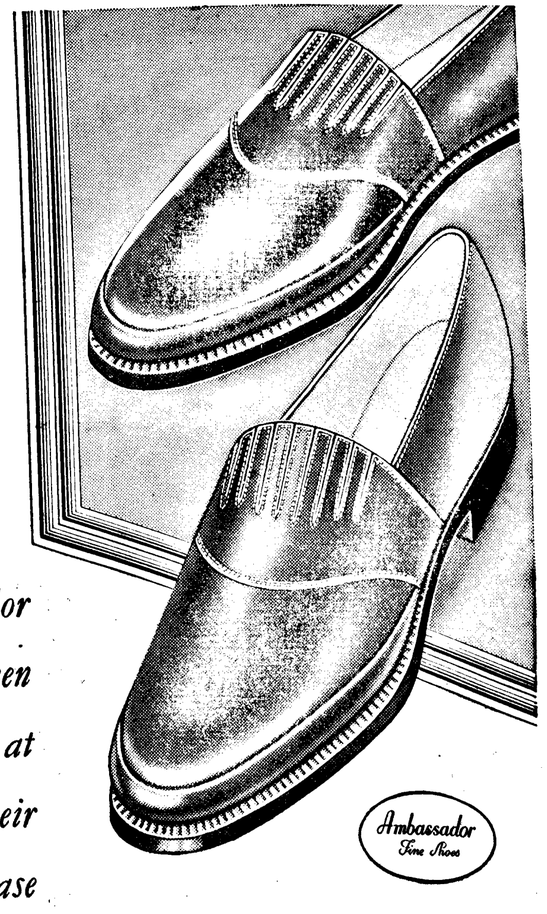
THE PROFIT OF THE RAJNAGAR TEA COMPANY HAS improved from Rs. 26,027 to Rs. 94,452 for the year ended last December. Providing Rs. 73,763 for taxation, there is Rs. 20,689. Bringing in Rs. 1,66,870, the available balance amounts to Rs. 1,87,559. Taxation provision for previous years absorbs Rs. 34,080. The dividend is increased from 10 percent to 11 percent, leaving a carry-forward of Rs. 1,18,279. The crop fell from 5,127 maunds to 4,701 maunds, but the average sale price rose from Rs. 1.77 to Rs. 1.97 a lb. Estimates for 1958 provide for a crop of 4,800 maunds at a cost of Rs. 6.64 lakhs.

THE KYANG TEA SEED COMPANY HAS MADE A PROFIT of Rs. 10,816 for the year ended last December, against Rs. 22,200. The dividend is lowered from 7½ percent to 5 percent to absorb Rs. 10,000. The carry-forward is Rs. 502, against Rs. 869 brought in. The seed crop amounted to 300 maunds.

Bombay Market

STRIKE NEWS AND BORDER TROUBLES HIT SENTIMENT



COTTON SHARES IDLE

Wednesday Afternoon.

THE Bombay stock market closed in a subdued mood last week and share prices slumped on heavy liquidation because of the deterioration in the strike situation at Jamshedpur. Operators were inclined to take a cautious view of Indo-Pakistani relations.

As a result of a decline in the prices of steel shares, other industrials were also shaded in the absence of interest. During the early part of the week, there was selective support in the miscellaneous group. Cotton mill shares were idle as operators were inclined to await the outcome of the conference between the Union Minister for Commerce and Industry and cotton interests to be held in Bombay in the near future.

Tata Steel declined to Rs. 176 and Indian Iron were lowered to Rs. 21.08 in sympathy. Buyers were conspicuous by their absence. Other engineerings, except Larsen and Toubro, and Mahindra and Mahindra, fell in sympathy. Alcock Ashdown were available at Rs. 244.50 and Premier Construction were bought at Rs. 180.50. Tata Locomotive lost at Rs. 164 on profit-taking. Good corporate news helped lift Larsen and Toubro to Rs. 16.16 and Mahindra and Mahindra improved to Rs. 19.50

For men at their ease

Style 17. A handsome casual styled to perfection with mudguard front and concealed elastic gores. Your foot slides in and out easily, yet you enjoy snug stay-in comfort. Soft pliable upper leather and leather sole for extra walking ease.

Bata *Ambassador*

ISSUED BY BATA SHOE CO PRIVATE LIMITED

on prospects of expansion in activity. Fluctuations in automobile shares were narrow, and Premier Automobile came to hand at Rs. 79, while Hindustan Motor were freely offered at Rs. 6.72.

Cotton mill shares tended to be lower as it was feared that the Government was unlikely to consider any further reduction in the cloth excise duty. Bombay Dyeing were transacted at Rs. 53.20 and Kohinoor were available at Rs. 263. Century were taken at Rs. 420 and Simplex changed hands at Rs. 152.50. Svadeshi were lowered to Rs. 168 and Standard Mills were bought at Rs. 385. India United Ordinary were freely offered at Rs. 9. Apollo were placed at Rs. 1.74.

Miscellaneous shares were shaded on balance. In the sugar group, Belapur softened to Rs. 243.50 and Phalton were quoted at Rs. 141. Cement shares were quietly steady on the expectation of a rise in the retention price of the commodity. Associated Cement changed hands at Rs. 147.50 and Digvijay Cement were dealt in at Rs. 142. Mining shares were subdued on an unpromising export outlook for minerals. Shivrajpur Syndicate declined to Rs. 80.20. Steamship company shares were fairly steady on hopes of expansion in tonnage. Scindia Steam were taken at Rs. 17, but Great Eastern Shipping lost at Rs. 19.96 on pressure. National Rayon came to hand at Rs. 228.50 and Tata Chemical were transacted at Rs. 14.64.

Prices of bank shares were maintained, though turnover was restricted. Bank of India were bought at Rs. 129.75 and United Commercial Bank were offered at Rs. 59. In the insurance group, New India Assurance jumped to Rs. 49.50 on excellent corporate news.

Electricity supply company shares were steady on quiet investment buying. Tata Power were bought at Rs. 1,211.25 and Ahmedabad Electric were placed at Rs. 94.40.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week Lowest for the week, Closing Quotations Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise.]

Now is the time to trade with

South East Asia

Rising standards of living open new markets for Indian goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—*their ability to buy*. The Indian Overseas Bank with branches in several strategic centres has made a special study of this important growing market and can help you solve your trading problems.

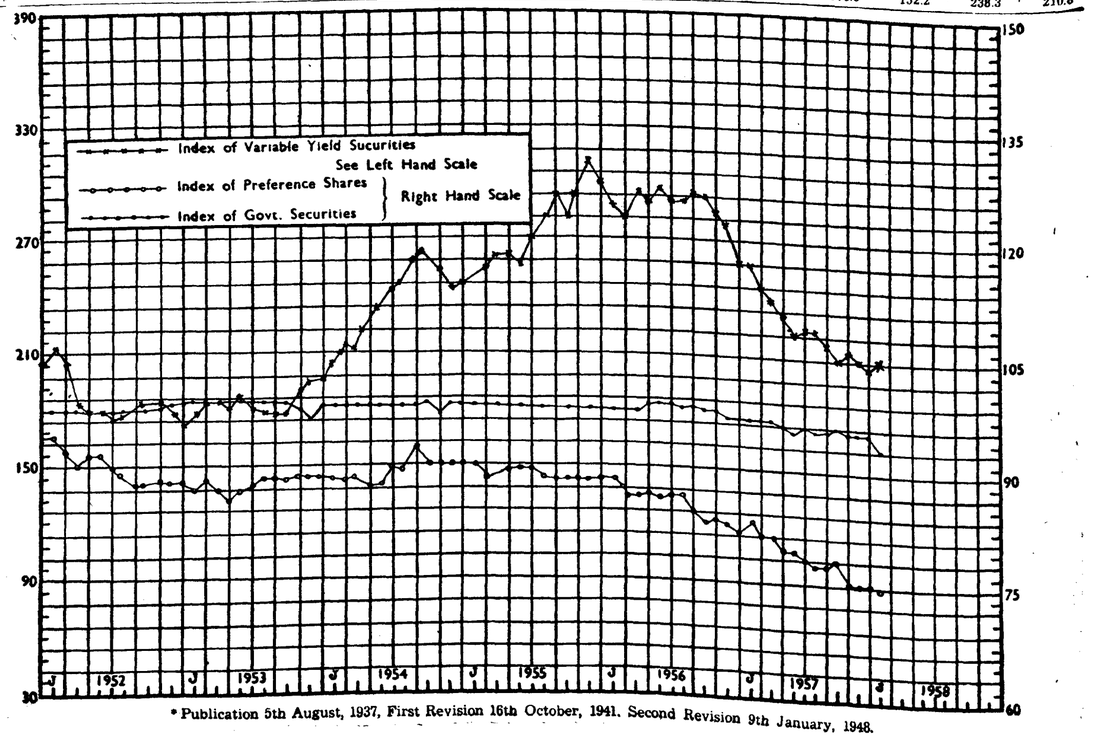
The INDIAN OVERSEAS BANK Limited, MADRAS

Branches at: Bombay, Calcutta, Madras, New Delhi, Hyderabad and throughout South India. *Overseas Branches:* Rangoon, Colombo, Ipoh, Kuala Lumpur, Penang, Singapore, Malacca, Bangkok, Hong Kong.

Agents and Correspondents all over the world

Chairman: M. Ct. MUTHIAH

General Manager: C. P. DORAIKANNU



"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (base: 1939) has now been brought up to January 1958. Compared with December, the January indices for Government securities and preference shares show drops of 1.7 points and 0.7 points, respectively.

There were increases in coals 10.7 points, minings and oils 1.8 points, cements 5.0 points, engineerings 8.8 points, miscellaneous 12.3 points and banks 3.1 points, while decreases occurred in cottons 1.2 points, teas 17.7 points, papers 111.3 points and sugars 4.0 points. Jutes remained unchanged at 82.5 points.

Correlating all the factors, the *Capital* variable yield securities index advanced by 2.7 points during January 1958.

	Index of Govt Securities	Index of Preference Shares	Variable-Yield Securities. Banks	Cotton Mills	Coals	Jute Mills	Mining and Oil	Cement Lime etc	Eng. and Metal Works	Tea Shares	Paper Mills	Sugar Shares	Others	Combined Index.

INDIA FACES NEW FOREIGN EXCHANGE CRISIS

EXPORT DRIVE MAKING LITTLE PROGRESS

(FROM OUR NEW DELHI CORRESPONDENT)

INDIA is in the grip of a fresh foreign exchange crisis. Her net weekly drawings from her sterling balances have lately been about Rs. 5.8 crores. The export drive has not made much headway. On the contrary, exports, particularly to Britain, declined by £23 million during the first three months of the current year, compared with the same period in 1957. In spite of food shortages, India has been forced to cut her fertiliser imports by half, and funds have been refused for the import of small items such as nylon finishing nets. Drastic cuts in industrial raw material imports are beginning to have repercussions on the volume of production. Due also to the scarcity of spares, several industries have had to slow down—engineering industries being among the worst sufferers. Foreign assistance has given a welcome relief on payment of bills, or has provided finances for the most urgent projects. But it has not provided funds for importing raw materials or spares urgently needed to maintain production. The situation is being anxiously watched.

The question, however, is whether there is any short-term remedy for such periodical crisis. One view here is that there is a definite remedy. It lies in re-thinking and re-adjusting the policy of a progressive enlargement of the public sector. Take the case of oil, for example. The policy of building refineries exclusively in the public sector is largely responsible for holding up the rapid development of the oil resources found in Assam some two years ago. As it is, the money for the pipeline is being found by the private sector. The Rumanians did offer to supply India with the refinery equipment on credit, but they have yet to submit their project report estimates for the refinery, and their terms for advancing credit.

It may be the Government's obsession to have two refineries in the public sector at any cost, and at anybody's cost. But would it be wise to invite a communist "Trojan horse" to a part of India which has not been peaceful lately on account of the Naga trouble. The communists have been capturing trade unions in India, and they want to dominate all the labour unions in Jamshedpur. It may be interesting also to ascertain the number of labour strikes which have occurred in Rourkela and Durgapur, compared with those in Bhilai. This is, however, by the way. The fact remains that there are a considerable number of projects, which can safely be entrusted to the private sector, without any material sacrifice of the ideology of socialism. Since the Prime Minister has firmly and unequivocally expressed himself against all rigidly doctrinaire approaches, it should not be difficult to apply the principles of socialism a little flexibly now. In case a reorientation of policy is decided on, and the plan is rephased, a considerable proportion of the foreign exchange burden can be shifted to other shoulders, which are waiting to bear it. Looked at from more than one angle, India's foreign exchange crisis is one which could have been avoided and might still lose much of its severity, if ideology and personal factors were less of the guiding principle in economic policy.

Paucity of Internal Resources

The paucity of internal resources has begun to be felt too. The case of sugar co-operative mills points to it. The second five year plan envisages the setting up of 35 co-operative sugar factories, in addition to the 15 which have been established in the first plan period. Licences have been issued for 39 factories, and 24 of these have already made arrangements for the import of machinery. Twelve have gone into production and three are likely to start working shortly. Twelve of these, which have placed orders for machinery, have had difficulty in finding foregn exchange. As for the rest, they have neither the foreign exchange nor the rupee funds. Two factories have been erected from the equipment manufactured in India. The State Trading Corporation has been negotiating with the Polish and Czech Governments to supply machinery for payment in Indian rupees. The Government may agree to this plan if internal finances are available. Even the Industrial Finance Corporation is short of funds to finance these projects. India is no longer deficient in sugar supplies. On the contrary, there is an exportable surplus. This makes it more difficult for the Government to divert funds to other sources to finance sugar factories.

India-China Rupee Agreement

China and India are negotiating a "rupee agreement" which is designed to facilitate the speedy exchange of certain essential goods, it is learned. Under the proposed agreement, India is expected to export chrome ore, tobacco, pepper, shellac and machine tools from the State factory to the tune of Rs. 2 crores. China, in her turn, will supply India with chemicals, including caustic soda and soda ash, newsprint and certain machine tools for a similar amount.

Take-over of Jessops Management

The following was the official release on the Government's taking over the management of Jessops. "In February 1958, it was brought to the notice of the Government of India that Jessop and Co. Ltd., Calcutta, was passing through a severe financial crisis. On a preliminary examination of the facts, the Government had reason to believe that this industrial undertaking was being managed in a manner highly detrimental to the scheduled industries in which it was engaged, and to the public interest and also that there was likely to be a fall in its production. In the circumstances, on 12th March, 1958, the Government ordered an investigation into the affairs of this company under Section 15 of the Industries (Development and Regulation) Act. The Committee appointed to carry out this investigation, has submitted its report to the Government. The report shows that while this undertaking has adequate technical management at the top level, its financial position is extremely unsatisfactory, mainly as a result of the gross mismanagement of its funds by certain private parties who were closely associated with its management till recently.

"After considering the report and after examining the working of the said undertaking, the Government of India has come to the conclusion that Jessop and Co. Ltd. is working in a manner highly detrimental to the scheduled industries and to public interests. The Government has, therefore, decided that this undertaking, which is engaged in works of great national importance, should be placed under a stable and sound management. In exercise of the powers conferred by Section 18A(1)(b) of the Industries (Development and Regulation) Act, 1951, the Government of India has appointed a board of management to take over the management of the whole of this undertaking. Mr. B. P. Singh Roy, president of the Federation of the Indian Chambers of Commerce and Industry, will be the chairman of the board of management. The other members of the board are: Dr. B. D. Kalelkar, Industrial Adviser (Engineering), Ministry of Commerce and Industry; the Secretary to the Government of West Bengal, Industries Department; Mr. S. D. Srinivasan of the Life Insurance Corporation of India; Mr. S. S. H. Sitwell; Mr. C. V. Graham; Mr. C. E. Cargin and Mr. A. H. Mitchell. The last four members of the board are at present technical directors. Mr. T. D. Markan, who has already been lent to Jessop and Company Ltd., by the Life Insurance Corporation of India, will be the Secretary of the Board. One more member will be added to the board of management shortly to function as a whole-time financial controller. These arrangements, which will be in force for a period of three years, have been announced in a *Gazette Extraordinary* of the Government of India."

Injunction Order on B.I.C. Directors

Reports from Allahabad show that Mr. Justice Upadhhya of the Allahabad High Court has issued an interim injunction restraining Mr. Haridas Mundhra, chairman, and six other directors of the British India Corporation, Kanpur, from acting as directors of the concern and from dealing with the assets and property of the British India Corporation, its subsidiary companies and other concerns which it either owns or controls, in any manner whatsoever. The Court has also restrained the company from doing anything prejudicial or detrimental to the interest of the petitioner, the Life Insurance Corporation of India, Bombay. The above order was passed by the Court on an application moved by the Life Insurance Corporation praying that the High Court appoint a special officer to take charge of the assets, management and affairs of the B.I.C. in complete suppression of the powers of the existing board of directors. It was further prayed that an interim order be passed *ex parte* during the pendency of the application. The application was admitted and ordered to be put up for hearing on 22nd May. The Life Insurance Corporation also filed an application praying for an interim order pending the consideration of the original application for the appointment of a special officer to take charge of the assets, management and affairs of the British India Corporation. The plaintiff is the registered holder of 747,513 fully-paid ordinary shares of Rs. 5 each and 1,485 preference shares of Rs. 100 each.

Export Promotion Mission

The Central Deputy Minister of Commerce, Mr. Satish Chandra, is shortly leaving for Russia and other east European countries on an export promotion mission. Trade with these countries has been on the increase, largely due to the activities of the State Trading Corporation, and the bilateral trade agreements which provide for payment for imports in Indian rupees and purchase of Indian goods through this medium. Several countries have set up rupee development funds to which are credited payments for the import of goods into India. These funds are used for the purchase of specified Indian goods.

Although Mr. Satish Chandra has adequate background and enough experience for undertaking such a mission, the utility of trade promotion bodies in general and of participation in trade fairs, needs careful and impartial evaluation. This should also cover the Trade Commissioners' Organisation. Literally, crores of rupees are being spent on these organisations and missions, but they have achieved precious little up to now.

Indo-U.K. Trade Declines

India's trade with her best customer, the U.K., has declined in the three months ended March. Her exports fell to £32,337,000 from £55,396,000 in the same quarter of 1957. This shows a drop of £23,059,000. During this period, tea exports were halved—falling sharply in value from £34,883,000 in 1957 to £17,071,000 in 1958. Other notable articles of Indo-U.K. trade in which there was a decline are as follows:

	First quarter 1958	First quarter 1957
	(in £'000)	
Leather, leather manufactures and dressed furs	4,195	2,788
Wool and other animal hair and tops	1,335	854
Cotton	1,059	292
Miscellaneous textile fibres and waste	281	152
Crude fertilisers and crude minerals, excluding fuels	633	477
Miscellaneous animal and vegetable crude materials	1,505	707
Animal and vegetable oils, fats, greases and derivatives	1,361	905
Miscellaneous textile manufactures	4,267	2.794

Foreign trade is not a one-way traffic. How far India's restrictive import policy is responsible for the fall in her exports has yet to be ascertained fully. During the three months ended March, India's imports from the U.K. declined from £47.869.000 in 1957 to £39.987.000 in 1958. Even machinery imports declined by £3 million, as the following figures show:

	January-March 1958	January-March 1957
	(in £'000)	
Boilers and boler-house plant	504	1,227
Internal combustion engines	823	316
Agricultural and track-laying tractor machinery	315	182
Office machinery	303	149
Machine tools	920	1.018
Pumps	278	161
Industrial and works trucks, etcetera	880	1,053
Excavating and earth-moving machinery	389	566
Mining and well-drilling machinery	164	176
Printing and book-binding machinery	210	222
Textile machinery	2,326	1,130
Generating sets, etcetera	933	1,002
Converting machinery, etcetera	1,625	1,534
Electronic valves and radio, etcetera	565	295
Telegraph and telephone equipment	236	66
Electric cables, wires, etcetera	1,636	1,083

Revised Programme for State Steel Works

A reference was recently made in these columns to the difficulties in keeping up to the target dates of commissioning the two steel plants, specially that in Rourkela, and to the discussions which took place between the Secretary of the Central Iron and Steel Ministry, Mr. S. Bhoothalingam and the representatives of Krupps-Demag, who came out to India. These discussions have solved the difficulties. According to the revised programme, the first blast furnaces in Rourkela and Bhilai will be completed about the same time towards the end of 1958 In the Rourkela steel works project, 1959 will see the completion of two more blast furnaces, as well as the open hearth melting plant, and the L.D. converter. Steel will begin to be produced in Bhilai before the end of 1959. The Bhilai steel plant is designed to operate on coke produced from a blend of 50 percent of Jharia, 30 percent of Bokaro-Kargali and 20 percent of Korba coals. The ash content of these coals, it is assumed in the detailed project report, is 22 percent.

The washery for Bokaro coals is under construction in Kargali. It will go into operation within a couple of months. The washing of Jharia coals presents a problem of a different kind and it is immensely more complex. Whereas the Bokaro deposits are mined only at two places, there are hundreds of collieries working the Jharia seams. The seams are also numerous and they vary considerably in their characteristics. This has meant a large number of washability tests before specifications could be drawn up, and it will be some months before the washery will be ready. In the meantime, it is the intention to use selected unwashed coals for the Jharia field. These coals have to be shared by all the steel works. In the initial stages, therefore, out of 1.8 million tons of coal, 500,000 tons will be from Bokaro-Kargali and the balance from Jharia. With this broad allocation, the Government has directed Hindustan Steel to plan actual supplies in consultation with the Coal Controller and the collieries concerned, to ensure that supplies are regular and according to specifications.

Iron Ore for Bhilai

Iron ore for Bhilai will be drawn from mines which are being developed in Rajahara about 50 miles away from the plant. Preliminary investigations have shown that there are adequate reserves, and the iron ore is rich in certain layers.

The steel plant will require nearly 1.94 million tons of iron ore annually. The mine has been designed by a team of Indian and Russian experts. Contracts have been concluded with Russia for the supply of plant and equipment. Preparatory work such as the levelling of the site, construction of a colony, etcetera, has been taken up. Detailed working drawings are being obtained from Russia. For the first 12 to 15 months of operation of the steel works, it is proposed manually to collect and use "float ore". Arrangements have been made for the collection of float ore, and it has already started. A minimum of 1,500 tons of ore is to be collected every day and loaded into wagons. The contract for the collection is up to about the middle of 1959, when the iron ore mines in Rajhara are expected to go into operation.

Limestone quarries are being developed in Nandini at a distance of about 12 miles. Plant and equipment for these quarries will be obtained from Russia. Until mechanisation is completed, the quarries will be worked manually. About 33,000 tons of manganese ore, required for blast furnace operations, will be obtained from the market. Other raw materials such as quartzite, wanzite, magnesite, ferro-manganese, ferro-silicon, ferro-chrome, copper, bauxite, sulphur, etcetera, which are required in relatively small quantities, are also to be purchased from the market.

Coal Production Programme

The National Coal Development Corporation has re-assessed the production programme for coal by 1960-61 as follows:

	Million tons	Million tons
1. Korba		1.6
2. Kathara		1.5
3. Central India Coalfields:		
(a) Korea	0.5	
(b) Kurasia (extra production from extension of the existing colliery)	0.5	1.0
4. Karanpura:		
(a) Gidi	1.5	
(b) Sounda	1.2	
(c) Bachra	0.6	
(d) Bhurkunda II	0.7	
(e) Chordhara	0.5	
(f) Sayal and Gidi A	0.5	5.0
5. Expansion of the existing collieries		0.5
6. (Where further examination is necessary)		
Walanda (Orissa)	0.5	
Kotma (C.I.C.)	0.5	1.0

The team of British engineers, which has been advising the Government of India on the site and lay-out of a new shipyard, has recently presented its findings in a report in London. The report, with a gaily coloured model of the proposed shipyard, will be sent to India immediately. The site of the shipyard will be chosen by the Government of India. Five places have been chosen as "possibles sites" out of the 20 visited by the team, and the scheme is adaptable to any site. The British team, led by Mr. James Lenaghan, visited India last autumn under the joint auspices of the Colombo Plan and the U.K. Shipbuilding Conference.

The model of the proposed shipyard shows a neatly devised project ranging from a steel working shop to a fitting-out berth. A dry dock will hold a vessel up to 850 feet long and with a beam of 120 feet. Nearby are the associated workshops. Two twin shipways, 900 feet long by 120 feet, will hold four ships of up to 12,000 d.w.t. or one large vessel of about 60,000 d.w.t. could be built. The whole is designed as an easily controllable unit, adaptable to available man-power. The members of the mission, whose experience covered every aspect of such an undertaking, were: Mr. James Lenaghan, director of Fairfield Shipbuilding and Engineering Co. Ltd. and of Lithgows Ltd.; Dr. P. W. Blythe, Chief Civil Engineer of constructors, John Brown Ltd; Mr. W. G. N. Geddes, civil engineer and partner in Babtie Shaw and Morton; Mr. D. K. Nicholson, director of Production-Engineering Ltd.; and Mr. R. F. C. English, of Deloitte, Plender, Griffiths and Co., chartered accountants.

Development Council for Oil-based Industries

The Central Minister for Industry, Mr. Manubhai Shah, has requested soap manufacturers to use non-edible oils to the maximum possible extent and conserve edible oils, such as groundnut and coconut oils. He has said this while inaugurating the Development Council for oil-based industries, comprising soap, paints and plastics. Referring to the paint industry, Mr. Shah has pointed out that the foreign exchange spent on imports of raw materials is of the order of Rs. 1.5 crores a year. It is necessary for the industry to develop indigenous raw materials and increase the production of pigments and nitrocellulose lacquers and finishes based on synthetic resins.

This is the 13th Development Council set up so far under the Industries (Development and Regulation) Act Mr P. A. Nariolwala of the Tata Industries (Private) Limited, Bombay, is its chairman. The Council has 21 members including representatives of the three industries and of labour. It will recommend to the Government production targets, co-ordinate production programmes and review the progress of the industries from time to time. It will also suggest norms of efficiency with a view to obtaining maximum output, improving quality and reducing costs. Among its other functions will be the promotion of standardisation of the products and measures for increasing the productivity of labour and for general labour welfare.

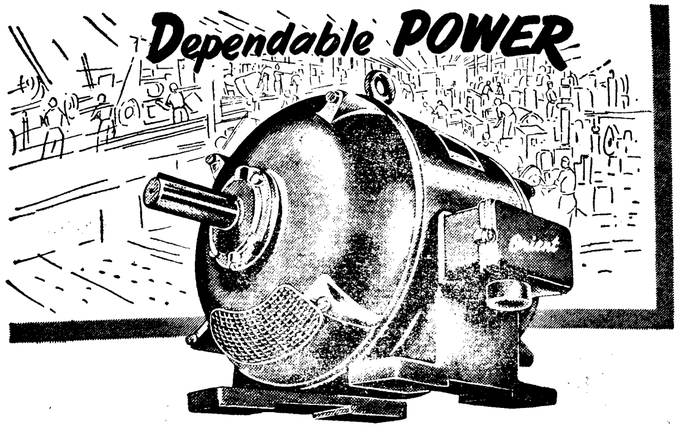
Mining of Lignite

The integrated Neyveli lignite project envisages the mining of 3.5 million tons of lignite a year to be utilised as follows: (i) 1.5 million tons—250,000 kW thermal power station; (ii) 0.5 million tons—urea containing 70,000 tons of nitrogen to be used as chemical fertilisers; (iii) 1.5 million tons—714,000 tons of raw lignite briquettes to yield on carbonisation 380,000 tons of carbonised briquettes for use as domestic and industrial fuel.

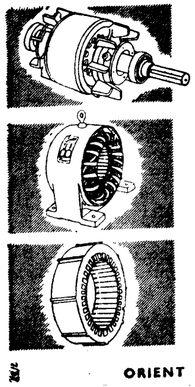
Mining part: A total volume of 27 million cubic yards of overburden will have to be removed before the lignite is exposed for mining by the open-cast method. As against this quantity to be removed by the middle of 1960, about 3.1 million cubic yards have been removed up to 31st March, 1958. By the end of the current year, it is expected to remove a further quantity of about 2.5 million cubic yards. The tempo of removal of overburden will increase from about March 1959, by which time the specialised mining machinery is expected to be available. The production of lignite will commence by the middle of 1960 in small quantities. Full production at the rate of 3.5 million tons a year is scheduled to commence by December 1961.

Thermal power station: This is being set up under the Russian 500-million rouble credit. For the preparation of the project report, the memorandum of instructions has been given to the Russian organisation, which is expected to submit the project report by September 1958. The first unit of 50-mW capacity is expected to be commissioned by January 1961, and full production of power will begin by the end of 1961.

Fertiliser plant: The Government has approved the setting up of a fertiliser plant producing 152,000 tons of urea, containing 70,000 tons of nitrogen a year, for being used as chemical fertiliser, at an estimated cost of Rs. 21 crores, subject to adequate foreign exchange credit being available. The plant is expected to go into full production by the end of 1961. It will thus be seen that it will be rather premature to talk of "a yearly target of production" at this stage. The four components of the project are scheduled to come up side by side so that by December 1961, full production of lignite might be 3.5 million tons and its utilisation on the spot might be assured, the storing of lignite being a dangerous thing.



Reserves of Pyrites in Amjore



From the data available from the exploratory operations carried out by the Geological Survey of India and the Kachwar Limestone Company, it appears that the indicated and proved reserves of pyrites in Amjore are of the order of 50,000 tons with an average content of 40 percent to 45 percent sulphur, though the inferred tonnage might be as much as 700,000 tons to 750,000 tons. A total of 2,941 feet of drilling had been carried out up to the end of March 1958, in Amjore in nine bore holes. Pyrites has been encountered in seven bore holes. The sulphur content of Amjore pyrites varies from 38.99 percent to 46.14 percent. At present, only about half a square mile of area between Amjore and Ghoga is being explored with the object of proving about 2.25 million tons of pyrites so that it can be mined at the rate of 100,000 tons a year to ensure an output of 30,000 tons of sulphur a year. Assuming a thickness of 31in. of pyrites bed in an area of 40 square miles, the potentiality of the zone can be assessed, in a manner similar to that done in a coalfield and the reserves are estimated to be of the order of 200 million tons. When ore reserves of the order of 2 million tons have been proved, the national Industrial Development Corporation proposes to set up a plant for the manufacture of elemental sulphur. It is expected that this plant will produce about 35,000 tons of sulphur annually.

Machinery for Heavy Electrical Project

Orders for the supply of machinery worth over Rs. 4.5 crores for the first phase of the heavy electrical project in Bhopal are expected to be placed with the Associated Electrical Industries at an early date. Negotiations are believed to be under way in London to conclude a deferred payment agreement with the Associated Electric Industries under which the entire machinery required for the Rs. 4.5-crore heavy electrical project will be supplied by A.E.I. Payments will be spread over a period of eight years. A certain percentage of the total payment, probably 10 percent, will have to be paid as soon as the agreement is signed between the British firm and the Government of India. A committee of experts of the Central Ministry of Commerce and Industry, meanwhile, has recommended that at least Rs. 60 lakhs worth of machinery for the first phase of the Bhopal project can be purchased locally.

A senior officer of the Bhopal plant, Mr. Desangs, is proceeding to the U.K. very soon to supervise the purchases of machinery in Britain by A.E.I. and study production methods at the firm's factory there. The Deputy Chief Engineer and the Chief Instructor are also proceeding to the U.K. to supervise the training of technicians sent out from India. Instructors numbering over 120 have already been recruited by the authorities for the training-cum-production school in Bhopal which will start functioning from 1st January, 1959 instead of 1st July. The time-lag of six months is sought to be made up by finishing the training of the first batch of students—over 1,500 of them—in 18 months instead of two years, the prescribed period of training.

BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.

Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.

Best insulating materials are used both in the slots and on the windings to give long life.

Dynamically balanced pressure die cast rotors are truly indestructible.

Uniflow forced draft ventilation system keeps belt dust away from the rotor.

These and several other features make ORIENT motors truly DEPENDABLE.

U.K. EXPORTS REACT TO RECESSION IN WORLD TRADE

THE CITY VIEW OF CURRENT DEVELOPMENTS

(FROM OUR LONDON CORRESPONDENT)

THE international scene could hardly be less encouraging, and the outlook in Britain is none too bright either, but the City has decided to take an unusually individual line and not allow itself to be stampeded. Even the visit to Washington for discussions of Sir Leslie Rowan, Second Secretary at the U.K. Treasury, and Sir Robert Hall, the Government's economic adviser—which led to all kinds of repercussions the last time—has hardly caused a ripple. Such market fluctuations as have taken place, and they have been few and not very significant, have been the outcome of special circumstances applying to each particular commodity or company. A "wait and see" attitude seems to be fairly general, with the successful outcome of the offer to the railwaymen and the expectations of further reductions in Bank rate as the real guiding factors to the possibility of "taking a view" as to the future.

British exports are at last showing some reaction to the recession in the world trade. After expanding steadily for several years, they have just held their own in the first quarter of 1958, and in April they have fallen off a little. But as imports were also lower than of late, in value if not in volume, the "trade gap" is still small compared with the average of recent years. Exports in April were valued at £265.5 million, 3 percent less than the monthly average in the first quarter. In the first four months of 1958, exports were 1½ percent less in value than a year ago. The value of imports in April was £310.9 million, almost the same as the monthly average in the first quarter. In the first four months of this year, imports have cost 11½ percent less than a year ago. Re-exports were unusually low in April at £11.8 million, 14 percent less than the monthly average in the first quarter. This was part of the reason why the "trade gap" rose to £33.6 million, £7 million more than in March and £10 million more than the monthly average in the first quarter. In the first four months of 1958, the average monthly gap was still £36 million less than in the same period of 1957.

Fall in Shipments to the U.S.

There was a sharp drop in shipments to the United States during April, but those to Canada increased, and the total exports to north America at £36.2 million were 4½ percent more than the monthly average in the first quarter. The trend of dollar exports is still good, but no longer rising steeply; in the first four months of 1958, they were 1 percent more than a year ago (after excluding the silver bullion repayments of last year). It is hoped that the setback here is no more than a temporary trend, but the general picture indicated by the April returns is a warning even though it may not be particularly discouraging.

Finance Bill Changes

The Finance Bill started on its long journey through the House of Commons last week with a long, but more than usually entertaining exposition of its provisions by the Financial Secretary to the Treasury, Mr. Simon, the reiteration of the Opposition's well-known criticisms, and the inevitable division on the second reading to furnish the Government with another substantial majority. Mr. Simon has announced one change which will give relief from estate duty to some insurance policies. He has said that the Government is reviewing the whole question of life assurance policies under estate duty law. Satisfactory solutions to all the problems have not yet been found. An interim concession will cover certain cases during examination of the wider problem. It will affect those who become entitled to the proceeds of a policy more than five years before the death of the policyholder. Mr. Simon has indicated also that measures are being taken to ensure that the law on dividend stripping covers other methods which have been found. He has given examples of the new practices.

A new form of banking account to encourage savings and to bring share ownership within the reach of millions is proposed by the Liberal Party in amendments tabled to the Finance Bill. It is proposed to call it an "employee's savings account": the Liberals claim that this is better than State buying of shares in industry, as favoured by the Socialists. Money, stocks, shares and other securities could be deposited in the accounts. The income tax due will be deferred until withdrawal. Since this will normally be after retirement, less tax will be payable than at the time the savings were made. Similar amendments to previous years, intended to assist profit sharing in industry, have also been put down by the Liberals. Mr. Wilson, "shadow" Chancellor of the Exchequer, has tabled an amendment relating to returns for income tax purposes. This would mean that the tax surveyor could require items of entertainment expenditure deducted as expenses to be fully indicated by affidavit.

Steel and Coal Output Declines

The position of Britain's two main industries gives cause for some discouragement. Steel production, which has hitherto been such a reassuring factor, fell heavily last month compared with that of the previous month and April a year ago. The reason, according to a statement issued by the Iron and Steel Board, was the lower export demand. There was also reduced demand at home for tubes and light sections for building purposes and for hand mill sheet. The average weekly steel production in April was 407,800 tons against 432,300 tons in March. In April 1957, the rate was 430,000 tons. Total supplies of steel in Britain in the first quarter of this year were 1 percent higher than in the corresponding 1957 quarter. This was mainly due to the recovery of the motor-car industry. This, however, must now be suffering a setback as a result of the increasing short-time working and laying-off of men following unofficial strikes in some sections of the industry.

The coal outlook is even worse, with production continuing to decline; the latest report from the National Coal Board discloses a loss last year of £5.3 million, which brings the accumulated deficit to £29.1 million. The figures probably underestimate the weakness of the Board's financial position, since it has long been its custom to charge to capital account and to the Treasury expenditures which belong properly to depreciation. Absenteeism, a considerable drop in demand and a sharp rise in costs were responsible for last year's setback. These adverse factors have continued into the current year and would mean heavy losses this year subject to the Board's "economy drive." It finds it extremely difficult to compete in export markets, and stocks of unsaleable coal are increasing, in itself a considerable financial burden, and the prospects for clearing these are bleak.

Talks on Cotton Imports

Following a week's discussions, the U.K. Cotton Board has recently announced that the talks in London between the representatives of the cotton industries of India, Pakistan and Britain about ceiling figures for duty-free imports of cotton manufactures for retention in the United Kingdom have ended, at all events for the time being. Whereas there was acceptance by the Indian and Pakistani representatives of the principle of import limitation, no agreed formula has yet been arrived at whereby this could be carried out. This difficulty has been entirely due to differences of opinion about the ceilings which might be embodied in an agreement. Proposals have been made by the individual delegations in a genuine effort to find a solution, but at the moment it has not been possible to arrive at a basis that would be likely to lead to an all-round agreement, though consideration is still being given to various possibilities.

The carefully-worded announcement suggests that hopes of an agreement have not yet been abandoned, though it is evident that there is still a wide margin between the countries as to what the quotas ought to be. On the whole, Sir Cuthbert Clegg and his colleagues have done better than might have been expected. Perhaps a little prodding in the right quarters officially might help towards finalising matters.

Commitments of Burmah Oil

Mr. W. E. Eadie's statement with Burmah Oil's 1957 accounts is noteworthy for its failure to give any idea as to how the company's commitment to Oil India Private Ltd. will be financed. By the agreement reached with the Government of India in January, Burmah Oil is to provide up to £10 million to finance a 280-mile pipeline to a refinery in Assam. Burmah Oil's latest balance-sheet shows net current assets up by £1,301,944 at £13,975,670, with cash up by £557,290 at £2,195,176. Since then, about £1,670,000 has had to be found for the "Shell" Transport share issue. Capital expenditure planned for 1958 by subsidiaries and by Burmah-Shell refining and distributing companies will absorb £2,100,000, so funds for the pipeline do not look to be immediately available. The 26 percent holding in British Petroleum is the obvious alternative source of cash. At the current market price it is worth about £130 million, with the holding in "Shell" Transport, now 3,339,600 shares, worth a further £23 million. The Assam refinery is due to come on stream early in 1961, so relatively small sales could be spread over three years. The chairman has nothing to say about the outlook, but it is encouraging to note that in India the volume of group sales rose by 8 percent over the previous year. In Pakistan, the rise was 7 percent and in Burma 10 percent.

Whatever it is that's got to go
—send it by air to TOKYO

YES, cargo by air is the *modern* way to get your goods on the market first—and Air-India International offers you two flights a week to speed your goods to this lucrative market.

Remember, cargo by air is so quick and convenient—cuts transit costs and risks to the minimum! Whatever you're sending...send it as cargo by Air-India International!

To Tokyo every Thursday and Sunday via Bangkok and Hong Kong

PAKISTANI LEGISLATION ON GENERAL INSURANCE

CLOSE RESEMBLANCE TO INDIAN REGULATIONS

(BY AN INSURANCE CORRESPONDENT)

THE course of legislation in India concerning insurance since 1912 has been in the direction of expanding State control. The need for control arose mainly in relation to the utilisation of the large, accumulating life fund. It was felt that exclusive power over a progressively expanding fund in the hands of a few people makes it potentially dangerous for the economic well-being of the community and for the safety of the fund itself. The legislation was motivated by a desire to provide checks against misuse. General insurance, however, received scant attention at the beginning for, in it, neither a trust fund nor the economic well-being of the community was directly involved. It had, so to speak, a free sway in unpartitioned India, except for some restrictive impositions to ensure sound trading, which came from the general insurance associations themselves. The insurance legislation of 1938—the first attempt to draft a comprehensive enactment—was, in reality, more a guide than an instrument of control, for the provisions did not seriously encroach on the freedom of initiative of this industry.

It was in 1950, following serious complaints about malpractices against many insurers, (such as the grant of excessive commissions and illegal inducements leading to a dangerous erosion of the finances of the companies) that comprehensive legislation was introduced after partition. Even that enactment, in the light of experience subsequently gathered, was considered insufficient by the industry. Further measures were considered necessary, but the nationalisation of life insurance in January 1956 scared the companies. It was felt by them that further controlling legislation, as they had envisaged, would be of such a character that it would be strategically inopportune to approach Parliament with its unpredictable mood and politically inspired bias for socialisation. The trade, therefore, took the hint from Mr. C. D. Deshmukh's pronouncements in Parliament, while he was piloting the Life Insurance Corporation Bill, that the Government would seriously consider the nationalisation of general insurance if the malpractices which it had been alleged prevailed in that trade, were not forthwith removed. It was left to the trade to set its house in order, and following this reasoning, a comprehensive "Code of Conduct" came into being. The Code is a voluntary agreement "freely accepted and freely given", and has no legislative sanction. The stringent regulations have been designed with the best of intentions, but yet they are more of an experiment than an answer to the problem. Malpractices in general insurance, particularly illicit inducements and excessive rebates, have not disappeared because of controlling enactments and voluntary regulations, but have only gone more and more underground.

Historical Perspective

An appraisal of the historical perspective of insurance legislation in India is necessary for a proper appreciation of the Pakistan Insurance Ordinance No. 1 of 1958, which has become effective in that country from 1st February, 1958. Its whole basis, and the subsequent amendments which have been made, have been conceived on the lines of the Indian legislation of 1950, and the subsequent Code of Conduct for general insurance in India. In copying, almost word for word, the Indian regulations with certain minor modifications and certain new innovations also contemplated in India, Pakistan has obviously taken the view that these regulations are sound; but there is much for her to profit from the Indian experience of the past seven years, for these regulations, in some vital aspects, are not soundly conceived.

Pakistan has literally copied the Indian law on the subject of limitation of expenses for general insurers. In India, permissible expenses are measured in terms of gross direct premium income written within the country. Thus on a premium income of Rs. 10 lakhs written direct in India, the permissible expenses are 35 percent thereof, plus 15 percent commission on non-marine business which together come to 50 percent. In Pakistan, it is 25 percent plus 15 or 20 percent, as the case may be, on non-marine business on the first Rs. 10 lakhs. The percentage has been reduced in Pakistan with the ostensible object, not wholly indefensible, of reducing the quantum of money available to insurers for management expenses. The lesser ratio of funds allowed to the companies will not permit them, it is believed, to attract accounts by illicit inducements.

This is true, so far as it goes, but an insufficiency of funds, less than legitimate requirements, may itself be a cause of malpractices. Insurers may be compelled to devise devious ways to raise money. The linking of expenses to direct premium written in the country, again, is bound to give rise to a scramble for business resulting in underwriting weakness. Since the quantum of direct premium written in the country will, under the given slabs, make available to insurers expanding funds, there will be a tendency to accept and write sub-standard risks. This underwriting weakness is bound to result in inflated claims and, therefore, the compulsory saving in expenses will be largely neutralised by a larger outgo in claims. This has been statistically proved by an analysis made in India. It has been shown that the total outgo in the post-1950 period up to 1953 exceeds that in the pre-1950 period (1947, 1948 and 1949) by 10 percent, due almost entirely to larger claims. The same danger, therefore, faces Pakistan.

Fictitious Claims

As claims do not come within the computation of management expenses, it has been suggested by many that fictitious or inflated claims or both will be pushed through for collecting funds for either management expenses with a view to keeping within the margin, thus deflating artificially the management expenses, or for illicit inducement. This, if factually correct, is a new form of malpractice not prevalent before the regulations relating to the limitation of expenses came into force in India. The same danger faces Pakistan. Pakistan, however, has recognised the potential danger, and has introduced a new series of regulations relating to a survey of claims and registration of surveyors. No such regulations are in force in India, although she is planning to introduce similar regulations within the purview of the Code of Conduct. Thus no person will undertake in Pakistan the surveying, assessment or adjustment of any loss concerning general insurance business, and no insurer will pay any claim for general insurance business transacted by him in Pakistan, unless the loss has been surveyed, assessed or adjusted, as the case may be, by an insurance surveyor who holds a certificate to act as such.

Then follow elaborate regulations relating to the registration of surveyors, and at the end are penal provisions for false and exaggerated claims. If, in any case, the Controller of Insurance has reasons to believe that an insurance surveyor has given a false report or has grossly over-assessed or under-assessed a loss or has made an adjustment of loss in a grossly unjust manner, he may direct the insurer to arrange for another survey of that loss through any other surveyor or surveyors approved by him. If the second survey establishes that the first survey was not correctly made, the Controller of Insurance may cancel the registration of the first surveyor. These regulations may effectively kill the potential danger of artificial, false and exaggerated claims which it is alleged are vitiating the general insurance trade in Pakistan, although no factual basis for this allegation has been established so far.

Remuneration to Staff

The Indian law on the powers of the Controller of Insurance to restrict excessive remuneration has also been adopted by Pakistan. The idea behind it is to ensure that no person is paid any remuneration whether by way of commission or otherwise, on a scale disproportionate, according to the normal standards prevailing in the insurance business, to the resources of the insurer. All remuneration above Rs. 6,000 annually has to be periodically reported to the Controller. This power acts as a brake for the payment of remuneration more than is justified. One of the malpractices which it is alleged is prevalent is the payment of excessive salary, with part of the salary earmarked by arrangement for rebating purposes. This regulation is intended to counter such malpractices.

The Controller of Insurance has been given the power to order an investigation into the affairs of an insurer direct, and not with the consent of the Central Government as in India. This power has been conferred as an additional safeguard against any deviation from the legitimate and normal trading standards by the companies.

Special Audit

In addition, there is also a statutory provision for special audit. Under this scheme, the books and records of every company will be audited annually by an auditor or auditors to be appointed every year by the Controller of Insurance for making such investigations and submitting such reports as may be necessary. This audit will be different from the statutory audit under the Companies Act, 1913. This is again taken from the Indian provision for special audit in the Code of Conduct. Thus, while the Indian counterpart is on the basis of a voluntary agreement, "freely given and freely taken," the Pakistan special audit forms part of the law of the country. This special audit has been designed to go into those aspects of trading which are normally beyond the scope of the orthodox company audit. The primary objective of the special audits both in India and Pakistan remains the same, namely, to keep a proper check over the company's employment of funds so that no questionable erosion of the trading funds may take place, in whatever statutory way the transaction is made to appear.

It will be seen that both Pakistan and India are anxious about company management, particularly in the matter of those expenses which can lead to an erosion of funds. It is, however, fundamentally wrong to create in the companies a craze for direct premium income by the device of measuring expenses in terms of direct premium income, resulting inevitably in malpractices, and then to go on devising various police measures to counter-act the resulting malpractices. This vicious circle has been the bane of Indian general insurance for some years. Pakistan should have profited by Indian experience, and should have been able to devise a formula which would not lead to a scramble for business, and the resultant malpractices.

Advance Payment of Premiums

India's most successful piece of regulation embodied in the Code of Conduct is the advance payment of premiums, as in life insurance. When it was first proposed, it was dubiously received and many expressed the view that since credit forms part of the basis of commercial transactions, the provision for advance payment of premiums will act as a hindrance and will impede the free flow of trade. These misgivings were, however, entirely belied by experience. The original code for advance payment of premiums has also been suitably amended to provide for relaxations whenever necessary to fall in line with international trade. This wholesome piece of legislation in India has been copied by Pakistan and integrated into its new law, almost word for word. This will solve, once for all, one of the most intractable problems facing general insurance, namely, the bane of large accumulating outstanding premiums for which credit under the law is taken in company balance-sheets. This credit, in fact, and in large part, is fictitious in character.

Regulating Flow of Business

Pakistan has introduced the novel innovation, not contemplated in India, of regulating the flow of reinsurance. It has been specifically laid down that no insurer can reinsure outside Pakistan any risk or part thereof concerning any insurance business in Pakistan, which is in excess of its treaty reinsurance arrangements. Excess reinsurance outside is permissible only when a certificate has been obtained from the Controller of Insurance to the effect that such excess cannot be placed within Pakistan. It has further been laid down that whether a particular reinsurance arrangement is treaty or not, the decision of the Controller of Insurance will be final. It has also been laid down that every insurer will, if required, furnish to the Controller of Insurance a certified statement giving the salient features of the reinsurance arrangement, or any other information that the Controller may require. These rules, when carried into effect, will impart an insular character to Pakistan insurance. Reinsurance has always been considered an international exchange. The spread of risk all over the world by various arrangements, against reciprocity or otherwise, gives reinsurers an account of a balanced character. Overseas reinsurance arrangements enable the companies to avoid violent fluctuations in results which jeopardise the steady character of the revenue accounts and the balance-sheets.

Compulsory Reinsurance

What Pakistan has now proposed will ultimately mean that all reinsurances without exception will have to be confined in Pakistan, with the result that there will be no opportunity for the local insurers to offset the results of bad years by spreading risks outside. An insular type of reinsurance acts as a brake on a proper spread of risk, which has always been considered fundamental in the transaction of insurance and reinsurance. It is true that by this device, Pakistan will possibly be able to save a considerable amount of foreign exchange. Foreign insurers operating in Pakistan, it has been alleged, do excessive reinsurance overseas. Such practices will necessarily have to be curbed, but there is no need to overstep the mark in the process. Already 30 percent of risks are reinsured compulsorily with the Pakistan Insurance Corporation. For the balance, after filling in net retentions, the normal treaty accounts should be utilised, and if necessary, an arrangement made by which excess reinsurances can be sold at a profit overseas. Adequate reciprocity from balanced accounts would bring the desired results to Pakistan. Too parochial a view of the reinsurance business is detrimental to the growth of a healthy insurance market.

GOODS PRICES FALL ON DOCK STRIKE THREAT

LIMITED BUSINESS IN FIBRE

DURING the past week, the All-India Port and Dock Workers Federation issued a strike notice to take effect from 16th June, if its demands are not met in the meantime. The stoppage would affect five major ports in India, and, if successful, would paralyse the country's import and export trade. Calcutta markets reacted quickly to this news and prices in the ready sacking positions dropped below the minima laid down by the I.J.M.A. Before this, the market had been very depressed due to the scarcity of business, and the general price level had been falling. It is too early yet to gauge the reaction of overseas consumers to this news, but with the present hand-to-mouth policy of most buyers, the situation could prove disastrous if prolonged for any length of time. The Americas now only carry small stocks, and according to the latest figures, these are only enough to last 3½ months, of which under two months' stocks are actual on the spot. Most other countries are in a similar position, so a regular continuation of supplies is vital to their economy. At present, overseas consumers continue to sit out and watch events, and the markets in general are dull. In the circumstances, however, this position could change overnight, and a rush for quick shipment goods, or an influx of shipping instructions to the mills, appears to be a distinct possibility.

The situation in Argentina is reported to be better, and it is understood that a certain number of licences have been issued, but on a very limited scale. A large quantity of goods for this destination is still lying with mills awaiting shipment, but no fresh business has been reported with that country. Early in the week, some overseas business was put through with Russia, Egypt and the Middle East. This gave the market an initial bullish tendency, but the rise was short-lived because of later events.

The fibre markets were quiet throughout the week, and the business recorded was the smallest for several weeks. Favourable weather conditions in the jute growing areas were again the main cause of the mills' apathy towards buying jute, and the prospects of a bumper crop of a high standard have given them bearish ideas. This is reflected in the quantity of new crop jute bought so far this year. According to all reports, not more than about 300,000 maunds have so far been contracted for, whereas in previous seasons at this stage, the figures were as high as one million to 1,200,000 maunds. Those mills with their own agencies have, of course, made a difference to the total this year, but the amount on their account is not enough to make up the deficit. For this reason, many prominent sellers have adopted a reserved attitude, on the assumption that mills will be looking for early shipment new crop jute in the near future. As only small quantities have so far been purchased, competition may well be keen, and it is very likely that interest will be concentrated in a short period instead of being spread over, as in previous years.

Raw Jute Arrivals.

Raw Jute arrivals in Calcutta and mill stations during April amounted to 414,700 bales. Arrivals from Pakistan were more than double those in the previous month, and amounted to 38,450 bales. Arrivals from India, however, showed a seasonal drop of 85,600 bales, and an overall drop of 66,650 bales from March. Compared with April 1957, arrivals last month were better by 38,000 bales, due to an increase of 2,650 bales from Pakistan and 35,350 bales from India. Total arrivals from July 1957 to April 1958 amount to 5,444,150 bales, made up of 556,200 bales from Pakistan and 4,887,950 bales from India. During the same period of the 1956-57 season, arrivals were 5,485,500 bales, consisting of 559,900 bales from Pakistan and 4,925,600 bales from the Indian Union. Thus, in the current season, total imports fall short of last season's comparative imports by 41,350 bales due to a fall in arrivals of 3,700 bales from Pakistan and 37,650 bales from India. During the current season, the estimated consumption of raw jute so far total 5,222,900 bales, so total arrivals now are 221,250 bales more than consumption, although in keeping with the trend in previous years, consumption for the last two months has been greater than the arrivals. Over the corresponding period of last season, arrivals were 483,900 bales more than the estimated consumption.

THE JUTE MARKETS

During the week, business in the futures markets was dull, and the rates, as supplied by the East India Jute and Hessian Exchange Ltd. for the period 14th to 20th May, were as follows:

	Hessian 40in. 10oz.	Sacking B Twills	Raw Jute Upper Assam
	May	May	June
Opening	41.10	100.65	25.92
Highest	41.44	101.60	26.26
Lowest	40.26	98.55	25.06
Closed	40.36	98.80	25.14

Manufactured Goods: At the opening last week, the markets developed a firmer tendency due to reports of overseas enquiries. Business was confirmed with Russia and the Middle East, and the restricted issue of licences by Argentina added to the general feeling of confidence. This was reflected in the improvement in the October-December shipping period for sacking, which appreciated to the same price as July-September shipment, after lagging well behind since it was first quoted. Opening quotations in the heavy goods market were based on B Twills at Rs. 101.40 for May shipment with forward shipment at a premium of 90nP. This was an increase of 40nP over last week's closing rates. Hessians also improved, and 40in. 10oz. went up by 15nP to Rs. 41.45 for May shipment. In this section, the forward delivery quotations continued to lag behind, and October-December shipment actually stood at a discount of 5nP, but July-September shipment showed a premium of 10nP over the near position. Sacking prices continued to rise, but hessians fell back due to heavy selling pressure. By the week-end, sacking also developed a declining tendency and B Twills fell to Rs. 101.10. The possibility of an all India dock strike next month caused a quick recession of prices, and with no business passing, the markets weakened. On Tuesday, heavy goods rates slumped, and the near B Twill quotation fell back to below the minimum level fixed by the I.J.M.A. in February: May shipment now stood at Rs. 99.60 which was Rs. 1.80 below the week's opening prices. Forward shipments now commanded a premium of Rs. 1.35, and at Rs. 100.95, were Rs. 1.55 below the opening level. Hessians also shared the general decline, and 40in. 10oz. came down to Rs. 40.80, but still remained above the I.J.M.A. minima in all sections.

On Wednesday morning, opening quotations were as follows:

	May Rs.	June Rs.	July-Sept. Rs.	Oct.-Dec. Rs.
40in. 8oz.	32.40	32.40	32.40	32.35
40in. 10oz.	40.45	40.55	40.60	40.40
B Twills	99	99.60	100.60	100.60
Heavy Cees (Plain)	99.75	99.50	100.75	100.60
A Twills	118.50	119.75	121	123
Liverpools	111	111.75	111.75	112.75
Cornsacks	99.85	100.75	102	102

Raw Jute: There was very little interest in the fibre markets last week, except in the early period, and business contracted was the smallest for some time. Prices rose temporarily after the opening, but fell back again later in sympathy with the weaker goods market, and the general lack of interest in raw jute. Sellers resisted the attempts of buyers to cut rates in the early session, and mills had to pay full market prices for their purchases. Imports upcountry continued to be small, but prices declined mainly on account of favourable crop reports. Local sellers, however, continued to look for higher prices and based their ideas on the scarcity of good quality jute in the local markets. It is reported that in Cossipore, out of a total of nearly 100,000 bales of jute, nearly 90 percent consists of low quality jungli and mesta. Opening quotations last week were based on Assam-Northern jute at Rs. 25.75 a maund basis Bottoms for May-June shipment. This advanced to Rs. 26, but before the close, fell back to Rs. 25.50. In the absence of business towards the end, these rates could be considered nominal, but sellers' ideas were above this level.

During the week, business was reported in Assam-Northern jute at Rs. 25 to Rs. 25.75 a maund for May-June shipment and tossa from the same districts at Rs. 28.50 to Rs. 28.75. In mesta fibres, Daissee Mesta passed at Rs. 24.25 to Rs. 24.50 and Desal-Northern Mesta at Rs. 24.50. Cuttings were also done at Rs. 80 a bale for May-June shipment against sellers' licence.

In new crop jute, business was done in Assam-Northern at Rs. 33 for tops alone, Rs. 29 for middles alone, and Rs. 25.50 to Rs. 26.50 a maund basis Bottoms for assortment jute, all for August-September shipment. Jungli white jute from selected agencies was also done at Rs. 23.50 basis Bottoms for August-September shipment.

In Cossipore, wagon arrivals for the week ended 20th May amounted to 460, which was 60 more than in the previous week, but 40 less than during the corresponding week last year. Sellers are inclined to be reserved on account of the scarcity of good jute. Quotations at the close were based on Kishenganj jute at Rs. 24 for average quality.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs a md basis Bottoms	Shipment
Assam	25.25	May-June
Northern	25.25	"

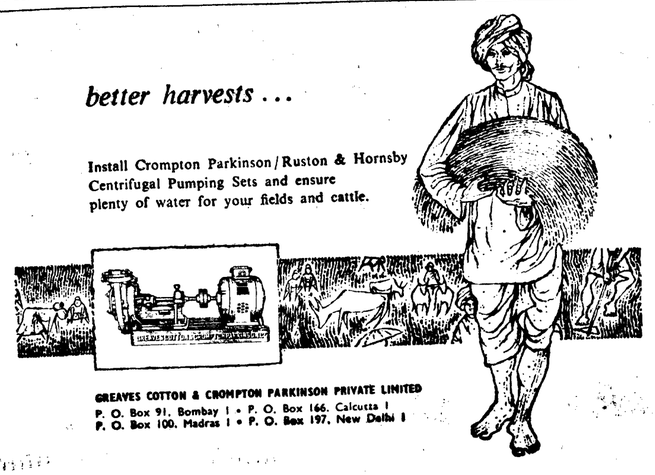
THE FOREIGN JUTE MARKETS



YARN AND CLOTH PRICES UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

A GOOD deal of discussion has taken place concerning the speech of the vice-president of the Pakistan Jute Mills Association, Mr. Jalil. Many are glad that Pakistan is facing competition in her jute trade with most of the consuming countries. Mr. Jalil has mentioned Thailand, Brazil and China as formidable competitors, as there is an ample supply of labour in those countries, waiting to be organised for producing jute. At the moment, Pakistan can command high prices, and no one disputes the right of sellers in asking for the best possible prices for their crops. Repeated warnings have been given to Pakistan that the maintenance of high rates would be detrimental to her industry on a long-term policy. A price reduction of perhaps £20 a ton might help the industry throughout the world in the meantime, but it is possible that paper, jute's most formidable competitor, could still compete strongly by reducing its prices. Still, it is new to the trade here to know that Pakistan is perturbed over the possibility of an end of her virtual monopoly in the sale of raw jute. It is something of a mystery as to how prices could be so well maintained in that country.

The U.K. trade is very quiet all round, and all members of the jute industry in Dundee—spinners, manufacturers, merchants and brokers—are complaining of a lack of orders. Consumers are not anxious to carry a lb of yarn or a yard of cloth more than they need, and spinners are also unwilling to add to their stocks of raw jute, especially at the recent high charges for overdraft. The fact that they are curtailing their output also restricts their activities.

The raw material is much the same as it was during the past week, with Mill Firsts at £116 lowest, Mill Lightnings £102. Mill Hearts £91 and grade Hearts £74. May-June, c.i.f. U.K. Crack Daissee-2/3 is down £1 to £105 and grade to £99, with grade Tossa-2/3 at £116 and grade Tossa-4 £107, all May-June. Extremely little business is passing. Values of Calcutta goods are irregular but firming up again after being lower at 63s for 40in. 10oz and 47s 6d for 7½oz., May to September,

and B Twills at 154s 3d May, 155s June and 156s July-September, all f.o.b., Calcutta. Yarn and cloth prices are unchanged.

GUNNY SHIPMENTS IN MARCH

The following are the total net figures of manufactured jute goods shipped from Calcutta during March 1958 after providing for short shipments. These figures include shipments to coastal ports.

	Bags (Tons)	Cloth (Tons)	Total (Tons)
Hessian			
Gross	2,014.8	31,128.2	33,143.0
Short Shipped	1,838.1	1,152.3	2,990.4
March, 1958 (Net)	176.7	29,975.9	30,152.6
February, 1958 (Net)	1 456.4	27,913.6	29,370.0
January, 1958 (Net)	1,462.8	19,276.9	20,739.7
Sacking			
Gross	27,123.3	679.5	27,812.8
Short Shipped	1 162.9	47.5	1,210.4
March, 1958 (Net)	25,970.4	632.0	26,602.4
February, 1958 (Net)	31,687.6	307.6	31,995.2
January, 1958 (Net)	22,005.0	414.0	22,419.0

Plantation Topics

ESTIMATES FOR NEXT COFFEE CROP RAISED

WIDER GAP BETWEEN RUBBER OUTPUT AND DEMAND

(FROM A SOUTH INDIAN CORRESPONDENT)

RAINS have greatly improved the prospects for the next coffee crop. The growing areas in south India have received showers in varying degrees in recent weeks, and the standing crop has been benefited. While conservative estimates place the 1958-59 output at 45,000 tons, certain planting circles expect it to reach 50,000 tons, which, materialising, will be the largest production yet. The 1957-58 season's crop has exceeded all previous estimates. Pool receipts to the end of April amounted to 41,477 tons, against the original estimate of less than 38,000 tons. The latest estimate of the Coffee Board is 41,687 tons, comprising 20,923 tons of Plantation, 7,179 tons of Arabica Cherry and 13,685 tons of Robusta. Last season's crop, which is still considered a record, was only 42,000 tons.

This steady increase in coffee production disproves certain conclusions of the Plantation Enquiry Commission. In its report on the industry the Commission has observed: "Unless a phased programme of replanting is urgently commenced, certain coffee lands would have to be abandoned during the next ten years and in consequence, production would seriously diminish." Nearly five years have passed since it made this observation. A marked decline in coffee production would have occurred by this time, if the fears were justified. Instead, production has risen from 24,200 tons in 1953-54 to 42,000 tons in 1956-57, or by nearly 80 percent, with only a 10 percent increase in acreage. If, as the Commission observed, 76.8 percent of the partly non-Indian companies and 37.8 percent of the Indian companies stood in need of replanting in 1953, this great increase in production would not have been possible. The Commission's case for a compulsory replanting fund is, therefore, refuted. The planters hope that the practical good sense that was exhibited by the Central Government through its earlier decisions on the recommendations of the Plantation Enquiry Commission will continue to prevail, and this recommendation for a compulsory replanting fund will be rejected.

South Indian Tea Output

South India produced 14 million lbs of tea in March, compared with 11.6 million lbs in the same month last year. During the first quarter, the region's tea harvest was to the tune of 32 million lbs against 27 million lbs in the same period in 1957. Favourable weather, which helped such a big harvest, may enable south India to improve upon her previous record of 145 million lbs.

Raw Rubber Production Increases

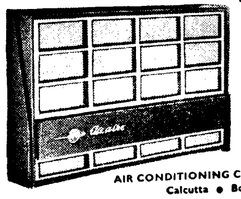
India's raw rubber output in March amounted to 1,366 tons, the highest for that month in any previous year. The total for the first three months of the year has touched a new peak at 4,956 tons. Early and adequate rains in the rubber growing areas of the south contributed largely to this welcome increase. There have been fairly good rains in subsequent weeks, so it is expected that the production in April and May will show still better results.

In spite of a steady increase in the country's raw rubber production, the gap between indigenous output and consumption is increasing for the reason that the manufacturing industry is expanding at a faster rate. In 1948, rubber production in India was 15,400 tons, against a requirement of 19,700 tons. In 1947, production rose to 23,800 tons and consumption to 34,800 tons. Thus within the course of ten years, the gap between the two has widened to 11,000 tons from 2,300 tons. This is likely to increase at still a quicker rate for the next few years.

The manufacturing industry in India has in hand ambitious expansion programmes. When these are completed, the country's rubber requirements, which were 34,800 tons last year, may double. According to the Rubber Board's own estimate, raw rubber consumption would amount to 80,000 tons by 1975. The performance of the rubber plantations are failing to keep pace with the manufacturing industry. It cannot be said that the negligence of the rubber growers alone is responsible. They were deprived of a reasonable price for a considerable time. It was only after a long period of persuasion that the Centre fixed a remunerative price in 1955. Since then there have been substantial increases in the cost and taxation, so less of the earnings from rubber is now available for reinvestment. Over and above this has come the Kerala Agrarian Relations Bill. This is a real threat to the expansin of the rubber growing industry in that State which now accounts for 94 percent of the total rubber area in the whole of India.

Further Price Revision Demanded

The growers have been pleading for a further revision of the present statutory price. The prices are relatively low on the price index list. Since a reasonable price alone can give the necessary incentive to planters to expand their cultivation, the question deserves to be considered seriously. The Government should also consider the suggestion that the replanting subsidy be raised with a view to creating greater interest among the growers. The manufacturers should be allowed to import as much rubber as they require to bridge the gap between local supplies and their consumption, and should be allowed to enjoy the benefit of lower prices of imported rubber. In planting circles, it is felt that a reorientation of the Government's rubber policy is an immediate necessity.



Memorandum against Kerala Bill

The Rubber Board, in a memorandum, pleads for certain changes in the Kerala Agrarian Relations Bill, for it contains some really dangerous provisions as far as the rubber growing industry is concerned. It says: "If the Kerala Agrarian Relations Bill, if passed into law without suitable modifications concerning the safeguards to plantation industry, will affect not only the existing plantations but also the future expansion of the industry." The memorandum points out that under the Bill a large grower cannot possess any other land if he should retain all the rubber areas he owns. This should bring about the fragmentation of many of the larger estates. The Bill does not give room for any new large estate to come into being, except as estates of co-operative farming societies whose members should be agricultural labourers without

Miss Career Girl and Airconditioning . . .

Miss Career Girl dresses elegantly and likes everything in her home or office to be elegant, too.
When she chose the ACCAIRE it was its ultra-modern, beautiful design that attracted her. The rest she took on trust.
Most of the sales talk didn't quite register in her mind. When the salesman said it was dependable and low in power consumption she just smiled and nodded. When he went on to say it was a full capacity 50 cycle unit, she looked a trifle bewildered but nodded pleasantly.
Now she congratulates herself on having made the right choice because her ACCAIRE gives her trouble-free service and is very economical to maintain.

and. It further says that even in the case of many small growers, the chances are that they may prefer to curtail the rubber areas in their holdings in order to retain possession of their other categories of lands within the ceiling area. In the nature of things, there is every reason to believe that any area under rubber that is selected for surrender will be surrendered only as waste land. To that extent there will be a reduction in the existing rubber areas in the country.

The memorandum also states that placing too much reliance on small holdings for meeting the future needs of the country is unwise, for there are limitations for the expansion of small holdings too. Such holdings of less than 50 acres constitute about 49 percent of the total area now under rubber. Out of the total number of small holdings amounting to 35,165 (1956), 30,492 estates are of five acres and below. The average production from these holdings has been found by experience to be lower than that of estates with 50 acres and more. It is also difficult to get the co-operation of the small growers in the endeavour to bring more areas under quality seedlings with the object of raising the natural rubber output at a lower cost. In spite of the intensive propaganda carried on by the Rubber Board, more than 50 percent of the planting materials used even now are unselected, and most of them are used by smallholders. The memorandum asserts that the problem of stepping up production at a minimum cost can be solved only by not limiting the scope for the expansion of large units under any circumstances. The Board, therefore, suggests that the definition of "plantation" may be suitably altered so as to include not only lands used principally for cultivating rubber, but also lands reserved for *bona fide* cultivation, it should also include lands reserved for the construction of any building for the purpose of, or ancillary to, the cultivation of rubber.

The Board further suggests that it may also be provided in the Bill that any person holding a plantation as described above will, in addition, be permitted to hold also any other land up to the ceiling area as defined in Clause (ii) of Section 61. For the future expansion, it suggests that lands suitable for rubber cultivation which are at the disposal of the Government, be set apart for the expansion of rubber cultivation and that such lands be made available to co-operative societies formed specially for the purpose. Lands held by statutory bodies such as the Rubber Board also may be exempted, the memorandum says.

Raising Home Consumption of Pepper

In view of the steadily falling prices of Indian pepper due to competition from Indonesia and Sarawak, the Central Spices and Cashewnut Committee, which recently met in Mercara, has recommended that intensive propaganda be undertaken to increase the internal consumption, to explore new foreign markets and the Union Commerce and Industry Ministry be requested to explore all possibilities for stabilising pepper prices in the world market. Mr. Krishnappa, the Union Deputy Minister for Food and Agriculture, who inaugurated the seminar on spices and cashewnut organised in connection with the meeting of the Committee, said that there was immense scope for the development of spices and cashewnut cultivation in view of the encouraging result of the recent experiments. Latest reports indicated that pepper could be grown in the States of Assam and Orissa and perhaps also in the Andaman and Nicobar islands. Likewise, it had been proved that cardamom, ginger, clove, nutmeg and cocoa could be cultivated in a number of other regions. Similarly, the cultivation of cashewnut which had been confined mainly to the west and east coasts was now gradually extending into the States of Andhra, Mysore, Orissa, West Bengal and Assam, he added.

The Minister said that the cashew tree which was introduced into India from Brazil had shown such a remarkable adaptability to conditions here that already over 200,000 acres were under this cultivation. The total area covered by spices and cashew cultivation in the country was about 750,000 acres, which constituted about 0.34 percent of the area under food cultivation, but earned foreign exchange worth Rs. 36 crores, the money equivalent of 3.5 percent of the country's foodgrains production.

Spices Research Station

Coorg has been selected for a spices research station, which will not only maintain a world collection of spices of commercial and scientific value, but also conduct a survey of spice growing areas of the country to implement crop improvement programmes. The station will be under the administrative control of the Mysore Government, while the Indian Council of Agricultural Research will exercise technical control and meet the entire recurring expenditure.

COCHIN TEA SALES

At Sale No. 13, 2,300,000 lbs of tea were on offer. There was a strong general demand, particularly for low medium and medium brokens, which were irregularly 5nP dearer. Similar fannings were about steady. Good mediums were firm, best liquorings were easier and quality whole leafs were strong.

IAC
DELIVERS THE GOODS

A welcome sight indeed to its young is the eagle winging home over the inaccessible mountains with the much awaited morsel.

IAC planes have become an even more welcome and common part of Indian skies. To the needy and the stranded they bring food, medicine and clothing; to the tourist and the busy executive they signify comfortable and speedy travel. The manufacturer and the merchant know that when IAC delivers the goods, they can always make the market.

As a vital link in India's economy, IAC is proud of its effort in quickening the country's pace of progress.

In 1956-57 IAC recorded:
19,201,903 miles by air
571,106 passengers
50,194 tons of cargo
5,221 tons of mail

Commodity Markets

BRITISH TEXTILE REVIEW

ABOLITION OF PURCHASE TAX ON WOOL CLOTH

THE abolition of purchase tax on wool cloth, the special feature of this year's Budget as far as wool textiles are concerned, can be regarded as official recognition that the home trade in wool goods has lost its buoyancy. The trade was showing some signs of recovery before the Budget, but not such as would have justified maintaining the discrimination between wool and non-wool textiles. Since 1955, when it was considered that the cotton industry, particularly, but not the wool industry, needed help, non-wool fabrics have been exempt from purchase-tax but wool cloth has been subject to tax at 10 percent until the removal of the tax last month.

The change has been well received in the industry, which had long been campaigning for it. A representative comment was that of Mr. C. J. Ballantyne, president of the National Association of Scottish Wool Manufacturers, who pointed out that it would encourage the use of better-quality cloth. So far, at least, as textiles are concerned, the idea that export trade can be promoted by restricting home trade has long since been abandoned, and the industry is satisfied that when its home trade has been reshaped to accord with the new structure of prices, a variety of new cloths suitable for export will emerge—at prices which, import policies abroad permitting, will be fully competitive.

Increased Contracts

In another section of the wool trade, Britain is performing a useful international service. The wooltops futures market was opened in London in 1953. In its first full year of operations, namely, 1954, its turnover, in contracts of 5,000 lbs, was just under 19,000. The corresponding figure for 1957 was almost double, at just over 37,000. In 1954, the New York market's turnover was well in excess of London's, more than 25,000. Last year it was less than 19,000. In 1954, London's share of the total trade was 35 percent. In 1957, its share of a substantially larger total trade was 56 percent. The smaller markets of Antwerp and Roubaix, whose annual turnover is of the order of 5,000 contracts in each case, have held their ground reasonably well (in terms of turnover, though not of percentages); the turnover of Roubaix has moderately increased while that of Antwerp has moderately diminished. But it is evident that a substantial volume of business has shifted from New York to London.

The London market had one rather disappointing year in 1955, but its development since has finally ended the argument whether it was worth establishing a London market at all. Particularly significant is the big increase in London's turnover last year from less than 22,000 to more than 37,000 contracts while the combined turnover of the other three markets increased less than 2,000. The instability of the primary markets last year enhanced the value of the hedging facilities of the futures markets, and most of the additional business was done through London.

Grey Cloth Exports to U.K.

Such favourable news as can be reported from the cotton trade is of much less positive character. Efforts to reach some voluntary agreement on the limitation of Asian exports of grey cloth to the United Kingdom were resumed at the discussions in London early in May between representatives of the U.K. industry on the one hand and representatives of the Indian and Pakistani industries on the other. In the opinion of some observers, the probem has become so urgent that the procedure ought to be accelerated. It is not clear whether the Hongkong millowners' stipulation that Britain should reach an agreement with India and Pakistan before negotiations with Hongkong could be resumed meant that they were genuinely willing to negotiate or was intended to sidetrack the issue. Anyway, how many separate negotiations would be needed to reach an agreement acceptable (however grudgingly) by all parties?

Lancashire has a grim fact to support its insistence that imports from the Commonwealth must be regulated. Whereas up to the end of 1957 records going back more than 200 years could not show any quarter-year in which more cotton cloth was imported into the United Kingdom than was exported from it, that situation arose in the first quarter of 1958. The significance of this fact can be exaggerated: it was only in March, as previously in June and October last year, that imports exceeded exports. But, when they occur, monthly excesses of exports tend to diminish and monthly excesses of imports tend to increase. As the Lancashire industry's output is in these times mainly for the home market, this development in overseas trade would not necessarily cause a crisis if the home trade were expanding; but it is in fact static. Unfortunately for Lancashire, the world trade in cotton goods has developed unfavourably since the problem of Asian competition in the U.K. market became acute, and the Asian suppliers, which are, as nations, much more dependent than is Britain on exports of cotton goods, cannot lightly relinquish any advantage that they may have gained.

Loss of Exports

Nor can it be overlooked that Lancashire's problem is in the loss of exports as much as in the competition of imports. Mr. Frank S. Winterbottom, a director of the Manchester Chamber of Commerce, told the conference of the National Federation of Textile Works Managers Associations in Blackpool in April: "We in Lancashire are losing our export trade at an alarming rate"; and he did not put all the blame on policies abroad. "The complaint can truly be made that we have done little under our present structure to retain our overseas markets."

Mr. Robert Booth, deputy secretary of the Manchester Chamber of Commerce, returned from Canada where he had been representing the U.K. Cotton Board, well satisfied with the conduct of the investigation into textile tariffs of that country. He was, he said, very favourably impressed by the open and fair-minded attitude of the Canadian Tariff Board. In presenting the British case, Mr. Booth had emphasised the complementary rather than competitive character of Lancashire's exports to Canada. But there is no harm in reminding some British firms that it is wise to offer goods which are lacking rather than those that are already available in a sufficient quantity.

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 107.8 during the week ended 3rd May, 1958, compared with 107.7 for the previous week. The index was higher by 1.1 percent and 0.7 percent, respectively, when compared with the corresponding week of the earlier month and that of last year. The index for Food Articles stood at 105.8 compared with 105.7 for the previous week. The prices of milk in Calcutta (+20%) and in Ludhiana (+14%), eggs in Madras (+17%), oranges in Nagpur and meat in Patna (+14% each), onions in Delhi, betelnuts in Bangalore and cummin (+10% each), ragi in Bangalore (+7%), arhar in Patna (+6%) and in Delhi (+5%), jowar in Gulbarga (+5%) and rice, coconut oil and tea (+1% each), milk in Bombay (-24%), oranges in Madras (-13%), gram in Delhi (-11%), arhar in Bombay (-8%), jowar in Ujjain and urad in Bombay (-5% each), barley, mung, groundnut oil, mustard oil (-2% each) and meat, maize, gingelly oil, coffee and chillies (-1% each) showed variations. The index for Tobacco receded by 2 percent to 90.3 compared with 91.7 for the previous week due to a fall in the prices of raw tobacco (Pollah) in Calcutta (-6%). The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's level of 114.5. The prices of gingellyseed in Nagpur (-11%), tanning materials, lac (-5% each), linseed and copra (-1% each) moved down while those of raw silk, cottonseed (+2% each), groundnuts and castorseed (+1% each) showed advances and the index for Industrial Raw Materials stood at 114.3 compared with 114.2 for the previous week. The index for Intermediate Products declined further by 0.2 percent to 108.5 due to a fall in the prices of lead (-2%) and cotton yarn (-1%) although those for aluminium (circles) (+3%) and zinc (+1%) showed advances. Higher prices of bricks, tiles (+8%) and oilcakes (+1%) raised the index for Finished Products by 0.3 percent to 108.4 compared with 108.1 for the earlier week.

FAIR GENERAL DEMAND AT INTERNAL TEA SALE

PRICE TREND EASIER

AT Internal Sale No. 46, held on 20th May, a total of 19,513 chests of Dust was on offer, for which there was a fair general demand, although the tone of the market was easier. Orthodox descriptions were generally 4nP to 6nP easier, while the black leafy types suitable for export, which were the strongest feature, declined by only 2nP to 4nP a lb. "Teas for price" met with competition and were generally steady. C.T.C. Assams were easier. The bright liquoring mediums as well as the best often sold 20nP to 25nP below valuations, and there were some withdrawals.

Quotations.

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1·64 to 1.66	1.55
Medium Assam Grainy Dust	1.70	1.60
Medium Assam C.T.C. Dust	2 to 2.10	1.60 to 1.65
Best Assam C.T.C. Dust	2.65 to 2.85	Not quotable

There was a total of 551 chests of Leaf on offer.

FREIGHT RATES EASIER

A large volume of business was done in grain cargoes to India in the freight markets during the past week but rates were soon cut. Conditions otherwise were weak, although coal charterers paid up from Newcastle N.S.W. to Japan by comparison with the rates to Korea. Nine vessels totalling about 90,000 tons were fixed for grain from St. Lawrence to west coast, India, with loading dates between 2nd June and 14th July. The early rate of 70s was soon cut to 67s 6d and then to 65s. Pacific coast to east coast, India, secured tonnage in the same position at 62s 6d. A number of ships were fixed from Newcastle N.S.W. to Japan at rates varying from 32s to 35s f.i.o. Manganese ore from Bombay to U.S.N.H. was done at $(U.S.) 7.10 for June loading. A large modern carrier was taken on time charter by a liner company trading to the U.S.A. at $(U.S.) 1.75 on 13,284 d.w.

HIDES AND SKINS STEADY

The hides and skins market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 13th May and 19th May, 1958)

Cowhides: Wet salted (Ord.) 4,600 pcs. on the basis of Rs. 8.75 to Rs. 9.50; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12.50 to Rs. 23.

Goatskins: Wet salted (Patna, Daissee and Kustia) 38,800 pcs. on the basis of Rs. 330 to Rs. 340, Rs. 342.50 to Rs. 390 and Rs. 415 to Rs. 425; Wet salted (he-killed) on the basis of Rs. 4.12 and (she-killed) on the basis of Rs. 3.62 a piece; Assam-Dinajpur-Jalpaiguri 18,200 pcs. on the basis of Rs. 325 to Rs. 375; Purnea-Kissenganj 9,300 pcs. on the basis of Rs. 365 to Rs. 375; Muzafferpore-Patna 58,800 pcs. on the basis of Rs. 335 to Rs. 360.

Bazaar Stocks

(19th May, 1958)

Cowhides: Wet salted 68,200 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia and Killed) 29,000 pcs.; Assam-Dinajpur 46,000 pcs.; Muzafferpore-Pakur-Patna-Kissenganj-Purneah 75,000 pcs.

LINSEED FIRM

The general tone of the linseed market remained firm during the past week. The main cause was a shortage of supplies from upcountry centres. Crushers were showing a meagre interest because of the lack of parity with oil prices. Trading was dull. In the oil section, offtake continued to be dull and sellers were hesitant. Shippers did not show much interest at prevailing rates as the U.K. market was dull. Latest quotations were as follows: ready Rs. 22 a maund and May-June Rs. 22 a maund.

SHELLAC STEADY

During the week ended 21st May, the market was steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 83 done and buyers; 81.50 to 83 buyers.
Lemon No. 1 Shellac	Rs. 85 done; 83.50, 85 buyers.
Lemon No. 2 Shellac	Rs. 79.50 buyers; 80 done and buyers; 80 buyers.
F.O. Std. 1 Shellac	Rs. 75.50, 77, 76 buyers.
Pure PN Shellac	Rs. 65, 66 buyers.
4% I.T.N. Shellac	Rs. 54.50, 55.50, 55 buyers.
No. 1 Kusmi Seedlac	Rs. 80 value; 80 buyers.
No. 2 Kusmi Seedlac	Rs. 75 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 72 buyers; 71 done and buyers; 72, 74 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 67.50, 66.50, 68 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 61, 60.50, 63 buyers.
Ordinary Bysaky Seedlac (C.P.) Kirleelac	Rs. 55.50, 55, 57.50 buyers. Rs. 11.50 value; 12.50, 13 buyers, 12 value.

COMPANY AND PUBLIC NOTICES

MARSHALL, SONS & CO. (INDIA) LIMITED.

NOTICE is hereby given that the Fortieth Annual General Meeting of the members of Marshall, Sons and Company (India) Ltd. will be held on 20th day of June 1958 at 10-00 a.m. at the Registered Office of the Company, No. 33/1, Netaji Subhas Road, Calcutta, to transact the following business:—

1. To receive and adopt the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 30th June 1957.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Books of the Company will remain closed from 6th June 1958 to 20th June 1958 both days inclusive.

As dividend warrants are sent only to registered shareholders or to their mandatees shares on blank transfer should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,
MARSHALLS (DIRECTION) PRIVATE LIMITED,
Managing Agents,
F. C. KRATY,
Managing Director.

33/1, Netaji Subhas Road,
Calcutta. 21st May, 1958.

BANKS

H indicates that Share capital is half paid. O., C. and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE LATEST FOREIGN EXCHANGE CRISIS

URGENT LOANS REQUIRED

AMONG India's many pressing economic problems, fresh anxiety has been expressed recently about foreign exchange. This is not altogether surprising since the Development Council reaffirmed the size of the second plan with so little apparent concern for any such irritating realities; the impression was given that matters of this kind are of little consequence beside India's undeniable needs. But to treat the foreign exchange problem with less respect than is really due is not to dispel it altogether. Nor does it alter the fact that another crisis is fast brewing which may mean development coming to a complete standstill for the time being. There will be little point then in talking about Rs. 4,500-crore plans and the determination to implement them. A glance at the true position now might be bad for the Development Council's optimism, but it should improve the chances of dealing with what promises to be a very difficult situation indeed.

On 16th May, 1958, India's total sterling balances stood at Rs. 252.51 crores, of which Rs. 42.84 crores were being held in the banking department of the Reserve Bank to finance current transactions. The remaining Rs. 209.68 crores were supplementing Rs. 118 crores of gold as a backing for the currency. This gold reserve was, therefore, standing at a figure only Rs. 3 crores higher than the statutory minimum fixed for it. There is no point now in discussing a statutory minimum for the foreign currency backing because this can be dispensed with in an emergency. What is more, the reserves have recently been below the latest figure fixed for this minimum and they are unlikely to stay above it for more than another month or so if any resources at all are to be kept to meet current outgoings. These figures for the currency reserve compare with a total this time last year of Rs. 477.59 crores, of which Rs. 412.52 crores was reposing in the Reserve Bank's issue department. The figure for gold was round about the same. The change over the year, then, is some Rs. 225.05 crores, or an average drain of about Rs. 4.3 crores a week. The present rate of loss is something like Rs. 6 crores a week. If gold is not to be reduced below its statutory minimum, India now has available a total of about Rs. 256 crores of foreign exchange compared with nearly double that amount at this time last year—and a weekly drain which is 30 percent higher. Even if, therefore, no minimum reserves have to be kept available for meeting current transactions, the entire foreign exchange holding will have disappeared in just about ten months' time. But this is not the complete picture. It has been made known that the coming period, June to October, is likely to see a heavier outflow than the one taking place at present. A figure of Rs. 150 crores for the four-month period has been mentioned from various sources, thus increasing the rate of loss to, say, Rs. 9 crores a week. If this is true, there is good reason to expect that India will have no foreign exchange at all by the end of this year, because imports are already down to the absolute minimum for maintaining industrial production and might even prove shortly to be below it. The immediate solution would seem to be to stop the import of development goods altogether. This might be effective if, first of all, certain irrevocable commitments had not already been made, and, secondly, the country were not now showing a deficit on *current* account. The latter point is the most significant of all and holds an altogether dismal prospect for the future growth of the Indian economy.

It is no use ignoring the fact that the position is critical, nor that the efforts made so far to stop the foreign exchange loss have not succeeded. These have certainly been energetic, but it is becoming clear that the original errors of planning were too fundamental to be corrected in this manner. Nothing short of a complete revision of the whole second plan now seems likely to meet the situation—short of massive foreign aid. There seems little scope for fresh import cuts. Consumer goods are already down to zero. Raw material stocks have been almost exhausted by measures taken so far; industry is living on a hand-to-mouth basis which offers no scope for further tightening. Only development-good imports could be cut. But those due in the next few months will mostly involve firm commitments which have already been made. Even if this type of import is ruled out altogether in future, it is doubtful if the adjustments could be achieved in time to save so much as a small proportion of the foreign exchange reserves. A good monsoon, especially in eastern India, would help the food situation. But food imports are mostly being financed through foreign loans and have little significance for the current payments position. There may still be some loopholes which could be plugged, although the saving is unlikely to amount to even one week's respite. And any move to stop, even temporarily, the paltry Rs. 7 crore-odd of profit, capital and interest remittances which are made abroad every year would have repercussions for future foreign investment in this country out of all proportion to the amount saved. It is, in fact, difficult to see what possible adjustments could be made in India's import or payments programme which would be large enough, and effective in sufficient time, to make any appreciable difference to the present situation.

The possibility of increasing exports is equally bleak. In fact, the present performance of this particular item should serve as a lesson to over-enthusiastic planners on the fallibility of their methods. Through no fault of her own, India is being affected by the decline in world prices for primary commodities and the contracting volume of world trade. She is also facing the inevitable consequences of already having cut down on her own imports and of having had to adjust her trading pattern to suit present straitened circumstances. The recently-announced drop of £23 million in India's exports to Britain, although largely due to a fall in tea sales, may owe something to this feature as well. There are no doubt other examples if one looks for them. Export promotion is essentially a long-term business, and little can be expected from even a determined intensification of it, in time to transform present realities. One more fact needs to be stated about trade prospects. As the reserves run out, the foreign currency kept with the banking department of the Reserve Bank for meeting current transactions, is bound to shrink. At Rs. 42.84 crores, it is already on the low side for the volume of transactions it is designed to cope with. As it decreases in size, India's trade and payments are likely to become confused. If serious disruptions in industrial production are to be avoided due to hold-ups in the supplies of raw materials, spare parts and so on, this state of affairs will have to be anticipated. Preferably, action should be taken before then to ensure that the balances available do not fall below their present figure.

If these current balances were to be kept round about Rs. 50 crores, which is probably the minimum required for even reasonable comfort, that would mean there are now a mere Rs. 200 crores or so to play about with—a figure which is likely to fall at an average rate of about Rs. 9 crores a week up to the end of October. Even on an optimistic reckoning, there will be very little left by then. That does not leave much time for remedial measures, and the point has already been made that the easiest and quickest of these—further import controls—now offers scarcely any scope at all. The only answer, therefore, is a foreign loan of sufficient size to tide the country over. How big that would be depends on what adjustments the Government is prepared to make in the plan now so as to eliminate the drain in future. Most important, it would have to be what the American call "off-shore" aid; that is, available for spending anywhere in the world, not simply on equipment required for specific projects. The loan of $75 million from President Eisenhower's special aid fund approved at the beginning of the year, was of this kind. There does not appear to have been any move to draw on this loan yet. When there is, it will add a useful Rs. 34.50 crores to the reserve and should give India another month or six weeks. But even with this added, a drain of Rs. 6 crores a week, increased to Rs. 9 crores during the four-month period June to October, will leave only about Rs. 50 crores of foreign exchange available by the end of the year—barely enough to meet current transactions adequately. What chance India has of raising her minimum requirement from the only source available, the United States is a question to which the Indian Government may or may not be in a position to give an answer. But if Mr. Morarji Desai has not already booked his plane ticket for Washington, then he is losing valuable time.

It is no use attempting to deny the disadvantage of having to go cap in hand to the United States. Such are the results of over-ambitious planning in a country which, among other things, also insists on inaugurating the socialist millennium. And there is no escaping the fact that every free loan incurred now, limits India's economic freedom of action in future. On page 715 of the 15 May issue of *Capital*, a table was published showing the repayment programme for interest and capital on loans already negotiated or expected. In the ten-year period beginning 1957-8 the total of foreign exchange that India will have to find exceeds Rs. 900 crores—or more than one entire year's earnings from exports. This is going to take some finding, and any large addition to it will only increase the drag it is bound to have on the third five year plan. There is, however, no alternative. The encouragement of private foreign capital would make a contribution towards easing the burden in future, but there is not time for it to have any effect on the present crisis. The great need now is to find some wealthy benefactor and find him fast.

NAINI TAL IN RETROSPECT

THE discussions at the Indian Labour Conference in Naini Tal were infructuous. There were sharp differences of opinion on various aspects of labour legislation and policy—these are inevitable on a subject so controversial—but the leaders who represented labour's interests at the conference showed a tendency for wishing to run with the hare and hunt with the hounds. They did not, of course, refuse to uphold the so-called interests of labour with their usual crusading zeal. But at times the discussion was unrealistic, and this was no less due to the conflict of ideologies, than to a general desire of trade union leaders to promote the interests of their organisations rather than those of labour. In the absence of a consensus of opinion on some aspects of practical policy, the conference could not adopt many unanimous resolutions, and the one accepted for implementing a code of conduct for trade unions, was possible only because it was less controversial. The conference could have achieved better results if the trade union representatives had produced constructive ideas for a solution of many of their problems. Instead, they doggedly upheld their doctrines in the belief that the interests of labour and capital are poles apart, and cannot be reconciled even with the best of intentions and goodwill.

The Central Labour Minister, Mr. Gulzarilal Nanda, suggested the creation of an unemployment relief fund, with the help of a small levy for maintaining continuity of employment in concerns which have closed down or where closure is inevitable. The shrinkage of employment is undoubtedly a serious problem before the economy, and the planners did not visualise this prospect when the second plan was launched. The Minister says: "It is difficult to comprehend why the wheels of industry should slow down in this manner in a developing economy with a rising tempo of investment." This might appear to be a paradox to Mr. Nanda, but private entrepreneurs honestly believe that no increase in employment opportunities will be possible so long as a rigorous taxation policy is pursued with no consideration for its consequences. The imposition of an enormous burden on employers, mainly in the shape of wel-

fare legislation, has proved the last straw for the camel's back, and many establishments have been virtually compelled to close down. The classic case of Governmental apathy is nowhere more obvious than in the textile and tea industries which have been claiming reliefs for some time. But Government spokesmen, although expressing their sympathy, have not yet extended a helping hand. It was only when the textile industry was on the brink of a major catastrophe because of the growing accumulation of stocks that the Government announced a meagre relief, and that only for a temporary period. In spite of repeated demands for concessions from tea producers, none has yet been granted, although New Delhi has assured them that a reduction in export duty will be announced shortly.

Much fuss was caused both inside and outside Parliament when reports were heard about the closure of certain tea gardens and textile mills. A rigorous import policy has brought in its train an acute shortage of raw materials, and many industrial units, through no fault of their own, have been reluctantly compelled to curtail production. It is a fitting comment on the situation that Mr. Nanda, who was so enthusiastic about increasing employment opportunities under the second plan, should now be saying that if the Government does not find it possible to exceed the outlay of Rs. 4,500 crores in terms of actual implementation, the employment content of the plan will shrink from 8 million jobs to a bare 6.5 million.

Toeing the line of their ideologies, representatives of workers held employers responsible for a shrinkage of employment in the private sector. Mr. Somnath Dave of the I.N.T.U.C. said that the incompetence of managements was responsible for closures. He opposed the idea of a reduction of wages in mills which are threatened with closure and said: "I am going to be no party to any proposal for a reduction of labour's wages. I am not going to suffer any ills and incompetence of those who made crores of rupees during war time." But he does not appear to appreciate that the industry which earned profits also shared its prosperity with labour.

Faced with a bleak prospect, many mills have eaten into their reserves. Had workers been more co-operative in accepting lower wages, many mills could at least have dragged on with a hope of survival. But this was not to be, due to the intransigent attitude of labour. The latter should appreciate that it is impossible for any modern industry to bear losses continually. The position is already serious; a Bombay mill is ready to close even if it has to pay Rs. 35 lakhs to workers as retrenchment compensation. The experiment in the Sholapur Mills, where workers have agreed to accept lower wages in the wake of a threat of closure, is only a stop-gap measure so as to enable the mill to rehabilitate its position. Bombay's Labour Minister, Mr. Shantilal Shah, has done well to point out that the proposal to labour for accepting lower wages in the event of a closure should not be construed to mean that a scheme is being prepared to cut wages; it is mainly intended to absorb the shock when a mill's position becomes precarious.

Although the Central Government has set up a study group to review periodically the question of closure, no worthwhile purpose will be served unless co-operation from labour is forthcoming. It will presumably be over-optimistic to think that workers will wholeheartedly co-operate, for the bane of the Indian trade union movement is that it is influenced by political considerations. If trade unions eschewed political ideologies, the interests of workers would be better safeguarded, and it would be easier to maintain harmonious industrial relations. It is a welcome development that the representatives of the four central labour organisations have agreed to implement the code of conduct for maintaining amicable inter-union relations. If properly implemented, this will create favourable conditions for the democratic functioning of trade unions. The code lays down that there will be no violence, coercion, intimidation or personal vilification in inter-union dealings. This is important, especially for what has recently happened in Jamshedpur and elsewhere. But the code should have laid more definite stress on increasing productivity of labour, for much of their prosperity depends on this factor alone. The recent conference could have been regarded as a success if it had attempted to imbue this spirit in the minds of those who call themselves the representatives of labour.

STRIKE CALL AT THE PORTS

THE All-India Port and Dock Workers Federation has served notice on the authorities that workers at the country's major ports will strike as from 16th June, if their demands for better pay and service conditions are not met in the meantime. It is to be hoped the Federation will not carry out its threat, otherwise, the effect of such a stoppage will be serious for the economy. There is an acute balance of payments crisis round the corner again, and if the much needed foodgrains, raw materials and the plant and machinery for the numerous development projects cannot be unloaded due to a dock strike, not only will the impending crisis be hastened, but serious injury will result to the economy from which it will not easily recover. If the militant trade union leaders can look a little beyond their noses and exercise their single-track minds in the direction of the broader national interest, they may discover that a strike at this critical time will amount to a stab in the economy's back. But this the leaders are unlikely to do. Some of them belong to a particular political party which has never been known to care much for the national interest because its loyalties lie elsewhere. It may now be out to avenge its humiliating defeat in Jamshedpur where its utterly childish actions have just deprived this country of a valuable quantity of steel.

Politically inspired as this strike is, one might expect the Central Government to stand firm and not give in to such calculated blackmail. The Government's long factual statement on the strike threat shows that the Federation has been unreasonable in trying to force action on a matter in which many other interests and principles are involved. In the first place, the workers do not all belong to one category and are not employed by any one single agency. In the circumstances, the demand for the rationalisation of pay scales becomes a difficult proposition for the Central Government to meet alone. Even so, the Government appointed a special officer, Mr. P. C. Chaudhuri, —in response to demands by port workers backed by a strike threat—to go into the salary structure of Class III and Class IV port employees in the light of the 1947 Central Pay Commission's recommendations, and to submit proposals for the removal of anomalies and disparities. But by the time this special officer was about to submit his final report, the Government had already announced the appointment of a second Pay Commission in order to re-examine the question of revising the salary structure of all Government employees, and accordingly, Mr. Chaudhuri had to state in his report that his proposals on pay scales and conditions of service might come up for review by the new Pay Commission and might even require modification. Since these classes of port employees correspond in rank to some categories of Government servants, it is only logical that Mr. Chaudhuri's recommendations cannot be implemented until the findings of the Pay Commission are available. As for his suggestions concerning other employees, the port authorities and other employing agencies have been asked to examine their implementation in consultation with the representatives of labour, which they have been doing.

The Federation complains of undue delay in giving effect to many of Mr. Chaudhuri's recommendations which have little connection with the Pay Commission's terms of reference. There seems to be little substance in this charge. Mr. Chaudhuri did not subimt his final recommendations until September 1957, and the printed copies of the report became available only about the end of last year; it was on the basis of this report that discussions were arranged by the Government with the representatives of employers and labour in New Delhi. But the Federation apparently did not like the "time-wasting" discussions to which its representatives had been invited, and while still agreeing to participate in them, it called upon its members in January to organise a general strike. It then withdrew this call, realising the unreasonableness which had prompted it. Subsequently, it has submitted a memorandum to the Government detailing what it considers should be the pay structure and service conditions of the various categories of port workers. In some cases they even exceed those recommended by Mr. Chaudhuri. At the latest meeting which the Federation's representatives had with the Central Minister for Communications and Transport, the latter explained that in view of the various interests involved, the proposals which would be submitted by the port authorities for Government sanction would take a little time to be decided. He has urged them to wait until 15th July, which is only a month longer than the time the dock workers are prepared to wait. If the workers have waited for a long time, as they say they have, nothing surely will be lost by allowing the Central Government one month more. Instead, they have chosen to pursue their old pressure tactics to force the Government's hands.

The statement by the spokesmen of the Federation in Calcutta would appear to suggest that the Government and the other employing agencies have been turning a deaf ear to the demands of port workers. The Government's statement lists a number of steps which have been taken to improve service and salary conditions. The disparity in the leave rules concerning class III and class IV employees in the Bombay, Cochin and Visakhapatnam ports has been removed: the port authorities have decided to extend travel concessions "on terms and conditions similar to those applicable to Central Government employees"; a substantial increase has been made in the number of shore workers in some of the major ports; the casual workmen in Visakhapatnam now get higher wages: the stevedore workers in the Bombay, Calcutta and Madras ports have been guaranteed a minimum of 21 days' wages a month irrespective of the number of days they work; and the Bombay Stevedores Association has been persuaded not to recover the over-payment of bonus to workers amounting to Rs. 1.30 lakhs. Other amenities and improvements are likely to follow gradually. But the Union leaders, apparently, want spectacular achievements to impress their workers. Their attitude is typified by the opposition they have been putting up to the introduction of the piece-rate system in the Calcutta port, although they agreed to it at a tripartite conference not very long ago. This system has been successfully tried out in Bombay and Madras, and in the latter port, the average monthly earnings of shore labour have gone up from Rs. 96.16 to Rs. 190.10. The same is being experienced in Bombay It becomes difficult to understand precisely on what grounds the labour leaders in the premier port have been refusing to co-operate with the authorities. The Government should perhaps consider its introduction without reference to such vested interests, and thereby gain a chance to expose their undesirable tactics.

DISTORTIONS IN WORLD TRADE

BUTTER DUMPING IN BRITAIN

UNILEVER ordinary shares, on the London Stock Exchange, reacted more positively than the New Zealand Government to the British Government's plan to restrict imports of butter. It is not easy to appease one supplier of a commodity, at the expense of other suppliers of the same commodity, when there is a substitute waiting to take advantage of any rise in price. But that is only one of many problems arising from the British Government's reluctant decision to restrict the supply and raise the price of a basic food, when efforts to reduce the cost of living have been generally unsuccessful. Important principles of commerce and finance are involved in this complex situation. The contrast between butter and margarine is interesting, nonetheless. Butter may be made in a factory, but it is essentially a farm product; margarine is entirely a factory product, a result of advanced technology. Governments do not, as a rule, subsidise manufacture, but most of them subsidise farming. The cost of making margarine and the price at which it is sold do not vary much; but the price at which butter is sold is not related to the cost of making it, when a surplus is sold in a free market, as an alternative to storing it indefinitely or wasting it.

