AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December, 1957 and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1957 with the books and accounts as kept at the Chief Managers' (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Section 211(1), (2) and (5) and Section 227(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Managers' (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the 9 Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December, 1957 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October, 1957.

Calcutta,
25th March, 1958.

THE UNITED COMMERCIAL BANK LIMITED

CHAIRMAN MR. G. D. BIRLA'S REVIEW

Statement of Mr. G. D. Birla, Chairman of The United Commercial Bank Ltd., circulated to the Shareholders at the Fifteenth Ordinary General Meeting of the Bank held on 9th April, 1958.

Gentlemen,

The Balance Sheet and Profit & Loss Account of the Bank have been in your hands for some time and you would, no doubt, have noticed with pleasure the continued progress achieved by the Bank during the year to which the accounts relate.

Deposits

You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1957 stood at Rs. 61.07 crores as compared with Rs. 52.15 crores at the end of 1956. The increase in deposits of Rs. 8.92 crores represents a rise of 17.1 per cent, which is a higher rate of increase than 9.3 per cent recorded in 1956 and compares with the rise of 16.9 per cent in the deposits of scheduled banks other than the State Bank of India, for the year 1957. The rise in the deposits of the State Bank of India was much higher than that of the banking system by reason of certain adventitious factors to which reference is made in the report of that bank.

Cash

Cash on hand and with banks and money at call and short notice amounted to Rs. 8.28 crores and represented 13.5 per cent of our deposit liabilities.

Investments

The Investments of the Bank in Government and other approved securities at Rs. 19.94 crores were only Rs. 50 lacs higher than our holding at the end of 1956. The additional resources which accrued to the bank from the increase in deposits were utilised primarily to repay the loan taken from the Reserve Bank of India during the 1956-57 busy season, thereby enabling the bank to work within its own resources. The cash balances and unencumbered investments together amounting to Rs. 27.92 crores give a ratio of 45.7 per cent to total deposits.

Bills

The amount of bills discounted and purchased declined from Rs 15.92 crores to Rs. 13.00 crores but the high figure of bills at the end of 1956 was due to the conversion of advance accounts into bills for "rediscount" with the Reserve Bank of India under the Bill Market Scheme. The figure at the end of 1957 is the normal figure and does not include any created bill. This self-liquidating asset forms 21.3 per cent of the deposits of the Bank.

Liquidity Ratio

The total of our liquid assets, cash on hand and with banks, money at call and short notice, unencumbered investments and bills represents 67 per cent of our deposit liability which, you would agree, is a highly satisfactory liquidity ratio.

Advances

Our advances at Rs. 24.69 crores are roughly 40 per cent of our deposits. There is a decline in the total of our advances and bills in conformity with the policy of credit squeeze pursued during the second half of 1957.

Foreign Exchange Business

The foreign exchange business of our Indian and overseas branches continued to expand and our London branch shows considerable increase in its activity and usefulness.

The credit for the excellent results of the working of the Bank goes primarily to the General Manager Mr. S. T. Sadasivan and his able deputies and assistants, to whom I take this opportunity of offering the thanks of myself and of the Board of Directors I wish also to record our thanks to the other members of the staff of the Bank for their contribution in achieving these results and I look forward to greater co-operation from them in the current year and the years to come.

Bank Rate

The official Bank Rate of the Reserve Bank of India was raised on the 15th May, 1957 from 3½ per cent to 4 per cent, but the rate for advances to scheduled banks against Government Securities, which had earlier been raised from 3½ per cent to 4 per cent, was left unchanged. At the same time, the stamp duty on usance bills of exchange, which was intended to act as a surcharge on interest rate and which was raised to 2 annas per cent for 3 months or part thereof, was reduced to 1/5 of 1% per annum. As a result of these changes, loans against Government Securities cost the scheduled banks 4% while loans against bills cost a minimum of 4-1/5 %.

Money Market

Monetary conditions during the earlier part of 1957 were, as a result of the severity of the 1956-57 busy season as well as the already fully extended position of the banking system, extremely stringent, and the demand for accommodation from trade and industry imposed a severe strain upon the resources of the commercial banks. In addition to the need to satisfy this seasonal demand, the banks were called upon to finance the heavy imports of steel, which were at the time being made. Fortunately, the Reserve Bank of India, which has displayed a sensitive awareness of its role in the monetary sphere in terms of the implementation of the Second Plan, suitably anticipated the difficulties that might be presented during the 1956-57 busy season, and, by substantially liberalising the bill market scheme, under which it approved lines of credit totalling approximately Rs. 150 crores, thereby giving the banks all the money they asked, enabled the commercial banks to tide over this period of stringency. Borrowings from the Reserve Bank of India against both Government Securities and bills reached a peak of Rs. 103 crores at the end of March 1957, and this figure would have been much higher but for the receipt by the State Bank of India of extraordinary deposits arising from the sale of U.S. surplus commodities under P. L. 480 which enabled the bank to dispense with borrowings from the Reserve Bank of India altogether. At about the same time, but gathering momentum in the second half-year, the deposits of commercial banks also began to rise and eased the strain under which they were functioning. But during the great part of the year scheduled banks, other than the State Bank of India, and, in particular, the Exchange Banks, had to resort to heavy borrowings from the central banking institution and also to sell off a part of their holding of Government Securities.

Credit Squeeze

It was during the slack season of 1957 that the favourable circumstance of an increase in deposits, coupled with a decline in advances, began week by week to improve the position of scheduled banks. On the one hand, early in June, the Reserve Bank of India, in pursuance of its policy of selective monetary control and with a view to bringing down prices and discouraging speculative holdings of stocks, directed the commercial banks to reduce the level of advances against foodgrains. A few days later the Reserve Bank advised the banks generally to reduce the volume of advances and gradually to lower the advances-deposits ratio from the high level that it had reached at the peak of the busy season, so that the banks could, while regaining normal liquidity, find themselves in a better position to take on the next season's demand for finance without undue dependence on the Reserve Bank for accommodation. Towards the close of the year, the Reserve Bank made it known to the scheduled banks that the facilities under the bill market scheme would not be as liberal as they were at the beginning of the year and that the banks should, normally, try to work on the basis of their own funds and only with a modest resort to central bank credit. These measures, which should be construed to be tantamount to a "credit squeeze", succeeded in bringing about a reduction in the level of scheduled banks' advances from the busy season

LLOYDS BANK LIMITED—*Cont'd.*

peak of Rs. 939.87 crores to Rs. 839.98 crores at the end of November 1957. On the other hand, the process of augmentation, throughout the period, of the deposit resources of scheduled banks gathered momentum. During 1957, deposits of all scheduled banks rose from Rs. 1,101 crores to Rs. 1,369 crores. Even if the State Bank were left out of the reckoning, by reason of its extraordinary receipts, the improvement in the deposits of the other scheduled banks, still, amounted to the considerable figure of Rs. 145 crores.

Interest Rates on Deposits

It is clear that the disbursements in connection with the Second Plan are to be seen as having a directly favourable impact upon the resources of the banking system. Set against this fact, I find it difficult to understand why banks should persist in bidding for deposits by means of steadily mounting rates of interest. The published accounts of banks reveal how steeply the figure of interest paid on deposits has risen. I had occasion some years ago to speak to you on this same matter when I deprecated the alarming tendency to try to attract fresh deposits by means of higher interest rates. I would like to reiterate here my plea for restraint in the competition for deposits through high rates. If it is conceded that the Second Plan disbursements by themselves result inevitably in the flow of new deposits, it follows logically that the attraction of higher interest rates is unnecessary in order to induce deposits.

The Role of the Reserve Bank of India

It is a matter of pride to hear the Indian central banking institution being described as one of the most efficient in the world. This is no exaggeration, for, the selective monetary control instituted by the Reserve Bank has succeeded in keeping at bay the inflationary pressures which this country had to face during 1957. While it is true that the inflationary potential in deficit financing was partly offset by the contractionary influence of a balance of payment deficit, the fact, nevertheless, remains that, by timely directives, the Reserve Bank has played a considerable part in imbuing the Indian economy with stability and in preventing the price situation from getting out of hand.

International Economic Scene

I shall now turn my attention, albeit briefly, to the international economic scene. After a long tussle with inflation, dear money enthusiasts in the rest of the world have finally won the battle so well as to have induced deflation! The result is that many countries are trying to change into reverse gear, but the process appears to be difficult, and recession in the United States of America is threatening to become an invisible export to other countries. The United States unemployment has reached a 16 year peak of 5.1 million, and other economic indicators also presage a difficult time for the economy. This recession is sought to be got over by a number of programmes, including the easing of credit. For the third time in recent weeks, the Federal Reserve Bank approved a reduction in the discount rate, and the latest cut of half per cent brings the rate down to 2½ per cent. The Bank of England has also followed the general trend and reduced the bank rate by 1 per cent to 6 per cent. Among other countries which have effected a reduction in the discount rate is West Germany, where the Deutsche Bundesbank reduced the bank rate by half per cent to 3½ per cent. This is the fourth successive reduction since the autumn of 1956. The Netherlands Bank also cut its bank rate by half per cent to 4½ per cent. Quite suddenly, it seems to me that the bogey of inflation has yielded place to the reality of recession. While I shall not presume to advocate a world-wide cheap money policy—after all, conditions in the various countries differ widely, and the level of Bank rate must be consistent with trends in the internal economy of each country—I should nevertheless, point out that we seem to have reached a stage where we may be exaggerating the effect of inflation in present-day conditions. A study has to be made of the extent to which a rise in prices is not necessarily evidence of inflation. After all, when there occurs an improvement in the standard of living, some element of increase in the price level is inescapable. And it is true to say that never before in economic history have so many countries participated in so general a rise in the standard of living. Finally, I should like to say that, in our preoccupation with the so-called dangers of inflation, we should not allow ourselves, as the rest of the world had during 1957, to become oblivious to the even greater danger of recession.

Capital Market

The prices on the Stock Exchange continued to decline and the downward trend was accentuated by the budget of May 1957 which introduced several new taxes and still further reduced individual and corporate saving capacity. A few new issues of capital and offers for sale were successfully put through, but these issues were rather exceptional, and conditions in the Stock Exchange have remained wholly unfavourable for the raising of any capital for new enterprises. The yield on industrial securities rose from 5.75 per cent (tax-free) at the beginning of the year to 7.26 per cent (tax-free) at the end of the year and this factor also contributed to the difficulty of existing companies in procurement of fresh capital by way of debentures or preference shares at reasonable rates. The Industrial Delegation which visited the United States and Europe has pointed out that the limiting factor in getting credit from abroad is not so much the reluctance on the part of foreign institutions and suppliers to give credit as the difficulty of raising internal capital in India itself. It is really the quantum of Rupee capital available in India which would appear to determine the finance that could be obtained from abroad. Broadly speaking, it would be necessary to raise 20 per cent of the capital to be used for the purchase of equipment for any project and the whole of the rupee counterpart of the expenditure on the project before foreign credits could be sought for the rest of the capital. If the minimum rupee capital which, thus, would come to about 50 per cent of the entire cost of a project could not be raised in the country, there would be no basis for seeking credit from abroad. In view of the fact that it is almost impossible to raise any substantial amount of rupee equity capital, industrial expansion in the private sector will have to come to a stop unless the profitability of industry is restored to a reasonable level through fiscal reliefs.

It is gratifying to learn that the efforts of the Government of India to raise Dollar credits in the United States of America have been successful and that loans of $150 million from the Export Import Bank and $75 million from the Development Loan Fund have already been arranged, part of which is available for utilisation by the private sector in cover of 100 per cent of the cost of purchase from the United States. These arrangements imply that if the private sector is to derive benefit from these loans it should be able to raise immediately the rupee capital required for the full cost of any project and not merely 50 per cent of the cost which would have sufficed under schemes of deferred credit or foreign participation.

Economic Situation

I now turn to the review of Indian economy, and, in doing so, I have inevitably to deal with the Second Five-Year Plan, the execution of which has become a subject of controversy. There are those who vehemently insist that the plan be implemented in toto irrespective of the cost or availability of resources, while others urge that the plan be pruned or rephased without stating how or to what extent the re-planning should be done. People are apt to forget that the plan is not an end in itself but only a pointer to certain objectives, viz., greater production, fairer distribution and increased employment.

The plan envisages an outlay of Rs. 4,800 crores in the public sector and Rs. 2,400 crores in the private sector, making a total of Rs. 7,200 crores which, in subsequent estimates, has been still further increased to allow for increased costs and additions to projects. But, sticking to the original estimate of expenditure in the public sector, the main provisions are: Rs. 2,300 crores for transport, communications, power and irrigation: Rs. 340 crores for agriculture and Rs. 690 crores for industry and mining in the public sector (total Rs. 3,330 crores), and Rs. 700 crores for industry, mining and plantations in the private sector. The projects covered by these allotments constitute the core of the plan, the rest of the plan expenditure being for community projects, social services and the like. In insisting that the plan shall be out through at all costs, the Government is more figure-conscious than performance-conscious, more insistent on the amount of plan expenditure than on the achievement of the planned rise in production or planned increase in employment. The public sector is faced with difficulties in the matter of both spending to the target limit as well as in achieving the production and employment targets. On the other hand, it would appear that the private sector is almost certain to complete its assigned task and invest its full quota of earmarked resources well before the end of the plan period. Mr. T T Krishnamachari whose exit from the Finance Ministership I deeply deplore, speaking before the Annual Meeting of the World Bank on September 25, 1957 said:

> "Private enterprise is, in fact, playing a vital role in India. Indeed, its development has never been more marked or varied at any previous period than during the past ten years. To some extent our recent difficulties stem from the very sizeable boom in private investment that has been under way. We do not regret this boom as it takes us a step forward towards our objective of higher levels of living".

The physical targets assigned to the private sector are also well on the way to fulfilment. The index of industrial production has risen from 100 in 1951 to 168.5 in June '57 * Privately owned collieries are already producing coal at an annual rate of 40 million tons as against a target of 48 million tons in 1961. Textile mills were briskly moving towards the plan target of 8,500 million yards, but there is not enough cotton available to enable this quantity of cotton textiles to be manufactured, and as both internal consumption and exports have dwindled, the plan target will have to be lowered. Expansion of manufacturing capacity in cement is lagging behind on account of foreign exchange shortage, but enough progress has already been achieved to make the supply position turn easy. Steel is an easy winner. Owing, however, to factors, all too familiar, of shortage of foreign exchange and lack of internal capital, the tempo of industrial expansion is slowing down and the goal of 8 million new jobs is receding. It, therefore, behoves the Government to reappraise the situation and initiate policies calculated to reactivate the industrial sector and to increase the foreign exchange earnings on our export trade.

The Need for Foreign Capital

Our foreign exchange needs will, for years to come, exceed our earnings. But I am averse to the idea of continued borrowing from abroad because, ultimately, the problem of repayment would become acute. Already, we have incurred future liabilities at an average rate of Rs. 90 crores per annum for a four-year period beginning from 1960-61. It would be better to create a favourable atmosphere in which foreign capital would feel encouraged to invest in our enterprises. Such foreign participation in equity capital would contribute to the creation of new wealth and the question of repatriation of capital would normally not arise so long as private enterprise is allowed to function with a reasonable degree of freedom. In this connection, I should like to bring to the notice of the Government of India the note handed to the Indian Industrial Delegation by the Department of Commerce, Washington, listing the factors which are considered to constitute some of the obstacles to U.S. investment in India and to appeal to the Government to take action to remove the deterrents.

Agriculture

The weakest feature of the Second Five-Year Plan is the imbalance between agriculture and industry. Agriculture occupies a key position in our economy. At the end of the Second Plan period our total national income is expected to rise to Rs. 13,500 crores of which nearly 46% is expected to come from agriculture. If agricultural production is not increased substantially, the purchasing power of the countryside will in relation to industrial production be reduced and the latter will ultimately have to go down. Increased food production would abolish scarcity conditions with attendant wholesome effect on the psychology of the masses and creation of conditions favourable to higher production. This should be emphasized from another angle also for, it is difficult to contemplate with equanimity, in view of the deteriorated foreign exchange situation, continued imports of between two and three million tons of foodgrains a year for as far ahead as we could visualize. While prodution of grains in absolute figures is not declining, the increase in output is not commensurate with the addition to population. Even after allowing for the vicissitudes of the monsoon and the failure of rains in some parts of the country it should be possible with greater utilisation of available water in other parts and through more intensive cultivation, to produce a higher yield of foodgrains per acre. But, unfortunately, the cut in fertiliser imports is likely to reduce agricultural production still further. We cannot afford to build steel mills at the risk of jeopardising food supplies. The least that should be done is to erect more fertiliser factories at the same time as steel mills.

Increased production of cash crops could also alleviate our foreign exchange position. An additional 1 million bales each of jute and cotton, per annum would mean an annual gain of almost Rs. 55 crores in foreign exchange. There is a scarcity of vegetable oils all over the world and the prices of copra and oilseeds have either remained steady or only slightly declined in the commodity markets of the world while other internationally traded commodities have been sagging. Our production of oilseeds and the yield of oilseeds per acre have remained static and a 25% rise in the output of oilseeds would enable us steadily to export to foreign markets vegetable oil which is so much in demand. We were successful last year in exporting about 160,000 tons of sugar earning valuable foreign exchange. Again if only we could increase the production of foodgrains by 10% and improve the export of tea and ores, we could achieve a diversification of our exports and substantially improve our foreign exchange earnings with resultant benefit to our foreign exchange reserves. I would go to the length of suggesting that exports of sugar and other commodities in interrisk of such commodities becoming somewhat scarce in the country or of subsidising such exports.

