that, externally, the country's foreign exchange reserves were very greatly reduced. By the middle of 1957, it became clear that such a situation could not continue, and a series of steps were taken to reduce the budget deficit, to restrain the granting of credit and to replace a complicated system of import charges and export premiums by a more simple system equivalent to an exchange adjustment. The rehabilitation work has been continued by a new Government in the late autumn, and France will in January open negotiations in E.P.U. and I.M.F. to obtain certain foreign credits, which can bridge the gap until the measures taken and still to be taken will become fully effective.

It is interesting to note that the gold and exchange markets already appear to have partly anticipated the results of the present plans of the French Government to rehabilitate the economy—evidently expecting a fair measure of success. The quotations in the unofficial bank note markets fell from 504 francs to the dollar to 478 in a fortnight in December; the gold price has fallen correspondingly; and certain recent market issues have been highly successful—subscriptions to a railway loan reached 40 milliard francs instead of the 20 milliard that had been expected. It is too early to make any definite predictions, but one cannot shut one's eyes to some distinctly favourable developments.

Finland

During my journey to Europe I also visited Finland where an old friend of mine, Rainer von Fieandt, had just become Prime Minister. The exchange value of the Finnish currency had been adjusted to the rate of the already devalued tourist mark in August 1957; and it was of interest to find out what the results had been. A devaluation is, of course, not in itself a solution to a country's difficulties. In Finland, however, it had been preceded and accompanied by a series of measures which made the home currency scarce, ensuring increased payments into the Bank of Finland. The autumn is seasonally the strong period in the Finnish exchange market, so it was natural that the foreign exchange reserves should increase; but that they should go up from the equivalent of 20 to 40 milliard Finnish marks within four months was decidedly more than the authorities had dared to expect.

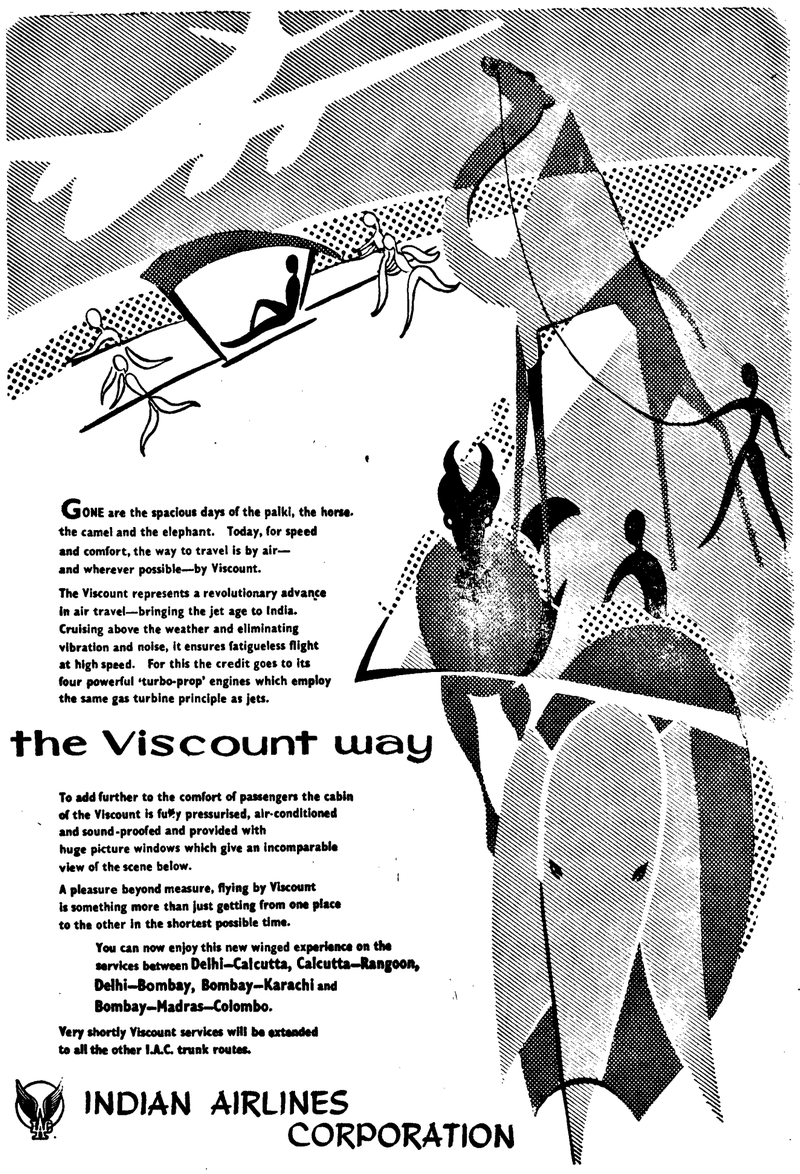
I have here referred to those countries which have been faced with acute foreign exchange problems of one kind or another. Many interesting things could be said also about the other European countries. Common to these other countries is one rather extraordinary fact: during the period of monetary tension in Europe in the summer of 1957, these other countries did not experience any acute strain. Several of them, and in particular Italy and Austria, continued to add to their foreign exchange reserves.

At the present moment, i.e., at the turn of the year from 1957 to 1958, in the European foreign exchange markets there are less signs of strain than there have been for a long time. Some might think that it is the calm before the storm, but, personally I am inclined to think that the readjustments and the many serious internal measures which have been taken in recent years begin to bear fruit in the form of a more balanced and durable international rate structure.

South America and Asia

I must say a few words about other continents also. For most Latin American countries, 1957 has been a year of disappointment and difficulties, in that the prices of the materials which they export have fallen in some instances quite sharply. But an interesting fact is that, notwithstanding the reduced foreign exchange receipts and, in fact, to some extent as a conse-

(*Continued on page* 111)



AMBAR CHARKHA PROGRAMME PRUNED

PROGRESS SO FAR NONE TOO SATISFACTORY

THE production target of ambar yarn cloth fixed at 300 million yards for 1960-61 has now been scaled down to 150 million yards. This is the result of the Planning Commission's acceptance of the recommendation made by the Expert Committee which reviewed the working of the Ambar Charkha programme recently. This Committee, it may be noted, was appointed in May 1957 by the Khadi and Village Industries Commission itself, with Mr. A. Zaman, I.C.S., one of the Joint Secretaries, Ministry of Commerce and Industry, Government of India, as Chairman. In its report, the Committee stated that it would be more reasonable to expect an output of no more than 150 million yards by the last year of the second Plan by means of Ambar Charkha. The revised scheme now proposed to be implemented envisages a production of 20 million yards in the current year (1957-58), 40 million yards in 1958-59, 100 million yards in 1959-60 and 150 million yards in 1960-61. The overall scheme is estimated to involve a total expenditure of about Rs. 36 crores, including the sum of Rs. 10-15 crores to be given as subsidy.

The downward revision in the production target for ambar yarn cloth, though it is belated, is a step in the right direction. Even before the original target of 300 million yards was fixed in the cotton textile policy announced by Mr. T. T. Krishnamachari as early as in June 1956, several experts in the textile industry had clearly pointed out that the technical and economic efficiency of the Ambar Charkha had not been proved to the satisfaction of all. It was stated that, if a sum of Rs. 30 to Rs. 40 crores per annum was required as subsidy to sell the yarn and cloth produced with the aid of this crude hand-operated spindle, it was obvious that it did not satisfy the test of economic efficiency. Further, in order to produce a given quantity of yarn, the Ambar Charkha would require 55 times the man-hours taken by an ordinary power-spindle. In view of all these defects, this journal observed in the course of an editorial (*vide* page 797 of the issue dated 28th April 1956) that encouragement to Ambar Charkha on the lines demanded by the protagonists tantamounted to nothing more than providing unemployment relief.

After the production target for ambar cloth was fixed at as high as 300 million yards out of the total estimated additional cloth requirements of 1,700 million yards in the second Five-year Plan period, genuine doubts were expressed as to whether reliance could be placed on the Ambar Charkha to produce in five years enough yarn required for manufacturing 300 million yards of cloth. The question was also posed as to who would weave the ambar yarn into cloth. These questions, posed two years ago, remain unanswered even today.

Actual Production Low

Viewed thus, it is not at all surprising to be told now that the implementation of the Ambar Charkha programme has so far been none too satisfactory. Notwithstanding the generous scheme of State subsidy and other measures of active support and encouragement, not more than 5.5 million lbs. of ambar yarn are expected to be manufactured in the current financial year (1957-58), as against the target of 18.1 million lbs.; the actual output in the six months ended September 1957 was 1,307,000 lbs. Similarly, in respect of cloth woven out of ambar yarn, the estimated production in 1957-58 is put at 20 million yards which represents a shortfall of 69 per cent. as compared with the target of 65 million yards; the actual production in the aforesaid six months was 3,618,000 yards.

One of the main reasons for the low level of ambar yarn and cloth production is the very slow progress in the manufacture of Charkhas. As against the target of 180,000 Ambar Charkhas fixed for 1957-58—150,000 Charkhas for distribution among trained spinners for commercial production of yarn and 30,000 Charkhas for training more spinners—the number that will actually be produced is estimated at 115,000, the output in the April-September 1957 period being no more than 45,815. The number of instructors trained is expected to be lower at 3,200—by the end of September 1957, only 1,648 persons had been trained—whereas the original target was 4,000. The number of spinners trained is also expected to be lower at 120,000—49,537 had been trained by the end of September 1957—as against the target of 150,000. With regard to the establishment of 100 *saranjam karyalayas*, only 20-22 per cent. has been done.

It is in the light of the actual experience thus and on the basis of advice given by the Expert Committee that the Planning Commission has revised the production target for ambar cloth from 300 million yards to 150 million yards. The enthusiasts of Ambar Charkha may feel that the revised target will be fully realised. This view is based on three considerations. First, the full impact of training and manufacture will be in evidence in the coming financial year (1958-59). Secondly, certain experiments are now being conducted to reduce the time spent on the preliminary process of preparing the cotton for spinning. Thirdly, the Government is keen on giving every possible encouragement and assistance (including subsidy) to the Ambar Charkha programme for social and political reasons. Incidentally, it may be noted here that the Ambar Charkha Committee had recommended, in June 1956, a single-point subsidy at the cloth stage of a minimum of As. 4 in the rupee. It is, however, not clear whether the subsidy involved has not actually worked out to be much more than As. 4.

Rather Doubtful

Despite the continuance of subsidy and extension of other measures of Government assistance and encouragement, it is rather doubtful whether even the revised target of 150 million yards of ambar cloth will, in fact, be hit in the next three years. Even supposing that the Ambar Charkha will produce enough yarn to produce 150 million yards of cloth, the wages that can be afforded to spinners of yarn on this instrument will be so low that the workers will not, as we have pointed out ere now, be able to make both ends meet. There is also no certainty that people will take to it easily unless they are either compelled or on the verge of starvation. They will always be on the look-out for some better and more profitable sources of occupation and switch over to them whenever opportunities arise. There will, therefore, be considerable fluctuation in the supply of yarn and the weavers dependent on it will be greatly handicapped.

It is necessary, in this connection, to draw attention to reports that the handloom weavers are reluctant even to touch the ambar yarn and prefer only mill yarn. This reluctance must be attributed primarily to the high prices of ambar yarn, on account of the substantially heavy wage cost of the Charkha which is said to be about Re. 1.87 per lb. of yarn, as against Re. 0.15 of a mill known for its high wages and excellent technical performance. Also, the quality of ambar yarn does not compare favourably with that of yarn produced in mills on scientific lines and under the supervision of experts. Apart from questions of cost and quality, the Ambar Charkha, it is said, cannot be expected to supply yarn which can be used by weavers with care for producing cloth of vast diverse patterns and designs.

The foregoing analysis will clearly bring out the fact that the Ambar Charkha will not be able to help meet to any significant extent the increasing requirements of cloth—domestic and foreign—in the coming years. Whether or not the Charkha will add to the total supply of cloth, there is certainly no point in continuing the negative policy of curbing consumption of such an essential item as cloth by the unconscionably high rates of excise duty. The demand for cloth is bound to be accelerated in the coming years, what with the rise in population at the rate of about 4.2 million every year and the general increase in the standard of living following the implementation of the various development schemes. This is a trend which should not be overlooked, whatever may be the considerations underlying the need for development in the decentralised sector of the cotton textile industry. The planners will do well so to shape the textile policy as to give the required freedom to the more efficient mill sector to expand its operations. Otherwise, they would have to take upon themselves the entire blame if there were to be any acute scarcity of cloth and soaring prices at any time in future.

SILK INDUSTRY

The Central Silk Board has just published a brief review of the progress of silk industry during 1957. The review, however, does not indicate the trend of production of raw silk in the country or the conditions obtaining in the sphere of mulberry cultivation. All that the review contains is the following high-sounding statement:

"Whether from the point of view of increased allocation of funds to the various State Governments towards the implementation of development plans in respect of sericulture, or because of the perceptible change for the better in the pace of expenditure in relation to the various schemes taken on hand or due to the sustained drive on the part of the Central Silk Board to achieve the target of self-sufficiency in the matter of raw silk production, the year 1957 will go down in the history of sericulture as an important landmark. Constituting as it does the greater part of the second year of the second Five-year Plan, the period under review is of considerable significance to the industry, inasmuch as the performance of the industry during the year will facilitate the determination, to a great extent, of the rate of progress that the industry could be expected to show during the rest of the Plan period. Looked at from this angle, it is really heartening to note that there has been an all-round progress in the development of the industry during the year 1957."

Considering that the Central Silk Board is the apex body entrusted with the task of ensuring the development of silk industry and that it has been functioning for the past several years, one naturally expects that the Board should make available to the public, especially in an annual review such as the one circulated to the Press now, statistical data relating to the different aspects of the silk industry. How else can one assess the extent to which the Board has contributed to the progress of the industry?

Even in regard to finances, the Board's annual review fails to give up-to-date figures. The latest year for which it has given figures is that ended March 1957. These figures show that there has been an improvement in the actual pace of development expenditure. Thus, during 1956-57, the States were able to show an expenditure of over Rs. 11 lakhs out of grants aggregating Rs. 33 lakhs, as against a little more than Rs. 1,60,920 out of Rs. 11 lakhs sanctioned in 1953-54. The Board claims a spectacular increase in the quantum of financial assistance rendered by it to the States; grants amounting to as much as Rs. 24,25,394 have been allocated for the current year (1957-58), as against Rs. 2,70,390 in 1952-53. This is in addition to loans to the tune of Rs. 21,27,050. The Board would have done well if it had given at least a rough indication of the actual utilisation out of the grants and loans made so far.

During 1957, large sums of money, we are told, were placed at the disposal of the State Governments concerned to effect improvement of mulberry, silk-worm seed organisation, silk-worm rearing, marketing, and sericulture research training. The Board says that it has set before itself three most important problems in respect of sericulture industry, namely, increase in production, qualitative improvement of goods produced and possible scaling down in the cost of production. With this end in view, the visit of two Japanese sericulture experts was arranged during the year. Dr. Y. Tazima, one of the experts, has already completed a tour of the important places of sericulture industry and his report covering the methods in which improvements can be effected in the different sectors of the industry is expected to be made available shortly. The other expert, Mr. Shohei Karasawa, will advise, in the main, on the organisation of the sericulture industry in Mysore State on a rational basis.

The production of spun silk yarn and noil yarn registered a rise during 1957 as compared with the previous two years. The total output of spun silk yarn during the first ten months of 1957 was at an annual rate of 65,000 lbs., as against 82,802 lbs. in 1956 and 53,666 lbs. in 1955. The production of noil yarn in the same period was at an annual rate of nearly 55,000 lbs., as against 45,703 lbs. in 1956 and 52,868 lbs. in 1955.

The Silk Board's review of the Bangalore silk market during 1957 shows that the market presented a firm trend, the prices of most varieties—filature silk, charka silk, domestic basin quality spun silk and even reeling cocoons—touching the highest level for the year in the last week of December. The following table gives the rates for different varieties of silk quoted in the market during 1957:

(In Rs. per lb.)

Filature: Kollegal: 31 to 37; T. Narasipur: 33 to 37; Kanakapura: 34 to 39; Channapatna: 36 to 38; Kisan: 28.50 to 37.50.

Charka: *Superfine*: 24 to 32; 1st quality: 21 to 28.50; 2nd quality: 18 to 26; 3rd quality: 17 to 23; domestic basin quality: 28 to 34; spun silk yarn 210/2: 20 to 21.

Cocoons: Reeling cocoons: 1st quality: 1.16 to 2.25; 2nd quality: 0.84 to 1.94; seed cocoons (per 1,000): Mysore: 2.50 to 14; foreign: 2.75 to 15.

Silk Waste: Filature: 3.75 to 6; improved *charka*: 1.75 to 3.25; long *charka*: 1.37 to 2.50; pierced cocoons: 2 to 2.75.

The Central Wage Board for the cotton textile industry of India, set up by the Union Ministry of Labour and Employment, will begin its hearings in Bombay from 12th February. The hearings will be in respect of units of the cotton textile industry in Bombay City, Sholapur and its adjoining areas, Nagpur (including Marathwada and Vidharbha) and Khandesh and its adjoining areas.

Two trade representatives from Japan met the Kerala Minister for Industries on the 8th inst., and discussed with him the possibility of starting a nylon twine factory in Kerala. The representatives suggested that the factory be started as a joint venture with the participation of the Kerala Government in it. Nylon twine is used for the manufacture of fishing nets. The Government will collect statistics about the State's requirements of the material within two weeks. Further discussion with the Japanese representatives will take place later.

PROBLEMS FACING COTTON INDUSTRY

COURTAULDS PRODUCE A NEW FIBRE

From A Special Correspondent

MANCHESTER, 7th January

MANCHESTER LETTER

AT the outset of 1958, firms engaged in the cotton and rayon industries in Lancashire face an uncertain prospect, yet one which is not wholly discouraging. The five years of intense post-war prosperity are now far behind and the subsequent period has been one of ups and downs in the true tradition of the county. Such fluctuating fortunes do not assist those whose job it is to gain new labour for the mills, but they have for many years been almost an integral part of the trade.

Much of the blame for these contradictory movements must be attached to the dependence of the industry on a fibre subject to climatic conditions. Additionally, the recent attempts to regulate supplies through governmental action have added a fresh factor of uncertainty and have resulted in world cotton markets becoming completely divorced from the elemental laws of supply and demand. There is as yet no sign that the existing arrangements under which the American Government is very successfully disposing of the remainder of its surplus cotton supplies will be materially revised, despite the many suggestions which are being put forward to the United States authorities.

By the end of the current season, it should be possible to have a better idea of the probable trends in the raw material, but, for the moment, prices seem likely to keep on an even keel, retaining the steady undertone which has been apparent for some months past. Stability in values has, in fact, been an important feature in recent trading and recognition that the trend will be maintained should stimulate buying in the near future.

The dearth of desirable qualities of raw cotton from the new American crop is also a pertinent feature of the situation, as it underlines the strength of the market and should result in firmer rates being quoted. On the face of it, there are grounds for believing that customers are being slow in not extending their commitments at the present time. Problems raised by the Government's credit restrictions have deterred many prospective buyers from increasing their engagements.

Fresh Problems

In addition to these national aspects of the financial situation, the cotton industry faces its own individual problems, such as the ever-present threat of competition from abroad and the rising scale of imports. It is difficult to foresee any change in this situation. Despite continual pleas, the Government appears to be quite adamant in its refusal to provide any form of protection. It would not be at all surprising if the present narrow gap between exports and imports was finally extinguished in 1958 and Lancashire became a net importer of cloth.

The common market project is another unpredictable source of uncertainty. While many traders fear its implications and believe that Lancashire as an industry will suffer, a number takes the view that the opportunities offered are too good to miss. The actual introduction of the scheme has now become a reality and the challenge is there to be faced. Individual firms and traders now have to make their decisions accordingly.

With rather shorter order books than at this time a year ago, spinners and weavers still retain useful contracts for completion and they are hopeful that the weeks ahead may bring a revival of buying interest. The trade done over the past six months has been remunerative and should be reflected in forthcoming financial results. The distant future is more obscure, but any improvement in demand can be satisfied by the output of the mills.

Raw Cotton Problems

The difficulties confronting the raw cotton markets of the world need no reiteration. For months past, ever since the American Government introduced its disposal programme to shift the burdensome supplies of the raw material, futures trading has been restricted and barely representative of current conditions in the industry. Latest trends indicate some movement towards greater equality between production and consumption, but progress in re-establishing marketing techniques is still slow.

Running over familiar ground in his speech at the annual meeting of the Manchester Cotton Association, Mr. A. L. Hughes, the President, was starkly realistic. "Until the two-price system is abandoned, it will be impossible for the futures markets of the world to carry out their appropriate function," he declared. "If a major change in policy does not come about reasonably quickly there may be no futures markets. The American method of making policy announcements at irregular intervals and to cover a very short term of the immediate future inevitably has a frustrating effect on an industry which must plan ahead over a much longer period."

Throughout the trade, the persistence of the policy of operating from hand to mouth whether the goods concerned be raw cotton or finished textiles is a severe handicap. Not only the procedure adopted by the United States Government, as Mr. Hughes pointed out, but the British Government's credit restrictions are responsible for this state of affairs. "It is absurd that, under present circumstances, we should have to conduct trade by emergency procedures more appropriate to times of war and disturbance," he added.

In the autumn of 1956, the American dock strike caught importers in this country with only light stocks of cotton. Visible supplies at that time were below 200,000 bales, but there was a subsequent build-up of about 150,000 bales and these stocks are still at hand either in the ports or awaiting arrival. Millowners lately have restricted their purchases as the inevitable outcome of the difficulties connected with financing supplies and there is no sign of any immediate change in this situation. Visible supplies of raw cotton, which at the end of October had reached a peak of 387,000 bales, are now 330,000 bales.

The Americans, as Mr. Hughes remarked, have supplied the underdeveloped countries with grants, loans, commodities, scholarships and technical assistance, believing that a well-fed and educated democratic community would not easily succumb to Communism. What they overlooked was that most of these areas derived an increasing portion of their national revenue from cotton growing. A stroke from the pen of the Secretary for Agriculture can do more harm to producers of raw cotton throughout the world than to the consumers.

A New Fibre

It is a well-established fact that progress in the textile field in the years to come is largely in the hands of the technician, the research worker and the chemist. Now that the actual operation of the machinery is open to all and countries which formerly imported huge quantities of cloth are engaged in a flourishing and extensive export trade, the technologist holds sway. For this reason, the various new fibres which are produced and the fresh processes evolved command attention from all those interested in the future of textiles.

With the opening of 1958, details have been released of the first British acrylic fibre—Courtaulds' "Courtelle." Limited quantities of this fibre are now being produced at a Coventry plant and the first garments made from it should be available in the spring. Additional full-scale plant at Grimsby will be producing the fibre early in 1959.

Extravagant claims have so often been made in the past on behalf of so-called "miracle fibres" that the trade is inclined to treat such comments with scepticism, but, if only a proportion of the virtues said to be possessed by "Courtelle" are substantiated, it will have more than earned its place among the wide range of man-made fibres now in production. This new fibre is of mineral origin, and the clothes made from it are claimed to be warm, soft and light, yet completely washable. It can be used in all kinds of end-products, from knitwear and woven fabrics to blankets, carpets and numerous industrial purposes. Said to be twice as strong as wool, garments made from the fibre should neither shrink nor stretch, need little ironing, and are creaseproof and mothproof.—*All Rights Reserved.*

The British textile industry is faced with increasingly severe competition from unregulated imports. Expressing this view, the Manchester Chamber of Commerce observes in its annual report that piecegoods imported from India are running at the rate of 200 million square yards a year and those from other countries continue to advance. The Government has been informed of the grave consequences of such developments and urged to help find a solution. According to it, it is to be hoped that there may yet be a satisfactory outcome as a result of the strenuous efforts still being made by Lancashire in negotiations with the industries of India, Pakistan and Hongkong.

WORLD COTTON SUPPLY POSITION

SUBSTANTIAL REDUCTION IN STOCKS INDICATED

A RECORD low production and substantially reduced carryover in the United States have considerably altered the overall supply picture of free world cotton during the current (1957-58) season. Total free world supply is expected to aggregate 48.6 million bales comprising an estimated crop of 28.1 million bales and a stock of 20.5 million bales which represents a reduction of 2.4 million bales over the previous season's figure. The fall has occurred despite larger prospective production and higher opening stocks in the free world countries outside the U.S. For instance, the season began with carryover of 9.3 million bales in the free world countries outside the U.S., as compared with 7.6 million bales in the previous season. Their production is expected to be higher at 16.4 million bales which is 500,000 bales above the previous season's figure. Global production, including that of communist countries, is estimated at 36.7 million bales, as compared with 38.2 million bales in 1956-57.

The relationship between prospective world production and consumption indicates, according to the International Cotton Advisory Committee, Washington, that further progress will be made this season in the liquidation of existing cotton surpluses. Last season, a marked declined in production, combined with an equally significant increase in consumption, resulted in a decline in world stocks by about a million and a half bales to 22.2 million bales. In the current season, however, according to the Committee, contraction in stocks will be brought about primarily by a continued decline in world production while, according to present indications, any variation in consumption will be relatively minor. The I.C.A.C. estimates that world deficit in current production in relation to consumption would be two million bales or even more. Total global consumption in 1956-57 was 39.1 million bales of which 29.5 million bales were consumed by free world countries and 9.6 million bales by communist countries. The following table gives the global supply of cotton during the three seasons 1955-56—1957-58.

(In million bales)

	1955-56	1956-57	1957-58
U.S.—			
Stocks	11.2	14.5	11.2
Production	14.7	13.0	11.7*
Total	25.9	27.5	22.9
Other free world—			
Stocks	9.4	7.6	9.3
Production	16.1	15.9	16.4
Total	25.5	23.5	25.7
Total free world—			
Stocks	20.6	22.1	20.5
Production	30.8	28.9	28.1
Total	51.4	51.0	48.6
Communist countries—			
Stocks	1.5	1.5	1.7
Production	8.9	9.3	8.6
Total	10.4	10.8	10.3
Total world—			
Stocks	22.1	23.6	22.2
Production	39.7	38.2	36.7
Total	61.8	61.8	58.9

* November estimate.

Contraction in world production and supply this season is attributed mainly to developments in the U.S. Opening stocks in that country on 1st August 1957, estimated at 11.2 million bales, was 3.3 million bales lower than what was carried over into the previous season. The December estimate of the U.S. Department of Agriculture placed the season's cotton crop at 11.01 million bales, as compared with the November estimate of 11.7 million bales and the September estimate of 12.7 million bales. The yield per acre was indicated at 390 lbs., as compared with 446 lbs. forecast three months ago. If the actual crop appoximates the latest forecast, it will be the smallest since 1951 when production just exceeded 10 million bales. The fall in production is attributed to heavy rains, frost and generally unfavourable weather over most part of the cotton belt.

Lower production has thus paved the way for a more substantial liquidation of U.S. stocks this season. The consensus of opinion in the U.S. seems to be that disappearance, that is consumption plus exports, may be in the neighbourhood of 14 million bales. This would mean a deficit in current production of about 3 million bales and stocks will, in all probability, fall to under nine million bales by 1st August 1958.

The following table illustrates the position:

(In million bales)

	1955-56	1956-57	1957-58
Stocks, 1st August	11.2	14.5	11.2
Production	14.7	13.0	11.7
Imports	0.1	0.1	0.1
Total	26.0	27.6	28.0
Disappearance	11.5	16.4	14.0
Ending stocks	14.5	11.2	9.0

Free world production outside the United States is expected to register a slight increase of about half a million. It is estimated that production might be of the order of 16.4 million bales, as compared with 15.9 million bales in 1956-57. Higher production is indicated in Mexico, Egypt, Syria, India, Pakistan, Argentina, and some of the smaller African countries. Smaller crops are anticipated in Sudan, Turkey, Peru and Uganda. Mexican production is expected to aggregate 2 million bales, about 200,000 bales above last season. Crop progress in Egypt is reported to be satisfactory and production is estimated at 1,718,000 bales, as against 1,498,000 bales last season. Prospects in Middle East countries are favourable. In India and Pakistan production is expected to be higher than last season.

Although aggregate production outside the U.S. may thus exceed last season's output, it will be more than offset by the very much smaller crop in the U.S., thus resulting in a significant reduction in free world total to about 28 million bales, as compared with nearly 29 million bales in 1956-57. Free world supply would, therefore, be the smallest for several seasons.

As regards consumption, there has been a continuous expansion during the post-Korean period. In the last six seasons, world consumption has increased by over 5 million bales or 15 per cent., an average increase of 2½ per cent. per annum. World consumption last season rose to a record of 39.1 million bales of which the free world accounted for 29.5 million bales and communist countries 9.6 million bales. A major exception to this trend was seen in the U.S. It is true that consumption there was much higher than in the thirties but allowing for seasonal fluctuations, the trend during the last decade has been downward. Consumption last season declined to 8.6 million bales, one of the lowest levels for the post-war period. For the current season, it is too early to make even a rough estimate, but the expectation is that consumption will be lower than last season's 8.6 million bales.

Outside the United States consumption is much higher than a few years ago. Free world consumption excluding the U.S. rose last season to nearly 21 million bales, as against 19.3 million bales in 1955-56. As compared with 1951-52, the increase was over 30 per cent. or an average of about one million bales per year. This is one of the encouraging features in the present world cotton situation.

COTTON VS. SYNTHETICS

The need to make cotton competitive with synthetic fibres was stressed by Mr. T. D. Morse, U.S. Under Secretary of Agriculture at Memphis (U.S.A.), recently. Mr. Morse observed that for U.S. cotton to compete at home and abroad with foreign growths and synthetic fibres, mills must be assured of ample and regular supplies. Availability, he pointed out, was as important as price. Mills were aware that they could get ample supplies of rayon at stable price. They need to be assured that the same would be true for cotton also. The second requirement was price. He pointed out the need for taking steps to produce more of the kind of cotton demanded by world spinners today. Mr. Morse said that short-staple and low-quality cotton should become cheap enough to induce mills to use them. He pointed out that low grade cotton could be used by mills if the price differential was large enough to compensate for the extra manufacturing costs.

Java

A tropical isle of great natural beauty, sometimes called "the Pearl of the East Indies."
The natural beauty and grace of the Javanese women complete the perfect picture they make when dressed in their national costume. This consists of a short robe covered with a long loose garment over which is worn a brightly coloured, long sleeved coat. The beautiful gold and silver embroidery work on the coat makes this costume a work of art.
There is no end to the variety of costumes all over the world.

—they're good

ASIA IN WORLD SUGAR ECONOMY

OUTPUT RISES APPRECIABLY

UNTIL recently, the international sugar market was influenced predominantly by two factors. First, Cuba, the largest sugar-producing country in the world, was interested very much in the stabilisation of prices at a fair level. The second factor was the European beet sugar. Owing to vagaries of nature, the size of the beet sugar crop vary from time to time. Forecasts of this crop, therefore, have an important bearing on the trend of sugar prices. The conditions in the sugar economies of the wide Asian region, however, hardly counted. But, of late, the sugar industry in this region is undergoing such rapid changes that it looks as though the region will influence the trends in the world sugar market more markedly in the coming years. This view is expressed by Dr. Hugo Ahlfeld, Ratzburg, in the course of an interesting article contributed to the *F.O. Lights International Sugar Report*. The sugar men of the world, Dr. Hugo Ahlfeld observes, have all reason carefully to consider the development in these districts (countries of Asia) which certainly will play also in the sugar sphere a more important role in future than for the time being. In this connection, he says:

"There can be no doubt that these areas will become more and more interesting for all sugar men too. When we formerly wrote about the sugar conditions in Asia, we did not mention the Soviet Union. Today, this would be a mistake, as the Soviet Union is more expanding sugar beet cultivation in Siberia. Naturally, it remains difficult to judge whether they have reached real success or whether the Russians want to glorify their system. There can be no doubt, however, that they want to develop an important sugar beet cultivation in Siberia and that there are wide districts which are suitable for beet cultivation."

Gigantic Development

In the opinion of Dr. Hugo Ahlfeld, in all Asian countries, great efforts are made to adapt the sugar industry to circumstances, efforts which have by no means settled the immeasurable problems in the countries of the Asian region. To quote him: "Therefore, it can be taken for granted that there will be a gigantic development also in the sphere of sugar during the next decades." This is certainly a realistic assessment of the position. Sugar production in the Asian countries has registered an appreciable expansion in recent years. The aggregate quantity actually produced during the 1956-57 sugar season was nearly 10.22 million tons (raw value), as against 7.92 million tons in 1953-54, representing a rise of as much as 30 per cent. The improvement has been accounted for by all the sugar-producing countries, with the exception of the Philippines, as is indicated in the table below:

(In thousand tons—raw value)

	1956-57	1955-56	1954-55	1953-54
India	4,840	4,375	4,344	3,827
Pakistan	1,300*	1,292	1,315	1,046
Philippines	1,075	1,105	1,244	1,302
China	945	935	600	810
Indonesia	906	1,090	968	870
Taiwan	894	814	770	784
Iran*	90	82	90	89
Japan†	75	78	70	66
Thailand	64	73	70	59
Burma	89	24	20	20
Total‡ ..	10,218	9,553	9,006	7,922
Percentage share in world output	23.2	22.9	22.2	19.6

* Estimate only.
† Beet sugar.
‡ Both cane and beet sugar.

The foregoing figures will reveal that the increase in production of sugar (white sugar and *gur*) has been particularly marked in India. As compared with 1953-54, the production in 1956-57 was higher by more than 1.25 million tons. Alongside the rise in output, the consumption of sugar, too, has gone up, but not proportionately. In view of this, as also of the large carry-overs brought in from previous seasons, there is an exportable surplus in sugar. It will be recalled here that India as well as Indonesia, previously not signitories to the five-year International Sugar Agreement, were allotted basic export quotas of 25,000 tons and 350,000 tons, respectively, under the protocol of amendments agreed on at the second session of the U.N. Sugar Conference held in Geneva from 2nd October to 4th November 1956. But actually India exported much more, mainly to non-agreement countries. During 1956-57, India exported about 150,000 tons of sugar, as against the quota of 200,000 tons allowed by the Government of India. Thanks to the present low level of sugar prices the world over, the chances of India continuing to export sugar are not bright, unless some ways and means are found to enhance the competitive capacity of its sugar. Commenting on the recent trends in the Indian sugar economy, Dr. Hugo Ahlfeld states:

"Considering the rising standard of living, there are still very important reserves for an increasing sugar consumption and, in consequence of this, for a much higher sugar production. Acreage and labour are abundant in India. Furthermore, the Indian sugar industry declared some months ago that they wanted to continue sugar exports in order to get foreign exchange. They repeatedly stressed the need to export sugar even with losses, an intention which, however, can be realised only to a certain degree, as business losses cannot be made a permanent economic principle."

Next to India, Pakistan and the Philippines are the biggest producers of sugar in Asia. Sugar and *gur* production in Pakistan does not show any marked variations, the average annual rate of output in the past three years being about 1.3 million tons. This quantity is not sufficient to meet the domestic requirements, so that the country imports about 100,000-120,000 tons every year. The Government of Pakistan is endeavouring to make the country self-sufficient by augmenting the sugarcane acreage, improving cane varieties and erecting new factories for producing white sugar. The Philippines quickly rebuilt its sugar industry after the Second World War. The production has, however, suffered a setback in the last three years, declining from 1.28 million tons in 1953-54 to 1.22 million tons in 1954-55, 1.09 million tons in 1955-56 and 1.08 million tons in 1956-57. The bulk of the sugar output is shipped to the U.S., because the home consumption is low, being only 275,000-300,000 tons. The same position is expected to hold good in future also, although it is probable that the Philippines will attempt to export small quantities of sugar to the world market.

China is another large producer of sugar in Asia. This country produces both cane sugar and beet sugar. The sugarcane crop is said to have risen from 3,133,000 tons in 1950 to 8,110,000 tons in 1955 and sugar beet crop from 245,000 tons to 1,596,000 tons. The total cane sugar production (raw value) during 1956-57 is estimated at 945,000 tons, as against 310,000 tons three years before. Alluding to the sugar industry in China, Dr. Hugo Ahlfeld makes the following notable observations:

"The figures underline the success of Chinese efforts. Considering the population of over 500 million heads, however, the results reached are a mere drop in the ocean. We calculated the Chinese *per capita* consumption at 1.2 kilograms in our *World Sugar Statistics*. We wish to save us and our readers the trouble to calculate anew what a world sugar production would have to be gathered if every Chinese consumed more sugar. For the time being, he does not yet eat considerably more sugar than 1.2 kilos and the export possibilities will remain restricted in the near future, because the country is and will be too short of foreign exchange within a measurable time as to spend valuable foreign exchange for sugar imports. Therefore, it can be assumed that China will try to settle the problem of covering her sugar consumption by raising home production. In all probability, it will be a long way before one will be able to state that also the Chinese people will be satisfactorily provided with sugar."

Indonesia

Indonesia doubled its sugar production during 1954-55 as compared with 1952-53. No further progress could be made in the following years, as the political situation prevented foreign capitalists from participating in the sugar industry to a larger extent. Dr. Hugo Ahlfeld refers to this aspect and says: "Java could not regain her leading position in the world sugar market which she had had in such an extraordinary measure between the two world wars and it can be assumed that the situation will not undergo any considerable change during the next few years." Incidentally, it is remarkable that, during 1955-56, Indonesia exported 222,000 tons of sugar to Japan and other markets in the Far East.

The sugar production of Taiwan (Formosa), it is said, is at present stagnated by the regulations of the International Sugar Agreement which limits the exports by fixed sugar export quotas. As home consumption has not exceeded 100,000 tons to any noticeable degree, production will be regulated by the possibilities of sugar exports to world markets. According to Dr. Hugo Ahlfeld, Taiwan has sufficient suitable land to produce much more sugar than it formerly did within the Japanese Empire. Further development will depend on the possibilities of exports to world markets and it can be assumed that this country will have no difficulty in shipping considerable quantities to the numerous sugar importing countries in the neighbourhood.

In Japan

Since the loss of Taiwan by Japan after the war, the sugar industry in Japan occupies a very insignificant place in the Asian sugar map. The country has now only a small beet sugar industry, comprising four plants in Hokkaido which can cover only a small percentage of home consumption. The production of native cane sugar in the Riu Kiu Islands is limited and can be consumed in Japan only to a small extent. Thus, Japan has been forced to import large quantities of sugar year by year which are—on the basis of trade agreements—supplied by Taiwan, Cuba and Indonesia, but also Peru, Brazil and Santo Domingo have been important suppliers of the Japanese sugar market. The possibilities of increasing the sugar beet acreage or modernising the cane industry situated on the Riu Kiu Islands are limited. Thus, it can be assumed that the Japanese sugar conditions will not be subject to any important changes within a measurable time. It may finally be mentioned that it is not an easy problem for Japan to cover its sugar requirements, as the country has to spend considerable amounts of foreign exchange.

Among other countries, Iran is considering plans to expand its sugar industry. For the time being, it has an efficient beet sugar industry mainly in the north of the country. It is contemplating to erect a cane sugar factory and a refinery in Southern Iran. Ceylon is making efforts to have a well-established sugar industry. A new sugar factory is being set up and other projects are provided for in its plan for economic development.

RAMTIRTH
BRAHMI OIL
FOR LONG, LUSTROUS HAIR

Use RAMTIRTH BRAHMI OIL, Ayurvedic Medicine (Regd.). It ensures growth of healthy hair, removes dandruff, protects scalp, increases memory and induces sound sleep. Useful to every one in all seasons. Rs. 4/- for big bottle and Rs. 2.00 for small. Send M.O. for Rs. 6.50 for big and Rs 4/- for small bottle including postage and packing. No V.P.P. sent.

U.K. COAL BOARD'S DIFFICULT TASK

GROWING ABSENTEEISM—NEW LABOUR CLAIMS

THE year 1957 has proved to be yet another disappointing one for the U.K. Coal Board. The production during the year, though slightly higher than in 1956, was none too encouraging, thanks to the increase in absenteeism in the second half of the year. Despite the increase in coal prices in July last, the operations in the first three quarters of the year—the latest available so far—resulted in a deficit of about £7 million, bringing the total accumulated loss since nationalisation to £31 million.

The production of coal in 1957 amounted to 223.6 million tons, an increase of 1.6 million tons over 1956. The upward trend was thus maintained for the second year in succession, though the pace of expansion was not impressive. Notwithstanding this expansion, the output for 1957 was still below that achieved in either of the three years 1952, 1953 and 1954. Of the increase in 1957, all but 129,000 tons was accounted for by opencast working, which produced 13.6 million tons last year, as against 12.1 million tons in 1956. Imports of coal were, however, lower at 2.85 million tons, as compared with 5.24 million tons in 1956. Exports, too, declined, from 9.98 million tons to 8.10 million tons. Consumption within the U.K. also fell from 218.09 million tons to 212.95 million tons. The stocks at the end of the year amounted to 27.65 million tons, of which 8.88 million tons represented undistributed quantity at collieries and opencast sites, the corresponding figures for 1956 being 20.99 million tons and 2.95 million tons, respectively. Thus, the undistributed stocks at the end of last year were three times that at the close of 1956.

The main reasons for the disappointing production are the annual holidays, the Asian influenza epidemic which started in September, and increased absenteeism. It is stated that absenteeism during the year increased from 12.92 per cent. to 13.81 per cent. and shifts worked per wage earner dropped from 4.65 to 4.61. The increase in absenteeism is traced to the abolition, in May last, of the penalties for absence. No doubt, the Coal Board foresaw the effects of this step, but nothing would appear to have been done to stop the decline in attendance. The Coal Board wants the Labour Union's co-operation in enforcing strict disciplinary measures against absentees, but, except in Lancashire coalfield, such co-operation does not seem to be forthcoming.

The disappointing production and the accumulation of stocks affected the earnings of the Coal Board, which, as pointed out earlier, suffered a loss of £7 million in the first three quarters of 1957. This deficit was the result of successive losses of £7.6 million in the second quarter and £8.1 million in the third quarter, thus more than wiping out the first quarter's surplus of £8.8 million. The loss of £8.1 million in the third quarter of 1957 was the heaviest since the second quarter of 1955 and occurred notwithstanding the average increase of 6*s.* 6*d.* per ton in the prices of coal with effect from 1st July. The increase in coal prices was designed to make at least a small surplus for the whole of 1957. But this expectation has so far been belied, if the financial results of the three-month period following the price rise provided any indication. It remains to be seen whether the Coal Board has been able to turn the tide so quickly in the final quarter and to earn a profit in order to wipe out at least the deficit of the preceding nine months.

The problem of the British Coal Board does not end with earning a surplus for 1957. It has still to make good the previous years' accumulated loss of £24 million and to find a way out for the disposal of its surplus small coals. It may be noted here that the entire stocks at the collieries and opencast sites, namely, 8.9 million tons, at the close of 1957, represented small coals, which were almost unsaleable. It may also be noted here that the proportion of small coals in the total output has been growing, while that of large coals, which are in increasing demand, is declining.

While the growing absenteeism among miners and accumulation of small coals are telling on the finances of the Coal Board, a new problem is cropping up. It is reported that the Miners' Union will shortly present a claim for an increase in wages. While the details of the wage claim are being worked out, it is stated that the miners may ask for an increase of 10*s.* per week which, if granted, will cost the industry about £18 million more a year. This demand for wage increase is on top of the Union's demand for a 40-hour week for surface workers and a sick-pay scheme already submitted to the Coal Board. It is reported that, in all probability, the Coal Board will reject any further concessions to workers, let alone giving higher wages, unless the workers give a guarantee against absenteeism. Meanwhile, the Coal Board itself is considering the question of asking the Government for an increase in coal prices. Will the Government accede to this request, if made, when it knows that it will certainly lead to larger wage claims and higher prices for manufactured goods?

JUTE GOODS OUTPUT SLIGHTLY HIGHER

DESPATCHES DECLINE—STOCKS INCREASE

THE New Year does not seem to have brought any cheer to the jute industry. On the contrary, the jute goods market is far from active and traders are extremely cautious, the talk of business recession in the world during the current year presumably acting as a restraint. Though the undertone at the time of writing is a bit steady, the sustained recession in prices of jute goods witnessed since the middle of October last has not been reversed. In fact, B. twills, among sackings, touched early last week a low of Rs. 103.70 per 100 bags (for ready delivery), the worst level seen since the first week of August 1956. They are now currently being quoted at Rs. 104.55, as compared with the 1957 closing of Rs. 106 and the past year's high of Rs. 121.60 touched in the second week of October. Hessians 40" x 10 oz. are being placed at Rs. 39.75 (per 100 yards), as against Rs. 39.10 a week ago. It will be recalled that this variety of hessian closed last year at Rs. 39.35, after touching a high of Rs. 44.60.

A feature of the trading in jute goods in recent weeks is the premium which the forward positions have come to command over the ready, as against the discount at which they were quoted a month ago. This change is evidently due to the operators' anticipation that the demand for jute goods, particularly for sacking, would broaden in the next few months, if the import of foodgrains gathers pace. This, coupled with the fact that the statistical position of the goods is sound, despite the increase in stocks at the end of December, is quite encouraging. The rise in stocks is due more to the sizable fall in despatches than to expansion in production.

The production in the month of December 1957 aggregated 92,800 tons, as compared with 91,900 tons in the previous month, thus maintaining the upward trend for the second month in succession, thereby taking the monthly output to the highest level since July 1956. The rise in output during December is, however, only a fraction of that noted in November and falls very much short of the general expectation. The following table shows the variety-wise output during the month under review, as compared with that in the previous two months and in the corresponding month of 1956:

(In tons)

	December, 1957	November, 1957	October, 1957	December, 1956
Hessian	32,100	38,400	31,700	37,700
Sacking	54,700	53,200	47,100	41,300
Others	6,000	5,300	4,700	5,900
Total ..	92,800	91,900	83,500	84,900

It will be noted that the rise in output is shared by sacking and "other manufactures," their share being 1,500 tons and 700 tons, respectively. With this expansion, the output of sacking has maintained the upward trend which began in August last. It will also be noted with interest that the output last month was 7,900 tons more than that in December 1956, thanks to the sharp rise in sacking production, which has gone up by 13,400 tons, consequent on the gradual switch-over of some of the hessian looms by the mills to this variety a few months ago. During the last four months alone, the output of sacking has gone up by 11,600 tons, while during the same period the hessian production has shrunk by 1,800 tons. Consequent on the switch-over, the proportion of sacking production to the total output has gone up from 48.6 per cent. in December 1956 to 58.9 per cent. last month, while that of hessian has dropped from 44.4 per cent. to 34.6 per cent.

With 92,800 tons during December, the total production of mills in the calendar year 1957 aggregates 1,029,900 tons, as compared with 1,092,800 tons in 1956, thereby showing a slight fall. The total is made up of 414,300 tons hessian (as against 415,200 tons in 1956), 548,700 tons sacking (the corresponding figure for 1956 was 605,500 tons) and 66,900 tons "other manufactures" (as compared with 72,100 tons in the preceding year.) The fall of 62,900 tons in output during 1957 has reversed the upward trend noted since 1953, when production rose from 869,200 tons to 1,092,800 tons, the highest level since 1942.

A season-wise analysis shows that the production during the first half of the current season (1957-58) aggregated 522,000 tons, as compared with 517,300 tons in the corresponding period of 1956-57.

The stocks of manufactured goods at the end of December aggregated 75,600 tons, as compared with 71,000 tons a month before. This rise of 4,600 tons, which was smaller than anticipated, has served to reverse the downward trend in stocks noted since June last, when they stood at 116,000 tons. The rise in stocks has occurred in sacking and "other manufactures," which have gone up by 4,000 tons and 1,600 tons, respectively, over the month, while hessian stocks are lower by 1,000 tons. The decline in hessian stocks, which started in July last, is thus maintained to touch the lowest level since January 1957.

(In tons)

	As on 31st Dec., 1957	As on 30th Nov., 1957	As on 31st Oct., 1957	As on 31st Dec., 1956
Hessian	25,000	26,000	29,500	19,700
Sacking	39,200	35,200	37,500	64,700
Others	11,400	9,800	9,000	11,300
Total ..	75,600	71,000	76,000	95,700

Notwithstanding the increase at the close of last month, the stocks are lower by 20,100 tons, as compared with those a year ago, mainly due to the decline in sacking from 64,700 tons to 39,200 tons. The stocks of hessian have, however, gone up from 19,700 tons to 25,000 tons.

As stated earlier, the rise in stocks at the end of 1957 was chiefly due to the setback in shipments, as will be seen from the following figures (which are gross figures based on shipping bills presented and include coastal shipments also):

(In tons)

	Bags	Cloth	Total
Hessian—			
December 1957	1,252.7	27,007.6	28,260.3
November 1957	3,358.9	32,347.1	35,706.0
December 1956	4,373.0	35,245.8	39,618.0
Sacking—			
December 1957	33,475.2	755.9	34,231.1
November 1957	41,374.9	864.2	42,239.1
December 1956	32,236.2	1,855.3	34,091.5

The break-up figures of net despatches from mills for export purposes and for internal consumption, in respect of December (and, therefore, for the whole year) are not available. The figures up to November do not, however, show an encouraging picture. The total quantity despatched for export purposes has gone up only slightly from 787,700 tons to 795,500 tons, while that for domestic consumption has shrunk from 177,200 tons to 160,700 tons, bringing the total offtake from mills during the 11-month period down from 964,900 tons to 956,200 tons. The decline in domestic offtake is in distinct contrast to the steady rise from 109,800 tons in 1954 to 193,400 tons in 1956 and is contrary to the general expectation that, with the steady expansion in the economic activity of the country year after year, the domestic consumption would also increase, thus compensating the loss of overseas demand for jute goods. The fall in domestic offtake is, therefore, cause for concern to jute mills. There is, however, still a ray of hope in the outlook for the industry. Thanks to the modernisation of mills in recent years the industry is decidedly better equipped today than at any time in recent years to keep its position in the world market. It can also improve its position through diversification of production and by adapting itself to the changing needs of consumers.

W. GERMAN JUTE INDUSTRY WANTS PROTECTION

A strong plea for protection to the home jute industry against "dumping competition" from India and Pakistan was advanced at the annual conference of the German Jute Association held recently in Bremen, reports the *Jute Bulletin* of the Indian Central Jute Committee. It is pointed out in the Association's annual report that other European countries, in view of the special position occupied by jute, have recognised the need for protection, a fact which has also been acknowledged by the O.E.E.C. The safeguarding of the supply of bags for the food industry and agriculture, says the Association, must not be left at the mercy of foreign suppliers.

Meanwhile, figures of exports recently released for the eight-month period, January to August 1957, show slight improvement in the West German jute industry's position in foreign markets, with the total up at 4,733 tons from 4,550 tons in the same period a year ago. The largest buyer was the United States taking 2,618 tons, as against 2,486 tons in January-August 1956. Among the major European buyers were Switzerland, Sweden, Norway and Denmark.

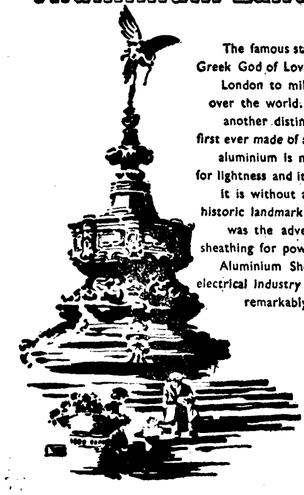
Aluminium Landmark..



The famous statue of EROS, the Greek God of Love, typifies the heart of London to millions of people all over the world. But the statue has another distinction: it was the first ever made of aluminium. Once rare, aluminium is now indispensable—for lightness and its other fine properties it is without a competitor. An historic landmark in cable manufacture was the advent of aluminium sheathing for power cables. In Henley Aluminium Sheathed Cable, the electrical industry now has a product of remarkably high quality.

★ Easily installed—comparative rigidity.
★ Are considerably lighter than the equivalent lead-sheathed Cable.
★ Give superior mechanical protection.
★ Permit fewer supports.
★ Have smooth, clean and tidy appearance.
★ Resist vibration.

GROWING CONSUMPTION OF OIL

ROLE OF BURMAH-SHELL AND STANVAC

A NOTABLE feature of post-war trends in world economy is the growing consumption of energy of all types, including coal, electricity, petroleum and natural gas. Between 1951 and 1954, world consumption of energy, according to the U.N. publication, *World Energy Supplies*, increased from 2,895.2 million tons (coal equivalent) to 3,215.6 million tons. It is interesting to note that while the proportion of coal as a source of energy to the total energy consumed declined during this period from 55.3 per cent. to 51.3 per cent., the share of petroleum increased from 27.0 per cent. to 29.2 per cent. In India, too, the consumption of energy is increasing year by year. Thus, between 1951 and 1954, it moved up from 37.96 million tons to 41.4 million tons. There is still immense scope for further increase in total energy consumption, considering that the *per capita* consumption is only 0.11 ton, as against 4.76 tons in the U.K. and 7.64 tons in the U.S. Further, the share of petroleum in total energy consumption is still very low. And, with the progress of industrialisation and increase in living standards, not only will the total energy consumption go up but also the share of petroleum in the overall total; it may be mentioned here that the demand for petroleum products has moved up from 20.3 million barrels in 1948 to 39.8 million barrels in 1956. From this point of view, given the opportunity, Burmah-Shell and Stanvac, two of the three principal oil companies engaged in the marketing and refining of oil in India, may be expected to play an increasingly important role in meeting India's growing energy requirements.

Burmah-Shell

In its latest publication, *Burmah-Shell—Survey of Activities* 1956, the Burmah-Shell Oil Storage and Distributing Company of India Ltd. points out that the year 1956 was a year in which total consumption of petroleum products in India increased by approximately 8 per cent. Supplies of petroleum products to India were well maintained throughout the year, despite the closure of the Suez Canal in the last two months. Further, prices of those products remained steady in sharp contrast to the wholesale price index (base: August 1939=100) which rose from 368 to 429 during the year. Again, the year 1956 was the first full year of operation of Burmah-Shell Refineries Ltd. in Bombay.

All the motor spirit and furnace oil and most of the high speed diesel oil which the Company sells in India is now being produced in the Refinery; sufficient kerosene and light diesel oil is produced for the Bombay rail-fed supply area. The pattern of supply has changed for, whereas imports of all products used to be made direct to the main installations at Cochin, Madras, Visakhapatnam, Calcutta, Okha and Kandla, now coastal transfers by tanker from Bombay are being made for motor spirit, furnace oil and high speed diesel oil. Over 820,000 tons of products were transferred by this means last year. The Company's distribution network of seven installations and 579 upcountry depots is being improved and expanded all the time, for example, a large new depot with a storage capacity of over 3.7 million gallons was opened at Shakurbasti, near Delhi, during the year to enable full use to be made of the shortest supply route to Delhi area via Kandla. As many as 569 tankers were handled at ports on the coast of India requiring Rs. 2.88 crores to be paid to the Port Authorities. Further, 108,446 bulk and packed wagons were loaded for distribution to interior points by road, and freight charges amounting to Rs. 7.67 crores were paid to the railways.

The Company, as is well known, has a well developed sales organisation. The general manager's office in Bombay directs the policy and acts in an advisory capacity to the four branches located at Bombay, Calcutta, Madras and Delhi. These branches, which have 22 divisional offices under them, are responsible for sales promotion and meeting the growing oil requirements of the country. The divisional offices maintain contact with agents and dealers and direct customers through their district sales representatives. Agents and dealers, who are a vital link in the chain of administration, are business men working in association with the Company. Many of them have grown with it, their connection going back to several generations. Through their industry and service they have won esteem in their local communities. In addition to the distribution and sale of petroleum products, in many cases they have other business of their own. Quite a few represent the Company at more than one station and for more than one product and thus have a considerable investment in the oil business. The number of the Company's main agencies and dealerships aggregated a little over 6,000, more than 200 additional agency and dealership points having been opened during the year to meet the growing demand for petroleum products in the country.

Aviation Service

Besides, the Burmah-Shell aviation service in India, which has been built up over the last 30 years, is available at all important airfields throughout the country. It may perhaps not be generally realised that the rapid strides made in civil aviation has led to the introduction of new and bigger aircraft which require larger quantities of fuel at a greater speed of delivery and demand more exacting specifications. Boeing 707, which have been ordered by many airlines, including Air-India International, requires a delivery of some 17,500 gallons (over 60 tons) of fuel at a rate of 1,000 gallons a minute. This has led to the development of new fuelling techniques, e.g., the Hydrant system of fuelling. It involves the use of underground pipelines through which the fuel can be pumped direct into the aircraft on the apron thus replacing the use of the normal fuelling vehicle. Seven Hydrant systems are already in use by the Company and the eighth, the most modern in India, is shortly to be commissioned in Bombay. In 1956, more than 90,000 aircraft were fuelled by Burmah-Shell on airfields in India.

Trading receipts (gross) in 1956 aggregated Rs. 115.23 crores. Out of this, the share of the Government by way of duties and taxes recovered from the Company was 28.23 per cent. The f.o.b. value of the oil accounted for 35.80 per cent. of trading receipts, distribution charges for 28.30 per cent. and ocean freights for 4.80 per cent. The balance, amounting to Rs. 3.31 crores or 2.87 per cent. of receipts, represents the Company's net earnings, that is, after payment of Indian and U.K. taxes. It is noteworthy that the Company's net earnings of Rs. 3.31 crores represent only 5.96 per cent. of the total capital employed which aggregates no less than Rs. 55.56 crores. This important point should be borne in mind when one comes across reports of the Company making excessive profit.

Stanvac

The progress made by Stanvac—or to give the Company its full name, the Standard-Vacuum Oil Company—is also impressive. Between 1947 and 1956, according to the pamphlet, *Stanvac—A Report of Progress*, published by the Company, the Company's sales of petroleum expanded from 4.6 million barrels to 9.6 million barrels and its staff from 4,300 to 6,294. Again, between 1949 and 1956, the Company's contribution to the Indian exchequer increased from Rs. 7.50 crores per annum to Rs. 16.59 crores per annum and its assets from Rs. 11.66 crores to Rs. 41.55 crores. During 1956, the sales volume handled by the Company's marketing organisation reached a record of 9.6 million barrels, resulting in a gross income of Rs. 50.22 crores. The cost of buying products absorbed Rs. 34.20 crores, salary and wages Rs. 2.59 crores, taxes Rs. 8.77 crores, depreciation Rs. 57.61 lakhs, interest paid Rs. 19.21 lakhs and other expenses Rs. 3.0 crores, leaving a net profit of Rs. 86.15 lakhs which works out to 3.74 per cent. of total assets.

The other major branch of Stanvac's activities, namely, the refining section, also made good progress. The total crude oil processed during the year was 10.32 million barrels and a gross revenue of Rs. 24.47 crores was realised. After paying Rs. 11.96 crores for crude oil, Rs. 1.06 crores for salaries, wages and employee benefits, Rs. 2.65 crores for other operating charges, Rs. 6.83 crores for excise duty and taxes, Rs. 32.45 lakhs for interest and Rs. 70.52 lakhs for income-tax, the refinery's net profits amounted to Rs. 81.11 lakhs. It is worthy of special mention that the finished products turned out by the Company in excess of India's requirements were exported, thus not only augmenting India's foreign exchange earnings but introducing a new item in the list of goods exported by India.

Exploration

The third aspect of Stanvac's activities is its search for oil. Stanvac's exploration efforts in the Bengal area continued at an accelerated pace during 1956 with emphasis on reflection seismic work. This programme started in 1950 with geological surface surveys and was followed by an aeromagnetic survey in 1951 and later by gravimetric and seismic surveys. All these efforts have the goal of securing as much information as possible about the subsoil conditions of this area, prior to the commencement of drilling. Last year, Rs. 67.82 lakhs were spent on the exploration project bringing the total spent to Rs. 2.62 crores. At the close of the year, a deep drilling rig was on the high seas headed for India.

The two earning members of Stanvac are the marketing and refining sections which, as already stated, made a net profit of Rs. 86 lakhs and Rs. 81 lakhs, respectively, or Rs. 1.71 crores in all. It is noteworthy that all this profit was re-invested in the organisation and also additional capital was imported for purposes of expanding and modernising Stanvac's services. In the last five years alone, Standard-Vacuum has invested Rs. 23 crores in India, of which only one-third represented the entire net profit for the period. The major projects completed during 1956 included the installation of the Hydrant refuelling system at Santa Cruz airport and lubricating oil blending facilities at Mazagon (Bombay) and construction of additional tankage at Calcutta and Madras, a terminal at Kandla and a tank discharge pipeline in Cochin. It would appear that the Company's plans in the current year call for further expansion and modernisation of facilities and enlargement and expansion of the capacity of the Bombay refinery. The pamphlet referred to above, essentially meant for distribution among Stanvac employees, says: "Our added experience and training will stand us in good stead as the industrial progress of India continues and the nation's need for petroleum products expands. In continuing to serve these needs, we would be doing a very useful job and we will find better security and opportunity to fulfil ourselves as individuals."

Training

An invaluable, though intangible, service which both Burmah-Shell and Stanvac are rendering to the country is in the direction of imparting technical and managerial know-how. Burmah-Shell has organised training courses at its four main branch offices and at the installations, besides establishing a residential training centre at Juhu, near Bombay. Stanvac, too, has organised training courses for its employees. In addition to those training courses, Stanvac has been sending Indian employees who show exceptional promise for advanced training in overseas countries. All this training, organised by the two companies, is a distinct contribution to India's national economy, considering how greatly economic development of a country depends upon the availability of technical personnel.

NATIONAL RESEARCH DEVELOPMENT CORPORATION

Established in December 1953, the National Research Development Corporation of India (Chairman: Mr. Kasturbhai Lalbhai) is engaged in arranging for the commercial exploitation of research processes developed by the National Research Laboratories set up by the Government of India. During the year 1956-57, to which the latest Annual Report of the Corporation refers, 134 inventions were reported for development by 21 research institutions, thus bringing the total number of inventions reported upto the end of March 1957 to 388. The research processes for which licences were negotiated during the year under review were: (1) lisasorb, (2) method for improving the storage life of cashew kernels, (3) thermo couple ammeters, (4) desiccants and dehumidifiers from Indian coals, (5) ethyl ether and (6) production of benzidine.

During the last three years, the Corporation, it is stated, had to face a number of basic problems in the intensive study of research development. One of these problems is that usually there is a time lag of at least two years between the completion of a research and its commercial exploitation, if all arrangements proceed smoothly. There have been cases where successful research projects have languished on account of one reason or another and commercial production could not be arranged within a reasonable time. The question is whether pilot plants should be run as experimental units to maintain interest in a project and to meet the demands during an interim period. The Corporation, therefore, has, as a matter of policy, laid down that, while research laboratories extend their investigations upto the pilot plant stage where necessary and sell the produce of such pilot plant experimentation, they should not be encouraged to undertake manufacture of a product as a part of their routine activities. If, however, it is decided to operate pilot plants as experimental production units, consideration will have to be given to the organisation which could assume responsibility for their operation.

NEW PRODUCTS AND PROCESESS

Mango Cereal Flakes

MANGO is a common fruit of India, available in abundance in all parts of the country. The fruit season generally lasts for three months only and although several preserved products are being made, large quantities still go waste during the seasonal gluts because the fruit cannot be utilised in time; at times even the collection and transport expenses exceed the market price of the fruit. As a part of investigations on new economic uses for mango, a product, mango cereal flakes, has been developed by the Central Food Technological Research Institute, Mysore, for use as a breakfast food, porridge or snacks. The product, which has approximate composition—mango solids 49 per cent., wheat flour 23 per cent. and added sugar 28 per cent.—can also be used as thickener and flavouring material for ice creams. It is highly nutritious, containing, among others, carotene, equivalent to about 3,500 I.U. of vitamin A per oz. Mango cereal flakes have been found acceptable to all tastes and have appreciable possibilities for successful marketing at home and abroad. In hermetically sealed tins and glass containers, they have good keeping qualities. The method of preparation consists in cooking the wheat or corn flour to gelatinize the starch and destroy the enzymes. Mango pulp, partially neutralised and heated separately, is added to the cooked flour. Cooking is continued till a desired consistency is obtained. Sugar and other additives are then added, the mixture is made homogeneous and dried into flakes on a suitable drum drier. This product offers good means of utilising not only large quantities of surplus fruit but also pulp obtained as a by-product in fruit canning. Production can be taken up independently, but preferably in conjunction with other lines of fruit processing. With some additional equipment, existing fruit and vegetable preservation factories can take up commercial production without much difficulty. Parties desirous of undertaking the commercial development of the process may contact the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

Combating Wind Erosion

Cultivated sandy soils are subject to the risk of soil being blown away, in particular during the period after sowing and before emergence of the crops. A chemical works, W. A. Scholten's Chemische Fabrieken N. V., at Foxhol (the Netherlands) has developed an anti-dust agent for which a patent application is being made. It only temporarily fixes the soil surface, and is not intended as a permanent fixing agent. The new agent has a durability varying between a few weeks and a few months, after which it disappears completely from the soil as a result of bacterial conversion, so that there is no danger of accumulation in the soil when this product is used periodically. The new agent is a cold-water soluble starch derivative which when dissolved in a 2 to 4 per cent. concentration can be sprayed over the field by means of the conventional insecticide-spraying machines at an operating pressure of about 10 atm. The dosage is 50 to 100 kilogrammes per hectare. The Soil Fertility Institute, Groningen, has made successful tests with this agent on sandy soils used for growing asparagus.

Colour Printing

Phosphorus-containing resins may provide the key to the development of simpler and more efficient processes for the colour printing of "difficult" plastics and man-made fibres such as polyethylene, Terylene or nylon. Research which has recently been carried out in the laboratories of the Nobel division of Imperial Chemical Industries, London, has shown, it is claimed, that the adhesion of phosphorus-containing resins, called Phoryl resins, to polyethylene, Terylene and nylon is good. For this reason they can be used to hold the coloured dyes used in colour printing on the polyethylene, or Terylene material. Then, at a later stage of processing, the resins can be removed, leaving the dye embedded in the plastic, or fibre. Materials which are colour printed in this way can be laundered or dry cleaned, it is claimed, without losing colour.

Metal In Oil Neutralises Engine Acid

The introduction of a short magnesium rod into the crankcase of automobile engines is reducing engine wear and prolonging the life of cylinders, pistons and spark plugs, according to Winthrop A. Johns, who has sold more than 700,000 kits to motorists in the United States. Installed in an oil plug that merely replaces the one in the crankcase, the inventor says the magnesium alloy rod neutralises the carbonic acid which forms after a time from the interaction of water and carbon dioxide. He reasons that this prevents the corrosive effect of the acid, which ordinarily reacts with iron and water, to form ferrous oxide or rust.

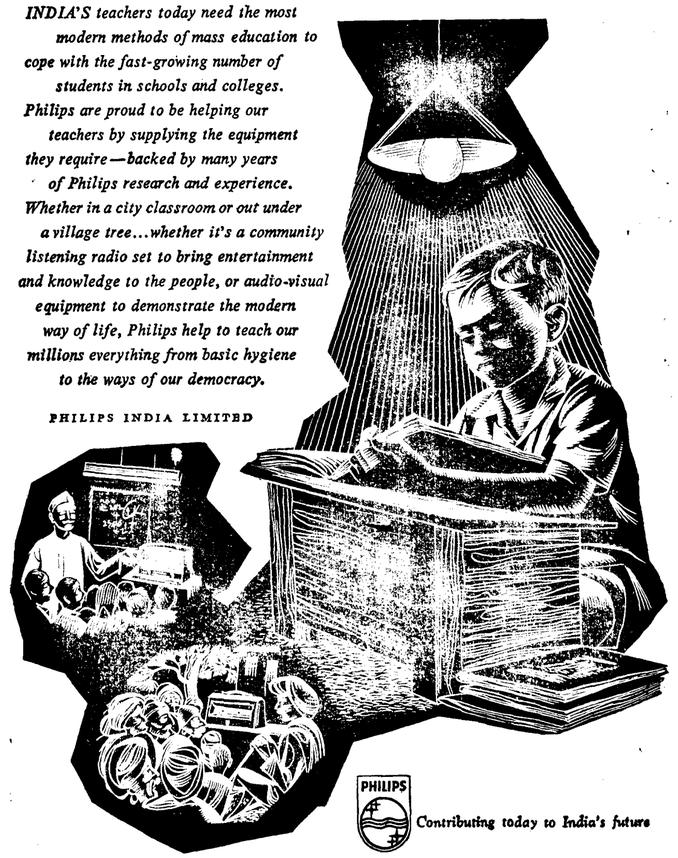
Shoe Moulded to Foot Now Assures Perfect Fit

For the first time in the United States it will soon be possible to buy a perfectly fitted shoe. A shoe that literally is moulded to the foot was patented recently. The new shoe has a special inner lining called a sock lining. After the shoe is put on the foot a moulding material of liquid latex mixed with zinc oxide and wood flour is inserted through the shoe sole, filling up all the space between the shoe proper and the sock lining. The material is injected at a comfortable body temperature.

In Education **PHILIPS** help to teach the modern way

INDIA'S teachers today need the most modern methods of mass education to cope with the fast-growing number of students in schools and colleges. Philips are proud to be helping our teachers by supplying the equipment they require—backed by many years of Philips research and experience. Whether in a city classroom or out under a village tree...whether it's a community listening radio set to bring entertainment and knowledge to the people, or audio-visual equipment to demonstrate the modern way of life, Philips help to teach our millions everything from basic hygiene to the ways of our democracy.

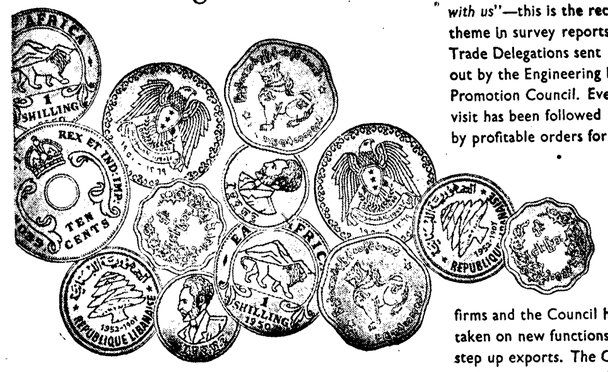
PHILIPS INDIA LIMITED



PHILIPS Contributing today to India's future

from goodwill to good business

"Wherever we went, there was much goodwill for India. These countries are willing to do business with us"—this is the recurring theme in survey reports of Trade Delegations sent out by the Engineering Export Promotion Council. Every visit has been followed by profitable orders for Indian firms and the Council has taken on new functions to step up exports. The Council registers exporters and their brands and recommends import of raw materials and replenishment of pig iron and steel used up in exports. Our activities are constantly widening. Many have profited by them and, may be, we can put some good business your way, too.



Engineering Export Promotion Council

India Exchange, Calcutta 1

EEPC-19

LAW OF MASTER AND SERVANT IN INDUSTRIAL DISPUTES

SOME RECENT JUDGMENTS ANALYSED

By Krishna Prakash Goel

WHEN the Indian Legislature enacted the Industrial Disputes Act, in 1947, it did not lay down any pointers for the guidance of Industrial Tribunals. With practically unfettered powers and fanciful notions of social justice, the industrial tribunals sometimes delivered conflicting awards. A few industrial tribunals went to the extent of disregarding the rulings of Labour Appellate Tribunal. Even the well-known principle of *Res Judicta* was not followed.

The position was highlighted by the confusion caused as a result of adjudication on the same issue by two industrial tribunals in West Bengal. The Government of West Bengal had referred the demands of the workers of the Calcutta Electric Supply Corporation. One of the demands was connected with overtime payment to workers of the mains department. The first reference was to the Judge, Mr. M. C. Banerjee. In his award, dated 26th March 1951, Mr. Banerjee observed:

"I do not find any reason for the union to doubt that workmen governed by the Factories Act should not be so admitted by the Company. The Company, in its written statement, admits that the mains department, the testing department, the central workshop, the generating station and certain sub-stations are governed by the Factories Act." (*Calcutta Gazette*, 19th April 1951.)

It is not clear why the Government made a reference again of the same demand to another tribunal. Nor is it clear as to why the new industrial tribunal adjudicated on a demand which had already been disposed of by an earlier tribunal. Whatever might have been the case, the second industrial tribunal, presided over by J. N. Maitra, in his award dated 13th September 1954, said: "I am unable to accept the contention of the Mazdoor Union that the findings under issue 21 amounted to an award by Mr. M. C. Banerjee that the workmen in the mains department were factory workers. Mr. M. C. Banerjee merely noted under the said issue that there was such an admission in the written statement of the Company. What the Company appears to have admitted was that the Factories Act applied to its generating stations, the testing department, the central workshop (but not central stores) and certain sub-stations." Mr. Maitra went on to state: "It is therefore obvious that the statement in the award by Mr. M. C. Banerjee was without foundation and made apparently through inadvertence." (*Calcutta Gazette*, 30th September 1954.) The matter did not end there. The workers filed an application before the Payment of Wages Authority, and the Authority chose to accept the earlier interpretation of Mr. Banerjee in favour of the workers. (*Etwari & others* vs. *Electric Supply Corporation of Calcutta* 1937 11 L.L.J.)

It is, therefore, heartening to know that at least one High Court (Allahabad High Court; *vide Bajpai & others* vs. *Labour Appellate Tribunal* 1957 11 L.L.J.) has categorically declared that the industrial tribunals would be bound to follow the Law of Master and Servant and the ordinary Law of Contract in so far as it is not expressly altered by the Industrial Disputes Act. In this context it may be worthwhile examining briefly the case-law under the Law of Master and Servant, which may be useful under cases of industrial disputes.

Employers and Employees

Under the Common Law governing the relations of employers and employees, an employer is entitled to terminate the services of his employee unless under a binding contract, security of tenure of service is conferred. An employer at best may be liable to pay to his employee damages for wrongful termination of employment, but normally he cannot be compelled to retain an employee whom he does not desire to retain in his employment (*Bombay Municipal Corporation* vs. *Labour Appellate Tribunal of India* 1957 I.C.R.). No court of equity could compel an employer to retain the servant, agent or manager. How is it possible for an employer or an agent to go on in the intimate connection which such a contract is calculated to create? They are to be on the same premises, acting in the management of the same business. If there is mutual dissatisfaction, well- or ill-founded, it is perfectly clear that a management conducted under such circumstances, must tend very much to the prejudice of the concern. Where the master is a trustee, however, as in the case of trustees of a school, the Court may, on a fit case being made out, interfere.

Notice

Even under the ordinary law governing the relations between master and servant, no employee can be dismissed without notice (*Laxminarayan* vs. *Imperial Bank of India*, A.I.R. 1939 Mad.) and where the dismissal is by way of punishment, it cannot be effected without giving the employee an opportunity to explain his conduct (*Kallagar Devasthan* vs. *T. T. Nambigal*, A.I.R. 1943 Mad.). If, however, the servant's misconduct be not such as to go the whole consideration of the contract on the part of the master, he will not be justified in dismissing the servant, but must, if necessary, resort to a cross action against the servant. It would be no ground to discharge a servant that, after the contract of hiring was entered into, the master discovered that the servant had acted dishonestly or fraudulently to a former master, unless indeed the servant had by fraud, misstatement or concealment of the facts, induced the second master to hire him. Where no time limit is limited either expressly or by implication for the duration of a contract of hiring and service, the hiring is considered as a general hiring, and in point of law, a hiring for a year. If a party hired for a certain time so conducts himself that he cannot give the consideration for his salary, he shall forfeit the current salary even for the time during which he has served. And where a person has entered into a binding agreement to take another into his service on a future day, but, before that day arrives, announces his intention not to do so, he is entitled to be immediately believed, and the servant may thereupon immediately bring an action against him, and is not bound to wait till the day arrives to see if the master will change his mind. It is conceived, however, that in such a case if the servant does not act upon the master's announced renunciation of the contract, and before the day arrives for the commencement of the service, becomes either by the act of God, *vis major*, or by his own misconduct or misfortune, incompetent or unable to perform his part of it, the master would be at liberty to avail himself of those circumstances to rescind the contract, and could not therefore be sued for a breach of it.

Monetary Value

The Supreme Court, in a recent case in which they had to decide the monetary value of reinstatement, stated:

"The position as it obtains in the ordinary law of Master and Servant is quite clear. The master who wrongfully dismisses his servant is bound to pay him such damages as will compensate him for the wrong that he has sustained . . . They are to be assessed by reference to the amount earned in the service wrongfully terminated and the time likely to elapse before the servant obtains another post for which he is fitted. If the contract expressly provides that it is terminable upon, e.g., a month's notice, the damages will ordinarily be a month's wages. . . . No compensation can be claimed in respect of the injury done to the servant's feelings by the circumstances of the dismissal, nor in respect of extra difficulty of finding work resulting from those circumstances. A servant who has been wrongfully dismissed must use diligence to seek another employment, and the fact that he has been offered a suitable post may be taken into account in assessing the damages." (*Chitty on Contracts*, 21st Edn., Vol. (2), p. 559, para 1040.)

If the contract of employment is for a specific term, the servant would, in that event, be entitled to damages the amount of which would be measured *prima facie* and subject to the rule of mitigation in the salary of which the master had deprived him (*vide Collier* vs. *Sunday Referee Publishing Co., Ltd.* 1940-4, A.E.R., 234, 237). The servant would then be entitled to the whole of the salary, benefits, etc., which he would have earned had he continued in the employment of the master for the full term of the contract, subject, of course, to mitigation of damages by way of seeking alternative employment.

Such damages would be recoverable by the servant for his wrongful dismissal by the master only on the basis that the master has committed a breach of the contract of employment. If, however, the contract is treated as subsisting and a claim is made by the servant for a declaration that he continues in the employment of the master and should be awarded his salary, benefits, etc., on the basis of the continuation of the contract, the servant would be entitled to a declaration that he continues in the service of the master and would only be entitled to the payment of salary, benefits, etc., which accrued to him upto the date of the institution of the suit. Whatever be the position in regard to the terms and conditions of employment, the benefit of reinstatement awarded to a workman certainly cannot be treated as part of the contract between him and the employer. The effect of an order of reinstatement is merely to set at naught the order of wrongful dismissal of the workman by the employer and to reinstate him in the service of the employer as if the contract of employment originally entered into had been continuing. The terms and conditions of the contract which obtained when the workman was in the employ of the employer prior to his wrongful dismissal which has been set aside continue to govern the relations between the parties. There is no variation of those terms and conditions of the contract. The only thing which happens is that the workman is reinstated in his old service as before.

The monetary value of the benefit of such reinstatement is, therefore, to be computed not on the basis of a breach of the contract of employment, nor on the basis of a tort alleged to have been committed by the employer by reason of the non-implementation of the direction for reinstatement contained in the award. The analogy of a suit for a declaration that the workman is continuing in the employ of the employer and that he should be paid the salary and benefits, etc., which would have been earned by him upto the date of the institution of the suit also does not strictly apply for the simple reason that the workman here is not asking for a declaration that he is still continuing in service on the ground that there was a termination of his service after the award, which termination is void. What he is asking for is a computation in terms of money of the benefit of reinstatement which was granted to him by the industrial tribunal and which the employer did not implement.

Value of Benefit

The purpose of the enactment of section 20(2) of the Industrial Disputes Act is not to award to the workman compensation or damages for a breach of contract or a breach of a statutory obligation on the part of the employer. Any money which is due from an employer under the award can by virtue of the provisions of section 20(1) of the Act be recovered by the appropriate Government on an application made to it by the workmen. Where, however, any benefit which is not expressed in terms of money is awarded to the workman under the terms of the award, it will be necessary to compute in terms of money the value of that benefit before the workman can ask the appropriate Government to help him in such recovery. Section 20(2) provides for the computation in terms of money of the value of such benefit and the amount at which such benefit should be computed is to be determined by the industrial tribunal to which reference would be made by the appropriate Government for the purpose. Such computation has relation only to the date from which the reinstatement of the workman has been ordered under the terms of the award and would have to be made by the industrial tribunal having regard to all the circumstances of the case. The industrial tribunal would have to take into account the terms and conditions of employment, the tenure of service, the possibility of termination of the employment at the instance of either party, the possibility of retrenchment by the employer or resignation or retirement by the workman and even of the employer himself ceasing to exist or of the workman being awarded various benefits including reinstatement under the terms of future awards by industrial tribunals in the event of industrial disputes arising between the parties in the future.

Even in the case of ordinary contracts between master and servant such considerations have been imported by the Courts. The observations of Greer, L.J., in *Salt* vs. *Power Plant*

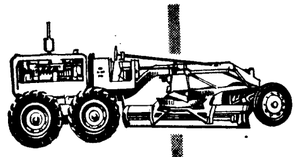
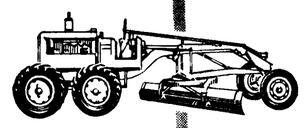
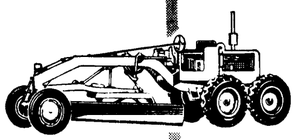
CAT
MOTOR GRADERS
All over India on the big construction projects with municipalities; state farms; and with the leading contractors, you can see Caterpillar Motor Graders hard at work.
Building or maintaining existing roads, ditches, shaping banks, there is no tool like the profit making Caterpillar Motor Grader.
All over India, and throughout the world successful contractors and project engineers give Caterpillar their first choice. The main reasons for this preference are the proved low cost, high production and long-lived performance of these famous machines.
Ensure the job gets done to time by using a Caterpillar Motor Grader. There are three models the No. 12, 112 and 212. One of these, or more, is the answer to your problem.


No. 12—115 HP


No. 112—75 HP


No. 212—50 HP

CHARGE AND COMPUTATION OF WEALTH TAX

MAIN PROVISIONS EXPLAINED

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

THE Wealth Tax Act 1957 received the assent of the President on 12th September 1957. It shall be deemed to come into force on the 1st day of April 1957. A review of its main provisions as they finally emerged from Parliament will be useful as the Government has started collecting this tax.

Wealth tax shall be charged for every financial year commencing on or from 1st April 1957 in respect of the "net wealth" on the corresponding valuation date of every individual, H.U.F. and company at the rates specified in the schedule.

The three categories of assessees are:—(1) Individual, (2) H.U.F. and (3) company. It excludes partnership and other association of persons from the operation of the Act.

Net wealth has been defined as the amount by which the aggregate value computed in accordance with the provision of the Act of all "assets" wherever located, belonging to the assessee on the valuation date, including assets required to be included in his net wealth as on that date under the Act is in excess of the aggregate value of all debts owed by the assessee on the valuation date other than—

(i) debts which under section 6 are not to be taken into account; and,

(ii) debts which are secured on or which have been incurred in relation to any asset in respect of which wealth tax is not payable under this Act.

Assets Defined

This definition takes us to the definition of "assets." The latter definition states:

"assets" include property of every description, moveable or immoveable, but does not include—

(i) agricultural land and growing crops, grass or standing trees on such land;

(ii) any building owned or occupied by a cultivator or receiver of rent or revenue out of agricultural land;

Provided that the building is on or in the immediate vicinity of the land and is a building which the cultivator or the receiver of rent or revenue by reason of his connection with the land requires as a dwelling-house or a store-house or an outhouse;

(iii) animals; even stud animals or race-horses, whatever their value may be are expressly exempted;

(iv) a right to any annuity in any case where the terms and conditions relating thereto preclude the commutation of any portion thereof into a lump sum grant;

(v) any interest in property where the interest is available to an assessee for a period not exceeding six years.

Valuation Date

The next important definition to note is the definition of "valuation date." Valuation date, says the definition, in relation to any year for which an assessment is to be made under this Act, means the last day of the previous year as defined in clause (11) of section 2 of the Income-tax Act if an assessment were to be made under that Act for that year.

Provided that where in the case of an assessee there are different previous years under the Income-tax Act for different sources of income, the valuation date for the purposes of this Act shall be the last day of the last of the previous years aforesaid.

This means that if you have a calendar year for your business source, financial year for your property income source, the valuation date will be the last date of the financial year, and not the calendar year of your business, because the financial year will be the last of the previous years.

Net Wealth

In computing the net wealth of an individual, there shall be included, as belonging to him—

(a) the value of assets which on the valuation date are held—

(i) by his wife—to whom such assets have been transferred by the individual, directly or indirectly, otherwise than for adequate consideration or in connection with an agreement to live separately, or

(ii) by a minor child—not being a married daughter to whom such assets have been transferred by the individual otherwise than for adequate consideration, or

(iii) by a person or association of persons—to whom such assets have been transferred by the individual otherwise than for adequate consideration for the benefit of the individual or his wife or minor child, or

(iv) by a person or association of persons—to whom such assets have been transferred by the individual otherwise than under an irrevocable transfer,

whether the assets referred to in any of the sub-clauses aforesaid are held in the form in which they were transferred or otherwise.

(b) Where the assessee is a partner in a firm or a member of an association of persons, the value of his interest in the firm or association determined in the prescribed manner.

In determining the value of interest contemplated above, the Central Board of Revenue shall have regard to the law relating to the manner in which accounts are to be settled between partners of a firm and members of an association on the dissolution of a firm or association, as the case may be.

Where the value of assets is to be included in the net wealth in accordance with clause (a), there shall be deducted for such value any debts owing on the valuation date by transferee mentioned in that sub-section in so far as such debts are referable to the assets.

The transfer mentioned above shall not apply to any transfer made by an individual before 1st April 1956, and the value of any assets so transferred shall not be included in the computation of net wealth.

The value of any assets transferred under an irrevocable transfer shall be liable to be included in computing the net wealth of the transferor as and when the power to revoke arises to him.

The expression "transfer" for above purposes includes any disposition, trust, covenant, agreement or arrangement. An "irrevocable transfer" includes a transfer of assets which, by the terms of the instrument effecting it, is not revocable for a period exceeding six years or during the lifetime of the transferee.

Exemptions

The law provides the following exemptions:

It says, wealth tax shall not be payable by an assessee on the following assets and such assets shall not be included in the net wealth of the assessee:

(i) any property held by him under trust or other legal obligation for any public purpose of a charitable or religious nature in India;

(ii) the interest of the assessee in the coparcenary property of any Hindu undivided family of which he is a member;

(iii) any building in the occupation of a ruler declared by the Central Government as his official residence;

(iv) one house belonging to the assessee exclusively used by him for residential purposes and situate in any place with a population not exceeding 10,000 and which is more than five miles from any area for which there is a municipality the population whereof exceeds 10,000;

(v) the rights under any patent or copyright belonging to the assessee, provided that they are not held by him as assets of a business, profession or vocation and no income or benefit accrues to him therefrom;

(vi) the right or interest of the assessee in any policy of insurance before the moneys covered by the policies become due and payable to the assessee;

(iv) one house belonging to the assessee ex-sion or other life annuity in respect of past services under an employer;

(viii) furniture, household utensils, wearing apparel, provisions and other articles intended for personal or household use of the assessee;

(ix) the tools and implements used by the assessee for the raising of agricultural produce. (Tools and implements do not include any plant or machinery used in any tea or other plantation in connection with the processing of any agricultural produce or the manufacturing of any article from such produce);

(x) the tools and instruments necessary to enable the assessee to carry on his profession or vocation, subject to a maximum of Rs. 20,000 in value;

(xi) instruments and other apparatus used by the assessee for purpose of scientific research;

(xii) any works of art, archæological, scientific or art collections, books or manuscripts belonging to the assessee not intended for sale;

(xiii) any drawings, paintings, photographs, prints and any heirloom not falling within clause (xii) and not intended for sale, but not including jewellery;

(xiv) jewellery in the possession of any ruler, not being his personal property which has been recognised by the Central Government as his heirloom or, where no such recognition exists, which the Board may, subject to any rules that may be made by the Central Government in this behalf, recognise as his heirloom at the time of the first assessment to wealth tax under this Act;

(xv) jewellery belonging to the assessee, subject to a maximum of Rs. 25,000;

(xvi) 10-year treasury savings deposit certificates, 15-year annuity certificates, deposits in post office savings banks, post office cash certificates and post office national savings certificates held by the assessee;

(xvii) the amount standing to the credit of an assessee, being a salaried employee, in any provident fund maintained by the employer to which the Provident Funds Act, 1925, applies or which is recognised provident fund within the meaning of the Income-tax Act;

(xviii) the property received by an assessee from Government in pursuance of any gallantry or merit award instituted or approved by the Central Government;

(xix) the value of shares held by the assessee in any other company in any case where the assessee is a company;

(xx) the value of any shares held by the assessee in any company referred to in section 45 (d), if on the relevant valuation date the provisions of this Act are not applicable to the company by reason of the provisions contained in that section;

(xxi) that portion of the net wealth of a company established with the object of carrying on an industrial undertaking in India within the meaning of the *Explanation* to clause (d) of section 45, as is employed by it in a new and separate unit set up after the commencement of this Act by way of substantial expansion of its undertaking:

Provided that—

(a) separate accounts are maintained in respect of such unit; and

(b) the conditions specified in clause (d) of section 45 are complied with in relation to the establishment of such unit:

And provided further that this exemption shall apply to any such company only for a period of five successive assessment years commencing with the assessment year next following the date on which the company commences operations for the establishment of such unit.

Wealth tax is not payable by an assessee in respect of any deposit made by the assessee with the Government or in any security of the Government or of a local authority not specified in clause (xvi) above which the Central Government may, by notification in the official *Gazette*, exempt from wealth tax; but the value of any deposit or security so exempted shall be included in computing the net wealth of the assessee.

Notwithstanding anything contained in sub-section (1), wealth tax shall be payable by an assessee in respect of assets referred to in clause (xvi), clause (xix), clause (xx) above for any assessment year unless the assets are held by him—

(a) in the case of shares in a company, from the date on which the shares were first issued by the Company, or for a period of at least six months ending with the relevant valuation date, whichever is shorter; and

(b) in the case of other assets, for a period of at least six months ending with the relevant valuation date.

Assets and Debts Outside India

So far as the exclusion of assets and debts outside India are concerned, section 6 of the Wealth Tax Act provides as under:

In computing the net wealth of an individual or a Hindu undivided family not resident in India or resident but not ordinarily resident in India, or of a company not resident in India during the year ending on the valuation date—

(i) the value of the assets and debts located outside India; and

(ii) the value of the assets in India represented by any loans or debts owing to the assessee in any case where the interest, if any, payable on such loans or debts is not to be included in the total income of the assessee under section 4 (3) of the Income-tax Act;

shall not be taken into account.

An individual or Hindu undivided family shall be deemed to be not resident or resident but not ordinarily resident in India during the year ending on the valuation date if in respect of that year the individual or the Hindu undivided family, as the case may be, is not resident in India or resident but not ordinarily resident in India within the meaning of the Income-tax Act.

A company shall be deemed to be resident in India during the year ending on the valuation date, if—

(a) it is a company formed and registered under the Companies Act, 1956, or is an existing company within the meaning of that Act; or

(b) during that year the control and management of its affairs is situated wholly in India.

How are the values of the assets to be determined?

The value of any asset, other than cash, for the purposes of this Act shall be determined to be the price which, *in the opinion of the wealth, tax officer*, it would fetch if sold in the open market on the valuation date.

However:

(a) where the assessee is carrying on a business for which accounts are maintained regularly, the wealth tax officer may, instead of determining separately the value of each asset held by him in such business, determine the net value of the assets of the business as a whole having regard to the balance-sheet of such business as on the valuation date and making such adjustment therein as the circumstances of the case may require;

(b) where the assessee carrying on the business is a company not resident in India and a computation in accordance with clause (a) cannot be made by reason of the absence of any separate balance-sheet drawn up for the affairs of such business in India, the wealth tax officer may take the net value of the assets of the business in India to be that proportion of the net value of the assets of business as a whole wherever carried on determined as aforesaid as the income arises from the business in India bears to the aggregate income from the business wherever arising during that year.

Companies Exempted

The following companies are exempted:

(a) a banking company within the meaning of the Banking Companies Act, 1949;

(b) an insurer or insurance company within the meaning of the Insurance Companies Act, 1938;

(c) any company established with the object of financing by way of loans or advances or subscribing to the capital of private enterprises in India where the Central Government has made or agreed to make a special advance for the purpose or guaranteed or agreed to guarantee the payments of money borrowed by the Company from an institution outside India;

(d) any company established with the object of carrying on an "industrial undertaking" in India in any case where the Company is not formed by the splitting up or the reconstruction of a business already in existence or by the transfer to a new business of any building, machinery or plant used in a business previously carried on.

The exemption granted by clause (d) shall apply to any such company only for a period of five successive assessment years commencing with the assessment year next following the date on which the company is established, which period shall, in case of a company already established be computed in accordance with this Act from the date of its establishment as if this Act had been in force on and from the date of its establishment.

The expression "industrial undertaking" means an undertaking engaged in the manufacture, production or processing of goods or articles or in mining or in the generation or distribution of electricity or any other form of power;

(e) any company solely engaged in the business of transporting goods or passengers by ships;

(f) any company registered under section 25 of the Companies Act, 1956.

Rates of Tax and Exemptions

The rates of wealth tax are as follows:

(a) In case of every individual:

	Per cent.
(i) On the first Rs. 2,00,000 of net wealth	*Nil*
(ii) On the next Rs. 10,00,000 of net wealth	½
(iii) On the next Rs. 10,00,000 of net wealth	1
(iv) On the balance of net wealth	1½

(b) in case of every Hindu undivided family:

	Per cent.
(i) On the first Rs. 4,00,000 of net wealth	*Nil*
(ii) On the next Rs. 9,00,000 of net wealth	½
(iii) On the next Rs. 10,00,000 of net wealth	1
(iv) On the balance of net wealth	1½

(c) in case of every company:

	Per cent.
(i) On the first Rs. 5,00,000 of net wealth	*Nil*
(ii) On the balance of net wealth	½

Companies incurring a loss: In case of a company which has incurred a net loss in any year computed in the manner hereinafter provided and which has not declared any dividend on its equity capital in respect of that year, the rate of tax for the relevant year shall be *nil*.

The loss referred to in the above proviso shall be computed in accordance with the provisions of sections 8, 9, 10 and 12 of the Income-tax Act but without deducting the allowances for arrears of depreciation or extra depreciation or developmental rebate or any allowance in respect of any losses brought forward from earlier years.

Wealth includes assets on which taxes not payable: Where the net wealth of an assessee includes the value of assets on which wealth tax is not payable, the amount of tax payable by an assessee shall be the amount bearing to the total amount of wealth tax which would have been payable on net wealth had no property been exempt the same proportion as the unexempted portion of net wealth bears to the net wealth.

Assessees other than companies having shares in companies as its assets: Where the net wealth of an assessee not being a company, in respect of any assessment year includes the value of any shares in a company, the wealth tax payable shall be reduced by the amount, if any, by which the sum of the following, namely:

(a) that portion of the wealth tax payable by the assessee computed as aforesaid as bears to the total amount of the tax the same proportion as the value of the shares aforesaid included in his net wealth bears to his net wealth;

(b) that portion of the wealth tax, if any, paid by the company in respect of the same assessment year as bears to the whole amount of the said tax, the same proportion as the paid-up value of the shares included in the assessment of the assessee aforesaid bears to the aggregate paid-up value of the share capital of the company as on the relevant valuation date, *exceeds* the amount calculated at the rate of 1.5 per cent. on the value of shares included in his net wealth.

Non-resident foreigner: Where an assessee is an individual who is not a citizen of India and who is not a resident in India, the wealth tax payable by him in respect of any assessment year computed in accordance with the rates specified in this schedule shall be reduced by an amount equal to 50 per cent. thereof.

Resident Indian citizen: Where the net wealth of an assessee, being an individual who is a citizen of India, or a Hindu undivided family, includes any assets located outside India, the wealth tax payable by the assessee in respect of any assessment year shall be reduced by an amount which bears to the amount of tax that would have been payable by the assessee if the rates of tax had been reduced to one-half of the rates specified in this schedule the same proportion as the value of the assets located outside India as reduced by the debts located outside India bears to the net wealth of the assessee.