Many countries have produced surplus butter, and the United Kingdom has been the only important market where it can be sold freely. European surpluses have flowed into the U.K. and reduced the prices of the cheaper grades of butter below those of the dearer grades of margarine. Consumption of margarine has been reduced and demand for edible oils has been affected. International trade in foods has shifted. So far as butter is concerned, the British consumer has "never had it so good" since the depression in primary prices in the 1930s. (The cheapest Australian butter was obtainable then at 8d a pound, which—allowing for the change in the value of money—is approximately equivalent to the price of 2s a pound at which the cheapest Australian butter was on sale at the time of the British Government's recent intervention.) By an unfortunate coincidence, the index of the cost of living, published a day or two after the British restriction was announced, showed a rise of two points to 110—the highest level on record. It may be true that a rise of, say, 6d a pound in the price of butter represents a rise of only one-tenth of a point in the index; but any move that increases the cost of living can cause disproportionate trouble when it is widely publicised.

It was equally unfortunate that at the same time as the rise in the cost of living was announced, the index of the terms of trade showed an adverse movement. The improvement in the U.K.'s external trading account this year, and in the latter part of last year, is attributable mainly to the lowering of import prices, while export prices have remained approximately stable; but in April, while export prices remained stable, import prices rose slightly. In the next month, the British Government felt obliged to forgo some of the benefit of cheap imports. Yet the change of policy was accepted in Britain with surprisingly little criticism. The British market is the principal outlet for New Zealand's farm products, and the New Zealand market is an important outlet for Britain's manufactures. Apart from the sense of loyalty to another member of the Commonwealth it was well understood that New Zealand's imports from Britain would have to be severely restricted if the value of the dominion's sales to Britain were not supported.

The reaction of other suppliers, however, revealed the complexity of the effects of any action restricting trade. It was immediately clear that exports to Eire, for instance, would suffer if imports of Irish butter were restricted; and that in a difficult phase of the negotiations on the sterling area's trading relations with continental Europe, restrictions on imports of Swedish butter would adversely affect Swedish opinion. The British Government was in a dilemma. Its policy is based on the idea that trade must be developed with both Continental Europe and the Commonwealth. Its plan for the European Free Trade Area has encountered one obstruction after another (the French crisis coincided with the butter crisis), and an alternative based on an Anglo-Swedish *entente* seemed a possible solution of the problem. On the other hand, the Commonwealth Conference is scheduled for September, and it cannot be conducted in a friendly atmosphere if Commonwealth countries feel that their interests are subordinate.

The Commonwealth suppliers have convincing arguments: that European butter has unquestionably been subsidised and "dumped", that the British Government has consistently asserted that competition in a European Free Trade Area must be fair, that the Anglo-Australian trade agreement of 1957 specifically provides for "anti-dumping" duties if either country's exports to the other are suffering from subsidised competition from a third country. But butter is not a simple case, for nearly all suppliers to the U.K. market have been selling it below their domestic prices. (It is significant that the complaints of British farming interests were rejected—because even British butter is indirectly subsidised.) The trade in farm products is, indeed, utterly confused. In recent memory even traditional suppliers of eggs to the British market were complaining that British eggs were being "dumped": for the prices guaranteed to British poultry-farmers produced such a profusion of eggs that the home market could not absorb them all, even at prices far below the cost of production. The whole problem needs reviewing, not nationally or bilaterally but on a world-wide scale. It may be seen that geographical trading is more appropriate—Europe supplying Britain, Australia and New Zealand supplying Asia. The very structure of international trade and payments would be involved in such a survey. But there is no evidence that any country will submit its agriculture to free economic forces. Meantime, the world has a reasonable abundance of food—even if it is not well distributed.

Current News and Comment

Progress of Paper

The paper industry has maintained a steady progress. The substantial expenditure incurred by existing units on modernisation and expansion of their plants has been reflected in the continued increase in output. Producers are making genuine efforts to reach the target under the second plan. Speaking at the annual general meeting of the Indian Paper Makers Association, Mr. J. F. Brierley, chairman, said that the final production figures will probably show that, for the first time in the history of the Indian paper industry, output has exceeded 200,000 tons. (A fuller version of the speech appears elsewhere in this issue of *Capital*.) The industry has made satisfactory progress during the last seven years, since its output has almost doubled during this period. But the main problem confronting producers is the rise in production costs. The prices of essential materials have increased since paper was decontrolled in 1950. For example, the price of coal, of which about 3½ tons are required for the manufacture of every ton of paper, has risen by nearly 30 percent; the price of hosiery cutting has risen by 80 percent, rosin by 48 percent, and china clay by 60 percent. Furthermore, labour costs have risen by about 35 percent due to increased wages and amenities. The enhancement of the electricity duty payable by mills in West Bengal will also raise their production costs. In spite of a rise in the latter, mills have maintained selling prices at a low level, and they have been able to do so by increasing their production efficiency. "It is to the industry's very great credit that, during the eight years since decontrol until March of this year, the selling price of the standard white printing paper was kept down to only 12 percent above the price ruling in 1950. This does not, of course, include the increase of 16 percent since March 1955 as a result of the imposition of excise duty."

But there is a limit to the extent an industry can absorb the increase in costs. A stage will inevitably come when some of the increases will have to be passed on to the consumer, especially if the industry is to expand and maintain its plant in efficient working order. Producers, therefore, informed the Government that they could no longer bear the whole of the increased production costs and asked for a rise of about 9 percent in the price for supplies against the Government rate contract for 1958-59. Although this request was fully substantiated by figures, the Government was prepared to allow a price increase of only 3.6 percent. This was accepted by the industry, but it made it clear to the Government that it was inequitable, "and thoroughly out of line with the increased cost of production." Producers assured the Government that prices of paper for civilian consumers would be kept down, although they said that a stage had been reached when a part of the increased production costs should have to be passed on to them. Prices have accordingly been raised by about 5 percent with effect from 1st April, 1958. Referring to the supply of raw materials for the industry, Mr. Brierley says that a scientific survey of the country's bamboo resources is an urgent necessity, since the future development of the industry depends on a precise knowledge of the availability of this material. He further says that it is in the interest of State Governments to lease out forests, direct to paper mills, on a long-term basis. "It is only in this way that the forests will be exploited fully and properly, and that full advantage will be taken of the resources of the country".

Higher Costs for Industry

The complaint that production costs in industry have been rising due to higher raw material and labour charges has been voiced by many company chairmen in the recent past. The latest to stress these problems is Mr. H. M. L. Williams, managing director, Guest, Keen, Williams Ltd., in his statement circulated to shareholders at the company's annual general meeting held this week. (A fuller version appears on another page of *Capital*.) Apart from their rising prices, the supply of raw materials is uncertain, which makes it difficult to maintain a proper schedule of production. Many industries have no dearth of orders, but they have been failing to produce the goods in time because of the irregularity in their raw material supply. The example of Guest, Keen, Williams is a case in point. Mr. Williams says that the year 1957 for the company started with good order books, which were maintained throughout the succeeding months at a satisfactory level. But deliveries of steel from overseas were most irregular, and: "from the end of February until the end of September imported spring steel billets and sleeper bars were generally not available. When these raw materials eventually arrived, the deliveries were out of phase with the works' consumption rates so that during the latter months of the year, and well into 1958, additional financing and handling costs have had to be borne." Raw materials remain the largest factor in the cost of production, and every rise in steel prices causes a commensurate rise in the working capital required. Salaries and wages continue to increase and are the second greatest cost factor; during 1957 they rose by over 15 percent over 1956, Mr. Williams adds.

In spite of the difficulties, production of both the Calcutta and Bhandup works of the company showed increases in most of their departments. The railway switches and crossings department was the only exception, largely due to the failure of a section of the workers to take advantage of the production incentive scheme. There was a marked increase in the demand "for the bright finished specialised bolt and nut items" of the company's products, but it could not work the plant concerned on a two-shift basis due to the irregular supply of raw materials, which though better towards the end of the year, was still insufficient and too uncertain. The steel melting furnace worked up to its peak output of over 8,000 tons; the output of forgings for wagons and other railway needs such as signal and track appliances continued to be high; the forging section increased the variety of its items for the motor-car industry; the railway track-fitting section achieved a record output and the screw works in Bhandup continued to hold its own. All these add up to a very satisfactory record, but Mr. Williams does not view future prospects with unmixed optimism largely because of the predatory rates of taxation.

Mr. Williams explains how the tax rates are proving damaging to the growth potential of companies such as Guest, Keen, Williams, which have a very important part to play in the country's economic development and which, in the nature of things, will continue to do so. The company has an expansion programme over the years 1957 to 1959, during which time very substantial sums of money have to be found. "Accordingly, the directors have been considering ways and means of increasing the capital of the company; unfortunately, their task is not made easy by today's atmosphere of heavy taxation with the present deterrents to capital formation, which check the natural evolution of capital growth from within, and offer little inducement to the potential investor in industry". The tax burden on the company is now the heaviest and takes away more than half of its earnings. Such a rate is too high to create a proper incentive to expand and progress. "The tax gatherer has the first pick and is not concerned with the imposition he is placing on a company's growth potential, nor is he concerned with the ploughing back of earnings, which every business undertaking must do unless it is to stand still or deteriorate", Mr. Williams stresses.

New Killick Equity Issue

Killick Industries have announced their intention of issuing 25,000 new equity shares of Rs. 100 each at a premium of Rs. 20 a share. Initially, the new issue will be offered to the existing shareholders in the ratio of one new share for every four shares already held. The object is to obtain further finance for the company's expansion schemes. These relate specifically to the takeover of the Sheffield firm of John Baker and Sons and Stamco Industries. Under an agreement with the former in 1954, Killicks acquired the name, trade marks and patent rights of the Sheffield firm for the manufacture in this country of "Lighthouse" engineers' files. Production of these files is continuing at a satisfactory rate in the company's Indian works. Last year, Killick Nixon and Company was also merged with the new concern and at the same time, Stamco Industries, a firm manufacturing typewriter ribbons and allied products, was also acquired. Since then, Killick Industries have been depending on bank overdrafts for financing their increased activities. This procedure is unsatisfactory. The directors consider that the concern is undercapitalised, so they have decided on the new issue to obtain additional funds.

Textile Exports and Profits

Fears are expressed here that the current year will be a disappointing one for textile exports. Overseas sales of cotton piecegoods amounted to 209 million yards during the first four months of this year, against 321 million yards in the corresponding period of 1957. Even if the current rate of export is maintained, the final figure for the year will not exceed 627 million yards, compared with 850 million yards in 1957. The official export target is 1,000 million yards a year, and the prospect for the remainder of this year is not considered promising. Communist China is continuing to offer stiff competition in south east Asia, while Russia and the other east European countries are making a determined bid to capture the markets of west Asia. With her sales to the United States and Canada curtailed, Japan, too, is expected to make fresh efforts to dispose of the cloth intended for the dollar markets in other areas. She is also making an effort to sell cloth directly to Indonesia by bypassing Singapore as an entrepôt point. This is expected to affect Indian exports adversely both to Singapore and to Indonesia. Hongkong and Pakistan are other contenders for a sizeable share of the export trade. Other disquieting factors include the withdrawal of the Open General Licence by the Sudan, another traditional market of India and the raising of the import duty by east African countries. Business with Saudi Arabia is almost at a standstill because of that country's foreign exchange problems.

The trend of falling profits in the textile industry is further illustrated by the reports for 1957 issued by two mills which belong to the Tata group. Tata Mills report that their gross profits declined from Rs. 31.15 lakhs to Rs. 12.46 lakhs. The sales, however, showed an increase of Rs. 334.41 crores, net of the excise duty on cloth,

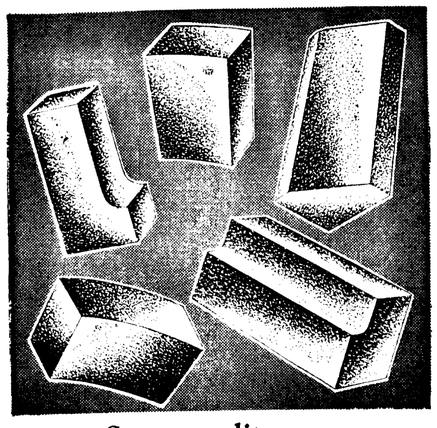
against Rs. 301.86 crores in the previous year. The directors say that increased costs of production account for the drop in profits. Cotton purchases cost an additional Rs 23 lakhs and amounted to Rs. 1.32 crores. On the other hand, production also increased considerably. Apart from the higher sales, unsold stocks with the mills were valued at Rs. 406.49 crores at the end of 1957, which amounted to almost seven times the opening stock. Svadeshi Mills, another Tata enterprise, have much the same story to tell. Their gross profits amounted to Rs. 22.96 lakhs at the end of last year, against Rs. 46.15 lakhs in the previous year. Sales, however, were higher at Rs. 3.64 crores, against Rs. 3.38 crores. The directors say that higher costs of production, including dearer cotton prices, and the closure and partial working of the mills for 30 days last year, accounted for the fall in profits. An encouraging feature is that the value of stocks showed a decline of Rs. 4 lakhs and was computed at Rs. 81 lakhs at the end of the year.

Prospects for General Insurance

The view that financially and numerically Indian companies have now reached a stage when they can provide cover against every form of insurable risk on a competitive basis was voiced by Mr. B. K. Setalvad, president, at the latest annual meeting of the Indian Insurance Companies Association, held last week. With the development of industries in the public and private sectors, and the launching of the various multi-purpose projects, Mr. Setalvad has said, there will be a growing demand for machinery erection and breakdown insurance, boiler insurance, and a number of other miscellaneous types of business, which are sold as a matter of course in other countries. Mr. Setalvad has stressed the need for a well-organised and integrated market composed of sound and healthy units, and for the rationalisation of the working of the industry in its various aspects. Wasteful competition, excessive procuration costs and rebating, Mr. Setalvad points out, are among the major ailments which afflict the business. He is, therefore, of the view that the new Code of Conduct, which has been devised to curb rebating and bring acquisition costs and management expenses of the companies within the limits prescribed by law, if properly implemented, should enable them to make sufficient underwriting profits and build up adequate reserves, thus becoming strong and efficient units within a few years. When uneconomic competition and other undesirable features are eliminated, it would be possible to offer more attractive terms and more efficient service to the insuring public, Mr. Setalvad says. The "greatest boon" under the new Code of Conduct has been the system of cash payment prior to the assumption of any liability by an insurer. This will help the industry considerably, and there will be no more headaches for the realisation of outstandings, which, in the past, only jeopardised the position of the companies, even of those who were at the helm. This "cash payment system" therefore, marks a turning point in the history of Indian general insurance.

Forward Trading in Madras Shares

The announcement that the Madras Stock Exchange will have forward trading from 1st July in a list of clearing shares, has been welcomed. The move is expected to widen the scope of dealings in these shares and create a freer market in sound and popular scrip. The list includes plantings as well as textile stock. The clearing house will be managed by the Bank of India. It is expected that the fortnightly system of settlement on the Bombay model will permit the carrying forward of transactions, or their closure after the payment of differences. The new regulations define the responsibilities of the brokers, principals and agents. The fact that yields of many shares in the Madras market are comparatively higher than in Bombay or Calcutta explains outside interest in some Madras scrip. Now with future trading allowed here, the local operators are likely to change over from the forward shares in Bombay and Calcutta to the Madras list; it is also expected that inter-market business will grow.



Both Bangalore and Hyderabad have some interest in Madras shares, and the regular business on their account might increase steadily if forward dealings develop as presumed. Some have suggested that the move is meant to raise the income of brokers here. But that is not correct. There are just a dozen such firms now. It is, of course, likely that their Bombay and Calcutta connections may improve as a consequence of the two-way trading in forward shares. Clients here are familiar with the *badla* and *havala* systems, and more may be added later to the list of these shares if outside interest grows. In it at present are included only good dividend payers, the local blue chips, so to speak, in many of which institutional interest has been permanent. The inception of forward trading may also help enlarge business in many other shares and lead to a mild appreciation in plantings, the fortunes of which are no longer tied up with Kerala's politics. In fact, the Devicolam by-election result did not cause much of a jolt when it was announced; the depression in these scrip which has prevailed for some time, is more correctly traced to the textile industry's difficulties.

Cold Comfort for Millowners

The millowners of Coimbatore, who presented a memorandum to Mr. L. B. Shastri, Central Minister for Industry, in the course of his recent visit to that city, made an effort to show that the south Indian mills with over 3.25 million spindles and 17,685 looms have nearly a quarter of the entire textile manufacturing capacity in the country. The yarn output has risen: so has its consumption, but there is a surplus of yarn, and powerlooms are not being encouraged as expected. The rise in costs and the fall in prices have led to lower profits and dividend cuts. In some cases, reserves have been drawn upon to meet dividend liability. The wage bill is heavy and the electricity surcharge also has added to the mills' costs. Railway rates are now higher. The mills also have to pay more for the diesel oil they use to produce power in summer. Difficulties in exporting yarn last year are a reason for the rise in stocks. The millowners asked for freight concession and export duty reductions, and pleaded that yarn be put on the O.G.L. list. They also asked for greater facilities for the import of raw cotton and essential machinery needed for replacement purposes. But the main point made in the memorandum was the demand that the output of yarn be restricted on a planned basis, and a curb placed on yarn imports. A plea was also made that the States should take over surplus yarn and sell it abroad, paying a minimum price to the mills. But the Minister gave only cold comfort by suggesting that mills should themselves subsidise export sales by a voluntary levy. Mr. Shastri also hinted at the appointment of a new Working Party to examine the economic conditions of the textile industry. He also said that automatic looms would be allowed to be installed if that did not harm the interests of labour.

Last Hopes of Lancashire

The failure to reach agreement with India and Pakistan on reducing their textile exports to the United Kingdom has not resulted in Lancashire giving up hope that something can yet be done concerning Hongkong, and from an entirely new angle. The suggestion which is now being canvassed is whether the British Government would be prepared to take action in another sphere in order to ensure that the working conditions and wages in the Hongkong mills are raised above their present low standards. Any improvement in conditions would presumably raise costs of production and reduce the price gap between Hongkong goods and similar articles produced in Lancashire. The possibility will be of interest to other Asian producers, who would also find their goods more competitive in markets now shared with Hongkong. There is nothing to suggest the British Government would consider any such action, but it is at least significant that a suggestion which bears on the problem has come from another source. In a recent leading article, the *China Mail*, a newspaper published in Hongkong in the English language, urges the local millowners to make a gesture to Lancashire on the limitation of their exports of cotton goods to the United Kingdom. Even if India and Pakistan continue to be evasive on the question of an acceptable formula, Hongkong's chances of escaping the limitations are not bright, the article says. Lancashire's pressure on the British Government is bound to increase, and it seems that of the three Asian exporters, Hongkong is the most vulnerable to any Government demand for limitation. Whereas it seems unreasonable that the colony should be penalised for its enterprise in developing a vigorous cotton industry, it might be unwise for the millowners to stand pat on their reasonable defence, the paper adds. It would be better to accept a maximum figure for exports, reserving the right to resume unrestricted exports at any time if the ceiling proved damaging to the colony's economy, than to have either to negotiate at a disadvantage with Lancashire, Pakistan and India or to accept an unpopular quota dictated by the present or any future British Government at the instigation of the home cotton industry, it has pointed out. It remains to be seen whether this advice will be accepted in Hongkong.

Super quality

ACC alumina

REFRACTORIES

...are available with medium, high and super alumina content, to meet all your requirements
...are made to the shape, size and quality you require
...are *far more economical* than ordinary fire-bricks
...have great resistance to spalling and abrasion
...fully comply with I.S. Specifications 6-1953 and 8-1953

And remember, the ACC hallmark on them is your guarantee of high quality and dependability.

Index of Business Turnover

In his annual statement to shareholders recently, the chairman of the Midland Bank introduced a new set of statistics—a series described as an "index of business turnover". The index was presented for each year from 1946 to 1957. In view of the interest taken in this useful contribution to economic statistics, the index has been re-worked on a quarterly basis, and the figures, as set out in the table below for the entire postwar period, appear in the bank's *Review* for May. The basis of the index is as follows: It is derived from figures of the total drawings on (or "debits to") current accounts with the Midland Bank, excluding those kept at a handful of branches in the City of London where the turnover is dominated by financial transactions, particularly in the money market, having little or no direct connection with the country's industrial and trading activity. The index number may thus be taken to represent the course of "business turnover" through drawings on current account (whether by way of cash paid out over the bank's counters or by cheque and other transfers to other bank accounts) in the ordinary course of industry, trade and day-to-day disbursements. In calculating quarterly figures, differences in the numbers of working days become important, and the results are, therefore, put on to an average working-day basis. It is found that the movements of the index show some tendency to follow a seasonal pattern—a pattern the regularity of which is affected by, among other things, the uneven date of Easter. Although the figures are presented for a period of more than 11 years, it is felt to be too early to make the necessary calculations for the construction of an index adjusted to remove seasonal fluctuations. It is emphasised that the index measures fluctuations in actual turnover, and not in the rate of turnover. However, the index is accompanied by a chart giving aggregate credit balances on current accounts with the London clearing banks, expressed as a quarterly index number (the published figures being averaged for the three monthly returns in each quarter). A rate of turnover index could be simply derived from those two indices.

British Trade Mission to Middle East

The representatives of industry and the Board of Trade who comprise the British Trade Mission to the Middle East left London recently for Iraq and Iran, the first countries on their tour list. The delegation is led by Mr. W. H. McFadzean, chairman of British Insulated Callenders Cables, and vice-chairman of the Advisory Council on Middle East Trade which was set up by the President of the Board of Trade in February. He will be joined later by the chairman of the Council, Mr. J. K. Vaughan-Morgan, Minister of State, Board of Trade. They will tour Iraq and Iran together, and will also visit the Lebanon, the Persian Gulf and Jordan separately. They left armed with the views of a number of trade associations, and encouraged by the knowledge that British exports to the Middle East were 8 percent higher last year than in 1956. Indeed, if Egypt is excluded, the rise was 23 percent by comparison; British exports to the world as a whole rose by only 5½ percent. The mission's attentions will be concentrated on Iraq and Iran. There, although consumer goods now account for about one-third of British exports, the lion's share is still taken by the investment of the oil companies, and by heavy capital equipment for internal development projects. Although specific matters such as the procedure for establishing export credits will be discussed, the delegation is most interested simply in meeting as many individual business men as possible in the Middle East, and interesting them in what Britain has to sell. Mr. McFadzean told the Press that he would be meeting Government officials and members of the British business community in each country. But he has emphasised that British trade in the area is likely in future to be increasingly carried on in partnership with the nationals of the countries concerned, and it is these that the delegation hopes particularly to meet. The delegation will report back to the Advisory Council. Its advice will also be available to those interested in exporting to the Middle East. Mr. McFadzean and the other members are hoping to talk to chambers of commerce and similar bodies on their return.

QUALIFICATIONS OF DIRECTORS

WE would draw the attention of our readers to the evidence of Mr. Buckley, Q.C., before the Select Committee of the House of Lords, which we publish in another column. It will be observed that Mr. Buckley feels no enthusiasm for imposing special share qualifications and liabilities on Directors. His view is, and it is undoubtedly the right one, that a large share qualification might keep out of office a comparatively poor man, who might be eminently fitted for the position but lacked the means to qualify. The real hold on a Director must be focussed in laying upon him a full sense of responsibility for his acts. He desired to see a substantial class of men, and paid well for their services. His remarks as to the liability of Directors are very much in point, and show very plainly that a grain of practice is worth a ton of theory. The matter resolves itself into a question more or less of confidence. Investors should satisfy themselves of the character and ability of Directors and Managing Agents before parting with their money. In India, where, as a rule, people are very well known, this is generally a simple matter. The higher (?) ethics of company promotion and management are, we are glad to say, almost unknown in India. The expenses of floating an industrial company here are a bagatelle contrasted with those in England. The company-promoter has not made his *début* yet. In all ventures there must be a risk; the business of a Director is, to quote Mr. Buckley, "not to be prudent but to be honest"; every Indian venture has not been successful; some few indeed have been disastrous; but the dishonest ones have been comparatively few, and their character was apparent at the outset. We are satisfied that so far as honesty is concerned joint stock enterprise in Calcutta ranks in the highest place.

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

SELLING HANDLOOM GOODS IN U.S.A.

SUGGESTIONS OF SURVEY TEAM

(FROM OUR NEW DELHI CORRESPONDENT)

IN its study report on promoting the sales of Indian handloom goods in the U.S.A., the U.S. Handloom Fabrics Survey Team, which was invited by the Government of India, in co-operation with the Ford Foundation, says: "In America, most clothing is purchased 'ready made' from speciality stores or department stores, which in turn buy their stocks from manufacturers, large or small. A minor fraction of the total is produced directly for the consumer by a custom tailor or dressmaker or is made in the home where it is used. This, in the United States, the purchasing of fabric for clothing is done mainly by manufacturers or their agents, and the fabric is made into clothing by factory production methods. These production methods impose certain requirements as to widths and lengths of pieces which may not seem important to a person familiar only with the Indian environment, but which are important to the American manufacturer. Fabrics produced for use wthin India do not, for the most part, have to be suitable for manufacture in garments by factory processes. Fabrics produced for the Indian market do not have to face the problem of 'cut and sew'. draping being the national fashion in clothing. In America, however, the situation is quite different, and with the desire for a greater export trade, it is most important that the Indian handloom industry become aware of the implications of this fact.

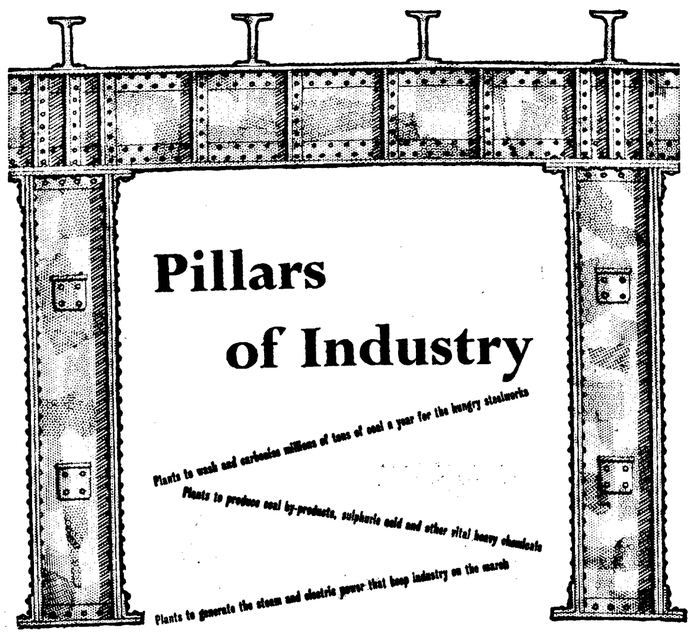
"A fabric for the American fashion industry must do many things, besides appealing to current fashion tastes and satisfying a need for beauty. It must cut easily without slipping under the scissors. It must sew well by machine, not snag or pucker when stitched. It must not pull at the seams when worn. A buttonhole must be able to be worked neatly. Hooks and eyes must hold in the fabric. Seams must not ravel unduly. Selvedges should be straight and clean. Short lengths of fabrics and irregular widths are serious handicaps in the American market, except for custom dressmakers and home sewers, which are of minor importance. Preferred length of pieces are 40 to 60 yards. Preferred widths are 39in. to 42in. for most silks and cottons, 45in. or more for sheer fabrics which are usually made into full, voluminous styles; 54in. for woollens.

Eye Appeal

"In recommending uses for handloom fabrics in various United States markets, it must be kept in mind that the final decision of the buyers which consummates the sale is based largely on the eye appeal of the fabric. The buyer automatically assumes the fabric to be technically perfect and reasonably guaranteed. His whole concern in selecting goods for clothing manufacture is fashion. Although tastes naturally vary, the basic trends are usually led by a relatively small group of fashion designers whose authority has been proved and whose leadership is accepted by the American consumer. The American pattern of living, busy working day at home and office, for both men and women, very few servants, little formality, more outdoor living, accelerated travel, etcetera, conditions the choice of clothing and exerts a steady influence on the fashion designer and the entire manufacturing industry.

"American women lead surprisingly active lives and enjoy great variety in their wearing apparel. New wardrobes of the middle and upper income brackets (these are the natural audience for India's quality fabrics) consist of 'occasion' clothes, clothes for daywear, clothes for country, for city, for travel and for various degrees of formality such as dinner, theatre and dancing. Also clothes for various sports such as swimming, tennis, golf and other leisure-hour activities. It is the understanding of this which gives direction to the whole United States fashion industry and, in turn, to the fabrics market. The manufacturers' fabric needs are based on seasons, usually three collections yearly, but sometimes as many as five or six. Then there are regional needs which condition the choice of fabric weights and colours.

"Manufacturers usually specialise in defined categories. Although there are a few top designing houses which produce general wardrobes, some of the more flourishing specialised groups are sportswear, separates, suits and coats, dressy clothes, at-home clothes, eveningwear, lingerie, bathing suits, rainwear and accessories. There are also various markets which cater to specialised size ranges, such as the junior field, children's wear, the sub-teen group, etcetera. There is a large men's wear market, and although it is more standardised than the women's field, a good deal of "fashion" is continually accented. The men's wear market also comprises various types of manufacturers, such as those making shirts, underwear, sportswear, etcetera. All of these markets together, within the general framework called the 'fashion industry', consume an astronomical amount of fabric.



"Obviously, if India chooses to expand her exports to this many-faceted U.S. market, the selection of patterns and colours to be offered must necessarily be large. The American fashion market is geared to 'the theory of the obsolete.' That is, a fashion which wins favour today is expected to rise to a peak of popularity and then gradually decline. This means a constant flow of fresh designs and continued experimentation for new effects. In saying this, however, we do not mean to suggest that India's handloom industry should attempt to appeal to the American consumer by turning to current American or European themes and neglecting India's own rich storehouse of ideas. On the contrary, we earnestly advise that India's handloom fabrics for export to the United States should, as far as possible, retain an inherent character which is uniquely Indian varying and adapting and building upon timeless Indian themes. Such fabrics, made to high standards of quality and adapted in suitable ways to American technical requirements and living patterns, should command a price and position of their own, and find a ready demand in the market for quality goods.

"Outside of a small group of high-priced custom dressmakers, there is not a great demand in the United States for the extremely elaborate designed fabrics. However, the skill and artistry with which this kind of fabric is made can well be a great contribution and inspiration in fashion if simplified in design. The handloom fabric has very special qualities which will always be an asset to the discriminating fashion market. There are certain effects and techniques which can only be hand-done and are above competition. Also it is easier for the pace-setting designers, who have a smaller clientele, but influence a vast audience, to work with handweavers in developing special ideas. Finally, the importance of maintaining quality and the unique style in exports to the United States fashion market cannot be overstressed."

Idea of a Sales Centre

The team has also suggested that a New York sales centre be established by first selecting an American of outstanding ability and a thorough merchandising background to whom complete authority can be delegated. This man would be known as the managing director of the sales division of the India Handloom Fabrics Export Corporation. The proper selection of this man is of prime importance to the success of the export programme. The Centre needs to be housed in a building which should reflect individuality and should preferably have three floors, to house three areas of activity. The ground floor must have as a retail showroom for consumer sales of not only handloom fabrics, *sarees* and fashion accessories, but for all types of home furnishings, accessories and handicrafts from India. The atmosphere should be that of a fashion bazaar. It should be a most exciting stage-setting for India, and also of great cultural value, as well as carrying healthy sales potential. The sales personnel should preferably be Indians, dressed in a handsome national fashion. The object is to project India into the U.S. market and make it impossible for the visitor, casual or purposive, to walk away without having been tempted by some goods or the other. The first floor (second floor, in American parlance) should house the "wholesale sales and buyer's service" for both fashion and home furnishing fabrics. This is the operation of primary importance and the division where India will be able to realise the largest dollar volume. This department should either accept orders for which it should take full responsibility for execution and delivery, or it should provide information to buyers on the basis of which they might make their own direct approaches to genuine sources of supply in India. Also, on the first floor should be the "design and sample weaving department." This department should work with wholesale buyers in developing fabrics which India should be able to produce. It has to be staffed with weavers and looms from India.

The second (third in America) floor of the building should accommodate the administrative offices and the public relations department. The public relations department should endeavour to maintain a consistent flow of news pertaining to India's handloom fabrics, interpreting them to magazines, newspapers, radio and other media. It will be necessary to maintain carefully selected stocks of fabrics in a warehouse in or around New York. This warehouse will also carry complete stocks of the handicrafts sold in the retail sales showroom. As part of the effort to cultivate the American market, steps should also be taken to stimulate an awareness of American fabric requirements and the way in which they are conditioned by industrial methods and living patterns. This should reach Indian weavers designers, etcetera, through such means as: (a) seminars with leading people from the American fashion and home furnishing industries, designers, manufacturers and decorators. (b) American books, magazines, newspapers and films, (c) Fulbright or other grant-students from the United States teaching in India and (d) retired teachers or professors in the textile field teaching in India. Like many of its predecessors, the report is being "studied".

To build such plants is a key task to which Simon-Carves bring half a century's experience, gained in every continent of the world, of engineering design, scientific research, and large-scale contracting. At the new Durgapur steelworks, at the great steelworks at Jamshedpur and Hirapur, and at many centres of chemical production Simon-Carves are applying their immense resources to India's industrial growth.

A Ditcher's Diary

INDIA'S DECISION TO OPPOSE A WESTERN PROPOSAL before the I.L.O. for a shorter working week will have the sympathy of all despairing employers in this country; productivity is already low enough in what is nowadays called "the working week" only with some stretching of verbal exactitude. Both work and leisure, however, are still largely unorganised and certainly unrelated alike to the needs of an industrial society and the harsh dictates of a brutal climate. With the temperature around 111 degrees in the shade—no doubt higher in the city centre—it is just not possible to maintain any level of efficiency between 10 a.m. and 5 p.m., the usual hours of work. A return to the feudal times of 7 a.m. to 11 a.m. and 6 p.m. to 8-30 p.m. would be more rational, but perhaps too upsetting. Air-conditioning in every office and factory is less impracticable an idea than some may think, and those who frown upon such luxuries would do well to remember that temperature and humidity are more than casually linked with the question of output. In fact, India's climate is her greatest economic problem; it is even recognised sometimes as not being without political significance either. A part of the vast amount of work left undone in every office, however, is explainable only by sheer laziness, and if this could be shed I would be inclined to support experiments with a five-day week. As it is, very little work is done on Saturdays: by the time my "black-coated" friends have recovered from a gruelling journey to office by tram or bus, a process that may take anything between 45 and 70 minutes, it is almost time to be thinking of going home. Two whole days off in a row would make a holiday seem like a holiday. But then, all this is possible only when what Mr. G. D. Birla once called "licensed absenteeism" has been left behind—meaning the innumerable holidays on just about everybody's birth and death anniversary. Why, we could then begin to think of a longish summer holiday every year. Oh *not* to be in Calcutta now that May is here.

BEFORE I LEAVE THIS SUBJECT OF THE WEATHER, I have a protest to make. A temperature of 111 degrees is certainly something—quite literally—to write home about. But that is merely the verdict of some pampered thermometer out in Alipore. Here in Calcutta, it would probably show another five or six degrees, and I for one resent being cheated of my increment. How much more martyred one can feel, for instance, to learn that it got up to 117 degrees in the spot where one was spending the working day—and that, I believe, is what in fact it did last Tuesday. The trouble is that Calcutta's citizens will put up with anything, even to being deprived of their right to know the true measure of their own discomfort. Something like this happened a few years ago in New York, I am told. There, the mercury was reading a mere 90-odd when the temperature was 110 at street level in the city centre. Now things have been changed, and the New Yorker can read in his morning paper a correct and mentally satisfying confirmation of what he knew he was going through the previous day. I should like to suggest, therefore, that those newspapers which quote the Alipore temperatures also keep a thermometer of their own in some place where people really live and work. And, oh yes, hasn't this weather shown how unsatisfactory the centigrade scale is for measuring temperature? There is absolutely no consolation whatever in learning that yesterday was 44 degrees C; there is something so scientifically unsympathetic about such a figure. Uncomfortable temperatures require drama in their reporting—such as the fact that the sinister 100-degree mark has been passed; or that 1,000 bats have dropped dead from heat exhaustion; or that Calcutta has just passed its hottest day since a week last Thursday. It is at times like this that I realise we are not really making the most of our amenities.

SOME WEEKS AGO IN THIS DIARY I MENTIONED the young Italian apostle of non-violence, Danilo Dolci, as a candidate for the title "the Gandhi of the Western World". I do not think my estimate of his character has necessarily to be revised now I learn that he is in serious trouble with the Italian Government: his passport is being withdrawn on the ground that he has "denigrated his motherland". When I last wrote of him, Dolci was on a Vinoba-style tour of England and Scandinavia seeking help for the under-privileged people of Sicily among whom he preaches the Gandhian faith. In the course of this tour he was reported by a Swedish newspaper as saying that among the poor around Palermo barely two in a thousand know how to read and write, that the local police keep the unsightly indigent out of the better quarters of the town lest the tourists see them and that epidemics have been known where the police have quarantined off the affected quarters leaving the poor within inadequately tended. These are very grave charges and I can understand that Rome should want to rebut them. But the withdrawal of Dolci's passport is not likely to convince the world that they are without foundation. Perhaps all it proves is that Gandhians will always get short shrift from constituted authority—and not only when that authority is foreign and imperial. Dolci should have known, of course, that Rome is particularly sensitive about any advertisement abroad of the well-known fact that masses of people in southern Italy live in appalling squalor. This has been demonstrated before in a way that, curiously, has relevance to the Indian film industry. Few of us have forgotten the immense impact in India of the early Vittorio di Sica films (particularly *Bicycle Thief)* around 1949-50. Di Sica's masterly and economical portrayal of poverty brought a new style into Indian film-making, previously totally given to adaptations of the Hollywood musical melodrama and extravaganza. All the Indian films that have since won international recognition (for instance, *Do Bigha Zamin)* have been in the "Italian style". But just when our local directors adopted their methods, the Government in Rome summoned di Sica, Fellini and others and told them that this concentration on poverty had to stop, because it was giving Italian society a bad name abroad. The poor could continue to be portrayed in films but somewhere in the background there should be a 12-cylinder, chromium-plated Alfa-Romeo driven by a Milanese beauty in ermine. The lush Gina Lollobrigida type of Italian film dates from this intervention.

THE VERY IMPROPRIETY OF THE KERALA EDUCATION Minister's description of the Supreme Court's "opinion" as a triumph for a Bill that has caused so much controversy, is a measure of the unreality inherent in any discussion of the merits of this document. Normally, of course, there would be no question of victory or defeat; all that happened was a reference by the Government of India to the Supreme Court for an opinion on certain constitutional aspects of the Bill. The wisdom of the reference has been ably questioned elsewhere, for the highest judicial body places itself in an awkward position by expressing opinions on hypothetical questions and may later be embarrassed by the appearance before it of concrete cases—to say nothing of the anomaly implict in the fact that the Court gives an opinion which the President may or may not accept. Even with the clause now held *ultra vires*, the Government of Kerala would probably have exercised no greater control over education than many other Governments already do—with this important difference, that it has a less reliable sense of what sort of education is good for the young. Almost every form of education is in a sense indoctrination, and the truth of this is not reduced by the ugly evocations of the word. Where, therefore, the real conflict comes in is whether a liberal society is not unwise to be so liberal as to usher in its antithesis, knowing that its end is the latter's chief objective. It has mystified some that, instead of fighting the State's many economic problems first, the Government of Kerala had chosen to reform education before all else. The reason is that all totalitarians have to catch them young, and this is as true of Namboodiripad as it was of Stalin and Hitler.

IT IS NOT OFTEN I CAN FIND TIME TO ATTEND ALL THE Press conferences held in this city, but one I certainly regret having missed was that given by Mr. Anandilall Poddar, director of the Calcutta Tramways, at the Calcutta Club last Sunday week. I have just finished reading what he had to say, and in particular, I noted this paragraph. ".....for every Rs. 100 which we receive by way of revenue, Rs. 95 are spent in India and the balance of Rs. 5 is spent in London for import of materials, Debenture interest, etcetera, and as such, you can take it that out of our revenue of Rs. 100 only Rs. 5 goes out of India, which no other transport system can claim, whether State-owned or private". That is certainly a reassuring statement, but I am still puzzled why Mr. Poddar should consider it needed saying. Everybody knows the Calcutta Tramways are British owned—although its proprietors have had precious little consolation from their investment in the last few years. It is not the Government's policy to discourage foreign enterprise, or even discriminate against it. The fact is widely recognised that the service the tramways give is the most efficient in India—Mr. Poddar mentioned an average price of 9¼nP for a five-mile journey compared with 12nP for Bombay. And the condition in which the vehicles are run and maintained is a lesson to every transport operator in West Bengal. In other words, the citizens of Calcutta have had more than their money's worth for longer than they have a right to expect. It is also well known now that any improvement depends on whether the travelling public is prepared to accept higher fares; or what is more correct these days, whether the State's communists are prepared to let them pay more. I really cannot see what the disposition of the company's earnings has to do with these simple economic facts at all. Calcutta's tramway users can consider themselves fortunate that this important public utility is still in private hands, and foreign ones too—unlike another of Calcutta's essential services which is attracting bitter comment these days. Surely, it is a question of value for money, not the nationality of those who are providing it? Or at least it would be if the economic life of this city were not completely at the mercy of a political party whose foreign allegiances are open, malevolent, and prosper unchecked.

GUEST, KEEN, WILLIAMS, LIMITED

REVIEW BY THE MANAGING DIRECTOR, MR. H. M. L. WILLIAMS

Statement made by the Managing Director, Mr. H. M. L. Williams, at the 28th Annual General Meeting held in Calcutta on 29th May, 1958.

The year 1957 has seen a continuation in the growth of the Company's sales and output generally, but it has been a difficult year. In spite of the greater outturn, earnings have not been maintained at the previous year's level due to the continued rise in manufacturing costs and the increased costs of stores and of almost all commodities bought out. This experience is in common with that of many other enterprises in India and, if you recall the remarks I made to you last year, will not be any surprise.

The year started with good order books, which were maintained throughout the succeeding months at a satisfactory level in the Company and its Subsidiary. During the year the deliveries of steel from overseas were most irregular, and from the end of February until the end of September, imported spring steel billets and sleeper bars were generally not available. When these raw materials eventually arrived the deliveries were out of phase with the Works' consumption rates so that during the latter months of the year, and well into 1958, additional financing and handling costs have had to be borne.

Raw materials remain the largest factor in the cost of production, and every rise in steel prices causes a commensurate rise in working Capital required. Salaries and wages continue to increase and are the second greatest cost factor; during the year under review they rose by over 15% of the 1956 figure. The rate of taxation on the profits of 1957 is the highest in the history of the Company. In spite of a fall in the surplus before taxation the amount provided for Tax and directly attributable to the year's operation exceeds that actually provided in 1956 by almost 2½ lakhs; in addition there is a further liability of nearly Rs. 14 lakhs for 1956, which has had to be found from Reserves.

Accounts

The Accounts are presented for the second year in succession under the 1956 Companies Act, and for the first time it is possible to show the comparative figures of the previous year. To assist in making this comparison two-colour printing has been used, and I hope you will find the general presentation of the Accounts brochure up to expectation. The practice adopted last year of showing a summary of the Profit and Loss Account in a simplified form has been continued, but modified in a way which it is thought will readily appeal to Shareholders.

For the 52 weeks ended 28th December 1957 on a total of sales and miscellaneous income of Rs. 9,18,58,837, compared to Rs 8,01,08,259 for the previous year, the surplus before taxation has fallen by Rs. 11,56,572 to Rs. 1,41,13,317. The provision for taxation at Rs 72,00,000 shows an increase of Rs. 2,39,226 over 1956, but with regard to the taxation of that year reference is made under the heading of Appropriations. Included in the provision for 1957 is an amount of Rs. 2,40,512 for Wealth Tax.

Appropriations

You will see from the Report of the Directors that having paid an Interim Dividend of 8% without any deduction for Tax they now recommend a Final Dividend of 12% without any deduction for Tax, and a transfer to General Reserve of Rs. 25,90,741, appropriating the remaining balance at the credit of the Profit and Loss Account. In making these recommendations your Directors have given consideration to the rate of dividend and, in view of all the circumstances of the year, think that it is proper to maintain the Shareholders' distribution not very different from the previous year.

I would like to draw your attention to the item in the Appropriation Account amounting to Rs. 13,75,133 for Taxation relating to the previous period. This further impost arose as a result of changes in the Tax rates and the introduction of the Wealth Tax, which were not announced until May 1957, and of course had to be found out of the unappropriated profits of 1956. Minor adjustments in the taxation structure between the years are not unexpected, but on this occasion the amount concerned is very substantial, and when looking back on the final surplus for the year 1956, must not be ignored.

Balance Sheet

The additions to Fixed Assets during the 52 weeks ended 28th December 1957 amounted to Rs. 62,26,724 and shows a substantial increase in comparison with Rs. 36,38,362 for the previous year, reflecting the progress of implementation of the plant rehabilitation and of the new Development Schemes. In addition the cost of Capital works in progress and advances to suppliers of Capital equipment are very substantial at Rs. 1,15,13,531 the finance for which has been found mainly from Reserves.

Stocks in hand have increased by Rs. 1,21,60,041 to Rs. 3,18,84,623 due to large quantities of construction stores being required for development work and the out-of-phase deliveries of imported raw materials which I mentioned in my opening remarks.

Under Book Debts, customers' accounts have risen considerably to Rs. 1,96,00,364 due to an improved volume of sales, and to the inflationary effect brought about by the higher cost of raw materials. Also contributory are the delays in settling price amendments with Government. The problem of long term outstandings over 3 months is being constantly tackled, but with two statutory alterations in the price of steel during the year, together with the difficulties in realising Sales Tax between different Government Departments, great pressure is being put on the Company's liquid resources, and at the end of the year the Company had a Bank overdraft of Rs. 92,70,265.

Production

The output of both Calcutta and Bhandup Works has shown a continuing rise in most of the major producing departments, which is very satisfactory; an exception is the fall in output of the Railway Switches and Crossings Department to which I refer later. The Steel Sleeper Department, contrary to earlier planning had to be kept in spasmodic operation throughout the year converting imported bar into finished track sleepers as and when supplies became available; on account of this and delay in delivery of new plant the expected changeover to greater production of steel turnout sleepers has been delayed, but I am glad to tell you that since the end of the year it has been possible to overcome some of these difficulties.

The Bolt and Nut Works continues to maintain its steady rise in output of the past few years and the tonnage sold in 1957 was over 2½ times that in 1953. Much of last year's sales relate to the heavier fastenings for the Railways which have to be executed at very low margins and do not reflect a commensurate rise in profits. The past year showed a marked increase in demand for bright finished specialised bolt and nut items. However, whilst raw material supplies improved towards the end of the year, they were still insufficient and too irregular to enable the major portion of the plant to be worked on a two-shift basis.

The Steel Melting Furnace had another successful year and worked up to what must be considered as about its peak output of over 8,000 tons which, from this size of furnace making special quality steels, is most satisfactory. The production of forgings for wagon and other Railway needs such as signal and track appliances, continued at a high level. The Forging Section has in addition produced an increased variety of items for the automobile industry. The Railway Track Fitting Section which makes tie bars, cotters, keys, rail anchors and loose jaws was another department to achieve a record output, but the demand for these items appears to be nearing saturation point and, since the end of the year, plant capacity is not being fully utilised.

The Screw Works at Bhandup has once again held its own in the race for greater production, and at nearly 4 million gross of wood screws shows a remarkable build-up over the past 5 years from nothing to a figure of about half the Country's requirements. At the same time this Works has continued to increase its production of most of its other items, and during the year added screw eyes to the range of products.

Page 4 of the Report brochure gives a graphic illustration of the past year's output in most of the major production departments, and the general steadiness of the upward trend will, I hope, be considered as satisfactory. To these has also to be added the Calcutta Rolling Mills, which is the king pin of most of the fabricating departments and supplies them with rolled bars and sections.

Throughout Calcutta and Bhandup Works continually mounting costs have now become a feature of production requiring the constant attention of management in our industry, and indeed in all industry today. Labour and material costs have again risen. Whilst improvements in productivity achieved by modernisation have helped to counteract this rising trend and keep our prices and quality standards competitive, there is a limit at which the level of costs must so affect the price of our products that employment can be endangered. The Company has always paid great attention to producing a quality of product acceptable by high standards, and the wisdom of following such a policy is certainly sound as a long term policy for an engineering enterprise supplying the country's needs. Nevertheless the fact must not be overlooked that customers in India are often conscious of price before quality, and it therefore behoves a Company such as yours with substantial overhead expenses (compared to many smaller units) to obtain the maximum effectiveness in operation, whether it be the use of manpower, raw materials or machines.

Agency Department

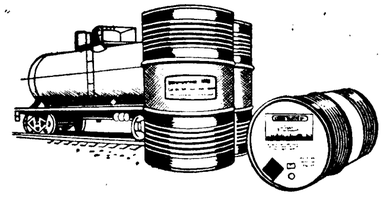
This Section continues to try hard, and much effort has been applied during the year to working up those Agencies which look like having a reasonable period of life ahead of them. Unfortunately the restrictive Import Licence Policy now means that most sales are confined to forward delivery and put on the Company's customer the onus of obtaining an "Actual Users" import licence. The quota licences for items which at one time formed a good turnover as sales ex-stock are now almost non-existent.

However, in spite of these difficulties Invoiced Sales and Commissions, which latter made a valuable contribution, totalled Rs. 42 36,174. The problem of clearing sea consignments through Calcutta Port, I am pleased to report, have eased during the year, but it still seems impossible to clear air and postal consignments expeditiously.

Development and Future Prospects

The past year was the beginning of the large scale additions (as apart from rehabilitation) to Calcutta Works, and it saw a progressive increase in plant installed at Bhandup. This expansion programme as at present planned is for implementation over the years 1957 to 1959, during which time very substantial sums of money have to be found. Accordingly your Directors have been considering ways and means of increasing the Capital of the Company; unfortunately their task is not made easy by today's atmosphere of heavy Taxation with the present deterrents to Capital formation, which check the natural evolution of Capital growth from within, and offer little inducement to the potential investor in Industry.

Last year I mentioned that the new Tax proposals were no inducement to any investor, and now that they have become facts you can see from the Company's Accounts what a huge load has been imposed on our resources. To be successful any enterprise must continually keep itself up-to-date and introduce more efficient machinery and be constantly on the lookout to combat rising costs of manufacture. Your Management is fully aware of this need, and during the past year the new Central Tool Room has been completed, which should be a help in checking the appalling rate of growth in the cost of tools. Modern methods of Work Study have become the full time responsibility of a new Administrative Section, and an increasing number of technical staff are continually using their ingenuity to improve processing methods.



For the past three years detailed Work Study investigations have been made into operations and processes at our Calcutta Works to set standards not only for cost accounting purposes but also to introduce a revised Production Incentive Scheme, based on the most modern lines. This new scheme was introduced on 1st May 1957 throughout the Works. A large majority of the workmen benefitted considerably and soon realised the advantages and equity of the new scheme, but as always happens when such schemes are revised some sections do not fare as well as others, because they do not wish to put in the similar amount of effort to earn more as do their colleagues. Such was the case with the Switches and Crossings Department whose performance was an exception to the continuing rise in output in most of the major producing departments.

However, beyond our control is the vexing matter of Taxation. This burden is now the heaviest that has ever had to be carried and takes away more than half of your Company's earnings; at such a rate it is too high to create a proper incentive to expand and progress. The tax gatherer has of course the first pick and is not concerned with the imposition he is placing on a Company's growth potential, nor is he concerned in ploughing back earnings, which every business undertaking must do unless it is to stand still or deteriorate. These are conditions with which we have to contend and unless some improvement is forthcoming your Company's progress is likely to be retarded. I would advocate that further thought must be exercised by those responsible for Tax legislation, whereby a proper and worth while inducement can be extended to all potential investors in India. Furthermore with the Country's present shortage of foreign exchange some greater incentive must be offered to encourage the flow of new investment from abroad. It would be wrong for me to disguise these facts.

Acknowledgment

During the past year the Company has continued to receive very valuable assistance of all kinds from its overseas Associates, without whose technical advice and research facilities the large development schemes could not have reached such a satisfactory state of implementation, or indeed have been possible. It is customary that statements of this kind end with an expression of thanks to the Company's personnel, but in this case it is much more than convention which prompts me to record our high appreciation of their services. Without the whole-hearted loyalty, enthusiasm and ability from Management, Staff and Workmen no operation can be successful.

INDIAN PAPER MAKERS ASSOCIATION

CHAIRMAN MR. J. F. BRIERLEY'S REVIEW

Speech delivered by the Chairman, Mr. J. F. Brierley, at the Annual General Meeting of the Association held at the Royal Exchange, Calcutta, on 23rd May, 1958.

Gentlemen:

On behalf of the Committee I should like to extend a cordial welcome to our guests to this Annual General Meeting of the Indian Paper Makers Association.

The Annual Report for 1957 has been sent to members. I regret that it has been issued somewhat late this year and that it has not been in your hands for longer.

1957 has been a year of steady progress and, although no new unit came into production, the substantial expenditure by existing units on modernising and expanding their plants is reflected in the continued increase in the production of paper. The final figures will probably show that, for the first time in the history of the Indian Paper Industry, production of paper has exceeded two lac tons. This was an achievement of great merit, and shows the very real effort the Industry is making to reach the target laid down for it in the Second Five-Year Plan. However, one would not be being honest with oneself if one tried to believe that the target was within reach, even at this comparatively early stage of the Plan. Nevertheless, very great strides have been made in the last seven years, since the commencement of the First Five-Year Plan, and the production of paper has almost doubled in this time. Such progress would be impossible without the combined efforts of all those concerned, and I think it would be fitting were I to place on record here the valuable assistance in implementing expansion schemes which is received from the Paper Development Wing of the Ministry of Commerce and Industry. For a rapidly expanding Industry such as ours it is essential to have a Government Department working in close collaboration, and the Paper Industry is fortunate in being in this position. The help and advice which we need is always readily available from the Paper Development Wing, and it is comforting to know that the many problems, big as well as small, which face us from time to time, are always fully appreciated.

While the Industry can justifiably be proud of its achievement, still greater progress has to be made. This is particularly so if there is to be any substantial quantity of paper available for export, and this is a matter which must be given more direct consideration in view of the country's Foreign Exchange position. But, before we can expect to sell our products on overseas markets, we must be able to satisfy overseas buyers as to their quality and we must also be able to offer paper at competitive prices.

Higher Production Costs

Mention of prices brings me to the other side of the picture for 1957. 1957 will be remembered as a year when production costs in the Paper Industry continued to rise steadily. Everyone connected with the Industry is all too fully aware of the rise in prices of essential materials, and in other costs, which has taken place since paper was decontrolled in 1950. For instance, the price of coal, of which about 3¼ tons are consumed for the manufacture of each ton of paper, has risen by nearly 30%; the price of hosiery cuttings has risen by 80%; rosin by 48%; and china clay by 60%. While labour costs, partly through increases in wage rates and partly through increased amenities, have risen, on an average, by about 35%.

A major contributory factor to Mills' rising costs of production has been Central and State Government duties or statutory price increases of one description or another. The latest of these, but I have no doubt not the last, is the enhancement of the Electricity Duty payable by Mills in West Bengal with effect from 1st February 1958. While I appreciate the importance to the West Bengal Government of the increased revenue which follows from this measure, I wonder whether they fully realise its impact on the West Bengal Paper Industry. Is it realised that it will increase the cost of producing paper in West Bengal by 1 nP per lb.? This is, moreover, only the direct effect on Mills of the enhanced Electricity Duty. There will, in addition, be an indirect effect as the prices of any chemicals and stores produced in West Bengal are bound to be increased similarly.

I understand that, more recently, the Government of Punjab have taken similar action which may affect even more drastically the costs of production of Paper Mills in that State.

I feel most strongly that Government should pay far greater attention to the impact on the Industry of measures which they enforce to increase revenue. At the moment they appear to see this matter only from the point of view of increased revenue, and they should be aware of the fact that, when prices increase, it is very often some action on their own part which has been responsible for the increase.

The Paper Industry has always maintained selling prices at as low a level as possible. In spite of the increases in cost to which I have referred, Mills have been able, by increasing their efficiency, to maintain relatively steady selling prices. It is to the Industry's very great credit that, during the eight years since decontrol until March of this year, the selling price of standard White Printing paper was kept down to only 12% above the price ruling in 1950. This does not, of course, include the increase of 16% since March 1955 as a result of the imposition of Excise Duty.

There is, however, a limit to the extent to which any Industry can absorb increases in costs. There will always come a stage when some of the increases must be passed on to the consumer, particularly if the Industry is to expand and maintain its plant in efficient working order. Accordingly, in March of this year, Government was advised that the Industry could no longer bear the whole of the increased cost of production which had taken place in the previous twelve months, and were asked for an increase of about 9% in the price for supplies against the Government Rate Contract for 1958/59. The Industry's request for this increase was fully substantiated by figures, but unfortunately Government was prepared to increase the price by only 3.6%. This increase was accepted by the Industry, but not without very great misgiving, and it was made clear to Government that the increase was considered to be inequitable, and thoroughly out of line with the increased costs of production.

It is hard to reconcile Government's policy on paper prices with their exhortation to the Industry to increase production. If Government are going to absorb for their own use between 30 and 40% of the paper produced in the country, and at the same time pay prices which barely cover production costs, it is clearly impossible for the Industry to set aside funds for expansion. If it is intended that this shortfall should be recouped from the prices charged to civilian consumers, then I can only say that the morality of such an attitude is questionable and at variance with the request which Government have made to keep selling prices down.

At the same time as discussing supplies to Government, representatives of the Industry also discussed civilian prices with Government and the Industry assured Government of its co-operation in assisting to keep them down. It was, however, made clear that, as in the case of supplies to Government consumers, a stage had been reached at which part of the increase in production costs would also have to be passed on to civilian consumers. Prices have accordingly been increased by about 5% with effect from 1st April 1958. Although there has been a certain amount of comment on this price increase in the Press, I am glad to say that it is generally appreciated that the cause of the high prices at which paper is selling in the Bazar is not the prices charged by the Mills, but the excessive profits taken by the Bazar. This Association has emphasised to its members that they must do everything within their power to see that paper sold to their distributors is thereafter sold to consumers at the prices recommended by the Mills.

Raw Material Resources

An address from this Chair would be incomplete without a reference to bamboo. Bamboo is the Industry's main raw material and to all intents and purposes, and until other raw materials can be developed, is the only raw material which can sustain the existing Industry and its expansion. The bamboo resources of the country are vast, but not so vast as to justify the belief in many quarters that they are unlimited. Insufficient is known about the total extent of the resources and a scientific survey of them by Government is now an urgent necessity, as the future development of the Industry depends on precise knowledge of the quantity of bamboo available. Meanwhile I must repeat the warnings of my predecessors that the country's paper production capacity is in real danger of outstripping the supply of this essential raw material.

The Raw Material Resources Sub-Committee of the Pulp and Paper panel has produced some rough estimates placing total resources of bamboo on a sustained annual basis at about 1.8 million tons. The estimated annual requirement of the existing Industry is .4 million tons and a further .85 million tons are estimated to be required for new projects and expansion of existing units authorised under the Industries (Development & Regulation) Act, 1951. It is recognised that the total resources include substantial quantities in regions which are incapable of being exploited economically. The Raw Material Resources Sub-Committee therefore feels that the balance of .55 million tons should, generally speaking, be considered as a reserve to meet possible eventualities, such as gregarious flowering. It is evident from these figures that the time has come when Central and State Governments must not only see that existing resources are utilised to the fullest extent, but also that steps are taken to increase the annual yield of bamboo areas.

In this connection I cannot emphasise too strongly that it is in the interest of State Governments to lease out forests direct to paper mills on a long-term basis. It is only in this way that the forests will be exploited fully and properly, and that full advantage will be taken of the resources of the country. Although the increasing out-turn of bamboo from areas worked by long-term lease-holders makes it abundantly clear that it is in the interests of State Governments to grant long-term leases, there is still a tendency in certain areas to look for immediate returns by leasing bamboo forests to the highest bidder on an annual basis. This short-term policy cannot be in the interests of the Industry or the country.

Protection of Bamboo Forests

In view of this, it must be a matter of astonishment that, to the Industry's fears regarding the adequacy of bamboo supplies, I have to add a warning on the need for protecting existing forests. One State Government has informed a member of this Association that 250 acres per annum of their leased area will be converted into Teak plantations and that all the bamboo in the area will be clear felled to make way for Teak seedlings. Quite apart from the loss of bamboo, there will be a considerable loss of revenue to the State Government and, above all, there are grave doubts as to the success of the Scheme. Moreover, while it is a moot point how long bamboo clumps which have been clear felled take to recover and become economically productive again, it is probably at least 12 years and opinions have been expressed that it may be even longer than that. It is also by no means certain that bamboo when it has grown again will be quite as productive as it was originally. In consequence it is estimated that a massive quantity of bamboo is likely to be lost from this area. I appreciate the need for improving the quality of mixed forests and that planting Teak is one of the methods of doing so, but I find it difficult to understand why areas should be selected which are already earning revenue and which provide the country with such an essential raw material as bamboo.

The same State Government introduced a Bill on 1st May to provide for the levy of a tax on bamboo and certain other goods carried by road or inland waterways within the State. On bamboo the tax is proposed at the rate of Rs. 2/- for every one hundred bamboos and, on this basis, it will work out to at least Rs. 17/- per ton of bamboos or Rs. 17/- per ton of paper. It is not too late for the Bill to be amended and I would therefore appeal to the State Government to reconsider their proposal and to omit bamboo from the list of goods on which this tax will be levied.

Supplies of other raw materials, as well as chemicals, have been satisfactory during the last year, with the unfortunate exception of Sodium Sulphate. Most Mills used to obtain their Sodium Sulphate from Rajasthan, but the deposits which were being worked there recently became exhausted and some Mills have now had to make arrangements to obtain their supplies from overseas. Imported Sodium Sulphate is subject to a Customs duty of 30 or 40% *ad valorem*, depending on the country of origin, and this, together with the sea freight, makes the price of imported Sodium Sulphate more than twice as much as the price of the indigenous product. Paper Mills are large consumers of Sodium Sulphate and the price of this chemical has a considerable influence on costs of production. I would therefore urge the Government of Rajasthan to make every endeavour to find further workable deposits in their State, so that indigenous supplies can once again be made available to Paper Mills.

FIRM UNDERTONE IN STOCK MARKETS

GILT-EDGED AND GOLD SHARES RISE

London, 28th May.

THE cut of a ½ percent to 5½ percent in the British Bank rate had only a modest effect on the stock markets as a small reduction had been already discounted to a great extent. Nevertheless, the news had a mildly encouraging effect and enabled markets to maintain the firm tone which had been established earlier in the week. Most sections recorded gains with renewed activity and the strength of gold shares was the outstanding feature. Buying on American, London and Continental account was accompanied by talk of a possible increase in the price of gold, but gains were subsequently reduced on profit-taking. Elsewhere, business was small prior to the Whitsun holiday week-end, and there was a further contraction subsequently. Apart from the cut in Bank rate, the news generally was unfavourable to the markets and it is indicative of the underlying firmness that prices mostly managed to improve in spite of the news. Political events abroad, particularly in France and Algeria, and domestic labour troubles, in spite of the settlement of the rail dispute, were the chief disturbing influences. Although a further reduction in Bank rate had been expected for some weeks, the actual timing of the cut, against a background of labour troubles, surprised the market. However, the news generated no excitement. The gilt-edged market responded quite well, particularly the short-dated stocks, and further gains were recorded later in response to the larger-than-expected fall in the treasury bill rate. Foreign bonds and rails attracted very little attention, while dollar stocks fluctuated with Wall Street and showed very little change on balance. Industrials were quiet, but a selective demand imparted a firm trend to the market generally and small gains were recorded. Banking and insurance shares were firm. Oil shares moved within narrow limits and showed only minor changes on the week. Rubber shares were subdued throughout, but there were occasional firm spots. Tea shares were quiet, but selectively firm, with Indian and Ceylon issues recording a number of gains on balance.

The Money Market

The main feature of interest in the money market last week was the cut in Bank rate. The timing of the reduction took the market rather by surprise in view of the labour uncertainties and international political troubles. The amount of reduction—½ percent—was short of expectations as a full 1 percent cut, it was felt, would be the right amount. But as it is, the market is left with the immediate short-term interest level still in a state of flux. This was evident at the Treasury bill tender on last Friday, when the average rate came out approximately ⅛ percent lower at £4 16s 5.6d percent, compared with the previous week, indicating that the downward trend has not been halted. While there has been an easing in the short-term interest rates over the past few weeks, there has been no relaxation of the tight credit supply position and once again, the market during the past week had to contend with fairly stringent conditions. Non-regular money prior to the changed Bank rate was maintained at the firm level of 5 percent and after the change, the new basis was 4½ percent. Regular money was fixed at 3½ percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 21st May shows that the gold stock fell by $130 million to $21,743 million. Foreign deposits rose by $4 million to $311 million, while foreign investments declined by $28 million to $3,068 million. The Federal Reserve bought $7 million worth of bills, making the total holdings of U.S. Government securities $23,943 million. Total discounts and advances declined by $30 million to $86 million, while the aggregate excess reserves of member banks fell by $174 million to $539 million. The daily average excess reserves of member banks fell by $72 million to $648 million, while their daily average borrowings declined by $19 million to $104 million. Business loans of New York city banks fell by $55 million to $10,936 million compared with a decline of $128 million to $11.512 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were $120 million lower at $20,323 million. Federal Reserve notes in actual circulation were $63 million lower at $26,437 million. The deposit of member bank reserve accounts was $47 million lower at $18,133 million.

Activity on Wall Street

Long-dated U.S. Government obligations fluctuated irregularly during the past week. Investment quality corporates developed a firm undertone after early softness, while railline and convertible issues were mostly higher. In the foreign bonds section, Australians were fractionally mixed and South Africans a share lower. German Nationals gave up a little ground early but later rallied. Italian and Greek issues improved fractionally. Denmark 4½ percents were unchanged and Norway 4¼ percents were a little lower. Amsterdam 5½ percents edged higher to sell at a new peak of $163. Among Japanese issues, Government 6½ percents of 1964 were unchanged and 5½ percents of 1975 were higher by nearly a point. Among South Americans, Colombia 3 percents and Chile 3 percents improved by small fractions.

Paris Gold Irregular

The Paris gold market closely followed domestic political developments during the past week. Optimism concerning the north African situation prevailed during the early part of the week, although most of the recent gains were erased. In the last two sessions, the market turned cautious pending further clarification of the political situation, and price fluctuations were irregular in restricted dealings.

Rise in Rubber Prices

Rubber prices were inclined to move higher during the past week and the market finally showed gains ranging up to ½d a lb. There was hardly any trade enquiry, but a little short-covering, touched off occasionally by better overseas advices, usually found sellers in a cautious mood, particularly when it was reported that Russia was enquiring for June shipment rubber from Malaya. Dealers too were reluctant to sell due to the French political situation and the strike in London docks. Following news that the dock strike was spreading further down the river, London buyers were enquiring for spot rubber in Liverpool and at one stage the prices commanded a premium of ¼d. But sentiment was slightly dampened finally by the disappointing U.S. consumption figures of natural rubber for April and the market finished a little lower than the best. Only a modest demand circulated for sole crepe but arrivals were again small and prices did not move much. Most dealers were latterly quoting 28d for No. 1 smooth ⅛th inch on the spot.

Reduction of Taxes on Quicksilver Demanded

Italian quicksilver producers are trying to bring about a modification and possibly the complete removal of the existing heavy manufacturing taxes on the metal. London trade circles say. The taxes—32,000 lire a flask and 800 lire a kilo of quicksilver contained in the ore—were imposed by the Italian Government in November 1954. They were applied at a time when the price of quicksilver had fallen to about £80, while the London spot price was even cheaper at about £76. The tax on the metal a flask is equal roughly to a quarter of the present Italian price. It remains to be seen whether the Government yields to trade pressure. If it does to the extent of some modification in the taxes Spain will bring her export price quickly into line with Italy's.

Locust Threats from Middle East

The International Desert Locust Information Service has reported that the locust situation in the Middle East is grave. It says in a review covering April and early May that there is heavy and widespread breeding in central, northern and eastern Arabia, and breeding has also begun in Jordan, Syria, Turkey, Iraq, Pakistan and Iran. Infestation has become widespread in north-western Africa. Swarms from late May onwards might invade Egypt, the Sudan, Ethiopia, south-western Arabia, Pakistan and India.

Stabilisation of Brazilian Exchange Rate

The Brazilian Finance Minister has announced that he has asked the authorities for currency and credit to fix a special exchange rate for remittances of foreign capital and profits, to be made through the Bank of Brazil, instead of through the free currency market at the prevailing rate, as is the practice at present. This is expected to relieve the heavy drain on the free market which led to the plunge of the exchange rate from 102 cruzeiros to 145 cruzeiros to the dollar in only two months. The immediate reaction to the recent announcement was noticeable in the opening selling rate of private banks which was 6 cruzeiros below the closing rate of 19th May. Other measures which are proposed by the Government to stabilise the exchange rate include the abolition of the minimum for inconvertible currencies at exchange auctions in order to relieve the strain on convertible and limited convertibility bids. Another measure proposes to tighten up import controls to discourage under-invoicing.

B.O.A.C. COMET II ESTABLISHES NEW RECORD FOR ATLANTIC CROSSING

B.O.A.C. has announced that a *Comet II*, flying from Gander to London on the night of 15th May, reached a speed over the sea of 750 miles an hour for part of the journey. On the crossing, it established a new civil Atlantic record of 4 hours 21 minutes. The previous highest ground speed of the *Comet* was achieved over Japan in 1952, when a speed of 658 miles an hour was reached. The previous fastest Atlantic crossing was one of 4 hours 30 minutes which was made by the same aircraft two days earlier. The *Comet* was engaged on one of the 11 transatlantic engine development and crew training flights which are, at present, being performed by B.O.A.C. Two of the four engines in this aircraft are Rolls-Royce Avon RA29, the type which will be installed in the *Comet IV*. B.O.A.C. expects to put the *Comet IV* into service towards the end of this year the intention being to operate these aircraft on the Eastern and Australian routes at the same time the possibility of using them on the Atlantic is being examined.

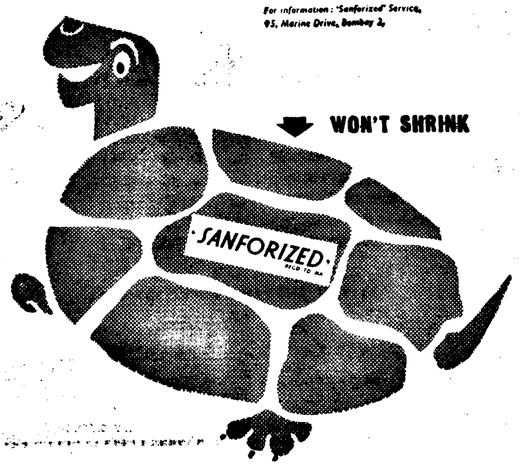
that's why people look for the label ·SANFORIZED·

ALL over the world, people choose fabrics trade marked 'Sanforized'—because they know the label 'Sanforized' means: *this garment will never shrink out of fit...even after many, many washings!*

The name 'Sanforized' means *extra* value and prestige for *your* label—it assures your customers that you take trouble to give them the *best* value for their money.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'

Look for ·SANFORIZED· on the label



MAY SHRINK

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

THE CALCUTTA MONEY MARKET

BANK ADVANCES DECLINE

Wednesday, 28th May.

CONDITIONS have been altogether slacker in the Calcutta money market during the past week. The total of advances outstanding showed a marked decline for the first time since the busy season began. This fact, together with the quieter conditions which have ruled for the past few weeks, appears to suggest that this year's busy season is drawing to its close. The needs of both the jute and sugar industries declined and rather less accommodation was required against grain and seeds storage. The needs of the cotton mills alone among the main sources of demand showed a slight increase. The interbank market has been slacker and the call rate has been reduced slightly to 3¼ percent.

In spite of the reduction in usance bill rates following the fall in the British Bank rate, the exchange market has continued dull. Neither tea nor gunny bills were in evidence. Remittance was poor. Spot sterling has been marked down against most Continental currencies in the past week. Although sterling began the period strong against the U.S. dollar, that too has now strengthened against the pound. This appears to be not so much due to the change in Bank rate as the prospects of strikes in the British economy.

BULLION WAS QUIET ON LARGE ARRIVALS IN THE face of a reduced demand. Silver fell from the previous week's level of Rs. 186.50 to Rs. 185, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 183.75. The London price was quoted at 75⅞d and the New York quotation stood at 88⅝ cents.

Gold was quiet in sympathy with silver and the price declined from Rs. 114 to Rs. 111.75. The sovereign at Rs. 72.50 showed a fall of 25nP.

DURING THE WEEK ENDED 23RD MAY, GOVERNMENT of India Treasury bills for Rs 8,10,00,000 were sold in favour of the Reserve Bank.

DECLINES OF Rs. 16.14 CRORES TO Rs. 1,614.83 crores in active notes and of Rs. 14.31 crores to Rs. 1,625.17 crores in the total note issue were outstanding features of the return of the Reserve Bank of India for the week ended 23rd May, 1958. Note held in the Banking Department consequently rose by Rs. 1.83 crores to Rs. 26.48 crores. The currency contraction was covered by reducing rupee securities by Rs. 15 crores to Rs. 1,167.62 crores. Deposits of the Government of India rose by Rs. 99 lakhs to Rs. 76.06 crores and other Government accounts were Rs. 2.80 crores higher at Rs. 16.49 crores. Balances of commercial banks at Rs. 73.14 crores showed a fall of Rs. 74 lakhs. Balances held abroad declined by Rs. 4.44 crores to Rs. 38.40 crores. Investments increased by Rs. 14.60 crores to Rs. 241.64 crores. Other loans and advances fell from Rs. 69.33 crores to Rs. 59.52 crores, of which advances to scheduled banks against usance bills amounted to Rs. 20.03 crores (Rs. 26.32 crores). Ways and means advances stood at Rs. 60.83 crores against Rs. 59.80 crores

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 16th May, 1958, shows a drop of Rs. 62 lakhs to Rs. 417.66 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 5 lakhs and Rs. 10 lakhs to Rs. 160.76 crores and Rs. 10.28 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have fallen by Rs. 3.49 crores to Rs. 201.17 crores. Cash and balances are, in consequence, shown at Rs. 27.32 crores, or Rs 26.98 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED BANKS for the week ended 16th May, 1958, shows Demand and Time liabilities at Rs. 743 crores (Rs. 17.35 crores on account of borrowings from banks) and Rs. 787.51 crores (Rs. 16.08 crores), compared with Rs. 752.17 crores (Rs. 19.84 crores) and Rs. 790.20 crores (Rs. 16.24 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have dropped by Rs. 1 crore and Rs. 39.24 crores to Rs. 39.35 crores and Rs. 68.07 crores, respectively. There is a rise of Rs. 14.85 crores to Rs. 440.31 crores in investments. Advances and bills discounted at Rs. 939.89 crores show a drop of Rs. 8.75 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7 percent and 61.4 percent against 9.6 percent and 61.5 percent.

Foreign Trade . . .
Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.
Foreign Agencies
ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

COMMERCIAL TRENDS IN EUROPE

SAFEGUARDS FOR FOREIGN INVESTORS DISCUSSED

(FROM A CORRESPONDENT)

A committee of international lawyers is to be formed soon to suggest safeguards needed by foreign investors in under-developed countries, a report from Paris says. This is the result of a two-day conference of mining and petroleum lawyers which was recently held in Aix-en-Provence. Among those who will sit on the committee will be Sir Hartley Shawcross and Mr. Charles Spofford of New York (one of the two international lawyers appointed by the Suez Canal Company to negotiate a settlement with the Egyptian Government). The committee will examine the possibilities of drawing up an international treaty to enforce an independent arbitrator's verdict in the event of a dispute between owners of foreign capital and the Government of the country in which it is invested. The conference has laid down three principles, which should be observed by countries receiving foreign investment: First, contracts freely entered into must be respected; second, if they are revoked, adequate compensation must be paid; and third, if a dispute arises, the competence of an international court must be recognised.

Sir Hartley Shawcross has told delegates that "many new countries will prefer to have their relations based on a solid foundation of international law, than on the precarious favours of the communist world." Mr. Vigier, chairman of a Franco-American mining group, has stressed the problem of restricting the liberty of action of a sovereign State. He suggests that apart from a recourse to force, only the moral persuasion of international law might induce an independent country to observe contracts to which it is a party. Even so, a contract must be reasonably flexible, or legal arbitration will be powerless to preserve it.

New West German Economic Council

The West German Minister of Economics, Dr. Erhard, has announced the setting up of "an economic council" to advise the Government and the nation on the state of the economy and to make recommendations twice a year on wages, capital markets and industrial development. The Minister said this at the annual meeting of the Federation of German Industries. The nine-man council will be headed by the Director of the Federal Office of Statistics. It includes representatives of four major economic research institutes and four university professors. The utmost publicity will be given to all findings of the council, not just their opinions of wage policies." Dr. Erhard has said that the Government will increase financial aid to newly developing countries, "but not by tapping the gold and dollar reserves of the Bundesbank."

Herr Berg, chairman of the Federation, has asked for "comprehensive plans to be held in readiness against a possible recession in West Germany." But Dr. Erhard has reiterated that there is no need for alarm. The declines in the coal, steel and textile industries are "only localised setbacks, the expression of long-term changes in consumer demand."

Herr Berg has stressed that West German industries should understand both the British and French points of view in the European free trade area discussions. "A compromise will be found because it simply must be found." He hopes that the treaty on the European free trade area will be concluded before the end of the year.

Report of the Coal and Steel Community

The president of the European Coal and Steel Community, M. Paul Finet, has lent the support of his organisation for creating the European free trade area. Presenting the High Authority's sixth annual report to the European Parliamentary Assembly meeting in Bonn, he says the project, "so close to our minds and hearts, will be a further milestone in Europe's progress." The move towards a united Europe will "have to be supplemented at no very distant date by an extension in breadth." Referring to the special arrangements necessary for coal and steel in a free trade area, he says that among the rules needed will be a ban on subsidies, as in the common market, and also a clause to enable action to correct or offset other distortions of competitive conditions.

Some means will also have to be found to enable other countries to link up with any allocation or quota system which might be introduced for the Community's coal and steel output at a time of serious shortage. Any such link will, however, be subject to "maintenance of a strict balance of obligations and benefits." Reviewing the market situation in coal and steel, M. Finet has told the Assembly that in spite of the 15½-million tons of coal and coke now stocked at pitheads in the six Community countries, it is absolutely essential, "paradoxical though this may seem," that the production of certain grades be expanded if the Community is not to become excessively dependent on imports later on. He has urged the six Governments to accept the High Authority's proposals for financial aid to encourage the building of buffer stocks.

Meanwhile, the Assembly has released a resolution drawn up by its political committee by which it will defer until its next session, which is scheduled to be held during 23rd to 28th June, the formulation of its opinion on the choice of a capital for the six Governments. This opinion was asked for by the Community's Council of Ministers in March. A vote on the resolution will be taken before the current session closes.

Repatriation of Swiss Capital

As a result of the U.S. recession, there has been some repatriation of Swiss capital, part of which is being invested in new bonds yielding relatively high interest rates. The recent cessation of the gentleman's agreement concerning foreign deposits with Swiss banks is also attracting foreign capital to Switzerland, and foreign investors can now freely purchase Swiss bonds. A third factor, which is influencing the money and capital markets, is the reduction of stocks, due partly to the decline in the level of economic activity in many countries as well as the still uncertain economic prospects, and partly to the persistent weakness of many raw material prices. As a result, funds are being freed and some of them are being channelled to the capital market. A further cause of the reduction in stocks is the substantial decline in Swiss imports in the first quarter of the year and the consequent marked improvement in the country's trade balance.

If the U.S. recession is halted and economic activity in that country and the world at large regains lost ground, marked repercussions on the Swiss economy are likely to be felt. One of the results of the U.S. recovery, Swiss economists point out, will be that Swiss and other foreign capital will once more turn to the United States. Swiss stocks will again be rebuilt, and the trade deficit, which is now considered to have already reached its normal level, will rise again. A fresh deterioration in the trade balance alone, it is said, can easily cause a new tightening of conditions on the Swiss capital market.

Upturn in the Austrian Economy

For a variety of reasons, the international recession has not so far materially affected the Austrian economy. Irrespective of the rather sharp decline in the tempo of the boom in the United States, business in western Europe, which absorbs two-thirds of the overall total of Austrian exports, has remained on a high level. Moreover, Austria's eastern trade, representing a relatively important factor in comparison with the results of similar trade relations with other west European countries, has additional stabilising effects. Favourable circumstances are further to be seen in the timely elimination of the home market "super-boom", regulated as early as 1956, and in the trouble-free development of the wage-price structure, which was made possible by consistent co-operation of management and labour. Whereas other west European countries were compelled, for reasons of their monetary policy and foreign exchange control, to adhere to a more or less restrictive policy—changed only in recent times—it was possible in Austria to relax the restraints on free enterprise as early as 1957. Some of these were the re-introduction of tax privileges for new investments and the restoration of a greater latitude of operations in the sphere of credit policy. Since the beginning of 1958 invigorating impulses have also been imparted to the economy through additional public orders. It has thus been possible to shift the centre of gravity of business from the foreign trade sector to the home market.

In contrast with the retrograde tendencies in the field of exports, the home market maintains a satisfactory level of activity and even shows a new upturn. Long-term investment plans in many spheres, the continued impact of the rationalisation programme, additional placement of public orders, and the availability of larger funds have created a favourable climate for a lasting boom in the investment goods sector.

Shipment of Pressure-duct Tubes to India

The Upper Austrian Voeest Steel Works has recently shipped pressure-duct tubes to a total weight of 500 tons to India. The material, to be used for installation in the Poringal-Kuthu power station in Madras, is designed to complete an earlier shipment of 680 tons of bends and other structural joints for the building of pressure pipelines, delivered between 1953 and 1955. Another shipment of pressure-duct tubes for the Neriamangalam power station in the south of India, representing a consignment of 950 tons, will be effected shortly.

Decline in Swedish Iron and Steel Trade

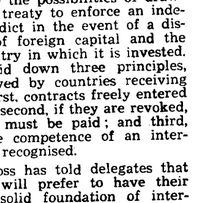
Sweden's production, exports and imports of iron and steel in the first quarter of 1958 showed a decline compared with January-March 1957, according to a report recently issued by the Swedish Iron and Steel Works Association. The declining trend, noticeable during the latter half of last year, thus continued and was reflected in lower employment in the iron and steel trade. Exports of iron ore dropped from 3,312,000 tons in January-March 1957 to 3,219,000 tons in the same period of the current year. Sponge iron exports declined from 8,200 tons to 4,000 tons, pig iron from 9,600 tons to 4,600 tons and merchant iron and steel from 86,600 tons to 64,900 tons. Exports of iron and steel manufactures fell from 20,000 tons to 16,800 tons. Imports of pig iron rose from 21,100 tons to 22,700 tons, whereas imports of merchant iron and steel declined from 223,400 tons to 193,900 tons. The domestic output of pig iron and sponge iron remained more or less unchanged at 381,000 tons and 35,000 tons, respectively. Ingot production declined from 677,000 tons to 633,500 tons and the output of merchant iron and steel from 474,200 tons to 420,800 tons.

Deficit in Foreign Trade

Sweden's foreign trade during the first three months of the current year resulted in a deficit of 837 million kroner (£50 million); or 106 million kroner more than a year ago. Exports declined by 139 million kroner to 2,373 million kroner (£164 million) while imports went down by 33 million kroner to 3,210 million kroner (£222 million). On the export side, timber shipment decreased from 167,000 stds. in January-March 1957 to 104,000 stds. in the same period of this year, while exports of chemical pulp rose from 416,000 tons to 429,000 tons. Paper exports declined from 259,000 tons to 230,000 tons. Iron ore exports fell from 3.3 million tons to 3.2 million tons and shipments of iron and steel from 87,000 tons to 65,000 tons. Motor-vehicles exports rose from 6,932 units to 9,678 units whereas exports of ships declined in value from 170 million kroner to 124 million kroner. Imports of coal and coke decreased from 1.3 million tons to 600,000 tons, while oil imports rose from 2.6 million tons to 3 million tons. Iron and steel imports went down from 223,000 tons to 194,000 tons. Motor-car imports showed a considerable increase; from 23,392 units to 38,655 units, and textile imports rose in value from 205 million kroner to 212 million kroner.

Dumping of Continental Butter in Britain

In Great Britain, which is the principal buyer of Danish bacon and butter, the bacon market showed further improvement in March. Supplies fell short of demand and the weekly quotations for Danish bacon continued to rise, reaching 305s a cwt. towards the end of the month, or 43s more than at the end of February and 65s more than in the beginning of January when the quotation was at its lowest. Development in the British butter market, on the other hand, continued to be unsatisfactory due to dumping sales from secondary suppliers, and it, therefore, became necessary to lower the quotation for Danish butter still further, from 239s to 200s a cwt. Under the circumstances, the Danish Government lodged a protest against Sweden's and Finland's sale of butter at dumping prices, at the same time informing the British Government that it endorsed in principle the request which New Zealand had made to Great Britain in February, to impose an equalisation duty on imports of dumped butter from various countries.



Results of Royal Dutch-Shell Group

After deduction of taxes, the net profit of the Royal Dutch-Shell group in 1957 was £212.7 million, compared with £179.5 million in the preceding year. This 18 percent increase resulted from an expansion of all the departments of the group's activities. The gross production of crude oils, including oil received under certain delivery contracts, amounted to 115 million tons, compared with 103 million tons in 1956. One hundred and eleven million tons of crude oil were processed, namely 4 percent more than in the preceding year. Sales of crude oil and oil products totalled 110 million tons, compared with 105.5 million tons in 1956. In 1957, proceeds of sales and other income rose by £313 million to £2,634 million sales of aviation fuel, kerosene and chemical products increased, whereas gas oil and fuel oil were in lesser demand due to the unusually mild weather. Sales of these products in Europe were affected by the difficulties in the supply from the Middle East early in 1957. Costs increased by £183 million to £1,497 million. At the meeting of shareholders to be held on 20th May, 1958, the board of directors and the managing directors of N. V. Koninklijke Nederlandsche Petroleum Maatschappij will propose a cash dividend for 1957 of 5 florins a share of 20 florins outstanding at 31st December, 1957, and of 3.50 florins on shares issued since this date.

Depression in Italian Cotton Industry

The long-standing depression affecting the Italian cotton textile industry shows no sign of relenting. Senator Ballora, president of the Association of Italian cotton manufacturers, says in the annual report to the Association's general assembly, that the slight improvement in 1956 did not last beyond the first half of 1957, since when the position has become worse. The reason for the crisis lies in the discrepancy between the productivity of the cotton industry and the increasingly limited opening for its output." He does not place much hope in the common market.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

Enquiries may be made through your own bankers or direct to:—

RECOVERY FOLLOWS IMPROVEMENT IN T.I.S.C.O. LABOUR SITUATION

U. K. BANK RATE CHANGE AIDS SENTIMENT

Wednesday Evening.

THE stock market has been more cheerful this week due to the improvement in the labour situation in Jamshedpur. The announcement by the management of the Tata Iron & Steel Company that the plant would begin reopening from today, and that normal production was likely by about 15th June, was well received.

The reduction in the British Bank rate on 22nd May from 6% to 5½% aided sentiment. This should benefit India, because it will cheapen deferred credit terms for purchases of capital goods from the U.K.. Some of the more optimistic operators suggested the possibility of a cut in the Indian Bank rate, due to the present easy money market conditions. The main factor preventing the present recovery from gathering momentum is the serious labour situation. Of immediate importance is the threatened strike by dock labour throughout India on 16th June. The recent Naini Tal conference has done little to improve sentiment. In fact, the possibility of additional burdens on industry, to finance the extension of social services, has caused concern.

Paper shares stole the limelight during the past week because import restrictions have recently resulted in an all-round rise in prices of indigenous paper. Producing companies are expected to reap some benefit—particularly as most of them have expansion schemes in hand. The following table shows the improvement which has taken place:

	Opening 21st May	Closing 27th May
	Rs.	Rs.
India Paper Pulp	20.25	21
Orient Paper	29.15	31
Shree Gopal Paper	15.50	16
Sirpur Paper	10.31	11.31
Titaghur	38	38.50

The Stock Exchange was unofficially closed today as a mark of protest against the arrest of one of its members for alleged illegal trading on the kerb.

The gilt-edged market witnessed an acute shortage of scrip except in the case of 3% Conversion Loan 1946-86, which was marked down from Rs. 71.15 to Rs. 71.05, sellers. All short-dated issues were in good demand and there were buyers of the recently floated 3½% 1963 loan at the issue price of Rs. 98.75. The medium and long-dated new issues, namely, 3½% 1968 and 4% 1973 were offered at their issue prices.

In the banking section, Punjab National improved to Rs. 53.25, against an opening quotation of Rs. 52.50.

There was practically no change in coal share prices, except in the case of Pench Valley which were marked down from Rs. 20.75 to Rs. 20.

The continued crisis in the cotton textile industry kept buyers away from this section. The exception was Kesoram which staged a slight recovery from Rs. 10.25 to Rs. 10.44.

In electrics, Benares were better at Rs. 13.50, as were Calcutta at Rs. 14.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 21 and Rs. 21.45; the unofficial quotation today was Rs. 21.26. There were strong buyers of Guest, Keen, Williams at the higher rate of Rs. 31.75, but sellers were scarce. Marshalls improved to Rs. 5.44, following the publication of a satisfactory report and the maintenance of the last dividend of 20% per annum. Jessops were slightly better at Rs. 20, as were Burn & Co., at Rs. 342. Braithwaite advanced from Rs. 25.87 to Rs. 26.31.

The moderately optimistic view expressed this week by a leading firm of stock brokers in Calcutta about the prospects of jute shares, brought out some buyers and prices generally improved.

With the exception of Dyer Meakin, which improved to Rs. 10, the sugar section was dull and featureless.

Among miscellaneous industrials, Alkali & Chemical moved from strength to strength and closed at the higher rate of Rs. 15.25. Indian Aluminium hardened to Rs. 14.75, as did Indian Cables from Rs. 33.87 *cum*-rights to Rs. 34.44 *cum*-rights. Indo-Burma Petroleum were better at Rs. 26.87, as were India Steamship at Rs. 10.94. Jardine Henderson receded from Rs. 56 to Rs. 54, while Metal Box were placed at Rs. 28.37. National Carbon were steady at Rs. 25 ex-dividend and Rohtas Industries improved from Rs. 17.56 to Rs. 18.25.

Tea shares displayed a mixed trend; for example, Bishnauth recovered from Rs. 18.87 to Rs. 19, Hattikhira from Rs. 10.75 to Rs. 10.87 and Tezpore from Rs. 15.25 to Rs. 15.37. On the other hand, Basmatia receded from Rs. 21.25 to Rs. 21, Hantapara from Rs. 114 to Rs. 112. Hasimara from Rs. 22.75 to Rs. 22 and Huldibari from Rs. 21.25 to Rs. 21.

In the mining group, Indian Copper were sticky at around Rs. 3.10, while Orissa Minerals were steady at Rs. 25.19.

REDUCING DEPRECIATION BY Rs. 10,000 TO Rs. 1 lakh, the loss of the Orient Jute Mills Company Ltd. has amounted to Rs. 55,117. Bringing in Rs. 11,098 and transferring Rs. 50,000 from general reserve, there is a balance of Rs 5,981 which is carried forward The dividends have been passed over. It is expected that the Budge-Budge and Allied Jute Mills Companies (Private) Ltd. which have been set up by the directors in collaboration with the directors of other jute mills in the Andrew Yule group of management with a view to contacting overseas markets directly, will benefit the company. Orient has subscribed to the capital of the new company equally with other jute mills.

THE PROFIT OF MARSHALL, SONS AND COMPANY (INDIA) LTD. has increased from Rs. 5.19 lakhs to Rs. 7.09 lakhs for the year ended last June. Providing Rs. 3½ lakhs (Rs. 1.90 lakhs) for taxation, bringing in Rs. 1,01,088 and making other adjustments, there is a balance of Rs. 3,45,774. A dividend of 20 percent has been maintained, leaving a carry-forward of Rs. 1,35,774.

The directors state that as a result of the co-operation between Marshall, Sons and Co. Ltd., Gainsborough, and the Britannia Engineering Company in the production of diesel road rollers, the former, as the selling agent, stands to gain. The first batch of diesel road rollers are about to come off the line, and it is hoped that the steam road rollers will be ready for delivery soon. The company is benefiting from the range of Marshall electric motors produced by the Motor Machinery Manufacturing Company The Marshall Baxter range of stonebreakers made by the company in India are developing satisfactorily.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE.

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

Bombay Market

TEXTILE ANXIETIES SET MARKET TONE

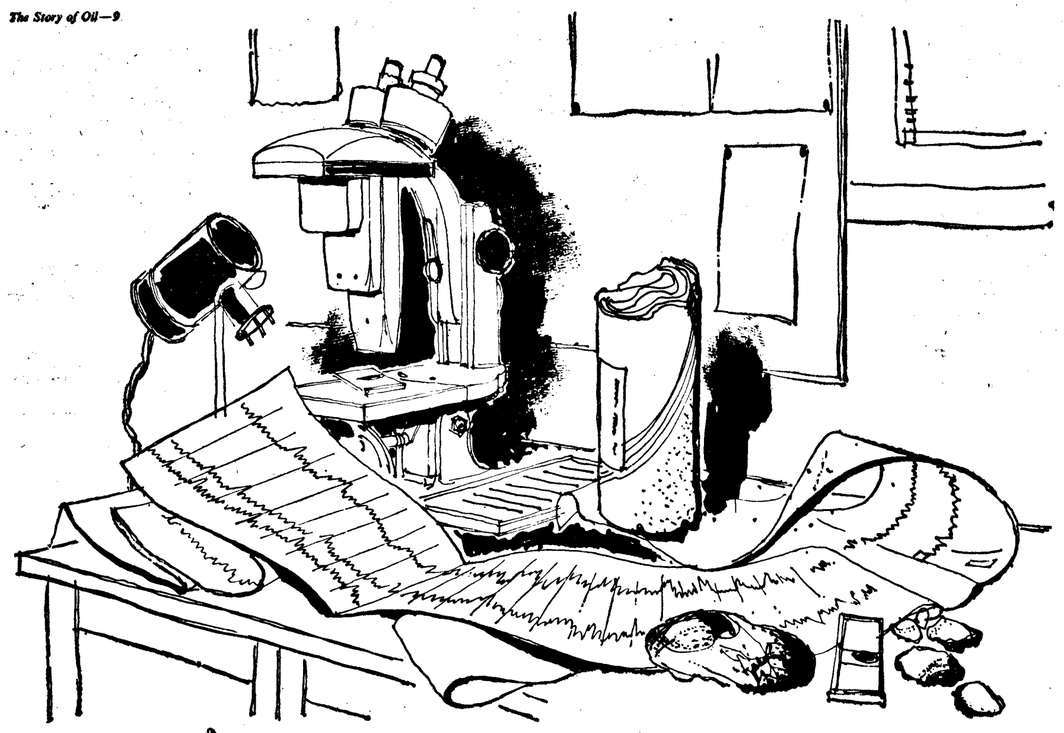
STEEL SHARES IDLE

Wednesday Evening.

SHARE prices see-sawed gently in the Bombay stock market last week on alternate good and bad news. Reports that working at the Tata Iron and Steel Company will be resumed shortly helped sentiment but operators were debating the possibility of loss in output as a result of the strike. The closure of books by the Tata Iron and Steel Company for the purpose of both dividends and bonus shares was regarded as helpful.

Towards the close, operators were hesitant because of the unpromising outlook for the cotton textile industry. Exports of cotton textiles during the first quarter of this year fell below expectations and the current trading in cloth was regarded as unsatisfactory. It is feared that the Government is unlikely to sanction any further reduction in the cloth excise duty in the near future.

Tata Steel were idle around Rs. 177.50 and trading was limited. Indian Iron closed at Rs. 21.40. Alcock Ashdown were fractionally higher at Rs. 247.50 on short-covering, while Tata Locomotive lacked interest around Rs. 165.50. Premier Construction were bought at Rs. 181.50 and Larsen and Toubro improved further to Rs. 16.44 on good corporate news. Mahindra and Mahindra were taken at Rs. 18.25, ex-dividend, on hopes of a rights issue. Automobile shares were idle, and Premier Automobile came to hand at Rs. 80.50. Hindustan Motor recovered to Rs. 7.08 on short-covering.



Cotton mill shares tended to decline further on selling pressure. Bombay Dyeing were offered at Rs. 53.20 and Century were sold at Rs. 427. Simplex were dealt in at Rs. 152 and Svadeshi declined to Rs. 170.50. India United Ordinary were freely offered at Rs. 9.12 and Apollo were transacted at Rs. 1.72.

Miscellaneous shares lost on balance in sympathy with the general trend. Disappointment over the delay in the publication of an increase in the retention price of cement induced pressure in the group. Associated Cement lost at Rs. 148 and Digvijay Cement were transacted at the lower level of Rs. 142. Sugar shares were quietly steady, and Belapur realised Rs. 245. Phalton were bought at Rs. 144. Steamship company shares were maintained on the prospect of an increase in freight earnings. Scindia Steam were transacted at Rs. 17.36 and Great Eastern Shipping were placed at Rs. 19.92. Mining shares were subdued with sellers predominating, and Shivrajpur Syndicate were offered at Rs. 80.50. Bombay-Burmah improved to Rs. 547.50 on replacement buying and Tata Chemical fluctuated narrowly around Rs. 14.72 in limited trading. National Rayon were bought at Rs. 231.50 and Wimco were transacted at Rs. 171.

Banking shares were steady, though prices showed little change. United Commercial Bank came to hand at Rs. 59.50 and Bank of Baroda were bought at Rs. 115. Insurance shares were higher, and New India Assurance realised Rs. 48.25 on good corporate news. Jupiter General came to hand at Rs. 7.76.

Electricity supply company shares were steady on scattered investment support. Bombay Suburban were bought at Rs. 105 and Tata Hydro were taken at Rs. 118.25. Demand continued for Ahmedabad Electric around Rs. 94.70.

The Story of Oil—9

How much oil?

One oil well does not make an oilfield. As soon as the first well in a new area gives proof of steady production the next step is to establish the extent of the oil accumulation in its underground trap. This is done by drilling further wells, the programme for which is based on the results of scientific surveys and tests carried out during the drilling of the discovery well.

Surveys for such " down-the-hole " information are commonly made by recording instruments lowered into the well on a cable. One instrument produces a record in the form of wavy lines on a chart which, when interpreted, confirms the nature of the rocks penetrated by the drill and shows exactly where the oil zone lies. Another instrument gives records from which the amount and direction of the slope or dip of the rock layers can be calculated.

Tests carried out in oilfield laboratories include analyses of samples of rocks and oil recovered from the well. From rock samples it is possible to calculate how much room there is for the oil in the spaces between the grains of sand in a sandstone rock, and the amount of water associated with the oil. An analysis of a sample of crude oil gives data about its gas content and other characteristics.

With all this information to hand the development of the oil find can proceed on a planned basis, and decisions can be made on how far apart the wells should be drilled, how deep they should go, how many drilling outfits will be kept in operation, and what size of refinery will be required.

LONDON INSURANCE LETTER

PROBLEMS OF BIG BUSINESS

THE insurance market is alert to new developments which require insurance cover; it must also be prepared for an increasing scale of risks, on projects new or old. This fact cannot be long overlooked in these times. The second international conference on nuclear energy insurance, in London early in March, was constantly aware of the size of the risks which it was discussing; and the structure of the world market now taking shape, with the formation of national insurance pools and arrangements for spreading the risks internationally by reinsurance, is taking account of this problem of size. The vastness of the African Kariba Dam project has been forced on the attention by the damage suffered by the rising of the river. The decision to negotiate insurance of San Francisco's Golden Gate Bridge in London was a reminder that a modern bridge could cost tens of millions of pounds: in this case the value is assessed at some £42 million—and in a region where the risk of earthquake must be taken into account.

Bridge insurance is a specialised activity, involving complex technicalities. Most large bridges —the Sydney Harbour Bridge, for instance, and the structure now being built across Auckland Bay—are insured mainly in the London market. It is not uncommon to insure against loss of revenue caused by damage, as well as against damage to the structure itself. Premium rates vary widely, because bridges, rather more than most structures, may have to be located in hazardous circumstances. Damage to bridges was a particular, and distressing, feature of the misfortunes that befell the Kariba project. The full extent of the damage will evidently not be known until June, but it can already be seen—as in so many previous cases—that the damage is less than appears at first: it is probably less than £1 million. The claims fall in the first place on British companies, but reinsurance was effected in the U.S.A., as well as the U.K. This disaster has raised one or two interesting points. Loss of time caused by damage could be serious in such a project—though in this case, it is said, the time lost will be quickly made up; anyway, it seems that this risk of loss was not insured. The question has been raised, what precisely is a flood? The claims are related to the "flooding" of the Zambesi; but does a rise in a river's level constitute a flood if the river does not break away from its normal course?

No By-passing the Market

Insurance men have been reading with interest and elightenment a book by H. A. L. Cockerell, secretary of the Chartered Insurance Institute, published recently by English University Press. The title is *Insurance*, and in a wide field one of the subjects discussed is this problem of size. It is sometimes reasoned, on the basis that insurance was evolved to distribute risks which were too heavy for individuals or small groups, that the need for insurance is being gradually reduced as the size of the groups increases. Why, it is asked, should a huge industrial enterprise insure itself in the market when its combined resources are surely sufficient to cover the risks incurred by each part of it? Are not big aggregate resources and spread of risks, two essentials of insurance, provided by these great enterprises within their own organisation?