Tax Relief

I feel happy to conclude my speech on a note of favourable import. Government have recently announced certain fiscal reliefs by way of repeal of the compulsory deposit of reserves relating to the ous qualities of cotton textiles. While it had been hoped that these concessions might have formed part of the budget proposals themselves, it is heartening to note that on due representation being made to them, Government have seen the validity of the requests for relief and have accorded it. If, as I hope, this is indicative of the willingness on the part of the Government to study each situation dispassionately, and not merely from the point of view of revenue, we may look forward to revisions being announced and implemented by Government at timely junctures.

New Finance Minister

I have great pleasure in welcoming the appointment of Mr Morarji Desai as Finance Minister. He has held charge of the Ministry of Commerce & Industry with great distinction and he brings to his new and onerous task a reputation as an extremely able and efficient administrator. I am sure that finance is in the hands of one who will safely steer this important portfolio through the remaining difficult years of the Second Plan period.

Note:—This does not purport to be a report of the proceedings of the annual general meeting.

* The index number for June 1957 is taken because it was at that time that Sugar factories ceased production for the season.

Money

THE CALCUTTA MONEY MARKET

MODEST INCREASE IN ADVANCES

Wednesday, 16th April.

THERE has been a fair increase in the total of advances outstanding in the Calcutta money market during the past week. The movement has been due chiefly to the expanded requirements of the sugar industry. There has also been a slight rise on account of foodgrain storage. The requirements of the jute industry and the cotton mills have remained about the same. Conditions have been generally easier in the interbank market and the call rate has declined to 3¼ percent.

There has been some improvement this week in the number of bills appearing in the exchange market. A fair amount of gunny documents has been reported, with a smattering of tea bills. Remittance has been good. Sterling began the period on a weak note but later strengthened and closed at round about the same dollar rate as last week. There has been a fractional deterioration against most Continental currencies.

* * * * *

Bullion was firm on bull buying in face of restricted supply. The price of silver improved from the previous week's level of Rs. 196 to Rs. 198 for forward delivery. The London price was at 75¾d and the New York quotation stood at 88⅝ cents.

Gold rose in sympathy with silver to Rs. 115 from Rs. 113 but reacted to Rs. 114.75 due to profit-taking at the close.

* * * * *

During the week ended 11th April, Government of India Treasury bills for Rs. 75,02,50,000 were sold in favour of the Reserve Bank.

* * * * *

Further rises of Rs 18.52 crores to Rs. 1,638.21 crores in active notes and of Rs. 23.76 crores to Rs. 1,651.39 crores in the total note issue were outstanding features of the return of the Reserve Bank of India for the week ended 11th April, 1958. Foreign securities were up by Rs. 10 crores to Rs. 226.07 crores, while balances held abroad were down by Rs. 16.52 crores to Rs. 51.82 crores. In the banking department, deposits of the Government of India fell by Rs. 6.04 crores to Rs. 49.23 crores, while other Government accounts advanced by Rs. 6.40 crores to Rs. 13.63 crores. Balances of commercial banks were Rs. 3.22 crores lower at Rs. 77.84 crores. Investments decreased by Rs. 2.17 crores to Rs. 215.94 crores. Other loans and advances fell from Rs. 73.92 crores to Rs. 55.53 crores, of which advances to scheduled banks against usance bills amounted to Rs. 19.06 crores (Rs. 24.19 crores). Ways and means advances stood at Rs. 46.59 crores against Rs. 37.63 crores.

The return of the State Bank of India for the week ended 28th March, 1958, shows a rise of Rs. 4.34 crores to Rs. 418.52 crores in total deposits. Investments in Government securities and other authorised investments remain unchanged at Rs. 180.37 crores and Rs. 10.33 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 1.27 crores to Rs. 210.52 crores. Cash and balances are, in consequence, shown at Rs. 21.41 crores or Rs. 2.24 crores less.

The statement of the position of scheduled banks for the week ended 4th April, 1958, shows Demand and Time liabilities at Rs. 767.49 crores (Rs. 15.95 crores on account of borrowings from banks) and Rs. 743.11 crores (Rs. 15.02 crores), compared with Rs. 745.25 crores (Rs. 15.26 crores) and Rs. 734.50 crores (Rs. 14.86 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 4.53 crores and Rs. 15.30 crores to Rs. 41.74 crores and Rs. 83.08 crores. There is a rise of Rs. 20 lakhs to Rs. 440.56 crores in investments. Advances and bills discounted at Rs. 969.41 crores show an increase of Rs. 7.08 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.3 percent and 64.2 percent, against 7.1 percent and 65.0 percent.

The Indian branches of LLOYDS BANK LTD. made a profit of Rs. 43.06 lakhs for the year ended last December. Deposits were shown at Rs. 43.89 crores. Investments totalled Rs. 11.61 crores and advances stood at Rs. 29.01 crores. Cash was shown at Rs. 2.62 crores. The profit of Lloyds Bank Ltd. amounted to £2,502,391 for the year ended last December, after providing for taxation and making other adjustments. Total deposits stood at £1,258,851,952. Investments were £367,840,484 and advances totalled £327,324,109.

QANTAS AND B.O.A.C. INTRODUCE CHANGES IN KANGAROO ROUTE OPERATIONS

Qantas and B.O.A.C. have introduced changes in their Kangaroo route operations from 1st April. From this date, B.O.A.C. has increased its *Britainnia* services between Sydney and London through the Middle East to four a week and Qantas has reduced its *Super-Constellation* operations to four a week. The new pattern provides eight services a week as before. The B.O.A.C. *Britannia* services include a call at Rangoon, making this the 21st port on the Kangaroo route.

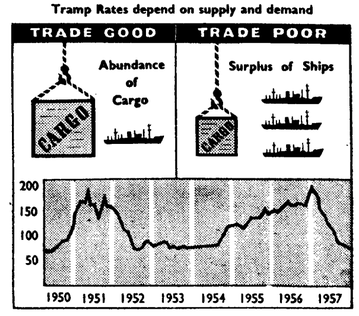
P&O

Peninsular and Oriental Steam Navigation Company

THE OPERATIONS OF THE GROUP ARE WORLD-WIDE



ALTHOUGH in the popular mind P & O is regarded as a passenger liner company, over 40 per cent of its tonnage consists of cargo liners. Moreover, it is the parent company of a large Group of shipowning companies two of which are concerned wholly in the trading of tramp ships. Those ships are traded on the open market and depend entirely on the law of supply and demand for the rates of freight they can obtain. At the present time it is impossible to fix one at a rate which will show a profit. Yet eighteen months ago the demand for tramp ships was at its height and freight rates reached almost unheard of levels after a year or more when rates had been steadily rising. As I have explained on previous occasions, liner rates of freight do not fluctuate so spectacularly as do tramp rates of freight and it is important to remember that the results of the past year have been derived very largely from the profitable state of the tramp market, showing an earned surplus for the year before charging taxation of £17.5 millions, a record in the annals of our group.

The operations of the Group are world wide. A drought in India necessitating the import of extra quantities of rice; a bumper wool cheque in Australia; Government restrictions on imports into any of the countries we serve; a major disturbance somewhere in the world resulting in a temporary shortage of shipping space; all these occurrences can have an important influence for good or ill on our trade.

The closing of the Suez Canal caused disturbances to the pattern of world trade beyond that actually passing through the canal. To give just one instance, the difficulty of obtaining goods from Europe caused India and other countries in the East to turn to other sources of supply. And so it happened that at a time when the earnings of the Group's cargo ships were swollen by the high rates of freight obtainable in the open market, certain of the liner trades experienced exceptionally good trading conditions.

Our ships are using the Suez Canal again, but one legacy of the unhappy events of 1956 still remains, who is to pay for the cost of clearing it? The

Tramp Rates depend on supply and demand

Tramp Voyage Charter Rates (Chamber of Shipping Index, 1952 = 100).

suggestion made in the United Nations that the cost should be borne by the ships using the Canal (and that means 40 per cent would fall on U.K. shipowners) is simply monstrous. The closing of the Canal and therefore its reopening were the results of national policies. It is surely unjust therefore that the cost of reopening it should be thrown on individuals or companies representing a small section of the community. The cost of national policies should surely be borne nationally, and not by individuals.

As the P & O Group is the second largest user of the Canal, I need scarcely say that the United Nations proposal is wholly unacceptable to us.

DIVIDEND POLICY

The profit for the year after taxation is £4 millions more than in 1956 and the Board were faced with the question of what dividend to pay. As we may well be on the threshold of a major depression in the industry, it might have been argued that the Board should not have raised the dividend above what was paid in 1956.

I fully realise, however, that the dividend that we have been able to pay for a number of years past has represented an extremely small percentage of the capital employed in comparison with the rate of return that can be paid by most other industries. Taking all this into consideration, the Board have decided to recommend an increase in the final dividend, making 11 per cent for the year. Even so, after increasing the dividend, the amount paid out by the Group is no more than 1½% on the book value of the net assets.

Whether we shall be able to maintain the dividend at 11% next year is obviously a matter of conjecture and I am anxious that nothing I say on this subject should be misunderstood. I would emphasise that shipping is a speculative industry where fortunes fluctuate more sharply perhaps than those of most land based industries. As to the future, I would remind you of the warning given in the Director's Report.

If you are interested *in these extracts from Sir William Currie's speech at the 118th Annual General Meeting please write for a full report to the P & O Agents; Mackinnon, Mackenzie & Co. Private Ltd., 16, Strand Road, P.O. Box 163, Calcutta.*

COMMERCIAL TRENDS IN EUROPE

NEW NORWEGIAN BILL TO REDUCE TAXES

(FROM A CORRESPONDENT)

IN addition to the tax reductions already proposed in the Norwegian State Budget, the Government has recently introduced a new Bill providing for further reductions. If approved, both measures will come into effect from 1st January, 1959. The new Bill, aiming to help larger families, proposes to raise the tax-free allowance from 6 percent to 8 percent, more generous family allowances, and increased personal tax-free allowance on the husband's and wife's joint earned income. No reductions are proposed for bachelors, however.

Subsidy cuts in margarine, coffee, milk, cream and butter will save the Norwegian Government 162.2 million kroner. Additional reductions totaling 155 million kroner are likely to be announced later this year. These cuts will raise the cost of living index, at present at 155, by 5.2 points. At 160 points, the trade unions are entitled to start new wage negotiations. The Storting (Norwegian Parliament) has recently appropriated an extra 200 million kroner (£10 million) for subsidies for the present fiscal year. It has reduced subsidies for the next fiscal year by 300 million kroner (£15 million). The price increase for margarine will amount to 6d a lb, for milk ½d a pint, and for coffee 4d a lb.

Northern Customs Union

"The Federation of Norwegian Industries does not share the view that the establishment of a northern Customs union would be a step on the road to a European free trade area." This is the essence of a preliminary comment made by the Federation on the scheme for a Northern Customs Union put forward to the Norwegian Ministry of Trade. It is of great importance that the northern countries should co-operate, as closely as possible, in the negotiations for a free trade area. A Customs Union, however, is no condition of such co-operation. How the problem of northern economic co-operation should be solved depends entirely on the result of the negotiations for a European free trade area. No decision on a Customs Union should, therefore, be taken until it is clear what this result will be, says the Federation.

Larger Investment in Swedish Industry

The aggregate investments in Sweden's industry in 1958 are estimated to be 8 percent larger than in 1957, according to a recent survey by the Swedish Board of Trade and the Institute of Economic Research. The rise from 1956 to 1957 was 4 percent. In actual figures, investments totalled 2,812 million kroner in 1956 and 2,930 million kroner in 1957. For 1958, investments are estimated at 3,184 million kroner (£220 million). Larger investments are expected in the mining, metal, engineering and food industries and also for public utilities, whereas decreases of around 10 percent are likely to take place in the pulp, paper and printing industries. Some decline in investment is expected in the chemo-technical industry. The survey covers both private and public-owned companies. Government industrial investments account for some 20 percent and municipal investments for 7 percent or 8 percent of the aggregate industrial investments.

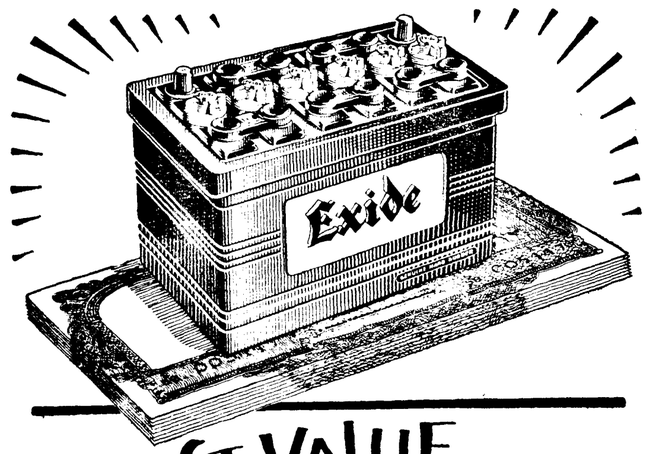
Sweden's foreign trade in 1957, which resulted in a deficit of 1,457 million kroner (£100 million) compared with 1,367 million kroner for 1956, showed a heavy increase in the deficit with dollar countries, whereas the surplus with sterling countries rose. The deficit in trade with other E.P.U. countries remained practically unchanged. The dollar trade deficit went up from 889 million kroner to 1,282 million kroner, mainly following larger imports of liquid and solid fuels. In trade with the United States alone, the deficit rose from 659 million kroner to 1,078 million kroner. The trade surplus with Britain increased from 205 million kroner to 255 million kroner, while the deficit with West Germany increased by 50 million kroner to 1,188 million kroner. Trade with non-dollar South American countries resulted in a surplus of 128 million kroner against 84 million kroner in 1956. Exports to Argentina showed a major upswing during the year. In trade with the east European countries, the 1956 deficit of 202 million kroner was reduced to 8 million kroner, largely as a result of smaller imports, particularly of Polish coal. As for the group "other countries", there was a considerable increase in exports to China, mainly of machinery, and a large increase in trade with Japan.

Sweden's imports in January reached a new monthly peak of 1,225 million kroner (£84.5 million). This is 84 million kroner more than in the same month of last year. Exports at 916 million kroner were only 1 million kroner larger than in January 1956. The import surplus thus totalled 308 million kroner compared with 226 million kroner a year ago. Imports of mineral oils were unusually heavy in January, totalling 1.47 million tons against slightly over 1 million tons in the same month of the past two years. Motor-car imports at 11,386 units were 5,061 units more than in January 1957, when, however, business was adversely affected by the Suez crisis. High import figures during the same month were also recorded for aircraft and ships. A seasonal decline occurred in shipmesnts of timber, whereas there was some increase for pulp. Exports of ships were smaller while shipments of motor-cars and machinery exceeded those in January 1957.

New Foundation for Shipyard

Undevallavarvet, Sweden's fourth largest shipyard in output, has passed into the hands of a foundation including representatives of a consortium of banks, the Government and the city of Uddevalla. The transaction has been the result of protracted negotiations following a financial crisis with an imminent risk of the shipyard's bankruptcy, which would have severely affected employment in Sweden's west coast region. Under the agreement, its owner, Mr. Gustaf B. Thorden, has ceded the yard and its subsidiary companies without compensation, while he and his family will retain the Thorden Lines and certain other shipping interests. The consortium will grant the shipyard a credit of 60 million kroner (£4.14 million), including 15 million kroner already granted, against a ten-year State guarantee of 30 million kroner and a municipal guarantee of 101 million kroner. The Thorden shipping companies owe the shipyard about 301 million kroner for vessels delivered during the past few years. This debt is to be settled under a separate agreement. The shipyard, now employing some 3,000 people and being the leading industry in the region, was founded by M. Thorden after the second world war. It has grown rapidly and is reported to be well equipped. But commentators say that the expansion has been too fast for consolidation. Ships on order are said to total about 40, including a number of supertankers for U.S. owners. It is understood that the foundation will be entitled to sell the shipyard if a suitable buyer is available.

Austria and the Free Trade Area



On 12th and 14th March, both Houses of the Austrian Parliament discussed the new Tariff Bill. In the debate the National Assembly and the Federal Diet had an opportunity to discuss their views on the problem of Austria's participation in the European free trade area. In the plenary session of the Assembly, deputy Hofeneder said on behalf of the Austrian People's Party: "The leading representatives of the Austrian economy, in the past as well as in the present, have maintained a positive attitude towards European integration. It is evident that, in principle, acceding to the free trade area is desirable for a State like Austria, nearly 70 percent of whose exports are with the O.E.E.C. countries and the member States of the projected free trade area. However, the danger cannot be ignored that the activities of the six-nation common market, unintentionally but in practical effect, might lead to a discrimination against the countries not united in the common market but incorporated in the prospective free trade area. A participation in the free trade area, on the other hand, will in no way affect the principle of Austria's neutrality."