Companies having profit less than wealth tax payable: Where the profits of a company in respect of any year, before deducting any of the allowances referred to in the second para of the proviso to Part II, are less than the amount of wealth tax payable by it in respect of the relevant assessment year, the wealth tax payable by the company for such assessment year shall be limited to the amount of such profits; provided that the company has not declared any dividend on its equity capital in respect of that year.

Produce More and Serve A

Double Purpose

Produce more and save the monies now spent in importing the deficit in our food supply

Produce more manufactured goods and hasten the process of industrialisation which is the pivot of the FIVE YEAR PLAN

RADIO AND ELECTRICALS MANUFACTURING COMPANY, LIMITED

CHAIRMAN, MR. K. NARAYANASWAMY'S REVIEW

THE Eleventh Annual General Meeting of the Radio and Electricals Manufacturing Company, Ltd., was held in Bangalore on 27th December 1957. Speaking to the shareholders on the occasion, Mr. K. Narayanaswamy, Chairman of the Company, indicated that the Company was contemplating expansion of the energy meter section on a substantial scale for the manufacture of single and polyphase energy meters, in view of the large demand expected during the current Plan period.

The following is the full text of Mr. Narayanaswamy's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you to this eleventh ordinary general meeting of the shareholders of the Radio and Electricals Manufacturing Company, Ltd. I extend a special welcome to the employee-shareholders who have joined this meeting for the first time in their capacity as shareholders. The Directors' report and the audited accounts for the year ended 31st March 1957 have been before you for some time and, with your permission, I propose to take them as read. Last year, your Company made a beginning in regard to payment of a return of 6 per cent. to the shareholders and I am happy to say that this year, a provision of Rs. 3,17,802 has been recommended towards 13 per cent. dividend on the paid-up capital. Payment of three months' basic salary as bonus to employees has also been made. Out of this proposed dividend of 13 per cent., an interim dividend of 5 per cent. has already been paid in September 1957 and the payment of a final dividend of 8 per cent. and also carry-over of the balance of net profit of Rs. 83,448 is before you for consideration and adoption.

Production of Meters

"In the Directors' report, mention has been made of the amalgamation of the meter section with effect from 1st April 1956. During the year under review, your Company manufactured about 50 per cent. of the electricity meters produced in India. But the existing installed capacity for electricity meters is not commensurate with the requirements of the country. Thanks to plans for expansion of the electricity generation capacity in the country from 1.83 million kw. to 3.4 million kw., the demand for meters by the end of the second Five-year Plan period is estimated to go up to about three times the present installed capacity in the country, thus indicating scope for substantial expansion of the production capacities. The Company is, therefore, contemplating expansion of the energy meter section on a substantial scale for manufacture of single and polyphase energy meters.

"There is similar demand for radio receivers also, but since the existing plant capacity of the Company has been utilised for the manufacture of electricity meters, manufacture of radio receivers is maintained on a modest scale, so that it can be augmented substantially when circumstances permit. The Company has also taken up manufacture of some more radio components in technical collaboration agreements with two U.K. firms as indicated last year.

Water Meters

"Operations of the new water meter section are progressing fairly satisfactorily. I am glad to report that already about 2,000 water meters assembled or manufactured by the Company have been put into the market and sold. There is a good demand for these meters and the question of increasing production of water meters is receiving careful consideration.

"The working of the Mysore Government Plastics Section which is under the management of your Company continues to be satisfactory.

"Whatever the alarms raised, the economic health of the country continues to display steady improvement, thanks to generous foodgrain loans advanced by developed countries, on the one hand, and a heartening degree of expansion in the output of manufactured goods within the country, on the other. Foreign exchange and other troubles are, no doubt, serious, but they are all inherent in the attempts being deliberately made to force the pace of development. The masses instinctively appreciate the position, because they can see no other way of breaking the deadlock facing the country all along, namely, stabilisation of the present subsistence level of living conditions and poverty. The plea for devaluation of the rupee on a unilateral basis or for allowing the rupee to 'float and find its equilibrium' is, therefore, most inopportune, to say the least. That the cure will prove worse than the disease is clear enough, if one remembers the imperative need for an ever-increasing volume of capital goods and other indispensable imports. The vulnerable and inelastic nature of demand for the main exports like tea, jute and textiles does not make the position any easier. Maintenance and expansion of exports so essential for development must, therefore, be secured not so much by tinkering with the rupee-dollar parity, but by appropriate control and other measures aimed at reducing production costs to reasonable levels, even if such controls involve some inconvenience to the general public during this period of transformation of India into a modern economy.

Employer-employee Relationship

"In this connection, I feel it my duty to refer to the steady encouragement and support being given to the Company from the State as well as the Central Governments. I also wish to acknowledge with thanks the valuable advice, co-operation and support received from my esteemed colleagues on the Board, on the one hand, and from all employees including officers and staff, on the other. I am glad to inform you that employee-employer relationships continue to run on a smooth and co-operative basis.

"With these introductory remarks, I now move: 'Resolved that the balance-sheet and the profit and loss account for the year ended 31st March 1957, as certified by the Chartered Accountants and the Comptroller and Auditor General of India, together with the Directors' report, be received and adopted.'"

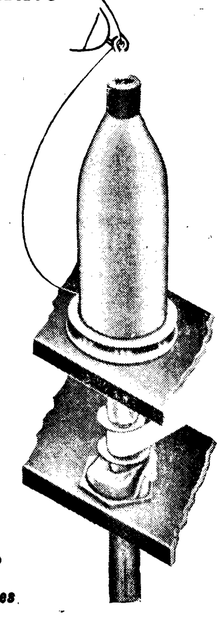
FACTS BEHIND FIGURES

Revolving over 10,000 times a minute



Round and round whirl the spindles in the spinning frames of India's 419 cotton mills. Averaging a speed of over 10,000 revolutions to the minute, these spindles wind yarn for 5,000 million yards of cloth each year. Under the Second Five Year Plan this output will increase by 3,500 million yards. Ten years ago the Indian textile industry imported almost all their machines; today, Indian machinery manufacturers are increasingly meeting their needs. Texmaco, pioneer manufacturer of cotton textile machinery in India, supplies the complete range of spinning machinery for cotton and staple fibre, designed and built to established international standards in technical collaboration with the world renowned Howa Machinery Limited of Japan.

NATIONAL NEWSPRINT AND PAPER MILLS LTD.

TENTH ANNUAL GENERAL MEETING

CHAIRMAN, SIR A. RAMASWAMI MUDALIAR, CONFIDENT OF THE COMPANY'S FUTURE

SPEAKING at the Tenth Annual General Meeting of the National Newsprint and Paper Mills Ltd., held at Nepanagar, Madhya Pradesh, on 31st December 1957, Sir A. Ramaswami Mudaliar, Chairman, said that the Company had got over its teething troubles and reached a stage from which it could forge ahead with success. The future of the mill, he added, was now assured.

The following is the full text of Sir Ramaswami Mudaliar's speech:

"GENTLEMEN,

"I have much pleasure in welcoming you to the tenth annual general meeting of the National Newsprint and Paper Mills Ltd. Copies of the balance-sheet and profit and loss account for the year ended 31st March 1957 have been in your hands for some time and, with your permission, I shall take them as read.

"With the completion of the chemical mill and the commissioning of it into production, the manufacture of newsprint on a commercial scale was taken up from the beginning of the current year. The mill was formally opened by the Hon'ble the Prime Minister on 26th April 1956, and, therefore, the accounts relate to one complete year of production of newsprint through the machinery installed in the mill.

Accounts

"The balance-sheet and the profit and loss account will appear at first sight to make cheerless reading, but a closer analysis of the figures, particularly the losses indicated in the balance-sheet, will show that the year under review marks an important milestone in the development of this mill. The losses are comprised of an amount of Rs. 75,83,183-15-6 which is the interest payable on the loans given by the Madhya Pradesh Government from time to time during the past eight years. It also includes a sum of Rs. 38,11,901 provided for depreciation on the fixed and other assets of the Company for the year. These two items require further elucidation, so as to present the balance-sheet in its proper perspective. The Madhya Pradesh Government gave its decision recently about the rate at which interest should be charged on the loans given by that Government during the period of construction which extended over eight years. The treatment of this interest on loans received during the period of organisation and construction and before the mill went into production and was in a position to earn revenue, has engaged the serious attention of your Directors. According to normal practice this interest amount would be capitalised and would form part of the capital of the Company. Your Directors had addressed the Governments of India and Madhya Pradesh to treat the loan granted by these Governments as capital and the Governments have kindly agreed to convert their loans into share capital and also to reconstitute the capital structure on a more realistic basis.

Accrued Interest

The question of whether the interest accrued during this long period should according to normal practice be added to the capital or be otherwise dealt with has formed the subject of correspondence between the Company and the Governments. The Directors have felt that adding over Rs. 78 lakhs to the capital would result in overcapitalisation and have, therefore, suggested that the interest should be frozen and that the Governments may be pleased to allow the Company to repay this interest in instalments spread over a period of 25 to 30 years. No decision has as yet been arrived at on this issue. Whichever way the decision may be given, it will be obvious now that this amount cannot be treated as a loss. I would like to refer to the large sum of Rs. 38,00,000 which has been provided in the accounts as depreciation for the year. This is the first year of real commercial production with the assets of the Company. It is rarely that the full amount of depreciation on such a large scale can be earned out of the revenue of the very first year of production, but the Directors have provided for this amount and shown it as a loss so as to give a clear picture to the shareholders of the position. Considering that the machinery has been newly installed and the factory has just come into production during the year, this depreciation amount forms a loss in a technical sense. Taking these facts into consideration it is expected that when the capital structure of the Company is properly constituted the financial position of the mill would be more reassuring.

"During the year under review the manufacture of newsprint on a commercial scale resulted in 13,534 tons. For the first time newsprint of an acceptable quality with entirely indigenous chemical and mechanical pulp was produced. The revenue from sales amounted to Rs. 1.06 crores and the working losses, if depreciation is not taken into account, amounted to only Rs. 95,084-13-9. The quality of our production has improved and the demand for our product has grown. We are at present producing 60 to 65 tons per day and our monthly savings average Rs. 3 lakhs.

Hindrances

"Several factors have hindered the mill from reaching the target production of 100 tons per day. The Consultants did not provide for the bleaching of merchnical pulp. During trial operations in the previous year it was established that bleaching mechanical pulp would be necessary to produce newsprint of an acceptable quality. Your Directors, therefore, decided to utilise the existing equipment, which was intended for bleaching only chemical pulp, to bleach mechanical pulp also. This naturally restricted newsprint production. A plan was drawn up to augment the capacity of the existing equipment so as to give optimum production and it was decided to implement this plan in two stages. The first stage of development contemplated only modifications to the equipment which was carried out during the year under review. As I have already stated, the chemical mill was commissioned during this year. Here again it was found that the capacity of the chemical mill was inadequate to produce the necessary amount of chemical pulp. Your Directors have, therefore, placed an order for a third digester. Certain economies in production were also found necessary. At present, bleaching is carried out with caustic soda and chlorine, instead of with lime and chlorine. Your Directors have, therefore, decided to install equipment for a calcium hypochlorite plant which forms part of the second stage of development. The Government of India have approved of these proposals. The year's working has demonstrated that the raw materials so far untried, namely, salai, could be utilised for the manufacture of newsprint. The operation of the mill during the year enabled our technicians to appraise correctly the potentialities of the various equipments in the mill and gave them the necessary experience to put the untried raw material to the best possible use.

"We started operation of the mill after a long period of construction and installation of machinery with an entirely untrained crew. Most of the crew have now gained experience and have been trained to do their jobs. We have now reached a stage when we can confidently go ahead progressing steadily towards increased production. The progress achieved during the year, therefore, is noteworthy in many ways. The entire mill was commissioned and tuned to commercial production. The progress of manufacture was perfected after laborious trials and experiments both in the plant and in the laboratory. Untrained and unskilled crew were trained for the job. The skill and labour put in last year is now being reflected in the current year's working, although we had a setback owing to shortage of power and steam. During the last two months, our production has averaged over 1,400 tons and there has been a working profit of Rs. 4.78 lakhs.

"In other spheres also, there has been all-round progress. Cost control has been introduced under the guidance of consultants specially appointed for the purpose. At every stage of production there is a check to assess costs and eliminate waste and inefficiency. To improve the effectiveness of the supervisory staff the 'Training Within Industry' scheme has been adopted.

Human Factor

"Realising the importance of the human factor in industry your Directors adopted several measures for the welfare of the workers. Three hundred tenements have been constructed this year. There is still a shortage of housing and it has been decided to construct another 200 tenements during the year. Provident fund facilities were liberalised and the dearness allowance has been raised by another five rupees. A child welfare centre was started and a maternity ward has been constructed in the hospital. The workers also have shown a remarkable spirit of co-operation and the industrial relations remained cordial throughout the year. Progressively the workers are being associated with the management in several spheres. Works committee meetings were held periodically. Workers are represented on housing, market and canteen committees.

"As this was the first year of commercial production, special effort had to be made to organise sales. A full-fledged sales department was set up and a sales policy was designed mainly with a view to making our newsprint available for the *bona fide* consumption of newspapers. Practically every leading newspaper in the country is now using our newsprint and many newspapers are using it regularly. Zonal agents were appointed for the distribution of our newsprint. The demand for our newsprint now exceeds our production. But for the shortage of chlorine we would have been in a position to serve the newspaper customers in a greater measure. Our newsprint has had a stabilising influence on the market and valuable foreign exchange is being conserved by the production of newsprint in the country. The mill can be reasonably proud to have made this modest contribution to the economy of the country in the present critical times.

Economy of Newsprint Manufacture

"Finally, I would like to suggest to you that the economy of manufacture of newsprint is entirely different from the manufacture of other kinds of paper. The principal buyers of newsprint are newspapers. The economy of a newspaper is comparatively rigid and there are definite limitations to the price which a newspaper can pay for the newsprint it buys. Newsprint has, therefore, to be produced as cheaply as possible. It is only the faith and the courage of the Madhya Pradesh Government and the stout support that it received from the Government of India that has enabled this mill to reach a stage from which it can forge ahead with success. The future of the mill is now assured. The mill had many teething troubles and many unforeseen setbacks but they can now be regarded as past history.

"In conclusion, I would like personally to thank the Industrial and Financial Directors nominated by the Government of India for their advice and assistance and the wholehearted manner in which they have co-operated in bringing the mill to its present condition. On behalf of the Board of Directors, I would like to thank both the managerial and the mill staff for the enthusiastic manner in which they have made their contribution to the progress of the mill and I would like to make special mention of the invaluable services rendered by the Managing Director, the Works Manager and the Secretary of the Company."

NEW PUBLICATIONS

Capital and its Structure. By L. M. Lachmann. Published for the London School of Economics and Political Science by G. Bell and Sons Ltd., London. Pages : 130. Price : 15 shillings.

FEW economic concepts have gained as much currency in popular and expert discussions in the post-war period as capital. In underdeveloped countries, in particular, the term has come very much into prominence, as shortage of capital and the difficulties in the way of its building up represent the crux of their problem. It is surprising that, despite its practical importance, economists have ceased to ask fundamental questions about capital. Consequently, it has turned out to be one of the "backward areas" in the realm of economics. This neglect of the theory of capital may be attributed to two main reasons. First, many economists have come to regard the conceptional framework of a theory of capital as unnecessary to discuss problems germane to capital. Secondly, the preoccupation of modern economists with quantitative treatment of problems have led to the neglect of capital which by reason of being no homogenous quantity but a heterogeneous aggregate, does not lend itself to quantitative expression.

The object of the book under review, in the author's own words, is "to rekindle interest in the fundamental problems of capital, to outline a new approach to them and demonstrate that it can be applied with some promise of success to a number of problems." His justification for writing it is that it is not possible to discuss the causes and consequences of a change in stock (of capital) without some knowledge of its nature and composition.

The author develops a conception of capital as a complex structure functionally differentiated, in that the various capital resources of which it is composed have different functions. He applies his ideas to a variety of capital problems. The analytical tool employed is the process analysis as developed by Lindahl and Lundberg. The author's reflections on certain practical problems of development in underdeveloped countries are interesting. For instance, pointing out the advantages of risk capital over loan capital in the development of backward countries, he states that foreign investors undertaking the risk would insist on taking managerial decisions regarding the investment, which, in the prevailing climate of opinion in underdeveloped countries, is not favoured by politicians. But, in the case of loan capital, such a difficulty does not arise, as the recipient has the full responsibility in decision-making. But there is a serious disadvantage in that, should the decisions go wrong, capital losses arising therefrom will have to be borne entirely by the recipient who is least able to bear them.

The subject discussed is essentially technical in nature and requires in the reader a degree of proficiency in economics for the arguments to make any sense to him. The general reader may not find anything to gain from the book but advanced students of economics will find not a little to interest and benefit them.

Indian Labour Code (Third Edition). By S. N. Bose. Published by Eastern Law House (Private) Ltd., P. 13, Ganesh Chunder Avenue, Calcutta. Pages : 1585. Price : Rs. 25.

Few countries of Western Europe, which has had more than two centuries of industrial existence, can boast of so vast a corpus of labour legislation as India which has only just started its industrial career. Even the most diligent lawyer is apt to get himself lost in the bewildering complexity of legislative enactments, not to mention the vast expanse of case laws built up by industrial awards. It is no cause for surprise, therefore, if an employer is not always abreast of the labour laws which, since 1947, have grown by leaps and bounds. And it is only very rarely, if ever, that the industrial worker has more than a vague idea of his exact position in law. This lack of understanding on the part of the employer as well as the employee, is responsible, in part at least, for the friction that is sometimes found to exist between the two. A suitable reference book, containing all existing labour laws, which will serve as a handy guide, was a long-felt need. The publication under review meets this need admirably. The fact that the book has entered its third edition since it was first published in 1948 bears ample testimony to its popularity.

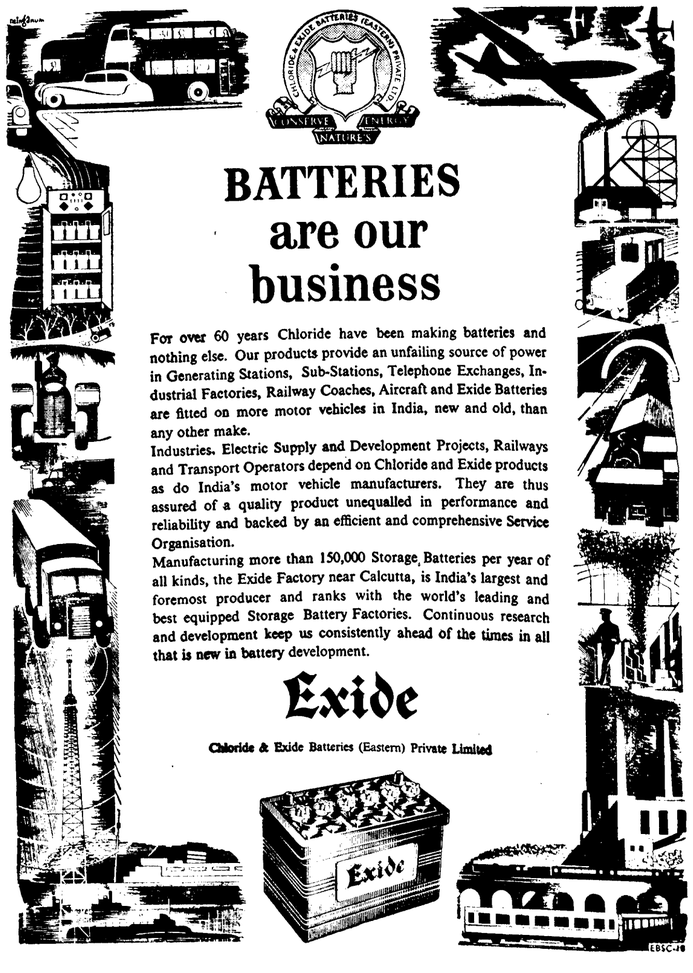
The third edition is a considerable improvement on the previous editions. The book has been thoroughly recast, rearranged and brought up to date, incorporating all factory, labour and welfare laws enacted to date. The author's introductory notes giving the historical background of each enactment and his comments on them will help the reader to view them in perspective and comprehend the exact scope and significance. Statements of objects and reasons for important Acts, together with extracts from parliamentary debates on the Bill, have also been incorporated. Added to the text are a number of appendices which give useful information about such relevant topics as the Philadelphia Charter, I.L.O. Conventions and Recommendations. To facilitate easy reference, a special index to statutory definition of terms like "wages," "workmen," "employment" and "factory" are also given. A comprehensive compendium of labour laws in India, this publication must find a place on every reference shelf.

A Schedule of Job Analysis of Different Job Categories in Ahmedabad Mills. Published by H. G. Acharya, Secretary, The Ahmedabad Millowners' Association, Ahmedabad. Pages : 168. Price : Rs. 2.

The need for a standardised wage structure for the different industries and employments is generally recognised. The aim of standardisation, it is common knowledge, is to fix a fair wage in relation to a specified workload. Hitherto the practice in India has been for industrial courts and tribunals to fix wages on an *ad hoc* basis and the awards usually do not specify the duties and the quantum of work to be done by a worker to entitle him to the prescribed wage. There cannot be two opinions on the need for basing the scheme of standard wages on scentifically evolved and well recognised principles which necessarily include the linking of wages to workload and standardisation of musters. In order to evolve any scheme of standardised wages, it is essential to determine the duties to be performed by the employees in each category and occupation and assign standard workload. The Ahmedabad Millowners' Association has, therefore, done well to sponsor the preparation of a schedule of standard duties to be performed by each worker in the different job categories in a textile mill. A technical committee appointed by the Association for the purpose, having thoroughly examined each job, prepared a schedule which is scientific and practicable. The schedule, which was originally circulated among member mills of the Association only, has now, through this booklet, been made available to a wider readership. It is a timely publication, in view of the fact that a wage board for cotton textile industry is studying the entire wage structure of the industry. The publication will prove to be of interest to all those who are connected with the textile industry.

Hand Book on Wealth Tax. By C. A. Gulanikar. Published by Mrs. Savita Gulanikar, Patel Buildings, Ahmedabad, 9. Pages: 346. Price: Rs. 7.

Amongst the books to be published on wealth tax, Mr. C. A. Gulanikar's book is the first to draw public attention to the complexity of this new tax. The book is written in such refreshingly simple style as would enable even a layman to follow its import. A large number of illustrations have been given to explain the technicalities of the computation, relief and charge. The author, who is himself an income-tax officer, has shown a grasp and mastery which is really commendable. The chapter especially on the ticklish problem of valuation is indeed very illuminating. No business house, professional practitioner, secretaries of companies should be without this useful hand book on their table as a ready reference to any wealth tax problem they are considering. We congratulate the author on producing a quite useful and illuminating book on wealth tax.—R. K. D.



BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.

Industries. Electric Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.

Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin ; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

RECENT TRENDS IN WORLD TRADE

SLOWING DOWN IN RATE OF EXPANSION

THE impact of the European Economic Community on world trade as assessed by the G.A.T.T. Secretariat was briefly reviewed in these columns last week. The review brought out the Secretariat's conclusion that the Community would clearly make an important contribution to the well-being of the whole world. It remains to be seen how far and to what extent this conclusion is justified. There is, however, no gainsaying the fact that the principle of setting up of regional marketing arrangements, if extended too far, is bound to hamper the progress towards the establishment of a free and multilateral system of international trade and payments.

The aforesaid aspect must be specially stressed in the present context of the fears of a slowing down in the rate at which world trade has been expanding in recent years. The aggregate value of world exports in the second quarter of 1957 as compared with the corresponding quarter of 1956 was higher by only 6 per cent., while the same during the first half of the year was about 10 per cent. above the same period in 1956. This suggests, as Sir Claude Corea, Chairman of the G.A.T.T. Contracting Parties, emphasised in the course of his speech at the last session of the Parties held in Geneva, that the world may now be entering a period in which the general tendency towards expanding trade, which it has enjoyed for a number of years and which has formed the background for so many developments in commercial policy, may be replaced by a slow down in the rate of expansion.

In support of his view, Sir Claude Corea drew particular attention to three important factors. First, as in previous years, a quite substantial part of international trade continued to be financed by extraordinary means which do not fit into the normal financial and trading pattern. Secondly, world trade in 1956 increased nearly twice as fast as world production, whereas, hitherto, these two trends had kept abreast. There is, therefore, some danger that the tendency towards a levelling off in production, which has recently made its appearance, might be accompanied by a fall in world trade. Thirdly, the exports of the non-industrialised countries as a whole have persistently failed to keep up with the general rate of trade expansion. It is obvious that the development of these countries is closely dependent on their capacity to maintain and increase their export earnings, in order to pay for imports essential to their development programme, as also to service development loans and credits.

Incidentally, it may be noted that the trade between the industrial and non-industrial areas of the world continues to decline; the value of the exports of non-industrialised countries to industrialised countries expressed as a proportion of world trade in 1956 was 24 per cent., as against 28 per cent. in 1950 and 30 per cent. in 1937. Such a contraction is attributed to several factors. The manufacturing industries are increasingly capable of producing the same quantities of goods with less raw materials. Since the war, the industrial countries are themselves producing more raw materials and food. Further, there is the substitution of synthetic raw materials in certain branches of industries. Again, the more advanced of the non-industrialised countries are producing insufficient raw materials and foodstuffs to meet their own increasing consumption and to maintain—much less to increase—their exports of these products.

Be that as it may, the table given below indicates the trend of world trade in the past three years:

(In million U.S. dollars)

	Exports (f.o.b.)			Imports (c.i.f.)		
	1957	1956	1955	1957	1956	1955
World total	**100.65**	**93.54**	**84.21**	**109.45**	**97.97**	**88.97**
U.S.A.	21.87	19.08	15.55	13.94	13.75	12.37
U.K.	9.87	9.29	8.47	11.74	10.89	10.87
W. Germany	8.45	7.36	6.14	7.26	6.62	5.79
Canada	5.39	5.29	4.78	6.90	6.27	5.16
France	5.18	4.54	4.91	6.74	5.55	4.74
Belgium-Luxemburg ..	3.25	3.16	2.78	3.47	3.27	2.88
Netherlands	2.89	2.86	2.69	4.08	3.71	3.21
Japan	2.69	2.50	2.01	5.11	3.23	2.47
Venezuela	2.46	2.12	1.91	1.52	1.23	1.09
Italy	2.45	2.16	1.86	3.72	3.17	2.71
Australia	2.31	1.89	1.75	1.88	1.94	2.16
Sweden	2.20	1.95	1.73	2.44	2.21	2.00
Switzerland	1.52	1.44	1.31	2.01	1.77	1.49
Malaya	1.31	1.36	1.36	1.40	1.36	1.25
India	1.25	1.27	1.27	2.20	1.71	1.41
South Africa	1.24	1.19	1.06	1.71	1.52	1.48
Denmark	1.15	1.11	1.06	1.29	1.31	1.18

Figures relating to 1957 are actually for the second quarter of the year.

It will be seen from the above table that the world trade trends continue to be generally favourable. An outstanding feature of recent years is that the commerce of the industrialised countries has expanded a good deal more satisfactorily than that of the less developed countries. The Governments of the former group of countries have continued to take advantage of easier circumstances in their payments position. They have, for instance, found it possible to remove or render more flexible their restrictions on imports. They have also been able to give wider scope to their importers and to take increasing advantage of multilateral arrangements in place of bilateral arrangements, thus widening the possibilities of buying in the cheapest markets. On their part, the Governments of the less developed countries have in many cases endeavoured to make import controls less onerous for international trade, although they have found it impossible to relax them substantially.

Trade Expands

Thanks to the foregoing welcome developments, world trade expanded more rapidly in the 11 years since the Second World War than in the corresponding period after the first war, notwithstanding many difficulties and obstacles. The first volume of the United Nations *Yearbook of International Trade Statistics*, published in Geneva this week, estimates that, by 1956, the total volume of world trade was nearly double that of 1938, while the same in 1929—the eleventh year after the first war ended—had reached only one and one-third times its level in 1913. The recovery and expansion of world trade after the second war, it is said, was achieved by a gradual reconstruction of a trade pattern in many ways similar to the one prevailing before the war.

The aggregate value of trade (calculated from exports, excluding those from the U.S.S.R., Eastern Europe and Mainland China) in 1956 was higher than in any other year. The volume of trade was of record size, being 1.8 times that in 1938. The average world exports in 1956 were (using dollar unit values) more than 2½ times those prevailing in 1938. Volume increases, notably above average, were recorded between 1938 and 1956, on the export side, by the U.S. and the Middle East (volume nearly trebled), as well as the Continental Western Europe and the dollar area of Latin America (volume more than doubled) and, on the import side, by the dollar area of Latin America (threefold expansion), the U.S. and the overseas territories of Continental Western Europe (more than double).

The most striking change in the pattern of world trade since the second war is that the U.S. has replaced the U.K. as the world's greatest trading country. The U.S. share in aggregate exports rose from 15 per cent. by value in 1938 to 21 per cent. in 1956, but its share in imports expanded only from 9 per cent. to 13 per cent. In 1956, the value of U.S. exports was 23 per cent. more than in 1955, while that of imports was up by only 11 per cent. This unequal rate of expansion accounts largely for the continuing international balance of payments problems. The effects of the dollar shortage, for instance, are evident in the trade statistics of the U.K. Between 1938 and 1956, the U.K. nearly doubled its volume of exports, while the rise in its imports was very little. During the same period, the U.K.'s imports from the sterling area improved much more rapidly than imports from the dollar area. In the rest of the sterling area, imports more nearly kept pace with the expansion in exports than they did in the U.K.

During the 11 years ended 1956, the trade of dollar countries (the U.S., Canada, Mexico, Colombia, Venezuela and the Central American Republics) greatly increased. The total value of the exports of all these countries accounted for about 31 per cent. of world exports in 1956 (30 per cent. in 1955), as against 22 per cent. in 1938, and the volume of exports had risen in 1956 by 15 per cent. over 1955 and by a factor of more than 2½ over 1938. Between 1938 and 1956, the percentage share of the Far East in the aggregate value of world trade declined from 12 to 7, due principally to Japan's failure to regain its pre-war trade volume as fast as the other major countries. Trade between Western Europe and Eastern Europe, which was just 3 per cent. of aggregate trade in 1938, fell to 1 per cent. in 1956, despite the upward trend in the value of exports from the U.K. and West Germany to Eastern Europe during the past two years.

Between 1955 and 1956, the volume of world trade expanded by 9 per cent. and the average price at which goods moved increased by about 2 per cent. without reaching the high prices of the peak in 1951 when prices were 9 per cent. above those in 1955, largely because of high raw material prices. The principal increases in value were in the following currents of trade:

	Percentage rise
U.S. to W. Europe	32
U.S. to Canada	24
W. Europe to U.S.	20
Non-dollar countries of Latin America to U.S.	20
Middle East non-sterling countries to the sterling area (despite disturbances in the former)	18

The average level of prices of primary commodities in world trade in 1956 was 14 per cent. below the post-war peak of 1951, though it was nearly the same as in 1955. There was a sharp advance of 8 per cent. in the world export prices of metal ores between 1955 and 1956; the prices in 1956 were only 2 per cent. less than those in the peak year of 1952. The prices of manufactured goods exported rose by nearly 4 per cent., reaching almost the peak attained in 1952.

SALT INDUSTRY

A nine-man committee with Mr. Satish Chandra, Union Deputy Minister for Commerce and Industry, as Chairman, has been appointed by the Central Government to enquire into the working of the salt industry and to recommend measures for its development. The terms of reference of the Committee, which has been asked to complete its work within six months, are quite broadbased, in that they cover the wide and varied aspects relating to the salt industry. The terms are:

To examine the position of the large, medium and small-scale manufacturers of salt and assess their production;

to review the concessions given to salt manufacturers, particularly the small producers, and ascertain how far these concessions have helped in the development of the industry (any practical difficulties experienced by small producers will be investigated);

to consider the question whether the statutory provisions like those contained in the Minimum Wages Act can be made applicable to the salt industry in order to assist the labour employed in it;

to assess the progress made in recent years in the co-operative field and suggest measures for encouraging salt manufacture on co-operative basis; and

to study quality control in salt production, keeping in view the difficulties of manufacturers, as well as the requirements of the general public, the industries based on salt and the export markets.

The constitution of a special enquiry committee for the salt industry with broad terms of reference reveals the Government's anxiety to ensure proper and well-balanced development of the industry. This is only as it should be. The consumption requirements of salt are rapidly rising On the basis of a *per capita* household consumption of 14 lbs. for a population of 408 million in 1960-61, the total demand under this head comes to 69.41 million maunds. Taking this into account, as also the increasing needs in the chemical and related industries and the efforts made to expand exports considerably, the aggregate demand for salt by 1960-61 is put at 100 million maunds. The production target is accordingly fixed at this figure. From the progress made so far in the implementation of the development programme drawn for the salt industry, it looks as though the target has already been reached. During the first eight months of 1957, the total production of salt was over 88 million maunds—or an annual rate of over 130 million maunds—as against 80 million maunds in the corresponding period of 1956 and 89 million maunds in the whole of 1956.

The total fixed capital investment in the salt industry is of the order of Rs. 8.30 crores, of which the public sector accounts for Rs. 1.07 crore and the private sector for Rs. 7.23 crores. The salt works give employment to about 29,300 workers per day (1955). In addition, on an average, 10,000 labourers work every day in the unlicensed salt works.

WORLD MERCURY PRODUCTION

In 1955, the latest year for which detailed data are available, world production of mercury was 183,470 flasks of 34.47 kilos (76 lbs.) each, as against 177,000 flasks in 1954, 160,000 flasks in 1953, 151,000 flasks in 1952, 147,000 flasks in 1951 and 143,000 flasks in 1950. The chief producers of mercury are Italy, Spain, Mexico and the U.S. Among the other producers, Yugoslavia, the U.S.S.R., Japan and China are important. The actual output in the chief producing countries in 1955 as compared with 1950 is given below:

(In flasks of 76 lbs.)

	1955	1950
Italy	52.000	53.000
Spain	43.000	52,000
Mexico	29,858	3,757
U.S.	18,830	4,535

Trade with JAPAN through

THE BANK OF TOKYO LTD.

T.I. CYCLES' RESULTS IMPRESSIVE

DIVIDEND ENHANCED—RESERVES STRENGTHENED

AN upward revision in the dividend rate to 10 per cent has been made by the T.I. Cycles of India Ltd. (Chairman: Dr. A. Ramaswami Mudaliar, Madras) for the year ended 30th June 1957 from a steady but modest maiden dividend of 6 per cent. per annum paid from the half-year ended 30th June 1954. This enhanced dividend follows an impressive rise in the Company's turnover and profit. Indeed, the Company's working during the year under review has produced results which are highly gratifying from every angle. The sale proceeds show a spectacular improvement, being nearly twice as much as those in the previous year. The gross profit has more than doubled. From Rs. 30.05 lakhs for 1955-56, it has shot up to Rs. 81.97 lakhs for 1956-57, an advance of Rs. 51.92 lakhs or 170 per cent.

In consonance with the rise in the gross profit, the net profit also has more than doubled, from Rs. 15.87 lakhs to Rs. 36.90 lakhs to be precise. It may be noted that the higher net profit has been arrived at only after making a liberal provision of Rs. 35 lakhs for taxation, as against a mere Rs. 7.50 lakhs in the previous year. The provision for depreciation also is higher, but only slightly, at Rs. 5.95 lakhs, as compared with Rs. 5.30 lakhs. In view of the substantial expansion of the Company's factory now on hand and the further expansion contemplated, the Directors have very wisely taken the view that it is prudent to follow the policy of ploughing back the major portion of the net profit into the Company's business. Accordingly, they have transferred a sum of no less than Rs. 30.01 lakhs to the various reserves. This sum represents 81 per cent. of the net profit and is well over three times the amount of Rs. 9.28 lakhs provided out of the profit for 1955-56. A breakdown of the additions made to the reserves this year shows that as much as Rs. 23.51 lakhs, as against Rs. 6.28 lakhs a year before, have been credited to development, replacement and research reserve, Rs. 5.50 lakhs, as against Rs. 1.50 lakhs, to general reserve, and Rs. 1 lakh, as against Rs. 1.50 lakhs, to dividend equalisation reserve. The dividend at 10 per cent. absorbs Rs. 7 lakhs, a sum equivalent to only 19 per cent. of the net profit. It is commendable that, despite a tax system which penalises prudence and efficiency, the Directors have followed an appropriation policy which is fully in consonance with the letter and the spirit of the Government's economic policy. There can be no better proof than this of their faith in the future and desire to co-operate fully with the Government.

The following comparative table shows the progress of the Company's working during the past three years:

(In lakhs of rupees)

	For the year ended 30th June			For the six months ended June 30, 1954
	1957	1956	1955	
Sale proceeds	2,70.67	1,38.14	1,45.71	64.34
Stock of finished goods and work-in-progress	6.95	5.70	52.35	23.69
Expenses	1,91.46	1,08.74	1,44.94	47.98
Gross profit	81.97	30.05	29.80	12.39
Managing Agents' commission..	4.12	1.38	1.25	0.58
Depreciation	5.95	5.30	5.87	4.68
Taxation	35.00	7.50	2.50	..
Net profit	36.90	15.87	20.18	7.18
To reserves	30.01	9.28	10.69	2.50
,, goodwill	..	2.50	5.00	2.50
Dividend	7.00	4.20	4.20	1.95
	(10%)	(6%)	(6%)	(6%)
Carry forward	0.49	0.59	0.71	0.42

It will be seen from the table above that the Company's proceeds from sales during the year very nearly doubled from Rs. 1.38 crores to Rs. 2.71 crores, reflecting, in a large measure, the increased production and the growing popularity of the Company's manufactures. Expenses have also risen from Rs. 1.09 crores to Rs. 1.91 crores but the rise is only in line with the enlarged turnover.

It is needless to add, as it must be obvious, that the aforesaid excellent financial results reflect the Company's satisfactory progress in production and expansion programmes during 1957. The Company was permitted by the Government to manufacture 200,000 bicycles and 100,000 sets of bicycle components. The production of bicycles reached the target during 1956-57, but that for components fell a little short of expectation. The Company is, however, confident of making good this shortfall this year. It has also made remarkable progress in the programme for attaining self-sufficiency in regard to all parts of a bicycle. The manufacture of freewheels, an important part of the bicycle, has already been successfully established to the satisfaction of a competitive market. The Company has received the Government's permission for increasing its manufacturing capacity of both bicycles and components.

The Company's latest balance-sheet shows that reserves and surplus aggregate Rs. 59.74 lakhs, as against a paid-up capital of Rs. 70 lakhs, all in ordinary shares of Rs. 100 each. The gross block of the value of Rs. 116.12 lakhs stands written down to Rs. 90.78 lakhs. Additions to the gross block during the year were of the order of Rs. 29.75 lakhs. The goodwill (Rs. 10 lakhs) has been practically written off, the balance remaining being a nominal sum of Rs. 16. The current assets, including cash and bank balances (these alone amount to Rs. 36.65 lakhs) aggregate Rs. 126.90 lakhs and cover the current liabilities and the provision for taxation, amounting to Rs. 87.95 lakhs in all, by a wide enough margin. The financial position of the Company is thus quite sound. Considering that the Company is only eight years old, it is, indeed, remarkable that it has been able to report a reserve fund which is equal to 85 per cent. of the paid-up capital.

This point alone is sufficient to show that the Company is under able management. Its success is due as much to the efficient work of its Directors and employees in this country as to the advice and assistance given by the Company's British collaborators, namely, Tube Investments Ltd. and Hercules Cycle Company, Ltd. As this collaboration is being kept up with all the enthusiasm that was shown in the initial years and as the Company has established itself firmly, there is no doubt that it is assured of a prominent and profitable place in the steadily expanding market for bicycles in this country. Incidentally, it may be noted that the Managing Agents, Messrs. T. & M. Industries Private Ltd., have voluntarily terminated their agreement with the Company, an action which is in keeping with the trend of thinking of the powers-that-be. Mr. A. M. M. Murugappa Chettiar and Mr. A. M. M. Arunachalam, connected with the managing agency company, have been appointed Managing Directors of the Company.

RAGHUVANSHI MILLS LTD.

Better trading results, as compared with the previous year, are disclosed by the Raghuvanshi Mills Ltd. (Managing Agents: Messrs. Ravindra Maganlal & Co. Private Ltd., Bombay) for the year ended 31st March 1957. The gross profit has doubled from Rs. 8.28 lakhs for 1955-56 to Rs. 16.56 lakhs. A sum of Rs. 15.20 lakhs (including Rs. 11.52 lakhs towards short provisions made in previous years) has been provided for depreciation, as against Rs. 4.35 lakhs 12 months before, while another Rs. 10,000 has been provided for taxation, as against *nil*. After the above essential provisions, the net profit amounts to only Rs. 1.01 lakh, as against Rs. 3.32 lakhs in the previous year. In order to offset the diminution in net profit and to make a modest upward revision in the distribution to shareholders, the Directors have withdrawn a sum of Rs. 2.56 lakhs from the capital redemption reserve. The gratuity fund has been credited with Rs. 1 lakh though the total liability in respect of future payments on this account still remains to be ascertained. A dividend of 6 per cent. per annum, absorbing Rs. 2.40 lakhs, has been declared on the ordinary shares, as against 3 per cent. a year ago. It may be recalled that, in the previous year the Company had to wipe out the balance of loss amounting to Rs. 1.46 lakhs incurred in its working during 1954-55 and also pay four years' arrears of dividend on its 4 per cent. preference shares.

Proceeds from sales of yarn, cloth and waste improved from Rs. 117.91 lakhs in 1955-56 to Rs. 126.42 lakhs. As against this, only a very modest rise in expenses, from Rs. 109.12 lakhs to Rs. 112.37 lakhs, was registered. The Directors say that, during the year under report, the Company was granted licences for the manufacture of art silk and staple fibre fabrics. The looms purchased last year were received during the year and they are under erection. The Company has already started the manufacture of art silk and staple fibre fabrics.

The paid-up capital of the Company as on 31st March 1957 remains unchanged at Rs. 44 lakhs. Of this amount, Rs. 40 lakhs are taken up by ordinary shares of Rs. 100 each and the balance by 4 per cent. redeemable cumulative preference shares of Rs. 50 each. The reserves and surplus are indeed nominal and amount to a mere Rs. 97,000. The gross block of Rs. 78.69 lakhs stands reduced at Rs. 31.96 lakhs. The current liabilities are of the order of Rs. 35.01 lakhs, while the current assets aggregate Rs. 48.01 lakhs.

HUKUMCHAND JUTE'S PROFIT DECLINES

DIVIDEND LOWER

IT is common knowledge that the jute industry has not been faring quite well in recent years. While, on the one hand, there has been increasing competition from Pakistan in overseas markets, on the other, the high prices of raw jute, consequent on inadequate supply thereof, have reduced the competitive capacity of Indian jute goods. Labour troubles, too, have been not infrequent. It is not, therefore, surprising that most of the units in the jute industry are reporting adverse working results and many even losses. The working of the Hukumchand Jute Mills Ltd. (Managing Agents: Messrs. Ramdutt Ramkissendass, Calcutta) for the year ended 31st March 1957 is a typical example to illustrate the aforesaid conditions. The gross profit of the Company for the year under review at Rs. 25.84 lakhs shows a decline of Rs. 12.79 lakhs from Rs. 38.63 lakhs for the previous year and is Rs. 15.98 lakhs lower than Rs. 41.82 lakhs for 1954-55. It is true that, in the latter year, namely, 1954-55, the gross profit made a modest improvement from Rs. 39.39 lakhs for 1953-54. That, however, does not mean that trading conditions in that year were any the better.

Like the gross profit, the net profit also stands lower at Rs. 14.75 lakhs, as compared with Rs. 18.77 lakhs for 1955-56, after maintaining the provision for taxation at Rs. 8 lakhs, but lowering that for depreciation from Rs. 2.36 lakhs to Rs. 1 lakh. The transfer to investment reserve has been cut from Rs. 2 lakhs to Rs. 1.50 lakhs. Not only that. The distribution of dividend to shareholders has also received a setback. Thus, the Directors have declared a dividend of only 20 per cent. per annum for the year under review, as against 26⅔ per cent. per annum for the past three years. It must, however, be said that even this dividend is an impressive one considering that most of the well-known jute companies could hardly pay remuneration to their shareholders.

The following comparative table will give an idea of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1957	1956	1955	1954
Sale proceeds	4,88.01	4,57.62	4,20.99	3,44.69
Other income	3.75	5.12	3.57	4.19
Closing stocks of finished goods.	31.14	38.25	27.74	16.28
Expenses	4,65.92	4,24.11	3,94.25	3,21.75
Gross profit	25.84	38.63	41.82	39.84
Managing Agents' commission..	2.09	9.50	8.90	7.36

The decline in the Company's earnings in the face of a rise in sale proceeds from Rs. 4.58 crores to Rs. 4.88 crores is due to the substantial increase in expenses from Rs. 4.24 crores to Rs. 4.66 crores. It will be seen from the table that, while the turnover in terms of value, has been rising from year to year, expenses, too, have been moving up at an accelerated pace, resulting in a fall in the profit margin.

The balance-sheet of the Company as at 31st March 1957 shows the Company's paid-up capital unchanged at Rs. 92.50 lakhs, divided into 40,000 seven per cent. cumulative preference shares of Rs. 100 each and 700,000 ordinary shares of Rs. 7-8 each. As against this, the reserves and surplus amount to only Rs. 30.01 lakhs, representing just about a third of the total paid-up capital. The 3½ per cent. debenture liability stands at Rs. 25 lakhs. The current liabilities are of the order of Rs. 119.97 lakhs, inclusive of a provision for taxation of Rs. 20.48 lakhs. The gross block of Rs. 293.22 lakhs stands written down to a net book value of Rs. 135.70 lakhs. The auditors of the Company consider that the depreciation provided so far is inadequate but the Directors disagree with this view on the ground that the present condition and the unexpired life of the assets justify their present book value. The current assets aggregate Rs. 131.80 lakhs and cover the current liabilities and provision for taxation by a modest margin.

The Rs. 7-8 paid-up shares are currently quoted at Rs. 18.50 *ex-div.*, at which rate the yield works out to 8.1 per cent. per annum.

KIRLOSKAR ELECTRIC FORGES AHEAD

ADDITIONAL CAPITAL PROPOSED

THE Kirloskar Electric Company, Ltd. (Managing Agents: Messrs. Kirloskar Associates, Harihar), established in July 1946, has completed 11 years of useful existence with the year ended 30th June 1957. During this short period of its history, it has made rather remarkable progress in the electrical field, especially in the manufacture of electric motors, transformers, switchgears, alternators, etc. The Company has been working in close collaboration with the famous British manufacturers, the Brush Electrical Engineering Company of Loughborough, and has on its Board a representative of Messrs. Parry & Co., Ltd., Madras. Within 18 months of its inception an up-to-date factory for the manufacture of electric motors upto 30 h.p. was erected. The factory was formally opened on 3rd July 1949 and actual production commenced in November 1949. From an initial target of 100 motors a month, the factory has progressively stepped up the production to the present level fo approximately 1,500 motors a month (about 10,000 h.p.), while the range has been increased from 15 h.p. to 250 h.p. In 1951, an additional line of manufacture, namely, transformers, was taken up. Within a short space of one and a half years, the Company was manufacturing transformers in various sizes upto 2,000 KVA, 33 KV; the present monthly production is about 15,000 KVA. The Company claims to be the first organisation in India to manufacture slipring motors, in addition to manufacturing a wide range of other special types of motors. Production of alternators for oil engines is also fast progressing. It is said that the Company's production accounts for nearly 30 per cent. of the total output of electrical industry in India. With such rapid strides that the Company has been making in its specialised field, it is but natural that the Company's turnover and earnings should show a steady upward trend.

The gross profit of the Company for the year ended 30th June 1957 at Rs. 22.75 lakhs represents a rise of Rs. 6.19 lakhs from Rs. 16.56 lakhs for the previous year. Further, it is almost three times better than Rs. 7.73 lakhs earned in 1954-55. The net profit at Rs. 6.94 lakhs is also higher than Rs. 5.94 lakhs and Rs. 2.71 lakhs for 1955-56 and 1954-55 respectively This improvement, again, it should be noted, is after raising the provision for depreciation from Rs. 4.88 lakhs to Rs. 5.50 lakhs and that for taxation from Rs. 4 lakhs to as much as Rs. 9.25 lakhs, inclusive of Rs. 50,000 for wealth tax. A sum of Rs. 4.43 lakhs has been transferred to the various reserves, as against Rs. 4.22 lakhs in the previous year. This consists of Rs. 1.52 lakhs to development reserve (Rs. 1.47 lakhs in 1955-56), Rs. 1.21 lakhs to general reserve (Rs. 1.70 lakhs), Rs. 80,000 to I.F.C. loan redemption fund (Rs. 80,000), Rs. 75,000 to rehabilitation reserve (*nil*) and Rs. 15,000 to dividend equalisation fund (Rs. 25,000). The figures within brackets represent the transfers made a year before. The dividend has been raised to 7½ per cent. from 5½ per cent. in the previous year, to which level it had been modestly stepped up from 5 per cent. per annum in the preceding three years.

The progress in the Company's working during the past four years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954

* On the increased capital of Rs. 33.68 lakhs.

Sales proceeds increased from Rs. 106.17 lakhs in 1955-56 to Rs. 167.18 lakhs, a rise of 57.5 per cent. The Directors state that the production of electric motors and transformers recorded further progress during the year under review and the demand also continued to be satisfactory. Good progress is being maintained in the Company's expansion programme. Apart from the normal expansion of production in existing lines, the Company has on hand schemes for new lines of manufacture. These will necessarily require additional finance and the Directors propose to issue additional capital for a sum of Rs. 5 lakhs.

The balance-sheet as at 30th June 1957 shows that the Company's paid-up capital rose from Rs. 30.14 lakhs a year earlier to Rs. 34.37 lakhs. These are in shares of Rs. 10 each. Of this capital, Rs. 68,965 represent the amount of forfeited shares. The reserves and surplus aggregate Rs. 11.32 lakhs, having risen from Rs. 6.90 lakhs in the previous year. The provision for taxation stands at Rs. 16.64 lakhs. The current liabilities amount to Rs. 52.73 lakhs. The gross block has been written down from Rs. 54.52 lakhs to a book value of Rs. 29.37 lakhs. The current assets aggregate Rs. 85.69 lakhs, providing full cover for the current liabilities and tax liability.

Points From The Chair

Newsprint Manufacture

"THE economy of manufacture of newsprint is entirely different from the manufacture of other kinds of paper. The principal buyers of newsprint are newspapers. The economy of a newspaper is comparatively rigid and there are definite limitations to the price which a newspaper can pay for the newsprint it buys. Newsprint has, therefore, to be produced as cheaply as possible. It is only the faith and the courage of the Madhya Pradesh Government and the stout support that it received from the Government of India that has enabled this mill to reach a stage from which it can forge ahead with success. The future of the mill is now assured. The mill had many teething troubles and many unforeseen setbacks but they can now be regarded as past history."

A. RAMASWAMI MUDALIAR,
National Newsprint and Paper Mills Ltd.

Taxation on Coffee

"The case made by the Central Board of Revenue that 25 per cent. of coffee income is industrial and, therefore, liable for tax has not yet been finalised. The test case which has been referred to in the Directors' reports for the past two years was recently transferred from Madras to the Mysore High Court and the appeal by the Central Board of Revenue has been dismissed. It is understood, however, that the Central Board of Revenue are now contesting another case before the Income-tax Appellate Tribunal in Madras. Now that the rate of agricultural income-tax is as much as 40 nP in the rupee, as against 51.5 nP under the Central Indian Income-tax Rules, even if the Central Board of Revenue gain their point, the increase in liability for tax will be relatively small, particularly when it is considered that shareholders can obtain a refund of Central Indian income-tax which is not possible under the Mysore Agricultural Income-tax Rules. The main problem to the industry, therefore, really rests only on the question of backlog."

R. C. PATERSON,
Consolidated Coffee Estates (1943) Ltd.

Plea for Devaluing Rupee Inopportune

"The plea for devaluation of the rupee on a unilateral basis or for allowing the rupee to 'float and find its equilibrium' is, therefore, most inopportune, to say the least. That the cure will prove worse than the disease is clear enough, if one remembers the imperative need for an ever-increasing volume of capital goods and other indispensable imports. The vulnerable and inelastic nature of demand for the main exports like tea, jute and textiles does not make the position any easier. Maintenance and expansion of exports so essential for development must, therefore, be secured not so much by tinkering with the rupee-dollar parity, but by appropriate control and other measures aimed at reducing production costs to reasonable levels, even if such controls involve some inconvenience to the general public during this period of transformation of India into a modern economy."

K. NARAYANASWAMY,
Radio & Electricals Manufacturing Co., Ltd.

Outlook for Jessops

"It remains to add that the Company's order book now stands at the remarkable figure of over Rs. 20 crores and that the works and their connected staff and employees are in an excellent position to tackle this great volume of business. I am glad to say in this connection that our relations with our employees have been consistently good throughout the year just ended and the satisfactory working results that I have been able to forecast are chiefly due to the sustained efforts of all the Company's employees to whom all thanks are due. As I have already told you, your Company has a very good order book on which it is earning satisfactory margins. There is no reason why it should not continue to do so provided that it continues to receive adequate supplies of steel, a commodity which unfortunately is in increasingly short supply with little prospect of easement within the next two years. Fortunately, a very large portion of our activities are concentrated on the manufacture of rolling stock for the railways which carries top priority for steel supplies, while the remainder of our order book covers contracts having a very high degree of priority, thus we can be sure of obtaining our full share of what steel supplies are available."

S. S. H. SITWELL,
Jessop and Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

CUTTACK ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Ranihat, Cuttack, 21st January 1958. Dividend: Re. 0.80 (8 per cent.) per share, for the 15 months ended 31st March 1957. Transfer books remain closed from 14th to 21st January 1958, both days inclusive.

SHANGRILA FOOD PRODUCTS LTD. Annual General Meeting, Bombay, 24th January 1958.

KALPETTA ESTATES LTD. Annual General Meeting, Alleppey, Kerala State, 27th January 1958. Dividend: Rs. 2.00 per share (20 per cent.). Transfer books will remain closed from 21st to 27th January 1958, both days inclusive.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th January 1958. Dividend: Re. 1.25 per share. Transfer books will remain closed from 23rd to 29th January 1958, both days inclusive.

UPPER JUMNA VALLEY ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th January 1958. Dividend: Re. 1.25 per share (includes an additional dividend of Re. 0.25 per share). Transfer books will remain closed from 23rd to 29th January 1958, both days inclusive.

CALCUTTA HYDRAULIC PRESS CO., LTD. Annual General Meeting, Calcutta, 29th January 1958. Dividend: Rs. 3.00 per share. Transfer books remain closed from 16th to 29th January 1958, both days inclusive.

CHUNDEECHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 30th January 1958. Dividend: *Nil*. Transfer books will remain closed from 22nd to 30th January 1958, both days inclusive.

RAJAHBHAT TEA CO., LTD. Annual General Meeting, Calcutta, 30th January 1958. Dividend: Re. 1.25 per share. Transfer books remain closed from 16th to 30th January 1958, both days inclusive.

JAIPUR UDYOG LTD. Annual General Meeting, Sawaimadhopur, 31st January 1958. Transfer books will remain closed from 11th to 17th January 1958, both days inclusive.

NEW KAISER-I-HIND SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 31st January 1958. Dividend: Rs. 6.00 per share, payable on 17th March 1958. Transfer books remain closed from 17th to 31st January 1958, both days inclusive.

ASSOCIATED CEMENT COS., LTD. Annual General Meeting, Bombay, 31st January 1958. Dividend: Rs. 9.00 per share, payable on and after 7th February 1958. Transfer books were closed from 4th to 30th November 1957, both days inclusive.

MYSORE CHROME TANNING CO., LTD. Annual General Meeting, Bangalore, 13th February 1958. Transfer books will remain closed from 1st to 14th February 1958, both days inclusive.

ALEXANDRA JUTE MILLS LTD. Interim dividend of Rs. 5.00 per share, for the year ended 31st December 1957, payable on or after 15th January 1958. Transfer books were closed from 24th December 1957 to 7th January 1958, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Interim dividend of Re. 0.50 per share, for the period of 13 months ended 31st July 1957, payable on or after 15th January 1958. Transfer books were closed from 24th December 1957 to 7th January 1958, both days inclusive.

KELVIN JUTE CO., LTD. Interim dividend of Rs. 4.00 per share, for the 11 months ended 31st May 1957, payable on or after 15th January 1958. Transfer books were closed from 24th December 1957 to 7th January 1958, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Interim dividend of Rs. 3.00 per share, for the half-year ended 31st August 1957. Transfer books will remain closed from 27th January to 4th February 1958, both days inclusive.

SRI PALAMALAI RANGANATHER MILLS LTD. Dividend of Rs. 6.00 per share, free of income-tax for the year ended 31st March 1957. Transfer books will remain closed from 8th to 21st February 1958, both days inclusive.

PREMIER AUTOMOBILES LTD. Dividend of Rs. 6.00 per share, for the year ended 30th June 1957, payable on 3rd March 1958.

NEW SWADESHI SUGAR MILLS LTD. Dividend of Rs. 20.00 per share, for the year ended 30th June 1957, payable on 25th January 1958. Transfer books remain closed from 10th to 22nd January 1958, both days inclusive.

OUDH SUGAR MILLS LTD. Dividend of Rs. 12.50 per share, for the year ended 31st July 1957, payable on 25th January 1958. Transfer books remain closed from 10th to 22nd January 1958, both days inclusive.

BOMBAY-BURMAH TRADING CORPORATION LTD. Final dividend of Rs. 28.75 per share, on old shares and Rs. 11.50 per share on new shares, for the year ended 31st May 1957, payable on 3rd March 1958. Transfer books will remain closed from 7th to 28th February 1958, both days inclusive.

BENGAL PAPER MILL CO., LTD. Interim dividend of Re. 1.50 per share (6 per cent.), for the year ended 31st December 1957. Transfer books were closed from 6th to 15th January 1958, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of Re. 0.30 (3 per cent.) per share, for the year ending 31st March 1958. Transfer books were closed from 7th to 14th January 1958, both days inclusive.

INDIAN VEGETABLE PRODUCTS LTD. Dividend of Rs. 10.00 per share, for the year ended 30th September 1957. Transfer books were closed from 27th December 1957 to 14th January 1958, both days inclusive.

KALPETTA ESTATE MAINTAINS DIVIDEND

MORE JUTE MILLS REPORT DISAPPOINTING RESULTS

Kalpetta Estates Ltd.

THE directors of the above Company (Managing Agents: Messrs. A. V. Thomas and Co., Ltd., Alleppey, Kerala State) submit the audited accounts of the Company for the year ended 30th April 1957.

Tea crop harvested during the year was 2,86,239 (2,63,489) lbs. at a cost of 124.87 (122.49) cents per lb., against an estimate of 2,25,000 (2,00,000) lbs. at 132.99 (147.09) cents per lb. The average selling price has been 187.63 cents per lb., as against 183.31 cents in the previous year. It may be mentioned here, that the cost of production at 124.87 cents per pound would have been less, had it not been for the fact that additional wages and bonus (as per Madras Agreement) had to be included during the year under report.

Rubber crop secured during the year was 2,70,000 (3,18,700) lbs. at a cost of 97.51 (77.81) cents against an estimate of 3,25,000 (3,00,000) lbs. at 73.27 (76.84) cents per lb. The shortfall in crop is due to adverse weather conditions and the low yield from the 501 acres of old and worn out rubber under slaughter tapping. The higher wages, bonus, etc., to workers and also the reduced crop have contributed to the increase in cost of production.

Cardamom crop secured during the year was 7,170 (6,087) lbs. at a cost of Rs. 3.82 per lb. against an estimate of 7,000 (6,000) lbs. to cost Rs. 5.23 per lb. Average price realised is Rs. 9.93 per lb., as against Rs. 8.40 in the previous year.

Coffee crop harvested this year is 81 (4,800 lbs.) cwts. at a cost of Rs. 409 per cwt., against an estimate of 80 cwts. to cost Rs. 516.70 per cwt. This crop is almost double that of last year, because more plants are coming to bearing.

Estimate for 1957-58 are as follows:—Tea crop of 2,60,000 lbs. to cost 133.26 cents per lb., Rubber crop of 3,00,000 lbs. to cost 91.67 cents per lb., Cardamom crop of 8,000 lbs. to cost Rs. 5.92 per lb. and coffee crop of 160 cwts. to cost Rs. 179.00 per cwt.

The net profit for the year under review after allowing for depreciation, managing agents' commission, Central and States taxes, works out at Rs. 93,228 (Rs. 1,40,440) to which should be added the sum of Rs. 4,860 (Rs. 17,844) brought forward from last year, totalling Rs. 98,088 (Rs. 1,58,284). This sum, the directors recommend, be disposed of as under:—

To pay a dividend of 20 (20) per cent. for the year 1956-57 absorbing Rs. 80,000 (Rs. 80,000) and to carry forward to next year Rs. 18,088 (Rs. 4,859) after placing Rs. 5,000 to staff pension and gratuity reserve and Rs. 65,000 to development reserve and writing of estate lease expenses to the extent of Rs. 3,425.

Accounts in brief are as under:—

Rs.	20,53,768	Rs.	20,53,768

Anglo-India Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1957.

In accordance with resolutions passed at the Annual General Meeting of the Company on 28th December last, the accounts are now being closed once yearly on the 31st of March. These accounts are therefore the first to be drawn up covering a full year's working and are also the first to be prepared in accordance with the provisions of the Companies Act, 1956. After transferring the sum of Rs. 3 (*nil*) lakhs from machinery replacement reserve account and providing the sum of Rs. 10 (10.25) lakhs for depreciation there is a credit balance on profit and loss account of Rs. 8,02,270 (Rs. 17,56,672) which the directors recommend should be dealt with as follows:

In payment of dividend on preference share capital at the rate of 7 per cent. per annum (Rs. 7 (Rs. 7) per share) without any deduction for income-tax paid by the Company absorbing Rs. 2,80,000 (Rs. 2,80,000) and in payment of dividend on ordinary share capital at the rate of 7 per cent. per annum (Rs. 7 (Rs. 7) per share) without any deduction for income-tax paid by the Company absorbing Rs. 3,44,449 (Rs. 3,44,448) and leaving to be carried forward Rs. 1,77,821 (Rs. 2,30,192 after transferring Rs. 5,00,000 to general reserve, Rs. 1,00,000 to machinery replacement reserve, and after paying Rs. 2,70,141 in respect of sales tax for the previous year and also Rs. 31,891 being net interest under the Income Tax Act).

As stated in the directors' last report, the percentage of sealed looms was reduced to 5 per cent. with effect from 20th February 1956 under the provisions of the working time agreement of the Indian Jute Mills' Association. In view of the substantial over-production which ensued, 2½ per cent. of the looms were re-sealed with effect from 16th July 1956 and a further 5 per cent. were re-sealed with effect from 17th September 1956 and for the remainder of the year under review, 12½ per cent. of the looms remained sealed.

Trading conditions during the year were difficult on account of the high price prevailing for raw jute in relation to the prices for manufactured goods.

The installation of electrical equipment at Middle Mill was completed during the period and the modernisation of that mill was also continued as planned. Three-quarters of the spinning capacity of Middle Mill is now fully modernised, whilst the complete modernisation of the preparing and spinning machinery at Lower Mill has been previously advised to the shareholders. It is the policy of the Directors to concentrate production in the modernised mills to the maximum extent possible.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Champdany Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1957.

The accounts show a loss of Rs. 26,43,053 (profit of Rs. 2,06,853) after charging Rs. 8,93,779 (Rs. 10,11,053) for depreciation. Taking into account the balance brought forward and the general reserve, the net debit balance in the profit and loss account comes to Rs. 7,24,043 (credit of Rs. 17,90,056) as follows: Loss for the year Rs. 26,43,053 (profit of Rs. 2,06,853) and credit balance brought forward Rs. 19,010 (Rs. 98,277) making a total of Rs. 26,24,043 (credit of Rs. 3,05,130). From this is deducted the amount transferred from general reserve of Rs. 19,00,000 (Rs. 14,84,926 from rehabilitation reserve) leaving a debit of Rs. 7,24,043 (credit of Rs. 17,90,056 from which the directors paid a dividend of Rs. 8 per share absorbing Rs. 4,73,312 and transferred Rs. 12,97,734 leaving to be carried forward Rs. 19,010).

General.—As indicated in the directors' report for the half-year ended 31st March 1956, the market prices for raw jute and those obtainable for manufactured goods remained at unprofitable levels throughout the 12 months ended 31st March 1957, and this factor was responsible for the very unsatisfactory results shown in the accounts. Manufacturing costs have been kept as low as possible and all other expenses have been reduced to the lowest level consistent with the efficient running of the mills. The directors and the managing agents have had the working of the mills investigated and steps to reduce still further the costs of manufacture are being pursued.

Since the commencement of the Company's new financial year there has been an improvement in the prices available for the Company's manufactures as compared with the cost of raw materials, and the working of the Company during the current year has consequently improved.

In accordance with the provisions of the Indian Jute Mills' Association's working time agreement, the mills worked 48 hours per week during the period under report. Five per cent. of the looms remained sealed on 1st April, 1956, and as mentioned in the last report 2½ per cent. and 5 per cent. of the total loomage was re-sealed and taken out of production on 16th July and 17th September, 1956, respectively. These steps were taken by the industry in an effort to bring production more into line with the quantity of raw jute available and thus reduce the disparity between the prices of raw jute and manufactured goods.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,16,400	Block ...	1,09,03,785

Khardah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright, Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The revenue account after deduction of all working charges, commissions and bad debts amounting to Rs. 4,418 (Rs. 8,519) shows a profit of Rs. 8,43,192 (Rs. 13,34,053). Adding to this the amount brought forward from the last year of Rs. 56,928 (Rs. 57,501) there is a total of Rs. 9,00,120 (Rs. 13,91,554). After providing for taxation (wealth tax) Rs. 43,450 (income-tax Rs. 4,22,126) and for depreciation Rs. 3,43,643 (Rs. 3,18,500) there remains an available balance of Rs. 5,13,027 (Rs. 6,50,928). This amount the directors recommend, be dealt with as follows:

For payment of dividends for the year ended 31st March 1957, without any deduction in respect of income-tax paid by the Company on preference shares at the rate of 6 per cent. per annum Rs. 54,000 (Rs. 54,000) and on ordinary shares at the rate of Rs. 8 (Rs. 10) per share Rs. 4,32,000 (Rs. 5,40,000) leaving to be carried forward Rs. 27,027 (Rs. 56,928).

In compliance with the working time agreement of the Indian Jute Mills' Association, the mills continued working 48 hours per week with 5 per cent. of the total complement of looms sealed until the 14th July, 1956, with 7½ per cent. of the total looms sealed from 16th July, 1956 to 15th September, 1956, and with 12½ per cent. of the total looms sealed from 17th September, 1956 onwards.

The jute industry had to face adverse working conditions during the period under review with simultaneous sales and purchases showing less throughout the period. With the resealing of 7½ per cent. of looms, however, the stock position improved considerably and the total stocks held by the mills at the end of March 1957 came down to 97,700 tons. The corresponding figure for October 1957 was 76,200 tons. Since then the stock position has continued to be favourable and at present although the prices of hessian cloth are very uneconomic, sacking constructions are showing manufacturing profit.

The supply position of raw jute still continues to be scanty and although in the beginning of the season it was felt that with bumper crops both in India and Pakistan the materials would be freely available to the mills, the effect of drought conditions was felt very severely, resulting in a very marginal position of raw jute stocks. As a result of this situation, the mills had to pay very high prices for raw jute till the end of October. Fortunately, however, since the beginning of November the raw material prices have declined considerably and it is hoped that they will continue to remain at a reasonable level.

In view of the above situation, for raw jute as well as finished goods, the directors anticipate that the mills will henceforth be making better profits than during the last 12 months. The competitive position of the Indian industry *vis-a-vis* the Pakistan and the Continental Industries, has recently improved to a considerable extent. The price of raw materials in Pakistan, which is the principal source of raw jute for both Pakistan as well as the continental mills, remain high. The Indian mills can, therefore, easily compete with their counter-part in other countries. In addition to this the Indian mills are gradually modernising their machinery resulting in lower production costs and if no untoward events happen during the coming months it can be safely presumed that there will be a substantial improvement in the economy of the Indian jute industry during the months ahead.

The establishment of a well regulated futures market has not yet been effected, mainly due to certain differences between the Forward Markets Commission and the industry. The need of such a market is very keenly felt in view of the wide and rapid fluctuations occasioned by the unrestrained activities of the local speculators. It is hoped that very soon there will be agreement between the authorities concerned, which will ensure stability in the prices of manufactured goods resulting in a larger volume of business.

The modernisation programme of the mills continues according to schedule. The installation of new machinery for the first two phases of the modernisation programme has already been completed and the directors are glad to report that the National Industrial Development Corporation has sanctioned a further loan of Rs. 20 lakhs covering the third and fourth stages of the modernisation scheme.

Accounts in brief are as under:—

Rajagiri Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas and Co., Ltd., Alleppey, Kerala State) submitted the audited accounts of the Company for the year ended 30th June 1957.

Crop.—The total estimated crop for the year under report was 5,50,000 (5,25,000) lbs. rubber from Rajagiri and 8,00,000 (7,50,000) lbs. from Challacary [Total 13,50,000 lbs.] to be produced at an average cost of 69.00 (65.86) cents per pound. The actual crop harvested was 13,89,753 (13,69,972) lbs., viz. 5,73,200 (5,57,800) lbs. on Rajagiri and 8,16,553 (8,12,172) lbs. on Shalidcary at an average estate cost of 71.42 (65.52) cents per pound. The average sale price realised was 150.00 cents per pound as compared to 148.50 cents for the previous year.

The profit before appropriation for 1955-56 was Rs. 9,98,721 and that for the year under review is Rs. 9,39,817. As the Agricultural Income Tax Act of the Kerala Government raising heavily the incidence of agricultural income-tax, was passed after the Accounts of the Company for the year 1955-56 had been adopted by the General Body, the provision that was made in 1955-56 Season's accounts in conformity with the rates then prevailing, was short by Rs. 1,35,000. To make up for this short provision, Rs. 1,35,000 has been additionally provided under taxation in the accounts for the year under review, besides Rs. 4,75,000 towards this year's tax provision, making in all Rs. 6,10,000. The balance available for distribution after this provision for tax, together with the carry forward from last year of Rs. 8,082 (Rs. 7,461) is Rs. 3,37,899 (Rs. 6,41,182). Out of this sum, the preference dividend for the year amounting to Rs. 1,35,600 (Rs. 1,35,000) and an interim dividend of 10 (*nil*) per cent. on the equity shares amounting to Rs. 1,35,000 (*nil*) have already been paid. To pay a final dividend of 10 (25) per cent. [making 20 (25) per cent. in all for the year for the equity shareholders], the funds available are short by about Rs. 68,000. So, Rs. 80,000 (*nil*) has been transferred from the dividend equalisation fund making a total of Rs. 1,47,299 (Rs. 5,05,582) available for distribution which the directors recommend be disposed of as under:—

The balance available for distribution is Rs. 67,299 (Rs. 5,05,582) to which is added the amount transferred from dividend equalisation fund of Rs. 80,000 (*nil*) making a total of Rs. 1,47,299 (Rs. 5,05,582). The proposed final dividend of 10 (25) per cent. [making 20 (25) per cent. for the year] on equity shares will absorb Rs. 1,35,000 (Rs. 3,37,500) leaving to be carried forward to next year Rs. 12,299 (Rs. 8,082) after transferring Rs. 1,10,000 to dividend equalisation fund and Rs. 50,000 to rehabilitation fund.

Estimate for 1957-58.—A total crop of 13,70,000 lbs. of rubber—5,70,000 lbs. from Rajagiri and 8,00,000 lbs. from Shaliacary—is estimated to be harvested during 1957-58 season at an average cost of 74.00 cents per pound. The capital expenditure for the year is estimated at Rs. 4,26,511.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,10,000	Block ...	41,12,483
Reserves ...	8,60,000	Stock-in-trade	1,54,020

Profit and loss account ...	12,298	Debts, deposits and advances ...	2,18,445
		Investments	10,000
		Cash ...	13,68,153
Rs.	59,38,341	Rs.	59,38,341

Teekoy Rubbers (India) Ltd.

The directors of the above Company (Managing Agents: East India Agencies Private Ltd., Pafai, Kerala State) submitted the audited accounts of the Company for the year ended the 31st March 1957.

The accounts have been drawn up in conformity with the form prescribed under the Companies Act, 1956. The net profit for the year, after meeting all charges and expenses including depreciation and interest on debentures, is Rs. 1,61,918 (Rs. 2,17,141). Together with the amount of Rs. 8,472 (Rs. 2,031) brought forward from the previous year a total of Rs. 1,70,390 (Rs. 2,19,172) is available for allocations. Out of this sum, the directors have paid the dividend on preference shares for the year ended the 31st March 1957 amounting to Rs. 36,000 (Rs. 36,000) and provided for taxes Rs. 64,450 (Rs. 84,700). The balance of Rs. 69,940 (Rs. 98,472), the directors recommend, may be utilised as under:—

To dividend on ordinary shares at 6 (9) per cent. absorbing Rs. 60,000 (Rs. 90,000) and to carry forward Rs. 9,940 (Rs. 8,472).

Debentures for Rs. 17,100 were drawn for redemption on the 31st March 1957. Debentures for Rs. 300 drawn for redemption previously remained unpaid on that date. These are shown in the accounts as drawn for redemption unpaid (at that date).

The crop of rubber obtained during the year was 4,01,436 lbs. The production fell short of the previous year's figure by 39,324 lbs. The decrease was mainly due to unfavourable weather, there having been complete and partial loss of tapping days from June to November due to rain and a spell of severe drought from December to mid-February. The shortfall in crop, as also other factors like the enhanced excise duty and additional bonus and other amenities to labour, have raised the estate cost from Rs. 84 per 100 lbs. in the previous year to Rs 97 per 100 lbs. The average price obtained for the year was Rs. 154 per 100 lbs. as against Rs. 149 in the previous year.

The area of the Company's estate remains unchanged at 1,178 acres seedling rubber, 276 acres budded rubber and 416 acres reserve land. The old seedling area on the Teekoy Estate was planted during the years 1906-10. Due to the age of the trees and the low stand per acre, the average yield has been on the decline. The directors have therefore decided to adopt a phased programme of replanting with high yielding rubber, to the extent finances permit. An application has been made to the Rubber Board for replanting an area of 85 acres in 1958, under the Rubber Board's subsidised scheme.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	20,84,869
Debentures	1,54,200	Stock-in-trade	97,546

Shahjahanpur Electric Supply Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Octavius Steel & Co., Ltd., Calcutta), submitted the audited accounts of the Company for the period of 18 months ended 31st March 1957.

In accordance with the Indian Electricity Rules, 1956, the accounts of the Company have to be closed henceforward each year on 31st March instead of on 30th September. The accounts for the period commencing from 1st October, 1955, have therefore been made upto 31st March 1957, covering a period of 18 months.

The revenue account shows a profit on the working of the period of Rs. 63,789. Adding to this the profit on sale of investments Rs. 1,128 there is a total of Rs. 64,917. After deducting from this arrears of depreciation Rs. 3,999, gratuity to retired employees Rs. 793, bonus to staff Rs. 4,178, expenditure during construction—written off Rs. 1,111, donation to Governor's flood relief fund Rs. 500, provision for taxation Rs. 39,500, provision for wealth tax Rs. 3,200 and reserve for contingencies Rs. 8,070, there is a net profit for the period of Rs. 3,566. To this is added the balance brought forward from previous year of Rs. 11,613, amount received on account of fuel clause adjustment Rs. 33,808, forfeiture of unclaimed dividends Rs. 500, doubtful debts realised Rs. 12,000 and staff bonus for 1950-51 recovered Rs. 1,098 making a total of Rs. 62,585. From this amount is deducted under-provision for taxation 1954-55 Rs. 9,857 and sundry adjustments Rs. 28 leaving a credit balance on profit and loss account of Rs. 52,700. The directors recommend that this balance should be carried forward.

A continuous supply of energy was maintained throughout the period and a small increase in the number of units sold was again recorded, as compared with the previous year. The Indian Electricity Rules 1956 were enforced with effect from 26th June 1956.

Plant.—A temporary partial bulk supply was made available by the Government of U.P. from their Sarda Hydel Scheme on the 26th November 1956. Full bulk supply of energy was effected on 16th July 1957 from which date the Company's generating sets were closed down.

During the 18 months ended 31st March 1957, the total units of electricity sold was 35,63,752 (23,54,926 units for the period ended September 1955 viz., for 12 months from October to September). The number of consumers and the load connected to the Company's system at 31st March 1957 were 2,101 (2,169) and 2,439 k.w. (2,528 k.w.) respectively.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,10,000	Block ...	5,51,018
Reserves ...	1,72,511	Stores, loose tools, etc.	4,05,634

Liabilities ...	2,70,877	Debts, deposits and advances ...	2,17,433
Profit and loss account ...	52,700	Investments	1,33,772
		Cash ...	1,09,459
		Miscellaneous expenditure and losses	15,184
Rs.	14,45,720	Rs.	14,45,720

Bhagalpur Electric Supply Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the period of fifteen months ended 31st March 1957.

In accordance with the Indian Electricity Rules 1956, the accounts of the Company have to be closed henceforward each year on 31st March instead of on 31st December. The accounts for the period commencing from 1st January 1956, have therefore been made upto 31st March 1957, covering a period of 15 months. The revenue account shows a profit on the working of the period of Rs. 2,31,110. After deducting from this arrears of depreciation Rs. 2,122, gratuity to retired employees Rs. 376, bonus to staff Rs. 13,863, expenses relating to loan from the Government of Bihar—written off Rs. 547, provision for taxation Rs. 24,500, provision for wealth tax Rs. 4,000, provision for redemption of Government loan Rs. 30,000, reserve for contingencies Rs. 12,055 and appropriations—under paragraph II of the 6th schedule to the Electricity (Supply) Act, 1948 Rs. 72,704 there is a net profit for the period of Rs. 70,943. After adding to this Rs. 33,352, the adjusted balance brought forward from the previous year, Rs. 942 on account of forfeited dividends and Rs. 448 on account of sundry adjustments and after deducting therefrom Rs. 1,658 being the amount written off on account of Sabour Transmission Line (Government Account) there is a credit balance of Rs. 1,04,027 which the directors recommend be disposed of as follows:—

Pay a dividend of 62 naye paise per share for the 15 months ended 31st March, 1957, without any deduction for income-tax payable by the Company Rs. 45,830 and to carry forward Rs. 58,197.

The Indian Electricity Rules 1956 were enforced with effect from 26th June 1956. A continuous supply of electricity was maintained throughout the year and as compared with the corresponding period of the previous year an increase of 7 per cent. in the number of units sold has been recorded.

The total number of units of electricity sold during the period of 15 months ended 31st March, 1957, was 52,77,046 (Rs. 39,72,312 for the year ended 31st December, 1955).

Total number of consumers connected to the Company's system, as at 31st March, 1957 was 4,310 (3,675) and the total connected load was 4,454 (4,107) kW. The Company's business continues to expand at a satisfactory rate and prospects are considered good.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,91,360	Block ...	11,68,703

		Cash ...	5,03,981
		Miscellaneous expenditure and losses	8,213
Rs.	23,77,170	Rs.	23,77,170

New Manbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

The revenue and profit and loss accounts for the year ended 31st March 1957, show a profit of Rs. 1,03,489, as compared to Rs. 44,701 of the previous year. To this after adding Rs. 70,222 (Rs. 36,426), the balance brought forward from the previous year and deducting Rs. 212 (Rs. 20,103) on account of sundry adjustments in respect of the previous year there is a balance of Rs. 1,73,499 (Rs. 70,222 after adjustment) at the credit of the profit and loss account. The directors recommend that this balance should be disposed of as follows:—

To pay a dividend at 5 (*nil*) per cent. for the year ended 31st March 1957, without any deduction for income-tax paid or payable by the Company Rs. 30,000 (*nil*) and to carry forward Rs. 1,43,499 (Rs. 70,222).

Raisings and despatches.—The raisings for the year ended 31st March 1957, amounted to 1,43,485 tons, despatches being 1,20,744 tons. This compares with 1,31,246 tons and 1,16,642 tons respectively for the previous year.

Prospects.—In the last directors' report it was stated that orders for the requisite machinery for stowing by means of crushing overburden had been placed. The directors have pleasure in informing that the machinery has now arrived and they hope it will be put into operation in the ensuing financial year. Furthermore, the Stowing Board have been pleased to sanction the directors' application for the project, which will increase the production of higher grade metallurgical coal and will naturally result in the improved working of the colliery in the future.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	10,96,408

Union Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1956.

The year's working has resulted in a profit on revenue account of Rs. 81,720 (loss of Rs. 1,00,318) after providing Rs. 23,465 (Rs. 16,884) for depreciation. After transferring the above profit making various adjustments, the balance on profit and loss account amounts to Rs. 77,105 (debit of Rs. 9,689) which it is proposed to carry forward. In view of the loss sustained during previous years no provision for taxation is considered necessary.

Raisings and despatches of coal.—Raisings of coal were 75,546 (63,550) tons and despatches amounted to 69,728 (60,615) tons.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	4 43,400
Reserves ...	3,35,000	Stock of coal	82,570

Rs.	10,71,295	Rs.	10,71,295

N.B.—Figures within brackets relate to the corresponding period of the previous year.

JESSOP AND COMPANY, LIMITED

ORDER BOOK STANDS AT HIGH LEVEL

MR. SITWELL EXPLAINS THE POSITION

ADDRESSING the shareholders of Jessop and Company Ltd. at their Twenty-fifth Annual General Meeting held in Calcutta on 9th January 1958, Mr. S. S. H. Sitwell, one of the Managing Directors of the Company and Chairman of the meeting, sought to remove certain misapprehensions prevailing in some quarters about the Company's affairs.

The following is the text of Mr. Sitwell's speech:

"GENTLEMEN,

"The next item on the agenda today is to receive and consider the accounts together with the reports of the Directors and auditors for the year ended 31st October 1956. These documents have been in your hands for some time and you have heard the Acting Secretary read the auditors' report. With your permission, I will not read the Directors' report which, in the main, covers the period upto 31st October 1956, though it also reveals certain important happenings after that date. I think, however, that it will be in the general interest to correct certain misapprehensions that have received some currency and to bring you even more up to date before I move the adoption of the report and accounts and so give you an opportunity to discuss them.

"Early in December 1957 your Board was advised that, by reason of certain actions on his part, Mr. H. D. Mundhra had vacated his seat on the Board. The Registrar of Companies was advised accordingly, the date being 5th December.

"I would now like to draw your attention to some changes that have taken place in the composition of your Board of Directors since the report was printed.

"First, Mr. K. N. Tapuriah tendered his resignation as a Director on 2nd January 1958. Your Directors accepted this resignation with regret for they have always found him a useful and likeable fellow worker.

"Secondly, Mr. S. D. Srinivasan was co-opted as a Director under clause 107 of the Company's Articles on 13th December 1957, and this calls for some explanation. Some of you will know that the Life Insurance Corporation of India is a large shareholder in your Company. In fact, it owns just under 20 per cent. of the ordinary shares and about 70 per cent. of the preference shares. In view of this fact, your Directors, some months ago, approached the Life Insurance Corporation with the suggestion that they nominate a Director on your Board. This suggestion culminated early in December by the Corporation nominating Sir Dhiren Mitra before, incidentally, he took up other appointments which have recently been in the public eye. Sir Dhiren is over 65 years of age and, therefore, under the Companies Act cannot be brought on to the Board except at a general meeting. You will note that a proposal to that effect will be moved later today. In the meantime, your Directors co-opted Mr. Srinivasan, the Zonal Manager of the Corporation here in Calcutta, so that the Life Insurance Corporation should not go unrepresented. Mr. Srinivasan retires at this meeting and is not standing for re-election.

"I would remark at this stage that, contrary to impressions in various quarters, no Administrator, Receiver or other official has been appointed for this Company by the Government or any other party. Your Directors themselves, as I have already said, invited the Life Insurance Corporation to nominate a Director and also took an opportunity to strengthen the Board by co-opting Mr. B. P. Khaitan, the well-known Calcutta solicitor, and Mr. B. N. Chaturvedi, who is, *inter alia*, the Chairman of the Calcutta Stock Exchange Association.

"Unfortunately, the meeting today is very much overdue. I would remark, however, that those of you who are shareholders of long standing will remember that our annual general meetings are usually held about July. In 1956, by a very great effort, we held the meeting in February, but experience then gained showed that with the large and varied nature of our business the time between February and the closure of the Company's accounts at the end of October was too short. It had been our intention to hold this meeting during June or July 1957, but we delayed in the hope that doing so would aid us in recovering the moneys due to the Company.

"In view of the fact that another of our financial years ended on 31st October 1957, I can tell you today a little of the more recent working of the Company. I must be brief and you must appreciate that figures must in many cases be approximate. The sales this last year increased to over Rs. 7½ crores, as against Rs. 6½ crores for the period we are reviewing today, and the margins have remained at a satisfactory level. As forecast in the report now in your hands, the activities of the import and trading departments continued to deteriorate, but those of the works increased by over 40 per cent. during 1957, as against 1956.

"The increased activity in the works was of a general nature though one new project, the manufacture of diesel road rollers, got fairly on its way. During the period January to September 1957, the Company completed 100 rollers, but in the autumn production came to a halt for lack of steel. Production is now continuing, but the steel situation is very difficult and it is not easy to see how we can economically produce a standardised article such as a road roller, unless we can get some real continuity of supplies of raw material.

"The new factory built for the manufacture of electric and other railway coaches is now virtually complete and a small amount of work has already started. This factory will be in full operation during the second half of this year.

"On the end cover of the report you will see a photograph of Level Luffing Wharf Cranes at Alexandra Dock, Bombay. These form part of a contract for 34 cranes for the Bombay Port Trust, the last of which has just completed 12 months' service. We have orders in hand for nine similar cranes for Calcutta and four for Madras and we have just received a further contract from Bombay for another 54 cranes. These cranes are entirely designed and manufactured here in India, only some special electrical equipment and such items as ball and roller bearings being imported. The local manufacture content is of the order of 75 per cent., so that on the new contract from Bombay, which totals about Rs. 164 lakhs, this Company saves India some Rs. 120 lakhs in foreign exchange. I think, I am right in saying that, apart from Japan, India is the only country outside Europe and North America where such cranes are being designed and manufactured, and in this country your Company is the only one so doing.

"It remains to add that the Company's order book now stands at the remarkable figure of over Rs. 20 crores and that the works and their connected staff and employees are in an excellent position to tackle this great volume of business. I am glad to say, in this connection, that our relations with our employees have been consistently good throughout the year just ended and the satisfactory working results that I have been able to forecast are chiefly due to the sustained efforts of all the Company's employees to whom all thanks are due.

"As I have already told you, your Company has a very good order book on which it is earning satisfactory margins. There is no reason why it should not continue to do so, provided that it continues to receive adequate supplies of steel, a commodity which, unfortunately, is in increasingly short supply with little prospect of easement within the next two years. Fortunately, a very large portion of our activities are concentrated on the manufacture of rolling stock for the railways which carries top priority for steel supplies, while the remainder of our order book covers contracts having a very high degree of priority; thus, we can be sure of obtaining our full share of what steel supplies are available.

"Turning back to the past I would emphasise that what is now revealed in the Directors' report, in fact, happened over a year ago and that as soon as the position was known prompt steps were taken which prevented any further happenings of the same sort. There is no disguising the fact that your Company has suffered severe damage but, to adopt medical terms, the wound is not mortal, bleeding was promptly stopped and the patient is on the road to recovery. However, the days of convalescence are frequently difficult ones and there is no exception in the case of your Company. It is now obvious that we were entangled in a mesh of events the full extent is only now becoming apparent. I use the past tense advisedly, for I believe that we have succeeded in disentangling ourselves from the net, but it still remains obvious that any measure that can be taken to conserve the Company's resources will materially assist in making its recovery more sure and more swift."

(*Note*: This does not purport to be a record of the proceedings of the annual general meeting.)

MONEY STRINGENT

(From Our Own Correspondent)

BOMBAY, 15*th January*

The short-term money market experienced perceptibly stringent conditions during the week under review, due to a broadening of the seasonal demand for credit. Although the busy season had been somewhat delayed, the demand for financing movement of crops and other trade requirements would appear to have gathered such quick momentum that the surplus funds with banks are said to have been used up. It is even said that banks have had to look up to the Reserve Bank for accommodation. This state of affairs is borne out by the fact that deposits of banks with the Reserve Bank have gone down during the last two weeks alone by over Rs. 10 crores and that banks have borrowed against usance bills substantially—the rise in outstanding borrowings during the past fortnight was over Rs. 9 crores.

During the week under report, there was a hardening of interest rates, particularly in the inter-bank section, where lenders were scarce. There were keen borrowers at 3 per cent. among the Exchange banks and big Indian banks and at 3½ per cent. among the smaller banks. House money at call was, however, unchanged at 4½ to 4¾ per cent. and short-term deposits at 4½ to 4¾ per cent. for one to six months.

A further sharp rise of Rs. 17.67 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 10th January 1958. This brings the aggregate expansion in the past three weeks to Rs. 36.12 crores. Notes held in the Banking Department were also higher by Rs. 1.08 crores, so that the increase in total notes issued is of the order of Rs. 18.74 crores. As against this, there has been a rise of Rs. 24.91 crores in rupee securities. Foreign securities have, however, declined by Rs. 4.97 crores and rupee coin by Rs. 1.19 crores. In the Banking Department, the Central Government's deposits have fallen by Rs. 2.81 crores, while deposits of other Governments are up by Rs. 8.06 crores. Deposits of banks have declined further by Rs. 6.09 crores. Balances held abroad are higher by Rs. 1.67 crores and loans and advances other than to Governments by Rs. 6.06 crores. Of the latter, advances to Scheduled banks against usance bills alone account for Rs. 5.37 crores. Investments have dwindled by Rs. 11.87 crores.

The Scheduled banks' statement for the week ended 3rd January 1958 discloses a sharp fall of Rs. 10.13 crores in demand deposits. But time deposits are up by Rs. 7.91 crores. Borrowings from banks have declined by Rs. 4.53 crores, while those from the Reserve Bank and the State Bank show a rise of Rs. 6.96 crores and Rs. 1.11 crores, respectively. A rise of Rs. 8.06 crores is noted in advances and of Rs. 14.55 crores in bills purchased and discounted, while investments and cash balances show small variations.

The Gilt-edged market ruled steady during the week under review, but in the last few days it turned dull, consequent on the decline in demand due to seasonal factors. The short-dated loans, which had been in keen demand till last week-end, were not much in favour latterly, while medium and long-dated issues were on offer. The 4 per cent. 1967 and 1968 State loans, however, continued to be in demand and due to scarcity of sellers, prices looked up further.

3 per cent. 1986 Conversion Loan was better at Rs. 71.05. 3 per cent. 1970-75 was unchanged at Rs. 85.70, while 3 per cent. 1966-68 picked up 10 nP to Rs. 91.50. 3 per cent. 1964 was stagnant at Rs. 93.90, while 3 per cent. 1963-65 gained 5 nP to Rs. 93.70, as also 3 per cent. 1959-61 to Rs. 98.95. 3¼ per cent. 1962 was marked up by 5 nP to Rs. 97.95. 3½ per cent. 1961 was unchanged at Rs. 99.60. 3¾ per cent. 1964 at Rs. 97.70, 3½ per cent. 1965 at Rs. 97.55 and 3½ per cent. 1967 at Rs. 97.60. Among the State loans, 4½ per cent. 1969 Bombay improved by 5 nP to Rs. 99.80. 4 per cent. Madras 1967 and 1968 gained 15 nP each to Rs. 97.25, and Andhra 1967 and 1968 10 nP each to Rs. 97. U.P. 1967 and 1968 put on 15 nP each to Rs. 97.15.

In the foreign exchange section, the rupee gathered further strength in terms of the U.S. dollar during the week under review, in consonance with the trend of sterling abroad. Banks' selling rate of ready U.S. dollars declined from Rs. 476.50 to Rs. 475.75 per $100 and their buying rate from Rs. 473 to Rs. 472.50. In New York, spot sterling hardened from $2.80½-2.81 to $2.81¼-2.81½ and three months' forward from $2.78¾-2.78¾ to $2.79.3/16-2.79.5/16. Transferable sterling moved up from 278.90-279 cents to 279.05-279.15 cents, but declined yesterday to 278.75-278.85 cents.

COPPER IN SHORT SUPPLY

(From Our Own Correspondent)

CALCUTTA, 14*th January*

The acute shortage of copper continued to dominate trading in the metal market during the week under review also. Fresh arrivals were few and far between, and were readily absorbed. Some quantity was also received by way of direct imports by consumers. The Government was also in the market to get its requirements. For most of the week, there was no quotation for electrolytic copper in the absence of stocks. For a time, however, the rate was as high as Rs. 170, as against Rs. 167 previously. New Delhi reports indicated that the Government was reviewing the import policy to provide for more imports of copper in the licensing period commencing from April and that import of copper ingots against licences for copper scrap and brass scrap would be permitted. Trade circles here stated that copper being an essential requirement for industrial development, the Government must provide for unrestricted imports. Unless this was done and established importers provided facilities to stock at least about three months' requirements, production in factories consuming copper would continue to be affected. The forthcoming meeting of the Import Advisory Council would give the industry a forum for voicing current difficulties arising from limited copper imports.

From Rs. 514, tin advanced to Rs. 524. The advance was due to the delay in fresh arrivals. Demand was as usual and was fully met. Electrolytic zinc opened at Rs. 54.50 and improved to close at Rs. 56. The increase was in sympathy with the uptrend in copper, as also to the not too satisfactory stock position. Virgin lead, on the other hand, was quiet at Rs. 59.50.

BULLION HARDENS FURTHER

(From Our Own Correspondent)

BOMBAY, 15*th January*

Bullish sentiment continued to prevail in the bullion market for yet another week. Despite the large arrivals of silver from upcountry centres, as reported last week, and persistent influx of Tibetan coins, the white metal hardened further on strong speculative support and short-covering. Rumours of an increase in the price of silver at Tibet also aided sentiment, but there does not seem to be any basis for these rumours.

After a lapse of nearly eight months, gold prices crossed this week the Rs. 110-mark and touched a high of Rs. 110-13 for ready and Rs. 110-8 for forward. The sentiment was favourably influenced by the good demand in the ready section and receding prospects of unauthorised arrivals, thanks to the strict vigilance of the Indian customs authorities and the strict measures taken by the East Pakistan Government against smuggling.

Silver for forward delivery (5th February settlement) advanced from Rs. 187-7 to Rs. 188-13 on Monday. The higher level, however, attracted profit-taking and the closing was done lower at Rs. 188-4.

Ready silver continued to be quoted at a discount of As. 12 consequent on the increase in floating stocks. The ready metal moved up from Rs. 186-11 to Rs. 188-1, before closing today at Rs. 187-8. The floating stocks of silver are placed at 1,500 bars. The daily average arrivals were 20 bars, while the offtake was no more than 15 bars.

Gold for forward delivery (4th February settlement) rallied from Rs. 108-11 to Rs. 110-8, but finished lower at Rs. 109-12.

Ready gold stood on balance Re. 1 higher at Rs. 110, after touching a high of Rs. 110-13. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 4,000 tolas and the offtake was also of the same order.

Silver was unchanged in New York at 89¼c. There was also no change in London prices at 77¼d. for spot and 76¾d. for forward. Gold, however, declined further from 249*s.* ½*d.* to 248*s.* 8¾*d.*, consequent on the persistent recovery in sterling.

The following comparative table shows at a glance the trend of the market during the week under review:

	15-1-58	Highest	Lowest	8-1-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	110 0	110 13	108 14	109 0

* 4th February settlement.
† 5th February settlement.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

LINSEED WEAKER

(Messrs. A. Bradley and Co.)