Mr. Cockerell finds serious flaws in this reasoning. The most obvious is that as the size of a business increases so does the size of the risk. A measure of self-insurance can, doubtless, be provided by a business that expands from, say, one factory to four, variously sited; but the problem is quite different where a single factory is quadrupled in size. Practice varies, of course, from one industry to another, but a characteristic of modern large-scale industry is the increase in the size of its individual units. So far from spreading its risks, a big industrial undertaking is inclined to concentrate them. Mr. Cockerell points to the classic case of General Motor's Willow Run plant, where the fire in 1953 involved insurance claims aggregating some $30 million. Not even the biggest corporations in the world could calmly accept losses of such magnitude. "Such corporations", the author observes, "have large accumulations of capital subject to the hazard of a single fire, and the risk inherent in these accumulations cries out to be spread. The alternatives are either the possibility of wide fluctuations in annual profit figures, with resultant loss of the all-important confidence of the investing public, or the creation of huge 'self-insurance' funds, with the consequent sterilisation of large blocks of assets which can better be employed in the development of industry." Essentially, therefore, it is a question of economic efficiency; and there is no limit to the inefficiency implicit in the idea of self-insurance. If big corporations, ignoring the facilities which the community has developed, are going to provide their own insurance, they may as well set up their own postal services and build their own railways! Ironically, this discussion has turned against the insurance companies—through no fault of theirs. Industrial companies should not undertake the functions of insurance; nor should insurance companies undertake the functions of industry.

Pan American's new Economy Class Thrift Fares offer you a saving over regular tourist fares of Rs. 540 on your round trip to the U.S.A. This brand new service at a low price designed for budget travel is offered aboard the finest modern equipment—like the famous "Super-7" Clippers*—America's fastest over-ocean airliners. Pleasant courteous crews, full 44 pound luggage allowance, complimentary sandwiches and light beverages. Fly aboard the only airline with over 70,000 transatlantic crossings.

Don't settle for less. Call your Travel Agent or Pan American in :-

OIL COMPANIES AGREE TO CUT PETROLEUM PRICES

BRITISH MISSION REPORTS ON POSSIBLE SITES FOR SECOND SHIPYARD

(FROM OUR NEW DELHI CORRESPONDENT)

THE long-drawn-out negotiations between the Government and the three oil companies operating in this country have resulted in an *ad hoc* reduction in the price of petroleum products. This will have the effect of saving India about Rs. 80 lakhs a month. The credit for the agreement should go to the three oil companies, and to the Secretary of the Ministry of Mines and Fuel, Mr. S. S. Khera, who has retained for himself the reputation of being a most tactful and astute negotiator. The negotiations proved complicated and difficult, particularly because of the peculiar attitude which the Minister for Oil, Mr. K. D. Malaviya, has been adopting. In these days of foreign exchange scarcity and the paucity of internal resources, he is the principal advocate of the nationalisation of the oil industry. Irrespective of the political and other consequences, he has brought in the Russians and Rumanians to set them up against the three old and established oil companies. If he had his way, he would have liked to reduce the oil prices still further, and were his demand to be accepted, it would mean Burmah-Shell alone surrendering Rs. 60 lakhs a month.

In India, the selling price of the main petroleum products has been regulated by an agreement between the Government of India and one of the oil companies. This agreement, which has been in force since 1948, lays down the formula on which the original price structure of the products was built up.

In 1957, the Government expressed its dissatisfaction with the level of prices prevailing in India then. Discussions started with the company which is responsible for the operation of the pricing agreement. On its entire marketing operations in India, the oil industry has in the past obtained a net return on the capital employed (totalling over Rs. 100 crores) of about 6 percent, or alternatively, about 3 percent on the gross turnover. In practice, however, all the earnings over many years have been ploughed back in India, in addition to further substantial investment on expansion. For example, in the case of one marketing company, the entire net profits over a period of eight years were re-invested, and an additional capital of Rs. 10 crores has also been brought in. This is apart from the investment in refineries and in other phases of the business.

New Price Formula

The agreement signed in New Delhi last week provides for an *ad hoc* reduction in the price of oil products. The company suggested to the Government that a new price formula be evolved to replace the existing valued stock account procedure. To this end, the industry has agreed to co-operate with the Government in a cost examination which will lead to a new price formula being evolved within a period of six months. The present price reduction amounts to Rs. 80 lakhs a month and represents in part the fall in world petroleum prices since the negotiations were undertaken, as also a voluntary reduction in the profit margin of the companies. Pending the evolution of a new formula, the oil companies will credit the Government with the amounts accruing on account of the agreed reduction in prices. As Parliament is not in session, an ordinance is likely to be issued to enable the oil companies to transfer these sums to the Government. How much of the reductions will be shared with the consumer may also be specified in the ordinance. One view here is that the saving should be used for financing development schemes. The foreign exchange requirements for petroleum products is of the order of Rs. 90 crores a year, almost half of which is spent on the crude oil needed for the three refineries. About Rs. 10 crores of foreign exchange saving a year is, therefore, very welcome in the present foreign exchange crisis. The following is the text of the agreement :

"A new price formula should be evolved to cover all petroleum products marketed in, or from, this country by the company. To arrive at an agreed break-up of the items to be included in the new price formula and the quantity of each such item, the company will provide all necessary facilities and information for examining the quantity and the propriety of all charges (from f.o.b. points or points through c.i.f. to company's selling point) included by the company in the selling prices of each product. The Government will appoint a cost accountant who will consult the company's cost accountant to settle the procedure and the time schedule for duly completing this examination so as to enable the new price formula to be introduced within six months from now. After this consultation, the Government cost accountant will make his detailed proposals for the carrying out of the proposed examination, for the approval of Government. The company will, on a purely *ad hoc* basis, give effect, from 20th May, to *ad hoc* reductions in the basic selling prices (exclusive of duties and taxes). These reductions, based on the company's sale estimates for 1958, amount approximately to Rs. 49.5 lakhs a month for Burmah-Shell alone. The prices, after making these *ad hoc* reductions, shall continue to be in force until the new price formula is introduced, subject only to the movements in the c.i.f. elements, apart from reasons outside the control of the company (such as changes in duties and taxes). For the specific purpose only of calculating such c.i.f. movements in this interim period, the Government agrees to the product c.i.f.s being based on product f.o.b.s ex Abadan and A.F.R.A. freight rates from Abadan to Indian ports, without prejudice to what shall be the f.o.b. or ocean freight basing point for the purpose of the new price formula to be later introduced, as a result of the above mentioned examination.

"The Burmah-Shell company agrees to writing off the net balance in the V.S.A. account as on 20th May, 1958, amounting to approximately Rs. 1.5 crores. The V.S.A. agreement will thereafter be deemed by mutual consent to have ceased to operate as from 20th May, 1958. The inclusion and certification by the company's auditors of particular elements in the prices in the past and until 20th May, 1958, shall be without prejudice to the inclusion, or otherwise, of any elements in the new price formula following the examination, or the retrospective application, of that new price formula, with effect from 1st April, 1958. On the new price formula being evolved, it will also be used to determine what the prices of all the products (whether they are products whose prices are being reduced on an *ad hoc* basis or not) should have been on 1st April, 1958 and subsequent to that date; if thereupon it is found that the prices thus determined are different from the prices actually charged from 1st April, 1958 onwards, retrospective adjustments will be made with effect from 1st April, 1958. Such retrospective adjustments will be made either by relating them to the future prices or in such other manner as may in due course be agreed upon. From the date of the *ad hoc* reduction (20th May, 1958) and till the introduction of the new price formula, an account will be maintained only of the c.i.f. movements, on the basis mentioned above, for the purpose of any movements in the prices during the interim period.

"Aviation gasoline	Rs. 0.15 a gallon"

Terms of Russian Loan

A Russian technical team is expected here early in July to finalise the terms of a Rs. 100-million-rouble loan, which that country has offered to finance an antibiotic plant and a synthetic drugs plant in India. These two plants will enable India to manufacture a variety of drugs, chemicals and pharmaceuticals. The Special Secretary to the Central Ministry of Industry, Mr. L. K. Jha, while in West Germany, was able to hold negotiations with the German firm of Bayer. Bayers are now expected to intimate their deferred payment terms for the plant to manufacture intermediates for dyestuffs and plastics. This and the other two plants in the public sector, it is expected, will manufacture the whole range of intermediates that India needs for her dyestuff, plastic, drugs and pharmaceutical industries. Side by side, the British firm of Glaxo has got permission to set up a factory to manufacture Vitamin A; so also the Swiss firm of Hoppman Le Roche. Details of the expansion programme for the manufacture of streptomycin have already appeared in these columns.

Double Tax Avoidance Agreements

A four-man team, headed by the Revenue Secretary, Mr. A. K. Roy, is leaving New Delhi on 28th May for West Germany, Switzerland and Sweden to finalise and sign the avoidance of double taxation agreements, which are in an advanced stage of negotiation. The main principle of these agreements is that the country where income accrues would keep the tax it levies. The Roy mission will also visit England, but it is not very hopeful of reaching an agreement with the U.K., as the differences between the two countries are apparently too wide to be bridged.

New Loan Offer

A Japanese firm has offered to negotiate a loan of $100 million from U.S. financiers for acquiring

They live next-door to each other
...years apart!

Next-door neighbours may look and dress alike; yet each is an individual ... sometimes, years apart in ideas and outlook.

It's a fascinating business, studying people and their next-door neighbours. At Hindustan Lever, through the modern science of marketing research, we study needs, aspirations, preferences, dislikes. They help us know you better, guide us in making products that will suit your taste, your pocket ... your way of life.

In this way, you are advising us, guiding us — for ultimately it is *you* for whom we produce.

HINDUSTAN LEVER SERVES THE HOME

HLL. 10-358

ships for India. In view of the heavy commitments already made, India may accept the offer to the limited extent of $25 million, and the Japanese company has been asked to intimate its terms such as the brokerage, the rate of interest, the period of loan and the manner of its repayment as also the chances of acquiring new tonnage in Japan.

Indian Aluminium Expansion

The Indian Aluminium Company has been permitted to expand the capacity of its Hirakund plant from 10,000 tons to 20,000 tons a year. The foreign exchange component of the capital structure is placed at Rs. 2.5 crores. A loan from its Canadian parent company is expected. The estimated cost of the expansion is placed at Rs. 3.6 crores. Permission is also being given to start one unit each of rolling mills in Assam, Bihar, Andhra and Kerala. There are no re-rolling mills in these States.

Allocations of U.S. Aid

Some indications are now available of the allocations made of the $(U.S.) 75 million loan, which India has recently received from the U.S. Development Fund. Some $40 million of this loan will be used to purchase steel for the Indian railways, $25 million for acquiring components for lorries, $5 million has been allocated to cotton and jute industries and another $5 million to the cement industry. The loan from the U.S. Export and Import Bank will be used to finance irrigation and power projects, road construction programmes, industrial schemes and the purchase of coalmining equipment.

First Instalment of Japanese Loan

Only 5,000 million yen will be available in the first year of the Japanese loan of 18,000 million yen promised to India. This sum will be used to purchase ships, power and railway equipment.

Sites for a Shipyard

The sites in Cochin, Kandla, Trombay, Geonkhali and Mazagon are considered to be the most suitable for the establishment of a second shipyard, according to the U.K. shipyard mission which has just submitted its report.

The Colombo Plan mission visited India last year, and inspected in all 20 sites—the advance party visited 18 sites, and the main party visited nine. The terms of reference for the mission were to advise the Government of India on the site and the lay-out of a new shipyard and the equipment which would be required to establish it and to furnish the estimates of the capital costs of the shipyard; it was also to prepare a report for consideration by the Government. The sites visited by the mission were Diamond Harbour and Geonkhali near Calcutta, Paradwip in Orissa, Tuticorin in Madras (three sites); Cochin in Kerala (four sites); Mangalore (two sites) Bhatkal (two sites) and Karwar (two sites) in Mysore, Trombay, Mazagon Dock and Kandla in Bombay. The site at Mazagon Dock, Bombay, was inspected by the mission on its own initiative.

The mission, in arriving at its conclusions, it is stated, has formulated the following minimum and necessary requirements which a site should satisfy: (a) the depth of water and tidal range should be adequate and suitable for the safe launching of the largest ships to be built; (b) good water channels from the sea or estuary; (c) site, sheltered from prevailing storms, adequate in area and with adjoining ground also available for further development: (d) proximity to an existing or projected major port and to an established township with industrial possibilities; and (e) the availability of adequate services, including electric power, water supply and road and rail access. None of the sites examined, according to the mission, is ideally suited for development. Nevertheless, the five named were worthy of further consideration. the report states. About the five sites recommended, the mission has said:

Cochin: It offers more at the Ernakulam site than any other site examined, towards the successful development of a shipyard. It is an expanding port; a number of industries subsidiary to shipbuilding are already established there; rail transport and other services are good, and there is a working force of labour familiar with industrial processes. The site at Cochin is not perfect from the civil engineering viewpoint. However, the problems in this connection are not insuperable, as may be instanced by the extensive work already carried out by the port authorities.

Mazagon Dock: Mazagon is a recognised ship repair centre and the redevelopment of part of the present establishment for the building of cargo ships up to 12,000 tons d.w. is a practicable proposition. However, only four ships of this tonnage could be built a year and the output would thus fall substantially short of the target laid down for the second shipyard. The main advantage is that Mazagon Dock can be redeveloped quickly and at a reasonable cost. Further, the present organisation is experienced both in the building of ships and repairs.

Kandla: Kandla would be a suitable site for shipbuilding, if it were not so remote from other industrial areas. In all probability, there would be difficulty in recruiting and retaining technicians and specialised labour.

Trombay: Trombay is advantageous from the civil engineering construction point of view; but the initial dredging of the yard frontage and of a channel connecting the site with existing deep water would be costly. Also, maintenance dredging would be a heavy recurring annual charge.

Geonkhali: Geonkhali is the better of the two sites near Calcutta. It is near the steel-making districts. The Hooghly river is, however, considered to be unreliable for safe launching and a continuous heavy dredging might, in time, endanger the foundation works.

The area required for the full development of the shipyard and its approaches would not be substantially less than 100 acres. The estimated costs of the proposed shipyards at the five sites, according to the report, are:

Cochin (Ernakulam)	Rs. 19.16 crores,
Kandla	Rs. 20.31 crores,
Trombay	Rs. 17.38 crores, and
Geonkhali	Rs. 20.88 crores.

For the somewhat different proposals for the redevelopment of Mazagon Dock, the costs are estimated at Rs. 7.04 crores.

These estimates have been prepared, says the report, on the assumption that the complete shipyard including the dry-dock and repair facilities would be ready and in full use in a period of about three years. Items external to the main proposal, for example, railway and road constructions, township, etcetera, have been excluded as well as the cost of acquiring the site. The total payments necessary for the purchase of equipment abroad would be £2,067,500 (Rs. 2,75,66,000). These payments in the case of Mazagon Dock proposal would be £980,000 (Rs. 1,30,67,000).

However well-equipped this new shipyard may be, the mission feels it is of the utmost importance that the labour force should be of good quality and well-trained. The labour content in Indian industries appears to be higher than in Europe. Every means must, therefore, be used to make sure that the considerable capital investment involved in the shipyard is economically employed. The criteria on which the different sites were compared were those of land, water, metereological data, communications and services, accommodation of labour, construction of yard (availability of local material), shipbuilding (restrictions on launching and interruptions to all-year-round shipbuilding) and locality. In the case of locality, the following factors were taken into account by the mission: existing industry, existing allied trades, existing port facilities, steel supply, availability of skilled labour and future area development of the shipyard.

Labour Build-up

The rate at which labour can be absorbed into the second shipyard will depend not only upon the completion of its construction, but also upon the development of housing and other community requirements at the site selected for the shipyard, says the mission. A labour build-up programme should, therefore, be prepared in conjunction with the local civil authorities, as it is essential to start with good labour relations, and those depend upon living and working conditions as well as on the standard of leadership and training.

The mission has recommended that the programme of gradually building up of the labour force be planned for the period of growth of the new yard, covering in all about five or six years. The programme should concentrate on the formation of small, carefully selected and well-controlled groups of men, each under the leadership of a supervisor of high calibre. A scheme of apprenticeships should be introduced by which an unskilled man or juvenile can, in due course, earn promotion to a semi-skilled grade, and thereafter become a skilled craftsman. Proposals for training schemes have been outlined by the mission. A model illustrating the proposed lay-out for the Cochin site has been submitted along with the report.

Expert Report on Bombay Port

A reference was recently made in these columns to the Millbourne mission, which came out to India under the Colombo Plan last cold weather, to survey the condition of Indian ports, and make recommendations for relieving the frequent congestions in them. Two members of the mission, Messrs Francis H. Cave and A. M. Smith, who enquired into the conditions prevailing in the Bombay port, have made the following observations: "When we arrived in this port we found that congestion on the quays had been cleared, and that instead of there being ships waiting for berths the port trust was in the enviable position of having empty berths in its docks. We naturally made enquiries as to the causes of this extremely creditable state of affairs, and while obviously there must be quite a number of factors which have a direct or indirect bearing on the position, we feel that two of them stand out above all the rest. They are: (a) vigorous action by the port trust to remove uncleared cargo from the berths and transit sheds; and (b) improvement in labour output due to the piece-work system of payment. It is possible that the second of these causes is to a certain extent influenced by the first, as it is well recognised that labour can produce a better output when working at berths which are clear of other cargo.

"We have examined carefully the port and its facilities and have studied the statistics concerning the pattern of the port's trade during the past few years. Although it is always possible that emergencies may occur, we think that in general the port should be quite capable of dealing with ships and cargoes without undue delay and, in fact, should normally still have a little bit in hand. This opinion pre-supposes that the two factors to which attention has been specially drawn in this report will continue to function at least at the present standard; and we draw attention to certain matters which may help the smooth flow of trade through the port. The port is well laid out with good transit sheds and first-class rail and road connections. Major improvement schemes are at present under consideration, and we shall refer to certain of them later in this report.

Mechanical Aids

"The port is well equipped with mechanical aids, and we were informed that eight additional mobile cranes are on order for the lighterage point at Haji Bunder. We were particularly pleased to see the effort which is being made to service the mobile units promptly and efficiently. We recommend that the following be undertaken as soon as possible: (a) the purchase of, say, 12 clamp lift trucks to deal with bale and case cargo, etcetera; (b) the completion of electrification of the cranes in Alexandra dock; (c) the purchase of a self-propelled floating crane. We feel that further consideration should be given to the required capacity. We would point out that a floating crane of 60 tons capacity is much cheaper to purchase and handier to operate than a 125-ton crane.

"We consider that the present and proposed railway facilities, including marshalling yards, are excellent and we were especially impressed with the co-operation which exists between the port trust and the main line railways. Although the supply of special types of rolling stock is not always fully up to requirements, it is vastly better than we have found at the other ports. There appears to be difficulty in obtaining 75-lb rails for berths 2 to 6, Alexandra dock, and we suggest that this should be treated as a matter of urgency. While we have paid tribute to what has been done to clear cargo from the transit shed areas, we do not think that the position is as yet free from danger. The port is fortunate in possessing some first-class 'uncleared goods' warehouses and very large areas of open storage space. There is still a fair amount of vacant space available for uncleared cargo, but much of what is at present in storage has been there for too long. Another sudden rush of ships might well upset the balance and produce congestion once more.

"We wish to emphasise, as we have said in previous reports, that it is the duty of a cargo owner to exercise vigour in completing the necessary formalities (including Customs) and to remove his goods from the dock estate as soon as possible, unless she has arranged with the port trust for duty-paid warehousing—which should never be allowed at any berth, transit area, or uncleared goods warehouse. We have no doubt whatever that many importers are failing in this duty and, in our experience, will continue to do so as long as they find it cheaper to leave their goods on the docks than it is to remove them elsewhere. It is difficult to blame the importer for this, but it is an improper use of the port's facilities and we suggest that the following steps should be taken by the port trust: (a) the free period for rent purposes should be reduced to three days from the general landing date; (b) at the expiry of the free period, goods still lying at the berth or in the transit shed should be immediately removed by the port trust to an uncleared goods warehouse or open storage site; (c) a charge of, say, Rs. 10 a ton should be made to cover the expenses of this removal, except for iron and steel for which a charge of Rs. 12 a ton is already made; (d) the demurrage fees should be increased progressively on a scale sufficiently steep to ensure that the owner will be forced to remove them from storage within a month of landing; (e) failing removal within a month, the port trust should without delay sell them by auction; (f) when in these circumstances goods are sold by auction there should not be any reserve price on them, but it should be a condition of sale that the purchaser will be liable for the payment of any outstanding charges which attach to the goods, such as, Customs duty, port charges, freight, etcetera.

Uncleared Goods

"We are moved to make these very stringent recommendations partly because we have been informed that uncleared goods sometimes lie in port storage for a year before they are sold,—though specific instances were not quoted; but chiefly because the report of the port trust shows that the principal increase in receipts (apart from bulk oil) in 1956-57, compared with the previous year, was one of Rs. 39.87 lakhs as demurrage fees. The explanation given in the report is 'tardier clearances of cargoes.'

"This is the one item of receipts in which a port should wish to note a decrease; and we are not surprised that congestion and delays should have occurred when the tardier clearance of cargoes coincided with a heavy increases in imports. We have again heard many complaints concerning Customs procedure and we hope that the Customs Reorganisation Committee will give special attention to: (a) the practice of selecting a package for examination by random reference to its serial number after the consignment has been stowed in the shed; (We mentioned this practice in our report on Madras.) (b) the practice of requiring the removal of packages from the transit shed to a central depôt for examination. Both of these practices cause confusion and interfere with the smooth movement of cargo. We suggest that they are quite unnecessary and that the purpose of Customs can be served in much simpler ways.

Labour Output

We are informed that the output of general cargo has increased by 30 percent—40 percent since the introduction of the piece-work scheme and now approximates to prewar levels. We think that the question of piece rates on iron and steel should be taken up again at once with the labour union and pressed strongly to a conclusion. We are disturbed to learn of the continued refusal of labour to allow the Buhler grain discharging and bagging plant to be used. This plant would be of very great value to the port, but we are not in a position to know whether any good purpose would be served by reviving the question with the union at the present time. We notice however that this port does not insist on bagging imported grain in the holds. In view of this, it is worth considering whether a simple type of portable hopper for use on the quay, such as we suggested in our report on Madras, might not be acceptable to labour. Hoppers such as these, though they would not have the output capacity of the Buhler fully mechanised system, would certainly increase the output and would retain a considerable proportion of the labour employed in handling and stocking the sacks.

"We shall be discussing the general problem of mechanisation in our final report to the Minister in the course of which we shall comment again on methods of handling bulk foodgrains. On visiting a ship which was loading manganese ore we observed the labour sitting idle at about 10.30 a.m., having loaded the ore from the rake of railway wagons alongside. We asked why a fresh rake of wagons was not put in and were informed that the men, having reached their quota for the half day, would not start work on another rake till the afternoon, as they preferred to be paid 'idle time money' for the remainder of the morning. Such a restrictive practice is clearly contrary to the best interests of the port, and as we understand that it does not apply to ore when brought alongside in road wagons, it would appear to be in the best interests of everybody that the shippers should bring their ore to the ship's side by road. We have received many comments on the lack of discipline among dock labour and the inability of those in charge of it on ships and quays to exercise a proper control. This is a very vital problem not only in Bombay nor, indeed, in India. It is generally agreed that indiscipline at this level not only affects output and quality of work, but has a bad psychological effect on good relations between employers and organised labour. In view of what we have heard, we suggest that the time may be ripe for a special study of this difficulty as it affects the port.

Poor Pilotage Facilities

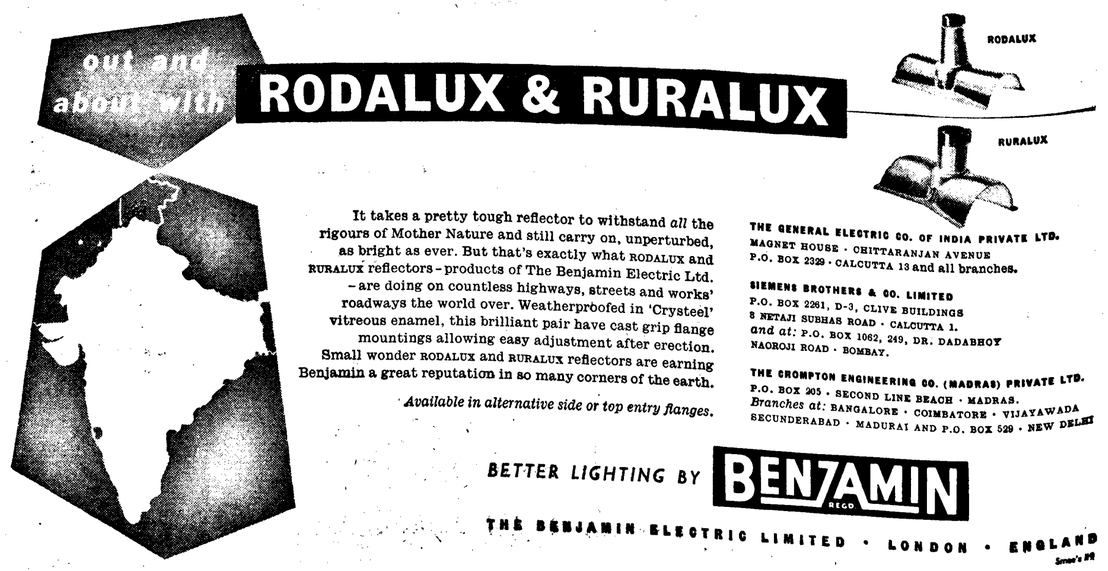
"Our attention was drawn to the withdrawal two years ago of the pilot vessel from its station at the seaward limit of the compulsory pilotage area. It was stated that since the withdrawal, two ships had gone ashore on prongs shoals, one of which became a total loss, and that many ships, especially tankers, unfamiliar with the port, had been delayed. We have not had any opportunity to examine whether the assumption of cause and effect in these statements is correct, but we do feel that a pilot vessel should be kept on this station. After having been told of the difficulties that have been experienced by the port trust in this matter, and its hope that the pilot vessel will be on station again soon, we suggest that consideration should be given to the purchase of a new vessel.

Development Scheme

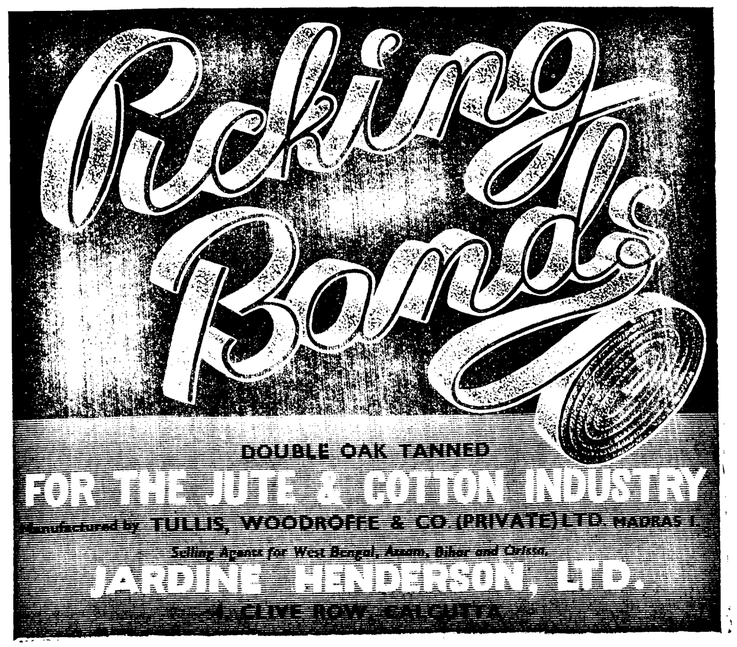
"We have had an opportunity to see the models and plans of the complete and "minimum" development schemes for the Prince's and Victoria docks. We have discussed both schemes in some detail with the Chief Engineer, two of his assistants, the Deputy Conservator and the Harbour Master. It is our opinion that the "minimum" schemes, with some alterations to which we will allude, should be implemented as soon as possible. Because of the increase in the length, beam and draught of modern ships the Prince's and Victoria docks are now outmoded. The "minimum" schemes for remodelling these docks and providing a new lock would ensure that the Port of Bombay continues to offer up-to-date facilities. We suggest that the proposal to lengthen the jetty berths in Victoria dock should be altered so as to increase the length by 120 feet instead of 75 feet. The proposal to add 75 feet to the length of the jetties was on the accommodation needed for *Liberty* class ships, but these are gradually being replaced by ships of greater length.

"We would draw attention to the proposal for a 1,000-foot turning circle outside the proposed new entrance lock. In our opinion, the strength of both the flood and ebb tides in the dredged channel, combined with the south westerly monsoon winds, would make the proposed site a definite navigational risk. We consider—and both the Deputy Conservator and the Harbour Master concur—that a canting basin or turning circle should be made at the south-end of the channel by a cutting of up to 1,000 feet from the Alexandra dock dam buoy and dredging this segment from the flank of the dam to the approaching channel. This would greatly facilitate the safe navigation of ships both in and out of the new dredged channel and would minimise the risk of this channel becoming overloaded with ships. For future development when the "minimum" schemes have been completed, we think that the complete development schemes are sound and should provide sufficient deep water and coastal berths to meet the future demands of the port for many years to come.

Silting of the Harbour Channel



"We have noted that a model of the harbour has been constructed at the Central Water and Power Research Station and that experiments are in progress. We agree with the Deputy Conservator that a draught of 34 feet l.w.o.s. should be provided in the channel. We are pleased to note that an order has been placed for a new four-grab dredger, but it will, of course, be necessary to treat the dredging of the channel and the disposal of the spoil as of sufficient importance to call for worldwide tenders."



World Rubber Production and Consumption

World production of natural rubber amounted to 137,500 tons in March 1958, compared with 167,500 tons in March 1957, according to the International Rubber Study Group. The statistics show that output in the first three months of this year is estimated at 400,000 tons, against 447,500 tons in the corresponding period a year ago. World consumption of natural rubber was placed at 157,500 tons in March 1958, compared with 167,500 tons in the same month last year. In the first three months of 1958, consumption was 465,000 tons and in the corresponding period of 1957, it was 472,500 tons. Estimated imports into Russia and China included in these figures totalled 24,250 tons in March 1958, (15,600 tons in March 1957), 68,750 tons in January-March 1958, against 34,150 tons in January-March 1957. Excluding communist countries for which data are not available, world synthetic rubber production was estimated at 95,000 tons, and consumption at 97,500 tons, in March 1958.

No Vaccination for Mr. Desai

The British Government has waived the international health regulation on compulsory vaccination against small pox in case of the Indian Finance Minister, Mr. Morarji Desai, who is a conscientious objector. Similar courtesy is likely to be extended by Canada. Mr. Desai will lead the Indian delegation to the Commonwealth Economic Conference in Montreal next September. He will be the guest of the British Government for a week on his way to or from Canada.

London

CITY REACTION TO CHANGE IN U. K. BANK RATE

FURTHER REDUCTION EXPECTED BY AUTUMN

(FROM OUR LONDON CORRESPONDENT)

THE City had more or less abandoned hope that Bank rate would follow market sentiment in a downward direction, at least until the labour outlook was less uncertain. Perhaps that was what the authorities were waiting for, or it may be that they regard the settlement of all outstanding problems so far as the railway unions are concerned —the London Underground men having followed their main line colleagues by accepting a 3 percent rise with balancing economies to provide the wherewithal—as a line clear on the industrial front. Anyhow, last Thursday morning produced a half percent reduction of Bank rate to 5½ percent, but little market reaction other than an improvement in gilt-edged prices could be noticed as the possibility had long been discounted. A further drop to get back to the pre-crisis level of 5 percent is confidently expected before the normal "pressure" period against sterling in the autumn, provided there are no adverse developments in the meantime

Where such developments might occur is undoubtedly on the labour front, for not all the trade union leaders are as moderate or responsible as one could hope. The communist leaders of the Electrical Trades Union, for instance, make no bones about using industrial action for political ends, as their President made clear at the annual conference the other day. Nor are the rank and file always prepared to follow the advice of their leaders or carry out agreement which they may negotiate. The London bus strike drags on, and sympathetic action in support of the busmen is spreading. Finally, there are unofficial strikes slowing down production, although fellow workers are being thrown out of employment in consequence.

Towards a Wage Policy

It is understood that a review of the relations between the Government, the State boards and the unions in wage negotiations and industrial disputes is likely to be considered by Mr. Iain Macleod, Minister of Labour once the present round of wage discussions is over. This review will be parallel to a wider investigation by an independent commission into the whole field of collective bargaining, arbitration and conciliation. The purpose of any enquiry in the nationalised industries will be to find reforms and improvements in the negotiating procedure to take account of recent experience and the conflict of interests between the boards' ultimate responsibility to Ministers and their commercial freedom. The adoption of Civil Service and G.P.O. methods of collective bargaining is among the ideals canvassed on many sides. The Minister is unlikely to make any move until all outstanding wage claims are disposed of, so that the co-operation of both sides of industry could be sought, free from prejudice and controversy.

Efforts to Amend Finance Bill

Three days in the House of Commons last week was devoted to the Committee stage of the Finance Bill, with purchase tax, already responsible for no fewer than 100 amendments, attracting the main attention. So far the Government has not given way on anything vital. Mr. Heathcoat Amory, Chancellor of the Exchequer, did mention, however, that he hoped in future there would be opportunities for further reductions in purchase tax. This would be progress towards "a tax which, while spreading over a wide field, would be only at a moderate rate." The reforms in this year's Budget would leave the way open without harsh changes or distortions in the framework of the tax. Altogether, there are about 40 pages of amendments to the Bill, but this is usual, and there is no suggestion of obstructionist tactics.

New amendments presented last week include an attempt to restore investment allowances for expenditure on hotels and restaurants and to exempt from purchase tax articles for their sole use. This is part of the campaign to help the tourist industry. An amendment designed to help owners of approved buildings of special architectural or historic interest has been tabled for Conservative back-benchers. This would permit extra relief from taxation on additional expenditure for maintenance, insurance or management.

The House rose on Friday last for the Whitsun recess, and by the time it reassembles on 10th June, the Prime Minister will be in the midst of imortant talks with President Eisenhower. He leaves for New York by air on 6th June, and after the talks in Washington goes on to Ottawa for discussions with Mr. Diefenbaker.

Economic Talks of the Prime Minister

It is generally expected that the main subject of these talks will be economic. Mr. Macmillan will do his best to convince the President that the defence of the free world cannot be assured, nor the sympathy of the "uncommitted" countries enlisted, by military means alone. The problem of world liquidity and of ensuring the strongest possible credit base for the trade of the free world is of at least equal importance and urgency. The United States can help by assisting in the steady expansion of institutions such as the International Monetary Fund and the International Bank for Reconstruction and Development as well as by lowering its own trade barriers. Mr. Macmillan will assure the President that any viable plans which can be worked out for more effective international co-operation in expanding the free world's trade will receive the British Government's wholehearted co-operation.

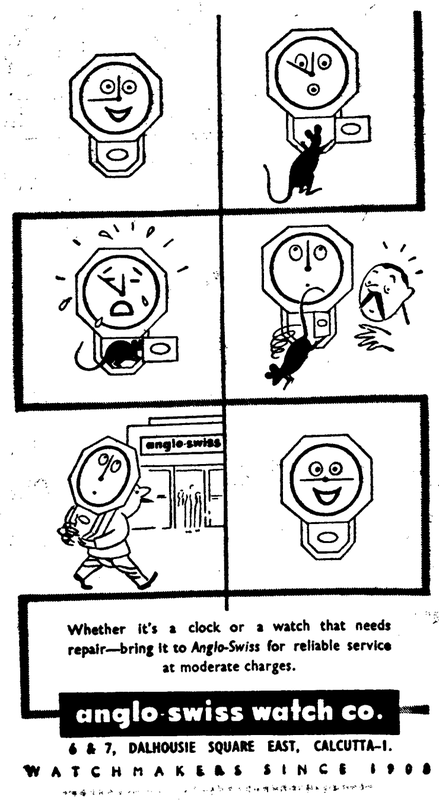
The talks with the Canadian Prime Minister will prepare the way for next September's Commonwealth Economic Conference in Montreal. The scarcity of liquid reserves within the Commonwealth springing from readiness to spend combined with the reluctance to save, is one of the main problems facing the conference. In Britain's view, some of the younger countries do not fully appreciate their capacity to finance investment out of their own internal resources. It will be pointed out that a major part of Britain's investment capital is produced out of individual wages and incomes, through insurance premiums, building societies, and other forms of personal savings. These can be developed in new countries as well as in the old.

Officials from Governments of all the members of the Commonwealth, and officials representing colonial Governments, will meet in London on 2nd June for a final sifting of materials to be submitted to the Ministers who will attend the conference in Montreal. A preliminary meeting of officials has already been held, but these discussions will be more detailed and will last perhaps two weeks.

Signs of Progress

As to the present position, Mr. Cameron Cobbold, Governor of the Bank of England, was reassuring when he addressed a luncheon meeting of the Manchester Chamber of Commerce. He drew encouragement from the way sterling has stood up to the troubles of recent weeks. This, he thought, suggested a real foundation of progress towards stable prices and a stable exchange situation. The main effort in the coming months must be to consolidate it and to avoid another of the exchange crises which have plagued Britain in the last ten years. As for the recession in the United States, Mr. Cobbold said that it had so far had rather less effect in the United Kingdom and Europe than many people had anticipated some months ago. "So far," he stressed, "I make no prophesy. We must obviously keep our eyes wide open here. But if things should move further downwards during the summer or the autumn, it is important for us to be as strong as we can be, so that we shall be able to meet what may be coming to us from a sound position."

In Britain, buyers are finding prices the same or lower than three months ago. The Economic Survey Committee of the Purchasing Officers Association says in its quarterly report that "in not a single instance of all reports received was a price increase indicated." In fact, there was quite a number of price cuts reported, usually of the order of 1 percent to 5 percent, and buyers are apparently finding that even when reductions are not offered, they can quite easily be obtained when argued for. The general picture given of business conditions is of reduced home orders and production for the home market, but a successful switch-to export markets which are so far little affected by balance of payments difficulties. Manufacturers' stocks are at a low level, with little advantage being taken of the low prices now prevailing for many commodities. But shortages are still reported of boiler plates, heavy sections and forgings and some other steel supplies, and electric control gear.



Warning Notes

From the point of view of the anti-inflationary battle, it is a warning against complacency that the Ministry of Labour has just announced that the April index of retail prices, which measures changes in the cost of living, was 110 (January 1956 equals 100). This was a rise of two points since 18th March. Calculated to one decimal, the April index was 109.6, compared with 108.4 in March. The only previous occasion on which there was a rise of two points in the cost of living was between March and April 1956. It jumped from 101 to 103.

Furthermore, while export prices remained unchanged in April, a seasonal increase in fruit and vegetable prices raised the import price index by one point to 99. Thus, the favourable movement in the terms of trade was reversed, for the first time, for 12 months, with the figure up one point to 90. The fact that there was a similar movement a year ago emphasises the belief that this minor reversal does not signal any underlying change in the trend. At their present level, the terms of trade are still 11 points more favourable than a year ago.

Wholesale Prices Still Falling

British industries continue to benefit from the lower prices of imported raw materials—a key factor in the favourable movement of the terms of trade. Last month reductions in wholesale prices of iron and steel and aluminium were reflected in the decline in the price indices of materials used in the engineering industry. The basic material index, which has ben falling since early last year, continued its decline last month. Apart from aluminium, the main falls were in cotton, wool and imported softwood prices. The index of materials (excluding fuel) used in non-food manufacturing industry, (1954 equals 100) fell from 94.8 to 93.9 in April. This compared with 110.2 a year earlier.

Whether it's a clock or a watch that needs repair—bring it to *Anglo-Swiss* for reliable service at moderate charges.

Jute

I.J.M.A. DECIDES TO MAINTAIN MINIMUM PRICES FOR GUNNIES

SACKING FALLS BELOW FLOOR LEVEL

AT a committee meeting during the past week the Indian Jute Mills Association confirmed that the minimum selling prices for gunnies fixed last February should be maintained. These are on the basis of Rs. 100 for B Twills and Rs. 39.50 for 40in. 10oz. hessians. In a Press note issued after the meeting, it was stated that the committee has agreed that the reasons for fixing minimum prices are still valid, and that the statistical position does not warrant the downward pressure on prices brought about in the past few days, mainly by speculative activity. This news came at the end of a week of uncertainty, during which time prices for all delivery periods in the sacking section fell below the minimum rates. Several factors were responsible for the weak conditions prevailing, prominent among them being the continued threat of an all-India dock strike in the near future. There has been no settlement yet for the workers' demands, and the All-India Port and Dock Workers Federation has affirmed that its members will carry out their strike threat on 16th June. There was also news that Egyptian buyers have experienced difficulty in opening letters of credit against recent business, after which the sacking market came under heavy speculative activity. Nervous liquidation by prominent operators forced prices lower. Throughout all this, the hessian section ruled surprisingly steady, even to the extent of recording a rise. The only change was a weakening of the forward section, where the premium which has been in vogue for a considerable time was changed to a slight discount. However, prices in general in this section were well above the I.J.M.A. minimum, and conditions were quietly steady. Overseas buyers showed little interest in the market during the week, and except for some small business with the United States and the U.K. towards the close, activity was confined to covering business at lower levels by local shippers.

The fibre section was dull during the week, and only small business was recorded. Prices showed a gradual decline in sympathy with the sacking section of the gunny market and lost about Re. 1 a maund. Sellers' ideas, however, were very different from the quoted rates, and in most cases they have refused to sell at the current levels. New crop reports from Assam and northern Bengal districts continue to be favourable, and the crop is very healthy. In all districts in these areas weeding is almost completed and the prospects are extremely good. In the Behar and Murshidabad districts, as also the local Daissee areas, the situation is very different. The recent heat wave has been unfavourable for the crop, and rain is now desperately required to prevent the plants from getting withered. Sellers of this type of jute are now very reserved, and have withdrawn completely from the market. Mills continue to hold bearish views, but the sentiment of neither party has really been tested during the week.

	May	June	July-Sept.	Oct.-Dec.
40in. 8oz.	32.35	32.40	32.40	32.40
40in. 10oz.	40.60	40.55	40.55	40.40
B Twills	97.60	98.60	99.85	99.85
Heavy Cees (Plain)	98.50	98.50	99.85	99.85
A Twills	117.50	118.50	119.75	122.00
Liverpools	109.50	110.75	111.75	111.75
Cornsacks	98.50	99.75	101.00	101.00

Raw Jute: The fibre markets were extremely quiet during the week, with only small business reported. Prices fell daily throughout the period in sympathy with the weak goods market, but in the absence of business, rates were nominal. Sellers were reserved and were not interested in the current rates for either old crop or new crop jute. Most sellers have finished dealings in old crop jute, and only the larger stockists are interested in sales of this variety, but at higher levels. Low quality jute is still freely available, but the majority of mills are not interested, as they themselves are holding surplus stocks of this category of fibre. Good jute is in very short supply, and those who have any stocks are inclined to wait for higher prices. New crop sellers are reserved, and any new crop business done was on a very small scale. Daissee sellers are very reserved due to the present unfavourable weather conditions and no new crop business has been reported. Opening quotations this week were based on Assam-Northern jute at Rs. 25.25 a maund basis Bottoms for May-June shipment. During the week, this fell to as low as Rs. 24.50, but recovered before the close to Rs. 24.75.

Business was reported in old crop jute at Rs. 24.50 to Rs. 24.75 basis Bottoms, and Tossa at Rs. 27.50. Small lots of Desal Mesta were reported at Rs. 23.50 and also Jungli White at Rs. 20.50. Pakistani cuttings changed hands at Rs. 70 to Rs. 72 a bale under buyers' licence, and Rs. 78 a bale under sellers' licence, and Tossa cuttings at Rs. 80.

New crop Assam-Northern was done at Rs. 24.50 to Rs. 25.25 for August-September shipment, and Desal at Rs. 24.25. Small lots of Daissee white were also reported at Rs. 25.25 and jungli white at Rs. 22.25.

Wagon arrivals dropped to 380 last week, against 460 the previous week, and 520 during the corresponding period of last year. There are very few sellers at current prices, and the undertone of the market is steady. Quotations were based on Kishenganj jute at Rs. 23.50 a maund for average quality.

On Wednesday morning, opening quotations were as follows:

Indian Jute	Landed at Mills Rs. a md. Basis Bottoms	Shipment
Assam	24.75	May-June
Northern	24.75	"
Purnea Desal	23.50	"
Daissee	28.50	"
Assam Tossa	28	"
Murshidabad Tossa	27.50	"

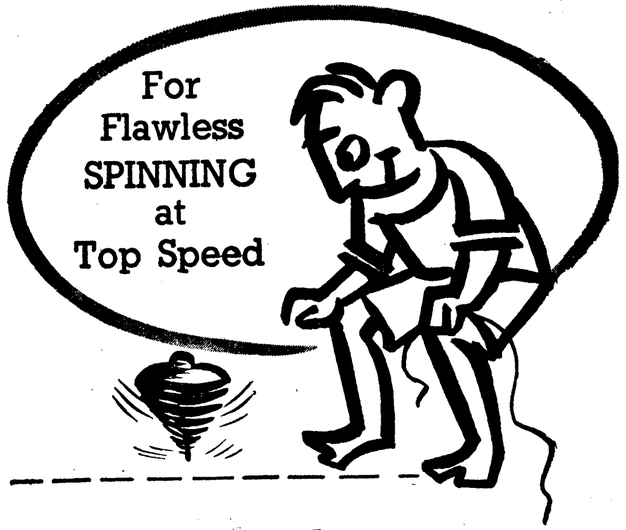
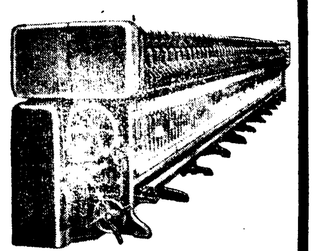
Jungli	21.50	"
Bimli F.A.Q.	21.25	"
Pakistan N.C.'s	72 a bale	"
New Crop:		
Assam Northern	25.50	Aug.-Sept.
Daissee	28.75	Oct.-Dec.

Pakistani Raw Jute Imports



Over the years since partition, there has been a rapid change in the position concerning the import of raw jute from Pakistan to India. According to trade estimates, India's requirements of raw jute are in the region of 7 million bales. After allowing for a carry-over of about 500,000 bales into the next season, the estimated domestic consumption in India is about 6.5 million bales a year. Separate accounts of raw jute supply by India and Pakistan to the industry were not introduced until the 1950-51 season, so the figures which follow start from that year.



THE JUTE MARKETS

There was only limited activity in the futures markets during the week and the rates, as supplied by the East India Jute and Hessian Exchange Ltd., for the period 21st to 27th May, were as follows:

	Hessian 40in 10ozs.	Sacking B Twills	Raw Jute Upper Assam
	May	May	June
Opening	40.26	98.80	25.10
Highest	40.62	99.60	25.10
Lowest	40.00	97.90	24.53
Closed	40.42	99.45	24.68

Manufactured Goods: The market opened quietly last Thursday and B Twills were quoted at Rs. 99.10 for May shipment, with forward delivery at a premium of Rs. 1.60. Hessians showed a slight increase to Rs. 40.60 for the near position, but forward shipment lost its premium and was quoted at the same rate as the ready position. After the opening, the heavy goods section came under considerable speculative activity as it was still unknown whether the difficulties experienced by Egyptian buyers in opening letters of credit, have been got over. Heavy goods prices fell by Re. 1 during the day, with nervous holders of heavy goods as keen sellers. A slight recovery took place after this in the near position, but forward shipments eased and the premium gap was narrowed to 70nP, or nearly half of what it was at the opening. This brought all deliveries of B Twills below the I.J.M.A. minimum, and mills were completely out of the market. The recession continued over the week-end with more speculative activity in the near position, and at one stage, the ready shipment dropped to as low as Rs. 96.50. Covering at the lower levels, however, caused a rise, and the undertone of the market improved. Towards the close, confidence returned with the I.J.M.A.'s announcement that the minimum prices fixed in February would be maintained. During this time, hessians showed very little alteration, and rates remained steady with a rising tendency. There were very few overseas buyers, and for this reason, the forward section lost ground and rates for October-December 10oz. goods dropped to a discount of 20nP.

170 MACKIE LAGAN SLIVER SPINNING FRAMES

now operating satisfactorily in 16 different INDIAN JUTE MILLS

THE LAGAN JUTE MACHINERY CO. PRIVATE LTD.

24, CHITTARANJAN AVENUE . CALCUTTA—12.

ARRIVALS IN CALCUTTA IN 000'S OF BALES

	India	Pakistan	Total	Percentage from Pakistan
Season 1950-51	24.79	25.76	50.55	50
" 1951-52	36.35	18.29	49.14	37
" 1952-53	41.45	13.23	54.68	24
" 1953-54	37.30	14.81	52.11	28
" 1954-55	44.27	12.41	56.68	22
" 1955-56	48.88	14.67	63.55	23
" 1956-57	56.20	6.34	62.54	10

It will be noted that in the 1950-51 season, India imported 50 percent of her requirements from Pakistan. At that time, India was the latter's biggest customer, and Pakistan, not having a jute industry of her own, was a willing party to all transactions. Over the next few seasons, India adopted a grow-more-jute campaign, the success of which can be gauged from the fact that from 1952 to 1956 India's dependence on Pakistani jute was greatly reduced, imports dropping to an average of about 25 percent of her requirements from 50 percent in 1950-51. During this time, Pakistan's own jute industry was developing, and her internal consumption was on the increase. Last season, raw jute imports from Pakistan dropped to 10 percent of the total, reducing the previous season's total imports from that country by more than half.

The fall was sharp, and it reflects India's growing independence of Pakistani supplies. In that season, however, smuggling activity in jute across the border increased considerably. Some estimates put the figure at 1 million bales, which was higher than the quantity officially imported. Official estimates, however, indicate that a quantity of 500,000 bales were smuggled across the border in the 1956-57 season. To curb this state of affairs, the Pakistan Jute Marketing Corporation opened a purchasing campaign in the border regions, but the quantity purchased from the five-mile border belt in no way covered the estimated crop in this region, so it is doubtful if this was an effective check to smuggling.

Great Achievement

India's jute production of 5,550,000 bales in the 1956-57 season from about 3 million bales in 1951 was a superb achievement. This represented an increase of about 90 percent, but there is still a deficiency. The quality of Indian jute has deteriorated and a large percentage of the increase consists of mesta, bimli and low quality fibres, the emphasis having been on quantity rather than on quality. India is in very short supply of white jute particularly the long jat variety, which is required for the manufacture of good quality hessian. This can only come from East Pakistan. So it would appear that even if India keeps increasing her production, she will still be dependent on Pakistan for this variety of jute.

Cuttings is another category for which India mainly depends on Pakistan. In previous years, licences were issued freely for the import of cuttings, but this year, the authorities have changed their policy, and now only issue licences to mills on a quota basis, depending upon the quantity of long jute consumed over a given period. This was done in the interest of economy and to maintain India's restriction on imports, but the object of this was defeated when they also issued licences *ad lib* to sellers, *i.e.*, non-consumers. That led to an immediate and wide difference in price between cuttings imported against sellers' licences and those imported against buyers' licences. Sellers began to hold those mills to ransom which found that their own quota was not sufficient for their requirements, and premiums of up to Rs. 12 a bale were reported. Latterly, however, the licensing authorities indicated that any purchases made by mills without their own licences would be considered to have been purchased under their licence number, and an equivalent amount would be deducted from it. This put a stop to the "grey market", but brought into being other malpractices, such as wrong invoicing consignments. Instances have already been dealt with under the latter category, and heavy penalties imposed.

Estimates of the size of the Pakistani crop vary, but trade estimates put it at about 7 million bales. Of this quantity, 4.2 million bales (60 percent) are earmarked for export (other than India), and 1.4 million bales for Pakistan's own consumption. India is expected to take up another 10 percent or about 700,000 bales, which leaves Pakistan with a 10 percent surplus, although a large portion of this must be maintained as a carry-over. Pakistan is now facing competition from many new jute growing sources, and it is doubtful whether she can continue to demand such high prices for a commodity in which she is fast losing the monopoly. Many Far Eastern countries will soon prove formidable competitors. Burma, China, Thailand, and in another sphere Brazil, are all potential raw jute producers, and healthy competition is all that is required to alter Pakistan's attitude. Substitutes are fast making an inroad into the preserves of jute goods, and unless fibre prices in Pakistan fall, this threat will soon become a reality.

Pakistan's jute production target for the 1958-59 season shows a considerable drop. The Jute Cultivation Advisory Board recommended that the production should not exceed 5.5 million bales, this being its estimate of the total requirements of foreign countries as well as those of the local mills. This represents a drop of about 20 percent on last season. India, on the other hand, plans a 25 percent increase in the jute crop for 1958-59, making a total of 5.1 million bales. Add to this a mesta crop of about 1.2 million bales, the total availability of indigenous jute to the Indian industry next season should be in the region of 6.3 million bales. This, however, depends on whether the increase of 18 percent recommended in acreage will produce the extra 25 percent crop. Without an all-out effort to produce a larger average yield an acre, which at present is very low, the production target will not be attained. The average yield an acre in India stands at the very low figure of 2.33 bales (400 lbs), whereas in China and Brazil, where jute-growing is in its infancy and the methods used are often primitive, the yield is nearly double this. The difference in the two types of soil and the high fertility conditions in other countries are no doubt largely responsible for the better yield, but intensive efforts to improve cultivation standards in India can produce better results, too.

THE FOREIGN JUTE MARKETS

FIBRE PRICES UNDULY HIGH

(FROM OUR DUNDEE CORRESPONDENT)

ONLY occasional slight falls have been recorded in fibre prices during the past week, and Pakistani shippers have been doing their best to keep their terms at a high level. New jute crop reports are quite satisfactory and there seems to be no undue volume of business passing in the raw jute. The members of the industry cannot understand the reason for the maintenance of the present artificially high prices. Offers of old crop were quite freely made, except for the better grades, such as Mill Firsts and above, but there was still no mention of new crop jute. Mill Firsts are obtainable at the lower rate of £115 a ton, Mill Lightnings at £101, Mill Hearts at £90 and grade Hearts £73, with good marks of Daissee-2/3 from £105 and grade £98 and grade Tossa-2/3 from £116 10s and grade Tossa-4 £106 10s, all c.i.f., U.K., May-June. Spinners are buying only the smallest of quantities, but they would be interested to have offers of new crop, which sellers are apparently reluctant to make in case they get into trouble with the authorities in Pakistan. An adjustment has been made in the prices for jute yarns in view of the easier tendency in raw jute and the changes which have taken place in costs of production over the past 18 months. New price lists are being compiled and will be in the hands of the trade soon. The reduction is anything but uniform, ranging from 23d for 16oz. to 45d for 6oz. yarns a lb. No change has been made in prices for jute cloth and bags. Hessian yarns are reduced from 15.72d to 15.44d a lb for 8 lbs "C.H.W." (common hessian weft) and from 16.86d to 16.59d for 8 lbs "J.C.H." warp.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in April was again quite satisfactory, being 1 million yards higher than that for the corresponding month of last year and 2 million yards below March this year. The total estimated consumption for the first four months of this year was 3 million yards better than that for the same period of last year. Improved demand for burlap bags (for feed bags, principally in the mid-west, for potatoes on the west coast, and for export grain shipped from Gulf ports) offset some decline in business for burlap piecegoods, principally for industrial uses. U.S. burlap stocks were unchanged. At 242 million yards, 138 million yards were spots and 104 million yards were afloats. Appearing below are two tables which include the April figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

BONUS DISPUTES IN PLANTATIONS

MADRAS COMMITTEE TO INVESTIGATE

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Madras Government has decided to set up a committee with its Labour Commissioner as chairman, and three representatives each of management and labour, to recommend a formula for the payment of bonus for the plantation workers in the State. The Minister for Labour and Industries, Mr. Venkataraman, convened a conference of the representatives of the planters and plantation workers on 1st May to consider the question of bonus for 1957, when the decision to set up this committee was taken. It will be asked to submit its report within two months.

In Kerala, a similar committee was appointed nine months ago to recommend a formula for bonus payment as well as to fix a satisfactory wage structure. It is now taking evidence and the time limit for submitting evidence to it has again been extended to 30th June. The Industrial Relations Committee for Plantations, which met in Ernakulam on 3rd May, dispersed without taking a decision on the question of bonus for 1957 as the employers' representatives were not in its favour before the committee appointed for the purpose of examining this question submitted its report. The Labour Minister of Kerala and the representatives of the communist-led labour unions were anxious to come to a settlement at this meeting.

There is a great difference between the planters' idea of bonus for 1957 and what the workers are demanding. Whereas the communist-led unions of Kerala are claiming a 25 percent bonus, the plantation workers in certain areas of Madras are asking for 20 percent. For 1955 and 1956 together, the plantation workers in Kerala got 21½ percent bonus—that is, 10¾ percent for each year. Last year was comparatively bad for the plantation industry as a whole, so the planters are not likely to agree to a bigger bonus. In Kerala, the plantation workers have already taken an interim bonus of 4 percent for 1957.

Value of Conciliation

The Madras Minister for Industries and Labour, Mr. R. Venkataraman, in his speech at the 11th annual conference of the Estate Staff Union of South India exhorted the planters and their employees to adopt conciliation proceedings in the matter of trade disputes as those would be the speediest and easiest for both. The Minister suggested the adoption of the "union shop" policy as opposed to the "close shop" policy, meaning that every member of the staff employed in the plantations should become a member of the union within three months of his employment. If he did not become a member, he would lose his employment. This policy would ensure better discipline among the staff and make easier the discussion between the Estate Staff Union and the United Planters Association of Southern India. He commended the "union shop" policy to be adopted on an experimental basis.

He congratulated the E.S.U.S.I. on its achievements, especially the settlement it reached with the plantation managements in October last year concerning the terms and conditions of service for the staff. The Minister has said that the E.S.U.S.I. is a unique institution because it represents the entire plantation staff in the three States of Kerala, Madras and Mysore and unlike other trade unions, it is fortunate in having no rivals in the field. The E.S.U.S.I. has been following the example of western countries where there is only one union for an industry. Unfortunately, the trade unions in India were formed on the basis of units, regions or States. At the business session, resolutions were passed requesting the Coffee and Rubber Boards to institute an educational stipend scheme for the wards of plantation employees. The State and Central Governments were requested to give representation to the Estate Staff Union on tripartite bodies and commodity boards.

Cashew Advisory Board

The Kerala Government has constituted an advisory board for the cashew industry according to the decision taken at a conference of the representatives of the factory owners and the employees convened by the Government early in April. The Minister for Industries is the chairman of this board. Besides the chairman, there are 12 members on the board, four each representing the Government, employees and the factory owners. The Secretary to the Government for the Industries Department is the convenor.

Expanding Cashew Markets

Fresh markets are being developed for India's cashew kernels. During last year, 33 countries bought cashew kernels from India compared with 18 countries three years ago. Among the new buyers, Russia tops the list. Last year, she imported 1,806 tons of cashew kernel. For five months from April to September 1958, she has contracted to buy 3,300 tons valued at Rs. 1½ crores which is a new record for her cashew kernel import. Out of this 3,300 tons 1,000 tons has already been shipped. Enquiries for cashew kernel are being received from east and west European countries and some of twhe Middle East countries as well. The United States and the United Kingdom, however, continue to be the largest buyers of Indian cashew kernels.

Committee for Industrial Disputes

The Kerala Government has announced its decision to constitute an industrial relations committee to handle industrial disputes between the estate staff members and the planters in the State. On this committee, which will be presided over by the Labour Commissioner, there will be three representatives each of the management and staff. A similar committee was constituted some time ago for the plantation workers.

Pepper Exports Fall

India's pepper exports since the beginning of this season have been lagging behind those of last year. During the first five months of the current season (November 1957 to March 1958), these amounted to only 7,575 tons against, 8,813 tons during the previous corresponding period. The latest available figures are for the month of March during which there was an export of 1,980 tons, which was 283 tons less than that of March 1956. Russia was the largest buyer, having taken 1,275 tons, representing nearly 64 percent of the total exports. The United States came next with an offtake of 400 tons. Canada and Italy took 134 tons and 90 tons, respectively.

The present stocks of pepper within the country are estimated at 8,000 tons. There are five more months for the next season to begin, and for such a period this stock, divided between the internal and export markets, should not be considered a heavy one. Sellers of Malabar black pepper remain strong holders, although enquiries from abroad have not been encouraging. Prices in the primary market now hover around Rs. 600 a candy. In the Cochin market, transactions are limited in the ready position, but in the forward delivery, a fairly large volume of trade is passing every day. The chairman of the Forward Markets Commission has expressed satisfaction with the behaviour of the forward market in Cochin when he addressed the annual meeting of the India Pepper and Spice Trade Association on 19th May. He has complimented the association on the progress it has made in developing the forward trade in pepper within the course of the last one year. He has said that although recognition was given to this association for three years, it should be placed on a permanent footing now. The India Pepper and Spice Trade Association conducts the forward market for pepper in Cochin.

Rôle of Forward Markets Commission

Explaining the rôle of the Forward Markets Commission, Mr. Doraiswamy, the Chairman, has said that it is anxious not to interfere in the internal administration of recognised associations. It is a kind of supervisory body, and its representatives on the board of directors of recognised associations are there only to assist and guide them on proper and right lines. He has added that the Commission wants to dispel the feeling that it is out to encourage speculative trading.

The president of the India Pepper and Spice Trade Association, Mr. Vallabhdas Mariwal in his speech urged the pepper growers to produce more at a lesser cost in view of the marked increase in home consumption and the increasing competition from Sarawak and Indonesia. He preferred the development of cultivation on a plantation scale which would enable the growers to reduce cost and make a better application of the results obtained through researches conducted by the I.C.A.R. and other bodies. He pointed out that the real purpose for which a forward market was opened for pepper in Cochin was hedging.

Ceylon Mattress and Bristle

A three-man delegation of the Coir Board will be visiting Ceylon during the third week of June to study the mattress and bristle manufacturing industry there, and to suggest ways and means of developing that industry in India. Large quantities of mattress and bristle fibre manufactured by a mechanical process out of raw husk are being exported every year from Ceylon, which claims a monopoly in those products. Even India is importing mattress and bristle fibre from that country. Some time ago, a delegation of the Coir Board toured all coconut growing areas in India to find out the possibilities of developing a coir industry in those areas where there are no retting facilities. This delegation has suggested in its report that a mattress and bristle fibre manufacturing industry could be started successfully in West Bengal, Orissa, Andhra, Mysore and Bombay.

Trade Delegation to Russia

Mr. Ravi Karunakaran, a member of the Coir Board, is on the trade delegation which is going to Russia and some other east European countries, under the leadership of the Union Deputy Minister for Commerce and Industry, Mr. Satish Chandra. He represents the coir interests.

Cochin Tea Sales

At Sale No. 14, 1,250,000 lbs of tea were on offer. The general demand was rather quieter, and prices irregularly declined by 5nP or 10nP for low medium and medium descriptions. There was less enquiry for fannings. High-growers were lower following quality while whole leaf grades were considerably easier.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.2 percent to 107.9 during the week ended 10th May, 1958, compared with 107.7 (revised) for the previous week. The index was higher by 0.7 percent when compared with the corresponding week of the earlier month but was lower by 0.6 percent when compared with that of last year. Higher prices of gur in Patna (+14%), onions and cummin (+11% each), jowar in Mohal, potatoes in Mettupalayam and fish in Calcutta (+8% each), mung in Madras (+5%), milk (+4%), barley (+3%), gram, coffee and betelnuts (+2% each) and rice, wheat, bajra, masur and cashewnuts (+1% each), raised the index for Food Articles by 0.8 percent to 106.7 compared with 105.9 (revised) for the previous week although prices of potatoes in Kanpur (−15%), oranges in Calcutta (−9%), jowar in Akola (−8%) and in Gulbarga (−7%), urad in Delhi (−7%), arhar (−4%), eggs (−3%), ragi, groundnut oil, coconut oil, tea for internal consumption and cardamoms (−2% each) and gingelly oil and black pepper (−1% each) showed declines. The index for Tobacco remained stationary at the previous week's level of 90.3. The index for the Fuel, Power, Light and Lubricants group stood at 114.4 against 114.5 for the earlier week. There was a fractional fall in the prices of castor oil. The index for Industrial Raw Materials declined by 1.0 percent to 113.1 compared with 114.2 (revised) for the previous week. Items which showed noticeable variations were: copra in Kozhikode (−7%), gingellyseed in Bombay (−5%), raw cotton (−3%), cottonseed (−2%), lac (+10%) gingellyseed in Nagpur (+8%) and tanning materials (Avaram bark) in Madras (+7%). The prices of cotton yarn and brass (+1% each) moved up while aluminium (circles) (−3%), coir yarn and lead (−2% each) and linseed oil, rayon yarn and German silver (−1% each) showed declines and the index for Intermediate Products receded by 0.2 percent to 108.3. The index for Finished Products stood at 107.6 against 107.7 (revised) for the previous week. The prices of jute manufactures (−2%) and woollen manufactures, drugs and medicines and oilcakes (+1% each) showed variations.

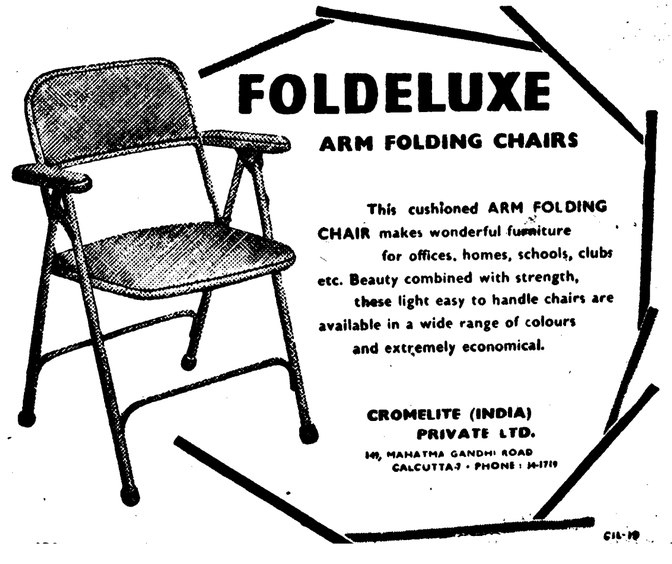
MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)



THE Middle Class Cost of Living Indices, by groups, have now been brought up to April 1958. As compared with March, the April Indices for Food and Clothing show rises of 6 points and 5 points, respectively, while those for Fuel and Lighting and Miscellaneous remain unchanged at 281 points and 286 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 4 points during April 1958.

Middle Class Cost of Living Index Nnmber for Calcutta. Prices in August 1939 = 100.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES DECLINE

AT Sale B, held on 26th and 27th May, offerings at the Export auction amounted to 7,113 packages. There was a general decline in quality compared with the previous sale but was better than Sale B of last year, and there were a number of useful first flush teas with attractive flavour. There was a good general demand, and most of the offerings sold readily at satisfactory prices, especially the more flavoury kinds which were keenly competed for and realised useful prices well above valuations.

At Internal Sale No. 47, held on 27th May, 20,424 chests of Dust were offered for sale. At the opening prices for all descriptions fell heavily and there was a further decline during the progress of the sale. Orthodox teas generally declined by 12nP or 16nP while C.T.C. Assams showed a greater decline and were sometimes as much as 30nP easier and occasionally more.

	Quotations	
	1958	1957
	Rs.	Rs.
Medium Dooars Dust	1.52	1.40 to 1.45
Medium Assam Grainy Dust	1.56	1.50 to 1.56
Medium Assam C.T.C. Dust	1.80 to 2.00	1.55 to 1.65
Best Assam C.T.C. Dust	2.40 to 2.60(nom.)	Not quotable

A quantity of 544 chests of Leaf was on offer.

FREIGHT MARKETS WEAK

THE freight markets continued generally weak, during the past week, and little business was effected. A 12,000 tonner accepted the lower rate of $(U.S.) 7 for ore Visakhapatnam-U.S.N.H. with immediate loading compared with a fixture of $(U.S.) 7.15 from Bombay to the same destination. Charterers for a coal cargo to Colombo, who have been on the market for weeks at 35s. eventually had to pay the handsome rate of 53s for a 3,500 tonner. This will affect rates to Pakistan and Alexandria for which charterers' ideas are well below those of owners. Grain from the Pacific coast to east coast India recovered by 2s 6d to 62s 6d. The locally operated *Risaldar*, built in 1940, has been sold to the Muhammadi Steamship Co., Karachi, for an undisclosed price while two war built vessels have been sold by British companies to Hongkong buyers at £110,000 and £120,000.

LINSEED FIRM

The general tone of the market remained firm last week, and prices advanced further by 4 annas a maund. Crushers have been virtually out of the market because of a lack of parity. Oil prices advanced slightly, but demand was negligible. Mills were not interested to sell at the prevailing rates as stocks were very small and arrivals of seeds from upcountry continued to be poor. Latest quotations were as follows: Ready Rs. 22-4 a maund and May-June Rs. 22-4 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 20th May and 26th May, 1958)

Cowhides: Wet salted (Ord.) 12,600 pcs on the basis of Rs. 8.12 to Rs. 9.50: Wet salted (Slaughtered) 18,700 pcs. on the basis of Rs. 12.75 to Rs. 23.00.

Goatskins: Wet salted (Patna, Daissee and Kustia) 57,900 pcs. on the basis of Rs. 325 to Rs. 345, Rs. 350 to Rs. 390 and Rs. 400 to Rs. 420; Wet salted (he-killed) on the basis of Rs. 4.12 and (she-killed) on the basis of Rs 3.62 a piece; Assam-Dinajpur-Jalpaiguri 13,600 pcs. on the basis of Rs. 285 to Rs. 380; Purneah-Kissenganj 10,500 pcs. on the basis of Rs. 365 to Rs. 375: Patna-Pakur-Purneah 5,600 pcs. on the basis of Rs. 330 to Rs. 345: Muzafferpore-Patna 14,600 pcs. on the basis of Rs. 340 to Rs. 355.

Bazaar Stocks

(26th May, 1958)

Cowhides: Wet salted 71,100 pcs.

Goatskins: Wet salted (Daissee, Kustia and killed) 13,000 pcs.; Assam-Dinajpur-Jalpaiguri 65,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 113,000 pcs.

SUGAR UNCHANGED

During the week ended 28th May, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals a day were 3,000 bags and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-8 for ordinary grain and Rs. 40-6 for big grain. The market was unchanged.

COMPANY AND PUBLIC NOTICES

THE EMPIRE JUTE COMPANY, LIMITED

NOTICE is hereby given that the Eighty-ninth Annual General Meeting of the Members of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 23rd day of June, 1958, at 3 O'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the thirteen months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr B. L. Bajoria, the Director retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

   "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation".

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To appoint a Director in place of Mr R. G. Edwards who resigned from the Board in March, 1958, and in this connection, to consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. D. N. Kapur be and is hereby appointed a Director of the Company liable to retirement by rotation in place of Mr. R. G. Edwards".

The Share Transfer Books of the Company will be closed from 9th to 23rd June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3 Netaji Subhas Road,
Calcutta, 29th May, 1958.

NOTE:—

Payment of the proposed dividends, if declared, will be made on or after 7th July, 1958, only to those members whose names are registered in the Books of the Company on 23rd June, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

Mr. R. G. Edwards resigned from the Board at the end of March 1958 and a Special Notice has been received from a member of the Company notifying his intention to propose a special resolution as set out in item 5 of the above notice appointing Mr D. N. Kapur as a Director of the Company liable to retirement by rotation, in the place of Mr R. G. Edwards. In the said Special Notice it has been pointed out that Mr D. N. Kapur is an "associate" of the Managing Agents within the meaning of the Companies Act, 1956, and that, in view thereof, it will be necessary for the members to pass a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

CHITAVALSAH JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Sixty-first Annual General Meeting of the Members of CHITAVALSAH JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 26th day of June, 1958, at 3 O'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the thirteen months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. B. L. Bajoria, the Director retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:

   "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation".

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 12th to 26th June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production during April 1958, was 196,000 tons bringing the total production up to 30th April, 1958, to 1,910,000 tons. The corresponding figures for the 1956-57 season were 273,000 tons and 1,821,000 tons, respectively. The offtake of sugar from factories during April 1958, was 183,000 tons against 198,000 tons during the corresponding period of last season. This brings the total despatches from factories in the first six months of the season (November 1957-April 1958), including despatches for exports to 991,000 tons, against 1,035,000 tons during the same period of last season. The total closing stock of sugar with factories on 30th April, 1958, was 1,348,000 tons against 1,314,000 tons on the same date of last season.

BANKS

H indicates that Share capital is half paid. O., C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FRANCE UNDER A DICTATORSHIP

POLITICAL AND ECONOMIC CONSEQUENCES OF DE GAULLE

THE semblance of legality which has accompanied General de Gaulle's assumption of power need not obscure the fact that France now has a totalitarian government. De Gaulle is no Hitler, he may not even be a Mussolini; but he is the dictator of France for a specified period of time which is all too apt to be extended indefinitely, unless the unlikely happens and the country's problems disappear completely in the meantime. This may not, in itself, be a bad thing. It is possible to be too sentimental about democracy in France; the final bid to retain it came chiefly from interested parties such as the communists. Most partriotic Frenchmen would agree that although in theory democracy is the system to which the Gaulish character ultimately gravitates, its recent practice has been far from ideal. If de Gaulle could solve France's immediate problems through the agency of strong government, and then retire gracefully leaving behind him a Constitution under which democracy could work in future, then his accession would probably be welcomed by many who could never be accused of being fascists. But there are a number of ifs in all this, the largest ones concerning the ability of de Gaulle himself to succeed where his democratic predecessors have failed, and his willingness thereafter to forgo the satisfaction which power accords a vain and conceited nature. Perhaps the main point to remember is that there is really no alternative to dictators, either of the right or the left, when democracy fails as it has done in France. There is a lesson here for India, where attachments to parties, regions, ideologies and persons have all in the past few years tended to take precedence over loyalty to the system of democracy and its institutions.

It would be easier to pass judgement on what has happened in France if it were clearer what de Gaulle stands for. His accession has been in answer to the call for a strong leader; he has offered no recognisable policies. This may have been the mark of wisdom in an astuter man eager for power. As it is, the General appears to be sincerely convinced that the remedy for France's disorders is simply de Gaulle—an opinion with which he is unlikely to find much sympathy outside his own country. The world knows he is anti-American and that he is not particularly pro-British. It *thinks* he is in favour of a liberal solution for Algeria, although the fact appears to have escaped the recalcitrant French generals whose opposition to M. Pflimlin's suspected intentions brought de Gaulle to power. He has been heard to recommend a *rapprochement* with Russia as a solution to the German problem, and he is known to be a firm advocate of France continuing to be a world military power. But he has offered none of these policies openly in exchange for the confidence the French people have been asked to place in him. Nobody doubts that he will strive to promote what he considers the best interests of France, her dependencies and her allies. But in the absence of any indication as to how he intends to pursue his aims, the world can be excused a large measure of scepticism about his ability to achieve them.

Speculation about the political and economic future of France under de Gaulle depends to a large extent on how long he will stay in office, whether he will seek to extend his powers, his success in tackling the Algerian problem, and the strength and unity of the opposition in France to totalitarianism. At the moment, his powers are limited. He is, for example, unable to denounce existing treaties, so there is no question yet of his leading France out of N.A.T.O. That is, unless the United States and Britain interfere too vigorously against his conduct of north African affairs. De Gaulle is likely to increase France's price for continued participation in N.A.T.O., at least to the level of a completely free hand in north Africa. He is not, however, likely to attack Tunisia or Morocco; the risk of this came more from weakness in Paris and the kind of local decision which led to the Sakiet bombing. The deciding factor may well be the price Russia is prepared to pay for France's co-operation in helping to solve the German problem. Moscow has two important advantages to gain from closer friendship with a France ruled by de Gaulle. If France could be persuaded back to the old alliances against Germany, it might be possible to offer the two halves of that country unity in return for a treaty limiting their strength. No West German Government, no matter how strong its American patronage, could resist such a bribe for long. A solution of the German problem would leave de Gaulle free to eject the Americans from France, and therefore from Continental Europe, and would leave the Russians free to dismantle their garrisons in eastern Europe for use elsewhere. This is one advantage; the other is that to strengthen a de Gaulle exasperated with the Americans in north Africa might encourage France to fumble her colonial affairs even more than she has done, with obvious benefits for Russian popularity in Africa and Asia.

This is the kind of reorientation which would take a long time to bring about. At present, de Gaulle does not have so much time, nor has he the power. But dictatorships have a habit of hanging on, and this one shows no particular promise of being the exception. One other point needs be considered. De Gaulle's freedom of action depends to a large extent on his being able to put France back on her feet economically and free her from the need for American aid. This is not such a difficult job—in theory. France is potentially the richest country for her size in Europe. Unlike Britain, whose need of American aid in the past few years has been simply the result of carrying too large a military burden in the N.A.T.O alliance, France's dependence on the United States has been due to colonial wars and political weakness. Properly handled, and free from Algerian commitments, there is no good reason why the French economy could not do without American assistance altogether in, say, three years' time. One indispensable requirement is, of course, that the French peasant be pursuaded to pay his taxes. It would take a very strong Government indeed to do that. De Gaulle's might manage it, if given time. But it is rather more likely that the General willl become the prisoner of his own economic die-hards, just as it appears probable he will eventually of his military ones. This is the usual fate of a fascist regime, as is well illustrated by France's neighbour, Spain. There is a strong streak of efficiency and modernity in the French State which weighs against such a retrograde movement. But totalitarial regimes, if indeed France has got one, are notorious for their distrust of progressive elements, and one with de Gaulle at its head is likely to be at least as conservative as most. The urge to be free from American influence, which is very prominent in France today, could strengthen de Gaulle's hand in any taxation reforms he may have in mind.

The probable fate of the proposed European economic projects to which France is a partner, is obscure. De Gaulle may demand a higher price for French participation, and is certainly likely to resist more fiercely than a democratic government might have done any move to limit France's economic sovereignty. Otherwise, the wish to offset American economic influence may lead to considerable hesitation before French participation is abandoned altogether. A period of indecision appears likely, while France makes up her mind whether de Gaulle has come to stay or whether parliamentary government is to be resumed soon. That will mean more exasperation on the part of France's partners and more obduracy from French negotiators, but it is unlikely there will be a complete withdrawal, not for the time being at least. A solution to the Algerian problem may well strengthen France's hand in negotiations for the European Common Market, because it will mean a possible acceleration in the development of the oil and mineral resources of the Sahara.

Any attempt to predict the effects of de Gaulle's accession to power, either politically or economically, is a hazardous matter. Dictatorships rarely turn out exactly as they at first appear. Much depends on the character of the man at the top. That is why two points only can be established with reasonable certainty. The first is that France is not going to turn into another Hitlerite Germany; de Gaulle is no megalomaniac demagogue with the energy of youth and the ruthlessness of a fanatic. The second is that France need not expect too much from the change; a fascist government does not necessarily mean a strong and determined one, nor one with a workable blueprint for putting the nation firmly back on its feet again. If miracles are to be achieved they are much more likely to come from hard work, discipline and the willingness to bear sacrifices, than from the assumption of power by a single prominent personality—even one considerably more prepossessing than de Gaulle. There will be opportunities for France under the new regime which did not exist under the old, but grasping them is not going to be as easy as she appears to think. De Gaulle is an old man now, as dictators go; he would perform his best service to his country by bringing what measure of peace in Algeria he is able and then handing over to a strong democratic government selected under a new electoral system—a field in which, of course, he has no power at the moment.

ECONOMIC PROBLEMS OF U.A.R.

OF the two "provisions" of the new United Arab Republic, India's trade relations with one, Egypt, are sufficiently important for her to follow with interest the very complex economic problems posed by political unification. It was first proposed to resolve some of these problems before plunging into political unity, and that is why a treaty of economic union was signed in Damascus last September. But the politicians, and more particularly the politicians of Cairo, soon after took the initiative and now the two countries find themselves one nation on paper but two very different economies in fact. The circumstance that Cairo is the moving spirit in the operation, and the source of most of the suggestions and proposals for further propress toward unity, is important because it indicates that where differences are to be resolved into unity it is the Egyptian system that will predominate. In other words, the adventurous and autarchic state-capitalism favoured by the military junta on the Nile can be expected to prevail over the liberal free-trade and private enterprise of the Syrians.

This is the consequence not simply of dogma but of necessity. Syria has almost no controls over currency exchange and the movement of capital; the piastre is a free money and one moreover that is valued at its true worth. On the other hand, the Egyptian pound is artificially maintained at an unreal value by means of rigid and total controls of every sort. To permit free movement of capital within the new Republic would automatically entail a flight of capital from Egypt and the collapse of the network of controls. In such conditions, it is necessarily the free system that must give way to the controlled system if internal movement is to be allowed.

True, the fact that wages are much higher—about 30 percent to 40 percent—in Syria than in Egypt means that capital can be more profitably

employed in the latter country. But the movement of investment funds that this might cause would not be substantial, seeing that both nations employ 75 percent of their populations in agriculture, not in industry. Furthermore, in both countries the class of merchants and speculators outnumbers investors and industrialists. There is a plan (Egyptian in authorship, naturally) to rectify this discrepancy in wage rates by moving one million fellaheen from Egypt to Syria. This would be a perfect solution, for the peasantry can be more usefully employed in the wheat-bearing lands of Syria than along the arid banks of the Nile, but opposition from Egyptian employers and from Syrian labour can easily be foreseen. And in any event the task of transferring masses of ignorant peasants to a new country presents formidable problems that are quite familiar to Indian Governments that have undertaken refugee resettlement.

That the obstacles to economic unity are considerable does not mean they are insurmountable. On paper, at least, the two economies are in many ways complementary. Egypt has a cereals deficit and Syria an excess of wheat. Their resources in raw cotton and textile manufacture, as well as in oil, can be conveniently married. Egypt is more industrialised and Syria less. But this latter contrast provokes as many difficulties as it seems to resolve, precisely because Egyptian industry is an inefficient hothouse growth. Egypt, incredibly, seeks to meet her requirements in everything from pig iron to watches and medicines; in spite of deplorably low industrial wages, these products are expensive. They will seem especially so to the Syrians, whose free trade allows them to buy abroad in the cheapest European markets—not to mention the poor quality of Egyptian products.

Both "provinces" can hope to benefit from economic union provided slow progress is made, but if matters are hurried Syria will certainly be the loser—her consumers because of the sacrifice of Syrian freedom to the necessities of Egyptian state-capitalism, her ruling classes because of the liquidation of Syrian feudalism by the Egyptian "democrats". Damascus is optimistic that union will be proceeded with slowly and cautiously, but obviously it would be a mistake to under-estimate the dynamism of the Cairo junta, which has probably been in no way lessened by Colonel Nasser's recent visit to the Soviet Union.

THE POUND COULD BE CONVERTIBLE

STERLING is now in transition between the season of strength and that of weakness. It is customary about this time of year to estimate how serious the weakness will become a few months hence. But this year the foreign exchange markets, anticipating no seasonal crisis, are considering other possibilities. They have noted the improvement in the sterling area's gold and dollar reserve, the proximity of the rates for the various kinds of sterling, the exchanges of opinion between London and Washington; and they are discussing whether, after years of delay, sterling will be convertible with dollar before the end of 1958. Until recently, nobody could suppose that an American recession would be a favourable background for such a move. It had to be assumed that in such a condition the United States would import less and try to export more, and that dollars would become scarcer and international liquidity more restricted. In fact, U.S. exports have been reduced much more than U.S. imports, and some people have even suggested that the U.S. dollar is no longer a hard currency. The revival of interest in gold appears to be attributable to some loss of confidence in the dollar as an international currency, as well as to ideas of revaluing gold—implying devaluation of all currencies, including the U.S. dollar, in terms of gold.

However, while the relative positions of the pound and the dollar have certainly changed in favour of the pound, it would be unrealistic to suppose that the pound could be made convertible without American assistance, whether direct or through some international medium. The sterling system is overloaded with liabilities in relation to assets, and the right to convert sterling freely, which ought to complete the restoration of confidence in the currency, might cause doubt and apprehension if the reserves were not effectively reinforced beforehand. When it was revealed in May that the sterling area's gold and dollar reserve had risen above £1,000 million in April—exceeding that figure for the first time since November 1954—the British Chancellor of the Exchequer, Mr. Heathcoat Amory, reminded Britain that the reserve included a good deal of borrowed money, which would have to be repaid over the next few years. But he pointed out also that assets were increasing while liabilities were decreasing. In fact, substantial amounts of sterling balances have been repaid over the last year, and the technical position of sterling has been thereby strengthened. But if one looks back a further year, the comparison with the present position is not so favourable.

How big a reserve is needed to support convertible sterling is a matter for argument, but it is not disputed that the recent rate of rebuilding the reserve would have to be maintained for many years to prove sufficient. A reserve of the order of $3,000 million is only half of what is estimated to be needed to provide for all reasonable contingencies and still leave a residue large enough to sustain confidence. The present reserve is not much more than is needed as a residue, and to provide for withdrawal from London of all short-term funds owned abroad, and also for speculation against sterling by accelerating payments in sterling and delaying payments in foreign currency, the figure ought to be nearly four times as large. But it is hardly conceivable that sterling would be subjected to such pressure if the reserve were substantial, and in practice some $6,000 million would probably be an ample support for convertibility of non-resident sterling—even allowing that the reserve must both guarantee Britain's international banking functions and absorb fluctuations in the sterling area's balance of payments on ordinary commercial account.

The present reserve can be augmented to the extent of some hundreds of millions of dollars by the unused facilities available from the International Monetary Fund and the U.S. Export-Import Bank. Even so, there remains a deficiency of roughly $2,500 million. The proportion of the reserve at present held in gold is probably not much less than that amount, and if the price of gold could be doubled, the reserve would be approximately adequate without any further assistance. The obvious alternative is a stabilisation loan provided by the United States. Another possibility is to arrange with the holders of the sterling balances to block a proportion of those balances while allowing the remainder to be freely converted, so that a smaller reserve would suffice; but the suggestion would not be welcomed abroad, and such an arrangement would, anyway, be temporary. The arguments for revaluing gold, mainly to improve the liquidity of international finance, are certainly strong, but there is no evidence that the American authorities are impressed by them. It can be argued that an American stabilisation loan would be in America's own interests, because trade in the non-communist world will languish if sterling is unable to perform its accepted function satisfactorily; but the loan negotiated for a similar purpose in 1946 was ineffectual (sterling was convertible for only a few weeks in 1947), and the Americans are at present so preoccupied with their domestic problems that tax-relief seems to them more important than additional foreign aid.

A big increase in the standby credits available from the International Monetary Fund would encounter the same difficulty, as the credits would have to be, in practice, mostly American. But the I.M.F. could be expanded in other ways. A leading British banker, Sir Oliver Franks, has proposed that some, at least, of the reserves of the member countries should be deposited with the I.M.F., which would issue in exchange equivalent gold certificates, available as international currency. (The world would then have an effective central bank.) By the same reasoning, it should not be impossible for Britain to transfer her sterling liabilities to the I.M.F., incurring a debt that would be repaid in an orderly manner and that could cause no crises. The various possibilities have lately been discussed between Washington and London. The British Government is evidently prepared to merge American-account and transferable-account sterling and so accord convertibility to the latter, which is used all over the world. But if that advance were made outside of a plan for total convertibility, the Americans might feel that their further assistance was unnecessary; for much of the world's sterling would already be available to buy their goods.

INTERIM RELIEF FOR TEA

THE measure of immediate relief which the Government has decided to grant the tea industry is bound to be welcome. The plight of the gardens, especially those producing a high proportion of common teas, called for urgent attention and the Government has acted wisely in making this gesture as an interim measure until a satisfactory formula can be worked out to give the relief the common tea producers need without granting too unrealistic a favour to quality varieties. At least, it is presumed that this is only an interim measure. The official announcement suggests that it is by pointing out that the problem of common tea is still under consideration. It would be unfortunate if it were considered in New Delhi that the enthusiasm with which the industry has received its announcement was an indication that nothing more need be done. It most certainly does; the problem of common teas has not yet been tackled on anything like the scale required. In the meantime, the concessions will put a much-needed Rs. 1.25 crores or so into the industry's pocket, from which, of course, increased agricultural tax and income tax will have to be paid. Of this, about Rs. 90 lakhs will come from the halving of the cess of Rs. 4 on each 100 pounds of tea exported. The remaining Rs. 30-odd lakhs will come from the reduction to half an anna a pound of the excise duty on teas not packaged in India. The total of relief is small in comparison with the industry's needs, but will help, to some limited extent, to offset the competitive advantage which other tea growing countries have been able to derive from India's tax system.

The complications involved in devising any form of tax relief to help only common-tea producers appear still to be baffling the Government. This is not surprising; it is essential that the industry pay the taxes it can afford without damaging too severely its competitive position, and to find the formula which safeguards the country's interests to the maximum extent without pricing the industry out of the world's markets is no easy task. The industry has already made its suggestions, based on an altogether commendable sense of realism. The Government would do well to pay particular attention to the industry's pleas: it is in the best position to appreciate how urgently the relief is needed. It has to be accepted that India is no longer in a position to dictate tea prices to the world. She has already invited the intensified competition of such old rivals as Ceylon while at the same time attracting the attention of new and ambitious ones like Argentina, East Africa and China. If the industry is to shoulder the tax and welfare burdens which have been piled upon it, the internal market for tea would seem to be its only salvation. A situation may not be far distant where home consumers will have to be called upon to subsidise export prices in order to maintain the industry's foreign exchange earning capacity. If this is to be avoided, the wholly unrealistic taxes which the industry is bearing may have to be simplified and drastically lowered. Out of a total contribution to the coffers of the Central and State Governments of something in the region of Rs. 16 crores, the sacrifice of a few odd crores of rupees is no great loss to maintain in sound health an industry which ranks as India's main foreign exchange earner.

Current News and Comment

Index of Industrial Activity

Corrected for seasonal fluctuations. *Capital's* Index of Industrial Activity shows a fall of 0.1 point during November 1957. Contributing to this were declines in tea, cement and railway ton-miles. The output of sugar, jute, yarn, cloth, coal, pig iron, finished steel, paper, tyres, automobiles, bicycles and electricity increased.

Ashok Leyland Expansion

In his address from the chair at the annual general meeting of Ashok Leyland Limited, Sir A. Ramaswami Mudaliar discussed the expansion programmes of his company. (A fuller version of the speech appears elsewhere in this issue of *Capital.)* Considerable progress was made during the past year in the expansion of the company's buildings and the installation of plant and equipment required for the phased manufacturing programme. The total expenditure on buildings amounted to Rs. 16.75 lakhs and that on plant and equipment to Rs. 34.5 lakhs. Early in the past year it became obvious that additional capital would be required in order to meet the heavy expenditure on buildings and equipment. In August, therefore, 2,034,522 shares of Rs. 5 each were offered for subscription of which 1,045,834 shares were, in terms of a resolution passed by shareholders, offered to Messrs Leyland Motors Ltd. The whole of this issue was taken up, and the financial difficulty of managing with too little capital in relation to the magnitude of the manufacturing programme was removed. The company's aim is to produce the complete range of Leyland heavy duty commercial vehicles at its Ennore factory. In accordance with this policy, a proposal for the expansion of its project to include the manufacture of Leyland "Tiger" and "Titan" chassis in its programme was submitted to the Government of India at the end of 1956. Sir Ramaswami says that the new phased manufacturing programme has now been accepted, planning is already in progress and that its physical implementation will commence towards the end of the current year. The first step in the company's extension of activities to include the manufacture of commercial vehicles with heavier load capacities than the "Comet", is of very great importance to it for two reasons. First, the trend towards heavier vehicles will be inevitable as the country's roads are continuously improved and bridges and culverts are strengthened. Second, the new programme provides, in the first phase, for the manufacture of the Leyland "600" and "680" diesel engines which are alternative fittings in the heavier chassis. To enable the output of "Comet" chassis to be increased without delay to 3,000 a year and to provide for the addition of the Tiger-Titan programme, the company's authorised capital has been increased to Rs. 3.25 crores, "of which Rs. 2 crores only will be fully paid up until such time as a new capital issue may prove expedient." The sales of "Comet" chassis have increased steadily since the manufacturing programme was inaugurated, and there is every indication that this trend will continue. Apart from State and municipal transport organisations from whom repeat orders have been received, private operators have been purchasing the company's vehicles in a continuously increasing volume. "We can without doubt look forward to 1958 being an outstanding year in your company's history both in relation to sales and to progress with the manufacturing programme. At some point towards the end of this year, we shall pass the half-way mark in manufacture. That is, more than half the value of a 'Comet' chassis will become made in India". Referring to the shortage of foreign exchange, Sir Ramaswami says that his company is anxious about whether it will be able to import those portions of the chassis which are still manufactured by Leyland Motors. He suggests that the Government might relieve manufacturers of this anxiety by issuing import licences at least six months in advance of the beginning of the period in which import will take place.

Raw Materials for Screws

The screw industry is engaged in the manufacture of wood and machine screws. It was first developed in the Amritsar area during war time, but it has subsequently been decentralised in other parts of the country such as U.P., West Bengal, Bombay and Madras. At present, 57 units, both big and small, are engaged in the manufacture of wood screws. The number of organised manufacturers, as sponsored by the Development Wing, is only 26. Furthermore, the Tariff Commission estimated the annual rated capacity of the existing units at 6.9 million gross or 3,450 tons on one-shift and 6,900 tons on two-shift basis. The production capacity of 18 units in the Central list is 2,880 tons or 5.76 million gross. Besides, there are several unregistered units getting their quota of raw materials from State Governments. But the capacity of these units has not been included in the Tariff Commission's estimate. Speaking at the annual general meeting of the Screw Manufacturers Association, Mr. D. V. Virmani, president, said that the estimated demand for wood screws is only 3,500 tons, and that the industry suffers from overproduction. "There is, therefore, no necessity either for further expansion of the present units or for sponsoring any more new units in the field. I would, therefore, appeal to the Government that the production figures of all the unlicensed units should be registered with the Development Wing and account should be taken of the existing capacity when further expansion is proposed." Producers are suffering on account of the inadequate and irregular supply of steel wire, which is the principal raw material for the industry. The latter has been getting its requirements for the working of only one shift. The Government should, therefore, consider how far it is possible to allocate raw materials for the working of two shifts, since this alone will enable the factories to operate on an economic basis. The Iron and Steel Controller and the Development Wing made it clear to the Association that its members could get only 50 percent of their requirements of wire from indigenous sources and that the balance should be met through imports. But unless the duty levied at present on imports of steel wire and wire rods is removed, the industry will find it uneconomic to import its requirements from foreign countries. The production capacity of some of the factories has been greatly expanded during the last three years, but it is regrettable that arrangements have not yet been made by the Development Wing to assess their capacities and to issue quota certificates on that basis. In spite of the shortage of steel wire, the Government has not issued import licences for the required quantity of this material. This has greatly affected the production programmes of the factories which partially depend on imported wire.

Lay-offs in U.P. Mills

A plea for an immediate amendment of the Industrial Disputes Act of 1947 has been made by U.P.'s Chief Minister, Dr. Sampurnanand, who says that the provisions in the Act relating to lay-off benefits are being misused by some employers. About 8,000 workers have been laid off for four to six months in Kanpur alone, it is said. The two major labour unions in the city, the Suti Mill Mazdoor Sabha and the Rashtriya Textile Union, are both considerably exercised over the prospect of a likely increase in the number of unemployed. The U.P. Government's public declaration of its helplessness at the recent labour conference in Naini Tal has had its reaction in Kanpur, where preparations for a "peaceful *satyagraha*", it is said, are in progress. As soon as a sufficient number of volunteers are enrolled, the movement for "bread or jail" will begin. It may be recalled that at the Naini Tal conference, Dr. Sampurnanand said that all labour problems had a law and order aspect which, he argued, was one of the reasons why more powers under the Industrial Disputes Act should be delegated by the Centre to the States. In particular, he wants State Governments to be given the power to appoint controllers for mismanaged industries.

So far as the Kanpur mills are concerned, he does not wish to emulate the Bombay Government's example—taking over and running the Sholapur mills—especially if the requisite consent from a majority of workers for a cut in their emoluments is not obtained. Under the Industrial Disputes Act, employers are not required to pay any compensation to a worker who is laid off for a period of less than a week at a time after the expiry of the first 45 days in a year. Dr. Sampurnanand seems to imply that some millowners in Kanpur are doing precisely this. The industry should have refuted this charge when it represented its case before Mr. D. S. Joshi, Textile Commissioner, and Mr. Majumdar, his Industrial Adviser, who visited Kanpur recently for an on-the-spot study of the situation.

Spokesmen for the industry impressed upon the Textile Commissioner that if there had been a slight drop in the accumulation of stocks, it was due to distress sales and to a curtailment of production. Two mills have totally closed, while others have sealed a portion of their looms. Incidentally, Dr. Sampurnanand, who takes a more hopeful view of the situation, has succeeded in persuading the parties to the Muir Mills dispute to agree to his arbitration. He will be assisted by a lawyer and an auditor and he has asked the parties to deposit Rs. 12,500 each towards the expenditure. He also believes that the problem of stocks in the Muir Mills could be solved by allowing it to release larger quotas of *dhoti* than so far. He has also supported the claim of the Atherton West mills for assistance to the tune of Rs. 10 lakhs to tide over its current difficulties.

U.P. Fireclay Deposits

Fairly large-scale deposits of fireclay exist at present in Bihar, Bengal, Madhya Pradesh and Mysore, and refractory plants are also functioning in most of these places. But over the past ten years, the import figures for refractories have shown an upward trend. While it was Rs. 1,73,359 in 1947-48, it increased by several times to Rs. 54,29,261 in 1954-55. In terms of tonnage, the increase has been about 30 times. The large deposits of fireclay which have been discovered in certain districts in Uttar Pradesh, if properly exploited, could, therefore, bring about an appreciable reduction in these imports. Valued at about Rs. 10 crores, these deposits should be enough to meet the refractory requirement is of the State for decades to come. Half the clay is yellow and the other half white. The immediate customers for the yield will be the State-owned cement factory in Churk and the Rihand dam. In addition, it is said, if the firceclay is substituted for the fly-ash now used for mixing with cement, economies to the extent of several lakhs of rupees could be effected.

Baroda Rayon Share Issue

Baroda Rayons, a new company set up for the manufacture of synthetic yarns in Veraval, Saurashtra, will soon offer shares to the public for subscription. Its authorised capital is Rs. 10 crores. The issue will consist of Rs. 100 preference shares for Rs. 5 crores and Rs. 100 ordinary shares for Rs. 5 crores. The entire equity capital will be issued in the first instance. The company's board includes Maharaja Fatesingh Gaekwar of Baroda, Mr. Babubhai Chinai, Mr. K. K. Shah, Mr. Bharat Ram, Mr. R. J. Chinai, Mr. Madanmohan Ruia and Mr. Jaykrishna Harivallabhdas. Gaekwar, Chinai and Company will be appointed managing agents of the new concern for an initial period of 15 years, and will be entitled to a commission of 10 percent on the company's net profits. Meanwhile, it is reported that the National Rayon Corporation is issuing 80,500 new shares of Rs. 100 each at a premium of Rs. 25 for each share. In the first instance, the company will offer the new stock to existing shareholders in the ratio of one new share for every two shares already held.

Jay Shree Textile Debentures

Jay Shree Textiles, a Birla concern, are to borrow Rs. 25 lakhs from the public by the issue of 2,500 second mortgage debentures, carrying an interest of 7 percent. The debentures will mature on 1st January, 1968, but the company reserves the right to redeem them either in full or in part at any time after 1st January, 1963, at par and inclusive of interest to date, provided a six-month notice of the intention to redeem is given to the holders. Of the money so raised, Rs. 13.71 lakhs will be used to repay the principal amount secured by the 5½ percent first mortgage debentures and the remaining Rs. 11.29 lakhs will be used to finance the company's expansion schemes. These include extensions to its linen thread, hose pipe and cotton canvas units, the acquisition of land, construction of buildings and the company's industrial housing scheme. The concern has already spent Rs. 7.8 lakhs in this connection, which amount was raised from banks in the form of advances. Jay Shree Textiles include among their activities the manufacture of flax hoses for fire-fighting, flax canvas and paulins, linen threads and twines, belting yarn, knitting wool, staple fibre yarn, staple and wool fabrics, cotton canvas and filter cloth. The company now supplies the bulk of the hair yarn requirements of India's belting industry.

Claims for Glass Factory

Tussles among the States for new industries are nothing new. The reported tug-of-war between West Bengal and U.P. for a new glass factory is, therefore, not surprising. A three-man Russian team recently visited both the States when the claims of Durgapur and Naini (Allahabad) as possible sites were put forward. The Government of India is setting up this factory in collaboration with Russia. Although the exact cost of the undertaking has yet to be worked out, according to present indications, it will be an ambitious one and the factory building alone may cost Rs. 1 crore. When the Russian team contacted the U.P. Government in Naini Tal, the latter, it is believed, urged that because of cyclones the rate of depreciation of machinery in Durgapur will be much greater than in Naini. The factors favourable for the location of the factory at the latter site, according to the U.P. Government, are that a glass factory already exists there and that limestone and clay could be had from the neighbouring district of Mirzapur and coal from Daltonganj. Labour in Naini is also cheaper than in West Bengal. What the latter State has to say about U.P.'s claims will be interesting to know.