The Secretary-General of the Austrian Trade Unions Federation, M. Anton Benya, told the Assembly: "The determined support the Austrian socialists have decided to give in matters of international co-operation, and in particular to European economic co-operation, is not attributable to theoretical contemplations, but primarily guided by the bitter experience gained in the past. If a sector of the economic system is excluded from the fresh air of competition on the international market, it will necessarily fall back in development and, one day, become a burden to the economy as an entire body."

The debate in the Federal Diet, the provincial chamber of the Austrian Parliament, was highlighted by the statement of the socialist deputy, M. Alfred Porges, Press Officer of the Vienna Fair Organisation, who said: "The question of whether or not, in its early stages, the free trade area will be of advantage to the Austrian economy, is of secondary importance for the time being. The decisive point is the fact that, after the consolidation of the European economic community, the establishment of the free trade area has become a vital necessity. It would be a catastrophe if the common market were not to expand into the free trade area." Speaking for the Austrian People's Party, M. Wilhem Salzer, Diet deputy, said: "Though absolutely capable of living by its own efforts, Austria cannot afford to bar its economy by a protectionist policy, not only because Austria is more advancing into a decisive stage of engagement in European integration, but also because narrow-minded action of particularist concept would certainly ruin the country's economy."

Gross National Product of Italy Increases

On the basis of preliminary data, Italy's gross national product during 1957 rose by a little more than 6 percent, in both real and monetary terms. This increase was 2 points higher than the gain recorded in 1956 and 1 point higher than the annual 5 percent "target" increase set by the ten-year programme for the "development of employment and income." This plan, commonly known as the "Vanoni plan", aims at a substantial increase in living standards and at the elimination of unemployment by the end of the ten-year period, 1955 to 1964. Agricultural output registered a slight decline compared with 1956—the index falling from 121 to 119. In the case of basic crops such as wheat, maize and rice, this decline reflected an adjustment of supplies to marketing possibilities in the wake of the relative overproduction in preceding years. In the case of other farm products —grapes, for instance—the decline in output was largely due to unfavourable weather conditions.

BEST VALUE FOR YOUR MONEY

A cheap battery may seem a bargain, but it is really costlier in the long run. The cheapest battery in the end is the one that gives the most in months of reliable service. The long-lived CB 95 alloy plates, the virtually indestructible Porvic separators and the shock-resistant hard rubber container all add up to make Silver Exide the cheapest battery in the long run. You get the best value for your money when you buy Silver Exide, the battery manufactured under strict Quality Control at every stage of production.

CHLORIDE & EXIDE BATTERIES (EASTERN) PRIVATE LTD.

Stocks and Shares

UNDERTONE STEADY BUT BUSINESS REMAINS DULL

SECURITIES RULE FIRM

Wednesday Evening.

ALTHOUGH the undertone remained steady and prices were on the whole maintained, there was a marked decline in the volume of business on the Calcutta share market during the past week. The wave of speculative activity which started with the concessions to the cotton textile and coal industries and the suspension of compulsory deposits, appears to have spent itself. When genuine investment business failed to follow the speculative lead, activity slowed down. The way prices are holding up, in spite of the fall in turnover, suggests that market opinion has not yet revised its ideas about the more favourable turn in the investment outlook. But a stock market recovery cannot be built only on prospects. The essential ingredient, the lack of which seems to be holding up further advance, is a flow of new savings into investment. Fear of impending labour trouble at Jamshedpur at one time induced caution in T.I.S.C.O. shares in Bombay, although Indian Irons remained comparatively steady.

Jutes were well maintained, deriving encouragement from the decline in the stocks of finished goods held by mills in March. Tea shares are steady, while operators wait for the Government to make up its mind about the nature of the tax relief for the industry.

Towards the close of the week there was a revival of interest on hopes that the restrictions on the development rebate, as proposed in the 1958-59 Budget, may be softened.

The Greaves Cotton equity issue was reported fully subscribed today.

Demand for preference shares continued, suggesting that at current rates of yield, they were considered attractive, compared with equities.

The gilt-edged market was strong with a good demand for all dated issues. Unfortunately there was insufficient scrip to satisfy the enquiry and consequently prices advanced on a broad front, as will be seen from the following table:

		Opening 10th April, 1958 Rs.	Closing 16th April, 1958 Rs.
3 % Conversion Loan	1986	71.18	71.25
2½% Loan	1961	95.15	95.25
2½% "	1960	97.75	97.90
3½% "	1964	98.18	98.20
3½% "	1965	97 70	97.75

The drop in the inter-bank call money rate over the past fortnight from 3½% to 3¼% has made it attractive for banking institutions to buy securities, and as this trend is likely to be maintained over the next few weeks, market opinion maintains that the Government will have no difficulty in implementing successfully its forthcoming borrowing programme.

In the banking section, Hind Bank were better at Rs. 51, as were United Commercial which, on the publication of a satisfactory report, advanced to Rs. 60 ex-dividend.

Operators in the coal section were still trying to assess the possible effect on collieries' working costs in the event of the Minimum Wages Act being extended to coal mines. Coal shares were featureless with the exception of Bengal which were reasonably steady at around Rs. 216.

Jute shares were steady though there are no signs yet of investor interest.

In the engineering section, Indian Iron & Steel shares opened the new account at Rs. 21.33, at one time dipped to Rs. 21.16, but subsequently recovered at the close to Rs. 21.61. Jessops were slightly better at Rs. 20.25 as were Guest, Keen, Williams at Rs. 30.87. In contrast, Braithwaites were easier at Rs. 25.25 as were Burn & Co. at Rs. 320. Textile Machinery were steady at around Rs. 18.20.

In electrics Calcutta were steady at Rs. 13.75.

In cotton textiles, Elgins advanced further to Rs. 13.37, while Kesoram were unchanged at Rs. 11.50.

In paper, Orient were well maintained at around Rs. 28.45 while Sirpur were done at Rs. 9.12 ex-dividend. Titaghur were steady at Rs. 35.62.

Sugar shares were featureless.

Among miscellaneous industrials, Alkali & Chemical were unchanged at Rs. 14.25 and Angelo Brothers were shaded at Rs. 17.75. Balmer Lawrie were enquired for at Rs. 147 as were Britannia Biscuits at the higher rate of Rs. 12.75. Dunlop Rubber recovered from Rs. 24.25 to Rs. 24.75. Indian Cables were enquired for at the higher rate of Rs. 29.50, while Indian Oxygen met with profit-taking and receded from Rs. 18.25 to Rs. 17. India Steamship were slightly better at Rs. 11, as were Martin Burn at Rs. 24. Metal Box continued to be popular and improved to Rs. 27.75. Philips closed slightly higher at Rs. 14.12. Rallis rose today from Rs. 28.25 to Rs. 29.

In the mining group, Indian Copper were sluggish at around Rs. 3.20 and Orissa Minerals, after being done up to Rs. 25, closed slightly below the best.

Prices of tea shares were fairly steady and business was of a retail nature.

The profit earned by the ELGIN MILLS CO. LTD. has increased by Rs. 2.54 lakhs to Rs. 4,835,779 for the year ended last September. The ordinary dividend is cut by four annas to Re. 1 a share. The taxation provision absorbs Rs. 26¼ lakhs against Rs. 22½ lakhs. Rehabilitation reserve is allocated Rs 3 lakhs against Rs. 15 lakhs. The general reserve allocation has been increased from Rs 2 lakhs to Rs. 9 lakhs. After various adjustments, a sum of Rs. 75,531 has been carried forward, compared with Rs. 78,754 brought in. About the subsidiaries, Shree Madhav Mills Ltd. and Calico Processors Ltd., the directors state that their trading results have been adversely affected by the unfavourable trading conditions in the textile industry during the year under report.

* * * *

The ALLIANCE JUTE MILLS CO. LTD. has incurred a loss of Rs. 5,76,813, after providing Rs. 1.38 lakhs for depreciation for the 11 months ended last May. After making necessary adjustments, a debit balance of Rs 5,74,381 has been carried forward. The dividends have been passed over. Gunny sales improved from Rs 98.11 lakhs to Rs. 2.37 crores, and stocks declined from Rs. 28.01 lakhs to Rs. 14.98 lakhs. The directors state that in order to run the mills on a more economical basis they considered it advantageous to close down the north mill from 6th May, 1957; the loom hours of the mill are being

* * * *

A loss of Rs. 4,25,950 has been incurred by the WAVERLEY JUTE MILLS COMPANY, after transferring Rs. 1.37 lakhs to depreciation, for the 11 months ended last May. After necessary adjustments, a debit balance of Rs. 4,15,285 is carried forward. There is no dividend. Gunny sales were Rs. 74.99 lakhs against Rs. 47.85 lakhs and stocks increased from Rs. 9.40 lakhs to Rs. 12.19 lakhs. The directors mention that it was decided to close the mill on 17th June, 1957. Under the prevailing conditions in the jute industry it was felt that this small unit, which required complete modernisation of the spinning plant, would not have been economical even after modernisation.

Bombay Market

TATA STEEL EASE ON STRIKE THREAT

TRADING GENERALLY RESTRICTED

Wednesday Evening.

TRADING in the Bombay stock market was restricted by the holidays during the past week Turnover was small because of settlement considerations and prices were shaded on balance. Steels declined on reports of a fall in the output of the Tata Iron and Steel Company for the year ended last March. The strike notice given by Tisco workers called for caution. The decline in cloth offtake during the first quarter of this year induced profit-taking in cotton mill shares. There were, however, a few bright features on good corporate news.

Tata Steel fell to Rs. 182.50 but Indian Iron rose to Rs. 21.56 on good buying from Calcutta interests. Other engineering shares were prominent. Tata Locomotive jumped to Rs. 163 on higher dividend hopes and Premier Construction were bought at Rs. 186.50. Larsen and Toubro improved to Rs. 15.04 but Alcock Ashdown fell to Rs. 271.25 on pressure. Automobile shares were shaded on profit-taking. Hindustan Motors fell to Rs. 7 and Premier Automobile were taken at Rs. 82.

Cotton mill shares were lower all round. Bombay Dyeing were offered at Rs. 56.80 and Kohinoors were transacted at Rs 278.50. Svadeshi were bought at Rs. 171.50 and Simplex changed hands at Rs. 155. Century made Rs. 432.55 and India United Ordinary were transacted at Rs. 9.60.

Miscellaneous shares moved in sympathy with the general trend. Associated Cement were fractionally shaded at Rs. 151.25 and Digvijay Cement realised Rs. 142.50. Sugar shares were quietly steady Belapur made Rs. 245 and Phalton came to hand at Rs. 139.50. Steamship company shares were firm and Scindia gained at Rs. 17.60. but Great Eastern Shipping declined to Rs 20. Mining shares were subdued because of an uncertain outlook. Shivrajpur Syndicate were bought at Rs 93.50. National Rayon rose to Rs. 219.75 on buying from knowledgeable quarters. Bombay-Burmah gained at Rs. 545 and Tata Chemical were steady at Rs. 14.20.

Bank shares were steady. United Commercial Bank realised Rs. 59.50 and Bank of Baroda were done at Rs. 112. Insurance scrip were selectively bought. New India Assurance were taken at Rs. 43.

Electricity supply company shares were firm. Ahmedabad Electric gained at Rs. 97.30 and Tata Power were bought at Rs. 1,195.

SUBSTANTIAL RISE IN STOCK MARKET

BUDGET AND BANK RATE HOPES LIFT INDUSTRIALS

London, 16th April.

THE stock market recorded a further appreciable advance during the past week under the lead of gilt-edged securities and industrials, although the former closed below their best levels. The setback in gilt-edged which took place immediately before the week-end reflected fears that a railway strike may be precipitated by a tribunal's rejection of wage claims. but a more hopeful view developed over the week-end and the advance was resumed. The dominating influence was the Budget and Bank rate talk. Recent Government White Papers strengthened hopes of tax concessions in the Budget, which ultimately materialised to some extent. while the trend towards lower interest rates was considered in many quarters to make a further reduction in Bank rate in the not-too-distant future a virtual certainty. Demand for gilt-edged and industrials broadened considerably and there was a good turnover in both sections. The extent of the rise reflected a growing shortage of stock at prices around the current levels. The rather better performance of Wall Street helped sentiment to some extent in industrials, while the possibility of the U.S. recession worsening was offset by the Budget and Bank rate hopes. Foreign bonds and rails were quiet and featureless. Dollar stocks fluctuated with Wall Street but were usually higher on balance. Industrials provided the best section and were virtually unaffected by the temporary setback in gilt-edged on Friday. South African gold shares were dull due to a lack of interest, but base metals were fairly well maintained. Oils were rather erratic and showed no marked change on balance. There was renewed firmness in rubber shares, reflecting the higher price of the commodity and the buying stimulated by dividend hopes. Initial firmness in teas subsequently gave way to irregular conditions. Ceylon issues were unsettled by nationalisation talk but Indian issues showed no marked change.

The Money Market

Credit conditions in the money market during the past week remained stringent due to a heavy bill take-up, a shorter working week and bankers' low cash balances. Money was in keen demand at 5 percent to 5⅛ percent, with the authorities providing a large amount of assistance; the inevitable borrowing was undertaken from the Bank of England There was some improvement at the close but money was still barely adequate for market needs. Bill business was on a fair scale, with banks taking July and hots off the market at 5⅛ percent, with a rate of 5⅛ percent conceded under pressure. After last Friday's tender, when there was a further drop in the Treasury bill rate to just over 5⅛ percent, the rate for July and hot bills declined to 5⅛ percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 9th April shows that gold stocks fell by $99 million to $22,295 million. Foreign deposits declined by $26 million to $253 million and foreign investments were $34 million lower at $3,267 million. No sales or purchases occurred in U.S. Government securities. the total standing at $23,628 million. Total discounts and advances rose by $27 million to $139 million, while the aggregate excess reserves of member banks declined by $72 million to $632 million. The daily average excess reserves of member banks declined by $44 million to $651 million, while their daily average borrowings fell by $54 million to $90 million. Business loans of the New York city banks were $189 million higher at $11,292 million, compared with an unchanged level of $11,632 million a year ago. Gold certificates on hand and due from the U.S. Treasury were $100 million lower at $20,848 million. Federal Reserve notes in actual circulation declined by $12 million to $26,528 million. The deposits in member banks' reserve accounts were $68 million lower at $18,298 million.

Hongkong Gold Falls

The Hongkong gold market fluctuated irregularly during the past week. Early dealings reflected sterling's movements, but prices eased towards the end following the reported arrivals of gold at Macao. More supplies were thus available to the market. The official offtake was 2,990 taels and the unofficial offtake 5,750 taels. The carry-over charges were 65 cents in sellers' favour. Arrivals at Macao were 38,000 ounces. Forward contracts were placed at $38.02, c.i.f. Macao.

U.S. Import Duties on Copper

Mr. Fred Seaton, U.S. Secretary of the Interior, has put the Administration's endorsement on a Senate Bill to restore import duties on copper. The circumstances in which the original suspension and its subsequent extension were based no longer exist, Mr. Seaton says in a report to the Senate Finance Committee. In the past 18 months, the extreme shortage of copper has disappeared and there is now an adequate supply. The tariff suspension is effective as long as copper is priced at or above 24 cents a lb, or until 30th June, 1958, unless repealed by Congress before then. Major producers are currently quoting copper at 25 cents a lb, while custom smelters are selling the metal for 23¼ cents a lb.

SITA HAS NEVER SEEN A TRAIN!

True! Sita has never seen a train! Yet she knows that a train brought the oil that burns in her humble lamp in the far off village where she lives!

Yes, Indian Railways serve Sita and 38 crores of other individuals like her in their daily lives—intimately yet unobtrusively, in a multitude of ways. They serve, too, every sector of the national economy, for which movement is life.

We Carry 15 Cities Daily!

Think of it! One per cent of India's population travels *daily* by rail! About 3,800,000 passengers *daily*—equivalent to the *combined* population of these 15 Indian cities: Ajmer, Allahabad, Amritsar, Bhopal, Cuttack, Gwalior, Howrah, Jabalpur, Jaipur, Mysore, Patna, Poona, Rajkot, Tiruchirapalli, and Trivandrum.

We Carry Over One Crore Maunds Daily!

The Indian Railways also carry over 360,000 tons (more than one crore maunds) of vital supplies *daily*—the equivalent in weight of foodgrains which all the people living in the 15 cities named above normally consume in 200 days! Besides life-giving food for the people, they carry precious coal and other raw materials for industry, finished goods for far-flung markets and a countless variety of other cargo which helps to maintain the country's trade and commerce, imports and exports in good shape.

Over the past 105 years, wherever the Indian Railways have gone, prosperity has followed in close step. Daily, they run nearly 7,000 passenger and goods trains. Without them, today, the Nation's throbbing economy, its very heartbeat, would come to a breathless standstill!