CALCUTTA, 13*th January*

There has been a slightly weaker undertone in the linseed market during the week, owing to absence of enquiries. Local crushers have reduced their output to a great extent, because of increasing lack of parity. Oil prices have declined, but with little corresponding decline in the price of seeds. Overseas advices for linseed oil are far from encouraging, with cheaper offers of Argentine oil failing to attract buyers. In the local market, demand has been sluggish.

The latest quotation for January-February is Rs. 22-12 per maund.

HIDES QUIET

(From Our Own Correspondent)

KANPUR, 13*th January*

During the week under review, the hides and skins market ruled quiet. The anti-cow slaughter campaign, coupled with the dry season and stoppage of shipment to the U.K. by Madras tanners were responsible for the quiet trend. The latest available quotations are given below:

Wet salted cow 1st grade Rs. 340 and 2nd grade Rs. 240 to Rs. 300 per score; wet salted buff 1st grade 1 lb. ¼ oz. and 2nd grade 1 lb. 10 ozs. per rupee; goat 1st grade Rs. 320 and 2nd grade Rs. 300 per 100 pieces; sheep 1st grade Rs. 275 and 2nd grade Rs. 200 per 100 pieces.

COTTON FUTURES RALLY

(From Our Own Correspondent)

BOMBAY, 15*th January*

Cheerful conditions prevailed in the cotton futures market during the week under review. The emergence of fresh investment support and large upcountry buying resulted in an impressive rally in prices. The firmness of the market was aided by strong spot advices, and encouraging news from the cloth market. Another bullish influence was the persistent rumour that an export quota announcement was imminent. The rumour gained considerable strength when it was known that the Cotton Advisory Board, at its meeting held on Friday, recommended a quota of 50,000 bales of Bengal *Deshi* and 25,000 bales of minor varieties not used by domestic mills. A section of the trade was, however, disappointed that the Board did not urge any reduction in export duty nor did it recommend export of 24/32" staple cotton as was expected in certain quarters. The disappointment is reflected in a break in futures values on Saturday. The setback, however, proved short-lived and the market again firmed up, thanks to the strength of other commodity markets and the expectation that an export quota would soon materialise, and would give fillip to exports, especially since foreign demand is beginning to revive. The firm trend persisted till the close today.

I.C.C. Moglai Jarilla opened the week at Rs. 681, as against the previous close of Rs. 676 and firmed up to Rs. 684.75 the next day. After declining on nervous liquidation to Rs. 676.50 on Saturday, the contract again firmed up to Rs. 691.50 yesterday. Opening at the same rate today, the contract gathered Rs. 2 before closing at Rs. 692. The net gain over the week was Rs. 16. The following table indicates the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

	15-1-58	*High*	*Low*	8-1-58
I.C.C. Moglai Jarilla (March 1958) ...	692	693.25	676.50	676

In line with the firm condition of the futures section the spot market was also active. There was a general widening of mill purchases. Most of the popular varieties evoked good attention and values registered handsome gains. Demand was particularly keen for Khandesh and Vijay even at advancing prices. Other varieties which evoked interest were Khamgaon, Berar, Moglai, etc.

In the export section, the rumours regarding quota imparted considerable strength to the market and prices of Bengals and other exportable styles improved remarkably. Export interest also widened. Enquiries were reported from Japan, the U.S. and France.

Activity in the foreign section was limited. Towards the close of the week, however, a sudden revival of demand was noted for U.S. styles. A prominent Bombay mill group was credited with having booked 10,000 bales of Californian Acala at prices ranging from Rs. 1,450 to Rs. 1,530, for February-March shipments.

The Government of India has notified that the quantity of cotton stapling 1-3/16" and above permitted for import from sterling areas has been raised from 30,000 to 40,000 bales. Mills which have already applied in terms of trade notice on 16th December will now be allotted quotas on this basis.

A trade notice issued by the Joint Chief Controller of Imports, Bombay, states that the period of shipment of licences already issued for the import of 50,000 bales of East African cotton permitted by the Government of India on 20th July 1957 has now been extended up to 31st January 1958. Licences already made valid up to 31st December 1957 may be submitted for necessary amendments.

The latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 620; Berar Jarilla 780; Khandesh 815; Oomra *Deshi* 750; Vijay 925; Hubli Laxmi 900; Jayadhar 760. *Delivery Contracts*: Vijay 905; Bengal 615.

The Karachi cotton market ruled firm during the week under review. The firmness was aided by good ready demand and reports of good business with France and Hongkong. Speculative support was forthcoming throughout the week and values registered substantial gains. N.T.R.G. January delivery, which had closed at Rs. 77-5, improved to Rs. 79-2-6. The March position gained, over the week, As. 8-6 to Rs. 77-2-6. Spot prices also moved higher. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 72; Punjab *Deshi* 70; 4F Punjab Roller 80-6; S.G. 84-14; L.S.S. Punjab Roller 82-14; S.G. 86-14; N.T. Roller 83-10; S.G. 90-2; 289F Punjab Roller 87-10; S.G. 95-10.

The easy conditions noted in the Alexandria cotton futures market last week persisted during the week under review also. In the absence of buyers to absorb the offerings, futures values registered a sizable fall. The spot section, however, continued to rule firm. Premiums hardened for high grades of Menoufi, Ashmouni and Giza 30 while those for Karnak remained steady.

Shipments of Egyptian cotton from 1st September 1957 till 31st December 1957 aggregated 234,085 bales (of 720 lbs.), as against 137,818 bales during the same period last year. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week-end closings:

Karnak: January 86.45 (88.60); March 87.50 (89.40). *Ashmouni*: February 71.50 (71.50); April 71.65 (72.40).

The week's trading in the Liverpool cotton futures market was dull with prices showing a declining trend. Lack of support in the near delivery

months and a considerable increase in hedge selling in the distant months resulted in a break in values. Traders were inclined to feel that although higher grades of U.S. cotton might get scarcer as the season advances, supplies of lower grade tenderable cotton would be plentiful. This consideration tended to keep the contracts down. The latest available quotations—in pence per lb.—from Liverpool are as follows:

American Cotton One Inch Staple Contract: March-April 26.32; May-June 26.60; July-August 26.76. *Sudan*: January-February 32.50.

The New York cotton futures market ruled easy during the week under the impact of a fair volume of hedge selling believed to have been against recent purchases of C.C.C. cotton for unrestricted use. New crop months were particularly easy due to New Orleans and local selling which found buyers scarce. Uncertainty regarding any change in farm legislation discouraged follow-up support even when scattered buying was forthcoming. Even the expectation of a high loan rate for the 1958 crop failed to impart strength to the market.

The mid-December parity price for upland cotton was announced as 37.43 cents per lb. This is 12 points above the mid-November parity price. The expectation of a high loan rate for the 1958 crop is no doubt based, to a large extent, on the advancing parity price.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	14-1-58	7-1-58	31-12-57
Spot	36.35	36.45	36.40
March	35.47	35.80	33.75
May	35.69	36.02	35.92
July	35.48	35.98	35.78

YARNS FIRM

(From Our Own Correspondent)

BOMBAY, 15*th January*

The yarn market ruled distinctly firm during the week under review. Cotton yarns which had been remaining very dull all these days picked up strength during the week under review and there was a rise in prices. Support was lent chiefly by reports of improved offtake in piecegoods and better enquiries from consuming centres. The mills were not inclined to sell at reduced prices. The recent large exports of cotton yarn from Bombay port—during December 1957, they aggregated over one million lbs.—led to expectations of still increasing demand from foreign countries, especially Hong Kong and Viet Nam. Staple fibre yarns met with continued bull support, thanks to excellent demand for quality yarns from Surat and Banaras. In sympathy with these yarns and induced by conditions of acute scarcity, particularly in imported variety, art silk yarns also recorded a further rise in prices. The scarcity in supplies of these yarns, it may be noted here, has been due to New Delhi's policy not to grant import licences to established traders and the tendency on the part of actual users to convert their licences from import of nylon yarns.

Snia rayon yarn (120 dull cones) February delivery elicited good attention of operators and improved by Rs. 8 to Rs. 913. No transactions were reported in the April delivery this week also. In the spot section, 120 Japan increased by 9 nP to Rs. 5.28. 150 Japan hardened by 12 nP to Rs. 5.09. 120 Italy and 150 Italy were both firm at Rs. 5.25. Among indigenous yarns, National Rayons 150 bright cones first grade spurted by 17 nP to Rs. 4.06. 120 bright cones first grade rallied 18 nP to Rs. 4.58.

Staple fibre yarns (40×2) February delivery met with excellent buying support and picked up Rs. 15 to Rs. 591. There were no transactions in the April delivery. Among spot foreign yarns, Paramounts strengthened by 25 nP to Rs. 6.75. Fujis gathered 20 nP to Rs. 6.64. Spot (40×2) Centurys rose by 7 nP to Rs. 3.22. On the other hand, Kohinoors lost 3 nP to Rs. 3.33. New Greats declined by a like amount to Rs. 3.09. Citys softened by 2 nP to Rs. 3.25.

In the cotton yarn section, ten counts Podars went up by 13 nP to Rs. 14. Moderns were better by 12 nP at Rs. 14.62. Twenty counts Moderns, however, declined by 37 nP to Rs. 17.25. Among thirty counts, Indus rallied 63 nP to Rs. 21.25. Forty counts Minaxis spurted by 62 nP to Rs. 25.37, Moderns by 50 nP to Rs. 25.50 and Gokaks by 75 nP to Rs. 25.25. Sixty counts were strong. Moderns and Finlays both moved up by 50 nP to Rs. 60. Raghuvamshis firmed up by 75 nP to Rs. 52.50. Eighty counts Mahendras were neglected at Rs. 69.75, Moderns at Rs. 72 and Finlays at Rs. 75.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those seven days before:

	15-1-1958	8-1-1958
Art silk yarn (per case of 200 lbs.)		
120 dull Cones Snia February	Rs. 913.00	Rs. 905.00
December	—	—
120 Japan (per lb.)	5.28	5.19
150 Japan (per lb.	5.09	4.97
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.25	5.25
Staple fibre yarn (per case of 200 lbs.)—		
40×2 February	591.00	576.00
40×2 December	—	—
40×2 New Great (per lb.)	3.09	3.12
40×2 Century (per lb.)	3.22	3.15
40×2 City (per lb.)	3.25	3.27
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.00	13.87
20s Gokak	—	17.50
30s Indu	21.25	20.62
40s Minaxi	25.37	24.75
60s Raghuvamshi	52.50	51.75
80s Modern	72.00	72.00

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, 15*th January*

Buoyant conditions prevailed in the oilseeds market during the week under review. The buoyancy was whipped up by large bull support and heavy short-covering. Groundnuts registered handsome gains, thanks to encouraging offtake by crushers and *vanaspati* manufacturers. There would have been a more marked rise in prices but for offerings by some Kanpur interests. Castorseeds ruled firm on revival of rumours regarding cut in export duty on castor oil. The firmness was aided further by reports of bulk business (involving about 300 tons) in castor oil commercial with the U.K. at Rs. 1,500 per ton. Linseed evoked good enquiries on hopes of better prospects of oil exports, following the availability of charter freight. The cottonseed section presented a bullish trend, the chief inspiring factors being renewed strength in cotton and oil export prospects. Traders welcomed the Government of India's decision to continue, up to the end of September next, the system of licensing exports of cottonseed oil freely as before. It was reported that a large quantity—estimated at nearly a thousand tons—had already been sold, Rumania, purchasing the bulk at Rs. 1,500 per ton f.o.b. Bombay. In sympathy with the general trend, kardiseeds and nigerseeds ruled strong, with values moving up.

Groundnut February 1958 delivery climbed up from Rs. 153.87 last week-end to touch a high of Rs. 158.75 before closing at Rs. 158.62. Bold ready rallied Re. 1 to Rs. 32.25. Coromandel advanced by 87 nP to Rs. 32.87. Khandesh improved from Rs. 32.12 to Rs. 32.87. Groundnut oil railway receipt hardened by 57 nP to Rs. 17.69. Ex-mill gathered 50 nP to Rs. 17.75.

Castorseed May 1958 contract spurted by Rs. 3 to Rs. 140 today but finished slightly lower at Rs. 139.87. Ready Madras rose from Rs. 27.87 to Rs. 28.12 before closing at Rs. 27.75. Kanpur was fully maintained at Rs. 26.50. Castor oil B.S.S. strengthened by 50 nP to Rs. 15.87. Commercial quality was better by 25 nP to Rs. 14.37.

Linseed May 1958 contract, after declining in the earlier sessions to Rs. 30.19, recovered to Rs. 31 before finishing at Rs. 30.87. Bold ready put on 65 nP to Rs. 30.75 and February-March 63 nP to Rs. 30.75. Linseed oil ready increased by 50 nP to Rs. 16.62.

Cottonseed February 1958 delivery which stood at Rs. 95.25 at the close of last week gradually moved up to touch Rs. 100.25 today. At the close, however, it was slightly lower at Rs. 100.

Among other seeds, kardi bold ready encountered good support and advanced by 50 nP to Rs. 19. Niger Madras improved from Rs. 26.87 to Rs. 27.25, but wound up today easy at Rs. 26.75.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	15-1-1958	8-1-1958	2-1-1958
Groundnut—	Rs.	Rs.	Rs.
February 1958	158.62	153.87	157.25
Bold ready (per cwt.)	32.25	31.25	31.87
Khandesh quality	32.87	32.12	32.75
Linseed—			
May 1958	30.87	31.00	31.06
Bold ready (per cwt.)	30.75	30.62	30.69
Castorseed—			
May 1958	139.87	137.00	141.50

SUGAR MOVES UP

(From Our Own Correspondents)

BOMBAY, 15*th January*

The sugar market put on a cheerful appearance during the week under review, in contrast to the bearish trend noted in the past three weeks. Demand from Malabar Coast broadened considerably. But there was paucity of ready stocks, on account of small arrivals; the quantity that actually arrived into the market during the week was not more than 10,000 bags, as against 10,600 bags in the previous week. Consequently, sugar prices tended to move up.

Large grain sugar advanced from Rs. 107-111 to Rs. 109-112 per bag, including the additional Central excise. Medium grain rose by a rupee to Rs. 105-107. Small grain was fully maintained at Rs. 104.

The total production of sugar during the first two months of the current season amounted to 493,000 tons, an increase of 42,000 tons as compared with the corresponding period of 1956-57. Offtake, including quantities despatched for export, aggregated 295,000 tons. The closing stock as on 31st December 1957 was 627,000 tons.

* * * *

HAPUR, 13*th January*

Want of support from consuming centres accounted for the dull conditions in the sugar market during the week. The *khandsari* prices have fallen appreciably and crystal sugar has to face much competition with *khandsari* which is now attracting better consumer demand. The undertone, however, was steady in anticipation of early good demand. Production of crystal sugar is in full swing in all the factories in west U.P. and cane supplies to them is adequate.

Sugar prices tended to go down in the Muzaffarnagar market, due to poor outside buying enquiry. Factories were reported to be anxious sellers, in view of increasing stocks of new quality. The latest ex-mill delivery prices are: New Deoband (B-29) Rs. 37.50; Khatauli (C-29) Rs. 36.62; Rohana (B-29) Rs. 37.37; Mansurpur (C-29) Rs. 36.50; Shamli (B-29) Rs. 37.44; Daurala (B-29) Rs. 37; Mawana (C-29) Rs. 36.50; Bijnore (E-29) Rs. 34.69; Amroha (D-29) Rs. 34.50; Simbhauli (E-29) Rs. 35.75; Meerut (D-28) Rs. 35.

The Kanpur sugar market showed barely any change from the generally listless pattern of trading in the past week, except for a slight improvement in quotations for east U.P. and Bihar ex-mill deliveries. The pace of daily arrivals in the market fell short of offtake, but prices failed to show improvement, as demand lacked a keen edge.

Following heavy arrivals, prices of *khandsari* suffered a setback. *Khandsari* production is continuing at a rapid pace, as producers are in a position to buy cane upto Re. 1 per maund, as against mill-gate delivery prices at Re. 1.44 per maund. The prevailing prices of *khandsari* are: Rs. 21 to Rs. 30 per maund, according to quality.

After an early fall of about 25 nP per maund during mid-session for want of support, ready *gur* made up most of the losses towards the week-end, as stockists entered the market and began to purchase for building up stocks. Local arrivals continued to be modest, the average being 3,000 to 4,000 maunds. The total arrivals from the beginning of the season are put at 260,000 maunds, the corresponding figure last year being 295,000 maunds. Local stock is put at 12,000 maunds and prevailing prices are: *Gur pansera* Rs. 11.50 to Rs. 11.75 and *balti* Rs. 12.25 per maund. Ready *gur* was mostly unchanged in the Muzaffarnagar market, where arrivals averaged 8,000 maunds and trade circles said that the overall *gur* production this season would not touch last year's figures. The prevailing prices were: *Gur Chaku Minja* Rs. 13.50 to Rs. 13.81, *pansera* Rs. 12.25 to Rs. 12.50; *khurpa rusket* Rs. 7.50 to Rs. 9.50; *shakker dara* Rs. 13.50 to Rs. 14.50; *masala* Rs. 14.50 to Rs. 15.50; *khandsari* Rs. 21 to Rs. 32 per maund.

After an early fall from Rs. 12.12 in the beginning of the week on Monday last to Rs. 11.81, *gur fagun* spurted on vigorous bull support and was quoted today at the best level of the week at Rs. 12.19.

Preparations for sowings of cane crop for the next season have begun and actual sowings will begin in a fortnight's time.

PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, 15*th January*

During the earlier part of the week, Malabar black pepper showed some improvement, following the report that Russia was in the market and bought about 600 to 800 tons at Rs. 97 per cwt. f.o.b. for shipment during the month of March. Alleppey improved to Rs. 487½ and garbled at Cochin to Rs. 87½. The news that Russian steamer was due on or about the 18th inst., for lifting about 1,000 tons proved a supporting factor. Most of the arrivals in all the primary markets were readily taken up by exporters. However, New York having refused to follow the advance, the market during the later part once again turned weak under the fear of further expansion in arrivals. Daily arrivals in North Malabar were reported to be about 250 candies, while the inflow in South Malabar was irregular as growers were holding back.

Singapore was reported steady as arrivals from Sarawak proved poor. Sumatra was said to be shipping pepper to Singapore along with rubber and tin for barter in defiance of the Central Government of Indonesia. Reports regarding the political situation in Sumatra were, however, conflicting.

New York was reported to be quietly steady, the President's Union message having been discounted. Trade was reported awaiting the President's Budget message. New York dealers were said to be offering at $0.22 which is below the replacing parity. Business, therefore, remained difficult. Future of the pepper appeared uncertain. The trade expected further fall in the prices, if no overseas support was forthcoming during February when arrivals are likely to reach the peak. Thanks to Russian buying and the consequent covering by Indian exporters, floating stocks in the terminal markets were not heavy.

At the time of writing, Alleppey is quiet at Rs. 475 while garbled is quoted at Rs. 86½ in Cochin and Rs. 510 at Calicut where Bombay houses are buying for replacement.

Business in A.S.T.A. proved poor. There were sellers at $0.22½ for March shipment but without buyers. In delivery section, February delivery, after improving to Rs. 500, came down to Rs. 486 under liquidation by bulls and hedge sales by the trade.

Following are today's nominal quotations: Ready delivery Rs. 72 per Bengal maund and February delivery Rs. 490-Rs. 495 per candy of 5½ cwts.

TEA PRICES IMPROVE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 9*th January*

The first export sale of the New Year, which was held on Tuesday, 7th January, contained 1,700,000 lbs. Quality showed an all-round improvement and there were some attractive highgrown teas on offer. From the outset there was a very good general demand and prices were generally dearer. Plainer types were about steady, but low medium and medium teas advanced irregularly 10 to 15 nP per lb. Buyers were quick to appreciate any teas which showed an improvement in quality. Best liquoring highgrown teas were considerably

dearer and top quality invoices met with keen competition. Whole leaf grades met a slightly better enquiry but prices were occasionally easier. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.35
Low medium	1.45—1.70
Medium	1.55—1.75
Good medium	1.90—2.15
Quality	2.20—4.40

The average price realised in sale No. 1 was Re. 1.94 per lb., as compared with Re. 1.76 per lb. realised in the last sale of 1957 and Rs. 2.42 per lb. in the first sale of 1957.

London Market—Sale of 6th January 1958.—Market generally 2d. to 4d. dearer.

Sale of 7th January 1958.—Very strong demand with advances up to 4d. according to quality.

Colombo Market.—Sale of 6th January 1958.—Generally dearer, except plainest UVAS. Some irregularity at top. More interest plainer fannings.

Sale of 7th January 1958.—Dearer, particularly fannings. Stalky broken mixeds unchanged.

Calcutta Market—Export.—Much improved general demand. Prices 10 to 15 nP dearer at commencement.

Internal.—20,000 dust. Good general demand. Weakest feature, fibrous C.T.Cs. Strongest feature best liquoring C.T.Cs. Middle East strong at 2 nP below last. Internal leaf 2,000 chests. Good demand at dearer rates.

Export Quota.—The market has been strong and there are sellers at 18 nP.

Forthcoming Auctions.—Sale No. 2 will be held on Tuesday, 14th January.

The South Indian tea crop for December 1957 is estimated at 10.98 million lbs., as against the actual output of 10.68 million lbs. in the corresponding month of 1956. This brings the total estimated production for 1957 to 144.94 million lbs., as compared with 126.94 million lbs. produced in the previous year.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale 2*:—1,300,000 lbs. Market opened quietly, but strengthened considerably and closed dearer for everything, particularly improved mediums and highgrowns."

KIP PRICES ADVANCE

(From Our Own Correspondent)

MADRAS, 13*th January*

The seasonal Christmas holiday slackening in the U.K. kip trade did not affect the Madras market. Prices ruled firm, as arrivals were small and tanners were finding it extremely difficult to buy raw stocks to keep their tanneries running. Though U.K. buyers were not able to obtain advances on their finished leather, it looked as if higher levels would be established eventually. There were more enquiries for tanned cow 10/12 lbs. run and 5/5½ lbs. fifths and higher prices were paid on several bookings. Arrivals of cow hides and calves, as well as of buff hides and calves, were small, and were taken up by exporters readily. Inferior fifths cow hides were in great demand for local trade at 10 per cent. over U.K. importers' ideas of prices.

In the tanned skins section, arrivals of common tannages goat and sheep skins were limited, and prices advanced by two to three annas per lb. Better class tannages were firmly held, because tanners were in a well-sold position, and prices in the raw markets were pushed up to fantastic levels. Shipment business was small.

TEA FIRM

(From Our Own Correspondent)

CALCUTTA, 14*th January*

Very firm conditions prevailed in the export auctions held yesterday. Prices were dearer on higher advices received from abroad in respect of the auctions held in Mincing Lane in the previous week. Also, the orders which collected during the Christmas and New York holidays were still being executed. Foreign buyers are turning their attention more to Calcutta, and there is a distinct diversion of business from Colombo to Calcutta. For, in Colombo, port delays have dislocated shipments, and shippers are naturally reluctant to bid in auctions there and block money when shipments are uncertain. Also, movement of teas from estates to Colombo port have been disrupted by recent floods, although it is stated that the gardens have not been affected, in view of their higher elevation. In the last week's sales in Colombo, Russians displayed some interest, and prices, on the whole, were dearer.

Adding the estimated output in December, North Indian tea production in 1957 amounted to 515 million lbs., that is, 25 million lbs. less than that in 1956. The uncertainty whether Indonesian exports would be maintained at normal levels, in view of the changed political situation there, was also a contributory cause for the higher trend here yesterday. In the event of Indonesian production being affected, traders said here, there was the distinct possibility of an increase in Calcutta's exports of common teas. This would mean considerable relief to the gardens in the Cachar and the Dooars areas. Indonesia generally ships fair quantities to Denmark and the U.S., and, if its exports are affected, these two principal customers of Indonesia are likely to increase their bids in Calcutta. The London report that the improvement in auctions in Mincing Lane followed adverse weather in Pakistan and East Africa threatening to restrict output was noted. Trade circles here believe that the changed situation would reduce the expected surplus.

Offerings during yesterday's export sales amounted to 55,372 packages. The strong general demand raised prices. The strongest feature of the sales was provided by clean well made teas, O.Fs in this category improving by 10 nP. B.O.Ps rose above valuations, while other medium B.O.Ps eased. C.T.C. teas met with good demand and were steady at about last rates; the brighter liquoring lots also advanced. Plain and medium B.Ps, fannings and teas for price improved by 2 to 4 nP per lb. Non-wither legg-cut teas irregularly advanced by 6 to 8 nP. Whole leaf grades and B.P.S. met with competition. Darjeelings were fully steady. The quotations were: Best Assam C.T.C. fannings Rs. 2.50 to Rs. 2.60 (nominal), best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80 (nominal), clean black pekoe Rs. 2.30 to Rs. 2.40, medium fannings Re. 1.80 to Re. 1.84, plain fannings Re. 1.70 to Re. 1.74, medium B.P. Re. 1.68 to Re. 1.72, and plain B.P. Re. 1.60 to Re. 1.64.

Export quota changed hands at 18 nP, but subsequently sagged to 17½ nP with buyers offering 17 nP.

In last week's auctions for domestic consumption, dusts on offer amounted to 19,789 chests. There was good demand for all teas on offer, barring the fibrous plainer liquoring C.T.C. Assams which received little support. Prices for the brighter liquoring medium and the best liquoring C.T.C. Assams advanced impressively, while other teas in this category eased by 10 nP. Following fair support by Middle East buyers, orthodox teas from all districts were sold above valuations. The rates were: Best Assam C.T.C. Rs. 2.50 to Rs. 2.86, medium Assam C.T.C. Re. 1.90, medium Assam grainy dust Re. 1.62 to Re. 1.64, and medium Dooars Re. 1.60.

Leaf offerings aggregating 1,837 chests met with improved demand. Green teas were the strongest feature, prices rising above valuations.

JUTE GOODS RECOVER

(From Our Own Correspondent)

CALCUTTA, 14*th January*

Earlier in the week under review, the jute markets were quiet, but, as the week progressed, speculators, as well as genuine buyers, accorded fair support and prices recovered. Details of jute goods with mills as on the 31st December were known on Wednesday, and, although the total stocks were higher than in the previous month, it was somewhat encouraging to note that stocks were equal to production of about three weeks only. The figure for hessian was 1,000 tons lower, at 25,000 tons, which indicated that the process of transfer of hessian looms to sacking was continuing. Sacking goods, at 39,200 tons, represented a rise of 4,000 tons and miscellaneous goods, at 11,400 tons, were higher by 1,600 tons. There was thus an overall rise of 4,600 tons in stocks. It was expected that in the coming weeks more hessian looms would be switched over to sacking and special constructions. For the demand for hessian from the United States is anything but encouraging. Burlap stocks in the U.S. were expected to last for three months only. Support from buyers on behalf of the U.S. has been so poor that fresh purchases have not gone for replenishment of stocks. Trade circles here believe that substitutes have once again become cheaper than burlap and that American farmers are increasing the utility of their burlap bags by using them again and again.

Output figures for the last month were released by the Indian Jute Mills Association yesterday, and indicated that the total, at 92,800 tons, was slightly higher by 900 tons, compared to November, consequent on the longer working hours in the month as a whole. This small increase was hardly taken notice of in the market, and as such prices continued to recover impressively yesterday. It was noted that stocks at the end of November and December being 71,000 and 75,600 tons respectively, demand in December was estimated at about 88,200 tons or 4,600 tons less than output. Although the demand thus fell short of the output, it was noted that the statistical position had improved inasmuch as stocks with mills had declined below the monthly output level. Similarly, reports from New York indicating that packaging in the U.S. still accounted for almost 80 per cent. of burlap consumption and that the growing carpet tafting industry promised lifting of more burlap were noted with satisfaction. More burlap would also be consumed in the development of a burlap asphalt lining for irrigation canals in the U.S. These reports were taken as an indication that the present lull in American buying would prove to be a temporary phase and that good orders from the U.S. might be forthcoming. These expectations, coupled with some actual buying, contributed to the recovery in hessian prices, while sacking received support from speculators as well as shippers.

In the meantime, note was taken of the report that the West German jute industry had demanded protection against India and Pakistan. This was taken as proof here that Indian bags continued to offer competition in foreign markets. West German production as well as exports were increasing. In the eight months to August last, West German exports to the U.S. amounted to 4,733 tons, as against 4,550 tons in the corresponding previous period. Other countries in Europe to which West Germany exported jute goods in the above period were Denmark, Switzerland, Norway and Sweden, and trade circles here thought that more attempts should be made to popularise the Indian product, which is not only cheaper but of higher quality as compared to the products of several other countries.

On Tuesday last, the market for jute goods was quiet, but before closure on that day short covering, coupled with speculative support, aided quotations to finish higher on balance. Thus, ready B. twills after being lower at Rs. 103.75 recovered to Rs. 104 and ready 40" 10 oz. hessian was lifted to Rs. 39.40 from Rs. 39.00 on the previous day. On the next day, stock figures were announced, and since the increase was considerably lower than earlier expectations the recovery continued, despite speculative manipulations which lowered prices for a time. B. twills advanced to Rs. 104.10 and 40" 10 oz. hessian to Rs. 39.45. At this stage, the report of the reduction in North American freight rates was received and enlivened activity of speculators raising hessian 40" 10 oz. to Rs. 39.65 on Thursday. B. twills registered a further rise to Rs. 104.85. On Friday, these levels were more or less maintained as the due date fluctuations in the *fatka* kept the quotations within narrow limits. Over the week-end, fair business took place and prices ruled firm at the following levels: Rs. 39.80 for hessian 40" 10 oz. and Rs. 104.60 for B. twills. Business continued to be transacted at these rates and yesterday the quotations rose further to Rs. 40.05 and Rs. 105.25, respectively.

Fair interest was shown by mills in raw jute and prices improved fractionally. The latest quotations are given below:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
District	33.00	30.00
Northern	32.50	29.50

Pucca bales 1st marks ...	Rs. 167.50 per bale	

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 13*th January*

Quiet to steady conditions prevailed in the foodgrain market during the week. The Government of India is despatching more of foodgrains to the drought-affected areas of Bihar and east U.P. About 300,000 tons are scheduled to reach Bihar by the end of March to be sold at subsidised rates. The Union Food Minister visited the east U.P. districts and assured all help from the Centre. Arrangements to import more wheat are being finalised and a total of 400,000 tons is to be shipped to India from Canada during this winter and early spring.

Wheat recorded modest gains towards the week-end, due to scanty daily arrivals and falling local wheat stocks. Wheat *dara* was quoted at Rs. 16 per maund and farm quality at Rs. 17.50. With daily arrivals at less than 50 maunds, local wheat stock ran down to 18 *khaties*, the corresponding figure last year being 52 *khaties*. Crop prospects continued to be not very bright for want of winter rains.

Rice ruled quiet. *Basmati* was done at Rs. 27 to Rs. 30, *mainpuri* at Rs. 23.75 and coarse quality at Rs. 20 per maund.

Coarse grain, recorded a sharp fall in the earlier part of the week recovered towards the week-end. Maize and *bajra* continued to attract good seasonal demand. Barley and *bejhar* were mostly unchanged, due to slack buying support. Further despatches of gram were made on State Government account to east U.P. and local gram stock ran down by 3 *khaties* to 37 *khaties*. The latest prevailing prices are: Gram Re. 1.25 to Rs. 11.50; barley Rs. 9.50; *bejhar* Rs. 9.37; maize Rs. 11.50; *bajra* Rs. 11.87; *jowar* Rs. 9 to Rs. 11; *gowar* Rs. 12.

After an early sharp fall of about 75 nP per maund in absence of buying enquiry, peas and *arhar* improved slightly towards the week-end in line with wheat and other foodgrains. Local stock position was better than that in previous years. The standing crop was reported to be fairly good. Other pulses were quiet. The quotations (in rupees per maund) on Monday were: Peas *dara* 9; farm 9.75; *arhar* 10; *urd* 16.25 to 17.50; *moong* 15 to 15.50; *masoor* 14.75.

LABOUR

(*Concluded from page* 82)

Co., Ltd. (1936-3 All. E.R. 322, 325) are apposite in this context:

"This is the case of a man who had, according to my view, got an engagement which was to last for life, or at any rate for the joint lives of himself and the company, but I think for his life, because I think there are authorities to the effect that, if a company winds up, that is a dismissal of the servants, and they can then prove for damages and get their dividend, whatever it may happen to be. Fortunately, the company has not been wound-up, but in estimating the damages, of course the tribunal estimating them will have to take into consideration the fact that at any time after 26th June 1935, it might have appeared to the Directors that they had good reasons for terminating the plaintiff's services, (for) reasons connected with his conduct. The present value of what his salary would be for the rest of his life must also be considered, and there must also be taken into account the fact that he is a man who might at any time terminate his service by his life coming to an end, and other matters with which I need not deal."

These and similar considerations would equally be germane in the matter of the computation in terms of money of the value of the benefit of reinstatement (*vide Shetty* vs. *Bharat Nidhi Ltd.*, 1957, II LL.J.).

ABBREVIATIONS.
A— Held by Government of India. B.—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
(f) Income-tax free. • Loans held entirely by the Trustees. N—Nominal.
†Bombay State Transport. †† Rate of interest reduced from 6 to 3 per cent. with effect from 1st June 1944.
‡ Rate of Interest reduced from 6½ to 4 per cent. with effect from 1st April, 1955.]—Interest free to first 12 years. ⊢—Interest free for first 7 years
Z.—Ex four instalments but inclusive of accrued interest

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

‡These carry the right to cumulative dividend of 7 per cent. and any surplus profits available after 10 per cent. of ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend.

¶Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y. = Accounts published yearly. H. = Accounts published half-yearly. P. = Company has Preference shares. T. = Company has Debentures N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (x) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. (k) Investments.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 100 each.
For 1956 the dividend of Rs. 17·8 includes an interim dividend of Rs. 7·8 per share. In 1956 the shares of Rs. 200 were split into shares of Rs. 100 each.

BANKING

(*Concluded from page 71*)

quence thereof, these countries, as a rule, have intensified their effort to fight inflation. It is not only that these countries, too, are tired of inflation; they realise more and more that political, social and economic developments become increasingly difficult in an environment of inflation. In a large number of cases, these countries have turned to the International Monetary Fund not only for financial assistance, but also for technical assistance.

If I should say just one word about countries in Asia, I would have to point out that for these countries it is more often than not the scope of a development plan and the intensity with which it is pursued that determines the monetary trend internally and in the balance of payments. Increased experience is all the time being gained in the field of financing, but it would be premature, to say the least, to pretend that a solution has been found to the financial problems facing these countries. There is surely not a solution; there are a number of different ways by which resources may be mobilised.

There are, I should add, two problems to which so far I have made no reference, but which are in everybody's mind, and both of these problems refer to the United States. There is, on the one hand, the question of the present business recession; on the other hand, the question of the trend of commercial policy. To put it bluntly, the raw-material-producing countries are asking, in the first place, whether they have to expect a further drop in raw material prices, associated with a continued slackening of business activity in the United States, and, secondly whether they will have to face any large-scale revival of protectionist practices in the United States, e.g., contemplated increases in the tariff on lead and zinc, talks of reinstituting a tariff on copper, voluntary restrictions on oil imports, restrictions on tuna fish imports, etc. I mentioned the raw-material-producing countries, but similar questions were, of course, put to me everywhere during my recent trip to Europe. Anxious questions were raised whether one need fear a repetition of the chain of events after 1929. What did I answer?

As regards the recession, I pointed out that recovery—as in the case of a man's recovery after an illness—would depend on three things: the strength of his constitution, the treatment he receives, and his willingness to submit to treatment, i.e., his general behaviour.

As regards the "constitution," the structure of the economy of this country (the U.S.), there can, of course, be little doubt that it is now much stronger than in 1929; not the same speculation on the stock exchanges, no longer the weak mortgage position, no longer the danger of deposits being lost in banks having to close their doors. Unemployed persons will receive support which will keep up purchasing power. Private indebtedness, it is true, has been rising, but can hardly be regarded as dangerously high at its present level.

If we then turn to the "treatment," the policies which will be applied, I believe that there is great confidence in the Federal Reserve System and, in particular, in Mr. William McChesney Martin, and every reason to believe that the new men at the Treasury will co-operate to strengthen confidence.

But what about the "behaviour" of the patient? If there is anything that seems to me certain about the business cycle, it is that particular care should be taken not to increase costs during the initial stages of the downward phase. Balance will have to be restored by an adjustment of costs and a recovery of demand—but that recovery must come through monetary policy, not through an increase in wages which simultaneously increases costs. If moderation as regards costs is observed, it is, in my opinion, likely that, before long, this recession can be overcome through the ordinary means of credit policy.

In general, I do not think that the Europeans are very worried about the recession here in the United States, for they cannot believe that things will get out of hand. They seem, in fact, to be more worried about a possible revival of protectionist practices. The last ten years have witnessed a remarkable expansion in world trade, by which the Western World has been knit more closely together. To have to face just at the present moment a setback in this field would be nothing less than disastrous. There are today some non-industrialised countries which have restricted trade in the hope that thereby they would be able to pursue better their development plans. There are other countries which have gone back on liberalisation because of sharp falls in their foreign exchange reserves. These setbacks may, however, be reversed; Finland will again liberalise its import trade from the 1st of January 1958, and other countries may soon do the same. Should, however, the United States alter its policy and increase its protectionism, the sense of cohesion in the Western world would receive a very heavy blow.

The time of a recession is, of course, a testing time for commercial policy, for it is then that foreign competition is more keenly felt. But I cannot believe that the people of the United States will this time agree to increased protectionism. They will no doubt remember that tariff increases have in many respects been a mixed blessing for this country in the past; and they will also feel their responsibility for the prosperity of the whole free world.

The United States is now a leading nation in monetary matters: what happens here affects the whole free world. It is difficult to think that a leading monetary nation can alter the main lines of its commercial policy according to the different phases of the business cycle without ups

AMERICAN LOAN TO INDIA

THE new U.S. loan to India, announced soon after we went to Press last week, is both timely and sizable. The amount of the loan is approximately $225 million or roughly equal to Rs. 106 crores at the current rate of exchange. Viewed against India's need of about Rs. 700 crores of foreign exchange to fulfil even the core of its second Plan and the commitments which it has already concluded, as well as against American capacity to help, this sum is not very large. But $225 million is not a small amount. It is some $160 million more than the amount the U.S. Government has been sparing for India every year during the past five years under the Indo-U.S. Technical Co-operation Programme. In any case, it is large enough to give a breathing spell for this country and buoy up its sagging spirits. It is an impressive expression of U.S. goodwill and a further proof of its sincere desire to help India's economy move forward on democratic lines. We are grateful to the U.S. Government and its people for coming to the aid of our country at this critical juncture. Special thanks are due particularly to all those who helped to bring about this arrangement. Prominent among these are Mr. T. T. Krishnamachari, who laboured hard to create a favourable public opinion in the U.S. for India, the U.S. Ambassador to India, Mr. Ellsworth Bunker, and the Indian Ambassador to the U.S., Mr. G. L. Mehta. Both the Ambassadors have spared no efforts to remove misunderstandings and to strengthen Indo-American friendship.

Details of the new loan of $225 million are yet to be worked out and, for this purpose, an official delegation from this country will proceed to Washington in a few days under the leadership of Mr. B. K. Nehru, Secretary for Economic Affairs, who by now must be quite familiar with American officials and non-officials, as he has been in charge of financial negotiations in the U.S. capital for a fairly long time. It has, however, been disclosed that the loan will be made available from two sources, the U.S. Export-Import Bank and the U.S. Development Loan Fund. While the exact share of each of these sources has not been indicated, the U.S. Ambassador disclosed at a Press conference at New Delhi last week that 70 per cent. would be from the Export-Import Bank and the balance of 30 per cent. from the Development Loan Fund, the actual figures on this basis being $157.5 million and $67.5 million, respectively. It is pertinent to recall here that the pressure for assistance from various other countries on these two sources of American Government capital is very high. The lending limit of the Export-Import Bank has been very nearly reached. President Eisenhower has, therefore, found it necessary to approach the Congress to sanction additional funds for this institution. The Development Loan Fund, which came into being only last year with an initial credit of $300 million for operations upto 30th June 1958, has received applications for aid aggregating $1,098 million; of these, requests for $800 million were received in the first three weeks of this month. It will thus be seen that, in promising loans to the tune of $225 million, the U.S. Government has given high priority to India. This shows that the U.S. Administration is fully alive to the urgency of India's requirements.

The present offer is a loan, pure and simple. It is a business transaction, and does not contain any element of grant or gift. It has to be repaid in full with interest. Our object in stressing this point is not to belittle the value of this type of American assistance but to remind the powers-that-be in this country that the money must be utilised prudently and profitably and that enough return must be obtained from its investment in the shape of capacity and ability to repay the debts as and when they fall due. It is, therefore, gratifying to hear that the project to be financed by these loans will be scrutinised by the lender. Some critics may regard this as an unwarranted condition. A few may even go a step further and characterise it as an interference. Such criticisms will be absurd. There is no harm in consulting friends, who are competent, about the soundness or otherwise of our plans and projects. On the contrary, it is a positive advantage, as it will enable us to discover our weaknesses and rectify them.

The fact that the offer is a loan and not a gift has also to be stressed for another reason. While occasional gifts from economically rich countries like the U.S. to poor countries like India should be welcome and need not be decried, excessive dependence on them, as Prime Minister Nehru has often reiterated, would be bad, as they might breed complacency, political corruption and ultimately demoralisation. The chances of this danger are greater in underdeveloped than in developed countries and more so if the underdeveloped nations happen to be politically young, with no strong democratic traditions. Further, in the context of current international politics, with cold war becoming active and colder, large and frequent gifts from the leaders of either of the two power blocs to underdeveloped, unaligned countries will only worsen the situation. It may lead to an unhealthy competition which may end in more and more underdeveloped countries going under the wing of the Communist bloc. It will be in the long-range interests of India not to encourage such competition between the power blocs, in which a country under dictatorship has certain obvious advantages over its democratic confrere.

It is not yet known when the aforesaid loans from the U.S. are repayable and what rates of interest they carry. Usually, the Export-Import Bank lends for periods from three to eighteen years. The rates of interest vary, in accordance with the changes in the cost of money to the U.S. Treasury which makes funds available to the Bank. Currently, the Bank has been charging 5½ to 5¾ per cent. It is possible that the loans offered to India through this Bank may be in various amounts repayable at varying periods. A part of the promised credit includes assistance to projects in the private sector, though the exact amount meant for it has not been disclosed. The loans through the Development Fund also may be subdivided, but nothing may be available to the private sector from this source. The rate of interest to be charged on loans from the Fund varies, depending upon the purpose for which they are taken. The classification seems to be based on profit-making and non-profit-making development projects.

A few days ago, it was reported that, while the rate of interest

for profit-making projects will remain on a par with that charged by the Export-Import Bank? While no information is available yet on this subject, it may be mentioned, in passing, that the trend of interest rates in the U.S. seems to be downward and that this is bound to influence the lending rates of the Bank also.

A loan from the Development Fund has certain advantages as compared with that from the Export-Import Bank. In the first place, the duration of loans from the former is very much longer than in the case of loans from the latter. As already stated, the Bank lends, generally speaking, for a maximum period of 18 years, while the Fund gives a time limit of 40 years. Mr. D. McIntosh, the Fund's Manager, has, however, urged that the maximum period should be reduced to 25 years. The outcome of this suggestion is awaited, but it is to be hoped that the authorities concerned will turn it down and retain the 40-year limit. The second important advantage is that, whereas Export-Import Bank loans are meant to be utilised only for buying goods in the U.S., those from the Development Fund can be spent anywhere in the world. The value of this advantage lies in the fact that a borrower from the Fund can buy his needs in the cheapest market in the world. And there are several items of goods required by India for implementing its projects which can be bought at a lower price outside the U.S. In view of these advantages, the benefit of U.S. loans to India would be greater if a greater proportion than now envisaged could be made available from the Fund instead of from the Bank. As it is, the loans from the Bank cannot help India to meet any part of the foreign exchange commitments already incurred outside the U.S.

The Government of India was in favour of a big straight loan from the U.S. Government. Such a loan would have, of course, enabled it to go ahead with the second Plan more easily than is possible now. It would have raised its foreign currency reserves, thereby imparting greater confidence among foreign investors in this country. It would have also minimised, to a very great extent, the need for buying plant and machinery on the costly method of deferred payments. But, for various reasons, partly political and partly economic, such a course has not been possible. Moreover, a straight loan of the type and size sought by India would have required Congressional sanction, but the mood of the Congress is said to be unpredictable. An approach to the Congress carried with it the risk of rebuff and an acrimonious debate, hurting the feelings of sensitive souls which abound in both the countries, perhaps in far greater number in this country than in the U.S. Criticisms of India in the U.S. Congress would naturally evoke unpalatable replies from this side, thereby resulting in public controversies to the mutual disadvantage of both India and America and to the benefit of communists and their friends all over the world. It, therefore, seems to us that the decision of the U.S. Government not to approach the Congress for a special loan to India and to give as much help as possible from the resources already at its disposal was the best in the present circumstances. Further, it has the additional advantage of providing India with urgently required funds far more expeditiously than would be possible through a loan requiring the authority of the Congress. The latter would have taken anything between six and nine months, if not a year, for sanctioning a loan.

The proposed U.S. assistance is not confined to the loan of $225 million alone. It is something bigger than that. For the U.S. Government is actively considering the possibilities of providing India with more wheat than has already been undertaken under the 1956 P.L. 480 Agreement, which provides for the sale of U.S. surplus farm products on easy terms. Explaining the scope for such assistance, Mr. Ellsworth Banker said last week that 900,000 tons of wheat could be made available in addition to the quantity already agreed, that is, 700,000 tons, by changing the supply of cotton to wheat and 200,000 tons in exchange for minerals, such as manganese ore. He added that India would be eligible for further assistance from the Development Fund and P.L. 480. This means that fresh negotiations for assistance could be initiated as soon as the Congress sanctions the President's request for a fresh loan of $625 million to the Development Fund and for an extension of P.L. 480. It is to be hoped that, in the interval, events will so shape out as to make conditions propitious enough for the American and Indian Governments alike to approach the U.S. Congress for a special loan of a more substantial amount. It is encouraging to hear from the American Ambassador that his Government has not ruled out such a future possibility.

Meanwhile, the Government of India will be well advised to be as thrifty as possible in the use of its foreign resources and to pursue an economic policy that will help the flow of foreign private capital into this country. There is ample scope and need for such capital. While announcing the new loan arrangement to the Press the other day, the American Ambassador paid a tribute to the Government of India and its planners by saying that the offer under reference constituted "further evidence of the United States' deep interest and confidence in the imaginative, courageous effort India is making to build a better life for all her people." It is to be sincerely hoped that this testimonial will not be interpreted by the powers-that-be to mean that their plans and policies are perfect and therefore need no amendment. It is necessary to stress this point, as they are quite liable to make that mistake. It would be a great tragedy for India if the American loan were to engender in them the complacent belief that there is no case for improving the climate for private savings and initiative.

SOVIET CHALLENGE TO THE WEST

THE facts compiled and published by the State Department of the United States on foreign aid given by Soviet Russia to the uncommitted underdeveloped nations make interesting reading. The revelations are, indeed, startling. Two years ago, when Mr. Nikita S. Khruschev challenged the U.S. and other Western powers to compete with Russia in giving aid to underdeveloped countries, many in this country thought that he was indulging in a propaganda stunt. It was generally believed that Russia did not have the necessary surplus production to render effective assistance to this part of the world. This belief was, of course, based mostly on advices received from the Western world. The inability of Russia to buy some of the goods which it had promised to take up under trade agreements with the underdeveloped countries was also in a way responsible for strengthening this impression. For instance, Russian failure to take up Indian jute goods, tea, and coffee to the extent anticipated caused great disappointment in this country. Similarly, reports from Burma and Ceylon that Russia was trying to drive a hard bargain with them after concluding specific barter agreements caused scepticism about the genuineness of Russian intentions and claims. But the State Department's report shows that one must revise one's opinions about Russia, that Mr. Khruschev was not making empty boasts and that Russia is in a position to render economic assistance on a much larger scale than has been believed hitherto.

The facts emerging from the U.S. State Department's report are summarised by the *New York Times* as follows:

1. In the last two and a half years, the Soviet bloc has made agreements with the underdeveloped nations to provide them with $1,500,000,000 in economic aid, excluding $400,000,000 in military aid. The nations are Afghanistan, Cambodia, Ceylon, Egypt, India, Indonesia, Nepal, Syria, Yemen and Yugoslavia. Only 10 to 15 per cent. of this amount has actually been expended to date, but funds are being made available as specific projects are approved. The United States' economic aid to the ten countries over the same period is estimated at about $900,000,000. (This, of course, excludes the latest U.S. loan of $225 million to India.)

2. During the first six months of 1957, more than 2,000 Soviet bloc technicians worked for one month or longer in nineteen underdeveloped countries. The rate at which the Soviet educational programme is turning out technicians makes possible a great increase in the number of technicians sent abroad within the next few years.

3. Despite economic hardship within the Soviet bloc, it could double its aid shipments abroad during the next eight years by drawing on only 5 per cent. of the projected increase in its productive output during the same period.

4. Trade agreements between the Soviet bloc and the underdeveloped areas, based on barter or acceptance of local currencies, have met with wide favour and are expected to increase.

Some of the specific Soviet bloc projects cited in the aforesaid report pertain to a steel mill in India, with a capacity of 1,000,000 ingot tons, for which the Russians are providing $115,000,000 in machinery, materials and technical services; a $175,000,000 aluminium plant in Yugoslavia; a $10,000,000 petroleum refinery in Syria; a sugar refinery in Indonesia; and a large flour mill-bakery installation in Afghanistan. In presenting the report to the public, the State Department has emphasised that, though Russia has offered economic assistance without attaching any strings, communist influence in all the uncommitted countries which have received its assistance has steadily grown. This may sound propagandistic, but, on calm reflection, one cannot but admit that it is a fact. To take our own country. The Communists, who were nowhere in the picture before India accepted Russian aid for putting up a steel plant at Bhilai, are commanding considerable power in many parts of the country today. They constitute the only effective opposition party at the Centre and West Bengal, besides holding office in one of the States, namely, Kerala. Whether this success of theirs is the direct result of economic collaboration with Russia or the weaknesses of the Congress Party is not the question to be answered here. All that we want to state here is the fact that, during the last three or four years, the Communists in India have gained in strength to a significant extent.

Be that as it may, there is some resemblance in the Russian policy of giving economic aid to underdeveloped countries with that followed by the U.S. Just as the U.S. has given larger aid to those countries which are definitely more friendly with it and the inherent leanings of which are not in doubt, so also Russia has undertaken to give bigger aid to those countries which, though uncommitted for all outward purposes, have been supporting it vociferously and appear to be almost in its camp. Thus, countries very much smaller than India and with hardly any plan for their economic development have been offered surprisingly large amounts of aid, exceeding that made to India by a wide margin. Including $400 million by way of military aid, Egypt has been promised $480 million. Syria has received $280 million by way of both economic and military aid. Purely economic aid has been offered to Afghanistan to the tune of $145 million, Indonesia $110 million and Yugoslavia $465 million. These amounts compare with $270 million committed to India. Another country which is being wooed on a large scale is Ceylon; it has already received $20 million. Negotiations are currently going on between Ceylon and Russia and an agreement is expected to be signed in a fortnight.

Considering the fact that Russia started offering economic aid to the underdeveloped countries only a little over two years ago, the progress made by it is remarkable, but not surprising, because, unlike a democratic country, which has to get parliamentary sanction, Russia can go ahead unhampered by red-tapism. Further, Russia has been offering aid without almost any conditions and in very sweet language. Again, Russia encourages socialisation of industry, trade and services which readily appeals to the ruling party in underdeveloped countries, whereas the U.S. and Western countries lay considerable stress on the need for encouraging private enterprise—advice not quite palatable to most of them. It may be argued that Russia has only made promises so far and may not be able to fulfil them. There is not much ground for this scepticism. Russia has already delivered a substantial part of its promised aid and, according to the U.S. State Department's findings, has enough resources (including those of its satellites) not only to continue the programe but even to expand it to some extent. It is pointed out, in this connection, that even if Soviet economic aid to underdeveloped countries were to aggregate $1,000 million per annum, it would be less than 1 per cent. of the estimated annual future industrial output of both the Soviet Union and its East European allies. The ability of these countries to supply engineers and other technicians is also said to be rapidly growing. The only limiting factors of Russia are its extensive commitments to China and other full-blooded communist countries and its deficiency in consumer goods, as well as in food and agricultural commodities. Nevertheless, there is now enough evidence that Russia's challenge to the West is a real one. It may be that underdeveloped countries must, in their own interest, be cautious in accepting large-scale economic aid from Russia. But this advice will cut no ice with them, as they are living in miserable conditions. The only effective solution lies in the West meeting the challenge. It remains to be seen whether the State Department's report will succeed in convincing the American Congress and the Parliaments of other Western countries of the necessity to set apart a larger part of their resources for rendering economic assistance to the underdeveloped areas of Asia Africa and South America than they have done so far.

END OF DEARER MONEY ERA IN SIGHT?

BEARS IN SHARES COVER—DIAMONDS SOFT—WORLD SUGAR WEAK—TAX PAYERS INCREASE

THURSDAY, 5 P.M.

AFTER registering a smart rise in value and turnover, the share markets have become listless. Although the closing rates for the week are well below the highest levels witnessed earlier in the week, they are higher than those a week ago and the trend is steady. The spurt in the initial days of the week was chiefly due to bear covering of a sizable nature. This is evident from the fact that the rise in prices was confined mainly to speculative counters. Apparently, the bears have come to the conclusion that the worst is over, or at least that the chances of making any profit by holding on to their sales have become rarer as compared with those by going long. In other words, the bears seem to have taken the view that it will be prudent for them to withdraw from the ring for the present. Not even the statements of the Prime Minister and the Finance Minister at the Gauhati Congress session that there would be no departure from the Congress Party's goal of socialism have encouraged them to stay. It will be noted that, at this session, Mr. Nehru firmly declared that there would be no retreat "even by a hair's breadth" from the goal of the Congress Party to usher in a socialist pattern of society in India. Mr. Nehru further said: "I want to tell the whole world that India will not change her policy under any threat or pressure or temptation of aid." Mr. Krishnamachari, the Finance Minister, clearly stated that there would be no change in the pattern of taxation, though he was prepared to concede the necessity for providing incentives for increased production. Yet market men are hoping against hope that there would be some relief in taxation in the forthcoming budget.

MARKET GOSSIP

Market circles have paid no thought yet to Mr. Babubhai Chinoy's suggestion that all companies should voluntarily agree on a scheme for restriction of dividends. Evidently, he hopes that, by such an agreement, the Government could be induced to give up or modify some of the taxes imposed as anti-inflationary measures. Is he not too optimistic, despite the rebuff he has had at the Gauhati Congress session, where his plea for even a modest relief in taxation fell on deaf ears?

* * * *

It looks as though interest rates in many parts of the world have started moving down. West Germany has cut its Bank rate from 4 per cent. to 3½ per cent., thereby signifying the end of its dear credit policy started in March 1956, when the Bank rate was pushed up from 4½ to 5½ per cent. Today, the Dutch Bank rate also has been lowered from 5 to 4.5 per cent. In the U.S., the Treasury Bill rate has fallen appreciably, the latest rate (for 91-day bills) being 2.587 per cent. It is confidently expected that the Federal Reserve rate also will be reduced from the present 3 per cent. to at least 2¾ per cent. Bill rates have been going down in the U.K., too, and it is felt that the 7 per cent. Bank rate might not last long. The lower rates of interest are the result of realisation by the authorities of several countries, particularly the U.S., Germany and the Netherlands, that the time has come to reverse the recessionary tendencies before they get out of control. There is thus every prospect of 1958 witnessing the end of the era of dearer money.

* * * *

Diamond, the hardest of all known materials, shows signs of "softening" in the world markets. Evidently, the demand, which began to fall in the last quarter of 1957, consequent on the slow down in business activity in the U.S. and the three-month strike of diamond cutters in Antwerp, an important market for the precious stone, has not picked up. To add to this, the markets have not yet recovered from the shock caused by the demise of Sir Ernest Oppenheimer (in the closing week of November last) and Dr. John Williamson (on the 7th inst.), the two leading personalities in the diamond industry. Another development of great interest to the diamond markets of the world is the announcement that Russia has made a second big diamond find. But this has not so far had any adverse effect on the market, because the Russians have yet to produce diamonds even from their first find in Siberia.

Despite the decline in demand in the last quarter of 1957, sales of diamonds during that year are said to have been higher than in 1956. The sales of De Beers' Central Selling Organisation, which handles about 80 to 90 per cent. of the total world production, reached a record high of £76.8 million, exceeding the previous year's high of £74.5 million. Of these sales, gems accounted for £52.8 million and industrial diamonds for £24 million, as compared with £50.5 million and £24 million, respectively, in 1956. The following comparative table shows the sales of the De Beers' organisation during the last five years:

(In million £s)

Year	Gems	Industrial Diamonds	Total
1953	43.3	17.8	61.1
1954	45.6	16.5	62.1
1955	50.3	24.0	74.3
1956	50.5	24.0	74.5
1957	52.8	24.0	76.8

The record sales in 1957 were due, to some extent, to a rise of 5.7 per cent. in prices of gems early in the year and of 8.5 per cent. in those of industrial stones. The sales of industrial diamonds have been well maintained, despite the cessation of buying for the U.S. stockpile of this class of precious stone.

* * * *

The Government of India has not yet come to any conclusion about exports of sugar from this country in the current year. Meanwhile, the prospects of India being successful in this sphere are bleaker than before, because the world sugar market continues to rule depressed and there has been a further fall of 0.05 cent per lb. in the price of sugar, the spot quotation for Cuban raw sugar in New York now standing at 3.70 cents per lb. (f.o.b. Cuba), as against 3.75 cents a week before and 4.03 cents on 4th December 1957. The low level of sugar prices is expected to persist during the whole of the current year. This at any rate is the opinion given by the Chairman of one of the leading sugar firms in the U.K., Messrs. Tate and Lyle Limited, when he addressed the recent annual meeting of the Company held in London last week. The year 1958, the Chairman pointed out, was likely to see a progressive growth in raw sugar stocks which should be reflected in prices, particularly because most sugar-producing countries could sell surplus output profitably at prices well below that ruling at present, namely, £1 13s. 7½d. per cwt. In support of his view, the Chairman stated that, despite political disturbances, Cuba, which supplies 50 per cent. of the free market requirements, would harvest 6.25 million tons of sugar in 1958, an increase of 750,000 tons as compared with 1957.

The continued low level of prices has whipped up the domestic demand for sugar in the U.K. But the Sugar Board is said to be losing heavily at a rate of 13s. per cwt., being the difference between the actual market price (of about 33s.) and the negotiated price at which it has to buy Commonwealth sugar. If, therefore, sugar prices do not register any rise, the Sugar Board, it is felt, may impose a surcharge on imports of raw sugar. Such a levy will, however, make matters worse for the world sugar market.

* * * *

It is surprising that, in the oilseeds market, linseed continues to remain low-priced; the May 1958 contract was done today at Rs. 29.62, the lowest touched since 11th December when it was quoted at Rs. 32.81. This is a matter for surprise because the statistical position of linseed is sound. The production of linseed in India is reported to have suffered a distinct setback in the current season (1957-58), the estimated output being about 300,000 tons, as against 349,000 tons in 1956-57 and 414,000 tons in 1955-56. The setback has occurred at a time when enquiries from crushers is encouraging, on account of broadening demand for linseed oil by industrial users, especially paint manufacturers, and from overseas countries. Prospects for exports of oil would appear to be quite bright, thanks to the tight world supply position, following the marked decline in the U.S. crop which is assessed at 676,000 tons, as against 1,225,000 tons last year. Canadian linseed oil, it may be noted, is quoted higher at £124 per ton, as against £113-£114 at which the U.K. is buying Indian and Argentine supplies. This is attributed to high prices for Canadian flax.

Meanwhile, advices from London suggest that the outlook for trade in linseed oil is at present very uncertain. To quote a report: "Dealers are worried about the effects on the consumption of linseed oil, especially in paint, and some signs of setback are apparently already evident. This would help to explain why demand for oil is so small, although it is also suggested that consumers may have enough in stock to meet their requirements for the early part of this year. For the moment then, supplies of oil afloat and already in Europe are reasonably ample, but there is very little pressure to sell." The new crop linseed oil surplus of Argentina is estimated at 150,000 tons as against the actual shipment of 120,000 tons in the previous year. But half of this quantity is said to have already been sold for export.

In India, taxes on incomes of individuals and corporations account for about one-third of the aggregate revenue receipts of the Central Government. Consequently, the statistics relating to assessment of income and tax levied which are compiled by the statistical unit of the Central Board of Revenue are always noted with interest. The latest financial year for which such data are made available is 1956-57. In that year, the total amount of tax asssessed registered a substantial rise of Rs. 34.6 crores to Rs. 216.6 crores (Rs. 182.0 crores in 1955-56), the income assessed being higher at Rs. 935.7 crores, as against Rs. 785.0 crores. The number of assessees too was higher at 579,902, as against 527,737. These figures, of course, suffer from a number of deficiencies. The data, for instance, cover not only the assessments completed in the year but also those for the earlier years, while some assessments of the year are carried over to next year. Further, they relate only to tax demand and not actual collections which differ widely on account of appeals. Another deficiency is that, since all capital gains do not come within the purview of income-tax, a large part of the income is excluded. Nevertheless, the income-tax revenue statistics do give some idea of the broad trends and magnitudes of incomes in this country.

The following table indicates the distributi of the total of assessed income and tax among t different categories of assessees:

	Income assessed (Rs. crores)		Tax assessed (Rs. crores)	
	1956-57	1955-56	1956-57	1955-56
Individuals	551.8	509.6	87.6	79.4
Hindu undivided families ..	63.4	62.2	11.0	11.0
Unregistered firms	32.7	34.0	1.6	9.0
Registered firms	51.9		1.6	
Companies	295.9	188.1	108.5	82.5
Total ..	935.7	784.9	216.6	181.9

N.B.—No figures are available for registered firms for the year 1955-56; these firms with an income of Rs. 40,000 and more have been subjected to pay tax only from 1956-57.

The above table shows that the rise in the assessment of tax on companies during 1956-57 was very much steeper than that of tax on individuals, being nearly 32 per cent., as against 10 per cent. There was no change in the assessment of tax on Hindu undivided families, while the unregistered firms met a smaller proportion of the tax demand.

There was a marked increase in 1956-57 of Rs. 36 crores in the assessment of tax on incomes from business and professions, the most important source of income; it amounted to Rs. 174 crores, as against Rs. 138 crores in the previous year, the total amount of income assessed being Rs. 575 crores, as against Rs. 452 crores. The break-down of income and tax—in crores of rupees—relating to the different business groups for the year under review is: Commerce, transport and communications: 245 and 47; banking, insurance, money-lending, etc. 80 and 28; processing and manufacturing textile and leather and products thereof: 55 and 27. The assessment of tax on incomes from "salary" was practically unchanged at Rs. 22.7 crores in 1956-57 (Rs. 22.2 crores in 1955-56), the total income being Rs. 207.3 crores (Rs. 206.5 crores), and the number of salary earners being 244,037 (235,291). Government servants accounted for Rs. 62 crores of the income assessed, the tax on which was Rs. 4.2 crores. There was also an increase in assessment of tax on incomes from dividends, interest on securities and property which recorded an improvement in 1956-57 as compared with 1955-56. The increase was particularly marked in the case of dividends, as the figures given below will show:

(In crores of rupees)

	Income assessed		Tax assessed	
	1956-57	1955-56	1956-57	1955-56
Dividends ...	55.00	45.97	24.50	19.26
Property ...	34.00	29.69	7.00	6.11
Interest on securities ...	14.00	10.21	6.40	4.54

The bulk of the assessment of tax on income from dividends—73 per cent. of the total tax—is accounted for by persons with an income of over Rs. 1 lakh, the actual share of which was Rs. 184 crores, the assessed income being Rs. 30 crores (55 per cent. of the total). The share of individuals and companies in the aggregate dividend income was Rs. 31 crores (56 per cent.) and Rs. 20 crores (36 per cent.), respectively. Out of the total tax of Rs. 6.4 crores on incomes aggregating Rs. 14 crores from securities, companies accounted for more than 81 per cent.—Rs. 5.2 crores, to be precise—the actual income being Rs. 9.0 crores (64 per cent. of the total.

An idea of the distribution of income-tax assessment of individuals according to grades of income during 1956-57 can be had from the table given below:

Grades of total income (Rs.)	Number of assessees	Tax yield	
		Amount (Rs. crores)	Percentage to total
Below 20,000—super-tax limit ..	510,173	20.9	9.7
20,000—50,000	N.A.	29.8	13.7
50,000—100,000	N.A.	24.9	11.5
Over 100,000	6,271*	141.0†	65.1
Total ..	N.A.	216.6	100.0

* Includes 2,187 individuals, 2,439 companies, 271 Hindu undivided families, 257 unregistered firms and 1,123 registered firms.
† The share of individuals and companies is Rs. 30.9 crores and Rs. 100.9 crores, respectively.

A striking feature revealed by the income-tax statistics is that the number of individual assessees with an income of over Rs. 1 lakh, which stood at 2,182 with an income of Rs. 47.6 crores before tax, declined to 242 after payment of tax, their aggregate income being Rs. 5.3 crores. The total tax assessed on incomes of over Rs. 5 lakhs was Rs. 95.1 crores, the number of assessees being 1,017. This consisted mainly of 847 companies paying a tax of Rs. 83.7 crores. The number of individual assessees with an income of over Rs. 5 lakhs was 113 (Rs. 11.7 crores) before tax and 9 (Rs. 1.2 crore) after tax. The percentage share of tax paid to the total income was 65 in the case of individual assessees with over Rs. 1 lakh of income, while the same for assessees with incomes of Rs. 20,000-Rs. 1 lakh and below Rs. 20,000 was 25 and 5, respectively.

* * * *

A new type of life insurance policy recently offered to the British public by the Confederation Life Association of Canada has many novel features to commend itself. Its most distinguishing aspect is that it provides cover, under a single contract, for every member of a family, including step-children and adopted children as well as children born after a policy is taken out. Such family policies, though new to the citizens of Britain, are familiar to their confreres across the Atlantic. The policies will be issued in units of £1,000, each unit providing whole-life assurance for that amount on the life of the father with premium payment ceasing when he attains the age of 65. Added to each

EARLIER GAINS IN EQUITIES PARED

HEAVY PROFIT-TAKING AT CLOSE

(From Our Own Correspondents)

BOMBAY, *23rd January*

THE share market on the whole fared well during the week under review. There was almost a boomlet in the earlier half of the week on strong speculative buying and short-covering, which lifted the leading scrips to levels not seen for sometime past. The rise in shares values, which touched their best levels for the week on Tuesday last, was noteworthy, in that it occurred without any support from the Life Insurance Corporation, which has been out of the market for the past few weeks. In the last two days, however, there was a slight reversal of the trend due to heavy profit-taking. Consequently, the closing rates today were well below the week's best levels. Nevertheless, over the week, almost the entire list shows perceptible gains.

With the attention of the market diverted to the enquiry now going on in the city into the investments of the L.I.C. in the Mundhra group of concerns, activity has thinned down and fluctuations are narrow.

The earlier cheerfulness was initiated by the announcement on Thursday evening last of a bonus issue by the Tata Iron and Steel Company (subject to Government sanction) in the ratio of one share for every five shares, out of the share premium account, in commemoration of the Company's golden jubilee. Though the gift was generally anticipated, it was greeted with a smart jump in Tata Steels as it was reported that the issue had the informal approval of the Government. Further, it raised hopes that the Indian Iron and Steel Company, which too collected a premium when it issued new capital last year, might also issue bonus shares. Reports of satisfactory movement of cloth from traders gave strength to textile shares. The most important news of the week was the announcement of the U.S. Government's offer to give loans to India aggregating $225 million to help the latter meet "the most crucial requirements of the second Five-year Plan during the next twelve or fifteen months." Roughly 70 per cent. of the loans would come from the U.S. Export-Import Bank and the balance from the President's Development Loan Fund. The loan programme would cover both the public and private sectors. It was also announced that India would be eligible for further assistance under the revolving system of credit offered by the Development Loan Fund. Good prospects of getting credit from West Germany, France and Japan and hopes of getting foreign private capital also infused strength to the market.

In the steel section, Tata Ordinaries rallied from Rs. 166.25 to Rs. 174.50, but profit-taking at the higher level caused a setback to Rs. 171.75 at the close. The new shares were marked up over the week by Rs. 7.50 to Rs. 165.50. Indian Irons advanced from Rs. 19.32 to Rs. 20.24 before finishing lower at Rs. 19.84.

In contrast to the dullness noted in the previous week, textile shares were somewhat lively this week and values hardened sizably. Bombay Dyeings came up from Rs. 50.70 to Rs. 52.30, but lost a part of the gain when they closed at Rs. 51.50. Centurys hardened from Rs. 392 to Rs. 401.25, only to react to Rs. 392. Kohinoors closed with a gain of Rs. 3.50 at Rs. 268.50, after touching a high of Rs. 273.50. Central Indias gained Rs. 2.50 to Rs. 86.50, Finlays Rs. 5 to Rs. 264 and Gokaks Rs. 3.50 to Rs. 160, while Indu Ordinaries showed no change at Rs. 9.64. Indore Malwas rose by Re. 1.50 to Rs. 119.50 and Morarjee Mills by Rs. 2.50 to Rs. 205. Mysore Spinnings jumped up by Rs. 4.50 to Rs. 99.50. New Greats put on a rupee at Rs. 223. Shree Niwas Cottons were better by Rs. 2.50 at Rs. 160. Standards were in request on reports of a bonus issue by the Company and rose by Rs. 11.50 to Rs. 404. Svadeshis looked up by Re. 1.50 to Rs. 170.50 and Tata Mills by Re. 1.75 to Rs. 40.50. Ahmedabad Advances closed with a gain of Rs. 4.50 at Rs. 112.50. Lakshmi Mills gathered Rs. 5 to Rs. 437.50 and Phoenix Rs. 10 to Rs. 126.25, while New Kaiser-I-Hinds were marked down by Rs. 2.50 to Rs. 83.50 and Sholapurs by Rs. 60 to Rs. 640.

Bank shares were steady with further gains in most scrips. Barodas were up by 25 nP at Rs. 106.25 and Central Banks (new) by 50 nP at Rs. 56.50, while Central Banks (old) shed 20 nP to Rs. 52.30. Bank of Indias were done Re. 1.75 higher at Rs. 135.25; their new shares were Re. 1 better at Rs. 136. Punjab Nationals provided the highlight of the section with a jump of Rs. 4 to Rs. 54, following the announcement of higher final dividend of Rs. 2.50 per share on the increased capital raised by the recent bonus issue. United Commercials also attracted good attention and rose by Re. 1.50 to Rs. 62.50.

In the insurance section, New Indias finished with a fractional loss of 25 nP at Rs. 49.25, while New Greats had business 12 nP higher at Rs. 17.12. Indian Mercantiles were marked up by 75 nP to Rs. 41.50 and Vulcans by 40 nP to Rs. 16.52.

Electricity shares were featureless and business was thin. Ahmedabad Electrics were a shade lower at Rs. 94.80. Bombay Suburbans and Surat Electrics were unchanged at Rs. 107 and Rs. 108, respectively. Tata Hydros held their ground at Rs. 113, while Tata Powers dropped Rs. 7.50 to Rs. 1,132.50. Andhra Valleys stood at Rs. 1,098.75.

Sugar shares came in for good attention. Belapurs were picked up Rs. 2.50 higher at Rs. 235. Phaltans put on Rs. 2.50 to Rs. 148 and Walchandnagars Rs. 3 to Rs. 273.75. Early in the week, cement shares came to the forefront, on expectations that the selling prices allowed to producers might be increased. A.C.C., for instance, shot up from Rs. 149.25 to Rs. 155, but the rise was not sustained in the latter part of the week. On profit-taking, the shares gave way to Rs. 152.75. The new shares gathered Rs. 2.70 to Rs. 80. Digvijays were well held at Rs. 135, while Ashokas rose by 24 nP to Rs. 8.12 and Dalmias by 48 nP to Rs. 10.24.

In the engineering and mining group, Alcocks were higher by Rs. 2.50 at Rs. 217.50. Tata Locomotives, after advancing from Rs. 138.50 to Rs. 144.50, finished at Rs. 141.25. Premier Constructions improved by Rs. 3.25 to Rs. 161.50. Larsen and Toubros were steady at Rs. 12.72 and Mahindra and Mahindras at Rs. 16.72. Shivrajpurs moved up by Rs. 2 to Rs. 87. Indian Coppers were steady at Rs. 2.86.

Among miscellaneous industrials, Bombay Burmahs (old) appreciated from Rs. 524 to Rs. 543.50 before receding to close at Rs. 534. The Partly-paids were better by Re. 1.25 at Rs. 202.50. National Rayons closed with a gain of Rs. 6.75 at Rs. 221.75, after touching a high of Rs. 225.25. Gwalior Rayons also looked up by 56 nP to Rs. 11.56. Killick Industries were marked up by Re. 1.50 to Rs. 158. Tata Chemicals put on 20 nP to Rs. 12.44 and Tata Oils Re. 1.75 to Rs. 36.75.

• • • •

Calcutta Stock Exchange

CALCUTTA, *22nd January*

A distinctly steady trend was noted on the Calcutta Stock Exchange during the week under review. The main contributing factor was last Thursday's announcement of the new U.S. loan of $225 million, the major portion of which would come from the U.S. Export-Import Bank, thereby raising distinct hopes of further assistance from this source in the future. Note was also taken of West Germany's possible willingness to accept payment for most of the steel plant equipment on a deferred basis. There was also a report which was very hopeful of India getting French and Swiss assistance. All these funds in foreign currency would keep the tempo of industrial progress, and the execution of the many projects would keep industrial concerns fully active. The possibilities in this regard made several scrips attractive possessions at the current rather lower levels during the week. Consequently, there was an enlargement in activity on the Exchange.

Other factors which aided the improvement in sentiment included the Congress's firm declaration to see the second Plan through despite difficulties and Mr. Nehru's speeches at Pragjyotishpur wherein he opposed any proposal to nationalise banks and industry on mere theoretical considerations. The Congress's general approval of the socialistic nature of last year's budget was only expected, but the fear whether this approval would result in further increase in taxation in the coming Budget was grimly entertained. Had it not been for this fear, the market should have attracted more funds during the week. Until a clearer picture in this regard came out—and this would not be until February-end—operators would proceed cautiously.

Sectionwise, the delay in loading and unloading in the port following labour trouble was a restraining factor, in general, and affected sentiment in the jute section, in particular, to some extent. However, earlier in the week the sentiment was better due to fair business that took place in hessian with U.S. buyers and hopes of further orders from them. While Kinnisons were better at Rs. 121, as against Rs. 110 previously, and New Centrals were fractionally higher at Rs. 12.19, Nationals closed at Rs. 24.95 after opening at Rs. 25.85 and falling to Rs. 23.75. Ganges were unchanged at Rs. 49, but Howrahs recovered to Rs. 13.81 from Rs. 13.00.

The delay in Government's decision on coal prices caused a considerable reduction in the volume of business in the coal section. Burrakurs were pushed down to Rs. 22.12 from Rs. 22.32, and at Rs. 16.75 Pench Valley lost one rupee.

Better advices from Bombay enlivened activity in engineerings. Indian Irons opened at Rs. 19.12 and rose to quote Rs. 19.90. Texmacos hardened to Rs. 16.50 from Rs. 16.30, while Jessop & Cos. were featureless at Rs. 20.75. Guest Keens, after being higher at Rs. 29.18, changed hands at Rs. 28.87 on profit-taking. Kumardhubis were quiet at Rs. 7.81, as were Braithwaites at Rs. 25.50. Richardson & Cruddas lacked buyers at Rs. 8.25.

In the miscellaneous industrials section, Dunlop Rubbers were a prominent feature for the rise to Rs. 21.87 from Rs. 21. Orient Papers spurted to Rs. 23.80 from Rs. 23.40. Indian Cables were better at Rs. 25.81, as were Calcutta Electrics at Rs. 13.69. India Steamships, on profit-taking, receded to Rs. 11.87 from Rs. 12.06. Calcutta Tramways, at Rs. 15.87 were up by 6 nP. In strong support Punjab National Banks rose from Rs. 50 to quote as high as Rs. 51.75.

Madras Stock Exchange

MADRAS, *21st January*

A firmer trend prevailed on the Madras Stock Exchange yesterday when the market reopened after the *Pongal* holidays and also today. During the two-day session, the volume of business transacted was sizable with prices moving upward.

Tea shares in the planting section generally recorded a rise in prices as compared with those on the 10th inst. Parksides advanced by 50 nP to Rs. 15. Devasholas and Haileyburias improved by 25 nP each to Rs. 19 and Rs. 16.05, respectively. Kil Kotagiris hardened by 17 nP to Rs. 5.15. Periakaramalais and Peermades strengthened by 10 nP each, the former to Rs. 4.20 and the latter to Rs. 19.40. United Nilgiris were quoted at Rs. 15.50, as against Rs. 15.40 11 days before. Chembras put on 5 nP to Rs. 2.85. Blue Mountains were a shade better at Rs. 2.95. Among coffee shares, Coffee Lands improved by 25 nP to Rs. 28.75. Consolidated Coffees were quoted 15 nP higher at Rs. 23.40. Anaparais rose by 10 nP to Rs. 4.85, Kumergodes gathered 5 nP to Rs. 6.70. Sheveroys were better by 8 nP at Re. 1.82. In the rubber group, Nenmenys spurted by Re. 1.35 to Rs. 14.75. Vaikundams hardened by 50 nP to Rs. 27.50.

Trading in the textile section was very active and there was, as already stated, a smart rise in prices. Coimbatore Cottons rallied Rs. 15 to Rs. 170. Metturs spurted by Rs. 9.50 to Rs. 362.50. Lakshmis increased by Rs. 8.50 to Rs. 112.50 and Rajalakshmis by Rs. 8 to Rs. 80. Ranga Vilas advanced by Rs. 3 to Rs. 70. Janardanas gained Rs. 2.50 to Rs. 80. Buckinghams improved by a rupee to Rs. 157, Cannanores by Rs. 2 to Rs. 160, Travancore Rayons by 30 nP to Rs. 11.50, and Kotharis by 20 nP to Rs. 10.50.

Sugar shares evoked good support. Kirlampudis rose by a rupee to Rs. 41.50. Travancores gathered 40 nP to Rs. 9.50. E.I.Ds were better by 25 nP at Rs. 29. Jeypores increased by 10 nP to Rs. 131 and Deccans by 8 nP to Rs. 7.98.

Among miscellaneous industrials, Aluminium Industries advanced by 80 nP to Rs. 14. India Cements went up by Rs. 2.12 to Rs. 26.62. Andhra Cements were higher by 40 nP at Rs. 11.25. Orissa Cements strengthened by 25 nP to Rs. 12.60. Travancore Cements gained 20 nP to Rs. 7.20, F.A.C.Ts 10 nP to Rs. 5.35 and Parry's Confectioneries 5 nP to Rs. 3.40.

THE CENTRAL BANK OF INDIA LTD.

ANIL HARDBOARDS LTD.

BOMBAY

IN continuation of the Prospectus of the Company published on 11th January 1958, the Board of Directors have the pleasure to state that the construction of the Factory Building is in full swing and the entire Hardboard machinery is expected to reach India by May 1958. Production of Hardboard also is expected to commence before the end of this year.

NEWS IN BRIEF

THE purchase mission which recently went abroad to buy new equipment for the Calcutta Port has placed orders to the tune of Rs. 2 crores with some foreign firms.

A 23-member committee has been appointed by the Government of Bombay, with the Minister for Housing as Chairman, to advise on matters relating to the housing activities undertaken through the Housing Board.

The Union Government is reported to have asked the State Governments to abolish the permit system of distribution of cement to the public. This further relaxation of control on the supply of cement has been ordered, following a steady improvement in the supply position of cement.

An industrial training institute is being established in Warangal, Andhra Pradesh, at a cost of Rs. 7 lakhs. The Institute, sanctioned under a scheme sponsored by the Union Labour Ministry, will start functioning from the next academic year and will admit 288 students for training in various crafts.

A conference of tea producers' and traders' associations in the country was held on the 16th inst. at Calcutta. The Conference discussed the question of relief for India's common teas and decided that a detailed memorandum, incorporating the decisions arrived at, be sent to the Union Commerce and Industry Ministry.

The Government of India proposes to set up a full-fledged small-scale industries development institute at Calcutta in co-operation with the Japanese Government. The proposed institute which is expected to be the biggest of its kind in the country, will be of great assistance in the development and promotion of small-scale industries in West Bengal through Japanese techniques.

A giant crane capable of lifting 275 tons is on its way from Britain to India for installation in the Tata Steel Works at Jamshedpur. The crane, made by the Horsehay Company, Ltd., of Wellington, Shropshire, is completely electrically driven by motors of over 1,000 h.p. It is a massive structure, having a span of 68 ft. 9 in. and an overall width of more than 50 ft. It is operated by one man seated in a cabin attached to its underside and will be used for transferring molten metal from the furnace into rows of ingot moulds.

The Government of India has issued a licence to a private concern to set up a paper factory at Mandya in Mysore State at an estimated cost of Rs. 3 crores. The raw materials for the manufacture of paper will be bagasse, which is now available in plenty at the Mandya sugar factory. The promoters of the Company are stated to have secured favourable terms from an American manufacturing concern for the supply of necessary machinery to set up the plant. The Government of Mysore has agreed to invest up to 10 per cent. in the share capital.

The Chittaranjan Locomotive Works proposes to manufacture steam locomotives with entirely indigenous components by 1961. By this time, the steel foundry at Chittaranjan and the three steel plants in the public sector, namely, Bhilai, Rourkela and Durgapur, will go into production and supply necessary castings and steel. The factory has been taking concerted measures to cut down imported components. In the first stage of this drive towards self-sufficiency, the cost of imported components was reduced from Rs. 2.5 lakhs to Rs. 1.3 lakh per engine. It has been slashed further to Rs. 50,000. The items now imported consist mainly of bar frames, boiler plates, tyres and axles.

The Japanese expert team's report on the exploitation of iron ore mines in three ore-yielding regions of the country will be submitted to the Union Government shortly. The report will give the necessary technical data and also recommend which of the three projects, namely, the Rourkela iron ore mines, the Balladila ore belt in Madhya Pradesh and the mines in Northern Orissa, should be developed first. The problem of port and railway facilities is linked to the iron ore development projects and reports on these aspects will be included in the Japanese report. The Japanese are expected to provide railway equipment, mining machinery and port equipment. A joint request by India and Japan for financial assistance will be made to the U.S. Government in March next.

The Engineering Export Promotion Council, Calcutta, has sent its fourth trade delegation to South-East Asian countries. The previous three delegations were sent to Burma in January 1956, to British East Africa, Ethiopia, and Sudan in January-February 1957 and to West Asian countries in August-September 1957. These delegations, it is said, have made useful studies and established contacts in the overseas markets which have been very helpful in developing India's export trade in engineering goods. The present delegation, which left Calcutta on the 17th inst., consists of Mr. B. S. Agarwal of the Jay Engineering Works Ltd. (leader), Mr. N. R. Pandit of Mysore Kirloskar Ltd., Mr. T. M. Desai of Cooper Engineering Ltd., Mr. C. R. Bondre of Kirloskar Oil Engines Ltd. and Mr. J. C. Kapur of Air Conditioning Corporation (Private) Ltd. (members). Mr. R. K. Singh is the Member-Secretary.

For some time now the Governments of India and the U.S.S.R. have been examining the possibilities of an air transport agreement between the two countries under which scheduled services could be established by airlines designated by the respective Governments. Certain preliminary exchanges have taken place and with a view to advancing these negotiations, it has been proposed that the two Airlines concerned should have discussions on various points of detail. The Air-India International team, headed by Mr. B. R. Patel, Vice-Chairman and General Manager, and assisted by Mr. V. G. Gadgil, Assistant Engineering Manager, Captain K. Vishwanath, Divisional Operations Manager (Central), Mr. A. F. Dubash, Commercial Manager, Traffic and Mr. G. Bertoli, Regional Traffic Manager, Continental Europe, accordingly plan to visit Moscow early in February. The talks will cover all commercial and technical aspects of the operation of the proposed air service, including such aspects as traffic rights, air navigational facilities, fuelling facilities, etc.

• • • •

From Abroad

A French delegation has arrived in Pakistan to conclude a trade pact with the latter.

The Standard Oil Company of California has ordered five tankers of 48,600 tons each from Danish shipyards. They are to be built between 1959 and 1960.

Talks between Indonesia and Japanese shipowners for the chartering of about 40 vessels have failed, as the ships were found unsuitable for Indonesian waters.

The Federation of Rhodesia and Nyasaland is seeking a loan of $25 million on the New York market. A mission from the World Bank will visit the Federation in March.

The Martin Company of Baltimore, U.S., has announced that its "package" power reactor was successful in its first test by achieving a self-sustaining nuclear reaction. The reactor is designed to be transported anywhere by cargo aircraft.

Russia's willingness to provide Yemen with a technical aid loan, equivalent to about £20 million, was seen in the visit of the ten-member Soviet technical mission to that country recently to study agricultural and mineral prospecting development schemes.

Production of vehicles by West Germany's ten main car companies aggregated 1,070,000 units in 1957. This was about 11.5 per cent. more than the output in 1956. Of these, Daimler-Benz alone produced about 125,000; half of this number was for export.

The congestion in the Colombo Port, which resulted in the cancellation of local tea auctions, has led the Ceylon Ministry of Trade and Commerce to release mid-country teas for London auctions without any restrictions for a short period.

Representatives of the British exporters of wool rugs, wastes, tops and yarns have decided to tender evidence before the Canadian Tariff Board in the hearing to be held in Ottawa on the 10th February for protection to the Canadian woollen industry.

Egypt has indicated its readiness to accept neutral arbitration in the assessment of Egyptianised British property. Such arbitration, however, will not be acceptable on claims arising out of the sequestrated property. The request by Britain to reopen financial talks is receiving Egypt's consideration.

The relationship between the State and local oil companies in Egypt will be placed on a new footing. In furtherance of this measure, a Committee has been appointed at the Ministry of Industry to study the present agreements and also to recommend new agreements within the next two months.

A Bill designed to impose a four-cent duty on copper imports whenever the indigenous price falls below 30 cents per pound is expected to be introduced in the U.S. Congress by members from the mining areas. In view of the fact that the present price is below this level, the duty is likely to take effect forthwith when the Bill is passed.

The Ford Motor Company has decided to cease production at its Ford Division assembly plant at Buffalo in New York State as, according to the Company, the plant there has become outmoded for the assembly of modern cars. Employees will be given the option of transfer to the Company's plant at Lorain, Ohio. Operation of the stamping plant at Buffalo will, however, continue.

A Bill imposing a levy of about ¾d. a lb. on tea exports, designed to finance the Ceylon Government's seven-year scheme for the rehabilitation of the tea industry, will be presented to the Ceylon Parliament before the end of this month. The scheme will benefit the small holders who have, in recent days, been put out of production due to delays in exports of tea from Colombo.

The British Overseas Airways Corporation has signed a £60,000,000 contract for 35 Vickers VC-10 jet airliners. The VC-10, which is expected to make its first flight in 1961, will be the biggest British airliner ever, capable of seating up to 150 passengers. The B.O.A.C. order, which does not include the cost of spares, is the biggest airline order ever placed in Britain. The B.O.A.C. has taken an option on 20 more VC-10s.

The Swedish Shipbuilding Association in a report states that ships launched and delivered at Swedish yards attained a new high in 1957, with the tonnage exceeding the annual average of the past few years by some 30 per cent. The number of ships launched amounted to 81, with an aggregate tonnage of 670,000 gross tons, while deliveries accounted for 82 vessels with an aggregate of 640,000 gross tons. Of the deliveries, 70 per cent. went to foreign owners, mainly Norwegian shipping companies, which received 32 vessels.

A reduction of 5s. a ton as from the 17th inst. on the spot bunker price of marine diesel fuel oil at all ports in the U.K., Europe, the Mediterranean, the Canary Islands and West Africa has been effected by the Shell Petroleum Company. It may be noted that only last month the prices of marine fuel and gas oils as also of marine diesel oil were lowered by a cut of 10s. a ton. The latest reduction reflects the persistent slackness in demand for bunker fuel. The reported high level of stocks and the slump in spot freight rates, resulting from the low level of shipping activity, are the factors responsible for the weakness in demand for marine fuels.

The group of Norwegian shipowners who, some time ago, had taken the initiative to start preparatory technical and scientific work on the construction of atom ships, has now formally constituted itself as a company under the name Rederatom. It has signed a contract with the Institute of Atomic Energy at Kjeller, near Oslo, for a two-year research programme in this field. Two million kroner (£100,000) will be spent on the work. The first aim of the company is to form a wholly Norwegian research group working on the problem of ship reactors. There are signs that in future there will be a brisk exchange of research material in the military field as well as in merchant shipping.

PERSONAL

MR. Rajeshwar Dayal, Ambassador of India to Yugoslavia, has been concurrently appointed Ambassador to Greece.

Mr. S. L. Kirloskar is the Chairman of the the Engineering Export Promotion Council, Calcutta, for the current year.

Mr. Shankar Prasad, I.C.S., at present Chairman of the Indian Airlines Corporation, has been appointed Director-General, Posts and Telegraphs.

Dr. Radhakrishnan, Vice-President of India, will leave on a three-week visit to the U.S. on 14th March in response to a number of invitations from that country.

Mr. Justice Koka Subba Rao, at present Chief Justice of the High Court of Andhra Pradesh, has been appointed a Judge of the Supreme Court, with effect from the date he assumes charge of his office.

Mr. Eugene R. Black, President of the World Bank, proposes to visit the Belgian Congo, the Union of South Africa, the Federation of Rhodesia and Nyasaland and Kenya, Uganda and Tanganyika in March and April.

The following are the members who have been elected to serve on the Committee of the Millowners' Association, Bombay, for 1958:

Sir Vithal Chandavarkar and Messrs. T. V. Baddeley, Krishnaraj M. D. Thackersey, Neville N. Wadia, G. D. Somani, Radhakrishna Ramnarain Ruia, M. L. Tapuriah, S. P. Jain, E. D. Sheppard, Pratap Bhogilal, Arvind N. Mafatlal, Naval H. Tata, Babulal Bubna, F. H. Kemple, E. F. Morrey, E. S. Vernon Jones, C. H. Campbell, Chandrakant Mulraj Khatau and Debiprasad Poddar.

The new Committee will begin to function after the annual general body meeting of the Association.

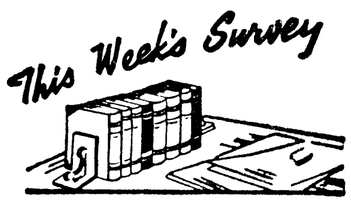
"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *21st January*

The Gold Standard

The adjustment of trade balances demanded an increase in the competitive power of debtor countries and accordingly a reduction in the gold prices of their goods. As long as these countries maintained their currencies at par, their domestic price level had to be reduced accordingly. Such a reduction is naturally a painful process, particularly as it has to be accompanied by a corresponding reduction in the income of the consuming classes of the population, if it is to have the desired effect upon the economic balance of the country. Few debtor countries with gold standard currencies have found it possible to effect, in this way alone, an equilibrium in their foreign transactions. By abandoning the gold standard and allowing the exchange value of their currencies to fall below gold parity, many countries have, however, managed to reduce considerably the gold prices of their products and at the same time keep down the domestic demand for consumers' goods, at least those of foreign origin. A similar adjustment has been attained by a fall in the exchange value of the currencies of countries which were not on the gold standard, such as China, Spain and Uruguay.



CONSTRUCTIVE EFFORT

THE Government of Bombay must be congratulated on its constructive effort to take over and run the Raja Narsinggirji Textile Mill at Sholapur as an unemployment relief scheme. This Mill, it will be recalled, was closed on 8th August last by the management which found it uneconomic to run. The closure resulted in throwing out of employment more than 4,400 workers. The workers urged the State Government to intervene in the matter. After satisfying itself that the management was not in a position to resume working, the Government sponsored a scheme for running the Mill itself with a view to relieving unemployment among the workers. This was approved by the Bombay High Court on the 16th inst., the permission of which had been sought earlier for the liquidation of the Mill.

The official liquidator has handed over the Mill (plant, machinery and other accessories) to the Bombay Government on lease basis for a period of 11 months or until it is sold by the liquidator in the ordinary course, whichever is earlier. The Government will pay a nominal rent of Re. 1 per month as consideration for the lease. It has, of course, the option to determine the lease earlier after giving 15 days' notice. The Government has agreed to pay all rates, taxes, assessments and outgoings but not arrears of such rates, etc., as were due and payable by the Mill prior to the Government's taking over the Mill. It has also agreed to insure the Mill and to comply with the requirements of the Factories Act.

The resumption of working in the Mill—possibly from the 1st of next month—will be under a new contract of employment between the Government and the workers for the period of the lease. The Government will not be responsible for any retrenchment compensation or any compensation due to workers from the previous management. Before the Mill is reopened, the State Government may promulgate an Ordinance preventing the application of the Wages and Disputes Acts in the case of this Mill, as also in respect of any other concern that the Government make take over in future. The proposed Ordinance will not, however, affect protective labour legislations such as those covering payment of wages, workmen's compensation, maternity benefits and provident fund.

The aforesaid move of the Bombay Government, as stated at the outset, is certainly a constructive effort, in that it will relieve unemployment among the 4,400 workers of the Raja Narsinggirji Textile Mill, though the workers will not get their full wages. The workers, it is said, will be paid only two-thirds of their former wages. Even this arrangement entails some financial burden to the State Government. A direct investment of Rs. 25 lakhs and borrowing of Rs. 75 lakhs from banks are required to meet the working capital of Rs. 1 crore needed for running the Mill. The investment will not yield any return, for the profit if any made by the Mill will be passed on to workers, but the losses incurred will be borne by the Mill itself.

This move of the State Government is to be appreciated, as it represents a novel method of providing unemployment relief. The exact cost of this experiment is not known, but it will be a wasteful form of unemployment relief, unless the Mill can be salvaged in the near future by being made an economic unit. If there is no scope for it, the Government should endeavour to find out other more productive means of providing relief, such, for instance, as building roads, soil conservation, and building irrigation tanks and canals.

Meanwhile it is the duty of the Government of Bombay to ensure that no more units of this premier industry are allowed to share the fate of the Narsinggirji Textile Mill. A special responsibility rests on its shoulders in this respect, because the adverse results of the Central Government's textile policy affect it to a much greater extent than the other State Governments, as about 46 per cent. of cotton mills is within its jurisdiction. More mill closures will mean more headaches to it. There is no gainsaying the fact that the real solution for preventing closure of any cotton mill or mills lies not in taking it (or them) over but in creating conditions which will induce the managements to think in terms of keeping their mills working all the time. There is, for instance, the imperative urgency for reducing the heavy tax burden on the cotton mill industry. Also, the Governments—Central and State—should take special steps designed to enable the mills to modernise and expand their machinery and equipment, with a view to raising their productivity and thereby their economic efficiency. The present economic policy of the Government is hardly conducive to such a healthy development.

ROAD FUND

The nine-day seminar on low-cost roads, sponsored by the E.C.A.F.E., which concluded last Saturday at New Delhi, recommended, among other things, the establishment of a Road Fund for quickening the *tempo* of road development. The suggestion would appear to be the result of the realisation, which was shared by delegates from all the 11 countries who attended the seminar that finance was the most important handicap to development of roads. The Fund, it was urged, should be fed by revenues derived directly from tax on petrol, diesel and other fuel oils, lubricants, tax on motor vehicles registration, licence fees, tolls on roads and bridges, etc., and other taxes such as surcharge on transport fares and freights. It was also suggested that a percentage of the total income derived from import duty on petrol, diesel oil, lubricants, motor vehicles, tyres and spare parts, as well as sales tax on all these items, should be earmarked for road works and pooled into the Fund, so that the requirement of road development could be fuly met out of it. The seminar also urged that highway tax levied on diesel oil used in road transport should be increased suitably and that this enhanced rate should be chanelled into the Road Fund.