More Cement from Churk

The U.P. Government's cement factory in Churk, it is reported, has exceeded its 1957-58 target by about 4 percent. Against a figure of 231,000 tons, it produced 239,633 tons. The factory, which was commissioned in 1954 with an output capacity of 700 tons a day, produced 177,956 tons in 1955-56 and 196 350 tons in 1956-57. These production figures work out to 77 and 85 percent, respectively, of the yearly rated capacity. In the course of the financial year ended 31st March, 1958, the services of all foreign technicians employed in the factory were terminated. Nearly 2,000 quarters were constructed for the workers employed in the factory and 75 percent of the regular employees have now been provided with rent-free quarters. The year also saw the starting of bulk supply of "naked" cement to the Rihand dam, which has resulted in an appreciable decrease in packing charges. But there has been an increase in operating costs on account of the increase in the price of many materials, especially coal and gypsum. Plans have reached an advanced stage for the expansion of the factory during the second plan at an estimated cost of Rs. 2.75 crores. Orders for plant and machinery have already been placed, and construction work is expected to begin shortly.

Trained Workers for General Insurance

The Executive Committee of the General Insurance Council—a statutory body formed under the Insurance Act of 1958—has framed a series of rules to regulate the activities of the rather ill-assorted groups of field officials working for general insurers. These officials, who are called by various names such as inspectors, superintendents of agents and development officers, came into being after the amendments to the Insurance Act in 1950, there being a bar in the period previous thereto, to the appointment of such officials under the rules of the voluntary associations. The Executive Committee says that the institution of inspectorship has been exploited by the trade to pay rebates and inducements which are not provided under the law and current regulations. It is possible for insurers, for example, to appoint an agent and also an inspector for the same business to obtain the legally permitted commission and the salary due to the inspector. The latter can have a number of *benami* agents under him or agents a *benami* inspector. These abuses rob the system of inspectorship of its institutional character. With a view to curbing the appointment of such fictitious inspectors, a series of rules have been framed, the most important of which is passing of the eligibility examination conducted by the Federation of Insurance Institutes (J. C. Setalvad Memorial), at the instance of the Executive Committee. A series of examinations have recently been held at various centres all over India. The examination consisted of two parts. All inspectors in the roll of the companies prior to 1st January, 1957, were required to appear in a *viva voce* test. Inspectors appointed thereafter were called to appear in a written examination. Difficult questions were asked, and a field man adept in procuring business need not be an expert in the English language. The Executive Committee solved the problem by devising questions which could be answered by simple "yes" or "no", both in oral and written tests. It has, nevertheless, been contended that too many questions relating to claims and their settlement have been asked not covered by published syllabuses. The Executive Committee has been endeavouring not only to eliminate malpractices alleged to be prevalent in the business but also to give a status for the entire category of field workers. Its idea is to have professionally trained men, not merely field workers who are adept at making connections, for without elementary technical knowledge it is no longer possible to satisfy the needs of modern insurance.

Dhorigat Canal to Work

The Dhorigat pumping canal in the Azamgarh district of Uttar Pradesh, which has been lying unused for the last two years, locking up about Rs. 1 crore spent on the construction of the pumping station and about 400 miles of channels, will start functioning soon. The high-power pumping units, orders for which were placed with a West German firm, are expected to arrive shortly. The pumps will lift the water from the Ghagra and pump it into the canal system which is above the river's level. The work on the scheme was started in 1954, and according to the original schedule, it was to start functioning by 1956-57, irrigating about 8,000 acres of land. But after the channels had been dug and lined and the pumping-station building erected, the work was held up due to the non-availability of pumping units. Four small units to pump 30 cusecs of water were, however, provisionally installed, but the water thus made available could irrigate hardly 1,000 acres of land. The original estimates for the whole project was Rs. 87.82 lakhs, but the cost has already increased to Rs. 1.3 crores. Even so, in the prevailing dry spell any amount of expenditure is not likely to be grudged by the people in many districts of Uttar Pradesh, provided water is made to flow. In the villages around Banda district, water scarcity has become so acute that the railways are sending 13 wagons of water on alternate days to the railway stations in the area for the use of the staff. The surplus is distributed to the public. If the monsoon does not break sufficiently early, the railways will have to rush water wagons to other places besides Banda.

Problem of Laid-up Ships

Shipowners of more than 12 nations were represented at a private meeting in London recently at the headquarters of the U.K. Chamber of Shipping to consider the problem of laid-up ships, which is causing some anxiety. Later, the International Chamber of Shipping issued the following statement: "The meeting had been convened to enable deep sea tramp owners in the various countries to exchange views on the desirability or practicability of co-operation on an international basis in view of the present depressed state of world tramp freight markets. The delegates explained the views presently held among tramp shipowners in their countries on co-operative action in general, and consideration was given to the broad issues involved in alternative co-operative schemes which had been previously prepared or outlined by certain countries. The meeting decided to appoint a representative international committee to submit for further consideration such schemes or recommendations which it felt might be likely to secure adequate support if it should subsequently be thought to be appropriate and desirable to introduce international co-operative measures. France, Germany, Greece, Holland, Italy, Japan, Scandinavia and the United Kingdom agreed to appoint representatives to the committee. Other member countries of the International Chamber of Shipping are being asked if they wish to serve."

Shifts in Nigerian Foreign Trade

The volume of Nigeria's foreign trade during the first nine months of 1957 was appreciably lower than during the same period in 1956. Imports fell by 1.8 percent at 1,639,000 tons and exports declined by 2.4 percent at 1,545,000 tons. In value terms, the decrease amounted to £9.5 million at £206.1 million. The adverse balance of trade amounting to £7.9 million was more or less equal to that incurred in the corresponding 1956 period. The fall in the volume of imports, however, did not affect the supply of consumer goods at home, of which sufficient stocks were available, and trading conditions were keenly competitive. The U.K. continued to be the biggest supplier of Nigerian imports and took the major part of her exports, but the latter's trade with the sterling area as a whole decreased by 10 percent from the 1956 level. The balance of trade with the area, however, was favourable, the imports being valued at £55.9 million against £62.2 million worth of exports. With the non-sterling area, Nigeria increased her trade by 4.5 percent over the 1956 figure, indicating an important shift in the direction of trade. Imports at £49.5 million and exports at £34.6 million showed increases respectively, of £1.6 million and £2 million over those for the first nine months of 1956. The Netherlands took the largest individual share of exports (£9.9 million), Italy and Trieste (£4.7 million) and West Germany (£4.4 million). Exports to the United States fell in value by £4.2 million compared with the same period in 1956, but those to the Netherlands and France rose by £1.2 million and £4.7 million, respectively. The latter figure represents an increase of over 1,000 percent on the previous year. Imports from Japan declined by £2.7 million to £11.3 million, or a fall of 19 percent.

Malpractices in Tea Trade

Chambers of commerce have been organised in many districts in Madras. Some towns also have local associations of merchants. The growth of industries has stimulated the rise in the number of these trade organisations. The oil crushing and other industries have developed rapidly in the past two decades, mainly because of the expansion of transport. In his address to the Virudunagar Chamber of Commerce recently, Mr. S. Anantharamakrishnan welcomed the increase in business men's organisations. While stating that heavy taxation and import cuts had affected trade and industry badly, he was quick to point out that taking advantage of a situation of scarcity, unfair trade practices such as adulteration was on the increase. In a recent issue of the *Planters' Chronicle*, a correspondent from Peermade has pointed out that the adulteration of tea is practised on a factory scale in the Virudunagar area where green husk and dried *agathi* leaves are being mixed with black tea. Years ago, some investigators appointed by the International Tea Marketing and Expansion Board found that the adulteration of tea with black gram husk was rife in this area, too. The use of unauthorised mixtures also gave a bad name to the loose tea shipped from Tuticorin. The increasing use of adulterants is, in part, due to the larger trade with distant places, which buy in bulk on inspection of only a few samples. It is generally alleged that the new entrants to the trade are mostly responsible for such malpractices.

Road Transport in Madras

According to the latest official report on road transport, the Madras Government's income from motor-vehicle taxes in 1957 increased by Rs. 3 crores. This would seem to suggest that the reorganisation of the State, involving the loss of Malabar and Kanara areas, has made little difference to the fleet of lorries in Madras. The preponderance of small fleets with ten vehicles or less is partly due to the new licensing policy of encouraging newcomers. Only in two or three districts are operators with over 50 vehicles to be found. Changes in law and procedure are matters with which the public served by road transport are hardly concerned, but the downward revision of freight rates has been generally welcomed. The Masani Committee, which is now examining the problems and prospects of road transport in different States, includes representatives of private interests from Madras as well as elsewhere. It will be interesting to know from the findings of this committee whether road transport managed by public authorities is more economical and efficient than when it is in private hands. The road transport interests in Madras are no longer worrying about inter-State permits. Their main concern is to get the load limits revised and to be allowed to use more trailers to raise the carrying capacity of heavier vehicles now common on Madras roads, which, incidentally, are rated much superior to those in other States.

TEA EXPORTS TO U.K.

WE publish in another column an interesting debate on the Tea Duties which took place in Parliament on the 9th May. The claims of tobacco prevailed and a good case was no doubt made out for the soothing weed. It seems rather ridiculous to urge a reduction of the duty on the ground that it would help India and Ceylon in their competition with China because the reduction would apply to China tea too and leave matters much as they are. With an artificially inflated currency in India and Ceylon—and an honest silver currency in China,—the yellow man with the white metal has an enormous advantage, and as China is opened up it may make itself more and more felt. Some people imagine that the tea industry in China is decreasing and point to the diminishing imports to Great Britain as an evidence; but what China has lost in that direction she has more than gained in her increased exports to Russia and the United States, and her outturn of tea has held its own. What will happen should European capital be diverted to the cultivation of tea in China remains to be seen; it will probably mean greatly increased competition, and then a sixteen-penny rupee will not be a thing of beauty and a joy for ever to the Indian tea industry.

Without Prejudice

ON SECTION 27, INDUSTRIAL DISPUTES ACT

INSTIGATING OR INCITING AN ILLEGAL STRIKE

(FROM OUR LEGAL CORRESPONDENT)

ONCE again, the reader interested in the English language is invited to consider the meaning and interpretation of two common English words. They are those italicised in Section 27 of the Industrial Disputes Act. This is the section. "27. Any person who *instigates* or *incites* others to take part in, or otherwise acts in furtherance of a strike or lock-out which is illegal under this Act, shall be punishable with imprisonment for a term which may extend to six months, or with fine which may extend to one thousand rupees, or with both." (Italics ours).

In the opinion of the Patna High Court in the latest reported decision on Section 27, the two words are synonymous. In the opinion of the legislature they are not; as is indicated by the use of the word "or". In the writer's view there is a definite distinction. To instigate is a stronger expression than to incite. To instigate necessarily connotes something evil or bad. To incite may do so but usually does not. For example, we could properly, though clumsily, at the beginning of this note have "incited" instead of invited the reader to consider etcetera but we could not "instigate" him to do so. A saint, by his example, may incite a youth to high endeavour; he would not be instigating him to it. The ditinction, if it exists, is important for Section 27. For a conviction under it might be secured for "inciting" in the sense of innocently encouraging, persuading, where none could be secured for "instigating" in the sense of wilfully bringing about a breach of the law.

The Patna case was an appeal on behalf of the State of Bihar from an order of acquittal passed by a judicial magistrate 1st class, Patna, as far back as 23rd September, 1953.

The facts were that a dispute had arisen between the management of the Patna Electric Supply Company and their workmen and this dispute had been referred by the Government to an industrial tribunal in March 1952. The employees had a union known as the Patna Electric Supply Workers Union. Respondent Mr. Ramen Roy was its president and respondent Mr. Damodar Jha was its general secretary. The dispute which had been referred to the tribunal was still pending when, in November 1952, there was a further dispute relating to an allotment of quarters followed by a disturbance in the presence of Mr. R. N. Sharma, Assistant Labour Commissioner and Conciliation Officer, in consequence of which Mr. A. V. Ramaswami, chief engineer of the company, suspended several workers who were members of the union. After this, Mr. Ramaswami received a notice from the union intimating that the workmen were going to stage a token strike for 24 hours from 8 a.m. on 29th November, 1952. The intimation was made through a letter written by the general secretary of the union, Mr. Damodar Jha (later one of the accused respondents). The chief engineer, Mr. Ramaswami, and the Government of Bihar in the Labour Department wrote to the union that the strike would be illegal. Nevertheless the strike was actually launched on the date and at the time fixed by the union.

Thereafter, the State Government decided to file a complaint against the persons who had joined in the strike. The prosecution case was that the respondents did various acts in furtherance of the alleged illegal strike. Under the heading "Offence committed" it was stated as follows: "Instigation and incitement to workmen of the Patna Electric Supply Company Ltd., Patna, to take part in an illegal strike or otherwise acting in pursuance thereof punishable under Section 27 of the Industrial Disputes Act, 1947."

The judicial magistrate acquitted the respondents, holding that the strike was not illegal and therefore the question of instigating or inciting an illegal strike did not arise. But in an appeal over the strike in another case, it was held that the strike was an illegal one. Wherefore the State appealed against the acquittal and the only point to be decided in the appeal was whether the respondents had instigated or incited the workmen of the company to take part in the strike and had accordingly made themselves liable for the penalty under Section 27 of the Act.

The case for the prosecution was:

1. An extraordinary meeting of the Patna Electric Supply Workers Union was held on 25th November, 1952, at which the Executive Committee resolved to launch a 24 hours' token strike from 8 a.m. on 29th November, 1952 to 8 a.m. on 30th November. 1952, unless the company fulfilled certain demands.

2. On 27th November, 1952, a meeting of the workers of the company was held under the presidentship of Mr. Gurbachan Singh, vice-president of the union. At this meeting the workers were asked to go on strike for the 24 hours above stated.

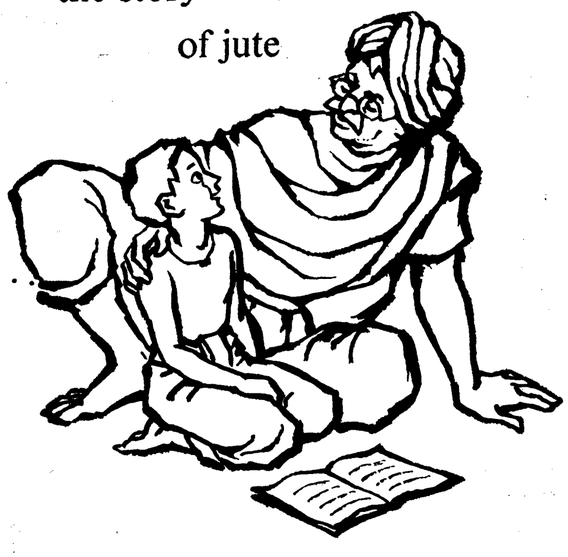
3. Another meeting of the workers' union was held on 28th November, 1952, under the presidentship of the respondent Ramendra Nath Roy Chowdhury, alias Ramen Roy, president of the union. At this general meeting of the union, the decision taken by the Executive Committee on 25th November, 1952, was endorsed and the workers were asked to go on strike as decided by the Executive Committee.

4. These steps were taken by the union in spite of the warning given by the Assistant Commissioner of Labour that the strike would be illegal.

5. In fact, the resolution was followed by a strike by the workers on the date fixed. It was alleged that the strike was in pursuance of the directions, decisions, advice, incitement and instigation of the accused persons charged.

The evidence of prosecution witnesses was that the respondents participated in the meeting where it was resolved to stage the strike, that some of them exhorted the wrokers to join the strike and that they actually did strike on the day fixed and they (the respondents) were seen carrying flags, distributing handbills and shouting slogans, although the exact wording of the latter was not brought out in evidence. On the other hand, the respondent Ramen Roy asked the workers to be peaceful and not to interfere with any employee who wanted to go to work.

Now let us stop there and consider those two words "instigate" and "incite" again, bearing in mind that they are used in Section 27 in an alternative and not a cumulative sense. The prosecution has to prove not that the accused instigated *and* incited but that he instigated or incited. If you agree with the writer that an instigator is the beginner, the begetter, the actual author of what is subsequently done and that he is such in a bad sense, whereas one who incites is merely one who encourages, assists by advice, exhorts to a certain course a man who may be already predisposed to it, you may also agree that a man may incite without instigating; and that upon proof of the facts above stated the respondents would be guilty of inciting a strike though possibly not guilty of instigating one. Well, you would be wrong. They were not guilty of anything. The High Court held that the two words mean one and the same thing. Said Banerji J. (Misra J. concurring): "The words "instigates" and "incites" should be read to signify something deeper than a mere asking of a person to do a particular act. There must be something in the nature of solicitation to constitute instigation or incitement under Section 27 of the Industrial Disputes Act. The words seem to convey the meaning 'to goad or urge forward or to provoke or encourage the doing of an act.' It is sometimes difficult to bring out the exact meaning of words which, by themselves, are so expressive and precise, and, not unoften, in trying to interpret such words we are faced with the danger of using words which, on closer scrutiny, may not carry the same sense. What acts will amount to instigation or incitement will depend also upon the particular facts of each case. In some circumstances a throw of a finger or a mere turning of the eye may give rise to an inference of either incitement or instigation. In others, even strong words, expressly used, may not mean that person using them was stimulating or suggesting to anyone to do a particular act. The words 'instigates' and 'incites' appear to be synonymous....."



The State's appeal was dismissed and the acquittal confirmed.

Well, there we have the law and, of course, we loyally accept it as such. But it appears to follow that Section 27 might as well have never been enacted; for in nearly every case it will be virtually impossible to secure a conviction for instigating or inciting an illegal strike.

State of Bihar v *Ramen Nath*, 45, *A.I.R.* 1948 (May) Patna, 259.

The beauty of village maidens in flaming red 'agunpat' sarees inspired many a poet of mediaeval Bengal. Woven on primitive looms out of yarn spun from 'Pat', as jute is known in Bengal, such sarees enjoyed immense popularity till even about 50 years ago. The English merchants carried this golden fibre from the sun-kissed fields of Bengal to mountain-ringed Dundee in Scotland, and a flourishing industry was born. The first jute mill in India was set up by George Auckland at Rishra on the banks of the Hooghly in 1855. With more than 100 mills in and around Calcutta, the jute industry is today the country's best foreign exchange earner. For machinery and spares, however, India had to depend till recently on imports. Today, with the best know-how of its technical collaborators of world repute, Texmaco is equipped to manufacture and supply the complete range of jute mill equipment, and also cotton and staple fibre spinning machinery. Helping the textile industry attain self-sufficiency, Texmaco serves India's basic industries.

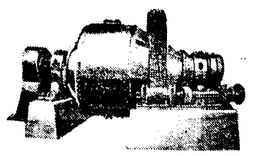
A Ditcher's Diary

SWELTERING DITCHERS MUST HAVE APPRECIATED the warning that the monsoon will be late again this year, and being told that the hot spell ended on 30th May. Not that I would care to contradict the hard-working reporter of *The Statesman* who was responsible for imparting that cheering piece of news; this is simply another example of how much misery can be successfully obscured by a few statistics. Most disconcerting was the opinion that the nor'westers are becoming feebler every year. I cannot see that there is any denying this fact, or that the summers in Calcutta are generally getting hotter and more uncomfortable. It is the growth of the city which is largely responsible—a growth which is taking place without any respect for climatic conditions. Personally, I cannot see any possibility of improvement; even the fight to keep the Maidan from deteriorating into a cheap building site, is a losing one. Calcutta is condemning its future generations to living in a city which is probably already the most uncomfortable in the world for its size. Is it too much to ask that this problem be studied by the city authorities, and something be done about it? Judging from the way in which Calcutta's affairs are handled at the moment, there is one short answer to that question: It is. The only hope in that case must come from artificial cooling devices. I read some time ago that it would be possible in years to come to equip a city with gigantic air-circulators, similar perhaps to the kind now used to ventilate coal mines.

THERE MAY BE A SLIGHT CONTRADICTION IN THE two verdicts on Calcutta recently attributed to Mr. Nehru. In the first, he called this city a constant headache to him, as well he might. In the second, and this time the reporter is Mr. A. K. Sen, his Law Minister, he calls Calcutta "a big, old, deserted village" in which "dead forces" dominate life. The fact is that the dead worry us but little; what does is "life's fitful fever" as Shakespeare called it. Perhaps Mr. Nehru is not wholly accurate either in describing this no mean city as a deserted village. The only places I have seen deserted around here are examination halls after question papers have been found "stiff" and hospital emergency wards or police stations when people may need their respective services. And in spite of the presence in our midst of a large number of people from the villages of what is now East Pakistan, I wonder whether Calcutta deserves to be called a village. Indeed, I would be prepared to show in Calcutta certain urban qualities and features that are not exactly conspicuous in New Delhi, for all the latter's pretensions to being a city. New Delhi is to Calcutta what Canberra is to Sydney or Washington D.C. to New York, and a capital is wise not to challenge seats of commerce and industry. More than wisdom, perhaps, it is a question of politeness. Mr. Nehru is himself largely responsible for the fact that so much—too much—economic and political power now rests with the Central Government. He must also be aware of the demoralising effects this concentration is having on once thriving commercial centres. Could not some respect and courtesy be extended to Calcutta, a city that has known greater days and for the passing of whose glory not all the responsibility is hers? I write this because I have just seen a pained and rather touching protest in the *Hindusthan Standard* (1st June), which gave me a disquieting glimpse of the sense of injury Calcutta nurses against Delhi, and this, I am sure, Mr. Nehru would be the last person to wish to encourage.

IT IS DIFFICULT TO DISCUSS A SUBJECT LIKE PROSTITution, for or against, wholly logically, and I am not surprised that Mr. A. K. Sen has not quite made up his mind either. He apparently thinks it should be abolished, but not yet. The constitutional point whether Mr. Sen and the Government of West Bengal are not guilty of displaying less than full respect for an Act of Parliament, interests me rather less than the universal ambience on the subject. Few can be as forthright as Arthur Koestler, who wrote: "The sale of any human faculty as a commodity is obviously a degrading process; but it is equally obvious that the difference between trading one's embraces and other forms of prostitution—political, literary, artistic—is merely one in degree, not in kind. If we are more repelled by the former, it is a sign that we take the body more seriously than the spirit." I do not entirely agree, but in case Parliament decides to think again on the subject, instead of forcing the Executive to attempt the near-impossible (given the present social set-up), I would like to recall the story of Mme Richard of France. She it was who in 1949 secured a formal vote for the closing down of the famous French institution of open houses. Koestler writes: "Most Parisians privately agree that the reopening of the Houses would be a boon. But none of the existentialists, post-surrealists, defenders of the philosophy of the absurd, flayers of hypocrisy, anarchists and libertines, whose books describe every vice in the alphabet with detached neutrality or implicit approval, had the guts to speak his opinion in public on this matter of social hygiene." The end of the Richard saga came in January 1952, and Koestler quotes *Time*: " . . . Last week Marthe Richard admitted she was wrong. She had just written a book, *L'Appel des Sexes*, in which she now says, 'The situation has become intolerable. We have to reopen the *maisons de tolérance*.'" (Koestler would have seen through the hypocrisy of this paragraph—full of other people's opinions, and none of my own.)



THIS NEWSPAPER HAS OFTEN MAINTAINED THAT India's personal tax system is not in fact "Kaldorian". Only the other week, at the risk of being misunderstood, it was pointed out in a leading article that one of the best ways of getting rid of this stifling mess, while continuing to raise the same amount of resources, would be to adopt Mr. Kaldor's proposals *in their entirety*. Certainly the damage to incentives would not be as disastrous as it is at present. Now Mr. Kaldor himself, I see, is objecting to the existing muddle being passed off under his name. In an article he has written for the *Accountant* of 12th April, he says, referring to Mr. Krishnamachari's innovations: "I would be chary, however, in claiming too much credit for all these reforms because the actual taxes adopted (both as to scope and definition, as well as to the schedule of rates) are so very different from what I originally recommended". I believe he was even more outspoken when he visited Delhi recently. And well he might be. Although I do believe his tax ideas are rather too theoretical for this wholly practical world of habit-ridden human beings. I still think they deserve a better fate than has befallen them. It is a pity Mr. Kaldor did not know more about this country before he began to prescribe for it. Or better still, he should have read his *Capital*, where it was prophesied long before Mr. Krishnamachari's reforms that only parts of the report would be accepted—the parts which was easiest to legislate for and which did not run counter to socialistic prejudices. It was only to be expected that a hard-pressed Finance Minister would select those proposals which suited his convenience without doing their author the honour of treating them as an integrated whole. That is why Mr. Kaldor's name will rank among the most unpopular in India's taxation history, a fact for which he is really not to blame. Or is he? Should he not have known that India is gaining an international reputation as being a haven for lost causes and bright ideas (however dangerous they might be in uncomprehending hands) which nobody else will have anything to do with? It is not long ago, for instance, that the wife of Professor Haldane was alleged to have made statements in a British court which appeared genuinely to recommend India as a land where police dogs' tails could be trodden on with impunity. What surprises me is how easily Mr. Krishnamachari has wriggled out of his share of the blame—perhaps because he was so sincere in his efforts to raise the necessary revenue and only recognised his mistake when it was too late. Mr. Kaldor's case is one which proves that history does sometimes find the wrong scapegoats. After all, Mr Krishnamachari has admitted he never read the report.

SOME TIME AGO, I COMMENTED IN THIS DIARY ON the difficulty experienced by an Indian friend of mine in getting himself a passport. There was no doubt in his case about the cause of most of the trouble—it was simply the depredations of bureaucracy in action. But there were other reasons, of course, and I was reminded of one the other day by a correspondent writing from London. He pointed out that with unemployment and short-time working on the increase in Britain, it would not be surprising if the Government there were to find itself forced into taking active steps to check the rising influx of immigrants, especially those from Commonwealth countries. A statement was made in the House of Commons recently on the flow of Indians and Pakistanis into Britain, by Mr. C. J. Alport, Secretary for Commonwealth Relations. He was replying to a Member who had urged that immediate steps be taken to check it. Mr. Alport said: "The Governments of India and Pakistan have expressed profound concern at the recent sudden rise of emigrants from those two countries. Mr. Nehru said recently in Parliament that because of the freedom Indians enjoyed in entering the U.K., responsibility was cast on the Government of India to prevent this from being abused. The Indian authorities assure us that the regulations governing the issue of Indian passports to intending emigrants will continue to be strictly enforced. The Pakistani Government, for its part, has recently announced stricter regulations for the issue of passports for travel to this country. It has increased the cash deposits required before such passports are issued, and has stipulated that migrants must have a working knowledge of English and a guarantee of work before leaving Pakistan." So much for the difficulties of getting an Indian passport these days. My correspondent goes on to say that unless this "traffic" is brought under complete control soon, the time may come when unemployed immigrants will prove a burden on both the U.K. and India or Pakistan through having to be repatriated in large numbers.

AUDITORS' REPORT :

We have audited the annexed Balance Sheet of the Indian Branches of the Bank of China as at 31st December 1957 and also the annexed Profit & Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the unaudited returns of the Bombay Branch not visited by us, with the books of accounts of the Calcutta Branch and with certified returns and particulars from the Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949 read with the proviso to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 (5) of the Companies Act 1956 the Balance Sheet and Profit & Loss Account are not required to be and are no drawn up in accordance with the Sixth Schedule of the Companies Act 1956 The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit;

(b) in our opinion proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Bombay Branch of the Bank not visited by us;

(c) the Balance Sheet and the Profit & Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis and read with the notes appearing thereon, the Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1957, and the Profit & Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

ASHOK LEYLAND LIMITED

SIR A. RAMASWAMI MUDALIAR'S REVIEW

Speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, Ashok Leyland Ltd., to the shareholders at the ninth Annual General Meeting of the Company held on 26th May, 1958 at 11 a.m. at the Company's Registered Office at Ennore.

Ladies & Gentlemen,

I have pleasure to extend to you a cordial welcome to the ninth Annual General Meeting of your Company.

The Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1957 have been in your hands for some time and with your permission I shall take them as read.

Last year I expressed the hope that in spite of many difficulties in our path which had to be overcome, we should be able to make steady progress towards the full manufacture of heavy duty commercial vehicles while at the same time being able to make modest dividend payments to those whose investments enable us to provide capital equipment. It is, therefore, gratifying to your Directors to find the Company is in a position to justify their recommending the payment of a dividend at the rate of 6 per cent per annum free of Income Tax.

During the year 1957 very considerable progress was made in the expansion of your Company's buildings and in the installation in them of plant and equipment required for the further implementation of our Phased Manufacturing Programme. The total expenditure during the year on buildings amounted to Rs. 16.75 lakhs; and the total expenditure on plant and equipment Rs. 34.5 lakhs. This by no means represents the end of our expansion.

Early in 1957 it became obvious that in order to meet the heavy expenditure on buildings and equipment additional capital would be required. In the month of August, therefore, 20,34,522 shares of Rs. 5 each were offered for subscription of which 10,45,834 shares were, in terms of a resolution passed by you offered to Messrs. Leyland Motors Ltd. The whole of this issue was taken up and the financial difficulty of managing with too little capital in relation to the magnitude of our manufacturing project was thereby removed.

Heavy Duty Commercial Trucks

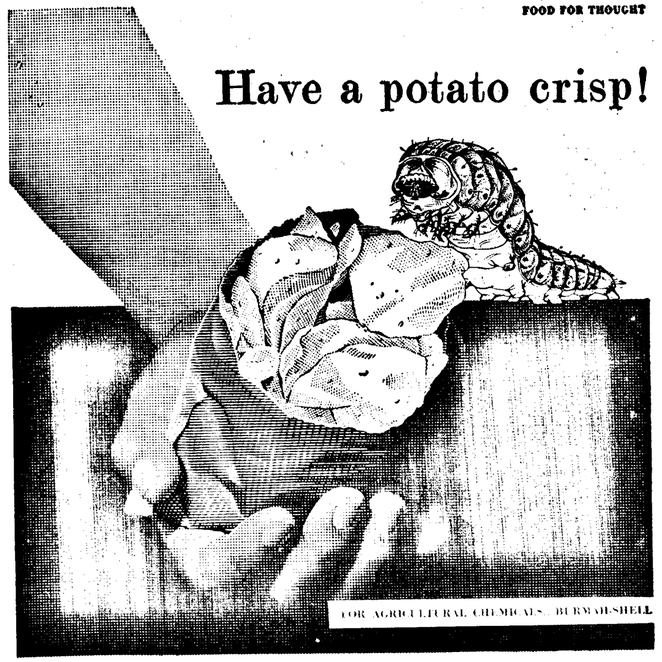
Your Company's objective is the establishment of the production at its Ennore Factory of the complete range of Leyland heavy duty commercial vehicles, as the development of roads and consequently of road transport in India progressively increases the demand for such vehicles. In accordance with this policy a proposal for the expansion of our project to include the manufacture of Leyland 'Tiger' and 'Titan' chassis in our Programme was submitted to the Government of India at the end of 1956. This new Phased Manufacturing Programme has now been accepted. Planning is already in progress and physical implementation will commence towards the end of 1958.

This first step in the extension of our activities to include the manufacture of commercial vehicles with heavier load capacities than the "Comet" is of very great importance to us for two reasons. The trend towards heavier vehicles as India's roads continuously improve and bridges and culverts are strengthened or rebuilt is inevitable. While, therefore, it may appear uneconomic from the point of view of the existing sales potential to engage in the production of vehicles with gross loading capacities exceeding 12 tons, there is no doubt that by the time manufacture is fully established the demand will justify the new project. The second reason, and initially the more important, is that the new programme provides in the first phase for the manufacture of the Leyland '600' and '680' diesel engines which are alternative fittings in the heavier chassis. These engines are suitable for most heavy transport requirements and they are the standard power units in Leyland trucks up to the 'Octopus' which is designed for 54,000 lbs. gross loads.

To enable the production of 'Comet' chassis to be increased without delay to 3,000 chassis per annum and to provide for the addition of the Tiger/Titan Programme, your Company's authorised capital has been increased to Rs. 3.25 crores, of which Rs. Two crores only will be fully paid up until such time as a new capital issue may prove expedient.

In my address last year I referred to difficulties we experienced due to certain anomalies in regard to gross vehicle weight restrictions. This question has continued to engage the attention of the Central and State Governments and of manufacturers and operators. Happily, it now appears not only that a serious attempt will be made to increase permissible gross laden weights on all roads which will bear them but also that steps will be taken to limit registered laden weights in all cases to a figure not exceeding, in any circumstances, the Manufacturers' specified gross vehicle weights. This is a most important step and in the right direction and all those responsible for it are to be congratulated. There is, however, still scope for a great deal of progress in the development of a road system which will enable heavier, and therefore more economic, load units to be carried over our highways. Gross vehicle weights have been restricted to such a low level in the past that the present tendency to consider 12 tons the ultimate limit is understandable. 12 tons may very well be an immediately desirable target, but it is quite inadequate as an ultimate one. If India's roads are to play their part in solving the tremendous problem of transporting goods and persons as industrial and agricultural production continue to develop, then 25 tons and not 12 must be the ultimate target for commercial vehicles. It is only by such a re-orientation of thinking on this question that full use will be made of the ability of heavy road transport vehicles to solve the country's transport problem.

Increased Sales



The sales of 'Comet' chassis have increased steadily since the Manufacturing Programme was inaugurated and there is every indication that this trend will continue. We are fortunate to enjoy the confidence of State and Municipal Transport organisations and repeat orders from these important operators continue to encourage us. More recently, private operators have been purchasing our vehicles in a continuously increasing volume and sales to the latter now exceed those to the former. We can without doubt look forward to 1958 being an outstanding year in your Company's history both with regard to sales and to progress with the Manufacturing Programme. At some point towards the end of this year we shall pass the half-way mark in manufacture. That is, more than half the value of a "Comet" chassis will become made in India. At the end of 1957, 36% of the value of the chassis was produced at your Factory; and at the end of 1958 the percentage will become 55. In this connection, I would like to draw your attention to the fact that these percentages indicate nett savings in foreign exchange. To arrive at these figures, the value of materials which are still imported for fabrication in your Factory is deducted from the gross saving represented by the deletion of units and components from C.K.D. packs imported from Leyland.

Unfortunately, just when we have surmounted all our initial difficulties, are well ahead with our production programme and are beginning to enjoy a sales demand which will ensure our efforts shall be financially sound, a shortage of foreign exchange has intervened. We are, therefore, continuously in the position of not knowing whether our own efforts to increase our local production to meet the sales demand will be matched by our ability to import from Leyland Motors those portions of the chassis still manufactured by them. This is a most unsatisfactory state of affairs because it obviates planning sufficiently far ahead to ensure complete co-ordination of our own and of Leyland Motors' effort to keep strictly to our programme. It is suggested that Government might relieve manufacturers of this anxiety by issuing licences for import at least six months in advance of the beginning of the period in which import will take place. Such an arrangement would enable manufacturers in India, still dependent on the import of some parts of their products, to order imported material in time to ensure its delivery at the right time.

Leyland Motors have continued to assist us in every way possible and we owe them a debt of gratitude. In this connection, I am sure you will wish that I shall convey to Sir Henry Spurrier and Mr. D. G. Stokes our special thanks for their personal help and guidance, which has proved so valuable in assisting us to deal with the problems incidental to the establishment of a modern commercial vehicle factory. I should like also to pay a special compliment to the Executives and staff and all the employees of the Company who have done commendable work and who deserve recognition for their loyal service throughout the year.

NOTE : This does not purport to be a record of the proceedings of the Annual General Meeting.

FOOD FOR THOUGHT

There are few foods which combine the down-to-earth simplicity and haute-cuisine elegance found in the potato. Whether it is mashed, baked, chipped or french fried, the potato occupies a prominent and useful place... from a formal marriage banquet to a handful of crisps.

All this is very well provided of course white grubs or cutworms haven't got there first. The white grub eats away all the flesh of a growing potato and causes considerable damage particularly in hill areas. The cutworm is a night bird: as soon as the sun goes down, he moves in the field to eat the tender young potato plants under cover of darkness.

These potato loving pests can destroy as much as one-third of an entire potato crop.

Shell aldrin provides effective control of white grubs and cutworms and can increase production by as much as 50% on effective fields. And when you consider that India produces nearly two million tons of potatoes a year from 6,00,000 acres, you will realise how important it is to get these insect pests very firmly under control. For every rupee spent on importing aldrin as much as twenty rupees worth of potatoes could be saved. This is a sensible expenditure whichever way you look at it; food for thought in fact.

SHELL Chemicals can save crops

and Foreign Exchange too!

THE DEVELOPING PETROLEUM INDUSTRY OF CHINA

PLANS FOR SYNTHETIC OIL MANUFACTURE

(FROM A SPECIAL CORRESPONDENT)

A NEW way has been found to develop the Chinese petroleum industry. The Communist Party Central Committee has laid down the policy that equal attention has to be paid to the production of natural and synthetic oil. It has called for "greater participation of the people" in oil production. The establishment of large, medium and small oil refineries will be spread over the entire country, and their activities will be properly co-ordinated. In addition to a number of natural oilfields, China also has rich synthetic oil resources. According to a study conducted by the Ministry of Geology in 21 provinces there are, besides the Mouming and Fushun oil shale deposits, approximately 100 areas, where oil shale can be found in the open. Furthermore, there are cannel, bituminous and anthracite coal mines almost everywhere.

The natural gas, which is produced abundantly in Szechwan, is also a good raw material for manufacturing synthetic oil. Many areas are enthusiastic about developing local oil industries. They claim to have solved many basic technical problems of the production of synthetic oil. If synthetic oil plants are permitted to be put up everywhere, oil production in China will considerably increase. If each special administrative area will establish one oil refinery of its own with a capacity of 10,000 tons of oil a year, then 180 of them in China will be able to produce 1.8 million tons of crude oil annually, it is estimated. This figure will be greater than the total oil production in the whole of China planned for 1958.

Medium and Small Refineries

The Ministry of Petroleum Industry has adopted a series of measures towards this goal. First, support and encouragement to the "localities" for the development of the synthetic oil industry have been given. In this connection, in addition to its intensified effort for the construction of the Mouming, Fushun, and a number of other major pilot synthetic oil refineries, the Ministry has drawn up blueprints for the construction of 22 medium and small oil refineries of various sizes. They include those with a capacity of 2,000 tons to 5,000 tons a year which can be built by the provincial and special administrative authorities, and also those which can be operated more easily and which can most suitably be built by chu and hsiang authorities. These plants will mainly produce heavy diesel oil which can be used as fuel for irrigation machines and as raw material for the production of gasoline, kerosene, and light diesel oil. If coal is used by them for the manufacture of oil, large quantities of coke will be produced in the meantime, which can be used as fuel for households and gas engines and as raw materials for the manufacture of chemical fertilisers.

At present, more than ten provinces including Shansi and Kiangsu, have kept touch with the Central Ministry of Petroleum Industry for the construction of oil refineries according to blueprints to be supplied by the latter. Three work teams have been despatched to north-east, east, north-west, and south-west China to study the distribution of synthetic oil resources. In addition, it plans to build a series of pilot oil refineries to gain some experience this year before oil refineries are established in large numbers. Secondly, it is necessary to intensify the geological prospecting work for the discovery of more natural oil resources and the development of natural oilfields. In this way, not only will major oilfields be developed on a priority basis, but minor oil resources will be fully utilised also.

Latest data show that the Karamai oilfield is several times larger than what it was initially thought to be. The development of this oilfield is being intensified. A number of wells in central Szechwan have recently struck oil and large quantities have started gushing from these wells. This will provide good ground for the development of the oil industry in China. Transport conditions in the area are good, so the development of oilfields will be easy. The Ministry of Petroleum Industry has recently ordered the digging of more than 100 oil prospecting wells in this area in order to get more information on, and to develop, the oilfields. In Yumen, where the operations at the Laochunmiao oilfield continue, plans are being formulated for speeding up the prospecting and development of the Yaerhhsia and the Paiyangho oilfields.

Geological Prospecting

This year the Petroleum Industry Ministry will carry out large-scale geological prospecting work in five oil prospecting areas. The total volume of work to be carried out in drilling wells will substantially surpass the original targets. The Ministry of Petroleum Industry has started to study the question of using natural gas. On the one hand, it can be used for the manufacture of synthetic oil, and on the other, it can be used as raw material for the production of chemical fertilisers and other chemicals, as fuel for factories and residents in nearby cities, and for motor-vehicles. A synthetic oil refinery will be built this year near the Huangkuashan gas field in Szechwan.

Rising Industrial Output

China's industrial output this year may show increases over last year's by as much as 33 percent, instead of the 14.6 percent target, set by the National People's Congress about a month ago. According to latest estimates, the production in various fields is likely to be as follows: 7 million tons of steel or 32 percent more than last year instead of 6,248,000 tons; 168 million tons of coal, about 30 percent more than last year, instead of the intial target of 150.7 million tons; 24,600 million kW of electricity, 28.6 percent more than last year, instead of 22,450 million kW; 8.18 million tons of cement, 19.2 percent more than last year, instead of 7,636,000 tons.

New Welding Process

A new process of welding which solves the problem of joining ferrous and non-ferrous metals —copper and aluminium, aluminium and steel and copper and high-chrome steel—cheaply and swiftly, has been invented in China, the authorities claim. The inventor, Ma Ching-yun, a welding technician at the Building Research Institute of the Ministry of Metallurgy, calls the process friction welding. It is done by the rotational friction of contacting surfaces. The heat thus produced and the axial pressure of the elements weld the surfaces together. It takes five to 25 seconds for various kinds of metal, and the welds have shown no signs of weakness under severe test. It is believed that friction welding may substitute most of the work now done by such welding processes as resistance, cold pressure and gas pressure. On some structures, it may possibly replace fusion, welding, soldering and brazing. The success of this process in welding aluminium and copper will enable aluminium to replace copper in many electrical transmission lines, and thus save large quantities of copper as well as reduce enormously the cost of erection of such lines. As the process applies to the welding of high-speed steel with medium carbon steel, duralumin and others, it may be used in machine manufacture, tool-making and the aircraft industry. The process is simple and cheap. A power-driven friction welding machine designed by the Institute has been used satisfactorily. It costs only 2,000 yuan (less than £300). Power consumption is only one-fifth to one-twentieth of that used in arc welding and resistance welding. Research work into this process is still in progress and the Institute hopes to weld copper with aluminium parts with a cross-sectional area of 6,000 square millimeters in the near future. Experiments will be extended to the welding of steel rails and others.

More Varieties of Alloy Steel

China's steel industry this year plans to produce some 100 new alloy steels. It also expects to set up its own system of alloy steels within three years, based on the country's natural resources. China, it is claimed, has abundant means to establish its own system of alloy steels and will develop new types of alloy and complex steels using silicon, manganese, vanadium, titanium, molybdenum, tungsten, boron, and other elements. More than 300 types of high-quality carbon and alloy steels are at present being produced in China. The 100 new types to be produced on a trial basis this year is the biggest number to be tried in any one year. A recent four-day conference on alloy steels attended by the representatives of 31 steel mills, machine-building plants and institutes of scientific research, discussed new types and heard the opinions on research, production, use and the popularisation of the new varieties. A technical guidance organisation has been set up in the iron and steel research institute under the Ministry of Metallurgical Industry, to supervise the use of rolled alloy steels, popularise new types of steels and organise research in new grades.

Food Production Increasing

China's foodgrain production has been increasing steadily. In 1952, the total grain output of China, it is said, surpassed that of 1936 by 11.3 percent. In 1957, although serious floods and droughts occurred, the grain output surpassed the first five year plan target by 1.9 percent.

The achievements of the Chinese first five year agricultural plan are given in the table below:

(unit: 100 million catties)

Item	Five-year target	Percentage of the targets fulfilled	Absolute increases in production
Grain crops in total	16,937.3	101.5	255.7
Rice	7,599.4	102.4	183.2
Wheat	2,221.0	101.7	39.0
Potatoes	5,214.0	100.4	20.3
Cereals	1,902.9	100.7	12.9

The yearly increase of rice output in 1949-1955 was 4.8 percent in the United States, 4 percent in Japan, 1.8 percent in India, and 4.3 percent in Burma, while it was 10.1 percent in China, it is claimed. During the same period, the output of wheat in Canada increased by 5.7 percent a year and Italy's was 2.9 percent; while in the United States and Australia, it suffered a yearly decrease of 3.3 percent and 2.2 percent, respectively.

Liquor Output to be Raised

The output of liquor and wines in China will go up by about 65 percent this year. Well-known types, in particular, are expected to show heavy increases. Reporting this, a wine industry conference has indicated that the total output, including grain spirits, grape wines, liquors and beer, would come to 1,070,000 tons. As a result of heavy State investment, the output of the famous Maotai spirits which has won many international prizes, will be almost doubled and newly added storage space will make it possible to extend the ageing process. Traditional methods of distilling have been revived. Before distilling, the grain will go through eight processes of fermentation lasting a total of nine months. The spirits will be aged for at least three years before leaving the cellar. The output of Fenchiu spirits from Shansi province, another international prize winner, will be increased by 70 percent, and Shansi province's Hsifeng spirits will be doubled.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

THE CALCUTTA MONEY MARKET

SLACK WEEK FOR BILLS

Wednesday, 4th June.

DEMAND conditions in the Calcutta money market have continued to ease during the past week. Once again, there was a decline in the total of advances outstanding. Most of the main sources of demand reduced their requirements. The interbank market has been generally quiet and the call rate is unchanged at 3¼ percent.

There have been very few exchange bills in evidence during the past week. Those that have come to hand have been chiefly on account of tea shipments. Remittance was poor. Sterling began the period on a weak note, with losses against most of the main Continental currencies except the French franc. Towards the close, however, the pound strengthened slightly both against the dollar and the D-mark.

BULLION WAS QUIET ON LACK OF SUPPORT. THE prices of silver fell from the last week's level of Rs. 185 to Rs. 184 as quoted today for ready delivery and the rate for forward delivery was Rs. 182.50. The London silver market and New York silver prices remained almost unchanged.

Gold market was quiet in sympathy with silver and the prices declined from the last week's level of Rs. 111.75 to Rs. 110.50. The price of sovereign remained almost unaltered at Rs. 72.50.

DURING THE WEEK ENDED 30TH MAY, GOVERNMENT of India Treasury bills for Rs. 5,17,25,000 were sold in favour of the Reserve Bank.

DROPS OF Rs. 10.91 CRORES TO Rs. 1,587.78 crores in active notes and of Rs. 9.51 crores to Rs. 1,615.66 crores in the total note issue were the main features of the return of the Reserve Bank of India for the week ended 30th May, 1958. Notes held in the Banking Department consequently rose by Rs. 1.39 crores to Rs 27.87 crores. Deposits of the Government of India decreased by Rs. 16.94 crores to Rs. 59.12 crores and other Government accounts were Rs. 3.49 crores higher at Rs. 19.98 crores. Balances of commercial banks at Rs. 77.80 crores showed a rise of Rs. 4.66 crores. Investments increased by Rs. 8.73 crores to Rs. 250.36 crores. Other loans and advances fell from Rs. 59.52 crores to Rs. 56.79 crores, of which advances to scheduled banks against usance bills amounted to Rs. 14.95 crores (Rs. 20.03 crores). Ways and means advances stood at Rs. 54.07 crores against Rs. 60.83 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 23rd May, 1958, shows a drop of Rs. 1.45 crores to Rs. 416.21 crores in total deposits. Investments in Government securities are down by Rs. 11 lakhs to Rs. 160.65 crores, while other authorised investments remain unchanged at Rs. 10.28 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 2.50 crores to Rs. 198.67 crores. Cash and balances are, in consequence, shown at Rs. 26.79 crores or Rs. 53 lakhs less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 23rd May, 1958, shows Demand and Time liabilities at Rs. 740.56 crores (Rs. 15.72 crores on account of borrowings from banks) and Rs. 793.11 crores (Rs. 16.49 crores) compared with Rs. 743.00 crores (Rs. 17.35 crores) and Rs 787.51 crores (Rs. 16.08 crores), respectively, in the previous week. Cash has fallen by Rs. 79 lakhs to Rs. 38.56 crores, while balances with the Reserve Bank have risen by Rs. 1.31 crores to Rs. 69.38 crores. There is a drop of Rs. 45 lakhs to Rs. 439.86 crores in investments. Advances and bills discounted at Rs. 934.15 crores show a decrease of Rs. 5.74 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7 percent and 60.9 percent against 7 percent and 61.4 percent.

THE INDIAN BRANCHES OF THE BANK OF CHINA made a profit of Rs. 7.51 lakhs for the year ended last December. Deposits amounted to Rs. 3.44 crores. Advances were shown at Rs. 3.88 crores and investments stood at Rs. 75.62 lakhs. Cash amounted to Rs. 52.43 lakhs.

TRADE AND MERCHANDISE MARKS

The Joint Committee on the Trade and Merchandise Marks Bill, 1958, decided that public bodies, associations, or individuals desirous of submitting memoranda on the Bill for the consideration of the Committee should send 55 copies of each memoranda so as to reach the Secretary, Lok Sabha Secretariat, Parliament House, New Delhi on or before 15th June, 1958. The Committee will meet next on 7th July, 1958.

STOCK MARKETS QUIETLY STEADY

GILT-EDGED RISE: LITTLE CHANGE IN INDUSTRIALS

London, 4th June.

VERY quiet conditions prevailed in the stock markets throughout the past week, and business on most days was virtually at a standstill. Nevertheless, in spite of many adverse influences, prices were fairly well maintained with a harder tendency developing later in the week. Buyers were holding off, but at no time was there any pressure to sell, and losses sustained were small. Prior to the week-end, the markets were dominated by the political crisis in France and the serious U.K. labour situation. The improvement in the French political situation over the week-end and the subsequent advance on Wall Street helped sentiment, but the markets were restrained by the continuation of the London bus strike and other domestic labour troubles. In addition, the usual end-account influences restricted business. However, a satisfactory undertone was maintained and prices were inclined to harden in several directions under the leadership of gilt-edged securities with long-dated and undated stock particularly responsive to a small investment demand. The foreign bond market gave a rather mixed display but small declines predominated on the week. Rails were featureless. Dollar stocks fluctuated with Wall Street, but were mainly higher on balance, in spite of a fall in the dollar premium. The general tone of the industrial market was satisfactory, but with business at a very low level, price changes were insignificant. South African gold shares reacted on profit-taking as interest diminished. Tin shares were dull, but copper shares improved. Oil shares were quietly irregular, but Shell Transport were a firm feature on buying stimulated by the quarterly report. Rubber shares were quiet and generally showed very little change. Tea shares were irregular. Indian issues were firm, although they showed very little response to the halving of the export cess. Ceylon issues however were dull, attributed partly to political developments in that country.

The Money Market

Credit conditions in the money market were rather uncertain during the past week. At times, it was difficult to obtain credit, but only on one occasion, was it necessary for the market to go direct to the Bank of England and borrow on Bank rate terms. The usual weekly taxation payments caused a certain amount of difficulty, but at the latter end of the week, the disbursement of the War Loan 3½ percent was a helpful factor. Rates for overnight loans were generally arranged between 4½ percent and 4⅝ percent, but during the rather easier periods, money was obtained at 3⅜ percent. There was a fairly good demand for bills with August maturities changing hands at around 4⅜ percent. The money market made no changes in its main bid at the Treasury bill tender and its quota was 49 percent against the previous week's allotment of 61 percent. The average rate came out at a trifle below the previous week's figure at £4 16s 3.84d percent. The general level of rates for fine trade bills remained unchanged.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "London gilt-edged securities extended their rally helped by the cut in Bank rate. Gold shares rose to within a striking distance of last year's high with the biggest turnover for 3½ years. The maintenance of Kennecott and Anaconda dividends helped coppers. London oils held back by general uncertainty but U.S. producers were more hopeful. Wall Street undertone was surprisingly firm but industrials were unable to surpass recent peaks. The cut in Bank rate reflects cautious satisfaction at sterling's good behaviour, but the rate is still high and is likely to be reduced again before next autumn if only to allow more room for manœuvres. Industrials have a firm undertone but the direction of the next major movement will depend on Wall Street and the French and other international uncertainties. Gold shares witnessed a noticeable expansion of interest and their advance could well go further."

Activity on Wall Street

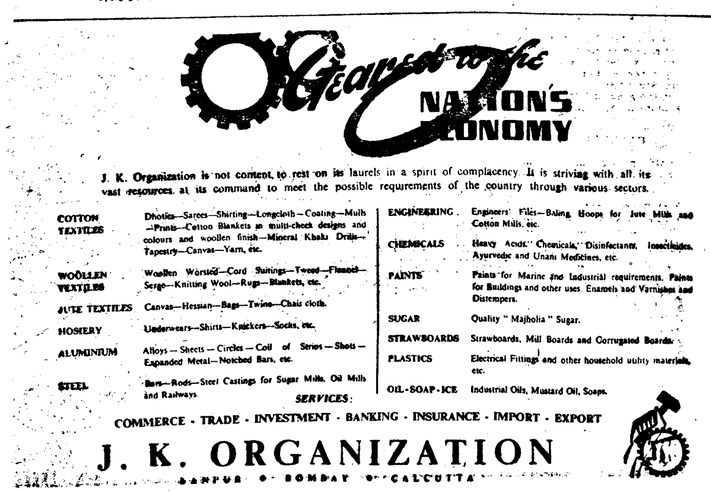
Long-dated U.S. Government obligations continued to fluctuate in an irregular manner during the past week. Prices dipped early in the period in response to reports that the U.S. Treasury might include a long bond issue in its pending $(U.S.)9,500-million re-financing operation. The market, however, eventually reversed its course and moved sharply forward with traders crediting this to President Eisenhower's remark that he would like to see a reduction in the long-term borrowing rates. The market interpreted his statement as making it less likely that the U.S. Treasury would include a long-term bond in its June financing. Investment quality corporates firmed with the Treasury list. Speculative rail issues scored sharp gains following the news that the Senate Committee had approved an eight-point programme to aid carriers. Convertibles were mixed reflecting an irregular trend in the stock market. In the foreign dollar bonds section, only a few major price changes were recorded. Australian issues were mostly higher by fractions while German Nationals were a shade lower. Among Italian issues, the Government 3 percents of 1977 fluctuated over a range of $1 with Rome 6½ percents of 1952 advancing over $5 to $129 for a new high. Among Japanese issues, Oriental Development 5½ percents of 1958 moved up by $5 while the 5½ percents of 1968 declined by $2. Union of South Africa 5½ percents were a little lower while Chile 3 percents were higher.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 28th May showed that the gold stock fell by $100 million to $21,643 million. Foreign deposits fell by $34 million to $277 million, while foreign investments declined by $30 million to $3,038 million. The Federal Reserve bought $121 million worth of bills, making total holdings of United States Government securities $24.064 million. Total discounts and advances rose by $86 million to $172 million, while the aggregate excess reserves of member banks declined by $104 million to $435 million. Daily average excess reserves of member banks fell by $27 million to $21 million, while their daily average borrowings rose by $15 million to $119 million. Business loans of New York city banks fell by $66 million to $10,870 million, compared with a fall of $151 million to $11,361 million in the corresponding week a year ago. Gold certificates on hand and dues from the United States Treasury were $100 million lower at $20,223 million. Federal Reserve notes in actual circulation were $119 million higher at $26,556 million. The deposit member bank reserve account was $97 million lower at $18,036 million.

Hongkong Gold Weakens

Apparently ignoring the international political situation, Hongkong gold eased in sympathy with the declining U.S. dollar which touched the year's low. This was attributed to unloading by tired longs who had accumulated substantial bull positions in the expectation of a weakening of sterling, while a contributory factor was the increasing quantities of U.S. dollar notes arriving here from Okinawa, Formosa, the Philippines, South Viet-nam and Thailand, according to market sources. Carry-over charges totalled 40 cents a ten taels in sellers' favour. The official offtake was 1,480 taels, and the unofficial 5,150 taels. Arrivals were nil. Forward contract was done at $(U.S.) 38.02 c.i.f. Macao.



Decline in Paris Gold

The Paris gold market closely followed political events during the past week and was dominated by General de Gaulle's coming to power. Wide fluctuations were recorded, and trade quarters generally considered General de Gaulle's success as bearish for the gold market. Towards the end of the past week, when the General's return seemed inevitable, the market fell sharply.

Rubber Prices Firm

Steadiness at the start of business in the rubber market during the past week reflected pre-holiday covering and a little Continental interest. When business was resumed after the Whitsun recess, prices hardened in sympathy with a rally at Singapore. Values were supported temporarily by selective buying of distant landed positions and the demand from dealers for nearby rubber but the market, on the whole, was not very responsive. Towards the close, however, renewed Continental interest found the sellers more reserved. Traders attributed a final fillip to short-covering in New York account, and prices closed firm at ⅛d a lb higher on balance. Quiet conditions continued in the sole crepe market. Sellers of No. 1. quality 4th inch smooth on the spot still asked 28d a lb but were open for near bids. The steadiness of prices was attributed to the reduced output.

B.O.A.C. INTRODUCES TRAVEL INSURANCE SCHEME

B.O.A.C. has made arrangements with a British insurance company whereby nationals of many countries will be able to indemnify themselves against the cost of possible emergency travel to visit sick relatives or business associates abroad. The scheme will enable the policy-holder to fly by B.O.A.C. to the bedside of a specified person who is seriously ill in any part of the world and then return home. His air fare in both the directions will be paid by the insurance company. In addition, the insured person is covered for all incidental expenses which include surface transport, hotel accommodation and subsistence up to £4 a day for a maximum period of 20 days. The policies also carry personal accident insurance for the person making the journey for a maximum of four weeks. Such policies are issued for one year or a shorter period. Premiums vary according to the distance separating the insured person and his specified relative but roughly they work out to less than 3 percent of the normal return air fare. Premiums are reduced if there are two or more specified persons. A relative or business associate is also permitted to visit the insured person if he should become ill.

Stocks and Shares

PRICES MARKED DOWN AS MARKET TURNS DULL

TEA SHARES SLIGHTLY BETTER

Wednesday Evening.

BUSINESS on the Calcutta Stock Exchange during the past week was dull and uninteresting, with a sharp reduction in turnover. The lethargic conditions which have been prevailing for some time now are due to the threatened strike of all-India dock workers on 16th June, the deterioration in the foreign exchange position and the continued decline in world commodity prices. Although Indian exports have not yet suffered to any great extent—because India's percentage of foreign trade in world markets is still small—the fact that the general index of commodity prices has fallen from 108.6 a year ago to 107.9 is ominous. The Expert Committee's findings on the problems facing the cotton textile industry are eagerly awaited, while at the same time, the continued accumulation of cloth stocks is causing anxiety.

The interim relief granted to the tea industry, after many months of waiting, was received with mixed feelings. Tea shares improved slightly, though it was generally felt that the interim relief granted was insufficient and would not assist tea producers to any great extent.

Miscellaneous, engineering and paper shares were well maintained, but the volume of business was disappointing.

The poor results of the Kamarhatty and Kanknarrah jute companies, and the uncertain export outlook for jute goods, appear to have temporarily halted the recovery movement in the jute section.

Coal shares showed little change. It is now learnt that the Coal Prices Revision Committee is likely to submit its report by the end of July. The increases granted recently for both coal and coke are unrelated to the scope of the Committee's investigations and the report is therefore expected to throw some light on the industry's future cost structure.

The gilt-edged market was remarkably steady, as conditions in the money market were reported to be fairly comfortable.

Prefesence shares of selected companies were enquired for on investment account, particularly Alkali & Chemical, Indian Iron & Steel, Kumardhubi Engineering and Metal Box. Some small interest was also shown in a few selected jute preference issues, particularly Nellimarla and Chitavalsah.

In the banking section, United Commercial moved up to Rs. 60 and United Bank of India D shares were slightly better at Rs. 4.25.

In the railway section, Baraset-Basirhat came to business, after a long interval, at Rs. 7. Dehri-Rohtas were crossed at Rs. 10.75 as were Howrah-Amta at Rs. 60.

Cotton textile shares suffered from lack of support and prices continued their downward trend with Elgin easing to Rs. 12.37, Dunbar to Rs. 115 and Kesoram to Rs. 10.40.

Prices of coal shares were trimmed down during the week as the following table will show:

	Opening 29th May, 1958 Rs.	Closing 4th June, 1958 Rs.
Amalgamated	17.75	17.62
East Indian	20	19.87
New Beerbhoom	14.75	14.25
Katras Jherriah	59	58

Contrary to the general trend, there was some enquiry for Bengal at Rs. 242 and Seebpore at Rs. 24.50. In spite of the publication of a satisfactory report by the Equitable Coal Company Limited, the shares were unchanged at Rs. 26.

For the reasons given earlier jute shares were subdued. Here is a chart showing representative price movements:

	Opening 29th May, 1958 Rs.	Closing 4th June, 1958 Rs.
Agarpara	8.44	8.31
Birla	16	15.87
Budge Budge	88	84
Howrah	16.25	15.75
Kamarhatty	93	90
Kanknarrah	50	48

In contrast, Fort Gloster improved from Rs. 320 to Rs. 332, Megna from Rs. 106 to Rs. 113, and Ganges from Rs. 51 to Rs. 55.

In electrics, Calcutta were better at Rs. 14.22 while other issues were unchanged.

In the sugar section, Balrampore met with enquiry and improved from Rs. 6.35 to Rs. 7. Cawnpore were shaded at Rs. 10.90 as were Dyer Meakin Breweries at Rs. 9.87.

In the engineering section, Indian Iron and Steel were sluggish at around Rs. 21.50 in spite of an improvement of about Rs. 4 in Tata Iron and Steel Ordinary shares during the period under review. Indian Standard Wagon were enquired for at Rs. 99 and Textile Machinery spurted from Rs. 17.95 to Rs. 18.50. Reports of lay-offs, owing to the steel shortage, brought out a few sellers of Burn & Company and the shares receded from Rs. 342 to Rs. 335. Guest, Keen, Williams were steady at Rs. 31.50 x.d. while Jessops were unchanged at Rs. 20.12. Braithwaites were shaded at Rs. 26.31.

Paper shares continued to meet with good enquiry. India Paper Pulp improved from Rs. 21 to Rs. 21.12, Shree Gopal from Rs. 15.87 to Rs. 15.94 and Titaghur from Rs. 38.50 to Rs. 38.87. In contrast, Orient were slightly easier at Rs. 31.95 and Sirpur at Rs. 11.37.

In cement, Ashoka were crossed at Rs. 8.19 while Dalmia were unchanged at Rs. 9.94 and Sone Valley at Rs. 4.87. Orissa changed hands freely at around Rs. 12.06, against an opening quotation of Rs. 11.81.

In insurance, Concord of India were reported at Rs. 12.19 and New Asiatic at Rs. 3.37. Triton were taken at Rs. 120.

In shipping, India Steamship were more or less unchanged at Rs. 10.87 as were India General Navigation at Rs. 50.

Among miscellaneous industrials, Aluminium Corporation hardened to Rs. 11.37 and Balmer Lawrie were sought after at around Rs. 153. Bengal Flour were better at Rs. 30, Birds Investment were easier at Rs. 8.75, as were Clive Row at Rs. 8.60. Dunlop Rubber were steady at Rs. 26.25 and both Indian Cables and Indian Aluminium moved up further to Rs. 35.62 *cum*-rights and Rs. 15.25, respectively. Indian Oxygen were enquired for at Rs. 18.37 and Indo-Burma Petroleum went ahead to Rs. 27.50. Martin Burn were steady at Rs. 25.87 as were Metal Box at Rs. 28.25. National Carbon improved to Rs. 25.75 x.d. and Philips were slightly better at Rs. 14.12. Indian Cables (old shares) and Indian Aluminium ordinary shares will be included in the clearing starting from 5th June, 1958.

In minings, Indian Copper were unchanged at around Rs. 3.10 as were Orissa Minerals at Rs. 25.50.

Tea shares were slightly better as will be seen from the following table:

	Opening 25th May, 1958 Rs.	Closing 4th June, 1958 Rs.
Banarhat	299	301
Basmatia	21	22
Betjan	22.75	23
Grob 'A'	24	25
Hasimara	22	22.50
Hattikhira	10.75	11.25

THE PROFIT OF THE INDIAN STANDARD WAGON Company has declined by Rs. 6.90 lakhs to Rs. 48.97 lakhs for the year ended last March. The ordinary dividend is 10 percent lower at 20 percent, but the capital has, meanwhile, been doubled by the issue of free bonus shares. Notable allocations include taxation provision Rs. 26 lakhs (Rs. 35.20 lakhs), taxation contingencies Rs. 1 lakh (Rs. 1.20 lakhs), development rebate reserve Rs. 84,528 and general reserve Rs 1 lakh (same). A balance of Rs. 42,976 is carried forward, against Rs. 23,569 brought in. The directors say that "although the orders on the books are not unsatisfactory, due to the shortage of steel the prospects of steady work during the current year are somewhat uncertain."

THE PROFIT OF THE BENGAL FLOUR MILLS Company has increased by Rs. 10.33 lakhs to Rs. 19.99 lakhs for the year ended last December. Providing Rs. 10.88 lakhs (Rs. 4.52 lakhs) for taxation provision and brining in Rs. 90,879, there is a balance of Rs. 10,91,787. The dividend has been maintained at 25 percent including an interim of 12½ percent. General reserve is allocated Rs. 5 lakhs (Rs. 2 lakhs), leaving a carry-forward of Rs. 2,01,787. The directors state that no provision has been made for liability to wealth tax. The payment of this tax is not considered to be a charge against the current profits of the company, and the directors, therefore, intend to charge against reserves any payment made for such assessments. They have planned a further extensive programme of modernisation and improvement. This is at present held up due to the difficulty in obtaining foreign exchange.

IN THEIR REPORT FOR THE YEAR ENDED LAST DECEMber, the directors of Kamarhatty and Kanknarrah Jute Mills in the Jardine Henderson group refer to the setting up of a few jute buying agencies in selected areas as a measure to ensure for the mills regular and more suitable supplies of raw material. The venture is promising enough to encourage a substantial extension of this system of purchase during the current season, and the mills have had the advantage of a steady supply of good class jute. This has resulted in a satisfactory reduction in the wastage percentage in the mills and the agencies themselves are operating on an economical basis. It is anticipated that the greater volume of agency purchases being made during the current season should ensure that all charges are recovered and no loss shown on agency working.

About future prospects they state that the increased availability of raw jute and the realisation by the market that the current year's crop would prove comparatively plentiful has resulted in the fibre prices being maintained at a level at which it has generally been possible in recent months to buy jute, and simultaneously sell goods at a profit. It will, nevertheless, be appreciated that the industry, being largely dependent on the export of its products for its prosperity and indeed for its survival, is particularly vulnerable to any general recession in the volume of foreign trade throughout the world.

THE KAMARHATTY COMPANY LTD. HAS INCURRED a loss of Rs. 9.22 lakhs, after providing Rs. 4.24 lakhs for depreciation. There is again no dividend and the debit balance to be carried forward amounts to Rs. 18,02,112. The loss of the Kanknarrah Company Ltd. has amounted to Rs. 20.22 lakhs, after transferring Rs. 10 lakhs to depreciation. A debit balance of Rs. 41,58,784 is carried forward. The dividends have again been passed over.

Bombay Market

OPERATORS IN MILDLY BULLISH MOOD

T.I.S.C.O. REOPENING ENCOURAGES SENTIMENT

Wednesday Evening.

THE Bombay stock market closed in a steadier mood and fluctuations were narrow in restricted turnover. Closing levels were, however, below the best on profit-taking. There were a number of bright features on good corporate news. An important factor was the absence of selling pressure as operators were inclined to take a mildly bullish view of the future trend. Rumours of an increase in the retention prices of steel and cement helped sentiment. A section of the market appears to think some useful move will emerge from the proposed conference between the Government and textile interests. The possibility of an early resumption of normal working at the Tata Iron and Steel Company's Jamshedpur works was regarded as an encouraging factor.

Tata Steel rose to Rs. 181.50 and Indian Iron were steady at Rs. 21.48. Among other engineerings, Larsen and Toubro were maintained at Rs. 16.40 on prospects of expansion in activity. Alcock Ashdown came to hand at Rs. 243.75 and Premier Construction realised Rs. 185.50. Tata Locomotive improved to Rs. 170 on hopes of a rise in the dividend. The possibility of an increase in engine output as a result of the U.S. loan helped the scrip. Automobile shares were quietly steady. Hindustan Motor recovered to Rs. 7 on short-covering and Premier Automobile were placed at Rs. 81.80.

Cotton mill shares maintained previous gains. Bombay Dyeing made Rs. 53 and Kohinoor were taken at Rs. 257.50. Simplex realised Rs. 159 and Svadeshi came to hand at Rs. 170.50. Century recovered to Rs. 421 on short-covering. India United Ordinary were dealt in at Rs. 8.68 and Apollo were transacted at Rs. 1.70.

In the miscellaneous group, Belapur rose to Rs. 246.50 on hopes of better working. Phalton were done at Rs. 144.50. Steamship shares were steady on hopes of expansion in tonnage. Scindia were better at Rs. 17.52 and Great Eastern Shipping were transacted at Rs. 20.20. Mining shares were idle and Shivrajpur Syndicate were maintained at Rs. 80.50. National Rayon recovered to Rs. 257.75 on higher export prospects. Bombay-Burmah Old rose to Rs. 551.50 on reliefs for tea. Tata Chemical were steadier at Rs. 15.20.

Banking shares were steady on scattered interest. United Commercial were taken at Rs. 60 and Bank of India were placed at Rs. 133.50. Insurance shares were strong. New India were higher at Rs. 48.50 and Vulcan were wanted at Rs. 17.40.

Sentiment was maintained in electricity company supply shares. Bombay Suburban were placed at Rs. 105.75. Tata Power were taken at Rs. 1,217.50 and Ahmedabad Electric were transacted at Rs. 95.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Mr. Burrah Saheb
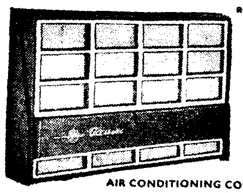
and Airconditioning



Mr. Burrah Saheb is really not bothered about the money he spends for his personal comfort. He is only interested in getting the very best and when it came to airconditioners he just took the ACCAIRE.

What he wanted primarily was a cool, clean room with a minimum of disturbing noises... a place where he could work with quiet efficiency. He found the ACCAIRE whisper-quiet and efficient in operation and that satisfied him.

Now his ACCAIRE gives him all that and more. It is a handsome unit, it is low in power consumption and it never lets him down.

5 % Calcutta Electric Supply—Rs. 97/50—97/50—97/50—97/50.

Books

TECHNIQUES OF ECONOMIC ANALYSIS

The Nature and Technique of Economic Analysis. By Dr. Seth (Published by Lakshmi Narain Agarwal, Agra. Price Rs. 8.75; 321 pages).

The methodology of economics has made a significant advance in the United States in recent years, particularly with the passing of the National Employment Act of 1946. American research agencies, such as the Brookings Institution, have made notable studies in applied economics by using the techniques of macro-micro analysis. This book is primarily written for the benefit of students preparing for college examinations and contains the views of authoritative writers like Boulding and Davies. The first four chapters are concerned with the nature and scope of economics. The fifth deals with the alternative approaches to economic analysis—micro and macro, or partial and total. It concludes that the best results might be achieved by properly combining the two. The three principal methods—statics, comparative statics and dynamics—which are frequently employed in forging theoretical tools in economics are then explained. The discussion on equilibrium analysis is interesting. The last two chapters deal with economic systems, but it is difficult to agree with the author's views on capitalism. He says: "The only way, therefore, to get rid of the evils of capitalism is to do away with capitalism itself" and "Socialism.... the future system of the world" (page 289). As pointed out by eminent writers like Galbraith, Lewis, Allen and S. B. Clough, class distinctions in the American economy are fading away; the dominant features are increasing productivity and a wider distribution of the national product. The underdog is improving his position faster in the United States than elsewhere. Even in the U.K. the intrinsic vitality of capitalism is steadily being restored.

SUGAR INDUSTRY

Indian Sugar Annual Number, April 1958. Edited by J. S. Mehta. (Published by the Indian Sugar Mills Association, India Exchange, Calcutta 1. Price Rs. 3, pages 128).

The latest annual number of *Indian Sugar* covers a wide range of subjects connected with the sugar industry. Production has doubled within a short period of four years, and the rise in output has mainly been achieved by the existing units, the new ones contributing only 40,000 tons. The expansion of the *khandsari* industry, under entirely artificial conditions, poses a great threat to the prosperity of sugar factories. This issue has been lucidly discussed in the opening article. The annual number contains a number of articles on sugar exports. In discussing this subject, Mr. S. S. Kanoria says that in spite of heavy taxation in India against no taxes whatsoever in many countries, retail prices of sugar are among the lowest. The argument that the industry will be unable to compete in foreign markets does not, therefore, appear to be valid. The publication has been profusely illustrated with charts, photographs and tables. It will undoubtedly prove valuable to all those connected with the sugar industry and trade.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The *Capital* Index of Indian Industrial Activity (base: 1953) has now been brought up to November 1957. Compared with the preceding month, there were decreases in tea 90.34 points, cement 0.16 points and railway ton-miles 9.65 points, while increases occurred in sugar 81.69 points, jute 11.60 points, yarn 5.34 points, cloth 3.99 points, coal 12.55 points, pig iron 1.15 points, finished steel 9.03 points, paper 7.83 points, tyres 67.67 points, automobiles 3.53 points, bicycles 90.45 points and electricity 1.81 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity declined by 0.1 point during November 1957.

New Delhi

CENTRAL CABINET DISCUSSES FOREIGN EXCHANGE CRISIS

FAILURE OF EXPORT PROMOTION MEASURES

(FROM OUR NEW DELHI CORRESPONDENT)

THE foreign exchange crisis took a more serious turn during last week, which also saw the return to the capital of the Prime Minister from his brief but well-earned holiday. A meeting of the Union Cabinet was summoned on 2nd June, which discussed the foreign exchange crisis, among other important issues. The foreign exchange budget is primarily drawn on the basis of current earnings. As already reported, the current earnings have not increased. Secondly, due to the earlier extravagance, they have now been largely mortgaged against capital goods for the plan. As payments for capital goods increase, the amount of foreign exchange available for commercial imports is reduced, because the total sum of foreign exchange is not increasing simultaneously. It is even going down. India must either repudiate her obligations, or reduce her commercial imports. A repudiation of obligations is out of the question, so the only alternative is further to reduce commercial imports. The import of consumer goods is already banned. The demand for foreign exchange made by the Central Ministry of Commerce and Industry to sustain production at the 1957 level amounted to Rs. 186 crores for the half-year ended 30th September, 1958. This figure has been substantially cut, and it does not provide for increased industrial production in 1958. Imports of iron and steel are being reduced. Production is going down, particularly in the engineering sector, as the supply of industrial raw materials and spares is becoming inadequate and irregular.

Foreign aid, in the absence of substantial increase in exports, is the only alternative. Loans from the U.S. Export and Import Bank, the U.S. Development Loan Fund and through other agencies such as Public Law No. 480 of that country have amounted to substantial assistance. Aid on the West German lines, by which payments for the steel plant for Rourkela have been postponed for three years, is the need of the hour. Such help would relieve the pressure on current earnings, and make them, once again, available for commercial imports. India is also negotiating for a loan to purchase one million tons of steel from the United States. The repayment of the wheat loan in Indian rupees is also under negotiation. The possibility of a big loan from the United States and the funding of the various debts India may owe Britain are being mentioned in knowledgeable quarters. On the other hand, the proposal to ban all commercial imports for three months—October, November and December—is being discussed.

It may be pointed out that there is neither the sense of urgency nor the awareness of the crisis among the Ministries and officials outside the Ministry of Finance. Take the case of the Education Ministry, for instance. Due to the paucity of resources, some of its projects were placed in a lower category of priorities. This would have saved some money. But the Ministry declined to surrender its savings.

Gap between Exports and Imports

"Export or perish" are literally the alternatives before India. In the first place, the gap between exports and imports has been widening. Secondly, current earnings are being spent to finance the import of capital goods as well as for the payment of past dues. So very little of current earnings is available to finance commercial imports. To sustain the economy at its existing level of activity, there are only two alternatives open to this country, i.e., either it must step up exports or attract foreign aid. It is a matter for some regret that a large number of steps taken by the Government have so far failed to increase exports. The attitude of the business community seems to be that it is only the Government's duty to promote exports. Although this opinion is likely to be challenged, the fact remains that the export trade of India has made little headway, in spite of the many export promotion councils, trade commissions, exhibitions, trade delegations, trade agreements with foreign countries and the scheme of excise drawbacks, to mention only some of the measures adopted by the Government. This is one side of the picture. The other side shows itself in a type of window-dressing, without tackling some of the basic problems. Some of the old and established export houses here had to leave this country. The pattern of export trade had to be re-adjusted during the war. The quota system, a feature of the wartime export trade, still remains. A quota-holder can make a big profit for himself. He is not interested either in creating or building goodwill for his firm, nor has he to establish contacts. Meanwhile, competition has been on the increase. It is quality plus price which would win the race. With a growing home demand, the trade and industry are not much interested in facing competition abroad, unless the Government makes it worth their while. There is, therefore, a demand for export subsidies to fight the price competition. Here again, without the bottleneck of the quota system, costs could be reduced by bulk exports, linseed oil, for instance. If the quota system is abolished, it can be shipped in tankers, which would effect appreciable reduction in transportation cost.

Freight Charges

A re-adjustment of railway freight rates could also lower costs. One of the first things the Congress Government did after Independence was to re-organise the railway freights making the movements of goods to the ports more expensive than it had been before. This raised the export price of Indian goods. So long as Japan, Germany and other countries had not entered the world markets, the uneconomic freight structure did not materially affect India's foreign trade. But it is doing now. The Joint Secretary to the Central Ministry of Commerce, Mr. K. B. Lall, has been having conferences with the Railway Board in order to persuade it to go back to the old pattern of freight structure for the railways. Another suggestion is to raise the internal prices of exportable commodities in order to subsidise exports. In the absence of a proper check, such a plan may lead to higher prices for the Indian consumer without adding to the country's exports. Higher prices in home market will mean higher profits, while exports will mean less, so it is unlikely that business men will prefer the latter course when they have to fight keen competition abroad.

Another feature lately has been the ever-rising tax burdens on exportable commodities. Take the case of tea, for example. The Central Ministry of Labour has selected this industry for demonstrating its welfare State ideology. There is a special Plantation Labour Act. The communists have selected this industry to strike at the foreign commercial interests. The Commerce Ministry used to be so certain of the dependence of the tea drinking world on India that it launched its own scheme to auction tea in India. Meanwhile, Ceylon was building up its tea publicity in London. East African teas were getting a footing in England and the Congo was entering the British tea market. Argentine tea has appeared in London last month. The Indian Tea Board has been working on plans to raise the internal consumption of tea, which from the long-term point of view is a good thing. But its main concern for the present should have been to increase India's exports of this commodity.

Relief for Tea

It will be in the interest of export promotion, if the burdens resulting from taxation, direct and indirect, the social security measures which have been imposed in India, Pakistan, Ceylon, Kenya, the Congo, and Argentina, could be taken for comparison. India can still retain her British market for tea, if steps in the right direction are taken. Just now some relief by the Government of India has been granted, with effect from 1st June; (1) the excise duty on teas which are not used in the manufacture of packaged tea has been reduced to half an anna a lb; and (2) the cess of Rs. 4 a 100 lbs levied on teas exported under the provisions of Section 25(1) of the Tea Act, 1953, has been halved. India will shortly set up a tea house in London. It will be on the lines of the Ceylon tea house. Arrangements will also be made to demonstrate the making of tea. A couple of Irish tea trade representatives are coming to India to discuss the details of a tea export promotion plan for Ireland. Preferential railway freight charges, as well as other export promotion inducements, are being examined in connection with the Government's export promotion move.

Refinance Corporation

The Refinance Corporation, it is expected, will be registered shortly. Its headquarters will be in Bombay. It is designed to finance medium-scale industries. The capital of the Corporation will largely consist of a loan of Rs. 26 crores which the Government of India is to make available to it from out of the P.L. 480 counterpart funds, the disbursement of which is currently being negotiated with the U.S. authorities. Another Rs. 5 crores will be subscribed by 15 banks which will be represented on the board of directors of the Corporation, and to which the Corporation in its turn will extend relending facilities. The 15 banks are the State Bank, the Central Bank, the Punjab National Bank, the Allahabad Bank, the Bank of India, the Indian Bank, the Mercantile Bank of India, the Hyderabad Bank, the Bank of Baroda, the National Bank of India, the United Commercial Bank, Lloyds Bank, the Chartered Bank, the United Bank of India and the Dena Bank. The P.L. 480 counterpart funds aggregate about Rs. 140 crores, of which Rs. 26 crores will be set apart for the Refinance Corporation: the balance will go to finance various plan projects.

Consultants for Heavy Structurals

Messrs W. S. Atkins (Partners) Limited are being appointed consultants to prepare a detailed report on a heavy structurals and vessel plate project, recommended by the Coates mission. The bulk of the payment to the consultants, as already reported, will be made by the British Government.

London Stay of Mr. Desai

Details about Mr. Morarji Desai's visit to England have now been finalised. Mr. Desai will pay a visit to London on his way to Canada to attend the Commonwealth Economic Conference. He will stay there from 6th to 13th September, as guest of the U.K. Government.

Report on Madras Port

The Colombo Plan team which came to India to investigate the problems of port congestion has submitted its report. On the port of Madras it says the following: "This port provides: (1) six alongside general cargo berths with transit sheds; (2) one open quay with a 60-ton static electric crane; (3) two alongside coal berths; (4) four buoy berths for work to and from lighters; (5) adequate oil berth facilities. All of these are within an excellent sheltered harbour with a minimum depth of water of 30 feet.

"A typical lay-out of a general cargo berth, built in 1918, as viewed from the quay edge is: (1) wide quay apron—up to 110 feet—with quay cranes and railway lines; (2) single storey transit shed up to 100 feet wide; (3) roadway up to 50 feet wide; and (4) raised railway loading platform with ample rail tracks. We were informed that road transport to and from the berths has been increasing steadily and that at the present time traffic is more or less equally divided between road and rail.

"The tonnage of cargo handled at general cargo berths (and, therefore, exclusive of coal and oil) in the year 1956-57 was:

Imports	Tons	Tons
Iron steel and machinery	232,283	
Foodgrains	149,963	
Fertilisers	144,805	
All other goods	552,246	1,079,297
Exports		
Ores	463,422	
All other goods	169,004	632,426
Grand total		1,711,723

"It is to be noted that: (a) the tonnage handled last year is more than double the tonnage when the port was built; (b) when over half the trade of a port is represented by only four commodities it may be liable to somewhat wide fluctuations. For example, since the year 1950 the imports of foodgrains into Madras a year have been as high as 489,028 tons and as low as 42,240 tons; (c) later in this report we make special recommendations for dealing with the goods which fall into the classification 'iron, steel and machinery;' (d) the new berth at present under construction will, it is expected, relieve the general cargo berths of about 75 percent of the ore exports. We shall be mentioning at a later stage the long-term development plan at present proposed, but would list the following operational improvements which, it seems to us, would help relieve the immediate difficulties.

IMPORTS: 1. Uncleared Cargo: By far the greater part of this cargo is unentered at Customs. There is far too much of it on the quays, transit sheds, open storage areas and in 'warehouses.' The latter, with the exception of the bonded warehouse, are, in effect, overflow transit sheds to which unentered goods can be moved from the quays. We have seen cargo in these sheds which was landed in June last, but we do not know whether this was, in fact, the earliest cargo stored there. It is clear that the regulation providing for sale by the Port Trust after two months is not being implemented.

Prompt Movement

"It is an axiom of good operation that cargo should be moved promptly and smoothly through the port. Any delay will decrease efficiency and this is especially so when goods are allowed to remain on the quays or in adjacent transit sheds. We have observed interference with free movement caused by goods stored on the wide quay aprons, and we feel that although the width was intended for this purpose, it is a practice which should be discouraged as much as possible. In our experience and opinion, the only way in which to force the owner of cargo always to remove it promptly, is to make the cost of leaving it in the port so high that it will be financially prohibitive for the owner to do so. There must also be powers of sale after a limited period and this should be strictly enforced.

"We would also point out that it is the business of the owner of the cargo to deal with the necessary documentation and Customs requirements. While the Port Trust will always wish to give special consideration to exceptional cases, we think it to be a fatal policy to accept at face value a plea that the importer was unable to remove his goods for such reasons as these. If all the goods which we have seen lying in this port for an undue length of time are genuinely immoveable on this account, there would appear to be need for an enquiry into the general Customs and trading methods; but we do not believe this to be the case.

Penalty for Traders

"The permitted 'free days' are, in our opinion, too generous and we recommend that they should be limited to three days after the final landing of each bill of lading consignment. We also consider that in normal circumstances, the cargo should be removed to 'warehouse' or open storage areas at the expiry of the free days; and that the length of time that goods are allowed to remain on the Port

Trust estate after being so moved, should be reduced to 30 days from the date of landing, after which period they should be sold by public auction. We do not feel that the present scale provides sufficient penalties to force the owners of cargo to move it promptly. We suggest that the present scales for the first and second weeks should be abolished and that at the expiry of the free days, the 'succeeding period' charge of Rs. 60 should be enforced, and at the end of seven days after landing, the penal charge of Rs. 10 a ton a day provided for in the Madras Port Trust scale of rates, should normally be applied.

"It is not to be expected that the policy recommended in the two preceding sections will be accepted willingly by traders, but we feel that it is necessary if the port is to operate with full efficiency. We have been seriously disturbed by the number of heavy lifts (including many not-so-heavy cases of machinery) which are lying on the quay apron of the west quay. We have observed that these slow down the discharge or loading of subsequent ships and interfere with the free movement of traffic.

"These lifts can broadly be divided into those which can be handled on the quay by a mobile crane and normal transport, and those which require a very high capacity crane and special vehicles. As for the latter, we are informed that the Southern Railway had, until recently, only four well-wagons, although they have now hired two more. In any case, the number is quite inadequate. The desirable way of dealing with heavy lifts is to berth the ship at a special open quay and not in the middle of the best and busiest set of berths in the port; alternatively to discharge by floating crane at the buoys with the aid of suitable barges and lighters. The Port Trust is impotent to remedy this position due to the setting of the only heavy lift crane (60-ton static) and the absence of floating cranes.

"We recommend that immediate steps should be taken to secure a 60-ton floating crane. The Ministry of Transport in London might be able to help. Complementary to this. we suggest that four swim-ended pontoon barges should be required. As for lifts which can be handled by normal transport, we suggest the immediate removal to a heavy lift dump. This will involve the use of 10-ton mobile cranes both on the quay and at the dump. Four tractors (we think that Scammell "Horses" would be most suitable) and 12 six-ton Scammell trailers would be of tremendous help.

Unloading Foodgrains

"The main commodity arriving in bulk is foodgrain, which is lightered from ships before it proceeds to Calcutta. The grain has to be bagged and the existing practice is to do so manually in the hold of the ship. This is a slow process and we suggest that a number of movable hoppers fitted with four spouts for bagging by gravity be obtained for use on the quay. It may also be possible to design small portable, grain elevators for discharge from the ship to hopper. This matter is one for expert advice by mechanical handling engineers, but we consider the provision of moveable hoppers in particular to be of great importance for this and other ports which handle part cargoes of bulk grains. At the present time, a small number of bulk fertiliser ships discharge in the port and such appliances as are referred to in the preceding paragraphs would be readily adaptable for feeding the fertiliser into the on-carrying railway wagons.

Exports. Ores: Within the last ten years, there has been a progressive and rapid increase in the export of ores, the tonnage for 1956-57 being 463,422 of which 313,986 was iron ore. There is one ore berth at present under construction, but in the meantime, ore must be dumped at the loading berth prior to the arrival of the ship. It is loaded by ballast baskets, three to a fall. This is a slow and unsatisfactory method, but we cannot suggest any alternative until the new berth is completed. Exports other than ore amount only to 169,000 tons and do not present any problem other than those referred to in other parts of this report.

Customs Delays

"It appears that the Customs procedure in releasing general cargo exports is slowing down the loading of ships. We understand that a Customs Reorganisation Committee is now sitting and we would strongly recommend that as little examination as possible of exports in the transit sheds should be done. We think that when the Customs wish to segregate a package for examination it should be selected at the time of arrival at the transit shed and not by the random selection of a package by serial number after the goods have been stowed in the transit shed. The latter practice, which is commonly followed, causes considerable dislocation of work.

Piecework System

"We understand that a piecework system will shortly be introduced in this port. We feel that this is a change of urgent importance which should produce good results, although it seems to us that labour is working reasonably well when properly supervised. We think that the supervision of steverdores' labour on board ship needs to be checked and in some cases tightened up. We went on board one ship which appeared to be discharging general cargo very slowly and it was some time before any supervision could be found. It seems to us that when a port is regularly working a multiple shift system, the Customs should endeavour to make the necessary adjustments in their available hours of service. Considerable delays appear to be caused by the shortage of shunting facilities at berths. We recommend the provision of two tractors (Muirhill would be suitable) in each section (six tractors in all) to deal with the ordinary "dressing" of the berths thereby freeing the present shunting engines for trip running.

"There are at present seven lighters on order. We think that this addition to the present fleet plus the swim-ended barges referred to above should be sufficient. Work is proceeding at a new passenger-cargo berth at the west end of the north breakwater This appears to be satisfactory, Although we felt that the roadways to be provided are rather too narrow.

"Work has commenced on new ore and coal berths at the south east corner of the harbour. In connection with this, provision has been made for railway sidings and storage grounds running southward from the harbour parallel to the shore. We do not question the desirability of providing these specialised berths, but we feel that they should be fully mechanised and that expert advice should be obtained on this subject, especially in view of the awkard situation of the storable areas in relation to the berths.

New Dock

"Preparatory work has started on a scheme for a new dock at the south side of the harbour which will be 1,700 feet long by 500 feet wide, with a dock entrance 110 feet wide. Six general cargo berths will be provided having quay aprons 100 feet wide and transit sheds of the same width. Behind the transit sheds, there will be roadways of a width of 50 feet including railway tracks. There will also be rail tracks on the quay aprons. Warehouses will be provided on each side of the dock.

"It is contemplated that this dock may ultimately be lengthened to double the size at present proposed. The two schemes referred to are contiguous, and we feel that an effort is being made to squeeze too much into too small an area with a resulting loss of efficiency. There does not appear to be any way of enlarging the site except by reclaiming part of the boat basin "Springheaven" in a line running diagonally roughly from the north east to the south west corner. Like all compromises, this would be by no means a perfect solution, but it would at any rate provide additional space at the south west of the proposed dock where it is most needed and would preserve the slipway and water access at the west of the basin. There are certain features of the lay-out of the new dock to which we would draw attention. It seems to us that the design reproduces the less desirable features of the berths on the west side of the harbour, which were built to deal with the pattern of trade in 1928. We think that the transit sheds should not be more than 50 feet from the quay edge, thus eliminating the storage of cargo between ship and transit shed. The space thereby saved should be added to the roadway at the back of the transit sheds, thus providing for the maximum flexibility at the moment of transport, without interfering with the working of the ships. We see little virtue in the building of the warehouses if cargo is kept moving and feel that the elimination of these would help provide much-needed elbow room.

Development of Trade

"We do not consider it to be part of our reference to proffer advice on the need for this additional berthing accommodation, as we have no reliable forecast to indicate the probable development of trade in this port. We would however point out that the provision of a specialised and fully mechanised ore berth will do much to relieve the existing general cargo berths; that the proposed reconstruction of the two general cargo berths on the south side of the harbour will enable tonnage to be handled more expeditiously; and that the more speedy removal of cargo will increase the capacity of all berths. In all these circumstances, and taking into account the necessity of providing accommodation in excess of minimum requirements, it may be worth while to give further consideration to a project which will double the number of general cargo berths in the port. We have seen a list of the new equipment, which is either on passage to the port, or otherwise provided for. This appears to be ample for present requirements."

New Textile Enquiry Committee

A committee has been set up by the Central Ministry of Commerce and Industry under the chairmanship of Mr. D. S. Joshi, Textile Commissioner, to examine the various problems now confronting the cotton textile industry, which have resulted in the accumulation of stocks and a decline in exports and production. It will attempt to diagnose the causes which have led to the present difficulties and suggest remedial measures. Among other things, the committee will study the problems, of rated capacities, the incidence of different elements of cost in various parts of the country, finance, modernisation of machinery, efficiency of management and production patterns. It will also make a reassessment of the phased requirement, of cotton cloth, both for domestic consumption and export. The other members of the committee will be: Dr. D. G. Karve, Mr. N. Majumdar, Mr. Kanhaiya Lal Mehta, Mr. Padampat Singhania, Mr. Krishnaraj M. D. Thackersey, Mr. S. R. Vasavada, Mr. R. Venkataswamy Naidu and Mr. K. R. Aravamuthan (member secretary).

Test Flight of Gnat Aircraft

Hot weather trials of the *Gnat* fighter aircraft with the Orpheus engine will shortly be held at Kanpur. Production plans of the *Gnat* are going full steam ahead at the Hindustan Aircraft Limited in Bangalore. The engine factory is almost complete. Orders for the machinery to produce the aircraft have already been placed and are expected to be delivered in another six months. Meanwhile, Squadron Leader Tennent, chief test pilot of Folland, has arrived here for conducting test flights of the *Gnat*. Financial and technical details relating to *Gnat* jet fighter production are understood to have been completed. Special deferred payment terms are believed to have been accepted by the manufacturers. According to the estimates of production costs worked out by experts, the *Gnat* should be produced in India very cheaply. Preliminary figures show the cost around a bare Rs. 6,00,000 an aircraft.

Lower Prices for Foodgrains

The price indices of all foodgrains, including that of rice, are lower than those for this time last year. The price index of wheat is 85 against 89 and that of rice 105.6 against 107 last year. The drop is substantial in the case of most of the coarse grains, the price index of jowar being 90.3 against 125, that of bajra 111.1 against 138, that of maize 109.6 against 121, that of barley 93.7 against 99 and that of ragi 98.4 against 101 last year. For cereals, as a whole, the index is 99 against 104. This situation, in spite of a decline in production due to drought, is largely an indication of the effectiveness of the various regulatory measures taken by the Government, particularly the measures it took to localise the difficulties and to prevent shortages in one area affecting the whole of the country. The total production of rice in 1957-58, although not less than the average of the previous years, has been about 3.5 million tons less than the production of 28.3 million tons in 1956-57 because of the damage caused by drought to the last rice crop in several rice-producing States in the north. Fortunately, the shortfall in the production of rice has been partly offset by an increase in the production of other *kharif* crops like jowar, bajra and maize. The production of jowar in 1957-58 is 8.1 million tons against 7.2 million tons in the preceding year. The production of bajra this year is 3.6 million tons compared with 2.9 million tons last year, that of maize 3.1 million tons against 3 million tons, and that of ragi 1.7 million tons, which is about the same as last year's production. Taking the *kharif* foodgrains as a whole, production this year is about 1.8 million tons less than what it was last year.

Although the rice crop was damaged in several parts of the north, the crop in the south has been very good. Prices of rice in the southern States of Madras, Andhra Pradesh, Mysore and Kerala have ruled at a reasonable level, and the creation of the southern rice zone comprising these four States, has prevented any wide fluctuations in rice prices within the zone and has helped the movement of rice from the surplus areas in the zone to the deficit areas where it was needed. Among the States in the north, the rice supply position in Madhya Pradesh and Orissa. which have been cordoned off, is satisfactory. The position in Uttar Pradesh, the eastern part of which has been cordoned off, is also on the whole satisfactory. The difficulties are, therefore, localised mainly in the States of Bihar, Assam and West Bengal. But the Central Government is confident that with the stocks at its disposal and the expected imports, it will be able to meet the requirements of these States. The Centre already holds stocks of 800,000 tons of wheat and 400,000 tons of rice. Besides, some substantial stocks of foodgrains are also available with State Governments. The Centre has already procured over 200,000 tons of rice in Andhra Pradesh and further procurement is in progress. In the Punjab over 90,000 tons of rice has already been procured on behalf of the Government of India. Rice is being imported from Burma and wheat from the United States and Canada.

Mines Act Comes into Force

The Mines and Minerals (Regulation and Development) Act, which provides for the regulation and development of minerals other than petroleum, has come into force. The Act empowers the Central Government to undertake prospecting and mining operations in any land or in relation to any mineral which is the property of the State. The Act also prescribes a maximum limit for a prospecting licence, for any mineral or group of minerals, of 50 square miles in any one State and a limit for mining lease at 10 square miles. Under the Act, the Central Government can alter, from time to time, the rates of royalty. It also provides for the recovery of royalty, dead rent, etcetera, due to State Governments in the same manner as arrears of land revenue. The Act makes no distinction between old and new leases for royalty, except in the case of coal. State Governments have been permitted under the Act to frame rules for minor minerals. All mining leases except those for coal granted before 25th October, 1949, shall be brought into conformity with the provision of this Act.

Decision on Sugar Exports

It has been decided to export about 200,000 tons of sugar. The exports will be made by a special corporation to be set up by the Government. In order to make sugar exports competitive, its internal prices will be increased by at least Re. 1 a maund. Two developments, in this connection, are already evident. First, in anticipation of a rise in prices, the internal prices of sugar have already shown a tendency to rise. Second, the world prices of sugar have further declined. Sugar is a test case. Here, on political grounds, the sugarcane prices have been raised to uneconomic levels, contrary to the recommendations of the Tariff Commission. Almost all the sugar-cane-growing States have levied cess on sugarcane with the avowed objective of improving its yield. The latter, so far as the sucrose content is concerned, has remained unchanged, and the cess is used to finance the ways and means position. And in order to meet the foreign exchange crisis, it is the consumer who is being asked to make further sacrifice by paying higher prices.

The interests of consumers have been totally ignored. Consumers' interests are not allowed to suffer when suggestions are made to earn foreign exchange by exporting oilseeds and oil. In either of these cases, it is not actually the consumer but the industrialist, whose sentiments are respected. The sugar industrialist has been demanding the export of sugar at anybody's cost but his own. The vanaspati and soap industrialists have been equally opposed to the export of oils and oilseeds.

Meeting of Motor-car Manufacturers

A meeting of the manufacturers of motor-cars and motor-car engines will be held under the auspices of the Ministry of Commerce and Industry on 12th and 13th June. The object of these meetings is to discuss ways and means for making a more rational use of the existing production capacity to meet the country's requirements with the minimum expenditure of foreign exchange. The position of the latter continues to be serious and the trends in the last two months are less favourable than they appeared in the first quarter of the year. A fresh review of the allocations of foreign exchange to different industries and the part that they can play in avoiding shortages has, therefore, become necessary.

All-India Exhibition

An all-India exhibition, called "India 1958", is to be held in New Delhi during October and November this year. Sponsored jointly by the Central Ministries of Finance, Commerce and Industry, the exhibition—the first of its kind—will provide visual publicity to the various industries and developmental enterprises in the country both in the private and public sectors and help stimulate exports of Indian merchandise and manufactures. It will synchronise with the annual conferences of the International Bank for Reconstruction and Development, the International Monetary Fund and the International Finance Corporation and of the International Air Transport Association, which are all scheduled to take place in New Delhi in October 1958. This would provide a good opportunity to create a world-wide interest in the economic and industrial development of the country. The object of the exhibition is to present a co-ordinated and comprehensive picture of the country's economic progress, promote economic relations between India and other countries and to establish further contacts between manufacturers, traders and consumers. It will also serve as the "show window" of India—her industry, trade, art and culture. The exhibition has therefore included all industries, other developmental enterprises and nation-building activities in the public and private sectors.

All the Central Ministries concerned are taking part in the exhibition and all State Governments are also expected to participate. The exhibition, which will be organised and managed by the Directorate of Exhibitions of the Central Ministry of Commerce and Industry, is scheduled to commence on 1st October, 1958, and is expected to continue until the end of November this year. It will be located on the Exhibition Ground in New Delhi, on the Delhi-Mathura highway. It will be wholly national in character. Goods produced in India, including those assembled in the country, will only be included in the exhibition. Foreign enterprises which have their organisations in India, as manufacturers or as collaborators in industrial concerns in this country may be permitted to take part in it. This display of commodities will be subject-and product-wise.

Details of Indo-Russian Air Agreement

An air agreement between the Governments of India and Russia was signed last monday. Initially, Air-India International and Aeroflot, which is the airline designated by the Russian Government, will operate a once-a-week service (to be started some time in August) between Delhi and Moscow in both directions. The specified route will be Delhi-Amritsar-Tashkent-Moscow. Any points on the specified air route may, at the option of the airlines, be omitted on any or all flights. Under the agreement, Air-India International is authorised to carry international traffic in passengers, cargo and mail to and from Tashkent and Moscow, and Aeroflot is authorised to carry such traffic to and from Amritsar and Delhi. The agreement sets forth arrangements to be made by the two contracting parties for the safe operation of the air service. Article 4 of the agreement provides that the commercial aspects of the service will be subject to a separate agreement between the two airlines. The tariffs to be charged for the carriage of passengers, baggage and cargo, and commercial practices, discounts, rebates and agency commission, etcetera, to be applied to the sale of transportation service, have been settled and specified in the commercial agreement which provides that while each party will bear its own expenses connected with operation of its aircraft, revenues earned by each party will be brought into a pool and then apportioned and divided between the parties, at the end of each calendar month, on the basis of the number of scheduled and non-scheduled one-way flights operated by each party. The one-way tourist class fare between Delhi and Tashkent and Delhi and Moscow will be Rs. 628 and Rs. 1,084, respectively, and first-class fares will be Rs. 785 and Rs. 1,857, respectively.