Serve the Individual and Build the Nation

105 YEARS OF NATIONAL SERVICE

New Delhi

NATIONAL DEVELOPMENT COUNCIL TO REVIEW PLAN RESOURCES

DISAPPOINTING RECORD OF STATES: SHORTFALL IN SMALL SAVINGS

(FROM OUR NEW DELHI CORRESPONDENT)

THE National Development Council will hold its next meeting on 3rd and 4th May. The Prime Minister will preside. A fresh appraisal of resources for the second five year plan is the most important item on the agenda. The plan says that the outlay of Rs. 4,800 crores for the public sector is to be financed as follows:

Surplus from current revenues at the existing rates of taxation	...	Rs. 350 crores
Additional taxation	...	Rs. 450 crores
Market loans	...	Rs. 700 crores
Small savings	...	Rs. 500 crores
Other budgetary resources		Rs. 400 crores
Foreign assistance	...	Rs. 800 crores
Deficit financing	...	Rs. 1,200 crores
Gap ...	...	Rs. 400 crores
		Rs. 4,800 crores

The additional taxation of Rs. 450 crores was to be raised jointly by the Centre and the States in the ratio of 50 : 50. The States have so far raised additional taxation amounting to Rs. 170 crores during the plan period, against the Rs. 225 crores they promised to raise. They were also to secure an unspecified amount of money to help bridge the gap of Rs. 400 crores. They have so far made no effort to meet this latter obligation. In addition. they had to make available Rs. 100 crores from their own resources. Instead of finding this sum, they now show budgetary deficits of Rs. 50 crores.

Heavy Deficit Financing

The Centre was to raise additional taxation of Rs. 225 crores, plus an undefined amount to bridge the gap of Rs. 400 crores. As against this, it has levied additional taxation which will yield Rs. 800 crores during the plan period. Of this, Rs. 175 crores has been transferred to the States under the award of the second Finance Commission. But what was gained in taxation has been lost in the capital market. The yield from public borrowings. in the shape of loans and small savings, has been very much below the Planning Commission's target. Deficit financing has been heavy.

Production has not been increasing as fast as was expected. It is feared that the new import policy will affect it further. The lack of co-operation between the Centre and the States over food production is making things difficult. Non-plan and non-developmental expenditure is mounting. The huge defence expenditure is being widely criticised. In Uttar Pradesh, an old age pension scheme is being introduced. The Union Education Ministry's extravagance has already been reported. A proposal is now being canvassed to find employment for 60,000 educated unemployed by starting one-teacher primary schools during the plan period. The Planning Commission has estimated that, as against a target of 8 million new jobs in the non-agricultural sector, only 7 million will find employment during the quinquennium. The proposal for 60,000 one-teacher schools will cost Rs. 28 crores in five years, including Rs. 15 crores in the plan period. This amount, it is suggested, should be met out of the Central provision of Rs. 95 crores for the Education Ministry. In other words, the whole scheme will have to be financed by the Centre.

Some important questions arise. Firstly, is there any ridigity about the allocations made for various Ministries? If the allocation for any Ministry cannot be utilised, it should either be transferred to a Development Fund, or diverted to other more urgent projects. Secondly, it is all very well to finance the project from Central resources during the current plan period, but what will happen to the schools and school teachers, say, in 1961? Will the States take over the financial responsibility for them? Thirdly, many educationists are not in favour of one-teacher schools; have they revised their opinion because of the experiment launched three years ago on the excuse of creating employment?

Limit of Taxation

These are some of the issues facing the Planning Commission, which is preparing a memorandum on the availability of resources for the plan. One view appears to be that the available resources do not warrant a plan of Rs. 4,800 crores. Some say that the plan outlay should be reduced to Rs. 4,500 crores, and others that it should be cut to Rs. 4,000 crores. The Centre, it is pointed out, has reached the limit in raising additional resources. If, for political reasons, it has to finance the entire outlay, then the plan will have to be cut down. Another solution suggested is to divide the plan into two sectors, Central and State. It should be left to the States to raise money to implement the projects falling within their sector. Failure to do so will not be made up by Central assistance, but particular projects will have to be given up. Mr. K. C. Neogy will soon leave the Planning Commission. The wisdom of his views on the plan is being realised on the eve of his departure. He and Dr. B. C. Roy were among the few people who deviated from the general optimism which marked the inauguration of the second plan.

Durgapur Coke Oven Plant

The Licensing Committee, which met here last week, has rejected the proposal of the Durgapur Industries Board to double the capacity of its coke oven plant, it is learned. At the instance of the West Bengal Government, the Planning Commission appointed the Coke Oven Projects Enquiry Committee, which, it will be recalled, recommended the setting up of: (1) a coke oven plant with a daily throughput of 1,300 tons of coal and coke breeze; (2) auxiliary plant for the recovery of by-products from coke oven gas: and (3) a coal tar distillation plant with a daily input of 50 tons of coal tar. The Planning Commission has accepted this report and the Government of India has given its general approval to this scheme. Subsequently, the West Bengal Government applied for the following expansions and additions to this project:

Expansion: Road tar from 335 tons to 666 tons a month; and wash oil from 58.5 tons to 117 tons a month.

New items:

1.	Phenol-formaldehyde resin	146 tons a month
2.	Tar varnish ...	150 tons a month
3.	Ammonium chloride	435 tons a month
4.	Caustic soda ...	551 tons a month
5.	Phenol	147 tons a month
6.	D-Dichlorobendene	18 tons a month
7.	Diphenyl oxide ...	9 tons a month
8.	Soda ash	119 tons a month
9.	Lithophone ...	290 tons a month
10.	Phthalic Anhydride	100 tons a month

Estimates of expenditure:

(a) 100 tons a day coal tar distillation plant	...	Rs. 107.16 lakhs
(b) Phenol - formaldehyde resin unit	...	Rs. 3.84 lakhs
		Rs. 111 lakhs
Foreign exchange element	... ...	Rs. 51.90 lakhs
Foreign exchange for items 3 to 10		
from the sterling area		Rs. 11,000,000
from the dollar area		Rs. 4,900,000

It is explained here that the doubling of the coke oven capacity is unnecessary as the arangements made for coal tar distillation at the three steel plant in the public sector will adequately meet the requirements of India for road tar and other allied chemicals. As for the scheme to diversify the by-products, there is no adequate justification for the project, particularly because of the overlapping those proposals would entail. They have to be considered in the context of the overall plans that are being framed for the establishment of organic chemical industries in the country.

New Aluminium Plant

Birla Brothers' aluminium project has run into difficulties, it is learned. Inter-State jealousy is largely responsible for the delay in reaching a final decision. According to the original plan, the plant was to be located in Uttar Pradesh and was to become an integral part of the Rihand project.

The block estimate for the first phase of the programme was Rs. 15 crores. This included a foreign exchange element of Rs. 10 crores from the dollar area. Kaiser Aluminium of the U.S.A. has agreed to participate in the capital structure of the project. The following are the estimated requirements of raw materials, all to be procured from indigenous sources:

	First Phase Quantity in tons	First Phase Value in Rupees	Second Phase Quantity in tons	Second Phase Value in Rupees
Bauxite	45,000	5,85,000	90,000	11,70,000
Caustic soda	2,000	12,00,000	4,000	24,00,000
Cryolite	1,000	14,00,000	2,000	28,00,000
Sodeberg Paste	6,000	19,20,000	12,000	38,40,000
Calcium chloride	200	80,000	400	1,60,000
Alaflouride	500	7,50,000	1,000	15,00,000
Soda ash	700	4,20,000	1,400	8,40,000

As stated by the Minister for Industries, Mr. Manubhai Shah, in the Lok Sabha, Birla Brothers have been permitted to enter into an agreement with Kaiser Aluminium of the U.S.A. Since then, the State Governments of Bihar and Madhya Pradesh have demanded the location of the project within their borders. This has caused the delay.

Streptomycin Manufacture

The Government of India has approved the expansion programme of Hindustan Antibiotics Ltd. Under the programme, the company. will manufacture streptomycin in addition to penicillin.

Monkey Exports

During the seven months ended October 1957, 128,261 monkeys were exported from India, earning Rs. 86,01,051 in foreign exchange.

Foreign Exchange Commitments

The total of outstanding commitments in foreign exchange as on 31st March this year was of the order of Rs. 880 crores, it is stated. The break-down is as follows:

On Government account	...	Rs. 523 crores
On private account	...	Rs. 300 crores
On account of imports of steel, mainly by the Iron and Steel Controller	... ...	Rs. 41 crores
		Rs. 884 crores

After taking into account foreign assistance from the U.S.A., the U.K., West Germany and Japan, the uncovered portion of the commitment is of the order of Rs. 300 crores.

Indo-Japanese Trade Agreement

The trade agreement between India and Japan, which was signed in Tokyo on 4th February, 1958, came into force last week, on ratification by the Governments of India and Japan. The instruments of ratification were exchanged in New Delhi last week between Mr. K. B. Lall, Joint Secretary to the Ministry of Commerce and Industry, and Mr. Akira Shigemitsu, *Charge d'Affaires, ad interim*, of Japan, in India. The agreement provides for the grant by the two countries to each other of the most-favoured-nation treatment in the matter of operation of State trading enterprises, rights of residence and property and shipping facilities. The two Governments have undertaken to co-operate in expanding trade and strengthening economic relations. They will promote the exchange of scientific and technical knowledge, particularly in the interests of economic development. The commodities listed for export from India include spices, tea, tobacco, coffee beans, molasses, sugar, raw cotton, cotton waste, hides and skins, iron and manganese ores, salt, mica, coal and tanning materials. Items listed for export from Japan include artificial fibre yarn and fabrics, raw silk, iron and steel and other metals, electrical machinery, ships, railway equipment, industrial machinery, drugs and medicines, fertilisers, dyestuffs and newsprint. The agreement will be valid for a period of two years and will remain in force thereafter, unless it is terminated by either party.

Lancashire Talks on Textile Exports

India is anxious to maintain harmonious trade relations with Britain, which is her biggest trading partner. It is in these terms that well informed circles explain the decision to send a delegation to the forthcoming textile talks in Lancashire. The delegation will consist of Mr. Kasturbhai Lalbhai and Mr. Neville Wadia. In this connection, it is pointed out that under the Indo-British Trade Agreement of 1939, the British Government promised not to place any restrictions on Indian cotton textile exports. The problem now has to be viewed in the context of India's growing need for foreign exchange. India has an export target of 1,000 million yards of cloth a year during the second plan period. Since sales to the U. K. account for about 18 percent of the total exports, the U.K. market is of more than ordinary significance. Yet, the Indian textile industry last year showed its willingness to reach a mutually acceptable solution. India, however, could not agree to a course which would throw the entire burden of sacrifice on her alone, it is pointed out. It is true that India's exports of cotton textiles to the U.K. are not falling, but those from Hongkong have been rising fast. They have almost doubled since 1956. Any measure to which the Indian industry may agree to accommodate Lancashire will have to take into account these factors, it is stated here. Sir Frank Lee, who was here last week. had a busy time, renewing contacts with top-ranking officials of the Government of India. Enquiries show that Sir Frank's visit to Hongkong has been fruitful, and that the Hongkong textile interests have agreed, in principle. to place a ceiling on their piecegoods exports to the U.K. What that ceiling should be is subject to further negotiations. India is likewise willing to place a ceiling on her exports of cotton textiles. Although the Government of India has not committed itself. it will not oppose any arrangement reached at an unofficial level by the parties concerned.

Problem of Expanding Exports

The import policy announced recently indicates that assistance from abroad has not made any difference to the foreign exchange position. Apprehensions are growing that the continued curb on imports of industrial raw materials may affect production. The export drive has yielded minor results, but some basic problems remain unsolved. No decision, for instance, has yet been reached on proposals to export vegetable oils and sugar. Engineering goods are facing stiff competition from well-organised and established rivals. The issue posed is whether something more than the mere drawback of excise or Customs duties is needed to promote exports.

Visit of Dr. Lucas Lopes

Dr. Lucas Lopes, president of the National Bank for Economic Development, Brazil, and his party arrived last week for a three-day stay in the capital. During his stay, as guest of the Government of India, Dr. Lopes was to meet the Secretaries to the Ministries of Finance, and Steel, Messrs. B. K. Nehru and S. Bhoothalingam. He was also to meet the members of the Planning Commission. The National Bank for Economic Development in

Brazil plays a rôle similar to that performed in India by the Planning Commission and the Reserve Bank.

Debate on Wage Policy

The Minister for Labour and Employment, Mr. G L. Nanda, categorically turned down the suggestion for an immediate wage increase of 25 percent. He characterised it as an unreasonable demand, being based on the view that by the end of the plan period there would be an increase of 25 percent in the national income. Mr. Nanda said this while replying to the debate in the Lok Sabha on the demands for grants for his Ministry. The Government, he pointed out, had set up wage boards for three industries and was examining the case of seven more industries. But any move in this direction had to be kept in suspense because of the recent Supreme Court decision in a wage board case. Referring to the situation arising out of the Supreme Court's decision concerning the journalists' wage board, Mr. Nanda said that it had been very useful in clearing the ground on many points and showing the way to avoid delays in the future.

Rehabilitation of Refugees

The debate concerning the Rehabilitation Ministry was lively, and the Minister, Mr. M. C. Khanna, gave an effective reply. In West Bengal, he said, there were at present 2.9 million people outside the camps and 260,000 in camps. The number of refugees in camps was about 100,000 towards the end of 1954. During the last 15 months, about 50,000 persons had been dispersed. About 50,000 refugees were in the Tripura, Bihar and Orissa camps and the remaining 260,000 in the West Bengal ones. Mr. Khanna said that "if undue interest" had not been taken by "some of my friends in Calcutta" in the camp population in Tripura, Charbatia and Bettiah, at least 40,000 refugees, leaving aside the hard core like the infirm and unattached women and children, would have been rehabilitated.

Denying the charge that the Ministry had not paid any attention to the camp population, the Minister said whereas the *per capita* income was Rs. 21 a head in the State, "we are spending upon these people at the rate of Rs. 125 a month a family, including the infirm and children." This expenditure came to Rs. 10 crores a year. "We are providing them with water, food and clothes. If they get married, we give some presents. If a son is born, we give something extra." Mr. Khanna said his "friends" did not want the refugees to go outside West Bengal. They were critical of the Dandakaranya scheme, which was still being examined and a detailed brochure on which had been circulated to members. "If I do not take the displaced persons outside West Bengal and rehabilitate them, I am told 'You are not treating it as a national problem; the rest of India is sleeping over the miseries and misfortunes of refugees from East Pakistan.' If I go to Chief Ministers and ask them to give me their best lands for settling refugees, it is said that these places, Bihar, Orissa, Madhya Pradesh or Rajasthan, are no good." The Minister said during the past year, he had sent 40,000 people from West Bengal under the dispersal scheme to Kotah (Rajasthan) and Ambikapur (Madhya Pradesh). "Not a single person has gone back (from these places), unless, of course, my friends outside start taking undue interest in them."

A survey conducted within the last four or five months, covering about 20 percent of the camp population in West Bengal, indicated that 70 percent of the people there had private incomes of their own. The survey also showed that a large percentage of the refugees had relatives or near relatives in Pakistan with whom they were still on visiting terms. A substantial percentage of the women in the homes had their husbands alive and some so-called orphans had their fathers alive. Some mothers who were supposed to be destitutes had sons who were living and earning in West Bengal. Mr. Khanna said if some of the refugees in the camps were not willing to go to places outside West Bengal, such as Kotah, this was because Dacca would then be far away and they would lose the private incomes in and round about the camps in West Bengal. He was not against their making some money. "If they (the refugees) can find roots in the economy of West Bengal, I am happy. Who would be happier than the Rehabilitation Minister when he sees that part of this problem has been solved? But it is exceedingly unfair to me, the Government and the Rehabilitation Ministry when the poor refugees speak very little about it."

Management of State Enterprises

Reference was made to the appointment of non-officials to the management of State enterprises in these columns last week. Since then, the Congress Party has set up a committee, with Mr. Krishna Menon as chairman, to recommend the best form of management for units in the public sector, keeping in view the vital need of accountability to Parliament. Pending the report of this committee, the appointments mentioned in these columns have been held in abeyance.

Consultations on Steel Plant Progress

Two directors of the West German combine which is building the Rourkela steel plant, and their consultants, arrived here last week for consultations with the Steel Ministry. They, along with the Secretary to the Steel Ministry, Mr. S. Bhoothalingam, have gone to Rourkela. The visit of the German directors was referred to by the Steel Minister, Sardar Swaran Singh, when he said in the Lok Sabha recently: "In Rourkela, however we have encountered difficulties. Nevertheless, I had expressed the hope that the first blast furnace might still be commissioned before the end of the year. As a result of the measures we have taken, I am sustained in that hope. I had also mentioned that owing to the difficulty of finding suitable civil engineering contractors there would be some delay in the commissioning of the melting shops and the rolling mills. As things stand today, there might be an average delay of about six months. But I believe that by intensifying the effort and telescoping certain portions of the work it might be possible to reduce the delay in the commissioning of some departments. The directors of the German combine have been invited to come next week to discuss and decide the necessary measures."

The Russian chief engineer for the Bhilai steel project is coming to discuss the problem of coal with the Steel Ministry here. The managing director of the Indian Steelworks Construction Company, Mr. R J. Barritt, is arriving this week on a periodical visit to the Durgapur steel works.

Tool and Special Steels

The indigenous production of tool and special steels, excluding spring steels, is about 2,000 tons a year. There is a proposal to set up an alloy and special steel plant in the public sector. Preliminary reports have been received from certain foreign firms and have been examined. Detailed reports will shortly be invited from some of the firms who appear to be willing and capable of rendering assistance.