While emphasising the need for a balanced development of different classes of roads, the seminar laid particular stress on the development of rural roads and the earmarking of an appropriate portion of the Road Fund for this purpose. It is obvious that, with the present cost of construction, it is impossible for underdeveloped countries to have an adequate road system which will meet the legitimate demands of an expanding economy. The immediate need is, therefore, to cheapen road construction. This, it is stated, could be done by adopting the technique of soil stabilisation that is, improving the properties of the soil that occurs at the site of the road to enable it to withstand the disintegrating effects of traffic. It is a solution worthy of consideration because it can reduce construction costs substantially. The technique has happily passed the laboratory stage and is being tried in field experiments. Many miles of roads have already been constructed in India and in some other countries of the E.C.A.F.E. region by employing this method. The seminar has pooled the knowledge available in this branch of engineering and made practical recommendations on the technique of design and construction of such roads. Recommendations regarding the procedure to be followed in the investigation of low-cost road alignments in terrains having widely differing characteristics were also made, so as to guide engineers working in these regions. It may be noted, in this connection, that the E.C.A.F.E. Secretariat has indicated its willingness to use its good offices for arranging training of engineers in the technique of low-cost road building. The possibility of procuring scholarships for trainees under the Colombo Plan, the U.N. Technical Assistance Programme and the International Co-operation Administration will also be explored.

MADRAS PORT TRUST

In the context of the expanding overseas and coastal trade, it is, indeed, gratifying that the Madras Port Trust is endeavouring its best to handle as much traffic as possible. The volume of trade which actually passed through the port during 1956-57 was appreciably more than in 1955-56 being 2,665,828 tons, as against 2,461,611 tons, according to the latest Administrative Report of the Port Trust. The bulk of this trade—nearly 48 per cent. of the total, to be precise—was accounted for by foreign imports, the volume of which aggregated 1,273,653 tons, as against 1,085,171 tons in 1955-56. The coast-wise traffic in imports was of the order of 759,749 tons, the figure for the previous year being 748,703 tons. On the export side, there was a rise in foreign traffic from 571,551 tons in 1955-56 to 594,429 tons in 1956-57, while the coast-wise traffic declined from 56,186 tons to 37,997 tons. In terms of value, the total of all imports and exports during 1956-57 amounted to Rs. 129.93 crores and Rs. 52.43 crores, as against Rs. 95.87 crores and Rs. 63.88 crores, respectively, in 1955-56.

The increase in the volume and value of trade handled by the port thus, together with the rise in the rate of demurrage on goods from 15th August 1956, enforcement of collection of dues before delivery instead of after, and change in the type of cargo passing earned for the port larger revenue during the year under review. The actual net receipts for the year amounted to over Rs. 234.08 lakhs, representing an improvement of Rs. 65.50 lakhs as compared with 1955-56. The figures exclude the sum held under suspense and contribution from pilotage fund. The improvement in receipts was neutralised to some extent by the rise of Rs. 13.57 lakhs in net expenditure which during 1956-57 amounted to Rs. 111.41 lakhs, exclusive of amount held under suspense and contributions to renewals and replacement fund, general insurance fund, and capital account. Nevertheless, the surplus on revenue account was more substantial in 1956-57 than in 1955-56, being Rs. 123 lakhs, as against Rs. 71 lakhs.

During the year under review, contribution to capital account aggregated Rs. 95.31 lakhs. Contributions to others were Rs. 34.57 lakhs to renewals and replacement fund, Rs. 8.80 lakhs to suspense account, Rs. 1.00 lakh to repayment of debt, Rs. 1.00 lakh to general insurance fund and Rs. 96,863 to interest on loans. After excluding these contributions from the gross expenditure, the ratio of actual working expenses to receipts works out to 46.75 per cent. in 1956-57, as compared with 56.85 per cent. in the previous year. The decrease in the ratio is attributed mainly to higher receipts.

Thanks to the continued upward trend in earnings, the financial position of the Madras Port Trust is quite satisfactory, as witness the sizable balances held in different funds. The renewals and replacement fund alone had Rs. 1.76 crore as on 31st March 1957. The balance of revenue reserve and general insurance funds was Rs. 1.20 crore and Rs. 22.36 lakhs, respectively. The closing balance of the pilotage fund was Rs. 1.87 lakh, the actual receipts for 1956-57 being Rs. 4.76 lakhs and expenditure Rs. 5.62 lakhs. The Port Trust received from the Central Government a loan of Rs. 1.20 crore which brought the total outstanding loan as at the end of the year to Rs. 3.02 crores. The surcharge of 50 per cent. on all charges leviable under the Scale of Rates was continued during 1956-57.

In view of the satisfactory finances, the Madras Port Trust would appear to be in a position to meet from its own resources a sizable part of the capital outlay on the expansion and modernisation programme under the second Five-year Plan. The total outlay on this port is estimated at Rs. 9.2 crores, out of the Rs. 76 crores (including schemes carried forward from the first Plan) earmarked for the entire programme relating to major ports. The development programme drawn up for the Madras Port includes the first stage of the wet dock scheme, which is expected to cost Rs. 7 crores. The scheme is intended to provide facilities for handling an increased volume of cargo in four berths in a new wet dock with a communication passage to the existing harbour.

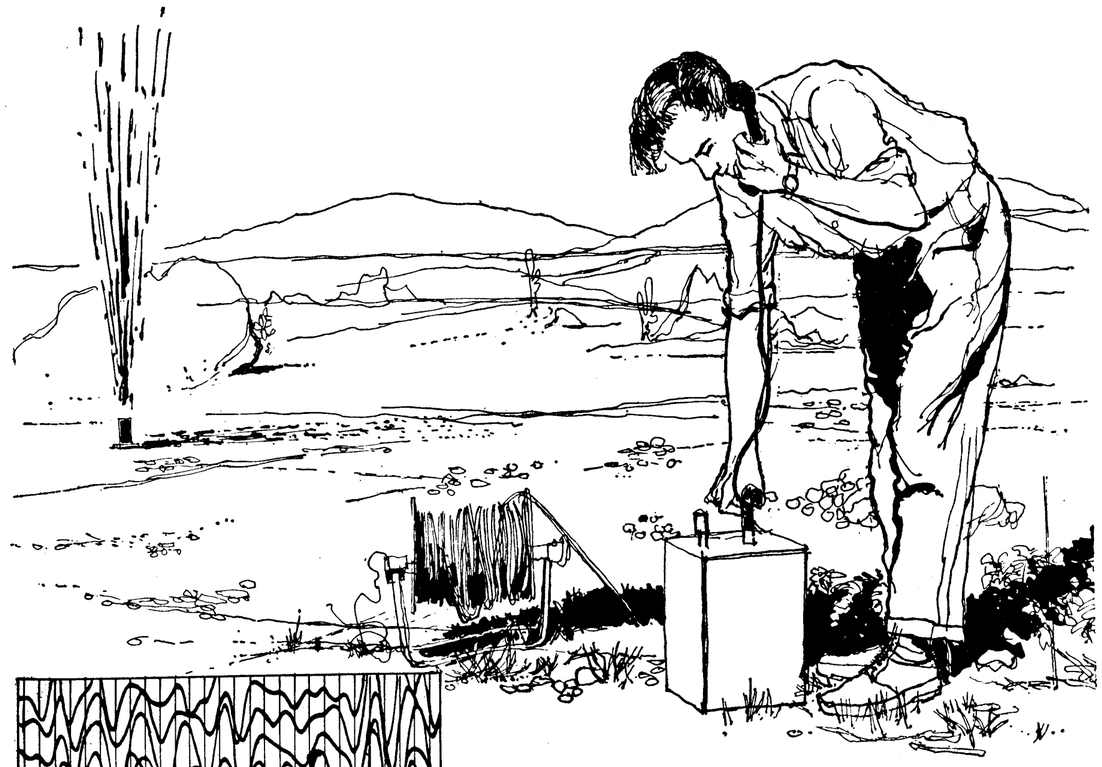
U.S. FARM POLICY

In line with the general expectation, President Eisenhower, in his annual farm message to the Congress, has called for substantial changes in U.S. farm policy. He proposed a shift of emphasis from short-term to long-term methods of reducing farm surpluses which, despite heavy acreage cuts, have not diminished to any notable extent. He said that a changed emphasis in the Soil Bank programme will aid all farmers. Although surplus holdings of farm products in the hands of the Government appear to have fallen from their peak, Government investment in price-supported commodities is still very heavy. It now stands at about $7,000 million which is $1,000 million below a year ago. In its surplus disposal programme the Commodity Credit Corporation incurred a record loss of $1,300 million in the fiscal year ended June 1957.

It is generally argued that this heavy accumulation of market-depressing surpluses is proof of the failure of the price support and crop control programmes, which, as now constituted, result in one vicious circle after another without touching the core of the surplus problems. The President himself called the present price support laws as "unrealistic" and Mr. Benson, U.S. Secretary of Agriculture, termed them as "directly contradictory to the objective of an expanding, prosperous and free agriculture." Some of the provisions of the present law, such as the escalator clauses, defeat the very object of bringing down the surpluses. These clauses require that price supports be raised as soon as a surplus is reduced. This means that the moment one surplus is done away with incentives are automatically provided to build another. The President has recommended to the Congress that these clauses in the present law should be abolished, because, as he put it, "until this basic law is changed, farm people can expect to be kept continually under the shadow of price-depressing surpluses." The Soil Bank and surplus disposed programmes, according to him, have already cut deeply enough into the surpluses to bring these escalator clauses into action to build more surpluses.

The President also suggested that the rigid formula in respect of price supports be amended and made more flexible. At present, price supports for basic products such as cotton, wheat, maize, rice and tobacco, range between 75 and 90 per cent. of parity. The President has suggested that the floor be dropped to 60 per cent. of parity, as he considered the current range too narrow to permit the growth of markets needed to absorb the production. This much-needed flexibility in price support policy would, according to him, open the door to market expansion, increased acreage allotments and greater freedom for farmers to produce crops of their choice and convenience.

The President did not propose any change in the law under which $4,000 million worth of U.S. farm surpluses have been sold abroad for foreign currencies. On the contrary, he asked for an extension of this law for another year, with authorisation to sell up to $1,500 million worth of surpluses under this scheme. He also asked the Congress for authority to increase the acreage allotments for cotton, wheat, rice, groundnut and tobacco up to 50 per cent. above their present levels. He noted that acreage allotments had already been cut sharply in recent years and were likely to be reduced further. But any acreage increases, the President emphasised, must be related to price adjustments which would permit the growth of markets necessary to absorb the increased production. In other words, the increase in acreage will depend upon the readiness of the Congress to agree to a lower support price.



The Story of Oil—5

Mapping buried rocks

Geophysics, which is the science of the earth's physical structure, aids the search for petroleum by making it possible to study the characteristics of rock layers buried deep in the earth's crust.

The geophysicist's main "tools" for this job are the gravity meter, the magnetometer, and the seismograph. The gravity meter and the magnetometer, as their names imply, measure the pull of gravity and the magnetic force of the earth. For the sedimentary rocks which may contain oil are lighter than others, and they are less "magnetic" than the harder rocks which never contain oil.

With the seismograph, the geophysicist can measure the intensity and timing of earth tremors. The men of a seismic crew bore a shallow hole in the ground, lower a charge of dynamite into it and set it off. The shock waves produced by this miniature earthquake travel down, hit the layers of rocks beneath and bounce back to the surface where they are recorded by the seismograph. The waves are reflected strongly from hard rock and less strongly from soft rock. The length of time they take to reach a particular layer and to return indicates the depth of the rock.

All this information is recorded in the form of wavy lines on a chart. By setting off explosions at a number of points it is possible to map the various buried rock formations with a fair degree of accuracy.

When all the results of a geophysical survey have been compared, it may be possible to locate a rock formation that might prove to be oil-bearing. But even if such a trap is found, the only way of proving whether or not it contains oil is by drilling a test well.

BOC

REACTIONS TO AMERICAN LOAN

SHIFT IN EMPHASIS ON IRRIGATION

From Our Special Correspondent

NEW DELHI, 21*st January*

THE official announcement, last week, of an American loan of $225 million for meeting in part the foreign exchange requirements of India's second Plan upto March 1959 has been received here with mingled feelings of disappointment and relief—*disappointment* because the already expected Export-Import Bank credits are included in the loan and the allotment from the Development Loan Fund has fallen considerably short of the original expectation, and *relief* because it holds out, by implication, the promise of a loan of the same order or, say $250 million in each of the last two years—1959-60 and 1960-61—of the Plan. The sense of relief is more justified than the immediate reaction of disappointment, for, as the loan expectations for the remaining two years are likely to be fulfilled, the foreign exchange gap of $1,500 million in respect of the "hard core" projects will have been met to the extent of 50 per cent. by the United States alone. It would thus appear that what has actually come about and what is most likely to take place belie alike the original excessive optimism of some circles and the original excessive pessimism of some others.

DELHI LETTER

There is no denying that the note of uncertainty, in so far as the last two years of the Plan are concerned, has been dispelled by the American Ambassador's significant remark that "India would be eligible for further assistance under the revolving system of credit offered by the Development Loan Fund" and special legislation for further loan assistance is not necessarily precluded by the present proffer. This is also supported by Mr. H. M. Patel's remark at the Press conference that, as the U.S. President has asked for the next year a much larger amount for the Special Development Fund, there is the probability of a much larger amount for India from this Fund in the future. But some crucial doubts still remain to be removed before there can be any jubilation that the second Plan has been saved from the necessity of rephasing in point of time or of pruning in point of size. Here, of course, the Principal Finance Secretary of the Government of India has not quite cleared the doubts, for he has merely stated that, with the latest U.S. loan ($225 million), the Japanese yen credit ($53 million), an expected additional World Bank loan ($100 million) and the extended credit for the Rourkela steel plant (120 million marks?), India is making good progress towards filling the foreign exchange gap of $1,500 million.

Gap in Respect of Hard Core

As the larger part of this gap is in respect of the "hard core" projects (75 in all, as revealed by Mr. Patel) and has to be mostly met in the third year of the Plan, it is too early to say whether the Plan as a whole or even its "hard core" has been saved from the necessity of pruning or rephasing. If anything, Mr. Patel's own estimate of Rs. 1,700 crores of targeted investment in the aforesaid 75 projects (with a heavy foreign exchange component) both in the public and private sectors provides enough warrant for the belief that the second Plan has undergone some drastic pruning or rephasing, or both. Now that the picture of external assistance is more or less clear, it will be interesting to watch if the Government will take the public into greater confidence and reveal the state of the Plan, so that it may know what projects and schemes would have to be dropped or postponed. If the Plan was democratically evolved by public discussion, there is no reason why it should not be openly and democratically pruned or rephased in a like manner.

There is here involved a vital pragmatic consideration, particularly in the case of major irrigation projects. It is not inconceivable that administrative decision may well be against dropping any of them or against even going slow on them. But the discerning public—especially the agriculturist section—would be in a better position to say whether some of them can be conveniently postponed. It would also appear that, if the current irrigation policies are objectively reviewed in public, their reorientation may well be facilitated. In this connection, your correspondent has been able to ascertain the views of some knowledgeable persons. These views may be summarised as under:—

Food self-sufficiency in three years from now cannot be achieved without a shift in emphasis from major to minor irrigation. New major projects inevitably cost much more per acre than the old major projects and even more than the minor works like tanks and wells. If water rates are to be on the basis of "net utility," and if the interest on the loans raised for the major projects is not wholly covered by the reduced rates, there will be a recurring loss to the exchequer—a loss which, in the last analysis, will have to be made good by taxpayers other than agriculturists. If water rates are reduced so as to encourage the use of irrigation water, the current or contemplated betterment levies also will have to be withdrawn as a consequence of more strenuous agriculturist opposition to them in the wake of reduction of water rates.

Water Rates

It is doubtful if even reduced water rates will markedly reduce the present 40 to 50 per cent. gap between new irrigation potential and its actual utilisation. It appears this gap is either larger than what is estimated or possibly increasing. For example, the area formerly irrigated by the Punjab canals which took off directly from weirs on the Sutlej is now included in the area under the Bhakra-Nangal irrigation system; as the old irrigated area is not shown separately, the figure of area supposed to be newly irrigated by this project is inflated to that extent. In the same way, the area formerly irrigated by the Anderson Weir (with a potential of one lakh acres) on the Damodar is now shown as newly irrigated area with the construction of D.V.C. dams. A similar kind of counting is probably done in the case of some other major projects. The rapidity with which new irrigation potential has been created without prior planning in the matter of distribution channels, drainage in the event of waterlogging, conversion of dry lands for wet cultivation and estimation of water requirements of crops in irrigated conditions, has been rather unfortunate. This may be wisdom after the event, but the fact remains that these knotty problems were not anticipated by irrigation and agricultural experts.

These problems would need to be solved expeditiously, though it is doubtful if all the new irrigation potential will be fully utilised even by the end of the second Plan. At the same time, the current and short-term need for increasing the area under irrigation (which, other things remaining constant, can by itself double crop-yields) could be more easily met by diverting some resources from major and medium projects (some of which can be conveniently postponed) to minor irrigation works like tanks and wells. The potential that can be created by small or big *kutcha* wells in particular will be more immediate than that under major projects which take a far longer time for construction, and will involve none of the knotty problems referred to earlier. The recommendations in the Gauhati Congress resolution on economic situation is also to the effect that old tanks and wells should be repaired and new ones constructed. This reveals a significant shift in emphasis from major to minor irrigation. What is required is energetic and large-scale action in this direction in the short run, so that an increase in food production may help save some part of the Plan—a part which may otherwise go unimplemented.

The production of *vanaspati* in India has gone up by about 40 per cent. in the last three years. The production in 1957 is estimated at about 3.2 lakh tons, as compared with 2.56 lakh tons in 1956, 2.61 lakh tons in 1955 and 2.31 lakh tons in 1954. There are at present 46 *vanaspati* factories in the country. Of these, 16 are in the western region, 12 in the southern region, and nine each in the eastern and northern regions. Since December 1953, all *vanaspati* factories are statutorily required to fortify their product with synthetic vitamin "A". There has also been a rising trend in exports of this commodity. In 1956-57, exports amounted to 11,150 tons valued at about Rs. 2.06 crores, as against 900 tons in 1953-54 valued at Rs. 21 lakhs. The exports were of the value of Rs. 1.75 crore in 1955-56 and about Rs. 1.48 crore in 1954-55. The domestic consumption of *vanaspati* is estimated at 2.53 lakh tons in 1956-57. Indian *vanaspati* is exported to a number of countries, including countries in West Asia, Burma, Pakistan, the United Kingdom, Aden, Australia, Malaya, Singapore and the Fiji Islands.

STERLING AS A WORLD CURRENCY—II

From Our Own Correspondent

LONDON, 18*th January*

LONDON LETTER

AS part of its drive to engender that sort of discipline at home which would strengthen the pound abroad, the British Treasury recently provided a detailed analysis of the sterling balances as they were in mid-1957. It showed, briefly, this picture:—

Sterling Balances

(In million £s)

Held by the Colonies	1,309
Held by the rest of the sterling area	1,616
Held by the non-sterling countries	569
Held by international organisations (International Monetary Fund, etc.)	660
Total	4,154

The balances held outside the sterling area can be further broken down as follows:

(In million £s)

Western European countries (O.E.E.C.)	205
Other non-dollar countries	278
Dollar countries	50
Other Western Hemisphere countries	36
Total	569

These balances represent liabilities inasmuch as if they are drawn down for capital purposes then to that extent British exports are non-revenue producing and the balance of payments is affected adversely. Thus, for instance, if, in a given year, there were an apparent surplus of £100 million on the balance of payments, but the sterling balances were drawn down by £300 million, then there would be a net deficit on the final balance of payments of £200 million which would fall to be met out of the gold and dollar reserves.

What reserves then does the country hold against these sterling balances? First, there are the published gold and dollar reserves of about £800 million (they were £850 million in mid-1957 to which the £4,154 million of sterling balances relates). Then there is an estimated £200 million of working dollar balances held by British banks; then comes about £320 million of dollar securities held by the British Government (the so-called second line of reserves) of which £90 million has already been pawned against the $250 million advanced by the American Export-Import Bank—leaving a net £230 million. Finally comes £290 million of dollar securities which are privately owned but deposited under control—probably rightly regarded as the last line of reserves. Thus, we have a grand total of reserves of the order of £1,500 million against liabilities of £4,150 million—nearly 40 per cent. It can be objected that much of the £1,500 million is illiquid, but then so is a great part of the £4,150 million. Thus, one can accept that the dollar working balances of the British banks must be maintained around their present figure and that, *under the present conventions*, the privately held dollar securities cannot be effectively mobilised—reducing the practical reserves to £1,000 million.

On the other hand, a great part of the sterling balances are in practice working balances for the countries holding them. The dollar and Western Hemisphere holdings can be only an irreducible minimum. The O.E.E.C. countries cannot work on much lower balances, the colonial holdings are, to a large extent, the reserves of the local banking and currency systems and working bank balances, and the same is true—though less proportionately—of the rest of the sterling area. Thus, it is unlikely that more than £1,500 million of the total liabilities could even be drawn off—but even so this figure is one and a half times the maximum readily available reserves and, psychologically, it is not possible to conceive a situation in which Britain could permit the active reserves to go down to vanishing point, even though that represented a full paying off of creditors who wanted to draw away their funds. For, in such an event, the holders of long-term balances would seek to mobilise them and the sterling system would have collapsed by reason of a complete flight from sterling.

There is no point in speculating how much bigger the reserves should be to give adequate cover against a miximum drawing down of the sterling balance for capital purposes; for such speculation could not increase the reserves by one pound. Instead one should appraise the

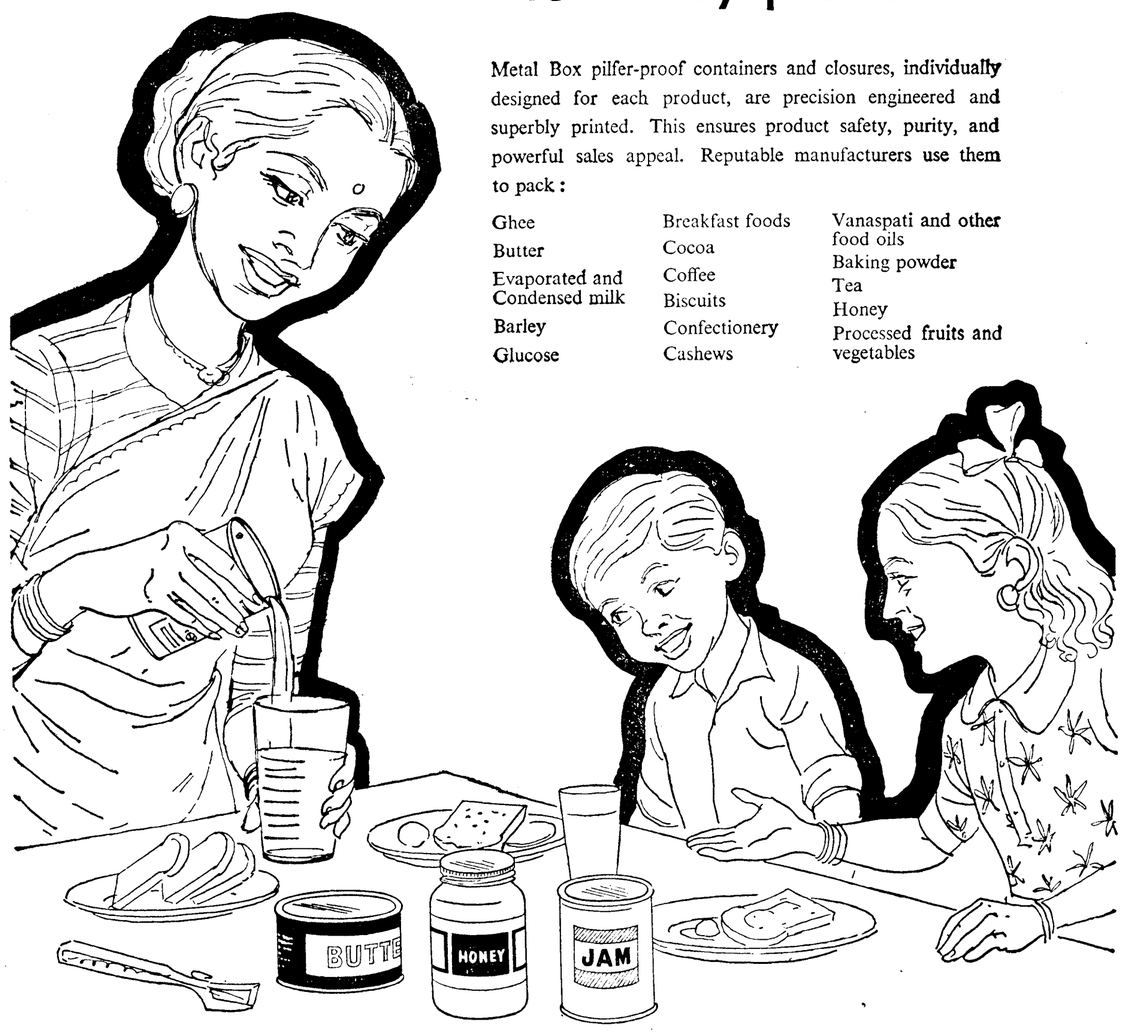
a pilfer-proof package for every product!



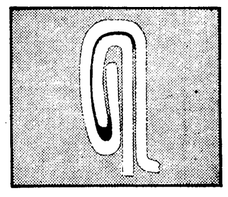
Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee
Butter
Evaporated and Condensed milk
Barley
Glucose
Breakfast foods
Cocoa
Coffee
Biscuits
Confectionery
Cashews
Vanaspati and other food oils
Baking powder
Tea
Honey
Processed fruits and vegetables

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.



This cross-section of a precision engineered double seam shows how the rubber-like compound lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

WORLD BANK LOAN OPERATIONS

HAS LATIN AMERICA BEEN DISCRIMINATED AGAINST?

THE operations of the World Bank during the calendar year 1957 are noteworthy more for the shift in both the area of the activities and the purpose for which its funds have been used than for the aggregate sum lent. While the total number of loans granted went up from 24 to 26, the aggregate amount declined slightly from the record total of $507.4 million (in 1956) to $502.4 million. Nevertheless, for the second year in succession, the loans granted by the Bank were well above the $500-million mark.

As already stated, there was a notable shift in the area of the Bank's operations and the purpose for which the loans were made. Thus, as much as about 70 per cent. of the total, or $351.7 million were given to countries in Asia, which had received no more than $150.15 million in 1956. In other words, the Asian countries received more than double the amount they got in the previous year. What is equally noteworthy is the drastic cut in the loan assistance given to European countries, which received only 5 per cent. of the total, that is, about $25 million, as compared with $145.6 million in 1956. The loans granted to African countries also were lower from $80 million to $75 million and so also those to Latin American countries from $72.4 million to $50 million.

Distribution

A purpose-wise analysis of loans made during the year shows that the largest share of the loans, namely, 40 per cent., was given for financing development of highways, railways and other forms of transport (as against only 14 per cent. in 1956), whereas development of electric power accounted for the bulk, namely, 44 per cent., of the funds lent in the previous year, as will be seen from the following comparative table:

(In million dollars)

Purpose	Amount granted	
	1956	1957
Highways, railways and other transport	236.5	72.1
Electric power	105.4	223.3
Industry	73.5	163.0
Agriculture	12.0	49.0
General development	75.0	..
Total ..	502.4	507.4

Of the large loans, as much as $75 million was lent to Iran to provide short-term financing for Iran's second seven-year development plan, $66 million to the Yankee Electricity Authority of Thailand to help a multi-purpose project for the development of electric power, flood control and irrigation and the equivalent of $40 million to the Belgian Congo for road construction and improvement forming part of the country's 10-year plan of development. A feature of the Bank's operations during the year was the addition of three new countries to the list of borrowers. They were: Iran, Philippines and Ruanda-Urundi. These countries had not borrowed previously from the Bank.

To revert to the area-wise operations of the World Bank. The decline in the Bank's lending to the Latin American countries during 1957 and the sharp rise in loans granted to Asian countries during the year would appear to have revised the old controversy that the World Bank is not fair in its treatment to some member-countries. For some time past, the Latin American countries have been nursing a grievance that they are being gradually neglected by the World Bank in the matter of giving loans, while the overall flow of the Bank's funds for development purposes has been increasing at a rapid pace. It is felt that the decline in assistance to the Latin American countries is due to something more than the Bank's desire to help countries which had hitherto received a less favourable treatment.

Conditions for Grant of Loans

The fall in assistance to Latin American countries is presumably due to the fact that the bulk of their loan applications has not satisfied the two important conditions laid down in the World Bank's policy, namely, that (1) loans would be given only to specific development or reconstruction projects and (2) loans would be provided as far as possible only to meet the foreign exchange cost of the projects. It is, however, contended on behalf of these countries that the less favourable treatment to them in recent years is not due to lack of well-prepared development projects, but to the unwillingness on the part of the Bank to lend money for financing a substantial part of the cost of the projects that require expenditures that are largely or wholly to be made within the country itself. The Latin American countries seem to feel that a strict application of the rule regarding financing only the foreign exchange cost of the development plans has resulted in their being denied assistance for development purposes, although the bulk of the cost thereof represents only local expenditure. This contention of the Latin American countries seems to have the support of some outsiders also. Thus, referring to this grievance of Latin American countries, "Lombard" observes in the *Financial Times* as follows:

"While it is easy to appreciate the considerations that have led the Bank to make it a rule that only the foreign exchange cost of development projects can, in general, be financed from its funds, I do feel that the time may have come to look at this matter again. For it would seem unfair that a country should be deprived of its due share of World Bank help in developing its resources simply because projects that should have top priority do not involve much spending abroad."

Most Equitable Treatment

It may be true that the Latin American countries do not get as much assistance as they want from the World Bank, but to accuse the Bank of discriminatory treatment simply because it is unwilling to change its affirmed policy to suit the needs of a particular country or group of countries is most unfair. In this connection, a perusal of the loans granted to the Latin American countries so far shows that they have received the most equitable treatment from the World Bank. For up to the end of 1956, the total development loans granted to Latin American countries, at $719 million, were larger than those given to any other region of the world so far. This compared with $508.9 million received by the Asian countries till then. At the end of 1957, however, the position was different; but even then the loans given to Asian countries, at $806.6 million, were only slightly higher than those granted to Latin American countries. Further, a larger number of countries in Latin America has received assistance from the Bank than that in Asia. The population of Asia is far greater than that of Latin America. Again, economically, Asian countries, with the possible exception of Japan, are more backward than Latin American and, therefore, deserve greater attention. Another important point in favour of Asia is that it is in the soft currency area, whereas the bulk of Latin America is a hard currency area being neighbours of the rich northern hemisphere of the new world.

Further, in the early years of the Bank's history, the loans granted by it for development purposes amounted to no more than a few hundred million dollars. Even though the Bank started giving development loans as early as 1948, it was not until a few years ago that the flow of these loans gathered momentum, because the problems in underdeveloped countries were quite different from those involved in European reconstruction for which large sums were given by the Bank in the earlier years.

Loans Compared

The following comparative table shows the amount of loans received by the Latin American and Asian countries up to the end of 1957:

(In million dollars)

Year	*Latin America*	*Asia*
1948	16.00	..
1949	126.64	44.00
1950	90.13	56.70
1951	45.45	..
1952	96.00	61.95
1953	72.59	59.70
1954	111.09	49.31
1955	88.70	87.10
1956	72.40	150.15
1957	50.00*	352.00*
Total ..	769.00	860.91

* Approximate only.

It will be seen from the above particulars that, up to the end of 1955, the Latin American countries had received every year more than the amount granted to Asian countries and that, despite the fact that, during this period, Argentina, one of the biggest Latin American countries, was not a member of the Bank. It was only in the last two years—1956 and 1957—that the loans to Asian countries had been stepped up substantially. Another noteworthy feature disclosed by the table above is that the loans received by the Asian countries up to the end of 1955 amounted to only 55 per cent. of the loans granted to the Latin American countries during the same period. Surely, these countries cannot expect such most favoured treatment to be extended to them year after year. Indeed, Latin America has had the advantage of getting large assistance from the World Bank in the first half of this decade when the cost of capital development was relatively cheaper than in 1956 and 1957. It is common knowledge that now money everywhere buys less than it did three or four years ago.

The decline in loans given to the Latin American countries during the last three years can be attributed only to the two causes mentioned earlier. Moreover, the Latin American countries, unlike their Asian counterparts, have been receiving substantial private capital from the U.S., as well as loans from the U.S. Export-Import Bank. Thus, in 1956, out of the total U.S. private investment abroad amounting to $33,000 million, direct investment in petroleum industries in Latin America alone accounted for $426 million. In addition, there were large investments in manufacturing and mining and smelting industries in Latin America. Besides, acquisition of oil rights in these countries was expected to have fetched further large U.S. investments during 1957. In short, there has been no dearth of capital flow to Latin American countries. In view of all this, it is not reasonable to expect the World Bank to spare its resources for areas and purposes for which adequate funds have been forthcoming from elsewhere.

THE
CENTRAL BANK OF INDIA,
LIMITED

Profits for 1957

The Net Profits of The Central Bank of India, Ltd., for the year ended 31st December 1957, subject to audit, including the sum of Rs. 18,23,048.49 brought forward from the previous year's account, amounted to Rs. 1,26,97,641.05.

The following appropriations have been made :—

	Rs.
An *ad-interim* dividend paid for the half-year ended 30th June, 1957, at the rate of 12% per annum free of income-tax, i.e., Rs. 1.50 per share on 12,58,170 shares	18,87,255.00
Amount transferred to Bank's Investments	15,00,000.00
Amount provided for Taxation.. ..	13,00,000.00
Amount transferred to Staff Gratuity Fund	6,50,000.00
Amount provided for Bonus to Staff ..	30,00,000.00
	Rs. 83,37,255.00
The balance of Rs. 43,60,386.05 the Directors propose to recommend to the shareholders to dispose of as follows:—	
To pay a final dividend for the half-year ended 31st December, 1957 at the rate of 16% per annum free of income-tax, i.e., Rs. 2 per share on 12,58,170 shares (making in all 14% per annum for the whole year)	25,16,340.00
To carry forward to next year's account	18,44,046.05
Rs.	1,26,97,641.05

WORLD BANK BOND ISSUE OVERSUBSCRIBED

The World Bank's public offer of a $150-million bond issue made in the U.S. market on the 7th inst. was quickly oversubscribed. The terms of the issue were: Interest: 4¼ per cent. per annum; issue price: $49¼ per cent; maturity date: 15th January 1979; and yield at maturity: 4.29 per cent. per annum.

The bonds are not callable before 15th January 1968. On and after that date, they are callable at the option of the Bank at prices varying from $102½ per cent. and accrued interest, if redeemed on or before 14th January 1970, to $100 per cent. after 14th January 1976. The Bank will redeem $7 million per annum beginning in 1968 and including 1977 and $5 million in 1978, as a sinking fund for the bonds. Purchases for the sinking fund, which are calculated to retire 50 per cent. of the issue prior to maturity, will be at a price of $100 per cent.

The issue represents the largest market transaction by the World Bank since 1947. This is the eighth issue of World Bank bonds to be marketed in the U.S. on a negotiated basis by underwriting groups, managed jointly by the First Boston Corporation and Morgan Stanley & Co. The previous such sale was made in October 1957, when 23-year bonds for an aggregate sum of $73 million were issued. The net proceeds of the latest bond issue will be used to finance the general operations of the Bank.

The Bank's outstanding funded debt as on 30th November 1957 was $1,270 million. Including the latest issue and the delivery of bonds under delayed delivery contracts, the Bank's funded debt is raised to $1,471 million. It includes U.S. dollar obligations amounting to $1,271 million and Swiss franc, Canadian dollar, sterling and Nertherlands guilder obligations aggregating $200 million. Since its inception to the end of December 1957, the Bank's loan commitments aggregate $3,480 million to finance programmes and projects in 46 countries.

MORE BANKS' RESULTS

The results of some more banks for the year ended 31st December 1957 released this week confirm that the past year was generally one of higher profits, though the pace of increase had slowed down considerably.

Central Bank of India Ltd.

A notable instance of this trend is provided by the Central Bank of India Ltd. Its profit for 1957 amounts to Rs. 108.74 lakhs, which shows an increase of only Rs. 4.38 lakhs, as against a rise of Rs. 26.60 lakhs to Rs. 104.36 lakhs recorded in 1956. Nevertheless, the year's profit is the highest to be reached since 1951. After bringing in the previous year's surplus of Rs. 18.23 lakhs, the Directors have maintained the provision for taxation at Rs. 13 lakhs and the allocation to the Bank's investments at Rs. 15 lakhs. The transfer to the staff gratuity fund has, however, been raised from Rs. 5 lakhs to Rs. 6.50 lakhs and that for bonus to staff from Rs. 27.50 lakhs to Rs. 30 lakhs. The interim dividend at the rate of 12 per cent. per annum (same as that paid in respect of 1956), paid already, absorbed Rs. 18.87 lakhs. The Directors have now recommended a final distribution at 16 per cent. per annum, to which level it had been raised a year ago from 12 per cent. per annum, which absorbs Rs. 25.16 lakhs. This makes the total dividend for the year 14 per cent. per annum, thus maintaining it for the second year in succession. The balance left to be carried forward is Rs. 18.44 lakhs.

Canara Bank Ltd.

The profit of the Canara Bank Ltd. has gone up from Rs.12.31 lakhs to Rs. 15.29 lakhs. This increase compares favourably with that of Rs. 2.30 lakhs noted a year ago. After bringing in the surplus of Rs. 0.38 lakh from 1956, and after making the usual and necessary provisions, the profit available for appropriation is Rs. 11.67 lakhs, as against Rs. 8.41 lakhs in the previous year. The Directors have raised the provision for taxation from Rs. 4.60 lakhs to Rs. 7.30 lakhs and that for bonus to staff from Rs. 1.40 lakhs to Rs. 1.90 lakhs. The 5 per cent. preference dividend requires Rs. 52,500 and the dividend on ordinary shares, which is proposed to be maintained at 10 per cent. per annum, absorbs Rs. 1.50 lakhs, leaving to be carried forward Rs. 44,767.

The Bank's deposits have increased by over Rs. 3.52 crores during the year to Rs. 17.84 crores.

The reserve fund stands at Rs. 40 lakhs, an increase of Rs. 8 lakhs over the year. During the year under review, the authorised capital of the Bank was raised from Rs. 50 lakhs to Rs. 1 crore. The Directors propose to issue in the current year 42,000 ordinary shares of Rs. 50 each, aggregating Rs. 21 lakhs. The new shares, which will be issued at a premium of Rs. 15 each, will be offered to the existing shareholders and the Bank's confirmed employees. The issue will raise the paid-up capital of the Bank to Rs. 50 lakhs, made up of 72,000 ordinary shares of Rs. 50 each and 28,000, 5 per cent. preference shares of Rs. 50 each, and will also bring in a share premium aggregating Rs. 6.30 lakhs.

Punjab National Bank Ltd.

The results of the Punjab National Bank Ltd. for the year 1957 are also very encouraging, in that the profit and deposits (as at the close of the year) have established record levels. The profit (subject to audit), after making payment of Rs. 9.27 lakhs to gratuity fund trust and providing for contingencies, has crossed the one-crore mark to Rs. 111.11 lakhs, thus showing a rise of Rs. 23.26 lakhs over the previous year's high of Rs. 87.85 lakhs. After bringing in the previous year's surplus of Rs. 6.20 lakhs, the amount available for appropriation is Rs. 117.31 lakhs, as against Rs. 90.20 lakhs a year ago. A sum of Rs. 8.75 lakhs had already been utilised for payment of an *ad-interim* dividend of Rs. 2.50 per share, free of income-tax, thus raising it from the corresponding distribution of Rs. 2 per share made in respect of 1956. The Directors have increased the provision for taxation from Rs. 27.50 lakhs to Rs. 50 lakhs, but have resumed the transfer to the reserve fund from Rs. 27.50 lakhs to Rs. 22.50 lakhs. Bonus to staff has been raised from Rs. 13 lakhs to Rs. 18 lakhs, while the charity account gets the same amount as last year, that is, Rs. 1 lakh. The Directors have recommended the payment of a final dividend of Rs. 2.50 per share, free of income-tax, on the increased capital of Rs. 125 lakhs as on 31st December 1957, raised by the capitalisation of the share premium amount. This compares with the final dividend of Rs. 2 per share paid on the old capital for 1956. The balance left to be carried forward is Rs. 4.56 lakhs.

Indian Overseas Bank Ltd.

The profit of the Indian Overseas Bank Ltd. for the year 1957, after providing for contingencies and expenses and subject to audit, amounts to Rs. 32.49 lakhs (which is a fresh record for the Bank), as compared with Rs. 28.65 lakhs earned in 1956 and Rs. 16.56 lakhs in 1955. The Directors have proposed to maintain the dividend at 10 per cent per annum, free of income-tax, to which level it had been stepped up last year from 7½ per cent. paid in 1955. The proposed dividend for 1957 is, however, on part of the increased capital raised during the year by the issue of right shares in the ratio of one share for every two shares held. This requires Rs. 5.62 lakhs, as against Rs. 4.91 lakhs utilised last year. The Directors have recommended the above dividend after raising the provision for taxation from Rs. 14 lakhs to Rs. 16 lakhs and the allocation to the reserve fund from Rs. 6 lakhs to Rs. 7.32 lakhs. The provision for bonus to staff has also been slightly increased from Rs. 3.50 lakhs to Rs. 3.75 lakhs. All these appropriations leave a surpuls of Rs. 2.32 lakhs to be carried forward, as against Rs. 2.52 lakhs brought in.

Bank of Maharashtra Ltd.

The net profit of the Bank of Maharashtra Ltd. for 1957 (subject to audit) shows a rise from Rs. 4.01 lakhs to Rs. 4.69 lakhs, after making larger provision of Rs. 70,000 for bonus to staff (as compared with Rs.60,000 set aside last year). The provision for taxation has been raised from Rs. 1.80 lakh to Rs. 2.10 lakhs and the transfer to the reserve fund from Rs. 1.25 lakh to Rs. 1.50 lakh. The dividend is proposed to be maintained at 6 per cent. per annum, free of income-tax, *pro rata*, requiring Rs. 1.05 lakh, as against Rs. 96,000. The surplus left to carried forward is Rs. 36,000, including Rs 32,000 brought in from the previous year.

The Bank's deposits as at the end of 1957 stand at Rs. 7.85 crores, having gone up from Rs. 6.26 crores a year before. The advances have risen from Rs. 2.96 crores to Rs. 3.83 crores, while investments are almost unchanged at Rs. 2.56 crores.

Andhra Bank Ltd.

The Andhra Bank Ltd. has earned a net profit (subject to audit) of Rs. 7.23 lakhs, after payment of one month's substantive salary as bonus to staff and after effecting revision in pay scales from 1st May 1957. This compares with Rs. 9.43 lakhs for 1956 arrived at after payment of 1½ months' substantive salary as bonus and making necessary provision for contingencies. The Directors had already paid an *ad interim* dividend at the rate of 8 per cent. per annum, free of income-tax, for the half-year ended 30th June 1957, raising it from the corresponding distribution of 7½ per cent. per annum paid a year ago and absorbing Rs. 1.47 lakhs (Rs. 1.30 lakhs), and had transferred to the statutory reserve a sum of Rs. 1.08 lakh (as against Rs. 1.03 lakh). These leave for final appropriation a net profit of Rs. 4.80 lakhs, including Rs. 11,996 brought in from 1956.

In Health **PHILIPS** aid the science of healing

INDIA's doctors need the most modern medical aids in tackling their tremendous problems. They are aided in this noble task by organisations like Philips who are proud to place their many years of research and experience at their disposal. Whether it's the highly intricate X-Ray unit, which is one of modern science's contributions to accurate diagnosis; or the super-sensitive cardiograph which registers every tremor of the heart; or whether it's the assured supply of flawless lighting or a whole range of tested pharmaceuticals, Philips aid in many ways the noble science of healing and point the way to recovery.

FREE WORLD COTTON GOODS OUTPUT AT RECORD HIGH LEVELS

EXPORTS MOVE UPWARD

THE production of cotton goods in the free world continues to move up. The estimated total output of cloth in the nine major producing countries—India, Japan, the U.S., the U.K., W. Germany, France, Italy, Belgium and the Netherlands—during 1957 was at an annual rate of 30,330 million yards, as compared with 29,540 million yards in 1956 and 28,551 million yards in 1955. The rise of 790 million yards during 1957 was shared by all the countries with the exception of the U.S. and Italy which are believed to have suffered some setback. The improvement was particularly marked in Japan, being as much as 355 million yards, followed by France with an increase of 298 million yards. Western Germany with 266 million yards and India with 147 million yards. Other countries to record an increase in production were Belgium 77 million yards, the Netherlands 74 million yards, the Netherlands and the U.K. 16 million yards each. In contrast, the estimated output in the U.S. and Italy was lower by 372 million yards and 51 million yards, respectively.

The following table indicates the trend of cotton cloth production in the aforesaid nine countries during the last three years:

(In million yards)

	1957*	1956	1955
India	7,240	7,093	6,821
Japan	3,655	3,300	2,814
U.S.	10,789	11,161	11,028
U.K.	1,727	1,711	1,781
W. Germany	2,633	2,367	2,184
France	1,952	1,654	1,622
Italy	906	957	937
Belgium	800	723	697
Netherlands	628	574	667
Total	30,330	29,540	28,551

* Estimates only.

One of the reasons for the persistent upward trend in cotton goods production is the addition of more automatic looms and looms with automatic attachments. The aggregate number of these looms actually in place in the free world as on 31st January 1957, the latest month for which data are available, was 927,400, which compares favourably with 917,200 a year before. This addition partly represented the replacement of ordinary looms which had become old and worn out. The total of ordinary looms as on 31st January 1957 was 1,274,000, as against 1,293,700 on the corresponding date of 1956. The aggregate number of all types of looms in the entire free world on the abovementioned date was 2,201,400, as against 2,210,900 a year before, a decline of 9,500 looms. In contrast, the Communist areas accounted for a rise in the number of looms, the total as at the end of January 1957 being 594,000, as against 591,000 a year before. An idea of the world's loomage position can be had from the table given below:

	As on 31st January 1957	As on 31st January 1956
Free world:		
India	205,300	207,600
Japan	373,400	368,400
U.S.	360,000	362,900
U.K.	289,900	316,700
W. Germany	132,000	128,100
France	129,000	136,100
Italy	34,400	35,900
Belgium	34,600	34,600
Netherlands	121,600	124,500
Others	..	..
Total free world	2,201,400	2,210,900
Communist areas:		
U.S.S.R.	342,000	339,000
China	85,000	85,000
Czechoslovakia	36,700	36,700
Poland	37,700	37,700
Others	92,600	92,600
Total	594,000	591,000
Grand total	2,795,200	2,801,900

The upward trend in cotton goods production noted during 1957 was accompanied by an increase in the volume of international trade in cotton textiles which had suffered a contraction in the previous three years. The free world's nine leading countries reported an aggregate export of 4,660 million yards in 1957, representing a rise of 477 million yards as compared with the previous year. The improvement was shared principally by Japan, India, Belgium and the U.S. There was, however, a slight fall in the shipments from Western Germany and the Netherlands. The following table shows the trend of cloth exports from the nine countries in the past three years:

(In million yards)

	1957*	1956	1955
India	895	804	872
Japan	1,400	1,262	1,139
U.S.	618	545	577
U.K.	474	474	554
W. Germany	170	186	223
France	318	296	364
Italy	91	86	91
Belgium	467	200	190
Netherlands	227	230	213
Total	4,660	4,183	4,223

* Estimates only.

The recovery in the world cotton textile trade is, indeed, significant, inasmuch as it has occurred notwithstanding many unfavourable factors. Special mention must be made of the fact that some of the cotton-growing countries which were hitherto large importers of cotton textiles for their domestic needs have themselves started manufacturing piecegoods. Further, the world trade in fabrics of rayon and other synthetic fibres has been expanding. Mention may also be made of trade regulations and trade barriers enacted by several countries for balance of payments considerations.

FEDERATION OF MILLOWNERS?

The renewed move of the different millowners' associations in the country to form themselves into a central organisation called the Federation of Millowners is not surprising. The cotton textile industry is passing through stresses and strains, thanks to the unhelpful official policies, several of which are based on ideological considerations. The industry has learned from experience that, before it can claim a more helpful official treatment, it is imperative that it must approach the powers-that-be with one voice. This was precisely what was lacking hitherto. There are quite a number of bodies representing millowners, resulting in a multiplication of representations to the Government on the problems facing the industry. Sometimes, there are even conflicting views as between two bodies. For some time past, Mr. Morarji Desai, Union Minister for Commerce and Industry, has been suggesting to the representatives of the cotton textile industry to set up an apex body, so that the demands of the industry could be jointly put forward to the Government, instead of each association approaching the Government for relief, etc. The latest move to establish a Federation of Millowners is a sequel to this suggestion.

There is, of course, nothing new in this move. An attempt was made in this direction a few years ago, that is, shortly after the Textile Control Board died a natural death following the abolition of controls. The T.C.B. came into existence during the war years and continued to exist for several years thereafter as an advisory body. It was not only in charge of controls on the industry but also played an effective role in planning the post-war reconstruction and development of the cotton industry. So long as this body was there, it served the purpose of an all-India federation of millowners, but its disappearance caused a gap. Whenever any big issue arises, all millowners, of course, get together even now through a meeting of some of the leading millowners. But this does not answer the need for a full-fledged federation of the existing millowners' associations. The previous efforts to form a federation failed because of power politics and group rivalries. Further, a section of millowners was rather critical of the Government's economic policies and actions, while another section, politically more influential, preferred to be less critical, even though it was fully aware of the untenable character of such policies and actions. But now the position is somewhat different, in that the former has lost, or is rapidly losing, its influence over the industry. The "yes" men are in charge of almost all the millowners' associations, as they constitute a majority in the industry. Consequently, the chances of a meeting of minds between the various associations are now better than ever before.

A meeting of the spokesmen of the several millowners' associations was held in Bombay last week. At this meeting, Mr. Kasturbhai Lalbhai was elected Chairman of the proposed Federation. A twenty-two man committee, consisting of seven representatives from Bombay, six from Ahmedabad, four from Madras, two from Uttar Pradesh, one each from West Bengal, Madhya Pradesh and Rajasthan, was also formed. The new body, however, has still to be registered and this will be done after final agreement on some matters is arrived at among the individual millowners' associations. Meanwhile, it is reported to have been agreed that the tentatively formed Federation will not make any representation to the Government about any issue on which there is difference of opinion. For instance, the South Indian mills, being mainly spinning units, want all possible active encouragement and assistance to the handloom industry, while the North Indian mills are opposed to such active assistance.

The Government of India has abolished all restrictions on exports of mineral khaki drill and/or cellular shirting processed by factories other than mills. Hitherto, the exporters of these varieties of cloth were required to purchase the grey material packed for home consumption only as envisaged in the Government announcement of 1st July 1953. This decision of the Government is in accordance with the recommendation made by the Export Promotion Committee that, "our aim being to export as much cloth as possible, no restrictions such as those once imposed on exports of mineral khaki cloth should naturally be placed on any variety or varieties."

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER

"EXCEPTED ARTICLES"?

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration or damage of such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Railways Time Tables and Guide.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

NEW CURBS ON CHINESE CLOTH IMPORTS

CHAMBER OF COMMERCE DISAPPOINTED OVER EXPORT TRADE

From Our Special Correspondent

MANCHESTER, 14*th January*

NO tears were shed in Lancashire at the departure of Mr. Peter Thorneycroft from the high office of Chancellor of the Exchequer. Whatever the merits or otherwise of the stand he took against increasing Government expenditure, in the eyes of British textile traders, he represented a view long associated with rejection of demands for protection against foreign competition.

MANCHESTER LETTER

Even before he was dubbed "the hangman of Lancashire," Mr. Thorneycroft was regarded by many as the real stumbling block against which successive deputations from the cotton trade had foundered in their efforts to obtain some relief from the inroads made by rival mills in Commonwealth territories. His policy, it was felt, permeated the Board of Trade and was responsible for persistent refusals to see the Lancashire viewpoint, even after he had moved to the Treasury.

Although there were some who immediately took heart, hoping that a change of policy would follow the Chancellor's resignation, few believed that an announcement relating to foreign cloth imports would come as swiftly as it did. Obviously, there was no connection between the two, but the decision to impose quotas on the entry of Chinese cloth provided a gleam of hope for Lancashire which will not be extinguished for some time.

Nervousness Recreated

The situation is thus in a state of "as-you-were." Traders who had already made up their minds that no Government action was contemplated have now begun to doubt whether further steps will be taken to curtail imports from abroad. So uncertainty becomes again a factor in connection with foreign cloth and, however, strongly Lancashire feels about this vexed question, it must be admitted that uncertainty is at the root of many of the industry's problems.

Ever since the agitation began about foreign cloth, Government spokesmen have deliberately refrained from making any categorical statements as to their intentions. Always the door has been left at least ajar so that, however faintly, traders have hoped that their appeals for some form of protection would succeed.

The new restrictions on the arrival of Chinese cloth will, it is estimated, keep these imports at around the 1957 levels. They provide for a maximum of £1,500,000 worth of cotton grey cloth to be purchased from China for processing in this country and re-export and £150,000 worth of goods to be imported for distribution in the home market. Similar arrangements, involving larger quantities, have been in force in Anglo-Japanese trade in cotton goods for some time.

Disappointment was expressed at the character of Britain's textile export trade with India, Pakistan, Ceylon and Burma during 1957 in the annual report of the Indian Section of the Manchester Chamber of Commerce. In 1956, it was pointed out, the total figure reached 30,000,000 square yards which was slightly above the preceding year, but, in 1957, it was doubtful whether the volume of exports would exceed 18,000,000 square yards.

Much of the blame for this unsatisfactory position from the Lancashire viewpoint is attributed to uncertainty as to the import licensing regulations, due to the intensification of financial restrictions imposed in India and the poor prospects of higher Indian spending on imported textiles have contributed to the situation.

In the case of Pakistan, the report observes that British trade in cotton texiles has dropped "catastrophically." In the first 10 months of last year, exports were only 570,000 square yards. "With the virtual absence of import licences in this market due also to financial stringency and with the completion of the triangular deal commitments, Lancashire's prospects in Pakistan have become very problematical," the report comments.

Difficult trade conditions also curtailed Ceylon's purchases of textiles and the upward trend of shipments during recent years has been reversed. As regards trade with Burma, the report states: "In the light of all the import problems facing Burma, it is doubtful whether we can look forward to sufficient licences being available to maintain a volume of textile exports above the pre-1956 levels."

In a further reference to British-Indian trading relations, the report traces the steps taken by Lancashire's interests to maintain at least a small flow of trade. The Executive committee approached the Government seeking to ensure some constant flow at the highest possible level of British textile goods if only of speciality types and fine yarns to the Indian market. A carefully selected list of cloths was drawn up which, if licences could be granted, would give Lancashire exporters an opportunity of keeping alive their marks and their dealer connections with the market.

Commenting on the triangular deals undertaken during the year with particular relation to Pakistan, the report says that they provided an opportunity for Lancashire traders to maintain contact with customers and retain many of their brands and qualities on the market. "Pakistan has been a valued and traditional market for Lancashire and one which we are most anxious to retain, as also the goodwill of buyers and consumers," the report adds.

While current conditions in Lancashire provide many disconcerting factors, reports from textile producing centres overseas are somewhat varied in character. The European common market plan adds emphasis to the situation in the Continental cotton industries, where, according to the latest evidence, the mills are doing better than in Britain.

Yarn production in Western Europe was, in fact, 11 per cent. higher in the third quarter last year than in 1956. In contrast, output in Britain was about 6½ per cent. up. Increased domestic demand in Italy and France accounted for much of the improvement in Continental activity, but output in Germany remains high and exports have broadened, particularly to French West Africa.

Japan, as usual, presents a paradox. Some reports speak glowingly of record output and exports; then comes news of curtailment of production, due to the accumulation of stocks. For the first ten months of 1957, shipments of cotton cloth were 18 per cent. above those in the same period of 1956. Exports of rayon piecegoods in the third quarter reached 366 million square yards, as against 281 million yards in the same quarter of 1956.

Shortly before the end of the year, however, there were signs that overproduction, combined with a tight money policy, was having its inevitable effect. Japanese industrialists, always ready with the superlative "quote," described the recession as "the biggest in the entire post-war period." Cloth quotations slumped—in some cases, to 50 per cent. below the 1956 peak. Despite its recurring crises, the Japanese mill industry has shown in the past that it can recover remarkably quickly from slump levels.

Another area where trade conditions are hardly rosy is in the United States. Stocks of cloth have accumulated, margins have fallen by 14 per cent., and most of the big mills extended their Christmas holiday break. Production and exports last year were running at a lower level than in 1956. As in Lancashire, concern is being expressed about the large imports of cloth and made-up goods from Hong Kong.

Yarn Output Up

Sectional surveys issued by the Manchester Chamber of Commerce covering the past year can be conveniently divided into those mainly catering for textile traders in the home market and those concerned with conditions overseas. The comments contained in these reports reflect the contrast between these complementary yet in some ways opposing branches.

If yarns were taken as the basic consideration, the situation would not be at all discouraging. Output for the first 46 weeks of last year was 4 per cent. higher than in the same period of 1956 and the number of operatives on the books of spinners at mid-November was 2,000 more than 12 months previously. Additionally, export trade in cotton yarns has increased, being 7½ per cent. higher than in 1956, but shipments are still below the 1954 level, which was itself only a poor year as compared with earlier results.

The yarn section emphasises two points which are brought out in many other annual reports—the continued uncertainty about future relationships between domestic and imported textile goods deterring firms from making plans ahead and undertaking capital expenditure, and the interference by Governments in the free marketing of raw cotton, causing spinners to face

SOVIET COTTON GROWING

ROLE OF FERTILISERS AND INCENTIVE SCHEMES

IT is common knowledge that, as compared with Soviet industry, Soviet agriculture is relatively backward and has not shown that spectacular advancement in productive efficiency which has brought Soviet industry, particularly heavy industry, on a par with that of any in the most advanced countries of the free world, namely, the U.S., the U.K. and West Germany. But there are, however, certain branches of Soviet agriculture which have shown truly remarkable progress. To this category belongs cotton, the production of which in the U.S.S.R. has almost doubled in the post-war period The 1934-38 average annual production of cotton in the U.S.S.R. was only 3.08 million bales. But it increased to 5.8 million bales in 1954-55 and six million bales in 1956-57. The improvement in yield has been more notable. The 1934-38 average yield was as low as 292 lbs. per acre but it rose to 513 lbs. in 1954-55 and, after having declined slightly to 487 lbs. in 1955-56, again improved to 562 lbs. in 1956-57. These overall figures, however, conceal much regional variations which reflects, in a large measure, the influence on production of a variety of factors, natural as well as man-made. The experience of the Central Asian Soviet Republics, namely, Uzbekistan, Kirgizia, Tadzhikistan and Turkmenia in respect of cotton production show, for instance, how a systematic policy of increasing specialisation in cotton production, aided by modern science and technology, can produce remarkable results. It also illustrates the role that a judiciously devised incentive scheme can play in encouraging cotton production. Some interesting details regarding cotton production in Central Asian Soviet Republics are revealed in an article entitled "Regional Economic Policy in the Soviet Union: The case of Central Asia," contained in the latest (November 1957) issue of the *Economic Bulletin for Europe* published by the U.N. Economic Commission for Europe.

Important Supplier of Raw Materials

Although Central Asia comprises only three per cent. of the Soviet Union's sown area, the region is an important supplier of raw materials —cotton, silk and wool—for the Soviet textile industry. Central Asian agriculture displays characteristics which are considerably different from that of the rest of the Union. Average agricultural yields are not much different from those obtained under similar natural conditions in the neighbouring countries. An important exception, however, is cotton which has been grown as a main crop on the irrigated land for at least seven centuries. Continuous and systematic efforts in recent years have raised cotton yields to a level comparable with that of Egypt, where the climate is more propitious for cotton production than in large parts of the Central Asian cotton areas. Between the late 'thirties and the early 'fifties, average yields of cotton in Central Asia fluctuated round the Egyptian average which is the world record for cotton yields. But now yields in Central Asia are somewhat higher, though long-staple type of cotton, which yields less per hectare than short staples, account for a much smaller share of the total in Central Asia than in Egypt. The statement often made in Soviet sources that Central Asian average cotton yields are several times higher than those of the United States, or of neighbouring Asian countries, requires the qualification that, in all these countries, a large share of the cotton is grown on non-irrigated land. In the Soviet Union itself, cotton production on non-irrigated land gave yields one-fifth of those obtained in irrigated land. But at present cotton cultivation on non-irrigated land has been almost entirely abandoned. Further, comparison with the United States misinterprets the policy of American farmers which concentrates on raising yields per unit of labour rather than per unit of land. The former are many times higher in the U.S. than in Central Asia.

The pre-Revolutionary policy of developing cotton production in Central Asia was accomplished both by positive measures, such as irrigation, introduction of better types of cotton and restrictions on rice cultivation in order to reserve irrigation facilities for cotton. The Soviet Five-year Plans pushed this specialisation in cotton further. In the years just before the Revolution, Central Asia supplied about 50 per cent. of Russian cotton consumption, other regions about seven per cent. and foreign countries 43 per cent. By 1924-25, the share of foreign imports had risen to 58 per cent. But from 1935 onwards, imports stopped. Central Asia today supplies 85 per cent. of a much increased internal consumption. Cotton production in Central Asia now is five times that grown before the Revolution. This spectacular increase in Central Asian cotton production was obtained by trebling the area under cotton and raising yields per hectare by about two-thirds. For instance, the index number of cotton production in Central Asia (Base 1913=100) improved from 100 in 1913 to 103 in 1928, 312 in 1940 and 526 in 1955. The index of area (1913=100) increased to 146 in 1928, 229 in 1940 and 321 in 1956. The index of yield per hectare (1913=100), after declining from 100 in 1913 to 71 in 1928, increased to 136 in 1940 and 164 in 1955.

The increase in area was achieved partly by a number of large irrigation projects which have increased the land under irrigation by 35 per cent. and partly by replacing other crops, mainly cereals, by cotton on the old irrigated areas. The increase in yield was obtained primarily by application of very large amounts of fertilisers but a number of other measures also contributed to this result. The land reforms in the 'twenties and the subsequent collectivisation abolished the old system of water rights and made possible a more rational system of water distribution. Agricultural methods were improved through the use of better seeds, closer planting, tractor ploughing and the use of insecticides. Moreover, a pricing policy gave sharply progressive remuneration for high yields.

It is noteworthy that, whereas the application of chemical fertilisers in Soviet agriculture as a whole is at very low levels by European standards, it is by now generous on cotton areas. In 1953, about one-third of the total production of mineral fertilisers in the Soviet Union was used for raising the yield of cotton. The response of yields to the increase in fertiliser input was spectacular, particularly in the 'thirties, as is evident from the following table:

Fertiliser Application in Uzbekistan
(In quintals per hectare)

	Quantity of fertiliser	*Average yield of unginned cotton*
1933	0.15	8.9
1934	1.66	7.9
1935	2.70	11.6
1936	5.10	16.2
1937	5.68	16.1
1938	5.32	16.8
1939	5.66	17.0

1 hectare=2.47 acres. 1 quintal=112 lbs.

Apart from the use of fertilisers and improvement in irrigation facilities, another method adopted for increasing production was the employment of incentive schemes. A cotton premium system introduced in 1935 offered very high premiums to farms that exceeded the planned targets or obtained high yields. It is, however, not possible to single out the effect of the system on yield, as its introduction coincided with an intensification of the application of mineral fertilisers to cotton fields, but a part of the improvement in yield is, no doubt, attributable to the premium system.

As a result of the rapid growth of the area sown to cotton in Central Asia, the share of cotton, which before the Revolution was about one-fifth of the sown irrigated area, is now more than one-half, while that of grains has been reduced from two-thirds of the total area to probably no more than 10 per cent. Moreover, the high premia paid for cotton was a temptation to reduce the share of alfalfa in the traditional cotton-alfalfa rotation and cotton has increasingly tended to become a monoculture. In 1950-56, it accounted for 80 per cent. of the total money income of the collective farms in Uzbekistan and Turkmenia. It has, however, now become more and more clear to the Soviet authorities that the mere use of mineral fertilisers will not be sufficient to raise, or even maintain, cotton yields. A more varied crop rotation must, it is realised, be introduced with a larger share of the area devoted to soil-improving fodder crops.

DEVELOPMENT OF SUGAR INDUSTRY

INCREASE OF 200,000 TONS IN CAPACITY DURING CURRENT SEASON EXPECTED

By T. C. Puri, I.C.S.

CHAIRMAN, DEVELOPMENT COUNCIL FOR SUGAR INDUSTRY

THE Indian sugar industry has amply demonstrated, on two occasions, that, given the right climate, it can develop itself to the extent necessary for meeting the country's requirement of an essential article of food—sugar. It was first called upon to meet the challenge in the early 'thirties when protection was granted to the industry. During the course of the next five years, the industry witnessed a phenomenal growth. The number of factories working in the Indian Union rose to 129 and the production to about 11 lakh tons. The area under sugarcane increased from 2.8 million acres in 1927-31 to about 4.0 million acres in 1936-37. From occupying a relatively minor position, the sugar industry rose to become the second largest industry of the country —being next only to cotton textiles.

Then came World War II. Due to shipping difficulties and engineering firms in India and abroad being fully booked with war orders, supplies of even essential replacement parts were greatly curtailed. Control was also imposed over distribution and price of sugar in 1942. Further development of the industry was consequently halted. During 1940-50, there were 135-140 working factories in the Indian Union and the production varied between 10.0 and 12.00 lakh tons depending upon the cane crop. This was, however, just sufficient to meet the needs of the country under controlled economy. It was under these conditions that the development programme for the first Five-year Plan was formulated. The then installed capacity of the industry of 15.0 lakh tons was considered adequate to meet the country's demand of sugar during the Plan period. The first Plan, therefore, did not envisage the establishment of new factories or expansions of the existing economic units and the entire development was restricted to increasing the supply of sugarcane so as to raise the working season, utilising idle capacity and effecting expansions in uneconomic units.

After the War

In keeping with the general policy of withdrawal of control after the war, control over sugar was finally lifted towards the end of 1952. Experience of the first year of decontrol showed that the demand for sugar under free market conditions was 16.6 lakh tons, as compared with the average offtake of about 10-11 lakh tons during the period of control. The consumption increased still further and the offtake in 1953-54 was 18.1 lakh tons. The indigenous production dropped to about 10.00 lakh tons due to failure of the cane crop. In order to bridge the gulf between supply and demand, sugar was imported, as a temporary expedient. Simultaneously, the policy of restricted development decided upon at the commencement of the first Plan was replaced by a policy of freely licensing the establishment of new factories and expansions in existing units. The target of production was raised to 18 lakh tons from an installed capacity of 20 lakh tons. On the recommendation of the Development Council for Sugar Industry, the production target was further raised to 22.5 lakh tons from an installed capacity of 25 lakh tons during the second Plan period. The gap between installed capacity and actual production represents the possible shortfalls due to failure of crop, etc.

As in 1932, the industry responded very well to the call for expansion for nearly doubling its production capacity. On the announcement of Government policy for licensing additional capacity in the industry in March 1954, a large number of applications were received for the establishment of new sugar factories and expansion in existing ones. After examination of these applications, licences have so far been granted for effecting substantial expansion in 68 factories and for the establishment of 56 new sugar factories involving an additional capacity of 3.8 lakh tons and 6.3 lakh tons of sugar per annum, respectively. Of the 56 new factories licensed, six factories would be established by utilising machinery lying idle in the country. In addition to the above, permission has been granted for the establishment of a factory of 1,200 tons daily cane crushing capacity in Pondicherry. No licence is necessary for this, because the Industries Act is not applicable to Pondicherry State. Statewise distribution of the capacity licensed is given in the attached table.

An outstanding feature of the current development programme is the establishment of a large number of sugarcane growers' co-operative sugar factories. Before the expansion programmme was launched, there were only two co-operative sugar factories, one each in Bombay and Andhra Pradesh. Of the 56 new factories licensed, 39 would be co-operative enterprises. There is still a provision for licensing about a dozen more co-operative factories in the second Plan period. The licensing of co-operative factories is an effort in the direction of early establishment of a socialist pattern of society—our avowed objective.

New Capacity

Since the entire capacity targeted for the second Plan has already been licensed, further licences are now being restricted only to expansions in existing uneconomic factories so as to raise their capacity up to 1,000 tons of cane per day and for the establishment of co-operative factories as envisaged in the second Plan as and when spare capacity becomes available by revocation of licences already granted.

Considerable headway has been made in regard to the establishment of the capacity licensed. By 1956-57, nine new factories including six co-operatives went into production and 20 factories completed their expansion programme. The total additional capacity thus coming into production amounted to over 2 lakh tons of sugar per annum. In 1957-58, 10 new factories, including eight co-operatives, are expected to be established. Two of these have already gone into production. Ten more existing factories would also complete their expansions during this year. The total additional capacity which will come into production during the 1957-58 season would be around 2.0 lakh tons. The remaining new factories and expansions for a total capacity of about 6.0 lakh tons are expected to be completed during the seasons 1958-59, and 1959-60.

Sugar Mill Machinery

The progress in regard to the establishment of new capacity has of late somewhat retarded due to the difficult foreign exchange position. It has, however, focussed attention to the great need of developing the manufacture of sugar mill machinery in the country. Although steps in this direction were taken up soon after the protection was granted in 1932, not much progress was made owing to limited demand during the early years of the growth of the industry, the competition from foreign suppliers and restricted policy of expansion in the earlier part of the first Five-year Plan. During the first Five-year Plan, there were about six firms producing items like tanks, juice heaters, vacuum pans, evaporators, condensers, etc. Later, a few more items were added in the field of indigenous manufacture and their quantum of production also increased. The value of machinery produced during 1954, 1955 and 1956 was Rs. 27.3 lakhs, Rs. 19.0 lakhs and Rs. 32 lakhs. As a result of the impetus given by current development programme, the production of indigenous machinery has gone up to about Rs. 40 lakhs during the first half of 1957.

A new chapter was added in 1956 by licensing six firms for manufacture of complete sugar plants in collaboration with well-known foreign firms. These are as under:

Name of firm	Name of foreign collaborator
Messrs. Walchandnagar Industries Ltd., Bombay.	Messrs. Skoda Works Ltd., Praha, Czechoslovakia.
Messrs. Protos Engineering Co., Bombay.	Messrs. Machinin Fabrik Buckau R. Wolf, A.G., West Germany.
Messrs. Textile Machinery Corporation Ltd., Belghurriah, Calcutta.	Messrs. Stork Werkspoor, Holland.
Messrs. Indian Sugar and General Engineering Corporation, Yamunanagar (Punjab).	Messrs. A. F. Craig & Co., Ltd., Scotland.
Messrs. Binny & Co., Madras ..	Messrs. Mirrlees Watson & Co., Ltd., Glasgow.
Messrs. K. C. P. Ltd., Madras ..	Messrs. CAIL, France.

The phased production programme of these firms envisages the manufacture of about a dozen complete sugar plants per year. These do not for the present include the manufacture of boilers, prime movers, high speed centrifugals and heavy electrical machinery. One firm has, however, plans for the manufacture of boilers also by 1961. To the extent progress is made by these firms in implementing their production programme, our dependence on imports of sugar machinery from abroad will be reduced.

Exports

Another notable event in the sugar industry has been the emergence of India as an exporter of sugar. With a view to augmenting the foreign exchange resources, it was decided in 1956 to export some surplus sugar. The work was entrusted to the Indian Sugar Mills' Association. The Association sold 1.52 lakh tons of sugar, of which 1.45 lakh tons has actually been shipped. These exports have been made without loss, because there was a rise in world sugar prices on account of the Suez crisis and failure of beet crop on the European continent. World prices have, however, returned to their normal level and further exports would be possible only at a loss. This may be as high as about £15 per ton, even after allowing remission of excise duty and cane cess. The question of continuing exports in future to earn the much needed foreign exchange even at a loss is at present under active consideration. The recent exports have given us very valuable experience in knowing the requirements of the importing countries, as also our own shortcomings.

Development Council

Simultaneously with the launching of the current expansion programme in 1954, a Council was set up for advising on matters concerning the proper regulation and development of the industry. During the course of its three years of existence, the Council has tried to tackle a number of problems confronting the industry. As stated earlier, the Development Council estimated that the country's requirements of sugar by 1960-61 would be of the order of 22.5 lakh tons from an installed capacity of 25 lakh tons. The Council has examined the measures necessary for securing the fuller utilisation of the installed capacity of the industry, particularly of the units at present lying idle in the country. It has recommended that 14 sugar factories can be rehabilitated at their existing sites, if suitable measures are taken for the development of their areas of operation. In the case of another 13 factories, which are at present lying idle, the Council is of the opinion that it would not be worthwhile to take any special measures for their rehabilitation owing to their plants being worn out and of uneconomic size. Shifting to better sites has been recommended in the case of only four factories.

Statement Showing Statewise Distribution of Additional Capacity Licensed

State	Expansions		New Factories				Total capacity Tons cane/ per day
			Joint Stock		Co-operative		
	No.	Capacity cane/ per day	No.	Capacity Tons cane/ per day	No.	Capacity Tons cane/ per day

Total ..	68	36,035	17*	15,900	39†	37,550	89,485

* Four factories are to be established by utilising old plants. † Two factories are to be established by utilising old plants.

Technical Efficiency

The Council has made a number of recommendations for improving technical efficiency of sugar factories. On its recommendation, an Extension Service for advising the sugar factories is being started at the National Sugar Institute, Kanpur. A pamphlet on Uniform Methods of Analysis and Reporting of Technical Data has been finalised and sugar factories have been requested to adopt this from the current season. This would make the technical data reported by various sugar factories comparable and thus facilitate in drawing conclusions for suggesting measures for effecting improvements. The Council also examined the question of employment of technical persons in the industry and in this connection ascertained the number and qualifications of persons employed by the industry on technical posts. It was found that a large number of persons holding technical posts in the industry did not possess the requisite qualifications and training. The Council, therefore, is of the opinion that the employment of technically qualified persons in the industry is very necessary for improving the efficiency of the factories. It has recommended that the employment of unqualified persons should not be permitted in future and that a number of short-term courses be started at the National Sugar Institute, Kanpur, for bringing the knowledge of unqualified persons at present employed in the industry to the desired level. In this connection, the Council has also recommended the extension of facilities of the Training-Within-Industry Scheme to the sugar industry.

The Council has also devised a system for promoting better standardisation of sugar. A Standard Contract for sale and purchase of sugar has also been finalised for facilitating smooth trading in sugar. In regard to the research work, the problems of the industry have been ascertained and divided into various categories according to their importance, facilities available, etc. The National Sugar Institute will take up these problems according to the priorities so fixed. Research schemes have also been sanctioned for undertaking work on utilisation of cane wax and treatment of effluents. For improving the sugar content of cane, the Council devised a scheme for making payment for sugarcane on the basis of its quality. Trials on the scheme were conducted in nine factories during the season 1956-57. It is proposed to continue the trials of the scheme during the current season also to make the system perfect by overcoming the difficulties experienced.

Achievement

The achievement of the sugar industry is clearly evident from the figures of production, consumption, etc., given below:

Season (Nov.-Oct.)	Production	Imports (including raw sugar)	Exports	Offtake (internal consumption)
1951-52 ..	14.97	..	0.08	11.68
1952-53 ..	12.97	0.59	0.07	16.52
1953-54 ..	10.01	7.17	..	18.07
1954-55 ..	15.90	5.65	..	17.23
1955-56 ..	18.62	0.08	..	19.41
1956-57 ..	20.30	..	1.31	19.74

Due to a good cane crop and establishment of additional capacity recently licensed, the production of sugar during the 1956-57 season totalled 20.3 lakh tons. This is an all-time record and exceeds the previous year's figure by 1.7 lakh tons.

Outlook

According to the first estimate, the area under sugarcane during 1957-58 is reported to be 6.3 per cent. higher than the corresponding figure for 1956-57. The largest increase is in U.P. and this is attributed partly to high prices of *gur* at the time of sowing and partly to better irrigational facilities and seasonal conditions. The other important sugarcane-growing States where the area under cane has gone up are the Punjab, Bihar, Madhya Pradesh and Rajasthan. There has been a small decrease in Andhra Pradesh and West Bengal. Due to this and establishment of new capacity, it is estimated that sugar production during 1957-58 would total about 21.50 lakh tons, or about 1.2 lakh tons more than in 1956-57.

The additional targeted capacity for the second Five-year Plan has already been licensed. But it should not be understood that there would be no further development for a long time to come, as happened between 1937 and 1953. Our consumption of sugar is steadily increasing on account of increase in population, changes in the dietetic habits of the people and increase in the general standard of living. Very soon we should be called upon to formulate the programme for the third Five-year Plan and to revise the target in an upward direction. If we are able to establish a regular export trade in sugar, the target will have to be further increased to provide for this also. From the performance of the industry so far, it can be confidently hoped that it will be able to develop itself further to serve the country in meeting its requirements of sugar in the future also.—*All Rights Reserved.*

At its meeting held on the 12th inst., the Joint Council of Action of Bihar Sugar Labour, representing 35,000 sugar workers in 28 sugar mills of Bihar, ratified its call to strike with effect from the 24th inst. The three important demands of the workers are 25 per cent. interim wage increase, immediate payment of bonus for the 1956-57 season and payment of retaining allowance to workers for 1957. A latest report says that the State Government has agreed on the question of retaining allowance. The strike, if it is not averted, will paralise the whole sugar industry in Bihar, resulting in loss of output, apart from financial loss to cane growers and loss of revenue to the State exchequer.

A plea for the Government of India setting up a board with a High Court Judge as Chairman to fix the price of sugarcane in future has been put forward by Mr. Genda Singh, a member of the U.P. and Bihar Sugarcane Board. The fixation of price now being done by the Centre is, in his opinion, undesirable, as it cannot do justice to the cane growers.

MANCHESTER LETTER

(*Concluded from page 125*)

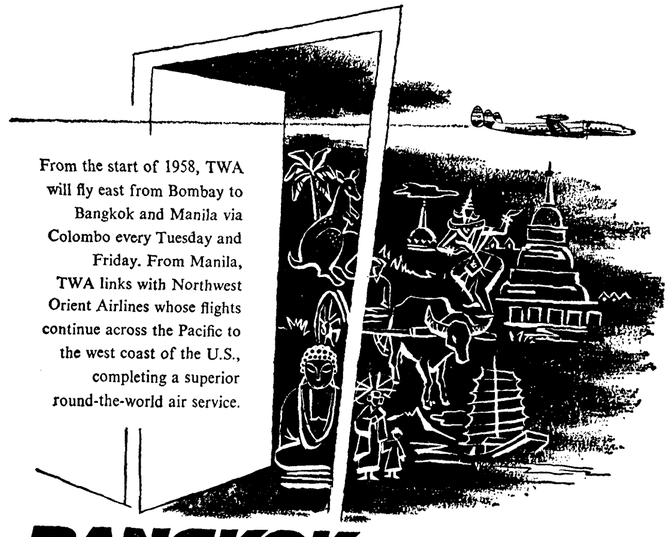
competition in overseas markets from countries often able to buy their raw material at very considerable discounts.

Arrivals of Clothing

Much of the publicity attached to the rising imports of foreign cloth has centred on the flow of unfinished fabrics into Britain for subsequent processing and making-up. Less has been heard of the arrival of finished products, but the garment manufacturers' section of the Chamber draws attention to this danger. In the first nine months of last year, imports of foreign clothing cost £13,900,000, a rise of about £2,000,000 as compared with 1956. The principal source of supply was again Hong Kong with £5,100,000, a figure slightly below the level of imports from the Colony in 1956, but considerable ground was made by Italy, with goods valued at £2,500,000.

Imports of shirts from Hong Kong in the first nine months of last year amounted to nearly 500,000 dozen, a smaller total than corresponding arrivals in 1956. The report comments: "This may represent a realisation on the part of the public of the better value offered by British manufacturers and a taste for the special non-iron finishes now becoming so popular as a result of the close collaboration between the textile finishing industries in this country."—*All Rights Reserved.*

TWA opens the FAR EAST



From the start of 1958, TWA will fly east from Bombay to Bangkok and Manila via Colombo every Tuesday and Friday. From Manila, TWA links with Northwest Orient Airlines whose flights continue across the Pacific to the west coast of the U.S., completing a superior round-the-world air service.

PAKISTAN'S JUTE INDUSTRY IN 1956-57

EXPORTS OF RAW JUTE DECLINE

THE year ended 30th June 1957 proved to be a none too happy one for Pakistan's economy. With a further deterioration in food situation, necessitating substantial import of foodgrains, which in turn caused a setback in balance of payments position, a slowing down in the tempo of industrial progress and fresh momentum to inflationary tendencies, the country's economy was subjected to serious strains during the year. Though the jute industry in Pakistan continued to hold the pride of place among the country's foreign exchange earners, it could not escape the setback in the country's economy as a whole. While there was no increase in raw jute production during the year, the domestic consumption recorded a rise, with the result that exports of raw jute suffered a marked fall. The decline in earnings from raw jute exports were, however, offset to a slight extent by the rise in those from exports of jute manufactures.

A complete, but brief, picture of Pakistan's jute economy in the 1956-57 season is given in the State Bank of Pakistan's *Report on Currency and Finance for* 1956-57, received by us only this week. A perusal of its account shows that there was a decline in the area under jute in Pakistan from 1.63 million acres in the 1955-56 season to 1.23 million acres in 1956-57. Notwithstanding this fall in acreage, the output of raw jute was nearly maintained at the previous season's level, the actual production being 6.40 million bales, as against 6.50 million bales in 1955-56.

The following table shows the changes in acreage and output of raw jute during the last four seasons:

(Area in 000's acres; yield in 000's tons)

	Area	*Yield*
1952-53	1,907	1,250
1953-54	965	714
1954-55	1,243	832
1955-56	1,634	1,161
1956-57	1,230	1,143

With a carry-over of about 0.20 million bales, the total supply aggregated 6.60 million bales, a shade less than 6.85 million bales in the previous year. The E.P.C. registrations with the State Bank of Pakistan declined sharply from 5.94 million bales to 4.77 million bales, mainly accounted for by the lower offtake from India, which shrank from 1.57 million bales to 0.75 million bales. Exports to overseas countries also declined, but only to a slight extent. The explanation for the decline in Indian purchases in the open market is the large-scale border smuggling of raw jute to India. After making allowance for this factor and taking the domestic consumption at 1.15 million bales, the available surplus, except for a small carry-over, was all disposed of by the end of the season. The actual exports in 1956-57 aggregated 4.07 million bales, the lowest level in the past seven years, having declined from 5.68 million bales in the previous year. The following is the trend of country-wise exports during the past five years:

(In thousand bales)

	1952-53	1953-54	1954-55	1955-56	1956-57
India ..	1,491	1,360	1,231	1,354	614
United Kingdom ..	842	702	791	692	667
France	343	469	438	476	347

Total ..	5,274	5,132	5,139	5,681	4,067
Value (in crores of Rs.)	56 64	55 64	59 82	82 87	70 58

The export of raw jute to countries other than India were "adversely affected by the disruption of the Suez traffic and bottlenecks in internal transport on account of the requisitioning of the bulk of inland water transport and railway wagons for the movement of imported foodgrains." During the season, the arrival of jute at baling centres was much restricted in view of the tight supplies and the reserved attitude of sellers.

The tight supply position in raw jute and increased domestic offtake necessitated by the growing utilisation of installed mill capacity caused a rise in the price of raw jute. White Jat Bottoms, for instance, closed the season Rs. 6 higher at Rs. 36 per maund, and Export Firsts gained over the year Rs. 64 to Rs. 218 per bale. In view of the satisfactory price levels, there was no change in the minimum export price of raw jute, which had been raised in March 1956, by £1 to £91 per ton for Export Firsts as the basis.

The export duty on long jute was unchanged at Rs. 20 per bale, while duties on "cuttings and cutropes" and "Habijabi" were raised from Rs. 5 per bale to Rs. 10 and Rs. 20 per bale, respectively.

The figures of output of jute manufactures for the full year 1956-57 are not available in the State Bank's Currency Report. But, on the basis of the data for the first six months, the production during the year is estimated at 144,534 tons, as compared with the actual production of 130,209 tons in 1955-56 and 74,815 tons in 1954-55. Data from East Pakistan show that actual production in 1956-57 was 146,508 tons, as compared with 128,235 tons in 1955-56. The bulk of production was in sackings, the total of such being 105,356 tons in 1956-57, as compared with 94,351 tons in the previous season. The production of jute goods during the calendar year 1956 amounted to 146,695 tons, as compared with 103,224 tons in the previous year, representing an increase of 42 per cent. over the year. The increased production of jute goods has not only made the country self-sufficient in respect of its requirements, which are estimated at 40,000 to 50,000 tons per annum, but also enabled the building up of a good export business. In terms of value, exports of jute manufactures amounted to Rs. 9.35 crores in 1956, as against Rs. 6.72 crores in 1955, and accounted for about 6 per cent. of the country's total export earnings.

In terms of value, the export of raw jute during 1956-57 aggregated Rs. 70.58 crores which, as compared with the previous season, represented a decline of Rs. 12.29 crores, that is, from Rs. 82.87 crores. The value of jute yarn and gunny exported in the year under review was Rs. 9.10 crores, as against Rs. 10.57 crores in 1955-56 and Rs. 2.31 crores in 1954-55. The actual earnings (as distinct from the value of exports) from export of raw jute, which had steadily advanced from Rs. 53.26 crores in 1952-53 to Rs. 92.71 crores in 1955-56, suffered a setback to Rs. 80.85 crores, which in terms of foreign exchange was the lowest level since 1952-53. This decline occurred notwithstanding a distinct rise in export price and was attributable entirely to lower volume of exports. The sharpest decline was recorded in earnings from India, which came down by Rs. 8.95 crores to Rs. 7.24 crores. With this fall, India came to account for only 9 per cent. of Pakistan's total earnings from raw jute exports. Earnings from exports to the U.K., however, improved by Rs. 1.53 crores to Rs. 15.35 crores and it emerged as the single largest buyer of Pakistani jute, accounting for about 19 per cent. of the total receipts from raw jute.

Earnings from jute goods exports, which had increased from Rs. 36 lakhs in 1953-54 to Rs. 8.52 crores in 1955-56, rose further to Rs. 10.19 crores in the year under review, though the pace of increase slowed down considerably. This reflected the slowing down in the rate of increase in production of jute goods (11 per cent. in 1956-57, as against 74 per cent. 1955-56), as well as an increase in domestic consumption. To sum up, the earnings from export of raw jute and jute manufactures declined from Rs. 101.23 crores to Rs. 91.04 crores, in consonance with the fall in earnings out of Pakistan total exports from Rs. 189.87 crores to Rs. 170.05 crores. In other words, the ratio of earnings from raw jute and jute goods to the total remained unchanged at about 53.5 per cent.

PROTECTION TO DUNDEE JUTE CRITICISED

There seems to be a growing feeling among consumers of jute manufactures in the U.K. that they are being asked to pay an unnecessarily high price to protect the jute industry in Dundee through import control which is operated by a system of marking-up prices of imported jute cloth used for bag making. The main reason for the continuation of the system of marking-up prices is the desire to protect the Dundee jute industry against competition from the more efficient overseas manufacturers. It is feared that, if this protection were not given, there would be large unemployment in Scotland where Dundee is. The consumers' protest against the artificially high price for jute manufactures is evident from two letters to the Editor, *Financial Times*, London, last week. It is alleged that the mark-up amounts to no less than a tariff on imports and is contrary to the assertion of the President of the Board of Trade (made in Parliament in December last) that Britain should not use tariffs to maintain full employment in any industry.

In July last, the U.K. Government reduced the mark-up of those widths of jute cloth most commonly used in bag making from 40 per cent. to 30 per cent., in accordance with the Board of Trade President's promise in May last to restore the competitive position of the jute sack made from imported cloth. It is stated that "the standard new hessian jute bag used largely for packaging of food still includes a mark-up content of about 5d. which represents approximately the amount by which it exceeds its chief competitor, the paper sack, which is not subject to similar Government interference in regard to price." One of the correspondents points out that "a purchaser at present either pays more than he should for a hessian jute bag which can, of course, be used several times or buys the cheaper paper sack with little or no re-use value. Either way, the country is the loser and inflationary pressure gets a fresh boost, this time through the agency of a Government department itself."

Refuting the argument that the system of mark-up is necessary to avoid unemployment, the writer points out that the Ministry of Labour figures have not shown any deterioration at all since July last in the unemployment figures either in the jute industry as a whole or in the Dundee area. He, therefore, concludes that "the Dundee jute industry is demanding for itself and receiving, with Government connivance, a level of protection beyond that required even to avoid unemployment."

Another correspondent, who is obviously a consumer of jute spun yarn, alleges that, as a result of the protection to the Dundee jute industry, "the Controller has made it possible for the Dundee spinners to supply a quality of jute spun yarn which just would not be acceptable in this country if it were faced by competition from up-to-date overseas mills." He does not see any reason why the jute industry should be subsidised at the expense of manufacturers of goods for export who have to compete in the export markets with overseas competitors to whom cheaper and better jute is freely available. It is not also obvious, he says, why protection should be extended to jute, when the same is denied to cotton textiles which also face similar competition. If, however, protection is necessary, the correspondent suggests, it can be given "by means of a straight tariff, which would then leave consumers of jute goods free to buy in the open market from whatever source best suited them."

U.S. BURLAP CONSUMPTION

The consumption of burlap in the U.S. during the month of December last amounted to 70.7 million yards, representing an increase of 7.7 million yards over the month. It, however, shows a decline of 1.3 million yards from that in the corresponding month of 1956. With the increase last month, the total consumption of burlap during the whole of 1957 aggregated 830.7 million yards, but this total falls short of the 1956 level by 47.3 million yards. Barring 1956, the consumption during the past year was the highest since 1948.

Stocks of burlap in the U.S. at the end of 1957 were of the order of 225 million yards, as compared with 267 million yards at the close of the previous year and were the lowest for the past four years.

INDIA'S NUCLEAR POWER RESOURCES

DR. BHABHA ON ECONOMIC ASPECTS

ONE of the main impediments in the way of rapid industrialisation of India is the paucity of power resources. The two main sources of energy in India are coal and hydro-electric power. Though the coal reserves are expected to last for several years to come, the geographical situation of the coalfields and the difficult transport position have contributed not only to the shortage of power in many of the industrial areas but to the high cost of energy consumption. The hydro-electric potential also is not uniformly spread over the whole of the country and is by no means plentiful. Further, in some parts of the country, it is subject to the vagaries of rainfall, which is seasonal and concentrated in only about three months of the year.

The only other sources of power which India can develop, in consonance with the recent trends in other industrially developed countries of the world, is nuclear energy. It is gratifying to learn from Dr. H. J. Bhabha, Chairman of the Atomic Energy Commission, that the known reserves of this source of energy in India are vast and could be made available to the major part of the country at a competitive cost. Dr. Bhabha, who delivered the Sri Krishnarajendra Silver Jubilee Lecture in Bangalore under the auspices of the University of Mysore last week, disclosed that the known Indian reserves of uranium in ore, containing more than 0.1 per cent., exceeded 30,000 tons and those of thorium were about 500,000 tons. These reserves exceeded in energy value the equivalent of 30 times the reserves of coal in India and were enough to support an annual *per capita* energy consumption in the country equal to that of the industrially more advanced countries for over 300 years. Dr. Bhabha was confident that it would be possible to obtain energy in a controlled manner from fusion within a much shorter period.

"Per Capita" Consumption

Dr. Bhabha pointed out that the *per capita* energy consumption in India was about one-twelfth of that in the U.K. and one-twenty-third of that in the U.S. The reserves of conventional fuels and water power in India were, he said, not sufficient to enable its population to reach a standard of living comparable even with the present standard in industrially advanced countries. The *per capita* energy consumption in the U.S., he added, corresponded to the burning of about 9 tons of coal per head per annum, and that, if the same *per capita* rate of energy consumption in this country were to be ensured, India would require 3,600 million tons of coal per year, at which rate the known coal reserves in India would last for only 12 years. The hydro-electric potential, which could economically be harnessed, amounted to less than 40 million kw., or hardly 0.1 kw. of installed capacity per head of population. This is equivalent to a *per capita* consumption of one-third of a ton of coal per annum. The *per capita* installed electrical capacity in the U.S. is 0.63 kw. and in Norway 1.1 kw.

Turning next to the economics of atomic power development, Dr. Bhabha said that the peculiar conditions obtaining in India made it possible for atomic energy to provide the primary necessity of all industrialisation—electric power—at a cost less than coal in regions remote from the coalfields. These regions, in fact, constituted the major part of the country. The three special factors, which made nuclear power competitive over a large part of the country, were: (1) the geographical distribution of the coalfields, (2) the limited spare transport capacity available on the railways and (3) the great shortage of power in certain industrial areas. Fifty-six per cent. of the total known coal reserves of the country were in Bengal and Bihar and 80 per cent. of the coal production (in 1955) came from these two States, some of which having had to be transported for distances up to 1,500 miles.

Transport Cost

Apart from scarcity of transport facilities, the cost of transport is also very heavy. The transport of coal on the railways, as Dr. Bhabha pointed out, is heavily subsidised in the interest of the economy as a whole. In this connection, Dr. Bhabha gave some interesting figures. The real cost of coal from Bengal and Bihar collieries in places like Rajasthan and Delhi was over Rs. 80 per ton. Even if coal was supplied to Ahmedabad, Bombay and Madras from the Central India coalfields, the real cost, he said, would come to Rs. 50 per ton. With coal costing Rs. 50 per ton, the estimated cost of electricity from thermal power stations was about 4.7 nP (or 0.85*d.*) per kw.h. There is every chance of the pithead price of coal going up in the next few years, so that the cost of thermal power will also go up.

Dr. Bhabha also gave an idea of the cost of atomic power in the U.K. The capital cost ranged from Rs. 2,000 per kw. of net electrical capacity for a 60 mw. station to Rs. 1,470 per kw. for a 250 mw. station and the cost of power varied from 5 nP to 4.4 nP per kw.h. (that is, 0.8 to 0.7 anna or 0.9 to 0.8*d.* per unit), as against 4.7 nP (0.85*d.* per kw.h., the cost of thermal power in India. The third circumstance which favoured the economic operation of atomic power stations in India was that power was in short supply in the industrial areas of the country; the grid systems of Ahmedabad and Bombay, for example, had load factors of 63 per cent. and 69 per cent., respectively.

Dr. Bhabha was hopeful that atomic power would become progressively cheaper, as a result of technical advances leading to higher operation temperature, higher efficiency and lower capital cost. The technical know-how and equipment, he said, could be bought and, indeed, India would itself be able to provide the former within about five years. The main problem, which Dr. Bhabha himself posed, was that of finding the money out of savings required for rapid industrialisation. This is in fact, the greatest problem facing India at present.