U.K. SHARE IN WORLD TRADE DECLINES

WEST GERMANY AND JAPAN EMERGE STRONG COMPETITORS

(FROM OUR LONDON CORRESPONDENT)

BRITISH exports have stopped growing, and have even begun to fall off this year. The Treasury draws attention to this trend in its latest *Bulletin for Industry* and calls for new efforts to maintain the U.K.'s share of world trade. In an analysis of British export performance, the *Bulletin* states that the prewar volume of exports was regained by 1946 and has been doubled since then. But the steady growth of recent years has for the time being come to an end. In 1955-56, the volume of exports increased by 6 percent, but in 1956-57 by only 2 percent; the figure for the last quarter of 1957 was barely level and in the first quarter of 1958 it was slightly lower. Moreover, the British share of world trade has fallen from 21 percent in 1953 to 18 percent in 1957. This merely reflects the recovery of German and Japanese exports, which have risen from 15 percent to 18 percent and from 4 percent to a 6 percent. respectively, and was to be expected; but, the Treasury points out, their gains are still continuing. The growth of world trade in manufactures is now slowing down, and an intensive struggle will develop for the maintenance of export shares.

The *Bulletin* argues that "the real test of the export drive lies in the condition of the balance of payments as a whole." Last year the U.K. had a good surplus and "the indications are that we are again doing well this year." In the past ten years, this surplus has averaged more than £100 million a year and in the past five years the average has been £170 million. In 1957 the surplus on current account has been estimated at £237 million, a performance which has enabled sterling balances to be reduced and a moderate volume of investment to be sustained abroad. But it adds: "If the United Kingdom is to take full advantage of all its opportunities and contiues to provide international investment capital on the scale expected, as well as maintaining an effective means of exchange for much of the world's trade and payments, an even larger surplus is needed."

Trade Pattern Changing

The remarkable transformation which has taken place in Britain's trading position over the past year is described in a special article contributed to the current *Board of Trade Journal*, and needs careful watching by those interested. Taking the first four months of 1958 and comparing them with the same months of 1957, it is found that exports are lower by 1½ percent, but imports are lower by 11½ percent. That is a modest way of describing the changes that have occurred. When applied to totals that exceed a £1,000 million, these percentage changes mean the saving of great sums of money and a great fortification of the national balance of payments. In 1958 so far, the average trade gap (excess of imports valued c.i.f. over exports valued f.o.b.) had been £24 million a month. This compares with £62 million in the same months of 1957. The saving is £144 million this year so far, and at this rate, it will be £430 million for the full year. There are signs that the closing of the gap has gone as far as it will go. Imports have probably reached their floor and exports are declining slowly. But there are no signs of a reversal. The position is favourable and likely to remain so, although it can hardly be expected to get much better.

Exports show what the Board of Trade calls a "slight, underlying downward trend." It is very slight, and in the latest figures, it is entirely due to two categories of exports, textiles and fuels. In April, cotton and wool textile exports fell further, bringing the total for textiles generally in the first four months to more that 8 percent below the total for these months in 1957. The fall in fuel exports has been more abrupt. In April, coal and coke exports were little more than half of the January-March rate, and refined petroleum exports were down by a third. International markets in both coal and oil have become extremely competitive and there is no sign of this pressure abating. Engineering exports continue to go from strength to strength. Through the first quarter motor-vehicles set the pace, but in April the lead was taken over by machinery (other than electrical).

Machine Tool Prospects

An optimistic view of the prospect for the British machine tool industry is put forward in the latest *Bulletin for Industry*. After analysing the changes in the recent experience of this industry, the author concludes that in the long term, the demand for machine tools in the U.K. is likely to be strong. As for exports, "the modern world is a high investment world" and British machine tools have shown themselves successful in some highly competitive markets. Last year 10 percent of U.K. machine tool exports went to the United States and 8 percent to Canada. It is not usually realised that the output of the British machine tool industry is valued at only about a half of 1 percent of total industrial production. But this small output is produced by 350 firms employing about 48,000 people. The value of the output of the German industry is about 50 percent bigger than the United Kingdom's and that of United States several times as big. However, British output has grown in volume by about 50 percent in the last seven years.

Last year the British machine tool industry exported 26 percent of its output, the West German industry exported 53 percent, and the American 14 percent. The largest markets for Britain were Australia, India. and France, although much progress was made in the West German. United States, and Canadian markets. Although new orders for the home market as well as for exports have been falling for some time. this is not a specially British experience. United States and West German orders have also dropped. The Treasury analysis makes the point that the future may depend on the research and development programme of the industry itself. "The rewards are likely to be great and the present may well be a critical stage in deciding who gets them."

Channel Tunnel Progress

The "pipe dream" of a channel tunnel, so long regarded almost as a joke, is that no longer. Mr. L. d'Erlanger, chairman of the Channel Tunnel Company, Ltd., told shareholders at the recent annual meeting in London that it was hoped to complete by late next year economic and geophysical surveys to assess the practicability of a tunnel. The study group set up last year for that purpose had decided that it could accelerate the project by making a physical survey which was due to start this summer. It was intended first to clear the shaft and galleries constructed more than 75 years ago in Sangatte, near Calais. The works on the French coast had been chosen in preference to the company's works near Dover because the geological structure was more complex there. A geophysical survey of the channel bed would then be undertaken. For this work the study group had commissioned one British. one French, and one American firm. and Professor Bruckshaw of the Royal School of Mines would act as consultant. Mr. d'Erlanger also stated these three organisations would carry out a traffic survey and assessment of the tunnel's economic prospects. These are the Economist Intelligence Unit, of London, the *Société d'Etudes Techniques et Economiques*, of Paris, and De Leuw, Cather and Company of Chicago.

Trainee Gets V.I.P. Reception

Dr. Mazhar-ul-Islam, a young Pakistani, walked into a V.I.P. reception when he landed at London airport last week. being met by a battery of photographers, the personal representative of the High Commissioner for Pakistan, senior officials of the British Council, and heads of departments from the Commonwealth Relations Office. Dr. Mazhar-ul-Islam happens to be the 2,000th trainee from south and south-east Asia since the Colombo Plan technical co-operation scheme began in 1951. He will spend a year studying the medical side of radio isotopes and radiation physics at the Atomic Energy Research Establishment, Harwell, and the Royal South Hants Hospital, Southampton. The number of Colombo Plan technical trainees in Britain is now 453, easily the highest since the plan began. They come from India, Pakistan, Ceylon, Burma, Thailand, the Philippines, Indonesia, Nepal, Malaya, Laos and Cambodia. The cost, borne by the British Government, averages £850 a head yearly and includes a non-taxable maintenance allowance of £10 10s a week. The British Council provides a full-time guide to meet each trainee and spend the first two days with him, and also provides vacational courses and social contacts during his stay.

Stock Exchange and Options

Stock Exchange members voted by a two-to-one majority last week for the restoration of dealing in options, the right to buy or sell shares at an agreed price three months later. These were suspended during the war. The Council, which for some years has periodically refused to reintroduce this "forward" selling of shares on the ground that it could give a new opportunity for gambling, has at last given way and announced that the rule which has, since the outbreak of war, banned such dealings will be revised—"subject to satisfactory rules and conditions being framed." The framing is to be done by a committee which will take evidence on the subject, and will invite the co-operation of members with expert knowledge of option dealing. These transactions are never likely to form a large proportion of the turnover on the Stock Exchange.

Brevities

The London coffee futures market organisation committee announces that its preliminary work is concluded. Trading will take place in the Commodity Exchange, Plantation House, London, E.C.2, and it is hoped that it will be possible to start business in futures contracts for Robusta coffee on 1st July.

Engineering and Transport

INDIA AND RUSSIA SIGN AIR AGREEMENT

DEVELOPMENT OF PALAM AS INTERNATIONAL AIRPORT

(FROM OUR NEW DELHI CORRESPONDENT)

UNDER the new agreement just signed between India and Russia, flying time between the two capitals will be reduced to less than seven hours. At present, the service between India and Moscow is routed through Kabul, where passengers have to stay the night. In fact, there is no air service to India as such. Intending passengers for Moscow have to leave Delhi by the Afghan airline, Aryana, and after stopping for the night in Kabul, take a Russian plane for Moscow. The proposed service will be run by the Russian airline, Aeroflot and the Indian airline, Air-India International, the former using the well-known planes *TU.104* and the latter using *Super-Constellations*. According to a tentative agreement, both the airlines will pool their earnings and divide them equally among themselves. It is also agreed to raise the existing Delhi-Moscow fare by 10 percent. British European Airways already has an agreement with the Russians under which the Moscow-London services are operated. The opening of the Delhi-Moscow route will reduce the flying time between Delhi and London. Scandinavian countries and particularly the city of Copenhagen will add to their importance by these new developments. A new phase in air travel will, therefore, begin with the inauguration of the Delhi-Moscow service.

Development of Palam Airport

The strong man of the Central Cabinet, Mr. S. K. Patil, is slowly asserting himself. A conference of the representatives of the Air Force and the Civil Aviation Directorate has recently tried to arrive at some agreement on the future of New Delhi's Palam international airport. The airport was originally developed by the Indian Air Force, which retains its control over it even at present. For over 10 years, it has also been serving the needs of civil aviation as far as international air traffic is concerned. This dual control has hindered its proper development into an up-to-date modern airport.

The advent of the jet age, however, demands the early development of the airport. Jet planes, which are expected to be put into operation by 1959, will need longer runways and most modern equipment. The conference was of the opinion that in the nuclear age, the military should not have its airfields in such close proximity to the capital. But Mr. Patil wanted a decision and not merely arguments. He asked the conference to recommend its decision by the end of May to enable him to proceed with his plans to develop an international airport for New Delhi. The second airport for civilian or military use will have to be across the Jumna river which, it is proposed, will be spanned by two more bridges.

No Change in K.L.M. Services

The *status quo* will be maintained in K.L.M. services through India, according to an agreement reached between India and the Netherlands. K.L.M. operates three air services, one through New Delhi and two through Calcutta. As for the fifth freedom traffic, although contractually K.L.M. will not be permitted to set down or pick up more than 40 percent of traffic destined for a third country, as far as a service through New Delhi is concerned, this rule will not be strictly enforced.

Talks between Air-India International and the Australian airline, Qantas, have been equally cordial. The representatives of the latter have returned to Australia. An additional Air-India, International service to Sydney, or alternatively a reduction by one of the Qantas services has been suggested. Qantas operates four services, two through Bombay and two through Calcutta, against one weekly service by Air-India International.

Report on Civil Aviation

A report from the Council of the International Civil Aviation Organisation of the 11th session of the I.C.A.O. General Assembly, now meeting in Montreal, says: "The year 1957 may perhaps best be described as one of preparation for transition from an air transport economy based primarily on the piston-engined aircraft towards a system in which the turbine-powered transport will predominate, with the long-range jet transport playing a revolutionary part over long distances. In the piston-engined field, the *DC-7C*, introduced in 1956, and Lockheed *L.1649A Starliner*, both capable of carrying between 60 and 100 passengers over distances up to 10,000 or 11,500 kilometres (6,000 or 7,000 miles) at maximum cruising speeds of approximately 530 kilometres (330 miles) an hour, probably represent the highest performance which will ever be attained by this kind of aircraft.

"In the turbopropeller field, Vickers continued to build up an enviable record, with 239 of the 361 *Viscount* aircraft ordered now in service, and the much larger and faster *Vanguard* nearing completion. The long-range Bristol *Britannia* accumulated 28,000 hours of successful operation on various routes, mostly between the United Kingdom and South Africa and the Orient; late in the year, this aircraft made its appearance on the north Atlantic route where crossings of less than nine hours were reported. The Lockheed *Electra*, a medium range aircraft of about the same speed, has flown and may see regular service late in 1958. Among the smaller aircraft of the turbo-prop type, the *Fokker Friendship* (16,000 kilogrammes—36,000 lbs gross weight) went into production as a possible replacement to the *DC-3* and, by the end of the year, about 125 of these aircraft had been ordered from the Dutch manufacturer and the U.S. licensee, about 83 of them by scheduled airlines.

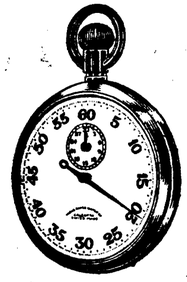
Turbo-jet and Turbo-prop Aircraft

"In the field of the turbo-jet aircraft, two main types are distinguishable; first, the very large and very long-range inter-Continental models, such as the *Boeing 707*, the *DC-8* and the proposed Vickers *VC-10*, all of them approximating one-quarter of 1 million lbs gross weight and designed to carry up to 170 passengers, covering maximum non-stop distances of about 9,500 kilometres (5,900 miles) at speeds of 885 kilometres (550 miles) an hour and more. On the other hand, there are the shorter range aircraft, such as the de Havilland *Comet*, the Snacase *Caravelle* and the *Convair 880*, varying from about 45,000 kilogrammes to 80,000 kilogrammes (100,000 lbs to 175,000 lbs) gross weight and designed for distances of 3,700 kilometres to 7,200 kilometres (2,300 miles to 4,500 miles) at speeds comparable with those of the larger jets. Mention must also be made of the line of turbo-prop and turbo-jet aircraft now being produced in Russia, the operating characteristics of which, and the number on order, are but incompletely known. There are indications, however, that the larger models, such as the turbo-prop Tupolev *TU-114 Rossiya*, may be expected to carry 170 to 220 passengers over distances variously estimated at from 7,000 kilometres to 12,000 kilometres (4,400 miles to 7,500 miles). Of the two medium-range turbo-jet aircraft of which we have knowledge, namely, the *TU-104* and the *TU-110*, the former has already seen extensive airline service.

"The transition referred to at the start of this section is illustrated by the tabulation below showing the comparative numbers of aircraft of the different types in service and on order. Only 42 jet aircraft were ordered last year compared with 77 ordered in 1956 and 139 in 1955, but it is difficult to say whether this decline in the rate at which orders are now being placed is significant, as it is known that 35 Vickers *VC-10s* have been ordered since the end of the year, and as quite a few more orders appear imminent.

"Piston-engined aircraft	1,603	98
"Turbo-prop aircraft	263	417
"Turbo-jet aircraft	None	365"

Trans-polar Services



"The development of trans-polar flying continued during 1957, one notable instance being the inauguration by S.A.S. of a route between Copenhagen and Tokyo, with a technical stop at Anchorage in Alaska. The total distance of this route, flown in two long stages, is about 11,300 kilometres (7,000 miles), compared with the same airline's route from Copenhagen to Tokyo *via* the Middle East, India and the Philippines, of 16,000 kilometres (10,000 miles). The time saving is approximately 20 hours. Trans-polar services between London, Paris and the west coast of the United States were also inaugurated by Pan American World Airways and Trans World Airlines in the latter part of the year. Air France is also planning to open a trans-polar service between Paris and Tokyo, and altogether six major airlines have actual or announced passenger and freight flights over one or other of the two poles.

"By joining its above-mentioned two routes in Tokyo and operating through flights in both directions, S.A.S. became the first airline to offer a one-plane service around the world. A second round-the-world service by one airline was opened immediately after the close of the year by Qantas Empire Airways, using *Super Constellations* on twin services between Melbourne, Australia and London, its one flight east-bound by way of the United States and the other west-bound *via* the Middle East and Europe. At the other extreme of distance, was the inauguration of the first helicopter service between two world capitals, namely, that of Sabena in Belgium between Brussels and Paris, where the ability to use heliports relatively close to the centre of the two cities has produced a time saving of approximately two hours over conventional aircraft, plus bus times.

Growth of Air Links

"The growth of air links between eastern and western Europe continued, with Russia and the United Kingdom signing a bilateral air agreement. A recognisable pattern of services has begun to develop. By the end of the year, 54 weekly round trip flights were being scheduled by Russia and other communist countries to points in western Europe, while 42 weekly round-trip flights were being scheduled into the communist area by western European countries."

HIGH PRICES KEEP MILLS OUT OF FIBRE MARKET

GOODS RULE DULL WITH SACKING QUOTED BELOW MINIMA

LAST week brought greatly reduced activity in the Calcutta fibre markets, with the mills showing no interest at current levels. Buyers' reluctance to enter the new crop market, on the grounds that it is too dear, has had its effect, and new crop quotations fell during the week to 50nP, or less, over old crop jute. This is significant in itself, but it also reflects the changing conditions in the jute markets over the past few years. In early May 1955, when fair quantities of Pakistani jute were still being imported, new crop quotations were offered at a discount of Rs. 5 a maund on old crop jute. This dropped to Rs. 2 a maund by June and Rs. 1.50 by the middle of July. The following year, the discount was Re. 1 in early May, increasing to Rs. 1.50 by July. Last season old and new crop quotations were practically on par from early May to July. During the current season new crop jute was initially offered at a Rs. 2 premium over old crop, and most of the business done has been on the basis of a Re. 1 premium. The current 50nP premium is mainly nominal in the absence of business, but sellers appear to be reluctant to make any further reduction in it. It would appear then that as imports of Pakistani jute have been reduced (last season India only imported 10 percent of her requirement from across the border, and in the current season is following a similar pattern), the price of new crop jute has been increasing. It is doubtful whether 1955 conditions will ever be repeated, because the availability of high grade jute appears to diminish each year, bringing into play the natural laws of supply and demand. Current crop reports in Assam and northern Bengal continue to be favourable, but this year the reports have done little to change sellers' dominant attitude, and even the prospects of a bumper crop have had little effect on their bullish ideas. This is based to a great extent on the fact that the quantity of new crop jute purchased so far this season is smaller than ever before. The reason for this is obvious in the light of the foregoing figures. Sellers' hopes are pinned on the possibility that buyers will have to come into the market shortly, irrespective of the price, to maintain their stock positions which, however, are currently reported to be good.

There has been little activity in the goods section this week, and in the absence of fresh overseas interest prices in general have weakened. The mills continue to observe minimum prices, and as far as the sacking market is concerned, this means no business, as the majority of fabrics, except specialities, are well below the level on which the I.J.M.A's minimum is based. Hessian continues to rule above the minima, but there are no buyers and even in this section the undertone is weak. The only price changes were mainly the result of small speculative activity. There is still no sign of a settlement of the dock workers' demands, and the possibility of the strike threat being implemented on 16th June is high.

THE JUTE MARKETS

Once again, activity in the futures market was on a restricted scale, and prices fluctuated within narrow limits. Prices as supplied by the East India Jute and Hessian Exchange for the period 28th May to 3rd June were as follows:

	Hessian 40in. 10oz. June	Sacking B Twills June	Raw Jute Upper Assam June
Opening	40.28	99.30	24.64
Highest	40.38	99.75	24.98
Lowest	40.06	99.20	24.60
Closed	40.14	99.35	24.92

Manufactured Goods: There was a slight improvement in the goods market at the opening last Thursday, and B Twill opening quotations advanced to Rs. 97.75 in the near position, with forward shipment maintaining the premium of Rs. 2. Hessians, on the other hand, lost ground slightly and 40in. 10oz. opened at Rs. 40.50 with the discount for forward shipment falling to 40nP. Lack of overseas interest in this section led to the decline and also selling pressure from mills, as hessian constructions were still above the minimum level. After the opening, prices in both sections fell back due to small speculative activity and the absence of overseas enquiries. This phase continued up to the week-end when B Twill rates were 40nP down and hessians 20nP down from the opening levels. There was a slight revival in sacking over the week-end and heavy goods prices climbed slowly back to the week's opening rates, but hessian continued to lag behind and quotations were unchanged. Towards the close, a steadier tendency developed in sympathy with the fibre markets.

On Wednesday morning, opening quotations were as follows:

	Ready	June	July-Sept.	Oct.-Dec.
40in. 8oz.	32.15	32.25	32.25	32.10
40in. 10oz.	40.35	40.40	40.35	40.10
B Twills	98	98.50	99.75	99.75
Heavy Cees (Plain)	98 25	98.25	99.75	99.75
A Twills	118	119	120.25	123
Liverpools	109.75	110.50	111.50	111.50
Cornsacks	99.50	100.00	101.25	101.25

Raw Jute: Business during the week under review was the smallest for some time, but the lack of interest from the mills did not affect sellers' ideas, except in new crop jute, the premium for which fell to 50nP at the beginning of the period. Operators were governed in their views by new crop reports, which although favourable in the early part of the week, lost their significance before the close due to inadequate rainfall in most districts. Sellers were reserved and were not keen for new crop business. Opening quotations last Thursday were based on Rs. 24.75 a maund for old crop Assam-Northern jute, and this price remained constant until after the week-end when rates were advanced to Rs. 25. Upcountry markets reported very small imports of old crop jute, and the demand for good quality fibre caused prices to harden.

During the week, business was reported in old crop Assam and Northern jute at Rs. 24.62 to Rs. 25 a maund basis Bottoms, and also Assam Tossa at Rs. 28 a maund. Small interest was shown in jungli X-Bottoms at Rs. 16 to Rs. 16.50. In the mesta fibres Assam mesta changed hands at Rs. 24 a maund. Business was again done for Pakistani cuttings at Rs. 70 to Rs. 73 a bale for NC's and TC's under buyers' licence, and also Rs. 80 under sellers' licence.

There were no reports of new crop business of any size last week.

Wagon arrivals in Cossipore were much the same as last week, a total of 375 being reported at the sidings. During the corresponding period last season wagon arrivals amounted to 395. The only interest in Cossipore stocks concerns high-grade jute, and in most cases buyers demand inspection before purchase. Quotations at the close were based on Kishenganj jute at Rs. 23.75 a maund for average quality.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md basis Bottoms	Shipment
Assam	25	June-July

GUNNY SHIPMENTS IN APRIL

The following are the total net figures of manufactured jute goods shipped from Calcutta during April 1958 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	4,163.1	19,900.0	24,063.1
Short Shipped	1,031.3	1,145.0	2,176.3
April 1958 (Net)	3,131.8	18,755.0	21,886.8
March 1958 (Net)	176.7	29,975.9	30,152.1
February 1958 (Net)	1,456.4	27,913.6	29,370.0
	Sacking		
Gross	25,302.0	911.0	26,213.0
Short Shipped	348.4	32.8	381.2
April 1958 (Net)	24,953.6	878.2	25,831.8
March 1958 (Net)	25,970.4	632.0	26,602.4
February 1958 (Net)	31,687.6	307.6	31,995.2

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

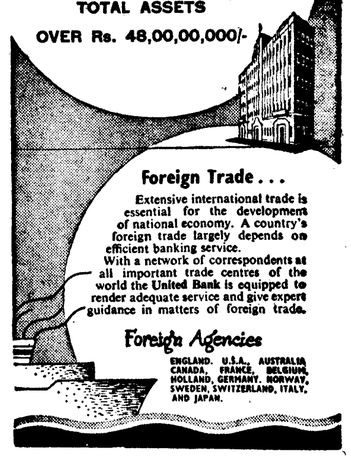
	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th May, 1958	969.5	18,687.5	19,657.0
1st to 25th April, 1958	3,510.2	11,953.7	15,463.9
1st to 25th March, 1958	1,820.0	17,836.5	19,656.5
	Sacking		
1st to 25th May, 1958	17,970.9	697.9	18,668.8
1st to 25th April, 1958	18,109.5	549.8	18,659.3
1st to 25th March, 1958	18,412.9	153.6	18,566.5

THE FOREIGN JUTE MARKETS

FIBRE PRICES MAINTAINED

(FROM OUR DUNDEE CORRESPONDENT)

FAVOURABLE reports of the new jute crop at this time of year usually have the effect of weakening prices for the fibre, but this year shippers of the raw material are sticking to their terms. Of course, the stringent regulations which the Pakistani authorities are imposing on the industry nowadays preclude sellers from dealing in new crop so early, and no doubt there is the desire to get rid of the old crop at today's very profitable prices before embarking on the sales of new crop. It may be some years yet before Pakistan can experience any competition from other sources of supply of the fibre such as those mentioned by the vice-chairman of the Pakistan Jute Mills Association, Mr. Jalil, and meantime, no doubt that country will continue to make the most of its monopoly crop.



Prices remain unchanged at £115 lowest for Mill Firsts, £101 for Mill Lightnings, £90 for Mill Hearts and £71 10s for grade Hearts, with good marks of Daissee-2/3 from £104 and grade £98 and grade Tossa-2/3 from £115 and fours from £106, all c.i.f., U.K., June shipment. No mention is yet made of new crop jute here, but spinners would be interested, as they are making enquiries. With a good quality crop in prospect, they are presumably prepared to wait until it becomes available. It is interesting to note that the imports of raw jute into the U.K. for the first four months of this year were only 243,815 bales, compared with 432,355 bales in the same period last year. The imports of jute fabrics are also well down this year at 41,388,000 square yards, against 76,104,000 square yards for the respective periods.

Prices for Calcutta goods show little change from day to day, but if the threatened strike of dock workers in India comes off, there will be a big change, and perhaps a chance for other producing centres like Dundee to do business. Prices today are 61s 3d for 40in. 10oz. and 45s 6d for 7½oz., June and July, and 61s and 45s 9d August-September, with B Twills 149s, 150s and 151s 6d for the respective periods of shipment, all f.o.b., Calcutta.

Jute yarns and cloth in Dundee and district are very quiet, and seldom has trade been so dull in its history here. Everyone is complaining of a lack of orders, but with raw jute being so well maintained no change can be made in prices. Hessians are at 13.64d for 40in. 10oz. and 11.62d for 8oz. a yard, and yarns at 15.44d for 8-lb cops and 16.59d for 8-lb spools a lb.

SHARP RISE IN WORLD COTTON CONSUMPTION

OFFTAKE MAY FALL THIS YEAR

A NEW high record for the world's consumption of raw cotton was established in 1956-57. According to statistics collected and published by the International Federation of Cotton and Allied Textile Industries, the world's mills used 42.4 million bales of cotton last season, against 38.9 million bales the season before, and 35.7 million bales in 1954-55. The world's spindleage also increased, but at a much slower rate, the number of spindles installed at 31st July, 1957, being 129.4 million or 551,000 more than the revised figure for a year previously. Consumption of United States cotton was 14.4 million bales last season, against 11.5 million bales in 1955-56, but there was a fall from 6.7 million bales to 6.6 million bales in Indian and Pakistan, and from 1.25 million bales to 1.05 million bales in Egyptian cotton, the "outside" growths increasing further to 20.3 million bales against 19.3 million bales. Europe and north America both reported decrease in the total spindleages during 1956-57, but there were increases in Asia, South America and Africa. Most of the decreases in Europe was in the U. K. for which a total of 22.5 million is shown against 23.9 million a year previously: Japan's spindleage is shown as a little over 9 million compared with 8.5 million a year previously, and India's as 12.3 million compared with 12 million. There was an increase from 1.6 million to 1.7 million in Pakistan, and one from 304,000 to 324,000 in Hongkong. A table in the International Federation's returns shows that the average annual consumption of cotton a 1,000 spindles over the world as a whole, which was 161.18 bales in 1912-13, was 327.9 bales in 1956-57. The increase is largely the result of the spread of shift working in spinning mills. Another table gives the numbers of hours worked by the spindles in various countries during the season. The figures range from 2,124 for the United Kingdom to 8,158 for Hongkong.

Prospects for 1958

Figures published by the International Cotton Advisory Committee, however, suggest that after an average annual rise of 1.5 million bales during the past five seasons, consumption of cotton will decline some 300,000 bales to 41.7 million bales during 1957-58. Not all countries benefited from the increased demand for textiles last season, and prospects for the present season are poor in several instances. The United States, after consuming 600,000 bales less last season than in 1955-56, is likely to experience a similar fall again this season. Consumption in western Europe is expected to remain steady, but in Japan it is estimated to decrease by 200,000 bales. Consumption in communist countries is expected to rise further, although at a diminishing rate. The sharp fall in consumption in the United States, where it is now about 1 million bales below the level of 1951-52, is mainly due to a substantial reduction in its usage in the industrial group. Cotton has probably been adversely affected by competition from other fibres, although rayon has also suffered from the effects of the textile recession. Cotton consumption on the Continent last season made its largest gains in recent years. Speculative activity as a result of the Suez crisis was partly responsible, but of greater importance were the lower and more stable raw cotton prices, and in some instances, increased activity in cotton promotion. Textile business has diminished since then, but in many countries the high rate of consumption has been maintained. There is evidence, however, of some overproduction, which may cause output to be adjusted later. In Belgium and Holland particularly, a decline in consumption is likely. France and Spain are finding difficulty in obtaining raw cotton, while Italy is considering a voluntary reduction of yarn production.

Asia and Eastern Europe

Japanese consumption is expected to fall as a result of the restriction of output dictated by overproduction and scarcity of foreign exchange. In India, stocks of yarns and cloth are increasing, but production continues to expand. Consumption is expected to remain steady at last season's level. Hongkong is likely to slow down its rate of consumption, which showed a proportionately much greater advance than that for the world as a whole, as a result of increased competition in its export markets. If consumption in Russia and eastern Europe is to be maintained at last season's level, imports of cotton will have to be increased. Russia has a smaller crop this season, and while activity in Poland and Hungary declined, consumption rose in Rumania, Bulgaria, east Germany and Czechoslovakia. Consumption in China has risen sharply, mainly because of greatly increased cotton production. Several hundred thousand bales, however, have still to be imported each year.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March, 1953=100) advanced further by 0.2 percent to 108.0 during the week ended 17th May, 1958, compared with 107.8 (revised) for the previous week. The index showed almost the same level as in the corresponding week of the earlier month but was lower by 1.8 percent when compared with that of last year. The index for Food Articles rose by 0.3 percent to 106.8 compared with 106.5 (revised) for the previous week due to an increase in the prices of oranges in Calcutta and fish (Pomfret) in Bombay (+10% each), maize in Ludhiana (+9%), mung and eggs both in Bombay (−6% each) barley in Motihare, arhar, urad in Bombay and bananas (+5% each), cashewnuts (+4%), groundnut oil, coconut oil and coffee (+2% each) and rice, tea for internal consumption and betelnuts (+1% each). The prices of onions in Calcutta (−16%), eggs in Madras (−8%), salt in Tuticorin (−7%), wheat in Moga (−5%), potatoes (−3%), jowar and milk (−2% each) and ghee and chillies (−1% each) were, however, marked down. The index for Tobacco remained stationary at the previous week's level of 90.3. There was a fall in the prices of castor oil (−1%) and the index for the Fuel, Power, Light and Lubricants group stood at 113.5 against 113.6 (revised) in the earlier week. Higher prices of raw skins and seedlac (Baisakhi) both in Calcutta (+8% each), copra (+4%) and raw cotton, linseed and gingellyseed (+1% each) raised the index for Industrial Raw Materials by 0.3 percent to 113.5 although the prices of silk (−3%) and raw jute and groundnuts (−1% each) showed declines. The index for Intermediate Products receded by 0.7 percent to 107.5 due to a fall in the prices of rayon yarn and brass (−2% each) and cotton yarn and coir yarn (−1% each). The index for Finished Products advanced by 0.2 percent to 107.7 compared with 107.5 (revised) for the earlier week. The prices of oil cakes (+2%), jute manufactures and bicycles (+1% each) and bricks and tiles (−2%) showed variations.

EXPORT DUTY ON OILCAKES ABOLISHED

In accordance with its policy of keeping export duties under constant review, the Government of India has decided to abolish, with immediate effect, the export duty on all varieties of oilcakes specified in Item 21 of the Second Schedule to the Indian Tariff Act.

International Panorama of Progress

Modern methods for ancient acres

Over centuries-old fields of rice and sugar cane a new sound is being heard. Shouts of encouragement to plodding buffaloes and oxen are being supplanted by the hum of modern farm machinery. Efficient equipment is bringing in bigger crops with less effort—aiding economies, easing the farmer's life. In many of the countries where agriculture plays a vital role, Caltex quality petroleum products help maintain and expand farm prosperity. Through the power of petroleum, Caltex fuels and lubricants run the machinery that lightens the work load, increases the standard of living for the peoples of over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

STATE TRADING IN CASHEW PRODUCTS OPPOSED

REDUCED TEA OFFERINGS AT COCHIN AUCTIONS

(FROM A SOUTH INDIAN CORRESPONDENT)

THE cashew factory owners of Quilon, excepting one, are not favourably inclined towards the Kerala Government's proposal to set up a trading corporation for the cashew industry. In their opinion, such a corporation will serve no other purpose than to create unnecessary difficulties for those who are now engaged in the cashew processing industry. The State Minister for Industries made this proposal at a conference of the representatives of the factory owners and of their employees, held a few weeks ago in Trivandrum, for the collection and distribution of raw nuts on an "equitable basis" and for undertaking the export trade of the finished products in order to put an end to the unhealthy competition among factory owners. The processsors wanted more time to think the proposal over. It is understood that they have now communicated their views to the Government opposing the move to set up a trading corporation.

Larger Cashew Crop

The cashew harvesting season is practically closed in Kerala. In the opinion of certain processors, the season's crop was better than that of the previous year and they expect that the indigenous crop will finally amount to nearly 70,000 tons, the highest on record. The African crop, too, was a larger one, according to information available with the processors. Raw cashew nuts are now available at just over Rs. 500 a ton in the Indian primary markets, which is a comparatively low price. The production of cashew kernels is progressing well and if no labour trouble arises, this year's output is most likely to exceed last year's.

The import of raw nuts as well as the export of cashew kernels has been fairly good since the beginning of this season. A recent occurrence of some importance in the cashew market is the contract which Russia has made for the purchase of 3,000 tons of cashew kernels, spread over a period of four to five months from now. Exports to the U.S.A., which is the principal market for cashew kernel, have also been fairly good. It is felt in certain quarters that to increase the exports of cashew kernel and cashew shell liquid, quality control needs to be introduced. The Pepper and Cashew Export Promotion Council, it is understood, has prepared a draft scheme for this.

Ginger Price and Exports Fall

India's ginger exports have been falling. The latest available figures are for March 1958. Exports during that month were only 652 tons, against 1,273 tons in the same month in 1957. For the first five months of the season (November 1957 to March 1958), exports totalled 3,123 tons, or less than 50 percent of what they were during the corresponding period last season. In the 1956-57 season, exports touched a new peak at 9,693 tons, compared with 5,376 tons in 1955-56 and 2,316 tons in the 1954-55 season. Prices, too, have fallen heavily. The present price is only Rs. 205 a candy of 6 cwt. in the Cochin market, compared with Rs. 375 at this time last year, and Rs. 1,200 in the 1954-55 season. This sharp price fall is attributed to a larger world supply. Producers have reduced their cultivation in Kerala, where most of India's ginger is grown. India's production last season was nearby 16,000 tons.

Direct Tea Shipments to U.K.

A number of south Indian tea companies have increased the shipments of their produce to London auctions directly in order to escape the 5 percent single-point sales tax on tea introduced in April 1957, by the Madras Government, and in October 1957, by the Kerala Government. Consequently, the quantity offered for auctions in Cochin is diminishing. Without any pressure from the Government, planters were selling a high percentage of their produce at the Cochin auctions, and the Central Government did not feel it necessary to prescribe a quota for the Cochin market as it does for the Calcutta market. If the State Governments do not reduce their tax in response to the many representations which the producers and the trade have made, the Centre might prescribe an export quota for the Cochin market as well. During 1957, some 52.5 million lbs were sold through the auctions in Cochin, an increase of 1 million lbs over that of 1956, against an increase in the crop of some 17.6 million lbs.

TEA EXPORT DUTY UNCHANGED

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3.50 a lb against Rs. 3.24 a lb in force from 1st May, 1958. There is no change in the existing rate of duty of 38nP a lb.

COCHIN TEA SALES

At Sale No. 15, 1,069,000 lbs of tea were on offer. There was a good general demand for everything except for low mediums and medium fannings which were neglected. Low medium brokens were irregularly 5nP easier, mediums were firm and best liquoring grades were stronger and dearer.

Calcutta Markets

FAIR GENERAL DEMAND AT INTERNAL TEA SALE

FURTHER FALL IN PRICES

At Sale No. 48, held on 3rd June, a total of 21,214 chests of Dust was on offer. There was a fair general demand, although prices showed a further decline. Although black leafy grades met with competition and a few selected lines were firm and occasionally dearer, orthodox grades were generally up to 8nP easier. C.T.C. Assams were an irregular feature and were generally easier, prices for the best liquoring kinds being sometimes 20nP lower while the mediums and plainer kinds were 10nP easier. The grainy kinds, however, were in better demand and were occasionally dearer.

Quotations.

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.48 to 1.50	1.40 to 1.45
Medium Assam Grainy Dust	1.52	1.50 to 1.55
Medium Assam C.T.C. Dust	1.70 to 1.90	1.60 to 1.70
Best Assam C.T.C Dust	1.70 to 1.90	Not quotable

There was a total of 414 chests of Leaf on offer.

LINSEED BETTER

Better conditions prevailed during the past week, and some small transactions were recorded chiefly for ready and near futures. Arrivals were still very scarce and sellers were reserved, while crushers displayed a keen interest due to better enquiries for linseed oil. While fresh overseas business was at a standstill, local enquiries were fairly good, and activity, although small, was better. Latest quotations were as follows: Ready Rs. 22-4 a maund and June Rs. 22-4 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 27th May and 2nd June, 1958)

Cowhides: Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 12.50 to Rs. 21.

Goatskins: Wet salted (Patna, Daissee and Kustia) 37,450 pcs. on the basis of Rs. 325 to Rs. 340, Rs. 350 to Rs. 370 and Rs. 400 to Rs. 412.50; Wet salted (he-killed) on the basis of Rs. 4.12 and (she-killed) on the basis of Rs. 3.62 a piece; Assam-Dinajpur 350,000 pcs. on the basis of Rs. 335 to Rs. 365; Purneah-Kissenganj 7,000 pcs. on the basis of Rs. 360 to Rs. 370; Pakur-Patna 6,000 pcs. on the basis of Rs. 315 to Rs. 325; Muzafferpore-Patna 6,000 pcs. on the basis of Rs. 340 to Rs. 350.

Bazaar Stocks

(2nd June, 1958)

Cowhides: Wet salted 66,200 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia and Killed) 5,000 pcs.; Assam-Dinajpur 11,000 pcs.; Muzafferpore-Patna - Pakur-Purneah - Kissenganj 130,200 pcs.

SHELLAC STEADY

CALCUTTA GAS COMPANY (PROPRIETARY) LIMITED

NOTICE

NOTICE is hereby given that the Tenth Annual General Meeting of the Shareholders of Calcutta Gas Company (Proprietary) Limited will be held at the Registered Office of the Company, No 8, Dalhousie Square East, Calcutta on Friday the 27th June, 1958, at 4 P.M. to transact the following business :—

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1957 and the Directors' and Auditors' Reports thereon.
2. To consider the declaration of the Dividend as recommended by the Directors.
3. To elect Directors in place of those retiring by rotation.
4. To appoint Auditors and to fix their remuneration.
5. To elect a Director who retires under Section 260 of the Companies Act, 1956 and Clause 117 of the Articles of Association.
6. To consider and if thought fit to pass the following resolution as an Ordinary Resolution of which a special Notice as required under Section 281 of the Companies Act, 1956 has been received by the Company.

   "Resolved that pursuant to the provision of Section 281 and other applicable provisions (if any) of the Companies Act 1956 the appointment of Mr. R. K. Dhanuka, who has attained the age of 65 years be and is hereby approved as a Director of the Company and it is hereby specifically declared that the age limit of Directors prescribed under Section 280 of the said Act shall not apply to him."

7. Any other business that may be transacted at an Annual General Meeting.

The Share Transfer Registers of the Company will be closed from the 20th June, 1958 to 27th June, 1958 both days inclusive.

By Order of the Board,

For and on behalf of
CALCUTTA GAS COMPANY (PROPRIETARY) LIMITED,
SOORAJMULL NAGARMULL,
Secretaries.

8, Dalhousie Square East,
Calcutta-1.

Dated the 30th May, 1958.

NOTE:—(1) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) Warrants for the dividend when declared will be forwarded in accordance with registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

EXPLANATORY STATEMENTS AS REQUIRED UNDER SECTION 173 OF THE COMPANIES ACT, 1956

ITEM NO. 5:—The Board felt the necessity of the services of a Director to facilitate the business of the Company, as such, Mr. R. K. Kanoria, a businessman of wide experience, was appointed as a Director. He however retires in terms of the provisions of Section 260 of the Companies Act, 1956 and Clause 117 of the Articles of Association of the Company.

As it is in the interest of the Company that the Board should receive the benefit of his advice, it is desirable that he be appointed as a Director.

ITEM NO. 6:—In respect of item No. 6 of the Notice of the Annual General Meeting it is notified that Mr. R. K. Dhanuka has attained the age of 65 years and hence he cannot continue as a Director of the Company except by a resolution in respect of which special Notice has been given in accordance with the requirements of Section 190 and 281 of the Companies Act, 1956. The Company has received such a special Notice from some members notifying their intention to move the resolution as set out. Mr. R. K. Dhanuka joined the Board of Directors of the Company in 1947 (since inception).

He is a businessman of wide experience and during the long period of his association with the Company he has rendered valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be appointed as a Director.

PRESIDENCY JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Seventy-third Annual General Meeting of the Members of PRESIDENCY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 27th day of June, 1958, at 3 O'clock in the afternoon, for the following purposes :

1. To receive and consider the Profit and Loss Account for the thirteen months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint Directors in place of Mr. Alec A. Leslie and Mr. B. L. Bajoria, the Directors retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

   "That Mr. B L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider, and if thought fit, to pass the following resolution :

   "That Dr S. C. Law, who attained the age of sixty-five years in July, 1957, and who was, at a General Meeting held on the 21st May, 1957, appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation be and is hereby permitted to continue in office as such Director, and it is hereby declared in conformity with the provisions of Section 281 of the Companies Act, 1956, that the age limit prescribed by Section 280 of the Act shall not apply to him".

Special Notice of intention to propose the foregoing resolution has been received by the Company.

The Share Transfer Books of the Company will be closed from 13th to 27th June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 28th May, 1958.

NOTE :—Payment of the proposed dividend, if declared, will be made on or after 15th July, 1958, only to those members whose names are registered in the Books of the Company on 27th June, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Dr. S. C. Law, who has been a Director of the Company since 19th April, 1945, attained the age of sixty-five years in July, 1957. Unless, therefore, as provided by Section 281 of the Companies Act, 1956, a resolution is passed by the Company in general meeting approving his appointment and specifically declaring that the age limit prescribed in Section 280 shall not apply to him, he will be required to vacate his office at the conclusion of the forthcoming Annual General Meeting in terms of the provisions of the proviso to sub-section 2 of Section 280 of the Companies Act, 1956.

The resolution in item 5 of the above Notice, of which special notice of the intention to propose it has been received by the Company, is intended to satisfy the statutory requirements and will enable Dr. S. C. Law to continue in office as a Director of the Company after the conclusion of the forthcoming Annual General Meeting and to be reappointed as a Director of the Company at all material times in the future.

SHREE GOPAL PAPER MILLS LIMITED.

NOTICE.

NOTICE is hereby given that the next Annual General Meeting of the shareholders of the Company will be held at its Registered Office at 12, India Exchange Place, Calcutta, on 27th June, 1958, at 10-30 A.M. to transact the following business. Your presence in the meeting is requested.

AGENDA

1. To receive the Directors' Report and to pass the audited accounts of the Company for the year ended 31st December, 1957.
2. To declare dividends.
3. To elect Directors in place of these who retire :

   Seth B. P. Poddar and Seth R. K. Jaidka, Directors of the Company being longest in office retire by rotation and being eligible offer themselves for re-election.

   Dewan Anand Kumar who was co-opted on the Board of Directors of the Company on 30.5.58, also retire and is eligible for election.
4. To appoint Auditors and to fix their remuneration.

   The present Auditors, M/s. Price, Waterhouse, Peat & Co. retire and are eligible for re-appointment.
5. Special Business :—

   To consider and if thought fit to pass the following resolution with or without modification as Special Resolution :

   "That in connection with the arrangements for supply of coal to the Company by M/s. Karam Chand Thapar & Bros. (Coal Sales) Ltd. commission payable to M/s. Karam Chand Thapar & Bros. (Coal Sales) Ltd. for services, being arrangement for priority and allotment of wagons and supervision of loading and despatches be and is hereby increased from As. -/4/- to As. -/8/- per ton from 1st July, 1958.
6. To transact any other business that under the Articles may be transacted at the General Meeting.

NOTE: (i) The Share Transfer Books of the Company will be closed from the 17th June to 27th June, 1958, both days inclusive.

(ii) A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend and vote instead of himself.

By Order of the Board,
KARAM CHAND THAPAR & BROS. PRIVATE LTD.,
Managing Agents.

Calcutta, 2nd June, 1958

EXPLANATORY NOTE :

Resolution No. 5 :—

The arrangement for supply of coal by Karam Chand Thapar & Brothers (Coal Sales) Ltd. for a period of 5 years from 1st April, 1956 was approved by a Special Resolution of the Company at the Meeting held on 20th August, 1956. As. -/4/- per ton is payable to Karam Chand Tapar & Bros. (Coal Sales) Ltd. as remuneration for services beng arrangement of priorities and allotment of wagons and supervision of loading and despatches of coal. In view of increase in the volume of work and servicing expenses they have approached for increase of commission from As. -/4/- to As. -/8/- per ton. Your approval to this increase from 1st July, 1958 is sought.

THE EAGLE ROLLING MILLS LTD.

AT a meeting of the Directors of the Company held on 30th May, 1958, a Dividend at the rate of 7½ per cent. per annum was recommended to be paid for the year ended 31st December, 1957, without any deduction for Income Tax payable by the Company.

By Order of the Board,

BANKS

H indicates that Share capital is half paid. O., C. and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

NO SHORT-CUTS TO FOREIGN EXCHANGE

DRASTIC ADJUSTMENTS INEVITABLE

THE firm decisions about the foreign exchange crisis which are to be made on 25th June, will not come a moment too soon; they might, with advantage, have been considered earlier. The date has been chosen because Mr. Nehru will be back from his holiday, and his presence should at least ensure that whatever measures are taken will have the highest possible authority to back them. They are likely to need it. The Prime Minister and some of his colleagues may be inclined to take a more complacent view of the foreign exchange crisis than many under-informed leader-writers. But there is nothing in the figures for the foreign exchange drain to support any optimism yet. In fact, Mr. Micawber's formula for misery is being followed with remarkable energy where India's housekeeping is concerned. It is no longer simply a case of marginal adjustments. Unless American generosity can be summoned to the rescue immediately, far-reaching changes in the Indian economy will be inevitable. If the Government is ready for what Mr. Dulles, in a rare moment of lucidity, once called an "agonising reappraisal", then all to the good, although it is important that those who have placed the country in this position by their refusal to accept that development coats must be cut according to resources cloth. should realise the likely consequences of their stubbornness. A better course, given the position already arrived at, would be as stated in these columns a fortnight ago—that Mr. Morarji Desai should be buying his ticket for the United States; or what is more effective in loosening Washington's purse strings these days, should be planning a trip to Moscow. In the meantime, the feeling in New Delhi seems to be that an ingeniously devised patch here and there will keep the economy afloat. There might be some truth in this, although it is unlikely they would do so for long and in any case they could not keep it moving forward. The pattern of overspending appears now to be a permanent feature of the second five year plan. Such measures as export subsidies and the indiscriminate cutting of foreign exchange allocations seem unlikely to correct it.

Apart from increased foreign assistance, these two proposals are the only ones which have so far been seriously put forward to deal with the situation. It is important, therefore, that they be considered carefully and their possible consequences foreseen. It would be a pity if they were accepted as complete remedies for the situation by those whose Alice in Wonderland economics have brought it about, and who would now willingly do a great deal rather than face up to the consequences of their folly—the complete dependence for many years to come on the generosity of a foreign power. In the sleepy summer atmosphere of New Delhi, such half-measures may seem all that is needed to stop the rot. But here in Calcutta, where the results of Ministerial decisions are always felt and not simply heard of, the impression is rather that they are just about the quickest way of inviting complete disaster.

The proposal that no allocation of foreign exchange should be made for the period October-December is, of course, something which may have to be faced if there is none left at all. It would mean little short of catastrophe in this part of India, but that does not necessarily mean that it could be avoided. A large part of the inadequate employment available in these eastern regions is provided by the engineering industry, some of it directly, but a great deal more indirectly. It is, therefore, dependent upon imports of raw materials, machinery and spare parts. The principle that raw material supplies should be the first call on foreign exchange resources has already been affirmed in New Delhi, and Mr. Lal Bahadur Shastri reassured Allahabad industrialists on this point only a few days ago. But if foreign exchange allocations are to be stopped completely, the engineering industry, some miscellaneous industries and others dependent upon them, will be brought to a complete standstill. There is no need to outline in detail what this will mean to West Bengal. The law and order situation in this State is at best precarious, and varies directly with the degree of unemployment. The result of putting many thousands more workers out of their jobs for an indefinite period would, to put it euphemistically, be serious. Already many engineering firms are living from hand to mouth, and some may be forced into short time working soon. It will not be possible for them to continue paying wages to their labour if they have to close down. Whether New Delhi realises the fact or not, such an eventuality is likely to have far-reaching political consequences here, and they might not be particularly favourable elsewhere.

The financial loss which the engineering industry would suffer from having its production interfered with, would quite likely put many of the less firmly established firms out of business altogether; overheads cannot be adjusted with the same ease as direct labour costs. Skilled workers might be permanently lost to the industry; certainly the disorganisation would damage the morale of both employees and management. The impact on other industries is difficult to predict accurately. But the situation could well arise where a large portion of, say, a jute mill would have to be closed down and the workers laid off because components for certain machines were not available from local manufacturers. Enough has already been said to establish the point that the disarmingly simple-sounding expedient of stopping all foreign exchange allocations for a certain period, or spreading an allocation already made over a longer time, is, in fact, no simple solution at all. It is more likely to lead to chaos. It might be better to decide the long-run figure of foreign exchange to be allowed the engineering industry for its imports within the limits of what is strictly practicable. It would then be possible for the industry to adjust itself to its allocation, however painful that might be, and plan its production accordingly. Modern industry is not something which can be interfered with every time the slightest difficulty arises. It is a closely integrated machine in itself, and the removal of a single cog is quite capable of bringing the whole thing to a standstill.

Another device which is at present being canvassed as a possible remedy is export subsidy. No doubt something of this kind, designed to maintain an artificially low price for imports, will eventually have to be introduced as a substitute for the devaluation of the rupee. But it has its dangers if pursued too openly, as any student of the economic history of modern Japan will readily confirm. There are a number of ways the object can be achieved without making the circumstances too obvious. One of them is by permitting export industries to pay less than their share of the community's general tax and welfare burdens—in the case of the tea industry, it might be sufficient if it were allowed to get off with no more than its share. Perhaps some recommendation of this kind will emerge from the coming investigation into the plight of the cotton textile industry. It is not an attractive expedient, but it has the advantages that it is widely practised in other countries, it does not so readily invite international retaliation and it spreads the burden between the Government, the consumer and the worker. It does not fit into the socialistic pattern of society, but these are hard times, and anyway, it is chiefly the eagerness for socialism which is responsible for the fact that India's exports are rapidly pricing themselves out of world markets. In no case is there any scope for the policy suggested some time ago by Mr. Morarji Desai—that exporters themselves should subsidise their own products; the Government has taken from them in taxation any resources which might have been available for doing that. There are a number of other export "incentives" which could be usefully introduced; most of them will be found in the report of the Export Promotion Committee. A point that needs to be established with some firmness is that it is not worth India's while to introduce any of the trading practices which earned for Japan such a bad name in pre-war years and which she has not yet entirely grown out of. They might produce immediately beneficial results so far as earnings are concerned. But the long-run consequences will be both expensive and damaging. India's need may be great, but other nations are unlikely to accept that as an excuse for "unfair" practices; and once a nation has earned itself a bad name for trading it can take generations to live it down.

It should become amply clear in the course of the discussions to be held on 25th June, that the foreign exchange situation is unlikely to respond to mere palliatives. Massive and continual foreign aid is the only alternative to the complete reorganisation of an economic growth structure which is soaking up foreign exchange like a sponge. Such a reorganisation will be far from painless, and may now, in fact be politically impossible. Nevertheless, it might have to be attempted, unless American generosity is rapidly forthcoming. The worst alternative would be a series of half-hearted indiscriminate measures designed to postpone the making of larger and more difficult decisions and succeeding only in reducing the economy to protracted chaos.

POPULATION PROBLEMS IN CHINA

ONE department of planning in which one would like to see keener competition between India and China is population control. Both countries, after initial hesitation, are now committed to energetic measures to reduce the birth rate, but China has much more precise targets and seems to be bringing greater determination to bear. After weighing up all the relevant factors—family and marriage habits, moral prejudices, medical and hospital equipment, social and economic conditions—Peking has adopted the objective of a 50 percent reduction in the birth rate in ten years. This would constitute a reduction never equalled in any country of the world—the decline in the Japanese birth rate from 34 a thousand in 1947 to 18 a thousand in 1957 was only achieved starting from the abnormally high post-war figure caused by the return of troops long absent during the war. But Peking is confident that it can be done. It would be ironical if unprecedented success in this field were to be achieved by a regime that until the other day was denying that the population problem existed anywhere outside the capitalist world.

The Chinese birth rate is at present between 43 and 45 a thousand, which is the classic figure for undeveloped countries. Deducting a mortality rate of 22 a thousand, we get a rate of annual increase in the population of 2.5 percent. This latter figure is not frightening in itself, and is in fact exceeded in countries such as Mexico, Brazil, Turkey and the Philippines. But the percentage has to be reckoned on the already immense Chinese population, which at the beginning of this year was reliably estimated at 640-645 millions, or about one-quarter of the whole world's inhabitants. Unchecked, the present birth rate would produce a population of 930 millions in 15 years, and within 50 years China would have a population of 2,600 millions, a figure equal to the total world population of a few years ago. Small wonder that the Chinese Communists have sacrificed Marxist orthodoxy before this terrifying problem.

The measures Peking is taking to attain its target can usefully be compared with those adopted (or neglected) in India. The three main ones are abortion, contraception and a raising of the marriage age. The latter naturally caused lively dispute in a country where, as in India, the custom is to marry young. It has been raised by law to 20 years for a man and 18 years for a girl, and what is more these limits are enforced. One has difficulty in imagining a similar law (and even more, a similar enforcement) in this country, and yet Peking sees this as essential. Moreover, the minimum marriage age will be raised further, the Chinese Government says, as the study period is lengthened and as professional training is more widely offered in the towns to young men and women. The law on abortion and sterilisation had already been liberalised in 1956 in favour of women over 30, sick, poor, mothers of four children or engaged in studies; since last year this law has been further loosened and now names only those cases where abortion is *not* permissible.

But it is on contraception that most emphasis is placed, and action is combined with a very vigorous programme of publicity and propaganda—to a degree that would perhaps shock some Indian opinion, at least at first and as long as the gravity of the problem is not widely understood. Contraceptives were last year distributed to 25 million Chinese *ménages*, out of the total of 100 million *ménages* under the age of 45. The materials distributed were 80 percent sheaths, 10 percent spermicidal jellies, 5 percent suppositories, 3 percent diaphragm caps and 2 percent other devices or preparations.

What results may be hoped for from this campaign? Starting with a population of 645 millions at the beginning of this year and a growth rate of 2.5 percent, China would have by 1967 a population of 822 millions—at least, for the death rate is falling too. On the other hand, if the authorities achieve their target of a halving of the birth rate (that is, from 45 to 22 a thousand), even if the death rate falls from 20 to 15 a thousand, the growth rate would decline from 2.5 percent to 0.7 percent, a figure equal to that of certain European countries. The Chinese population would still rise by 1967 to 745 millions, which will give the planners of agricultural and industrial production quite enough to worry about. We are not among those who assume that the mere enunciation of a plan by Communist authorities is as good as its fulfilment; it remains to be shown that the Chinese Government can attain this formidable objective. But one would feel more confident about India's progress in this field if plans, calculations and forecasts of a similar exactitude were available for this country.

DEFECTIVE POLICIES FOR FIGHTING INFLATION

THERE are various opinions on economic policy, but most economists and bankers and industrialists agree that the results of the policies followed in free economies throughout the world during the last year or two are unsatisfactory. The salient facts are that economic activity has been erratic and that prices have continued to rise. If inflation has been halted its effects persist; and if the monetary authorities go on trying to correct them by orthodox means, the result may be a low level of business at a high level of prices. The United Nations Economic and Social Council decided that the *World Economic Survey, 1957*, published this June, should concern itself with inflation in the 1950s. The U.N. experts' investigations suggested that the character of the inflation had not been properly understood, and that the treatment of it had not always been appropriate. At the same time, the *London and Cambridge Economic Bulletin* published a critical survey by Professor E. A. G. Robinson of current economic policies in Britain, suggesting likewise that they were not properly adapted to the problems.

The basic criticism in the U.N. report is that the inflation of recent years has been treated as a general problem, whereas it was in fact a specific problem of excess demand for durable goods. Over a wide range of industry, agriculture and mining, there has been no pressure of unsatisfied demand; yet policies against inflation have been applied in most countries indiscriminately. According to theory, resources should move from activities where demand is slack to activities where demand is taut; but this movement—though to some extent, of course, it has occurred—is impeded by the rigidity of wages and prices in modern economies, and by the physical and social difficulties of transferring labour. We have been misled, the U.N. investigators suggest, by "the illusion" that "if prices are rising throughout the whole economy, the economy as a whole must be experiencing an excess of aggregate demand"; so we have overlooked the danger that in attacking the rise in prices we may be forcing an already weakened economy into recession.

A similar theme occurs in Professor Robinson's analysis. Having pointed out that the restrictions of the past two years were not effective until they were assisted by a fall in import prices, he continues: "Any overload of the economy would seem to have been effectively removed before the end of 1957. If a continuation of restrictions of this severity proves to be the necessary condition of price stability, it will become necessary to ask whether the cost is greater than Britain can afford to pay, or whether the same results can be better achieved by some alternative means." A thought that worries the professor, and many people in the world of business, is that a recession as it deepens becomes more difficult to reverse. So counter-measures must be prompt. But the American authorities have been vacillating between the fight against rising prices and the fight against recession, and the British authorities have been waiting and watching for "the right moment" to apply "a policy of re-expansion".

It seems to be blandly assumed that "re-expansion" is a simple act of policy. While Professor Robinson's arguments were being studied, the British Chancellor of the Exchequer, Mr. Heathcoat Amory, was telling the Association of British Chambers of Commerce that the present question was: "Have we yet reached a position where production can safely be encouraged to expand without generating pressure leading to renewed inflation and higher prices?" Whatever the answer (which was not forthcoming), the Chancellor specified that at the appropriate time industrial investment would be high on the list of priorities. But Professor Robinson had already pointed out that total fixed investment by manufacturing industries in Britain was in the fourth quarter of 1957 considerably below the average of the year as a whole, and that the decline was clearly in progress before the anti-inflation measures were strengthened (late in the third quarter). "This fact may well affect one's judgment of how easy it may be to reverse the recent trends by mere relaxation of some of the anti-inflationary measures, when the time for that is considered ripe." Only the planned investment of the nationalised industries and of the national and local authorities can assuredly be increased by a change of policy. Regardless of policy, many private industries will be unwilling to expand unless they can foresee an increase in demand for their products. In the United States, it is the curtailment of investment plans that raises most doubt whether the recession can be quickly reversed.

The truth is that Britain's restraints on inflation are already partly superfluous, because there is not enough inflation to restrain. The restraints themselves have failed to prevent prices and wages from rising, and in so far as they have curtailed production, they have restricted the supply of goods that could absorb available money. But to withdraw the restraints and apply some stimulants (that might or might not be effective) would imply an independent policy that could be dangerous to sterling. It is doubtful if restraints at home can promote exports when there is already surplus productive capacity (which means that some resources are being inefficiently used) and when overseas demands rather than available supplies govern trade; but "re-expansion" could, perhaps, swell imports appreciably, especially by increasing purchases for stockbuilding. Co-ordinated "re-expansion" in the whole sterling area (that might be discussed at the Montreal conference in September) could be even more dangerous, because most or all sterling countries might increase their imports from non-sterling sources. What is needed at this stage is co-ordinated action on a world-wide scale to turn world trade on to an upward course. But some country must take the initiative, and Britain's policy might well be more dynamic than it has been in this crucial year.

FOREIGN CREDIT FOR THE PRIVATE SECTOR

AS the Reserve Bank's study of India's balance of payments position for the final quarter of last year shows, capital goods imports for private industry were markedly down during the period, while those for its public counterpart were considerably higher. This is very likely to be the order of things for a long time to come, since the state of the country's foreign exchange reserve has been moving from bad to worse. The private sector, under the circumstances, has to fend for itself if its production capacity is to be maintained intact, and reasonable expansion, where possible or permissible, is to be undertaken. A scheme for the import of capital goods by the private sector on deferred payment terms was initiated some time ago, but later the facilities under it were restricted. Yet that scheme, however circumscribed, seems to be the only way in which the private sector can hope to import capital goods from now on.

The Federation of Indian Chambers of Commerce and Industry has just brought out a brochure to inform business men "of the various institutions and facilities that are available for obtaining foreign exchange and credit to finance their import of capital goods." It is entitled *Foreign Credit and Exchange for the Private Sector—A Survey*, and can be obtained from the office of the Federation on payment of Rs. 2-8. The brochure lists the foreign agencies which may be approached for credit. They are the World Bank, the International Finance Corporation, the U.S. Export-Import Bank and the U.S. Development Loan Fund, all in the United States; the Japanese Export-Import Bank in Tokyo; the Commonwealth Development Finance Company in London; and the Indian institutions of the Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India. The orochure explains the origin and the purpose of each of these institutions, the manner of their operations, the scope for obtaining credit from them, as well as the cost of the loans from each different source. There is also another country from which credit can be obtained, and that is France—not West Germany. The Government of India has an "economic and technical co-operation" agreement with that country under which credit facilities are available to private parties against specific projects.

It needs to be pointed out that the Government's tacit or express approval is necessary for all arrangements under the deferred payment scheme. Private parties can "undertake negotiations with foreign firms in different countries for securing credit terms" only subject to certain conditions or against schemes sanctioned by the Government under the Industries (Development and Regulation) Act. 1951. The terms of foreign collaboration "are required to be settled to the satisfaction of the Government" also. There is exemption from income tax on interest earned by

the foreign financier on the loans granted by him, but this concession will only apply if the terms of repayment have been approved by the Government and the rate of interest is considered reasonable in relation to the Bank rate prevailing in the country concerned. It should however be said in favour of this policy that Government control is necessary in view of the country's present balance of payments circumstances, and the criterion for qualifying under the scheme has naturally to be the foreign exchange saving or earning potential of the projects concerned.

Current News and Comment

British Insulated Callenders

In his statement to shareholders circulated for the coming annual general meeting of British Insulated Callender's Cables Ltd., Mr. W. H. McFadzean, chairman and managing director, explains the circumstances leading to the fall in the concern's trading profits. (A fuller version of his speech appears elsewhere in this issue of *Capital*). There has been no decrease in overall activity; the lower working results were due to a combination of several adverse factors such as: (1) a fall in profit rates; (2) the dislocation caused by the major re-planning and re-equipment schemes and (3) the effect of the falls in the prices of the concern's principal raw materials, especially copper. The company's worldwide organisation trades with some 130 countries, yet it is necessary to open all possible new markets since so many countries now restrict imports because of foreign exchange scarcity or to aid the development of local manufacture, Mr. McFadzean says.

The development of local manufacture is, of course, not a new problem, he continues. "Where it seems inevitable or justified, our policy for many years has been to enter into partnership with the nationals concerned. It invariably means a loss of the export of some products from the U.K., but this is gradually compensated by the export of more technical goods as the country develops and by the fees received for technical services in addition to the expected return on shareholding." Mr. McFadzean dealt at length with the company's overseas investments in his last year's statement, so this year he has chosen to confine himself to some recent developments only. These relate to the manufacture of power and telephone cables in Portugal in collaboration with a local concern, the production of an important range of cables in Venezuela by a subsidiary concern which is collaborating with the General Cable Corporation of the United States and C.E.A.T. of Italy, and the acquisition of a controlling interest in Rhodesian Cables Ltd. which it is proposed to develop further with the company's technique and co-operation. Mr. McFadzean refers to the subsidiary concern of Phillips Electrical Company Ltd. in Canada as the only exception which did not operate profitably during the past trading year. The severe trade recession in the United States was a major cause of this. Discussing the short-term prospects for the organisation, the chairman says that "if there is going to be any severe recession in the volume of world trade, we, like any other international concern, cannot escape the adverse effect of that." But he appears to have every confidence in the medium and long-term prospects.

State Finance Corporation

The amount of loans sanctioned by the West Bengal Financial Corporation has declined from Rs. 71,65,000 in 1956-57 to Rs. 58,50,000 in 1957-58. The amount of loans applied for has also decreased, and this reflects the prevailing unfavourable investment climate. The latter has been attributed to high taxation, uncertain business prospects, difficulty in obtaining foreign exchange and import restrictions, etcetera. The enhancement of the Corporation's lending rate from 6 percent to 7 percent per annum, commensurate with the cost of interest for funds which it has been obliged to raise by borrowing in the market, is another factor responsible for the decline of better-class applications for loans. The resources of the Corporation have been increased by issuing 4½ percent ten-year bonds of the face value of Rs. 50 lakhs issued at a discount of 1 percent repayable at par. The bonds have been fully subscribed, but only with the specific support of the Life Insurance Corporation, the State Bank of India and the Reserve Bank, who were the largest subscribers. Speaking at the annual general meeting of the West Bengal Financial Corporation, Mr. B. M. Birla, chairman, said that there has been a considerable deterioration in the sphere of entrepreneurial investments. The low purchasing power of the people and the consequent curtailment in the demand for consumer goods is putting a brake on industrial development. It is paradoxical that in spite of an increase in the note issue, the purchasing power of the people in the cities has not improved. There is very little surplus money to invest in industries, and the capacity to purchase consumer goods is not expanding. "Both in the urban and the rural areas, the standard of living of the large mass of the population is, because of their impoverished condition, below the subsistence level." If savings tend to decline rather than grow, the effect on industrial enterprises cannot but be adverse. It is necessary, therefore, to ensure that with the progress of industrialisation, the products of industry are consumed. Otherwise, it will be useless to go on increasing production.

Re-finance Corporation

The Re-finance Corporation for Industry (Private) Limited has been formed with an authorised capital of Rs. 25 crores. It will have an initial issued capital of Rs. 12.5 crores contributed jointly by the Reserve Bank of India, the Life Insurance Corporation and the 15 participating Indian and British banks. The Corporation will have an additional sum of Rs. 26 crores at its disposal under the Agricultural Commodities Agreement between the Governments of India and the United States, which has stipulated that this sum from the counter-part funds will be reserved for lending to Indian private ventures. The Government of India will now make it available to the Corporation as and when the need arises on an interest-bearing basis. The Corporation will lend sums not exceeding Rs. 50 lakhs in any one case, and the loan period will not be less than three years and not more than seven years. Loan facilities will be available only to industrial concerns whose paid-up capital and reserves, excluding reserves for the payment of taxes and normal depreciation reserves, do not exceed Rs. 2.5 crores. Loans must be for the purpose of increased production in industries included in the second five year and subsequent plans. The board of directors of the Corporation will consist of seven members: the Governor of the Reserve Bank of India (chairman), a Deputy Governor of the Reserve Bank, the chairman of the State Bank of India, the chairman of the Life Insurance Corporation, and three members of the participating banks. These are the State Bank of India, the Central Bank of India, the Punjab National Bank, the Bank of Baroda, National Overseas and Grindlays Bank, the United Commercial Bank, Lloyds Bank, the Allahabad Bank, Chartered Bank, the United Bank of India, Mercantile Bank, Devkaran Nanjee Banking Company and the State Bank of Hyderabad.

Alembic Chemicals Expand

The Alembic Chemical Works of Baroda are to extend their activities by the installation of a penicillin producing plant. Orders for the necessary equipment have already been placed and the building for housing the plant is now under construction. Production is expected to begin some time next year. The directors have decided to issue a further 23,000 ordinary shares of Rs. 100 each to help finance the new project. Meanwhile, last year was an extremely successful one for Alembic Chemicals. Sales increased to Rs. 1.92 crores from Rs. 1.38 crores in the previous year. Correspondingly, the gross profit, after allowing for managing agents' commission, increased from Rs 15.14 lakhs to Rs. 25 lakhs. The dividend has also risen from Rs. 10 to Rs. 12 for each ordinary share. At the end of last year, the company's paid-up capital stood at Rs. 56.27 lakhs, of which Rs. 41.27 lakhs was in 41,277 ordinary shares of Rs. 100 each and Rs. 15 lakhs in preference shares. Alembic Glass Industries, too, showed progress at the end of last year. Sales amounted to Rs. 96.10 lakhs, against Rs. 65.27 lakhs in the preceding year. The gross profit of the concern, after allowing for the managing agents' commission, rose from Rs. 9.08 lakhs to Rs. 23.27 lakhs. The directors have transferred Rs. 8.50 lakhs to the general reserve.

U.S. Recession Rolls Along

The business reports in May have included signs of betterment, which have improved business sentiment although they supply no proof that a real turning point in the recession has been reached, says the latest monthly letter of the First National City Bank of New York. For some time business observers have been talking about a "bottoming out" of the decline, and the first substantial grounds for believing that this is happening now seem to be appearing. In April the seasonally adjusted rates of retail sales, housing starts, and personal income recovered moderately from their first quarter lows. In May insured unemployment has declined and a contra-seasonal upturn in steel output, together with an increase in motor-vehicle production, may have been sufficient to arrest the drop in the index of industrial output. The flow of new orders to manufacturers in April remained above the February low, although it was down somewhat from March, when heavy defence ordering boosted the total. Shipments showed little change in April, but liquidation of factory stocks—primarily in durable goods industries—continued at the same rapid rate as in the first quarter. As a result, the ratio of stocks to sales declined in April for the first time since the recession started, indicating the progress being made in bringing stocks more nearly into line with the current business volume. By April, the Federal Reserve index of industrial production (seasonally adjusted, 1947-49=100) had dropped eight months in a row, and at 126, was 20 points, or 14 percent, below its February 1957 peak. Steel production in May averaged 11 percent above April, and operations which had fallen as low as 47.1 percent of capacity at the end of April were scheduled at 56.5 percent in the last week of May, the highest rate since mid-January. Passenger car output is estimated to have risen 7 percent in May over April, and is scheduled to continue at approximately the May rate during June. Other fragmentary statistics point to a reduced rate of decline in overall production in May and June, if not a sidewise movement.

It would be wrong to place too much emphasis on May-June developments. The rise in steel output represents in part the replenishment of skimpy inventories by steel users who anticipate a rise in steel prices about 1st July, when automatic wage increases for steel workers go into effect. After that date, demand may lapse again as these anticipatory inventories are used up. Motor-car manufacturers are already planning lengthy shutdowns during the summer to bring dealers' stocks of new cars down to reasonable proportions before the introduction dates for new models—reportedly much earlier this year than last. As in other slack years, the summer will provide many industries with the opportunity for extending the usual vacation shutdowns an extra week or two for inventory adjustment, repairs, or other purposes. Between the summer lay-offs and the normal seasonal expansion of the labour force, unemployment is likely to be large throughout the summer. The Secretary of Labour estimates that unemployment may rise to more than 6 million in June, in spite of a sizeable seasonal rise in employment. Over 2 million new workers will be entering the labour force at the end of the school year, and this time a large proportion of them will fail to find jobs.

Business expenditures on new plant and equipment must be expected to slacken further. Business investment plans indicate a continued decline into 1959, as old projects are finished up, but new capital programmes in all too many cases are being shelved until the economic climate is more favourable. So far the overall decline in consumer income has been relatively slight—1.3 percent from the August 1957 peak through April 1958—but uneven in its impact. The wonder is that heavy and prolonged unemployment has not affected buying more than it has. Consumers' expenditures in the first quarter of 1958 were at a seasonally adjusted annual rate of $281.2 billion, less than 1 percent lower than the $283.6 billion rate at the third quarter peak and up from $286.7 billion in the first quarter of 1957. Even more remarkable is the fact that consumer cash outlays have risen steadily in spite of the recession. Total cash outlays are equivalent to total personal consumption expenditures less net extensions of consumer credit. Since the third quarter of 1957, consumers have stepped up their cash outlays moderately in spite of a decline in disposable income. The net repayment of consumer debt in the first quarter has also been accompanied by an increase in liquid savings.

Employees State Insurance

The Employees State Insurance scheme has been introduced in India as an economically necessary social service The inspiration for it came from similar legislation in the advanced countries of the west, particularly the U.K. The postwar social and economic forces in India added urgency to the issue, and the scheme was brought into force as soon as it became practicable. The 1956-57 annual report of the Employees State Insurance Corporation, reviewing the progress of the scheme, shows that at the end of the year 1957, it covered 1,122,500 employees. It is now operating in 42 regions in the States of Delhi, Uttar Pradesh, Punjab, Madhya Pradesh, Bombay, West Bengal and Kerala. At the end of 1957, arrangements were in progress for the extension of the scheme to Patna, Katihar, Monghyr and Samastipur in Bihar State, Jabalpur in Madhya Pradesh and Beawar in Rajasthan.

One of the principal worries of enforcing the scheme was the administrative cost. According to the report, the ratio of administrative cost to total

SJ. N. BANERJEE, M.A., General Manager.

expenditure dropped from 24.71 percent to 17.55 percent. The cost was as high as 75 percent in 1952-53, 50 percent in 1953-54, 52 percent in 1954-55 and 24.71 percent in 1955-56. The ratio of the administrative cost to contribution-income also came down from 9.6 percent in 1955-56 to 8.7 percent in 1956-57. The main benefit of the scheme is medical care, apart from cash benefits payable in the event of employment injuries, sickness and maternity. In-patient treatment has been included in the scheme. Thus two beds for 1,000 employees are now reserved in existing Government and private hospitals. The Corporation has plans to build annexes to existing hospitals or separate hospitals in areas where the number of beds required exceeds 100. The arrangement with the private medical practitioners has been based on a panel system devised by individual agreements with them. They will be paid a capitalisation fee per insured person. The system is at present working in some principal cities. In other areas, the Corporation has full-time service personel. According to preliminary figures, 2,111,370 new and 6,472,627 old cases were treated during the year at the various State insurance dispensaries and the clinics of panel practitioners, against 1,545, 794 and 4,988,011, respectively, in 1955-56. Some 18,383 and 167,231 cases were referred for admission to hospitals and for specialist investigation, against 14,477 and 136,951, respectively, in the previous year.

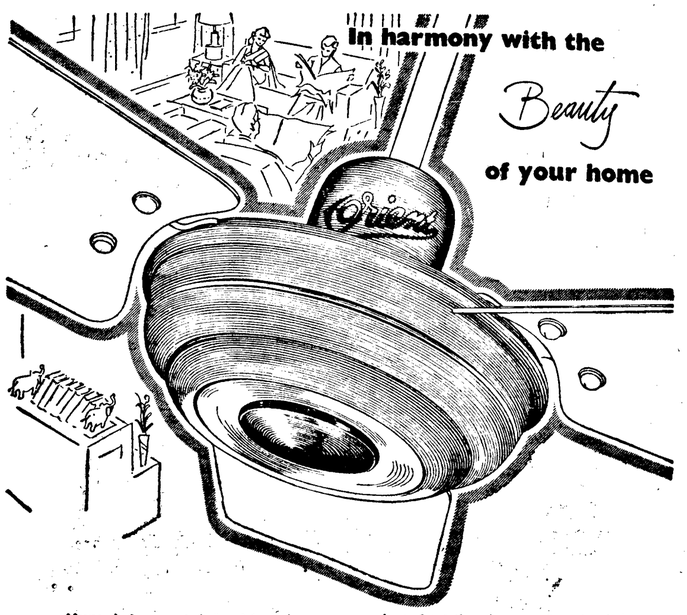
Employers' and employees' contribution formed the main source of the Corporation's income. During the year, the income from the employees' contributions was Rs. 3.22 crores, and that from the employers special contribution Rs. 2.59 crores, compared with Rs. 2.39 crores and Rs. 1.87 crores, respectively, in the previous year. The total income of the Corporation from these two sources thus came to Rs. 5.81 crores in 1956-57, compared with Rs. 4.26 crores in 1955-56. The Central Government has taken note of the fact that the income from the employees' contribution exceeded that from the employers by a substantial margin. With a view to remedying this disparity, the Government, it has been announced, intends to revise the rates of the latter's contributions. It will, however, be unfair to demand a contribution from employers in areas to which the scheme at the moment does not apply.

Power Supply in Southern States

The Southern Zonal Council meeting, held recently in Ootacamund, has raised hopes of an early arrangement for the use of Kerala rivers for the benefit of Madras. A common power grid may also be developed. The inception of several power schemes in Kerala has made such an approach to power supply necessary. The increase in electricty rates in Mysore as well as in Andhra in recent years is mainly to obtain a better return on the capital invested. The Governments are not content with 4 percent as before the war, but want 7 percent on their generation and distribution of power. The rise in costs is one reason. Another is the constantly growing demand from outside these States. A common grid may help to produce a permanent demand for power from Kerala from the proposed Neyveli thermal station, while power cuts in summer have forced Madras to look for supplies from the adjacent States. Madras, like Mysore, has been working hydro-electric schemes over the past 30 years, and has built up large depreciation funds and reserves for further investment. Andhra, with its larger coal output from Singareni, is no longer at a disadvantage. Besides, it can obtain electricity from the Machkund and Tungabhadra schemes. The take-over of private companies in Nellore, Guntur and other towns has facilitated the extension of Machkund power to the Circars over the last five years. Nationalisation in Andhra has proceeded at the same pace as in Madras.

Food Supply in Madras

In an official appraisal of the improvement in food supply in Madras over the past decade, the fact has been brought out that while rice output has increased, millet production has remained more or less the same. This is due to the local population's preference for rice. The State, unlike West Bengal, now has no serious food problem. The deficit area of Malabar has been transferred. Only the Nilgiris remain a deficit zone. Madras city imports rice from Andha to export it to Kerala. The extension of cultivation due to irrigation is among the factors contributing to increased supply, but the more important is double-cropping which is now generally practised. The area described as waste is small, and only in hilly regions is there some uncultivable land. The present increase in exports to Kerala from 112,000 tons to 231,000 tons is due to the enterprise of Kerala buyers who come with cash and take away rice from milling centres in several districts. Inter-State traffic has now increased the arrivals of bananas from Kerala. Higher prices in the surplus districts in Madras noted since 1952 are explained by the fact that unrestricted export of rice is allowed across the border.



Better Outlook for Castor Exports

The oilseeds trade in Bombay is agitating for the complete removal of the export duty on castor oil. It bases its plea on the fact that exports up to the end of May amounted to 5,653 tons, against 6,500 tons by the end of February last year. On the other hand, the castor crop for this year is estimated at around 90,000 to 95,000 tons, against 135,000 tons in the previous season. Since domestic consumption has also increased, the exportable surplus this season will be comparatively small. Brazil has ceased to be a seller for the present and her new crop will not be marketed until October this year. It would, therefore, seem that the prospects for Indian exports are bright even without the export duty being removed. The somewhat tight position in world markets is shown by the fact that the London quotation has risen by £2 to about £112 to £113. India sold recently some 500 tons to British purchasers and to the Continent at £112 10s for Commercial and at £119 to £120 for the B.S.S. quality, both in bulk. It is also reported that the Government of India is considering the export of 15,000 tons of groundnut oil to Burma in exchange for rice. Burma seems to be the only outlet at present for Indian oil because the Nigerian product is available in the U.K. and Continental markets at around £99 a ton in bulk, whereas the Indian price works out to £130 c.i.f. British ports. But if Burma were to import Nigerian oil from other sources, it would cost her about the same as Indian oil because of freight and other charges. Also Burma would prefer a barter or a rupee deal to spending sterling. Last week, India sold about 650 tons of linseed oil to Australia at around £113 to £114 a ton.

Safety in Collieries

Safety in collieries is to be the subject of prolonged investigation by the Government following the recent disasters. A steering group has been appointed to conduct the enquiry. It is possible that these major accidents, due to their sensational impact on the public mind, might prompt the group to concentrate most of its attention on them, and neglect others which do not arise due to mechanical failures, but to the human element. An analysis of accidents in collieries, made by the Indian Mining Association in a memorandum which it has submitted to the steering group, shows that the fatalities due to major disasters account for only 10 percent of the total number of deaths, the remaining 90 percent being on account of the human element. This latter is a more serious problem and needs to be tackled urgently by better education, training and discipline among the miners, it says. Another gratifying fact which the memorandum points out is that the rate of colliery accidents in India is the lowest in the world. The *I.L.O. Year Book* of 1954 testifies to it. The Indian rate declined from 0.72 in 1950 to 0.51 in 1957, compared with 0.83 and 0.68 in the U.K. In Japan there was an increase from 1.86 in 1950 to 1.91 in 1955. The improvement in India is further substantiated by the fact that the all-India death rate for each million tons of raised coal declined from 9.3 in 1951 to 8.1 in 1955.

Thus the working conditions in the collieries have been relatively satisfactory, and the industry is anxious further to improve safety. But it will be actually hindered rather than helped in this task if more legislation is enacted. There are now in force some 3,092 regulations involving the maintenance of numerous statutory books and forms. These are already exhaustive and any further enactments will add enormously to the paper work of the managements. As it is, compliance with the existing rules has become a big problem, and some of them are not even immediately enforceable due to the lack of materials, euqipment and also trained personnel. Certain items of materials and equipment can only be obtained from abroad, and the current import restrictions seriously interfere with their supplies. Others, which are made in this country, are in short supply, and considerable time is usually involved in obtaining them. The Association urges the Government to take measures for facilitating a reasonably prompt supply of the necessary materials and equipment from indigenous as well as foreign sources.

Never before were industrial designers so conscious about the elegance of products as is evinced in the new design of Orient Fans.

Orient's designers bring home the kind of beautiful fan you would want to harmonise with the decor of your room. Graceful lines, sleek contours of the casing and beautiful everlasting pearly stove enamelled finish. All this makes Orient Fan a piece of sculptured beauty for every home. A thing of joy. A technical masterpiece !

CORRESPONDENCE

PRINCE PHILIP'S VISIT

• (To The Editor of "Capital")

Sir,

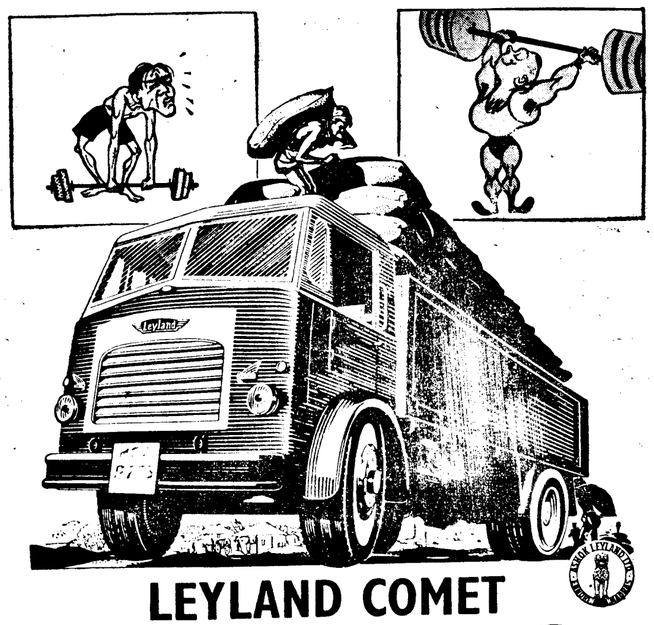
I read with considerable interest the note on Prince Philip in your issue of the 22nd instant in "A Ditcher's Diary". If India extends an invitation to Prince Philip to attend the Indian Science Congress it will be a right step and this country will certainly give him a rousing welcome. But I can hardly agree with you when you say: "A visit from Philip may not be intended as a prelude to one from the Queen". Whether it may be taken as a prelude or otherwise, I see no reason why the Queen of England should not be invited to India, when almost all the heads of so many nations have been to India and been received with a warm welcome and in the traditional Indian way. I also disagree with you when you say: "Philip is known to be one of those who had been urging the Queen to become more Commonwealth-minded. That is not as easy as it sounds, at least where the Asian and African members are concerned. Old associations are not all that easily forgotten" Whatever old associations may have been with Asian and African members, India has forgotten the past, the days of the British regime, and ever since she gained independence, the tie between India and Britain has become stronger. Yes, India readily censured Britain for her action in the Suez affair and Britain too has pointed out a few things which she felt India should not have said, nor done. That happens all over the world and that spells true democratic ways. I do not think there was any need for you to have mentioned the visit of Messrs Bulganin and Khrushchev and say that popular taste still favours such political carnivals. This was not a healthy remark and had no reference to the subject in question. When the Russian dignitaries arrived in our country, India had just then begun to receive such distinguished foreign visitors, and then that was a time when the Russian leaders were on the top of the wave of popularity in Asian countries. But I once again say that the Russian visit has no bearing on how the people of this great country will receive the Queen of England if she ever arrives here. Her Constitutional Monarchy has little to do with her reception in India. The good people of India have been known for ages for their great hospitality and when the guest happens to be so distinguished, the reception will be equally great and befitting. I am sure you do know India and its fame for her hospitality. The ancient tradition will never die that fast, and with Mr. Nehru as our Prime Minister, India will continue to stand as the Mecca of international friendship and concord.

Yours, etc.,

DORAB R. BANAJI.

Bombay, 31st May, 1958.

RAILWAY ACROSS BORDERS



THE possibility of the extension of our Indian Railway system to Colombo and an overland route to India are being keenly discussed. These are, however, no new questions of the day, brought on by the recent doings of Russia in the Asiatic continent; since, so far back as 1877, the question of the extension of the South Indian line to Colombo through the Travancore State was mooted, and had to be abandoned in consequence of the quicksands said to prevail in the Straits between the mainland and the island. Again, we have the proposed linking of the India and Burma systems; and the most recent of trans-Asiatic constructions under contemplation has been the overland route to India; but no definite decision has been arrived at, because opinions are divided as to whether the line will prove a paying concern or not. The question of its proving a paying concern depends on whether the line is to be constructed and controlled by a company or by the State exclusively. Railways, more or less taken in hand by the State, are constructed to serve a political purpose, not irrespective of the fact, however, that in order to serve that purpose they should likewise prove self-supporting; whereas under the control of a company the interests of commerce will first be studied, side by side with the question of the quickest and shortest roads possible; and then with the addition of feeder lines, the line will be made to serve commercial and political purposes alike. It is well known that railway communication has generally proved an incentive to commerce; or, in other words, it is commerce that has followed in the wake of railways. A glance at the map shows that the overland railway route would traverse the rich alluvial lands watered by the Tigris and Euphrates, and spoken of in Scripture history of old as Babylonia. The wealth and resources of this tract of land are attested not only by ancient history, but also by several tablets; and among the various banking firms that are mentioned, probably one amongst many of the captive Jews who acquired wealth by embarking in agriculture, and subsequently took to business leaving his mark on the history of Babylonian finance. We also read that one of the most important of the caravan roads which had existed, and was traced out subsequently by the conquests of Tiglath-pileser, extended from Nineveh across Persia and Afghanistan to the Punjab.

Without Prejudice

A VERDICT NOT ACCORDING TO THE EVIDENCE

POWERS OF QUASI-JUDICIAL TRIBUNALS

(FROM OUR LEGAL CORRESPONDENT)

THIS is a noteworthy decision. It ought not to be noteworthy at all since it does no more than record what should be a commonplace platitude that a case in a court of law must be decided according to the rules of evidence. It is noteworthy because it deals what one hopes is a death-blow to an exactly opposite theory which has held the field in India during nearly eight years, namely, that industrial tribunals or courts are not bound by the rules of evidence but can disregard the same if they deem it necessary or desirable in favour of the principles of what they consider to be natural justice and good conscience. Incidentally, with the possible exception of the phrase "accident arising out of and in the course of his employment" in the Workmen's Compensation Act, it may be doubted whether in the whole history of industrial law, any expression has caused more confusion, uncertainty, delay and expensive litigation than those pseudo-benevolent words "natural justice and good conscience".

True it is, and we accept the fact that the industrial tribunals or courts are armed with extraordinary powers and can do things which no other court can do.. For example, they can vary, add to or even virtually abrogate the contract of service, or so mutilate it as to make the original agreement unrecognisable by the original parties to it. But while we gradually acclimatised ourselves to the idea that the law of contract as between master and servant in cases to which the Industrial Disputes Act applied had gone by the board, and that from thenceforth no one would know what natural justice and good conscience would substitute for it in any particular case, it never occurred to anyone until 1950 that the tribunals or courts, deciding disputed points of fact or law, would not even be bound by the rules of evidence. A man, say, is dismissed for being absent without leave. He says he has been ill in hospital. The employer denies this. The man produces a slip of paper with no heading and no rubber-stamped endorsement, containing an illegible signature and no description of the status of the signatory which the man says is a hospital certificate signed by the assistant surgeon. The employer denies that this is a genuine document. Can the tribunal accept this disputed document as correct without the assistant surgeon being called as a witness to verify it? Yes, it can, or rather it could, for in 1950 came the bomb-shell in the form of the case of *Electro Mechanical Industries Ltd.* v. *Industrial Tribunal No. 2, Madras*. A.I.R. 1950 Madras. 839(A), where it was held that "quasi-judicial" tribunals like the industrial tribunals are not "hampered" by the rules of evidence applicable to proceedings in a court of law and are entitled to rely on data available to them otherwise than from the evidence adduced on behalf of the parties.

It was held also that the tribunals could decide matters upon facts of which their members had personal knowledge quite apart from the actual evidence in the case. Notice that expression, "quasi-judicial tribunals". The Madras court seems to have tried to soften the shock attendant upon holding that a court of justice may decide a *matter* otherwise than by the rules of evidence, by calmly saying that an industrial tribunal is not in fact a court of justice at all but only an approxi*mation to one almost a court but not quite as you* might put it. Even so it is difficult to understand why a body consisting of gentlemen who are qualified to be, or actually have been, judges who have extraordinary powers to decide disputes between employers and workmen, and disobedience to whose orders may be criminally punishable, should not be considered a court whereas the most junior munsiff or deputy magistrate is so considered: and whether they are a court or not why they should not be bound by the rules of evidence.

Well, as to the "quasi" business doubt was thrown upon it in the very year in which the theory was adumbrated, and in the highest quarter. In 1950 the Supreme Court, in the case of *Bharat Bank Ltd.* v. *the Employees*, held that "the Industrial Tribunal has all the necessary attributes of a court of justice." That, if one may respectfully say so, looks a little like judicial hedging. "All the necessary attributes" might be merely a longer way of saying "quasi". But in the latest decision the Calcutta High Court comes down plump and plain. An industrial tribunal is a court. So that we now know that the present three-tier system of labour courts, industrial tribunals and national tribunals constitutes courts of justice in every sense of the words. And what effect has that fact upon the 1950 Madras decision? Expressions like "quasi-judicial", "not *hampered* by the rules of evidence", "relying on data.....otherwise than from the evidence" have a much more mellifluous and soothing sound than the venerable oath: "A true verdict *given according to the evidence.*" They literally reek of good conscience, natural justice and the pure milk of human kindness like the late Reverend Mr. Chandband did. But they are commodities upon which you could not run a fish and chips stall, let alone a vast business undertaking or a system of jurisprudence.

You may remember the English case of *Rex* v. *Bath Justices* on which we commented a few years ago. A separation case came on for hearing before the Bath magistrates. The chairman of the bench (well known to the writer), a level-headed, perfectly honest old gentleman, knew the husband and wife. The case was part heard and then adjourned for a week, the justices hoping that the parties would become reconciled. During this interval, the chairman in his capacity of a mutual friend of both parties called at their house, saw the wife and tried to persuade her to make things up. She refused. The case came on again, was contested and a separation and alimony ordered in the wife's favour. The husband appealed to the High Court against the order. Grounds: the very same as those sanctioned for industrial tribunals by the 1950 Madras case. The chairman, though acting with the best motives, had, in fact, relied "on data available to him otherwise than from the evidence adduced",i.e., his private conversation with the wife.

The High Court set aside the decree on the time-honoured principle that not only must justice be done, as in this case no doubt it was, but it must be manifestly seen to be done. The chairman's intervention opened the door to reasonable suspicion. Something very similar in principle happened in the Calcutta case just reported. The employers' contention was that a workman having been absent without leave for a specified period, his employment had automatically terminated under the standing orders. The tribunal had what it termed "a discussion" and what the Calcutta High Court later described as "no better than a gossip outside Court which....should never have taken place at all" with the manager of the colliery concerned, Mr. Hare. As a result of this discussion or gossip, which was not on the record and formed no part of the proceedings, the tribunal came to the conclusion that it was a case of victimisation and that the workman had lost his job, not because of his absence without leave, but because of his activities in what the manager in the informal chit chat was said to have referred to as a new communist union. The tribunal relied on this conversation or alleged conversation which was not legal evidence at all, notwithstanding the fact that Mr. Hare actually did give formal evidence at which he was questioned at length by the tribunal, although not a single question was put to him about the new union being a communist union.

There was another point. The workman accounted for his absence by alleging that he had been in Dhanbad hospital. He was said to have had a discharge certificate but never produced one. Whereupon the tribunal went out of its way to write to the assistant surgeon, Dhanbad. The tribunal, in the words of the High Court, later "exhibited the letter purported to have been received from the Assistant Surgeon, Dhanbad, together with its enclosure without any form of proof whatsoever." The tribunal held that the workman was entitled to be reinstated and on appeal the appellate tribunal affirmed this decision soothingly remarking that it did so "in view of the manner in which proceedings are conducted in industrial disputes"; as who should say: "Just too bad, but that's how it goes." But that is not how it will go in future. The Calcutta High Court (Sinha J.) allowed the employer's appeal and quashed the award.

We shall hear no more of "quasi-judicial" tribunals. The High Court held in terms that a tribunal is a court within the definition of Section 3 of the Evidence Act and is bound by its provisions. And therefore about this particular case: "it is not open to an Industrial Tribunal to mark documents as exhibits and rely upon them without having them proved. Nor is it open to the Tribunal to rely upon a discussion which has taken place between the Tribunal and one of the parties when there is no mention of it in the record." The Madras 1950 decision above cited was expressly dissented from and it looks as though tribunals and courts in future under the Industrial Disputes Act will have to work under the inconvenience of being "hampered" by the rules of evidence.

This was a perfectly simple case. Simply whether under the standing orders a workman's employment had ceased. In England a county court judge would have decided such an issue within six weeks or so on the law and on the evidence. In India the principles of good conscience and natural justice were exemplified in a period of almost precisely four years.

Burrakar Coal Co. Ltd v *Labour Appellate Tribunal*. A.I.R. 1958. (May). Calcutta. 296.

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

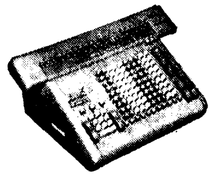
A Ditcher's Diary

THE WISE LOVER DOES NOT LOOK TOO CLOSELY INTO the object of his affections—and Mr. Nehru loves democracy. Only thus can I explain his recent rather harsh remarks about leader-writers, on the grounds that they have definite opinions on everything which they express with firmness, little responsibility and less knowledge. Democracy lives on this willing suspension of scrutiny. Chesterton shrewdly evaded argument once when pressing the case for it by saying, in his peculiar manner, that democracy is like "writing one's own love letters or blowing one's own nose. These things we want a man to do for himself even if he does them badly.....In short, the democratic faith is this, that the most terribly important things must be left to ordinary men themselves—the mating of the sexes, the rearing of the young, the laws of the State. This is democracy: and in this I have always believed." So has Mr. Nehru, but he has invited argument by appearing to suggest that leader-writers be denied the elementary rights of an ordinary voter. The latter does not write leaders but elects them, and nobody has thought of looking into his intellectual equipment to do so wisely. Indeed, the qualifications of the leaders themselves are not subject to any very close examination either. Mr. Nehru has only to look around to see that many are the leaders and Ministers whose sole title to their positions is the attainment of 21 years of age and the possession of a sound mind in the strictly medical sense. This is the very basis of democratic criticism, that it does not insist on full knowledge of every detail. Members of Parliament see no more of official files on which decisions are based, than leader-writers, and Mr. Nehru would scarcely suggest that the latter should on that account be denied the right of speech. In fact, it is not so long ago that Mr. Nehru remarked how well informed certain Press men were about official reports which he admitted not having had the time to read, although, presumably, he will some day be asked to pass an opinion or base a decision on. No, it is the freshness of ignorance and instinct which people bring to bear on the expert knowledge of Ministers and their secretaries which keeps the latter in their places: and that is democracy.

IN INDIA, WHERE BETWEEN A NEWSPAPER'S ACTUAL daily print order and the advertised figure of circulation falls the luminous shadow of managerial imagination, the relevance of the recent Tokyo report on how to print 90,000 newspaper copies an hour, is unlikely to be great in the foreseeable future. While I am all for the latest techniques in most things, systems labelled with such fearful names as "chacatrone" and "erographic" do, I must confess, scare me. The latter, I read, allows transmission direct to the printing plate for simultaneous printing. If this is anything like what the Americans call tele-type, which is already in use, the experience of some American editors does not appear to be entirely happy. Expenses and modern organisation have already made for too great a degree of uniformity in the Press. The only papers that look really different from one another are those which print "features" rather than news; and while the latest methods will reduce costs in composing, proof-reading and all that, and produce substantial savings in the Press, they may also kill it in the process. Imagine a hundred newspapers receiving the same tape, which just runs through a machine to produce a slug, and turning out a newspaper is made easy beyond belief. Beyond readability too, I suspect. It is bad enough to have to read so much agency stuff in Indian newspapers. With features, and perhaps leaders in the fulness of time, syndicated (and syndication is the essence of mass production) one paper will be as good—or as bad, more likely—as any other. And all individuality will have gone out of the most individual of large-scale industries. The job of journalism is reporting, sub-editing and writing—by every newspaper in its own way. Any technical progress which is likely to make these three functions more uniform than they are is to be viewed with caution.

IT HAS ALWAYS SEEMED TO ME SLIGHTLY INCONGRUous that in socialist India, the symbolic representative of the Government-owned international air corporation should be a Maharaja. Among other reasons, that may be because socialistic symbols are usually so dull and humourless, whereas Air-India's is just about the most likeable and attractive that the genius of the advertising profession could devise. I do not want to be the last to wish him well on his tenth birthday; he has always seemed to me to have the kind of cheerful personality which makes people put themselves out to take a special note of all his anniversaries. Its Maharaja is not, of course, the only point on which Air-India International deserves congratulation. In the past ten years, it has succeeded in establishing itself among the world's leading airlines and it is now an ambassador of which India can justly be proud. I have heard its reputation spoken of at air terminals as far apart as Sydney, Tokyo and London, and not once has the verdict been unfavourable. It is no easy matter either to make a name for service, safety and punctuality these days in competition with more experienced and older-established airlines. I have never myself had the pleasure of flying Air-India. That is a matter of accident rather than design, and something I intend to rectify at the earliest opportunity. I am looking forward to making the Maharaja's closer acquaintance, especially now that I have been told he has lived down that little matter of the flavour of the food he serves. As it is, the sight of his face smiling down from some poster on the wall of an international airport is as fine a tonic as a tired traveller could wish for. May he live to be a hundred—or more.

THE SERIOUS INVESTOR, NO LESS THAN THE speculator, is always intrigued by attempts to lay down rule-of-thumb guides to the best course of stock market behaviour to follow under a given set of economic circumstances That is why City of London financiers were alarmed in March when Professor Sargant Florence propounded the thesis that owners of high-yielding stocks fared better on the whole than investors in low-yielders—he based his contention on a statistical survey of price movements between 1936 and 1951—because this appeared to upset the long accepted doctrine that low-yielders always pay off best in the long run. Keen interest is now being taken in a memorandum on this subject issued by Moodys Services, who have been led to make a fresh investigation on the theory that Professor Florence's test period of 1936-51 is too long and ill-chosen. Moodys selected 175 leading industrials, of which 50 were labelled high-yielders and another 50 low-yielders. Starting from March 1947, the average gain up to March 1957, taking both groups, was 72.6 percent, and 16 of the high-yielders and 19 of the low-yielders did better than the average. Although the low-yielders beat the high-yielders in this test, there was very little difference between the two groups in the final results. Under a second test, Moodys divided 330 leading industrials, according to their 1952 yields, into high-yielders (giving over 7 percent), medium-yielders (between 6 percent and 7 percent) and low-yielders (under 6 percent). Over the following five years the average rise in the low-yielders was from £100 to £203. Medium-yielders rose from £100 to £168 and the average rise in the high-yielders was from £100 to £172. From the two tests, Moodys draw three main deductions. First, that low yielders have given better results than the high yielders since the war; that this is more likely to prove true over a shorter period; and that continuous scrutiny of any chosen list is essential if the best results are to be obtained.



THE UNFORTUNATE AFFAIR OF UDAIGIRI, THE President's elephant, is a sad reminder that the ceremonial days of this noble and most imposing of beasts are probably numbered. If this kind of incident had occurred in public, not all the devotion of the mahout, Bawa Jan, nor the gallantry of Captain Bhowani Singh, could necessarily have prevented many lives being lost. Elephants have one thing in common with motor vehicles, they can do a great deal of damage when they get out of control. The controversy which seems to have arisen over the method finally used to check poor Udaigiri reminded me of one of the incidents related by that inveterate elephant lover, J. H. Williams, in his *Elephant Bill*. He tells how, during the war, after one of the bull elephants used by the British Army in Burma had gone on *musth*, killed its *oozie*, and run amok into the jungle, a British sapper Major drove into the camp in a jeep and remarked that he had just met a very large elephant on the road. Williams, puzzled, asked him how he had managed to get past the brute. With all the innocence of complete ignorance, the Major explained that he had enticed it out of his way by proffering some pieces of bread he had luckily found in his pocket. To him, of course, elephants were nothing more than docile creatures who lived in zoos and to whom one threw bananas and peanuts on Bank holidays and outings. Somehow I do not think half a dozen Majors loaded with loaves would have had much influence with Udaigiri. And that is a pity, because elephants have many qualities which human beings might do well to emulate.