Industrial Expansion

During 1957-58, 101 new units were licensed and established under the Industries (Development and Regulation) Act while 161 units were expanded. The following are the details:

Name of Industry	Number of new units established	Number of units expanded
Metallurgical Industries:		
(a) Ferrous	8	12
(b) Non-ferrous	3	1
Coal	—	2
Internal combustion engines	2	—
Electrical equipment	—	5
Radio receivers	—	1
Vegetable oils, including solvent extraction oils	1	2
Soaps	—	1
Rubber goods	2	3
Leather and leather goods	2	1
Glue	1	1
Glass	4	—
Ceramics	7	—
Cement	1	5
Timber Products (Plywood)	1	—
Ships and other vessels	1	—
Railway rolling stock	—	4
Automobiles	4	1
Bicycles	2	5
Tea machinery	—	1
Chemical machinery	—	1
Cranes	—	1
Power driven pumps	—	2
Hand and small tools	3	3
Sewing and knitting machines	1	1
Weighing machines	1	1
Fertilisers	1	—
Heavy chemicals	2	19
Man-made fibres	—	1
Drugs and pharmaceuticals	2	10
Textiles made wholly or in part of cotton, including cotton yarn, hosiery and rope	31	60
Paper and paper boards	—	3
Sugar	13	10
Alcohol	2	3
Flour	4	—

Pulp Manufacture

Two schemes to establish factories in Assam and Madhya Pradesh for the production of pulp required for the manufacture of paper have been approved by the Government. The location of these units was decided after taking into consideration the availability of raw materials, transport and effluent facilities, and other amenities required for setting up industrial undertakings. Balmer Lawrie proposes to establish a new undertaking at Lamsakhang (Assam) with an issued capital of Rs. 310 lakhs and debenture stock of Rs. 167.34 lakhs. The company proposes to enter into an agreement with the International Finance Corporation of Washington for participation in the share capital. Arrangements are being made to import plant and machinery. The matter is now being considered by the Central Government.

Coal Tar Distillation Products

The output of various coal tar distillation products during 1957 was as follows:

Item	Production
Creosote oil (light) ...	529,927 gallons
Creosote oil (heavy) ...	705,908 gallons
Road tar	26,895 gallons
Pitch	4,240 tons

The production of these items is linked with the availability of tar for distillation. Supplies of crude tar are limited mainly because the steel companies are using more and more tar as a fuel in their steel furnaces.

Prospecting for Iron Pyrites

The only place where prospecting for iron pyrites is being carried on is Amjor, in the Shahabad district of Bihar. A total of 2,137 feet of drilling has been done so far by the Indian Bureau of Mines in eight bore holes. Pyrites have been found in seven of these holes. Their sulphur content varies from 38.99 percent to 46.14 percent. Some work in this connection has also been carried out by the Geological Survey of India in the Chittaldrug district of Mysore during the field seasons of 1950-51 to 1955-56, but not specifically for the purpose of establishing the manufacture of sulphuric acid. Fairly large deposits of pyrites, estimated at about 1½ million tons, have been discovered.

Cuts in Expenditure of Ministries

The following statement shows the estimated cost of various buildings and other major works which have been stopped by each Union Ministry during 1957-58:

Ministry	Estimated Cost Rs.
Ministry of Commerce and Industry	65,37,317
Ministry of Defence	2,71,30,000
Ministry of Education and Scientific Research	1,05,18,000
Ministry of Finance	42,89,330
Ministry of Food and Agriculture ...	56,70,564
Ministry of Health	18,54,015
Ministry of Information and Broadcasting	1,59,37,000
Ministry of Labour and Employment	1,49,32,000
Ministry of Rahabilitation ...	51,90,094
Ministry of Steel, Mines and Fuel ...	1,00,000
Ministry of Transport and Communications	57,92,502
Ministry of Works, Housing and Supply	2,83,32,596
Atomic Energy Establishment ...	48,00,000
	13,10,83,418

Output of Woollen Manufactures

The output of woollen and worsted yarn in 1957 amounted to 27.82 million lbs, and was 9 percent greater than in the previous year. Cloth production was 2.6 million yards higher than in 1956. The consumption of raw wool and wool tops by the organised woollen mills increased by 9.12 percent, bringing the total to 30.13 million lbs.

A. Production of Woollen and Worsted Fabrics of the Organised Woollen Mills (in million yards).

Fabrics	1953	1955	1956	1957
Suitings	5.33	4.55	5.42	6.30
Blankets and rugs	2.05	3.27	4.19	4.75
Melton and Shoddy	1.04	0.54	0.16	0.28
Lohis and Shawls	1.58	1.96	1.89	2.10
Uniform Cloth	1.22	0.86	0.97	1.26
Other sorts	2.53	2.78	3.71	3.80
Total	13.75	13.96	16.34	18.49

B. Production of woollen/worsted yarn of the organised woollen mills (in million lbs.)

	1954	1955	1956	1957
Woollen Yarn	8.90	10.28	11.62	13.10
Worsted Yarn	10.50	10.41	13.97	14.72
Total	19.40	20.69	25.59	27.82

C. Consumption of raw wool and wool tops by the organised woollen mills (in million lbs.)

	1954	1955	1956	1957
Indigenous raw wool	5.30	6.60	6.82	7.09
Imported raw wool	2.34	2.56	2.43	3.80
Imported wool top	10.12	10.82	14.38	14.74
Reclaimed wool and waste	2.48	3.44	3.85	4.50
Total	20.24	23.42	27.48	30.13

D. Installed Capacity

Woollen spindles	60,979
Worsted Spindles	1,17,359
Powerlooms	4,042

E. Rated Capacity (Worked on average counts and qualities on the basis of a single shift of eight hours)

Woollen yarn ...	8.5 million lbs
Worsted yarn ...	11.7 " "
Woollen and worsted fabrics	24.0 " "

London

TRIBUNAL REJECTS RAILWAY UNION CLAIMS

POSSIBILITY OF NATIONAL TRANSPORT STRIKE

(FROM OUR LONDON CORRESPONDENT)

THE week or so prior to the presentation of the Budget is invariably marked by suspense, and this year proved no exception. On the contrary, the hesitancy was increased by talk of a further cut in Bank rate and by the labour situation. The latter has become more difficult since the Railway Staff National Tribunal flatly rejected all the claims of the railway unions for more pay and shorter hours. With London's busmen committed to strike action on 5th May, the prospect of a national transport strike is brought much nearer. Workers on London's Underground have been holding back their claims only to see the result of arbitration in the case of the main line claims. The trade union member of the Tribunal, the Lancashire miners' leader, Mr. Edwin Hall, has appended a minority report suggesting that some pay increase is justified to restore the men's purchasing power to what it was a year ago, and that there should be further negotiations to work out a new wage structure.

In the Budget debate, it is expected that some indications will be given of the Government's plans in the event of a trade recession, although so far the American recession appears to have had little or no ill effects on British exports. These are understood to involve the extended use of export credits. Under present legislation, the Export Credits Guarantee Department is authorised to insure exporters' credit sales up to a limit of £750 million. The limit for guarantees which may be given specially in the national interest has been raised recently from £150 million to £250 million. If it becomes necessary for the Government to put more money into the economy, stimulation of exports will be in the first test to be applied. It is not felt that fresh legislation will be needed. It is likely that some extension of the powers to guarantee has been considered. If the need to stimulate exports develops sufficiently, the Government might be prepared to authorise loans to foreign Governments willing to spend money on British manufactures.

A Problem of Timing

These questions form the main theme of Sir Hugh Beaver's presidential address to the Federation of British Industries prior to his re-election to that office for the current year. He deals with the American recession in some detail, explaining its peculiar features and arriving at the conclusion that it will last until the autumn. It is the effect of this and of other factors—the fall in world commodity prices, the industrial nationalism of post-war years, etcetera—on the British economy which renders his survey particularly useful. Things are going to become more difficult and more competitive, and the question is whether Britain can hold and strengthen her position in the international market. "Costs and prices are the first problem that faces our economy; and it is therefore not satisfactory to have to note that last year incomes rose faster than output, income from employment, *e.g.*, wages and salaries, accounting for two-thirds of the 4 percent increase in home costs. Out of a total rise in the index of retail prices of 25 percent since 1952, only 1½ percent was due to rises in the cost of manufactured goods. This shows that there has been a large degree of voluntary restraint shown in these years; and it is certain that unless forces wholly outside our control set the pace, this attitude will continue." In order to achieve material reductions in costs and prices, two things are necessary. Britain must prevent further inflation, and achieve greater productivity. The Government is faced with the heavy responsibility of recognising at what point to call a halt to the present anti-inflationary restrictions. "If the Government acts too soon and too optimistically, we may be back where we were, and worse: if the Government delays over-long, we should see the position begin seriously to deteriorate." Sir Hugh says that it is not possible to curtail investment, particularly private investment, for very long without affecting both future productivity and the economy as a whole.

T.U.C. Urges Protection

How circumstances can alter cases is evident in the approaches likely to be made to the Government by the T.U.C. in the cause of protection and the maintenance of price levels—so diametrically opposed to its campaign for reducing the cost of living. The Economic Committee of the Congress has recently been considering New Zealand's complaints on the dumping of dairy produce in the U.K. by Continental countries to the detriment of New Zealand's exports, and the case of the Dundee jute industry if and when Britain joins a European Free Trade Area, as outlined by the jute industry trade union at last year's Congress. New Zealand's case, which is admitted to be a special one in view of her supplies of butter at a fixed rate to the U.K. when other suppliers were unable to help, is also being pressed on the authorities here by her Deputy Prime Minister, Mr. C. Skinner. The T.U.C. will support his pleas for anti-dumping duties to be imposed. As far as jute goods are concerned, the T.U.C. General Council is being urged to call on the Government to ensure that the measure of protection which the industry has enjoyed since the beginning of the last war is maintained and that adequate safeguards for all workers in the industry should be secured. Dundee's staple industry has been in existence for more than a century, and if protection is removed there will be great hardship in the area. Representatives of four of the jute unions have put this case to the Economic Committee and emphasised that Dundee is one of the areas in Scotland most seriously affected by unemployment. It has been decided to ask the Government what it is going to do about this unemployment and what form of protection it intends to give the jute industry.

Nationalisation and Redundancy

In quite a different direction, the T.U.C. is expected soon to be in consultation with the Labour Party. On 25th April, the Economic Committee and the engineering unions are to consider proposals for the nationalisation of the aircraft and machine tools industries, prepared jointly by the T.U.C. and the Confederation of Shipbuilding and Engineering Unions. Documents which have been exchanged by the two bodies show that they are in broad agreement. Once full formal agreement has been reached, the unions will probably ask the National Executive Council of the Labour Party, or possibly its study group working on the policy document, *Control of Industry*, to meet them. Leaders of the 245,000 textile workers of Lancashire are seeking to establish the principle of compensation payments to workers who become redundant when mills close down. They have drawn up a detailed plan which will be presented at a meeting in Manchester with the employers' organisation. During the past five years, more than 250 Lancashire mills have shut and many thousands of workers have been affected. Many of the mills have been forced to close because of competition from cheap textiles from the Far East.

Back from Malaya

A service to help former Government officers retiring from Malaya and Singapore after the grant of independence is getting into its stride. So far, the Malayan Services Re-employment Bureau has placed 115 people in jobs. Its offices are in Sanctuary Buildings, Great Smith Street, Westminster. Set up last summer with the assistance of the Colonial Office, the Bureau has 321 names on its books, including doctors, engineers, former administrative officers and policemen. Twenty names a month will, it is expected, be added to the register for some time to come.

Factory Building Plans

The U.K. Board of Trade figures for factory building schemes approved in the first quarter of this year show a sharp drop in area, but numbers are well maintained. In the first quarter of 1958, plans for 11.8 million square feet of new industrial building and of extensions to old buildings were planned. That is markedly less than the 13.8 million square feet approved in the last quarter of 1957 or the 15.5 million square feet approved in the first quarter of 1957. The decline in the number of schemes approved, as distinct from aggregate area, has been far more modest. In the first quarter of 1958, the number was 583, against 595 in the fourth quarter of 1957 and 588 in the first quarter of 1957. There are fewer big building schemes but lots of small ones and extensions.

Pakistani Immigrants

The British and Pakistani Governments have discussed the immigration of Pakistanis to this country, for, in the words of a Commonwealth Relations Office spokesman, "accelerating immigration is creating an acute unemployment problem for them." Those wishing to come to Britain will in future have to pay increased deposits when applying for a passport. Their Government is considering the repatriation of Pakistanis living on the dole here. A spokesman at the Pakistan High Commissioner's office in London has said: "An almost insignificant number of our nationals have approached us asking to be repatriated. We are enquiring into these cases." In a Parliamentary answer a month ago, Mr. Butler, Home Secretary, estimated that about 5,000 Pakistani immigrants came to Britain last year. In the Birmingham area alone, there are 1,300 unemployed Pakistanis. There are substantial groups in Bradford, Attercliffe, Coventry, Walsall, Manchester, Liverpool and Stepney.

Brevities

Mr. R. N. Drake, Chief Manager of the Mercantile Bank, retires at the end of April but will remain on the Board. Mr. C. R. Wardle will succeed him as Chief Manager.

Opportunities to develop trade in the Middle East will be investigated in May and June by Mr. Vaughan-Morgan, Minister of State, Board of Trade, and chairman of the Advisory Council on Middle East Trade. He will be accompanied by Mr. W. H. McFadzean, vice-chairman and industrial leader of the Council.

Lombard Banking, which recently formed a subsidiary in Uganda, has now established a subsidiary to operate in Singapore and Kuala Lumpur. It will provide credit finance for plant, machinery, equipment and vehicles for industry, commerce and agriculture. The managing director of the new offshoot, Lombard Banking (Far East), is Mr. Alan Waugh, formerly chairman of Henry Waugh and Co. and a number of tin and rubber companies.

Exports Now Serve A Double Purpose

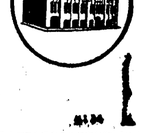
They add to our foreign exchange resources which are at present at a dangerously low level

•

More exports mean more industrial activity and the easier realisation of the Five Year Plan

•

We in the Indian Bank are fully equipped to advise and help you on all matters connected with export trade



THE INDIAN BANK LTD.

RISING COSTS IN TEXTILE INDUSTRY

INFLATION AFFECTS DEMAND FOR CLOTH

(FROM OUR BOMBAY CORRESPONDENT)

PERHAPS it would be correct to say that the aims of the second five year plan, "rather than being ambitious, are urgent," said Mr. Ramnath A. Podar, addressing the annual general meeting of the Bombay Millowners Association. Mr. Podar was of the view that the second plan would not have run into difficulties had the favourable conditions prevailing during the first plan continued. Increased investment during the last two years of the first plan and the expansion of Treasury bills had led to an inflationary pressure which was still continuing.

Referring to the cotton textile industry, Mr. Podar said that 1957 was the most disappointing year in the last two decades. Stocks with mills mounted, which meant that the industry was compelled to lock up large sums of money. "Many mills were compelled to resort to the desperate expedient of making distress sales in an attempt to reduce accumulations and. having failed in this attempt, they were eventually forced either to close down completely or to curtail production. According to recent information, 26 mills, including those that had closed down in previous years, have dropped out of business, affecting some 25,000 workers, while a number of others had to curtail production—in some cases drastically," Mr. Podar said. An accumulation of two months' stock entails a frozen investment of some Rs. 66 crores. In the absence of a quick turnover, mills were forced to resort to borrowings and to mortgage their assets which were urgently required for plant rehabilitation and modernisation. The inflationary pressure and the increase in the cost of living had hit the textile industry. The demand for cloth, which had risen steadily during the first plan period, had tapered off, Mr. Podar said.

Discussing the excise duty on cloth, Mr. Podar said that it was sharply increased on 1st September, 1956, but with the accumulation of cloth stocks and the adverse effect on production and employment, the Government announced a reduction in the excise duty on medium cloth last December. This measure was not adequate and the Government followed up with further concession in March which covered all categories. The total relief is estimated at Rs. 15 crores. "It is too early to say what effect the scaling down of the excise duty will have on the textile trade and industry in the coming months," Mr. Podar said. Cotton costs and wages account for nearly 80 percent of the total manufacturing cost and both these have risen greatly in recent years. "To take the example of three well known varieties of cotton, the price a candy of Surti in 1955 was Rs. 866, but it rose to Rs. 1.020 in 1957. While the prices of Punjab American 216F and Jayadhar were Rs. 758 and Rs. 777. respectively, in 1955, they shot up to Rs. 913 and Rs. 970. respectively, in 1957. At the same time. the industry is required to pay a heavier wage bill in the shape of increased dearness allowance. due to the rise in the consumer price index number and the higher neutralisation percentage awarded by the Tribunal. The increase in the dearness allowance payable by the cotton mills of Bombay city alone amounts to Rs. 3.42 crores a year since 1955."