PIG IRON FOR FOUNDRY INDUSTRY

Growing scarcity of raw materials is the principal problem of the foundries in India. There are as many as 1,300 foundries, of which 300 fall within the purview of the Central allocations, the rest being small foundries in the State lists. An idea of the rapid growth of this industry can be had from the fact that its requirements of pig iron, the main raw material, rose from 450,000 tons in 1955 to 750,000 tons in 1957. The magnitude of the scarcity of raw material will be evident from the quantum of pig iron allotted to it against this demand. The allocations actually fell from 300,000 tons in 1955 to 260,000 in 1957. It will thus be seen that, while the demand for pig iron rose rapidly, the supply declined, so that the scarcity was aggravated. Sardar Swaran Singh, Union Minister for Steel, Fuel and Mines, however, was somewhat optimistic that the worst was over and that the position would improve a little in 1958 and become positively better in 1959. He held out this hope on two grounds. Addressing the Indian Foundry Association's annual meeting at Calcutta last week, the Minister said that (*a*) the railways had arranged for their own imports and as such would not share from the common pool and (*b*) the "blowing in" of three blast furnaces, one each at Burnpur, Bhilai and Rourkela, was likely to increase the supply to about 500,000 tons in the current year. He was confident that 1958 would be the last year of raw material shortage for the foundries, as there would be enough to go round from 1959 onwards.

Scrap and hard coke are two other basic raw materials required by the foundries. These two are not available both in quantity and quality. Referring to this position, Mr. K. L. Jalan, Chairman of the Association, said that, a few years ago, a sufficient quantity of good scrap was available from the railways, but, for the last two years or so, hardly any of the foundries had obtained scrap from this source. The price of scrap had also risen from Rs. 115 to Rs. 280 per ton. He suggested that scrap from the railways should be controlled and distributed by the Government. He urged the Government to adopt a systematic arrangement for the allocation of scrap from the main producers in different units and evolve a plan for collection of melting scrap, its classification by categories, fixation of a fair price and the organisation of a reliable scrap trade. Simultaneously, the Government should, he said, realise that millions of tons of scrap which were being exported could be converted into useful steel. As regards coke, his main complaint was that a difficult supply position was made more acute by inadequate transport facilities. Many a time, when suppliers were in a position to offer coke or pig iron, wagons could not be found. Accordingly, he pleaded for a more realistic allocation of wagons.

Sardar Swaran Singh did not seek to underestimate the difficulties of this key industry. He counselled patience, saying that current scarcities represented "pains of growth" and that they were, therefore, of a passing nature. Scarcity of foreign exchange was the root of the difficulty and the solution lay in raising indigenous production, for which the Government was working very hard. In the meantime, it was doing its best by rationing the available supply. The Minister, however, did not agree with Mr. Jalan's statement on the supply of scrap. He contended that it was incorrect to say that railway scrap was no longer available. For it was controlled and channelled mainly to industries which produced for the railways' requirements. It might not have gone to some firms, but it went to the industry as a whole. The Government had banned export of all types of scrap that could be used in India, besides imposing a price control to prevent high prices. He thought that, if these steps had not helped ensure supplies at a reasonable price, one obvious reason was that it was not worthwhile for agencies to collect and supply scrap. He suggested that industries should themselves co-operate and evolve a mechanism for scrap collection. The Association will find it worthwhile to implement this suggestion; scrap collection in India at present is not half as vigorous as it was during the war years.

EARTHQUAKE-PROOF ATOMIC REACTOR

Britain, having already obtained an order to supply Italy with an atomic reactor, has her scientists and construction engineers now engaged in finding the answer to a special problem—to meet the needs of Japan in the field of nuclear power. This problem is to make the Calder Hall type of reactor so strong that, however badly it might be shaken in an earthquake, there would be no danger of radiation outside.

As it stands, the reactor at Calder Hall, in Cumberland, has been constructed with such careful scientific calculation of possible strains and stresses that it is judged to be absolutely safe in all normal circumstances. This opinion is supported by Japanese scientists who, after examining all types of reactor, have come to the conclusion that none can so easily be made earthquake-proof as the Calder Hall type. Japanese scientists think that few additions are needed, and that these would add little to the cost of making such a reactor proof against earthshock.

Because Japan lies in a zone which experiences severe earth tremors, the greatest emphasis is being laid on selecting reactors sufficiently robust in construction to remain safe in extreme conditions, and an "earthquake study team" has been sent to Britain in advance of the main body of the Japanese atomic-power negotiating mission, which reached London on 18th January. The advance party of three experts, headed by the Vice-President of the Japan Atomic Power Company, arrived in Britain on 4th January. The special earthquake study team, comprising five men, arrived in London on 8th January, 1958. This party has been in consultation with British atomic-energy and construction experts in various parts of the United Kingdom. Mr. D. Yasukawa, President of the Japan Atomic Power Company, is leader of the main group and negotiating mission of eight scientists and constructional engineers.

After full and detailed discussion with British atomic scientists and representatives of British industries connected with the building of nuclear energy plant, it is expected that tenders will be invited from the British groups interested. Assuming that all the parties are satisfied, it is hoped that it will be possible to complete the final terms so that construction of an approved reactor for Japan could begin in October. According to present arrangements, the negotiating mission will leave Britain about the middle of February and will split into two parties, one returning to Japan by way of Europe, and the other visiting the United States on its way back to Tokyo.

CONCRETE RUBBER FINISH

Considerable interest has been aroused among architects and designers in a technique developed in Britain for the application of figured rubber sheeting to the surface of concrete to give it a decorative finish. The method is described in a brochure dealing with the uses of rubber in building just issued in London by the Natural Rubber Development Board. The publication, entitled *Casting Concrete Against Textured Rubber*, presents in compact form all the basic information needed to use the technique.

As a result of development work jointly carried out by the Natural Rubber Development Board and the Cement and Concrete Association, the stage has been reached where, according to the brochure, an architect now has at his disposal tested techniques for finishing concrete by means of rubber sheeting, and there are a varied range of patterns at his disposal. All these patterns are applicable both to precast units and concrete cast *in situ*. Subjects covered in the brochure include the positioning and fixing of rubber in moulds, lubrication of rubber, concrete mix and its placing in moulds, stripping of rubber, and selection of rubber and choice of patterns.

It is stated that concrete cast against rubber has shown good results in weathering tests, and the brochure comments: "There are on view at the Wecham Springs station of the Cement and Concrete Association some panels in a satisfactory condition which were cast in 1949, and have since been continuously exposed to the weather." Illustrations in the brochure show close-up photographs of concrete slabs cast in a variety of well-tested patterns, as well as of a number of notable buildings decorated by this rubber-against-concrete technique.

NEW PRODUCTS AND PROCESSES

New Technique for Apple Breeding

A NEW technique in apple breeding which may substantially shorten the time required for new varieties to gain commercial acceptance is being employed at Cornell University's New York State experimental station. Under the conventional apple breeding procedure, thousands of seeds obtained from fruit produced by cross-pollination of two known parents must be planted each year in greenhouse beds, and grown into seedling whips six to eight feet tall. They are then set in hedge rows in the field where they remain until they produce fruit, after a matter of from eight to ten years. These fruits are then evaluated for desirable characteristics. On the average, however, only one seedling out of a thousand shows sufficient promise to merit further propagation by budding and further testing. In the new method, the seeds are planted in individual pots. As soon as they are well started, a thin section of a root is made with a microtome and examined under a microscope to determine the number of chromosomes—the character determining elements—which are present. By selecting the seedlings by microscope, the total number to be grown to fruiting can be drastically reduced it is claimed at the outset, simply on the basis of the number of chromosomes which are present. To speed up the process still further, buds from selected seedlings are placed on special root-stocks, thus increasing the number of trees of the original seedling before they even begin to bear fruit. When the original seedling and these budded trees produce fruit, enough fruit is available to evaluate it for dessert purposes and for processing long before fruit is available in the usual apple breeding cycle. As a result of using the new technique the station now has several bushels of fruit of what are stated to be highly promising selections from a cross between the Northern Spy and Golden Delicious varieties made in 1943. One of the most promising of these weighs 50 pounds to the box as compared with 36 pounds for McIntosh.

Mango Cereal Flakes

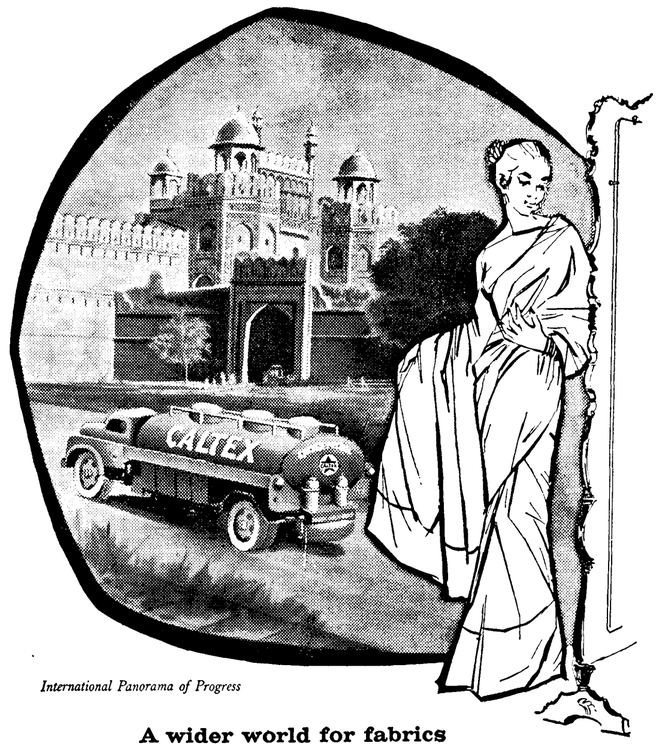
Breakfast food, porridge or snacks for a common man in India will be made more delicious, nutritious and palatable in future with the use of mango cereal flakes. The new product has been developed as a part of investigations on new economic uses for mango at the Central Food Technological Research Institute, Mysore. The product, which has an approximate composition—mango solids 49 per cent., wheat flour 23 per cent. and added sugar 28 per cent.—can also be used as thickener and flavouring material for ice creams. It has been found highly nutritious, containing, among others, carotene, equivalent to about 3,500 I.U. of vitamin A per ounce. Mango cereal flakes have been found acceptable to all tastes and have appreciable possibilities for successful marketing at home and abroad. In hermetically sealed tins and glass containers, they have good preserving qualities. The method of preparation consists in cooking the wheat or corn flour to gelatinise the starch and destroy the enzymes. Mango pulp, partially neutralised and heated separately, is added to the cooked flour. Cooking is continued till a desired consistency is obtained. Sugar and other additives are then added, the mixture is made homogeneous and dried into flakes on a suitable drum drier. This product offers good means of utilising not only large quantities of surplus fruit but also pulp obtained as a by-product in fruit canning. Production can be taken up independently, but preferably in conjunction with other lines of fruit processing. With some additional equipment, existing fruit and vegetable preservation factories can take up commercial production without much difficulty.

Sillimanite Refractories From Sillimanite Waste

The Central Glass and Ceramic Research Institute, Calcutta, had initiated investigations to examine the causes of high porosity of locally manufactured sillimanite refractories and if possible, to produce better refractories by even utilising the natural sillimanite waste obtained during sawing the boulders into blocks. As a result of systematic investigations, it is now possible to produce much superior sillimanite bricks having porosity and other properties similar to those of samples obtained from other countries and not so far possessed by the locally made products. The methods worked out do not involve any radical departure from the existing practice followed by the refractories works and it is possible to utilise waste sillimanite instead of kyanite. Sillimanite needs no calcination and thus has an advantage over kyanite. Compared to calcined kyanite natural sillimanite is hard to grind and as such the cost of grinding it to the desired fineness may be slightly more but this is compensated by saving the expenditure incurred otherwise on calcining kyanite. Other factors in the manufacturing process being practically the same, it is felt that there will be no appreciable increase in the cost of production.

"Wonder Metal" in Pure Form

The so-called "wonder metal" niobium is now being produced in its purest form for the first time by scientists of the Westinghouse Electric Corporation at Pittsburgh, Pennsylvania, U.S. Scientists and engineers believe that niobium may be of major importance in the development of future aircraft engines and nuclear reactors. Discovery of a method to purify niobium, formerly called columbium, is considered an important step towards its practical application in industry. It is expected that new alloys based on niobium will be able to maintain their strength at temperatures above 1,800°F. This is well above the highest operating temperatures of the best existing engine and reactor structural materials. The Westinghouse scientists purified the metal by repeated meltings in a nearly perfect vacuum. The high temperature and low pressure distils impurities out of the metal.



International Panorama of Progress

A wider world for fabrics

CALTEX

PETROLEUM PRODUCTS

In many countries, the subtle influences of past traditions and customs have been combined with modern materials and design to create new trends in fashion. This resurgence-in-textiles on the part of European and other nations has broadened their panorama of progress, created a wider world for fabrics through expanded production, employment and opportunity. The textile industry is just one of many nourished by Caltex quality fuels and lubricants. Through the power of petroleum, Caltex keeps industry and every segment of society expanding, aiding the prosperity of today and holding forth the promise of an even brighter tomorrow to over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

PADDY CROP INSURANCE FOR CEYLON

OUTLINE OF A TENTATIVE SCHEME

A PREDOMINANTLY rice-eating nation, Ceylon, our island neighbour in the south, has reason to feel despondent over its food situation. For its food shortage is more acute than that facing India. Out of its yearly consumption of rice of about 900,000 tons, Ceylon has to import from abroad roughly 50 per cent. In addition, a large quantity of wheat flour is also imported. This heavy import of food is a national anxiety for Ceylon, as it involves a great drain on the country's foreign exchange. During the seven years 1949-55, Ceylon's food import bill averaged Rs. 600 million annually, which was over two-fifths of total imports. Imports of rice alone cost the country Rs. 222 million in 1955, although it was less than 50 per cent. of normal imports in previous years. Higher production of rice or paddy is, therefore, a question of great national urgency for Ceylon. The method of doing it, put simply, is partly to increase the yield from lands already under paddy and partly to extend the area sown to it.

Like many other monsoonal countries, paddy cultivation, or agriculture in general for that matter, is a gamble in the monsoon. The problems of paddy production are those arising from natural causes like uncertainty of rainfall, hazards like drought and flood as well as those having their origin in economic and social or institutional factors such as pressure of population on land, uneconomic holdings, sub-division and fragmentation, absentee landlordism, insecure tenancy and share-cropping system, inefficient methods of production. The Government of Ceylon is fully aware of the problems to be tackled in order to improve and increase paddy production. The Food Production Department, which is directly concerned with paddy production, is active in promoting improved cultural practices, securing more intensive cultivation of food crops in areas where they are not grown, providing services of general benefit such as minor irrigation works and wells and financing through co-operative societies. While there is no doubt that the natural hazards of paddy production could be mitigated by measures such as irrigation, drainage, land reclamation, etc., on the one hand, and by improvements in social and institutional set-up on the other, still a great deal of uncertainty will always be there. For, no imaginable measures could make paddy cultivation completely independent of the monsoon. Secondly, most of the physical measures are to be justified by their cost-benefit ratio. There may be many cases, for instance, where flood is preventible but the cost of the preventive measures might be far out of proportion to the benefit. In such cases, it would be bad economy to spend more capital, especially in underdeveloped countries where capital is scarce, in preventing a risk than would be lost if the risk itself were to materialise. But, as against this, there is the consideration that, with a population constantly pressing against the land, no part of the latter could be given up for cultivation, simply because it is subject to periodical risks of crop failure. The risk has, therefore, to be faced. To this date, it is the owners and cultivators who have mostly borne these risks, often unaided and sometimes with the help of Government. But it is obviously too heavy a burden on the small owners and operators who form the majority of paddy-land holders. If the crop fails on account of bad weather or other similar factors, the farmer bears a burden which may become permanent and which he may find it difficult to throw off.

Crop Failure—Its Effects

Farmers, however, are not the only sufferers from crop failure, especialy when the failure is extensive and occurs in respect of a principal crop. In a predominantly agricultural country, it creates a general uncertainty, prices tend to go up, balance of payments and the budgetary position of the Government are affected. Unless, therefore, relief is an accepted and preferred policy of the Government, insurance against climatic hazards would appear to be the relatively less costly and more appropriate way of meeting crop failures. Crop insurance, through reducing the uncertainty of loss through a combination of a large number of similar uncertainties and through distribution of the burden of loss by utilising funds accumulated in advance, offers a measure of security to the farmers. Although insurance cannot prevent crop failures, it can at least take the sting out of the calamities that befall the cultivators.

At the request of the Government of Ceylon, the Food and Agriculture Organisation of the United Nations assigned to it the services of an agricultural insurance expert, Dr. P. K. Ray, to advise on crop and livestock insurance. The expert, after a detailed study of the problem, submitted a report, entitled *Report to the Government of Ceylon on Crop (Paddy) Insurance.* This is a general study, on the basis of available data, of the problems and possibilities of paddy crop insurance in Ceylon, of likely insurance cover and premium rates, its other possible features and financial implications. It is not an actual blue-print for paddy crop insurance in Ceylon as much still needs to be done before applying the scheme in practice like determination of coverages and premiums, preparation of contract and policy forms, laying down of procedures for the collection of premiums, payment of indemnities, organisation of the necessary administrative set-up and training of technical staff, etc. Nevertheless, the report is of particular interest to India as well, in view of the similarity of problems faced in this country and the equally urgent need for giving relief to farmers from calamities which it is beyond their power to control.

Benefits of Crop Insurance

The principal benefits of crop insurance are the following: (1) It would protect farmers against losses caused by crop failure, and thereby ensure a stability in farm income. (2) If the insurance were combined with sizable storage of an insured commodity like paddy, it might help to reduce the uncertainty of supplies and of prices during periods of extreme scarcity. (3) Insurance will improve the economic position of farmers and thus reduce their dependence on private moneylenders. (4) It would also strengthen the position of co-operative credit institutions, in so far as it enables farmer-members to repay their loans in years of crop failure. (5) Crop insurance would encourage more intensive cultivation and thus result in increased crop production. (6) Government would be relieved of the financial burden of providing relief and distress loans to farmers, unless the loss was very widespread and of a catastrophic nature.

Practical Difficulties

While the need for and the benefits of crop insurance are generally recognised, the difficulties in the way of its introduction are not always fully realised. Some of the main problems of crop insurance in an underdeveloped and predominantly agricultural country are: (1) Lack of basic, reliable, long-period data regarding acreage, average yield and the extent of damage caused by various natural hazards, (2) smallness of the holdings which implies not only greater moral hazard (that is probability of loss due to intentional act or omission on the part of the insured) from the insurance point of view but also makes it administratively difficult and costly, (3) complicated terminal system and absence of proper registration of titles which renders it difficult to determine the insurable interest and the beneficiaries of insurance as also to fix and allocate the liability for premium payment, (4) lack of understanding of the real meaning and significance of insurance, (5) poverty of the cultivator and (6) lack of trained personnel to run the administration. While many of these problems are to be encountered in Ceylon, the more serious of them are smallness of paddy holdings, complicated tenurial system and lack of proper registration of titles. On the other hand, there are certain factors favourable for paddy insurance in Ceylon which singles out that country from other underdeveloped countries. These are: (1) Smallness of the country, only 25,000 sq. miles in area, (2) relatively better economic condition of the people. (The *per capita* domestic product of the island was Rs. 517 in 1953, as against Rs. 290 in India and Rs. 220 in Pakistan), (3) a high percentage of literacy (about 66), (4) a fairly extensive

Homage to the new lord of the skies

An unusual painting by the poet Rabindranath Tagore—which has inspired this design—paid subtle tribute to the modern aircraft: birds bowing to the man-made 'bird'. Nor were birds slow to recognize the new lord of the skies as the first I.A.C. Viscount touched down majestically at Delhi's Palam airport.

The Viscount represents a revolutionary advance in air travel - bringing the jet age to India. Cruising at 325 m.p.h. above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets. To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below. A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience while saving nearly a third of your flying time on the services between Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

INDIAN AIRLINES CORPORATION

IN THE EXPANSION OF INDUSTRIAL CAPACITY

Specialised machine tools, new methods of production and highest quality materials are the ingredients which make this up-to-date motive power—Orient Industrial Motors—indispensable for mass production.

Designed to conform with modern trends and requirements of Industry these motors are of robust construction, are liberally designed and embody many new features.

DEVELOPMENT OF RAILWAYS

ALL SET TO ACHIEVE SECOND PLAN TARGETS

By Jagjivan Ram

MINISTER FOR RAILWAYS, GOVERNMENT OF INDIA

THE *sine qua non* of any economic development programme is an adequate means of transportation to carry raw materials to manufacturing points; to help distribute the finished goods to consumption centres; to make manure, fertilisers, seeds, etc., easily available to the countryside; and to bring in the ripe produce to hungry towns.

India has launched on a big industrial and agricultural expansion programme. For its fulfilment, it is essential that our transportation capacity should keep pace with, if not be a step ahead of, the additional production capacity.

Since in India railways are the chief carriers of passengers and goods, the main brunt of increased economic activity, quite naturally, has fallen on them.

Main Objectives

The railway development plans are, therefore, essentially and inevitably a part of India's general economic expansion plan, and our main objective is to expand our goods-carrying capacity in proportion with the general expansion of industrial and agricultural production.

Out of this overall objective other corollaries follow: (1) We should, in ever-increasing measure, depend on indigenous industry for our own needs of rolling stock and other equipment. This, incidentally, will help save us a lot of foreign exchange, increase the country's prosperity by increasing indigenous production and employment opportunities, and will make us relatively independent from the sources of supply abroad. (2) For obvious reasons, we have to give first priority to the traffic requirements of basic industries such as coal, steel, cement, etc. (3) We have to rehabilitate and maintain our rolling stock, track, bridges, etc., in the best trim to enable satisfactory carrying of the increased traffic.

If we are to work to the enhanced target of goods traffic from 42 million tons to 61 million tons, the requirements of the second Five-year Plan on the railways are likely to cost the nation about Rs. 1,425 crores—about Rs. 300 crores more than the original sum of Rs. 1,125 crores allotted by the Planning Commission.

The aforementioned amount is scheduled to cover the following, among other things:

(a) Construction of about 842 miles of new railway lines mainly to serve the requirements of the coal and steel industries; (b) renewal of about 8,000 miles of existing track which has fallen into arrears, owing to shortage of rails and sleepers; (c) doubling of about 1,607 miles of track, where additional capacity is required on the existing single lines; (d) conversion of about 265 miles of metre-gauge lines into broad-gauge; and (e) electrification of about 1,353 route miles of existing railway lines, where density of traffic is likely to be such that steam traction cannot cater to the needs.

We propose to purchase the following quantities of rolling stock during the second Plan period: Locomotives 2,364; coaching stock (in units) 11,575; and wagons (in 4-wheelers) 107,247.

We have ordered 100 diesel electric locomotives and the first batch of 20 has already arrived. These engines will initially be used on certain busy main lines, pending completion of electrification of those lines. As electrification is completed, these engines will be shifted to other areas where, meanwhile, the traffic density would have increased.

There will be a large number of line capacity works like remodelling of important marshalling yards, improvement of goods facilities, opening of new crossing stations, provision of additional loops and extension of the length of existing loops, etc., and, of course, a sizable expansion in railway workshops, sheds and sick lines to help to get the most out of the rolling stock.

Works Programme

The second Plan programme has been on the way for over a year and a half, and it seems to be a good mile-post to do a bit of stocktaking. I give here an idea of the position as at the end of 1956-57, the first year of the second Plan.

The railways each year prepare a "Works programme," detailing the new works to be taken in hand in a particular year. The programme for 1956-57 made provision for new works which, on completion, were estimated to cost in all Rs. 330 crores. The break-up is:

Item	*Anticipated cost* (Rs. crores)
Rolling stock	148
Workshop, plant and machinery ...	27
Track renewals	21
Bridges	6
Line capacity works	43
Electrification	31
New lines	16
Staff quarters and staff welfare ...	17
Railway users' amenities	4
Other works	17
Total	330

The 1956-57 budget provision for new works and the works in progress was Rs. 193 crores: Rs. 88 crores for rolling stock and Rs. 105 crores for other works. Out of this sum, the railways, despite the shortage of essential materials like steel and cement, have spent a total of Rs. 179 crores.

Actual deliveries of rolling stock up to the end of March 1957 were: locomotives 664, coaching stock (in units) 1,236 (excluding EMU stock), and wagons (in units) 34,387.

A total of 2,800 miles of surveys was approved during the year, and work in the field is actually in progress on about 2,000 miles.

Work on three new lines was completed during the course of the year and these were opened to traffic. These are the 37-mile Ernakulam-Kottayam metre-gauge line on the Southern Railway, the 24-mile Champa-Korba broad-gauge line on the South-Eastern Railway, and the 27-mile Fatehpur-Churu metre-gauge line on the Western Railway.

In addition, the seven-mile line from Gandhidham to the new Kandla port was opened for both goods and passenger traffic.

Work is in progress on about 556 miles of new railway lines, the important ones being the Rourkela-Dumaro, Bhilai-Dhalli Rajhara, Etah-Burhan, Indore-Dewas-Ujjain, Chandrapur-Muri, and Noamundi-Banspani.

Work is also in progress on the Rohtak-Gohanna section of the Northern Railway (20 miles), and will be started shortly on the Akbarpur-Tanda section (11 miles) of the same railway.

The conversion of the Renigunta-Gudur metre-gauge section of the Southern Railway into broad-gauge, a total of 52 miles, at an estimated cost of Rs. 2 crores has been completed and opened to traffic.

Work was in progress on about 670 miles of doubling, of which about 350 miles lie on the South-Eastern Railway alone. A few of the important sections where doubling work is in progress are: Delhi-Mathura, Saharanpur-Moradabad, Kanpur-Allahabad, Delhi-Rewari, Arkonam-Jalarpet, Bezwada-Gudur, Manoharpur-Rourkela, Rajkarswan-Barajmda, and Rourkela-Drug.

Electrification

Work on the Howrah-Bandel main line has been completed and that on the Sherophuli-Tarakeswar section of the Eastern Railway will be completed shortly. The Howrah-Bandel electric service was inaugurated by the Prime Minister on 14th December 1957.

It has now been decided that the railways should use the alternating current single-phase 50-cycle system, instead of the direct current system which has hitherto been in vogue, and on which our original plans were based. This decision is in line with developments in several foreign countries and has been reached after a great deal of careful thought and study.

The routes to be electrified will be in the east: the Calcutta suburban area, Howrah to Moghalsarai, Howrah to Khargpur and Asansol-Sini-Tatanagar-Rourkela-Rajkarswan-Noamundi—a total of 1,061 miles; in the west: Igatpuri to Bhusaval 192 miles; and in the south: Tambaram to Villupuram 100 miles (including a third line from Madras to Tambaram).

A large number of workshops and loco sheds on the Indian railways are being expanded and modernised to meet the maintenance requirements of the increased holdings of rolling stock.

As many as 67 goods yards are being remodelled, including major remodelling of marshalling yards at Moghalsarai, Ondal, Tatanagar, etc. Work on providing modern marshalling yards at Bhilai and Rourkela is in progress. As many as 52 new crossing stations are being opened to increase line capacity. At a large number of stations, the length of existing loops is being increased and additional loops are also being provided, depending upon the requirements of individual sections.

Amenities

Railway users' amenities are also receiving close attention. A large number of works are in progress at various stations. A sum of about Rs. 3 crores was earmarked for such works during 1956-57. It is proposed to spend about the same amount during 1957-58.

Some of the amenities with approximate proposed expenditure during 1957-58 are: improved facilities in existing carriages, Rs. 60.91 lakhs; improved facilities on platforms, Rs. 75.66 lakhs; improved waiting and other facilities at stations, Rs. 39.09 lakhs; and better and improved water-supply facilities at stations, Rs. 21.86 lakhs.

During 1956-57, the railways spent about Rs. 8.15 crores on staff quarters and other amenities, including Rs. 6.80 crores for the construction of new quarters and improving the existing ones.

During 1957-58, a total of Rs. 10.77 crores has been earmarked for such works, of which about Rs. 1.14 crores will be spent on providing new hospitals, health centres, etc., and improving facilities in the existing ones, while about Rs. 9.63 crores will be spent on providing quarters, improving the existing ones, providing electric lighting, etc.

Goods Traffic

During 1955-56, the total tonnage of goods moved on the Indian railways was about 114 million tons, which figure increased to about 125 million tons during 1956-57, representing an increase of about 10 per cent.

The line capacity and other works proposed take a long time to develop. In the meantime, we are resorting to improved operational methods leading to better utilisation of wagons by running block trains and express goods services, running goods trains to a time-table, reducing the time allowed for loading and unloading of wagons, round-the-clock working in important transhipment yards, reducing the number of disabled rolling stock, etc., to keep pace with the increase in traffic.

Self-sufficiency

The railways are very much alive to the importance of achieving self-sufficiency in the matter of stores, equipment and personnel, and are actively working to this end. Early in 1956-57, the Railway Equipment Committee submitted its report to Government. As a result of one of the recommendations, a nucleus Development Cell has been established in the Railway Board office, and, for the first time, the development of exclusively railway items has been taken over by the Ministry of Railways. One of the first steps taken by the cell was to augment the wagon-building and underframe manufacturing capacity in the country from about 20,000 wagons and 300 underframes per annum to an ultimate of about 36,000 wagons and 1,700 underframes per annum respectively.

Issue of licences has been recommended in favour of some of the prospective firms capable of doing the work. A number of development orders for rolling stock components as well as electrical signalling items have also been placed during the year.

Production Up

At the Chittaranjan Locomotive Works, the rate of production has been stabilised at 14 WG locomotives per month. The total number of steam locomotives manufactured during the year 1956-57 was 156, making a total of 504 WG locomotives since the workshop went into production.

The monthly outturn of unfurnished coaches at the Integral Coach Factory at Perambur has been stepped up to 11 per month. During 1956-57, 88 shells were manufactured, making a total of 100 shells since the factory went into production on 2nd October 1955.

A workshop to manufacture spare parts for locomotives and to carry out major reconditioning of machine tools is being set up. In addition, it has been planned to set up two new wagon repair shops and modernise the existing ones.

The railways will require a large number of additional technical men to handle the increased traffic and maintenance requirements of rolling stock, etc. It is proposed to spend about Rs. 3 crores in the second Plan period to increase the training facilities on the railways. It is also proposed to recruit untrained hands and train them for the work they will be required to perform.

The requirements of the railways are of a specialised and technical nature, training for which can only be imparted at the moment by the railways themselves, as there are no outside facilities available. The staff are being trained in railway workshops, loco sheds and special training schools run by the railways.

Facilities are being expanded to train over 7,000 men of different categories at a time. About 125,000 men in all are expected to be trained during the second Plan period.

Before the commencement of the second working season, all works in connection with the training of the river Ganga, eight of the 15 main piers and all the four shore piers had already been completed. During the second season, which commenced from October 1956, work had been in progress on the remaining seven piers (all water piers), earthwork in the transhipment yard on the north bank, and on the raising of the formation in the river area to its final railroad level. All the main piers have now been completed, including the placing of grillages in position.

Fabrication of steel girder spans has been commenced and these are being received at the site.

Foreign Exchange and Steel

I have referred to some of our development projects to show that the railways have geared themselves for the tasks ahead to complete the large number of works necessary for their second Plan. Arrangements have been made for training the necessary personnel, but the greatest difficulty appears to be the question of foreign exchange and the shortage of steel. As for foreign exchange, the World Bank was approached for a loan and, earlier this year, it sanctioned a loan of $90 million. Similar help will be sought in the future also. Meanwhile, arrangements have been made for the procurement of iron and steel that is essential for railways, such as track and track fittings. A few months ago, a high-powered railway mission went to Europe and was able to buy 522,000 tons of steel.

Development in Assam Area

Geographically, the area which has received continuous attention from the Railway Ministry is Assam. When Partition cut off Assam and a portion of West Bengal from the rest of India, it was immediately decided that the Assam Rail Link should be constructed. This line of 141 miles was completed in December 1949 at a cost of Rs. 8.5 crores.

Its alignment crossed difficult terrain subject to heavy floods. Its protection works have received attention every year since construction, and have cost about Rs. 3½ crores. An engineer-in-chief was posted before the commencement of the last monsoon to hold the link and to devise further measures for its stabilisation. Fortunately, the line has survived the ordeal and has remained unbroken despite heavy monsoons.

It is proposed to commence work during this working season on further strengthening of the link, and also to survey an alternative alignment over certain stretches. Recently, the Railway Board sanctioned a preliminary engineering survey of this area. It is also proposed to take in hand the construction of a bridge across the Brahmaputra. Also, to improve operational efficiency in this area, the North-Eastern Railway has been split into two zones. The new zone, called the North-East Frontier Railway, has its headquarters at Pandu. A major railway repair workshop will also be set up at Bongaigaon, in Assam.

The satisfactory execution of the enormous task which the railways have undertaken during the current Plan period, depends to a large extent upon the full and willing co-operation of ten and a half lakh railway employees. It is a matter for great satisfaction to me personally that these railwaymen are fully alive to their responsibilities. The railway administration, too, fully realises the necessity of paying increasing attention to the welfare and contentment of railway workers and has a massive staff welfare programme in hand. I have full confidence that both the railway administration and the workers will render better account of themselves than in the past in the fulfilment of the bigger tasks which lie ahead.

A treasure to admire

ACHIEVEMENTS OF INDO-BRITISH ECONOMIC COLLABORATION

RELATIONSHIP FULL OF PROMISE FOR MUTUAL BENEFIT

By Paul Bareau

AN abiding impression which I carried back to London after a five-week visit to India was a conviction that never in the history of the two countries had collaboration between Britain and India been so close, so full of promise for continued development, and so mutually beneficial. Not only were personal and business relations on as friendly a basis as they had ever been, but—paradoxically, perhaps—the economic bonds between the two countries appeared to be firmer as a result of the fundamental change in the direct political links between them.

I was assured that there are now more Britons in India than there were in the days before Indian independence was secured, including in this comparison those who were in the old Indian Army. That in itself is an impressive token to the growth of economic collaboration between the two countries. A new world of business friends has been called in to redress the balance of the earlier political relations between them.

Although I want, in this article, to deal mainly with the commercial, industrial, and technical links between Britain and India, it would be misleading to discuss them in isolation from, and independently of, the cultural and philosophical relations on which they are based.

Common Heritage

Both countries have a common heritage of culture and philosophy which may belong more to the social and political field than to the economic but which, nonetheless, affects the latter. In the realm of technical collaboration, it stands to reason that a common language is of immense importance, and that for India it opens the door to the vast literature and the whole world of technical education on which the future progress of its industry so largely depends.

I recall, in this context, one of the series of Commonwealth economic conferences held in London at a moment of stress in the economic position of the sterling area. When the *communique* announcing the customary measure of general agreement on problems discussed was published, I asked one of the participants, a high British official, how he could explain the fact that general agreement could be secured on problems in which the individual interests of the participating countries could—in the short run, at least—appear to be so divergent.

He answered me with a parable. He said that towards the end of the conference, an Oxford and Cambridge dinner had been organised for the participants, and that it was discovered then that every delegation, save one (the exception was South Africa), was very fully represented at this gathering of graduates of the two universities. This, he said, symbolised the common heritage of culture and philosophy which, for all its intangibility, provided the real cement of the Commonwealth.

For good measure, he added that, in all the speeches made at this dinner, by far the most eloquent and impeccable English came from the Indian delegate (who shall be nameless). To complete the story, it would appear that the Indian delegate closed his speech with a peroration in which he quoted Scotland's national poet, Robert Burns, in the appropriate brogue. The Canadian delegate, who spoke next, expressed his admiration for this feat, but added that, in his opinion, this was "carrying coals beyond Newcastle!"

I hope that, in the search for national self-expression, India will not choose the negative way of discouraging the use of the English language, with all the cultural as well as economic and technical advantages it has brought and will continue to bring.

Ties of Sterling

Turning to the more strictly economic aspects of this problem of Indo-British relations and of Britain's contribution to India's development in the post-independence period, I would like to give first priority to the financial links, and particularly to the ties of sterling, that bind them.

When I was in India a few months ago, I heard occasional criticism of the London market as one which had become singularly narrow in its capacity to satisfy India's large capital requirements. The accusation is somewhat unfair. It should be judged, in the first place, in the light of the counterclaims, often made in Britain in these days, that the British investor is, in fact, pouring out too much of his substance in the development of oversea countries, and that better use could be found for his savings in domestic investment than in the underdeveloped countries overseas.

I disagree with this thesis, but I must stress the fact that India cannot claim exclusive rights or even priority in the London capital market. Given all the responsibilities which Britain has to endeavour to honour as an international banking nation, the amounts of capital that have been flowing to India from the United Kingdom are by no means negligible.

As a result of this common bond of sterling, India has had placed at its disposal not only the long-term lending but the banking facilities of the London banking centre. British banks have formed syndicates which have provided short- and medium-term credit to finance some of the more important projects now being carried through in India. The British Government's Export Credits Guarantee Department—now an integral part of the mechanism of the City of London—has played an important role in insuring the finance of the massive surplus Britain has been running in its trade with India and the substantial flow of exports of capital goods to India.

Providing Finance

Not least in the contribution Britain has made to India's industrialisation plans has been the provision of finance through the running down of India's sterling balances. Admittedly, this is money which belongs to India, and no one will gainsay India's right to use it. The fact remains that these substantial balances, which are now less than half of what they were a few years ago, have provided India with some £400,000,000 of truly convertible sterling which has been spent on the industrialisation programme.

The manufactures and, in particular, the capital equipment which have been bought with these resources have come from most industrial countries of the world. When, in my tour of Indian factories, I saw machine tools bearing the names of the industrial elite of the free world—the United States, Germany, Switzerland, and Britain itself—I was given the most convincing of all proofs that sterling is a convertible currency.

These expensive machine tools had been bought wherever the best quality was available. The cheques to pay for them were drawn in sterling. Britain had honoured those cheques by paying in whatever currency the buyer needed. When, therefore, thought is given to the economic partnership between the two countries, the financial and monetary ties that bind them should be given their due recognition.

When we think of the economic partnership between the two countries, the mind immediately turns to the more visible aspects of that collaboration—namely, to the partnership between British and Indian capital which is now to be found at so many points in the development of India's second Five-Year Plan, and which will carry over into the subsequent stages of the industrialisation programme. That collaboration is to be found in both public and private sectors of the Indian economy.

Major Projects

In the public sector, it is symbolised by the great steel works which is going up at Durgapur, West Bengal, on the orders of the Indian Government but with the help of British capital and technicians. Here, incidentally, is competitive co-existence at its best and most constructive. From an almost equal start the British, the Germans, and the Russians have been erecting steel plants of virtually equal capacity in India. It will be interesting to see which of the three pours its first ingot, and—even more important—which, in the long run, will prove the most efficient and provide the best return for the money invested in it.

Another important project in which British "know-how" is being put at the disposal of the Indian Government is the creation in India of a heavy electrical industry, in which Associated Electrical Industries (A.E.I.) is vitally interested. This is of interest as being another instance of British private enterprise contributing to a project which falls well and truly in the sphere of the public sector in India, and thus helps to create the "socialist pattern of society."

This is a project in which the imparting of expert skills is as important as the delivery of plant and equipment. In order to ensure a continuing supply of skill, the A.E.I. project includes a well-thought-out plan for the training of Indian technicians in A.E.I. factories and in technical schools in Britain. This also applies to the Durgapur steel project, under which several hundred Indian trainees are, and will be, working in Britain to familiarise themselves with the technical details of the plant now being erected; they will ultimately make it a wholly Indian-run enterprise.

Of this, and of the heavy electrical project, it may be said that, in due course, they will be entirely Indian-run, but on the basis of techniques imparted by Britain, and probably with the help of continuing collaboration between experts in the two countries.

Private Sector

It is, however, in the private sector of industry that the greatest diversity of Indo-British industrial and commercial collaboration is to be found. Illustrations of this mixture of skills and resources abound. They are to be found in such widely divergent fields as motor car production and assembly, telephone equipment, textile machinery, the manufacture of paints and varnishes, plastics, the manufacture of radios and components (in which no less than 10 British firms are involved), diesel engines, batteries, lamps, and cables.

In each of these cases, joint ventures have been launched which represent a genuine marriage of Indian and British resources. More often than not, the capital is jointly subscribed. Even if, in the initial stages, the administrative and technical skills are in large measure provided by British personnel, these men have taken good care to impart their knowledge to their Indian colleagues, and so to prepare for the day when the major responsibility for the running of these organisations is, in fact, in Indian hands.

In order to help this constructive marriage of British and Indian capital, the Indian authorities have gone out of their way to maintain freedom of remittance of dividends and profits from India to the United Kingdom.

May I stress here how important it is that this toleration should continue, even though the

November 22, 1957 marked a red-letter day in the life of our young company. On that day we celebrated the production of our 55,000th vehicle.

Behind its production lie a few brief but hectic years, years of careful, far-sighted planning and intense effort, ultimately translated into prideful achievement. Ahead of it lies an undreamt of future, a vast field of endeavour for us. To follow it, there will be a long long line of more and more vehicles to be produced under our plan of progressive manufacture.

These vehicles* are destined to play an important role in the country's transport and economy. Imagine the crores of rupees that are likely to be saved by way of foreign exchange! The Second Five Year Plan, which has been rightly called the "Transport Plan," is geared to the needs of rapid industrial development. The target is an annual manufacture of 57,000 vehicles by 1961. We have the will, the confidence and the ability to make a substantial contribution to it.

DEVELOPING MICA INDUSTRIES IN INDIA

ESTABLISHMENT OF A WET GRINDING PLANT SUGGESTED

INDIA would have for the first time a large mica wet grinding industry, if the recommendation of the National Council of Applied Economic Research, New Delhi, were accepted by the Government of India. The recommendation is based on a special project undertaken by the Council at the request of the Union Ministry of Commerce and Industry. The request was a sequel to the proposal put forward some time ago by a foreign firm for the establishment, in collaboration with Indian enterprise, of a mica grinding plant with a capacity of 1,000 tons per day, requiring a capital of Rs. 1.25 crore. After examining the various aspects of the project, the Council has urged the outright rejection of the foreign firm's proposal. For, in its opinion, the actual production of wet ground mica as envisaged in the proposal will be 225,000 tons per annum which is more than twice the entire U.S. output of 91,695 tons of dry mica and 14,490 tons of wet ground mica (in 1955) and the world consumption of ground mica will not reach the level proposed by the foreign firm in the next 20 years. But it has favoured the implementation of a more modest-sized plant.

The scheme evolved by the Council provides for the setting up of a mica wet grinding plant with an annual production capacity of 1,000 tons but expanded to 2,000 tons. The capital outlay of the plant is put at approximately Rs. 3 lakhs and the return on such investment is expected to be 17 per cent. or more per year. The Indian mica interests and the Government of Rajasthan, it is said, are ready to participate in the project; these two, it is said, can easily find the capital required. As regards the location of the plant, the Council feels that it is probably desirable to locate it near the supply of raw material, muscovite scrap, because of the reduction in weight in shipping, although this is slight. There should also be easy access to an exporting port.

The Council's suggestion for establishing a mica grinding project deserves to be supported. Although mica mining has been known in India since ages, the country has not developed mica industries worth any mention. The result is that it exports 75 per cent. of the total world supply, the average quantity actually shipped in the past five years being 367,000 cwts. valued at Rs. 9.06 crores. The exports comprise splittings, blocks and waste. If a wet mica grinding plant is established, India will be able to meet the requirements not only of the expanding domestic roofing, paint and rubber industries but also the growing demand of Europe and Asia.

Consumption

The Council has based its scheme on a detailed review of the position in respect of world demand for and supply of ground mica (powdered form of mica), which is used by roofing, paint, rubber and some miscellaneous industries. The ground mica consuming capacity of the world has gone up markedly in recent years, although there was a setback in 1956. The aggregate consumption of ground mica, both wet and dry, during 1956 was 110,511 short tons, as against 78,950 tons in 1953; it was, of course, lower by 5,754 tons as compared with that in 1955. The following table shows the consumption of ground mica in the different countries during the last four years:

(In short tons)

	1956	1955	1954	1953
U.S.A.	99,981	106,185	80,072	73,072
Rest of N. America ..	1,880	1,380	1,323	1,449
South America ..	928	407	422	393
U.K.	2,316	3,710	1,563	2,059
Norway	1,737	2,053	874	583
Sweden	189	134	128	174
Belgium	350	306	273	146
W. Germany	1,066	734	365	237
France	840	484	432	209
Italy	265	298	218	197
Rest of Europe ..	73	36	92	19
India	27	4	30	25
Indonesia	19	..	..	6
Japan	313	467	735	265
Philippines	34	..	30	..
Rest of Asia ..	266	24	8	11
Africa	227	43	95	113
Oceania	..	..	48	1
Total ..	110,511	116,265	86,708	78,950

It will be seen from the above table that the U.S. accounts for more than 90 per cent. of the world consumption of ground mica produced by both wet and dry processes. The European countries together consume about 6 per cent. The share of Asian countries is just half per cent. The consumption of wet ground mica in the U.S. is said to be less than one-sixth of that of dry ground mica. Out of the total of 106,185 tons consumed in 1955, dry ground mica acounted for 91,695 tons and wet ground mica for 14,490 tons. The consumption of these is expected to rise to 130,000 tons and 20,000 tons, respectively, by 1966. Generally, roofing materials, welding rods and well drilling use only dry ground mica and wallpaper uses only wet ground mica, while rubber, paint and plastics use both. The annual consumption of mica in the U.K. has fluctuated around 2,500 tons. There has been a rising trend in consumption in almost every country in Europe, especially France and W. Germany. Consumption in Norway appears to have been relatively high. Japan is the most important consumer in Asia.

Source of Supply

The main source of the world supply of ground mica is the U.S. Most of the European countries import mica scrap and waste from India and grind them for domestic use, in addition to importing ground mica from the U.S. It is possible that some of these countries may be exporting limited quantities of ground mica to neighbouring countries. The imports of Indian mica scrap and waste by some countries of Europe in the past four years are given below:

(In short tons)

	1956-57	1955-56	1954-55	1953-54
U.K.	2,365	2,414	3,869	1,614
Norway	1,097	1,828	2,162	920
W. Germany	799	862	489	137
France	658	635	297	130
Italy	291	112	123	76
Sweden	68	199	129	125
Belgium	..	22	..	..
Total ..	5,278	6,072	7,069	3,002

The findings of the Council reveal that the two important varieties of mica used in grinding are muscovite and phlogopite. The muscovite type is used more commonly by the grinding industry, particularly in the high quality wet process. The largest sources of mica scrap are India, the U.S., Canada and South Africa. These countries are in a position to produce ground mica without depending on external resources for the supply of raw material. Both India and the U.S. have large supplies of muscovite scrap and waste. The U.S., of course, imports mica scrap and waste from India, but the quantity involved is limited; during 1956, it amounted to not more than 8,500 tons, as against the total U.S. consumption of over 100,000 tons of scrap. The U.S. has enough resources of scrap for grinding. Canada also has enough supply of phlogopite type of scrap to cater to the needs of its grinding industry. The European countries, however, have to depend on outside sources of scrap for their grinding industries.

Ability To Sell

Since the final decision to set up a mica grinding plant in India will depend on its ability to sell the finished product at competitive price in international markets, the Council has done well to study some of the more important aspects of this problem. The Council draws special attention to the competition from the U.S., Canada and European countries. According to it, the U.S. is the principal supplier of ground mica to the world markets. Exports from this country have been on the increase in recent years, the total for 1956 at 4,451 tons being more than thrice the quantity of 1,284 tons shipped in 1950. The increase was shared by all areas. Over the years 1950 to 1956, the U.S. exports rose by more than 10 times to Asia, five times to Africa and four times to Europe. The U.S. has vast resources of raw material, technical know-how and investment capital. It will be a more powerful competitor in the North and South American markets, because of their geographical proximity than in the European, African and Asian markets. As regards Canada, the Council's study shows that it has adequate resources of phlogopite scrap and a distinct geographical advantage relative to India in the U.S. market. Canada is virtually the only country which sells in the U.S. So far as the European countries are concerned, it is said that their ability to compete with Indian-produced ground mica will be conditioned by their access to raw material at competitive prices, since these countries depend mainly on India for supplies.

Favourable Factors

It is against this background that the ability of India to compete in the world markets for ground mica is to be judged. This ability, as the Council rightly emphasises, should be considered mainly on the basis of production cost. From the study of the Council, the following interesting points emerge:

Availability of raw material at competitive prices: India has abundant sources of scrap. It is estimated that it produces more than 50,000 tons of scrap every year. In addition, there are unknown quantities of accumulated scrap near the pitheads of the mines. Indian scrap is at least as good in quality as the U.S. scrap. Indian mica producing firms estimate that adequate supplies of scrap are available at Rs. 50 per ton. In the U.S., the cost of muscovite scrap in June 1957 varied from about Rs. 125 per ton for mine scrap and flakes to about Rs. 330 per ton for fabricator's scrap. Thus, it appears that raw material costs in India will be definitely lower than in the U.S. The U.S. mica grinders who replied to the questionnaire, reported paying between Rs. 100 and Rs. 200 per ton for muscovite scrap.

Knowledge of technical processes: There has been some grinding of mica in India by the dry process. An Indian firm reports that it ground 250 tons in 1956. Another Indian firm reports that it has plans to produce about 1,500 tons per year and will go into production very soon. It is reported that the Indian Glass and Ceramics Research Institute has developed a method of wet grinding that is cheaper than the U.S. method. If need be, collaboration with an experienced foreign firm will be helpful in securing necessary technical knowledge.

Adequate margin to meet costs: In order to justify economically the setting up of a mica grinding plant in India, the margin between the price of finished ground mica and the price of scrap and waste should be adequate to meet the costs of production and marketing. The margin per ton between the value of Indian scrap and waste mica plus marketing costs and the current prices in the U.S. comes to a minimum of Rs. 175 and a maximum of Rs. 359 in the case of wet ground mica, the corresponding figures for dry ground mica being a loss of Rs. 55 and a profit of Rs. 15, respectively.

The Council's study accordingly concludes that India will be able to compete in the U.S. on a price basis, if its cost of wet grinding is no more than Rs. 175 per ton. It will probably not be able to compete in dry ground. In European markets, the margin is likely to be somewhat larger, since ground mica sold in those markets by the U.S. bears a relatively higher transportation charge. Any tariffs in the European countries will affect equally shipments from the U.S and India.

TRADE AGREEMENT WITH CEYLON

A trade agreement between India and Ceylon was signed in New Delhi on the 13th inst. Under the agreement, which will be valid till 31st August 1961, the Government of India has undertaken to permit import of specified quantities of Jaffna chewing tobacco during the next four years at a concessional rate of import duty of Rs. 400 per candy. The quantity to be permitted for import is fixed at 1,500 candies in 1957-58, 1,200 candies in 1958-59, 960 candies in 1959-60 and 770 candies in 1960-61. Imports will be made through the port of Trivandrum, while imports through other ports as well as those in excess of specified quantities will be subject to the Indian tariff rate applicable to the import of unmanufactured tobacco. The Government of Ceylon will facilitate the import of Indian-grown tobacco for the production of cigarettes and other tobacco manufactures in Ceylon. Ceylon has also agreed to allow the import of fixed quantities of Indian *bidis* during the next four years at the prevailing rate of duty. The quantities are: 1957-58, 2 million lbs.; 1958-59, 1.6 million lbs.; 1959-60, 1.28 million lbs.; 1960-61, 1.02 million lbs. If there are temporary gaps in Ceylon's requirements and production of *bidis*, the Ceylon Government will issue supplementary licences for imports whenever necessary. On its part, the Government of India will issue supplementary quotas for Jaffna tobacco.

SCINDIA STEAM REPORTS BETTER RESULTS

RESERVES ENHANCED—FLEET BEING EXPANDED

THE working of the Scindia Steam Navigation Company, Ltd. (Chairman: Mr. Dharamsey M. Khatau, Bombay), during the year ended 30th June 1957 has yielded results which should be considered excellent from every point of view. The Company's earnings, which had made a substantial rise in the previous year from the depressing level touched in 1954-55, have shot up further. The increase in freights in overseas services was the factor mainly responsible for the impressive expansion in earnings. Better profits have brought cheer to the shareholders as well, in that their dividend for the year has been stepped up from Re. 1 to Re. 1-4 per share and that on an enhanced capital. In other words, the rate of dividend has been raised further to 6¼ per cent. per annum from 5 per cent. for the previous year, to which level it had been stepped up from a very modest 2½ per cent. paid for the preceding two years. It must also be noted that the year's dividend is, as has been just stated, on a higher capital, following the capitalisation of Rs. 1.88 crores from the share premium account and issue of bonus shares at the rate of one fully paid-up share for every five shares held.

The Company's gross profit at Rs. 370.48 lakhs represents an advance of Rs. 101.17 lakhs or 27.3 per cent. from that for 1955-56. It may be noted that the Company's earnings had suffered a progressive decline in the two preceding years when the gross profit fell from Rs. 242.29 lakhs in 1952-53 to Rs. 159.35 lakhs in 1953-54 and still further to Rs. 117.69 lakhs in 1954-55. The recovery made in the last two years is, therefore, nothing more than a return of the Company to a normal level of operations. The rise in the profit is due, as it should be, to a substantial increase in freight and passage receipts from Rs. 10.19 crores in 1955-56 to Rs. 12.46 crores in the year under review. The income from other receipts, however, has dropped from Rs. 42.41 lakhs to Rs. 35.63 lakhs. The net profit at Rs. 138.62 lakhs also shows a handsome rise from Rs. 71.41 lakhs. It is significant that this higher net profit has been arrived at after raising the provision for depreciation from Rs. 172.16 lakhs to Rs. 187.19 lakhs and providing another Rs. 31 lakhs for taxation, as against *nil* in the previous year. The sum of Rs. 187.19 lakhs provided for depreciation consists of Rs. 115.19 lakhs normal depreciation and Rs. 72 lakhs special depreciation. The latter, namely, Rs. 72 lakhs, represents the amount by which the Company's tax liability is reduced on account of the development rebate of 25 per cent. allowed under the Income-tax Act, in respect of new ships commissioned during the year.

Results Compared

The following table shows at a glance the trend of financial results of the Company since 1953-54:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Freight and passage money ..	12,46.03	10,18.75	8,88.22	9,17.87
Other income	35.63	42.41	25.68	34.92
Expenses	9,11.18	7,91.85	7,96.21	7,93.44
Gross profit	3,70.48	2,69.31	1,17.69	1,59.35
Agents' commission ..	13.67	25.74	10.27	15.08
Depreciation	1,87.19	1,72.16	74.70	81.32
Taxation	31.00	..	..	..
Net profit	1,38.62	71.41	32.73	62.95
To debenture sinking fund ..	10.00	10.00	10.00	10.00
,, gratuity reserve ..	..	13.00	..	..
,, dividend	70.40† (6¼%)	46.93 (5%)	23.47 (2½%)	25.47* (2½%)
Transfer from reserves and excess provision	..	55.08	11.75	..
To reserves	58.00	53.68	11.00	29.50
Carry forward	5.84	5.62	2.74	2.73

* On the increased capital of Rs. 9.39 crores, raised by the capitalisation of Rs. 2.35 crores and increasing the paid-up value from Rs. 15 to Rs. 20 per share.

† On the capital further raised by the capitalisation of Rs. 1.88 crores.

It will be seen from the table above that, despite the substantial rise in earnings over those of the previous years, the net profit, after providing for all essential transfers, constitutes only about 11 per cent. of the freight and passage income, although it is better than 7 per cent. in the previous year. Out of the net profit indicated in the table above, the dividend of 6¼ per cent., which is only modest, absorbs as much as Rs. 70.40 lakhs, that is, about 50 per cent. of the net profit. The balance of profit has been ploughed back. Of the additions to reserves the debenture sinking fund gets Rs. 10 lakhs, the same as that in the past few years. Another Rs. 58 lakhs has been transferred to the various reserves. This amount is not comparable with the Rs. 53.68 lakhs allocated in the previous year, in addition to Rs. 13 lakhs made to gratuity reserve, (no provision has been made in the current year on this account) because the appropriations made in that year constituted nothing more than a reallocation of the reserves created in the preceding years. It will be seen from the table that a sum of Rs. 55.08 lakhs was withdrawn from the reserves out of which only Rs. 53.68 lakhs were credited back. Be that as it may, the allocations from the profit of 1956-57 consist of Rs. 24 lakhs to dividend equalisation reserve, as against Rs. 13 lakhs in 1955-56, Rs. 24 lakhs to deferred taxation reserve, as against *nil*, and Rs. 10 lakhs to annual and special survey reserve, as against Rs. 20 lakhs.

The managing agency agreement between the Company and Messrs. Narottam Morarjee and Company, expired under law on 15th January 1957. The question of the future managing agency of the Company, which will be on the broad outlines reported last year, is still in the final stage of discussion. The commission payable to the agents for the period up to 15th January 1957 has been calculated *pro rata* for 6½ months at 13/24ths of the total profits for the year and the amount payable on this basis for the year comes to Rs. 13.67 lakhs.

Traffic

Cargo carried by the Company's steamers during the year was slightly less, at 1.87 million tons, as compared with 1.91 million tons last year, but the effect of this deficiency on revenue was offset by higher freight rates. The Directors say that the year under review included a very abnormal period for the shipping industry following the Suez Canal crisis. Hence, they have cautioned the shareholders that it is extremely difficult to draw any useful comparison between the earnings in 1956-57 and those of the previous year or to base estimates for future years' trading on them. In fine, the excellent results for the year under review are due to fortuitous factors, to some extent, and shareholders should not be surprised if the Company's results for 1957-58 were to show a setback. The large addition to dividend equalisation reserve should, however, ensure the maintenance of the dividend at about the current level.

Expansion

Alluding to the Company's scheme of modernisation, which is going apace, and its policy of replacing old and worn-out vessels, as also those which prove unremunerative, the Directors state thus:

"The sale of s.s. *Jalakirti*, s.s. *Jalaratna* and s.s. *Kalavati* was reported last year. We have since then sold s.s. *Jaladuta* due to her old age and the prohibitive cost of putting her through special survey. We have also sold s.s. *Jalakanya* to our subsidiary company, the Kamal Shipping Company Private Ltd. Besides these steamers, small launches *Sarasvati*, *Devi* and *Bhaktawar* were sold due to their age.

"Out of the ships ordered from the German shipbuilders, four ships, namely, *Jaladharma*, *Jaladhir*, *Jaladharati* and *Jaladhanya* were delivered since the last report and the remaining two ships are expected to be delivered, one in 1959 and the other in 1960. In pursuance of the policy of modernising the fleet of the Company, the Directors have purchased the s.s. *Silverburn*, built in 1953, which will be delivered in March-April 1958. Its deadweight capacity is 8,865 tons. The remaining two 7,000-tonners which were to be delivered by the Hindustan Shipyard Private Ltd. some time during the second half of 1957 are now expected to be delivered in February and May 1958."

Finances

As regards the financial position of the Company, it will be remembered that, in 1953-54, its capital was raised to Rs. 9.39 crores, by capitalising reserves of the order of Rs. 2.35 crores and increasing the paid-up value of the shares from Rs. 15 to Rs. 20 per share. The Company has only ordinary shares. Even after such capitalisation, the Company's reserves and surplus aggregated Rs. 10.91 crores. Since the close of the financial year 1956-57 and as stated at the outset, a sum of Rs. 187.99 lakhs out of the share premium account was capitalised. But the bonus issue that followed was ranked *pari passu* with the then existing shares. Besides the capital and reserves the Company has 4½ per cent. 1963 debentures amounting to Rs. 4.01 crores. In addition, it has loans from the Government of India aggregating Rs. 4.51 crores, so that the total of long-term secured liabilities are Rs. 8.52 crores. As against these capital resources, the fixed assets, after depreciation, appear at Rs. 21.87 crores, of which the net value of fleet account is Rs. 18.98 crores and payments on account of steamers under construction Rs. 2.70 crores. The gross value of the fixed assets comes to Rs. 27.66 crores, as against which a total depreciation of Rs. 5.79 crores has been provided. The current liabilities amount to Rs. 7.52 crores, against which there are current assets aggregating Rs. 14.48 crores, exceeding the former by Rs. 6.96 crores. The current assets include the Company's investments in subsidiaries and others of the value of Rs. 5.85 crores, of which Rs. 3.84 crores are in quoted investments and Rs. 2.01 crores in unquoted investments. It is to be noted that the market value of the quoted investments as at the close of June last was almost equal to that of the book value.

The Rs. 20 fully paid-up shares of the Company are being currently quoted at Rs. 17.24 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 7.81 per cent. per annum, free of income-tax.

RADIO AND ELECTRICALS MFG. CO., LTD.

The results of the Radio and Electricals Manufacturing Company, Ltd. (Chairman: Mr. K. Narayanaswamy, Bangalore) for the year ended 31st March 1957, as compared with those in the previous year, make encouraging reading. The Company's turnover has recorded a sizable improvement and, along with that, the earnings also have risen to new levels. It must, however, be said at the outset that the accounts for 1956-57 are not strictly comparable, since the profit and loss account for the year under review relates not only to the radio section but also to the meter section taken over from the Government of Mysore with effect from 1st April 1956, while the corresponding figures for the previous year relate only to the radio section. In view of this new development in its activities, the Company's gross profit for the year at Rs. 11.33 lakhs has shown a marked improvement over Rs. 2.60 lakhs for 1955-56.

After raising the provision for taxation from a mere Rs. 74,252 to Rs. 6.28 lakhs and that for depreciation from Rs. 2.46 lakhs to Rs. 2.54 lakhs, the net profit amounts to Rs. 2.51 lakhs, as against a net loss of about Rs. 60,000 in the preceding year. The net profit has been further strengthened by the addition of Rs. 2.17 lakhs, which includes some provisions written back and also the half share of profit from the plastics section of the Government of Mysore. The income from the latter account amounts to Rs. 1.77 lakh. The Directors have utilised a sum of Rs. 85,970 to write off deferred revenue expenditure and have also made a modest provision of Rs. 3,360 for bad and doubtful debts. Out of the balance, they have declared a dividend of 13 per cent. for the year under review, absorbing Rs. 3.18 lakhs, leaving a balance of Rs. 83,448 to be carried forward, as against Rs. 21,242 brought in. It must be said in this connection that, in the previous year, with the income of Rs. 6.47 lakhs, represented by the half share of profit from the meter and plastics section of the Government of Mysore, the Directors had wiped out all the losses, including Rs. 4.19 lakhs brought forward from the preceding year. In addition, they also declared in that year a modest maiden dividend of 6 per cent. per annum.

The Company has a big expansion programme. The Government of India has given its approval to the technical collaboration agreements entered into by the Company with two U.K. firms for manufacture of band switches and condensers. A programme of production of these radio components on a substantial scale has been drawn up. Manufacture of water meters also has been taken up from this year and steps are being taken to increase their production gradually.

Against a modest reserve and surplus of Rs. 1.24 lakhs, the Company has a paid-up capital (as on 31st March 1957) of Rs. 24.84 lakhs. The smallness of the reserve is due to the fact that the Company is a relatively new one and has just turned the corner. There is no doubt that, in the coming years, it will steadily strengthen its reserve position. The gross block of Rs. 27.04 lakhs has been well written down to Rs. 16.28 lakhs. Assets earmarked against employees' provident fund accounts for Rs. 22,931. The current liabilities amount to Rs. 43.85 lakhs, against which there are current assets aggregating Rs. 53.43 lakhs. The overall financial position is thus satisfactory.

In his speech to the shareholders at their last annual meeting published in our last issue, the Chairman, Mr. K. Narayanaswamy, clearly indicated the outlook for the Company. It will be seen therefrom that the Company is engaged in a promising field of manufacturing activity, that its management is quick enough to avail itself of the profitable opportunities for development afforded by the second Plan and that it enjoys the support and co-operation of the Central and State Governments alike.

The Rs. 10 paid-up shares of the Company are currently quoted at Rs. 12.37 *ex-div.* at which rate and on the basis of the latest dividend, the yield works out to 10.5 per cent. per annum.

Points From The Chair

The Real Saving

"THERE is only one sort of saving. It is the sum of private and industrial earnings in excess of the sum of private and industrial spending and Government expenditure on current account. There is a simple choice whether such savings, from which alone capital investment can be made, shall be made by individuals and industry ploughing back its profits or by forced savings through taxation by the Government in power. To get the former, there must not only be an incentive to save but a new attitude towards the saver. Till our penal rates of taxation are reduced, a strong inflationary influence will remain; there will be less inducement to save and less than adequate savings.

"To many, the saver who accumulates the new capital so essential for expansion is looked upon as a greedy, almost reprehensible, person who should be taxed out of existence during his life and his property confiscated by duties on his death. In fact, he or the industry that saves and ploughs back those savings is the provider of the wherewithal which enables thousands upon thousands of others to earn a good living. In default of the private and industrial saver, if there are to be savings and further expansion at all, there is only the State with compulsory savings through heavy taxation with all its disincentives and frustration. If the State takes on the role of compulsory saver to acquire and finance the means of production, it inevitably means rigid control, licences for everything for imports and exports and, sooner or later, the control and direction of labour as well as of capital, in fact a communist or near-communist state. Those who amiably smile on the elimination of private enterprise would be horrified when they realise that it leads ultimately to the loss of freedom of choice in their employment and to compulsory transfer from one industry and area to another. The signposts are clearly marked and it is well that all realise where each road leads and that we choose aright."

SIR A. HAROLD BIBBY,
Martins Bank Ltd., (Liverpool)

Competition for Money

"There is today an increasing tendency for organisations other than the Government to take deposits or loans directly from private individuals and companies instead of from the banks. Local authorities frequently finance themselves by this means and even borrow from one another, and other financial institutions such as hire purchase companies advertise freely for deposits, sometimes offering rates of interest which seem unnecessarily high for short-term investments if they are of good quality. This raises an important question: whether the banks should attempt to resist this tendency by offering higher rates for money, or even, in the case of hire purchase, by taking a direct interest in the business themselves. To offer higher rates would in any case be futile, in my opinion. There is no sense in the banks competing for money at rates which make it impossible in present conditions to employ it profitably, and whatever rates we offer, our rivals outside will always bid, like Chu Chin Chow, one dinar more for what they need; in some cases apparently several dinars. The alternative may be that the banks must face a gradual diminution of their deposits and a change-over to more exclusive dependence on their current account balances for the raw material of their business, a trend which was already apparent during the long period of 2 per cent. Bank rate between 1932 and 1951. Although there may be attractions to the official mind in having as much as possible of the loose money in the private sector of the economy channelled through the banks, through a bottleneck where it can be controlled with the minimum of effort, I feel that we should not accept that view without the closest scrutiny of all its implications. ... A banker must always put the quality of his business first, and must never be tempted to reduce his standards, in order to increase his profits or maintain his turnover. *Corruptio optimi pessima.*"

ANTHONY WILLIAM TUKE,
Barclays Bank Ltd., (London)

U.K.'s Special Responsibility

"The general state of the economy of this country (United Kingdom) is healthy, as the trade figures show, but we have a particular responsibility arising from our position as bankers to the sterling area. It is a prime responsibility of a banker to hold adequate liquid resources and reserves. It may be that no country would now willingly shoulder the heavy responsibilities entailed in being bankers to the sterling area, but we have carried them for many years and are in honour bound to bear them still. Though they are more difficult to bear as a result of two world wars, they are not without advantage to us and, having accepted the responsibilities, we must behave as a good banker should. This means that, in running our own affairs, we need to exercise restraint, so that not only do we not try to get more out of the common pool than we put in but also that it is clearly seen that we are building up reserves. It may be that, in recent years, we have been using too much of the resources which have come into our possession to invest abroad, including investment in the underdeveloped areas of the Commonwealth, on a long-term credit basis. This is, of course, quite a laudable thing to do, not without profit to ourselves in the long run, and a thing which, I am sure, all people in these islands want to do, particularly to the extent of helping those less fortunate than themselves. If, however, at the present time we had these resources in liquid form, moderate though the amount is in proportion to our national product, we should be the better able to fulfil our duties as a banker and the present crisis, which is essentially one of confidence, might not have arisen."

SIR ERIC A. CARPENTER,
Williams Deacon's Bank Ltd., (Manchester)

COMPANY MEETINGS AND DIVIDENDS

INDIAN CARDBOARD INDUSTRIES LTD. Annual General Meeting, Calcutta, 29th January 1958. Transfer books remain closed from 22nd to 29th January 1958, both days inclusive.

UPPER JUMNA VALLEY ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th January 1958. Dividend: Re. 1.25 per share (includes an additional dividend of Re. 0.25 per share). Transfer books remain closed from 23rd to 29th January 1958, both days inclusive.

CALCUTTA HYDRAULIC PRESS CO., LTD. Annual General Meeting, Calcutta, 29th January 1958. Dividend: Rs. 3.00 per share. Transfer books remain closed from 16th to 29th January 1958, both days inclusive.

CHUNDEECHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 30th January 1958. Dividend: *Nil*. Transfer books remain closed from 22nd to 30th January 1958, both days inclusive.

RAJAHBHAT TEA CO., LTD. Annual General Meeting, Calcutta, 30th January 1958. Dividend: Re. 1.25 per share. Transfer books remain closed from 16th to 30th January 1958, both days inclusive.

JAIPUR UDYOG LTD. Annual General Meeting, Sawaimadhopur, 31st January 1958. Dividend: Nil. Transfer books remain closed from 11th to 17th January 1958, both days inclusive.

NEW KAISER-I-HIND SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 31st January 1958. Dividend: Rs. 6.00 per share, payable on 17th March 1958. Transfer books remain closed from 17th to 31st January 1958, both days inclusive.

ASSOCIATED CEMENT COS., LTD. Annual General Meeting, Bombay, 31st January 1958. Dividend: Rs. 9.00 per share, payable on and after 7th February 1958. Transfer books were closed from 4th to 30th November 1957, both days inclusive.

DHANRAJ MILLS PRIVATE LTD. Annual General Meeting, Bombay, 31st January 1958. Transfer books remain closed from 16th to 31st January 1958, both days inclusive.

CENTRAL HYDRAULIC PRESS CO., LTD. Annual General Meeting, Calcutta, 5th February 1958. Dividend: Rs. 10.00 per share (includes bonus of Rs. 4.00 per share). Transfer books remain closed from 25th January to 5th February 1958, both days inclusive.

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 10th February 1958. Dividend: Re. 1.00 per share. Transfer books will remain closed from 4th to 10th February 1958, both days inclusive.

GANNON DUNKERLEY & CO. LTD. Annual General Meeting, Bombay, 12th February 1958. Dividend: Rs. 6.00 per share. Transfer books will remain closed from 5th to 19th February 1958, both days inclusive.

MYSORE CHROME TANNING CO., LTD. Annual General Meeting, Bangalore, 13th February 1958. Transfer books will remain closed from 1st to 14th February 1958, both days inclusive.

SCINDIA STEAM NAVIGATION CO., LTD. Annual General Meeting, Bombay, 19th February 1958. Dividend: Re. 1.25 per share, payable on or after 26th February 1958. Transfer books were closed from 18th November 1957 to 17th December 1957, both days inclusive.

SUTLEJ COTTON MILLS LTD. Dividend of Rs. 6.00 per share, for the year ended 31st March 1957.

INDIAN WOOD PRODUCTS CO., LTD. Interim dividend of Re. 1.00 per share, for the year ended 30th September 1957, payable on 29th January 1958.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Interim dividend of £3½ per cent. nett, for the year ending 31st March 1958, payable on 15th February 1958.

PREMIER AUTOMOBILES LTD. Dividend of Rs. 6.00 per share, for the year ended 30th June 1957, payable on 3rd March 1958.

NEW SWADESHI SUGAR MILLS LTD. Dividend of Rs. 20.00 per share, for the year ended 30th June 1957, payable on 25th January 1958. Transfer books remain closed from 10th to 22nd January 1958, both days inclusive.

OUDH SUGAR MILLS LTD. Dividend of Rs. 12.50 per share, for the year ended 31st July 1957, payable on 25th January 1958. Transfer books remain closed from 10th to 22nd January 1958, both days inclusive.

BOMBAY-BURMAH TRADING CORPORATION LTD. Final dividend of Rs. 28.75 per share, on old shares and Rs. 11.50 per share on new shares, for the year ended 31st May 1957, payable on 3rd March 1958. Transfer books will remain closed from 7th to 28th February 1958, both days inclusive.

BENGAL PAPER MILL CO., LTD. Interim dividend of Re. 1.50 per share (6 per cent.), for the year ended 31st December 1957. Transfer books were closed from 6th to 15th January 1958, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of Re. 0.30 (3 per cent.) per share, for the year ending 31st March 1958. Transfer books were closed from 7th to 14th January 1958, both days inclusive.

INDIAN VEGETABLE PRODUCTS LTD. Dividend of Rs. 10.00 per share, for the year ended 30th September 1957. Transfer books were closed from 27th December 1957 to 14th January 1958, both days inclusive.

RAJAHBHAT TEA EARNS HIGHER PROFIT

RESULTS OF U.P. ELECTRIC SATISFACTORY

Rajahbhat Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. McLeod and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

The season's working resulted in a profit, after providing for depreciation, of Rs. 2,56,455 (Rs. 1,03,758) to which must be added the balance of profit brought forward from 1955 of Rs. 13,527 (Rs. 34,441) making a total of Rs. 2,69,982 (Rs. 2,19,906 including other adjustments). From this amount must be deducted adjustment account Rs. 13,173 (*nil*), bonus to garden labour and staff Rs. 27,659 (Rs. 1,85,465 for 1953 and 1954), provision for taxation Rs. 30,500 (*nil*), provision for wealth tax Rs. 5,500 (*nil*) and amount written off stores for obsolescence, etc. Rs. 1,770 (*nil*) leaving a balance of Rs. 1,91,380 (Rs. 1,59,441). The interim dividend for the year ended 31st December 1956, at Re. 0.50 (*nil*) per ordinary share, declared by the Directors on 17th May 1957 will absorb Rs. 30,000 (*nil*) leaving a balance of Rs. 1,61,380 (Rs. 1,59,441). From this amount the directors have set aside to buildings and machinery reserve Rs. 75,000 (*nil*) leaving an available balance of Rs. 86,380 (Rs. 1,59,441) which, the directors recommend, should be dealt with as follows:—

In payment of a final dividend for the year ended 31st December 1956 at the rate of Re. 0.75 (Re. 1.25) per ordinary share on 60,000 ordinary shares, absorbing Rs. 45,000 (Rs. 75,000) and leaving to be carried forward Rs. 41,380 (Rs. 13,527).

Tea crop.—The saleable crop weighed out at 10,071 (9,135) maunds against an estimate of 11,370 maunds and was disposed of at an average price of As. 34.29 (As. 29.49) per lb.

General.—The smaller crop made in 1956, as compared with the estimated crop, was due to adverse weather conditions and earlier cessation of plucking under the I.T.A. Voluntary Crop Regulation Scheme.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	7,48,122
Reserves ...	11,01,434	Stock of tea ...	4,89,271
Provision for taxation ...	3,15,709	Stores, etc. ...	2,49,047
Liabilities ...	5,19,891	Debts, deposits and advances ...	1,49,582
Profit and loss account	41,380	Investments	53,575
		Cash	8,88,817
Rs.	25,78,414	Rs.	25,78,414

United Provinces Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

Having regard to the provisions relating to the closing of accounts under the Companies Act, 1956 and the obligations imposed on a Company by the Act in respect of every annual general meeting, the directors recommend that the Company's accounts in future be made up annually to the 31st March in each year.

Satisfactory progress is being maintained and in view of the stabilised position, the cash discount for prompt payment of bills covered by the Company's scale of charges has been raised from three naye paise to six naye paise for each whole rupee of the consumer's bill, as from 1st January 1958. The following schedule indicates that progress has been maintained during the past three years.

Year ended	Maximum demand on power stations Kws.		Units sold	Revenue Rs.
	Lucknow	Allahabad		
31st March, 1955 ..	11,950	7,500	66,118,986	81,14,253
31st March, 1956 ..	14,400	8,400	72,994,737	86,90,131
31st March, 1957 ..	13,850	8,500	75,993,930	90,98,280

After providing for all charges and placing Rs. 1,70,808 (Rs. 1,39,477) to statutory contingencies reserve, Rs. 2,00,000 (Rs. 2,00,000) to reserve for redemption of debentures, Rs. 78,366 (Rs. 3,00,505) to tariffs and dividends control reserve and Rs. 3,30,000 (Rs. 2,90,000) to general reserve, there remains a balance of Rs. 6,44,072 (Rs. 6,40,728) including Rs. 80,728 (Rs. 77,157) brought forward from the half-year ended 31st March 1956. From this is deducted a sum of Rs. 2,80,000 (Rs. 2,80,000) in respect of dividends paid for the half-year ended 30th September 1956, leaving a balance of Rs. 3,64,072 (Rs. 3,60,728) available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum without deduction of tax for the half-year ended 31st March 1957 Rs. 2,80,000 (Rs. 2,80,000) and carrying forward to next year Rs. 84,072 (Rs. 80,728).

Upper Jumna Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1957.

Having regard to the provisions relating to the closing of accounts under the Companies Act, 1956, and the obligations imposed on a Company by the Act in respect of every annual general meeting, the directors recommend that the Company's accounts in future be made up annually to the 31st March in each year.

In view of the provisions of the sixth schedule of the Electricity (Supply) Act 1948, the Company is required to so adjust its charges for the supply of electricity that there shall be no excess over the permissible reasonable return, therefore, having regard to all circumstances, it has been decided to forego the royalty received from the State Government in respect of supplies in rural areas as from the 1st April 1956 and henceforth. Satisfactory progress has been maintained as indicated in the following schedule:—

Year ended	Units Sold	Revenue Rs.
31st March, 1955	8,947,732	15,41,462
31st March, 1956	10,430,517	19,02,317
31st March, 1957	13,602,172	22,43,942

After providing for all charges and placing Rs. 17,848 (Rs. 9,914) to statutory contingencies reserve, Rs. 13,521 (Rs. 79,931) to tariffs and dividends control reserve, and Rs. 75,000 (Rs. 45,518) to general reserve, there remains a balance of Rs. 94,516 (Rs. 96,679) including Rs. 34,492 (Rs. 31,490) brought forward from the half-year ended 31st March 1956. From this is deducted a sum of Rs. 31,000 (Rs. 31,094) in respect of dividends paid for the half-year ended 30th September 1956, leaving a balance of Rs. 63,516 (Rs. 65,585) available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum without deduction of tax for the half-year ended 31st March, 1957 Rs. 25,000 (Rs. 24,875), an additional payment of Re. 0.12 (Re. 0.12) per share without deduction of tax Rs. 6,000 (Rs. 6,219) and carrying forward to next year Rs. 32,516 (Rs. 34,492).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	16,88,922
Reserves ...	7,65,006	Stores, spare parts and loose tools, etc. ...	6,02,510
Provision for taxation ...	64,727	Debts, deposits and advances ...	6,50,039
Liabilities ...	20,29,061	Investments ...	78,295
Profit and loss account ...	32,516	Cash ...	3,71,544
Rs.	33,91,310	Rs.	33,91,310

Patna Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the period of fifteen months ended 31st March 1957.

In accordance with the Indian Electricity Rules 1956 the accounts of the Company have to be closed henceforward each year on 31st March instead of on 31st December. The accounts for the period commencing from 1st January 1956 have therefore been made upto 31st March 1957 covering a period of 15 months.

The revenue account shows a profit on the working of the period of Rs. 14,44,934. Adding to this—profit on sale of investment Rs. 289 there is a total of Rs. 14,45,223. After deducting debenture interest of Rs. 1,25,000, debenture trustees' fees Rs. 875, bonus to employees Rs. 1,18,151, gratuity to employees Rs. 10,571, provision for taxation Rs. 3,97,200, provision for wealth tax Rs. 41,000, arrears of depreciation Rs. 15,221 and for reserve for contingencies Rs. 67,924, there is a net profit for the period of Rs. 6,69,281. After adding to this Rs. 1,96,550, the adjusted balance brought forward from the previous year, Rs. 1,040 being sundry adjustments, Rs. 3,277 being forfeiture of unclaimed dividends, Rs. 11,370 being the provision for taxation in respect of previous year no longer required and Rs. 53,381 transferred from reserve for tariffs and dividends control in accordance with the paragraph II(2) of the Sixth Schedule to the Electricity (Supply) Act, 1948 and deducting therefrom Rs. 1,16,093 being additional bonus to employees from 1952 to 1955, referred to hereafter, and Rs. 1,477 and Rs. 20,670 on account of sundry adjustments and coal clause adjustment respectively there is a credit balance of Rs. 7,96,659 on profit and loss account out of which the directors have transferred Rs. 2,00,000 to general reserve. The directors recommend that the balance namely, Rs. 5,96,659 should be disposed of as follows:—

To pay a dividend of 10 per cent. for the period of 15 months ended 31st March 1957 without any deduction for income-tax payable by the Company Rs. 3,50,738 and to carry forward Rs. 2,45,921.

General.—The Indian Electricity Rules 1956 were enforced with effect from 26th June 1956. A continuous supply of energy was maintained throughout the period and the number of units sold during the period recorded an increase of approximately 8 per cent. as compared with the same period of the previous year.

The Labour Union made a number of demands during the period and served a strike notice on the Company in September 1957. Conciliation proceedings were held by Government and the strike notice was withdrawn as a result of a negotiated settlement signed on 27th September 1957 by virtue of which a bonus equivalent to 3 months' wages was to be paid in respect of each of the years 1953, 1954, 1955 and 1956-57.

During the period ended 31st March 1957, i.e., for 15 months the total units of electricity sold was 39,021,753 (29,498,309 for 12 months ended December 1956). The total number of consumers connected to the Company's system at the close of the financial year was 16,722 (15,977) and the connected load as compared with the previous year was 29,249 kw. (28,225 kw.).

Prospects.—There is a continued demand for additional supply within the Company's licensed area and prospects are considered good. A partial bulk supply of D.V.C. power to the extent of 1,200 kw. was made available to the Company in September 1957, but was temporarily discontinued after about four weeks on account of the emergency created by drought conditions in Bihar. It is hoped that a permanent bulk supply from D.V.C. to supplement the Company's generating capacity will become available during 1957-58. Bulk supply to the Government of Bihar for the P.B.B.E.S. scheme has almost been discontinued. Supply was extended to Sultanpur and Saguna villages during 1956-57. Extensions of supply to Pataliputra Housing Colony, Rajendra Nagar Colony and the villages of Jamaluddin Chowk, Magdumpore and Sarari will be completed during 1957-58.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,10,478	Block ...	76,60,057

Provision for taxation ...	4,38,200	Investments	6,96,304
Liabilities ...	23,24,396	Cash ...	10,50,332
Profit and loss account ...	2,45,921		
Rs.	1,19,02,004	Rs.	1,19,02,004

Chundeecherra Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Crop.—A crop of 8,623 (8,251) maunds of tea was manufactured and disposed of for sale in the U.K. 2,025 (*nil*) maunds and for sale in Pakistan for internal consumption 6,598 (8,251) maunds. The teas realised an average price of Rs. 2 per lb. as compared with Rs. 2-1-0 per lb. obtained for the previous season's crop.

A further 8 acres were put out during the year and the area under cultivation at 31st December 1956, was 622 acres.

The revenue account shows a profit of Rs. 6,75,586 (Rs. 7,61,053) and after deducting from this manager's planting commission Rs. 859 (*nil*), manager's retiring gratuity Rs. 10,725 (*nil*), staff commission and bonus Rs. 71,798 (Rs. 87,061), managing agents' remuneration Rs. 57,019 (*nil*), provision for taxation Rs. 2,60,000 (Rs. 3,50,000) and depreciation Rs. 49,904 (Rs. 34,102) there is a balance of Rs. 2,25,281 (Rs. 2,74,704 after deducting managing agents' commission on profits of Rs. 15,186). To this amount is added the dividend on investments (net) of Rs. 329 (Rs. 329) making a net profit for the year of Rs. 2,25,610 (Rs. 2,78,453 including other income). After adding to this the adjusted credit balance of Rs. 42,062 (Rs. 17,259) brought forward from the previous year, there is a credit balance of Rs. 2,67,672 (Rs. 2,95,712) on profit and loss account. The directors regret that owing to lack of funds in India they are unable to recommend the payment of any dividend for 1956 at this stage. As and when they are able to have the profits remitted to India a dividend will be declared. Meantime the directors propose to transfer a sum of Rs. 1,50,000 (Rs. 1,50,000) to the buildings and machinery reserve out of the profit and loss balance leaving a sum of Rs. 1,17,672 (Rs. 40,712 after paying a dividend 30 per cent. for the year 1955 absorbing Rs. 90,000 and transferring Rs. 15,000 to contingencies reserve account) to be carried forward.

Outstanding dividends.—The Company has now been able to transfer certain funds from Pakistan to India in respect of past year's profits, but a considerable sum on this account still remains to be remitted. Meantime the dividend declared for season 1953 on 23rd November 1954, has now been distributed to the shareholders.

The estimates for season 1957 provide for a tea crop of 8,000 maunds at a total outlay of Rs. 7,13,234 excluding capital expenditure amounting to Rs. 2,86,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	6,32,508

PRESIDENT EISENHOWER IS CONFIDENT OF ECONOMIC OUTLOOK FOR U.S.

PRICE INFLATION SUCCESSFULLY RESTRAINED

IN a candid survey of the American economy, President Eisenhower told Congress on Tuesday this week that the year 1957 was a prosperous one for the United States. He expressed confidence that the moderate decline in business activity which began in the fourth quarter of the year need not be prolonged, and that economic growth "can be resumed without extended interruption."

These views are contained in the annual Economic Report which the President sent to Congress this week. The Report is required to be submitted by the Employment Act of 1946, which declares it to be the responsibility of the Federal Government to help create conditions in which high levels of production, income and employment can be maintained.

In appraising 1957, the President's report notes that economic expansion continued during the year with production, income and employment again attaining record levels. It estimates the Gross National Product—the total output of goods and services—at $434,000 million, and personal income of all Americans at $343,000 million, both about 5 per cent. above 1956. Average civilian employment rose 300,000 during the year to about 65 million, while average unemployment, at 2.9 million, showed little change from the previous year.

The decline which became apparent in the last quarter of the year, the Report observes, followed an unusually long period of expansion which began in 1954. The decline, the Report notes, has been rather moderate, despite reductions in inventories and industrial production. Purchases of goods and services have been well sustained; incomes have held up well; and the continuing high level of retail sales attests to the confidence of consumers in their economic position.

From a long-range perspective, the President points out that, in the 12 years since the Employment Act was passed, the aggregate of goods and services produced has increased nearly one and one half times—an average rate of economic growth of 3.5 per cent. a year. Moreover, the number of civilian jobs has increased by 10 million, and more than $350,000 million of private funds have been devoted to the expansion and modernisation of productive facilities. This is in addition to huge investments in homes, schools, hospitals, roads and other private and public improvements.

The increases have been accompanied by a significant advance in consumption. The output of consumer goods and services, the President notes, is 40 per cent. higher today than it was in 1946—an average rise of 3 per cent. a year. All this leads the President to conclude that the U.S. economy "has exhibited a remarkable capacity for sustained and balanced growth. The American people and the free enterprise system have responded well to the challenges of increasing requirements."

Discussing the role of national policy in economic affairs, the Report lays great stress on the need to limit fluctuations in the rate of growth to a relatively narrow range around a rising trend. Through its policies and programmes, the Report says, Government can help achieve a sound economic balance.

In 1957, the Report notes, the shifting in economic forces called for adjustments in public policies. The paramount task during much of the year was to restrain inflationary tendencies. As the year progressed, however, these tendencies diminished in strength. Thus, from restrictive monetary and fiscal policies, Government agencies began to switch to policies of greater ease.

In its efforts to achieve economic growth and at the same time avoid price inflation, the President points out, reliance has been placed on measures which involve a minimum of intervention in the affairs of individuals and private groups. This recognises that the productiveness of the American economy, in the words of the Report, derives from its "reliance on private enterprise and on the incentives and opportunities which such a system supplies for the development and use of individual talents and energies."

Among the evidences of strength visible in the economy today, the President cites research and development outlays by business, residential and commercial construction, expansion of public services and facilities, a continuing high level of personal income, and the greater availability of credit.

Looking further ahead, the President sees "good grounds for confidence" that a vigorous expansion of the U.S. economy can be sustained over the years. He notes that the domestic market for goods and services has doubled every 25 years, while *per capita* consumption has increased more than 50 per cent. over the past two decades. Meanwhile, he notes, technological achievements are opening up new and growing fields for investment and trade.

Foreign Economic Policy

Explaining the foreign economic policy of the U.S., the President says:

"Now more than ever, the United States must ensure that its foreign economic policy is soundly conceived in the interests of the nation as a whole and is adequate to the changing needs of the times. Gratifying gains have already been achieved in the scope and freedom of international trade and financial transactions. Important legislative steps remain to be taken in the field of foreign economic policy, if we are to deal successfully with the problems confronting us.

"The keystone of our foreign trade policy is the Trade Agreements Act, shortly up for renewal. Under that Act, as extended from time to time by the Congress, trade barriers against United States goods have been reduced on a wide front. The most important results are embodied in the General Agreements on Tariffs and Trade, to which 37 countries accounting for more than 80 per cent. of world trade are now signatories. Through the General Agreements we have secured conditions conducive to the increase of our exports. We have succeeded not only in reducing tariffs against our goods but also, owing in large part to the multilateral obligations provided by the General Agreements, in greatly reducing the quantitative controls abroad which were so prevalent before and, for a time, after the war.

"While the national interest demands a growing two-way flow of trade, certain recognised safeguards have been established. These include "escape clause" relief for industries which have experienced or are threatened with serious injury as a result of tariff concessions on imports. To assist him in the consideration of Tariff Commission investigations in such cases, and to advise on the administration of the trade agreements programme generally, the President has established the Trade Policy Committee at the Cabinet level with the Secretary of Commerce as chairman.

"The preservation and extension of the benefits obtained from widening the channels of world trade will depend heavily on the direction taken by American trade policy in the next year. The decisions made will have a significant bearing on the economic fortunes and policies of our trading partners, and particularly on the success of the steps being taken toward closer integration in Western Europe through the Common Market now starting among six countries and through the Free Trade Area under negotiation for the region as a whole. It is basic to our interests and to those of the larger community of nations that these new groups pursue policies favouring the expansion of international trade and that they contribute effectively to the economic growth and unity of the free world.

"To meet these needs, three major elements are required in our trade agreements programme:

"First, the Trade Agreements Act should be extended for five years from the date of its expiration on 30th June, 1958. This action would confirm our continued adherence to the principles which the Act embodies, and would enable the United States to carry on necessary negotiations in behalf of our export trade during the crucial formative period which lies ahead in Western Europe.

"Second, additional authority is needed to make tariff concessions to enable us to conduct trade negotiations successfully. Congress will be requested to authorise the reduction of any duty existing on 1st July 1958 by 5 per cent. per year over a five-year period, or by an equivalent total amount in not less than three stages with a maximum of 10 per cent. in any one year. The President would also be authorised, alternatively, to reduce any rate of duty by three percentage points *ad valorem*, without any yearly reduction exceeding one percentage point or to reduce any rate to 50 per cent. *ad valorem*, if the existing duty is in excess of that

MONEY SHADE EASY

(From Our Own Correspondent)

BOMBAY, 22*nd January*

Conditions in the short-term money market during the week under review showed signs of a slight relaxation in the stringency noted in the previous week. Contrary to the general expectation that the demand for credit would broaden in the coming weeks, there was a distinct fall in demand. With a fairly adequate supply, banks had no difficulty in meeting the call for funds and were, therefore, not keen borrowers in the market. There was, however, no change in interest rates. Thus, inter-bank call money continued to be quoted at 3 per cent. among the Exchange banks and big Indian banks and at 3½ per cent. among the smaller banks. House money at call fetched the self-same rate of 4¼ to 4½ per cent. and short-term deposits 4¼ to 4½ per cent. for one to six months.

After three weeks of successive expansion, notes in circulation have recorded a fractional decline (Rs. 47 lakhs) during the week ended 17th January 1958, according to the Reserve Bank of India's statement for that week. There has been a sharp fall of Rs. 24.72 crores in foreign securities, as against which there is a corresponding rise in rupee securities. The decline in foreign securities has been offset to a large extent by the increase of Rs. 22.57 crores in balances held abroad in the Banking Department, so that the net decline in foreign assets is of the order of only Rs. 2.15 crores. Deposits of the Central Government are up by Rs. 2.42 crores and those of other Governments by Rs. 15.19 crores. Deposits of banks also have risen by Rs. 4.91 crores. Loans and advances other than to Governments are lower by Rs. 1.11 crores, in contrast to the aggregate rise of Rs. 13.43 crores in the preceding two weeks. The advances to Scheduled banks against usance bills are only fractionally higher, while investments have gone up by no less than Rs. 23.55 crores.

The Scheduled Banks' statement for the week ended 10th January 1958 discloses a fall of Rs. 6.63 crores in demand deposits and of Rs. 2.13 crores in time deposits. Borrowings from the Reserve Bank are higher by Rs. 4.67 crores and those from the State Bank of India by Rs. 92 lakhs. A further rise of Rs. 8.48 crores is noted in advances, while bills purchased and discounted have recorded a decline of Rs. 7.95 crores. Cash balances have shrunk by Rs. 9.93 crores, and money at call and short notice by Rs. 4.88 crores.

Activity in the gilt-edged market was dull during the week under review, though the undertone remained steady consequent on the demand for some of the short-dated Central loans and State loans. Barring one or two issues, the Reserve Bank was reported to have suspended sale of all securities, the latest ones to be withdrawn from its sale being 3½ per cent. 1974 and 4 per cent. 1972. Consequently, there was a general shortage of scrips and the volume of business was, therefore, next to nothing. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 71.05, while 3 per cent. 1970-75 attracted slight enquiries at quoted rates, consequent on the suspension of sale of 4 per cent. 1972 by the Bank. 3 per cent. 1966-68 gained 15 nP to Rs. 91.65. 3 per cent. 1964 put on 10 nP to Rs. 94, while 3 per cent. 1963-65 was stagnant at Rs. 93.70. 3 per cent. 1959-61 was marked up by 10 nP to Rs. 99.05. 3½ per cent 1962 was placed at Rs. 97.85 *ex*-voucher, as against Rs. 97.95 *cum*-voucher a week ago. 3½ per cent. 1961 had buyers 5 nP higher at Rs. 99.65. 3½ per cent. 1964 was held at Rs. 97.70, while 3½ per cent. 1965 had sellers at Rs. 97.55. 3½ per cent. 1967 and 3½ per cent. 1967 had buyers at Rs. 97.60 and Rs. 99.60, respectively. 3½ per cent. 1974 was unchanged at Rs. 98.25, while 4 per cent. 1972 gained 10 nP to Rs. 100.10. Among State loans, 4 per cent. 1968 Madras showed a rise of 5 nP to Rs. 97.30. Andhra 1968 hardened by 10 nP to Rs. 97.10 and U.P. 1968 by 5 nP to Rs. 97.20.

In the foreign exchange section, there was a further slight hardening of the rupee in terms of the U.S. dollar. Banks' selling rate of ready dollars declined from Rs. 475.75 to Rs. 475.50 per $100 and their buying rate from Rs. 472.50 to Rs. 472.25 per $100. In New York, sterling, after an initial recession, gained strength. Thus, spot sterling fell from $2.81⅝-2.81¾ to $2.81-3/16-2.81-5/16 before appreciating to $2.81-7/16-2.81-3/16. Three months' forward dropped over the week ¼c. to $2.79-1/16-2.79-3/16, while transferable sterling was unchanged on balance at 278.75-278.85 cents.

DEMAND FOR HIDES KEEN

(From Our Own Correspondent)

KANPUR, 20*th January*

The hides and skins market ruled firm during the week under review. Demand for both wet salted cow and buff was keen, the main purchasers being the local tanners. The Madras dealers were interested in goat, sheep and lighter cow. The country tanners were prominent buyers of inferior grade cow.

The latest available quotations are: Wet salted cow 1st grade at Rs. 360, 2nd grade Rs. 320 and 3rd grade Rs. 300 per score; wet salted buff 1st grade 1 lb. 4 oz. to 1 lb. 8 oz. and 2nd grade 1 lb. 10 ozs. to 1 lb. 12 ozs. per rupee; goat skins 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; sheep skins 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

LINSEED DECLINES FURTHER

(Messrs. A. Bradley and Co.)