WRITING THE OCCASIONAL OBITUARY IS A DIARIST'S most dismal task, and especially so when his subject is, or was, a man of the calibre of Mackinnon, Mackenzie's late chairman. Although he had not occupied that place of eminence in Fairlie Place for anything like as long as he had a right to expect, Mr. W. R. B. Sample had already secured his niche in Calcutta's business life. An enthusiastic sportsman in his youth, he had graduated into being an indefatigable committee man in his maturer years. I shall leave the more detailed recount of his many activities and interests for those whose concern at his passing is more official than my own. The thing which I should like to say about him is that it was impossible to meet a more likeable character anywhere in Calcutta—or outside it either for that matter. Forty-nine is a ridiculously early age to be struck down these days and this was one life which the world would have benefited from having prolonged. But such matters are so seldom decided on merit. His wife and family deserve our condolences, although we will miss him too.

BRITISH INSULATED CALLENDER'S CABLES LIMITED

AN EVENTFUL BUT DIFFICULT YEAR

MR. W. H. McFADZEAN ON A WELL-EQUIPPED ORGANISATION

The Thirteenth Annual General Meeting of British Insulated Callender's Cables Limited will be held on June 25th in London, England.

The following is an extract from the circulated statement by the Chairman and Managing Director, Mr. W. H. McFadzean, C.A., Companion I.E.E.:

Although the monetary value of Group sales shows a decrease of some 14 per cent. on 1956, this is more than accounted for by the lower prices ruling for our principal raw materials, the physical volume of sales having been well maintained. The fall in Surplus on Trading from £9,445,363 to £7,832,872 is not therefore due to any decrease in our overall activity but to a combination of several adverse factors, and in particular to (1) a fall in profit rates; (2) the dislocation caused by our major re-planning and re-equipment schemes; and (3) the effect of the falls in the prices of our principal raw materials, especially copper.

The Group Balance Sheet is a strong one, with Fixed Assets and Investments both shown at very conservative figures and disclosed Reserves now totalling over £30,000,000.

Sales and Orders

Sales amounted to £111,000,000 as compared with £129,000,000 for 1956.

Of the total Sales some £71,000,000 (last year £82,000,000) comprised sales at home and £40,000,000 (last year £47,000,000) represented direct exports from this country and the turnover of our Overseas Subsidiaries.

Amongst the most notable orders received have been those from the British Transport Commission for overhead track equipment and telecommunication work relative to their great railway electrification schemes.

The outstanding progress made by British scientists towards harnessing thermo-nuclear energy for domestic and industrial purposes has been aided by BICC capacitors. The achievements of the "Zeta" and "Sceptre" equipments have already aroused world-wide interest.

In 1957 we traded through our world-wide organisation in some 130 countries. Believing, as we do implicity, in the value of personal contact, this has involved many of us, and in particular my colleagues wholly concerned with overseas affairs, in many long journeys. I am glad to say many of our personnel stationed abroad and also customers have in turn visited us, thus ensuring that two-way traffic so essential to mutual understanding and co-operation.

We particularly welcomed the visit of members of the Canadian Trade Mission to our BIC (Submarine Cables) Factory last December which impressed them most favourably and where they saw in the course of manufacture the repeat order, which we were so proud to receive, for the supply of submarine power cables from the British Columbia Electric Company Limited in Vancouver. We were also glad to have members of the Chinese Technical and Economic Mission visit some of our factories and laboratories, which I feel confident contributed to the placing with us recently of a substantial order for China.

With so many countries restricting imports because of shortage of ready cash and/or development of local manufacture, we are continuing our efforts to open all possible new markets.

The development of local manufacture is of course not a new problem and where it seems inevitable or justified our policy for many years has been to enter into partnership with the Nationals concerned. It invariably means a loss of the export of some products from this country, but this is gradually compensated by the export of more technical goods as the country develops and by the fees received for technique and technical services in addition to the expected return on shareholding.

Overseas Developments

In my Statement last year I dealt at length with our overseas investments, and I feel this year I need only deal with some recent developments.

Portugal.—In conjunction with Fabrica Nacional de Condutores Electricos Ltda., we formed some years ago a company called Cabos Armados e Telefonicos Ltda. which began the manufacture of power and telephone cables in Portugal in 1953. Through our joint efforts this company has become a well-established and profitable concern. Last year we acquired a substantial holding in Fabrica Nacional de Condutores Electricos Ltda. itself, which has extended our interests into the rubber and thermoplastic fields in Portugal.

BICC interests and connections in Portugal go back over very many years, and this investment will broaden and strengthen our trading position in metropolitan Portugal and her overseas territories, where there is undoubtedly an encouraging prospect of a steadily expanding economy and rising standard of life under the wise and far-sighted leadership of Dr. Salazar.

Venezuela.—In the autumn of last year it was announced that a new Company had been formed to undertake the manufacture of an important range of cables in Venezuela with General Cable Corporation of America and CEAT of Italy as the major shareholders. Venezuela is a country in which we have done a considerable business for a large number of years and to retain our position we were thus faced with undertaking local manufacture ourselves or endeavouring to participate in the new Company. The latter alternative was clearly the more attractive and I am glad to say that as a result of most constructive negotiations with General Cable and CEAT we have acquired a substantial shareholding. The factory is almost ready to go into production and we look forward with confidence to the future of this partnership in which Venezuelans are amongst the other shareholders.

Rhodesia.—A controlling interest has now been acquired in Rhodesian Cables Limited and plans are now well advanced for its development with our technique and co-operation. This we feel is a logical development of our long connection with and substantial other interests in Rhodesia.

Whilst dealing with Rhodesia, Stockholders will be pleased to know that the first half of the new electrolytic copper refinery at Ndola, in which Rhodesian Selection Trust Limited own two-thirds and we a one-third interest, is expected to come into production in the early autumn as originally planned. In a year or two we should thus start to obtain the benefit of this important and substantial investment.

Apart from a few concerns still to varying degrees in the development stage, our interests overseas operated profitably with the important exception of our Canadian Company, Phillips Electrical Company Limited. During the year Phillips opened a new factory in Vancouver and carried out considerable re-organisation and re-equipment in their Brockville and Montreal plants with consequent temporary dislocation. But the two factors which adversely affected their 1957 results most were the severe trade recession in North America and the heavy loss in copper due to the stocks they must carry in their widely spread branches and the terms of their long-standing purchasing arrangements which benefit them when prices are rising and in contra adversely affect results when prices are falling. As compared with their splendid performance in 1956, they incurred a small loss in 1957.

The big changes that can occur in business conditions and results in North America are well known and will no doubt continue to recur, but your Board retain full confidence in the value of the Canadian Company. It is now better equipped than ever before and will assuredly participate to the full in the beneficial development of the great future which clearly lies before Canada.

From the medium and long-term aspects, I have every confidence. From the shorter-term viewpoint the main problem is whether there is going to be any severe recession in the volume of world trade or, like any other large international concern, we could not escape the adverse effects of that. All I can say at this date is that we have made a satisfactory start to 1958 and that the results for the rest of the year must depend on the volume of business available.

Money

THE CALCUTTA MONEY MARKET

ADVANCES CONTINUE FALLING

Wednesday, 11th June.

THERE has been a further reduction in the advances outstanding in the Calcutta money market this week. This is to be expected at this time of year, although the return of funds seems to be proceeding unusually slowly. The main reductions during the week have been in the requirements of the jute and sugar industries. The needs of the cotton mills and accommodation against grain storage has remained about the same. Conditions in the call market this week has been easier and the rate has fallen to 3 percent.

It has again been a slack week for bills; those that have been in evidence have been chiefly on account of gunny shipments. Remittance was poor. Rupee forward rates dipped sharply yesterday on devaluation rumours. Sterling is slightly weaker against the American dollar and the D-mark.

THE BULLION MARKET SHOWED A MIXED PATTERN. Silver ruled quiet on large arrivals in face of a reduced demand and prices declined further from the last week's level of Rs. 184 to 183, being quoted today for ready delivery, and the rate for forward was Rs. 182.50. The London silver market and New York prices remained unchanged.

In spite of a fall in silver prices, gold ruled steady on increased demand and prices advanced from the last week's level of Rs. 110.50 to Rs. 111.75. The price of sovereign at Rs. 72.75 showed an increase of 25nP.

DURING THE WEEK ENDED 6TH JUNE, GOVERNMENT of India Treasury bills for Rs. 43,43,00,000 were sold in favour of the Reserve Bank.

RISES OF Rs. 20.81 CRORES TO Rs. 1,608.59 CRORES in active notes and of Rs. 8.04 crores to Rs. 1,623.70 crores in the total note issue were outstanding features of the return of the Reserve Bank of India for the week ended 6th June, 1958. Notes held in the Banking Department consequently declined by Rs. 12.76 crores to Rs. 15.11 crores. The currency expansion was covered by raising rupee securities by Rs. 9.94 crores to Rs. 1,167.56 crores. Deposits showed an all-round decline. Deposits of the Government of India dropped by Rs. 8.76 crores to Rs. 50.36 crores, while other Government accounts were Rs. 6.07 crores less at Rs. 13.91 crores. Balances of commercial banks at Rs. 75.91 crores showed a fall of Rs. 1.89 crores. Balances held abroad fell by Rs. 2.84 crores to Rs. 29.91 crores. Investments increased by Rs. 3.07 crores to Rs. 253.44 crores. Other loans and advances rose from Rs. 56.79 crores to Rs. 57.77 crores, of which advances to scheduled banks against usance bills amounted to Rs. 16.16 crores (Rs. 14.95 crores). Ways and means advances stood at Rs. 53.98 crores against Rs. 54.07 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 30th May, shows a rise of Rs. 4.31 crores to Rs. 420.52 crores in total deposits. Investments in Government securities are up by Rs. 35.63 crores to Rs. 196.28 crores, while other authorised investments remain unchanged at Rs. 10.28 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 3.90 crores to Rs. 194.77 crores. Cash and balances are, in consequence, shown at Rs. 29.24 crores or Rs. 2.45 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 30th May, shows Demand and Time liabilities at Rs. 746.41 crores (Rs. 17.33 crores on account of borrowings from banks) and Rs. 793.06 crores (Rs. 15.91 crores) compared with Rs. 740.56 crores (Rs. 15.72 crores) and Rs. 793.11 crores (Rs. 16.49 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 44 lakhs and Rs. 5.47 crores to Rs. 39.00 crores and Rs. 74.85 crores, respectively. There is an increase of Rs. 39.30 crores to Rs. 479.16 crores in investments. Advances and bills discounted at Rs. 922.82 crores show a drop of Rs. 11.33 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.4 percent and 59.9 percent against 7 percent and 60.9 percent.

FORMATION OF NEW COMPANIES IN INDIA

FALLING TREND IN NUMBER REVERSED DURING PAST YEAR

ACCORDING to reports received from the Registrars of Companies in various States, the total number of new concerns registered during 1957-58 was 961, against 1,448 and 848 formed during 1955-56 and 1956-57, respectively. The total authorised capital of those registered in 1957-58 aggregated Rs. 103 crores, compared with Rs. 157 crores and Rs. 211 crores in 1955-56 and 1956-57, respectively. Thus the substantial downward trend in new registrations after the enforcement of the new Companies Act has been reversed. The fall in the number in 1956-57 created some misapprehension about the provisions of the new Companies Act which, it was believed, was the principal cause for the reduction. It was also felt that the promotional activity was not likely to revive so long as the restrictive provisions in the new Act existed.

In the first statutory report on the working and administration of the Companies Act for 1956-57, it was pointed out that the fall in the number of new companies in that year was a passing phase. It said that "with the gradual realisation of the fact that the new Company law placed no impediments in the way of the formation of new companies and that the policy of the Government continued to be to encourage the development and expansion of the private sector in conformity with the plan, the present setback in new registrations may prove to be only shortlived". This observation seems to have been confirmed by the trend in new registrations in 1957-58. The fall in the number of newly registered companies in 1956-57 was attributed to several causes in the report some of which are as follows:

"Exaggerated apprehensions about the provisions of the new Companies Act may have led to a rush of registrations during the last quarter of 1955-56, just before the enforcement of the new Companies Act. This naturally affected the number of subsequent registrations. Company promoters and others interested in corporate activities may have also wanted fully to understand the ramifications and implications of the new Company law before forming companies under the present Act.

"Further, the limit set on the number of companies with which a managing agent or a director could remain associated may have also partially encouraged the recent tendency to set up new departments of existing companies rather than incorporate new ones."

Besides these, possibly the most important factor which might have brought about the fall in new registrations was the general unfavourable economic climate prevailing during 1956-57, following the new fiscal measures adopted by the Government. The business class preferred to slow down the processes of formation of new companies, and the prospective sponsors of corporate enterprises were reluctant to come forward with proposals of new ventures.

In face of such factors, the Companies Act alone was not responsible for the setback. It may be relevant to mention that during the four decades 1914-55, when the old Companies Act of 1913 remained in force, there had been big oscillations in new registrations which had principally been the result of the variations in the economic climate. The highest and the lowest levels during that period were 4,807 in 1946-47 and 112 in 1914-15.

Fewer Public Companies

Of the 961 companies set up during 1957-58, the number of public companies is 65 with a total authorised capital of Rs. 53 crores while that of private ones is 896 with a total authorised capital of Rs 50 crores. In the preceding year, 84 public companies with a total authorised capital of Rs. 54 crores and 764 private companies with a total authorised capital of Rs. 157 crores were incorporated. The trend in the new registrations of public companies has been downward since 1955-56 as will be seen from table 1 at page 4. The number of new public companies in the latest year was about one-third of that in 1953-54 when it totalled 204 companies. From 211 public companies formed during 1954-55, the number came down to 186 in 1955-56, 84 in 1956-57 and finally to 65 in 1957-58. Thus it is seen that the number of newly registered public companies had fallen even before the new Companies Act came into force. It can, to a certain extent, be said that the formation of new public companies during the last two years has been affected by the restrictive provisions of the Act applicable only to public companies, which possibly led to 227 public companies converting themselves into private companies during 1956-57. But compared with the total number of about 10,000 companies, these 227 public companies work out to a small proportion i.e., 2 percent.

The proportion between the newly formed public and private companies which stood at 1:5 in 1953-54 and 1954-55 has come down to 1:14 in 1957-58. It may, however, be of some interest to mention that the number of new public companies registered in the U.K. is very insignificant, compared with that of the private ones, and that the number of new public companies has either been falling or been static during the last ten years. While about 12,000 private companies are formed in a year in that country, the number of public companies comes to about 25 or so.

TABLE 1

Overall position of new registrations (Authorised capital in lakhs of Rs.)

Year	Public		Private		Total	
	No.	Authorised capital	No.	Authorised capital	No.	Authorised capital
1953-54	204	1,22,94	989	1,32,45	1,193	1,55.39
1954-55	211	1,69.54	992	56,44	1,203	2,25,98
1955-56	186	67.89	1,262	89,05	1,448	1,56,94
1956-57	84	54,13	764	1,56,52	848	2,10,65
1957-58	65	62,74	896	49,97	961	1,02.71

The following table gives the overall picture of new registrations during the last five years.

In the latter half of 1956-57, the number of monthly registrations stood around 74 against which 100 new companies were formed in the first month of 1957-58. The average monthly figure for the first six months of 1957-58 works out to 76 companies, while the corresponding figure for the latter half of that year is 84. Similarly, the new registrations in the latter halves of the previous two years also exceeded those in the first halves of those years. The half-yearly monthly averages of new registrations during the last three years, given below, show just this.

	First half	Second half
1955-56	113	128
1956-57	68	74
1957-58	76	84

State-wise Distribution

The State-wise distribution shows that the number of new registrations has increased in the case of the majority of States. Of the four major States of Bombay, Madras, West Bengal and Delhi, which normally account for more than 80 percent of the total new company formations in any month or a year, only Madras has recorded lesser number of new registrations in 1957-58 than in 1956-57, the difference being 11 companies. The number in 1957-58, compared with 1956-57, has gone up in Bombay, West Bengal and Delhi by 21, 58 and 5 companies, respectively. Among the other States which show improvement are Andhra Pradesh, Assam, Bihar, Madhya Pradesh, Mysore and Orissa. The number in the case of Pubjab and Himachal Pradesh remains steady at 29 while there has been a marginal fall in Kerala, Rajasthan and Uttar Pradesh. On the whole, it can be said that the State-wise pattern of new companies during the year 1957-58 continues to be the same as observed in the earlier years.

Size Pattern

A study of the size pattern based on the authorised capital with which the new companies have been incorporated reveals that about 25 percent of the total have been set up with an authorised capital below Rs. 1 lakh, while 40 percent have been formed with an authorised capital of between Rs. 1 lakh and Rs. 5 lakhs. The corresponding figures for the two size groups are 20 percent and 36 percent in 1956-57, and 21 percent and 39 percent in 1955-56, respectively. These two size groups, namely, companies having an authorised capital of below Rs 1 lakh and those between Rs. 1 lakh and Rs. 5 lakhs together account for about 65 percent, 56 percent and 60 percent of the total in 1957-58, 1956-57 and 1955-56, respectively. In absolute terms, 605 companies out of a total of 961 have been formed with an authorised capital of less than Rs. 5 lakhs in 1957-58, against 478 out of a total of 848 in 1956-57 and 871 out of a total of 1,448 in 1955-56. To the above two size groups, if the third group of companies having an authorised capital of Rs. 5 lakhs and under Rs. 10 lakhs is added, the total percentage of companies having an authorised capital less than Rs. 10 lakhs works out to 87 percent in 1957-58, against 83 percent in 1956-57, and 86 percent in 1955-56. This means that during the last three years, in spite of the fluctuations in the number of new companies, there has been very little change in the percentage of small companies to the total. The total number of big and giant companies i.e., those having an authorised capital of Rs. 50 lakhs and under Rs. 1 crore and those having an authorised capital of Rs. 1 crore and above, comes to 4 percent in 1957-58, against 5 percent in 1956-57 and 3 percent in 1955-56. Nine big companies were formed with an authorised capital of Rs. 50 lakhs and under Rs. 1 crore in 1957-58 and 28 giant companies were incorporated in 1957-58, against the same number in 1956-57 and 26 in 1955-56. Table 7 below gives the size pattern of newly registered companies during the last three years. Table 8 furnishes the quarterly break-down of newly formed companies according to the size distribution during 1957-58.

Giant Incorporations

The statistical record of giant incorporations for the year 1956-57 showed that they accounted for nearly 80 percent of the authorised capital of all the new companies formed in that year, and the share of giant government companies in the total came to about 57 percent. On the basis of these figures, it seems that the promotional activity in the private sector was falling and the government companies were dominant in the corporate sector. But the trends observed in 1957-58 suggest to the contrary. It is seen that while the giant floatations during that year acounted for little more than two-thirds of the authorised capital of all the companies formed in that year, the share of new government giant companies in the total authorised capital of all the new companies was only 8 percent against 60 percent in 1956-57 and 20 percent in 1955-56. This shows that in 1956-57, an unusually large number of government companies with a very broad authorised capital base were formed due to the new emphasis on the public sector. In 1956-57, seven giant government companies were formed, namely, the State Trading Corporation Private Ltd, the Western Shipping Corporation Private Ltd, Heavy Electricals Private Ltd, National Coal Development Corporation Private Ltd. Travancore Minerals Private Ltd, Neyveli Lignite Corporation Ltd, and National Projects Construction Corporation Ltd. Two giant government companies have been incorporated this year and they are the National Instruments Private Ltd. and Export Risks Insurance Corporation Private Ltd. with an authorised capital of Rs. 3 crores and Rs. 5 crores, respectively. Table 9 below summarises the position of government and non-government giant companies during the last three years in juxtaposition with that of the total number of new government and non-government incorporations during the three years.

TABLE 9

				Total	6,700

During the year 1957-58, 18 government companies are reported to have been formed with an authorised capital of Rs. 8.60 crores. Of these, 14 have been incorporated in the State of Orissa in March 1958, nine of which have an authorised capital of less than Rs. 1 lakh. Of the remaining four new government companies, two, namely, the National Instruments Private Ltd. formed with an authorised capital of Rs. 3 crores and the Export Risks Insurance Corporation Private Ltd. with an authorised capital of Rs. 5 crores have been set up by the Central Government. The two others, the Mysore Fruits Products Private Ltd. and the Kerala Cycle Company, belong to the States of Mysore and Kerala, respectively. The total authorised capital of the 18 new Government companies formed during 1957-58 comes to 8.5 percent of the total authorised capital of the 961 companies formed during the year. Some 13 government companies were set up during 1956-57 and of these 12 have survived. Excepting one government company, namely, the Travancore Minerals Private Ltd., the others were either incorporated with the Central Government alone or jointly with some State Governments. The total authorised capital of the 13 government companies set up during last year aggregated Rs. 120 crores, which accounted for nearly 57 percent of the total authorised capital of the companies formed during that year. In 1955-56, seven government companies were formed with a total authorised capital of Rs. 31.4 crores, accounting for nearly 20 percent of the total authorised capital of the 1,448 companies formed during that year. At the end of 1957-58, the number of government companies (as defined under Section 617 of the Companies Act) was 94. This total however is provisional, as replies to some queries are still awaited. Table 11 below shows the number and authorised capital of government companies formed during the last three years. Table 12 furnishes the names of government companies formed during the year 1957-58, together with the information relating to the nature of businesses, authorised capital, the State of registration, etcetera.

Form of Management

An overwhelming number of new companies, that is, 75 percent are to be directly managed by boards of directors, and of the remaining except 17 companies, the others are proposing to have managing directors at the head of the management. The number of new companies which are to have managing agents to supervise and manage their work is 15 while one company will have managers and another secretaries and treasurers to manage their affairs. The number of companies which are to be looked after by boards of directors and by managing directors is 717 and 227, respectively. The latest statistics for 1957-58 confirm the observations made in the first statutory report that there has been a perceptible shift towards the management of companies by boards of directors. This trend is in conformity with the underlying objectives of the Act which imposes more stringent restrictions on managing agents' remuneration, and the contracts with managing agents. Table 14 summarises the statistical position relating to the form of management to be adopted by new companies formed during the three years 1955-56 to 1957-58. Table 15 gives the names of companies registered during 1957-58 which are to have managing agents. Table 16 shows the names of managing agency companies formed during that year.

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings.

What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'. Anytime, unannounced...our expert visits a mill licenced to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to a rigorous international wash-test, reports on his findings. *Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'.*

'SANFORIZED' on the label means better sales for you!

It's this kind of care plus our advertising plus *experience* which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for *you!*

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) Proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

Stocks and Shares

IMPROVED FEELING AS TATAS RESUME PRODUCTION

DOCK LABOUR SITUATION CAUSING ANXIETY

Wednesday Evening.

CONDITIONS on the Calcutta Stock Exchange have been rather steadier in the past week. The improvement in the Jamshedpur labour situation and the resumption of full production helped sentiment in steels—the market leads—and speculative share prices moved upwards slowly on a fairly wide front. The movement might have been more general if it had not been for the continued anxiety about the foreign exchange situation and the prospects of a dock strike beginning 16th June. Operators have been cautious in extending commitments, but the volume of transactions has been better. Some of the main investment sections received support, notably jute, paper, engineering and cement. During the week, two new shares were added to the forward list, namely, Indian Aluminium and Indian Cables. The prices of both scrip benefited from the promotion.

Jute shares have been steadier, with slightly increased turnover due to favourable working results, but sentiment has been hesitant following the publication of the jute goods stocks figures for May. Tea scrip have been dull, and the recent tax concessions appear to have had scarcely any effect on demand for shares in this section. Coals have been quiet.

The gilt-edged market has remained steady throughout the week. Sentiment has been rather easier, but prices in some cases have improved and at the close were quoted up to the week's best levels. The recent upward price trend does, however, appear to have come to an end. During the week, the Reserve Bank increased its selling price for 3½% loan 1965 to Rs. 98.25 and also indicated that it would consider bids for 3¾% loan 1974 at Rs. 98.30 and 4% 1972 at Rs. 100.35. The main feature during the week was Government Paper which improved from Rs. 71.05 to Rs. 71.15.

In the banking section, Punjab National were marked up to Rs. 55, while United Commercial Bank lost fractionally at Rs. 60. United Bank of India "D" shares were steady at Rs. 4.25.

Among cotton scrip, Dunbar were slightly better at Rs. 115, Elgin ruled steady at Rs. 12.25 and Jayshree fractionally improved to Rs. 6.69. Kesoram were marked up to Rs. 10.75, as was New Victoria to Rs. 1.37.

Coal shares were quiet, with the exception of Bengal which met with enquiry at Rs. 246. East India improved to Rs. 20.50 on buying support, while Pench Valley were bought up to Rs. 20.

Jute shares were rather better on the whole, although features were not numerous and gain tended to be limited. Belvedere were enquired for at Rs. 100. India met with fair support and the price moved up from Rs. 125 to Rs. 130. Kinnison were better at Rs. 101, as were Megna at Rs. 116 and New Central at Rs. 15.50. National Jute, the share quoted on the forward list, was slightly better at Rs. 22.50.

Mining scrip were quiet, with Indian Copper showing fractional gains at Rs. 3.22 and Orissa Minerals meeting with enquiry at Rs. 25.25.

Cement shares were in fair demand following rumours in the market about improved working results. Orissa were better at Rs. 13.12, as were Jaipur Udyog at Rs. 12.87. Dalmia Cement met with support at Rs. 10.50.

In electrics, Calcutta Electric Supply Corporation shares were steady at Rs. 14.25.

There was fair demand for selected engineering scrip during the week. Guest, Keen, Williams were bought up to Rs. 31.50 and Indian Standard Wagon were in demand at Rs. 98. Indian Irons, after starting the week's trading quietly, later improved to Rs. 21.71, to close this evening below the day's best level at Rs. 21.60. Textile Machinery were in good demand at Rs. 18.50.

There was improved enquiry for selected miscellaneous shares. Balmer Lawrie were fractionally improved at Rs. 154. Dunlop Rubber met with good demand up to Rs. 26.25, while National Rubber were quoted at Rs. 12.75. Hindustan Levers were slightly better at Rs. 22.75. The two new additions to the forward list, Indian Aluminium and Indian Cables, improved to Rs. 15 and Rs. 28, respectively. Philips India gained to Rs. 14.81.

There was good general business in shares in the paper section, especially the two in the Birla group of companies, Orient and Sirpur, which were quoted at Rs. 31.90 and Rs. 11.19, respectively.

THE WORKING OF THE McLEOD GROUP OF JUTE MILLS for the 13 months ended 31st July, 1957, is considered satisfactory in view of the difficulties of the industry. There is a profit of Rs. 3,76,705 earned by the Empire Jute Co. Ltd. The ordinary dividend is declared at 75nP a share, including an interim of 40nP a share. The taxation provision is allocated Rs. 1.55 lakhs, development reserve Rs. 1,06,600, and depreciation absorbs Rs. 2,21,805. There is a carry-forward of Rs. 4,192. Gunny sales were Rs. 1.13 crores and stocks amounted to Rs. 25.92 lakhs.

Presidency Jute Mills Co. Ltd. has made a profit of Rs. 3,87,210. The ordinary dividend has been declared at 30nP a share. Depreciation is Rs. 2.05 lakhs and the taxation provision is allocated Rs. 1.82 lakhs. Development reserve absorbs Rs. 96,344. There is a balance of Rs. 7,049 which it is proposed to carry forward. Gunny sales were Rs. 1.36 crores and stocks were valued at Rs. 21.55 lakhs. A profit of Rs. 9.95 lakhs was earned by the Chitavalsah Jute Mill Co. Ltd. The ordinary dividend has been declared at Rs. 1.10 a share, including an interim of 60nP a share. The taxation provision is allocated Rs. 4.80 lakhs, including that for wealth tax of Rs. 64,000. Development rebate reserve absorbs Rs. 1.75 lakhs and depreciation is Rs. 3.11 lakhs. There remains a balance of Rs. 73,099 which has been carried forward. Gunny sales totalled Rs. 1.69 crores and stocks were Rs. 36.06 lakhs. The directors of both Empire and Presidency comment: "Trading conditions continued to be difficult during the period and it was not possible to transact simultaneous business at a profit".

THERE IS AN INCREASE OF Rs. 21,943 TO Rs. 11,92,037 in the profit made by the Equitable Coal Company Ltd. for the year ended last December. The ordinary dividend has been maintained at 15 percent. The depreciation is slightly less at Rs. 11.34 lakhs. The provision for wealth tax absorbs Rs. 1.13 lakhs. The development reserve claims Rs. 4 lakhs (Rs. 5 lakhs), debenture redemption sinking fund is allocated Rs 1 lakh (Rs. 2 lakhs) and investment depreciation reserve Rs. 1 lakh (nil). After necessary adjustments, there remains a balance of Rs. 59,732 which is carried forward against Rs. 41,728 brought in. Net raisings amounted to 1,800,651 tons against 1,684,813 tons, and despatches were 1,910,936 tons compared with 1,684,549 tons.

THE BENGAL COAL COMPANY LTD. HAS INCREASED its profit by Rs. 21.48 lakhs to Rs. 69,78,138 for the year ended 31st October, 1957. The ordinary dividends have been declared at 17½ percent, including an interim of 7½ percent. The provision for taxation is up by Rs. 24.65 lakhs to Rs. 42.65 lakhs and general reserve has increased by Rs. 5 lakhs to Rs. 7 lakhs. Depreciation is less by Rs. 1 lakh at

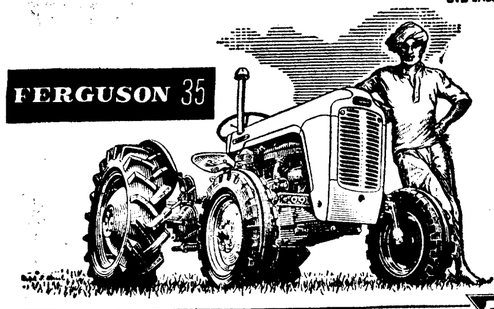
Who wants *more* food ?



My basic job is to assist in raising this country's food production from its present low level—so low that we have to buy abroad.

The extent to which I can help is very often not realised—it certainly is not realised enough.

Whether it is wheat or rice—gram or grass—sugar or groundnuts—whatever it is, only I can reliably and economically :

- Have the soil ready for the rains or water,
- Prepare the best tilth to suit the crop,
- Sow quickly and well on the right day,
- Give the crop attention whilst it grows,
- Harvest at the right time,
- Do, in time, all those never-ending duties such as agricultural heritage, soil conservation, water distribution and so on—which mean the difference between shortage and enough.

MECHANISATION MEANS MORE MEALS

MASSEY-FERGUSON (INDIA) LTD., BANGALORE
Incorporated in the U.K. — Liability of Members Limited

Rs. 24 lakhs. Wealth tax for two years is estimated at Rs. 3.25 lakhs. After various adjustments, a sum of Rs. 11,48,060 has been carried forward against Rs. 9,44,657 brought in. Raisings for the year amounted to 2,801,164 tons, compared with 2 320,350 tons in the previous year. Despatches, which included purchased coal, totalled 3,101,292 tons against 2,559,083 tons.

The directors mention that the increased raisings, which constitute a record in the history of the company, were the result of planned expansion to meet the requirements of the second five year plan. While despatches during the year record a satisfactory increase, the position has since deteriorated and there is continued reason to doubt whether the railways will be able to maintain movement of the ever-expanding output. As for the disaster at Chinakuri Colliery, the court of enquiry is now investigating the cause of the accident and the company is rendering it all possible assistance.

MESSRS TATA INDUSTRIES PRIVATE LIMITED, managing agents for the Tata Iron and Steel Company Ltd., report that the total approximate production of iron and steel at the steel works in Jamshedpur during May 1958, was: pig iron 57,400 tons, steel ingots 52,900 tons: semi-steel for sale 7,600 tons; finished steel 20,900 tons.

Bombay Market

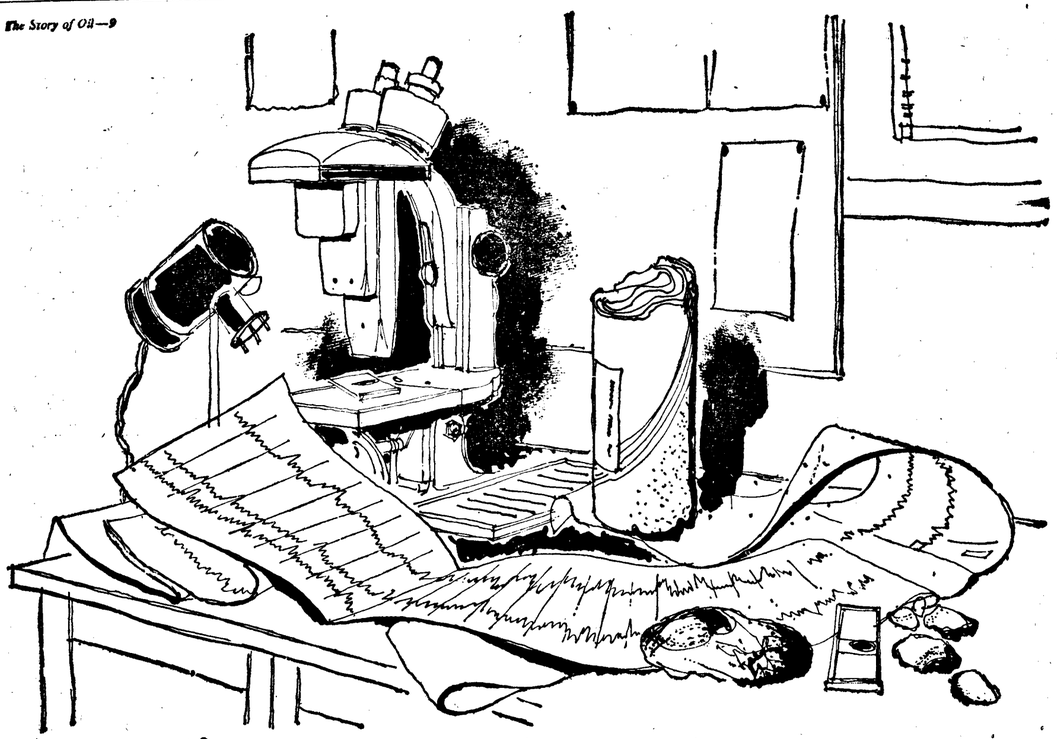
MODEST IMPROVEMENT IN PRICES

STEELS BETTER ON LABOUR NEWS

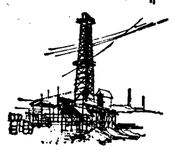
Wednesday Evening.

THE Bombay stock market was steady last week and selected scrip improved in restricted turnover. Optimism arising out of good corporate news was modified by cautious thoughts relating to the difficult foreign exchange position. The threatened dock strike was an important restraining factor. The slow trading in cloth, combined with accumulation of stocks with mills, tended to subdue sentiment, especially in the cotton mill group.

Tata Steel soared to Rs. 182.75 following an improvement in the labour situation at Jamshedpur. Indian Iron were steady at Rs. 21.68, but operators in Lyons Range were cautious. Other notable gains in engineerings included Tata Locomotive which rose to Rs. 171 on higher dividend hopes. Interested support lifted Premier Construction to Rs. 194. Alcock Ashdown gained at Rs. 252.50 on replacement buying. Automobile shares were steady, and Premier Automobile were higher at Rs. 84.30. Hindustan Motor were transacted at Rs. 7.04.



Cotton mill shares were hesitant, except Central India which jumped to Rs. 84.50 on buying from informed quarters. Bombay Dyeing were placed at Rs. 53.60 and Kohinoor came to hand at Rs. 258. Simplex were dealt in at Rs. 161.50 and Svadeshi made Rs. 174.50. India United Ordinary were available at Rs. 8.80 and Apollo were offered freely at Rs. 1.68.



There were a number of bright features in the miscellaneous group. Among cement shares, Digvijay improved to Rs. 147.25. Associated Cement were taken at Rs. 151.50. In the shipping group, Great Eastern Shipping spurted to Rs. 23 on talks of a bonus issue. Scindia Steam were bought at Rs 17.48. Sugar shares were steady, and Belapur rose to Rs. 247.50. Phalton gained at Rs. 148.75. Mining shares were subdued, and Shivrajpur Syndicate were quoted at Rs. 81.70. Good corporate news helped lift National Rayon to Rs. 239 and Tata Chemical were higher at Rs. 15.52.

In spite of limited business, bank shares were maintained. United Commercial Bank came to hand at Rs. 60.50 and Bank of India were transacted at Rs. 134. Selected insurance shares were supported. British India General rose to Rs. 15 and New India Assurance came to hand at Rs. 48.

Electricity supply company shares were fractionally higher on scattered investment interest. Bombay Suburban Electric were placed at Rs. 106. Tata Hydro were taken at Rs. 117.50 and Ahmedabad Electric were transacted at Rs. 94.80.

The Story of Oil—9

How much oil?

One oil well does not make an oilfield. As soon as the first well in a new area gives proof of steady production the next step is to establish the extent of the oil accumulation in its underground trap. This is done by drilling further wells, the programme for which is based on the results of scientific surveys and tests carried out during the drilling of the discovery well.

Surveys for such "down-the-hole" information are commonly made by recording instruments lowered into the well on a cable. One instrument produces a record in the form of wavy lines on a chart which, when interpreted, confirms the nature of the rocks penetrated by the drill and shows exactly where the oil zone lies. Another instrument gives records from which the amount and direction of the slope or dip of the rock layers can be calculated.

Tests carried out in oilfield laboratories include analyses of samples of rocks and oil recovered from the well. From rock samples it is possible to calculate how much room there is for the oil in the spaces between the grains of sand in a sandstone rock, and the amount of water associated with the oil. An analysis of a sample of crude oil gives data about its gas content and other characteristics.

With all this information to hand the development of the oil find can proceed on a planned basis, and decisions can be made on how far apart the wells should be drilled, how deep they should go, how many drilling outfits will be kept in operation, and what size of refinery will be required.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

B.O.C

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise.]

FIRM CONDITIONS IN STOCK MARKET

GILT-EDGED EASIER: RISE IN INDUSTRIALS

London, 11th June.

FIRM conditions were maintained in most sections of the London Stock Exchange during the past week, but business remained small and selective. The better tendency was due to a number of favourable factors but business was restricted by the continuing U.K. labour troubles, particularly the strikes in the London docks and by busmen. The main factors, which favourably influenced sentiment, were the better trend on Wall Street, some satisfactory dividend announcements, the highly satisfactory end-May gold reserve figures and the more settled political situation in France. Buying was small and selective with large operators holding off. But it was significant that there was very little selling pressure. Gilt-edged securities showed early firmness on small investment buying, but interest subsequently subsided and prices tended to ease. On balance, there were occasional small recessions. The fall in the Treasury bill rate on Friday last was considered to have already been discounted and had very little effect. There was very little interest in foreign bonds and in rails which were quietly irregular. Dollar stocks improved reflecting the advance on Wall Street. But the main feature of the past week was the firmness of industrial equities. Prices in most sections steadily improved under a small selective demand and recorded widespread gains on the week. Courtaulds were outstanding following their results. Although the dividend and profits were lower, they were considerably better than the market had expected, particularly from the dividend point of view. South African gold shares recovered from early dullness on confirmation of recent reports that a 30-million dollar U.S. trust is being formed to invest in the gold mining industry. Business, however, failed to show any marked expansion but prices were often higher on the week. Copper and other base metal shares were firm. Oil shares recorded gains up to several shillings. Rubber shares were quietly firm and showed scattered gains on balance. Indian tea shares tended higher but Dooars and Empire of India were dull following the passing of the preference dividends. Ceylon tea shares were neglected and were mainly easier.

The Money Market

The disbursement of the War Loan interest money gave only temporary relief to the London money market. Once the funds had been absorbed in the banking system, stringent conditions prevailed since the weekly tax payments accentuated difficulties. The authorities had to pump in funds to relieve the shortage, but even so, penal borrowing had to be undertaken at the Bank of England. The rate for non-regular money ruled at 4½ percent and 4⅜ percent with 4⅜ percent being paid during the most difficult periods. Business in bills was patchy with August maturities being sold at 4⅜ percent although some changed hands at 4⅜ percent. At the weekly tender on Friday last, the money market revised the bids sharply and brought the average rate for Treasury bills down nearly by 2s to £4 14s 5.72d percent. After this, the rate for bills in the open market fell to 4⅜ percent.

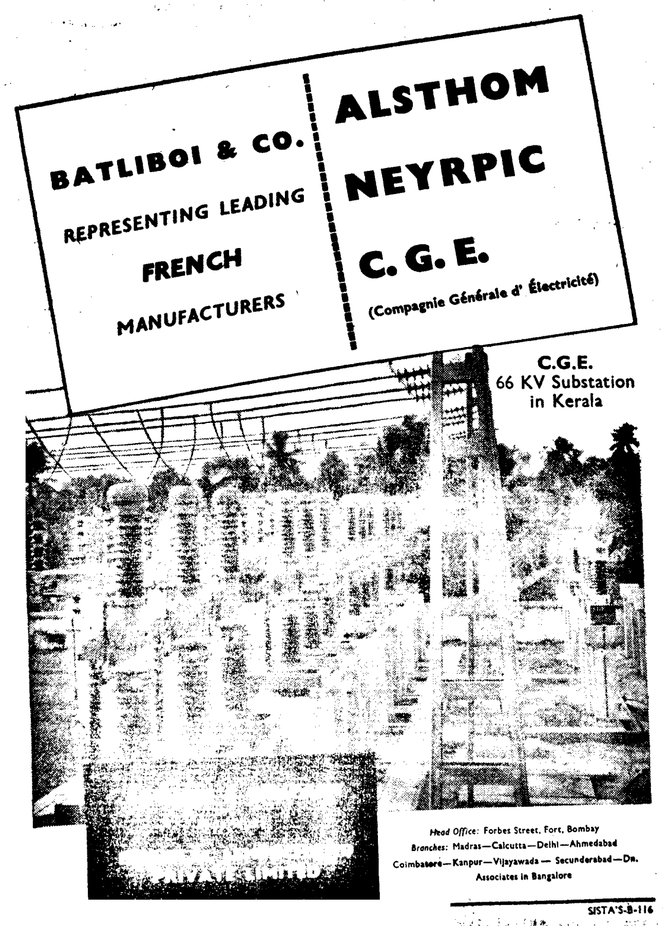
Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: London gilt-edged securities are firm and active. Industrials are very steady. In gold shares, a minor reaction, with sharply reduced business, is considered technically favourable. Copper shares were firm assisted by technical position. Oils were technically sound and could respond to news. The big talking point is whether the Wall Street barometer is discounting the turn not apparent to the professionals who are short of 5½ million shares. London has acted much better than was expected in the face of French, Middle Eastern and domestic unrest. Due to continued absence of selling pressure, prices held steady. Wall Street has a firm undertone because of the predictions that the recession has grounded but the big "bear" position still indicates the existence of some sceptics. London seems to want to go better with investors looking towards better business and lower interest rates."

Vegetable Oils Featureless

Most vegetable oils and oilseeds encountered a featureless market during the past week with activity largely confined to covering enquiries for early arrivals. Substantial tonnages of oilseeds were said to be blocked by the London dock strike and stop-gap supplies were moved from unaffected ports to London refineries. On the shipment market, there was little change in prices. Coconut oil ruled steady on origin advices but the European trade was confined to afloat parcels of Straits bulk oil to Italy around £104½ a ton, c.i.f. Copra was easier with late sellers prepared to operate around $2 a ton under pre-week-end levels. The Nigerian Board lowered its price of palm oil for July-August shipment to £83 a ton, c.i.f., but resale offers were claimed to be available for August-September shipment down to £82 c.i.f. General rates for groundnuts and groundnut oil were virtually repeated in a near-idle market. Private reports, speculating on the possible removal of the export duty on Indian castor oil, had an unsettling effect on the market and the U.K. buyers were again difficult to contact. East African castorseed was fractionally cheaper but the best bids came from Marseilles and were rarely over £52 c.i.f.

Rubber Prices Fall



Rubber prices were barely steady at the start of the past week with business being patchy. A sharp fall at Singapore brought the prices down by ½d a lb. This led to short-covering, but the decline failed to stimulate buyers to any marked extent. The fall in prices was attributed to a report that the Indonesian Government would permit the export of a large quantity of lower-grade rubber. Fairly sustained Continental and dealer interest for early shipments helped keep the market steady at the lower level but orders were thinly spread. After minor fluctuations, the market hardened on a fairly active demand for nearby rubber. Because of the dock strike, the London spot position was technically firmer and a premium of ½d a lb. was paid for warehouse supplies in Liverpool. The market closed with most landed position ½d lower on the period but with spot positions only ¼d down. Business in sole crepe remained disappointingly small and although sellers mostly continued to quote on the recent basis of 28d a lb. for 1 inch smooth No. 1 on the spot, occasional sales were made at lower prices.

Hongkong Gold Weakens

The Hongkong gold market eased during the most part of the past week following the improved international situation and the lack of bolstering influences at home and abroad. A slackening demand from neighbouring outlets was also an adverse factor. Bullion dealers expected that the dull trend would continue. Carry-over charges were two cents a ten taels in sellers' favour. The official offtake was 2,530 taels and the unofficial 4,430 taels. Arrivals at Macao were nil. Forward contracts were done at $(U.S.) 38.02, c.i.f., Macao.

Debenture Offer by Associated Electricals

Associated Electrical Industries Limited has announced that it proposes to create £25 million 6 percent debenture stock, 1978-83, and arrangements are now in hand for the underwriting of £21,550,000 of the issue, being the full amount thereof less the amount to be allotted to holders of the company's 3½ percent issue.

New Delhi

IMPORT RESTRICTIONS AFFECT PRODUCTION AND EMPLOYMENT

PROPOSED MEASURES TO INCREASE INDIAN EXPORTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE foreign exchange crisis was discussed by the Central Cabinet last week. The main issue is whether the drawing down of the sterling balances is a temporary measure or whether the present rate of heavy withdrawals is going to continue throughout the second plan period. There is no machinery in existence to find an answer to this question. A "wait and see" attitude can scarcely be the answer to the problem even for a short period and India cannot afford to take the risks which a steep rate of drawings implies for the economy. It has, therefore, become necessary further to restrict imports and increase the country's exports. Import restrictions are already having their repercussions on industrial production. In the present context of things, raw materials and spares are relatively more important than capital goods. The Government of India is, therefore, exploring the possibilities of importing these to sustain the present level of production.

One method under examination is to secure bigger supplies of foodgrains under the U.S. Public Law 480, which would release foreign exchange for raw materials The other method being examined is to import food from communist countries in exchange for Indian goods. The third possible method is to secure an off-shore loan, say, of $600 million. A request for such a loan is likely to be very sympathetically considered in London as well. Timely help from either the United States or the U.K. is considered a certainty. India, too, has created the requisite climate for such aid. She has cut down her imports to the bare bones. She has drawn upon her sterling balances to the maximum possible extent, and they are now well below the requirement for this country's paper currency reserve. She has made adjustments in the second five year plan to bring it within manageable dimensions. Lastly, she is doing her best to expand her exports, definite steps in which connection are shortly to be announced. Several steps are under discussion. According to one proposal, the railway freight on the exportable goods would be charged for the first 100 miles only, irrespective of the distance to the ports. Another proposal is to make the earnings from exports free of income tax. A third proposal would permit an industry to keep for itself 20 percent of its foreign exchange earnings from exports. So far as cloth is concerned, it is proposed to refund to the exporter the excise duty on two yards for every one yard of cloth exported.

Opposition to Further Import Cuts

One school of opinion is definitely opposed to further cuts in imports. Apart from the fact that such a step might cause dislocations in the economy by creating unemployment for instance, a unilateral campaign for exports, unaccompanied by a measure of imports, may not produce the desired result. This school would prefer a cut in the foreign exchange element of the defence budget instead. That, it feels, would further strengthen India's case for external aid. The Prime Minister, unfortunately, has not shown much interest in economy in the foreign exchange expenditure of the Ministry of External Affairs. There are, for example, over 1,200 employees in the Indian High Commission in London, almost half of whom, it is said, can be dispensed with. The activities of the Education Department in London and Washington also could stand some cuts.

Commonwealth Officials Meet

The Central Finance Secretary, Mr. B. K. Nehru, and the Special Secretary to the Ministry of Commerce and Industry, Mr. L. K. Jha, have left for London to participate in the Commonwealth officials' conference, which has been meeting since 2nd June Mr. L. K. Jha is also Chairman of G.A.T.T., and as such, has acquired special knowledge of the European Common Market move. The Commonwealth officials' conference will discuss the U.K.'s viewpoint on the proposed Common Market and the outcome of the negotiations that country has so far had. Each Commonwealth country has prepared a memorandum, expressing its views on the Common Market and Free Trade Area plan, which will help the conference in making its proposals to the Commonwealth Economic Conference to be held in Montreal in September.

Two definitions are likely to be discussed by the officials, namely, those of "agricultural products" and "the country of origin." The question of "agricultural products" has been the principal bone of contention between the U.K. and the Common Market countries. Some proposals to define agricultural products have been under discussion. As for the other, Indian textiles can be taken as an example. They are exported to Britain in half-finished conditions. Would they be regarded as made in Britain after they had been given a finish or would they still be regarded as of Indian origin?

Company Law Enforcement

Three cells are being created in the Company Law Department. They will deal with investigation, prosecution and research. The new law provides for the investigation and prosecution of the companies for offences of evading its provisions. There is yet no adequate machinery to deal with this task. Investigation, for example, is entrusted to accountants who have no knowledge of criminal law and prosecution to persons who have no knowledge of the company law. The cells which it is now proposed to create will have a couple of accountants and lawyers who are well versed in criminal law. Some police officers also will be included.

Demand for Hard Coke

The Government of India has appointed a committee to re-assess the demand for hard coke in the country. The committee will make an overall assessment of the demand for sized hard coke that is likely to arise by 1962, and will also estimate the gap between its demand and availability. It has been asked to recommend whether the required additional capacity could be obtained by expanding existing coke oven plants, including the Government plants in Sindri and Durgapur, or by establishing new units at new locations, or by a combination of both. While making these recommendations, the committee will take the comparative cost of production into consideration, particularly the benefits in terms of reduction of costs which might be secured in expanding existing Government units. Mr. P M Nayak, Coal Controller, will be the chairman of the committee, which will have Dr. G. P. Kane, Industrial Adviser, Ministry of Commerce and Industry, Mr. K. S. Raghupathi, Deputy Secretary, Department of Iron and Steel and Mr. P. C. Mathew, Divisional Superintendent, Eastern Railway as members. In making its recommendations, the committee will also go into the comparative advantages from the point of view of (a) the availability of sources of supply of raw coal of the desired grades and quantity to be used in the plant with or without blending; (b) the adequacy of transport, subject to the operating convenience of the railways, for the movement of these coals from pitheads to the plant and of the finished products, including by-products, such as tar, from the plant to the ultimate points of demand; and (c) the mode of disposal and extent of use of the by-products, including coke oven gas and coal tar.

The committee has been asked to report to the Government within four months, and will have its headquarters in Calcutta. The Coke Oven Project Enquiry Committee, it will be recalled, has estimated the demand for hard coke in the country by 1960 at 831,000 tons. But there has been a rapid expansion of engineering and manufacturing industry based on coke in the meanwhile, and demand has far outstripped supply. In the years to come, it is expected to increase still further. It has, therefore, become necessary to re-assess the requirements of hard coke and to plan for additional coal production to bridge the gap between supply and demand.

Income Tax Administration Enquiry Committee

The Government of India has set up a committee under the chairmanship of Mr. Mahavir Tyagi, M.P., to go into the question of the administration and procedure of the Income Tax Department. The other members of the committee are: Mr. Rajendra Pratap Sinha, M.P., Mr. B. M. Gupta, a former member of the Rajya Sabha, Mr. G. P. Kapadia, president of the Indian Merchants Chamber, Bombay; and Mr. K. S. Sundara Rajan, Member, Central Board of Revenue. The Secretary of the committee is Mr. F. H. Vallibhoy, Commissioner of Income Tax, Bombay South. The terms of reference are "to advise the Government on the administrative organisation and procedures necessary for implementing the integrated scheme of direct taxation with due regard to the need for eliminating tax evasion and avoiding inconvenience to the assessees."

A resolution of the Government of India constituting the committee says that for some time past the question of having an efficient system of direct taxation, which will be sufficiently broad-based and will also be determined according to the capacity to pay, has been under consideration. With a view to achieving this end, necessary legislation has been undertaken recently to impose taxes on wealth, expenditure and gifts, and the exemption limit for payment of income tax has also been reduced. The integration of the tax structure has thus been completed so far as legislation is concerned. The entire work of the assessment and collection of these taxes has fallen on the Income Tax Department. This Department was organised for the assessment and collection of income tax only. In recent years, it has been expanded to take on new burdens, but it is necessary to ensure that the administrative organisation and procedures are such as would secure the basic objectives of the present taxation policy. It is equally important that the administrative machinery should be effective in checking evasion of taxes and function without giving any scope for public complaint, the resolution adds. The committee has been asked to submit its report before 31st March, 1959.

Credit from Communist Countries

An East German technical mission is arriving here shortly to finalise the raw film project deal which that country has undertaken to finance. India will pay for it in rupees or in goods needed by East Germany. Ootacamund in south India has been selected as the location for this project. Russia has also confirmed its offer of an 80-million-rouble credit to finance the project to manufacture pharmaceutical intermediates. A Russian technical team is expected shortly. On their return from Europe, Messrs B. K. Nehru and L. K. Jha may be able to advise the Government on the project to manufacture dyestuff intermediates. Although a deferred payment plan has been worked out for this project, the immediate payment in foreign exchange may be more than 20 percent of the total cost. There is a possibility of associating the Italian firm of Monticattini with this project.

No Vaccination for Mr. Desai

The Canadian Government has also exempted the Indian Finance Minister, Mr. Morarji Desai, from smallpox vaccination when he visits that country to attend the Commonwealth Economic Conference in September.

Dr. Erhard to Come to India

Dr. Ludwig Erhard, Minister for Economic Affairs of West Germany, will arrive in New Delhi on 6th October. He will be leading the West German delegation to the meetings of the World Bank and the International Monetary Fund. It is Dr. Erhard who has arranged the credit of 600 million deutschemarks for India, which has enabled this country to postpone by three years the payments for the Rourkela steel plant.

Shipping Development Fund

The fund to develop the Indian shipping industry has now been created. The Government of India has agreed to contribute Rs. 1 crore a year to this fund, which will also receive the repayment of the loans which have been advanced to Indian shipping companies. A loan of Rs. 75 lakhs is also being advanced to the Joint Steamer Service Company in Bengal. The Joint Secretary to the Central Ministry of Transport, Mr. Nagindra Singh, who is expected to return to India by 12th June, from abroad, has negotiated the purchase of six ships. A technical mission is shortly leaving India to inspect them, before the deal is finalised.

Report on Visakhapatnam Port

The British technical mission which came to India under the Colombo Plan to investigate port congestion problems has made the following observations on the Visakhapatnam port: "Visakhapatnam is a highly specialised port handling imports of: (a) iron and steel and machinery for the new steel works at Bhilai; (b) foodgrains and (c) oil which does not present any problem. The exports handled are manganese ore, iron ore, tobacco and myrabolams. The principal purpose of our visit is to suggest short-term means for increasing the speed at which these are handled, so that ships will improve their turnround and waiting time will be minimised. We, therefore, begin by dealing with each item separately.

"*IMPORTS.* a. **Steel and machinery:** Serious delay is caused by the lack of reasonably good ship's gear. In some cases, the maximum lift is two tons. This entails abnormal use of the 60-ton floating crane and the consequent berth occupation for an unduly lengthy period. This is a matter which cannot be dealt with at the port level; but we recommend strongly that the Government should endeavour to ensure that the chartered ships arriving with these goods are equipped with derricks of at least 10-ton capacity. In the meantime, we consider that berth priority should be given to ships with adequate gear.

"For handling these goods on the quay—especially ex lighter—four mobile cranes with an out-reach of 20 feet and a lifting capacity of three to five tons should be provided. It is also recommended that two mobile cranes of 25-ton and 10-ton capacity, respectively, should be provided for use at the heavy lift dump.

"b. **Foodgrains:** These imports consist of part discharge to enable the ships to proceed to Calcutta, and it is seldom that more than 3,500 tons are discharged from any one ship. We have watched the discharge of a wheat ship, and although we were disturbed by the long carry by shore labour from ship's side to stack in the transit shed, it appeared that the shore was keeping pace with the ship's discharge. In the circumstances, we cannot suggest any short-term means of improving the ships' turnround, but would refer to our general observations on use of mechanical appliances.

"c. **Penalty:** Rent on import cargo does not begin until five days from the last day of ships' discharge. This seems to us to be quite unduly generous, and we recommend that the free period on any goods should terminate three days after the date of landing. Consideration might also be given to an increase in the authorised rates of penalty.

"*EXPORTS:* a. **Manganese ore:** There are at the present time nine dump areas on which are stored a multiplicity of lots, both large and small, of varying grades belonging to a considerable number of individual shippers. This tends to slow down the work of transfer from the dump to the ship's side. We suggest that the Government should consider the possibility of marketing all manganese ore exports through the State Trading Corporation, as is done in the case of iron ore. Considerable delay in the loading of ships occurs through the non-arrival of sufficient tubs at ship's

side. There are two principal reasons other than the multiplicity of consignments which contribute to this state of affairs.

"i. **Shortage of narrow-gauge locomotives:** We suggest the introduction of shunting tractors (Muirhill would be very suitable) to marshall the tubs at the berths and at the dumps, thereby confining the work of the locomotives to the haulage of complete trains. It may be found advisable to increase the number of narrow-gauge locomotives from four to five, but this should not be done until experience has been gained of the above recommendation.

"ii. **Handling at dumps:** Delay also occurs through the inability to load tubs sufficiently rapidly at the dumps. We suggest that mechanisation of at least part of this loading is worthy of consideration. Mechanical shovels or short-length mobile belt conveyors would be suitable.

"b. **Iron ore:** The export of iron ore at J2 berth is expected to increase. The dumping site is immediately adjacent to the berth, but may involve a carry of up to 300 feet. We suggest that portable electrically-driven belt conveyors be used to expedite the movement between the dump and the ship's side.

"c. **Tobacco and (d) Myrabolams:** These items are referred to in the paragraphs dealing with mechanisation.

"*GENERAL:* Railway shunting: Shunting in the port area and the feeding of berths and sheds would be greatly facilitated by the provision of two shunting tractors (we have already referred to Muirhill). The broad-gauge shunting engines could then be confined to trip running and the marshalling yard work.

"2. **Lighter Fleet:** The size of the lighter fleet is at present insufficient and much more work could be done at moorings. We are informed that 20 additional lighters and four barges are in course of construction locally and we consider that these should be hastened as much as possible. We also recommend the purchase of four 'Swim'-ended, 100-ton capacity steel pontoon barges.

"3. **Tugs:** An additional berthing tug is required, and we suggest that an order for this be placed as quickly as possible, and that it should be not less than 1,200 I.H.P. and twin screw.

"4. **Pilotage at night:** Pilotage at present is only undertaken during the hours of daylight. We are informed that it is proposed to dredge and widen the channel during night time in the near future, but we suggest that immediate steps be taken to light and mark the channel, so that night pilotage may be instituted as soon as conditions permit.

"5. **Test weighing of ores:** There are no convenient facilities for the test weighing of tubs of ores before shipment. We would recommend that two or three Avery Hook spring balances should be purchased, so that one can be provided for use at each ore berth.

"6. **Railway wagons:** It has been represented to us that the number of port railway wagons for internal use is insufficient. The present stock is only ten open and ten covered wagons, and it is felt that an increase to 30 open and 20 covered wagons would be advisable.

"7. **Mechanisation:** We think that it would be wise for us to refrain from any general recommendations on mechanisation until we have completed our survey of all the ports which we shall be visiting. This is specially so in view of the inevitable consequent reduction in the demand for manual labour. We would, however, at this stage, recommend the provision in this port of two clamp lift trucks for handling cases of export tobacco both into the receiving shed and from the shed to the ship's side. These appliances would also be extremely useful in dealing with bales of gunnies and the smaller cases of machinery.

"8. **Fresh water:** There appears to be a chronic shortage of fresh water supply which at times reduces the number of locomotives in commission and the number of hours that can be worked on the docks. We feel that in view of the importance of working the port and its facilities to maximum capacity, some degree of preference should be given to the port by the municipal authorities as is at present done, we understand, for the Caltex refinery."

Conclusions of the Mission

The following are the conclusions of the mission: "We have now completed our examination of the ports of Calcutta, Bombay, Madras and Visakhapatnam in accordance with our terms of reference to advise on the best means of getting rid of the congestion of ships and cargoes at these ports and preventing its recurrence. We have made as thorough a survey as the time at our disposal permitted, and on leaving each port we have submitted an interim review to the chairman or administrative officer of the port and currently sent a copy to Mr. R. L. Gupta, Secretary, Central Ministry of Transport. For reference we now enclose copies of these four reviews, but do not propose to deal with them in detail in our present observations.

"As an introduction to our final observations, we would like to give a word-picture of the place and functions of a port in the pattern of overseas trade. A port is a transit dépôt for the transfer of cargo between sea transport and land transport. It is by its very nature a bottleneck between the world overseas and the hinterland which produces or consumes the cargoes that pass through it. Through one end of the bottleneck, ships pass in and out; through the other, cargoes. Within the bottleneck, the transfer between sea and land carriage takes place, and the whole structure and functions of the port should be directed towards effecting this transfer as rapidly, efficiently and economically as possible. Like all bottlenecks, it is very easily blocked; and once the smooth movement of ships or cargo is slowed down or stopped, even for a day in a busy port, the seed of congestion is present and if not immediately eliminated, the effect will be cumulative at a very high ratio.

"These are elementary considerations, but we set them down because they are not always fully realised by the various interests connected with the ports, and sometimes not even by the port authorities themselves. This high emphasis on movement is fundamental to the recommendations in our reports.

"In so far as a port and its users fail to maintain this constant movement, the port is inefficient. The mere building of more docks or larger transit sheds for purposes other than increasing trade does not produce efficiency although it may hide the effects of inefficiency for the time being. It merely adds to the heavy capital burdens which every port must carry, and, consequently, increases the costs which must be paid by the ships and cargoes which use the ports and, ultimately by the trade of the country. Modernisation and the provision of mechanical aids to ports is in quite a different category as factors which at reasonable cost enable a port to facilitate the transit of the maximum volume of cargo in the shortest time and at the minimum cost. It is for these reasons that while in our reviews of the individual ports we have recommended a considerable number of mechanical aids, and in some cases, major new construction, we have again and again emphasised the need for rapid clearance of cargo by its owners; the simplification and speeding up of Customs procedure; the provision of suitable railway wagons in adequate numbers; and the improvements of road connections to transit sheds and berths.

"There are one or two items about which we have been deliberately somewhat indefinite in our interim reviews and would now wish to discuss at greater length. Before doing so, we would, however, wish to say that in our opinion the ports of Calcutta, Bombay and Madras should, by vigorous and intelligent management and subject to the recommendations in our interim reviews, be able to deal without delay with the cargo at present passing through them except, perhaps, at monsoon time. We are not taking into our consideration such emergencies as that caused by the reopening of the Suez Canal, which is presumably non-recurrent and in any case cannot be provided against.

"Visakhapatnam is a different case. It is a smaller port which is being required to deal with specialised traffic of a volume which necessitates the development of increased berthage and special facilities. It is, however, a port without any great industrial hinterland of its own and we have no knowledge of what its future is likely to be as a result of present and subsequent industrial planning. We would only say that from a physical viewpoint, it has great possibilities for development as a harbour and port.

"The next three subjects which are partially outstanding are very closely inter-connected, but it will perhaps give greater clarity if we attempt to deal with them separately. They are: bulk cargoes, mechanisation and labour.

"*BULK CARGOES:* The principal bulk cargoes which are liable to cause trouble are the export of ore and the import of foodgrains.

"a. **Export of ore:** The volume of this problem can be calculated. There is a growing demand for ore and the ports have given us an indication of the probable increase which they expect during the next few years. The real difficulty comes back to the question of the degree of mechanisation which is desirable. Considering the matter in the void there is no doubt that full mechanisation is the proper answer. Ore is a commodity which is eminently suited to mechanical handling, but we gather that the complete turnover from manual to mechanical handling may cause labour trouble and, due to the heavy displacement of labour, may be considered at the present time to be contrary to public policy. At Madras, we have recommended that the new ore loading berth should be fully mechanised. The special reason for this recommendation was that the storage site was very awkwardly situated in relation to the berth, and manual operation would be more than usually slow and expensive. Perhaps the labour and policy difficulties might be overcome if only increased mechanical aids were provided at existing ore loading berths, but a decision must be taken that any new berths built in the future should be fully mechanised.

"**Foodgrains:** The handling of these imports from a labour or policy point of view presents much the same difficulty as the export of ore, but it is complicated by the fluctuating volume of imports and the variations in the destinations where they may be required. We think that if it is practical to confine the major imports to one port on the west and one on the east coast, the development of Kandla and the new ancillary port of Calcutta would be the best places and that as these are new ports it might be possible to arrange for full mechanisation with sucker discharge into silos. The balance of the imports which would have to be handled at the major existing ports presents a difficult problem, but we would refer to the suggestion in our interim review of Bombay that a slow beginning might be made with simple aids to quicker discharge as a means of leading up to the use of the Buhler or similar mechanical appliances.

"**Mechanisation:** Apart from the above special commodities, we feel that the mechanisation of handling general cargoes up to the practical limit would meet with so much opposition, both from industrial and policymaking quarters, that it would not at the moment be advisable. We would suggest that, as in the United Kingdom, mechanical aids should be introduced very gradually, partly so as not to disturb labour unduly, and partly to enable the consequent displacement of men to be absorbed by the natural wastage in the labour force.

"**Railway wagon:** We do not wish to reiterate all that we have said in our interim reviews concerning the shortage of suitable rolling stock. So far as we can gather the supply of special types of wagons was not planned in advance of the arrival of the machinery, etcetera, for which they are required. We regard this question of such great importance that we think that, as a matter of policy, priority should be given to the ports. On many occasions it was found necessary to do this in the United Kingdom during the war, and the situation at certain of the ports, principally Calcutta and Madras, is so unsatisfactory that, in spite of demand elsewhere, we believe it to be necessary. It is absolutely vital to the trade of the country that the ports should be kept clear.

"**Form of port administration:** At the begining of this report, we reduced efficient port working to its elementary principles. It must not be thought that the implementing of these principles is a simple matter, particularly in a large port. As ports have grown in size to accommodate larger ships carrying cargoes of types undreamed of a few decades ago; as methods of land transport have been revolutionised; as the pattern of world trade has become increasingly complicated; and as the more leisurely methods of other days have changed to an urge for speed and ever more speed—so the ports of the world have steadily been developing new and highly technical systems of control and management. We venture to suggest that Indian ports have fallen behind in organisation and that the congestion which has occurred is to an appreciable extent due to this.

Administration of Ports

"We have observed with admiration the remarkable work which is being done by the chairmen of the major ports, and we think it is clear that the policy of each port should continue to be controlled either by a chairman and board, or by the Government, or by some combination of the two which may be considered suitable. In the case of direct control by the Government of the smaller ports, there should at any rate be a local advisory committee in the port. We would only say about these governing or advisory bodies that in our opinion it is a matter of strength if a considerable proportion of members are actual users of the port, although it is essential that all their actions should be directed to the good of the port and not to any private interest.

"In no circumstances, we think, should the chairman or board attempt to carry out the day-to-day executive and managerial functions of the port. These should be the responsibility of a chief executive officer (we suggest that he might be called 'general manager' in the major ports and 'port manager' in the lesser ones), who will be both the technical adviser to the board and responsible to it for carrying out the policy which it will determine. He must be capable of accepting very wide responsibility and must have authority through the various senior officers over every facet of the port's work. He should normally be a man of wide experience who has made port operation his professional career in life. To put it in a nutshell, port operation has become too technically complicated to be run by amateurs.

"In our visits to the ports, we have seen the first fruits of the appointment in Calcutta of a man of the type we envisage; and they have been very good. A change such as we suggest cannot be brought about by a stroke of the pen. It will need some years of experience and training to produce the required senior port officers. They must be men above the average in brains and character, not afraid of responsibility and, above all, with an enthusiasm for the intricate and fascinating work which port operation provides. We have met many of the younger men in the ports who might make good material for special training. We would add a recommendation that from time to time senior officers and those who are in training should visit ports of other countries to study their methods and to get the necessary breadth of mind. There is a *camaraderie* among ports which makes them very willing to welcome visits of men from other ports, and whether a port operator visits the ports of the United Kingdom or the Continent of Europe, or those of north America he will always find something new to him which may perhaps be useful in his own future plans.

"*Conclusion:* These are to be read in conjunction with our interim reviews of the individual ports; and with this report:

"a. cargo must never be allowed to become static within port areas. Penalties should be enforced on cargo owners who do not move their goods promptly;

"b. Customs procedure should be speedy and rationalised; unnecessary difficulties eliminated; junior staff should be instructed to get on with the job;

"c. priority should be given to the ports by the railways in the provision of special types of rolling stocks;

"d. piece-work systems should be brought into operation as quickly as possible;

"e. supervision of labour should be more strict;

"f. mechanisation should be introduced as fast as is practically possible; and

"g. methods of port administration should be reviewed."

London

GOVERNMENT ANXIOUS ABOUT LABOUR SITUATION

RISE IN DOLLAR RESERVES DUE TO BETTER PAYMENTS BALANCE

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer has been making some speeches recently, and while he appears to be looking ahead to his next Budget—which could contain proposals for reducing taxation and reversing the present restraints on expansion generally—it is only too evident that the labour situation, and especially the latest disturbing developments in that sphere, are giving rise to considerable anxiety. That is hardly surprising, for in spite of the efforts of the more moderate trade union leaders, of the more progressive employers, of the independent Press, and of Ministers to explain the value of beating inflation, stabilising prices and avoiding unofficial strikes, the spokesmen of the more extreme elements are openly advocating industrial direct action to achieve political ends—and the rank and file, as recent conference resolutions, to say nothing of the spreading stoppages, go to show, are influenced more by the latter than the former.

Addressing the annual luncheon of the British Chambers of Commerce, Mr. Heathcoat Amory asked whether the U.K. had yet reached a position where production could safely be encouraged to expand without generating pressure leading to renewed inflation and higher prices. "Very, very much depends on the outcome of wage settlements over the next few months," he said. He thought the railway wage settlement "reasonable and satisfactory from the anti-inflationary point of view." But, he said, "a number of voluntary wage settlements have been reached recently which cause me a good deal of anxiety because they seem to go well beyond any probable increase in national productivity. If settlements of that kind become at all general this year, then fresh inflationary pressure is bound to be generated." The Chancellor said that when the time came to go safely ahead, they had to see that industrial investment in the widest sense had a high priority. It could not be expected that the terms of trade would remain as favourable as they were at present. The steadying of the price index was largely the result of the decline in world commodity prices. "We have to remember that this is also making it more difficult for our customers in many parts of the world to have as much money as they had to spend."

Improving Gold Reserves

It will be particularly unfortunate if labour troubles upset the general economic recovery, which continues most satisfactorily. That is certainly true of the addition of $125 million to the sterling area's gold and dollar reserves in May to carry them to $3,039 million. They have not been as high as this since the September quarter of 1951 when, at the peak of the Korean war boom, they climbed precariously over the $3,000-million mark and then fell back disastrously when the boom came to an end. If one takes account, on the one hand, of the $5 million of United States defence aid and the $4½ million received from the European Payments Union in April, and on the other of $2½ million paid to E.P.U. creditors in bilateral settlement, last month's residual surplus works out at $118 million. This compares with a surplus of $136 million in April and of $148 million in March, but it still reflects the continuing benefits of the favourable U.K. balance of payments and the resilience of the sterling area in face of the American business recession.

The rate of growth has been both steady and impressive through the first five months of this year. The cumulative effect has been to transform the basic monetary position of the entire sterling area. At the worst stage of the crisis in the autumn, the reserves were down to $1,850 million. They have since increased by two-thirds. Whereas September was a time of acute danger, the present is obviously one of comparative safety. It has to be recognised, however, that this safety has been secured as a result of borrowings as well as by earnings. In October, $250 million was borrowed from the U.S. Export-Import Bank; in December, $104 million was not repaid on the United States and Canadian loans when it should have been, and in December 1956. $561 million was borrowed from the International Monetary Fund. In due course, all these loans will have to be repaid. The balance with the European Payments Union in May was less satisfactory. There was a deficit of £13 million after a surplus of £2 million in March. This deficit will have to be settled, three-quarters of it in gold, in the present month.

Sterling Debts Cut

To get a true picture of our external payments position it is not enough to know merely the total of the gold and dollar reserves. This must be compared with the level of our external debts. The Chancellor hinted recently that there had been a decrease in external indebtedness, but he did not say by how much. Now, at long last, this gap in the financial statistics is to be filled by new figures. Every quarter the Treasury will reveal the totals of overseas sterling holdings, and it will also present another entirely new set of figures showing the volume of outstanding acceptances. It will thus be possible to interpret short-term changes in the gold reserves more realistically than hitherto, when the sterling balance totals have been available only at half-yearly intervals. The first figures in the new tables, covering the position at 31st March, 1958, show that in the first quarter of this year, overseas sterling holdings, excluding non-territorial organisations, were reduced by £33 million to £3,234 million. A sharp reduction of £77 million to £1,740 million in the category of sterling area countries other than British colonies more than offset small increases in several other categories. Since acceptances were down by £7 million to £140 million, it is clear that the rise of £178 million in the gold reserves recorded during the quarter represented a genuine net gain. In fact, it under stated, by a net amount of £26 million, the real improvement in the overall external position. In the detailed survey of overseas sterling holdings now made available by the Treasury, it is disclosed that at the end of 1957 about 80 percent was held by central banks and other official funds. At the end of 1956, 60 percent of these holdings was in the form of British Government securities, 32 percent in Treasury bills, and 8 percent in bank deposits.

Output Index Steady

The Treasury states that the Index of Industrial Production for April is provisionally estimated at 134-135, compared with 144 for March, the same figure as for February. These figures are very similar to the corresponding ones for 1957: February 143, March 145, and April 134. But production in March and April of last year was affected by the shipbuilding and engineering strikes, so this year's figures might be regarded, perhaps, as being not quite as good. A better picture of the recent trend is provided, however, by the index figures as adjusted for seasonal factors. These are as follows:

Month	1958	1957
January	... 137	137
February	... 139	138
March	... 138	138
April	... 137-8	137

In the first four months of 1958, the index averaged 140, the same as in the corresponding period of 1957. According to this index, which is prepared by the Central Statistical Office, the total volume of industrial production has remained roughly unchanged for more than two years. Some industries are shown to have expanded and others contracted; within each industry the same contrast of expansion and contraction is repeated. This is what is now generally described as "stagnation," but it is obvious that what this country really needs is not more production but better production, with uneconomic units making way for efficient and well-managed ones.

Banks Buy Gilt-edged

It is interesting to find from the combined return of the clearing banks for the month ended 21st May, that they have bought £27 million more Government securities after buying £43 million in April and £10 million in March. Also, that the liquidity ratio has dropped to just over 31 percent, the lowest for nearly two years. Thirdly, the holding of Treasury bills is down by £36 million, contrary to the seasonal trend. One must assume that funding operations were fairly heavy again. Bank advances to customers, which had grown strongly in the past three months, fell off slightly in May; they are still well below the level of a year ago. The May decline was entirely in advances to nationalised industries. Some banks are now reporting that the demand for loans from private customers has declined to the point where no special restrictions have to be enforced in order to maintain the total at the agreed figure. This was to be expected in view of the heavy fall in raw material prices.

Stock Exchange Values

While the nominal amount of gilt-edged and foreign stocks quoted remained practically unchanged at £22,000 million, their market value fell by £730 million in the year ended 31st March to £15,961 million. This is disclosed by figures released by the Stock Exchange. A £500-million rise in the nominal amount of company securities to £8,200 million was accompanied by a fall of £2,000 million in their market value. The biggest single section, commercial and industrial, with 4,852 quoted securities, showed a fall of more than £660 million to £7,900 million. Only three of the 40 groups moved against the trend. These were breweries, South African mines and rubber shares. Gold shares were in the lead with the market value of South African mines up from £724 to £831 million. Breweries and distilleries, with 500 quoted securities, were about £11 million higher at £606 million. Rubber shares were up from £61 million to £65 million. Oils, the largest group apart from commercial and industrial, lost about £640 million.

Ceylon Rubber Paradox

Mr. A. Hollington, chairman of Grand Central (Ceylon) Rubber Estates, invites attention to the paradoxical situation in Ceylon in his latest statement to members. On the one hand, the company has just made a return of capital to shareholders. On the other, the chairman is obliged to talk about the need for new money. This curious situation is coupled with the refusal by the Ceylon Exchange Control to allow funds in Colombo to be remitted home. The capital payment has had to be made from London sterling balances, which are now very depleted. Increasing crops call for improved plant in Ceylon, but it is most unfortunate that a mention of new funds needs to be accompanied by such a stark appraisal of the outlook. Mr. Hollington says that it is impossible for anyone not connected with Ceylon to appreciate the great difficulties. Unless responsible members of the Ceylon Government are prepared to insist on a more realistic approach to the country's problems, there would not appear to be much hope of improvement. Continuous strikes have been caused by quarrels between rival unions, and recenty have paralysed shipping, preventing movement of any produce.

Direct Irish Tea Purchases

Legislation recently passed by the Irish Parliament in effect short-circuits the prewar pattern of Irish tea purchases which were invariably routed through Mincing Lane in London. The new Act, the Tea (Purchase and Importation) Act, 1958, gave authority to set up a new body, Tea Importers (1958) Ltd. Under the terms of the Act, individual importers will in future be able to make arrangements to import direct from foreign markets using the new company as an agency for this purpose. Most of the tea imported into Ireland comes from India. The new body replaces Tea Importers Ltd., the body set up by the Government during the war to purchase tea in bulk.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

OUTLOOK FOR MACHINERY EXPORTS IMPROVES

(FROM A SPECIAL CORRESPONDENT)

BROADLY speaking, there is little change in industrial trends since this letter was written a month ago. Industrial production is barely maintained, with export figures being satisfactory on the whole, but with certain industries still playing a disproportionately large part. The export of machinery of various kinds, for example, is still large. Machinery may be supplied to meet a universal need for long, and that may be all we need to know, if we are thinking in terms of the maintenance of British prosperity in general. Some of Britain's overseas competitors are becoming more efficient with the help of the machinery they purchase. Meanwhile, the question of the European free trade area is in virtual suspense. The pace might quicken now that France seems to have achieved comparative stability in her political situation. One the other hand, there is little at present to indicate that she will be able, for months to come, to take a detached view on the developments. There is no guarantee that she will be prepared to reverse her recently expressed views on the conduct of European trade—so much at variance with those of the United Kingdom.

Further afield the tariff outlook is discouraging; the pressure by Australian, Canadian and U.S. manufacturers for higher and more extensive duties has become increasingly hard to combat. There has been a certain feeling of elation due to the fact that the British Government is favourably disposed, through the opportunity offered by the London transport strike, to make a beginning with some of the fundamental labour problems which have helped make the existing economic situation unsound. There is no doubt that the public opinion is strongly in support of the Government making the bus strike the occasion for dealing with larger issues, and taking advantage of the difficult situation a section of trade unionists, who might be unable to resist measures of reform. Industrial opinion is solid on this matter and sees the justification for application of like steps throughout the country. Of course, although the Transport Workers Union has made a strategic mistake on this occasion, in pressing a case so vulnerable, the trade unions, as a national movement, are unlikely to cede their power without a struggle. That struggle might be initiated far from the centre of the present dispute. So elation should be tempered with caution. This does not mean that industrialists are not willing to risk and sacrifice for the cause of economic solvency.

Russian Competition in Chemicals

The chemical and allied industries remain the outstanding subjects for discussion. It is now fully accepted by the British chemical companies that Russia will spend vast sums on improving and developing her chemical industries during the next few years. Much of this expenditure need involve no excessive external drain, as her vast natural resources ensure her of a greater part of the raw materials she needs. But she will need to import chemical manufacturing machinery on a large scale. Who is going to provide her with them? Can the British chemical machinery industry rise to the occasion? Will political conditions change sufficiently rapidly to allow it to do so? The trading pact being negotiated by Russia with West Germany points to one export supplier ready to hand. But Britain might have to mix barter with her ordinary trading methods (which West Germany is willing to do). One thing is certain, granting that the machinery is obtained from somewhere, Russia will become a great exporter of chemicals, if she wishes to do so well within the next decade. Whether that prospect will be welcomed by all the leading British chemical firms is difficult to say, but the most powerful one has expressed itself philosophically on the subject. Certainly, it provides a potential challenge to the British chemical industry.

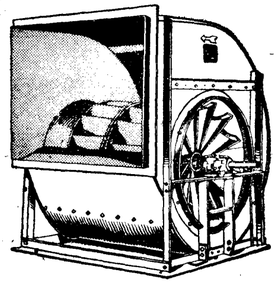
New Publication

Meanwhile, there is renewed activity in the British (and the U.S.) publishing world concerning new books on industrial chemicals. The market for this type of books appear to be favourable for an indefinite period ahead. Readers of the recent article in *Capital* on organic chemicals may care to look into the second edition of *The Petroleum Chemicals Industry* by Dr. R .T. Goldstein. Unfortunately, the price is too high (95s), as is for many modern technical books. One wonders if publishers in a number of cases, could not come down a little, especially when second editions have been reached. At any rate, the book has been claimed as "monumental", as it might fairly well be, having 473 pages, with numerous figures, charts and tables. Indeed, nothing more complete, on the subject, is available at present.

Textile Conference

Some dozen papers were read at the Textile Institute's Edinburgh conference, on the interesting subject of "Fibre blends—developments since 1952." A summary of proceedings at the conference was issued and an estimate was made of foreseeable developments in fibre blends. So, little was lacking in an endeavour to make the occasion fully intelligible. Nevertheless, it still remained hard going, save to the ultra-specialist. The papers gathered much information on fibre blending operations to date; but they were of a nature for the reference dossier rather than for the ordinary forms of assimilation. It has been announced that the Institute's September conference will be held in Gothenburg, Sweden. The subject for discussion will be "mechanical properties of textile materials." Two papers which should interest Indian textile readers are "mechanical properties of chemically modified cottons" and "the tensile and tearing strength of woven cotton fabrics." The first is being given by Dr. Conrad of the Southern Research Laboratory, New Orleans, where valuable pioneering work has shown much promise of increasing the range of cotton uses through chemical modification of the raw material. The second paper will come from the British Cotton Industry Research Association.

Enquiry on Co-operatives



The co-operative movement has fallen on bad days, so much so that it has been necessary to appoint a commission of enquiry with Mr. H. Gaitskell as chairman. Co-operatives not only do retail business with many associated units; their activities extend into agriculture, manufacture and research. This is not the first time that the movement has been charged with being unprogressive. Indeed, an outcry was made as far back as 35 years, the allegation then being that the best jobs had become the strictly guarded perquisites of family circles at the expense of the exclusion of much needed ability from executives. That allegation has not been directly made today. But, whatever the reason, it needs but a glance into the multiple stores to see that these are run with greater ability. Moreover, the co-operative shops are out-matched in display and organisation. One result is that, over the past ten years, the movement has not increased its share of the nation's expanding domestic trade, whereas the gain of the multiple stores has been heavy. It is reported, as an outcome of the enquiry that there are far too many co-operative shops which are being run on parochial lines. It is intended to reduce the number of shops by as many as two-thirds. Other reforms are proposed which are to be carried out through a "Co-operative Retail Development Society", which seems prepared to learn everything it can from the methods of its competitors. The general feeling is that the movement has left reforms rather late in the day, and that it will have to be content with a much more moderate place in the nation's economy than was at one time hoped.

SACKING SLUMPS HEAVILY ON COMPLETE LACK OF DEMAND

MILL STOCKS AT HIGHEST LEVEL FOR PAST YEAR

PRESENT conditions in the Calcutta goods and fibre markets are causing considerable anxiety. All heavy goods prices, for both near and forward positions, with the exception of specialities, are well below the minimum laid down by the I.J.M.A. The position is further aggravated by the fact that even if mills were prepared to break the gentleman's agreement over minimum prices, there are no buyers at the current rates, or even below them. Overseas buyers have shown a complete lack of interest, and the only business on the home front is emanating from the Indian Government and is so small as to be of little consequence. It would appear that many members of the I.J.M.A. are in favour of a break in the minimum rates, and it was rumoured that the position was being reviewed at the I.J.M.A. meeting on Tuesday. While the meeting was in progress, speculation became rife and prices fell to new low levels. The position in the hessian section was somewhat better than in the sacking and during the early part of the week, rates continued to rule above minimum levels. A little confidence returned when it was reported that letters of credit had been sanctioned and established by overseas buyers covering May sales to Argentina but this was short-lived and completely vanished due to the publication of the mills' stocks of jute goods at the end of May. These showed an increase of 15 percent on April stocks, and brought the totals up to the highest level of the past year. It is usual at this season to have an increase in stocks, but not to the extent of the current rise. As was anticipated, hessian stocks showed an increase due to the goods destined for Argentina being returned to the mills, or not shipped at all on account of the existing restrictions. An increase of 4,600 tons was not considered excessive. The trend of the sacking market was reflected in the increase of 11,600 tons in heavy goods stocks, and emphasised the difficulties under which mills are operating.

Sacking stocks are now double what they were six months ago, in November 1957, when mills began to switch their production from hessian to sacking to take advantage of the better prices then available. At that time, sacking produciton constituted just under 50 percent of the total, and hessians about 36¼ percent—the balance of 13½ percent being miscellaneous manufactures. At the end of May, sacking output rose to 64 percent and hessian production fell to 22 percent; other goods remained constant. That sacking has been grossly over-produced is only too obvious, and mills are really partially to blame for their present plight. A large percentage of current stocks may be P.D.O's at higher levels, but the fact remains that manufacturers are now holding more unsold goods than for some time past, and are not in a position to finance stock-holding on such a scale. Unless an outlet is found for its goods, the industry may have to resort to a further curtailment of production in the near future.

The fibre markets have been influenced by the events in the goods market, although certain sections of the trade maintain that the opposite is the case. As there has been no business in the gunny market, mills have taken no interest in raw jute, and idle conditions have prevailed. The fact that new crop reports continue to be favourable is a mere coincidence, and the effect these reports have had, compared with the dearth of buyers, has been negligible. The weather in lower and upper Assam, as also in the better class northern districts, has alternated between rain and sunshine, and has been very beneficial to the standing crop, which is reported to be healthy. Only in Bihar and certain western districts have there been any complaints. In these areas more rain is required, and much of the growth is stunted due to the prolonged drought. Most of the Daissee districts have had rain recently, but much more is required to promote growth.

Freight Rates Again Cut

The threat of the all-India dock strike has caused a flurry of activity in shipping circles, and every effort is being made to sail as many ships as possible before the midnight of 15th June, which is the time the strike is scheduled to begin. It was announced during the week by the Calcutta-U.S.A. Conference that the duration of the temporary reduction in jute goods freight rates has now been extended to vessels starting to load not later than 10th October, 1958. The freight rates on jute backing and wide hessian have also been revised for shipment to Pacific ports, and with effect from June, sailings will be assessed on a weight basis which will reduce the rate to $45 for 20 cwt.

THE JUTE MARKETS

The futures market showed a downward tendency throughout the week, and prices as supplied by the East India Jute and Hessian Exchange for the period 4th to 10th June, were as follows.

	Hessian 40in. 10oz. June	Sacking B Twill June	Raw Jute Upper Assam June
Opening	40.20	99 45	25.08
Highest	40.26	100.10	25.36
Lowest	39 64	97.85	23.94
Closed	39 64	97.65	23.99

Manufactured Goods: There was little activity in the goods market at the opening last Thursday, but prices showed a slight increase from last week's closing. B Twills opened at Rs. 98.85 for June shipment, with forward delivery at a premium of Rs. 1.25. Hessians also showed an initial improvement, and 40in. 10oz. opened at Rs. 40.45, but in this section, forward shipment continued at a discount of about 30nP. The rise was short-lived, however, as heavy selling pressure, especially in forward sacking, which was now above the I.J.M.A. minima, resulted in price falls. Over the next few days, prices fluctuated within narrow limits but the general trend was in a downward direction. Overseas buyers were completely out of the market, and even local shippers appeared reluctant to do business. There was a slight improvement after the week-end, but once again shortly after the opening, in the absence of fresh business, and on account of the publication of the mill stock figures, easier conditions prevailed and by Tuesday morning, B Twills had dropped to Rs. 97.75 and hessians 40in. 10oz. to Rs. 40. Throughout Tuesday, the market was depressed and full of rumours about decisions reached at the I.J.M.A. Committee meeting on the subject of ways and means of reducing stocks. Heavy goods reacted to these reports and slumped to Rs. 97. No decision is reported to have been taken however, and the market continued weak.

On Wednesday morning, opening quotations were as follows:

	June.	July-Sept.	Oct.-Dec.
40in. 8oz.	32	32	31.75
40in. 10oz.	40	39.95	39.80
B Twills	97	98	98.40
Heavy Cees (Plain)	97 25	98	98.40
A Twills	117.25	118.50	120
Liverpools	109	110	110.50
Cornsacks	98.25	99.50	99.75

Raw Jute: At the opening last week, a fair amount of business was conducted by a large mill group in both old and new crop jute, and up to the week-end, this continued on a smaller scale. Buying was not general however, and the business done had little effect on prices. After the week-end, the market was completely neglected, and in the absence of mill interest, prices eased. Sellers of new crop jute continued to demand a premium of Re. 1 a maund over old crop at the outset, but by the close, this had been reduced to about 50nP. Good rainfall in the jute-growing areas caused easier conditions and as a result of this, most sellers became keen for business. There were very few buyers at this stage however, and the general undertone of the market was weak. Upcountry markets eased considerably over the week, although imports, on the whole, were very small.

During the week, business was reported in old crop Assam-Nothern jute at Rs. 24.75 to Rs. 25 a maund, and also jungli X Bottoms at Rs. 16.50 to Rs. 16.75 a maund. A small lot of jungli mesta was also done at Rs. 25.50. The bulk of the business was done in new crop Assam-Northern at Rs. 25.25 to Rs. 25.75 basis Bottoms for July-August shipment. Daissee White was also done at Rs. 25.25 and Desal White at Rs. 24.75 for the same shipment. In Cossipore, arrivals amounted to 430 wagons which were well up to the average of the corresponding period last year, and about 55 more than the previous week. Quotations at the close were based on Kishenganj jute at Rs. 23.25 a maund for average quality.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	24.50	June-July
Northern	24.50	"
Purnea Desal	23.50	"

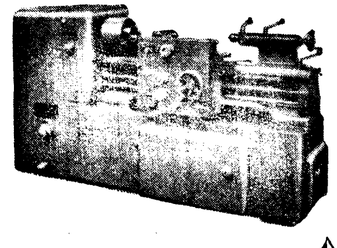
THE FOREIGN JUTE MARKETS

RESTRICTED DEMAND FOR GOODS

(FROM OUR DUNDEE CORRESPONDENT)

THERE is little or no change taking place in all sections of the jute industry. Most manufacturers in Dundee and on the Continent are working under reduced hours or with machinery shut down, so the whole position is unsatisfactory. Orders being placed are for the smallest of quantities, enough to do the turn, as no one seems to want to carry any more than is absolutely necessary. Stocks are being allowed to drop to very low levels, because buyers are well aware that fresh supplies are obtainable practically off the shelf. It is unfortunate that the whole industry is now under this hand-to-mouth manner of buying, from spinners as well as the actual consumer of jute cloth and bags. The Pakistani Jute Board and the Pakistani Government are blamed for a lot of the troubles and trials in the jute trade meantime. "Capsularis" in the *Jute and Canvas Review* for June, the monthly journal of the British-Continental Trade Press, of Strand, London, says that now is the time for the jute industry to have a show down with Pakistan if the jute manufacturing industry in any country, even in Pakistan, is to survive. The excessively high prices for raw jute are leading to mills and factories closing through their inability to compete with substitute materials. Why should the industry "go on incurring losses to fatten the bellies of the bureaucrats in Pakistan?", the writer asks. If the growers were really gaining some benefits there might be some sense to it, but they



I.J.M.A. STOCK FIGURES FOR MAY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of May as follows:

Description	31st May, 1958 Lakh Yds.	000 Tons	30th April, 1958 Lakh Yds.	000 Tons	Increase over (+) or decrease from (-) last month Lakh Yds.	000 Tons	31st May, 1957 Lakh Yds.	000 Tons
Hessian cloth and bag	9.51	25.0	7.77	20.4	+1.74	+4.6	14,86	40.4
Sacking cloth and bag	17,28	71.8	14,47	60.2	+2,81	+11.6	13,86	58.0
Others		15.2		16.9		−1.7		11.0
Grand Total (000 Tons only)		112.0		97.5		+14.5		109.4

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

must obey their dictators. "Farm one acre, not two, and earn £50, not £100."

Prices for raw jute show little change. Mill Firsts are still at £115 lowest, Mill Lightnings £100, Mill Hearts £89, and grade Hearts £71, June-July, c.i.f., U.K. These prices would be considered by shippers also for August-September. Good Daissee-2/3 is from £104 and grade £98, grade Tossa-2/3 £115 and grade Tossa-4 £106, June-July. Only small lots are being bought in old crop, but new is neglected.

Calcutta goods are irregular, but showing only slight changes at around 61s 6d for 40in. 10oz. and 45s 9d for 7¼oz., June to September, with B Twills at 150s June, 150s 9d July and 152s 6d August-September, all f.o.b., Calcutta. Prices for Dundee jute yarns and cloth remain firm and unchanged.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st May, 1958	2,693.3	28,593.7	31,287.0
1st to 30th April, 1958	4,162.9	19,900.0	24,062.9
1st to 31st March, 1958	2,014.9	31,128.1	33,143.0
	Sacking		
1st to 31st May, 1958	26,281.3	931.1	27,212.4
1st to 30th April, 1958	25,301.8	911.1	26,212.9
1st to 31st March, 1958	27,133.4	679.4	27,812.8

SMITH STANISTREET & CO., LTD.
CALCUTTA-14.

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

CARRYING CARGO BY AIR

B.O.A.C. TO INTRODUCE NEW SCHEME

THE next 12 months will see the beginning of a new phase in B.O.A.C.'s cargo activities. With new fleets of modern jet airliners and much greater freight capacity, the new policy will expand the Corporation's cargo capacity. Since its inception in 1940, B.O.A.C. has been able to offer only limited cargo space. The Corporation believes that the three essential factors underlying any cargo service are regularity, reliability and service, and it has not always been possible to provide a shipper with a service exactly suitable for his requirements. This has been due, to a great extent, to a shortage of the right type of equipment.

There has been a tremendous expansion in the air transport industry during the past decade but this growth is only an indication of what is yet to come. B.O.A.C has a new plan for carrying cargo by air. It has appointed Mr. W. D. Koster as its Cargo Manager to direct the development of cargoes. He has been concerned with air cargo and all its intricacies since 1930 when he started a career in the air shipping and forwarding world. Speaking of the new development he says: "It is essential that carriers—and B.O.A.C. in particular—should appreciate fully the exact needs of the shipper. We are an intricate part of the world's industry in our position as a carrier and we must assume a full sense of responsibility in this rôle. We shall try to do this in three ways. First, by ensuring that we provide the type of service which the shipper wants. Second, by getting to know our shippers and their trades intimately, for only then can we understand the problems that face them and help them achieve the most economic use of the service that B.O.A.C. can offer. Third, by close co-operation between the shipper and the carrier to make the best possible use of the tremendous increase in capacity which will become available over the next ten years on all the world's routes."

Freight Salesmen

For the first time, B.O.A.C. is to have specialist freight salesmen in Scotland, Birmingham, Manchester and London and also in Europe in conjunction with B.E.A., to offer one-the-spot advice to shippers in these areas on the advantages which air travel can provide in the distribution of their goods.

Many Facilities

The air freight shipper has many facilities at his disposal, including a booking service which will reserve space for freight in a particular aircraft in the same way as a passenger makes a booking. Arrangements can also be made in the United Kingdom whereby freight (excluding perishables, livestock and consolidated shipments) may be accepted on a cash-on-delivery basis. Alternatively, the charges may be forwarded to B.O.A.C. destinations in most parts of the world. A service to which B.O.A.C. will pay even greater attention in the future will be its packaging arrangements. The corporation will have experts to advise shippers on the best methods of packing all kinds of freight. As weight and space are vital factors in the assessment of air freight charges, packing can have a considerable bearing on a manufacturer's distribution costs. On the other hand, the cargo must be adequately protected.

Both geographically and because of the services it offers, London is one of the smoothest transshipment points for cargo anywhere in the world. In their endeavours to offer better service, worldwide cargo carriers are constantly introducing methods to "streamline" the handling of cargo and to reduce unnecessary formalities. It is now commonplace for cargo to be transferred directly from one aircraft to another without any intermediate delay. Simplification of procedures with Customs has been given due consideration in B.O.A.C.'s new policy for air cargo. A number of recommendations concerning facilities for the handling of freight at airports in the United Kingdom were contained in the fourth report of the Select Committee on Estimates which dealt with Customs and excise matters.

SIMPLIFYING TIME-TABLE PRODUCTION

EXPERIMENT BY BRITISH RAILWAYS

THE elimination of much of the laborious and monotonous clerical work necessary for the revision of time-tables may be the outcome of experiments now being made by British Railways who claim that they "are leading the world in this particular application of computers"—those remarkable products of the electronics industry whose versatility and possibilities are apparently unlimited. It has recently been disclosed that a Ferranti "Pegasus" and an English Electric "Deuce" computer—both still the property of their manufacturers—are being used for this purpose by the Eastern and London Midland regions, respectively. So far the Deuce has been used to test the feasibility of using electronic computers to find ways of fitting special trains into existing time-tables and operating schedules. Later it will be used to work out seasonal variations of time-table for a section of line. The second machine, which is based in London, is being used to work out a complete time-table which would make best use of line capacity, rolling stock, and train crews. A spokesman of British Railways said that it had not yet been decided whether to buy a computer for time-table work although it appears that the experiments so far have given encouraging results and much progress has been made in solving the problems of "feeding" the machines with the necessary basic details.

Apart from this novel application, the railway system already has computers in Swindon, Paddington, and Bristol, where they are used for payroll calculations. A computer has been ordered for the Railways Research Laboratory in Derby, while a number of others are on order for goods control and inventory work at regional centres. The British Transport Commission, whose Electronics Advisory Panel suggested the experiments, said: "The successful conclusion of these experiments would greatly facilitate the half-yearly time-table revisions. It would also accelerate the timing of special train programmes for bank holiday periods and other seasonal events and of individual special trains."

Electronic Clerk

Perseus, the largest electronic digital computer yet made in western Europe for doing routine office work, will shortly be in use for the first time. For more than two years, Ferranti designers and engineers have been working on it at their laboratories in the New Town of Bracknell, Berkshire. Perseus will cost approximately £300,000. The first two models are to be exported. One to Sweden this autumn for the Trygg and Fylgia Insurance Companies of Stockholm, and the second next year to the South African Mutual Life Assurance Society in Capetown. The first application of Perseus by these insurance companies will be for keeping thousands of policy records. These will be held on reels of magnetic tape, from which Perseus can rapidly provide up-to-the-minute figures. It will issue premium notices, prepare accounts, work out tables of rates and provide figures which it would have been extremely tedious to extract from records before. Perseus is not limited to insurance work. It can do any of the routine work in a large office: control stock, forecast sales, prepare invoices, work out pay. The unusual feature of this "electronic clerk" is that it works like a human clerk directly with letters and numbers, no matter what the language or currency. Time is not lost in converting them into a form normally necessary for a computer to understand.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.6 percent to 108.7 during the week ended 24th May, 1958, compared with 108.1 for the previous week. The index was higher by 1.0 percent when compared with the corresponding week of last month but was lower by 1.5 percent when compared with that of last year. Higher prices of gur in Patna (+14%), bananas in Calcutta (+12%), wheat in Kotah (+11%), in Moga (+8%), in Kanpur (+7%) and in Abohar (+5%), potatoes in Mettupalayam (+9%), arhar in Hapur and betelnuts in Bangalore (+8% each), milk (+6%), barley in Moga (+5%), maize (+4%), gram, chillies and cloves (+3% each), jowar (+2%), and rice, masur, urad, cashewnuts, tea for internal consumption and coffee (—1% each) raised the index for Food Articles by 1.3 percent to 108.2 although wheat in Rajkot (—11%) and in Dhandula (—8%), oranges (—9%), potatoes in Shillong and eggs in Delhi, (—8% each), onions (—7%), fish (—4%) groundnut oil (—2%) and gingelly oil, meat, sugar and black pepper (—1% each) showed declines. The index for Tobacco stood unchanged at its previous week's level of 90.3. A rise of 4 percent in the prices of coal was responsible for pushing up the index for the Fuel, Power, Light and Lubricants group by 1.2 percent to 114.9. The index for Industrial Raw Materials remained stationary at the previous week's revised level of 113.3. Items which showed important variations were: raw skins in Kanpur (+7%), raw wool in Fazilka and in Beawer (medium, yellow) (+6% each), mustardseed in Kanpur (+5%), gingellyseed (+2%), raw wool in Bombay (—11%), raw jute in Barachakia (—5%) and bamboos (—4%). The index for Intermediate Products advanced by 0.3 percent to 107.8 due to a rise in the prices of coir yarn (beach) in Alleppey (+7%) and rayon yarn (+2%). The prices of lead (—2%), however, showed a fall. The prices of quinine sulphate (foreign) in Bombay (—6%), tiles in Bangalore (—3%) and jute manufactures (—2%) moved down while oilcakes (+1%) showed an advance, and the index for Finished Products receded by 0.2 percent to 107.6 compared with 107.8 (revised) for the earlier week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53 = 100)

SUGAR PRODUCTION INCREASES

Production and despatches of indigenous sugar amounted to 1,947,000 tons and 1,082,000 tons, respectively, up to 15th May, 1958, in the current season against 1,913,000 tons and 1,170,000 tons in the corresponding period of last year. Stocks with factories on 15th May, 1958, stood at 1,290,000 tons compared with 1,270,000 tons during last year.