Mr. Podar urged the need gradually to introduce automatic looms as a means of modernising the industry. "Also from the point of view of export promotion, modernisation will have to be undertaken with greater vigour. The planners have prescribed an export target of 1,000 million yards of cloth a year besides laying down that cotton yarn and manufactures should earn annually an average of Rs. 75 crores during the current plan period. In a highly competitive world market, where price and quality are the only criteria, these goals are likely to prove elusive unless the industry has the advantage of efficient productive equipment."

Cotton Futures Fall

There was a fall in cotton futures prices following heavy unloading by nervous bulls. The spot market also declined and prices in upcountry centres dropped by about Rs. 30 a candy which caused concern here. It is said that the delay in the announcement of an export quota of ¾ in. stapling and the release of a smaller import quota from soft currency areas caused considerable uncertainty. Advices from upcountry centres were not conducive to speculative activity and prices in the local spot market received a setback. There was heavy unloading by local and upcountry bulls. The Jarilla May contract opened at Rs. 674.50, but gradually declined to a new low of Rs. 660.25. It recovered to Rs. 668.50 during the week, but the closing quotation was Rs. 666.75. The Jarilla August contract followed a similar trend. It opened at Rs. 680 and closed at Rs. 676.50. In the spot market, Laxmi came down from Rs. 1,060 to Rs. 1,020, while Jayadhar lost 30 points at Rs. 875 a candy. Western Farm declined from Rs. 680 to Rs. 650, Kala Gin by 25 points to Rs. 630 and Wagad from Rs. 655 to Rs. 633 a candy. The only exception was Bengal Deshi which remained unchanged around Rs 580 a candy. The fall was equally heavy in upcountry centres, particularly in Andhra and Mysore where the marketing of the new crop is in full swing, and also in Saurashra and Gujerat which have yet to market around 30 percent of the produce. The marketing season has just commenced in Madras. The export market was disappointing. In spite of a reduction in the export duty on Bengal Deshi and the the quotas for other Deshi varieties, demand was poor.

Slower Trading in Piecegoods

Demand in the local cotton piecegoods market slackened following the brisk business done in the previous week. But it is reported that stocks with upcountry centres are moving and the wholesale trade here believes that there will be a revival in th Bombay market shortly. A curious feature is that interest is mainly confined to fine and superfine qualities. Delhi, Amritsar and South Indian merchants have shown the greatest interest. There has been hardly any demand from overseas buyers. Official figures indicate that the production of cloth amounted to 410 million yards last month, against 392 million yards in February. Production in March 1957, however, totalled 453 million yards. Taking the first quarter of this year as a whole, production fell to 1,239 million yards, against 1,371 million yards in the corresponding period of last year. More serious is the fact that exports fell by nearly 90 million yards in the first quarter of this year. The actual figure was 165.62 million yards, against 255.29 million yards during January-March 1957. These figures relate to shipments made from Bombay Port.

Vegetable Oils and Oilseeds

There was considerable bullish activity in groundnuts because of a strong tehnical position. The castorseed market was somewhat jittery in the initial stages, but recovered later because of the possibility of overseas business in castor oil. Largely because of the continued demand from vanaspati manufacturers and dwindling arrivals, the groundnut futures contract exceeded the Rs. 165 margin limit and advanced to Rs. 166.73. A margin of Rs. 2.500 a 100 candies has been imposed on all outstanding business. The rise in the futures market, however, was not speculative as spot material commanded a premium of about Rs. 5 a candy while buyers were willing to pay a higher premium of Rs. 10 for good quality Madras variety. Yet another indication of the marked strength in the spot position was the fact that the excise duty free oil sold at par with the duty paid oil. Further, trade estimates were gradually revised downwards for the groundnut crop from 240,000 tons to around 200,000 tons in terms of kernels.

The May castorseed contract came down from Rs. 154.62 to Rs. 154 because the trade was hoping for a greater reduction in the export duty for oil. In any case, the present reduction is not expected to bring about any significant change in the country's position in world markets. Exports to the United States continue to be impossible since Indian prices are still higher than those of Brazil by at least 2 cents a lb. The outlook is said to be less discouraging in the case of the U. K., although much depends on the attitude of London buyers over the next few weeks. Shippers here who had rushed offers for commercial oil to Britain at £116 to £116 10s in bulk received counter-offers of £114 a ton. However, business of about 300 tons was said to have been completed with the U. K. around £115 a ton for immediate shipment. This, together with consistent reports that Russia was interested in Indian castor oil, pepped up sentiment near the end. Linseed was comparatively inactive. The spot market remained neglected while futures met with short-covering at lower levels. Prominent exporters were reported to have settled their commitments in the futures section. Reports that business was completed with Australia at £113 a ton for 240 tons failed to enthuse the market.

OURS is a story worth telling. It is really a chapter in the story of our country's industrial progress. India's first ring spinning frame rolled off our assembly lines in 1946. We have since added other firsts to our credit—the Lancashire type boiler and the water-tube boiler. Some of the largest sluice gates in India have been erected by us at Rupar. At Hirakud we have provided giant penstock liners. For the Indian Railways we manufacture rolling stock and locomotive boilers. At Sindri our chemical plants and equipment are at work. We have started manufacturing sugar and jute mill machinery. For the D.V.C. we are now fabricating a variety of equipment. Our products are manufactured to international standards and in technical collaboration with the world's best know-how. This is how Texmaco serves India's basic industries.

a story worth telling

FIRM FIBRE MARKET PUSHES UP GUNNY PRICES

MORE BUSINESS WITH OVERSEAS BUYERS

THE Calcutta jute goods market has staged a recovery during the past week. With sacking and hessians reaching new high levels, confidence has returned. There has been considerably more interest from overseas consumers. Enquiries from Egypt, the Argentine and the United States, coupled with internal business for the Central Government, have prompted a bullish tendency. The improved gunny stock position, principally in hessians, started the rise, which has since been maintained by a very strong jute market. Mills have been keen sellers at the enhanced rates, especially since the holidays, as the premium for forward shipment heavy goods has shown an increase on demand from consumers. The near positions have held little attraction for mills; most of them have only small balances for that position, having sold forward at premium rates some months ago. Speculative support in both sections has been reported and the confirmation of foreign business has pushed up prices still further. The publication of the I.J.M.A. production figures has caused a slight recession. These show that output during March was exactly the same as in February, in spite of the fact that there were 5½ more working hours last month. There was no significant change in the percentage rates of sacking and hessian to account for this, and the cause was really the Ramzan. During this period, the workers' efficiency is affected and production invariably suffers. The shipping statistics have also been poor. Towards the close, these factors have been discounted, and both sacking and hessian are well maintained by a strong raw jute market.

Illegal Trading

It is reported that illegal futures trading has been taking place in raw jute and jute goods. The Enforcement Branch of the Calcutta Police has taken over 100 people into custody in this connection, and seized documents and accounts after raiding several premises. The allegation is that they have contravened the provisions of the Forward Contracts (Regulation) Act, 1952. The East India Jute and Hessian Exchange is the only body allowed to conduct futures trading in these commodities. Since the opening of the Exchange, the market has not seen excessive speculative activity, but it appears that many operators continue to deal in an unofficial fatka market. Following the police action, activity in the official market has come to a standstill, and quotations are nominal. In the interests of the trade, it is hoped that the Enforcement Branch will continue to be vigilant in stamping out illegal business. It is encouraging to note that the authorities intend to enforce the stern warning given to would-be offenders by the Commerce Minister at the opening of the East India Jute and Hessian Exchange last month.

The raw jute market is very strong. Many mills have supported it and a fair amount of business has been done. Sellers are very reserved and show no interest in indications below the quoted rates; in fact, all fresh business has been conducted at rising prices. The upcountry markets are mainly responsible for the rise. The availability of jute there is very small, and demand is heavy, so premium prices are being asked and paid. The shortage of jute upcountry is reflected in recent arrivals at Cossipore. Last week, only 240 wagons reached the sidings and this was less than half the number that arrived during the corresponding period of last year. Most of the remaining crop is now in the hands of stockists, and they appear to have adequate financial resources to hold out for higher prices. Large quantities of jute have still to be covered against recent sales. and as much of this calls for a high assortment of Middles, fibre in this category is in great demand. Upcountry markets are currently operating at a premium of about Rs. 1.50 a maund over Calcutta rates. The weather in the jute-growing areas has added to the steadiness of the market. Although most areas are reporting rain, much more is still required, especially in the Daissee districts, where rainfall has been negligible. The preparation of land in these areas is being held up as the ground is too hard to plough.

I.J.M.A. Production Figures

The production of jute goods during March 1958 amounted to 85,300 tons, and showed no change from the previous month. Working hours increased by 5½ to 197.5, but due to a drop in efficiency during Ramzan output suffered. Hessian production increased by 300 tons to 30,400 tons (35.6 percent) and sacking by 200 tons to 49,500 tons (58 percent). This was offset by a drop of 500 tons in other goods, which stood at 5,400 tons (6.3 percent). In March 1957, production totalled 84.700 tons for a 200.5-hour working month. The proportion of hessian manufactured was 42.5 percent, of sacking 50.9 percent and of other goods 6.6 percent.

Raw Jute Consumption

Raw jute consumption last month was the same as in February at 497,300 bales, making a total for July 1957 to March 1958 of 4,609,900 bales. In March 1957, the consumption was 494,000 bales and in the 1956-57 season up to that month it was 4,495,600 bales. Thus, in the current season, consumption is up by 114,300 bales.

Alliance Mill to Close

The Alliance Jute Mill in the Bird-Heilgers group of jute mills will be closed down from 3rd May and its loom hours will be worked at Auckland, Northbrook and Lansdowne. The looms will be distributed as follows: 317 looms to Auckland, 100 to Northbrook and 317 to Lansdowne.

THE JUTE MARKETS

Manufactured Goods: The gunny markets opened quietly last Thursday, with most fabrics recording small gains. Local shipper covering was mainly responsible for this, but mills showed little interest at this stage, especially as indications were mainly for near shipment. B Twills recorded a rise of 60nP at the opening to be quoted at Rs. 99.85 for April shipment, with July-September shipment standing at Rs. 101.10. Hessians also improved and 40in. 10oz. advanced to Rs. 40.05, with forward shipment at a premium of 30nP. Rates were well maintained over Thursday and Friday, with small fractional gains being recorded. Towards the week-end, reports of foreign enquiries caused a bullish tendency to develop. An order for cotton packs from Egypt combined with internal business for sacking with the Central Government pushed up prices. On Saturday, sacking was 50nP higher and hessians were up by 25nP. Mills showed interest at these levels and a fair amount of business was reported, mainly in forward shipment. Further support for gunnies came from the raw jute section. More foreign enquiries were received and over the week-end, prompted by the steadiness of jute, prices again rose. At the opening on Tuesday, after the holiday for the Bengali New Year, substantial gains were recorded. B Twills were quoted at Rs. 102.25, which was Rs. 2 higher than before the holiday; the forward section improved by Rs. 2.25, and was at its highest since early February. New high levels were also recorded in hessians, where 40in. 10oz. was quoted at Rs. 40.80 in the near position. Mills again took an interest, and fresh business was put through, but very little of this was against foreign enquiries. Prices continued to advance throughout the day, supported by raw jute, and very firm conditions prevailed.

At the opening on Wednesday morning, quotations were as follows:

	April Rs.	May Rs.	June Rs.	July-Sept. Rs.
40in. 8oz.	32.90	33	33	33.10
40in. 10oz.	41.10	41.30	41.40	41.50
B Twills	102.50	103.40	103.60	104.15
Heavy Cees (Plain)	101.75	103	103.25	104.25
A Twills	122.50	123	124	125
Liverpools	115	115.50	115.60	116
Cornsacks	103.15	104.10	105.40	106.25

Raw Jute: There was increased activity in the fibre markets, and a fair quantity of business was reported daily. Prices advanced throughout the past week, and in all cases full market rates were paid. There was a demand for Middle quality jute, and also Tops, so in order to obtain their requirements buyers frequently had to pay premiums. Sellers were very reserved as the firm upcountry markets gave them no margin to work on. Only small quantities of jute were on offer in the mofussil, and there was keen competition for each lot as it was released. With the advent of the Bengali New Year, a fair amount of "lucky day" business was put through, but with mills selling fair quantities of gunnies, the greater part of it was genuine covering against sales. Local markets were very firm. From an opening last Thursday of Rs. 25 a maund basis Bottoms for Assam-Northern fibres, there was a daily increase until the same fibres were on the basis of Rs. 26.75 at the close. Sellers were still reserved at this level and the quantity of business done at the higher levels was much smaller than earlier in the week.

Business was reported in Northern and Assam jute at Rs. 25 to Rs. 26.50 basis Bottoms, and also at Rs. 28.50 to Rs. 29.75 for Middles only. Tops were reported at Rs. 35 and Rs. 36 a maund. The main business was in these categories. Small parcels of Tossa passed at Rs. 28.50 to Rs. 28.75 basis Bottoms, and local packing at Rs. 24.50. Interest in mesta slackened and only odd lots at Rs. 23.50 were reported. In cuttings, mills paid Rs. 71 to Rs. 74 a bale for shipment under buyers' licence and Rs. 85 a bale for ready shipment under sellers' licence.

The Cossipore markets were very steady due to the increase in demand and the small imports. Wagon arrivals totalled only about 240; this was 60 less than in the previous week, but 310 less than during the corresponding week of last year. All arrivals found ready buyers, with the demand centred on Middle quality jute.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	26.75	April-May
Northern	26.75	"
Purnea Desal	25.50	"
Daissee	30.25	"

THE FOREIGN JUTE MARKETS

ANXIETY ABOUT FIRMNESS OF FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE fact that raw jute prices are maintained is worrying the trade, which has been hoping for a fall. Reports from Pakistan say that there is scarcely enough jute coming forward from upcountry markets to meet the demand. Continental consumers have taken fair quantities and Dundee spinners are buying fairly steadily. Although fresh business in manufactured goods is slow, they have a fair number of orders on the books and they are hoping for an improvement in demand soon At the moment, there is little incentive to buy the raw material, the price of which has risen by 20s or 40s a ton. Mill Firsts have become lowest at £115 and some are asking as much as £117, with Mill Lightnings now lowest at £101 and up to £106 wanted. Mill Hearts are from £90 and grade Hearts £75, all April-May, c.i.f. U.K. Dark jute is being bought in small quantities at the higher rates of £101 lowest for crack marks of Daissee-2/3 and £95 for grade. Grade Tossa-2/3 is not freely quoted at from £111 and fours from £103, c.i.f. U.K., April-May. Some shippers have had their shipment time put forward to May-June. So far, no mention has been made here of new crop fibre. Perhaps those firms which formerly were prone to speculate in it are now afraid to mention it because the Pakistani Jute Board suspended four London merchants a few months ago. Happily, the trouble there has now been amicably settled.

Calcutta goods have become dearer. Jute yarns and cloth are firm but buyers are still showing little interest.

I.J.M.A. PRODUCTION FIGURES FOR MARCH

The Indian Jute Mills Association reports that the total production of jute goods during March was as follows:

Description		Quantity
1. Gunny Bags		
(a) Hessian	3,368	tons
	96.2	lakh yds.
	63.0	lakh Nos.
(b) Sacking	48,006	tons
	11,69.8	lakh yds.
	4,90.7	lakh Nos.
2. Gunny Cloth		
(a) Hessian	26,996	tons
	10,89.8	lakh yds.
(b) Sacking	1,507	tons
	31.4	lakh yds.
3. Other Manufactures	5,373	tons
4. Total production (above figures combined)		
(a) All kinds	85,250	tons
(b) Hessian (Both bags and cloth)	11,66.0	lakh yds.
(c) Sacking (Do)	12,01.2	lakh yds.

Summary

	(00,000 Yds.) March 1958	Feb 1958	March 1957	(000 Tons) March 1958	Feb. 1958	March 1957
Hessian	11.66	11.67	14.01	30.4	30.1	36.0
Sacking	12.01	12.00	10.18	49.5	49.3	43.1
Others				5.4	5.9	5.6
Grand Total:				85.4	85.3	84.7
Hours worked:				197.5	192.0	200.5

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai, with estimates for three non-member mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th April 1958	146.8	6,320.1	6,466.9
1st to 5th March 1958	637.2	7,279.6	7,916.8
1st to 5th February 1958	324.6	10,968.1	11,292.7
	Sacking		
1st to 5th April 1958	3,146.7	160.6	3,307.3
1st to 5th March 1958	2,893.7	70.5	2,964.2
1st to 5th February 1958	4,710.2	113.6	4,823.8

CO-ORDINATING DEVELOPMENT OF CASHEW INDUSTRY

FORMATION OF ADVISORY BOARD URGED IN KERALA

(FROM A SOUTH INDIAN CORRESPONDENT)

THE constitution of a State Advisory Board for the cashew industry has been recommended by a conference of the representatives of factory owners and trade unions connected with the industry, convened on 8th April in Trivandrum by the Kerala Government. Other recommendations of the conference are that the cashew industry should be brought within the purview of the Industries (Development and Regulation) Act, 1951; the Government should take effective steps to bring the required additional area under cashew cultivation so as to attain self-sufficiency in raw nut production; and a trading corporation should be established for the industry. In relation to the last recommendation, factory owners want some time to consider it, so they have been asked to give the Government their views before 23rd April.