CALCUTTA, 20*th January*

A further decline in linseed prices has been recorded and trading has continued to be very dull. Arrivals of seeds are small, and the local stocks of both seeds and oil are limited. Crushers are operating very cautiously. The oil market is dull; local demand is sluggish, whilst overseas markets have ruled easier with sellers offering vainly at reduced prices.

The latest available quotation for January-February is Rs. 22-4 per maund.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 23*rd January*

Trading in the bullion market during the week under review was marked by a further hardening of the precious metals, thanks to the sustained bull grip over the market. Though there was a slight setback towards the close, on profit-taking, the undertone was still bullish. Consequent on the decline in arrivals and good demand in the ready section, the bulls once again made a bold bid to push up the prices of both silver and gold and they were successful to a large extent. In silver, despite the heavy *budla* charges which they had to pay in the last two days, the bulls showed no signs of relaxing their grip on the metal. Gold touched a new high for the year at Rs. 111-3 in the ready and Rs. 110-15 in the forward (current settlement). The *budla* charges for this metal were in favour of buyers, albeit slightly.

Forward silver (February settlement) dropped early in the week from Rs. 188-4 to Rs. 187-11, but this recession was short-lived. For the white metal soon crept up to touch a high of Rs. 189-10 yesterday. On profit-taking, however, there was again a setback at the close to Rs. 188.15. The March settlement advanced from Rs. 188-15 to Rs. 190-3 before closing at Rs. 189-11.

Ready silver appreciated from Rs. 187-8 to Rs. 189-1, but receded to close at Rs. 188-6. Thanks to the slackening of arrivals, the discount at which the ready metal was quoted below the current settlement narrowed down from As. 12 to As. 9. The floating stocks are placed at 1,500 bars. The daily average arrivals were 10 bars, while the offtake was higher at 15 bars per day.

Gold for forward delivery in the February settlement moved up from Rs. 109-12 to Rs. 110-15, but shaded off at the close to Rs. 110-9. The March settlement gained up from Rs. 109-14 to Rs. 110-14 before finishing today at Rs. 110-8.

Ready gold closed As. 13 higher on balance at Rs. 110-13, after touching a peak of Rs. 111-3. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were of the order of 2,500 tolas and the offtake was also of the same order.

In New York, silver declined from 89⅞c. to 89⅝c. London prices also fell in sympathy from 77¼d. to 77d. for spot and from 76¾d. to 76½d. for forward. Gold moved up from 248s. 8½d. to 249s. ½d. before closing lower at 248s. 9¼d.

The following comparative table shows at a glance the trend of the market during the week under review:

	22-1-58	Highest	Lowest	15-1-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	110 13	111 3	109 9	110 0

BRISK OFFTAKE IN COW HIDES

(From Our Own Correspondent)

MADRAS, 20*th January*

Arrivals of cow hides were small and offtake by shippers brisk. Prices ruled firm. The U.K. buying was selective; and light weight cow hides superior standards were sold at 68/58/48d., cow calf at 93d. and buff calf at 67d. Ordinary F.A.Q. marks were done at higher prices, and trading with the U.K. was extremely difficult. There was good demand for low grades cow hides and buffs for inland trade, while the U.K. levels were 5 per cent. lower.

In the tanned skins section, there was good call from the Continent for superior tanned goat skins and for common tannages in sheep skins, with the result that prices in the raw centres remained firm.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 21*st January*

Prices of base metals were well maintained during the week under review. There were more fresh arrivals of copper during the week; these did not alleviate the shortage in the metal. For arrivals were not only little as compared to demand but even these could not be unloaded from ships in time due to continued refusal by pool stevedore labour engaged in unloading and loading to accept bookings. Electrolytic copper closed at Rs. 167 after having sagged to Rs. 165 from Rs. 168 earlier. The mid-week fall was attributed to weakness on the London Metal Exchange. The break in London was arrested following a report from New York that Chile might plan to cut copper production by 10 per cent. The report also indicated that, unless Chile reduced output, world supply would exceed demand. Locally, scrap was not available. There was an enquiry on behalf of the Government mint. Tin opened at Rs. 523 and hardened to Rs. 539. Ready supplies were difficult to be obtained, but some quantity was expected to be received shortly. Virgin lead was throughout quoted at Rs. 60. Demand was little and the supply position was comfortable. More supplies of zinc were received, and the price eased to Rs. 54.50 from Rs. 56.50.

COTTON FUTURES IRREGULAR

(From Our Own Correspondent)

BOMBAY, 22*nd January*

The cotton futures market ruled irregular during the week under review. It opened the week easy but picked up strength on Saturday which gathered further momentum on Monday. There was, however, a reaction yesterday and today; towards the close, some recovery was in evidence. The initial weakness was due to nervous liquidation induced by recession in spot Vijay prices and disappointment over the delay in the announcement of export quota. On the third day, the market staged a smart rally, thanks to encouraging reports from the yarn and cloth market and firm upcountry advices. The apprehension that, with the approaching maturity date of the March contract, scarcity of tenderable cotton would be increasingly felt forced the shorts to enter the market and cover their requirements. There was also large-scale mill and investment support. Consequently, the prices touched a peak of Rs. 697 on Monday. The sharp spurt in price caused panic among traders who feared that the Forward Markets Commission might intervene to check the rise in prices and direct the East India Cotton Association to enforce margin at a level lower than Rs. 750 at which margins are payable at present. It was recalled that the Commission had not hesitated in the past to reduce the limit to as low as Rs. 700. These apprehensions had an adverse effect on the market. The bulls sold heavily on Tuesday, with the result that the Jarilla March contract fell sharply to Rs. 687.50. There was, of course, some switch-over of purchases to the May contract, business in which commenced on Monday. Towards the close today, however, the market again firmed up, on emergence of fresh buying, and values recovered so that today's closing rate was actually higher by Rs. 2.25 as compared with last week-end quotation.

I.C.C. Moglai Jarilla (March 1958) opened the week at Rs. 690 and, after declining to Rs. 685 the same day, firmed up to Rs. 689.25 on Saturday. Persistent short covering pushed up the contract to Rs. 697.50 on Monday. After dropping to Rs. 687.50 today, the contract again recovered to Rs. 694.25 at the close. Business in I.C.C. Moglai Jarilla (May 1958) started on Monday at Rs. 685.25. After moving up to Rs. 690 the same day, it fell to Rs. 684 yesterday. Commencing at Rs. 681.50 today, the contract improved to finish at Rs. 687.50.

The following table indicates the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	22-1-58	*High*	*Low*	15-1-58
I.C.C. Moglai Jarilla (March 1958)	694.25	697.50	680.50	692
I.C.C. Moglai Jarilla (May 1958) ...	687.50	689	680	685.25*

*On 20th January 1958.

In the spot section, encouraging upcountry advices coupled with fears of scarcity of good quality cotton led to enlarged mill demand at higher prices. The new arrivals of Vijay, which showed a deterioration in quality, were quoted lower. But subsequent arrivals were better and prices consequently improved. The other varieties in demand were Khandesh, Khamgaon, Berar and Laxmi.

In the export section, shippers' interest revived towards the end of the week in anticipation of export quota. Sizable business was put through in fine and superfine Bengals subject to availability of export licence. Although there is disappointment over the delay in the announcement of quota, it is considered to be a certainty because the supply position of exportable styles is such as to leave a sizable surplus for shipments abroad.

In the foreign section, there was revival of demand for American cotton and some business was reported in Californians for February-March shipments. Interest was also noted in East African growths. A prominent Bombay mill group was credited with having purchased 10,000 bales of East African cotton and another group about 3,000-4,000 bales of East-African Bukhedi.

There is widespread resentment among mills against the allocation recently made in respect of 40,000 bales of Sudan cotton. Originally, allocations were to be made on the basis of a mill's average annual consumption over the past three years. But now the authorities have also taken into account the stocks held by the mills out of their previous import allocations. This change has drastically reduced the share of many mills who have been important consumers of foreign cotton. Mills which had built up stocks on a long-range view are now at a disadvantage. They will be deprived of the benefit of the prevailing lower prices. Importers too find themselves in an awkward position.

In contrast to last week's firm trend, the Karachi cotton futures market ruled easy during the week under review. Overseas demand was slack. Domestic spinner interest was also subdued. Mill buyers were inclined to take the view that, as the current season's crop would be higher, the supply position would be comfortable. N.T.R.G. January declined from Rs. 79-2-6 last week-end to Rs. 78-14 at close yesterday, and the March contract was marked down, over the week, by As. 12-6 to Rs. 76-6. In the spot market, activity was subdued and prices climbed down. Sind *Deshi* and Punjab *Deshi* dropped Rs. 2 and Re. 1-8 to Rs. 70 and Rs. 68-8, respectively. The latest available quotation—in rupees per maund of 82 lbs.—for a few other popular varieties of Pakistan cotton are given below:

4F Punjab Roller 79; S.G. 84; L.S.S. Punjab Roller 81-12; S.G. 86; N.T. Roller 82-12; S.G. 89-8; 289F Punjab Roller 87; S.G. 95.

The current season's cotton crop of Pakistan is estimated at 1,715,000 bales, as compared with 1,600,000 bales harvested in the previous season. Local mills are expected to consume about one million bales, leaving an exportable surplus of

715,000 bales. Export sales in the current season are below that of the previous year, the principal customers being, Japan, France, Hongkong, and U.K. U.S.A. and Germany are interested in *Deshi* styles.

The Alexandria cotton futures market continued to display an easy trend during the week under review also. The absence of buying support, in the wake of a considerable volume of hedge selling, resulted in a further break in values. Both the Karnak and Ashmouni contracts were marked down. Spot premiums, however, were firm. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: January 83.10 (86.45); March 84.05 (87.50). *Ashmouni*: February 69.10 (71.05); April 69.70 (71.65).

Limited turnover, with prices showing a declining trend and inter-month switching operations, characterised trading in the Liverpool cotton futures market during the week under review. There was a fair volume of liquidation and hedge selling in near months which was only partially absorbed by mill fixations and trade covering. Lack of buying support reflected the hand-to-mouth policy of the mills, the weak trend of the New York market, more generous American offers and slow movement of yarn and cloth stocks. Both the American and the American type contracts declined. Sudan contracts were neglected. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March-April 25.60; May-June 25.95; July-August 26.30; October-November 26.50. American cotton *mixed growth contract*: March-April 26.85; May-June 27.10; July-August 27.40; October-November 27.58. *Sudan*: January-February 32.50; May-June 32.60; July-August 32.60.

The downward trend of prices noted in the New York cotton futures market last week gathered further momentum this week, thanks to heavy speculative selling which was touched off by the President's farm message to the Congress urging lower support prices and higher acreage allotments. A further fall was, however, prevented by the emergence of some buying support prompted by the opposition of some leading Congress men representing agricultural interests to the Administration's farm proposals, and reports of heavy entry into 1958 Soil Bank programme with the consequent temporary suspension of the signing of agreements with farmers for retiring lands from cotton. Over the week, futures prices showed a marked decline.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	21-1-58	14-1-58	7-1-58
Spot	36.25	36.35	36.45
March	35.14	35.47	35.80
May	35.30	35.69	36.02
July	35.29	35.48	35.98

SUGAR DULL

(From Our Own Correspondents)

BOMBAY, 22*nd January*

The sugar market presented a dull trend during the week under review. Demand from Malabar Coast was slack and spot demand was at a low ebb in the wake of larger arrivals, aggregating 16,060 bags, as against 10,000 bags in the previous week. Rumours were also current that the Union Food Ministry would issue the usual monthly release very shortly. Another unhelpful factor was the report from Kanpur that the manufacturers of *khandsari* sugar were doing prosperous business, due to the wide gap in prices between white sugar which is subjected to excise duty and *khandsari* which enjoys relief in tax. Sugar circles estimate the production of *khandsari* in the current season at 500,000 tons, as against the normal annual output of 250,000 tons. Owing to inroads of *khandsari* in the sugar market, fears are expressed that white sugar prices may go down. Reflecting these fears, the ex-mill quotations for U.P. sugar have receded by about As. 8 per bag, with a corresponding decline of Re. 1-8 per bag in the Bombay-Deccan.

Despite all these adverse factors, sugar prices in the local market did not suffer any break. Small grain was unchanged at Rs. 104 per bag, including additional Central excise, medium grain at Rs. 105-107 and large grain at Rs. 109-112.

* * * *

HAPUR, 20*th January*

A quiet tendency was witnessed in the sugar market during the week under review. There were reports that crushing for the season was in full swing and an overall increase in sugar production in the country was expected during the current season. The trend of the market in future would depend mostly on the decision to be taken by the joint meeting of the sugar merchants' associations and the Government regarding the export policy for sugar.

In limited business, the sugar market at Muzzafarnagar ruled quiet, due to lack of support from consuming centres. Rates of some varieties for Saurashtra and Punjab side declined by 6 nP to 25 nP per maund. The factories are attracting enough cane for maximum crushing, but the recovery of sugar is reported to be 0.5 per cent. lower as compared with last year, on account of poor cane quality. The latest prevailing ex-mill delivery prices per maund are: New Buland (B-29) Rs. 37; Rampur (B-29) Rs. 37; Shamli (B-29) Rs. 37.44; Daurala (B-29) Rs. 37; Mawana (B-29) Rs. 37.12; Amroha (D-29) Rs. 34.50; Bijnore (E-29) Rs. 34.31; Meerut (D-28) Rs. 35.25; old Iqbalpur (D-29) Rs. 34.62.

Owing to lack of buying interest, the sugar ex-mill delivery prices at Kanpur moved downward in the wake of selling pressure. Crystal sugar had to face keen competition with *khandsari* in the spot section. The production and arrivals of *khandsari* in the market were reported to be twice those in the previous season. The Government's announcement of export policy is keenly awaited.

Following heavy arrivals in neighbouring markets and increased production, *khandsari* prices eased further; they ranged between Rs. 22 and Rs. 31 per maund, according to quality. The *khandsari* manufacturers were reported to be buying cane around Re. 1 per maund as against the mill delivery price of Re. 1.44 per maund.

Thanks to disquieting reports about the overall sugarcane output, the downward trend in ready *gur* prices was halted. In fact, there was some improvement in prices. Outside demand continued to be slack and stockists were the main supporters. Arrivals in all the main producing areas in North India continued to be smaller as compared with previous year. Daily arrivals at Hapur averaged 2,500 maunds and total arrivals from the beginning of the season were put at 275,000 maunds, the corresponding figure last year being 300,000 maunds. Local stock aggregated about 30,000 maunds. The prevailing prices at Hapur were: *Gur pansera* Rs. 11.50 to Rs. 11.75 and *balti* Rs. 12.50 per maund.

Despite slack outside demand, ready *gur* at Muzaffarnagar recorded a gain of about 50 nP per maund during the week, due to poor daily arrivals and support lent by stockists. The latest prevailing prices were: *Gur chakku minja* Rs. 14.25 to Rs. 14.75; *pansera* Rs. 12.50; *shakker dara* Rs. 14.75 to Rs. 15.75; *shakker masala* Rs. 14.75 to Rs. 15.75.

Future *gur* moved both ways during the week and recorded a bullish trend toward the close. Opening at Rs. 12.04 on Monday last and touching the highest of the week at Rs. 12.26 the same day, *fagun* delivery declined to the lowest level of Rs. 11.82 on Friday. Thereafter, it recovered to Rs. 12.13 today.

The preparation for sowing the cane crop for the next season have begun.

BLACK PEPPER DEPRESSED

(Messrs. Parekh and Co.)

BOMBAY, 22*nd January*

The Malabar black pepper ruled depressed during the week under pressure of arrivals and owing to paucity of foreign as well as inland demand. Alleppey went down to Rs. 462½ and garbled at Cochin to Rs. 83. Tellicherry pepper showed comparatively softer undertone, in view of lower holding powers of the growers. Calicut was lower at Rs. 480. But for the covering by exporters for shipment of about 1,200 tons to Russia, the market would have gone still lower.

New York proved a discouraging market, most of the dealers and grinders inclining to hold off in anticipation of further declines. Spot in New York came down to $0.23½. Big offers of 100 to 200 tons of smuggled Lampong from Singapore scared away prospective buyers. Dealers in New York indicated chance of business for Malabar black at $0.21 for January shipment. They refused to give firm offers.

Sarawak in Singapore ruled steady, but Lampong weakened under fear of heavy arrivals of smuggled pepper from Sumatra which was reported to be shipping away most of their produce to Singapore for bartering in contravention of the Central authority at Java. It was stated that Sumatra was trying to break away from the Republic and to establish a separate Government of its own, while the Central Government in Java was devising ways and means to deal with the independent barter trade by the Provinces such as Sumatra and the Celebes.

The present depressed state of the pepper market in Europe and New York was responsible to some extent, if not fully, for the exaggerated estimated of the crop of Malabar black or 1957 given out by the Government. The Government placed its estimate at 32,000 tons which was very much wide of the mark. Some of our foreign friends were asking us to confirm if the official estimate published by *Reuter* was true. It was high time that the Cashew and Pepper Export Promotion Council took up the matter with the State for circulating such an exaggerated estimate, causing depression in the world market to the detriment of the producing countries.

In A.S.T.A. February was done at $0.21¾, while April-May-June were done at $0.22.

In the delivery section, February was done at as low as Rs. 468.

Today's nominal quotations are: Ready Rs. 71 per Bengal maund, February Rs. 468-Rs. 473 and March Rs. 474-Rs. 479 per candy of 5¼ cwts.

YARNS LOOK DOWN

(From Our Own Correspondent)

BOMBAY, 22*nd January*

The distinctly firm trend noted in the yarn market in the past few weeks abated during the week under review. In fact, the market ruled easy. Art silk yarn lacked support on reports that the recent marked rise in prices had evoked consumer resistance from handloom and powerloom interests. These interests, it is said, are finding it difficult to run their looms, as the prices of fabrics have failed to keep pace with increased yarn values. Fears are expressed that, if the situation were to continue, the weaving operations might be cut down. There are, besides, expectations of larger arrivals of imported yarns in the coming weeks; the expectations are based on the news that several exporters of art silk fabrics have applied for import of yarn on a guarantee of augmenting shipments by 100 per cent. in the ensuing half-year. Meanwhile, the Silk and Rayon Textiles Export Promotion Council is contemplating to raise the export target for the six months ending June 1958 by Rs. 150 lakhs for rayon piecegoods and by Rs. 50 lakhs for silk goods. Indications are that this target will be hit. The quality of the fabrics, for instance, has been improved, new attractive designs at lower prices introduced and efforts are being made to standardise the goods meant for export. These reports did not have any effect on the market. In sympathy with art silk yarns and on account of lack of follow-up support, staple fibre yarns and cotton yarns ruled dull. Enquiries from consuming centres slackened. It was stated that the weavers had already covered their minimum needs of yarn.

Snia rayon yarn (120 dull cones) February delivery dropped from Rs. 913 to Rs. 907 but recovered today to Rs. 913. There were no transactions in the April delivery this week too. In the spot section, 120 Italy and 150 Italy were dull at Rs. 5.25. 120 Japan lost a naya paisa to Rs. 5.27. 150 Japan receded by 7 nP to Rs. 5.02. Indigenous yarns evoked some support, National Rayons 150 bright cones first grade improving by 13 nP to Rs. 4.19 and 120 bright cones first grade by 17 nP to Rs. 4.75.

Staple fibre yarns (40×2) February delivery which had gone up yesterday from Rs. 591 to Rs. 596 relapsed today to Rs. 593. No transactions were reported in the April delivery this week also. Spot (40×2) Centurys put on 3 nP to Rs. 3.25. New Greats were better by a naya paisa at Rs. 3.10. Citys, however, shed a naya paisa to Rs. 3.24. Among spot foreign yarns, Paramounts gathered 3 nP to Rs. 6.78. Fujis, on the other hand, declined by 58 nP to Rs. 6.06.

In the cotton yarn section, among ten counts, Moderns and Podars were quiet at Rs. 14.62 and Rs. 14, respectively. Twenty counts Moderns climbed up by 43 nP to Rs. 17.68. Gokaks were done at Rs. 17.62. Among thirty counts, Indus were dull at Rs. 21.25. Forty counts, Moderns and Gokaks were unchanged, the former at Rs. 25.50 and the latter at Rs. 25.25. Minaxis encountered selling and came down by 12 nP to Rs. 25.25. Sixty counts, however, elicited good support. Finlays and Moderns both moving up by a rupee to Rs. 61. Raghuvamshis improved by 50 nP to Rs. 53. Eighty counts were quiet, Mahendras being done at Rs. 69.75, Moderns at Rs. 72 and Finlays at Rs. 75.

The following table gives the prices of rayon, stable fibre and cotton yarns quoted today, as compared with those seven days before:

	22-1-1958	15-1-1958
	Rs.	Rs.
Art silk yarn (per case of 200 lbs.)—		
120 dull Cones Snia February	913.00	913.00
120 Japan (per lb.)	5.27	5.28
150 Japan (per lb.)	5.02	5.09
120 Italy (per lb.)	5.25	5.25
150 Italy (per lb.)	5.25	5.25
Staple fibre yarn (per case of 200 lbs.)—		
40×2 February	593.00	591.00
40×2 New Great (per lb.)	3.10	3.00
40×2 Century (per lb.)	3.25	3.22
40×2 City (per lb.)	3.24	3.25
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14.00	14.00
20s Gokak	17.62	
30s Indu	21.25	21.25
40s Minaxi	25.25	25.37
60s Raghuvamshi	53.00	52.50
80s Modern	72.00	72.00

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 22*nd January*

Easy conditions prevailed in the oilseeds market during the week under review, in contrast to last week's buoyant tone. There were offerings from upcountry and stale liquidation, but buying enthusiasm was lacking. The market, of course, depicted a firm trend on Monday, following rumours of an export quota of groundnut oilcake to the tune of 20,000-25,000 tons, continued free licensing of exports of decorticated cottonseed oilcake as well as undecorticated cottonseed oilcake against the balance quota of 10,000 tons remaining unutilised at the end of last month, and release of a fresh export quota (4,000 tons) of "other oilcakes." But the firmness did not last long, for, yesterday, the market again staged a relapse on resumption of fresh selling, while support was very poor. Today also, the market was easy. Not only were Monday's gains completely erased but the closing rates stood lower than those at the end of last week. Reports that the Forward Markets Commission was feeling rather concerned over the swift rise in prices of commodities unnerved a section of speculators and induced a certain amount of bull liquidation.

Activity in the groundnut section was subdued during the major part of the week under review. A feature of trading was the switch-over of forward transactions from February contract to May contract the business in which commenced on Thursday. Groundnut February came in for selling and declined from Rs. 158.62 last week-end to Rs. 157.50 on Saturday, and, after recovering to Rs. 159 on Monday, fell again to Rs. 156.75 today. May delivery commenced at Rs. 160 and lost 50 nP on the second day. After recovering to Rs. 160.62 on the 20th inst., it eased to Rs. 158.50 today. Bold ready fell by 75 nP to Rs. 31.50, Coromandel by 87 nP to Rs. 32.00 and Khandesh quality by 75 nP to Rs. 32.12. Groundnut oil ex-mill lost 50 nP to Rs. 17.25. Railway receipt eased by 44 nP to Rs. 17.25.

Castorseed futures encountered selling induced by inability of the spot section to move up. There was, however, a distinct recovery today, on reports of export business in about 300 tons of castor oil with Russia. May contract opened the week at Rs. 139, as against the last week's close of Rs. 139.87, and moved down to Rs. 136.12 on the 18th inst. There was a sharp rise of Rs. 2.38 on Monday when the contract stood at Rs. 138.50. Subsequently, it came in for selling and dropped to Rs. 136.75, but recovered to Rs. 139.00 today. Ready Madras decreased by 25 nP to Rs. 27.50. Castor oil B.S.S. shed 25 nP to Rs. 15.62. Commercial was done at Rs. 14.31 today, as against Rs. 14.37 a week ago.

The linseed section ruled dull in the absence of any encouraging development. Turnover was restricted and values tended to look down. Over the week, May contract declined by a rupee to Rs. 29.87. February-March delivery and bold ready both lost Re. 1.38 to Rs. 29.37. Linseed oil ready fluctuated between Rs. 16.69 and Rs. 16.50 before winding up the week at Rs. 16.37.

Cottonseed February contract was subjected to continued selling and fell from Rs. 100 to Rs. 98.25 on Monday. After recovering to Rs. 99.75 on the following day, it again reacted, today's closing rate being Rs. 98.00. May position was done at Rs. 97.75.

Kardiseed lacked support, notwithstanding the release of an export quota of 5,000 tons for the period January-September 1958. Opening at Rs. 18.50, as against Rs. 19.00, it declined to Rs. 18.25 before recovering to Rs. 18.75 today. *Nigerseed* Madras remained dull at Rs. 27.25 during the major part of the week, but evoked some support yesterday, when there was a rise of 25 nP in the quotation. Today again, it eased to Rs. 27.25 for want of support.

The following table shows the closing prices of oilseeds and oils today as compared with those a week and two weeks before:

	22-1-1958	15-1-1958	8-1-1958
	Rs.	Rs.	Rs.

GOOD DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 17*th January*

Approximately 1,300,000 lbs. were on offer in Sale No. 2 which was held on Tuesday, 14th January. Quality again showed improvement and there was a very useful selection of teas from all districts on offer. The sale opened quietly, but a strong general demand quickly developed. Low medium and medium teas were 10 to 15 nP dearer and sometimes more with buyers quick to appreciate improved quality. Good medium and best liquoring teas met keen competition, although highgrown fannings were a weak feature. There was a much improved enquiry for whole leaf grades and these must be quoted 10 to 15 nP dearer. The following are the quotations:—

	1958 Rs.
Plain B.P.	1.40
Low medium	1.55 to 1.75
Medium	1.75 to 2.20
Good medium	2.15 to 2.50
Quality	2.55 to 4.50

The average price of tea realised in Sale No. 2 was Rs. 2.05 per lb., as compared with Re. 1.94 per lb. in the previous sale and Rs. 2.41 per lb. in the corresponding sale of 1957.

Dust Sale 'B'.—A little over 600,000 lbs. were on offer in Dust Sale 'B' which was held on Thursday, 16th January. The sale opened to a very strong general demand and prices were irregularly 10 to 15 nP dearer for all types. Fine dusts were the strongest feature of the sale and occasionally advanced more. Highgrown dusts were well supported at dearer rates.

Export Quota.—The market has been a little easier and business has been done at 17½ nP.

Forthcoming Auctions.—Sale No. 3 will be held on Tuesday, 21st January and Dust Sale 'C' on Tuesday, 28th January.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 3:—900,000 lbs. Very strong general demand for everything, particularly whole leaf. Low medium and medium descriptions 15 to 20 nP dearer. Better sorts higher following quality.

MIXED TREND IN TEA

(From Our Own Correspondent)

CALCUTTA, 21*st January*

There was again little demand during tea auctions held yesterday. Prices generally improved, but it was thought that the higher trend would have been more marked if only labour troubles in the Calcutta port were not causing anxiety.

In the last month, tea output in North India amounted to 11.7 million lbs., or 1.7 million lbs. more than in December 1956. Production in 1957 as a whole was 18.9 million lbs. lower at 521.1 million lbs. Pakistan's output in 1957 aggregated 45 million lbs. which also showed a fall of 9 million lbs. over the year. Ceylon's output last year, however, increased by about 9 million lbs. compared to 1956. Although thus the statistical position has improved, yet the problem of world surplus remains. It is to be hoped that the forthcoming Commerce and Industry Mission to Japan, the United States, and, Canada to boost tea exports to these countries would meet with success.

Dusts on offer during last week's sales for domestic consumption amounted to 18,083 chests. Demand was good, and all offerings were accepted. All teas of orthodox manufacture were steady. Exporters evinced keen interest in clean black leafy grades. The strongest features of the sales were the better liquoring mediums, and the best liquoring C.T.C. Assams, prices of which rose. The higher trend was also in evidence in the plainer fibrous teas. The rates were: best Assam C.T.C. Rs. 2.80 to Rs. 3.05, medium Assam C.T.C. Rs. 2.00 to Rs. 2.20, medium Assam grainy dust Re. 1.64 to Re. 1.66, and medium Dooars Re. 1.62 to Rs. 1.64.

Leaf on offer amounted to 1,890 chests, which met with good demand at firm rates.

During yesterday's export sales, offerings aggregated 58,041 packages. Demand was good, but while teas for certain varieties rose, prices for most others gave way. The strongest features of the sale were bright liquoring Assam B.O.Ps and O.Fs. The latter showed some improvement. However, the ordinary B.O.Ps gave way by 5 to 10 nP. The ordinary O.Fs also lost, C.T.Cs met with good demand. The best lots were firm, while the lower qualities eased. Broken grades of medium and common kinds declined by 2 to 3 nP, and fannings by 4 nP. An irregular trend was in evidence in "teas for price." Legg cut teas moved down by 4 to 6 nP, while a firmer trend was displayed in brighter liquoring lots. Whole leaf grades were very steady, as were Darjeelings. The quotations were: best Assam C.T.C. fannings Rs. 2.50 to Rs. 2.60, best Assam C.T.C. B.P. Rs. 2.60 to Rs. 2.80, clean black pekoe Rs. 2.35 to Rs. 2.40, fannings Re. 1.76 to Re. 1.80, medium B.P. Re. 1.66 to Re. 1.70, plain fannings Re. 1.66 to Re. 1.70 and plain B.P. Re. 1.58 to Re. 1.62.

Export rose to 15 nP from 14½ nP, but subsequently sagged to the lower rate.

JUTE GOODS QUIET

(From Our Own Correspondent)

CALCUTTA, 21*st January*

After registering a mid-week recovery following good consumption reports from the United States, prices of jute goods sagged towards the close of the week under review. In fact, yesterday's closing levels were lower on balance for the week. Raw jute prices were, however, maintained for most part of the week but fell fractionally during yesterday's trading following the lower trend in the jute goods market. For a time, stockists of jute goods derived encouragement from reports that burlap consumption in the U.S. during December, at 70.7 million yards, registered an increase of 7.7 million yards over the previous month's total. Some business was also transacted by buyers on behalf of the United States, and more orders were anticipated, in view of the fact the stocks of burlap in that country at the end of 1957 was lower than a year ago. Bag manufacturers in the U.S. must have also noted that mills here had been gradually transferring hessian looms to sacking manufacture, and that the output of hessian was declining month by month. It was noted that American consumption for the last year as a whole was lower than 1956 owing to a recession in economic activity.

The jute goods market opened on Tuesday last on a quiet note, and in the absence of incentives prices gave way with ready B. twills being pushed down to Rs. 104.85 from Rs. 105.25 and ready 40" 10 oz. hessian to Rs. 39.90 from Rs. 40.05. On the following day, speculators paid keen attention and bought a fair quantity in anticipation of business with the U.S. B. twills gained to Rs. 105.20 and hessian 40" 10 oz. to Rs. 39.95. At this stage, gunny shipment figures for the ten days to 10th January were available. Sacking shipped was lower at 9,000 tons, as against 13,500 tons in the corresponding period of December, and hessian 10,000 tons, as against 13,500 tons. These figures caused some anxiety in the market. This was reflected in the fall in B. twills to Rs. 105.10 and hessian 40" 10 oz. to Rs. 39.80. Sentiment was further affected by the refusal by pool stevedore labour in the port to accept bookings which brought loading and unloading operations here to a standstill. By the week-end, B. twills declined to Rs. 104 and hessian 40" 10 oz. to Rs. 39.65. Yesterday, B. twills recovered to Rs. 104.75 on speculative attention.

A quiet trend was in evidence in raw jute market, although mills bought a fair quantity of mesta white jute. Imports were limited in the upcountry areas, and prices there ruled above those in Calcutta. Sellers refused to lower their quotations, despite persistent attempts in this regard by mills. The latest quotations for January-February delivery for the different varieties of raw jute are:

	Middles Rs.	Bottoms Rs.
Pakistani:		
District	33.00	30.00
Northern	32.50	29.50

ready.

[SLIGHT FALL IN WHEAT PRICES

(From Our Own Correspondent)

HAPUR, 20*th January*

A quiet trend prevailed in the foodgrain market during the week. The Government of India, it was reported, was arranging more exports and a heavy quantity was expected shortly from Canada.

Wheat at Hapur recorded a modest fall, average quality being quoted at Rs. 15.44 per maund and farm produce at Rs. 17. Daily arrivals continued to be scanty and local stocks were fast dwindling, the latest estimate of which is put at 17 *khatias*, as against 53 *khatias* a year before. Some rains were received during the week in scattered parts of west U.P., but winter rains have so far been deficient and crop prospects are still bleak. The fall in wheat prices must be attributed to the Government's efforts not to let prices go up by selling wheat and other grains in the needy areas.

Rice ruled quiet during the week and the local supply position was reported to be satisfactory. The prevailing prices were: Basmati Rs. 27 to Rs. 30; mainpuri Rs. 23.50; coarse quality Rs. 20 per maund. Gram eased in the absence of any active demand and easy Punjab advices. The stocks were being moved to east U.P. on Government account. Local stock ran down by 4 *khatias* to 33 *khatias*, the corresponding figure last year being 38 *khatias* when gram was transacted at Rs. 13.87 per maund.

While maize was mostly unchanged during the week, *bajra* sought lower levels due to fall in ready demand. *Guwar* also eased. The week-end prices (in rupees per maund) were: Gram 11 to 11.12; barley 9.50; *bejhar* 9.37; maize 11.25; *bajra* 11.37; *guwar* 11.50; *jowar* 9 to 11.

Peas and *arhar* mostly in the form of pulses attracted some demand at lower rates, which resulted in the depletion of local stocks. *Arhar* advanced towards the week-end, following reports of damage to the standing crop due to frost. Other pulses were mostly unchanged. The quotations in rupees per maund were: Peas *dara* 9; farm 9.50; *peas dal* 10.06; *arhar* 10.25; *arhar dal* 13.75; *urd* 16.50 to 17.50; *moong* 15 to 15.50; *masoor* 14.62.

Arhar futures advanced in line with ready section, while other pulses futures ruled quiet. The prices prevailing on Monday were: *Peas maha* Rs. 8.81; *jeth* Rs. 9.31; *arhar maha* Rs. 10.06; *jeth* Rs. 10.81; *bajra fagun* Rs. 11.25; *urd maha* Rs. 16.31; and *urd baisakh* Rs. 16.81.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciations is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. (s) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k) Investments.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each. Dividend for 1956 is on shares of Rs. 10 each. P.—Bengal Coal Co. Dividend from 1954 to 1956 are on shares of Rs. 200 each.
New Jehilli Jute Co. Dividend of Rs. 17-8 includes an interim dividend of Rs. 7-8 per share. In 1956 the shares of Rs. 500 were split into shares of Rs. 100 each.

MARKET GOSSIP

(*Concluded from page 115*)

£1,000 cover on the father is a temporary assurance for £200 on the life of the mother. It will remain in force until the father reaches 65. This amount will be varied upwards if the mother is younger than the father and downwards if older. If the mother dies before the father attains the age of 65, the amount of assurance on his life will be increased by £200 until that age is reached.

Similarly, each child is insured from its first birthday upto the age of

UNREALISTIC ADVICE

THE advice tendered by the Panel of Economists to the Planning Commission early this week on rephasing of the Plan is extremely disappointing. Their recommendations are hedged in with so many qualifications that many of them are not quite intelligible and, in the case of those the meaning of which is clear, there is lack of realism. It looks as though the experience of the second Plan during the past 22 months has meant nothing to them. The failure of the Plan to progress along the lines envisaged by the majority of the planners and their advisers and its serious shortcomings that are as plain as daylight have brought about no change in their outlook. Excepting Prof. Shenoy, whose views are well known, all of them still maintain that "they are convinced that there was nothing basically over-ambitious in the initial targets of the Plan." One can understand politicians refusing to admit facts, but it is a bad day for the country when its teachers also do so. Not content with saying that the Plan was not over-ambitious, they give the naive explanation that, "if the Plan has run into difficulties, it is because of the inadequacy of effort, mainly organisational, that has so far gone into its implementation." What an explanation! While, of course, this is one of the reasons, it is by no means the main one. The main cause lies in the facts that the Plan sought to achieve the impossible and that when this was pointed out in good time by many eminent economists and financiers, both in India and abroad, the authorities turned a deaf ear to them. The Plan as it was framed has completely gone out of shape, because its authors concentrated too much on what should be done instead of on what could be done and how it could be done. It is depressing to find that most of our economists continue to make that mistake even now, despite all that has happened during the last two years.

In all sixteen economists participated in the discussions on the Plan. They were: Prof. D. R. Gadgil, Prof. V. L. D'Souza, Prof. C. N. Vakil, Prof. B. R. Shenoy, Dr. V. K. R. V. Rao, Dr. P. J. Thomas, Dr. K. N. Raj, Dr. S. R. Sen, Dr. S. K. Muranjan, Dr. B. K. Madan, Dr. D. T. Lakdawala, Dr. B. N. Ganguli, Mr. B. N. Datar, Mr. M. L. Dantwala, Mr. D. S. Savkar and Mr. J. J. Anjaria. As stated at the outset, Prof. Shenoy has again disagreed with the majority of his colleagues on their conclusions and recommendations, but no statement has been made to the public giving details of his disagreement, though his views are common knowledge now. It would appear from their statement to the Press, giving the gist of their meeting and conclusions, that, besides the elucidation of the problems facing the Government by the Finance Minister, the Panel was furnished by the Planning Commission with a statement on the progress of the Plan outlay in both the public and private sectors and on the lines along which the Plan was being rephased. It would have been helpful to commentators in the Press if this statement also had been made available to them. The Planning Commission would have lost nothing by giving publicity to such information. After all, the public has had no comprehensive progress report on the second Plan, though nearly two years are over since its implementation began.

The members of the Panel say that they did not have sufficient time to examine all the material placed at their disposal. And yet they chose to give serious advice to the authorities as to how they should go about the rephasing of the Plan. This is, indeed, an extraordinary thing to do. It is doubtless uncharitable to attribute motives, but one cannot help feeling that this prefatory qualification to the entire statement is a safety valve to escape responsibility later on. It would be easy for these economists to say in future, for instance, that what they said early this week was only tentative. Surely, the distinguished economists could have spent a couple of days more in the bracing climate of New Delhi and considered all the aspects in full at some leisure before formulating their recommendations. Where was the need to hurry through? A few days' delay would have made little difference to the nation.

The first subject referred to in the Panel's statement pertains to inflation. While the Panel is perfectly right in pointing out that the Plan has generated "a large inflationary potential even in its early stages" and that the heavy deficits in the balance of payments have counteracted the inflationary pressure so far, it is not convincing when it asserts that it "is definitely of the view that inflationary pressure has not been in the past nor is likely to be in the future such that it cannot be held in check by appropriate policy, including direct controls at particular points." The rise in prices and cost of living since 1955 is there for all to see. That this rise has led to an increase in the salary and wage bills in both the public and private sectors without bringing about any corresponding improvement in productivity cannot be denied. The recent increase in the dearness allowance of bank employees and the interim increase awarded by the Pay Commission for Government servants are the latest instances to substantiate this contention. There is also no indication to believe that the upward trend in the wage bill has come to a halt. If inflationary pressures could not be effectively held, despite heavily drawing down the external reserves, it is extremely risky to proceed on the assumption that they could be successfully subdued when the cushion of foreign exchange reserves is gone for all practical purposes and no reserve of food exists. Past experience of direct controls, of which we have had plenty, is not happy. The efficacy of such controls is limited and they only postpone the day of reckoning. The penalty for the countries (including India) that practised direct controls during the war and early post-war years was devaluation, besides severe hardship to the vast majority of the masses. If this country decides to accept the aforesaid advice

Administration. Nothing could be more conducive to the growth of communism than such a situation. Indeed, the more one thinks about this aspect the plainer becomes the lack of realism in the economists' approach. They have themselves discovered several shortcomings in organisation and co-ordination which have worked to the serious detriment of the Plan. Nevertheless, they expect every one to believe that the same Administration is competent enough to work a complicated system of direct controls to hold the fresh flood of inflation that will be generated by further deficit financing.

The Panel is of the view that a plan of Rs. 4,800 crores at today's prices should be feasible, but it has been careful enough to add some riders to this statement. It has thus stated that an investment of Rs. 4,800 crores will be possible only if (a) external resources of the order of Rs. 700 crores are forthcoming, (b) there is a considerable increase in the efforts to mobilise domestic resources in all forms, and (c) utmost care is taken to see that all available resources are fully utilised and that all the expenditure that is incurred comes to fruition without loss of time. To what extent can these conditions be fulfilled? It is the business of economists who undertook the responsibility of giving advice to the Commission to provide the answer in the light of a true assessment of the position. It must be said to their credit that they have made an attempt in this direction. Only, their conclusions sound hollow or over-optimistic.

Apparently, the large tax efforts made in the last two years, the country-wide campaigns launched to garner the savings of the people, the total nationalisation of life insurance and the enormous control the State has been exercising over the money market—all these efforts by the Government have not convinced the Panel that enough has been done to mobilise internal resources and to channel them along the lines planned. This inference is irresistible, because the Panel says that, "considering that the rate of domestic savings implied in an investment target of this order is by no means high, it should be possible to devise ways and means of raising the resources required, without causing serious strains in the process." In the opinion of many competent observers—as well as that of this journal—the people of this country have already been squeezed enough; the level of taxation is so high today that it has led to serious strains in the economy. The Industrial Delegation that visited the major Western countries in the latter half of last year has stated that the road to further progress is blocked, as sufficient internal resources are not available. Several State Governments also have found from experience that the job of extracting financial resources from the people of this country by asking them to tighten their belts further is not easy of accomplishment. If, however, the fifteen out of the sixteen economists who participated in the Panel's discussion feel that these contentions are wrong, they must in fairness to their profession, show how more resources could be raised without causing serious strains. They ought to draw up and publish for the edification of the public the blue-print of a practical scheme for raising more resources. Indeed, they will be doing a real service to the country, if they can clearly show the way out. What is needed now is positive action and not empty statements.

On the question of foreign exchange required to implement a plan of Rs. 4,800 crores (even at today's prices), will the gap be only Rs. 700 crores? It is not known how the gap has been estimated, whether it includes or excludes the new American loan of about Rs. 106 crores. As the Panel met after this loan was made public, it is reasonable to presume that allowance has been made for it. In any case, the Finance Minister himself is reported to have remarked that the foreign exchange gap in the Plan was much greater than was originally estimated. It is, however, not clear to which estimate the Finance Minister was referring; there are several of them. But even assuming for argument's sake that the gap is only Rs. 700 crores, what are the chances of bridging it? The economists themselves say that, after taking note of the assessment of the position by the authorities, even the figure of Rs. 700 crores is a large one and that "it cannot be assumed that external assistance of this order will be forthcoming." Why then have they taken the view that a plan of Rs. 4,800 crores is feasible? Since unsubstantiated assumptions and unwarranted hopes about filling the foreign exchange gap through external assistance were one of the basic causes for the second Plan going awry, the economists ought to have been doubly careful in lending even qualified support to the target of Rs. 4,800 crores. They should have been realistic enough to suggest that the planning authorities should no longer gamble on getting billion-dollar gifts and that the size of the Plan should be reduced to the external assistance which could be regarded as possible in the present circumstances. Instead, they have given the following advice to the Planning Commission:

> "While the rephasing of the Plan has, at this stage, to proceed on the assumption that the foreign exchange gap will be covered by additional resources from abroad, it is necessary at the same time to be prepared to take whatever corrective measures are required against the contingency of external assistance falling short."

Here is a typical instance to prove our contention at the outset of this article that the economists have ignored the lessons of the grave mistakes made in the preparation of the second Plan. Are not half of India's current difficulties, frustrations and disappointments due to the assumption that somehow or other the foreign exchange required could be found? If the rephasing of the Plan also were to proceed on such a dubious assumption, it would mean either that the planners are incorrigible optimists or that they are incapable of learning even from experience. Further, are there any corrective measures which can effectively meet the contingency envisaged by the economists and if so what are they? If there are any correctives, why not apply them now to set right the defects arising from similar assumption made earlier? The economists would have probably strengthened their argument had they indicated the type of correctives that could be applied in case the contingency anticipated were to materialise.

The economists are, however, perfectly justified in stating, as a general principle, that "in executing programmes of industrial development, care should be taken not to spread out effort in too many directions at the same time but to try to concentrate effort on lines of production strategic to future development and to try to make them as early as possible more or less domestic-based rather than import-based." Equally right they are when they say that "it is necessary, in view of the shortage of both external and internal resources, to secure the maximum economy in the outlay of resources for the end-results in view" and that "all postponable expenditure should be abandoned and a strictly utilitarian approach adopted in the matter of all construction work and the provision of amenities." The same is also true of their advice on the deferred payments system. The Finance Minister had asked them to state their views specifically on the extent to which it would be safe to incur further liabilities by way of deferred payments and to indicate the criteria for entering into further commitments on this basis. The economists' reply to this request is as follows:

> "It is arguable that further commitments can be taken on, if deferred payment terms are available and no payments fall due within the next four or five years. It is important, in this context, to remember that the finding of complementary internal resources for these projects will impose an additional strain on the economy. There are dangers in permitting an unco-ordinated increase in investments in the private sector merely on the ground that no immediate foreign exchange expenditure is involved. However, exceptions could be made in particular cases where there is substantial import-saving or export-earning accruing in a short time. It is, of course, assumed that a similar discipline would be exercised in regard to extension of liabilities for the public sector."

The foregoing criteria are undoubtedly sound and should be strictly observed if the country is not to get into embarrassing difficulties in future on the foreign exchange front.

EXPORT PROMOTION

ONE of the principal ways in which the foreign exchange gap can be closed is export promotion. It is, therefore, quite natural that the Panel of Economist, which tried to tackle the task of rephasing of the second Plan early this week, should have paid some thought to this question. But, unfortunately, the Panel seems to have given only cursory consideration, possibly because it was not asked to go into the subject at any great length. The Panel has urged a review of the existing export policies, with a view to setting apart a larger proportion of domestically produced goods for export. It has also briefly indicated as to how this could be done. "Besides fiscal measures to assist this redirection of resources," says the Panel, "there may be need for extension of State trading and, under certain circumstances, for more direct action by way of controls and allocation."

Fiscal measures can be used in two ways to promote exports. One is the punitive method, as is the case with cotton textiles which are subjected to very high rates of excise duty, so that the domestic market for cloth may be depressed and the producers compelled to seek an export outlet. Similarly, cotton mills are permitted to install automatic looms on the distinct understanding that the increased production that will be secured through this new capacity will be exported. This directional control also is of a punitive nature. Such penal measures are not productive of sustained results, especially in the case of highly competitive manufactures like textiles. It is true that in 1957 exports of cotton goods were higher than in 1956, but this increase cannot be solely attributed to the penal excise duties; in any case, it is not appreciable as compared with the gain made by the Japanese cotton mills, which have maintained the first place in the world export of cloth for the seventh successive year. The fact that the scheme for introducing automatic looms has not evoked much enthusiasm among the millowners also goes to prove the correctness of our contention. With more and more cotton mills being established in every part of the world, with countries like Australia and the U.K. thinking in terms of placing restrictions on imports of textiles even from Commonwealth nations, with China, Soviet Russia and East European countries entering the world textile markets, and with all the adverse implications of the European Common Market to Indian cotton textiles, how many millowners in this country have the courage to incur large capital expenditure on putting up highly modern automatic looms? By following the present negative policy, the Government is actually undermining the future of an important export industry, if not hastening its end. It is only making the long-term aspect of the problem of foreign exchange more difficult. It is, therefore, to be hoped that the authorities will not treat the economists' suggestion as an endorsement of their unhelpful fiscal policy and directional control or quote it in favour of their continuation. On the contrary, they should view it from the other way, namely, the positive one, under which producers are given fiscal reliefs for stepping up their exports and all facilities for strengthening their competitive capacity.

The theoretical bent of mind of the distinguished economists seems to have had the better of them while examining the problem of exports also. For there seems to be no other explanation for their dragging State trading into the picture. The limited experience of the State Trading Corporation in the sphere of export trade is by no means encouraging to warrant the belief that the Government can fare better as a trader in the competitive international markets than private enterprise. The Export Promotion Committee, of which Prof. V. L. D'Souza, one of the members of the Panel, was the Chairman, attached no special importance to State trading as a means for promoting exports. Stating that it was too early to judge what contribution the State Trading Corporation had made in promoting exports from India, the Committee supported the view that the Corporation should avail itself of expert professional advice from experienced persons, that Government should not give it any privileges or facilities that are not available to the private sector and that the Corporation should not be given monopoly rights to export a commodity, unless private traders, individually or collectively, are unable to promote its exports. It is not surprising that the D'Souza Committee showed no enthusiasm for State trading, because all the principal export merchandise—tea, jute goods, cotton manufactures, raw cotton, oilseeds, metallic ores and scraps, tobacco, mica, raw wool, hides and skins—are such that it is beyond the competence of a democratic Government to make a good job of it. Some may argue that the Government can always take the assistance of experts either for money or for love of the country. But experience in India, as well as elsewhere, shows that an advisory body of counsellors who have no significant stake of their own or responsibility for the actual conduct of business is not a satisfactory device. The incident that took place in the L.I.C., now a subject matter of judicial enquiry, may conceivably occur in State trading as well.

INVESTMENT MERITS OF INDIAN OXYGEN

OUTLOOK FOR TEXTILES—U.S. COTTON—TIN AGREEMENT—AUSTRALIAN TARIFFS

THURSDAY, 5 P.M.

THIS has been a dull week for almost all the markets. Even the events which were expected to materialise have not done so. The Government's decision on the recommendations of the Cotton Advisory Board regarding exports of short-staple cotton, for instance, has not been made known upto the time of writing, though it is long overdue. There is really not much for the Government to do in this respect, except to check up the basis on which the Board has made the suggestions. The delay in the announcement of export quota is, therefore, intriguing. Meanwhile, the trend of cotton prices has been firm, with operators taking a bullish view of the prospects for the rest of the current season. The futures section will have shot up by now but for threats of intervention by the Forward Markets Commission. The other commodity markets are ruling somewhat quiet, following the latest crop reports which point to a slight improvement in size over the earlier estimates. Castor is the only exception in oilseeds. While the crop estimates of this seed have been revised downwards, export demand has been good. In the bullion market, speculators' attention has shifted from silver to gold, the floating stocks of which have shrunk, arrivals are small and demand is brisk.

MARKET GOSSIP

The undertone of Stock Exchanges all over the country is quite steady. Prices have been fluctuating within a small range, but the trend has been irregularly upward. There seems to have been some revival of investment buying; it is quite possible that a section of investors may have begun to feel that the markets have turned the corner and that it was worthwhile averaging their investments. It is now fairly well known that most of the cotton mills in Bombay which will shortly announce their results for 1957 will show either losses or a very marked fall in profits. But this has not deterred cotton mill shares from edging forward. The reason for this is psychological. Reports from the cloth and yarn markets are still favourable and operators think that the worst is over for the cotton mill industry and that 1958 will turn out to be better than 1957. With full eleven months still to go, it is, however, too early to take any such definite view of the outlook for the cotton mill industry. There are still many imponderable factors. The raw cotton supply position is getting tight and prices have been steadily moving against the mills. The Wage Board for textile industry has been working in right earnest and its findings will be out in the course of this year. Again, one does not know yet how the export trade in cloth will fare. All available signs are by no means auspicious, what with the lower foreign exchange earnings of the countries which provide the markets for Indian cloth and the persistent efforts of Lancashire to get a ceiling imposed on imports of cotton textiles into the U.K.

The Central budget for 1958-59 is ahead of us by less than a month from now. Yet there is hardly any speculation about it. At one time, it was thought that there would be some relief in taxation. This was based on the belief that the Finance Minister must have come back from his foreign tour fully convinced of the need for giving some incentive to investors. At present, this belief is not that firmly held, as there are serious doubts whether Mr. T. T. Krishnamachari will remain as Finance Minister till 28th February 1958. Indeed, there are already repeated, unconfirmed but uncontradicted reports that he has tendered his resignation to the Prime Minister. The trend of evidence before the Chagla Commission regarding the L.I.C's investments in the Mundhra group of shares has given rise to these doubts and reports. In view of this uncertainty, shrewd operators prefer to wait and see.

* * * *

The long awaited public issue of the Indian Oxygen Ltd. has been announced, the details of which will be found on pages 182-184 of this issue. It is one of those issues in which the Indian investor has been given a welcome opportunity to participate in successful and promising foreign companies in this country through the offer of shares held by the foreign holders or through a fresh issue of shares. In the last two years, we have had a chain of such issues, the most recent one being by Philips India Ltd. Before that we had Guest, Keen, Williams, Hindustan Lever, National Carbon and Imperial Tobacco. All these issues were offered at premiums of varying degree and were found to be relatively more attractive to investors as compared with the returns available on comparable equities quoted on the stock exchanges. They were, therefore, heavily oversubscribed, in spite of acute stringency in the capital market. If the success of the earlier issues is any guide, the issue of Indian Oxygen, too, should have an equally favourable reception. The details of the offer, the working of the Company in recent years and the future prospects, all indicate that there is no reason to take a contrary view.

The Company, working as a private limited firm under the name of Indian Oxygen and Acetylene Company, Ltd., is more than two decades old and is well known in this country. It was only a fortnight ago that it was converted into a public limited company. Simultaneously, its name also was changed to Indian Oxygen Ltd. It has all along been a wholly-owned subsidiary of the British Oxygen Company Ltd. of London, its entire paid-up capital of Rs. 2 crores, made up of 2,000,000 ordinary shares of Rs. 10 each being held by the British Company. Out of its holdings, the British Oxygen is offering now 600,000 shares of Rs. 10 each to the Indian public at a premium of Rs. 3.50 per share. The entire issue price is to be paid on application. A part of the offering, namely, 30,000 shares, is being reserved for the employees of the Company.

The shares now offered to the Indian public are entitled to any dividend that may be declared in respect of the year ending 30th September 1958. The Company had paid a dividend of 10 per cent. per annum for the past three years on a capital of Rs. 1.32 crore. Quite recently, the Company issued 680,000 new ordinary shares of Rs. 10 each to the British Oxygen Company Ltd. at par, raising the paid-up capital to Rs. 2 crores. If there are no adverse factors, the Directors expect that the profit for the current year should be sufficient to justify the payment of a dividend of 10 per cent., free of income-tax. This means that the dividend of 10 per cent. will be on a higher capital of Rs. 2 crores and will require Rs. 6.80 lakhs more than that distributed in the previous three years. Apparently, the Directors are confident that this extra amount can be found. It may be noted here that dividend is covered three times by profit. On the basis of this expected dividend and at the issue price, the yield works out to 7.4 per cent. per annum, free of income-tax. This compares favourably with that of 7.2 per cent per annum, provided by the recent Philips issue. This scrip, which was offered at Rs. 12-8, is now standing in the neighbourhood of Rs. 14, thereby registering a gain of Re. 1-8 over a period of about 2½ months.

The performance of Indian Oxygen during the last few years has been very encouraging, in that the sales have risen nearly fourfold within a decade from Rs. 1.08 crore in 1947-48 to Rs. 4.18 crores in 1956-57. The profit before providing for depreciation and taxation has gone up from Rs. 36.23 lakhs in 1952-53 to Rs. 82.52 lakhs in 1956-57. The net profit, after depreciation and taxation, shows a rise from Rs. 15.37 lakhs to Rs. 31.49 lakhs. Of the net profit of Rs. 31.49 lakhs for 1956-57, a sum of Rs. 11.44 lakhs was set aside for additional depreciation and development rebate.

The Company is claimed to be the main supplier of India's requirements of industrial and medical gases and equipment for welding and various other processes involving the use of industrial gases. The prospects for the Company are closely connected with the industrial development of the country. The development plans, particularly those of the steel industry, are expected to cause a further very substantial increase in demand for the Company's products. With this prospect in view, the Company has undertaken a replacement and expansion programme, which includes the setting up of a new industrial undertaking for the manufacture of gas welding and cutting equipment. The programme is expected to be completed by 1960 at an estimated cost of Rs. 3.21 crores. Of this expenditure, a sum of about Rs. 1 crore has already been incurred and the balance of Rs. 2.21 crores is to be expended in the three years ending September 1960. A part of this will be met by the net sale proceeds of the present offer, which will be made available by the offeror (British Oxygen Company) as loan for a period of seven years. The replacement and expansion programme of the Company involves an expenditure in foreign exchange equivalent to Rs. 1.43 crore. Of this, the equivalent of Rs. 68 lakhs has already been met by the recent issue of shares to the parent Company. For the balance, the Company is carrying on negotiations with the I.C.I.C. of India Ltd. and intends approaching the Commonwealth Development Finance Company Ltd. of London.

The success of the issue is assured by the fact that the I.C.I.C. of India Ltd. has underwritten the whole issue.

* * * *

A cloud of uncertainty had for long hung over the future U.S. cotton policy. Speculation was rife as to the probable shifts in policy. Various rumours, often conflicting ones, were quick to sprout and fade. The net effect of this uncertainty was to leave the futures markets in American cotton in a state of flux. Even the U.S. President's annual farm message to Congress on 16th January has not completely dispelled all doubts about the future, though the Administration's policy in respect of farm surpluses is clear. Whether its policy will be approved by the U.S. Congress remains to be seen. The President's message has made it clear that the Administration stands for lower support prices and larger acreage allotments. Mr. Eisenhower has pleaded for more flexibility in the price-support formula and suggested that the support level should range between 60 and 90 per cent. of parity, as compared with the prevailing range of 75 and 90 per cent. of parity, so as to permit the growth of market needed to absorb the production and to make cotton competitive with other fibres.

The President has also asked the Congress for authority to increase acreage allotments for cotton and other crops by 50 per cent. over their present levels. There is a considerable volume of opinion in the U.S. in favour of the modification of farm policy on these lines. Critics of the current policy argue that Government aid, with its attendant restrictions and controls, has underwritten inefficient operations and blocked production adjustments that would occur in a free market. This view is echoed by the National Cotton Council of the U.S. which is reported to have represented to Mr. Benson, the U.S. Secretary of Agriculture, for an immediate increase in the next season's cotton acreage. The Council has pointed out that an enhancement of acreage is necessary because of the low quality of the 1957 crop and the shortage of supplies of better grades. Further, the Council would appear to have suggested a system which would permit low-cost farmers to increase the land sown to cotton, provided they were prepared to accept lower support prices. In principle, this proposal is in line with the policy of the Administration. But there is considerable opposition to it from the high-cost farmers who consider it the thin end of the wedge which would ultimately force them to stop growing cotton. Reports from Washington suggest that the latter group has the support of many prominent Congressmen who, informed quarters believe, would stoutly oppose a drop in the "floor" of the support level.

It is thus too early to say whether the modifications in policy suggested by the President would materialise. But cotton circles outside the U.S., especially in Liverpool, believe that a basic change in the U.S. policy is very likely. The President of the Liverpool Cotton Association, Mr. Arthur Byrne, for instance, cited three reasons in support of this view. First, heavy export movement over the past two years, coupled with the heavy deterioration suffered by the current season's U.S. crop from bad weather, has brought about a sharp reduction in the Commodity Credit Corporation's surplus stocks from as much as 14.5 million bales on 1st August 1956 to no more than 4.4 million bales by the middle of this month. Most of the cotton now held by the C.C.C. comprises undesirable, lower graders. Secondly, opinions are being expressed in all segments of American cotton textile industry favouring a return to freer production and marketing on the ground that a continuation of the present policy of drastic acreage curtailment and high supports would create a deficiency of cotton and encourage the use of competing fibres. Thirdly, according to Mr. Byrne, there is no doubt that the Department of Agriculture is seriously concerned over the disruptive effects of the two-price system on the traditional method of cotton trading and the effective functioning of the futures markets.

It will be pertinent to recall, in this connection, the latest statistical position of U.S. cotton. At the commencement of the current season, that is on 1st August 1957, carryover stocks stood at 11.2 million bales, which, together with the season's crop of about 11 million bales, would make an aggregate supply of 22.2 million bales. The U.S. mills are expected to consume about 8.5 million bales of cotton this season and the prospective exports are estimated at 5 million bales. This would leave a surplus of 8.7 million bales (including stocks with the C.C.C.) to be carried over into the 1958-59 season on 1st August next, which would be the lowest since 1953 when the end-season stocks were of 5.6 million bales. The total quantity sold for exports under the current export programmes this season is 4,812,322 bales. As already stated, Government-owned stocks at present aggregate about 4.4 million bales, comprising 2.4 million bales of 1956 and earlier crops and 2 million bales of 1957 loan stocks.

* * * *

The tin market in India presents a curious trend. The quotation for this metal at Calcutta which had gone up from Rs. 523 per cwt. on the 21st inst. to Rs. 545 early this week has since come down to Rs. 511. The sharp fall of Rs. 34 over a period of six days is in distinct contrast to a marked recovery in tin prices the world over. The open market rate for spot 'A' New York delivery now stands at about 94.37 cents per lb., as against 92.00 cents a week before. Similarly, cash tin on the London Metal Exchange is done higher at £731½—at one time it had even risen to £736—as against £730½ on Tuesday last week.

The recent recovery in world tin prices has been aided by the latest fresh moves of the International Tin Council to secure the continued effectiveness of the Tin Agreement and to maintain the floor price of £730 per ton. At its meeting held in London last week-end, the Council took two important decisions—(1) creation of a special fund to supplement the dwindling resources of the buffer stock and (2) extension of export quotas at lower levels for a further period of three months, that is, upto 14th June next. Although the actual size of the proposed fund is not revealed, it is said that the fund will enable the buffer stock manager to continue buying tin for a longer time, even if the 40 per cent. cut in supplies from the main producing countries is insufficient to bring supplies into line with current consumption. The secrecy about the size of the fund is regarded as a desirable one, inasmuch as it does not give any basis for speculation as to the period during which the buffer stock would continue buying tin. The export quotas for the six major producing countries—Malaya, Indonesia, Bolivia, Belgian Congo, Thailand and Nigeria—have been not only extended but also curtailed from a total of 27,000 tons for the three-month period 15th December 1957 to 14th March 1958 to 23,000 tons for the period from 15th March to 14th June 1958. The individual quotas—in tons—for the current and next quarters are: Malaya: 10,125 and 8,625; Indonesia: 5,516 and 4,699; Bolivia: 5,516 and 4,699; Belgian Congo: 2,416 and 2,059; Thailand: 1,985 and 1,690; Nigeria: 1,442 and 1,228.

The aforesaid decisions of the International Tin Council have been prompted by two considerations. First, the imposition of export quotas in the middle of December, which meant a reduction of 28.5 per cent. of supplies from the six countries mentioned above, did not have much effect on the tin market, because the cut in supplies was not adequate to

ERRATIC TREND IN EQUITIES

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, *30th January*

THE share market presented a steady tone during the week under review, although the trend of prices was erratic. In the earlier part of the week, equities were buoyant with a sharp rise in prices, led by steel shares. Indian Irons, in particular, were in the forefront on good support from Calcutta. The visit of the World Bank team and its discussion with the Union Finance Minister and other Ministers on the proposed $100-million loan for development of major ports and some power projects, as also on the Bank's further assistance to finance the Damodar Valley and Koyna projects, were noted with encouragement. The signing of the agreement between France and India providing for a credit guarantee by the French Government of 25 billion francs, or about Rs. 28 crores, to French firms for supply of capital equipment to India and Japan's acceptance of India's proposal that the proposed Japanese credit for 18 billion yen (about Rs. 25 crores) should be on a Government-to-Government basis induced hopes that the pressure on foreign resources would be relieved to some extent. Consequent on these encouraging news, Tata Ordinaries shot up to a high of Rs. 176 and Indian Irons to Rs. 20.52, levels which had not been seen for some time past.

Subsequently, however, there was a minor setback on selling pressure in Tata Ordinaries, induced by reports of lower production during the current month, as also by reports that the expansion programme of T.I.S.Co. to raise the output of steel to 2 million tons which was scheduled to be completed in May this year might not be over before September. Just at the close, there was again a recovery, which was more pronounced in Indian Irons, Associated Cements, Centurys and National Rayons.

Sectionwise, Tata Ordinaries rallied from Rs. 171.75 to Rs. 176 before reacting to Rs. 172.50. At the close, there was a recovery to Rs. 173.75. The new shares gained over the week Rs. 2 to Rs. 167.50. Indian Irons improved from Rs. 19.84 to Rs. 20.52 and after a dip to Rs. 20.28 yesterday came up again to Rs. 20.56. The closing was done at Rs. 20.52.

Barring a spurt in Centurys, textile shares, in general, were featureless, but the undertone was fairly steady. Bombay Dyeings moved between Rs. 52 and Rs. 51.20 before finishing at Rs. 51.60. Centurys advanced from Rs. 392 to Rs. 396.50 and, after a recession to Rs. 392.50, jumped up to Rs. 397.25. Kohinoors gathered over the week Re. 1 to Rs. 269.50, the highest level touched during the week being Rs. 271.50. Central Indias dropped Rs. 2.50 to Rs. 84, on reports that the Company had again passed over the ordinary dividend for the year ended June 1957 and also had kept in arrears the preference dividend, which for 1955-56 had been paid out of the dividend equalisation fund. Finlays gained Re. 1 to Rs. 265 and Gokaks Rs. 2.50 to Rs. 162.50. Indu Ordinaries were a shade lower at Rs. 9.56. Indore Malwas were marked down by a rupee to Rs. 118.50, while Khataus improved by Re. 1.50 to Rs. 153.50. Models dropped Rs. 2.50 to Rs. 177.50, Morarjee Mills Re. 1 to Rs. 204 and New Greats Rs. 2 to Rs. 221. Shree Niwas Cottons suffered a loss of Rs. 2 to Rs. 141, as also Standards to Rs. 402. Svadeshis were a shade better at Rs. 171 and Tata Mills at Rs. 40.75.

Bank shares were featureless. Barodas were a fraction lower at Rs. 106, while Central Banks looked up a little to Rs. 52.50. Their new shares were unchanged at Rs. 56.50. Bank of Indias picked up 75 nP to Rs. 136, but Punjab Nationals, after last week's spurt, reacted to Rs. 53—a fall of Re. 1 over the week. Likewise, United Commercials also lost Rs. 2 over the week to Rs. 60.50, in distinct contrast to the rise of Re. 1.50 in the previous week.

Electricity shares were dull. Ahmedabad Electrics were unchanged at Rs. 94.80, while Bombay Suburbans shed 25 nP to Rs. 106.75. Surat Electrics also were a fraction lower at Rs. 107. Tata Hydros gained a little to Rs. 113.50. Tata Powers were marked down by Rs. 5 to Rs. 1,127.50 and Andhra Valleys by Rs. 3.75 to Rs. 1,095.

Sugar shares fared well. Belapurs moved up from Rs. 235 to Rs. 238. Following an increase in the distribution for the year ended September 1957 from Rs. 9 to Rs. 12 (inclusive of a bonus of Rs. 3) per share, Phaltans jumped up to Rs. 154.50 from Rs. 148, to which level they had receded from Rs. 150 a week ago. But profit-taking erased a part of the gain, and the shares finished at Rs. 151. Walchandnagars put on Rs. 2.50 to Rs. 276.25. Kesar Sugars spurted by Rs. 4.50 to Rs. 60, on the announcement of an increase in dividend from Rs. 4 to Rs. 7 per share for the year ended July 1957.

In the cement group, Associated Cements moved within a narrow range between Rs. 154.25 and Rs. 152.25 before shooting up to Rs. 156 at the close. The rally at the close was induced by hopes that the Company would be able to get a higher selling price. Their new shares gathered Rs. 2 to close at Rs. 82. Digvijay Cements gained over the week Re. 1 to Rs. 136. Orissa Cements were better at Rs. 12.76. Ashoka Cements were unchanged at Rs. 8.12, while Jaipur Udyogs dropped 12 nP to Rs. 11.80.

In the engineering and mining group, Alcocks declined by Rs. 2.50 to Rs. 215. Tata Locomotives came up from Rs. 141.25 to Rs. 144, but gave way to Rs. 142 at the close. Premier Constructions were dull at Rs. 161. Mahindras were in favour and rose by 80 nP to Rs. 17.52. Texmacos were firm with a jump of Re. 1.16 to Rs. 17.80. On expectations of higher dividend, Shivrajpurs were sought for and the shares rallied from Rs. 87 to Rs. 94. Indian Coppers were steady at Rs. 2.90.

Shipping shares were dull. After improving from Rs. 17.48 to Rs. 17.68, Scindias receded to Rs. 17.44. Great Easterns dropped 28 nP to Rs. 20. Among automobiles, Premier Automobiles were quiet at Rs. 86.50, while Hindustan Motors were a shade better at Rs. 6.24.

In the miscellaneous section, Bombay Burmahs (old) gained Rs. 6 to Rs. 540, while their new shares were unchanged at Rs. 202.50. National Rayons were erratic, moving between Rs. 221 and Rs. 225. The closing, however, was higher by Rs. 2.75 at Rs. 224.50. Gwalior Rayons were done 44 nP higher at Rs. 12. Sirpur Papers were enquired and they gained 44 nP to Rs. 8.80. Tata Chemicals improved by 20 nP to Rs. 12.64 and Tata Oils by 50 nP to Rs. 37.25, while Wimcos softened from Rs. 171.25 to Rs. 171. New Central Jutes came into the limelight with a jump of Re. 1.32 to Rs. 13.32, on reports that the Company had decided to issue bonus shares (subject to Government sanction) in the ratio of one share for every two shares held.

* * * *

Calcutta Stock Exchange

CALCUTTA, *29th January*

The week under review on the Calcutta Stock Exchange was short by two holidays on Thursday and Friday last. The pre-holiday feeling was reflected in trading on Wednesday last, when buyers were hesitant to enter into commitments. Moreover, advices from the Bombay market showed that operators there were holding away, and the Bombay Exchange's ban on trading in the Mundhra group of shares was also a factor which imparted dullness. Also, attention was diverted to the proceedings of the enquiry into the L.I.C's recent bulk purchases of shares direct from Mr. Mundhra. The reopening on Monday was noted for a steady trend, and in trading during yesterday quotations moved up further.

In the meantime, conditions in the commodity markets were improving. Prices of jute goods recovered, and selected counters in jutes added gains. Coals tended to be quiet for a time, on reports of an increase in stock in collieries due to transport difficulties. However, the increase in raisings during the nine months to September last by 9.28 per cent. to 31,968,313 tons was noted with satisfaction. Tea shares sagged, as the easier trend during yesterday's auctions affected sentiment.

The feature of the trading in coal shares yesterday was the rise in Bengals to Rs. 248 from Rs. 235 and New Beerbhooms to Rs. 14.75 from Rs. 13.50 on interested buying. Burrakurs were unchanged at Rs. 22.12 and Pench Valleys at Rs. 17.25. Amalgamateds were fractionally better at Rs. 15.37.

In jutes, Nationals gave way to Rs. 24 from Rs. 24.25, and Howrahs to Rs. 13.75 from Rs. 13.81, while Aucklands were pushed to Rs. 85 from Rs. 81.

Now is the time to trade with

South East Asia

Rising standards of living open new markets for Indian goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—*their ability to buy*. The Indian Overseas Bank with branches in several strategic centres has made a special study of this important growing market and can help you solve your trading problems.

The INDIAN OVERSEAS BANK Limited, MADRAS

Branches at: Bombay, Calcutta, Madras, New Delhi, Hyderabad and throughout South India. *Overseas Branches:* Rangoon, Colombo, Ipoh, Kuala Lumpur, Penang, Singapore, Malacca, Bangkok, Hong Kong.

Agents and Correspondents all over the world

Chairman: M. Ct. MUTHIAH

General Manager: C. P. DORAIKANNU

IOB 2058

In the engineering section, Indian Irons recorded a fair recovery on bullish support. The opening rate was Rs. 19.90 and the latest is Rs. 20150. Texmacos picked up to Rs. 17.40 from Rs. 16.55 and Jessops hardened to Rs. 21.25 from Rs. 20.25. Guest Keens were fully steady at Rs. 28.94.

In the miscellaneous industrials section, there were several features. Indian Coppers gathered strength to Rs. 2.91, as did Indian cables to Rs. 27.12. National Carbons had buyers at Rs. 24.56, as against Rs. 24.31 previously. National Insulated Cables were fractionally higher at Rs. 23.94. There was a further rise in Dunlop Rubbers to Rs. 22.50. Martin Burns were better at Rs. 25.75.

* * * *

Madras Stock Exchange

MADRAS, *28th January*

The Madras Stock Exchange ruled steady during the week under review. Plantation shares elicited some enquiries induced by improvement in tea prices at the Cochin auctions. Textiles also evoked some enquiries, thanks to persistent reports of continued rising trend of offtake in piecegoods. There were signs of revival of investment support in the sugar, electricity and banking sections and values of several counters tended to move up. The miscellaneous section presented a firm trend under the leadership of cement shares. The chief inspiring factors were rumours of a possible relaxation of controls on cement distribution and expectations of increase in prices.

Among tea shares in the planting section, Balanoors improved by 25 nP to Rs. 14.75. Chandramalais gained 8 nP to Rs. 2.78, on reports that the Company had proposed to issue 68,750 shares of Rs. 2 paid 7½ per cent. tax-free preferences in the ratio of one for every four ordinary shares held. Nonsuch and Kalasas added 20 nP each to Rs. 19.20 and Rs. 13, respectively. Parksides advanced by 50 nP to Rs. 15.50. Ouchterloneys hardened by 13 nP to Rs. 5.06. Twyfords gathered 10 nP to Rs. 12.60. Waterfalls and Haileyburias put on 7 nP each, the former to Rs. 3.40 and the latter to Rs. 16.12. Among coffee shares, Anaparais went up by 15 nP to Rs. 5. Sheveroys and Sangameshwars rose by 6 nP each to Re. 1.88 and Rs. 2.56, respectively. Mysore Coffees were better by 3 nP at Rs. 2.80. Coffee Lands, however, encountered selling and declined by 75 nP to Rs. 28. In the rubber group, Midlands strengthened by 25 nP to Rs. 15.10. Anandams rose by 12 nP to Rs. 14.12, Be Bes by 15 nP to Rs. 2.90, Cowcoodys by 10 nP to Rs. 7.10 and Rajagiris by 8 nP to Rs. 14.20. Nenmenys increased by 5 nP to Rs. 14.80. Thirumbadis, on the other hand, softened by 2 nP to Rs. 1.27. The Company has declared a dividend of only 5 per cent. for the year ended 30th September 1957, as against 12½ per cent. last year; the cut in dividend is attributed to the need for making higher provision for taxes.

Trading in textile shares was of a selective nature. Bangalore Woollens met with good support and improved by Rs. 5 to Rs. 172. Vijayakumars hardened by Rs. 3 to Rs. 113. Coimbatore Pioneers spurted by Rs. 2 to Rs. 237. Metturs rose by Re. 1.50 to Rs. 364. Cambodias were well favoured at Rs. 10.20, a rise of 70 nP.

Among sugar shares, Cauverys improved by a rupee to Rs. to 88.50. Travancores were better by 25 nP at Rs. 9.75. E.I.Ds gathered 12 nP to Rs. 29.12.

In the miscellaneous section, India Cements climbed up by 88 nP to Rs. 27.50. Andhra Cements improved by 75 nP to Rs. 12. Travancore Cements advanced by 55 nP to Rs. 7.75.

TRAVANCORE BANK LTD.

A further rise of Rs. 2.91 lakhs to a record level of Rs. 14.82 lakhs is noted in the profit of the Travancore Bank Ltd. for the year ended 31st December 1957. With this increase, the profit of the Bank has not only maintained the upward trend for the third year in succession but more than doubled itself in the course of the last three years. The Directors have raised the provision for taxation from Rs. 4.90 lakhs to Rs. 7 lakhs and the transfer to the reserve fund from Rs. 2.40 lakhs to Rs. 2.97 lakhs. A sum of Rs. 5,000 has been set aside for gratuity to staff, while a year ago the Directors had provided Rs. 40,000 for gratuity, as well as bonus to staff. The Directors have recommended the payment of a dividend of 5 per cent. per annum, free of income-tax, raising it from 4 per cent. paid for 1955 and 1956 (this will absorb Rs. 5 lakhs) after transferring Rs. 20,000 (same as in the previous year) to depreciation reserve on investments. All these appropriations will leave a balance of Rs. 5,628 to be carried forward, as against Rs. 45,060 brought in.

UNITED COMMERCIAL BANK LTD.

A rise of Rs. 3.17 lakhs to a fresh record level of Rs. 59.41 lakhs is disclosed by the profit of the United Commercial Bank Ltd. for the year ended 31st December 1957. This is the fourth year in succession for which the profit of the Bank has maintained an upward trend. Notwithstanding the expansion in profit, the Directors have pruned the transfer to the reserve fund from Rs. 20 lakhs to Rs. 19 lakhs. The provision for taxation has, however, been raised from Rs. 16 lakhs to Rs. 18.50 lakhs and that for bonus to staff from Rs. 6.50 lakhs to Rs. 7 lakhs. The dividend also is proposed to be stepped up from Rs. 3.50 per share or 7 per cent. to Rs. 3.75 per share or 7½ per cent., free of income-tax. This small enhancement in the dividend level follows the substantial increase from 5½ per cent. to 7 per cent. made a year ago. The proposed dividend requires Rs. 15 lakhs, that is, Rs. 1 lakh more than in the previous year, leaving a surplus of Rs. 0.49 lakh including Rs. 0.29 lakh brought in.

NEWS IN BRIEF

THE revenue from excise duty on cotton cloth in the first six months of the current fiscal year amounted to nearly Rs. 32 crores, according to official figures. The budget estimate for the whole year is Rs. 72 crores.

A consignment of 5,360 tons of Russian steel products arrived in Bombay on Wednesday last week. The major part of the shipment consists of steel billets, joists and angles. These are for the re-rolling mills in India.

Manganese ore exports were well maintained in the second half of 1957, when shipments were placed at 431,952 tons valued at Rs. 9.80 crores, as against 522,880 tons of manganese ore worth Rs. 9.45 crores exported in the previous half year, bringing the total shipments in the whole of 1957 to 954,832 tons valued at Rs. 19.25 crores.

The Government of India has sanctioned Rs. 96,000 this year for starting a model coir factory with a branch research institute attached to it at Uluberia in the district of Howrah, West Bengal. The proposed institute and the factory will be run under the direct supervision of the Central Coir Board.

The Indian Merchants' Chamber will celebrate its golden jubilee in Bombay next week. The celebrations will be inaugurated by Prime Minister Nehru on Monday. The occasion will be marked by the institution of a scheme for practical training in business management for persons holding specialised degrees. The Chamber has also decided to set up a research department to do research work on current economic problems.

A gift of audio-visual equipment has been made available to the Central Committee for Co-operative Training by the Canadian Government under the Colombo Plan. The equipment consists of 13 sets of film projectors and necessary accessories and spare parts valued at about $14,000 (about Rs. 70,000). In addition to this gift, films, pamphlets and books worth about $25,000 (about Rs. 1,25,000) are expected to be given to India shortly.

The Life Insurance Corporation of India completed, during 1957, a total business of Rs. 256 crores, excluding foreign business which is accounted for separately. During 1954 and 1955, business turnover was Rs. 236 crores and Rs. 238 crores, respectively. In the first year of nationalisation, that is, 1956, the business amounted to only Rs. 188 crores. Besides the completed business of Rs. 256 crores during 1957, a further business of at least Rs. 9 crores awaits completion of formalities. Proposals for insurance introduced aggregated Rs. 320 crores. The months of October, November and December were more productive than previous months, the total business written being a little more than Rs. 177 crores.

A scheme for improving navigational aids at Visakhapatnam Port was approved of by the Central Advisory Committee for Lighthouses which met in New Delhi recently. Early introduction of night navigation is one of the steps proposed for increasing rapidly the handling capacity of the Port which in recent years has been meeting the requirements of increasing traffic. The scheme envisages the laying of outer channel deep-sea lighted buoys, shallow draft lighted buoys for the inner channel and several pairs of leading lights. Two new lighthouses, one on the Sandhills and another at Waltair Point, are also included in the scheme. It is proposed as a first stage to implement the scheme partially with the equipment already available. The lanterns and flashers required for the inner channel buoys are to be fabricated in the lighthouse workshop at Madras and are expected to be ready shortly. The scheme is estimated to cost about Rs. 10.5 lakhs.

Three well-represented U.S. trade missions will visit India in April as a link-up to the American trade fair to be held in Bombay, Calcutta and New Delhi. Opening first in Bombay on 15th April, this fair will exhibit machinery for small-scale industries. These will be operated by Indian technicians who will demonstrate the production of small tools, parts and also do welding jobs. In co-operation with the Small-scale Industries Corporation, the fair will demonstrate how small business can be tied up with big industrial establishments for the production of machine parts, tools and semi-finished products. These machines are in the price range of $250 to $5,000. The trade fair will also demonstrate how the farmers in villages can utilise their spare time to organise small-scale industries with the help of these machines. After four weeks in Bombay, the fair will move to Calcutta and then to New Delhi.

An all-India soil and land use survey has been sanctioned by the Union Government. The aim of the survey is to formulate a national policy for all phases of soil survey and cartographic work, including standardisation of methods and procedures for improvement. The central office for the survey has been set up at the Indian Agricultural Research Institute, New Delhi. Four regional centres will also be established at Delhi, Kharagpur, Nagpur and Bangalore. The Central Soil Conservation Board of the Union Ministry of Food and Agriculture will exercise general control on the implementation of the scheme. A major function of the survey is to help scientists in predicting soil behaviour under defined land use and management. It will thus be a scientific analysis of the soil in a plot of land and the manner in which it can be exploited safely and economically. The survey will benefit farmers, conservationists, engineers and others engaged in grouping soil according to its capability. A sum of Rs. 65.09 lakhs has been sanctioned for the scheme for the remaining three years of the second Plan.

* * * *

From Abroad

As a sequel to mounting protests against selective rate increases, the U.S. railways decided, on 21st January, to cut the proposed charge for loading and unloading import and export freight from 10 cents to 6 cents per 100 lbs.

West German exports last year rose by 16.5 per cent. from £2,627 million to £3,061 million and imports by 13 per cent. from £2,381 million to £2,689 million, leaving an export surplus of £372 million, as against a surplus of £246 million in 1956.

French motor output in 1957 showed that total production amounted to nearly 930,000 vehicles. This is more than 10 per cent. higher than the output in 1956. Of this, Renault is the leader, followed by Citroen, Simca, Pengeot and Panhard.

Exports from Japan rose by 15.5 per cent. in 1957 to a total value of $2,861 million, according to the Japanese Ministry of Trade. This rate of expansion was, however, lower, as compared with 1956, which showed an increase of 23.4 per cent. over 1955.

Imperial Oil of Canada intends spending $133 million on oil exploration and new plant and equipment in 1958. Half of this amount is earmarked for exploration. In 1957 itself, the Company had spent $160 million on exploration and new plant.

Approval for a loan of $13.4 million has been given by the World Bank for the development of electric power in the State of Sao Paulo in Brazil. The loan will help to meet the financial needs of an 85,000 kw. power project which is being built at Jurumirim on the Paranapanema river, and associated transmission lines.

Australia's search for oil will receive further fillip by the decision of the Commonwealth Government to increase the oil search subsidy from £A300,000 to £A500,000 a year. The subsidy will meet the Commonwealth's half share of cost of drilling deep bores to obtain further geological data of Australia's sedimentary basins, which are likely to contain oil.

A rise in the prices of some medium and heavy duty nylon truck tyres by three to five per cent., effective from 1st February, has been announced by the Goodyear Tyre and Rubber Company of U.S. The increases have been designed to bring the selling price of these tyres more in conformity with actual costs. It is thought that other tyre companies will follow this lead.

Oil search concession agreements covering two-thirds of Jordan territory has been approved by Jordan's Lower House of Parliament. One was a concession on one-third of the territory granted in November 1955 to an independent American oil producer. Another one-third was conceded in November 1957 to an Arab financier living in Guatemala. It is learnt that an Italian company is making efforts for a concession over the other third of the area.

A ten-man Soviet delegation, now holding a series of talks with Government officials in Pakistan, has offered assistance to the latter in the field of industrial development, particularly in the setting up of a steel plant, if such a request was made. Pakistani officials have disclosed that, while the discussions centred round the question of further development of trade between Pakistan and Russia, no definite request for a steel plant had so far been made.

British Overseas Airways Corporation will start a round-the-world operation via San Francisco in March 1959. It is expected that this operation will be the shortest round-the-world service of any airline. The present plans are to open up a San Francisco-Tokyo route via Honolulu, thus completing a global circuit. Commencing from 3rd April, B.O.A.C. will introduce a Brittannia on the twice-weekly San Francisco-London route. This will cut down the time-schedule from 20½ to 18½ hours.

France is negotiating for a loan of £25.5 million from the World Bank to help finance the cost of building the Kouilon dam in French West Africa. The loan will be guaranteed by the French Government which will also take a direct initiative in the raising of the balance of the capital required for building the dam and the aluminium plant which it will serve. Kouilon is the second of two French West African hydro-electric aluminium projects. The other one is at Konkouri, Gabon.

The International Tin Council has announced an extension of export controls for a second three-month period commencing from 1st April next. A *communique* issued after a two-day meeting of the Council, in which 19 nations were represented, said that the six tin-producing countries would be allowed a total permissible export quantity of 23,000 tons during the period ending 30th June. India was one of the countries represented at the Council meeting.

The launching of vessels aggregating 2,424,000 tons last year takes Japan further ahead as the world's premier shipbuilding nation. This figure puts Japan more than one million tons ahead of Britain. The British tonnage launched was 1,407,000, with West Germany (1,230,000 tons) occupying the third place. In 1955, Japan launched 829,000 tons of shipping, as compared with Germany's 929,000 tons and Britain's 1,474,000 tons. In 1956, Japan scored over both its rivals with an output of 1,746,000 tons.

Britain will contribute this year the equivalent of 25,000 U.S. dollars to the fund to be established by the International Atomic Energy Agency for financing the grant of fellowships for training in the peaceful uses of atomic energy. It is understood that the United States has offered to contribute up to half of the $250,000 which is the target for the Agency's fellowship scheme this year. The Soviet Union has offered places to 25 students from underdeveloped countries for study in Russia, but has offered no contribution to the Agency's fund.

PERSONAL

MR. Bishnuram Medhi, former Chief Minister of Assam, was sworn in as Governor of Madras on the 24th January.

Sir John Cockcroft, Director of the United Kingdom Atomic Energy Research Establishment at Harwell, Berkshire, will be succeeded by the present Deputy Director, Dr. Basil Schonland.

Mr. H. Bailey, Under-Secretary to the U.K. Ministry of Supply, has been appointed Senior U.K. Trade Commissioner in New Delhi. He will take up the appointment in May, when Mr. G. J. MacMahon completes his term of duty.

Mr. G. Lepori, Federal Councillor for Posts, Telegraphs, Railways, Broadcasting, Television and Tourism of Switzerland, arrived in Bombay from Geneva on Wednesday last. He is on a fortnight's visit to India at the invitation of Dr. B. V. Keskar, Minister for Information and Broadcasting.

Mr. U. L. Goswami, Joint Secretary, Indian Ministry of Commerce and Industry, has been named for the post of Director of the Division of Economic and Technical Assistance in the Department of Technical Works of the International Atomic Energy Agency (I.A.E.A.). The appointment was announced by Mr. Sterling Cole, Director-General of the I.A.E.A.

Mr. F. J. Philips, Vice-Chairman, Presidium, Board of Management, N. V. Philips' Gloeilampenfabrieken, the Netherlands, is on a tour of India visiting the offices of Philips-India and meeting important personalities in the Government and in the industry. After visiting Calcutta, Madras and Bangalore he arrived in Bombay on Tuesday, 21st January 1958, and spent five days. He left for New Delhi on Saturday last. It will be recalled that Philips-India was recently converted into a public limited company with the participation of Indian capital in it and with an agreement with N. V. Philips' Gloeilampenfabrieken in the Netherlands by which the latter will make available to Philips-India the benefit of research facilities and vast technical knowledge in the production of radio apparatus, radio components, lighting fittings and accessories, public address equipment and other electrical articles.

"COMMERCE" 1933

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

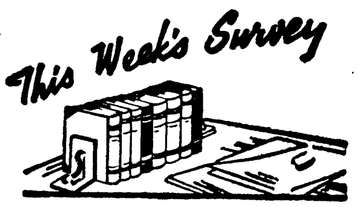
CALCUTTA, *28th January*

Joint Stock Enterprise in British India

The report for 1929-30 of joint stock companies operating in British India and in the Indian States of Hyderabad, Mysore, Baroda, Gwalior, Indore and Travancore has been issued by the Department of Commercial Intelligence and Statistics. In the year under review the number of newly registered companies (both public and private) increased by 16 per cent., as compared with the previous year. The authorised capital of the newly registered companies, as compared with the preceding year, was greater by 128 per cent. and the paid-up capital 206 per cent. The number of private companies registered in 1929-30 was 301, as against 277 in 1928-29. The total number of companies limited by shares which were incorporated in India up to 1929-30 under the laws relating to the registration of companies, was 15,369. Of these, 6,919 companies or 45 per cent. of the total number registered were working at the end of the year 1929-30; the remainder were either wound-up or discontinued, or never commenced business. The number of companies at work and the capital invested in them stood as follows at the end of each of the last three years:

		1927-28	1928-29	1929-30
Companies	(No.)	5,880	6,580	6,910
Authorised capital	(Rs. 1,000)	6,30,62,81	6,41,40,10	6,69,98,00
Paid-up capital	(Rs. 1,000)	2,76,43,54	2,79,80,81	2,86,35,58

As compared with the preceding year, there was thus an increase of 589 in the number of companies at work and of about Rs. 29 crores or 4.5 per cent. in the authorised capital and of Rs. 7 crores in the paid-up capital.



SOVIET ECONOMY EXPANDS

A STUDENT of Soviet economy outside Russia has had to face, till very recently, many formidable problems. In the first place, there was a dearth of accurate and reliable data regarding many key branches of the economy. Soviet statistics about industrial and agricultural production, even when available, were masked behind percentages and actual figures were seldom forthcoming. Western economists and statisticians, anxious to measure the magnitude of Soviet economic growth and size up its industrial potential, had very little factual material to work with. Much of their efforts were, therefore, no more than essays in uncertainties. A lot of time and talent were wasted in guessing what the facts might be rather than in interpreting them. It was only in 1956 that a *Statistical Abstract for the U.S.S.R.* was made available. Even this was too brief and incomplete to be of much use. Last year, however, a more comprehensive abstract, dealing with the statistics of Soviet industry, was published. Even this, no doubt, fell far short of a census of production, but the coverage was sufficiently wide to provide a fairly clear-cut picture of Soviet economy, although many Western economists were inclined to think that there were still many statistical pitfalls in them.

While the reliability of Soviet statistics is a matter for debate, it cannot be denied that the performance of Soviet industry in 1957, as revealed in the figures released by the Soviet authorities last week, is impressive. According to the Central Statistics Board of the U.S.S.R. Council of Ministers, as reported by Tass, the official Soviet news agency, the total volume of industrial production last year was 10 per cent. above that of the previous year and exceeded the planned target of 7.1 per cent. Production of capital goods was higher by 11 per cent. and that of consumer goods by more than eight per cent. It was claimed that all the Republics of the Union fulfilled their 1957 programmes for gross production and that the majority of principal items of production were ahead of schedule. Soviet national income, in comparative prices, went up by six per cent. in 1957, as compared with 1956. Employment was higher by 2.1 million at 52.1 million by the end of 1957 and, as in previous years, there was no unemployment.

The increase of 10 per cent. in industrial production is composed of varying percentage increases in different branches of production. The actual output of some of the products, with the percentage of increase over 1956 given within brackets, was as under: Pig iron, 37 million tons (4 per cent.); steel, 51 million tons (5 per cent.); rolled metal, 40 million tons (6 per cent.); coal, 463 million tons (8 per cent.); oil, 98 million tons (8 per cent.); gas, 20,200 million cubic metres (4 per cent.); electric power, 209.500 million kw. hours (9 per cent.); vehicles, 495,500 (7 per cent.); tractors, 204,000 (11 per cent.); grains combines (that is, machines which harvest the crop and gather grains) 133,080 (60 per cent.); wool fabrics 282 million metres (5 per cent.); silk fabrics 85 million metres (8 per cent.); leather footwear 315 million pairs (10 per cent.).

It is claimed that milk production in the Soviet Union aggregated 95 per cent. of that in the U.S.A. and butter production almost equalled the U.S. outturn and exceeded, if home-made butter were included in the total. In actual figures, 54.7 million tons of milk, or 43 per cent. more than in 1954 and 20 per cent. more than in 1956, was produced in 1957. Total harvest of grain crops, despite unfavourable weather, increased by 26 per cent. over the 1953 figure and wheat crop was higher by 40 per cent. and maize by 100 per cent.

A total of 210,000 million roubles were invested in State and co-operative organisations in 1957 which was higher than the 1956 figure by 12 per cent. During the year, 800 new industrial enterprises were started. The report also speaks of the advancements in the field of atomic power generation. Work on new atomic electric power stations with a capacity of 200,000-400,000 kilowatts each is stated to be under way. Reflecting these growths in the different sectors of the economy, Soviet foreign trade expanded by 13 per cent. over 1956. It was valued at 33,000 million roubles in 1957, as compared with 29,000 million roubles in the previous year.

Several important steps are also stated to have been taken to improve the material welfare of the Soviet people. Wages of low-paid workers were raised and they were exempt from taxes. Working hours of industrial operatives were shortened, but it is not stated from how many and to what extent. Soviet citizens received in 1957 57,900 million roubles in pensions which was 21,400 million more than in 1956. Investments in savings banks increased by 16,800 million roubles. Consumer goods worth 75,700 million roubles more are estimated to have been purchased in 1957, as compared with the previous year. There was thus an all-round improvement in the economy of Soviet Russia.

EASTERN ZONAL COUNCIL

Mr. Govind Ballabh Pant, Union Home Minister, did well to stress, when he spoke at the second meeting of the Eastern Zonal Council held in Patna on 23rd January, that the meetings of the Council would be held in future at more frequent intervals, notwithstanding preoccupation with other matters. There are so many issues, especially economic, of common concern to the States of the zones that, unless the representatives of the Governments meet regularly and at frequent intervals, co-ordinated action will be lacking, thereby slowing down the pace of implementation of development schemes. The need for such regular and frequent meetings is all the greater in the case of the Eastern Zonal Council, covering territories (Assam, Bihar, Orissa, West Bengal, Tripura and Manipur) which are developing rapidly into an industrial area comparable to the Ruhr or Pittsburg or other industrially well-known centres of the world. As Mr. Pant remarked, Rourkela in Orissa, Jamshedpur in Bihar, Durgapur in West Bengal, Asansol and its neighbouring areas, and the mining belt on the Orissa-Bihar border are humming with life and activity of fast developing industrial centres. The execution of these projects and also of the proposed erection of an oil refinery in Gauhati (Assam) "is bound to have a vital impact on the economy of this region."

It is true that all these projects are mainly the responsibility of the Centre, but the State Governments included in the Zone also have, as Mr. Pant rightly reminded them, certain vital functions to discharge, if the tempo of activity is not to be arrested. Considered thus, it is disquieting to be told that no progress has been made in the direction of co-ordinating and harnessing the manpower resources of States at the zonal as well as the national plane since the question was discussed nine months ago, that is, at the inaugural meeting of the Council held on 30th April 1957. This is a very important problem which must be tackled energetically and expeditiously. The participating States may, of course, be unequal in their contributions, but "what is necessary is," to quote Mr. Pant, "that they should be equal in their desire and will to help."