SHORTAGE OF FERTILISERS AFFECTS COFFEE ESTATES

IMPORTANCE OF SECURING LARGER SUPPLIES

(FROM A SOUTH INDIAN CORRESPONDENT)

THE foreign exchange difficulty poses a problem for the Indian coffee since it is unable to get an adequate supply of fertilisers. The planters have taken up improved methods of cultivation, and the use of fertilisers has become popular during the past three or four years. This is the reason for the phenomenal increase in India's coffee output during the past three seasons. Many of the estates need to use chemical fertilisers in increasing quantities in the coming years. The shortage of supply of fertilisers at this stage, will—apart from retarding production and dampening the enthusiasm of planters—have a very serious effect on the growth of plants themselves. Even if fertlisers are made available fully in subsequent years, it will take a long time for the affected plants to regain their lost vitality.

The coffee industry is a major earner of foreign exchange. Last year, it established a new export record by sending a shipment of 15.000 tons. Exports during the current year may well exceed 11.000 tons and next year they are expected to be higher. The chairman of the Coffee Board has, therefore, said in his address at the half-yearly meeting of the Board that since this industry is contributing not a little in earning foreign exchange and will continue to do so in future years, its case should be sympathetically considered by the Central Government. The coffee industry needs phosphatic fertilisers in the form of rock-phosphate and potash as muriate of potash. Efforts are being made to secure at least 10,000 tons of rock-phosphate and 8,000 tons of muriate of potash a year. The import of nitrogenous fertilisers was cut by 55 percent in 1957-58. and the position is not likely to improve in the near future. West Germany has agreed to buy from India Rs. 71 lakhs worth of coffee representing 75 percent of the value of fertilisers India is to buy from that country.

Training for Coffee Board Official

A scientific officer of the Coffee Board has been selected by the Government of India for undergoing training in the United Kingdom under the Colombo Plan. He will study the use of radio-active isotopes in coffee culture and the plant protection techniques. When this officer returns after completing his training, the Board will provide him with a laboratory at its Balehonnur research station.

Introduction of the Metric System

The Coffee Board has decided to change over gradually to the metric system with effect from October 1958, it has been officially announced. The curers and agents of the Board have agreed to pack coffee in 60-kilo bags from this year in conformity with the prevailing international standards. The Board proposes to introduce the metric system at all stages this year, after coffee is delivered by planters to the pool. Estates will continue to deliver their coffee in imperial bushels and other weights and measures as they are in vogue now. After curing, the coffee will be accounted in metric weights, and thereafter, all transactions will be made in that system. The price differential scale will continue as before, but the number of points will be expressed in units of 60 kilos instead of cwts.

New Scheme for Curing

The Coffee Board proposes to introduce a new scheme to solve the problem of handling next season's bumper crop of 50,000 tons. According to it, the planter has to inform the curer of the quantity he is likely to deliver before 30th June, 1958. The curers will have to make necessary arrangements for curing the coffee or inform the planter to make alternate arrangements if they cannot handle the excess. The various curing establishments in the coffee-growing areas of south India are expanding their curing and storage capacity in view of next season's bright crop prospects. It is officially stated that the present curing capacity is for about 50,000 tons which can be increased to 55.000 tons, by employing extra labour or working more shifts. With the increase in production, more curing facilities should be available. The Board has granted licences to certain private agencies for setting up new curing houses, of whom one or two have reportedly dropped the idea of undertaking the construction of new curing houses.

The Plantation Enquiry Commission's recommendations were a source of anxiety to the curers, and it is no wonder that some of them were hesitant to invest new capital for expansion. Now that the Government's decision on the Commission's recommendations has been announced and since the Government has not accepted the recommendations on curing arrangements, there seems to be no reason for continued anxiety and, therefore, a better climate for expansion should prevail. The curers feel that an increase in curing charges is necessary in view of a rise in labour and other charges. They have already approached the Coffee Board with a request to raise the curing charges. But the Board as well as the Government hold the view that the basis for determining agency and sales commissions should also be examined along with the fixing of adequate curing charges. The Board proposes to constitute a committee to investigate the entire problem. It also proposes to recast the present agency agreement and put it on a long-term basis.

Development Loans

For intensive and extensive cultivation of coffee, the Coffee Board has so far distributed development loans among growers amounting to Rs. 6,71,501, it has been officially stated. Out of this, a sum of only Rs. 27.663 has been granted for extensive cultivation. The development scheme, sponsored by the Coffee Board, is not very popular among planters. The loan applications amounted to only 63 this year against 87 last year and 595 in 1956. The unpopularity of the scheme is attributed to two reasons; first, the difficulty in satisfying the conditions laid down by the Board for the granting of loans; second, the possibility of getting loans from other sources on more attractive terms.

Educational Stipends

The Rubber Board has decided to give educational stipends for the children of rubber estate workers from the academic year 1958-59. The scheme is for secondary and college education, as well as for technical education. The term "workers", as envisaged in the Board's scheme, includes only those workers employed in registered rubber estates actually doing manual work and only such other persons working as *kanganies* and watchers. The stipends are to be distributed directly by the Board.

The Coffee Board also has a scheme for giving financial assistance for the education of coffee estate workers. But the method of distribution is different. It proposes to create a trust and to hand over the fund to the respective State Governments. The fund for medical help to coffee plantation workers is also proposed to be distributed through the State Governments.

COCHIN TEA SALES

At Sale No. 16, 1,050,000 lbs of tea were on offer. There was much less demand for everything. Low mediums and mediums declined by 10nP or 20nP. good mediums were irregularly 10nP lower while best liquoring grades declined by 20nP or 30nP. Whole leaf types were about steady.

EXPANSION OF TANGANYIKA TEA ESTATES PLANNED

Britain's Colonial Development Corporation (C.D.C) has agreed to subscribe up to £450,000 towards the cost of a tea development scheme being carried out by Bird and Co. (Africa) Ltd. on its estates in the eastern Usambara mountains of Tanganyika. The company plans to increase the 840 planted acres on its estates to 2.700 acres by June 1965 at an estimated cost of £820,000. This will include the cost of building a factory capable of handling annually some 3 million lbs of tea. The C.D.C. will be entitled to appoint a director to the board of the company. Both of them will also co-operate in investigating the possibility of an African smallholder tea scheme in the Usambaras. Last year's estimated production of tea in Tanganyika was 6 million lbs.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for May 1958:

Upper Assam: Good rain has fallen with excessive rainfall in Dibrugarh: temperatures low: outturn to date normal but poor in north Lakhimpur; prospects good.

Central Assam: Outturn normal but poor in Golaghat; weather seasonable; crop prospects generally are favourable.

Lower Assam: Weather seasonable but rainfall excessive; outturn normal and immediate prospects fair; red spider blight prevalent in Nowgong.

North Cachar: Good rain has fallen generally and prospects are bright; red spider blight prevalent.

South Cachar: Weather hot; good rain has fallen generally but is deficient in Hailakandi and Chutlabheel; outturn good; red spider blight severe in some districts, with black rot in Chutlabheel.

Eastern Dooars: Rainfall is much above normal for the season to date; outturn and immediate prospects good; red spider blight prevalent, also looper caterpiller in Kalchini

Central Dooars: Outturn in April good; immediate prospects fair; weather favourable; red spider blight severe in Dalgaon.

Western Dooars: Outturn about normal; weather seasonable; good rain has fallen generally, and prospects are now brighter; hailstorms with little damage reported from Dam Dim; red spider blight prevalent.

Darjeeling: Outturn in April good; immediate prospects fair; weather seasonable; red spider blight prevalent.

Terai: Weather improved; crop prospects improving; red spider blight severe.

Calcutta Markets

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

DUST PRICES DEARER

AT Sale No. 1, held on 10th June, a total of 18,690 chests of Dust was on offer, for which there was a good general demand. Buyers from the Middle East were operating freely, and black leafy exportable types from all districts sold well at generally dearer rates, the best kinds being up to 12nP above valuations. The remaining orthodox descriptions were about firm at the beginning and strengthened towards the close C.T.C. Assams continued to be a weak feature and demand was irregular and prices were generally easier, the greatest decline being registered by the thinner liquoring descriptions.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.54 to 1.56	1.45 to 1.50
Medium Assam Grainy Dust	1.56 to 1.58	(Nominal)
Medium Assam C.T.C. Dust	1.70 to 1.90	Not quotable
Best Assam C.T.C. Dust	Not quotable	"

A total of 368 chests of Leaf was on offer.

CHARTERING RESTRICTED BY HIGHER FREIGHT RATES

CHARTERERS in the freight markets are finding difficulty in obtaining tonnage for local orders at the low rates recently arranged. Owners' ideas for coal to East Pakistan are now 22 to 24s f.i.o. against 18s accepted last month. The present tender for eight cargoes to Chalna and Chittagong, delivery July-August, is likely to arouse the gambling proclivities of some of the Pakistani importers who may well burn their fingers badly this time, since the discharge of 20,000 tons coal at Chalna in a short period is likely to be a slow process and will result in demurrage accruing. A variety of fixtures made recently included Burma-Manila rice at 30s f.i.o.s., Burma-Ceylon 25s f.i.o.s, Shanghai-Ceylon 33s 9d f.i.o. and Taiwan-Karachi sugar at $(U.S.) 4. Calcutta-Alexandria coal was done at 50s and Newcastle N.S.W.-Japan 39s 6d. Some interest was shown in the time charter section with 26s paid for a new 11,630 d.w. motorship delivery Shanghai, plus a bonus of £1.500 for ballasting from Calcutta The State Trading Corporation, it is reported, is examining proposals for chartering on a round voyage basis in an attempt to promote exports by lowering freight rates. How far this development will go before Indian shipowners protest at what would appear to be competition from within, remains to be seen.

HIDES AND SKINS DULL

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 3rd June and 9th June, 1958)

Cowhides: Wet salted (slaughtered) 15,700 pcs. on the basis of Rs. 12.50 to Rs 21.

Goatskins: Wet salted (Patna, Daissee and Kustia) 53,500 pcs. on the basis of Rs. 325 to Rs. 335, Rs. 350 to Rs. 390 and Rs 410 to Rs. 420; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs 3.50 a piece; Assam-Dinajpur-Jalpaiguri 42,000 pcs. on the basis of Rs. 310 to Rs. 380 Purneah-Kissenganj 28,400 pcs. on the basis of Rs. 350 to Rs. 360; Patna-Pakur (Ord.) 15.500 pcs. on the basis of Rs 315 to Rs. 325; Muzafferpore-Patna 1,000 pcs. on the basis of Rs. 340 to Rs. 350.

Bazaar Stocks

(9th June, 1958)

Cowhides: Wet salted 62,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia and Killed) 27.100 pcs.: Assam-Dinajpur 39,500 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenganj 1,09,700 pcs.

SHELLAC STEADY

During the week ended 10th June, the market was steady. The range of quotations was as follows:

Pure Buttonlac	Rs. 82 to 82.50 buyers.
Lemon No. 1 Shellac	Rs. 84.50 buyers; 85 done and buyers; 86 buyers.
Lemon No. 2 Shellac	Rs. 80.50 buyers; 80 to 82 done and buyers.
F.O. Std. 1 Shellac	Rs. 76.50 buyers, 77 to 78 done and buyers.
Pure TN Shellac	Rs. 65.50 to 66 buyers.
4% I.T.N. Shellac	Rs. 56 to 56.50 buyers.
No. 1 Kusmi Seedlac	Rs. Nil.

Kireelac	Rs. 12.50 buyers.

Shipments during May were 38,384 packages comprising shellac 14,142 packages, seedlac 20,792 packages, buttonlac 1,406 packages and others 2,044 packages.

COMPANY AND PUBLIC NOTICES

BHARTIA ELECTRIC STEEL CO. LTD.

NOTICE

NOTICE is hereby given that the Twenty-ninth Annual General Meeting of the Members of the Bhartia Electric Steel Co. Ltd., will be held at the Registered Office of the Company at No. 4, Old Court House Street, Calcutta-1 on Tuesday the 8th July, 1958 at 4 P.M. to transact the following business:—

1. To consider the Profit & Loss Account of the Company for the year ended 31st December, 1957 and the Balance Sheet as on that date and the Reports of the Board of Directors and Auditors of the Company.
2. To declare a Dividend.
3. To appoint Directors in place of Sri R. L. Bhartia and Sri P. R. Bagri, who being longest in office, retire by rotation.
4. To appoint Auditors for the year 1958 and to fix their remuneration.
5. To consider and, if thought fit, to pass with or without modification the following resolutions each of which will be proposed as a special resolution:—

(a) "Resolved that the Company accords its approval to the continuance of payment of a remuneration of Rs. 1,500/- per month to Sri P. R. Bagri, an associate of the Managing Agents, and that payments already made on and from 1st March, 1958 and also before that date are hereby also approved and ratified."

(b) "Resolved that the Company accords its approval to an agreement or agreements being entered into with Messrs. Ranken & Co. Private Ltd., an associate of the Managing Agents, for payment, in such manner and proportion as the Directors of this Company may from time to time consider proper, of charges for services commonly used by both or separately provided by them to the Company at Premises No. 4, Old Court House Street, Calcutta with effect from the 1st June, 1958."

Explanatory Statement in respect of business referred to under Item 5 (a) and (b) above ad-seriatum:—

(i) Sri P. R. Bagri is a Director of your Company since 1950 prior to which he was the Secretary of the Company and has been actively associated with the management of the affairs of the Company for over 15 years. He has been drawing a monthly remuneration of Rs. 1,500/- since 1951. But he, being a Director of the Managing Agents, Messrs. Bhartia Company Ltd., is an associate of the Managing Agents and hence under Section 360 of the Companies Act, 1956 your approval is necessary for payment of such monthly remuneration to him.

(ii) Your Company is a tenant of Messrs. Ranken & Co. Private Ltd., an associate of the Managing Agents of the Company, in respect of an area of about 5,000 Sq. ft. on a monthly rental of Rs. 2,500/- in Premises No. 4, Old Court House Street, Calcutta-1. Sri R. L. Bhartia and Sri P. R. Bagri who are Directors of your Company and its Managing Agents are also Directors of Messrs. Ranken & Co. Private Ltd. The Registered Office of the Company has been shifted from the previous address at 42, Shibtolla Street, Calcutta-7 to 4, Old Court House Street, Calcutta-1 with effect from 1-6-1958 and the Company will be obliged to take electric and other services from the said associates at the latter place for which payments will have to be made to them. Your approval is, therefore, necessary in compliance of Section 360 of the Companies Act, 1956.

Note:

1. The Share Transfer Books of the Company will be closed from 25th June to 8th July, 1958 both days inclusive.

2. A member of the Company entitled to attend and vote at the above meeting of the Company shall be entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

3. Dividend declared, if any, at the above meeting shall be paid only to those shareholders of the Company who will be registered on the books of the Company as on 8th July, 1958 or to their Order or to their bankers.

4. The Registered and Head Office of your Company has been shifted from No. 42, Shibtolla Street, Calcutta-7 to 4, Old Court House Street, Calcutta-1 on and from 1st June, 1958.

By Order of the Board,
BHARTIA COMPANY LTD.,
Managing Agents.

4, Old Court House Street,
Calcutta-1.
Dated, the 4th June, 1958.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Register of Members and the Transfer Books of the Company will be closed from Thursday, the 3rd July to Thursday, the 31st July 1958, both days inclusive.

Notice is also hereby given that the dividends for the year ending 31st March 1958, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Thursday, the 31st July 1958.

Notice is also hereby given that pursuant to the Special Resolutions to be passed at the Extra-ordinary General Meeting of the Company to be held on Thursday, the 19th June 1958, the holders of Ordinary Shares on the Register of Members of the Company on Thursday, the 31st July 1958, being the date fixed by the Directors pursuant to the above Resolutions, will be entitled to the issue of bonus Ordinary Shares.

By Order of the Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
J. D CHOKSI,
Director.

The Company Meetings and Dividends table appears on page 855.

MUTTRA ELECTRIC SUPPLY COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the Fifty-ninth Ordinary General Meeting of the Company) of the abovenamed Company will be held at its Registered Office, No. 15, Shib Thakur Lane, Calcutta-7, on Monday the 23rd June, 1958 at 4-30 P.M. for the following purposes:—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1957 the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a dividend on the Ordinary shares.
3. To appoint Directors in place of those retiring. And, in this connection, Special Notice as required by Sections 280 and 281 of the Companies Act, 1956, is hereby given that at the meeting the following resolutions will be proposed as a Special Resolution, namely:—

"That Mr. G. D. Bhagat who has attained the age of 71 years, be and is hereby re-appointed a Director of the Company and that the age limit prescribed by Section 280 of the Companies Act, shall not apply to him".

4. To appoint Auditors and fix their remuneration.

BANKS

H indicates that Share capital is half paid. O., C. and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE NEED FOR A COMMONWEALTH BANK

A QUESTION OF SUPPORT

INDIA'S need for foreign loans is only one example of the current maldistribution of the world's liquid resources. Another is the inability of sterling—the currency in which 60 percent of world trade is carried on—to sustain anything but the most limited of seasonal runs. This is a matter of international concern. The British economy has not suffered unduly from the American recession because U.S. imports of manufactured goods have been maintained even though exports have fallen off. The impact of the recession on the entire sterling area has, therefore, been considerably reduced. But that does not mean it will not feel the effects if the slump is further prolonged, nor if recessions of varying depth and frequency are to be the feature of the post mid-1950 world economy. There are two other good reasons why the precariousness of sterling should be a matter of special concern just now. The most important is the need to counter the Soviet Union's new economic imperialism; the other is to offset West Germany's tendency towards the United States' old habits of accumulating a large proportion of the world's liquid reserves and forgetting to put them back into circulation. If the economy of the free world is to be saved from its own contradictions, some method will have to be devised for financing an increasing flow of trade and for channelling investment resources to the places they are wanted —India, for instance. These tasks can only be achieved through sterling: neither the dollar nor the D-mark can supply such facilities while they remain as hard as they are at the moment. And the nucleus of a world financing centre exists only in London.

This is the background to the suggestions which have been heard recently for a Commonwealth Bank. The project is believed to have been discussed in general terms between President Eisenhower and Mr. Macmillan, during the latter's visit to Washington a few weeks ago. It is one of the subjects to be dealt with at the forthcoming Commonwealth Economic Conference in Montreal —which promises to be the most important of its kind since the Ottawa Conference of 1933. The difficulty is that an institution of this description will require outside backing—either American or West German or possibly both. The resources of the sterling area itself are not adequate for the job and are unlikely to become so in the foreseeable future, in spite of the improvement in the U.K.'s balance of payments. Technically, this backing could be achieved by supporting nations buying stock in the new bank and so providing resources for lending or simply for supporting sterling in case of emergency. There should be no difficulty in finding the money required; the unused resources at the disposal of the International Monetary Fund and Export and Import Bank would be quite adequate for the purpose. The main difficulty is to interest prospective contributors in a project which is chiefly for strengthening sterling and, as at present conceived, to benefit the Commonwealth.

There has been more appreciation in the United States during the past few years of the rôle the sterling area plays in financing world trade. Mr. Adlai Stevenson recently made some flattering remarks about Britain's "miraculous skill" in underpinning "50 percent of the world's trade with a dollar reserve no larger than that of the Ford Foundation". He did not do the sterling area complete justice; the proportion of world trade it finances is larger than that. There is no reason to suspect that this appreciation of Britain's difficulties is not fairly widespread in America's governing circles, although that does not mean Congress will necessarily approve measures to alleviate them. A revision of the price of gold would automatically increase the value of the sterling area's reserves and might even leave them adequate to carry on their task without any fresh support. But such a move, of course, is about the least likely at the present time, if only because it would also increase the trading potential of the Soviet bloc. The only other effective way to counter the deflationary effects of continually expanding world trade would be a large dollar loan for sterling on the scale of the one negotiated by Lord Keynes in 1946. It might not be easy to get that idea accepted by Congress. The first loan was swallowed up in the post-war inflation; assurances that a second one would merely be a standby for use only in the kind of emergency which would be unlikely to arise if the credit were granted, would cut very little ice.

It would probably be much more acceptable to the U.S. Congress to be able to support a project which did not appear to be purely for Britain's benefit. The same could probably be said of West Germany. The idea might be even more acceptable if it were linked to the convertibility of the pound—a dream which has long been close to American hearts. The whole thing would have to be presented in a manner which would convince Congress that there are few cheaper and more effective ways of fighting the new communist economic offensive than by strengthening sterling, and that this is not just another move to restrict the demand for American export goods—although the U.S. only has herself to blame if she has consistently refused to be a good creditor. The most telling economic point, perhaps, is that the dollars would be supporting a going concern in the commercial sense: there is no question of aid involved. The project is simply for a semi-international bank financed by sterling and looking to the liquid resources of the United States and West Germany simply for facilities as "lenders of last resort". It should not be impossible for the hard-headed business men in Congress to accept the value of an investment which will pay a reasonable dividend economically and an altogether bumper one politically.

The ability of Britain herself to assume her true rôle as investment banker to the Commonwealth is probably greater now than at any time since the war. The weakness of Britain's position so far has been that her liabilities were too large in proportion to her assets. This position has now improved. During the last two or three years, many Commonwealth countries, of whom India is an outstanding example, have drawn heavily on their balances to finance development. Britain has been able to liquidate some of her debts without having to turn for help elsewhere. If this state of affairs continued, it might be possible eventually for Britain to move naturally into her pre-war creditor position when members' present balances have been exhausted. But this would depend on a continuation of present trade circumstances, something which just cannot be relied upon. In any case, it would take far too long for the sterling balances to be reduced to the level at which runs on the pound become unlikely, and there is not that amount of time to be lost. Discussion eventually returns to the fact that the backing for sterling is far too small for the work it has to do, and that it is likely to remain so for a considerable period to come. But the next few years will see an increase in the demand for development resources and it would be more convenient for all concerned if these could be supplied through sterling drawings—especially if the pound were convertible—than if each borrower had to negotiate facilities separately with the United States or some other creditor country for a loan which would be tied to their goods at their prices. Such a procedure is too slow, smacks too much of aid when it is, in fact, nothing more than a commercial or industrial credit such as any banker might arrange with his client, and is unnecessarily restricting and expensive for a country which would prefer to buy its requirements in the most suitable markets and at the most favourable prices. At the moment, sterling does not allow freedom as complete as this; but what it does offer is considerably better than much of the assistance that a dollar loan from the Export Import Bank can give.

It is reassuring that economic opinion throughout the free world is becoming more aware of this increasing need for liquidity if trade and investment are to go forward at the pace required. Even Mr. Dulles—whose grasp of modern realities is never conspicuous—has declared himself in favour of some new move to relieve the strain on sterling. No doubt the subject will be discussed threadbare at the coming Montreal Conference of Commonwealth Finance Ministers. It is to be hoped that the views of so many free and developing nations will persuade the American Congress to take a step from which only gain can result. But the deciding factor is still likely to be the need to counter the Soviet economic offensive. It is regrettably true that, ever since the United States became a creditor nation, it has only been the threat of communism which has made her assume the responsibilities of one. Now that threat is taking a new and more distinctly economic form. It should be easier to get the United States to see her own interests in taking some strictly economic measures to counter it. There is no doubt that if something in the nature of a Commonwealth Bank could be organised, and backed up with credits so that it could do its job without collapsing the first time Britain's balance of payments showed signs of weakening, it would be an attractive alternative to the lure of Soviet credits.

BETWEEN THE DEVIL AND THE DANUBE

WHILE one or two countries may have been rather slow in realising the full significance of the Hungarian Revolution of October 1956, there has hardly been any difference of opinion in the free world on the murder of Imre Nagy. Much is still unknown of the circumstances leading to the ending of his life and those of his associates. The little that is has been shocking enough. The announcements came from Moscow first. Few details were given of the trial, secret, and at a so-called people's court. It is not even considered necessary to say where, when or how he was killed. The 14-page statement issued by the Ministry of Justice of the Hungarian People's Republic (which, incidentally, comes to us from the U.S.S.R. Embassy in New Delhi) is content to speak only of a "counter-revolutionary uprising, with the active support of the imperialists, designed to overthrow the lawful system in the Hungarian People's Republic". Who says so? The prosecutor, who is also the judge and the jury and the only witness. Shaw's exaggeration, *The Crime of Punishment*, seems a gross under-statement to describe this piece of justice.

It would be a serious error to consider the murders of Nagy, Maleter and others as the continuation of the 1956 repression by other means. Life was cheap in those weeks of October and November, and it was taken by the hundred in that confusion. There is also the temper of an occupying army to be taken into account in judging the brutal excesses of the Soviet forces. Even these flimsily extenuating circumstances were absent in the recent executions. Here was no mass insurrection to be considered, in which the wisest may act foolishly and the kindest cruelly. Here was no serious threat to anything or anybody: only a bunch of aged and sickly prisoners in some unknown gaol—and just shuffled off like that

in the coldest and most calculated manner. What, then, may the calculations be?

Incredibly ignorant though the Kremlin is of what goes on in free minds—how a mere dog, for instance, can stir deep emotions in a people—it cannot have failed to foresee that the killing of Nagy would earn nothing but the disgust of all decent folk everywhere in the world. Cynically contemptuous though the Russian attitude generally is towards world opinion, deliberate indifference to its foreknown revulsion is hard to reconcile with the expensive propaganda efforts the Soviet Union has been making recently. The refusal to wait with patience for the usual confessions which precede executions of this kind suggests that someone may have acted impulsively, but excessive reliance on the doubtful supremacy of emotions in the mind of the Kremlin leadership is a barren line of enquiry. Impulses are mostly unpredictable, and if these ever become the decisive factors in Moscow's actions, all the rest of the world can tremble at the fatal prospects. A more fruitful line of enquiry may be to assume, and then to try to discover, reason behind the Soviet action.

There is some truth in the theories now current; the execution of Nagy and his associates is a dark hint to potential insurrectionists everywhere in the Soviet empire. It is a warning to Marshal Tito in particular, and it may not be altogether fanciful that the recent worsening of Soviet-Yugoslav relations precipitated the unseen trial and its tragic climax. It is certainly a reminder to Mr. Khrushchev's surviving rivals inside his own country of what awaits them—if. It is a cautionary tale to all "revisionists" in fact who, Mr. Khrushchev found to his embarrassment, had taken his de-Stalinisation a trifle too literally. All these, however, may not add up to a full explanation of the murders, if only because the profit expected to be collected on these scores still falls far short of the total on the debit side of the book. To mention only one factor, Mr. Khrushchev should know better than anybody else that men who go into active communist politics rarely rate death as a very grave deterrent. Has not Mr. Khrushchev himself expected death, violent and sudden, almost every day of his political life—under Stalin and after? Others may desist no more than he did.

It is necessary then to enquire what *material* advantages the Kremlin hopes to derive to set off against the clear propaganda disadvantages. But, before that, it will be useful to take note of the way the West, especially the United States, has been trying to portray Imre Nagy. Certain things are being attributed to him which almost justify, from the communist point of view, what has been done. In the United States, for instance, is shortly to be published a book written by Nagy; the excerpts we have seen are certainly dangerous heresies which no communist government could be expected to tolerate. He had begun to question some of the basic tenets of communism, although in the name of Leninism or Marxism, and this the Kremlin could not possibly put up with. Nagy was, if these extracts are any guide, clearly turning a Djilas—who is now in Tito's prison. It required a Churchill to put the escape of Trotsky from Russia in its perspective. Without caring to think whether this might not sound heartless, he said at the time that what Stalin had done to Trotsky was only what Trotsky would have done to Stalin, if only he had the chance. The closeness of his death and the secrecy in which he worked for most of his life make an assessment of Nagy exceedingly difficult, but it does not seem necessary to present him posthumously as a great liberal or even a great communist. He was swept into power by the revolution, and he never seemed to know just what he was doing. It is the Soviet murder which has invested the man with greatness, for he came, in his imprisonment, to symbolise something bigger than himself. The fact that he did not confess to uncommitted crimes, in spite of the temptations and tortures which presumably he was confronted with, bespeaks extraordinary strength of character. He must have had many other qualities, which made so many Hungarians turn to him in those fateful days of October 1956.

A clue to Soviet intentions is still to be had; it may not be available for a long time. A great power wants to be loved and feared alternately, and what made the Soviet Union choose the way it did at this moment is still unclear. It may be that the internal situation in eastern Europe forced the choice. It may also be that the Kremlin was getting increasingly nervous about the summit talks it had asked for so stridently and insistently. It may well have been calculated that the American reaction to the murder of Nagy and his group would be what they have been—a sense of angry despair whether it is much use talking to these people. In America and elsewhere, some people are already viewing the tragedy as an excuse for inaction, and it may well suit the Soviet book. Whether the Kremlin should be so obliged is another matter.

Whatever the significance of the executions in Hungary, whatever it is the Soviet Union is trying to tell so crudely nobody knows what and to whom, nobody should miss the cynicism inherent in the means adopted to do so. A third party (the Hungarians) has been done to death by a first party (the Russians) in order to illustrate a point made to some second party (the Yugoslavs or others). A more lurid illustration of communist methods has not come our way in recent times, and the world will have only itself to blame if the right lessons are not drawn and digested. In the final analysis, this may be more important than speculating on Soviet intentions for the latest murders. Intentions, largely unknowable, are sometimes irrelevant.

4¼ PER CENT STATE GOVERNMENTS LOANS

Name of State	Amount	Year of maturity	Issue Price per cent.
(1) Andhra Pradesh ...	Rs. 500 lakhs	1970	Rs. 99.50
(2) Bombay ...	Rs. 1000 lakhs	1970	Rs. 100.00
		1971	Rs. 99.75
(3) Kerala ...	Rs. 300 lakhs	1970	Rs. 99.00
(4) Madhya Pradesh ...	Rs. 200 lakhs	1970	Rs. 99.00
(5) Madras ...	Rs. 500 lakhs	1970	Rs. 99.50
(6) Mysore ...	Rs. 500 lakhs	1970	Rs. 99.50
(7) Orissa ...	Rs. 300 lakhs	1970	Rs. 99.00
(8) Rajasthan ...	Rs. 250 lakhs	1970	Rs. 99.50
(9) Uttar Pradesh ...	Rs. 700 lakhs	1970	Rs. 99.50
(10) West Bengal ...	Rs. 500 lakhs	1970	Rs. 99.50

All the State Governments reserve the right to retain subscriptions up to ten per cent in excess of the notified amount.

All the above loans will be repaid at par on 15th July 1970 except the 4¼% 1971 loan of the Government of Bombay which will be repaid at par on 15th July 1971.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 15TH JULY 1958 AND CLOSE ON 19TH JULY 1958 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 15th July 1958.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% BOMBAY GOVERNMENT LOAN 1958, 3% COCHIN LOAN 1955-58, 3% MADHYA PRADESH LOAN 1958, 3% MADRAS GOVERNMENT LOAN 1958 and 3% UTTAR PRADESH LOAN 1958 will be accepted AT PAR for conversion into the new loan/s of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid up to and including 14th July 1958.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the office of the Reserve Bank of India at Nagpur in the case of the Bombay loans.

(ii) At the branches of the State Bank of India and at Treasuries and Sub-treasuries in the case of Andhra Pradesh, Bombay, Kerala, Madhya Pradesh, Madras, Orissa, Rajasthan and Uttar Pradesh loans.

(iii) At the branches of the State Bank of India in the case of West Bengal loan.

(iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Bombay loans.

(v) At the branches of the Bank of Mysore Ltd. except at Bangalore, the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

TROUBLE FOR THE U.K. POWER PLANNERS

WRONG CALCULATION OF FUTURE DEMAND

IN July this year the last of Britain's wartime controls on consumption will be withdrawn: coal will be derationed and its price will be decontrolled. This change reflects the general abundance of coal, in defiance of the forecasters who envisaged scarcity of this fuel until, many years hence, nuclear energy would be abundant. Soon after the announcement of impending decontrol there was news of Britain's nuclear-power industry. An agreement was signed with Japan which implied that this important customer, having spent many months investigating the various systems of generating electricity by nuclear power, had decided that the British system was the most practical. At the British Electrical Power Convention, Sir Claude Gibb, chairman of the Nuclear Power Plant Company, said that Britain had a commanding lead in the new era of nuclear power. But at the same convention, Sir Christopher Hinton, chairman of the Central Electricity Generating Board and one of the highest authorities on nuclear power, said that nuclear power-stations could remain competitive only if the capital cost of these stations was reduced considerably by 1966.

In Britain especially, nuclear power has been developed with the utmost speed on the assumption that the supply of energy would become critically deficient within a few years, unless the conventional fuels were substantially supplemented by a new mode of energy. That assumption was based on a belief that the demand for energy would steadily increase. The experience of 1957-58 has shown that this belief was mistaken. A temporary industrial recession is not an adequate reason for re-estimating the long-term demand for energy, but it is no secret that the estimates made a few years ago are no longer accepted as realistic. There are two main reasons for questioning these estimates. The first is that the present recession will obviously not be the last; that the pattern of economic development established in the first 12 years after the war is an unreliable guide to the pattern of future development. The second is that the estimates of demand for fuel seem to have made inadequate allowance for technological changes in the use of fuel, enabling it to be used more economically; this economy could be more important than increases in supply, especially in the case of coal.

In the case of oil, there is one major technological development that seems to promise a big increase in supply if demand requires such an increase. The recent news from Amsterdam that the Royal Dutch-Shell group is evolving a method of thermal "cracking" of heavy oil underground, so that much more of a given quantity of oil in the ground can be pumped out, has caught the imagination of many people besides those responsible for planning power. It suggests that the virtual exhaustion of reserves of oil that has seemed (in the eyes of the pessimists, at least) to be always only a few decades distant is now deferred into the indefinite future. The National Union of Mineworkers in Britain has been urging the authorities to restrict imports of oil so that the coal industry, still the foundation of the whole economy, can be maintained in a healthy state. Lord Mills, Minister of Power, has insisted that free competition between coal and oil must continue so that the whole economy can be maintained in a healthy state. The economy does, indeed, need cheaper fuel, and it would be unwise to deny it the full benefits of the recent months' reduction in oil prices, which has undoubtedly stimulated consumers' interest in this fuel.

Britain's stocks of coal have, indeed, grown to embarrassing proportions, and merely stocking the surplus has cost enough to turn the National Coal Board's profits into losses. (One enterprising consulting engineer has informed the Board how it can save £17 million in a year by stacking low-grade fuel to a height of at least 16 feet, instead of 8 feet, which is the present limit, allowing only a few thousand tons to be accommodated on an acre.) But fuel technologists see a better way of restoring the coal trade than restricting competition. The coal that is surplus in Britain is small coal, which many fuel-burning appliances (including locomotives) cannot easily consume. Both the Institute of Fuel and the National Association of Colliery Managers have been in conference in Britain recently, and the theme of their discussions has been the utilisation of small coal. Nearly all authorities are agreed that mechanisation of mining, which has produced this surplus of small coal and which cannot be quickly modified to produce more large coal instead, must continue. What must be adapted is the treatment and the use of the product.

The anticipated reward of mechanisation is a comparatively rapid increase in output in the next few years, for capital invested in development in the past is now becoming fully effective, and investment continues—though less confidently. Most of the increase in output will be small coal, and unless much more of it can be consumed (at home or abroad) the stock will become enormous, and the whole programme of development will be futile. The choice is between large coal that is relatively scarce and dear and small coal that is plentiful and relatively cheap. Recent British figures have shown that to produce 1,000 tons of coal requires 272 man-shifts on conventional faces but only 169 man-shifts on power-loaded faces, and that wage-costs for each ton are correspondingly reduced by mechanisation. More mechanisation offers great benefits if the product can be used; and the incipient revolution in processing coal, treating it not as a finished fuel but as the raw material of various manufactured fuels (and chemicals), points the way to economic use. The question arises, then, whether Britain's costly nuclear-power programme is really beneficial. Some authorities believe that technological development of the coal industry, to produce abundant cheap fuel, will be more rewarding.

Current News and Comment

Tax Evasion in Oil Crushing Industry

In a representation to the Central Government, Rai Bahadur G. V. Swaika, president, West Bengal Oilseeds and Oil Trade Association, states that unscrupulous elements in the oil crushing industry have been taking advantage of the excise-exemption concession available to small oil mills and *ghannis* with a capacity of 75 tons and less, and have been offering severe competition to the organised sector. Not only have a large number of mushroom mills sprung up with one expeller unit or a pair of power-driven rotaries, but many larger units have broken themselves up in order to escape the payment of excise. These elements, adds the Rai Bahadur, have not only succeeded in undercutting the price of linseed oil quoted by the large-sized duty-paying units, but they have been competing unhealthily with the village *ghannis*, too. As a result, the latter, for whom the exemption has been granted, are being deprived of the benefit. The consequences of these and other malpractices, such as mixing mustard oil with linseed oil, are also reflected in the increasing unemployment in the organised sector. It has been doing its best to promote the export of linseed oil, but due to this cut-throat competition the incentive is being lost. Rai Bahadur Swaika suggests that the total abolition of excise duty on the oil crushing industry could be one solution. The other is to enforce the recommendations of the Oilseeds Crushing Industry Enquiry Committee to ban altogether the establishment of new oil mills.

Investment in Plantations

Plantations in the Nilgiri hill areas produce some of the finest tea in south India, and have been able to improve the quality of their output. But they are now faced with the problem of finding the resources for development and expansion. To compensate for increased costs, planters have been compelled to raise output, but to increase the latter, they need money, especially for buildings, machinery and factories. In the past, this money was available from profits, but this is no longer possible due to higher taxes. Speaking at the annual general meeting of the Nilgiri Planters Association, Mr. M. W. Hoare, president, has referred to the burden of Central, State and local taxation. Out of 1,000 lbs of tea produced by an estate, about 400 lbs go to labour in wages, amenities and other benefits. About 180 lbs go towards paying for the tools, equipment and supplies required to keep an estate in production. About 275 lbs go in meeting income tax, agricultural income tax and sales tax, duties, cesses, road tax, property tax, education cess and a number of other levies. The remaining 145 lbs go towards depreciation, or to provide for funds for the replacement of machinery, buildings and equipment when they are worn out or too old, towards reserves and paying a return to those whose investment helped develop the industry. "The less attractive the return to investors, the less the investment that will be attracted to this industry. Its inevitable result will be stagnation." The raising of resources from the capital market is not a practicable proposition in as much as plantation shares have been eroded by a continuous decline in their values. Under the circumstances, the industry must look increasingly towards its own internal resources. If the prevailing level of taxation does not allow this process, the plantation industry will stagnate and its earning capacity will decline. It is obvious that the phase of expansion in the industry has passed. Planters are well aware that it is saved from collapse by a series of fortuitous circumstances. "Among them are the internal disturbances which prevent the rehabilitation of the Indonesian tea industry to its prewar level; repeated internal commotions in Ceylon caused by floods, riots and strikes; in northern India, adverse weather conditions last year: late in 1956 the Suez crisis. All these have gone towards concealing the real problems of the industry." The cost of production of tea has been rising continuously. It is necessary, therefore, to minimise the fiscal and welfare burdens which have been imposed on producers.

Outlook for Marine Underwriting

The annual address of the chairmen of the Liverpool Underwriters Association on the problems and prospects of marine insurance has always evoked worldwide interest. The latest report from Mr. E. E. Griffith, at the 156th annual general meeting of the Association, is full of sound advice and carries a note of warning to marine underwriters everywhere including India. His assessment of the present and future prospects was somewhat gloomy, but he has indicated solutions to some of the problems—solutions which can be achieved through sound leadership and the co-operative effort of individual underwriters. Underwriting results in marine insurance are causing considerable anxiety, he says. His pessimistic forecast was often criticised by many in the past, but the loss ratio of marine accounts published in the past year and perhaps also in some of those which have just been closed, has fully confirmed his fears. Mr. Griffith has pointed out that while the warnings of some of his predecessors have gone unheeded, the pressure of economic forces have brought home to the underwriters the extent of the deterioration (obscured for some years by a light casualty experience), which has been shown by the time lag in the presentation and settlement of claims and the insidious practice of "writing marine on the back of the war premium." According to Mr. Griffith, substantial additional premiums accruing from the boom in hull values, which reached its peak at the time of the Suez crisis, concealed to some extent the effect of inflation on claim settlement. It has been clear for some considerable time that there is no margin in current rates for a serious casualty or a heavy average claim, and it must surely be realised after the experience last year and in the second half of 1955 that a return to the elementary underwriting principle of a fair premium for a fair risk is urgently needed, Mr. Griffith stresses.

Mr. Griffith, however, could draw a more hopeful picture when he stated that the complacent attitude displayed in some quarters was giving way to a more realistic appraisement of a situation which required the utmost underwriting skill and judgment. He has suggested the need for strong leadership, particularly to arrest the unrelenting competition born of an insatiable thirst for premium income and unhealthy competition in rates and conditions irrespective of past results. He has also warned against the "vice" of granting cover on trade losses. The underlying rule applying to all insurance, that a policy of insurance covers a risk and not a certainty, has been emphasised by Mr. Griffith. Unfortunately, this wholesome rule seems to have been completely abandoned in some quarters. Efforts to eliminate cover for non-fortuitous losses in cargo insurance have been made in the past without success. He has strongly urged support for the resolution sponsored by Mr. Thorburn at the International Union Conference in 1955, deprecating the granting of this form of cover and inviting member associations to consider the adoption of a binding agreement to restrict insurance to conditions "not wider than those of the Institute Cargo Clauses (All Risks) or equivalent wording." Unfortunately, even on this very desirable provision no general agreement could be reached. Mr. Griffith has suggested that the British market should give a lead. He has no doubt that a large number of marine insurers overseas are looking for and would welcome such a lead.

Financing Industries in Bombay

The working results of the Bombay State Financial Corporation for the year ended 31st March, 1958, show a profit of Rs. 8,28,887.96. The Government of Bombay has guaranteed a minimum dividend of 3½ percent a year, and to pay this amount, the Corporation has to request the State Government to give a larger subvention. An increase in the latter has become inevitable due to a rise in the provision for taxation by Rs. 1.50 lakhs and expenses amounting to Rs. 20,000 incurred in connection with the issue of bonds. For augmenting its resources, the Corporation decided to issue bonds of the face value of Rs. 1 crore with a maturity of ten years. The issue price of the bonds was fixed at Rs. 98.50, and they were repayable at par in 1967 carrying interest at 4½ percent per annum. They had been guaranteed by the Bombay Government for the repayment of the principal and interest. The bonds were over-subscribed and the list was closed on the opening day. The Corporation entered into an agreement with the State Bank of India under the scheme of integrated credit sponsored by the latter, in order to establish close coordination in granting loans to small and medium-scale industries at pilot centres within the State. It was decided that there would be close consultation between the two agencies about the facilities required by loanee concerns who, under the arrangement, need only approach one institution for all their credit requirements. The applicants would then be advised to approach the proper institution depending on the type of finance required by them. The Government of Bombay was hitherto disbursing loans to small industries under the State Aid to Industries Rules, 1935, through the Department of Industries. But it eventually decided to direct credit through an institutional agency. Accordingly, it appointed the Corporation as its agent for recommending and disbursing loans. During the year, the Corporation considered 84 applications in all and sanctioned 25 of them, mainly for financing expansion programmes of old or new constituents. Referring to individual industries, the report says that 13 applications for loans were received from the pharmaceutical and chemical industry of which three had been sanctioned a sum of Rs. 4.30 lakhs. The engineering industry submitted 17 applications of which five had been sanctioned a sum of Rs. 3.70 lakhs. Of the 18 applications received from the textile industry, seven were sanctioned a sum of Rs. 21 lakhs, the major portion of which would be used in purchasing processing equipment. The report further shows that the miscellaneous group of industries submitted 22 applications, of which eight had been sanctioned a sum of Rs. 23.05 lakhs. The major portion of these loans will be used for the purchase of plant and machinery, and the balance for the construction of suitable factory premises.

Formula for Cloth Exports

The All-India Exporters Association has submitted a 17-point formula to the special committee set up by the Government of India to enquire into the affairs of the textile industry. This formula is designed to stimulate cloth exports. The Association believes that Indian textiles are losing competitive power in foreign markets mainly because of rising production costs. It is suggested that the industry should be given certain tax reliefs and that every effort should be made to increase the efficiency of labour and management. Cloth exports should be placed under open general licence and Customs procedures should be simplified. One of the tax reliefs suggested is that 10 percent of the export profits should be exempted from income tax. The Association urges that special efforts should be made to step up the exports of fine, superfine and printed fabrics and further suggests that mills manufacturing such goods should be permitted to import foreign cotton equivalent to its content in the cloth which is manufactured for export. The Association has said that the heavy accumulation of stocks, high excise duties, the heavy incidence of taxation and the steep rise in the wages bill and dearness allowance are responsible for the crisis which is now facing the textile industry. A tripartite conference of the Government, mill and exporters' representatives has also been suggested. Meanwhile, the Bombay Millowners Association has announced that the increase in production last month was entirely accounted for by the greater number of working days in May than in the previous month. The announcement says that the increase "is not due to any improvement in the present condition of the industry. It is significant that compared with the output of the corresponding month of last year, cloth and yarn production in

May was down by 33 million yards and 10 million lbs, respectively"

Excise Burden on Textiles

Addressing the annual general meeting, Mr. Naval H. Tata, chairman of the Svadeshi Mills Company Ltd. has once again appealed to the Government to revise its excise policy on cloth. "I appeal to the Government to revise its notions on the capacity of Indian consumers and the mill industry to bear the heavy burden of excise duties and effect an immediate reduction in the case of medium and finer varieties to at least the pre-September 1956 level which will act as a welcome tonic to revitalise the industry," he says. Mr. Tata states that the Svadeshi Mills would have shown better results last year had they been in a position to manufacture more printed cloth, but they were prevented from doing so by the restrictive policy of the Government of India. The Government has fixed printing quotas for each mill in order to protect the cottage printing industry and in most cases, Mr. Tata adds, these quotas have been totally inadequate. In a review of the problems of the textile industry as a whole, Mr. Tata says that a recent I.L.O. survey shows that at the end of January last year, over 35 percent of the world's 2.8 million looms were automatic, while India had a poor showing. India will have to take note of the technological progress in the world and if she does not take steps to improve the quality and reduce the price of her products, there is no possibility of stepping up cloth exports and earning some vitally needed foreign exchange. He has pointed out that the volume of textile exports is at a low level this year because of increased competition. Two years ago, the Government of India sanctioned the installation of 18,000 new automatic looms, but attached certain conditions which have discouraged the mills from proceeding with their rationalisation schemes. The applications received by the Government so far cover only one-half of the available quota of 18,000 looms. In addition, the foreign exchange situation has led to a virtual ban on the imports of up-to-date finishing and processing machinery. Demand for better quality products has been growing in home and foreign markets, but the mills are unable to improve their production because they lack the necessary equipment. Giving an example, Mr. Tata says that the Svadeshi Mills are in urgent need of a sanforising unit, but are unable to import it because of the foreign exchange shortage.

Ceiling to Salaries in Kerala

The American slogan, a ceiling to hours and a floor to wages, is being modified and a ceiling to salaries is now the popular demand. What is going to be done about it in Kerala has recently been explained at a meeting in Madras by Kerala's Law Minister. Only the Chief Engineer and the Director of Health Services in Kerala will be eligible for a salary of about Rs. 1,200 a month. This might have the effect of driving talent outside the State and might accentuate competition for jobs in the private sector in Kerala. The absence of a Shops and Establishments Act which protects employees in Madras, was mentioned by Kerala's Law Minister, and it is clear that new labour legislation, like that recently enacted in Punjab, will be brought into force to advertise the Kerala Government's sympathy for middle-class employees. The plea that the Government should be a model employer has been readily conceded by the Minister, but how State-owned concerns will fare in the future can only be guessed. The Kerala Government has a substantial interest in some industrial enterprises and the eagerness to erase the distinctions between the superior and lower categories of staff in Government service may well lead to fresh troubles. The free legal aid which is being offered to trade unions in Kerala is a sign that the communists are ready to win the support of labour by any means.

Deadlock Over a Bonus Dispute

The failure of negotiations, held under official auspices, has forced the management of the Buckingham and Carnatic Mills to explain why the company prefers to adhere to the prescribed procedure. Arbitration is not approved because in the past the labour union as well as the management had relied on Tribunal awards. Any claim for bonus, placed before an arbitrator, may result in a judgment similar to that delivered in the bonus dispute in Coimbatore Mills. The management has pointed out that a comparison with the latter is inappropriate since the employees of the Buckingham and Carnatic Mills get benefits which are not available to workers in other mills. The Government's bias for the union has been made quite clear in its recommendation for arbitration. An official spokesman of the mill has said that the workers' plea for exemption from the payment of sickness insurance contribution has to be referred to the Central Government for approval. Meanwhile, workers have claimed that the mill's capital has been doubled and its reserves have increased while workers' bonus has been pegged at 20 percent of the pay. The judicial pronouncement that reserves are entirely the property of shareholders and workers have no claim on undistributed profits has been ignored again. But the management has made it quite clear that the strike is illegal and that it deprives the union of any right to ask for arbitration. It is noteworthy that the closure of the mill has not affected the value of its shares. In the light of the dispute in Madura Mills and the Government's efforts to settle it by leaning to the side of workers, the outcome of the present dispute is doubtful, but the closure of the mill during the present power shortage may please some industrial consumers.

Commonwealth Finance

The Commonwealth Development Finance Company which was formed with the backing of the Bank of England, and leading industrial, financial, mining and shipping interests to help private industrial projects and thereby to strengthen the balance of payments of the sterling area, has now been operating for five years. Its commitments amount to about £14.6 million of which nearly £10 million is already invested. The projects in which it is interested include the Kariba hydro-electric undertaking in Rhodesia, the Algom uranium mines in Canada, and industrial finance corporations in South Africa, India, Pakistan and Ceylon. Last year was a very difficult one for the company because of high interest rates. The net profit figure of £20,087, against £43,027 in 1956, is not really significant, as so much of its investment is in projects which have not reached their full earning capacity. But rates were so high last year that no large new loans could be made, and the chairman, Lord Godber, reports that a number of applications for loans were withdrawn by their sponsors because the cost was so great. Only two minor new commitments were made in the year ended 31st March. One was the subscription for 50,000 £1 shares, with 2s paid, in the Industrial Finance Corporation of South Africa. This company has been formed to attract venture capital from local and overseas sources to provide finance for the development of the private sector of industry. The other new investment was in the Pakistani Industrial Credit and Investment Corporation, a similar body, whose objective is the encouragement of industrial development. This investment consists of Rs. 573,000 in shares. Of the 14 projects in which C.D.F.C. now has an interest, the directors appear satisfied with the progress of all but one. The one disappointment is Tasman Pulp and Paper in which C.D.F.C. holds 500,000 ordinary £1 shares and £2½ million debentures. Progress has been slower than expected and there is an accumulated loss of over £3½ million. It will be several years before this can be made good.

You can see it in his eye, his bearing and the way he dresses. Such self-confidence often indicates the influence of strong family traditions of refinement and culture.

THIS YOUNG MAN WILL GO FAR

When BINNY'S started manufacturing their quality cloth nearly eighty years ago young men discovered a new standard in textiles, for here was *variety* in colour, design and texture undreamt of before. As the years passed, BINNY'S continued to pioneer new materials including anticrease suitings and union fabrics. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but *discerning* people look for these reassuring BINNY'S trade marks on the cloth they buy:

BINNY'S—a great name in textiles

Longer Export Credits

The Secretary-General of the "Berne Union", reporting on the achievement of the recent meetings in Venice, says resolutions were again passed on the vexed question of seeking export markets by offering longer and longer credits. This conference of export insurers has now agreed that five years ought to be the maximum period of credit for all exporting countries, and that any Government loans extended through the export insurance machinery "for declared political purposes" should be subject to the same maximum period. He goes on to explain that the public has had an "incorrect impressian" that different views are being held in different countries. This, it seems, is due to a misunderstanding. The West Germans, for example, gave an assurance that the new facilities they are now setting up to finance export trade were by no means intended to start a race in export credit terms. That assurance, we are told, has behind it the authority of the Federal Minister for Economic Affairs, and that was no doubt the best the conference could expect to get. Some misunderstanding, the statement claims, has been caused by the fact that the West Germans call credits "long term" which other countries call "medium term". Some reports of long-term credit offers are no doubt exaggerated in an effort to engender competition, but it is too much to expect all suspicions to be resolved as simply as this. Nevertheless, it is encouraging that the Berne Union serves the important purpose of holding these practices in check. Among the associate members of the union is the U.S. Export-Import Bank, which informed the conference that its main business is to grant long-term development and other loans, but that a small part of its lending has recently been used to finance individual sales of U.S. capital equipment on medium terms. It may be assumed that any important exporting country which started to make export credits easier and longer than the rest, would almost certainly provoke a general orgy of easy finance.

Hongkong Cloth Exports to U.K.

In his speech as chairman at the annual meeting recently of the Cotton and Rayon Merchants Association, Mr. J. S. T. Hawke, one of the Lancashire delegates at the recent meetings with the representatives of the Indian and Pakistani cotton mill industries, said he was hoping that "the really trivial gap" that now separates the parties would be bridged soon, thus leaving the way clear for a further visit to Hongkong. Both the Indian and the Pakistani millowners, Mr. Hawke said, keenly appreciated the danger that any agreement on piecegoods might be nullified by "garments running wild" or even by finished goods, and the question of goods other than grey cloth presented very great difficulties. The larger manufacturing units in Hongkong, he thought, appreciated the force of Lancashire's case for a voluntary ceiling to consumption in the British home trade, but their managements were not in a position to pledge the whole industry, let alone the garment-makers. He had not the slightest doubt that there would eventually be some limitation of the imports from Hongkong, and in his view it would be unfair to the industry there to allow its reliance on the British market to go much farther than its present extent. Last year, Mr. Hawke said, the U.K. imported from Hongkong 71 million square yards of cotton cloth, 7.3 million woven shirts, and some 303,000 overall-type garments. There was a high proportion of retention in the home market, and the trade had caused "very real hardship" indeed to the British industry. He had yet to hear of any scheme that the industry could introduce which would be practicable and which would not stimulate imports of finished goods and garments.

"A SURVEY OF INDIA'S FOREIGN TRADE 1958"

With the edition of CAPITAL, dated 10th July, will be published "A Survey of India's Foreign Trade 1958", containing articles discussing all aspects of the country's export and import trade. It reviews a field of activity which is vital to the existence and progress of a modern industrial economy, and one which is of more than usual interest at this critical juncture in the second five year plan. The supplement will be supplied free to registered subscribers and will be available to others at Rs. 5 a copy (postage extra). Enquiries may be addressed to the Manager, CAPITAL, 5, Mission Row, Calcutta 1.

DEMONETISATION OF GOLD

THE history of Indian coinage points to a great variety of gold and silver coins being current in different parts of India up to 1766, when the East India Company attempted bimetallism, and failed dismally. Confusion reigned till 1806 when the masterly and unanswerable treatise of Lord Liverpool reached India, and the principle of one metal as standard for unlimited tender was adopted. The minute of Lord Liverpool was buried in the archives of the India Office and never again saw light until 1894, when, at the instance of Sir Henry Fowler, the House of Commons authorised its publication, and it can now be had for 2d a copy. (We may here parenthetically remark that the Government of India have offered no copies for sale in India, and we trust that the Chamber will procure and distribute copies as soon as possible.) The Government of India took no action on this important minute till 1818, when it issued a new coinage of gold and silver, and for the first time introduced the silver rupee as legal tender in Southern India, where gold alone had hitherto been the standard. In 1835 the silver rupee was declared the sole legal tender throughout India, but the gold rupees were allowed to pass current and were received at the public treasuries at their market value in silver. The gold discoveries of 1848 caused a general fear of serious fall in the value of gold. Holland demonetised gold and Lord Dalhousie in 1852 notified that no gold coin of any sort would be received at the public treasuries. Gold was thus completely demonetised in India, and although in 1864 the Chambers of Commerce of Bengal, Bombay and Madras advocated the re-introduction of gold coins and that the gold sovereign should be made the standard unit, the opportunity was lost and the fatal step of selecting an exclusive silver standard was confirmed.

BEHIND THE WHEELS OF INDUSTRY

Orient Industrial Motors are precision built from the highest quality materials to give high performance and long service.

Liberally designed, these motors have a high overload capacity and are capable of withstanding severe punishment.

Best insulating materials are used both in the slots and on the windings to give long life.

Dynamically balanced pressure die cast rotors are truly indestructible.

Uniflow forced draft ventilation system keeps belt dust away from the rotor.

These and several other features make ORIENT motors truly DEPENDABLE.

Without Prejudice

THE RIGHTS OF A THIRD PARTY

SUING THE INSURANCE COMPANY

(FROM OUR LEGAL CORRESPONDENT)

HERE is another rather out of the way point of interest to persons involved in driving accidents and those engaged in third-party insurance. You are knocked down and sustain severe personal injuries in a road accident caused by the negligent driving of Mr. Pouter's car by that gentleman's servant. You have, therefore, a sound claim for damages against Mr. Pouter. But he is in the United Kingdom, is not returning to India, and you have no idea of his address. Moreover, he is financially on the rocks, has sold the car taking the proceeds with him, and is not worth suing personally. You know that Mr. Pouter is insured against third party risks. Can you sue the insurance company direct?

Apart from statute law which we will discuss presently, you certainly cannot. The principle is quite simple. A policy of insurance is a contract between the company and the insured person and between them alone. No third party can enforce its terms. If you sue Mr. Pouter for damages for negligence and obtain a decree against him, he may claim indemnity from the company in the terms of the policy as regards the damages awarded against him. That is up to him. You can do nothing about it as against the insurance company. That is the ordinary law of the land; the common law of contract. But the common law has been amended for third parties by the Motor Vehicles Act, 1939, and it is the scope of Sections 96 and 97 of that Act with which this note is concerned in the light of the latest decision on the subject. The facts were briefly these. Mr. Ramaswamy was the plaintiff and appellant in the Andhra Pradesh High Court. He had filed a suit for recovery of Rs. 5,300 as damages sustained by him on account of the rash and negligent driving of a motor bus belonging to the first defendant by his driver, as a result of which the bus fell into a canal and the plaintiff received very serious and grievous injuries. The trial court found that the facts as stated by the plaintiff were true and that the plaintiff received his injuries as a result of the rash and negligent driving of the first defendant's driver. The learned judge, however, dismissed the suit on the ground that it was barred by time. We are not concerned here with the time factor, which was of interest only in the particular case. What we are concerned with is this: the plaintiff had sued not only the owner of the bus, but also the insurance company with which that owner was insured, and the question was whether a suit was maintainable at all as against the insurance company, which is of general interest. "No", said the trial judge and dismissed the suit; whereupon the plaintiff appealed to the High Court.

Said Umamaheswaram J. in his judgment: "Apart from resting my judgment on the question of limitation I hold that the suit as against the insurance company by the third party is not maintainable.....I am inclined to take the view, on a reading of Sections 96 and 97 of the Motor Vehicles Act, that the suit by the third party is unsustainable. Section 96(1) provides that if after a certificate of insurance has been issued under Section 95(4) in favour of the person by whom a policy of insurance has been effected, judgment in respect of any such liability is obtained against the person insured by the policy, then the insurer shall pay to the person entitled to the benefit of the decree any sum not exceeding the sum assured, as if he were the judgment debtor in respect of the liability....."

That is all to the good so far as it goes from the point of view of the person injured. But it does not cover the question with which we opened this note. If you had sued Mr. Pouter and obtained judgment against him you could, under the section, have stood in his shoes *vis-à-vis* the insurance company and its liability to indemnify him, and the company would have had to pay you the amount awarded you up to the limit of the sum assured.

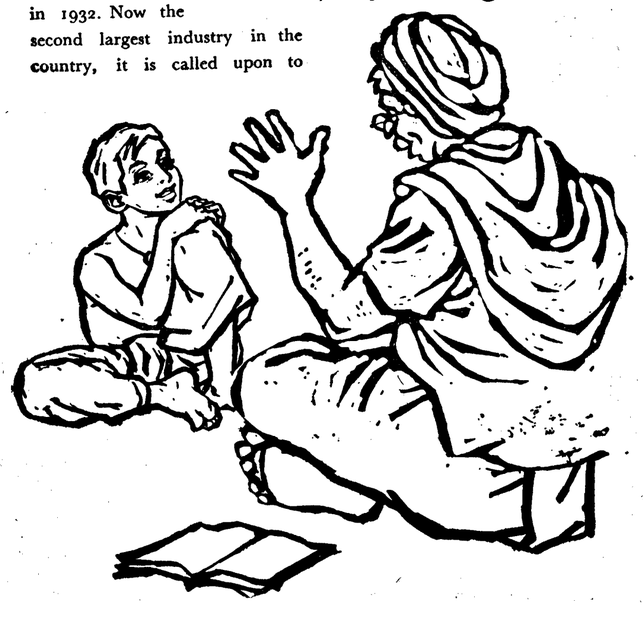
But you have not sued the absent Mr. Pouter. What then? We will see. The judgment of the High Court proceeded: "It is clear from the language of Section 96(1) that a suit must be filed as against the insured and a judgment obtained against him. It is only after the judgment is obtained against the insured that the sum is recoverable from the insurer, i.e., the insurance company. Section 96(2) provides for the issue of notice to the insurance company and the defences that may be raised by the insurance company, if made a party. From the terms of Section 96(2) it is implicit that no suit as against the insurance company can be maintained by the third party taking advantage of the insurance policy. Section 97 supports this conclusion."

The conclusion may be awkward indeed for you the injured third person. Mr. Pouter may be out of the jurisdiction and not bother to make any claim on his insurance company; he may refuse to do so out of spite against you, knowing that he is out of reach of the court's jurisdiction. He may be in a lunatic asylum. He may be in jail. He may deliberately keep out of the way so that your claim against him becomes time barred. He may be dead.

Be that as it may, there seems to be but one set of circumstances in which you can yourself enforce the terms of the policy as if you were yourself the insured person. Mr. Pouter's becoming an adjudged insolvent. If the insured person becomes an insolvent, his rights against the insurer stand transferred to and vest in the third party to whom the liability was incurred. This is by Section 97(4) of the Motor Vehicles Act. Under it, if the insured person becomes an insolvent, the third party would be entitled to have a direct recourse as against the insurance company under the terms of the policy of insurance.

Dismissing the appeal in the case against the insurance company direct in the Andhra Pradesh High Court, his lordship proceeded: "I am therefore clear, on the reading of the terms of Sections 96 and 97 that the third party would not be entitled to maintain a suit as against the insurance company except in the case of the insolvency of the insured. As aforesaid, if a decree is obtained against the insured the decree may be executed against the insurance company treating it as a judgment-debtor under the terms of Section 96.....What is insured against is the insured's legal liability and that shows that the policy is taken out for his benefit and not for the benefit of any passenger.....as the passenger is not a party to the contract of insurance."

Nor would the position be any different if a third party tried to enforce the terms of an arbitration clause which insurance policies now invariably contain. The attempt was made in 1951 in a Punjab High Court case when the question arose whether a third party is entitled to avail himself of the clause for reference of any dispute arising between the owner of the car and the company to arbitration. It was held that the third party was not entitled to take advantage of the arbitration clause. In the Punjab High Court case the learned judge observed as follows: "There is no doubt that in the insurance contract between Mr. Tawakley and the company there was a clause for reference of any dispute between them to be referred to arbitration, but the dispute is not between Mr. Tawakley and the company, the claimants being a third party. Under the ordinary law the only persons who can take legal steps to enforce the terms of contract are the parties to the contract."



In the present case the Court agreed with and followed the principles enunciated in the Punjab and a previous Bombay High Court decision. Referring to the former case, his lordship said: "The learned judge negatived the argument that in a contract of insurance for third party risks, there was a kind of trust created for the benefit of any third party who might suffer injury or loss. I agree with him that no trust can be spelled out and that the third party cannot be regarded as a *cestui que trust* (i.e. beneficiary) on whose behalf the policy was effected. I follow the two decisions aforesaid and hold that the suit as against the insurance company is not maintainable." The appeal failed.

[1958 (May). *A.I.R.* A.P. 309.]

The Central Sales Tax (Second Amendment) Bill, 1958, has been referred to a select committee of the Lok Sabha. Public bodies, associations or individuals who are desirous of submitting memoranda on the Bill for the consideration of the committee, should send 45 copies of each memorandum so as to reach the secretary, Lok Sabha Secretariat, Parliament House, New Delhi on or before 15th July 1958. The committee will meet next on 2nd August, 1958.

ON the muddy banks of the river Hooghly, near Budge Budge, lies Achipur, a small village. Back in the third quarter of the 18th century, Tong Atchew, a native of China, established here probably the first "Sugar manufactory" in India. Here and there, a few mills appeared in the late nineties but the industry recorded a phenomenal growth after protection was granted by the Government in 1932. Now the second largest industry in the country, it is called upon to increase its installed capacity from 16 lakhs to 22.5 lakhs tons by the end of the Second Five Year Plan. To meet the requirements of this expanding industry, Texmaco has started manufacturing sugar mill machinery to international standards in technical collaboration with Stork Werkspoor of Holland. This is how Texmaco serves India's basic industries.

A Ditcher's Diary

I HAVE HEARD RATHER WELL-INFORMED PEOPLE dismiss as pure moonshine the communist boast, renewed by Mr. Namboodiripad last weekend, about eventually establishing the Party's rule over the whole of India. After the Devicolam by-election, I should no longer be so complacent if I were they. Nor would I feel secure in the knowledge that the non-violent and tolerant tradition of this country is a guarantee against totalitarian rule, while the thesis that communism has succeeded in China only because "authoritarianism and regimentation" have been part of that country's history, seems to me too over-simplified. To verify this truth, one has to go no further than Japan. The tradition of that country is scarcely ultra-democratic, yet one finds the Communist Party there fighting a losing battle: it won only one seat out of the hundreds it contested at the recent general election. The same is true of West Germany, and would be true of the eastern portion too if it were not for the presence of the Red Army. Communism, to repeat an oft-quoted truism, thrives mainly on ignorance, poverty, inefficiency and corruption: so India could be its ideal breeding ground. And the fashion now seems to be for India actually to nurse this viper in its bosom. What surprises me is that some leading public men in this country, who have hitherto declared themselves the sworn enemies of the Communist Party, are now full of praise for Mr. Namboodiripad and his Government. Mr. Rajagopalachari's description of Kerala's Chief Minister as "a man of great character" must have startled a good many people. Mr. Nehru's demonstrative friendship with the communists outside India has also helped their cause, as indeed have some of his internal policies. The communists are now the most avowed supporters of the second five year plan, because of its socialistic overtones, although they have been doing many things to frustrate its progress. Some day they may even rally under the banner of the "socialist pattern of society", because far from being an answer to the communist challenge, that is precisely the sort of thing they themselves are aiming at.

HERE IN INDIA, WHERE UNIVERSAL FRANCHISE IS now taken so much as a matter of course, there may have been some surprise to learn that in Switzerland the Government is only just thinking of giving women the vote. Actually, women voters are a relatively recent phenomenon even in Britain, and in France women earned the right only after World War II. The arguments for and against have been stated so often that it is not necessary to repeat them here, except to affirm that there are in fact arguments against. In the divided house that Europe has been since the Congress of Vienna, Switzerland has occupied an almost unique position. She has known a longer spell of peace, with the exception of Sweden, than has been the lot of any other country in that unhappy continent. Her neutrality has never been in doubt, and when the others get tired of their quarrels they usually think of meeting at Geneva. She has steered clear of all disputes, helped the belligerent wounded, housed the League of Nations, given her name to conventions which have considerably lessened the brutality of war and has generally been associated with most serious efforts for peace in our time. In her own country, she has evolved what is often called the most perfect democracy, although feminists are unlikely to endorse that verdict in full. Her economy is strong, and in certain categories of precision work her record is unmatched. I have seldom seen a placid and more beautiful sight than Lake Geneva, and to look at the Alps is to renew one's love for life. Efficient, hard-working, clean, honest, sports-loving, warm-hearted, the Swiss are indeed among the happiest people in Europe. Whether this long list of good things in a small but well-loved country has any causal connection at all with the fact of women not having votes, I would not pretend to know. And I dare not suggest that feminine franchise is even remotely likely to make things less simple, or policies less neutral, in fortunate Switzerland.

THIS YEAR'S FARNBOROUGH AIR SHOW, I SEE, IS to be bigger and better than ever before. The emphasis will be on more space, a larger number of exhibits and increased accommodation for visitors—everything in fact to improve its effectiveness as the British aircraft industry's shop window. At least, almost everything. One item seems to be missing which certainly ought not to be, and that is a better reception for unexpected visitors who may, nevertheless, be important and influential people. I know from my own experience of these shows that admission problems are handled with altogether excessive officiousness. The Society of British Aircraft Constructors, which organises them, uses as an excuse for this high-handed attitude that all events of any size require some regulation and anyway they have security matters to consider. There may be something in this. But I still cannot see why important visitors, some of whom may well have cheques for several million pounds in their pockets, should be treated rudely and disrespectfully because they have been human or careless enough to arrive unexpectedly or ticketless on one of the days reserved for the Association's own members. This is no exaggeration. I know of cases where important visitors from India have received what the Americans might call "the bum's rush" when they have presented themselves for admission. And subsequent complaints in the right quarter have produced nothing but a niggling acknowledgment and a tiresome lecture on the virtues of more predictable habits—a tactless reply to any successful business man who prides himself on his efficiency, especially if he is a foreign one. I also know of a prominent British business man of this city who has resorted to walking over fields and squeezing through fences after being turned back peremptorily at the gate. India is supposed to be the British aircraft industry's best customer. After hearing stories like these I wonder why. The complaints are not reserved to visitors. I was once told by the head of a well-known firm which is a member of the Association that they have often had the greatest difficulty in getting some of their most important customers into the show when they have happened to arrive at inconvenient times. One particularly wealthy South American buyer of somewhat casual habits had to be piloted, along with his wife (women are not allowed on three of the six days) and his fat cheque book, in by the back way after having been stopped by a barrier of red tape at the front. Such arbitrary regulation so unintelligently applied is more in keeping with a barracks than a trade exhibition. One might expect behaviour of this kind from petty civil servants, but not from a body of first-class industrialists out for business. Or perhaps the Society is still labouring under that stupid and characteristically British fallacy that quality needs no effort to sell.

ENTHUSIASM FOR DEMOCRACY OFTEN MAKES US forget that it is in fact the most difficult of all forms of government. Pakistan's experiments with it led President Iskander Mirza once to advocate "controlled" democracy for that country, which at the time earned him no small measure of odium. But neither in the east nor the west has Pakistan given overwhelming evidence to refute the General's admittedly tactless statement, and the way the three-day-old Sarkar Government at Dacca was brought down seems to indicate that political instability may get worse before it begins to get better. At least in East Pakistan, the people made its wishes clear in the last election by voting the Awamis in with a huge majority. It is possible to blame the electorate in, say, Orissa for not making up its mind or for distributing its choice too variously, but not so in East Pakistan. It is the Awami Party which has split itself into a number of factions and thus thrown away the wonderful opportunity it had of replacing the Muslim League. Once again, the politicians must take all the blame for the muddle East Pakistan is in. It is not surprising that President's rule has had to be imposed in the end; now democracy in East Pakistan will be very "controlled" indeed. Loud American propaganda is apt to make many think that democracy's only enemy is communism. Oftener in recent history democracy has been its own executioner, as can be seen in such diverse countries as France and Pakistan. Personal ambition is believed to be at the root of Pakistan's malaise, as is obviously true. But there is room for personal ambition even in a democracy. What vitiates politics and bedevils democracy in Pakistan is the politician's belief, partly justified, that those legitimate ambitions cannot be achieved through democratic means. Mercifully, dismissals and resignations of Ministers are more frequent than assassinations, but in varying degrees it is the same mind at work in both cases.

THE "HONESTY BOXES" WHICH CALCUTTA TRAMWAYS have introduced on their Gariahat section seem to have been a success from the financial point of view, although I am still not convinced they are a good idea psychologically. After all, there is frequently no question of honesty involved. Most people who alight without paying their fares do so not because they are being deliberately dishonest, but because the conductor has not been able to get to them. Intention is the factor which establishes whether an act is dishonest or not, and to be confronted by a box which, by its title, suggests otherwise is an insult to honest passengers without being any deterrent to the other kind. I have often myself resented most strongly the sly nudge honesty boxes, as used in the U.K., have given my conscience. My own reaction has usually been that my fare is an uncollected one, and whereas I would willingly put it in a box bearing that label, I would be damned rather than surrender it to something which, by inference, called my honesty into question.

ANOMALIES IN EXPENDITURE TAX ACT

NO CONCESSIONS FOR MARRIED INDIVIDUALS

By K. C. Khanna

THE Expenditure Tax Act, 1957, came into force on 1st April, 1958, and returns of total expenditure for the previous year (relevant to the assessment year 1958-59), have to be submitted, unless an extension of time is obtained, on or before 30th June, 1958. Unlike Section 22 of the Indian Income Tax Act, 1922, the Expenditure Tax Act does not provide for the issue of a public notice calling upon assessees to make a return of expenditure. Section 13(1) of the Expenditure Tax Act, reads as follows: "Every person whose expenditure for the previous year was of such an amount as to render him liable to expenditure tax under this Act shall, before the thirtieth day of June of the corresponding assessment year, furnish to the Expenditure Tax Officer, a return in the prescribed form and verified in the prescribed manner setting forth his expenditure for the previous year".

It will be noted from the above that the submission of a return is obligatory on every person, "whose expenditure for the previous year was of such an amount as to render him liable to expenditure tax under the Act". However, a reference to the Proviso to Section 3(1) which is the charging section, shows "that no expenditure tax shall be payable by an assessee for any assessment year if his income from all sources during the relevant previous year, as reduced by the amount of taxes to which such income may be liable under any other law for the time being in force, does not exceed Rs. 36,000."

Reading the above provisions with clause (h) of Section 6(1), which provides for a basic allowance of Rs. 30,000 in the case of an individual assessee, it is apparent that liability to expenditure tax can be incurred only if an individual exceeds *both* the following limits:

1. **Income Limit:** His income from all sources, including casual income, whether taxable or not, during the relevant previous year, as reduced by the amount of taxes to which such income may be liable under any other law for the time being in force, exceeds Rs. 36,000.

2. **Expenditure Limit:** His basic expenditure during the said previous year exceeds Rs. 30,000. (In the case of an individual who is not a citizen of India, but is resident in India, an additional amount up to Rs. 10,000 is allowed for expenditure incurred outside India with the result that the total basic expenditure allowance in such a case could be increased to Rs. 40,000).

Basic Allowance

Since the amount of expenditure incurred in a previous year does not by itself render an individual liable to expenditure tax, it is obviously anomalous to call for a return of expenditure from one whose "net income" from all sources is less than Rs. 36,000. There is no separate basic allowance for a dependent and as the definition of a dependent includes, where the assessee is an individual, his or her spouse, it follows that no additional allowance can be claimed by either. There is an apparent anomaly in as much as no distinction is made between a married and an unmarried individual both being allowed a basic allowance of Rs. 30,000, irrespective of the fact that "in the former case the spending units are multiple whereas in the latter case they are single". This is contrary to the recommendations of Professor Kaldor who, on page 34 of his Report, states as follows: "Since the purpose of the tax is to discourage high level spending by steeply rising marginal rates on expenditure it is far more necessary in the case of this tax than in the case of income tax to take into account differences in needs arising out of differences in the size of the family which the taxpayer has to support. Hence...the rates of taxation in the case of expenditure tax ought to vary with the scale of expenditure per head rather than the total expenditure of the whole family unit".

Extra Allowance for Foreigners

It has been stated above that in the case of a foreign resident in India, the basic allowance could be increased to Rs. 40,000. Clause (1) of sub-section (1) of Section 6 reads as follows: "Any expenditure incurred by the assessee in any country outside India, in any case where he is not a citizen of India but is resident in India to the extent to which such expenditure is not admissible under clause (c) or clause (e) or clause (f) or clause (g), subject to a maximum of Rs. 10,000". It must be admitted that the above clause is open to different interpretations. Since clauses (c), (e), (f) and (g) lay down monetary limits, it may be argued that the additional expenditure of Rs. 10,000 will be allowed only to the extent to which the amount of the expenditure actually incurred exceeds the permissible limits under the clauses aforesaid. Thus, if a foreigner resident assessee spends Rs. 20,000 outside the taxable territories, including Rs. 10,000 on the education of his children, he will be entitled to an additional allowance of Rs. 2,000 only, in spite of the fact that the expenditure incurred outside India on items other than those falling under clauses (c), (e), (f) and (g) is well within Rs. 10,000.

The generally accepted interpretation, however, is, that a "blanket exemption" has been given for a total expenditure of Rs. 10,000 incurred in a country outside India, and this appears to be in keeping with the recommendation of the Select Committee which stated "that expenditure incurred outside India by persons who are not citizens of India, but are resident in India should be allowed to be deducted subject to a limit of Rs. 10,000 to the extent to which such expenditure is not admissible under any other item in this clause". The Committee's recommendation, however, does not seem to have been enacted in the form in which it was made.

Criterion of Net Income

The criterion of "net income" as laid down in the Proviso to Section 3(1) of the Act also raises certain anomalies. For instance, it has nowhere been laid down as to how income from sources other than those which are liable to tax should be computed, *e.g.*, agricultural income or casual gains. Moreover, there is no provision for what might be termed "marginal cases". Thus an assessee with a "net income" of Rs. 35,999 could expend any amount with impunity and still escape liability to expenditure tax. On the other hand, an individual with a "net income" of Rs. 36,001 may become liable to a high demand of expenditure tax, even though the actual expenditure incurred by him during the relevant previous year was less than the amount of expenditure incurred by the individual with a net income of Rs. 35,999. A reference to this point was made by some members of the Select Committee and one of them wrote in his minute of dissent: "Those persons whose net taxable income does not exceed Rs. 36,000 are permitted to make any amount of expenditure from their capital or otherwise without being subject to expenditure tax, whereas in the case of those people whose net taxable income exceeds Rs. 36,000 will pay expenditure tax on their expenditure even though it may be from capital. This discrimination should be corrected." The anomaly remains and no attempt has been made to frame suitable amendments.

There is no provision in the Act allowing for a carry-forward of deficiency of expenditure incurred in any one year. The absence of such a provision leads to anomalous results. An individual who restricts his expenditure in the early years of his life and saves with a view to provide for increased expenditure in later years due to increased family commitments, that is, expenses of higher and technical education of children, their marriage expenses, holiday and travel expenses, etcetera, is penalised by the imposition of expenditure tax in the year in which heavy expense is incurred, in spite of the fact that if the aggregate expenditure were spread over a number of years the average would have fallen well below the basic allowance.

Better Treatment for Animals

Another glaring anomaly is that the Expenditure Tax Act would appear to accord better treatment to animals than human beings. Under clause (1) of Section 5, an individual may incur unlimited expenditure on the maintenance of livestock but clause (e) of Section 6(1) restricts expenditure on the maintenance of one's parents to a maximum of Rs. 4,000. For the same reason, unlimited medical expenses may be incurred in the treatment of a racehorse, a tame elephant or a sacred bull, but no more than a total of Rs. 5,000 can be expended, free of tax, on the medical treatment of the assessee's entire family, including the individual, his parents and his dependents, irrespective of their number.

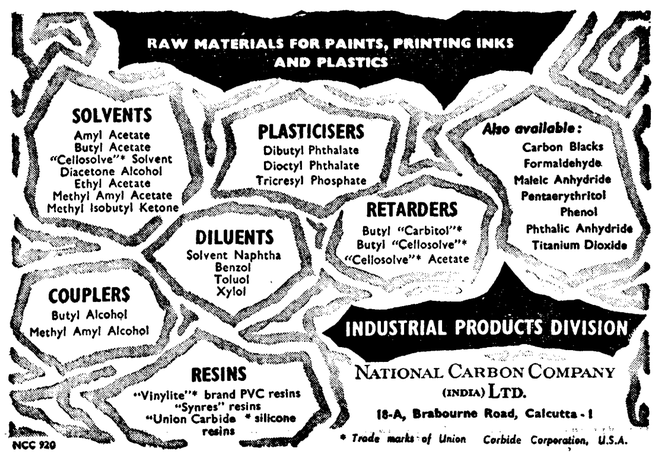
Similar further instances can be cited where necessary and unforeseen expenditure is disallowed, but frivolous spending or "investment" is permitted. To quote again from another minute of dissent: "It would be perfectly legitimate for a person according to the Bill to receive the best of medical treatment provided it is available up to a specified amount of Rs. 5,000 a year; he can also send his son or daughter abroad for being educated. But this again should not exceed a specified target of Rs. 8,000. But if he decides, not being inclined to be so soft or civilised as to look after his or his dependents' welfare, or so solicitous about minor matters like education of his children, he can quietly contemplate sinking his savings in gold (under Clause 5) and there need be no limit to the amount that he can invest".

Tax Liability

The following computation shows the tax liability of a salaried employee with a gross annual income of over Rs. 3 lakhs and total expenditure of over Rs. 1 lakh. With no unusual items of expenditure, the tax payable amounts to Rs. 2,000 only—an amount too small to justify the expense, and harassment involved in its collection, an assessment too anomalous to be upheld by any canons of a fiscal or moral code.

SALARIED EMPLOYEE—EXPENDITURE TAX LIABILITY 1958-59—AN ILLUSTRATION

Salary, allowances, bonus, commission, etcetera.		Rs. 2,89,500
Perquisites:		
(a) Rent-free quarters valued at Rs. 750 p.m.	Rs. 9,000	
(b) Free transport for personal use valued at Rs. 125 p.m.	Rs. 1,500	Rs. 10,500
Taxable Income		Rs. 3,00,000
Less: Income and super tax		Rs. 2,05,471
Add: Other income *e.g.* home leave passages		Rs. 94,529 Rs. 10,000
Total income from all sources		Rs. 1,04,529
Salary, allowances, bonus, commission, etcetera, as above		Rs. 2,89,500
Less: Income and super tax		Rs. 2,05,471
Net payment to bank		Rs. 84,029
Deduct cash expenditure as shown below		Rs. 84,000
Balance in bank		Rs. 29



Total expenditure incurred during the year as under:

(a) Cash-expenditure incurred by the employee:

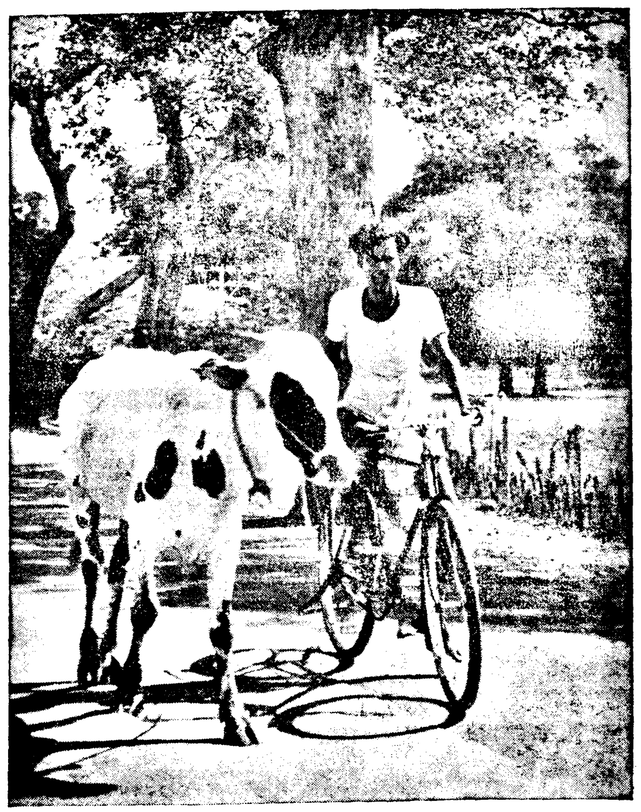
	Rs.	Rs.
(1) Gifts to friends	2,000	
(2) Shares and securities purchased	5,000	
(3) Jewellery and ornaments purchased	5,000	
(4) Household goods and furniture purchased	5,000	
(5) Expenditure incurred on maintenance of riding horses	5,000	
(6) Expenditure incurred on maintenance of parents	5,000	
(7) Life insurance premia paid	6,000	
(8) Contributions to provident and pensions fund	6,000	
(9) Educational expenses incurred overseas	9,000	
(10) Other personal and domestic expenditure at Rs. 3,000 a month	36,000	Rs. 84,000

(b) Expenditure incurred by the employer on behalf of the employee:

	Rs.	Rs.
(1) Home leave passages paid	10,000	
(2) Travelling and entertainment expenses incurred in the performance of duties	10,000	
(3) House rent, etcetera, paid	9,000	
(4) Medical expenses	5,500	
(5) Transport expenses —free use of motor-car for personal requirements	1,500	36,000
Total Expenditure		1,20,000
Less: Deductions and exemptions allowed as under:		
Less: Deductions and exemptions allowed as under:		

(a) **Section 4.**

Expenditure incurred by the employer on behalf of the employee subject to a maximum of Rs. 1,20,000	Rs. 5,000	
(b) Section 5—Exemptions		
(1) Gifts to friends	2,000	
(2) Shares and securities purchased	5,000	
(3) Jewellery and ornaments purchased	5,000	
(4) Expenditure incurred on maintenance of riding horses	5,000	
(5) Life insurance premia	6,000	
(6) Contributions to provident and pensions funds	6,000	
(7) Home leave passages	10,000	
(8) Travelling and entertainment expenses incurred in the performance of duties	10,000	49,000 54,000
Gross Expenditure		66,000
	Rs.	Rs.
(c) Section 6—Deductions		
(1) Four-fifths of the expenditure incurred on the purchase of house-hold goods and furniture	4,000	
(2) Expenditure incurred on maintenance of parents Rs. 5,000; maximum allowable	4,000	
(3) Medical expenses incurred Rs. 5,550; maximum allowable	5,000	
(4) Educational expenses incurred overseas Rs. 9,000; maximum allowable	8,000	
(5) Basic Allowance	30,000	51,000
Taxable Expenditure		15,000
Expenditure tax payable :		
On first Rs. 10,000 at 10 percent		1,000
On next Rs. 5,000 at 20 percent		1,000
Total tax payable		2,000



Notes: (a) In terms of Section 4, a deduction of Rs 5,000 has been claimed from expenditure incurred by the employer on behalf of the employee.

(b) In terms of Section 6, a deduction for medical expenses, even though met by the employer, has been claimed as the total expenditure incurred by the employer is far in excess of Rs. 5,000.

(c) If cash expenditure by the employee were to exceed Rs. 84,029 resulting in a bank overdraft, the repayment of the overdraft amount, but not interest thereon, would be exempted expenditure.

(d) The effect of the provisions of subsection (2) of Section 6, under which the expenditure tax liability may be reduced to nil, has been ignored in the present instance.

(e) It has been assumed that in an expenditure tax assessment also, perquisites will be valued, both for purposes of income and expenditure, on the same basis as in an income tax assessment.

Hercules goes to the villages

THIS is a familiar sight everywhere in India today. With new prosperity brought about by the Five Year Plans, the cycle is becoming as much a part of a farmer's life as ploughs and bullocks. T. I. Cycles are happy that by providing farmers and workers, shopkeepers and school teachers - people from every walk of life - with sturdy, long lasting cycles they are helping to build a brighter and more prosperous India.

Money

THE CALCUTTA MONEY MARKET

ADVANCES CONTINUE SEASONAL DECLINE

Wednesday, 25th June.

DEMAND for money has fallen again in the Calcutta money market during the past week. The main change was in the requirements of the jute industry which showed a sharp fall, in spite of a rise in stocks due to the dock strike. The offtake of the sugar industry is also slightly less. Other sources remained about the same. The call market has continued quiet with the rate unchanged at 3½ percent, but business is reported down to 3 percent.

There have been some gunny bills in the exchange market this week despite the dock strike. Remittance has been on a fair scale. Demand from importers for exchange facilities has once again been strong during the past week due to persistent rumours about an impending devaluation of the rupee. Sterling has tended to weaken gradually, but a sharp fall was recorded today. This is probably due to seasonal factors which always operate against the pound at this time of year.

BULLION RULED QUIET LAST WEEK IN THE ABSENCE of demand. Renewed speculative bull selling induced by heavy arrivals helped the falling trend. The price of silver has reacted from Rs. 182.75 to Rs. 181.37, quoted today for ready delivery, and the rate for forward was Rs. 181.37. The London price was the same at 75d and the New York quotation stood at 88⅜ cents.

Gold ruled quiet in sympathy with silver and the price fell to Rs. 110.50. The sovereign at Rs. 72.62 showed a decline of 13nP.

DURING THE WEEK ENDED 20TH JUNE, GOVERNMENT of India Treasury bills for Rs. 95,54,50,000 were sold in favour of the Reserve Bank.

A SHARP DECLINE OF Rs. 18.07 CRORES TO Rs. 1,586.91 crores in active notes is the outstanding feature in the return of the Reserve Bank of India for the week ended 20th June, while the total note issue rose by Rs. 1.43 crores to Rs. 1,625.42 crores. Notes held in the Banking Department consequently increased by Rs. 19.50 crores to Rs. 38.51 crores. Balances held abroad in the Banking Department declined by Rs. 6.19 crores to Rs. 17.42 crores. Deposits of the Central Government dropped by Rs. 1.52 crores to Rs. 49.90 crores, while other Government accounts increased by Rs. 1.89 crores to Rs. 15.25 crores. Balances of commercial banks were Rs. 12.59 crores higher at Rs. 93.68 crores. Investments increased by Rs. 4.71 crores to Rs. 267.16 crores. Other loans and advances fell from Rs. 56.80 crores to Rs. 55.13 crores, of which advances to scheduled banks against usance bills amounted to Rs. 11.76 crores (Rs. 14.46 crores). Ways and means advances stood at Rs. 46.63 crores against Rs. 50.33 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 13th June, shows a rise of Rs. 1.35 crores to Rs. 420.74 crores in total deposits. Investments in Government securities remain unchanged at Rs. 196.29 crores, while other authorised investments are up by Rs. 20 lakhs to Rs. 10.48 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 2.98 crores to Rs. 189.99 crores. Cash and balances are, in consequence, shown at Rs. 27.78 crores or Rs. 2.46 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 13th June, shows Demand and Time liabilities at Rs. 750.85 crores (Rs. 26.15 crores on account of borrowings from banks) and Rs. 794.80 crores (Rs. 24.97 crores), compared with Rs. 748.49 crores (Rs. 21.34 crores) and Rs. 792.17 crores (Rs. 22.44 crores), respectively, in the previous week. Cash has declined by Rs. 48 lakhs to Rs. 38.80 crores, while balances with the Reserve Bank have increased by Rs. 2.99 crores to Rs. 77.43 crores. There is a rise of Rs. 1.07 crores in investments to Rs. 484.85 crores. Advances and bills discounted at Rs. 912.82 crores show a fall of Rs. 7.62 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.5 percent and 59.1 percent against 7.4 percent and 59.7 percent.

LONDON FINANCIAL LETTER

SIGNIFICANCE OF THE CUT IN U.K. BANK RATE

By Air Mail.

THE lowering of the British Bank rate by ½ percent to 5 percent on 19th June—just nine months after it was raised from that level to 7 percent emphasised a disparity of ideas which had been apparent to careful observers earlier. Reactions on the Stock Exchange were significant. The gilt-edged market, already adjusted (as the discount market was also) to a rate of 5 percent, moved only slightly after the announcement. The industrial sections, which were already in process of rising because the Chancellor of the Exchequer had announced increased initial allowances for plant and machinery, accelerated their advance; they were in no mood to take notice of the official insistence that the cut in Bank rate was a technical adjustment—implying that it was not an act of monetary policy. The business community is convinced that monetary policy is being relaxed; and the relaxation is, indeed, obvious and undeniable. The question is what criterion one adopts. Are the authorities content to remove the restraints which were imposed specifically for last year's crisis, or, are they beginning, however cautiously, a U.S.-type policy of "re-expansion"?

From the viewpoint of the foreign exchange markets, the distinction is supremely important. No one abroad will criticise the British authorities for reverting to the pre-crisis state when the crisis is obviously past. But monetary relaxation—it must be remembered that monetary stringency was in force before the crisis last September, and that Bank rate at 5 percent is still high by normal standards—would be regarded as a very dangerous procedure. The foreign exchange market was steady after the announcement, implying that dealers accepted the authorities' assurance that the basic policy was unchanged. (Any weakening of sterling could be attributed to sales in advance of the normal seasonal need, to take advantage of rates that are still favourable—so this slight weakening should relieve the pressure later.) Yet the strong rise in industrial ordinary shares implied the contrary interpretation: that the authorities had seen the warning signs of recession and were acting to reverse the trend.

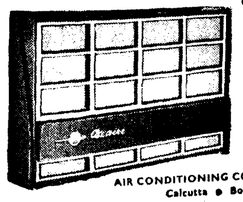
It is not easy to make a clear distinction between a technical adjustment, to changes in the money market, and a change in monetary policy. If inflationary pressure is relaxed, as unquestionably it is in Britain, money tends to become easier and cheaper, and lowering Bank rate is a natural consequence of the change. On the other hand, a reduction in Bank rate is customarily regarded as a signal that the authorities wish to help by reducing the cost of borrowing by industrialists and traders —the rates charged by the banks are directly linked with Bank rate, and other lenders' rates are more loosely connected. The stock markets' further rise was based on the assumption that the reductions in Bank rate (this month's was the third in a series that began in March) would promote industrial investment, either deliberately or as a side effect. It may be argued, however, that a policy of "re-expansion" would require—should one say will require? —more positive action. Cheaper borrowing from the banks will certainly help industry finance some projects for expansion that it is awaiting an opportunity to start. But capital development is not permanently financed with bank money, and it may be doubted that development will be much stimulated unless the long-term rate of interest, which is still high, is reduced.

In any case, the prospective earnings from a project are generally a more important consideration than the cost of financing it. Industry will not readily expand its productive capacity until it foresees an expanding market for its products. On the one hand, it is argued that consumption must be increased, especially by reducing taxation (less cautious elements are already talking of a supplementary Budget in October or before), so that manufacturers will see more incentive to invest in capital equipment. On the other hand, it is argued that rising wages are preventing prices from declining (as they should decline when the cost of most materials has been reduced), and that an additional release of purchasing power could have disastrous effects on overseas trade—both increasing imports and reducing exports. The authorities themselves are in a quandary, and when one observer says that policy is relaxed and another says that policy is firm, they may be reflecting accurately different facets of the Prime Minister's and the Chancellor's minds.

To the natural enquiry which idea will predominate in these minds, the best answer, probably, is that no firm idea will predominate until the whole problem of recession has been more thoroughly discussed on the international plane—particularly in Montreal in September and in New Delhi in October. It is not believed in London that the recent informal top-level talks in Washington initiated any plan of action, and it is by no means sure that official American thinking will favour a bold plan if the U.S. recession is seen to be "bottoming out" of its own accord. So some people here who are not normally hot-headed are urging the Government to take an independent line (independent, that is, within the framework of Commonwealth co-operation), and at least to think expansively before it is too late to act expansively. A trend cannot be reversed immediately it becomes apparent—as the *Financial Times* remarked, "one cannot stop a train by running along behind it". Reversal of the U.S. recession might solve the whole problem; but it could not immediately expand the incomes of the primary-producing countries, and it is their recession, not—at least, not directly—the U.S. recession which threatens British trade.

Miss Career Girl and Airconditioning...

Miss Career Girl dresses elegantly and likes everything in her home or office to be elegant, too.



When she chose the ACCAIRE it was its ultra-modern, beautiful design that attracted her. The rest she took on trust.

Most of the sales talk didn't quite register in her mind. When the salesman said it was dependable and low in power consumption she just smiled and nodded. When he went on to say it was a full capacity 50 cycle unit, she looked a trifle bewildered but nodded pleasantly.

Now she congratulates herself on having made the right choice because her ACCAIRE gives her trouble-free service and is very economical to maintain.

COMMONWEALTH COMMERCIAL TRENDS

IMPORTANCE OF THE MONTREAL CONFERENCE

(BY A SPECIAL CORRESPONDENT)

THE United Kingdom Secretary of State for Commonwealth Relations in a speech to the Canadian Chamber of Commerce in London recently, has outlined the main themes of discussion at the forthcoming Commonwealth Economic Conference in Montreal. They are: first, the strengthening of the sterling area (itself an action greatly in the interest of the dollar area); second, the expansion of intra-Commonwealth trade; and third, the provision of additional capital for Commonwealth development, and the machinery through which it may be used to maximise advantage.

The Secretary of State has pointed out that the Commonwealth possesses one-quarter of the world population, conducts one-third of international trade, and contains more than half of the world's important commodities. The deliberations of the Montreal Conference will, therefore, be of world-wide significance.

The Commonwealth accounts for almost all the world's jute, most of its coir, half its wool, and a third of its hard hemp. It produces about one-sixth of the world's cotton, and rather more than one-tenth of all man-made fibres. These are some of the salient facts from an interesting study, *Industrial Fibres*, published recently in London by the Commonwealth Economic Committee. Taking the 1956-57 output in relation to the 1934-38 average, cotton during the period rose by 250 million lbs, wool by 820 million lbs and jute by 280,000 tons. Over the same period, hard hemp production nearly doubled and that of man-made fibres increased more than four-fold. Between the two periods the Commonwealth's share of estimated world production has increased in wool and hard hemp, but has fallen in cotton and flax. Its share of man-made fibre production, at just under 11 percent, has remained approximately the same, as it also has for jute.

Free Trade Area

The proposal to explore the possibilities of establishing an area of free trade between Australia and New Zealand deserves more public attention than it appears to be receiving, says Mr. L. Alderton, until recently New Zealand High Commissioner in Australia, in a statement in Auckland. "I feel there is no doubt that the adverse trade balance, so heavily weighted against New Zealand, is bound to increase unless steps are taken promptly to arrest it. The proposal to establish a 'free trade area' is a practical possibility. It is perhaps a misnomer to describe the proposal as the establishment of a 'free trade area.' The intention, as I understand it, would be to establish an area of trading which would be free of licensing restrictions by both the countries. It is inevitable that tariffs would continue up to a point, for the protection of efficient industries where necessary; such tariff rates should be fixed by agreement between the two countries to ensure that they do not become unduly oppressive or prohibitive. In addition, there must always remain the usual Governmental power to prevent dumping.

"The 'free trade area' should in its initial stages be established over a comparatively small group of commodities, and gradually extended. There is ample justification for an approach being made on these lines. Provision was made in the Australian-New Zealand Agreement of 1944 which was duly approved by both the Governments in the same year covering this very point. I quote Section 35, (paragraph c) of the agreement: "The two Governments agree that.....(6) the development of commerce between Australia and New Zealand and their industrial development should be pursued by consultation and in agreed cases by joint planning. If an approach is made to our Australian kinsmen on the subject, it should be made in the firmest of terms, objectively clear and explicit, and pursued relentlessly to a conclusion," says Mr. Alderton.

Mr. Alderton has suggested the following: (1) New Zealand is Australia's largest purchaser of manufactured goods. (2) The value of metal goods exported by Australia exceeds substantially the total value of New Zealand's exports to Australia. (3) Apart from fish, the only foodstuffs exported in any quantity by New Zealand to Australia are lactose (sugar of milk) £180,000, fresh vegetables £250,000, and peas £27,000, bringing the total value of foodstuffs exported to Australia from New Zealand to £1.1 million. On the other hand, the value of Australian exports of foodstuffs to New Zealand amounted to £3,250,000, and it is necessary to bear in mind that New Zealand is essentially a food producing country. (4) Timber sales are declining since it is becoming increasingly hard to dispose it off. (5) Exports of sheep from New Zealand to Australia, mainly Romney and Corriedale stud sheep, the value of which amounted to nearly £250,000 in the 1956-57 trade year, will probably be completely prohibited this year, due to more stringent quarantine restrictions recently introduced by Australia.

Survey on Trade Prospects

The New Zealand Government is planning a world-wide survey of trade prospects in an effort to seek alternative markets for primary products as a result of the slump in prices, especially for butter and wool in the U.K. market. Preliminary investigations are under way, but Government to Government negotiations are unlikely to start until the Ottawa Agreement is reviewed. New Zealand trade experts claim that until the review is completed, it will be impossible to reach trade agreements or understandings with foreign countries because of the high preference tariff which New Zealand must give Britain. Foreign countries are giving trade preference to Australia, but the New Zealand Government hopes to overcome this when the British preference under the Ottawa agreement is reduced to 10 percent and 7.5 percent, as asked for by New Zealand. New Zealand trade investigations will soon start with the Pacific Islands, including Fiji. A trade mission is also likely to be sent soon to East African States, followed by the first ever New Zealand survey of prospects in South America. A New Zealand official, who will soon return from the United Kingdom, has also been told to investigate trade possibilities with Mediterranean countries.

Australian Aid to New Zealand

It was announced in Sydney on 16th June that following talks between Mr. Menzies, the Australian Prime Minister, and Mr. Nash, the Prime Minister of New Zealand, the Australian Government has decided to give financial aid to New Zealand because of her current balance of payments difficulties. No details have yet been announced.

Income Tax Relief in Kenya Budget

A new income-tax structure offering relief to the private taxpayer was one of the main proposals made by Kenya's Minister for Finance and Development, Mr. E. A. Vasey, when he presented his seventh Budget in the Kenya Legislative Council. He said that Kenya had every reason to face the future with confidence. "We have no reason for lack of faith in ourselves and in our country." As a member of the Legislative Council for almost 13 years, Mr. Vasey had seen the national income of Kenya rise from £50 million to £170 million. The new Budget offers greater relief to the private taxpayer than that recommended by the Coates Commission, which enquired into taxation in East Africa. Much of the Coates Plan has, however, been accepted, although in modified form.