Unhealthy Competition

Mr. K. P. Gopalan, Kerala's Industries Minister, presiding over the conference, has spoken of unhealthy competition in the procurement of raw nuts as well as in the marketing of the products. Such competition harms the development of the industry. Unless control and regulation are exercised both over the procurement of raw nuts and over the marketing of processed nuts, it will be difficult to co-ordinate the different activities economically and to establish the industry on a healthy basis, the Minister says. He suggests establishing a trading corporation to procure and distribute raw nuts and to market processed kernels. The Minister is confident that a beginning can be made in this way and that the activities of the corporation can be developed gradually so as to make it more comprehensive and more effective in its coverage. He also suggests adopting statutory measures to prevent any expansion of the industry which is not commensurate with the availability of raw materials. He feels that by bringing the industry within the purview of the Industries (Development and Regulation) Act, 1951, its lop-sided expansion can be checked.

It has been announced that the Central Spices and Cashewnut Committee will meet in Mercara on 6th May to consider the schemes submitted by various States for research and development concerning spices and cashewnut. Other subjects related to the development of these crops will also be discussed.

Rubber Replanting Subsidy

The Rubber Board has just announced certain major concessions in the terms and conditions for giving replanting subsidies to rubber growers. Under the new rules, no distinction will be drawn between the small grower and the large grower in relation to the minimum and maximum area on which replanting has to be done in a certain year. There will not be any ceiling on the area that may be replanted in an estate. The minimum that will qualify for subsidy will be one acre. The age of the trees that have to be uprooted for replanting or the yield from them will not be taken into consideration when the request for a subsidy is examined. Under the new rules, a subsidy will be given for replanting rubber area having low-yielding unselected trees planted in or before 1956, irrespective of whether the present stands are yielding or not. It is not compulsory that the yielding trees on the replanted area should be uprooted immediately. They can be removed gradually. Inter-planting with other crops will be allowed under certain conditions. Other trees, like coconut and jack trees, can be retained, subject to the maximum prescribed by the Board. Under the old rules, no more than two such trees could be retained. Small growers are allowed certain other forms of assistance also like grants for anti-soil erosion measures and the supply of seeds and manure at subsidised rates.

As a result of these concessions, rubber growers may show more interest in the replanting scheme sponsored by the Rubber Board. But to get the full response, the Board will have to raise the subsidy, which amounts to Rs. 400 an acre in the case of small growers owning less than 50 acres and to Rs. 300 an acre in the case of large growers owning 50 acres and more. The rates quoted are the maximum. They go down on a slab basis when the acreage increases. The subsidy offered in India is too low compared with the subsidies given in Ceylon and Malaya, the other two countries having subsidised replanting schemes. Another factor which has to be taken into consideration is the high cost of replanting in south India. It is estimated that Rs. 1,000 to Rs. 1,500 is required to replant one acre and to maintain the plants until the yielding age. The subsidy the Board offers should have some relation to the cost involved.

Increasing Requirements

India's rubber requirements are increasing at a faster rate than production. Towards the end of 1957, the gap between the two was as wide as 7,988 tons, compared with 1,198 tons in 1952. The shortage is likely to increase in coming years in view of the proposed expansion of the manufacturing industry. Besides the expansion plans of the existing units, two or three new tyre factories are likely to be established shortly—one in Madras, another in Bombay and the third in Kerala. Therefore, the country is now faced with the need to increase production by all possible means. Experience shows that by giving rubber growers a price incentive, production can be improved considerably. Growers have been pleading for a revision of the statutory price of rubber for some time now on the ground that the cost of production has gone up considerably during the past two years on account of increases in wages and bonus as well as in taxes. When they were getting a fairly satisfactory margin, they planted extensive area with rubber. In 1955 and 1956, new plantings were on a large scale. Since then there has been a decline, according to planting circles. The question of revising the price, it is expected, will be taken up by the Tariff Board some time this year.

By-election

Voters in the Devicolam-Peermade plantation area in Kerala will go to the polls on 16th May to elect a member to the State Legislature. The by-election is being held to fill the vacancy caused by the election of Mrs. Rosamma Punnose (Communist) having been declared void by the Election Tribunal on an appeal filed by her Congress rival after the last general election. Mrs. Punnose is president of the Communist plantation labour unions in the High Ranges. The Communists and the Congress are intensifying their campaign in this area. The by-election is a matter of life and death for the Communist Ministry in Kerala for it now has only a single-vote majority in the State Legislature. If it loses the by-election in the Devicolam constituency, its continuance in office would become difficult. Knowing this, the Communist Party has been trying its best to strengthen its position among plantation workers, who form nearly 80 percent of the voters in this constituency. It is pointed out that most of the disturbances on the plantations in this area since May last year have been engineered by political parties with the ulterior motive of winning this strategic by-election.

CALCUTTA TEA AUCTIONS IN MARCH

GOOD GENERAL DEMAND

FIVE tea sales were held during March, at which a total of 290,000 packages was offered. There was a good demand throughout the month, especially for teas with improving quality and autumnal character which were keenly sought after, say Messrs. Carritt Moran & Co. Private Ltd. in their monthly tea market review. Flavoury Darjeelings sold well and stylish whole leaf grades were firm, while there was good support for the limited number of tippy teas on offer. Fannings generally were a strong feature, especially where they had good clean leaf appearance or useful liquors. Thin liquoring brokens, however, showed an easier tendency, especially where stalk showed an increase. There was little change in the quotation for good C.T.C. teas, and although the value of the poorer types again declined, they attracted fair interest at the lower rates. Non-wither Dooars teas were well supported, but some of the plainer liquoring types without compensating leaf appearance, were easier. A few of the better liquoring ones were keenly sought after at dearer rates.

Darjeeling Leaf appearance during the month showed a marked decline, and most of the teas from this district were brownish end-of-season types. A number of invoices had quite attractive autumnal flavour, but some tended to be rather "wild" and "woody" in character.

In Assam, the dry leaf became browner in appearance, and a little more stalk and fibre were present in the lower grades, but the general standard of leaf appearance was fully average for the time of year. Cup quality was well maintained, and towards the end of the month many teas showed improvement, being bright in cup with fair autumnal character. The appearance of Dooars teas was satisfactory, and on the whole, above average for the time of year, although in some instances stalk and fibre showed some increase. The liquors of non-wither Legg-cut teas were for the most part of a useful description and some orthodox teas showed improvement, being brighter in cup with a little cold weather character. There was, however, a fair quantity of tea on offer with rather plain and ordinary liquors. Although there were some well made black leaf teas with bright and sweet liquors catalogued, the bulk of the offerings from Cachar were comparatively plain in cup, and stalk and fibre became more prominent. The general standard, however, may be taken as about average for the time of year.

Sale No. 39	" "	1.46	1.66

Internal Market

There was a total of 19,413 chests of leaf catalogued for sale. The increased number of chests on offer met with a good general demand, but prices showed regular declines until the final sale when there was some improvement particularly for C.T.C. Assams. Altogether a total quantity of 78,349 of Dust chests was on offer. Again a few invoices had some early autumnal character. There was a good general demand during the early part of the month which strengthened in the two final sales. Middle East interest improved as the month progressed, but was barely maintained in the final sale on 25th March. Prices for orthodox sorts declined in the second sale but rose in the following sale, and were finally, in the last sale, dearer than at the beginning of the month. C.T.C. Assams were an irregular feature. The best liquoring kinds continued to sell well, but the prices of all the descriptions in this category were barely maintained.

Export sales up to and including No. 38, totalled 1,913,841 chests at an average price of Rs. 2.14, compared with 2,020,206 (Rs. 2.41) in the comparable period of the previous year. Internal sales at 83,330 chests of Leaf and 638,902 chests of Dust (Rs. 1.43 and Rs. 1.39) go against 76,124 chests and 658,793 chests (Rs. 1.63 and Rs. 2.15), respectively.

The price of export quota declined gradually throughout the month from 5¼nP to 4¼nP a lb., in the first week, and then to 4nP a lb. towards the middle of the month, some business being transacted on 20th March at 4¼nP a lb. It was announced that 20th March was the last date on which the Licensing Committee would register quota transactions, prior to the conversion of all export quota balances to special export licence which would be valid from 1st April. Some business was transacted in special export licence at between 2¼ and 3nP a lb. after 20th March, the price being 3nP a lb. at the close. These transactions were registered in the books of the Licensing Committee on or after 1st April.

Arrivals in Calcutta warehouses (in chests) during the period 24th February to 23rd March, 1958, with the corresponding figures of the previous year in parentheses, were: by steamer 36,495 (10,182), by rail 12,413 (6,023) and by air 3,281 (4,071), making a total of 52,189 (20,276) chests. Arrivals since the beginning of the season 1st April, 1957 to 23rd March, 1958 have been: by steamer 3,094,391 3,331,516), by rail 1,077,939 (1,055,828) and by air 187,193 (164,364), making a total of 4,359,523 (4,551,708) chests.

COCHIN TEA SALES

At Sale No. 9, 2,250,000 lbs of tea were on offer. There was a limited demand which lessened considerably as the Sale progressed. Best liquorings declined up to Re. 1, good mediums and mediums were 20 to 30nP easier, while low mediums and whole leafs were 15 to 25nP lower.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of March:

Upper Assam: Weather abnormally dry and too hot for the time of year, and rain is much wanted everywhere, immediate prospects fair.

Central Assam: Weather dry and hot, rain is badly needed; prospects normal to poor.

Lower Assam: Weather hot and dry and rain is much wanted; prospects poor.

North Cachar: There has been severe heat, and rain is badly needed; prospects poor.

South Cachar: Weather abnormally dry and unless rain falls shortly, leaf prospects generally will be poor; red spider blight prevalent.

Eastern Dooars: Outturn last month poor; hot and dry weather is interfering with outturn and rain is much wanted; looper caterpillar prevalent in Kalchini.

Central Dooars: Immediate prospects fair; weather abnormally dry and rain is badly needed.

Western Dooars: Hot and dry weather is interfering with outturn, which to date is slightly under last year; immediate prospects fair, but unless rain falls shortly leaf prospects will be poor.

Darjeeling: Outturn last month very poor; immediate prospects very bad; weather abnormally dry; red spider blight prevalent

Terai: Drought conditions prevail; immediate prospects poor; red spider in evidence.

DEATH OF MR. A. N. STUART

While on a visit to his tea interests in East Africa, Mr. A. N. Stuart died suddenly on 15th March in Dar-es-Salaam. A leading figure in tea circles in India, Africa and the U.K., Mr. Stuart was chairman of Alex Lawrie and Company, as well as its various subsidiary concerns. He was chairman of Butler's Wharf and deputy chairman of the National Bank of India. Educated at Harrow and Balliol College, Oxford, Mr. Stuart came to India as a partner of Balmer Lawrie and Company. After a period of service in the Army during the first world war, he joined Alex Lawrie and Company in England as a partner, and became a director when that concern became a limited company, eventually succeeding the late Mr. Percy Balmer Lawrie as chairman Mr Stuart took interest in all lines of his company's activity, which included tea, paper-making, flour milling, heavy and light structural steel works and electrical construction works, but the growing, manufacture and marketing of tea was his biggest interest. He was one of the pioneers in the application of science to tea production, and it was largely due to his initiative that an investigation was started into the chemistry of made tea.

Engineering and Transport

AIR BOOKINGS OF FOREIGNERS SERVING GOVERNMENT

FINANCE MINISTRY SUGGESTS USING A.-I.I.

(FROM OUR NEW DELHI CORRESPONDENT)

THE Secretary to the Central Ministry of Finance, Mr. B. K. Nehru, has circulated a memorandum saying that, "apart from the foreign experts and technicians obtained under the various foreign aid programmes, quite a number of foreign nationals are engaged by the Government, both Central and State, statutory bodies and various industrial undertakings in the public sector. Air passages for them are very often booked with foreign airlines. This results in avoidable drain on the foreign exchange resources of the country. Air-India International is operating in a number of countries in Europe, Africa and Asia, but even where it has no such service, it is in a position to book passages to and from every destination due to its inter-line agreements with numerous airlines. It is, therefore, considered that in future contracts for engagement of foreign technicians, there should be a clause stipulating that all payments for the transportation of these technicians and their families would be made direct to Air-India International by the Government or the Government organisations employing them. As far as past contracts are concerned, similar efforts should be made to book the passages of these technicians and their families with Air-India International as far as possible. This Department would appreciate it if these instructions were brought to the notice of all concerned immediately."

Improving International Airports

Of the three international airports in the country, it has already been decided to extend the main east-west runway at Santa Cruz in order to make it fit for use by jet aircraft, at an estimated cost of Rs. 4 crores approximately. As for Palam and Dum Dum, the matter is under consideration, and a decision, it is expected, will be taken at an early date. Certain additions and alterations are being carried out to the existing terminal building at Palam airport. A more spacious hall for Customs examination of international passengers and separate lounges for arriving and departing passengers have already been provided. The work relating to the provision of a transit lounge for passengers passing through Delhi is in progress. It is proposed to air-condition the restaurant and the transit lounge.

Enquiry on Indamer

After his enquiry into allegations of irregularities on the part of the Indamer Company, Mr. R. N. Katju has submitted his report. The enquiry has shown that certain irregularities were committed by some of the pilots and engineers of this concern. The non-scheduled operational permit of the company was not renewed when it expired on 28th February 1958. Appropriate action against the employees concerned is being taken by the Director-General of Civil Aviation.

Economy Class on Transatlantic Routes

On the transatlantic routes between north America and the eastern hemisphere, both first and tourist class fares have been slightly increased. But this is counter-balanced by the introduction from April of a new low economy class fare at $(U.S.)63 below that of the tourist class between "gateway" points. Transatlantic 15-day short-limit round-trip fares have been withdrawn in favour of the economy class. As for mid-Atlantic fares for travel between points in central America and the eastern hemisphere, the first class has been increased by $20 for single and correspondingly for round-trip journeys, but tourist class rates remain the same.

On the south Atlantic routes, fares applicable between south America and the eastern hemisphere are likely to be increased both in first and tourist class rates, except for those between Lisbon-Madrid and south America.

Between Europe on the one hand, and Africa, the Middle East and the Far East on the other, except India, Pakistan, Ceylon and Australasia, fares are to be increased. There are a few more exceptions also. Within Europe there have been extensive changes, both increases and decreases, although some fares remain unaltered. On certain sectors, both first and tourist class fares have been increased, while on others, either one or the other has been raised and on a few, the rates remain the same in both classes. In a few instances, fares have been reduced, notably those to and from Warsaw where the reduction is of the order of 12 to 14 percent. Short-limit round-trip excursion fares have been revised and new facilities in this category have been introduced.

B.E.A. International Summer Schedule

British European Airways summer schedules for international routes came into force on 1st April, in line with those of other European carriers, but those for domestic lines will not start until 20th April, the date on which British summer time comes into force. Schedules this year provide for considerably increased seating capacity on all routes; this is made possible by the introduction of more of the bigger 800-series *Viscounts* as well as by increased frequencies on most routes. For example, during the peak summer months, the Manchester-Dusseldorf line will be operated daily. Services between London and Salzburg, which are resumed on 1st May every year, will be stepped up to a daily frequency during the height of the season. *Viscount* flights between London and Palma will be twice daily providing both tourist and night tourist services. Manchester-Palma direct fights this summer are operating three times weekly from 1st April. The Manchester-Barcelona night tourist service will be twice weekly from 1st June. From 14th June, there will be twice weekly night tourist flights between Manchester and Milan. With the placing in service of the new *Viscounts* of the *806* type, B.E.A. will provide for the first time a combination of first and tourist class accommodation in separate cabins on aircraft on certain important routes. The chief of these are services to Switzerland and Scandinavia as well as London-Paris flights, but this new facility has not been provided with the introduction of summer time-tables on 1st April due to technical reasons. The delay is not, however, expected to be of more than a month or two's duration. An important new line to be opened in April is a direct service between London and Warsaw flown twice weekly with *Viscounts*. This additional link between the U.K. and eastern Europe will be flown in co-operation with the Polish carrier L.O.T. which will provide a further two flights each week operated with *IL-14* aircraft via Berlin (East Germany) and Brussels. At Warsaw, connections will be available to numerous cities in eastern Europe including the Russian capital. To the principal destinations served by B.E.A. in Scandinavia and Germany, the usual night tourist services will be resumed for the summer season. Most of these will be operating at increased frequencies over those provided last year.

To south-west Europe, many more services will be offered than in previous years. Between London and Lisbon, there will be four flights weekly in each direction. In conjunction with the three services operated by the Portuguese carrier T.A.P., daily flights will be available between these two cities. To Madrid, B.E.A. will provide five day tourist flights weekly and Iberia three, making a total of eight services—one each day and two on Saturdays. The Spanish carrier offers a further three flights *via* Barcelona. In addition, B.E.A. will operate two night tourist services, London-Madrid and return, from mid-May to the end of September, and Iberia will provide a third from the beginning of June. There will be eight flights weekly between London and Gibraltar—four direct and the other four by means of a connection at Madrid, as well as four direct night tourist flights between these two points. A new through service will be provided twice a week between London and Tangier by *Viscounts* to Gibraltar and from there by *Pionair*.