A similar kind of co-operative venture is urgently required in respect of three other important problems to which the Home Minister drew pointed attention—improvement of communications, power development, and maintenance of law and order. There must be a major liberalisation of the State Governments' policies in regard to road transport, so that the load in inter-State traffic within the Zone which the railways or steamer companies are still unable to lift may be diverted to the roads and can be moved freely without restriction, at least within the Zone. Such liberalisation will doubtless supplement the measures which the Centre has initiated or is considering. It will be recalled that, only a fortnight ago—15th January—a new railway zone, the North-East Frontier Railway, came into being, in order to deal more efficiently with the rather peculiar problems of rail transport to and from Assam; the new zone with its headquarters at Pandu, covers a route mileage of 1,738.3 in Assam, North Bengal and East Bihar. Various measures to relieve the congestion in Calcutta Port are also being examined. As regards power development, Mr. Pant's suggestion for the setting up of a technical committee for co-ordination within the zone deserves to be considered. Such a committee will surely have a useful function to perform in suggesting closer and better integration of the various grids in the Zone and in routing electric power to areas where it is most urgently needed. No less vital is the need for maintaining general law and order at a high standard. This point has to be stressed, because a growing number of irresponsible elements are trying to undermine peace in the industrial areas under the cloak of trade union movement. Their ultimate aim is to capture political power and they regard the trade unions as a convenient ladder.

THE BOMBAY STATE CO-OPERATIVE BANK LIMITED

9, BAKEHOUSE LANE, FORT, BOMBAY-1.

(ESTABLISHED IN 1911)

Chairman: SHRI RAMANLAL C. SARAIYA, O.B.E.

Money deposited with this Bank helps the Indian Agriculturists and Co-operatives.

		Rs.
PAID-UP SHARE CAPITAL:		
Subscribed by the Shareholders	Rs. 40,11,500	
Subscribed by the Government of Bombay	Rs. 31,00,000	71,11,500
RESERVE AND OTHER FUNDS		56,56,100
TOTAL DEPOSITS		16,71,33,700
WORKING CAPITAL		17,83,73,000

BRANCHES 56 IN 11 DISTRICTS

Collection arrangements in all the important cities of the Indian Union. Deposits of all kinds accepted. Terms on application.

C. M. LAUD, *Managing Director.*

"ZETA"

Before the astonishment stirred up by the Russian *Sputniks* has begun to subside, there comes yet another sensational news of the latest technical achievements in nuclear research in the U.K. and the U.S., the consequences of which promise to be more far-reaching and more beneficial to mankind than the "baby moons." The U.S. Atomic Energy Commission and the British Atomic Energy Authority issued, on the 24th January, simultaneous announcements of spectacular developments in research aimed at producing, economically, electric power from controlled thermonuclear reaction. They said that the British and American scientists have made significant strides towards harnessing the power of the hydrogen bomb, thus bringing nearer the day when mankind will obtain limitless power from the oceans.

The announcements confirm what has hitherto been a mere rumour, that scientists of the two countries have been able to fuse together atoms and thereby release energy. This was considered to be a far tougher problem than the fission of the atom—the present source of atomic energy from uranium. The former is the energy process that goes on in the sun and has kept it hot for 3,000 million years. In a thermonuclear reaction, the nuclei of the heavy hydrogen atoms collide with one another and fuse to form heavier nuclei, releasing energy. This can only take place in extreme heat such as the reaction that takes place in the hydrogen bomb which is an uncontrolled reaction. The British and U.S. scientists have now succeeded in producing, in a plasma of deuterium gas (heavy hydrogen gas) temperatures as high as six million degrees centigrade for a few millionths of a second. In order to produce electric power economically from this reaction, much longer containment and temperatures of the order of a hundred million degrees would be required.

The apparatus use by Britain's Atomic Energy Research Establishment at Harwell in the fusion process is known as ZETA (short for Zero Energy Thermonuclear Assembly). It reached a temperture of five million degrees centigrade which is higher than the measured surface temperature of any star, and was sustained for a few millionths of a second. For generating thermonuclear energy for practical purposes a temperature of 50 to 100 million degrees will have to be reached (the centre of the sun has a temperature of 10 million degrees centigrade) and the heat sustained sufficiently long.

The British and American scientists are confident that this can be done. The British Atomic Energy Authority said: "There appears to be no fundamental reason why these longer times together with much higher temperatures cannot be achieved." According to Sir John Cockroft, it would, perhaps, be 20 years before industrial nuclear stations producing energy through the fusion of deuterium could be put into everyday use.

What will be the effects of these developments on the current efforts in the development and construction of nuclear reactors to produce electricity from nuclear fission, the process used in the standard atomic power plants such as the engine which propels the U.S. submarine *Nautilus*? Answering this poser, Mr. Lewis L. Strauss, Chairman of the U.S. Atomic Energy Commission, emphasised that controlled thermonuclear programme will not interfere with the development of reactors to produce electricity out of nuclear fission. He added that the results of the research in the fusion process are "sufficiently encouraging and the ultimate rewards are so great as to justify the necessary expenditure of money, time and talent." The "power-hungry" world is hopefully awaiting the time in the near future when science will enable it to harness that inexhaustible source of fuel, the ocean.

JUTE OUTPUT DECLINES

The fall in raw jute production during the current season (that is, 1957-58), as disclosed by the all-India final estimate, is not wholly unexpected. For some time past, there were fears that the delay in the onset of monsoon and the drought conditions in some areas of production would affect the total raw jute output in the country. It was, however, expected that, thanks to intensive cultivation, production might not be seriously affected. It is, therefore, somewhat gratifying to note that the weather has been more kind to many jute-producing States than anticipated, as indicated by the increase in yield in these areas, with the result that the decline in aggregate production in the country has been much less than once feared early in the season.

The final estimate of raw jute output in 1957-58 is placed at 4,088,000 bales (of 400 lbs. each), as against 4.288.000 bales in 1956-57, thus showing a decline of 4.7 per cent. This setback in production has reversed the upward trend noted in the previous two years, when the output rose from 2.93 million bales in 1954-55 to 4.29 million bales in 1956-57. It will be recalled that the raw jute production expanded substantially after the partition of the country from 1.66 million bales in 1947-48 to a high of 4.68 million bales in 1951-52, before suffering a setback to 2.93 million bales in 1954-55. The decline in production during the current season, though not serious, cannot but be viewed with some concern in the context of the intensive efforts being made to attain self-sufficiency in raw jute.

The fall in production is not so marked as that in the area under jute, which has declined from 1.908,000 acres to 1,754.000 acres or by 8.1 per cent. It is perhaps this reduction in area, without a corresponding decline in output, which has raised the all-India average yield per acre from 899 lbs. or 2.25 bales in 1956-57 to 932 lbs. or 2.33 bales in the current year. The break-up figures of area under jute and outputs in various States are not available, but the data relating to yield show that the yield has been higher in all the States, except in Bihar and Uttar Pradesh. The highest average yield of 1,254 lbs. or 3.13 bales per acre has been recorded in Assam, the corresponding figure for the previous season in respect of that State being 1,182 lbs. or 2.95 bales per acre. Besides Assam, the Union territory of Tripura, West Bengal and Orissa States also have recorded an increase in yield. The output per acre in Tripura has risen from 2.72 bales to 2.90 bales, in West Bengal from 2.03 bales to 2.41 bales and in Orissa from 2.02 bales to 2.21 bales. In Bihar, the yield has shrunk from 2.08 bales per acre in 1956-57 to 1.63 bales in 1957-58 and in U.P. from 2.80 bales to 2.20 bales, consequent on the drought conditions during the sowing and growing period of the crop, which affected not only the production but also the area under cultivation.

The fall in production of raw jute is reflected in the decline in arrivals durng the six months ended 31st December 1957, to 3,268,000 bales from 3,326,000 bales in the corresponding period of 1956. Of this quantity, the arrivals of Indian jute account for 2,854,000 bales, as against 2,936,000 bales in the six months ended December 1956. The import of Pakistani jute has however, gone up from 390,000 bales to 414,000 bales, thanks to the sharp rise in arrivals during December (the last month of the licensing period for import of raw jute from Pakistan) when a quantity of 105,000 bales—the largest quantity for any month since March 1956—was received. Till the end of November, import of Pakistani jute was lagging behind that in the corresponding period of 1956-57.

The first export of Japanese rayon plant to India under deferred payment system has been contracted for. The Kawasaki Aircraft Industry Company of Japan will furnish a complete plant equipment worth 300 million yen, 20 per cent. of which will be paid on shipment and the remainder in five years. The estimated production capacity of this plant is put at five tons per day.

FOR INTERNATIONAL EXPERIENCE & SERVICE...

Fly PIA to Karachi

DAILY CONVAIR FLIGHTS

Refreshments and full bar service (outside Prohibition Areas) on all flights.

Ex Bombay: 11.40 hrs. arriving Karachi 13.55 hrs.
Ex Karachi: 07.30 hrs. arriving Bombay 10.50 hrs.

Connections at Karachi (with optional stopover) to Baghdad, Rome, Geneva, London.
Every Tuesday and Friday at 17.00 hrs., a P I A Super-Constellation leaves Karachi for London.
P I A can book you straight through to any destination in the world.

ECONOMISTS ON THE PROSPECTS FOR SECOND PLAN

THEIR ADVICE TO PLANNING COMMISSION QUITE UNSOUND

From Our Special Correspondent

NEW DELHI, *28th January*

NOT many in the vast multitudes that were awe-struck by the fantastic colour and pageantry of the Republic Day in the Capital could have seen its sombre background in a miserable, though revealing, document drawn up by the Panel of Economists of the Planning Commission on problems relating to adjustments in the second Plan—a document which was as cheerless as the cultural and military parade was cheerful. The Panel's conclusion is that a public sector outlay of Rs. 4,800 crores, *at present prices*, is feasible in the five-year period 1956-61 if the estimated foreign exchange gap of Rs. 700 crores happens to be wholly covered and domestic resources in all forms happen to be mobilised adequately. Assuming that the two conditions may be fulfilled, this would mean that the public sector outlay will be considerably less than Rs. 4,800 crores in 1952-53 prices at which the Second Plan's original financial target of Rs. 4,800 crores was fixed. In other words, this would mean, in the words of the Panel itself, reduced performance in terms of physical targets incorporated in the original Plan. The Panel, however, has not exactly estimated the likely reduction in physical performance (as distinct from financial performance) probably because there are still some vague hopes, alongside of clear uncertainties, in the situation.

DELHI LETTER

The hopes, of course, are just so many assumptions which are probably unwarranted, because, according to its own admission, the Panel "has not had the time necessary for a close examination of the relevant material, especially material bearing on the progress of the Plan in the various sectors and sub-sectors of the economy and the possible imbalances in the system which are emerging or which may emerge hereafter in the process of rephasing," or "the opportunity of reviewing in detail the resources position and outlook for the future." This is a crucial admission in the sense that, in the absence of a critical evaluation of sector-wise performance and, more especially, in the absence of a detailed review of the resources position, the Panel's advice is either pointless or potentially dangerous. If it had happened that the Panel was not given the opportunity to review the resources position in detail, there was no point, one might have thought, in the Planning Commission seeking its advice. If, on the other hand, it had happened that the Panel did not use the opportunity it might have had of reviewing the resources position, there was no point, one might have thought again, in its giving advice either. But the advice was sought and it has been given on the basis of the following passage in which the hopeful note is cancelled out by a note of diffidence:

"The Panel has not had the opportunity of reviewing in detail the resources position and outlook for the future. It assumes, however, that every effort will be made to raise the domestic resources required for implementing a Plan of Rs. 4,800 crores (at present prices). . . . Even this financial target of Rs. 4,800 crores is not easy of achievement. Considering, however, that the rate of domestic savings implied in an investment target of this order is by no means high, it should be possible to devise ways and means of raising the resources required, *without causing serious strains in the prices.*" (Italics mine.)

". . . it cannot be assumed that external assistance of this order (Rs. 700 crores) will be forthcoming. While the rephasing of the Plan has, at this stage, to proceed on the assumption that the foreign exchange gap will be covered by additional resources from abroad, it is necessary at the same time to be prepared to take whatever corrective measures are required against the contingency of external assistance falling short."

The italicised words in the above passage cannot be taken to represent an implicit warning against inflationary deficit financing which may well cause serious strains in the context of a continuing food shortage which is confidently forecast by the Panel for the remaining years of the Plan. If anything, those words provide some implicit justification for such deficit financing, because, in the light of the Panel's advocacy of a policy of direct controls, such strains as might develop could be subdued. It should be relevant to recall here the Panel's "definite" view that "the inflationary pressure has not been in the past nor is likely to be in the future such that it cannot be held in check by an appropriate policy, including direct controls at particular points." The Panel appears to have been so well aware of the inflationary potentialities in the situation that it gives the advice that "it would be desirable to initiate action even at this stage in preparation for a fairly comprehensive system of controls (involving compulsory procurement and rationed distribution of foodgrains) in case of need." The "need," it may be noted, is not dimly but distinctly visualised. The conclusion is irresistible that, even in implementing a plan of smaller physical size, physical controls would be more or less inevitable. This is pretty unsound advice to the Planning Commission which should have been in a dilemma all along—to have a smaller plan with few physical controls or to stick to the Original Plan with full-fledged food controls becoming inevitable.

Quite apart from the dangerous implications of the Panel's advice in the matter of an outlay of Rs. 4,800 crores at present prices, there is an element of casualness and unrealism in it even after the Finance Minister's reported statement at the meeting of the Panel that the foreign exchange gap in the Plan was expected to be much larger than was originally anticipated (Rs. 700 crores) and the performance of domestic resources was still below expectations in spite of the large tax effort that had been made. With such widening gaps in resources, the probability is that actual expenditure on the public sector schemes in the coming three years will not be significantly more than an annual average of Rs. 750 crores, unless, of course, deficit financing is stepped up further. This figure, incidentally, happens to correspond, more or less, to the annual average outlay in the first two years when the effort to mobilise internal resources had all but reached its peak. It is clearly too late in the day to keep alive the hope (or illusion?) that a Rs. 4,800-crore Plan at present prices would still be possible, and so the Economists' Panel cannot be taken as having discharged its advisory functions boldly and frankly. In its obsession with the question of easing the likely financial strains by possible physical controls, the Panel has regrettably ignored the real cost to millions of people in terms of hardship and inconvenience that such controls would involve.

(*Concluded from next column*)

working dollar balances of the British banks should also be held in trust for the British Government to whom they would be reported weekly and these too should be added into the published reserves.

These arrangements, while not apparently adding to the country's dollar resources, would, in practice, strengthen the reserves by bringing out to the world what they really were. Is it not obvious that published reserves of £1,500 million (which is what the mobilised total would be) would be far more impressive in relation to the total of the sterling balances than published reserves of only £800 million. Of course, people would say, you cannot use the whole £1,500 million—but then neither can one use the whole £800 million. At present, we make the worst of all worlds keeping our reserves split up into fractions none of which can be fully mobilised and some of which cannot be mobilised at all. They should all be put to work and their joint effectiveness thereby increased.

A final point which should be considered is the desirability of monthly publication of the reserves figures. At present, such publication tends to arouse or to dampen speculation. If, the reserves are swelled to their true level in the manner suggested above, publication would not matter so much; but, while the reserves give a false picture of the country's strength, it would be better to publish them only at the annual Budget when the Chancellor has an opportunity to report on them in perspective.—*All Rights Reserved.*

THE STERLING SYSTEM—III

From Our Own Correspondent

LONDON, *25th January*

THE preceding "Letters" in this series have established that, as against current liabilities of some £1,500 million (out of a total of £4,154 million of sterling balances), the total liquid assets of the sterling area held in London are about £1,000 million of which only £800 million are mobilised; and, since this £800 million appears as the total gold and dollar reserves, probably not more than £200 million of it could be dissipated without causing a confidence crisis.

LONDON LETTER

It is an undoubted convenience, though not a necessity, for world trade to be carried out largely in sterling; the use of sterling banking facilities brings in an invisible income to the United Kingdom of some £125 million per annum. It is in the interests of Britain and the whole sterling area to keep the sterling system in being, but the co-operation of the whole area is necessary to this end.

If this co-operation is not forthcoming, if the Bank of England is supposed to operate the sterling system with the published reserves only and with them face all the vicissitudes of trade throughout the system, then it had better give up trying and save the British people a great deal of headache and nervous strain. And the rest of the sterling system had better try to make its own peace with the world.

The first requisite is, therefore, to set up a permanent Sterling Commission—comparable to the European Payments Union—of the Finance Ministers of the sterling area of which the Bank of England would be the *Agent*. The Commission would sit permanently in London and normally each country would be represented by nominees of the Finance Ministers who would be attached to the staffs of the various High Commissioners in London. So, instead of rare conferences of Finance Ministers, there would be a permanent body keeping the affairs of the sterling system under constant review.

The second requisite is that the balance of payments of Britain *and* of each of the sterling area countries should keep in balance over the years. Some countries may have deficits in some years and surpluses in others—that is the advantage of having a sterling area—but so long as payments are *normally* kept in balance, then there will be nothing to nibble away the reserves. Foreign funds may flow into sterling and out of it, but they will not drain the reserves. As they come in they will swell the reserves and be put to use in the money market but there will be gold and dollar backing available to pay them off at call if need be.

The third requisite is for the major deposit holders (who would form the permanent Commission) to agree a *maximum* drawing down of their deposits year by year. Deposits could be drawn upon without limit, but, over the year, they should not fall below an agreed level. If any protest that this is an infringement of their rights, the answer is that a devaluation of sterling would be an even greater infringement. In the real world, given the limited amount of the gold and dollar reserves, the choices are between maintaining the sterling system by avoiding overstraining it and of bucking it up by insisting on getting more out of it than there is to give.

For, in fact, the sterling balances can only be drawn down by the sterling area as a whole throwing up a surplus of exports with the gold and dollar world, or by drawing down the existing gold and dollar reserves. And, unless the reserves are big enough to be drawn without difficulty, or unless the sterling area is in trading surplus with the gold and dollar world, it is simply not practicable to draw the balances down.

The fourth requisite, which the depositors could fairly demand in return for abstemiousness over their drawings, is to mobilise effectively the second and third lines of reserves. The dollar securities privately held should be sold to the British Government and the total dollar security holdings of the latter should then be deposited as collateral with the I.M.F. (in preference to the Export-Import Bank) against which dollars can be drawn. These securities should then rank as part of the reserves. Similarly, the substantial

AMERICAN LETTER

"PUMP PRIMING" BACK AGAIN IN U.S.

ANOTHER ERA OF INFLATION BEGINNING?

From Our Special Correspondent

NEW YORK, *21st January*

AS predicted in earlier despatches, "pump priming" as practised in the Administrations of Franklin Delano Roosevelt is back under President Eisenhower. The most important annual messages by the President have been submitted to Congress. They all spell expansion, just a few months after the previous session of the same Congress was possessed by an economy mania which was a major contributing factor in the economic cutbacks, which have occurred in the United States.

It is difficult to explain rationally. Perhaps, as long as human beings are involved, reason can never be disassociated from emotion and *vice versa*. Sputnik did it as well as the severe criticism which has been heaped upon the U.S. defence command by such individuals as General Gavin who is generally regarded as one of the greatest brains of the current military generation.

As is customary at this time of the year, much attention is being paid to the Government's economic plans. In this connection, a word must be said about the U.S. Budget. There are, in reality, two budgets. One is the widely heralded book-keeping Budget, the other the cash Budget of Washington. The former excludes the Government trust funds, such as Social Security and other items which become bigger every year. They are wholly disregarded in the regular Budget which is tied in with the national debt limit, presently at $275,000 million.

The current fiscal year Budget (book-keeping) is in the neighbourhood of $72,000 million. The next one for the fiscal year ending 30th June 1959 is projected at about $74,000 million. What are the cold facts?

Cash spending by the U.S. Government in the current fiscal year ending 30th June 1958 will amount to about a little better than $81,000 million. This is slightly less than was received from taxpayers. Hence, the economic pinch. In the following fiscal year, about $85,000 million will be dispensed by the national treasury and for the year next to it, the figure is likely to be $86,000 million. Both are far above expected tax revenues.

All this means that the chances are from here on in, there will be deficit spending as in the '30's under President Roosevelt. This may be aggravated by political motives of the lawmakers. There is now talk of a reduction of taxes, in order to make the new programme of defence more palatable to the voters. Nothing can be ruled out as unlikely under present circumstances, I feel.

In the final analysis, the U.S. seems to be headed for another era of inflation and, thus, for a further reduction in the purchasing power of the U.S. dollar. This is a long-range forecast, not a prediction for the immediate future.

All this may sound quite complicated to Indian readers. The point is, the U.S. has an antiquated budgetary conception. Unlike Great Britain, where every annual Budget stands on its own feet, the U.S. appropriations carry over from one year to another so far as unspent portions are concerned. Thus, it is almost impossible to determine just what Government spending is going to be, unless a close analysis is made of the facts at hand. There is little doubt this time. Washington is headed for a new spending spree which, in terms of dollars, may be without precedent in peace-time history of the country. It is based on the American conception that everything can be bought—peace, security, health plus the necessary tangibles which go with it.

Much criticism is directed against Secretary of State Dulles for his adamant stand against "summit talks" with the Kremlin leaders. Mr. Dulles, to be certain, distrusts the Soviets and he has good reasons for his attitude. At the same time, the average man in the street, and I mean just that, asks, with a good deal of justification, what possible harm could come of talks between President Eisenhower and Nikita Khrushchev?

Indeed, the atmosphere is such at this writing it seems most likely Secretary Dulles will be overruled and a summit meeting will take place. All this is against the background of utter confusion regarding the future.

Something new, something very frightening has come over the U.S.—Sputnik. These revolving missiles do not fall into the traditional thought pattern. As President Eisenhower said in his message to Congress, "important new weapons . . . do not fit into any existing service pattern. They cut across all services, involve all services and transcend all services at every stage from development to operation . . . pride of service and mistaken zeal in promoting a particular doctrine has more than occasioned the kind of difficulty of which I have spoken." The U.S. Chiefs of Staff of the U.S. Army, Navy, and Air Force are openly and earnestly opposing any reorganisation. So is the Chairman of the Joint Chiefs, General Nathan Twining.

The world may know as well that this situation exists in the U.S. today. It is a human problem of well-meaning people, but it is a problem. Senators and Congress men are now trying to untangle this emotional jungle. Whether they will be successful remains to be seen.

The latest estimate is that the current fiscal year which has a little more than five months to go, will show a deficit of $400 million, instead of the originally estimated surplus of $1,800 million. Present projections are that the 1959 Budget will be in balance. This, however, rests on a predicted $2,000 million rise in revenues which is problematical. It would occur only if there were to be a fairly quick end of the current business recession.

Meanwhile, the U.S. Treasury faces the prospect of running short of cash under the current debt limit of $275,000 million. Already, the Administration has asked Congress, which controls the purse-strings, to boost the debt limit by $5,000 million to $280,000 million. It was approved promptly by the House of Representatives' Ways and Means Committee.

At this point, some economies in non-military expenditures are contemplated, but they are not to take effect immediately. The plan is that within the next few years, Washington would shift some of its financial burden to State and Local Governments. This would apply particularly to such matters as slum clearance, aid to the needy, vocational education and other fringe areas.

It may be noted that the new Budget provided for no new public works projects. The old ones are still very much in evidence, such as the 10-year road-building programme. Because of higher road construction costs and expansion of plans by the States, the figure for this joint Federal and State venture is now at $37,600 million, that is, 37 per cent. up from earlier estimates. Whatever else may be said, it will be a powerful stimulus for the U.S. economy.—*All Rights Reserved.*

NO LEAKAGE OF BRITISH BANK RATE

TRIBUNAL'S UNANIMOUS VERDICT

THE three-man Tribunal appointed by the U.K. Government to enquire into the alleged leakage of information relating to the raising of the British Bank rate in September last, has unanimously concluded that there was no justification for the allegations. The Tribunal was headed by Lord Justice Parker, Mr. E. Milner Holland, Q.C. and Mr. Geoffrey Veale, Q.C., being his two colleagues. It has further found that even the information disclosed by the Ministers to some Press men and Party members generally about the proposed restrictive financial measures (not specifically about the Bank rate) was treated by the recipients as confidential and that no use of such information was made for the purpose of private gain. It has fully endorsed the view that the transactions made on the eve of the Bank rate rise were made by intelligent anticipation of the possible crisis measures that the Government would have to take in the circumstances in which Britain found itself in September last.

The Tribunal's report has come as a great relief to the City of London, which has for long been enjoying the position of a leading international financial centre, though its place as the "financial capital of the world" has in recent years been taken over by Washington. Financial circles in London find it gratifying that the Tribunal has fully justified the hope expressed by the Governor of the Bank of England that its report would not only maintain but actually enhance London's reputation for financial integrity. Such a reputation was at stake in September last, when allegations were made against the Cons rvative Government of improper disclosure of information relating to the raising of the Bank rate. The allegations were, of course, denied by the Government. The members of the Opposition (Labour Party) were, however, unconvinced and almost raised a storm in the House of Commons demanding an independent enquiry. After considerable hesitancy, the Government agreed to the suggestion and the result was the appointment of the Tribunal under the chairmanship of Lord Justice Parker on 14th November.

Thorough Enquiry

The Tribunal first sat on 21st November 1957 to consider the procedure and to give directions. Hearing of evidence and arguments lasted for 12 days between 2nd and 30th December. The enquiry was a thorough one, inasmuch as evidence on oath from 132 witnesses and a statutory declaration from one witness were recorded, written statements of 236 other persons were considered, the lists of sales and purchases of Gilt-edged securities made on 18th September and on the morning of 19th September upto the time when the increase in Bank rate was announced were scrutinised and the turnover in Gilt-edged securities of leading jobbers on these two days was compared with that on other days between 22nd August and 3rd October 1957, inclusive, as also with that on 15th February 1956 and 6th February 1957, the days preceding the earlier changes in the Bank rate.

The report of the Bank Rate Tribunal covers investigation of three distinct issues, namely, (1) allegations of premature disclosure by Ministers to the Press and other persons not in the public service, (2) rumours current in the City (London) of substantial sales of Gilt-edged securities on 18th and 19th September 1957 of a character which suggested selling by persons who were in possession of advance information, and (3) accounts of isolated incidents which, if true, would support the view that unauthorised persons were in possession of such information. The Tribunal unhesitatingly reached the unanimous conclusion that there was no justification for allegations that information about the raising of the Bank rate was improperly disclosed to any person.

Prior Disclosure

On the first issue, namely, disclosure by Ministers of the proposed restrictive measures to the Press and other persons not in service, the Tribunal's finding is as follows:

"We have found the occasion on which and the circumstances in which prior disclosure was made by Ministers of the proposed restrictive financial measures. We have also found that in every case the information disclosed was treated by the recipient as confidential and that no use of such information was made for the purpose of private gain. As we said at the outset, the propriety of such disclosure is a matter for Parliament alone.

"We do, however, understand and appreciate the reason for the decision of the Chancellor of the Exchequer with the approval of his Cabinet colleagues, to explain in advance to Press representatives, the Conservative Central Office and representatives of industry the nature of the intended restrictive financial measures, having regard to the serious financial situation and the urgency created by his imminent visit to Washington."

The Tribunal is satisfied that, although the Chancellor discussed with the aforesaid people in confidence the restrictive financial measures, he did not at any time discuss with, disclose to or give them, either directly or indirectly, any information whatsoever about the proposed increase in the Bank rate. It is also satisfied that no unauthorised disclosure was made by any of these persons of the information as to the restrictive financial measures given to them as representatives of their newspapers and that no use was made of the information for the purpose of private gain.

The report next deals with three members of the Conservative Party, who were not in public service, but who received prior information about the restrictive financial measures. The Tribunal has found no justification for the allegation that these persons received, either directly or indirectly, any information as to the increase in Bank rate. "Each of them," the Tribunal added, "treated the prior information on the restrictive financial measures which they received as confidential and did not use it for the purpose of private gain." A similar verdict is given by the Tribunal about the representatives of industry who met the Ministers prior to the Bank rate rise.

Sales of Securities

As regards the sales of Gilt-edged securities on 18th and 19th September, the Tribunal's report says that securities of the nominal value of about £16.5 million were sold and of £14 million were bought on the 18th. Sales on the 19th were small. Giving its views on these sales, the Tribunal observes:

"In our view, the effect of these substantial sales, together with the general factors already indicated above, was to cause the fall in prices of Gilt-edged securities between the afternoon of the 18th and 11.45 a.m. on the 19th when the increase in the Bank rate was announced. There was no evidence that the fall in prices was due to any general leakage of information about the impending rise in the Bank rate. The comparatively small figure of sales negatives any such conclusion. Indeed, in the light of all the circumstances, we are surprised that selling was not heavier.

"This may be due to the fact that it was the general opinion that the Government would be unwilling to agree to an increase in the Bank rate and in part also to the fact that it was thought that a new Government funding operation was shortly to be undertaken. It does not follow, that there may not have been individual cases in which dealings were prompted by the improper disclosure or use of confidential information.

"There is no doubt that a number of persons in the City had come to the conclusion that some Government measures to deal with the financial and economic crisis would have to be announced before the Chancellor of the Exchequer left for Washington. This was, we think, a very natural view to take and could readily have been formed without any special knowledge.

"It is possible that some people may have been encouraged to this view by rumours that consultations with the Chancellor had been taking place for some time, but there is very little evidence that any such rumours were current and the interviews given by Ministers on the afternoon of Wednesday, the 18th, even if the fact of such interviews became known, were too late to have any effect on the market on that day. On the 19th, although the newspapers forecast a Government announcement, the sales of Gilt-edged securities were small in amount."

Probe into Dealings of Firms

The Tribunal made a special probe into the dealings of certain firms, with which two Directors of the Bank of England (Lord Kindersley and Mr. W. J. Keswick) and the Deputy Chairman of the Conservative Party (Mr. Oliver Poole) were connected. Lord Kindersley is Chairman and one of the Managing Directors of Lazard Brothers, Governor of the Royal Exchange Assurance Company and Chairman of the British Match Corporation. In these three firms, no person, other than Lord Kindersley, had any prior knowledge of the impending rise in the Bank rate or of the proposed restrictive financial measure. The firm of Lazards sold large parcels of securities of a nominal value of £2 million prior to the Bank rate rise and bought back on 23rd and 24th September securities of the value of £750,000 at the lower prices then ruling and made a profit of over £30,000 in the repurchase, although it suffered an overall loss on its remaining Gilt-edged holdings. Though the Tribunal found that the proceeds of the securities sold by Lazards were considerably in excess of the firm's requirements, it was satisfied that "in a business such as that carried on by Lazards, liquidity must be of considerable importance and the steps they took arose out of necessary requirements of the firm's business, in the light of the situation as the Managing Directors saw it at that time. Had Lazards any prior knowledge of the Bank rate rise, the Tribunal points out, they would no doubt have sold more Gilt-edged securities and thus have reduced the overall loss which they suffered on their remaining Gilt-edged securities.

Lord Kindersley's Conduct

The Tribunal was satisfied that Lord Kindersley did not disclose in any way the knowledge which he had, or use that knowledge in order to assist Lazards. Though Lord Kindersley was a party to the firm's policy decision leading to sale of securities, the Tribunal found that he was influenced solely by the necessary requirements of the firm and not by any knowledge obtained as a Director of the Bank of England. The Tribunal did not find anything unusual about the sales of Royal Exchange Assurance and British Match Corporation. Dismissing the allegation that the sales of Royal Exchange Assurance implied prior knowledge of Bank rate rise, the Tribunal points out that, if the Company had any such knowledge, it would have sold more Gilt-edged securities and sold long-dated securities rather than short-dated ones, as was actually done by the Company. The Tribunal has, in fact, paid a tribute to the conduct of Lord Kindersley, the complete honesty and propriety with which he conducted himself "during a period when he might, at any moment, have been placed in an embarrassing position."

Mr. W. J. Keswick, another Director of the Bank of England, is a Director of Messrs. Matheson & Co., the London agents of Messrs. Jardine Matheson, Hong Kong. Messrs. Matheson & Co. sold Gilt-edged securities of the value of over £1 million on behalf of the latter firm. The Tribunal made an exhaustive study of the evidence tendered by Mr. Keswick and came to the conclusion that he behaved with complete honesty and propriety in the difficult and embarrassing situation in which he found himself. It was his duty to Jardine Matheson to give the advice sought for by the latter. The advice was given reluctantly and the Tribunal was satisfied that, if he had not been a director of the Bank of England, he would, in the circumstances prevailing at that time, have given the same advice.

In the case of Mr. Oliver Poole, the Tribunal found not a shred of evidence that he made any

AMENDMENT TO COMPANY LAW

IMPORTANT RECOMMENDATIONS OF NEW COMMITTEE REVIEWED

By Premjus Roy

THE Companies Act Amendment Committee which was appointed by the Government in May 1957 has submitted its report to the Government. It is intended to set out in this article the main recommendations of the Committee.

Some of the recommendations would adversely affect company managements. It has been recommended that clause (iv) of section 3(1) of the Companies Act, for instance, should be amended to provide that any private company in which shares to the extent of 25 per cent. or more of the paid-up capital are held by one or more public or private companies should not be treated as a private company, but that it should be deemed to be a public company. If this recommendation were accepted, many genuine private companies will come to be considered as public companies, and will be liable to the various disabilities, restrictions and obligations which apply to public companies. Another recommendation made by the Committee is that those private companies which are subsidiaries of foreign bodies corporate but in which some part of the capital is beneficially held by Indian nationals or Indian companies, should be treated as subsidiaries of public companies. In case there is no beneficial holding of Indian nationals, the matter is left to be considered by the Government whether Indian subsidiaries of such foreign bodies corporate are or are not to be treated as subsidiaries of public companies.

In regard to section 81 of the Companies Act, the Committee has recommended that, on any increase of subscribed capital of a company after the expiry of one year from the first allotment of the shares, the issue or allotment of further shares must be offered to the existing holders of equity shares. This amendment is proposed, in order to prevent directors allotting to themselves shares which were offered to shareholders but were not taken up by them, when the share values go up.

The Committee has also recommended that it will not be enough if only the chairman's speech which forms part of proceedings of general meetings is published in the papers, but that the whole minutes should be published. This recommendation, if accepted, would entail unnecessary expense to the company.

Managerial Remuneration

A very important recommendation which the Committee has made is that, in section 198, which prescribes a ceiling for overall managerial remuneration, an explanation should be added to the effect that remuneration would include perquisites. It has also been suggested that it should be provided that the minimum remuneration of upto Rs. 50,000 which is authorised by section 198(4) to be paid to managing agents, etc., in the case of absence or inadequacy of profits, should be fixed only subject to the approval of the Central Government, and it will not be enough if such minimum remuneration is sanctioned by the directors or by the company in general meeting.

One very revolutionary recommendation which the Committee has made is that, within seven days of the declaration of the dividends, the company should deposit the total amount of the dividends in a Scheduled bank and dividends should be paid from that account from time to time. When the companies are already finding difficulty of finances, this provision, which would compel companies to lock up their funds, is, indeed, very drastic and will have to be modified.

It has also been recommended by the Committee that an amendment should be made in section 209 to provide that books of account must be preserved by the company for a period of at least eight years. The power given to the Registrar of Joint Stock Companies under section 210(4) to allow the company to extend its financial year upto 18 months is recommended to be cancelled. Another very important suggestion made is that the directors' report, in addition to the matters already required to be stated under section 217(1) in respect of the company's year of account to which the report relates, should also state material changes and any commitments in respect of purchases or sales of investments and capital expenditure between the close of the financial year and the publication of the directors' report.

The Committee has also recommended that private companies should, in addition to the balance-sheet, file a copy of the profit and loss account with the Registrar, although only members will have the right to inspect or get copies of the profit and loss account from the Registrar.

An amendment has been suggested to section 228 to the effect that the branch accounts of a company must also be audited by qualified auditors. In section 283(1)(h), it has been suggested that taking a loan from the company by a director, even indirectly, would also be a disqualification rendering the director liable to vacate office. In respect of section 293(1), the Committee has suggested that the resolution of the company in general meeting relating to the power of borrowing should specify the total amount upto which moneys may be borrowed by the Board.

It has also been recommended that full information relating to contributions made by companies to political parties should be given in the accounts and circulated to the members.

A very important recommendation made by the Committee is that no managing agent who has resigned his managing agency shall take up sole selling agency directly or indirectly, without the approval of the Government within six months of the Act coming into force. It has also been recommended that the Government should have the power to specify industries or commodities in which sole selling agents shall not be appointed, except with the Government's approval regarding conditions of agency, etc.

Shareholdings of Managing Agents

Yet another restrictive provision is in respect of section 307, which the Committee has recommended should be amplified to include shareholdings of managing agents, secretaries and treasurers and managers. Hitherto, particulars of shareholdings had to be recorded by the company only in respect of directors, and not the managing agents, etc. A further restriction has also been placed on the power of managing agents to transfer the right to manage the affairs of the company to another person, such as under irrevocable power-of-attorney, without the Government's approval.

For calculating managing agents' commission under section 349, the Committee has recommended that debts considered to be bad or doubtful will also be deducted from the profits, apart from other deductions already prescribed. For reimbursement of expenses incurred by the managing agents on behalf of the company under section 354, it has been suggested that sanction for reimbursement should be based on the certificate of the auditors, or the managing agents, or the managed company.

It has also been prescribed that, in the profit and loss account, detailed information should be given about remuneration, other emoluments, pensions, etc., payable to directors, managing agents, treasurers, secretaries and other managerial personnel. It has also been suggested that a new section should be added after section 362 to provide that every company shall, in its accounts, give full particulars of managerial remuneration, commission paid to managing agents in various ways, etc.

In respect of section 369, it has been suggested that the company should not make loans to managing agents, whether directly or indirectly, and further that an explanation should be added to the effect that credits given by the company to the managing agents for facilitating company's business refers only to cash advances, transactions on such advances being settled as far as possible on a monthly basis.

Another very important recommendation made by the Committee is that a new section should be inserted after section 629 to provide for levy of penalty for default or non-compliance of any of the provisions or orders made under the Act for which no punishment is provided separately. This is a blanket provision for penalty and is very drastic indeed.

All the above provisions are, as mentioned at the outset, of an onerous character, so far as company managements are concerned. The Company Law Amendment Committee has also made some recommendations to remove certain difficulties of company managements. These may now be mentioned. An amendment is proposed to the definition of "managing director" in section 2(26) to the effect that only substantial powers of management vested in a director would bring him within this definition.

The definition of "relative" in section 6 is also recommended to be modified. Under the modified definition, reference to relationship by adoption, illegitimate descent, full-blood or half-blood is removed, and it is intended to cut down the number of relatives to about half the present number.

In respect of non-profit-making associations which are licensed to register as companies under section 25, the Committee has recommended that the Central Government may be given power to exempt such companies from the operation of certain specified sections of the Companies Act. In addition to the sections specified by the Committee, there are many more sections in the Act which such non-profit-making associations find difficult to comply with, and it is, therefore, preferable that the Government are given a general power to scrutinise the Articles of such companies and give exemption from any sections, if the contrary provisions in the Articles are not found objectionable.

It is also recommended by the Committee that Government's approval should not be necessary where a private company is proposed to be converted into a public company, and that such consent should be necessary only when a public company is proposed to be converted into a private company.

Investments

In regard to section 49, which prescribes that investments of a company must be held by the company in its own name, it is recommended that the section should be amended to provide that nothing in the section should be deemed to prevent a company from depositing with or transferring to or holding shares or securities in the name of the State Bank of India or a Scheduled bank which acts as the company's bankers.

In section 106, it is proposed that for variation of class rights, the sanction of a special resolution passed at a separate meeting of the shareholders of that class should suffice, instead of the sanction of three-fourths of the entire issued shares of that class. In regard to section 172, it is recommended that the explanatory statement need not be published in the newspapers, and publication of notice of the general meeting is enough. In respect of section 192, it is provided that all special resolutions need not be filed, and that it should be enough if copies of resolutions which amend or alter the Articles or which relate to capital structure, appointment of managerial personnel, etc., are filed.

The Committee has also recommended that section 255 should be altered to provide that companies may, by Articles, provide for retirement of all directors at every annual general meeting, instead of only one-third of the directors retiring every year. It has also been suggested that to remove difficulties experienced by chambers of commerce, clubs, etc., sections 263, 177, 255 and 256 may not apply where the Articles of a company specifically provide for election by a ballot, instead of election of each director separately at the general meeting.

An amendent is also proposed in section 285 to provide that private companies having a subscribed capital below a certain amount, and guarantee companies, or any such class of companies as the Government may exempt, should not be required to hold a meeting of the Board once at least in every three months.

In regard to section 294, which requires appointment of sole selling agents to be approved by the company in general meeting within six months of the appointment, the Committee has suggested that the approval of the shareholders might be required to be obtained at the next annual general meeting even if it takes place after the expiry of six months of the appointment. An amendment is also proposed in section 300 to provide that the holding of not more than 2 per cent. of the paid-up capital of a company with which contract is proposed to be entered into, shall not disqualify a director from taking part or voting on that contract in the Board's meeting.

(Continued on page 203)

IMPORT QUOTA FOR RAW WOOL RAISED

STRESS ON PROMOTING EXPORTS OF FINISHED PRODUCTS

TWO notable decisions governing import of raw wool and wool tops during the current calendar year have been announced by the Government of India. First, the monetary ceiling on imports is fixed at Rs. 9 crores, as against Rs. 4 crores announced in November last. The quota will be allocated on a past consumption basis, the part which has already been released on the basis of spindleage being adjusted appropriately. The allocations will be in two parts, Rs. 5 crores for the January-June period and Rs. 4 crores for the July-December period. Secondly, import allocations have been made to serve as an incentive for promoting exports of finished woollen products. Accordingly, those manufacturers who undertake to export a specific quantity of finished products within a certain time may claim in advance an additional quota of foreign exchange up to 75 per cent. of the value of goods to be exported.

The aforesaid decisions of the Central Government are a sequel to the representations made by the woollen textile industry. When the Government announced the import quota of Rs. 4 crores in November last, it was not clear whether the quota was for six months or for one year. The Federation of Woollen Manufacturers protested against this lack of definiteness and questioned the very basis on which the quota had been fixed. Declaring that the restrictions on imports of raw wool and wool tops were too severe, the Federation had warned that, unless the ceiling was raised suitably, it would inevitably result in short working in mills, leading to unemployment among workers.

Higher Ceiling Urged

The fixation of the ceiling of Rs. 9 crores on imports of raw wool and wool tops now announced, though it compares favourably with the previous ceiling, is less than the rough estimate of imports of Rs. 11 crores during 1957. Since, however, the prices prevailing now are lower than those a year ago, there may not be any appreciable shortfall in the total quantity of imports this year. Nevertheless, the woollen manufacturers would appear to feel that the revised ceiling would not fully meet their requirements. The question was discussed by the Federation at a meeting held in Bombay a few days ago. It is understood that a communication has been sent to the Government of India urging the latter to enhance the ceiling to about Rs. 12 crores. It may be noted here that imports of wool tops during 1957 were higher than those in 1956, the actual quantity imported in the first eight months being 11.46 million lbs., as against 11.13 million lbs. in the corresponding period of 1956. But imports of raw wool were lower at 2.61 million lbs., as against 2.97 million lbs.

Satisfaction is, of course, expressed by the woollen industry on the Government's decision to link the import allocations partly to the export of manufactured goods. The decision, it is expected, will encourage a diversification of woollen goods exports. In past years, wool hosiery has been the principal item, although some quantities of worsted cloth have lately been shipped to Soviet Russia. One of the main defects of woollen manufactures is heavy shrinkage after almost every dry wash in the initial period of their usage. This is one of the reasons why even domestic consumers prefer to buy foreign woollen goods, notwithstanding the fact that a substantially higher price has to be paid for them due to heavy import duty. If, therefore, Indian-made woollen goods are to compete effectively in foreign markets, their quality must be improved. They should compare favourably with foreign-made goods in regard to anti-shrinking quality.

Thanks to the upward revision in ceiling on imports of foreign raw wool and wool tops, together with the export incentive scheme, the output of woollen textiles is likely to be maintained at a high level this year. The following table indicates the trend of production of woollen-worsted yarn and fabrics during the first 10 months of 1957 and 1956, as also in the whole of 1956, 1955 and 1954:

	Yarn (thousand lbs.)		Fabrics (thousand yards)	
	1957	1956	1957	1956
January	1,844	1,732	1,196	1,234
February	1,862	1,900	986	1,194
March	2,137	1,969	1,066	1,285
April	2,179	1,859	1,157	1,083
May	2,185	2,056	1,211	1,153
June	2,217	2,171	1,225	1,452
July	2,427	2,349	1,382	1,470
August	2,485	2,364	1,366	1,552
September ..	2,620	2,387	1,515	1,592
October	2,581	2,351	1,686	1,506
Jan.-Oct. ..	22,537	21,138	12,790	13,523
Whole of 1956 ..	25,576		16,308	
,, 1955 ..	20,700		13,578	
,, 1954 ..	19,361		13,748	

It will be seen from the above table that the production of woollen yarn has gone up markedly, while that of fabrics has suffered some setback. Incidentally, the total number of mills engaged at present in the manufacture of woollen textiles is 122, the bulk of which, namely, 73 units, is accounted for by purely weaving units. The number of purely spinning units is 18 and there are 26 composite factories which both spin and weave. The major centres of woollen yarn spinning are in the States of Punjab, Bombay, Uttar Pradesh, Mysore and West Bengal. The production of woollen-worsted yarn and fabrics in the different States during the first 11 months of 1957 is shown below:

	Yarn (in lbs.)	Fabrics (in yards)
Bombay	7,527,223	2,437,534
Punjab	8,799,992	4,367,023
Uttar Pradesh	3,217,786	2,374,284
West Bengal	2,777,089	945,835
Mysore	2,498,189	3,827,825
Jammu and Kashmir ..	358,568	200,262
Total	25,178,847	14,152,763

An idea of the different varieties of woollen-worsted fabrics manufactured can be had from the following table which relates to production in the months of September and October 1957; the figures for the previous months are not available:

(In yards)

	September 1957	October 1957
Woollen :		
Suitings	137,192	163,956
Uni cloth	64,408	63,067
Lohis	40,562	12,166
Worsted :		
Suitings	373,840	366,885
Uni cloth	26,722	34,727
Lohis	65,059	73,099
Mixing :		
Suitings	29,208	55,075
Uni cloth	1,474	5,571
Lohis	32,259	74,534
Blankets and rugs ..	339,286	306,384
Hosiery goods	73,358	22,756
Other items	286,036	268,825
Shoddy	44,796	68,755
Total ..	1,515,200	1,685,800

WORLD WOOL CONSUMPTION

The wool consuming capacity of the world continues to move up. During the first nine months of last year (1957), the total consumption in the 11 chief manufacturing countries of the non-communist world is estimated at 1,457 million lbs. (clear weight), representing a rise of 5 per cent. as compared with the corresponding period of 1956. The rate of wool consumption was one of the highest since the war in the first half of 1957, but slackened slightly in the third quarter and a further decline is believed to have occurred in the final three months of the year. Taking the whole of 1957, the world wool consumption would appear to have touched an all-time record. Although the actual figure is still not available, it is said to compare very favourably with the average for recent years despite trade reports of reduced wool textile activity lately.

The last quarter of 1957 witnessed a weakening of competition in the world wool market which is attributed to a number of unfavourable developments in some of the principal wool-using countries. In the United Kingdom, an increased Bank rate and intensified credit restriction so increased the cost and difficulty of borrowing that the vast wool-consuming trades of Britain found it expedient to run down their stocks and reduce their buying rate. This more or less coincided with news from Japan that sterling shortage and balance of payment difficulties caused it to modify its wool buying programme for the current licensing period. The devaluation of the French franc, which also occurred in the autumn, increased the cost of wool imports into that country. A developing recession in the United States was reflected in sharply-reduced wool consumption in American mills. As Britain, France, the United States and Japan—in that order of importance—are the largest buyers of the world's wool exports, it is hardly surprising that Commonwealth wool values have sustained a setback during the present marketing season.

There are indications that the more reasonable price level of the raw material may prove a promising augury for improved business in the days ahead. Wool stocks in commercial hands appear to have been reduced to a lower level and market reports indicate that orders for intermediate products such as tops and yarns are being placed more freely. This suggests that all sections of the industry are improving their liquid position and that, to a greater extent than of late, new business will need to be met from production.

World wool supplies for 1958 are expected to be somewhat lower than in 1957. This is due mainly to a reduction in Australian production, which is now officially estimated to be nearly 10 per cent. smaller than the first estimate issued six months ago. Drought conditions during the period of growth are reflected in a reduced quantity of wool coming forward for sale.

SHORT-STAPLE COTTON

The world's shortest and coarsest cotton, the Comilla of India, is in good demand abroad. The harsh short-staple Bengal *Deshi* has also a ready market in foreign countries. The special attraction of these types of cotton, it is common knowledge, is that because of the extreme harshness of their staple and the springy and resilient nature of the fibre, they can be mixed well with wool in the manufacture of blankets and other woollen goods. The traditional markets for these cottons are the U.S.A., Japan and West European countries. In view of their strong statistical position, these varieties fetch higher prices, as compared with better and longer staple cotton. In view of India's urgent need for augmenting foreign exchange resources, attempts are being made to increase the production of these short-staples. At present, the total annual production of Bengal *Deshi* and Comilla together averages about 337,000 bales (of 400 lbs.) annually, of which about 105,000 bales are exported. While Comilla is produced mainly in Assam, Bengal *Deshi* is grown in the Punjab, Rajasthan and Uttar Pradesh.

In view of the importance of this type of cotton from the point of view of earning foreign exchange, the Indian Central Cotton Committee is bestowing considerable attention on its production. The Committee is encouraging the growth of these cottons in exclusive areas where there is no risk of their being used for mixing with long-staple cotton. The Committee estimates that output of these cottons can be raised by 150,000 bales by the end of the second Plan period. The prospective States in which such cotton may be grown are Rajasthan, Madras, Mysore, Andhra Pradesh, Uttar Pradesh, Madhya Pradesh and Assam.

REVITALISING COTTON MILL INDUSTRY

GOVERNMENT ASSISTANCE URGED

From A Special Correspondent

MANCHESTER, 21st *January*

MANCHESTER LETTER

CERTAIN months of the year tend to bring better production returns, in the absence of holidays or other restrictive factors. The output of cotton yarn in Lancashire in November last was at the highest monthly level in 1957, with the exception of May, the weekly average being 18,310,000 lbs. Production of cotton waste yarns in that month at 2,190,000 lbs. was the highest of the year, but yarns spun from cotton and man-made fibres both failed to exceed the May average. Over the first 11 months of the year, production of yarn of all types was 813,200,000 lbs., as against 785,400,000 lbs. in the same period of 1956.

In weaving, the November cloth figure of 47,820,000 yards per week had only been exceeded in February and March last year, but the quantity of cotton cloth involved at 34,270,000 yards was the highest of any month in 1957. Over the 11 months, the aggregate output was 2,124,200,000 yards, as against 2,145,500,000 yards in the same period of 1956. Although production of purely cotton fabric last year was running at a higher level than in 1956, the aggregate totals as compared with either 1955 or 1954 show a distinct reduction in output. As compared with three years previously, the 11-month total was exactly 400,000,000 yards lower, of which 300,000,000 yards were in cotton fabric and 100,000,000 yards in other materials.

At the end of November, the total available labour force in spinning and weaving was 242,490, a reduction of 3,250 as compared with the 1957 peak at the end of February. The major part of this decline in manpower was experienced in the weaving section where the available total fell from 117,750 to 115,070. Spinning and waste spinning manpower was almost identical, but there was a loss of 600 in the available labour in the doubling trade.

Aircraft Or Looms?

Comparing Government expenditure on aircraft to the amount needed to re-equip the Lancashire cotton weaving industry, Mr. Kenneth O. Boardman, Chairman of Boardman Marden Ltd., the Manchester textile group, this week urged that a loan should be granted to the trade. Addressing the Trade and Industries Committee of the Manchester Junior Chamber of Commerce, he said that the cost of converting the weaving industry to completely automatic production to give output similar to that of today would be £26,000,000. Considering that the Government had just placed an order for 35 new aeroplanes at a cost of £60,000,000, was it too much to ask for the loan of the price of 14 of these aircraft, in order to revitalise and extend an industry employing over 300,000 workpeople?

Mr. Boardman said that the section of the industry, which was destroying Lancashire textiles and could be the main cause of its further decline in the future, was the weaving industry. Over 80 per cent. of the looms in use at the moment is of the old type known as the Lancashire loom. "This machine cannot play any part in modern textile production," he declared.

With re-equipment requiring the introduction of three-shift working, it would be possible for the Lancashire weaving trade to enter into the European common market plan with confidence. Considerably higher wages could be paid which would attract labour and yet reduce the cost of production. Average wages for weavers could be around £14 a week, offering greater prospects to the workers than for the past 30 years.

Smaller Cloth Exports

The continued decline in Britain's export of cotton and rayon fabrics "can only be viewed with grave concern," according to the Annual Report of the Board of Directors of the Manchester Chamber of Commerce. This states that, to some extent, the trend reflects the pace of the development of highly protected local industries in many of Britain's best overseas markets. In other cases, currency difficulties or import licensing restrictions limit the flow of goods. The report adds: "It would be wrong, however, to imply that these are the only reasons. There are still some open markets and, in these, our competitive ability, whether in quality, price, design, or sales organisation, can still be the deciding factor."

The Chamber has given support during the year to market research surveys in the Scandinavian and Venezuelan territories, commissioned by the Cotton Board. In the former, Lancashire exporters have been exposed chiefly to competition from Continental producers and, in the latter, the United States and Japan have been their chief rivals.

On a more satisfying level, the Chamber gives evidence of more practical and immediate help which it has been able to give the trade in securing export business which might otherwise have been lost. The past year had seen the satisfactory conclusion of the triangular aid schemes with Pakistan, Burma and Indonesia, in which the Chamber has worked "in almost daily collaboration" with the Board of Trade, the Chartered Bank, and the Liverpool and Manchester Raw Cotton Associations.

In the case of Pakistan, a final additional quota of $600,000, chiefly for yarns, was secured, while the Chamber's pool arrangements for Burma and Indonesia operated most successfully in providing exporters with facilities for raw cotton cover necessary under the schemes, which many members could not otherwise have secured on their own account. Seventy per cent. of the textiles exported under the aid scheme to Indonesia and 50 per cent. to Burma were covered through the Chamber's pool.

Indicative of the stagnation which persists throughout raw cotton markets is the small number of transactions recorded in Liverpool futures from day to day. Even those closely connected with this branch of the trade would scarcely deny that its revival in 1954 has hardly lived up to expectations.

The blame for this inactivity is by no means the responsibility of merchants and brokers dealing with the raw material. Their efforts to stimulate interest in the distribution and purchasing of cotton have been worthy of commendation, but circumstances on an international scale have been against them practically from the start of the re-establishment of the market. The real stumbling block came with the introduction of the two-price system in the United States which has effectively stifled initiative in cotton markets throughout the world.

Interest in the American contract in Liverpool remained relatively constant during the second half of last year, but the average turnover was distinctly lower than in 1956 which in turn failed to reach the level recorded in 1955. To gain some idea of the decline which has taken place in market conditions, it should be stated that an average of nearly 40,000 bales changed hands daily in the American contract in March 1955, whereas the figure during the second half of last year was around 2,500 bales.

An Innovation

Among the innovations introduced by the Liverpool Cotton Association to stimulate demand in the raw material was the establishment of a mixed contract covering not only United States qualities but also other substitute growths. This contract has been in existence for about 18 months, but the daily turnover has shrunk from a peak of nearly 3,700 bales in October 1956 to only a few hundred bales daily. The Sudan contract has been bedevilled by developments in that country and has attracted little attention for months past.

It would be idle to pretend that the outlook in this connection for raw cotton traders is anything but bleak. In such a narrow market, transactions tend to have a disproportionate effect on prices; selling or buying pressure can cause fluctuations in values which are not justified by the size of the business under consideration. Political opponents of the system will not be slow to point out these defects, if the opportunity arises to make changes in the situation.

The only encouraging aspect of the position from the viewpoint of those involved is the possibility that the United States Government may eventually revise its farm policies. Reversion to a single price system would be generally welcomed throughout the cotton world, but the threat of further statutory plans to control supplies and prices cannot be ruled out now that Governments are so deeply involved in commodities and industry as a whole.—*All Rights Reserved.*

Last week, forty-six leading Japanese textile manufacturers held a sales promotion exhibition in Hong Kong. The objective of this exhibition was to establish direct commercial relations with overseas markets. It was the first of its kind held overseas by Japanese manufacturers since the second world war.

The Moscow Artificial Fibre Institute has produced a fibre which, it is claimed, is more durable than steel. It can be used to make products ranging from lace to machine parts.

RAW COTTON TRADE AND THE EUROPEAN COMMON MARKET

IMPLICATIONS ANALYSED

RIGHT from the moment the idea of a more closely linked European economic community was mooted, which has now materialised with the coming into force of the European Common Market on 1st January 1958, the question has been asked as to how it would affect world trade in general and trade in commodities in particular. The six Common Market countries—Belgium, Luxembourg, France, Western Germany, Italy and the Netherlands—have large textile industries which have been extensively modernised since the Second World War. They draw raw materials for these industries, partly from indigenous sources and from associated overseas territories but mainly from a wide range of other countries outside Europe. The formation of the Common Market, which involves, among other things, relaxation of trade barriers between participating countries and reduction and eventual elimination of all duties inside the area, is likely to affect the competitive position of raw cotton *vis-a-vis* synthetic fibres, the internal consumption of cotton in each country and the volume and pattern of imports. The Food and Agriculture Organisation of the U.N. recently made a study of some of the possible effects of the Common Market on the raw cotton trade. Its conclusions, published in a recent issue of the *Monthly Bulletin of Agricultural Economics and Statistics*, will doubtless be of interest to readers in this country.

Largest Single Outlet

The Common Market represents the largest single outlet for imported cotton, as the six constituent countries together import 850,000 to 900,000 tons of cotton annually, which is nearly one-third of the total moving in international trade. There are two main sources of supply to these countries. They are: First, overseas territories associated with these countries. Less than 10 per cent. of the combined imports are derived from such associated overseas territories in Africa. Under special arrangements, France acquires the whole supply of French African cotton. In the 1956-57 season, French Africa's output amounted to 225,000 bales of 478 lbs. each. The exportable quantity of Belgian Congo cotton moves freely to all countries (in accordance with the Congo-Basin Treaties) but the Common Market countries take the bulk of it. During the 1956-57 season, Belgian Congo is estimated to have produced 250,000 bales of 478 lbs. of which about 200,000 bales were exported. The second source is "outside" supplies which have been divided into three groups: (1) countries the cotton exports of which have been concentrated on the six countries, (2) countries the cotton exports of which are not so concentrated, but for which cotton production and trade is particularly important, and (3) the U.S.

Group (i) includes countries like Greece, Turkey, Syria and Iran which are not important world producers; but their output has been expanding in response to demand from developing indigenous textile industries. Common Market countries purchase cotton from them under special trade arrangements. They, however, supply less than 15 per cent. of the Common Market countries' import requirements. The second group includes widely dispersed major cotton producers such as Mexico, Egypt, Brazil and Pakistan. They offer a wide range of cotton and account for about one-third of the total imports into these six countries. Some of them, Brazil, for instance, have special trade arrangements with the Common Market countries. Raw cotton exports from each of these countries to the Common Market countries represent a significant portion of their total exports. It has averaged 41 per cent. for Mexico, 38 per cent. for Brazil, 30 per cent. for Egypt and 21 per cent. for Pakistan.

The United States, the world's largest producer and exporter of cotton, supplies a varying residual proportion of the Common Market's cotton imports. Despite U.S. foreign aid programmes, the relatively high price of U.S. cotton led to a sharp decline in the U.S. exports to these countries in 1955-56. Over the past three seasons, namely, 1953-54, 1954-55 and 1955-56, the share of U.S. cotton averaged only 25 per cent. of total imports into these countries.

Effects Not Drastic

The F.A.O. study points out that the direct and indirect effects on cotton trade of the Common Market would be numerous but seem unlikely to be drastic. Since standards of living in these metropolitan countries are already relatively high and some technological factors also are operating adversely, a rapid increase in consumption of textiles generally is scarcely to be expected. The relaxation of barriers to textile trade between the contracting countries would add impetus to the demand for speciality products of individual industries; but whether the textile price structure will generally be lower will, it is pointed out, depend, to some extent, on the tariff treatment of low-cost textiles, particularly those originating in the East. The sizable textile requirement of the associated overseas territories will no doubt expand as joint investment in their developments proceed and all the six Common Market countries gain access to their markets. But any discrimination against textiles into these territories from outside the Market might tend to put a break on expansion.

Prospective Consumption

The prospect for cotton consumption in the Common Market countries will be affected by the increasingly competitive status which rayon staple will achieve in the area. It may be noted, in this connection, that rayon, particularly in its staple form, is widely used by the textile industry of these countries in combination or competition with cotton and the indigenous production of the fibre constitutes a substantial and increasing proportion of total supply, though the pulp required for its manufacture is largely imported. Presently, import duties on rayon staple range from 6 per cent. (in Benelux) to 20 per cent. (in France) whereas cotton enters duty-free into all countries except Italy where a 6 per cent. duty is levied. The reduction and eventual elimination of all duties inside the Common Market may, therefore, tend to divert some consumption to rayon or, at least, increase the pressure on cotton prices.

Pattern of Imports

As regards the pattern of cotton imports, the F.A.O. Study says that no major change is likely to occur, at least in the near future, as a direct result of the advent of the Common Market and the eventual elimination of duty on cotton which, in effect, means the abolition of the 6 per cent. duty levied by Italy. Shifts will no doubt occur, but they are more likely to have their origin in the policies of the cotton-producing countries, notably in the United States. Already, the associated African territories ship virtually all their exportable surplus to the Common Market countries. Intensified, joint efforts by the latter to increase productivity, including the use of more highly organised and mechanised methods, may yield sizable results, but probably only over a longer term and any displacement of other cottons is, therefore, bound to be slow. The Common Market countries have closer economic ties with cotton-exporting countries like Syria, Turkey, Iran and Greece, while, in the case of Egyptian, Sudanese and Pakistani cotton, these are mostly staples not produced in the overseas territories associated with the Common Market. It is, therefore, unlikely that imports from these countries would be reduced as a result of expansion in the cotton production of African territories. Imports from the Western Hemisphere, on the other hand, are, at least to some extent, hampered by currency difficulties and it seems likely that any cut in imports, owing to increased supplies, from overseas territories would fall on the U.S. or Latin American cotton. The U.S. exports are currently favoured by subsidies and other financial aid but efforts are being made to reduce production. To the extent that these efforts prove successful, the study points out, the danger to Mexico and Brazil (which are the main competitors of the U.S. in the European markets) of reduced outlets for their cotton in the Common Market will be removed.

MILL CONSUMPTION OF COTTON

Indian mills consumed during the first three months of the current season, that is 1st September 1957 to 30th November 1957, 1,311,446 bales of raw cotton (of 400 lbs. each), as compared with 1,269,045 bales during the corresponding period of the previous season. Of this, 1,162,690 bales were indigenous cotton and 148,756 bales foreign cotton. The corresponding figures for the previous season were 1,117,406 bales and 151,639 bales, respectively. Of the foreign cotton consumed in the first quarter of the current season, 69,526 bales were U.S. cotton, 19,293 bales Egyptians, 17,692 bales Sudanese, 37,378 bales East African and the rest other growths, as against 10,453 bales, 34,925 bales, 26,298 bales and 75,052 bales, respectively, in the same period of the previous season. The following table gives the varietywise break-down of foreign cotton consumption during the period, together with the figures for the corresponding period of the previous season.

Raw Cotton Consumption

Variety	1st September to 30th November	
	1957	1956
Indian cotton	1,162,690	1,117,406
Foreign cotton	148,756	151,639
Of which :		
U.S.	69,526	10,453
Egyptian	19,293	34,925
Sudan	17,692	26,298
East African	37,378	75,052
Belgian Congo	356	926
Peruvians	3,029	1,821
Others	1,482	2,164

It may be noted that the share of U.S. cotton in the consumption portfolio of Indian mills has increased sixfold, thanks to the larger availability of that cotton under the aid programmes while that of Sudanese, Egyptian and East Africans has shrunk considerably. It is common knowledge that shortage of foreign exchange is the main obstacle in the way of getting East African and Sudan cotton, whereas Egyptians and U.S. cotton are obtained for payment in rupees.

THREE SMALL SUGAR CO-OPERATIVES IN UTTAR PRADESH

SUGAR TO BE MADE THROUGH OPEN PAN SYSTEM

IT is rather difficult to understand as to why the Government of Uttar Pradesh has taken the initiative in sponsoring the establishment of three new co-operative processing societies for the manufacture of sugar on a small scale through the open pan system, unless the idea is to provide some sort of unemployment relief or to improve upon the present methods of sugarcane utilisation. Out of a share capital of Rs. 1,20,000 per each society, two-thirds are to be given by the Government—Rs. 40,000 as direct contribution to the share capital and Rs. 40,000 as loan by the Co-operative Department; only the balance of Rs. 40,000 will be met by sugarcane growers who number 400 per society. This is a clear instance of excessive official patronage which is not a desirable feature. The co-operative movement, as no less a person than Prime Minister Nehru emphasised in the course of his address at the recent meeting of the National Development Council's Standing Committee, is essentially a movement for human beings working together and building themselves up. This can only happen if responsibility is cast upon them. These remarks are, indeed, very pertinent. As this journal itself has ere now pointed out, the co-operative movement must grow from within; it will have little chance of success, if it is imposed from above, that is, through official patronage and compulsion. The capital outlay of the aforesaid co-operative crystal sugar mills is so small that the whole of it could have been left to be subscribed by the canegrowers themselves.

Of the three factories, one will be established in Bisalpur in Pilibhit District, another in Budhana (Muzaffarnagar) and the third in Deokali (Ghazipur). The construction of buildings for erecting plants is already in progress and actual manufacture is expected to commence in the near future. Each processing plant will have a crushing capacity of 1,000 maunds of cane a day.

The scheme is patterned on the lines of the Ghosi pilot project initiated in the Azamgarh District about two years ago. It is designed to ensure the cane growers a minimum return of Re. 1 per maund of cane. This is no doubt As. 4 to As. 6 more than what could be had from making *khandsari* or *gur*, but is lower than the official minimum price of Re. 1-7 per maund payable by sugar mills for gate deliveries and Re. 1-5 for deliveries at rail centres. The processing societies are expected to earn a decent return. The selling price of crystal sugar in the market ranges from Rs. 20-30 per maund, as against the estimated cost of production of Rs. 22.

Wasteful Process

As compared with white crystal sugar manufactured by large-scale factories, production of crystal sugar through open pan system, it must be stressed, is a wasteful process, in that it results in loss of much sugar, to the extent of 20-25 per cent. The recovery of sugar is expected to be not more than about 7.5 to 8.0 per cent., as against the average recovery of 10 per cent. in a sugar factory. On this basis and assuming that the duration of the crushing season is 120 days, the loss in the production of sugar in each of the three proposed units will work out to 2,400 to 3,000 maunds valued at Rs. 72,000-90,000. The State Government will also not levy any tax in the shape of either the cess on cane crushed or the excise duty on sugar produced, since the sugar is classified under the category of *khandsari*. In other words, there will be some loss of revenue to both the Central and State Governments.

All these disadvantages will have to be duly considered before the authorities in Uttar Pradesh decide to extend the scheme for crystal sugar production through open pan system to other areas. It is one thing to try and provide, even at some sacrifice, some means of employment in localities where there is no other way out. The cost involved in such cases can be written off as unemployment relief. But it is an entirely different matter to adopt such means on a wider scale even in areas where profitable opportunities for employment and utilisation of land and raw materials exist. In such cases, it would undoubtedly constitute unconscionable waste.

It is, however, possible that, as compared with manufacture of *gur*, the new method to be tried in the aforesaid co-operatives has certain advantages. The recovery of sugar from the cane will be higher than in the case of *gur*. It is, therefore, less wasteful than *gur*. But its extensive adoption as a heavily subsidised and mechanised cottage industry is undesirable, because it will, in course of time, undermine the strength of the organised large-scale white sugar industry and thereby the sugarcane economy as a whole. It behoves the U.P. Government not to give room for such a danger. This timely warning is necessary, in view of the mania now prevailing in this country for encouraging all sorts of uneconomic means of production as a solution for rural unemployment.

It is, however, gratifying that the U.P. Government has decided to spend about Rs. 3 crores for distribution of manures and fertilisers in the drought-stricken 15 districts of east U.P. on *taqavi* basis during the next three years. The object of the scheme is to help the peasants to step up their per-acre yield of crops and thereby improve their economic conditions. Under another scheme to be launched from the next financial year, over Rs. 46 lakhs will be spent in these districts in three years for the economic development of the agriculturists. In 1958-59, a sum of Rs. 11,15,000 will be spent under the scheme.

Other Schemes

Certain schemes which will help the cultivator in earning money as well as increasing the fertility of his land are also proposed to be launched. Deepening of tanks on payment of wages is one of these schemes by which more water will be available in tanks for irrigation and the soil dug out from them could be utilised for increasing the fertility of the fields. Another scheme to prepare compost from water lily by salvaging it from tanks on payment of wages is also under Government's consideration.

Recent soil tests have revealed that land in the eastern districts of U.P. is actually deficient in phosphorus, a deficiency which can be removed by using bonemeal. It has, therefore, been decided to utilise the caraceas bone—this is exported at present—in the manufacture of bonemeal by setting up 50 bone mills in 25 places. In addition, superphosphate to be mixed with bonemeal will be distributed at a cost of Rs. 26,59,560, giving a rebate of 25 per cent. on the price. In order to protect the standing sugarcane and other crops from frequent ravages of floods, it is proposed to conduct thorough agricultural research in respect of crops.

All these steps, if they are implemented with vigour, will surely go a long way towards improving the sugarcane economy in east Uttar Pradesh.

"GUR" AND "KHANDSARI" IN U.P.

The *gur* and *khandsari* scheme of the Industries Department, Government of Uttar Pradesh, aims at securing an increase in production and improvement in quality through the introduction of modern implements and better methods of manufacture. Stressing the importance of *gur* and *khandsari* in balancing the prices of sugar to the advantage of the cultivator, the Director of Industries, in a Press note issued the other day, observes:

"The sugar mills consume only 25 per cent. of the total cane produced in Uttar Pradesh and seeds and chewing account for another 10 per cent. The rest of the total output is estimated to be consumed in the manufacture of *gur* and *khandsari*. The *per capita* consumption of *gur* and sugar in India is only 26 lbs., as compared with 97 lbs. in the U.K. and 100 lbs. in Australia. Considering this, the Planning Commission has fixed a production target of 77 million tons sugarcane in the second Five-year Plan. Out of this, sugar factories are expected to consume only about 25 million tons, the balance going to the village sector for production of *gur* and *khandsari*. This implies an increase of 1.2 million tons over the present production."

In about five months' time, Ceylon is expected to join the rank of sugar-producing countries, for efforts are being made to set up a fairly large sugar factory. The Government of Ceylon has signed on agreement with a Czechoslovakian firm for the supply of the necessary machinery and equipment. The estimated capital outlay of the proposed factory including a housing scheme, is placed at Rs. 2.15 crores. Productive operations are expected to commence by June next.

COAL OUTPUT IN PRIVATE SECTOR

TARGET UNDER SECOND PLAN RAISED?

THE Government of India is reported to have revised upward, in consultation with the Planning Commission, the target of additional production of coal earmarked for the private sector under the second Five-year Plan from 10 million to 11.9 million tons. This does not involve any corresponding cut in the public sector's target of 12 million tons per annum. At one time it was felt that, in view of the widespread apprehension that the collieries in this sector may not be able to attain the additional output of 12 million tons in the next three years of the Plan period, its share might have to be reduced. But it is now stated that the original target of 12 million tons for the public sector will be maintained. This means that, in theory, the overall target of coal output will be stepped up to 62 million tons. Apparently, the authorities must have felt that, while they should try to reach the goal set for themselves, they should at the same time take care to see that the original overall target of 60 million tons was not missed and if for this it was necessary to give more scope for the private sector, that should be done. In short, the reported increase in the target for the private sector is a sort of insurance against a possible failure of the public sector to hit its target. If this surmise based on the aforesaid report is correct—no official announcement has been made on the subject till the time of writing—it marks a change in the Government's policy pertaining to the private sector's role in the fulfilment of the current Five-year Plan.

Another reason for revising the private collieries' target may be the reported proposal of the Government to relax substantially—if not abolish—the system of pegging output of coking coal with effect from the current year onwards. The decision to raise the private sector's target is obviously due to the fact that the potentialities of quickly raising production from the contiguous areas of the existing units in this sector are large. The Ministry of Steel, Mines and Fuel is said to be confident of achieving its target also, although a recent assessment of the coal development programme by the Planning Commission is known to have revealed a possible shortfall of 4 to 5 million tons (in both the public and private sectors) at the end of the Plan period.

Encouraging Trend

Preliminary figures of coal output in 1957 show an encouraging trend. Production up to the end of October last (the latest month for which official figures are available) aggregated 35.6 million tons, as compared with 32.4 million tons and 31.7 million tons in the corresponding periods of 1956 and 1955, respectively. The output for the whole year is expected to be over 42 million tons, as against 39.6 million tons in 1956 and 38.2 million tons in 1955. This means that, during the last two years alone, coal production in the country has gone up by 4 million tons, leaving a balance of 18 million tons to be covered in the course of the next three years to reach the original target of 60 million tons. It may be noted here that, out of the additional output of 12 million tons per annum to be got from the public sector by the end of the Plan period, the existing State collieries (including Singareni collieries) are expected to provide 3.5 million tons and new mines 8.5 million tons. Of the new collieries in the public sector, Kathara (near East Bokaro) and Gidi (near Karanpura), the first two mines to be taken over under the Coal-bearing Areas Acquisition Act, will commence production in the current year and are expected to produce 1 million tons and 1.50 million tons per annum, respectively, by the end of the Plan period. The target of production for the other new coalfields are: Korba, 2.60 million tons; Bachra-Sounda (Karanpura), 0.60 million tons; Korea, 1 million tons and Bisrampur, 1 million tons. It will thus be seen that the task of the public sector, as compared with that of the private sector, is a stupendous one. Nevertheless, the Coal Council of India affirmed at a recent meeting that the target would more or less be achieved.

DISCIPLINE IN PLANTATION INDUSTRY

TRIPARTITE COMMITTEE DECIDES TO ADOPT I.L.C. CODE

IT is now admitted on all hands that one of the essential conditions for the rapid expansion of the country's economy is cordial relationship between the management and the workers. This can be secured only through the mutual recognition by workers and employers of their respective rights and responsibilities. To fight for their own rights, without any regard to their obligations and responsibilities to the other, would spell disaster to both. It is this recognition that paved the way for the evolution of the code of industrial discipline by a tripartite sub-committee in August last pursuant to the recommendations of the Indian Labour Conference.

The need for such a code of discipline in the plantation industry is all the more essential, in view of the recent happenings in various plantations, namely, the acts of violence by plantation workers in Kerala and the closure of some estates here and there in Assam, which have created an atmosphere of insecurity about the future. The plantation industry plays an important role in the economy of the country, both as a leading earner of foreign exchange and as a source of employment. The number of persons employed in various plantations forms a large proportion of the total employment in organised industries of the country. It is, therefore, in the fitness of things that this problem of enforcing discipline in the plantation industry figured prominently in the discussions of the Tripartite Industrial Committee (Plantations) which held its eighth session in Shillong on the 21st and 22nd ultimo, under the chairmanship of Mr. Gulzarilal Nanda, Union Minister for Labour and Employment.

Problems Discussed

The Tripartite Industrial Committee (Plantations), which ultimately decided to adopt such a code of discipline, discussed also various other problems facing the industry, namely, inter-union rivalry, which is an important cause of labour unrest, amendment of the Plantation Labour Act, extension of the Industries (Development and Regulation) Act to plantation, provision of housing for plantation workers and the feasibility of setting up a wage board for the industry.

Inaugurating the two-day session of the Committee, the Union Minister for Labour and Employment called for a spirit of mutual understanding and co-operative endeavour to resolve all difficulties and problems which the industry and workers might be facing today. He added:

"We should address ourselves to these tasks with determination and in every case explore and discover the solution which is fair to all parties and is best calculated to promote the well-being of the community. The assumption is, and that assumption underlies the whole structure of industrial relations created in the country, that among various participants in the industry there is a large community of interests, and an approach of mutual co-operation and adjustment will enlarge gains and benefits for all parties concerned, while, on the other hand, if conditions of suspicion, friction and hostility persist, harm to everybody can be the only outcome. Even such differences as may at the moment appear to be irreconcilable can be settled, if we apply to them the supreme test of the common good."

Emphasising the fact that these considerations have a special significance in the case of plantations, in view of the important role which the industry plays in the economy of the country, the Minister expressed his apprehensions about the recent developments in the industry, which bid fair to "create an element of insecurity about the future." He referred to the disorderly behaviour and acts of violence by workers which "have assumed serious proportions in some areas." The magnitude of the evil, he said, could not be judged merely by the number of incidents or of persons affected. This was relatively not very large, but the repercussions could be very grave.

Giving discipline in the industry the foremost place among the problems in the field of employer-employee relations, Mr. Nanda declared:

"Without this, there can be no firm foundation for our other aims, namely, increase in productivity and a rising level of well-being for the workers. A code of discipline has been evolved as a result of tripartite discussions. This is meant for the whole country. There may be some special features of the situation in the plantations, which call for addition of supplementary provisions to the code. Whatever conclusions emerge and whatever agreements are reached, the vital point is that steps should be taken to ensure effective implementation. For this purpose, special machinery of a tripartite character should be set up. I may add that a sound conception of discipline rests more on the capacity for a proper appreciation of mutual obligations than on our eagerness to enforce certain rights. Its positive aspects are of real importance. It will essentially become a process of education and re-education. Let us approach this problem in this spirit."

Closure of Estates

Another recent development, over which the Minister felt disturbed and for which he squarely laid the responsibility on the management, was the closure, here and there, of some estates. "Some others are in difficulties," he said, "because they are not being properly managed and considerable number are undergoing neglect and exhaustion." The Assam State Government would appear to have expressed its anxiety over this development and it was this anxiety which led to the inclusion, in the agenda for the meeting of the Committee, of the item relating to the extension of the Industries (Development and Regulation) Act to plantations. It is, however, gratifying to note that Mr. Nanda ruled out the feasibility of such extension on technical grounds. But he added that it would be legitimate for the Committee to consider what other remedial action was practicable and appropriate in the circumstances. Proceeding, he observed:

"It will be legitimate to insist that safeguards should be devised both in the interests of the industry and of the workers who draw their livelihood from it. The very first consideration in the planning for a country's economy in our conditions has to be that whatever assets have already been created, whether in the period of the Plan or earlier, should be conserved and used fully and to the best advantage."

While it is admitted that the existing assets and resources should be fully utilised to the best advantage, it cannot be denied that these assets will become unproductive and uneconomic after some time, unless replaced. It is, therefore, necessary that the causes and circumstances which have led to the closure of the estates should be scrutinised and remedial measures suggested, instead of merely asking the estates not to close down.

On the question of enforcing the code of discipline in the industry, the Tripartite Committee was of the unanimous view that the necessary code of conduct should be adhered to by both the management and the workers, in order to ensure the smooth and harmonious working of the industry. It was agreed that the code already adopted by the Indian Labour Conference and the Standing Labour Committee was basically suitable. It was, however, decided to appoint a sub-committee to consider whether supplementary provisions should be added to that code to suit the special circumstances of the plantation industry. The Committee found it desirable to draw up an agreed code of conduct which labour unions would observe in their relations with each other, in order to avoid inter-union rivalry which is found to be an important cause of labour unrest. While this primary matter was to be arranged by trade union organisations, the Central Government might, if necessary, convene a conference of trade unions to consider the matter.

The Committee agreed that the practice of dividing estates into small units to avoid the Plantation Labour Act, which was said to exist in certain places, was undesirable in the interests of workers and labour welfare, as also the industry, and that it should be discouraged. It was also agreed that, while steps should be taken to prevent fragmentation, care should be taken to ensure that no new burden was imposed on existing units. The Committee, however, does not seem to have examined the question of giving relief from the present burden on the small units. It was generally agreed that all possible steps should be taken to ensure a high level of efficiency to maintain the industry, prevent any deterioration of assets and management of plantations, so that the closures due to such causes could be minimised. The State Governments, in consultation with the Central Government, would consider legislative or other measures necessary for this purpose.

On the question of creating a wage board for the plantation industry there was general agreement that national wage boards were the most suitable machinery for the determination of the wage structure for the industry. In view, however, of the fact that agreements on wages existed in some States, it was considered that the question as to when and in what manner a wage board should be set up for the plantation industry, should be examined by a sub-committee to be appointed for the purpose.

WORLD TEA OUTPUT HIGHER

Tea production in North-east India during the month of December last aggregated 11.8 million lbs., as compared with 46.9 million lbs. in the previous month and 1.5 million lbs. in the corresponding month of 1956. This brings the total production in the year to 521.4 million lbs., the lowest level for the past three years, and represents a fall of 18.7 million lbs. over that in 1956. The South Indian production up to the end of November, at 134 million lbs., was 17.7 million lbs. more than that in the corresponding period of 1956. Even at this level, the production is much in excess of a whole year's output in any of the previous years. Pakistan produced 42.3 million lbs. up to the close of November, as against 51.7 million lbs. in the corresponding period of 1956.

Ceylon's tea production during 1957 reached a record total of 397.7 million lbs., exceeding the previous high of 380 million lbs. in 1955, from which level the output fell to 375.6 million lbs. in 1956. Indonesian output up to the end of September amounted to 73.5 million lbs., an increase of 6.2 million lbs. over the year. British East Africa, which has emerged as a serious competitor in the world tea market, produced 26.6 million lbs. up to September, as against 24.4 million lbs. in the corresponding period of 1956.

Thus, the fall in production in North-east India and Pakistan has been more than offset by the increase in other main tea-producing countries, with the result that the total output of the five main producers so far show an increase of 20.1 million lbs. at 1,195.5 million lbs.

The decision of the Coffee Board to close all coffee houses run by it in various cities of the country with effect from 1st April next is said to have been approved by the Union Ministry of Commerce and Industry. It is felt that there is no further need for carrying on propaganda for the purpose of popularising coffee in non-coffee drinking areas of the country. It is even felt that a limit on internal consumption deserves to be placed, in order to enlarge exports and to earn the much needed foreign exchange.

PHILIPS INDIA LIMITED

THE COST OF AIRPORTS

MUST INDIA FOLLOW EUROPEAN COUNTRIES?

By "Rudderbar"

WHEN Charles Lindberg set out to win a $10,000 prize for the first non-stop flight between New York and Paris, and successfully completed this hazardous journey flying solo in a small single-engined aeroplane, he accomplished something of which he had never dreamed. It was undoubtedly the glamorous nature of his feat which fired the imagination of people all over the world and stimulated enormous interest in the possibilities of air travel. That event took place only 30 years ago and, in that short space of time, commercial aviation has grown from what was generally regarded as a foolhardy adventure, with no serious commercial possibilities, to become an important and large-scale industry.

The dynamic rapidity of that development has created, both for the industry itself and for national governments many difficult problems, and none more difficult, perhaps, than the provision of airports—airports sufficient in number, of adequate size, and equipped with all the multifarious aids and facilities demanded by this continually expanding industry.

The airliner of 30 years ago was small, slow, simple of construction, and of very limited seating capacity. Airports for these aircraft presented no difficulties whatsoever. Any fairly level grass field, offering a take off run of six to seven hundred yards, was considered perfectly adequate—as, indeed, it was. Since flying was then only possible so long as visual contact with the ground could be maintained, navigational aids were limited to prominent landmarks. A row of kerosene flares was standard night-flying equipment at most airports.

Ten years later, the picture had already begun materially to change. Four-engined aircraft had been introduced, and speeds had risen to 150 miles per hour; seating capacity had, naturally, been increased and the large airliner of that time carried from 15 to 20 passengers; flight instruments on the gyroscopic principle had made it possible to fly in cloud; radio directional aids, though still few in number, were to be found on most major routes. Most important of all, the simple grass field no longer sufficed as an airport; the heavier aircraft of that period required, among other things, runways to support their weight when rain made the ground soft.

Effect of War

The Second World War forced the pace of development almost immeasurably. Unlimited finance was available for research and this led to rapid progress in almost every field of aeronautical endeavour. Engines of far greater efficiency and power were developed; operational necessity demanded all-weather flying for which more precise instruments, better navigational aids, radar, instrument landing systems, and even a "fog dispersal" device had to be, and were, evolved.

To prosecute the war with the utmost vigour, a great many airfields were required. These were built in hundreds in every theatre of war. The very much heavier aircraft which were being produced for both bomber and transport duties, had to have runways longer and stronger than any which had formerly existed. It was, perhaps, this legacy of numerous, large airfields which led, in many countries, to the promotion of air transport undertakings on a scale which, prior to the war, would have been quite impractical. India is, possibly, a case in point.

Be that as it may, with the cessation of hostilities, there was an unprecedented boom in commercial air transport. Not surprisingly, there was, at the same time, an alarming increase in the incidence of air accidents. Something clearly had to be done, and the newly formed International Civil Aviation Organisation took early steps to draw up a set of standards covering every aspect of air safety. These included many recommendations in respect of airports—their layout, the permitted proximity of obstacles, the length and breadth of runways, the provision of directional aids, the intensity and design of runway and approach lighting, a system of air traffic control, and many other subjects. Since safety was involved, every country naturally felt it incumbent to implement these recommendations—at least to the minimum standards laid down.

The race to establish supremacy in this new "carrying trade" was on, and no country could afford to dawdle. Great airports were planned and money lavished on these projects. By the year 1947, however, a new generation of fast, pressurised airliners had begun to roll off the production lines and many airports had to be replanned to satisfy their requirements in respect of runway lengths and auxiliary facilities. In the meantime, the backlog of travel, pent up during the war years, began to seek an outlet in air transport, and traffic grew in volume at a quite unexpected rate. Again, much airport planning had to be revised—this time from the aspect of bigger buildings and more space to cope with the increasing flow of passengers.

Tourist Class

The introduction of cheaper 'tourist' fares in 1950 gave another tremendous fillip to air travel. Curiously enough, the financial benefits to the airlines was by no means as great as had been expected, but one important result did materialise—air tourism became a major and lucrative industry in most European countries. National governments, as a consequence, were—and are—very anxious to ensure that nothing should interrupt or interfere with this golden flow of dollars. To this we can attribute, perhaps, the apparent willingness to finance, once again, the enormously costly airport development schemes, which the imminent introduction of large commercial jet airliners has now rendered necessary.

Let us pause for a moment and examine the effect of these constant and progressive demands on a single airport—that of London, for example. Planned in 1944 on lines which, it was thought, would provide all that could conceivably be required for the foreseeable future, work commenced on London Airport in 1946. It was finally completed—at tremendous cost—only last year, incorporating many of the improvements which had been found necessary in the light of events. Already, however, the runways require lengthening for the new turbo-jet airliners, the passenger handling facilities need to be enlarged, and the transportation of the rapidly growing volume of traffic between the metropolis and the airport is the cause of considerable anxiety.

Second Port for London

To meet this situation, the British taxpayer is called upon to foot a bill for £17 million for interim improvements—and that does not include, one understands, a costly rail project to link the airport with a terminal in the West End. Nor is that, by any means, the end of the story. The time is not very far distant when the airport will reach "saturation point" and an alternative will have to be found—indeed, a second airport at Gatwick is already under development.

Whilst the British taxpayer may not relish the additional burdens which international air transport thrusts upon him, he has at least one source of compensation—the annual flow of "dollar tourists" through London Airport provides very valuable and much needed foreign exchange. Viewed in that light, the expenditure entailed to keep London Airport—as is claimed—the best in the world, is probably a good investment. Can the same thing be said of the taxpayer in respect of the cost of India's airports?

The Union Government, it is understood, has three major projects under consideration. At Santa Cruz (to cater for the Boeing 707 aircraft on order for A.I.I.), the main instrument runway has to be lengthened—and, judging by what happened recently to a 'Britannia' of B.O.A.C., strengthened too! In any event, the lengthening of the runway will entail the levelling of the two hills which obstruct the runway approach at the eastern end. The cost of this work has been estimated—or so one understands—at Rs. 6 crores.

The second project concerns an entirely new civil airport for the Capital. This, we are told, has become necessary in order to permit the development of Palam (the present international airport for Delhi) exclusively as an Air Force base. No very reliable figure of the cost of this new airport is available. A sum of Rs. 13 crores has, however, been mentioned. The third project is a comparatively minor one; it involves the construction of a new terminal building, on modern lines, for Dum Dum at a cost of Rs. 2½ crores.

On the question of whether these costly works are essential or otherwise, opinions will vary. Whilst the modernisation of Santa Cruz is probably a necessity—the hills to be levelled present a hazard even under present conditions of operation—it is hard to see why, if Palam were to be suitably enlarged, the present joint use of that airport by both civil aircraft and the Indian Air Force, should not continue for many years to come. Similarly, whilst a modern terminal at Dum Dum is probably desirable, many would question whether it is any more than that.

Taxpayer Has to Foot the Bill

Whatever opinions may be held on these particular subjects, one melancholy fact is incontestable—the taxpayer in India is unlikely to see any very tangible return on his investments in international air transport. London Airport handles 600 aircraft movements every 24 hours and in the course of one year (1956), no less than 3,500,000 passengers embarked or disembarked there. The combined movements of all international aircraft at all three of India's major airports would barely reach a twentieth of that total. Even if we include the movements of all domestic aircraft as well, the proportion is still grotesquely unequal.

At this point, a very natural question is bound to arise: why should the air transport industry, which, apparently, is expanding its activities so rapidly, be subsidised, however, indirectly, at the expense of the taxpayer-at-large? Why should not the airlines, as do the ocean shipping companies, pay for all the facilities which they require? Why, if they desire to introduce much larger and heavier jet aircraft, should they not be called upon to pay, by means of increased landing fees and other dues, the entire cost of building longer and stronger runways?

These are, of course, pertinent and reasonable questions. The answers lie, indirectly, in the extreme rapidity with which the industry has developed. Sea transport has grown to its present size and importance over a very long period of time. Docks, harbours, warehouses, lights, tug services, etc., have been long established and the capital cost recovered many times over. Moreover, ships are built for various trades and with an eye to the harbours, depths of water, etc., available. It is very, very seldom that a liner or tanker of such vast dimensions is built as to require special docking facilities.

The air transport industry, on the other hand, has passed from, shall we say?, the sailing ship age, to that of the *Queen Mary*, in a matter of 30 years. The industry, moreover, makes marginal profits and is, at this juncture, in extremely difficult financial circumstances owing to vast investment—many say overinvestment—in jet re-equipment. The airlines are already seeking higher fares as a remedy for their difficulties. Were they to be called upon to pay very substantially higher airport dues, these could be found only from still higher fares (owing to the law of diminishing returns, a very doubtful source) or by direct subsidisation contributed by the various national governments concerned—in other words, by the taxpayer-at-large!

NEW PRODUCTS AND PROCESSES

Dehydrated Castor Oil

THE Regional Research Laboratory, Hyderabad, has developed an improved process for the manufacture of dehydrated castor oil. Dehydrated castor oil is used as a drying oil in the formulation of light coloured paints and enamels and in the production of alkyd resins, printing inks, oilcloth, linoleum, etc. It has also been employed as a substitute for tung oil. It is superior to linseed oil in many ways; it dries more quickly and has better water and alkali resistance. D.C.O. films are completely free from "yellowing" associated with linseed oil films and it is particularly suited for making white and pale coloured paints and enamels. Though the manufacture of dehydrated castor oil is an established industry in foreign countries and it is being produced by a few paint factories in India for their own use, large-scale production has not been undertaken in this country so far. The dehydrated product ordinarily obtained by the use of catalysts, namely, sodium bisulphate and sulphuric acid, is dark in colour; it possesses high acid value and tends to give tacky films. The new process involves heating the castor oil with the catalyst, and modifying agents under vacuum till dehydration is complete. The product is then cooled under vacuum and filtered before storage. The equipment required is simple. Existing equipment in paint factories can be employed with minor modifications. Independent production units can also be set up in places where raw castor oil is available in plenty. The process has been tried on a pilot plant scale and a standardised procedure has been worked out. Parties interested in undertaking the commercial development of the process may correspond with the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi.

New Textile Drier

A Netherlands engineering works manufacture a machine for drying fabrics and yarns. The drying medium is hot air which is blown on the material to be dried. Unlike the conventional types using wind boxes with discharge nozzles, this drier has blowout nozzles on the circumference of a cylindrical drum at an appropriate distance from the material. The positioning of the nozzles on the circumference of the cylinder effects a considerable saving in length and cost of the drier. The fabric or yarn enters the machine at the bottom via a roller, turns on the rolls on the inside of the cylinder and is passed out again at the bottom via another roller. The drive of the rotating drum with nozzles and the latter roller in such as to cause a difference in velocity between fabric and drum wall, as a result of which the drying air covers all parts of the fabric or yarn. An axial ventilator built-it at one end of the drum forces the circulating drying air via a diffuser into the interior of the nozzle-drum. The new machine has a favourable water evaporation of about 150 kg. (330 lbs.) per hour for a steam consumption of about 1.5 kg. (3.3 lbs.) per kg. of evaporated water. The machine is built for a maximum width of fabric of 6½ ft.

Push-button Record-changers

A record changer which is fully operated with push-buttons has been put on the market by a firm of Amsterdam. This apparatus changes all types of records at speeds of 78, 45, 33⅓ and 16 r.p.m. The movement of the pickup arm cannot be disturbed because any irregularity is automatically eliminated. The pickup element has 2 exchangeable sapphires for ordinary and microgrooves. This record player is adaptable to 110 or 220 volts and can be supplied in 3 designs: on an assembly plate for building in, on a bakelite stand, or in a smart case. The same firm also supplies a small new record changer with push-button operation for 45 r.p.m. records. It is supplied in a closed cabinet with storage space for 10 or 12 records and connecting wires and plugs, and with a thick or thin record-changing spindle as required.

Molybdenum Coatings

A new process for coating steel and metal alloys with molybdenum has been developed by the Vitro Laboratories of the U.S. It is said to produce a hard, bright, thin, molybdenum coating which shows excellent resistance to changes in temperature, and to be capable of protecting the metals to which it is applied against corrosive attack by molten metals and salts. The process can also be used to coat ceramics providing small quantities of graphite and other materials, such as osmium oxide, are added to the ceramic materials which are to be coated in order to increase their ability to conduct electricity. Operation of the process depends on the use of an electrical technique termed "electrophoresis" in which electrically charged particles of material are made to migrate towards an electrode having the opposite electrical charge. It is claimed by the company, that it not only enables the thickness of the coating which is applied to be very accurately controlled, but also that it produces the coatings exceptionally quickly and cheaply.

Pressure Seal for Vacuum Furnaces

When a cylindrical rod or other type of element is passed through the wall of a chamber containing gas at a pressure other than atmospheric pressure, such as a vacuum furnace, the prevention of any leakage of gas presents a number of engineering problems. A new form of pressure seal for use in vacuum furnaces and similar equipments has recently been patented in the U.K. As designed for use in the removal of an ingot from the base of a vacuum furnace, the seal consists of a water-cooled cylinder attached to the furnace beyond which lie a series of small chambers, each of which is fitted at both its entrance and its exit with a ring of resilient heat-resistant metal sheet. Each of these metal rings is slit at intervals in order to increase its resiliency. As the ingot is passed through the chambers from the furnace each chamber is continuously evacuated. The seal can also be used to facilitate the insertion of a consumable electrode into such furnaces. Furnaces of this type are used for processing titanium and a number of other metals.