Mr. Vasey estimated that the Colony's revenue in 1958-59 would be £31,315,000 and expenditure £33,076,000. Added to the revenue figure would be £1.5 million from the British Government and a credit balance of £228,000 to be carried forward. The Minister gave examples of income-tax relief to the individual as follows:

A single person on £1,000 a year paying £112 at present, would have paid £102 under the Coates Commission proposals and will pay £96 under the Budget proposals.

A married man with no children, on £1,500 a year, paying £140 at present would have paid £127 under the Coates Plan and will pay £100 under the Budget proposals. Some relief has also been provided for parents in increased education allowances for children studying in Kenya and overseas.

Economic Prosperity in Rhodesia and Nyasaland

Although austere by the standards of the last two years, economic conditions in the Federation of Rhodesia and Nyasaland in 1958 are likely to be prosperous, says the Federal Government's *Economic Report for 1958*. But it is likely to be a year in which there will be big changes in the relative prosperity of different groups of people and sectors of the economy. The report suggests that many of these changes may be for the better, and almost certainly some will help force uneconomic concerns to the wall, and so contribute towards greater efficiency. But the immediate economic outlook for the Federation has a number of less favourable aspects than in previous years. The report forecasts that total exports from the Federation in 1958 will be considerably below the 1957 figure. This will occur even if the present price levels and volume of exports are maintained. It further points out that the 1957 export figure reflected average prices well above those now prevailing. Copper is by far the Federation's most significant single export, and even at the lower prices ruling in 1957, accounted for just over 50 percent of the total value of exports of merchandise and gold. Between 1956 and 1957, there was a fall of 21 percent in the average prices of exports.

Referring to copper, the report says that it is doubtful whether the cuts in output so far effected by the main producers in the western world, are by themselves sufficient to correct the excess of supply over demand. There is thus little immediate prospect of a substantial improvement in the income of the Federation's copper mining industry. Viewing the market for chrome ore, the report says that it seems unlikely that this will recover in the immediate future. On the other hand, exports in the last quarter of 1957 were of a higher value than in the corresponding period of 1956. Exports of processed ferro-chrome were also high. Market conditions for lead, zinc, cadmium, manganese and most other base metals and ores exported from the Federation, were not generally favourable at the end of 1957, largely because of conditions in the United States. The price of asbestos, which is the Federation's third largest export in terms of value, also fell slightly during the year. Coal output, though unlikely to expand in the immediate future, appears likely to be maintained. The greater availability of locomotive and rolling stock has enabled the railways to move coal for overseas export *via* Laurenco Marques.

A considerable reduction, in the immediate future, in Government revenues from direct taxation will be the result of lower prices for copper and other minerals, the report says. The present basis of income-tax assessments results in a delay between changes in incomes and the collection of income tax. However, though taxation in the coming year will be related to taxable incomes based on higher prices than those prevailing at present, those incomes are nevertheless based on very much lower prices, in the case of copper, than were reflected in tax returns presented in 1957.

Investment Needs of Malayan Federation

The Federation of Malaya needs industrial investment worth $(M)3,000 million (£350 million) in the next ten years, if full employment is to be provided for its rapidly growing population. This figure has been given in Kuala Lumpur by Tan Siew Sin, Minister of Commerce and Industry. He is confident that this sum will be available, subject to the political climate and the stability of the country. The Government has already received "serious enquiries", totalling $(M)100 million, from foreign and local investors concerning industrial development. The Minister has announced that the Bill providing for tax-free holidays for pioneer industries is scheduled to come up at the next meeting of the Federal Legislative Council. It is intended to have restrospective effect from last year, and provides for a two-year tax holiday for all pioneer industries and a further holiday up to five years for others relative to the amount invested. No differentiation between local and foreign capital will be made. A Malayan Industrial Development Finance Company is now being formed with a capital of $(M)15 million to provide loans for industrial development. The Government will contribute one-sixth of the capital, and banks, insurance companies, the Colonial Development Corporation and private investors will contribute the remainder.

Stabilisation of Rubber Prices

Malaya is not in favour of an international agreement for stabilising the price of rubber and operating in a manner similar to the international Tin Agreement. This is expected to be the attitude of the Malayan delegation at the international rubber study group talks opening in Hamburg on 9th June. The meeting will again discuss the question of price stabilisation brought up by France at last year's talks. The Malayan view is that no measures are necessary because study group statistics show that the price was stable last year, and since rubber has a free market, some price fluctuations are inevitable. The French delegation wants a stabilising agreement to ensure better living standards in south-east Asia. The average price last month in Singapore was 73.13 cents, compared with 76.64 cents in April and 90.23 cents in May last year. For the first five months this year, the price has averaged 76.54 cents (91.93).

Free Uranium Ore Exports from Canada

It was recently announced by the Canadian Minister of Trade and Commerce in Ottawa that the local uranium producers would, in future, be allowed to make private sales anywhere in the world of limited quantities of their surplus production over and above the amounts required for their existing contracts with the Canadian Crown Company, hitherto the sole purchaser of their output. Under the new arrangement, quantities of up to 250 lbs can be sold anywhere for research purposes. But no country will receive more than 2,500 lbs unless it has signed an agreement providing for co-operation in the peaceful uses of atomic energy. The Minister added that when a country had signed such an agreement, the Government would normally grant permits for the export to that country of uranium exceeding this limit. Canada, the United States, and South Africa are the largest producers of uranium in the free world. The production in Australia will be expanding steadily over the next two or three years. The largest known uranium ore reserves in the free world are in South Africa. The figures, in thousand tons of estimated uranium ore reserves, are: South Africa, 1,100,000; the United States, 60,000; Canada, 225,000.

Farm Output in New Zealand

The New Zealand Governmtnt has called for facts and figures on all aspects of the guaranteed price to farmers. The departmental officers will explore and report on the diversification of primary produce, said the Prime Minister, Mr Nash, in Auckland recently. New markets have also to be found. The Prime Minister outlined these steps following the butter talks be had with the United Kingdom. He added that the Government had every intention of looking into the diversification of farm production. Every effort would be made to satisfy the present markets and to develop new ones, and while extensive markets in Asia were a long-term business, even now these markets could be begun to be built up. "If we can help Asian countries to develop their resources, they will be in a better position to trade with us", said Mr. Nash.

Prices in the Commonwealth

The following figures indicate recent trends in retail prices in some of the Commonwealth countries: The U.K. index of retail prices on 13th May, 1958, was 109.2. This was 4.2 points above a year before (17th January, 1956 equals 100).

The Indian index of consumer prices in February, 1958, stood at 111. This was 4 percent above a year ago (1949=100).

In Ceylon, the index in February, 1958, was 105.8. This was 5.0 percent above a year ago (1952 equals 100).

The index in Canada for March 1958 was 124.3. This was 3.8 percent above a year before (1949 equals 100).

The South African index covering nine urban areas stood at 215.1 in December 1957. This was 7.8 percent more than a year ago (1938=100).

In Australia the index covering six capital cities was 114.9 in December 1957. This was 0.7 percent more than a year ago (1952-53=100).

Stocks and Shares

SHARE PRICES IMPROVE DESPITE ECONOMIC OUTLOOK

ENQUIRY FOR SELECTED JUTES

Wednesday Evening.

THE buoyant conditions witnessed on the Calcutta Stock Exchange during the past week have been all the more surprising considering the trend of current economic developments. The nine-day old dock strike and the growing foreign exchange crisis are certainly likely to retard investment prospects. The bulls, however, point out that the technical position of the market is sound in that prices have kept at a very low level for some time past, despite good corporate results. They maintain that a recovery is, therefore, overdue.

Strong rumours about the possibility of a devaluation of the rupee have aided sentiment. They have revived hopes of renewed inflation which in turn is expected to boost equity prices. This may be true on the short-term view, but informed observers believe that devaluation will not solve India's economic problems; on the contrary, it would, for many sound reasons, aggravate them. Another bull factor is the prevailing rumour, (rather premature) of a possible bonus issue by the Indian Iron & Steel Company through the capitalisation of the share premium reserve account, as was done by the Tata Iron & Steel Company. Hopes of further relief for the cotton textile industry, the possibility of an increase in the retention price for cement and the likelihood of an early end to the dock strike have contributed to the present behaviour of the stock market.

Investment business continues to be disappointing and unless genuine investors decide to support the market it is felt that the present recovery movement cannot be sustained. India's exports have been lagging behind and the steel shortage is causing anxiety in the engineering industry. Tea shares are still in the doldrums due to the delay in granting further tax relief. The offtake of jute goods continues to be disappointing.

The market received some support from the L.I.C. last week and one of the shares purchased was India Steamship, which recovered from Rs. 11.06 to Rs. 11.56

The announcement that ten State Governments will be in the market on 15th July for a sum of Rs. 47½ crores did not have much effect on existing Government securities and State loans. These continued to rule steady, as both the timing and the terms of the new loans are in accordance with market expectations. Furthermore, the yields offered are quite attractive when compared with those of existing issues. As the money market is fairly comfortable, the success of all ten loans should be assured.

The Calcutta Stock Exchange was closed today due to the death of one of the founder-members of the Association.

Selected miscellaneous and engineering preference shares continued to meet with good enquiry, but sellers were not forthcoming.

In the banking section, Punjab National was the outstanding feature, improving from Rs. 56 to Rs. 59. Hind Bank were better at Rs. 53, while United Commercial were unchanged at Rs. 61.

Coal shares were devoid of interest. Similarly, cotton shares were listless.

In railways, Dehri-Rohtas were crossed at Rs. 11 and a small lot of Howrah-Sheakhala at Rs. 48.

Jute shares stole the limelight during the week and quite a few shares recorded substantial gains, as will be seen from the following table:

	Opening 19th June, 1958	Closing 24th June, 1958
	Rs.	Rs.
Anglo India	150	161
Bally	150	160
Chitavalsah	14.37	15
India	130	133
Megna	119	126
Soorah	14.50	16
Union	123	128

In electrics, there was some enquiry for Calcutta at the higher rate of Rs. 14.37, while Benares were shaded at Rs. 13.50.

In the engineering section, Indian Iron & Steel improved steadily from Rs. 21.96 to Rs. 22.40; profit-taking at the close brought the price down to Rs. 22.30. Jessops were subdued at Rs 19.75, while Textile Machinery hardened to Rs. 19. Kumardhubi Engineering were in demand, and rose from Rs. 9.50 to Rs. 10. Guest, Keen, Williams, in contrast, were softer at Rs. 31.12. Burn & Co. improved to Rs. 339 and Marshalls were dealt in freely at around Rs. 5.50 x.d.

The recovery movement in paper shares appears to have been halted, and there was little or no change in prices.

In cement, prices of most scrip were well maintained, but Jaipur Udyog moved from strength to strength and improved from Rs 13.19 to Rs. 13.69 as did Orissa Cement from Rs. 13.75 to Rs. 14.

In insurance, Concord of India were done at Rs. 12.12 and New Asiatic at Rs. 3.62.

Good features in the miscellaneous section were Alkali & Chemical, Balmer Lawrie, Britannia Biscuit, Hindustan Motors, Imperial Tobacco, Indian Wood Products and Shaw Wallace, which were all sought after at rising prices.

In the mining group, Indian Copper met with some profit-taking at higher levels and closed lower at Rs. 3.33.

Tea shares ruled quiet throughout and prices on balance were slightly easier.

THE RUNGLEE RUNGLIOT TEA COMPANY LTD has disclosed a revenue profit of Rs. 31,512 for the year ended 31st December, 1957, compared with Rs. 1,00,045 in the previous year. The dividend has been declared at 25 percent (35 percent). Depreciation is shown at Rs. 7,924 (Rs. 7,247). The provision for taxation is allocated at Rs. 24,500 (Rs. 30,500) Wealth tax and development reserve receive Rs. 1,000 each. There were no such allocations in the previous year. There is a carry-forward of Rs. 10,362 against Rs. 20,358 brought in. Crop was 156,960 lbs compared with 210,320 lbs. The average selling price realised was Rs. 3.49 a lb, against Rs. 3.06 a lb in the previous year. Estimates for the current year provide for a crop of 176 000 lbs at an outlay of Rs. 5 47,822, including inland freight and sale charges.

THE DIVIDEND OF REWA COALFIELDS LTD. HAS BEEN reduced by 5 percent to 10 percent for the year ended last December. The profit has declined from Rs. 4.95 lakhs to Rs. 4.72 lakhs. The provision for taxation is shown at Rs. 1.60 lakhs (Rs. 2.18 lakhs) and depreciation is allocated Rs. 1.83 lakhs (Rs. 1.86 lakhs). Contingencies reserve absorbs Rs. 1 lakh (Rs. 1.20 lakhs) After various adjustments, there is a carry-forward of Rs. 24,549, against Rs. 22,852 brought in. Raisings fell from 385,218 tons to 373,388 tons as did despatches from 387,940 tons to 373,679 tons.

THE ORDINARY DIVIDEND OF SHAW WALLACE AND Company Ltd has been maintained at Re. 1 a share for the year ended last December. The profit has

'SANFORIZED' means better sales for you!

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings.

What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'

Anytime, unannounced ...our expert visits a mill licenced to use the trade mark 'Sanforized'. Selecting samples of cloth at random, he subjects them to a rigorous international wash-test, reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'!

It's this kind of care plus our advertising plus experience which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for you!

Look for 'SANFORIZED' on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet the Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 93, Marine Drive, Bombay 2.

improved by Rs. 10.51 lakhs to Rs. 37,91,964. The provision for taxation has been allocated Rs. 18.24 lakhs (Rs. 13.96 lakhs). Depreciation has been increased from Rs 2.26 lakhs to Rs. 4,83,934. General reserve allocation is Rs. 4 lakhs; there was no such provision in the previous year. After making various adjustments, there is a balance of Rs. 365,425, which it is proposed to carry forward against Rs. 364,354 brought in. Sales were Rs. 5 86 crores. compared with Rs. 2.85 crores in the previous year. Stocks were valued at Rs. 95.81 lakhs against Rs. 68.12 lakhs.

THE BHARTIA ELECTRIC STEEL COMPANY LTD HAS shown a satisfactory result in its working for the year ended last December. The profit has risen by Rs. 11.98 lakhs to Rs. 2.524,574. The dividend has been maintained at Rs. 12½ percent. The taxation provision has been increased by Rs. 5 lakhs to Rs. 15 lakhs. Depreciation is the same at Rs. 15 lakhs. General reserve absorbs Rs. 4 lakhs. After making necessary adiustments, there is a carry-forward of Rs. 97.400 against Rs. 97.826 brought in. Output showed an all-round improvement. Considering the age of the plant. particularly at the Ballygunge works, the directors feel that a considerable amount of outlay will be necessary in the near future to maintain and improve working efficiency They think that the available financial resources of the company are inadequate to meet the requirements of increased working capital as well as replacement and modernisation of plant and machinery. So they have tried to secure large unsecured loans on current account.

Bombay Market

OPERATORS DISCOUNT CRISIS NEWS

PRICES MOVE UP

Wednesday Evening.

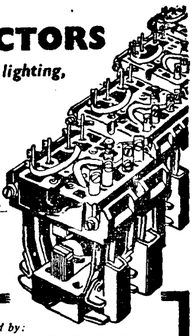
CHEERFUL conditions prevailed in the Bombay stock market last week and occasionally hectic trading was seen. It is difficult to ascertain the reason for the buoyancy in the face of certain adverse economic developments, such as the deterioration in India's foreign exchange position and continuation of the dock strike.

Apart from excellent corporate news, operators appeared to be encouraged by the resumption of normal work at the Tata Iron and Steel plant. The company chairman's observation that the work on the expansion programme might be slightly delayed as a result of the strike, has had little effect. Tata Steel were boosted to Rs. 186.50. Indian Iron improved to Rs. 22.32, on suggestions of a free scrip issue. Among other engineerings, Alcock Ashdown came to hand at Rs. 263.75. Premier Construction were bought at Rs. 203 by knowledgeable quarters. Tata Locomotive were steady at Rs. 174. Premier Automobile were taken to Rs. 84 and Hindustan Motor were higher at Rs. 7.56 on short-covering.

Hopes of an excise duty relief for medium and coarse cloth generated selective enquiry in the mills group. Kohinoor rose to Rs. 271.75 and Simplex gained at Rs. 176 on interested support. After an initial rise, Century reacted to Rs. 444.50 on profit-taking. Bombay Dyeing realised Rs. 56.40 and Svadeshi changed hands at Rs. 190.75. Apollo were transacted at Rs. 1.74 and India United Ordinary were offered at Rs. 9.64, as the report that a prominent indurtrialist would join the company's board of directors was not confirmed.

There were a number of bright features in the miscellaneous group. Belapur Sugar improved to Rs. 259 on prospects of higher earnings. Phalton were taken at Rs. 158 and Walchandnagar Industries rose to Rs. 285 on talks of a fresh capital issue. Among steamship company shares, India Steamship forged ahead to Rs. 11.60 in the expectation that the company's earnings for the year ended last March would show an improvement. Scindia Steam were done at Rs. 18.36 and Great Eastern Shipping were bought at Rs. 23.52. Mining shares were quietly steady on a rise in world metal prices. Shivrajpur Syndicate were transacted at Rs. 90.50. National Rayon reacted to Rs. 231.25 on realising, but Tata Chemical rose to Rs. 16.52 on the possibility of restrictions on imports of heavy chemicals. Voltas gained further to Rs. 134 on the inclusion of the scrip in the forward list.

Banking shares were quietly steady in routine turnover. United Commercial made Rs. 61.30, and Bank of India realised Rs. 133.50. Insurance shares were steady on reports of an improvement in working. New India Assurance came to hand at Rs. 48.



Electricity supply shares met with scattered support. Tata Hydro were bought at Rs. 117.50. Ahmedabad Electric changed hands at Rs. 95.

A. C. CONTACTORS

for the control of heating, lighting, distribution and motors

ALL STANDARD VOLTAGES

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for tender No. Con/1/GM/16/HD/58-59 for supply of conduit solid drawn of different sizes. Tenders will be opened at 12 noon on 30-7-58.

Tender forms with full particulars are obtainable from the office of the Controller of Stores (Construction section), Garden Reach, Calcutta-23 at Rs. 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing earnest money of Rs. 1,000/- with this Railway's Chief Cashier without which the tender is liable to be rejected. Approved contractors having permanent deposit of Rs. 1,000/- with the Controller of Stores are exempted. Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER.

Deep tread pattern for long life

Broken shoulder bars for better grip on rough ground

Strong casing to withstand abuse

DUNLOP RK.3

TAKES THE ROUGH WITH THE SMOOTH

The Dunlop 'RK.3' is a dual purpose tyre for use on and off the road. The ribbed centre tread means longer life on hard roads and the self-cleaning shoulder buttresses give adequate grip for 'off-the-road' service.

Available in size 6.00-16 6 ply

For fitment to Cars, Jeeps, Land Rovers and Station Wagons

DC-504

THE EASTERN BANK LTD.

INCORPORATED IN ENGLAND.
Wholly-owned subsidiary of The Chartered Bank.
(Incorporated by Royal Charter 1853.)

PRICES ADVANCE ON LONDON STOCK MARKET

RISE IN INDUSTRIALS: GILT-EDGED UNCHANGED

London, 25th June.

THE London stock market continued its recent advance during the past week and prices in most sections, particularly industrials, recorded fresh gains. The strength of industrials was, in fact, the main feature of last week. A number of favourable developments combined to account for the fresh improvement in the market. The most remarkable event of the past week was the cut of ½ percent to 5 percent in the British Bank rate which brought it back to its pre-September crisis level. This reduction was widely expected and consequently it had only a limited effect on the market. The Chancellor of the Exchequer's unexpected announcement of an increase in initial allowances, on the other hand, brought about a marked rise in industrials. These two events encouraged the view which gained ground recently that the Government intended to relax the credit squeeze at the earliest opportunity provided that there was no risk of losing the economic gains scored since the September sterling crisis. The improved domestic labour situation also reflected a favourable impression. The Middle East political situation was, however, a restraining influence while the less optimistic findings of the F.B.I. second industrial survey tended to dampen enthusiasm. The cut in the British Bank rate was almost fully discounted in the gilt-edged market and although a firm tone was maintained, prices were mostly unchanged. Foreign bonds and rails were selectively higher. Dollar stocks fluctuated with Wall Street and were mostly lower on balance. The industrial market scored a substantial advance and recorded widespread and often appreciable gains on the week. South African gold shares were in selective demand. Base metal shares were erratic. Oil shares were overshadowed by the situation in the Middle East and were mainly easier. The feature of tea shares was the weakness of Ceylon issues on reports of threats to Europeans in Ceylon. Indian issues by contrast tended higher but gains were small.

The Money Market

The outstanding point about the London money market last week was the reduction of ½ percent to 5 percent in the British Bank rate. This was but a natural course of events after the downward pressure which was exerted in bill rates following the recent heavy demand. The reduction in Bank rate was welcomed by the market and it was felt that perhaps the pressure on bill rates might be relieved, although at last Friday's weekly tender, the money market increased its effective bid by 1s to £98 18s 6d which brought about a reduction in the average rate for Treasury bills from the previous week of 4s 4d to £4 5s 9.63d percent. Competition for the bills remained keen as ever and the market secured a reduced number of bills at prices indicating possibly that it will have to bid even higher to secure the bills and thus cause a further decline in bill rates. The money position over the past week was at first very comfortable due to the large Government disbursements but tightened up towards the close. The minimum basic rate for regular money is now 3½ percent while for non-regular money, rates ranged up to 4½ percent when money was tight. Business in September bills is currently being done at 4 7/32 percent.

Activity on Wall Street

Long-term U.S. Government obligations during the past week experienced one of the sharpest slumps for some months. In heavy turnover, the Treasury issues were marked down well over a point, and this was attributed to a number of factors by dealers. These included an unconfirmed report that the U.S. Federal Reserve was curtailing its easy money policy, being once again concerned with the threat of inflation and the sale of securities by speculative interests. Investment quality corporates also suffered sizeable losses in sympathy with the weakness in the Treasury list. Speculative rail issues drifted irregularly in limited activity. Convertibles moved higher early with the stock market but receded when securities turned reactionary. In a mixed and sluggish market for foreign dollar bonds, South African issues were a firm spot with the 4½ percents adding over a point. Austrians and German Nationals showed only minor changes, while several Italian issues fluctuated over a range of a point or more. Greek 7 percents and Serb 7 percents were soft losing a major fraction of a point, respectively. Among the Japanese issues, the Government 6½ percents of 1964 receded slightly. Chile 3 percents gave up over a point to come within a minor fraction of the year's low at $ 36⅜. In over-the-counter trading, Bolivian bonds picked up a couple of points following news of the renewal of interest payments.

Mixed Trend in Hongkong Gold

The Hongkong gold market showed a mixed trend during the past week. Prices steadied after early easiness but thereafter eased again. The lower Bank rate, accompanied by the recovery of sterling, led to an easier price trend. Prices were also affected due to the situation in the Lebanon coupled with easier sterling and increased remittances from overseas. Carry-over charges were 7 cents a 10 taels in sellers' favour. The official offtake was 960 taels and the unofficial 5,600 taels. Arrivals in Macao were nil. Forward contracts were done at $(U.S.)38.02 an ounce, c.i.f. Macao.

Brisk Trading in Paris Gold

The feature on the Paris gold market during the past week was the steadily growing volume of sales. The volume of business was the largest since the gold market was started after the war. Dealers, acting on behalf of the Bank of France, took up all offers at a fixed price of 3,600 francs a Napoleon coin and 514,000 francs an ingot. But other coins lost ground under selling pressure as investors were unfreezing their holdings to subscribe to the Government loan pegged to a Napoleon at 3,600 francs. But some business was also done on speculative support in anticipation of a sharp decline in gold prices when the Bank of France would stop its purchases. The number of ingots, 12-kilo bars and Napeoleons traded last week on the official market was equivalent to an estimated amount of 35 tons.

Rubber Steady

In spite of the limited activity during the past week, the rubber market had a steady undertone. A slight initial decline in prices was soon followed by a recovery and values continued around 22½d a lb for most landed positions with no particular inclination among traders to extend their commitments due to the absence of factory or speculative support. No important influence came from New York and the Rubber Study Group's findings did not affect the market. Prices tended to drift in the final stage. There was not much evidence of selling pressure except that distant positions were not very strongly held. The reduction in the U.K. Bank rate slightly stimulated market sentiment but the announcement brought no increase in activity. Closing values were mostly unchanged on the week. Dull but steady conditions were noted for sole crepe with small arrivals balancing the limited offtake. Prices were unchanged on the basis of 28d a lb for fin. smooth No. 1 on the spot.

Quicksilver Unchanged

There had been no significant change in the price of quicksilver during the past week. The London ex-warehouse price continues to rule at £76 a flask. The labour situation in the London docks is sustaining a price level which might otherwise have been difficult to maintain. The overall volume of demand is as usual, trade sources say, and the trouble in the docks not only immobilised a certain amount of quicksilver, including Mexican, but also resulted in some metal being diverted to Continental ports for eventual shipment back to London. Metal for shipment to the United Kingdom—excluding Spanish and Italian metals—is still mentioned at down to about £74 c.i.f. At this level, Mexico might not feel disposed to sell to the United Kingdom, preferring to accept the General Services Administration's floor price of $205 or about £73¾.

New Delhi

U.S. CONSULTANTS REPORT ON PIPELINE PROJECT

ONE REFINERY NEAR OILFIELDS SUGGESTED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India is now examining the details of the report submitted by U.S. consultants on the pipeline project, to connect the Nahorkatiya oilfields with the site of the new refinery in Assam. The length of this pipeline has been placed at 300 miles. The acceptance of the report will involve radical changes in the present decision of the Government on oil refineries. The Government, it will be recalled, has decided to set up two refineries, one in Assam, about 300 miles from the oilfields and the other in Barauni in Bihar State. The Assam Oil Company, which is responsible for finding the oil and has agreed to set up a rupee company to undertake the production of oil, has also offered a loan of £10 million to finance the pipeline project.

The U.S. consultants suggest the setting up of one refinery only, near the oilfields. In terms of foreign exchange expenditure, this will be cheaper than two separate refineries, as decided by the Government. It has also been pointed out that modern methods will enable the pipeline to carry all petroleum products, crude as well as finished. It will also be possible to wash the pipeline from inside after one product had been pumped down. Side by side, a British firm, Messrs Head Wrightson, has shown interest in the installation of the refinery. The Assam Oil Company has also reaffirmed its offer of £10 million to finance the pipeline project. Meanwhile, an Indian team has gone to Rumania to negotiate the credit offer which has been made to finance the refinery project. The team will also visit London to explore the possibilities of the British firm, Head Wrightson, which has shown interest in the project, participating in it. The Government will reach a decision after the team has submitted its report.

Sugar Exports

The Government of India, as already reported, has decided to export sugar. It will be done through the industry itself. The internal prices have already been raised to subsidise exports and make sugar competitive in export markets. The industry has assured the Government that it will not raise internal prices any more, but will maintain them at the prevailing level.

U.S. Tobacco for India

The U.S. Department of Agriculture has authorised the purchase by India of some $2,737,450 worth of unmanufactured tobacco against Indian rupees. Some 1,200 metric tons of tobacco are listed in the agreement, which followed the commodities agreement reached nearly two years ago, according to which some $360 million worth of American commodities are to be sold to India against local currency. A substantial proportion of the sale proceeds is to be lent back to the Government of India for economic development projects. Approximately half of the commodities covered in the agreement have already been delivered, and the balance will be arriving in another year. The latest announcement by the U.S. Agriculture Department has said that the tobacco will be shipped from U.S. ports between 17th June and 30th June.

Indo-U.S. Credit Agreements

Two Indo-U.S. agreements have been signed this week. One provides for a loan of $75 million from the U.S. Development Fund as part of the $225 million credit advanced to India. The remaining $150 million will be a loan from the U.S. Export-Import Bank. Some $40 million of the former will be used for the railways to buy steel for wagons, goods vans and locomotives and $4 million has been earmarked for structural steel for repair, maintenance and construction of railway bridges. Some $35 million will be used to purchase road transport equipment, machinery for cement plants and equipment for jute mills. The road transport equipment will consist of lorry and jeep parts or unassembled vehicles. The parts will be assembled in India. The second agreement enables India to receive $52 million worth of goods.

Little Foreign Exchange for Shipping

The paucity of foreign exchange may retard the progress of Indian shipping, it is learnt. The Joint Secretary in charge of the Shipping Department, Maharaj Nagendra Singh, who went abroad to negotiate the purchase of ships on a deferred payment basis, has brought some attractive offers. All of them, however, involve a certain percentage of foreign exchange expenditure at the outset. At least Rs. 1 crore of foreign exchange may enable India to acquire six to seven ships. The Government, however, is not in a position to allocate more than Rs. 5 lakhs of foreign exchange for one ship, which is unacceptable to the dealers. Some indication of the Government's attitude will soon be known.

Studies on State Concerns

The Indian Statistical Institute, Bangalore, has produced some studies on the State enterprises in India. They include those of the Hindustan Shipyard, the Sindri Fertilisers and the Bhadravati Iron and Steel Works, Mysore. The preface to the studies begins by citing the preamble to the Constitution of India and says that "it was in keeping with these basic principles that the Government of India declared its intention of establishing the socialist pattern of society. The socialist pattern of society rests on co-operation. And co-operation constitutes the law of life, on which man has built all his institutions—social, economic and political."

"Labour participation is an attractive slogan. However, to translate that slogan into reality calls for sympathy, understanding, resourcefulness and above all, a thorough understanding of the human psyche. The most important pre-requisite, to achieve this objective is to create a genuine labour management team. A mere official decree will not achieve this end. This can best be achieved only through a singleness of purpose, education, development and participation in day-to-day working and living conditions. Each worker will have to be inspired, trained and educated in the new steps of co-operation procedures, practices and achievements, in the interest of national well-being. The management and supervisory staff will have to be thoroughly educated in the validity of increasing labour participation in planning, production and management, in keeping with the growing understanding between labour and management.

"Dominating and autocratic leadership has been tried and proved absolutely wanting. In reality, the situation calls for co-operative and dynamic leadership. A supervisor is essentially a captain, to lead and co-ordinate the work of the members of the group so that they may all share in the achievements the failures and the successes of the team. The old ivory tower academic isolation has proved a regressive force in industrial development. In India, the simply pure academic approach has proved infructuous both intellectually and practically. It is high time that it was realised how essential it is for the academicians to move on to the shops of the nation to face live problems. Likewise, it is equally important that shop men go to the classrooms, to master the theory for more effective practical use. Such collaboration and cross-fertilisation is essential, if we are to move forward in a systematic manner and expeditiously."

High Degree of Centralisation

The study group further says:

"The high degree of centralisation and the corresponding lack of delegating authority and responsibility obtaining at the Hindusthan Shipyard Limited, arrest the development and inhibit the growth of leadership, and, naturally, lead to inefficiency. Increasing decentralisation of organisation, corresponding delegation of authority and responsibility in the shops, are imperative in the interest of developing a team, to achieve efficiency, and to make a success of the shipbuilding industry. Labour, through H. S. Union and Associations, should be actively drawn into the discussions and a plan for decentralisation should be worked out. A limited suggestion for decentralisation has been made, as an experimental measure, in the treatment of grievances. But the principle needs plant-wide adoption to encourage initiative and, above all, to help the individual team and its captain to cultivate self-confidence, group reliance and maturity, so that eventually it may begin to assume more and more responsibility and correspondingly greater authority, right down to the very bottom unit. This will call for hard labour, dogged effort, intimate team work and the new structure will have to be built, brick by brick.

"The managing director and a few top officials are conscious of the urgency of change in their outlook towards the workers—of understanding, of sympathy and of the recognition of the dignity of labour—and the imperative need of absorbing them into their team. There is, however, considerable reluctance, if not open hostility, to 'giving in' to the workers among some officers. Essentially, this resistance to change is the product of a long heritage of social, official and bureaucratic caste habits and vested interests, so entrenched in our life. To replace these inhibitive and static forces with co-operative and dynamic practices is the immediate task. To achieve this end, imagination, understanding, resourcefulness, techniques of modern management and, above all, perseverance are needed. There is still considerable suspicion, fear and hate between labour and management. The saving grace is that there are people of goodwill on both the sides, aware of the evils and conscious of the necessity of concerted action for desired correction. But management must, because of its advantageous position and knowledge, take the initiative and, by its studied efforts and day-to-day action, prove its *bona fides*. Once this is achieved the long-standing fears, suspicions and hates will gradually wither away. The outlook of labour will change correspondingly, and even the demagogic labour leaders will think twice before they mislead the rank and file of workers. At any rate, workers will not tolerate dividing tactics which adversely affect the logical growth of the industry, once harmonious labour-management relations are established. Management, inevitably, will have to implement this by deeds rather than through profession and lip sympathy. It must be fully appreciated that, however desirable the changes might be, they cannot be brought about precipitously. A transitional period of change in the thinking and developing of new habits in place of old is essential. This can be most effectively brought about by winning over both management and labour to the new philosophy and practice of team work. Much goodwill, co-operation, education and hard and persistent labour, on both the sides, will be needed to overcome the inertia in day-to-day relationships."

"So far as Sindri is concerned, the study holds that the maintenance department is unwieldy and has all kinds of engineering and store activities under its wing. Raw material supply, especially of coal, is unsatisfactory from the point of view of quality control. The use of manpower is not so effective as it could be both from the qualitative and quantitative points of view. The Industrial Engineering Department is not being used at all for the purpose it is used elsewhere. There is overlapping of functions and responsibilities. For instance, stores are being managed by an over-worked superintendent of management; education is being administered by an over-taxed estate officer and the training centre is being guided by an over-burdened superintendent of production. A study of manpower and production indicates that productivity per man per year has been on the decline and has fallen by nearly 8 percent since 1952."

Output at Shipbuilding Yard

As for the Hindusthan Shipyard, the Study group says that there is a high percentage of illiteracy among industrial workers. The study quotes the French experts, employed at the Yard, as saying that "the present Indian technical officers and staff are inexperienced, most of them are not up to the required level. The output of riveters is poor, the ratio between a French worker and a local worker is 7.8 to 1." The study team found that "there was a lack of organised quality control in the Yard." The French expert explained that he had come to conclusion that "the rate of man-days required for a certain job at a European yard and the Visakhapatnam yard comes to 1:355." The absence of any effective contribution from the labour representative as seen from the recorded minutes of the board meetings even on matters essentially connected with labour and labour-relations, is noteworthy.

Employment of Primary School Teachers

Further "investments in men" were announced during last week. The Government of India has given its approval to a scheme to relieve educated unemployment, under which 60,000 primary school teachers will be appointed during the next three years; the Central Government is meeting the expenditure on a 100 percent basis, for the emoluments of teachers, equipment grants at the rate of Rs. 250 a teacher, the cost of training the teachers and the cost of 6,000 residential quarters at the rate of Rs. 2,500 a quarter for female teachers. Provision has also been made to appoint 1,200 inspectors of the lowest rank. The Government of India's liability will end with the second five year plan.

The proposed employment of 60,000 primary teachers has a history. The full allocations of the Education Ministry under the second five year plan could not be used because of foreign exchange and other difficulties, and although the plan is being cut down by at least Rs. 300 crores because of the shortfall even in internal resources, the allocation of Rs. 95 crores originally made for the Union Ministry of Education has been kept intact. The money has to be used somehow or the other. The Government's anxiety to solve the unemployment problem is not so evident in other sectors, and it is blissfully unaware of the large-scale unemployment which its social and economic policies are causing. The policy of Prohibition, for instance, has created considerable unemployment. The Government merely takes its stand on moral grounds. Large-scale unemployment has followed in the wake of its import policy. The Ministry of Labour, always so solicitous about men being thrown on the unemployment market, has not even bothered to take a census of unemployment caused by the import policy. The Ministry is solicitous about the unemployed in the organised sectors only.

Matching Grants

Reference is also made to this in the report of the Second Finance Commission which was definitely opposed to the system of matching grants for education under which such schemes are financed. The Finance Commission said: "During the first five year plan period, a number of schemes involving such grants were sanctioned and subsequently incorporated in the plan. A large number of such schemes have also been included in the second five year plan. State Governments were unable to meet their share of expenditure on these schemes, as all their resources have already been committed for their inescapable expenditure. Their difficulty was greater in the case of schemes outside the plan. In either case, they found it impracticable to reject the schemes on the ground of want of resources because of understandable public criticism. In the result, most of them accepted schemes and ran into revenue deficits. There is considerable force in this complaint. So far as the second five year plan is concerned, we have sought to meet it by taking into account in our scheme the requirements of the States involving matching grants, so that the States will have resources to meet their share of the expenditure."

Enquiries show that the scheme is not included in the second five year plan. Yet it has been sanctioned. The Planning Commission has admitted now that this country does not have the internal resources to implement the plan in full. So it is engaged in pruning the plan. The allocation for coal production, for example, has been curtailed. The responsibility of the Ministry of Finance is even greater. How did it agree to an expenditure

outside the plan when money is not available to implement a plan of even Rs. 4,260 crores? The Planning Commission, in its appraisal of the resources for the plan, said last month that "the resources aggregate Rs. 1,804 crores for the remaining two years of the plan; they add up to Rs. 4,260 crores for the plan period. This shortfall in resources, obviously, cannot be met by further deficit financing, nor is it practical to rely on more external assistance."

There is another aspect of this problem. A large number of taxation measures were taken last year largely to finance the second five year plan. If there is surplus money, no longer required for the purpose for which it has been raised, namely, to finance the plan, it is time that some relief in taxation was given to the taxpayer. The Finance Commission, in paragraph 189 of its report, says: "In formulating the second five year plan and assessing the resources available for it, the existing resources of the States and the proceeds of the future taxation have been fully taken into account, leaving the States without any margin for further commitments. Many States complained that, in spite of this, additional burdens were frequently placed upon them by Central policies." It is true that the States will bear no part of the expenditure on this scheme during the plan period. But they will be solely and wholly responsible for running the scheme after 31st March, 1961. Most of them are already in financial difficulties. How they will find additional money in 1961 is not disclosed either by the Union Ministry of Education or by the States on whom the scheme will then be foisted.

South Arcot Lignite Project

The Budget estimates for the integrated South Arcot lignite project for the current plan period are placed at Rs. 60.62 crores including the following:

1. Mining scheme	Rs.	20.32 crores
2. Thermal power station	Rs.	27 crores
3. Fertiliser plant	Rs.	9.30 crores
4. Briquetting and carbonisation scheme	Rs.	10 crores
	Rs.	60.62 crores

The Planning Commission has, however, reduced this provision to Rs. 46.60 crores, as follows:

1. Mining scheme	Rs.	20.30 crores
2 Thermal power station	Rs.	17 crores
3. Fertiliser plant	Rs.	9.30 crores
	Rs.	46.60 crores

The Commission is not inclined to include the briquetting and carbonisation scheme as the outlay for industries and mineral development has had to be reduced to Rs. 790 crores.

Third Plan Coal Target

The target for coal production in the third five year plan has been placed at 100 million tons. The Planning Commission has placed a ceiling of Rs 40 crores on expenditure for coal production in the public sector during the second plan period, compared with Rs. 45 crores suggested by the Central Ministry of Fuel. The latter's demand, among other things, was based on the following estimates: Rs. 30 crores to reach the target of 10.5 million tons of coal in the public sector plus Rs. 5 crores for housing. This provision is exclusive of the rupee value of the expenditure on the various projects to be implemented in Korba in collaboration with the Russians. The expenditure, including the rouble allocation against which payment has to be made in rupees, is placed at Rs. 8 crores. This also excludes the development expenditure on the Singareni collieries. It was also suggested that the final ceiling should carry a sufficient margin for undertaking various items of a preparatory nature in connection with the third five year plan. The question of the private sector being permitted to produce an additional 1.4 million tons of coal to serve as a cushion against any possible shortfall in the same sector has been dropped. The next meeting of the Coal Council will be held here on 8th July, 1958.

Amendments to Mining Rules

The amendments to the Mining Leases (Modification of Terms) Rules and the Minerals Conservation and Development Rules have been published. The rules lay down that "every owner of a mine or the holder of a prospecting licence will, when any appointment is made of an agent, or manager or mining engineer or geologist in charge or when any change occurs in the address of such agent, manager, or mining engineer or geologist in charge, send an intimation of such appointment or change of address and the date to the director within 30 days of such appointment or change of address." Rules also provide for notices and returns concerning prospecting operations, mining operations, change in the name of a mine or the intention of abandonment of a mine. Notices are to be given of the mining operation, record of shafts and bore-holes, transfer of records, employment of geologists and mining engineers. It is laid down that "every owner, agent or manager of a mine or the holder of a prospecting licence will preserve intact all cores and specimens of different types of rocks and minerals obtained during the drilling or sinking operations and arrange for them to be laid out in serial order with identification marks, showing the progressive depths at which they were obtained. Such specimens will not be broken except for the purpose of analysis and will be preserved for a period of not less than six months." The following minerals are declared to be minor varieties under the Mines and Minerals (Regulation and Development) Act, namely: Boulder, shingle, chalcedonypebbles used for ball mill purposes only, limeshell, kankar and limestone used for lime burning, murrum brick earth, fuller's earth, bentonite road metal, reh-matti, slate and shale when used for building material.

Industries Council Meeting

The present economic situation in relation to industrial development will be discussed at the ninth meeting of the Central Advisory Council of Industries which will meet in New Delhi on 21st July, 1958. Mr. Lal Bahadur Shastri, Minister for Commerce and Industry and Chairman of the Council, will preside. The Council will review production and price trends and the present foreign exchange position. Reports of the Development Councils for different industries, as well as that of the reviewing sub-committee will be discussed at the Council meeting. The present position of the motor-car, cement, jute and sugar industries, and the progress of public sector projects will also be discussed. The development of small-scale industries and productivity activities in the industrial field are the other items on the agenda of the meeting. The Council advises the Government on the development of industries, scheduled under the Industries (Development and Regulation) Act.

Dock Labour Strike

The dock labour strike should demonstrate the lack of wisdom in centralising certain categories of labour, as the Government of India is responsible for this unity among dock workers. It is generally known that conditions differ in one port area, say, Cochin from another port area, say, Calcutta. Previously, each port trust was able to tackle the problems of its own labour. If there was a strike in one port, it did not spread to the other ports, which continued to function undisturbed. Then came the "departmental imperialism" centralising dock labour under the Ministry of Transport. It enabled the workers to unite in a federation and organise a strike on an all-India basis. Similar centralisation took place in the case of bank employees with similar results. Proposals are under discussion to centralise iron and steel labour.

Official Recruitment

Proposals are being canvassed to make it obligatory for the Central Ministries to consult employment exchanges before making their recruitment of certain categories of staff. The exchanges are a postwar creation, set up to assist demobilised defence services to find alternative jobs.

Evaluation of Labour Awards

The Central Ministry of Labour and Employment has set up a tripartite committee to evaluate the implementation of awards, agreements and settlements. This follows the recommendation made by the Standing Labour Committee at its last session. The first meeting of the committee, which will be called the Central Implementation and Evaluation Committee, will be held next month. Employers' representatives on the committee are Mr. Naval H. Tata, Employers Federation of India; Mr. G. D. Somani and Mr. P. Chentsal Rao (All-India Organisation of Industrial Employers), and Mr. H. P. Merchant (All-India Manufacturers Organisation). Workers' representatives are Mr. S. P. Dave (Indian National Trade Union Congress), Mr. B. D. Joshi (All-India Trade Union Congress), Mr. Bagaram Tulpule (Hind Mazdoor Sabha), and Mr Gurbachan Singh (United Trade Union Congress). Official representatives on the committee will include the Secretary and the Joint Secretary in charge of the Evaluation and Implementation Division of the Central Labour Ministry.

Committee for Jute Industry

Following the recommendations of the Indian Labour Conference, held recently in Naini Tal, the Central Labour Ministry has set up a tripartite industrial committee for the jute industry. The committee, which is expected to meet shortly in Calcutta, will review the position of the jute industry with special reference to the closure or threatened closure of some of the mills. The Government will be represented on the industrial committee by one member each from the Central Ministries of Labour, Commerce and Industry, Finance, and the Planning Commission, and two members from the West Bengal Government. The employers will be represented by two members each from the Indian Jute Mills Association, Calcutta, and the Employers Federation of India. Two members from I.N.T.U.C. and one each from A.I.T.U.C. and the Hind Mazdoor Sabha will represent the workers.

The Labour Ministry has appointed another committee to consider the question of payment of bonus to tea garden workers in Assam, West Bengal and Tripura from 1957 onwards. The committee has been set up in pursuance of a recommendation of the Industrial Committee on Plantations, which met some time ago in Shillong. It will consist of the representatives of the Indian Tea Association, Calcutta, India Tea Planters Association, Jalpaiguri, Tripura Tea Association and the Assam Tea Planters Association on the employers' side, and I.N.T.U.C., A.I.T.U.C. and the Hind Mazdoor Sabha on the workers' side. The Regional Labour Commissioner will be the convener of the committee and its first meeting is likely be held shortly in Calcutta.

Indian Scientists Abroad

According to the National Register, "there are over 5,000 Indian nationals holding technical qualifications who are currently abroad. Most of them are taking advanced courses of study or trainnig in various foreign countries. Some are employed abroad. At the present stage in India's industrial development, it has been found necessary to take stock of the technical manpower potential. Unfortunately, there is no complete record of such trained personnel who are abroad, although it is known that they constitute a sizeable fraction of the best qualified group. Only scattered information is available from various sources which can help in the assessment. The records of the Ministry of Education, Government of India, the publications of the Indian students' directories for the U.K., U.S.A. and Canada, and the Reserve Bank returns in connection with foreign exchange, are useful sources.

In September 1957, the National Register of the Council of Scientific and Industrial Research opened a special section to enrol technically qualified Indians in foreign countries, irrespective of whether they are students, trainees, employed or unemployed. The information so far obtained in this section of the National Register throws considerable light on the overall situation. The purpose of this assessment and the roster is to help use the well-trained technical personnel available for national development programmes. The broad distribution of the technical personnel for five major fields, namely, engineering, science, technology, medicine, and business administration and accountancy, in different foreign countries is shown as follows:

APPROXIMATE NUMBER OF INDIANS (Technical Personnel) CURRENTLY ABROAD

Country	Engineering	Science	Technology	Medicine	Business Administration and Accountancy	Total
U.K.	850	280	300	500	70	2,000
U.S.A.	550	530	150	200	80	1,510
Canada	100	50	30	50	20	250
European countries	400	200	200	100	50	950
Australia and New Zealand	100	50	60	20	20	250
Other	200	90	60	100	50	500
	2,200	1,200	800	970	290	5,460

The average number of these people who would be returning to India annually in the next few years is estimated as follows:

Category	Number
Engineers	550
Scientists	350
Technologists	250
Medical personnel	250
Business administrators, etcetera	100
	1,500

The Central Ministry of Education maintains, at a considerable cost in foreign exchange, students' departments in the Indian High Commission in London and in the embassies in Washington and Bonn. No Indian student, it is reported, can secure admission into any training institution including workshop in Britain or the U.S.A. without the approval of this education department. There are known cases where a training institution, after agreeing to take on a trainee, wrote to his parents to approach it formally through the Embassy's education department. But the education departments, having sponsored a trainee, take no step to check his later progress. The National Register pays some tribute to the Ministry of Education for its "useful records." If the Ministry had been functioning as it should have, it would have furnished the whole character-sheet of all students and trainees who have been sponsored by the education department. So far as the U.S.A. is concerned, only a minority of the trainees are homesick. They are earning comparatively much higher emoluments there than they are offered in India. They yield to none in patriotism or love of their country. They assert that they are in no way inferior to the Russians, who are given Rs. 75 a day, income tax free plus everything found. If the country has the money to pay the price of Russian experts, it should also pay its own nationals more attractively.

CITY REACTION TO THE REDUCTION IN U.K. BANK RATE

RELAXATION OF CREDIT SQUEEZE EXPECTED

(FROM OUR LONDON CORRESPONDENT)

BANK rate was reduced last week from 5½ percent to 5 percent, the third reduction this year, and the rate is now back to that ruling just before the September crisis when it was put up to 7 percent. The City had been expecting the cut for some weeks—in fact ever since the last cut of a half percent on 22nd May, and Stock Exchange reactions were not great, as the move had been more or less discounted. Britain has been gaining gold every month for the past six months, and as it became clear that the threat to sterling had been obviated—at any rate for the time being—there was no point in keeping interest rates at penal levels, especially with declines elsewhere. For the ordinary man, the first effect will be a cut in the rate he pays on his overdraft—if he has one. The Building Societies Association has said that the reduction is unlikely to have any immediate effect on rates of interest currently paid and charged by most societies. Speculation will now be concentrated on whether Mr. Amory will ease the credit squeeze another development which is widely anticipated, and may well be heightened with the definite improvement during the last few days in the strike situation and the setting of a definite standard for the solution of outstanding wage claims.

Tax Relief to Industry

During the Budget debate, the Chancellor of the Exchequer has given emphasis in his reply to the Opposition's criticisms of his proposals that his policy is adaptable to changing circumstances and he will not hesitate to make adjustments from time to time as these become necessary. There have been several indications recently that industrial production is losing its momentum—the latest is the statistical return for March of the machine tool industry which, though up on February, is well below the figures for March last year—and needs some boosting. To achieve this without risking more inflation, initial allowances to industry are to be increased by one-half instead of by one-quarter as proposed in the Budget. This was announced in the House of Commons last week during the committee stage of the Finance Bill. Mr. Heathcoat Amory, Chancellor of the Exchequer, said that he proposed to move, on the report stage of the Bill, an amendment to provide for this raising of the allowances. It would date, as did his original proposal, from 15th April. The Chancellor explained that the effect of the concession would be to raise initial allowances to 30 percent for plant and machinery and 15 percent for industrial building. He did not propose to alter the special 40 percent rate for mining works. The allowance is given as an offset against tax for the assessment year in which the capital expenditure is incurred, so the cost will be negligible this year, but will amount to £16 million in 1959-60 and £23 million in a full year.

The Chancellor's decision came as an agreeable surprise to industry and to the City. It has obviously been prompted by a determination to give a fresh stimulus to capital investment, which has been showing signs of flagging. Falling expenditure on new plant and machinery and on industrial factories and buildings has begun to affect many sections of heavy industry, such as steel manufacture and most branches of the constructional trades. It will, nevertheless, take quite a long time before this concession plus the lower Bank rate has any visible effect on industrial activity or employment. It should go a long way to restoring industrial confidence, however, and probably have some indirect influence on sterling as well, both desirable developments at present.

Capital Needs of India

The last-named outcome would appear to be necessary if no solution can be found to India's problem of securing adequate finance for her development scheme. Writing in the *News Chronicle*, Mr. Paul Bareau of its City staff, says that the Indian Government needs to raise about £200 million in the capital markets of the world in the coming year, for otherwise she might default on debts to British, West German, Japanese and U.S. firms. About half the loss would fall on British firms. But most of the money due to Britain is guaranteed to 85 or 90 percent by the Government—which means the British tax-payer in fact would bear the burden. Such a default would be a major disaster not only for India but for the whole sterling area. The amount needed to tide India over the next three years is too large to be raised by loans issued in the market. It needs an inter-national scheme, in which the United States and perhaps West Germany would be asked to share.

Discussions for such a rescue operation, he continues, will shortly be taking place in London, Washington and New Delhi. India has commitments of about £670 million to meet over the next three years. Allowing for what India can earn and credits already arranged, the deficit to be met by April 1961, is £420 million. Of this, about £215 million has to be found before April 1959. Meanwhile, India's sterling balances are down to £175 million.

Exports Holding Up

Higher exports, accompanied by imports sharply affected by the London dock strike, narrowed Britain's trade gap in May to £6.6 million. This is £26.8 million less than in April, and compares with a monthly average of £22 million for the first five months of the year while the latter was little more than one-third the 1957 average. This figure is the best since October 1954. Then, for similar reasons, the gap was reduced artificially to £4.1 million. Exports rose by £21.8 million in May to £287.3 million, the highest figure since May 1957, but it must be remembered that this year's total so far is 2 percent less in value than for the same period of 1957. Shipments to north America reached £44.1 million, £8 million more than in April, and almost a record. The figure has been exceeded only once before, in May 1956, when the dollar total was £47.1 million. Exports to the United States at £22.8 million were £200,000 below the March record, but shipments to Canada at £21.2 million have been exceeded only in those months which included deliveries of the *Empress* liners and an aircraft carrier.

Imports in May were £2 million down at £308.6 million, but the Board of Trade estimates that the figure was affected, probably to the extent of some £10 million to £15 million, by the dock strike. The dock strike tends of affect import figures more quickly than export ones, largely because imports are recorded sooner than exports. About one-third of Britain's total imports and exports are shipped *via* London. But the lower imports fit in with the recent trend. In the first five months of 1958, imports were 13 percent less in value than a year ago. Re-exports in May rose to £14.5 million, £3 million more than in April.

Movements in Price Indices

The prices of basic materials bought by British industry have continued to fall in May, according to the Board of Trade. The index is now 15 percent lower than in the some month of last year. The further fall was due mainly to lower prices for raw rubber, which dropped by nearly 7 percent during the month, and smaller declines in raw cotton, aluminium, zinc, and tungsten. The effect of these falls was partly offset by a further rise of 2 percent in the price of copper. On the other hand, the wholesale prices of goods manufactured by British industry—other than fuel, food, and tobacco—continued to be unchanged in May, as they have been since last September. The index shows only a minute drop of 0.1 percent, caused mainly by slight falls in the prices of most textiles and clothing.

The cost of living index, however, which is heavily affected by food and fuel, fell one point during May, from 110 to 109. The actual fall was only by four decimals, and it was due mainly to reductions in the average prices of coal, milk and eggs, as well as some cuts in the purchase tax rates. This small but welcome fall in consumer prices partly reverses the rise in April, which had been the first increase since last November. As for factory prices of manufactured goods, they have still not come down in line with the cheapening of many raw materials.

Freight Index Improves

Slightly higher freight rates for coal, sugar and timber are reflected by a modest rise in the Chamber of Shipping's May tramp freight index (1952=100) from 62.7 to 64.6. This is the first reversal of the consistent downward movement which began in December 1956, with the exception of a 1½-point rise last November. That rise was followed by an 11-point drop in December, so not too much hope should be pinned on last month's showing. The unhappy state of the freight market is again shown by the lack of reported time charters which has prevented the calculation being made for May. The last time charter index was for March at 51.8, a drop of 2.6 on February.

Notice on Victory Bonds

A new notice to the market concerning 4 percent Victory Bonds was issued by the Bank of England on 17th June. Coupons on existing bonds to bearer and bonds registered as to principal only were exhausted by payment of the coupon due 1st March. Further coupons will not be issued and the procedure now laid down by the Bank continued the postwar practice of requiring that British Government bearer securities should be written in when they become coupon exhausted.

Attock Dividend as Forecast

The Attock Oil Company is paying a final dividend of 1s 8d. (8½ percent) making 2s 8d (13½ percent) tax free as forecast, for the year ended 31st December on the capital increased by a one-for-three scrip issue and a one-for-four "rights" issue, against 3s 4d (16⅔ percent) a unit on the old capital. Group net profit has declined from £560,854 to £423,212, after taxation of £784,830 (£880,448) and depreciation of £225,510 (£263,383).

Lancashire in the Commons

The Labour motion on the cotton industry, published last week, has attracted amendments by a group of Lancashire Tories. The original motion reads: "That this House is deeply concerned by the continued decline of the British cotton industry brought about by adverse world conditions and the unlimited import of textile goods, many of which are produced by sweated labour: and that this House deplores the spread of unemployment and short-time working among Lancashire textile operatives and calls upon Her Majesty's Government as emergency measures to take steps to limit these imports and by legislative means and other action to establish civilised standards of labour in Hongkong." This motion has been signed by Mr. Tom Brown, Mrs. Braddock, and 28 other Labour members.

The Tory amendment would make the motion read: "That this House is deeply concerned by the continued decline of the British cotton industry and the threat of unemployment and short-time working among Lancashire textile operatives and calls upon Her Majecty's Government to do everything possible to support the effort of the Lancashire textile industry in its negotiations with producers in India, Pakistan, and Hongkong for a rational limitation of cloth imports, to the ultimate benefit of themselves as well as the Lancashire industry." The amendment has been signed by Mr. Fort, Mr. Green, Sir John Barlow, Mr. Fletcher-Cooke, Mr. Phillip Bell, Mr. Leavey, and Mr. Bidgood. It omits the Labour members' references to "sweated labour" and to the lack of "civilised standards of labour in Hongkong."

RACE TO INAUGURATE TRANSATLANTIC COMMERCIAL JET SERVICE

B.O.A.C. PLANS FOR COMET IV BETWEEN LONDON AND NEW YORK

(FROM OUR NEW DELHI CORRESPONDENT)

THE race to inaugurate the first transatlantic commercial jet service has begun. According to London reports reaching the *Aviation Daily*, B.O.A.C. now plans to begin *Comet IV* service between London and New York "late this year." Previously, the Corporation had indicated that it would use its first *Comet IVs* on routes to Australia and the Far East. Pan American Airways plans to start the New York-London service with *Boeing 707s* during this spring, reportedly from 1st November. B.O.A.C.'s first *Comet* made its maiden flight on 27th April this year behaving "splendidly" during its flight of one hour and 23 minutes, the test pilot reported. The Corporation expects to take delivery of five of these jet aircraft by the end of 1958. The tentative B.O.A.C. time-table suggests that the west-bound north Atlantic flight will take 11 hours with one stop *en route* and about seven hours non-stop for the east-bound journey.

Since October 1957, *Comets* of the Royal Air Transport Command have been operating a weekly service from the United Kingdom to Christmas Island. The route extends to 9,737 miles *via* Keflavik, Goose Bay, Offut in Nebraska, Travis Air Force Base in California, Hickam Field in Honolulu; flying time is 24 hours.

B.O.A.C. began its jet proving flights on 5th May over the north Atlantic with a *Comet IIE*, a prototype of the *Comet IV* which it obviously plans to use on the scheduled London-New York service which will start late this year. The west-bound flights from London to Gander are being refuelled at Reykjavik. The east-bound Gander-London flights are operated non-stop.

Increased B.O.A.C. Britannia Services

Changes in the Qantas-B.O.A.C. Kangaroo route have increased B.O.A.C. *Britannia* services between London and Sydney through the Middle East to four a week, and have reduced Qantas *Super Constellation* operations to four a week. B.O.A.C. will now include a call at Rangoon over the route which has been jointly operated by the two carriers since 1934. From the first week of August 1958, B.O.A.C. *Britannia* services, B.A. 712-713 on the Kangaroo route, London-Sydney-London passing through Bombay, will make an additional call at Melbourne, which will increase the frequency of the Bombay-Melbourne service to twice a week. From the first week of June 1958, the Qantas Empire Airways service, E.M. 533-534 operating on the Sydney-London-Sydney route, and passing through Calcutta, will call at Kuala Lumpur in both directions.

The west-bound call at Djakarta will be reintroduced on the E.M.535 service while the E.M. 533 service will overfly Djakarta. With effect from the first week of August 1958, two more *Britannia* services will be introduced on the B.O.A.C. eastern routes. With the introduction of services B.A. 936-937 on the London-Tokyo-London route, Delhi will enjoy one more service a week, stepping up its frequency to three a week. The other additional *Britannia* service, B.A. 795, overflying India and passing through Karachi, will provide a connection at Karachi during the same day for passengers joining from Delhi and Bombay by the Indian Airlines Corporation.

Ruling on International Traffic

Qantas Empire Airways has petitioned the U.S. Civil Aeronautics Board for a ruling on the question as to what constitutes international traffic on flights between Honolulu, San Francisco and New York in both directions. As Australia's international airline, Qantas holds rights under the Australian-U.S. Air Transport Agreement to operate from Australia through Honolulu, San Francisco and New York to London, picking up and putting down international traffic at the three U.S. points. On a ruling which has been described as "in-bound bad, out-bound good" Qantas has been permitted to pick up a passenger at, say, Honolulu and set him down at San Francisco if the passenger is travelling on a ticket, say, from Honolulu to London. Conversely, this form of traffic is not permitted, the airline being prohibited from picking up a passenger at Honolulu and setting him down at San Francisco, if he is travelling on a ticket from Sydney to San Francisco as the destination.

The point of view of Qantas is that it is entitled to carry a passenger on any of the sectors—Honolulu-San Francisco, Honolulu-New York, and San Francisco-New York—provided the passenger is travelling on a through ticket to or from a point outside the United States. The airline holds that such travel between these U.S. cities is permissible. In other words, where a passenger ticket is clearly for an international flight, his carriage between the U.S. points is not domestic but international. Publication of the petition of Qantas to the U.S. Civil Aeronautics Board has led to an intervention, in accordance with the normal procedure, by two U.S. domestic carriers namely, United Airlines and American Airlines—the United States' two largest domestic carriers. A public hearing will be held and a recommendation will be made to the Civil Aeronautics Board on the basis of the hearing.

New Company to Manufacture Aircraft Engines

The Bristol Aeroplane Company and the Hawker-Siddeley group have formed a new company, Bristol-Siddeley Engines, to co-ordinate their aircraft engine manufacturing activities. The arrangement combines activities of Bristol Aero-Engines and Armstrong Siddeley Motors, Ltd. on a "fifty-fifty" basis. Sir Arnold Hall of Hawker Siddeley and the president-elect of the Royal Aeronautical Society has been named the chairman of the new company and Air Commodore F. R. Banks, a director of the Bristol Aeroplane Company, its vice-chairman.

Hunting Clan to Extend Freighter Service

Hunting Clan will extend its *York* freighter service to Johannesburg on a non-scheduled basis early in May next year. Its present terminal is Salisbury. Meanwhile, negotiations are being carried on with the South African Government for granting it a licence for scheduled services.

Rolls-Royce Builds Turbo-prop Engines

Rolls-Royce reports that it has built 16 Tyne turbo-prop engines to date and has accumulated over 5,000 hours of test running with them. The Tyne has completed a 150-hour development test to the combined U.S.-U.K. type-test schedule at 4,850 shaft horse power for take-offs. The take-off power for initial production engines has been increased to 4,500 shaft horse power. For stage two engines, to be delivered in 1961, the take-off power will be 5,030 shaft horse power. Specific fuel consumption at 25,000 feet at 370 knots cruising speed has been improved. Flight testing of the Tyne's anti-icing system will start soon. Two *Elizabethans* are being converted to take Tyne engines and will be used for scheduled operational development flying which will start this December.

U.K. Travel Agency Charters Tu-104

Horizon Holidays, a British travel agency, has chartered *Tu-104* jets for 15-day tours from London to Moscow, Leningrad and Kiev. The first *Tu-104* flight under this arrangement will leave London airport on 26th July, and fly directly to Moscow in four and a half hours.

New Company to Organise Tourist Flights

A German-British-Dutch air charter company, to be called International Charter Aviation, will shortly be established to organise low-fare tourist flights to holiday resorts within Europe and the United States and freight charter flights throughout the world. Dutch Press reports suggest that the new company will use three *Vikings* which are to be replaced in 1959 by *Elizabethans* acquired from B.E.A. Negotiations are in progress to co-ordinate its activities with those of K.L.M. and the company will take over surplus K.L.M. equipment and employ K.L.M. personnel. Headquarters will probably be located in Schiphol.

Combined Operation by Sabena and L.I.A.

Sabena and Lebanese International Airlines have formed a combined operation to be known as Solia which is expected to start scheduled services between Beirut and Brussels, Paris, Milan and several Middle East airports in May with *DC-4s* and a *DC-6B*. Sabena has a 90 percent interest in Solia.

New Airline for Ghana

The Government of Ghana has decided to set up a national airline, Air Ghana, with the assistance of B.O.A.C. The latter is expected to provide managerial, operational and administrative personnel until Ghana nationals are trained to take over responsibility.

National Airline for Nepal

The Nepalese Government is undertaking the establishment of a national airline in which it will hold a 51 percent interest. A licence for domestic flights in Nepal is now held by the Indian Airlines Corporation associates (the B. Patnaik Company) and Indian Airlines itself flies between Khatmandu and Patna. The B. Patnaik Company has reportedly offered to form the Air Nepal Company and to provide all necessary personnel to continue the existing domestic services which are operated with four *DC-3s*.

Increased Tu-104 Jet Services

Aeroflot has announced increased *Tu-104* jet services under its new spring and summer schedules. International routes receiving more *Tu-104* aircraft include the Moscow-Prague, Moscow-Budapest, Moscow Copenhagen and Moscow-Peking runs. The *Tu-104* domestic service on the Moscow-Tashkent run will be increased from four flights a week to daily flights while the Moscow-Tbilisi service will be increased from weekly to daily. There will also be more frequent *Tu-104* services between Moscow, Vladivostock, Novosibirsk, Irkutsk and Sverdlovsk. The Russian airline expects that the first production of *Il-18* four-engined turbo-prop aircraft will be delivered to its Leningrad division before mid-year. It will be assigned to the Leningrad-Moscow-Adler (Caucasus)-Simferopol (Crimea) run. Aeroflot claims that twin-engined *Il-14s* have now "entirely replaced obsolete *Il-2s* (the Russian version of the *DC-3*) on all main routes not served by jets." More *Il-14s* were assigned to the Moscow-Sofia, Moscow-Bucharest and Moscow-Warsaw runs during April.

Expansion Plans of the Austrian Airlines

The Austrian Airlines has opened a daily Vienna-Frankfurt service to be operated in pool with Lufthansa. Services to Zürich will also be started soon, and later to Paris on a daily basis then to Warsaw, two or three times a week in pool with L.O.T. and to Rome three times a week on a short route crossing Yugoslavia if permission can be obtained. Its four *Viscount 779Ds*, leased from Fred Olsens until 1960, are flown by some Olsens captains. Other crew members are Austrian and they will take over full responsibility in due course. The Austrian Airlines eventually will buy its own equipment and is considering the purchase of the *Viscount 810*, *Vanguard*, *Caravelle*, *Comet IV* and *Convair 880*. The *Viscount 810* is regarded by the airline as most suitable for its services.

Commemoration of Transtasman Air Crossing

To mark the 30th anniversary of the first transtasman air crossing, Teal will make two commemorative flights: one east-bound and the other west-bound. They will be planned to coincide as closely as possible with historical detail. "Smithy's" pioneer flight, which was hailed throughout the world as a great achievement, was made on 10th and 11th September 1928. He took off from Richmond aerodrome in Sydney. To represent the circumstances of the flight, a Teal *Super DC-6* will fly from Mascot on 11th September this year, making its first call near Wellington and will circle the capital and touch down at Harewood near Christchurch. The flying time will be about 5½ hours; the flight will carry passengers and mail, both as a commercial venture and as a commemorative feature. On its west-bound commemorative flight, Teal will leave Christchurch, fly over Blenheins and make the crossing in a quarter of "Smithy's" time.

Now is the time to trade with

South East Asia

Rising standards of living open new markets for Indian goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—*their ability to buy*. The Indian Overseas Bank with branches in several strategic centres has made a special study of this important growing market and can help you solve your trading problems.

K.L.M TO OPEN NEW AIR SERVICE TO MOSCOW

As a result of the negotiations between the Government delegations of the Netherlands and Russia, K.L.M. will inaugurate a weekly service between Amsterdam and Moscow on 21st July, 1958. The representatives of the Russian civil airline, Aeroflot and K.L.M. have reached full agreement concerning the co-operation on the new air route. Commencing on 21st July, both companies will operate their weekly services between Amsterdam and Moscow throughout this summer and the coming winter. The intention is to raise the frequency to two flights a week as from the 1959 summer schedules. K.L.M. will operate the service *via* Warsaw with a *DC-6B*, while Aeroflot will fly direct with a *Tupolev 104A*. The Dutch airline will establish an office and a commercial organisation in Moscow. In this connection, Mr. F. W. Telders has been temporarily appointed as representative of K.L.M. in the Russian capital. On 1st July, a K.L.M. *DC-6B* will make a proving flight on the new route with a number of technical, operational, administrative and commercial experts in order to prepare for the operation of the new service. Aeroflot will act as general agent of K.L.M. in Russia, and in the same capacity K.L.M. will look after the interests of Aeroflot in the Netherlands.

Jute

ARGENTINE IMPORT RELAXATION NEWS HELPS RECOVERY

NO LOADING ON DOCKS YET

THERE has been an air of confidence in the Calcutta goods markets this week, and prices in general have shown a marked improvement from opening levels. The main bullish feature has been the reports from Argentina, about the removal of restrictions on jute goods imports. This news was welcomed by Calcutta shippers and mills; there was a swift reaction and renewed activity in local circles. It was reported that in some cases letters of credit had already been sanctioned and opened, but steamers due to accept cargo for Argentina were either held up in port or had not been placed due to the dock strike. Although unloading has taken place on a restricted scale, it is doubtful if loading is possible under present conditions, and it is understood that some ships, having been relieved of their cargoes, were turned round empty. The fate of charter steamers on their way to Calcutta in ballast to pick up Argentine shipments is still in the balance, and it is not known if these have been diverted.

The economic situation in India is causing concern in all branches of commerce and industry. Jute goods are one of India's major exports and dollar earners, thus the jute industry, and India, stand to lose a great deal from the lack of interest displayed by overseas buyers. Recent rumours about the devaluation of the rupee have been keenly followed. But while this move would probably boost India's export drive, the effect on her import bill would be ruinous. A compromise might be the solution, and devaluation on a differential basis, i.e. for export goods only, might save the day. This has been tried successfully in other countries in varying degrees without upsetting the internal economy, and it could prove an effective brake to the current inflationary tendencies here.

The hessian market was strong throughout the week and business was reported with mills. The sacking section reacted in sympathy and prices advanced until forward shipment heavy goods, which continued to command a premium of up to Rs. 2.25 over near shipment, reached the minimum levels as laid down by the I.J.M.A. Mills came out as sellers at these prices and are reported to have sold limited quantities of both sacking and hessian. The bulk of the business was absorbed by bazaar parties, however, because overseas buyers continued to remain aloof.

Last week Calcutta mills purchased nearly 300,000 maunds of raw jute at rising prices. Of this amount, about 50 percent was new crop jute and constituted nearly 40 percent of total new crop purchases so far this season. With the increase in mill interest, sellers' ideas hardened, and the majority withdrew their offers for higher prices. The continued favourable new crop reports appeared to have little effect, and the normal bearish reaction to this news was not forthcoming. In fact, during the week both old and new crop quotations were advanced by Re. 1 a maund. New crop reports were most encouraging but had little effect on sellers' ideas, which were bullish. This attitude is based on the assumption that mills will be taking up large quantities of new crop in the near future. Buyers, however, insist that their stock position is good and that there is no immediate necessity to make large-scale purchases.

THE JUTE MARKETS

There was heavy activity in the futures market during the week, and figures, as supplied by the East India Jute and Hessian Exchange for the period 18th to 24th June, were as follows:

	Hessian 40in. 10oz.	Sacking B Twills	Raw Jute Upper Assam
	June	June	June
Opening	39.54	97.55	25.04
Highest	40.92	99.70	26.08
Lowest	39.44	97.50	24.94
Closed	40.58	98.85	25.68

Manufactured Goods: In spite of the fact that there were no overseas buyers during the week, markets ruled steady. On Thursday, following reports of business in forward shipment, prices improved and B Twills opened at Rs. 97.25 for June shipment, and Rs. 99.15 for October-December shipment. Hessians also showed a slight improvement and 40in. 10oz. was quoted at Rs. 39.90 with forward shipment at a discount of 5nP. Mills sold cautiously at these levels and the undertone of the market was steady. Over the next two days, and during the week-end, rates advanced steadily, partly in sympathy with the better fibre market, but mainly because of reports of the easing of restrictions on goods destined for Argentina. By Monday morning, B Twills stood at Rs. 98 for June shipment, and the premium for forward shipment had advanced to Rs. 2.35, bringing October-December goods above the I.J.M.A. minima for the first time since 5th June. Hessian prices also moved up and June shipment 40in. 10oz. rose to Rs 40.70 and the discount gap for forward shipment was closed to 5nP. Heavy selling pressure developed from the mills at this stage, especially for forward shipment, and business was reported in both sacking and hessian. The pressure continued on Tuesday, but after opening strongly prices began to be depressed toward the evening. The position in the docks continues to improve and the possibility of a settlement of the dispute in the near future acted as a deterrent to lower prices.

On Wednesday, the market was slightly easier and opening quotations were as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 8oz	32.60	32.65	32.65	32.55
40in. 10oz	40.60	40.65	40.65	40.60
B Twills	97.65	98.50	99.10	100.00
Heavy Cees (Plain)	97.25	98.25	98.80	99.75
A Twills	119	119.75	120.50	121.50
Liverpools	109.50	111.50	111.50	112.75
Cornsacks	98.80	99.65	100.10	100.80

Raw Jute: It is estimated that not less than 300,000 maunds of jute was purchased by mills during last week. Business was transacted almost daily and consisted of both old and new crop purchases. The initial rise in prices that followed the early purchases did not seem to deter mills, and business was done on the rise, mainly by Indian mills. Towards the close, sellers adopted a very reserved attitude, and put up strong resistance to the mills' attempts to discount rates. New crop reports are very favourable, but this has had little effect on prices. Conditions during the week both in India and Pakistan for all districts were very favourable, and the standing crop is in a very healthy state, although more rain is required to fill the retting tanks. The state of the crop is about one month in advance of last season. There is still a large quantity of new crop jute to be purchased and estimates put the figure of current purchases as low as 25 percent of previous seasons at the same period. For this reason, sellers are reserved and the undertone of the market is firm. Opening quotations last week were based on Assam-Northern old crop jute at Rs. 24.25 a maund, but during the week prices advanced almost daily and by Tuesday were quoted at Rs. 25.25. New crop quotations commanded a premium of 75nP to Re 1 a maund throughout.

During the week, old crop business was reported in Assam-Northern jute at Rs. 24 to Rs. 24.50. Desal Tossa was also done at Rs. 27.25. Small lots of Desal and Northern Mesta passed at Rs 23.25 to Rs. 24 a maund.

A fair quantity of new crop jute was purchased and prices of Assam-Northern fibres ranged from Rs. 25 to Rs. 26 a maund for July-August shipment. Good business was done in Daissee white jute at Rs. 25 a maund for August-September shipment, and Murshidabad mesta at Rs. 23.50 a maund for October-December shipment.

Once again Cossipore markets witnessed a fair amount of activity and prices for all varieties of fibre tended to harden. Good jute is at a premium, and the major portion of the 400,000 maunds held there consists of low quality jute. Wagon arrivals were again small and only numbered 250 during the week, which was slightly better than the 200 of the previous week. During the corresponding period last year, wagon arrivals amounted to 450. At the close, Kishanganj jute was quoted at Rs. 24 a maund for average quality.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md basis Bottoms	Shipment
Assam-Northern	25.25	June-July 1958
Purnea Desal	24.50	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th June, 1958	901.8	9,692.6	10,594.4
1st to 15th May, 1958	739.9	15,513.0	16,252.9
1st to 15th April, 1958	2,180.4	9,211.2	11,391.6
	Sacking		
1st to 15th June, 1958	9,368.6	147.2	9,515.8
1st to 15th May, 1958	12,327.8	644.0	12,971.8
1st to 15th April, 1958	9,368.8	220.4	9,589.2

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in May was 4 million yards lower than in April and 7 million yards below that of May last year. The lower level of consumption seems to have been due principally to the continuing decline in demand for piecegoods for industrial uses, bag cut-up having been only slightly lower than during the previous month. U.S. burlap stocks at the end of May declined by 2 million yards. At 240 million yards, 143 million yards were spots and 97 million yards were afloats. Last year, stocks totalled 261 million yards. Appearing below are two tables which include the May figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

NO REDUCTION IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE jute industry continues to remain dull and uninteresting. Raw jute buyers always seem to be waiting for something to happen to force sellers to reduce their terms but Pakistani shippers are very reluctant to give concessions. There is certainly a feeling prevailing among shippers that they must not offer jute at less than the E.P.C. prices, and, though these have recently been reduced by £2 a ton the decline has stopped there and the position appears to be as firm as ever, in spite of all the favourable reports of the new jute crop. It is doubted if ever Pakistan will reduce its prices for the cash crop. The country is badly in need of foreign currency and it knows full well that raw jute spinners cannot secure their fibre elsewhere.

Mill Firsts are quoted at from £111, £97 for Mill Lightnings, £87 for Mill Hearts and £69 for grade hearts, new crop, July-August or August-September. It is believed that sellers would accept these rates for old crop for June-July shipment, c.i.f., U.K., if the opportunity arose to sell. The prolonged spell of quietness is getting very monotonous for sellers. The rates for dark jute have remained quite steady and unchanged at £104 for good marks of Daissee-2/3 and £98 for grade, with grade Tossa-2/3 at £115 and grade Tossa-4 £106, c.i.f., U.K., June-July. No new prices have yet been named for dark jute, as sellers are not willing to break the rule that they must not sell for shipment more than three months ahead.

The Calcutta goods market is irregular and prices are maintained at a higher level than might have been expected as a result of the strike of dock workers. Of course, if the mills are compelled to restrict their output, there may be a scarcity of goods. On the other hand, if the goods cannot be shipped, there may be a glut if the mills carry on working. Prices current are 60s 6d for 40in. 10oz. and 45s 6d for 7½oz., June to September, and 147s 6d for B Twills, June, 148s 6d July and 150s August-September, all f.o.b., Calcutta. Dundee jute yarns and cloth are quiet, but steady and unchanged. The Jute Control is allowing quota holders to buy only four weeks' quota of imported goods instead of eight weeks as hitherto, because of the port strike in Calcutta.

RATIONALISATION IN JUTE INDUSTRY

THE PRESSING NEED FOR MODERNISATION

DURING the last few months occasional reports have appeared in the Press about the closure of jute mills. The Indian Jute Mills Association considers that these reports, generally, have created a wrong impression and have tended to obscure the circumstances attending the mill closures, a Press note issued by the I.J.M.A. says. The paramount importance of the rationalisation of the industry has been repeatedly stressed by the I.J.M.A. and has been officially acknowledged by the Government of India. The workers' unions themselves have recognised that there is no alternative course if the jute industry in this country is to survive. The unrelenting competition from jute substitutes, the gradual introduction of new marketing methods such as bulk handling, the steady growth of jute manufacturing industries overseas—all these are indisputable facts, requiring no substantiation, and it is these factors which have dictated the policy of rationalisation and modernisation of the Indian jute industry. The market conditions prevailing today are a stern reminder of the fact that the jute industry is predominantly an export industry and serve to underline the pressing need for the adoption of modern production techniques to enable the Indian mills to maintain the competitive position of their products in the world markets. The recessionary trend in the U.S.A. has been reflected in a weakening economy in the jute industry's markets generally, and the mills are at present faced with rapidly accumulating stocks of finished goods. It would be folly on the part of the Government, the manufacturers or the workers to shut their eyes to this situation.

Mill Closures

The mill closures that have taken place must be seen against this essential background. At the same time, it must be made clear that these closures have not resulted in a curtailment of the industry's total output and that the impact on labour has been reduced to the minimum. The production of the closed mills has been transferred to other modernised units, giving a closer and more economic concentration of the manufacturing potential. All permanent workers affected by the closures have been offered alternative employment, with continuity of service and no loss of pay, in the concerns to which the production has been transferred. In most cases, the workers have also been given living accommodation in the vicinity of their new place of work. The Government of West Bengal has appointed a tripartite *ad hoc* committee to go into the question of rationalisation in the jute mills and it is hoped that with the co-operation of all the interests represented on the committee, a realistic solution of the various aspects of the problem will be evolved.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)

RECORD SOUTH INDIAN TEA CROP

LOWER EXPORT EARNINGS FROM COFFEE

(FROM A SOUTH INDIAN CORRESPONDENT)

SOUTH India had a record tea harvest in April, amounting to 18.6 million lbs compared with 13.4 million lbs in the same month of 1957. Statewise, Kerala produced the largest crop (9.9 million lbs), Madras coming next with 8.4 million lbs, and Mysore had a harvest of just 300,000 lbs. The south Indian tea crop for the first four months of the year totalled 51 million lbs, showing an increase of 11 million lbs over that of the previous corresponding period, with Kerala producing 26.7 million lbs, Madras 23.3 million lbs and Mysore 900,000 lbs. Favourable weather was no doubt the principal factor which helped such a big harvest. The application of manures on a larger scale and such other cultural care of the plant that is being practised by the producers in south India have started paying high dividends.

Trade estimates place the south Indian tea crop for May 1958, at 18 million lbs compared with 16.7 million lbs in May 1957. It is now certain that south India will improve upon her previous record of 144.5 million lbs this year.

Heavy absenteeism of estate labour, especially during the period of tight work on the estates, has become a headache for the planters. This makes it impossible for them to reap the full benefit of favourable weather conditions and realise the fruits of their enterprise fully. Cultural operations as well as plucking get into arrears. Mr. R. W. Thorpe, chairman of the Nilgiri-Wynaad Planters Association, has attributed this heavy absenteeism to the increased income of estate workers resulting from the recent wages agreement. Labour absenteeism has increased definitely during recent months. It was so bad, he said, during January to March that work, including plucking, got into arrears, a state of affairs which has never occurred before. He said that without such heavy absenteeism, estates in the Nilgiri-Wynaad area could work with 10 to 15 percent less labour. He added: "This is a problem which will have to be tackled both in the interest of the industry and the labourers themselves. I am told that high-yielding estates in other countries manage with one worker an acre. If they can do so, I can see no reason why we cannot do likewise. In fact, if Indian tea is to be competitive in the world market, a solution for this problem should be found soon." He said that the recent staff and labour agreements had increased the cost of production very considerably. These agreements have given additional benefits to labour and the staff in the form of increased wages, enhanced contribution to provident fund and gratuity on retirement.

Unfortunately, during the current year, prices for the type of tea the Nilgiri-Wynaad district has produced have been very poor. Tea prices just at the moment have improved slightly, but looking towards the future there appears to be no possibility of a consistent improvement in low and medium-grown teas until either production comes down or world consumption increases, he says. Mr. Thorpe has added that the profits made by the average tea estate in his district will be insufficient to finance the capital commitments for the coming year under the Plantations Labour Act. Many companies will have to draw on their reserves, if they have any left. This is a somewhat gloomy picture in spite of the fact that the district has produced a record crop of 10.7 million lbs.

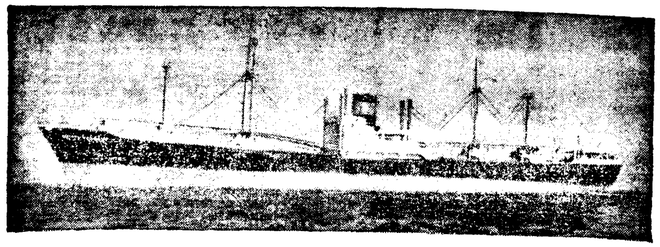
Lower Coffee Prices

Referring to coffee, he has said that following the bumper crop in 1956-57 the current season's output is below the average. The price to be realised this year, it is expected, will be substantially lower than in the past few years. These two factors are likely to involve the coffee estates in financial difficulties. Prospects for the next season are excellent. The short crop just picked is an early one and the weather has been the hottest for 17 years. But blossom showers have been adequate and regular. Under these ideal conditions, the next coffee crop should be a record one. The growth of new leaf this year has been very much better than usual, which will result in the trees being able to bear a heavy crop without undue suffering, he says.

The Coffee Board, when it met in Bangalore a couple of weeks ago, took stock of the current coffee situation and revised its estimates relating to the crop already picked and the one on the plants. India's coffee crop for the current season will touch a new peak at 42,930 tons, according to its revised estimate. Actual receipts in the Board's pool to the end of May amounted to 42,669 tons, against 40,654 tons during the corresponding period of last season. Thus the 1957-58 season's crop has belied all the previous estimates varying from 37,000 tons to 41,000 tons, made both by the Coffee Board and planting circles. The next season's crop prospects are very bright, and the Coffee Board's estimate is 44,235 tons, made up of 27,650 tons of Arabica and 16,585 tons of Robusta. A crop of 50,000 tons is considered possible by certain planting circles. The Board's being only a blossom estimate, its subsequent estimates, in all probability, may well exceed the 50,000-ton mark. If the current season's performance of the industry is any guide, a still larger harvest is possible during the 1958-59 season.

Internal Sales

Sales in the internal market currently run ahead of last year's, the total for the first five months of 1958 from the Board's pool amounting to 10,619 tons,—4,407 tons of Plantation, 1,322 tons of Arabica Cherry and 4,890 tons of Robusta. For 1958, the home consumption is estimated at 27,000 to 28,000 tons. The export allotment, out of the current season's crop, has now been raised to 12,930 tons, of which 5,499 tons has already been sold. When there was a crop of 42,000 tons last season, exports amounted to 15,000 tons. It has now been proved beyond doubt that the current season's crop will be a higher one. It does not appear that the home demand has increased to such an extent as to warrant a reduction of 2,000 tons in the export allotment. But a major difficulty with exports this year is the declining prices in the world market. Rates for mild coffees, the type that India produces, have been falling for the past six months, and the tendency is for the prices of all coffees to fall further because of the great increase expected in the world coffee crop for the marketing season 1957-58. A carry-over of 20 million bags of 60 kilos each is expected when the season closes this month. It will be the biggest since 1946-47. The average export price realised by India's Plantation coffee during the first five months of the year amounts to slightly less than Rs. 240 a cwt., against the last year's average of Rs 300 a cwt. A lower export price means a fall in the country's external earnings from coffee. In the pattern of marketing that is followed in India, the size of the grower's margin largely depends on export earnings. The coffee growers will get for themselves the surplus sum of Rs. 6.8 lakhs held in the Coffee Board's pool fund for the 1954-55 season, according to a recent decision of the Board.



Overproduction of Coffee

The world coffee-growing industry is heading towards a major crisis with production far exceeding demand. The latest estimate suggests that production will amount to 52 million bags of 132 lbs each during the next marketing season commencing from 1st July, 1958, against an estimated consumption of 38 million bags. The carry-over from the 1957-58 season's crop is estimated at 22 million bags. Brazil, the largest producer, is expected to harvest a crop of 25 million bags and her carry-over will be something like 13 million bags. Thus the supply of Brazilian coffee next season will amount to 38 million bags. It will, therefore, be as big as to satisfy the entire world demand.

The Mexico city agreement of last November contemplated a 20 percent cut in coffee exports of the producing countries in Latin and central America such as Brazil, Columbia and others. This agreement to hold back 20 percent of their crops had some favourable effect on the world coffee market for the six months beginning from November last year. But with clear signs of a heavy crop during next season, market sentiment again deteriorated and is likely to worsen further. Competent observers are of the view that Brazil's failure to restrict her coffee crop will mean and end of the world coffee agreement based on regulated exports. The economy of many producing countries in America is shaking with the threatened glut of coffee in the world market.

COCHIN TEA SALES

At Sale No. 18, 1,600,000 lbs of tea were on offer. There was a good demand for low mediums and mediums were irregular but about steady. Good mediums had useful enquiry at firm rates. High-grown were irregularly easier with quality, and the plain and fibry sorts were neglected.

BRITISH TEXTILE REVIEW

RECESSION AFFECTS OUTPUT AND DEMAND

A cut in Courtaulds' weaving departments' working week to four days has jolted the complacency of anyone in the British textile trades who thought that the recession was nearly ended. To generalise may be misleading when some sections go against the trend, but it must be recognised that the recession may be entering a new phase. Whereas it has hitherto mainly affected demand, it is now seriously affecting production. It will be recalled that in the textile recession of 1951-52, months elapsed between the decline in orders and the decline in output. Now the decline in orders, especially for rayon and cotton goods, has reached the manufacturing level. Compared with a year ago, the output of the man-made fibre industry is reduced approximately a fifth, that of the cotton industry approximately a tenth: and further contraction is in prospect. The process of closing factories continues. So does the process of diversification—even so eminent an organisation as British Cotton and Wool Dyers Association has lately announced that it is entering the catering trade!

Experience shows that the cycle of the textile trades does not necessarily accord with the trade cycle of the economy as a whole, and their present recession is, indeed, well in advance of any general recession. But it can hardly be supposed that the general recession, which may not be severe but is perceptibly developing, will have no adverse effect on demand for textiles. As far as the mass market is concerned, general wage rates are rising less this year than previously, and actual pay-packets are in many cases smaller than last year, because most overtime work has been eliminated and there is a good deal of short-time working. Prices, however, continue to rise, apart from durable goods, many of which are less heavily taxed since the Budget, and expenditure on them has accordingly increased. In conditions of uncertainty, saving is at a high rate. So one way or another, there may be less money available to spend on textiles. Essential as they are, buying of them can usually be deferred for a time, if necessary.

Rising Imports

It is doubtful if Lancashire's production is yet fully adjusted to demand. In comparing this year's production with last year's, one must remember that in the early months of 1957 the cotton textile industry was working on substantial and widespread orders placed in the late months of 1956. As there has been no such stimulus this year, the decline seems relatively moderate. In the meantime, imports of cotton goods have risen while exports have fallen. The net addition to the supply of cotton cloth in the first quarter of 1958 (412 million square yards) was only slightly less than in the first quarter of 1957 (417 million square yards), although both production and imports early last year reflected a relatively active demand. This year's additions to supply have not been fully absorbed, and stocks have increased.

Later figures for production will almost certainly show the delayed effects of a decline in orders; so also, probably, will later figures for imports—some consolation to British firms. Meantime, it is interesting to note that production has declined much less than the apparent decline in the weaving capacity would suggest. Some of the more efficient units must have actually increased their output: overall efficiency has evidently improved. Against this background, the loss of labour seems less ominous than it appears at first glance. But many firms are in a quandary, wondering whether to retain workers who are not needed now and may not be needed later or to release workers who are not needed now but may be needed later. Anyway, the cotton industry's labour force (now, probably, about 230,000) has lately been diminishing at a rate of thousands a month.

Increased Consumption of Fibres

Difficulties in the textile trades are reported these days from so many countries that many people in the business here were surprised by figures contained in *Industrial Fibres*, compiled by the Intelligence Branch of the Commonwealth Economic Committee and published by H. M. Stationery Office last month. Reviewing on a world-wide scale, such a publication cannot be up to date, but this one shows unmistakable evidence of the upward trend of the consumption of fibres; though it confirms also that cotton is losing ground. The latest full year's figures for the non-communist world relate to 1956. They show that in that year, compared with 1955, the aggregate world consumption of the main apparel fibres increased by about 4 percent. Consumption of wool increased 9 percent, of man-made fibres 6 percent, of cotton 3 percent. Particularly featured, of course, are the synthetic (non-cellulosic) man made fibres—principally nylon, though this fibre's share of an expanding total is diminishing. Production of these fibres, at 643 million lbs, was 16 percent greater in 1956 than in 1955; and it is estimated that productive capacity will be more than double the 1956 figures by the end of this year, at 1,400 million lbs or more. Although development of these fibres has been prominent in Britain, this country has lost to Japan the position of the second-ranking producer—the first being, of course, the United States.

Even against the figure of 28,300 million lbs for the estimated world production of fibres in the season 1956-57, that figure for synthetics is not insignificant. But whether the share of all man-made fibres can continue to increase, as in recent years, is uncertain. The broad tendency of rayon staple seems to be still upward, but the rayon industry, as a whole, is in difficulty in other countries besides Britain. Rayon as a fibre may be helped by the fact that much cotton machinery can be used for rayon. But it is significant that "drip-dry" cotton shirts and other cotton goods are now conspicuously successful in competition with synthetics. The fact remains that cotton was the only one of the main fibres which could show no increase in production in 1956-57.

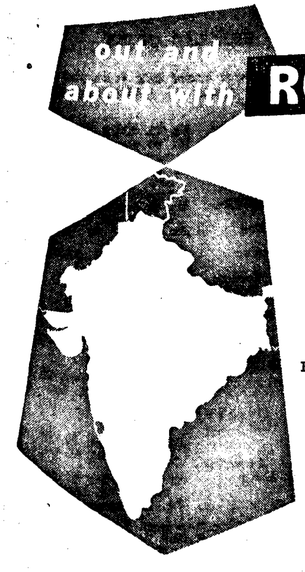
Import Restriction in Australia

While the U.K. cotton trade was trying to read some positive meaning into the statements which followed the talks in London last month on restriction of Asian exports, the Australian and Canadian authorities were considering or acting on the same problem, as affecting either cotton or rayon goods. It is understood that Australia's new import duties on rayon fabrics were directed primarily against the low-cost Asian producers: indeed, the U.K. interests are gratified that the arguments of the British Man-made Fibres Federation and the Cotton Board were received sympathetically by the Australian Tariff Board, with the result that the higher-priced British goods are not penalised by comparison with the lower-priced products of, particularly, Japan. Canada's tariff policy is recognised in Britain as relevant to British producers not only directly, through its effect on their exports to Canada, but also indirectly, through its effect on the exports of lower-cost producers who will intensify their efforts in other markets if their trade in Canada is curtailed. This problem is obviously relevant to Indian cottons and to Italian woollens.

As for the general principle, officials as well as textile men must look somewhat enviously at the uninhibited countries of the Commonwealth abroad. They are free to protect their industries from the competition of British as well as other

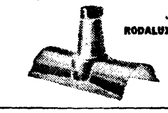
MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)



THE Middle Class Cost of Living Indices, by groups, have now been brought up to May 1958. As compared with April, the May Index for Food shows an increase of 1 point, while those for Clothing, Fuel and Lighting and Miscellaneous remain unchanged at 549, 281 and 286 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 432 points during May 1958.



Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100.

Compiled and constructed by the Statistical Department of "Capital"

out and about with **RODALUX & RURALUX**

It takes a pretty tough reflector to withstand *all* the rigours of Mother Nature and still carry on, unperturbed, as bright as ever. But that's exactly what RODALUX and RURALUX reflectors—products of The Benjamin Electric Ltd.—are doing on countless highways, streets and works' roadways the world over. Weatherproofed in 'Crysteel' vitreous enamel, this brilliant pair have cast grip flange mountings allowing easy adjustment after erection. Small wonder RODALUX and RURALUX reflectors are earning Benjamin a great reputation in so many corners of the earth.

Available in alternative side or top entry flanges.

suppliers, whereas Britain has to involve herself in long discussions with competing Commonwealth suppliers, hoping to persuade them to restrain their exports voluntarily.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March, 1953=100) rose further by 0.7 percent to 109.7 during the week ended 7th June, 1958, compared with 108.9 for the previous week. The index was higher by 1.8 percent when compared with the corresponding week of last month but was lower by 1.3 percent when compared with that of a year ago. Higher prices of milk in Calcutta (+25%), urad in Delhi (+22%), rice in Kalyan (+14%), in Kakinada, in Calcutta (+6% each) and in Imphal (+5%), potatoes in Mandi (+14%), arhar (+11%), barley in Hapur and fish (Rohu) in Calcutta (+10% each), maize, mung in Bombay and gram (+8% each), bajra (+6%), turmeric in Calcutta (5+%), wheat (+4%), cashewnuts and gur (+3% each), jowar, masur, oranges groundnut oil and betelnuts (+2% each) and bananas and coffee (+1% each), raised the index for Food Articles by 1.3 percent to 110.0. The prices of tea for internal consumption (−13%), onions in Calcutta (−8%), black pepper in Calcutta (−7%), rice in Badati and fish (Hilsa) in Calcutta (−6% each), eggs in Madras (−5%) and ragi (−4%), however, showed declines. The index for Tobacco increased by 0.3 percent to 90.0 due to a rise in the prices of raw tobacco. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's level of 114.9. The prices of castorseed and rapeseed (+3% each), groundnuts and lac (+2% each) and raw cotton, linseed and gingellyseed (+1% each) showed advances while cottonseed (−5%) and raw hides (−1%) moved down and the index for Industrial Raw Materials advanced by 0.7 percent to 114.2 during the week. The index for Intermediate Products rose by 0.5 percent to 108.6 due to an increase in the prices of rayon yarn (+3%), lead (+2%) and linseed oil and zinc (+1% each) although the prices of brass (−2%) and tin (−1%) moved down. The index for Finished Products stood at 107.5 against 107.4 for the previous week. The prices of sodium hydro-sulphite (foreign) in Bombay (+25%), oilcakes (+3%), quinine sulphate (foreign) in Bombay (−8%), silk and rayon manufactures (−2%) and bricks and tiles (−1%) showed variations.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production during May 1958, was 52,000 tons bringing the total production up to 31st May, 1958, to 1,963,000 tons. The corresponding figures for the 1956-57 season were 154,000 tons and, 1,975,000 tons, respectively. The offtake of sugar from factories during the month was 183,000 tons against 192,000 tons during the corresponding period of last season. This brings the total despatches from factories up to 31st May, 1958, to 1,174,000 tons against 1,227,000 tons during the same period of last season. The total closing stock of sugar with factories on 31st May, 1958, was 1,213,000 tons against 1,269,000 tons on the same date last season.

Calcutta Markets

LITTLE BUSINESS IN FREIGHT MARKETS

THE freight markets were very slow during the past week and little business was concluded. Ore was fixed from Bombay to Baltimore at $(U.S.) 7 for July loading and Mormugao-Antwerp-Bremen was done at 40s gross terms. Sulphur was fixed from Galveston or Port Sulphur to Cochin-Calcutta range at 72s 6d gross terms for August loading. The *Ivybank* is reported fixed on time charter, delivery Calcutta early July, re-delivery New Zealand at 13s 6d and a *Liberty* size oilburner at 15s delivery Savona, re-delivery Indonesia. The tender for coals to East Pakistan, referred to recently, is rumoured to have been taken at 24s but no fixtures have been advised. One owner is asking for 42s 6d for a voyage to Chittagong. Whatever might be the outcome of the strike negotiations now taking place in Delhi, it seems reasonably certain that the present set-back will take a long time to return to normalcy since the port is again faced with the prospect of congestion over a period of a month or two.

LINSEED STEADY

The general tone of the market last week was steady. The main cause was the shortage of supplies of seeds from upcountry centres. Crushers showed very little interest due to lack of parity with oil prices and trading was rather dull. In the oil section, offtake continued to be very small and sellers were not inclined to reduce prices. Shippers were not showing any interest at prevailing rates as foreign markets were still dull. Latest quotations were as follows: Ready Rs. 23 a maund and June-July Rs. 23 a maund.

HIDES AND SKINS QUIET

The market was quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 17th June and 23rd June, 1958)

Cowhides: Wet salted (Ord.) 7,200 pcs. on the basis of Rs. 7.50 to Rs. 9.75: Wet salted (Slaughtered) 4,600 pcs. on the basis of Rs. 12 to Rs. 21.

Goatskins: Wet salted (Patna, Daissee, Kustia) 44,500 pcs. on the basis of Rs. 325 to Rs. 335, Rs. 355 to Rs. 380 and Rs. 410 to Rs. 415; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece: Assam-Dinajpur 18,100 pcs. on the basis of Rs. 325 to Rs. 365: Purneah-Kissenganj 12,000 pcs. on the basis of Rs. 360 to Rs. 370: Patna (Ord.) 5,400 pcs. on the basis of Rs. 315 to Rs. 325: Muzafferpore-Patna 2,000 pcs. on the basis of Rs. 345.

Bazaar Stocks

(23rd June, 1958)

Cowhides: Wet salted 77,500 pcs.

Goatskins: Wet salted (Daissee, Kustia. Killed), 32,000 pcs.; Assam-Dinajpur-Jalpaiguri 45,000 pcs.

SHELLAC QUIET

During the week ended 24th June, the market was quiet. The range of quotations were as follows:

Pure Buttonlac	Rs 81, 82.50 82 buyers.
Lemon No. 1 Shellac	Rs. 85 buyers: 87 done and buyers; Rs. 86 buyers.
Lemon No. 2 Shellac	Rs 81 buyers; 82.50 done and buyers; Rs. 82 buyers.
F. O. Std. 1 Shellac	Rs. 77 buyers; 79 done and buyers; Rs. 78 buyers.
Pure TN Shellac	Rs. 64.50 to 67.50, 67 buyers.
4% I.T.N. Shellac	Rs. 55.50 to 57.50, 56.50 buyers.
No. 1 Kusmi Seedlac	Rs Nil.
No. 2 Kusmi Seedlac	Rs. 76, 77 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 71 50 buyers; 73.50 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 74.50 buyers; 74.00 done and buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 65 buyers: 67, 68 done and buyers; Rs. 66.50 buyers;
Ordinary Bysaky Seedlac (C.P.)	Rs. 58 buyers: 61, 62 done and buyers; 61 buyers.
Kireelac	Rs. 54 buyers; 56 done and buyers; Rs. 55.50 buyers. Rs. 13 buyers.

Shipments during June until the 21st were 21,082 packages comprising shellac 7,680 packages, seedlac 11,810 packages, buttonlac 310 packages and others 1,282 packages.

COMPANY AND PUBLIC NOTICES

ORISSA CEMENT LIMITED,
RAJGANGPUR.
NOTICE

NOTICE IS HEREBY GIVEN THAT THE EIGHTH ANNUAL GENERAL MEETING OF THE MEMBERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR on Saturday, the 16th August, 1958 at 11-30 A.M. to transact the following business:—

1. To receive and adopt the audited Balance Sheet, Profit and Loss Account and Appropriation Account for the year 1957, the report of the Directors and the Auditors thereon.
2. To declare a dividend. (The Directors have recommended a dividend of 4½% on Preference Shares and 15% on Ordinary Shares free of Income tax to the extent of the tax payable by the Company on its profits).
3. To elect a Director in place of retiring Director Shri Jaidayal Dalmia.
4. To elect a Director in place of retiring Director Shri Nihar Chandra Roy.