LLOYDS BANK LIMITED

THE STERLING AND WORLD ECONOMY

VIEWS OF SIR OLIVER FRANKS

THE Annual General Meeting of Lloyds Bank Limited will be held at London on 14th February 1958. The following are extracts from the statement by the Chairman, The Right Hon. Sil Oliver Franks, G.C.M.G., K.C.B., C.B.E., circulated with the report and accounts for the year 1957:

"The profit for the year, at £2,502,391 is slightly lower, by £39,402, than last year and we propose to repeat the 1956 dividend of 13 per cent. per annum.

"Although high rates as well as a high degree of activity in all sections of our business have again benefited our earnings, our operating costs continue to rise inexorably.

"Our loans and advances are lower by some £9 millions than they were a year ago. The reduction would have been greater but for the two particular categories of lending I referred to in my statement last year. Our advances in the East have expanded along with our general business there, and we have continued to interest ourselves in the important and specialised field of medium-term credits to facilitate the export of major capital goods, a category of advances excluded from the operation of the general restrictions upon bank lending.

Eastern Branches

"A heavy and sustained demand for bank advances has been a pronounced feature of our operations in India during the past year. Both there and in Pakistan, a shortage of foreign exchange has led to a curtailment of imports, the financing of which is an important part of our business.

"Our thanks are due to the Eastern staff for their devoted work in difficult conditions.

External Problems of Sterling

"As a member of the Radcliffe Committee, I cannot comment upon monetary developments at home during the past year. Instead, I propose to discuss some of our problems, certainly no less important, in the sphere of international payments.

"I do not mean to imply that our external problems and our domestic policies can be divided into separate compartments. We cannot argue that our payments difficulties arose purely out of our position as a world banker and had no connection with the state of the United Kingdom economy: for the fear that inflation might continue played a large part in disturbing international confidence in sterling. Unfortunately, it is also true that to avoid further inflation will not automatically ensure success in the vital task of rebuilding the reserves. Sterling being an international currency, we are necessarily affected by the general climate of world trade. The course of events is bound to depend not only upon our own policies but also, in some considerable degree, upon those followed by other countries, above all by the United States and our fellow-members in the sterling area.

"Nothing can change our dependence upon overseas trade for a living, but our persistent external difficulties have led to suggestions that we should be better off if we shed our role as banker to the sterling area. On the face of it, this system is well designed to promote the interests of its members and of the world economy as a whole. It means that individual sterling countries do not have to keep an extract balance either in their trade with each other or with the outside world, provided that deficits are matched by surpluses elsewhere in the area. The use of sterling as an exchange reserve keeps down competition for the world's limited supplies of monetary gold. Both these features tend to promote the expansion of world trade, as does the natural alliance of the financial machinery of the City of London with the use of a common currency for the settlement of transactions.

"Sterling balances held by countries outside the area are now fairly small, as compared with those of the overseas sterling countries. That a large proportion of these latter balances is earmarked for such purposes as currency reserves affords no great comfort, since the example of India has shown that local currency laws can easily be amended. Still the fact that all the members have a common stake in the preservation of the pound is some safeguard. From the collective point of view, nothing could be more urgent than to build up the reserves again. Yet individual Governments find it difficult to believe that any objective can really merit a higher priority than their own development programmes.

Possible Deflation Ahead

"What of the relationship between sterling and other currencies? By outlawing beggar-my-neighbour policies and helping to clear the jungle of exchange restrictions left over from the war, the Bretton Woods system has rendered the world good service. To say that the system has served us well hitherto is not, of course, to say that this must always be so. For the time being, the post-war boom in the world as a whole has lost much of its impetus. That being so, our preoccupations during the next phase may become those of deflation rather than inflation. Should the course of events take this direction, it means that, if the Bretton Woods system is to work successfully, the policies followed by creditor countries will be of decisive importance.

"A condition for a smooth functioning of the Bretton Woods system is an adequate level of monetary reserves. At present, the problem centres upon the distribution of existing exchange reserves rather than their absolute magnitude. Nearly half the total is now held by the United States and Germany, though the United States has large short-term liabilities to the outside world. By contrast, sterling finances perhaps 40 per cent. of world trade, yet the United Kingdom reserves are about half those of Germany and less than 4 per cent. of the world total.

"That is the most important single fact in the world currency situation. Measures to ensure the stability of the sterling area and measures to ensure the smooth working of the Bretton Woods system must alike be directed to the removal of that anomaly.

"Once we have brought about a substantial increase in the reserves by our own efforts, therefore, the question may arise of their being further fortified by some kind of stabilisation operation.

"It might be that an operation of this kind should take an international rather than a national form. In that case, the International Monetary Fund would be the obvious instrument. There might be general advantage for the world, however, if the Fund could move in the direction of becoming a supercentral bank. This implies that the controllers of the Fund should be permitted greater discretion in their operations than is accorded under the present articles. Secondly, it means that countries should be prepared to deposit exchange reserves with the Fund and treat the Fund's certificates of indebtedness as exchange reserves, in the same way that some European countries already treat as part of their exchange reserves their stake in the European Payments Union.

Position Summed Up

"To sum up, the problems of the sterling area and of the world economy, as a whole, are essentially those of reconciling the aims of individual nations and their Governments with the general requirements of an international order. They are therefore merely one aspect of the far wider problem which the free nations have to solve: that of adapting their political ideas and political institutions to the facts of their growing interdependence, in economic as in military affairs."

Consent of the Central Government has been obtained to this Offer for Sale by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for effecting a substantial expansion to an existing industrial undertaking and for the establishment of a new industrial undertaking. Copies of these Licences are open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting these Licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of this Offer for Sale, having attached thereto the documents specified below, has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation for the whole of the issued share capital of the Company.

The Application Lists will open at 10 a.m. on Tuesday, the 4th day of February, 1958, and will close at 10 a.m. on Friday, the 7th day of February, 1958 or later at the discretion of the Offeror.

INDIAN OXYGEN LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913)

CAPITAL

Authorized .. .. Rs. 4,00,00,000

Issued and Fully Paid .. .. .. Rs. 2,00,00,000

REGISTRARS

JARDINE HENDERSON LTD., 4, Clive Row, Calcutta-1.

The Offeror will receive through the Company's Bankers, The Chartered Bank, applications for the above Ordinary Shares payable in full (i.e. Rs. 13.50 per share) on application.

It is intended to reserve a maximum of 30,000 (i.e. 5 per cent.) of the above 600,000 shares for offer in the first instance to employees of the Company. To the extent to which these shares are not taken up by employees they will be available to meet applications from the public.

Applications which, unless made by employees of the Company, must be for 50 shares or multiples thereof, must be made on the accompanying form and lodged, together with the full amount payable, before the close of the application lists, with any branch in India of The Chartered Bank. Employees of the Company may apply for 25 shares or multiples thereof and a special form of application, coloured blue, is provided for this purpose with copies of this Offer for Sale issued to employees.

Further instructions regarding application for shares appear later in this Offer for Sale and also on the Application Forms.

All expenses of the offer, including stamp duty payable on the first transfer of shares (from the Offeror to the applicant), will be paid by the Offeror.

The shares now being offered will confer the right to any dividend declared in respect of the Company's financial year ending 30th September 1958. No dividend has yet been declared in respect of such financial year.

PARTICULARS

History and Business : Indian Oxygen Ltd. was incorporated and registered in West Bengal on the 24th January 1935, as a private company limited by shares under the name of "The Indian Oxygen & Acetylene Co., Limited. On the introduction of the Companies Act, 1956, the name of the Company was changed to "The Indian Oxygen & Acetylene Co., Private Limited. The Company was converted into a public company on the 15th day of January 1958, and at the same time its name was altered to "Indian Oxygen Limited."

The Company was originally formed for the purpose of taking over (and, after incorporation, did take over) as going concerns the businesses then carried on:—

Firstly: By The Lightfoot Refrigeration Company Limited at Calcutta, Bombay, Lahore, Jamshedpur, Giridih and Kargali and at Colombo in connection with the manufacture and sale of Oxygen Gas and Liquid Oxygen Explosives and appliances therefor.

Secondly: By The Gas Accumulator Co. (India) Limited at Calcutta in connection with the manufacture and sale of Oxygen and Acetylene Gases and appliances therefor.

Thirdly: By Allen Liversidge (India) Limited at Bombay in connection with the manufacture and sale of Acetylene Gas and appliances therefor.

The Company is a subsidiary of The British Oxygen Company Limited and, as such, is a unit of an organisation having subsidiary and associated companies in Africa, Australia, Burma, Canada, Ceylon, Eire, Hongkong, Malaya, New Zealand, Norway, Pakistan and the United Kingdom.

New companies were formed in Pakistan, Burma and Ceylon, as subsidiaries of The British Oxygen Company Limited, to commence operations as from the 1st August 1949 after taking over the capital assets, stocks and certain other assets, together with certain liabilities of The Indian Oxygen & Acetylene Co., Limited in those territories. The Indian Oxygen & Acetylene Co., Limited ceased trading in those territories as from the 1st August 1949, consequent upon the formation of the new companies.

The Company's present business consists of the manufacture and sale of Industrial and Medical Gases (including Oxygen, Acetylene, Nitrous Oxide and Dry Breathing Oxygen) and Electrodes and of the assembly, manufacture and sale of Welding and Cutting Apparatus and Equipment and other similar articles.

The business is carried on in India at the Company's Head Office and factories in Calcutta and at branch factories and offices at Ahmedabad, Bangalore, Bombay, Burnpur, Delhi, Jamshedpur, Kanpur, Madras, Tiruchirapalli and Visakhapatnam and through depots at Bombay City, Baroda, Cochin, Delhi, Gauhati, Howrah, Hubli, Hyderabad, Jaipur, Patna, Poona and Vijayawada.

Development : Since its incorporation the Company has progressively expanded both its volume of production and its range of products and it is now the main supplier of India's requirements of Industrial and Medical Gases and Equipment for Welding and various other processes involving the use of Industrial Gases.

An indication of this progressive expansion is given by the following figures showing the total sales turnover during the last ten years:—

	Rs.		Rs.
1948 ..	1,08,52,445	1953 ..	1,97,39,770
1949 ..	1,36,59,064	1954 ..	2,34,03,420
1950 ..	1,33,03,772	1955 ..	2,67,96,882
1951 ..	1,53,97,836	1956 ..	3,45,59,726
1952 ..	1,69,25,955	1957 ..	4,17,74,429

Note :—Sales in Pakistan, Burma and Ceylon up to 31st July, 1949, have been included in the above figures. After that date separate companies were, as mentioned above, incorporated in these countries to take over the business previously carried on there by this Company.

In order to meet the increasing demand for its products the Company has throughout adopted a progressive policy both as regards expansion of its factories and facilities and as regards replacement of old plant and machinery by modern equipment.

The industrial development plans initiated by the Government of India, and in particular the expansion in steel production envisaged by the second Five-year Plan, are expected to give rise to a further very substantial increase in the demand for the Company's products. With this in mind the Directors have therefore drawn up a replacement and expansion programme. This programme involves the setting up of new factories and expansion and modernisation of existing factories and includes provision for the progressive manufacture in this country of certain equipment and accessories used in the process of Welding and Cutting which presently have to be imported from abroad. As indicated by the headnote on the first page of this Offer for Sale, Licences under the Industries (Development and Regulation) Act, 1951, have been obtained for the establishment of a new industrial undertaking for the manufacture of Gas Welding and Cutting Equipment and for effecting a substantial expansion to the Company's existing industrial undertaking for electrode manufacture. In the light of a recent Government notification the Company has been advised by the Ministry of Commerce and Industry that Government now considers that Industrial Gases, Oxygen and Dissolved Acetylene, and also Fluxes of all types, are covered by the Act. This will necessitate the obtaining of certain further Licences under the Act and the necessary applications have been submitted.

The Replacement and Expansion programme, which is already in hand, is planned to be completed by approximately 1960 at an estimated cost of Rs. 3,20,86,423. Of this sum expenditure of Rs. 99,59,423 had already been incurred up to the 30th September 1957, leaving a balance of Rs. 2,21,27,000 to be expended during the three years to the 30th September 1960. The expenditure incurred to date has been financed, on a temporary basis, by The British Oxygen Company Limited partly by means of the Special Loan Account referred to on the first page of this Offer for Sale and partly by allowing the Company to withhold payment of amounts due to The British Oxygen Company Limited on Current Account.

Shortly before this Offer for Sale 680,000 Ordinary Shares of Rs. 10 each were issued to The British Oxygen Company Limited at par. Out of the total issue price (Rs. 68,00,000) Rs. 29,23,333 was paid by liquidation of a loan from The British Oxygen Company Limited then outstanding. The balance of Rs. 38,76,667 was remitted to the Company in cash.

The Offeror (The British Oxygen Company Limited) has agreed to leave the net proceeds of sale of the present Offer for Sale, less Capital Gains Tax, if any, payable by the Offeror in respect thereof, on loan to the Company for a period of seven years at the rate of interest from time to time applicable to loans from The British Oxygen Company Limited to the Company. Such rate of interest is subject to adjustment in the light of prevailing conditions but at present stands at 6 per cent. per annum.

In planning the financing of the Replacement and Expansion Programme the Directors have had due regard to the necessity of providing for adequate foreign exchange for the import of capital goods. In this connection the subscription by The British Oxygen Company Limited of the sterling equivalent of Rs. 68,00,000 (partly by liquidation of an outstanding loan to the Company and partly by remittance in cash) will be of great assistance but it is estimated that further foreign exchange to the extent of approximately Rs. 75,00,000 will be required for the Replacement and Expansion Programme. The Company is therefore engaged in negotiations with The Industrial Credit and Investment Corporation of India Limited and intends to open negotiations with the Commonwealth Development Finance Company Limited of London and it is honed that these two Companies between them will lend to the Company a total of Rs. 75,00,000 available as foreign exchange. Should these negotiations for any reason prove unsuccessful it will be necessary to explore other possible means of raising the required amount of foreign exchange.

The balance in the hands of the Company resulting from the recent issue of 680,000 shares to The British Oxygen Company Limited; the net proceeds of this Offer for Sale (less Capital Gains Tax, if any) to be lent to the Company by the Offeror; the foreign exchange loans referred to above; (assuming the negotiations are successful) and the amount that is estimated to be available from the Company's internal resources (after making due allowance for the working capital which will be required during the three years to the 30th September 1960), will be used to finance the Replacement and Expansion Programme including expenditure already incurred. It is proposed in the first instance to pay off the amount due to The British Oxygen Company Limited on the Special Loan Account and also at the earliest opportunity to pay off the sum presently due to that Company on Current Account.

Management, Staff and Technical Facilities : The Company has an experienced technical and executive staff, a large proportion of whom have been trained by the Offeror in the United Kingdom, and provides work for over 2,000 employees.

As a wholly owned subsidiary of The British Oxygen Company Limited the Company has had the benefit of the wide technical experience and "know how" of that Company. Consequent upon the conversion of the Company into a public company with a view to the present Offer for Sale by the Offeror to the Indian public of a substantial part of the Offeror's shareholding, it is proposed to enter into an Agreement with the Offeror for a period of 5 years for the undertaking of joint research in the Offeror's research establishments in the United Kingdom, each party to pay an appropriate proportion of the cost of such research, subject to a maximum annual payment by the Indian Company of £30,000, and for the continuance of the various training and technical assistance facilities heretofore provided by the Offeror. The Agreement will also make provision for the continued use by the Company of registered designs, trade marks, patents, processes and inventions of the Offeror and for reciprocal facilities to be given by the Company to the Offeror. Application has been made to the Reserve Bank of India for its consent to the proposed Agreement.

Working Capital : Taking into account bank facilities the Directors consider that the Company has adequate working capital for its present requirements and the financial arrangements referred to above provide for working capital during the period of the Replacement and Expansion Programme.

Future Prospects : The growth of the Company's sales is reflected in the profit figures over the past five years. Whilst no assurance can be given as to future profits or prospects, it is considered that with the planned rise in steel production in this country there should be a ready absorption of the Company's present and proposed increased production.

The Directors anticipate that, in the absence of circumstances beyond their control, the profits of the current financial year should be sufficient to justify recommending a dividend for the year of 10 per cent. free of income-tax.

AUDITORS' REPORT

The following is a copy of a Report which has been received from Messrs. Price, Waterhouse & Co.:—

B4, GILLANDERS HOUSE,
CALCUTTA, 8*th January* 1958.

THE DIRECTORS,
THE INDIAN OXYGEN & ACETYLENE CO. PRIVATE LTD.
48/1, DIAMOND HARBOUR ROAD,
CALCUTTA—27.

Dear Sirs,

We have examined the books and accounts of The Indian Oxygen and Acetylene Co. Private Ltd., which are kept in Calcutta and in which are incorporated the audited returns from the Branches, for the five years ended 30th September, 1957, and report that the profits of the Company are as set out below. These profits have been arrived at after charging all expenses of working and management including provision for normal depreciation as allowable for taxation and after making such adjustments as are, in our opinion, appropriate:—

	Year ended 30th Sept., 1953	Year ended 30th Sept., 1954	Year ended 30th Sept., 1955	Year ended 30th Sept., 1956	Year ended 30th Sept., 1957
INCOME					
Sales and Recoveries	1,97,39,770	2,34,03,420	2,67,96,882	3,45,59,726	4,17,74,429
Miscellaneous Income	70,197	51,066	60,273	27,587	20,725
	1,98,09,967	2,34,54,486	2,68,57,155	3,45,87,313	4,17,95,154
EXPENDITURE					
Cost of Sales and Recoveries	1,19,34,762	1,39,02,828	1,55,34,830	2,10,94,178	2,61,57,756
Staff—Salaries, Wages and Incidental Expenses	23,59,363	25,22,067	27,89,111	30,88,457	38,32,438
Office and Administration	7,57,456	9,06,700	11,04,009	11,95,504	16,39,582
Selling Expenses	7,07,112	7,57,048	8,15,635	9,76,022	11,65,763
Miscellaneous Expenses	4,28,607	3,26,073	2,66,327	3,40,338	7,47,702
	1,61,87,300	1,84,14,716	2,05,09,912	2,66,94,499	3,35,43,241
Net Profit before Depreciation and Taxation	36,22,667	50,39,770	63,47,243	78,92,814	82,51,913
Normal Depreciation	8,81,672	9,41,439	10,30,414	10,78,659	12,54,773
Net Profit before Taxation	27,40,995	40,98,331	53,16,829	68,14,155	69,97,140
Taxation after allowance of normal depreciation only	12,03,768	17,93,266	25,13,682	38,21,367*	38,48,416
NET PROFITS	15,37,227	23,05,065	28,03,147	29,92,788	31,48,724
Extra Shift Allowance	1,15,390	1,18,601	1,13,220	97,523	97,523
Double Allowance	5,90,895	6,33,658	7,05,480	7,32,010	8,84,798
Initial Allowance	4,10,819	2,90,933	2,03,955	2,61,756	....
Development Rebate	....	3,99,562	72,094	1,55,013	1,62,112
	11,17,104	14,42,754	10,94,749	12,46,302	11,44,433

* Exclusive of Rs. 7,50,000 Super Tax payable in respect of Bonus Shares issued during the year. Depreciation and Development Rebate figures not included above are as follows:—

We also report that the assets and liabilities of the Company as at 30th September, 1957, which is the last date to which the Company's Accounts were made up, prior to the date of this report, are as set out below. These assets and liabilities have been arrived at after making such adjustments as are, in our opinion appropriate:—

ASSETS.	Rs.	Rs.
Capital Assets less Depreciation, Capital Work-in-Progress and Capital Goods in Transit		2,51,11,147
India Government Securities and other Investments at Cost		4,46,023
Stocks on hand and Goods in Transit		1,49,52,898
Sundry Debtors and Advance Payments less provision for Doubtful Debts		98,22,230
Cash at Banks in Transit and in hand		23,82,947
	Rs.	5,27,15,245
LIABILITIES.		
The British Oxygen Co., Ltd., Loan Account—Unsecured	29,23,333	
The British Oxygen Co. Ltd. Special Loan Account—Unsecured	6,04,063	
The British Oxygen Co. Ltd. Current Account	1,11,09,199

30th September, 1955	10%	13,20,000
30th September, 1956	10%	13,20,000
30th September, 1957	10%	13,20,000

Yours faithfully,

(Sd.) PRICE, WATERHOUSE & CO.

Statutory and General Information : The shares now being offered for sale were acquired by the Offeror prior to 1947. No part of the proceeds of this Offer for Sale is payable directly to the Company but, as mentioned above, the entire net proceeds less Capital Gains Tax if any, payable by the Offeror in respect thereof will be loaned to the Company by the Offeror. The expenses of this Offer for Sale, which are payable by the Offeror, inclusive of underwriting commission, brokerage, stamp duty, printing charges, Registrars' fees and legal and other charges are estimated at Rs. 5,20,000. This does not take into account Capital Gains Tax, if any, payable by the Offeror.

No share or loan capital is under option or agreed to be put under option.

The main objects specified in the Company's Memorandum, apart from the taking over of the businesses of The Lightfoot Refrigeration Co., Ltd., The Gas Accumulator Co. (India) Ltd., and Allen Liversidge (India) Ltd. referred to above, are:—

"To carry on the business of manufacturing and compressing oxygen, hydrogen, nitrogen, carbonic acid, acetylene and other gases or kindred substances or any compounds thereof by any process, and of selling or applying such gases, substances and compounds or any of them to such purposes as the Company may from time to time think desirable, and to manufacture, buy, sell, let on hire, and deal in engines, cylinders, compressors, machines and other apparatus and conveniences which may seem calculated to promote (directly or indirectly) the consumption of gases.

To manufacture and deal in metals, substances and materials of all kinds (including glass) which may be usefully or conveniently employed in the manufacture of receivers for compressed or liquefied or other gases, and all machinery, appliances, tools, articles and things used or capable of being used for closing or in the manufacture of appliances for closing such receivers or for closing or stoppering bottles or for liberating the gases or other contents of any such receivers or the tools required for or used in the manufacture of any such articles or things or for any of the purposes aforesaid.

To carry on the business of manufacturing, buying and selling dissolved acetylene, acetylene lamps, generators and plants, acetylene apparatus and accessories and other apparatus, appliances, articles and things which may seem calculated to promote or to be capable of being used in connection with the consumption of dissolved acetylene.

To carry on the businesses of chemists, druggists, importers, and manufacturers of and dealers in carbide of calcium and other pharmaceutical, medicinal, chemical, industrial and other preparations and articles, compounds, cements, oils, paints, pigments and varnishes, makers of and dealers in proprietary articles of all kinds, and electrical, chemical, photographical, surgical and scientific apparatus and materials."

No shares or debentures have been issued or agreed to be issued within the two years preceding the date of this Offer for Sale as fully or partly paid up otherwise than in cash and no shares have

been issued at a premium within the said two years, nor are any shares presently intended to be issued at a premium.

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

No amount or benefit has been paid or given within the two years preceding the date of this Offer for Sale or is intended to be paid or given to any promoter or officer of the Company save as remuneration for services as a director, managing director or employee of the Company.

On a show of hands every member present in person has one vote and every person present as a General Proxy (i.e., any Proxy other than a Proxy appointed for a specified meeting only) or as a representative for a body corporate, if he is not entitled to a vote in his own right, has one vote. On a poll the voting rights of members are as specified in Section 87 of the Companies Act, that is to say, every Ordinary shareholder has a right to vote on every Resolution in proportion to his share of the paid-up equity capital of the Company.

No member may exercise any voting rights either personally or by Proxy at any meeting of the Company in respect of any shares registered in his name on which any calls or other sums presently payable by him have not been paid or in regard to which the Company has or has exercised any right of lien.

The Board are authorised to borrow and secure the payment of any sums of money for the purposes of the Company but they may not without the sanction of a General Meeting, so borrow any sum of money which will make the amount borrowed by the Company (exclusive of temporary loans obtained from the Company's bankers in the ordinary course of business) and then outstanding exceed the aggregate for the time being of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose.

The general powers of management of the Company are vested in the Board subject to the provisions of the Companies Act or any other statute, to the provisions of the Memorandum and Articles of the Company and to any regulations not inconsistent therewith duly made thereunder, including regulations made by the Company in General Meeting.

There has been no revaluation of the assets of the Company during the two years preceding the date of this Offer for Sale.

The following capitalisations of reserves or profits of the Company have taken place:—

Bonus Issue of	24,111	fully paid Ordinary shares of Rs. 10/- each in	March	1940
Do.	24,111	do.	April	1941
Do.	24,112	do.	April	1942
Do.	40,000	do.	December	1944

During the two years preceding the date of this Offer for Sale no commissions, discounts, brokerage or other such terms, except as herein mentioned, have been granted to any person in connection with the issue or sale of any stock, shares or securities of the Company.

Contracts: The following contracts, not being contracts in the ordinary course of business, have been entered into by the Company with the parties mentioned during the two years preceding the date hereof and are or may be material:—

(1) Dated 20th January, 1958 with Jardine Henderson Limited whereby the latter were appointed Registrars and Share Transfer Agents to the Company at a fee of Rs. 30,000 per annum and also undertook to perform various services for The British Oxygen Company Limited in connection with this Offer for Sale for a fee of Rs. 50,000. (2) Dated 10th July, 1956, with The British Oxygen Company Limited being an order placed by the Company for a Liquid Oxygen Plant for Bombay Branch for Rs. 7,66,670. (3) Dated 29th April, 1957, with The British Oxygen Company Limited being an order placed by the Company for a Liquid Oxygen Plant for Burnpur Branch for Rs. 8,76,820. (4) Dated 29th April, 1957, with The British Oxygen Company Limited being an order placed by the Company for a 1,000 cubic feet Mobile Oxygen Plant for Rs. 2,88,000. (5) Dated on various dates between 10th February, 1956 and 27th September, 1957 with The British Oxygen Company Limited being orders placed by the Company for plant and machinery comprising cylinders, evaporators, oxygen compressors, liquid oxygen transport tanks, portable equipment for steel process work, water receivers, conversion units, filter units, alumina driers, pipeline supply components, machinery for manufacture of welding fluxes and nozzles for a total sum of Rs. 76,42,058. (6) Dated on various dates between 17th January, 1956 and 2nd December, 1957 with Dalbhum Trades & Industries Ltd., Aluminium Manufacturing Co. Ltd., G. C. M. Burman, Indian Galvanizing Co. (1926) Ltd., Parry & Co. Ltd., General Electric Company of India Private Ltd., Cumberland & Martin Ltd., Process Plant Engineers, A. Reyrolle & Co. Ltd., (Indian Agency), Braithwaite & Co. (India) Ltd., C. A. Parson & Co. Ltd., (Indian Agency), Alfred Herbert (India) Private Ltd., H. G. Fewkes & Co. Private Ltd., Avery Co. of India Private Ltd., Martin Burn Ltd., Garden Reach Workshops Ltd., William Jacks & Co. Ltd., Batliboi & Co., Biyani & Sons (Private) Ltd., Bombay Company Private Limited, Madras, Nigam Brothers, Crompton Engineering Co., Parkeen Brothers, W. H. Brady & Co. Ltd., and Quasi-Arc Co. Ltd., being orders placed by the Company for miscellaneous items of plant and machinery for a total sum of Rs. 5,69,559. (7) Dated 18th October, 1956, with Bosana & Co. being an order placed by the Company for site preparation at Khardah for an Electrode Factory for Rs. 2,05,000. (8) Dated 4th March, 1957, with Bridge & Roof Co. (India) Ltd., for the construction of factory buildings for the new Electrode Factory at Khardah at an estimated cost of Rs. 15,30,000. (9) Dated 11th September, 1957, with the General Electric Company of India Private Limited being an order placed by the Company for electric installations at the new Electrode Factory at Khardah at an estimated cost of Rs. 78,000. (10) Dated 1st November, 1957, with H. G. Fewkes & Company Private Limited being an order placed by the Company for sanitary installation at the new Electrode Factory at Khardah at an estimated cost of Rs. 35,000. (11) Dated 5th August, 1957, with Mr. N. Guha for the construction of factory and office buildings at a new site at Burnpur at an estimated cost of Rs. 11,50,000. (12) Dated 14th October, 1957, with the General Electric Company of India Private Limited being an order placed by the Company for electric installations at the factory and office buildings at the new site at Burnpur at an estimated cost of Rs. 1,15,000. (13) Dated 5th August, 1957, with Mr. N. Guha for the construction of staff quarters at Jamshedpur at an estimated cost of Rs. 4,40,000. (14) Dated 5th July, 1956, with the Governor of the State of West Bengal regarding acquisition on behalf of the Company at an approximate cost of Rs. 1,50,000. of an area of approximately 17.76 acres of land in Burnpur for an oxygen and acetylene factory and other buildings. (15) Dated 11th February, 1956, with the Gas Accumulator Company (India) Limited for assignment to the Company of quota rights held by that Company. (16) Dated 11th February, 1956, with the Gas Accumulator Company (India) Limited for the transfer of quota rights by the Company to that Company. (17) Dated 7th May, 1957, with Deloro Stellite Limited whereby the latter granted exclusive resale rights to the Company in India in respect of hard facing rods and electrodes as from the 1st April, 1957. (18) Dated 27th December, 1957, between the Company and Mr. R. G. C. Stephenson whereby Mr. Stephenson was re-appointed Managing Director of the Company from the 1st January, 1958, for a period of five years at a salary of Rs. 4,150 per month from the 1st January, 1958 to the 30th June, 1960, and Rs. 4,500 per month from the 1st July, 1960 to the 31st December, 1962, together with such allowances, appropriate to his appointment, as are determined by the Board.

Directors are interested to the extent that Mr. J. S. Hutchison is a Director and Member of the Offeror Company, Mr. A. D. Vickers is a Partner in the firm of Messrs. Orr, Dignam & Co., Solicitors to the Company, he and Mr. S. K. Sinha are Directors of Jardine Henderson Limited, the Registrars, and Mr. T. R. Shields is a Member of the Offeror Company.

The Articles of Association contain (*inter alia*) provisions to the following effect:—

Subject to the provisions of Section 111 of the Companies Act the Board, without assigning any reason for such refusal, may, within two months from the date on which the instrument of transfer was delivered to the Company, decline to register any transfer of shares upon which the Company has a lien, and, in the case of shares not fully paid up, may refuse to register a transfer to a transferee of whom the Board do not approve.

Unless otherwise determined by the Company in General Meeting the qualification of a director shall be the holding in his own name or jointly with any other person, whether beneficially or as a trustee or otherwise, of 100 shares in the Company.

Unless otherwise determined by the Company in General Meeting the Chairman of the Board shall be entitled to receive out of the funds of the Company a fee of Rs. 20,000 per annum and each other director who is neither a Managing Director nor a director in the whole time employment of the Company shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board a fee of Rs. 500 per mensem. All other remuneration, if any, payable by the Company to each director, whether in respect of his services as a Managing Director or a director in the whole or part-time employment of the Company shall be determined in accordance with and subject to the provisions of the Articles and of the Companies Act. The directors shall be entitled to be paid their reasonable travelling and hotel and other expenses incurred in consequence of their attending at Board and Committee meetings and otherwise in the execution of their duties as directors.

If any director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company or as a member of a committee of the Board, then, subject to Sections 198, 309 and 310 of the Companies Act, the Board may remunerate the director so doing either by a fixed sum or by a percentage of profits or otherwise and such remuneration may be either in addition to or in substitution for any other remuneration to which he may be entitled.

Subject to the provisions of Section 297 of the Companies Act a director shall not be disqualified from contracting with the Company either as vendor, purchaser or otherwise for goods, materials or services or for underwriting the subscription of any shares in or debentures of the Company nor shall any such contract or arrangement entered into by or on behalf of the Company with a relative of such director or a firm in which such director or relative is a partner, or with any other partner in any such firm, or a private company of which such director is a member or director, be avoided nor shall any director so contracting or being a member or so interested be liable to account to the Company for any profit realised by any such contract or arrangement by reason of such director holding office or of the fiduciary relation thereby established.

Subject to the provisions of Sections 267, 268, 269, 316 and 317 of the Act, the Board may, from time to time, appoint one or more directors to be Managing Director or Managing Directors of the Company.

Subject to the provisions of Sections 309, 310 and 311 of the Act, a Managing Director shall, in addition to the remuneration payable to him as a director of the Company under the Articles, receive such additional remuneration as may from time to time be sanctioned by the Company.

Every director, manager, secretary or officer of the Company or any person (whether an officer of the Company or not) employed by the Company as auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such director, manager, secretary, officer or auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted or in connection with any application under Section 663 of the Companies Act in which relief is granted to him by the Court.

Application for Shares: Applications by persons other than employees of the Company must be for 50 shares or multiples of 50 shares and must be made on the white form accompanying this Offer for Sale. Employees of the Company may apply for 25 shares or multiples of 25 shares in which case they must do so on the blue form accompanying the copies of this Offer for Sale issued to them. All application forms, properly completed, must be lodged, together with the full amount (Rs. 13.50 per share) payable on application, with any branch in India of the Chartered Bank, viz., at Amritsar, Bombay, Calcutta, Chowringhee (Calcutta), Cochin, Delhi, Kanpur, Kozhikode, Madras and New Delhi. Payment should be made by cheque or draft in favour of "The Chartered Bank A/c British Oxygen" and should, for the applicant's protection, be crossed "A/c Payee only." A separate cheque or draft must accompany each application. Cheques or drafts drawn on the Chartered Bank, or drawn on any bank in the same town as that in which the branch of The Chartered Bank with which the application is lodged is situated, need include no allowance for collection charges. All other cheques or drafts must include bank charges at the rate of 25 nP. per Rs. 100.

Applications from persons resident outside India will not be considered.

Acceptance will be notified by the despatch of an Acceptance Letter but the Offeror reserves the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or the balance, as the case may be, of the application money received will be refunded to the applicant by post at his risk and any bank charges will be payable by the applicant. The Company has agreed to waive the first payment of transfer registration fees in respect of the transfer of shares from the Offeror to applicants whose applications are accepted and for which Letters of Acceptance are issued. Share certificates will be available for issue in exchange for Letters of Acceptance on or after the 25th April, 1958.

Brokerage at the rate of 12 nP. per share will be paid by the Offeror on acceptances made in respect of applications bearing the stamp of a recognised stock broker or banker. Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Limited, in addition to the underwriting commission, on acceptances made in respect of applications made or procured by them provided that the relative forms of application bear their stamp.

Messrs. Price, Waterhouse & Co. have given and have not withdrawn their written consent to the issue of this Offer for Sale with a copy of their Report included therein in the form and context in which it is included. A copy of such consent, together with a statement of the adjustments made by that firm in arriving at the profits and assets and liabilities shown in the Report and giving the reasons therefor, copies of the consents of the auditors, solicitors, bankers and brokers to the Company to act in those capacities and copies of the material contracts specified above have been attached to the copy of this Offer for Sale which has been delivered to the Registrar of Companies for registration.

A print of the Memorandum and Articles of Association of the Company, copies of the material contracts and of the agreement proposed to be entered into between the Company and the Offeror referred to above, the Report of the Auditors and their Statement of Adjustments and the audited Accounts of the Company for the last five financial years may be inspected at the registered office of the Company during usual business hours (Saturdays excepted) for a period of fourteen days from the date of publication of this Offer for Sale or until the closing of the application list, whichever is earlier.

Copies of this Offer for Sale and forms of application can be obtained from any branch in India of The Chartered Bank and from any of the Brokers specified above.

Dated the 21st day of January, 1958.

DEVELOPMENT OF SMALL INDUSTRIES

REMOVAL OF CERTAIN INHERENT WEAKNESSES URGENT

THE wide and varied problems connected with the development of small industries were impressively brought out by Mr. Manubhai Shah, Union Minister for Industry, when he addressed the tenth meeting of the Small-scale Industries Board held at Calcutta last week. At the very outset, Mr. Shah sought to explain why the Governments of the States should assume the responsibility for the development of small industries. These industries, he declared, required less capital but more organisation, less technique but more efforts, so that it was only the local Governments, aided by local talents and people, that could pay adequate attention to the intensive development of these industries in their respective areas. Mr. Shah urged the State Governments to make vigorous efforts to give a powerful drive and momentum to the development of small industries. "I will," to quote him, "repeat this over and over again in order to induce *a new sense of urgency* that is required to be installed and implemented at the State level and at the people's level."

The development of small industries, it will be recalled, has been accorded a special place in the second Five-year Plan, the total financial provision made being as much as Rs. 200 crores, as against Rs. 25 crores in the first Plan. Of this total, the funds earmarked for small industries other than handloom, *khadi* and village handicrafts, silk, coir and 'other' industries, aggregate Rs. 61 crores. About 750 State Government schemes have been sanctioned since the second Plan. The amount sanctioned for the implementation of these schemes in the current financial year has already exceeded Rs. 4.5 crores, whereas the Plan allocation was only Rs. 4 crores. This is in addition to the sum of Rs. 5.5 crores sanctioned for supply of machinery to small industries on hire purchase, industrial estates, co-operatives, etc. The terms and conditions on which loans are advanced to small industrialists have been liberalised. It is now possible for small *entrepreneurs* in most States to get loans up to Rs. 1,000 on a personal bond and up to Rs. 5,000 against one or two securities. Loans exceeding this amount are also given against security which includes assets created out of the loans. What is more, the rate of interest is low and the loans are repayable in easy instalments spread over 10 years.

Bottlenecks

While the pace of improvement in schemes sanctioned is to be welcomed, the question is whether, in actual practice, they will be successfully implemented, and that in time. Present indications are that, if adequate and timely attention is not given, the implementation may not be wholly satisfactory. Mr. Shah did well to call upon the State representatives to bear in mind the great need to fulfil the targets before the fiscal year ended. It is certainly disquieting to be told time and again that, despite liberalisation of credit facilities by almost all the State Governments, the grant of loans to small-scale units is still hampered on account of avoidable procedural delays. If the assistance given to small units is to be timely and effective, it is imperative that the bottlenecks are avoided and procedure simplified. Attention must be drawn here to the urgency of eradicating certain inherent weaknesses to which Mr. Shah made a special reference in his speech. These are:

A large number of units are not in a position to provide even the minimum securities that are required.

They often pay high prices for their raw materials and sometimes have to sell their goods at distress prices, because they do not organise themselves, and fear and shun joint effort.

Practically all small units are working with persons who have learned a technique by experience but are not properly trained, and with out-of-date equipment, with the result that, often, their cost of production is high and quality inferior.

The overall shortage of iron and steel in the country and the difficulties in supplying adequate quantities of proper coal and coke at all centres add to the numerous problems they have to face.

Unless all these weaknesses are overcome, the small-scale industries cannot be expected to play a prominent role in bringing about the accelerated industrialisation of the country.

A very pertinent point which Mr. Shah reiterated in the course of his address was that the small-scale industries would have ultimately to get all their finances from institutional agencies. Having regard to the record of *taccavi*, rehabilitation and other direct loan activities of Government, the supply of credit with a view to the effective fostering of productive enterprise would not, as Dr. B. K. Madan, Principal Adviser, Department of Research and Statistics, Reserve Bank of India, aptly remarked in his article appearing in one of the issues of the *Reserve Bank of India Bulletin*, seem appropriate for being entrusted to direct Government agency. According to Dr. Madan, "institutional agencies like banks and finance corporations making loans on a businesslike basis are much more likely to succeed in setting up effective production units on their feet than disbursement of Government funds through Industries Departments. The objective of future development may, therefore, well be the gradual but effective replacement, in a planned manner, of Government credit by institutional credit."

A Beginning

Viewed thus, it is, indeed, gratifying that a beginning has at least been made now to develop financing by institutional agencies. The information given by Mr. Shah in this regard shows that efforts are being made to get State Financial Corporations appointed as agents of the State Governments for handling this work so that delays caused in scrutinising applications, etc., by departmental agencies may be reduced and the transactions are commercialised. State Financial Corporations in U.P., Andhra Pradesh, and Bombay have already started doing this work. Urban co-operative banks are also being organised in different areas for giving loans to small-scale industries. All the 12 State Financial Corporations are advancing long- and medium-term loans to small industries from out of their own funds under their present rules and regulations. They have by now sanctioned an amount of Rs. 2.4 crores to 284 small industrialists. The State Bank of India has also introduced a pilot project of providing working capital to small industries in 36 towns on liberalised terms and conditions. By the end of November 1957, they had sanctioned an amount of Rs. 150 lakhs to 260 parties. The Reserve Bank is also examining the possibilities of placing some of the small industries on their approved list to provide them credit through the co-operative banks.

Apart from financial aid, organisation also plays a notable part in ensuring speedy and smooth development of small industries. Reference may be made here to the setting up of industrial co-operatives. We are told that, since independence, the number of such co-operatives has gone up from a mere 3,000 to over 20,000. The latter figures include 5,600 each of handloom and small-scale industries societies, 5,200 cottage and village industries societies, 370 handicrafts societies, 250 coir societies and 2,980 miscellaneous. The Minister for Industries wanted this number to be doubled or trebled in the coming years. In his opinion, the very liberal assistance given to co-operatives should make it easy to spread them as much as possible. But there is dearth of competent, well-trained co-operative functionaries, the co-operative workers who, as Mr. Shah rightly called, "would be the central point or fulcrum of good and successful industrial co-operatives." The Government's move to hold a special seminar shortly at Delhi to discuss all the problems of industrial co-operatives and to chalk out an intensive programme for their growth and development deserves to be welcomed.

Another important step taken by the Government to assist small industries to which Mr. Shah alluded, relates to the establishment of an Industrial Extension Service, consisting of four regional institutes at Bombay, Calcutta, Madras and New Delhi. Over and above this, there are 14 major and branch institutes and 60 extension centres which advise small units on adoption of improved technical processes; use of modern machinery and equipment; utilisation of local raw materials; hold demonstrations at stationary or mobile workshops; supply designs, drawings and schemes; instruction on proper methods of business management; and act as information centres on various technical matters. By the end of November 1957, over 38,000 parties were provided technical assistance and advice, and more than 36,000 visits were paid by these technical officers and experts. With a view to meeting the requirements of trained personnel in small industries, 114 training-*cum*-production centres have so far been set up in different States; an equal number is likely to be opened in 1958. Already, 1,400 persons have been trained and another 2,000 are undergoing training. The Institutes, it is said, have prepared 75 pamphlets containing model schemes and technical details on different industries. It is proposed to translate these booklets into different Indian languages. Meanwhile, special surveys of important industries in selected areas are being made to supply the industrialists information on the prospects of different industries in the area. Reports on 16 industries in six areas have already been completed and published. As regards direct marketing assistance, during 1956-57, the Director-General of Supplies and Disposals purchased goods worth Rs. 2.75 crores from small industries, in addition to the purchase of *khadi* and handloom products. In the current financial year, a target of Rs. 4 crores is sought to be achieved.

Although the Small Industries Service Institutes have done a good job, there is no denying the fact that the degree of their utility has been limited. This must be attributed to three factors. First, there is the non-availability of suitable technical officers for the vacant posts. Secondly, the publicity given by the Small-scale Industries Board to the activities of the Service Institutes is poor, especially in the rural areas. Thirdly, there is said to be no proper and adequate co-ordination between the Institutes and the Departments of State Governments. In order to remove this deficiency, the Government is contemplating some structural reorganisation of the existing set-up of the Central Organisation in the States. As a first step, a fifth regional institute will be set up immediately at Kanpur, so that the regional redistribution in this organisation is coterminous with the zones in the States Reorganisation Act. Further, from this year onwards, every State will have a separate institute for small-scale industries suited to its needs with a competent director as its head. The technical officers in each region will work in a pool, so that the available technical manpower can be put to the best possible use.

Most Effective Way

Whatever may be the method of assistance —financial and technical—given to the small industries, the fact cannot be disputed that the most effective way of ensuring an orderly and sound development of these industries lies in building up small units not independently but as ancillaries for the production of components and parts required by the large factories. The National Small Industries Corporation must certainly be congratulated on having taken the initiative in this direction. The Corporation, we are told, has succeeded in securing the co-operation of over a dozen large factories for this purpose. The Corporation has also helped the small industries to market their goods through its wholesale depots and mobile sales vans. Export orders for the products have been secured from Russia, Poland and New Zealand for a total value of Rs. 80 lakhs. The Corporation supplies machinery to small units on easy hire-purchase system; by November 1957, nearly 1,050 applications for the supply of over 3,800 machines worth Rs. 2.8 crores had been accepted, and over 608 machines costing Rs. 60 lakhs have already been delivered. It has also supplied more than 1,100 sewing machines to women in low-income groups, in order to enable them to augment their family income. The scheme of machinery supply on hire purchase is claimed to have become extremely popular. It is said that, at the rate at which applications are being received, the Corporation will have to supply machinery worth over Rs. 3 crores per annum in the coming years.

An exhibition displaying nearly 300 items of machinery and equipment manufactured by Hungary is now being held in Bombay at the premises of the Silk and Art Silk Association, Dr. Annie Besant Road, Worli. The exhibits cover, among others, medical implements, laboratory equipment, electronic and electrical instruments for geodesic, nuclear and meteorological purposes, materials testing and measuring appliances for the textile industry, and instruments for plant control. Some of the outstanding items of each group of instruments are: 1551 type double-beam oscilloscope, laboratory signal generator, 272/s type universal measuring bridge for telephone maintenance, 1862 type portable radiation meter, electronic extensometer, Univeka universal electric measuring instrument, neo-laboragraph flour quality tester, geodetical plane table equipment, air samples, lilliput type mercury sphygmomanometer, automatic cotton grader, etc. Arrangements have also been made to give more detailed technical and scientific information on the products displayed. The last day of the exhibition is Saturday next.

PREMIER AUTOMOBILES TO ISSUE DEBENTURES

SHORT-RANGE OUTLOOK UNCERTAIN

IT is common knowledge that the automobile industry is struggling hard to establish itself on a sound financial footing. The Government has given tariff protection to this industry for a period of 10 years. It has also given it the freedom to fix the prices of vehicles in accordance with the cost of production. In return, the industry is committed to implement a programme of progressive manufacture of cars and trucks within the country. This is a difficult undertaking, because, apart from other handicaps, the industry must command sufficient financial resources and it cannot find them easily, as investors have burnt their fingers badly in automobile shares. To some extent, this handicap is the result of the Government's shortsighted policy. While it is anxious to see a strong automobile industry established at an early date, it has placed severe restrictions on the growth of the market for the industry's products through imposition of heavy taxes. The extremely limited character of the market for cars and trucks is, indeed, the principal bottleneck that must be widened first if the automobile industry is to make any headway.

So long as an automobile unit is mainly an assembly shop, it is able to show a moderate profit and pay modest dividends. But, once it starts manufacturing on a progressively expanding scale, its profit-margin begins to thin down. This again is due, to a considerable extent, to the smallness of the Indian market for cars, for, unless manufacturing of parts is done on a large scale, it is not an economic proposition. The experience of Hindustan Motors in the last few years clearly bears out this contention. This Company is well ahead of the Premier Automobiles in the implementation of manufacturing programme, but its profit is less than that of the Premier. While the Premier has been able to pay at least a modest dividend, the Hindustan still seems to be a long way from it. The Premier, too, is beginning to make more and more parts and use more of indigenous products. This will be evident from the following extract from the latest Directors' report adopted at the annual meeting of the Company held at Bombay last week:

"The Company's manufacturing programme is making progress. The machining of various components for the Fiat engine is completed and the Fiat engine is now on the production line. The scheme for the manufacture of transmission and rear axles for Fiat cars has been submitted to the Government for their approval and on receipt of their sanction production of these items would be taken in hand. The progress on Timken axles has advanced considerably. Orders for the machine tools and fixtures required for the manufacture of these axles have been placed and a part of the machinery has already arrived. We expect that, within a few months, we shall be commencing the production of important components for the front and rear axles for trucks. When this is done about 72 to 80 per cent. by value of the components of trucks will have been manufactured in the country.

"It may be recalled that, in our last report, we had mentioned that preparation for the manufacture of sufficient petrol engines for our then estimated production of the Chrysler group of cars and petrol trucks had been completed. A part of our potential, however, in this direction has been rendered unfruitful inasmuch as the demand for these cars has gone down considerably, as a result of the very heavy excise duty which has been imposed by the Government on big cars. This has been further aggravated by the fact that the use of petrol engine is being progressively restricted only to small-wheel base trucks and the vehicles in demand by the Defence Department and that most of the civilian demand is being increasingly diverted to diesel-powered trucks. The manufacture of transmission is progressing satisfactorily. But, here also, in view of the shift in demand for heavier transmission for diesel engines, we had to effect some alteration in our plans and to obtain the permission of the Government for producing five-speed transmission. It is expected that the manufacture of this will commence early next year (that is, 1958)."

As the Company's cars and vehicles begin to have more and more of indigenous components, will its profit also go down? Will it be able to maintain even the modest dividend of 6 per cent. per annum, first paid for the year ended 30th June 1956 and repeated for the following year, 1956-57? While we do not know much to give categorical replies to these posers, it can be said without fear of contradiction that the Company's Chairman (Mr. Lalchand Hirachand) himself did not sound quite optimistic on these points when he addressed the shareholders a few days ago. He actually struck a note of caution about the results for the current year (1957-58). Apart from the excise duty on big cars which has affected their sales, the foreign exchange difficulties will affect the imports of engines and other essential parts not made in this country. The imports of Fiat engines have already been discontinued. Fiat cars were one of the main sources of the Company's revenue hitherto. Their contribution in the coming years will depend on the Company's ability to make the engines here in requisite numbers and as efficiently as is done in Italy and what is more on the popularity of the new Fiat cars fitted with the engines made in this country. Further, the Company has applied for permission to import machinery for the manufacture of transmission and rear axles for Fiat cars on the basis of deferred term payments. The Government's consent is yet to come. The short-range outlook is thus clouded by quite a few uncertain factors. As against this, however, there remains the fact that the Company's management, under the leadership of Mr. Lalchand Hirachand and Mr. Chinubhai Kilachand, will make determined efforts to get over them and to maintain its operations on a profitable scale.

The Company needs more finance to put through its manufacturing programme. With its existing shares quoting at a discount—they are currently standing at Rs. 87 *cum*-dividend—issue of equity capital is out of question. The only way out is debentures. The Company has, therefore, decided to raise Rs. 2 crores by way of debentures. Details of this issue were given to the shareholders by Mr. Lalchand the other day. Out of the proposed Rs. 2 crores, convertible debentures of the value of Rs. 1.60 crores only will be issued for the present. They will carry interest at 6½ per cent. per annum, taxable, and will be redeemed at par at the end of 15 years from the date of allotment, with an option to the Company to redeem them at par at any time after 10 years on giving six months' notice. They will be offered, in the first instance, to the ordinary shareholders of the Company, as they are convertible into 'A' ordinary shares under certain conditions. The necessary arrangements for underwriting the issue are in an advanced stage. From the proceeds of the issue, the Company proposes to pay off the loan of Rs. 45 lakhs due to the Industrial Finance Corporation of India.

Before concluding this review, the results of the Company's operations during 1956-57 may be briefly stated. There was a substantial increase in the turnover. The gross profit was slightly better, though the rise was not commensurate with that in turnover. The point to be remembered, however, is that the upward trend in the Company's earnings was maintained for the third year in succession and the fact that such was possible after suffering a net loss of Rs. 13.84 lakhs as recently as in 1953-54 is, in itself, sufficiently gratifying. The gross profit at Rs. 82.80 lakhs represented a rise of Rs. 4.04 lakhs from Rs. 78.76 lakhs for 1955-56. After setting aside Rs. 22.72 lakhs for depreciation, as against Rs. 23.88 lakhs in the previous year and Rs. 17.01 lakhs for taxation (including Rs. 1.21 lakhs for wealth tax) as against *nil*, the net profit was appreciably lower at Rs. 37.32 lakhs, as compared with Rs. 47.71 lakhs for 1955-56. In view of the sizable reduction in the net profit, the transfer to reserves was cut from Rs. 34.50 lakhs to Rs. 24 lakhs. These for the year under review consisted of Rs. 10 lakhs for contingencies, Rs. 9 lakhs for general reserve and Rs. 5 lakhs for dividend equalisation reserve. The dividend was maintained at 6 per cent., as stated already.

The salient features of the Company's working during the past four years are brought out in the table given below:

(In lakhs of rupees)

	For the year ended 30th June			
	1957	1956	1955	1954
Sales (cars, trucks and spare parts)	18,08.67	14,29.43	12,37.57	2,87.39
Other income	5.66	3.55	3.32	2.39
Closing stocks	2,80.17	2,73.98	1,05.96	2,98.63
Expenses	17,46.72	14,32.24	10,77.00	5,11.76
Gross profit (+) or loss (—)	+82.80	+78.76	+61.23	—13.83
Managing Agents' remuneration	5.75	7.17	3.92	..
Depreciation	22.72	23.88	30.00	..
Taxation	17.01	..	..	..
Net profit (+) or loss (—)	+37.32	+47.71	+27.31	—13.83
Transfer to reserves	24.00	34.50	8.00	..
Loss written off from previous year's credit	..	..	..	..
Dividend—Ordinary	13.04 (6%)	13.04 (6%)	.. ..	0.39 ..
Carry forward	6.32	6.03	5.87	—13.44

It will be seen from the table above that, though the Company's proceeds from sale of cars, trucks and spare parts had staged a smart rise from Rs. 14.29 crores in 1955-56 to Rs. 18.09 crores, the gross profit works out to only 4.5 per cent. of the turnover, as against 5.5 per cent. in the previous year. This is due to the sharp rise in expenses from Rs. 14.32 crores to Rs. 17.47 crores.

The balance-sheet of the Company as at 30th June 1957 shows its paid-up capital at Rs. 220.25 lakhs, all in ordinary shares of Rs. 100 each. As against this, the reserves and surplus stand at Rs. 69.46 lakhs. Secured loans from the Industrial Finance Corporation of India and banks total Rs. 301.79 lakhs and unsecured loans Rs. 11.96 lakhs. In all, the current liabilities amount to Rs. 581.03 lakhs, including a provision for taxation of Rs. 22.93 lakhs. The gross block of Rs. 342.78 lakhs stands depreciated at Rs. 172.85 lakhs. The current assets aggregate Rs. 697.89 lakhs and cover the current liabilities and the provision for taxation by a wide margin of Rs. 116.86 lakhs.

The Rs. 100 fully paid-up ordinary shares are currently quoted at Rs. 87 *cum-div.* On an *ex-div.* basis, the yield works out to 7.41 per cent. per annum.

INDIAN VEGETABLE PRODUCTS

DIVIDEND MAINTAINED

DESPITE a sizable rise in turnover, the earnings of the Indian Vegetable Products Ltd. (Managing Agents: Messrs. Forbes, Forbes Campbell & Co. Private Ltd., Bombay) for the year ended 30th September 1957 are a shade lower than those of the previous year. The gross profit amounts to Rs. 7.38 lakhs, as against Rs. 7.60 lakhs for 1955-56. Even so, it is more than twice the profit (of Rs. 3.39 lakhs) for 1954-55 and constitutes the second best for the four-year period under discussion. The net profit at Rs. 2.32 lakhs is also lower than Rs. 2.71 lakhs for the previous year but is better than Rs. 2.01 lakhs made in 1954-55. The provision for taxation has been raised from Rs. 2.90 lakhs to Rs. 3.92 lakhs but that for depreciation has been lowered from Rs. 68,315 to Rs. 45,888. The amount transferred to general reserve at Rs. 25,000 is also lower, as compared with Rs. 55,000 in 1955-56. The dividend has been maintained at the previous year's rate of 10 per cent. to which level it had been raised from 5 per cent. for the preceding two years.

The following comparative table brings out the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1957	1956	1955	1954
Sale proceeds	2,39.43	2,06.29	1,27.47	1,64.79
Closing stocks of finished products	3.05	5.53	6.34	4.41
Expenses	2,30.87	1,99.01	1,27.11	1,65.77
Gross profit (+) or loss (—)	+7.38	+7.54	+3.27	—0.01
Managing Agents' commission	0.68	1.25	0.31	..
Depreciation	0.46	0.68	0.75	0.75
Taxation	3.92	2.90	0.20	0.46
Net profit (+) or loss (—)	+2.32	+2.71	+2.01	—1.22
Transfer from reserves	..	..	0.22	1.06
To reserves	0.25	0.55	..	..
„ dividend	2.12 (10%)	2.12 (10%)	1.06 (5%)	1.06 (5%)
Carry forward	0.04	0.08	0.04	—1.18

The balance-sheet as at 30th September 1957 shows the Company's paid-up capital at Rs. 21.17 lakhs, all in ordinary shares of Rs. 100 each. As against this, the reserves and surplus amount to a mere Rs. 4.76 lakhs. The gross block of Rs. 24.64 lakhs stands written down at Rs. 4.75 lakhs. Cost of machinery to be erected amounts to Rs. 1.72 lakhs. The current assets, including cash and bank balances at Rs. 11.43 lakhs, aggregate Rs. 42.80 lakhs, against which the current liabilities amount to only Rs. 23.35 lakhs.

The Rs. 100 paid-up shares are currently quoted at par, at which rate the yield works out to 10 per cent. per annum. With exports of Indian *vanaspati* showing a rising trend and with increased home consumption, following enlarged use of *vanaspati* as a substitute for ghee, the prospects for the industry appear to be bright. The margin of profit, however, depends to a large extent on the price of raw materials, an unpredictable factor. For some years now, the supply of oil and oilseeds has not been plentiful and their prices have invariably been against *vanaspati* makers. There has been no worthwhile improvement in this respect since September last and the prospect for the coming months too does not seem to be favourable.

A CORRECTION

In our review of the results of the Kirloskar Electric Company Ltd. for the year ended 30th June 1957, on page 95 of *Commerce* dated the 18th January, the rate of dividend for 1955-56 was stated to be 5½ per cent. per annum. This is not correct. The actual dividend for that year was 6 per cent. per annum.

OUDH SUGAR'S EARNINGS IMPRESSIVE

DIVIDEND HIGHER—TAXATION, TOO, TAKES MORE

THE Oudh Sugar Mills Ltd. (Managing Agents: The Cotton Agents Private Ltd., Bombay) has reported very encouraging results for the year ended 31st July 1957. The Company's sugar mills had a record cane crushing during the year, with the average recovery also showing an improvement over the previous season. These favourable factors were further strengthened by higher sales realisations. The cumulative effect of all these was so marked that even other adverse factors like lower production in the *vanaspati* factory and the unsatisfactory working of the Company's farms have had no effect on the Company's earnings. The latter, on the other hand, have made a strident advance over those in the previous year. The gross profit for the year under review, for instance, amounts to Rs. 63.66 lakhs, as against Rs. 37.82 lakhs for 1955-56, an improvement of Rs. 25.84 lakhs or 68.32 per cent. over the year.

The net profit also stands higher at Rs. 19.76 lakhs, as compared with Rs. 12.01 lakhs for the previous year. But, as compared with the rise in gross profit, the growth in net profit is disproportionately smaller, because of the heavy incidence of taxation. The provision for taxation, it may be noted, has shot up from a mere Rs. 8.45 lakhs in 1955-56 to as much as Rs. 25.58 lakhs. The amount set apart for depreciation is modestly higher at Rs. 12.75 lakhs, as against Rs. 10.50 lakhs a year ago. A welcome feature of the appropriation of profit is the decision of the Directors to plough back a larger sum into the business than was done a year earlier. Thus, a sum of Rs. 9.52 lakhs has been conserved, as against a mere Rs. 2.92 lakhs. These are in the form of Rs. 5 lakhs to renovation and renewals reserve and Rs. 4.52 lakhs to capital redemption reserve. The addition to the latter reserve is in furtherance of the Directors' decision to redeem in full the Company's four per cent. taxable first cumulative redeemable preference shares of Rs. 25 each. During the year under review itself, 18,151 of such shares were redeemed and the balance will be paid off in due course. The conservative policy of the Directors in regard to payment of dividend has also undergone a slight revision in favour of the shareholders, in that it has been stepped up to 12½ per cent. from 11 per cent., at which rate it had been maintained for the previous four years in succession.

The following comparative table shows the Company's progress during the past four years:

(In lakhs of rupees)

	For the year ended 31st July			
	1957	1956	1955	1954
Sales and shipments	6,88.18	5,82.11	3,79.25	5,15.09
Other income	3.71	6.43	0.61	0.61
Closing stock	1,45.51	1,48.13	1,17.81	69.64
Expenses	6,25.61	5,82.20	4,02.80	4,49.88
Gross profit	63.66	37.82	24.98	33.66
Managing Agents' remuneration	5.57	6.86	3.96	6.09
Depreciation	12.75	10.50	7.00	8.00
Taxation	25.58	8.45	5.40	8.50
Net profit	19.76	12.01	8.62	11.08
Transfer to reserves	9.52	2.92	..	2.00
Dividend—				
Preference	0.89	0.41	0.41	0.41
Ordinary	8.69 (12½%)	8.52 (11%)	8.52 11%)	8.52 (11%)
Carry forward	0.86	0.21	0.05	0.87

As stated at the outset, the sugar mills had a record cane crushing during the 1956-57 season. Thus, a total quantity of 12.49 million maunds of cane were crushed during the year, as against 10.53 million maunds in 1955-56. Along with this, the recovery of sugar also improved from 9.59 per cent. to 9.73 per cent. The working results of the Company's farms were, however, not satisfactory due to lower yield per acre as a result of infestation of cane crop. Due to inadequate supplies of raw materials, there was a slight reduction in the output of the Company's *vanaspati* factory also, production for the year being only 14,700 tons, as against 16,900 tons in the previous year. The quantity of power alcohol and spirits at 959,000 gallons was also lower than 1,010,000 gallons produced in 1955-56.

The paid-up capital of the Company as at 31st July 1957 stands reduced from Rs. 90.22 lakhs in the previous year to Rs. 85.68 lakhs. This is due to the redemption of the 18,151 first cumulative preference shares as aforesaid. Of the present capital, Rs. 77.48 lakhs are in ordinary shares and the balance in 4 per cent. taxable and tax-free first and second redeemable cumulative preference shares of Rs. 25 each. These are supplemented by reserves and surplus aggregating Rs. 64.84 lakhs. The current liabilities amount to Rs. 166.18 lakhs. Of these, secured loans from a bank account for Rs. 77.82 lakhs, unsecured loans for Rs. 10.25 lakhs and provision for taxation for Rs. 38.07 lakhs. The gross block of the value of Rs. 215.99 lakhs stands well written down at Rs. 97.74 lakhs. The current assets aggregate Rs. 218.97 lakhs and cover the current liabilities and the provision for taxation by a comfortable margin.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 123.75 *ex-div.*, at which rate, and on the basis of the latest dividend, the yield is 10.1 per cent. per annum.

Points From The Chair

I.M.F.'s Weakness

"....Our preoccupations during the next phase may become those of deflation rather than inflation. I am not, of course, predicting that this will in fact happen; I merely suggest that we must take the possibility into account. Should the course of events take this direction, it means that, if the Bretton Woods system is to work successfully, the policies followed by creditor countries will be of decisive importance. It is true that a deficit country persisting in inflationary courses will not only aggravate its own difficulties but tend to infect other members of the system with the inflationary virus. The sanctions against such behaviour, however, are quite strong; the country in question is liable to get into a bad crisis in its balance of payments, involving the loss of gold or other reserves. It is the lack of any sanction of similar strength against over-restrictive policies on the part of surplus countries that is perhaps the least satisfactory of the Bretton Woods rules. There is, of course, the so-called 'scarce currency' clause, but a deflationary trend might already be fairly advanced before that became operative and would not necessarily be reversed by it. In the meantime, a country with gold coming in is not absolutely compelled to expand credit; it can sterilise the addition to its exchange reserves and may in this way inflict more damage upon the rest of the world trading community than lies within the power of any deficit country. One might say that, if over-expansionist policies can be suicidal, over-restrictive policies are undoubtedly fratricidal."

THE RT. HON. SIR OLIVER FRANKS,
Lloyds Bank Ltd., London.

The Clerical Guild

"You may be interested to learn a little about the Staff Associations in the Bank, particularly about the Clerical Guild, since the occasional Press references which appear on this subject are often misleading and often directed towards the discrediting of a system such as that obtaining in Westminster Bank. The Guild was established in 1919 and is very representative of the clerical staff at all levels. It enjoys a 70 per cent. membership of the total of our active clerical staff and if one leaves out those with less than three years' service that is to say, the bracket in which there is a considerable turnover in present conditions—the proportion of possible membership is approximately 80 per cent. It can thus be seen that the Guild is a truly representative body and that its elected representatives, who come along to head office on a variety of problems, speak with a great weight of opinion behind them. These meetings, I may say, take place quite frequently and can be called by either the Bank or the Guild. They are conducted in such an atmosphere as to permit of a very full and frank exchange of views on both sides of the table and, although agreement on all points cannot always be achieved, a better understanding of the other side's point of view invariably results. In addition, there is in being a formal Arbitration Agreement completed in 1956, by the Bank and the Guild which can be invoked by either party, although I hope the need will never arise.

THE RIGHT HON. LORD ALDENHAM,
Westminster Bank Ltd., London.

U.K. Trying To Do Too Much

"For 12 years in this country (the U.K.), we have been attempting to do more than our resources can manage and, in the process, we have been gravely weakening ourselves. We have been trying to be a nuclear power with large conventional force as well, and maintain the Welfare State at a high level. It has meant that, over 12 years, we have slithered from one crisis to another. It has meant that the pound sterling has sunk from 20s. to 12s. That is a picture of a nation in full retreat from its responsibilities. The simple truth is that we have been spending more money than we should. It is not the sluice gate that is at fault. The plain fact is that the water is coming over the top of the dam. The basic problem, whether it is in the Welfare State or arms, or both, is that we should plan to spend less than we are planning to spend at the present time and unless we do so the pound sterling is going to continue to decline in value. Higher taxation has already reached the point where most men admit that it is inflationary in itself. A new method of paying for the social services may well be right, but it is only a new form of taxation. I believe there is an England that would prefer to face these facts and make the necessary decisions now. I believe that living within our resources is neither unfair nor unjust, nor perhaps, in the long run, even unpopular. Self-interest and honour alike demand that we should take the necessary steps to hold the value of our money."

PETER THORNEYCROFT,
Ex-Chancellor of the British Exchequer.

COMPANY MEETINGS AND DIVIDENDS

CENTRAL HYDRAULIC PRESS CO., LTD. Annual General Meeting, Calcutta, 5th February 1958. Dividend: Rs. 10.00 per share (includes bonus of Rs. 4.00 per share). Transfer books remain closed from 25th January to 5th February 1958, both days inclusive.

TYROON TEA CO., LTD. Annual General Meeting, Calcutta, 6th February 1958. Dividend: Rs. 4.50 per share (includes interim dividend of Rs. 2.00 per share. Transfer books remain closed from 25th January to 6th February 1958, both days inclusive.

CALICO PROCESSORS LTD. Annual General Meeting, Bombay, 10th February 1958. Transfer books will remain closed from 1st to 10th February 1958, both days inclusive.

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 10th February 1958. Dividend: Rs. 10.00 per share. Transfer books will remain closed from 4th to 10th February 1958, both days inclusive.

GANNON DUNKERLEY & CO. LTD. Annual General Meeting, Bombay, 12th February 1958. Dividend: Rs. 6.00 per share. Transfer books will remain closed from 5th to 19th February 1958, both days inclusive.

MYSORE CHROME TANNING CO., LTD. Annual General Meeting, Bangalore, 13th February 1958. Transfer books remain closed from 1st to 14th February 1958, both days inclusive.

MALWA SUGAR MILLS CO., LTD. Annual General Meeting, Calcutta, 15th February 1958. Transfer books will remain closed from 5th to 15th February 1958, both days inclusive.

SCINDIA STEAM NAVIGATION CO., LTD. Annual General Meeting, Bombay, 19th February 1958. Dividend: Re. 1.25 per share, payable on or after 26th February 1958. Transfer books were closed from 18th November 1957 to 17th December 1957, both days inclusive.

ROOPACHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 20th February 1958. Transfer books will remain closed from 8th to 20th February 1958, both days inclusive.

PROFIT OF NEW SWADESHI SUGAR HIGHER

RESULTS OF MORE ELECTRIC COMPANIES

New Swadeshi Sugar Mills Ltd.

THE directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th June 1957.

The profit and loss account after providing Rs. 2,39,136 (Rs. 2,50,000) for depreciation shows a profit on the year's working of Rs 8,87,687 (Rs. 5,94,827). To this amount is added the amount brought forward from the previous year of Rs. 6,269 (Rs. 5,317) making a total of Rs. 8,93,956 (Rs. 6,00,144). Provision for taxation absorbs Rs. 5,81,226 (Rs. 3,02,000) and provision for welfare and charities Rs. 34,000 (Rs. 20,000). Thus there is an available balance for disposal of Rs. 2,78,730 (Rs. 2,78,144). From this amount the directors recommend payment of dividend on 13,211 ordinary shares of Rs. 100 each at the rate of Rs. 20.00 (Rs. 20.00) per share free of income-tax, absorbing Rs. 2,64,200 (Rs. 2,64,220) and on 1,531 quarter ordinary shares of Rs. 25 each at the rate of Rs. 5.00 (Rs. 5.00) per share, free of income-tax absorbing Rs. 7,655 (Rs. 7,655) leaving to be carried forward Rs. 6,855 (Rs. 6,269).

The directors are glad to report that during the year under review a record crushing of about 40,54,600 maunds of cane was achieved surpassing the previous record of 39,30,875 maunds of cane crushed in the season 1955-56. It is regretted, however, that the average recovery was only 9.2 per cent. during the year as against an average recovery of 9.9 per cent. in the previous season. The fall in the recovery is attributable to disappearance of better variety of cane, red-rot epidemic and irregular rainfall. The mills worked satisfactorily.

The Company's farms yielded about 3 lakh maunds of cane as against about 4 lakh maunds in the previous season. The cause for the shortfall in production lay in smaller area under cane and larger area under ratoon and the crop having been affected by diseases.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,59,375	Block ...	46,73,412
Reserves ...	49,91,797	Stock-in-trade	38,72,707
Provision for taxation ...	10,42,255	Stores, chemicals, spare parts, etc.	4,93,132
Liabilities ...	49,87,730	Debts, deposits and advances ...	23,51,855
Profit and loss account ...	6,855	Investments	6,40,193
		Cash ...	3,56,713
Rs.	1,23,88,012	Rs.	1,23,88,012

Salem-Erode Electricity Distribution Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1957.

The revenue account shows a profit on the year's working of Rs. 3,86,026 (Rs. 3,70,380). After deducting from this arrears of depreciation Rs. 115 (Rs. 116), bonus to employees Rs. 42,968 (Rs. 24,648), provision for taxation Rs. 52,327 (Rs. 36,500), provision for wealth tax Rs. 9,300 (*nil*), reserve for contingencies Rs. 23,196 (Rs. 19,958) and appropriations—Under paragraph II of the Sixth Schedule to the Electricity (Supply) Act, 1948 Rs. 63,942 (Rs. 1,29,208) there is a net profit for the year of Rs. 1,94,178 (Rs. 1,59,866 after providing Rs. 190 for gratuity fund). After adding to this Rs. 25,231 (Rs. 22,417), the balance brought forward from the previous year, and Rs. 1,255 (Rs. 202) on account of forfeited dividends and after deducting therefrom Rs. 4,453 on account of loss on conversion of investments, there is a credit balance of Rs. 2,16,211 (Rs. 1,89,201) on profit and loss account out of which the directors have transferred Rs. 70,000 (Rs. 50,000) to general reserve. The directors recommend that the balance of Rs. 1,46,211 (Rs. 1,39,201) be disposed of as follows:—

Dividend in respect of 6½ per cent. cumulative redeemable preference shares for the year ended 31st December 1956, without any deduction for income-tax payable by the Company—(already paid) Rs. 26,000 (Rs. 26,000), pay a dividend on the ordinary shares of 10 (10) per cent. for the year ended 31st March 1957, without any deduction for income-tax payable by the Company Rs. 87,970 (Rs. 87,970) and carry forward Rs. 32,241 (Rs. 25,231).

With reference to the special resolution dated 25th October 1957, passed by the Company appointing, with retrospective effect from 15th January 1957, Messrs. Octavius Steel & Co., Ltd., as its secretaries and treasurers the necessary approval of the Government of India in regard to the appointment has since been received.

The Indian Electricity Rules 1956 were enforced with effect from 26th June 1956. A continuous supply of energy was maintained throughout the year. The number of units sold during the year recorded a slight decrease as compared with the previous year, on account of restrictions in supply imposed by Government due to low water level conditions both at the commencement and end of the year under review. The Madras State Electricity Board was formed on 1st July 1957.

Consumers connected and units sold.—The number of consumers and the load connected to the Company's system at 31st March 1957 are as follows:—

	No. of consumers	*Connected load in K.W.*
Salem	12,059 (11,028)	13,950 (12,524)
Erode	3,226 (3,011)	3,334 (3,198)
Villages	2,097 (1,742)	3,770 (2,939)
Total ..	17,382 (15,781)	21,054 (18,679)

The total number of units of electricity sold during the year was 23,171,982 (23,487,473).

Rural Electrification.—Supply was extended during 1956-57 to the villages of Pudur, Pallitherupatty, Sandiyur, Sandiyur Attayampatty, Ammapalayam and Devendragoundanoor. Supply was extended to Karuppur village in April 1957 and electrification of six more villages will be taken up for execution in 1957-58 when a loan of Rs. 10 lakhs is sanctioned by Government. A scheme to extend H.T.. supply to the Dalmia Magnesite Corporation Ltd. is under execution.

The Company's business continues to expand at a satisfactory rate and prospects are considered good.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,79,775	Block ...	26,92,242
Reserves ...	9,41,304	Meters and transformers not in operation ...	1,20,428

Liabilities ...	18,94,114	Debts, deposits and advances ...	3,65,778
Profit and loss account ...	32,241	Investments	2,13,611
		Cash ...	2,91,985
Rs.	41,96,955	Rs.	41,96,955

Tinnevelly-Tuticorin Electric Supply Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1957.

The revenue account shows a profit on the year's working of Rs. 2,99,878 (Rs. 2,69,232). After deducting from this arrears of depreciation Rs. 3,986 (Rs. 3,989), bonus to employees Rs. 38,798 (Rs. 36,827), gratuities Rs. 2,333 (Rs. 451), underprovision in respect of income-tax for 1955-56 Rs. 1,422 (Rs. 56,500 for taxation), provision for wealth tax Rs. 8,500 (*nil*), reserve for contingencies Rs. 20,299 (Rs. 8,366) and appropriations under paragraph II of the Sixth Schedule to the Electricity (Supply) Act, 1948 Rs. 65,834 (Rs. 15,757), there is a net profit for the year of Rs. 1,58,706 (Rs. 1,42,589 after writing off Rs. 4,753 in connection with expenses relating to issue of preference shares). After adding to this Rs. 21,047 (Rs. 13,512), the balance brought forward from the previous year, Rs. 811 (Rs. 427) on account of sundry items, and deducting therefrom Rs. 4,912 (profit of Rs. 93) in respect of loss on sale of investments and transferring Rs. 30,000 (Rs. 30,000) to general reserve, there is a balance of Rs. 1,45,652 (Rs. 1,26,621) on profit and loss account which the directors recommend be disposed of as follows:—

To pay a dividend in respect of 6½ per cent. cumulative redeemable preference shares for the year ended 31st December 1956, without any deduction for income-tax payable by the Company—(already paid) Rs. 29,250 (Rs. 8,574), to pay a dividend of 10 (10) per cent. in respect of the ordinary shares for the year ended 31st March 1957, without any deduction for income-tax payable by the Company Rs. 97,000 (Rs. 97,000) and to carry forward Rs. 19,402 (Rs. 21,047).

With reference to the special resolution dated 25th October 1957, passed by the Company, appointing with retrospective effect from 15th January 1957, Messrs. Octavius Steel & Co., Ltd., as its Secretaries and Treasurers the necessary approval of the Government of India in regard to the appointment has since been received.

Consumers connected and units sold.—The following table shows the number of consumers and the load in k.w. connected at 31st March 1957.

	No. of consumers	*Connected load in K.W.*
Tuticorin	4,827 (4,530)	8,250 (7,570)
Tinnevelly and Palamcottah ..	9,362 (8,760)	7,656 (6,897)
Villages	422 (214)	554 (344)
Total ..	14,611 (13,504)	16,460 (14,811)

During 1956-57 the total number of units of electricity sold was 16,844,241 (16,960,723).

Extension of supply.—H.T. supply was extended to the Municipal Head Water Works, Manapadai in December 1956.

Rural electrification.—Supply was extended during 1956-57 to the villages of Karungulam, Mannirpallam, Tharuvai, Kootampuli and Kulayankarisal out of the loan of Rs. 3 lakhs sanctioned by the Government of Madras. The electrification of eight more villages will be taken up for execution in 1957-58 when a further loan of Rs. 7 lakhs is sanctioned by Government.

The Company's business continues to expand satisfactorily and prospects are considered good.

Accounts in brief were as under:—

Rs.	35,86,683	Rs.	35,86,683

Muttra Electric Supply Co., Ltd.

The directors of the above Company (Chairman: Mr. G. D. Bhagat, Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1956.

Applications for electrification of the towns of Raya, Gokul, Baldeo, Mahaban and Goverdhan in the district of Mathura have been submitted with the Government of Uttar Pradesh and the director-in-charge has been able to get the Government department concerned agreed for the issue of the licences in favour of the Company by the end of this year or early in 1958.

As indicated in the directors' report for the year ended 31st March 1956, there has been appreciable increase in the number of consumers, with a consequent improvement in the revenue position. This has resulted in a considerable excess of clear profit over reasonable return, making a reduction in rates to consumers possible, and the Government of Uttar Pradesh has already referred the matter to the Rating Committee to modify our scale of charges.

Satisfactory progress has been maintained during the period under review as indicated in the following schedule:—

Year ended	*Units sold*	*Revenue* Rs.
31st March, 1955	31,87,103	5,39,119
31st March, 1956	36,25,664	6,41,067
Half-year ended 30th September, 1956	21,62,850	3,95,620

After providing for all charges and placing Rs. 3,802 (Rs. 3,183) to statutory contingencies reserve and Rs. 25,864 (Rs. 22,427) to Director-in-Charge's remuneration (which is payable subject to the approval of the shareholders in the next ordinary general meeting) and bringing forward Rs. 15,088 (Rs. 9,915) from the half-year ended 31st March 1956, there remains a balance of Rs. 46,913 (Rs. 37,372) available for distribution and this the directors recommend be disposed of as follows:—

Payment of a dividend at 8 (6) per cent. per annum free of income-tax for the half-year ended 30th September 1956 Rs. 27,988 (Rs. 20,991) and carrying forward to next half-year Rs. 18,925 (Rs. 11,381 after placing Rs. 5,000 to general reserve).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,99,850	Block ...	8,11,534
Reserves ...	1,67,564	Stores, spare parts and tools, etc.	1,84,248
Provision for taxation ...	86,006	Debts, deposits and advances ...	2,02,173
Liabilities ...	6,41,233	Investments	1,38,967
Profit and loss account ...	18,925	Cash ...	2,76,656
Rs.	16,13,578	Rs.	16,13,578

Central Hydraulic Press Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1957.

The accounts show a profit of Rs. 1,37,129 (Rs. 66,695) of which taxation requires Rs. 78,000 (Rs. 30,000). The balance brought forward from last year was Rs. 26,289 (Rs. 13,957) making a total available for appropriation of Rs. 85,418 (Rs. 1,08,421 including Rs. 42,769 being profit on investments sold in previous years and Rs. 15,000 being excess provision for taxation). The directors recommend that a dividend of Rs. 6 (Rs. 6) per share and a bonus of Rs. 4 (*nil*) per share be paid Rs. 50,000 (Rs. 30,000) leaving a balance to be carried forward of Rs. 35,418 (Rs. 26,289 after providing Rs. 15,000 for taxation reserve and Rs. 37,132 for reserve for depreciation of investments).

The Company's presses and ancillary plant were disposed of during the year under review realising Rs. 56,528 more than their written-down value, and the Board considers that, in view of this non-recurring profit, part of the distribution to shareholders should be in the form of a bonus.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	1,45,213
Reserves ...	2,47,132	Investments	6,99,501
Provision for taxation ...	76,028	Debts, deposits and advances ...	33,992
Liabilities ...	54,731	Cash ...	34,603
Profit and loss account ...	35,418		
Rs.	9,13,309	Rs.	9,13,309

WORLD'S OCEANS MAY PROVIDE LIMITLESS POWER

BRITISH EXPERIMENTS ENCOURAGING

CONTROL of thermonuclear reactions for the generation of electricity may well be a possibility for the future, according to the United Kingdom Atomic Energy Authority. In a statement issued on 24th January 1958, the Authority said that, whereas atomic power was now based on the splitting of atoms, experiments were being made to produce power by the joining of atoms. The following is the text of the announcement:

"Research at Harwell with the latest apparatus has led British scientists to the conclusion that control of thermonuclear reactions for electricity generation may well be a possibility for the future, though its practical application is still a long way off.

"The operation of present atomic-power reactors is based on the fission (or splitting) of atoms. The possibility now being explored is the harnessing of power from the fusion (or joining) of atoms, which provides the heat for the stars.

"Results obtained from the Harwell apparatus ZETA suggest that 'thermonuclear neutrons' have been obtained, but further experiments will be necessary before this can be proved conclusively. Temperatures reached in this apparatus have been as high as 5,000,000° C., higher than the measured surface temperatures of any star.

"Many major problems have still to be solved before its practical application can be seriously considered, and the work must be expected to remain in the research stage for many years yet. *If it proves ultimately possible to construct a power station operating on the fusion of deuterium, the oceans of the world will provide a virtually inexhaustible source of fuel.* (Italics ours.—Ed.)

"On 12th August 1957, a large experimental apparatus for studying the controlled release of energy from thermonuclear reactions was started up at the Atomic Energy Research Establishment, Harwell. On 30th August this apparatus was first operated under conditions that produced nuclear reactions; neutrons emitted in these reactions were observed when deuterium gas was heated electrically to temperatures in the region of from 2,000,000° to 5,000,000° C. The hot gas was isolated from the walls for periods of two to five thousandths of a second. The heating process was repeated every 10 seconds.

"The high temperatures achieved, together with the relatively long duration for which the hot gas has been isolated from the tube walls, are the most important experimental results obtained so far. Whilst much longer times (perhaps several seconds) are required for a useful power output, there appears to be no fundamental reason why these longer times, together with much higher temperatures, cannot be achieved.

The source of the observed neutrons has not yet been definitely established. There are good reasons to think that they came from thermonuclear reactions, but they could also come from other reactions, such as the collision of deuterons with the walls of the vessel, or from the bombardment of stationary ions by deuterons accelerated by internal electric fields produced in some forms of unstable discharge.

"In the ZETA apparatus, the number of neutrons produced by each pulse of energy as the current was doubled was roughly that which might be expected from a thermonuclear reaction at the measured temperatures. These temperatures have been definitely established."

Principle of Apparatus

As the Atomic Energy Authority has stated in its last two Annual Reports, research has been in progress for some years into the possibility of producing energy in a controlled manner from thermonuclear reactions. Over two years ago, the design began of a large installation for this work, and in August 1957 the apparatus called ZETA (which stands for Zero Energy Thermonuclear Assembly) started up, with the results described in the Atomic Energy Authority's announcement.

The reaction being studied in ZETA is that in which deuterons (nuclei of the heavy hydrogen isotope deuterium) collide with one another and fuse to form heavier nuclei, releasing energy and some neutrons in the process.

The principle adopted in ZETA is to pass a large electric current through deuterium gas. This current sets up an electric discharge in the gas (analogous to the discharge in a neon sign) which heats it and also produces an intense magnetic field around the column of hot gas. This magnetic field causes the discharge to become constricted, and hence heated still more.

Since it also causes the discharge to wriggle about this field by itself, it is not enough to keep the discharge away from the walls. The wriggling has been suppressed by applying an additional steady magnetic field parallel to the axis of the tube.

While temperatures in the region of 2,000,000° to 5,000,000° C. are needed to explain the observed rate of neutron production on the basis of a thermonuclear process, electric fields in the gas arising from instabilities can also accelerate deuterium ions and lead to nuclear reactions. It is not, therefore, altogether certain that the observed neutrons come from a thermonuclear reaction. Experiments are continuing to study details of neutron-producing processes.

In order to obtain a net gain in energy from the reaction, it would be necessary to heat deuterium gas to temperatures in the region of 100,000,000° C., and to maintain it at this temperature long enough for the nuclear energy released to exceed the energy needed to heat the fuel and lost by radiation. Lower temperatures would suffice for a deuterium-tritium mixture.

The high temperatures achieved in ZETA and the relatively long duration for which the hot gas has been isolated from the tube walls are the most important experimental results obtained so far. There are, however, many major problems still to be solved.

Research work in the field of controlled thermonuclear reactions is also being carried out at the A.E.I.—Associated Electrical Industries—research laboratory (Director: Dr. T. E. Allibone) at Aldermaston, Berkshire, on behalf of the Atomic Energy Authority and with the advice of Sir George Thomson. Experimental work was started at the Imperial College by Sir George Thomson in 1947. It was moved to the A.E.I. laboratory in 1951. Senior members of the staff engaged are Mr. D. R. Chick and Dr. A. A. Ware.

Full collaboration in the field of controlled thermonuclear reaction was established with the United States in October 1956.

Cockcroft Traces Progress For Newsmen

The future possibility of limitless power from the sea, and of creating on earth temperatures far exceeding that at the centre of the sun, was held up to newsmen from many countries when they visited Harwell on 23rd January to get their first glimpse of ZETA, writes a London correspondent.

ZETA has helped to bring this dream a step nearer to reality by reaching a measured temperature of 5,000,000° C., thus opening up the immense prospect of turning the H-bomb to peaceful purposes.

The starting-point was the study made by Cockcroft and Walton at the Cavendish Laboratory, Cambridge, in 1932 into nuclear reactions between light elements. It was found that nuclei of heavy hydrogen, speeded up by high voltages, could join (or fuse together) with other nuclei of heavy hydrogen to form helium, producing neutrons and energy in the process. Now, a quarter of a century later, the same Cockcroft—now Sir John Cockcroft, Head of Harwell—was able to review the spectacular progress that has been made since then. "We know that processes of this kind provide the energy and heat of the stars," he said. "Our sun has a central temperature of about 15,000,000° C., and, at this temperature, the nuclei of light elements can move about so fast that fusion reactions can occur."

It has long been the ambition of scientists to emulate the stars, and to produce in the laboratory temperatures so high that useful energy could be produced from fuel reactors.

"I consider that to have achieved temperatures which are a third of those at the centre of the sun, and to hold them for so long, is a remarkable scientific achievement, and I have no doubt that, within a year ZETA, with some modifications, will far surpass the sun's central temperature," said Sir John. At the present time, energy produced in the fusion reaction was only about one millionth of a millionth of the energy input. "We intend to increase the current circulating in ZETA by the provision of more condensers; temperatures should then rise substantially," Sir John said. But even when a temperature of 25,000,000° C. was reached, the amount of energy produced in ZETA would be small as compared with the energy input.

Sir John said that, in order to break even, they would have to produce temperatures of at least 100,000,000° C. in deuterium gas and about

(Continued on page 203)

Notice

THE CENTRAL INDIA SPG., WVG. AND MANUFACTURING COMPANY, LTD.

NOTICE

THE EIGHTY-THIRD ANNUAL GENERAL MEETING of THE CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Friday the 14th March, 1958, at 4-30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June 1957, and the audited Balance Sheet as at 30th June 1957.

(2) To appoint a Director in the place of Mr. K. M. D. Thackersey who retires by rotation and is eligible for re-appointment.

(3) To appoint a Director in the place of Mr. M. M. Amersey, who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution of which a special notice, as required by Section 281 of the Companies Act, 1956, has been received by the Company:

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. M. M. Amersey, who has attained the age of 67 years and retires by rotation, be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

(4) To appoint Auditors for the current year and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statement, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under item 3 set out above, is annexed hereto.

(*b*) *A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.*

(*c*) The Transfer Books of the Company will be closed from Friday, the 7th March, 1958, to Tuesday, the 18th March, 1958, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents.
T. V. BADDELEY.
Director.

BOMBAY, 28th *January* 1958.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

The following explanatory statement, as required by Section 173 of the Companies Act, 1956, sets out the material facts relating to the special business under item 3 mentioned in the Notice dated the 28th January, 1958.

Mr. M. M. Amersey, a Director of the Company, who retires by rotation and is eligible for re-appointment has attained the age of 67 years and he cannot therefore be appointed a Director of the Company except by a resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item (3). Mr. M. M. Amersey has been a Director of the Company for the last 10 years. He is a businessman of wide and varied experience, and throughout his association with the Company, has rendered valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed a Director.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents.
T. V. BADDELEY.
Director.

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 29th *January*

The short-term money market continued to rule easy for yet another week. Despite the fact that two months of the traditional busy season had passed, there was a perceptible slackening of demand for credit and, with an expansion in supplies following the release of funds locked up in cloth stocks, banks were more comfortably placed in regard to meeting their day-to-day requirements. There was, however, no decline in interest rates. Inter-bank call money was placed at 3 per cent. among the Exchange banks and large Indian banks and at 3½ per cent. among the smaller banks. House money at call was quoted at 4½ to 4¾ per cent. and short-term deposits at 4½ to 4¾ per cent. for one to six months.

A contraction of Rs. 6.62 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 24th January 1958. Notes held in the Banking Department are higher by Rs. 7.28 crores and the fractional rise in total notes issued is covered by a similar increase in rupee coin. There has been no change in rupee securities or foreign securities, but foreign balances (in the Banking Department) have declined by Rs. 2.31 crores. A rise of Rs. 10.31 crores is noted in deposits of the Central Government, while deposits of other Governments have fallen by Rs. 7.50 crores. Deposits of banks have gone up by Rs. 8.65 crores. Loans and advances to Governments show a rise of Rs. 1 crore, while other loans and advances have declined by Rs. 10.72 crores, of which advances to Scheduled banks alone account for Rs. 9.28 crores.

The Scheduled banks' statement for the week ended 17th January 1958 discloses a sharp rise of Rs. 14.98 crores in demand deposits, while time deposits are a fraction lower. Borrowings from the Reserve Bank have fallen by Rs. 1.84 crores. There has been an increase of Rs. 7.16 crores in advances and of Rs. 1.85 crores in bills purchased and discounted. Cash balances are up by Rs. 2.40 crores, but money at call and short notice has shrunk by Rs. 2.20 crores.

The Gilt-edged market showed no signs of liveliness. Barring a few enquiries in selected issues, activity was restricted. The undertone, however, remained steady. 3 per cent. 1986 Conversion Loan was featureless at Rs. 71.05. 3 per cent. 1970-75 had sellers at Rs. 85.70. 3 per cent. 1966-68 had buyers, but the quotation was unchanged at Rs. 91.65. 3 per cent. 1964 held its own at Rs. 94. 3 per cent. 1963-65 gained 10 nP to Rs. 93.80 and 3 per cent. 1959-61 5 nP to Rs. 99.10. 3½ per cent. 1961 was marked up by 5 nP to Rs. 99.70 and 3¾ per cent. 1964 by a like amount to Rs. 97.75. 3¾ per cent. 1965 was on offer at Rs. 97.55, while 3¾ per cent. 1967 was featureless at Rs. 97.60. 3¾ per cent. 1967 had buyers at Rs. 99.60. Among the State loans, 4 per cent. Bombay 1967 put on 5 nP to Rs. 98.30. Madras 1967 gained 5 nP to Rs. 97.40 and 1968 10 nP to Rs. 97.40. U.P. 1967 and 1968 were marked up by 25 nP and 20 nP, respectively, to Rs. 97.40.

The rupee ruled steady in terms of the U.S. dollars. While banks' selling rate of ready dollars was unchanged at Rs. 475.50 per $100, their buying rate shaded off from Rs. 472.25 to Rs. 472 per $100. Sterling was featureless, but it ruled steady. In New York, spot sterling moved between $2.81-7/16-2.81-9/16 and $2.81¼-2.81⅜, before finishing 1/16c. better at the latter level. Three months' forward advanced from $2.79-1/16-2.79-3/16 to $2.79¼-2.79⅜ and transferable sterling from 278.75-278.85 cents to 278.85-278.95 cents.

COPPER HARDENS FURTHER

(From Our Own Correspondent)

CALCUTTA, 28th *January*

While electrolytic copper maintained the higher trend during the week under review, other base metals eased fractionally mainly following the expectation that the import policy which would be formulated for the six months commencing April next would provide for more imports of metals. The new U.S. loan in the amount of $225 million and assistance from West Germany, France, and other countries would ease the foreign exchange shortage situation considerably, and the market noted with cheer that U.S. assistance would be continued over and above the present offer amount. There were indications that the execution of the projects under the second Plan would gather momentum in the next few months, and this would mean larger consumption of metals. Thus, market circles hoped that current restrictions on import of metals would be relaxed markedly in the near future. While this expectation affected tin and lead, electrolytic copper, after opening at Rs. 167, hardened to Rs. 168.50. The labour trouble in the Calcutta port having ended, there were clearings of copper too from waiting steamers. These arrivals could not relieve the shortage. More steamers carrying copper were anticipated in the next month, but the quantity is expected to be insignificant compared to demand. However, the situation should improve with the anticipated arrival of a fair quantity of copper under the Colombo Plan. In the meantime, an easier tendency was reported in both New York and London. In the U.S., customs smelters were reported likely to reduce their selling price further.

Electrolytic zinc was quiet at Rs. 53.50, although for a time the rate sagged to Rs. 53. Consumers bought just to meet their day-to-day requirements only, as stocks in the market were plenty. Tin dropped to Rs. 511 at one time from Rs. 545 following fresh arrivals. Lead eased to Rs. 59 from Rs. 60. Only little business was put through.

SILVER EASY, GOLD FIRM

(From Our Own Correspondent)

BOMBAY, 29th *January*

A feature of the trading in the bullion market during the week under review was the divergent trends presented by silver and gold. In contrast to the bullish trend displayed in the previous three weeks, silver was a shade easy and suffered a setback in prices, while gold presented a firm tone. Following the widening of the *budla* charges from As. 12 to Re. 1 against them in silver, the bulls would appear to have diverted their attention to the yellow metal, in which the *budla* against sellers widened from just an anna to As. 8. Consequently, the carry forward charges against buyers in silver once again declined to As. 12 today.

The fall in price of silver in New York and London markets and reports of heavy arrivals of coins from Tibet were the other factors which induced the "bulls" to lighten their commitments in this metal. The fact that the actual daily arrivals into the local market were far less than the daily offtake was ignored. In contrast to silver, gold ruled distinctly firm. The bulls derived great comfort from (*a*) scarcity of floating stocks, (*b*) good seasonal demand from upcountry centres, especially in South India, and (*c*) reports of further seizure of smuggled gold.

Forward silver (February settlement) was marked down from Rs. 188-15 to Rs. 187 before closing today at Rs. 187-15. The March settlement finished a rupee lower over the week at Rs. 188-11, after declining to Rs. 187.

Ready silver fell from Rs. 188-6 to Rs. 186-14, but improved slightly to close at Rs. 187-11. The discount at which the ready metal was quoted under the current settlement narrowed down from As. 8 to As. 4, consequent on the decline in floating stocks from 1,500 bars to 1,300 bars and the improvement in offtake. The daily average arrivals were of the order of 10 bars, while the offtake was higher at 20 bars per day.

Gold for forward delivery (February settlement) gained from Rs. 110.9 to Rs. 111.4 and finished at Rs. 111 today. The March settlement moved narrowly and closed on balance without any change at Rs. 110-8.

Ready gold moved up from Rs. 110-13 to Rs. 111-6. The floating stocks of gold are unchanged at 20,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was over 4,000 tolas per day.

In New York, silver was marked down from 89½c to 88½c. Following this, London prices also declined, the spot metal from 77d. to 76½d. and the forward from 76¾d. to 75¾d. Gold was steady with movements confined to a narrow range. On balance, it was ¼d. lower at 248s. 8¾d.

The following comparative table shows at a glance the trend of the market during the week under review:

	29-1-58	Highest	Lowest	22-1-58
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	111 6	111 8	110 14	110 13
Forward*	111 0	111 4	110 9	110 9