To Italy, the Middle East and other points in the Mediterranean, B.E.A. will provide frequent services—both day and night tourist. The direct line between London and Ajaccio (Corsica) will again be provided this summer with stops at the island three times weekly on the London-Malta service of B.E.A. beginning on 1st June.

Frequency of Domestic Services

Frequencies on B.E.A.'s domestic lines will be much increased when summer time-tables are introduced on 20th April; these will remain in force until 4th October. Between London and Glasgow, there will be seven flights daily in each direction, all operated with the 57-seat 800-series *Viscounts*. Between London and Edinburgh, there will be four daily flights and between London and Belfast five—all flown with *V-800's*. There will be the usual high frequencies on the Channel Islands and Irish Sea routes; the big *Viscounts* will operate a number of services to Jersey during summer months. In Scotland, services northwards from Glasgow and Edinburgh will be improved and increased, providing better same-day connections between London and the north of Scotland in both directions. The only scheduled flights still provided by the smaller *Heron* aircraft are now those to Tiree and Barra; all other Scottish services are operated with *Pionairs*.

Middle East Airlines Expands

Middle East Airlines is enjoying a period of rapid expansion of its services. With the delivery of additional *Viscount* aircraft, it has been able to increase frequencies on existing routes, and to extend its network eastwards to Pakistan and India. Last October, the M.E.A. service between Beirut and London, *via* various intermediate European cities, was increased from two to three flights weekly. From 1st April this has been stepped up to five services each week in both directions. Certain of these flights will call at cities not previously served, namely, Istanbul, Geneva and Vienna. In addition to these five weekly flights, there will be services, each twice weekly, between Beirut and Brussels (a new route) and between Beirut and Frankfurt. One of the Brussels services operates *via* Athens, Geneva and Zurich and the other *via* Athens, Zurich and Frankfurt. The two Frankfurt services will call intermediately at Istanbul and Vienna. These services are all operated with *Viscounts*; the twice weekly all-cargo flights between Beirut and London *via* various intermediate points continue to operate.

Within the Middle East area, the most important innovation is the introduction of a twice weekly service from Beirut to Karachi and Bombay. Both flights are operated with *Viscounts*, one calling intermediately at Dhahran and the other at Kuwait and Bahrain Island. The other new route is a weekly service on the line Beirut-Jeddah-Aden, also operated with *Viscounts*.

Santa Cruz Modernisation Scheme

Details are now available of the expansion and modernisation scheme relating to Santa Cruz airport, which will make it suitable for jet planes. The project will cost over Rs. 7 crores, and will be executed in two stages. The following are the details:

Main features incorporated in the expansion or modernisation of Santa Cruz airport	Estimated cost of individual work
	Rs.
First Stage:	
Terminal building including services	62,00,000
New apron and taxi tracks ...	29,00,000
Extension of east-west runway from 6,000 feet to 7,000 feet and strengthening of this runway ...	34,00,000
Further extension of east-west runway from 7,000 feet to 8,200 feet ...	21,63,000
Second Stage: (for making it fit for jet operations—works sanctioned and in progress)	
(a) Extension of runway to 10,500 feet ...	3,06,93,600
(b) Strengthening of apron ...	
(c) Extension of apron in front of terminal building ...	
(d) Removal of obstructions ...	
(e) Shoulders to runway ...	
Land acquisition for future extension	93,23,000
Freight block and equipment shed ...	8,06,354
Third Stage:	
New parallel taxi track ...	35,00,000
Strengthening and extension of second runway ...	32,01,000
Tele-Communications Equipment:	
Tele-communication centre in the new terminal building (completed) ...	2,60,000
Radio tele-type equipment (partially completed) ...	4,00,000
V.O.R. (under installation) ...	2,50,000
G.C.A. (not completed) ...	50,80,000
P.A. system (completed) ...	40,000
Remote receiving station (not completed)	5,00,000
Electric Works:	
Terminal Building:	
(a) Internal electric installation (completed) ...	5,41,000
(b) External electrical services (completed) ...	3,24,000
Air conditioning (under installation)	3,32,700
Kitchen equipment, that is, refrigerators, cold cases, hot cases, etcetera (completed) ...	60,000
Lifts (partially completed) ...	1,75,000
Street lighting (partially completed)	1,87,700
Runway Lighting:	
Provision of runway lighting (completed) ...	16,80,000
Extension of lighting on east-west runway (not completed) ...	18,00,000
Lowering and diversion of h.t. lines (not completed) ...	7,34,000
	7,45,51,354

Air Talks with Ceylon and Holland

Indo-Ceylon air talks have commenced here this week. They will be followed by Indo-Dutch air talks towards the end of this month. Both Ceylon and Holland are asking for more frequent services to India or through India.

The draft of the Indo-Russian air agreement has been sent to Moscow for approval. The agreement, it is understood, will be signed in Delhi. The proposed India-Moscow service will start by July, it is expected.

Demand for More Air Facilities

India has an air agreement with Sweden. The other Scandinavian countries, Norway and Denmark, are demanding similar agreements for their airline, S.A.S., to have greater traffic facilities from India. Belgium also wants an air agreement. An Italian airline, it is reported, will commence a service to this country.

NEW STEAMER SERVICE FROM CALCUTTA TO U.S. ATLANTIC AND GULF PORTS

Jardine Henderson, Ltd. has announced the introduction of a fast regular steamer service from Calcutta to Atlantic and Gulf ports of the United States. Vessels operated by the Central Gulf Steamship Corporation will sail on the 8th of each month, *via* Suez, direct to Philadelphia in 27 days, and will then proceed to Norfolk, Savannah, New Orleans and Houston. The new company is a member of the Calcutta-U.S.A. Conference. Full particulars about Conference rates and the services can be obtained from Jardine Henderson, Ltd., 4, Clive Row, Calcutta. The first two vessels will be the s.s. *Noordzee* and s.s. *Tappanzee*, sailing from Calcutta on 8th May and 8th June, and due to reach Philadelphia on 5th June and 6th July, respectively.

B.O.A.C. BRITANNIAS TO CALL AT MELBOURNE

As from 4th May, Calcutta will be linked directly for the first time with another of Australia's main cities when the B.O.A.C. *Britannia* service, which leaves Calcutta weekly on Sunday, will make a call at Melbourne. The *Britannia* will also call on the return journey leaving Sydney on Tuesdays. This service will overfly Jakarta calling only at Singapore and Darwin *en route* to Melbourne, and will operate a similar route in the westbound direction. This is the first time that Melbourne has become a port of call for a B.O.A.C. service.

Commodity Markets

COMMONWEALTH RAW COTTON TRADE

INDIA BECOMES NET IMPORTER

THE Commonwealth's position in world trade in raw cotton has been altered in recent years by the Sudan's attainment of independence and by the change in India's position from a net exporter to a net importer of the commodity. Recent developments are discussed in the *Review of Commonwealth Raw Materials*, published for the Commonwealth Economic Committee by the Stationery Office at 15s net. In 1955-56. India was the second most important consuming country—the United States retaining first place—having overtaken both Japan and the United Kingdom. At 2,036 million lbs, India's consumption represented 58 percent of the total Commonwealth consumption in 1955-56, against 738 million lbs and 21 percent, respectively, for British consumption. Pakistan accounted for 11 percent, Canada for 5 percent. and Hongkong for 2 percent. Commonwealth consumption as a whole was 26 percent of the total free world consumption. Commonwealth exports of raw cotton since the war have been affected by the reduced output and increased consumption in India and Pakistan, and even in 1953, after several years of steady increases, represented less than 60 percent of the 1935-37 average. The position deteriorated further in 1954, and in spite of an improvement in 1955, the figure was still only about 50 percent. The Commonwealth share of the reduced world export figure was 17 percent in 1955, against 25 percent before the war. Of the Commonwealth average exports between 1949-55, Pakistan provided about 40 percent, colonial territories slightly over 25 percent, and India most of the remainder. On the import side, the heavy decline in U.K. imports has more than offset the increased quantities taken by other Commonwealth countries. The U.S. share in the U.K. total fell from 44 percent before the war to 30 percent in 1949-55, while the Commonwealth's share was 17 percent in both periods. The main source of supply shifted, however, from India before the war to Nigeria. Pakistan, and Uganda.

Progress in Africa

At the annual meeting of the British Cotton Growing Association in Manchester, the president, Lord Derby, gave an encouraging report of the cotton crop situation in northern Nigeria. The setback of 1957, when the crop was 44,000 bales below the highest levels recorded, is being reversed this year. There are prospects, he said, that the crop will amount to nearly 240,000 bales, which would be 50,000 bales above the previous record, and nearly 100,000 bales more than in 1957. Of particular importance is the expanding road programme of the area, and the possibility of a new railway line in the north-east which may open up new large cotton growing areas. The African farmer is being encouraged to plant earlier and to improve his methods of cultivation, and new seed with a better yield potential is being provided. In Uganda also the Department of Agriculture is redoubling its efforts in encouraging growers to plant early, and improve cultivation. After extensive experiments to prove its value, it is also educating the farmers in the need for and the use of chemical spraying against lygus, which yearly takes a heavy toll of the crop. In the Federation of Rhodesia and Nyasaland, a team of entymologists is already investigating the depredations of the various pests. The increasingly large crops have made considerable financial demands on the Association. In the past ten years, more than £480,000 has been re-invested in the African cotton-growing countries in buildings, machinery, etcetera—some £10,000 more than the issued capital of the Association. Over the last three years, Lord Derby continued, for every 1s that has been distributed to shareholders more than 3s has been re-invested as capital expenditure in Africa.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose further by 0.5 percent to 106.1 during the week ended 29th March, 1958, compared with 105.6 for the earlier week. The index was higher by 1.2 and 1.0 percent, respectively, than those of the previous month and a year ago. The average for March 1958 worked out to 105.4, compared with 104.7 (revised) for February 1958 and 105.6 for March 1957. The financial year average for 1957-58 stood at 108.4 against 105.3 (revised) for 1956-57. Higher prices of cloves (+13%), arhar in Bombay (+11%), black pepper in Madras (+10%), masur in Bombay (+9%), onions in Calcutta (+8%), jowar in Mohal and mung in Bombay (+7% each), wheat in Dhanduka, maize in Chilwara and ghee in Bombay (+6% each), gingelly oil in Bombay (+5%), oranges (+4%), mustard oil and tea (+3% each), gram (+2%) and rice, ragi, urad, groundnut oil and salt (+1% each), raised the index for Food Articles by 0.9 percent to 103.4, compared with 102.5 (revised) for the previous week. The prices of eggs (-7%), jowar in Hyderabad (-6%) and bajra, cashewnuts, coffee and chillies (-1% each), however, showed a fall. The index for Tobacco remained stationary at the previous week's level of 93.

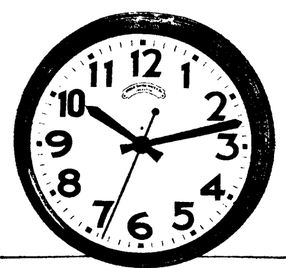
SUGAR PRODUCTION AND STOCKS

Production and despatches of indigenous sugar amounted to 1,713,000 tons and 808,000 tons up to 31st March, 1958, in the current season, as against 1,544,000 tons and 837,000 tons, respectively, in the corresponding period of last year. Stocks with factories on 31st March, 1958, stood at 1,334,000 tons, as compared with 1,235,000 tons a year previously.

A MODERN CLOCK FOR MODERN PEOPLE

A modern office or home needs a smart, attractively designed "Electric Clock". The Anglo-Swiss "Electric" Clock is just what you need. It needs no winding.



Dial 6" Overall diameter 7½" Model No. CL-19. Rs. 80/-
Dial 9" Overall diameter 11" Model No. CL-20. Rs. 100/-
Dial 12" Overall diameter 14" Model No. CL-21. Rs. 110/-
Dial 16" Overall diameter 18" Model No. CL-22. Rs. 125/-
Dial 24" Overall diameter 28" Model No. CL-23. Rs. 210/-

This clock runs smoothly and accurately on A/C mains, 220-230 volts. These clocks are available in 3 colours, Brown, Black and Cream.

Interchangeability of parts guaranteed. The beauty of the metal highly polished case is enhanced by the use of bold figures and hands. Fitted with red centre second hand. Current consumption 1½ units per month.

ALL MODELS HAVE AUTOMATIC STARTING DEVICE AND BEAUTIFUL ARABIC FIGURES

MANUFACTURED IN INDIA

STRONG GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 41, held on 15th and 16th April, offerings at the Export auction amounted to 58,199 packages for which there was again a strong and general demand, the strongest feature of the Sale being "Teas for price" which were from 6 to 10nP dearer. Plain Broken Pekoes and Fannings advanced by 6 to 8nP, particularly the latter, while Medium Broken Pekoes and Fannings were 2 to 4nP dearer. The bright liquoring B.O.P.'s and O. Fgs. were fully firm and dearer, but B.O.P.'s with ordinary liquors generally realised prices below valuations C.T.C. teas, particularly those with seasonal quality, were well supported and were dearer. The more ordinary sorts, however, did not receive the same attention and at times realised prices below valuations. Brown Dooars met with good demand. Whole Leaf grades were generally easier, particularly the ordinary Pekoes. The limited quantity of tippy teas on offer were about steady at last rates.

Quotations	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.25 to 2.30	
Plain B.P.	1.54 to 1.58	
Medium B.P.	1.64 to 1.68	
Best Assam C.T.C. B.P.	2.70 to 2.80	Not
Plain Fannings	1.68 to 1.72	available
Medium Fannings	1.80 to 1.84	
Best Assam C.T.C. Fgs.	2.80 to 2.90	

At the Internal Sale a total of 20,665 packages of Dusts were on offer. Although a good general demand prevailed, which strengthened as the Sale progressed, prices for most sorts tended easier. The orthodox descriptions at the start were often 6 to 10nP easier, but prices appreciated as the Sale progressed and at the close were only 2 to 4nP easier. Powdery descriptions were well supported and towards the close were fully firm and sometimes dearer. Best C.T.C. Assams were fully firm, while medium types in this category with autumnal liquors enjoyed a very satisfactory Sale and often realised prices above valuations. The poorer types, however, were generally easier. The limited quantity of Darjeelings on offer were the weakest feature of the Sale.

Quotations	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.54 to 1.58	1.50 to 1.60
Medium Assam Grainy Dust	1.58 to 1.62	1.65 to 1.70
Medium Assam C.T.C Dust	1.90 to 2.10	1.75 to 1.85
Best Assam C.T.C. Dust	2.75 to 3.05	(nominal)

There was a fairly strong general demand for the 4,627 chests of Leaf on offer. Prices for all descriptions advanced with the exception of a few invoices of Green Tea which tended easier.

FREIGHT MARKETS FIRMER

THE freight markets have shown a firmer tendency during the past week, but owners have been holding off for higher rates. There was good enquiry in the north American grain section, and rates for St. Lawrence-U.K. have shown a little improvement. A fixture of 5,500 tons 10 percent coal Hampton Road-Osaka has been concluded at $(U.S.)7 with 1,000 tons discharge free. Mormugao ore shippers have paid 42s 6d for shipments to Rotterdam. There was very little activity in the Far Eastern market.

HIDES AND SKINS STEADY

The hides and skins market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 8th April and 14th April, 1958)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8.50 to Rs. 12.25; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 13.50 to Rs. 22.

Goatskins: Wet salted (Patna, Daissee and Kustia) 48,400 pcs. on the basis of Rs. 320 to Rs. 330, Rs. 350 to Rs. 360 and Rs. 380 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Pakur-Patna 71,600 pcs. on the basis of Rs. 300 to Rs. 310; Muzafferpore-Patna 110,300 pcs. on the basis of Rs. 300 to 340; Muzafferpore (heavy) 5,700 pcs. on the basis of Rs. 370 to Rs. 380.

Bazaar Stocks

(14th April, 1958)

Cowhides: Wet salted 87,200 pcs.

Goatskins: Wet salted (Daissee, Kustia and Killed) 11,000 pcs.; Assam-Dinajpur-Jalpaiguri 52,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 105,500 pcs.

LINSEED ERRATIC

Price movements were rather erratic in the linseed market during the past week. After declining to Rs. 22 a maund, rates gradually began to creep up and towards the end returned to their former level of Rs. 22-10. Oil prices followed a similar pattern, and having declined to Rs. 51-4 for a short period, ruled steady at Rs. 52, with sellers reserved. Trading generally was rather limited. There was no change in the overseas market for linseed oil and no fresh business was reported. Latest quotations were as follows: ready Rs. 22-10 a maund and April-May Rs. 22-10 a maund.

COMPANY AND PUBLIC NOTICES

THE PREMCHAND JUTE MILLS LTD.

NOTICE.

PROCEEDINGS of the Forty-ninth General Meeting of the Shareholders of the Company held at its Registered Office at 81, Sovabazar Street, Calcutta, on Friday, the 11th April, 1958.

By Order of the Board,
J. H. G. WHITFIELD,
Secretary.

2, Fairlie Place,
Calcutta-1, 15th April, 1958.

FORWARD TRADING IN LINSEED

In a resolution dated 19th November, 1955, the Government of India accepted the recommendations of the Forward Markets Commission on the recognition of associations for forward trading in linseed. The Calcutta Wheat and Seeds Association, Calcutta, was recommended for recognition under Section 6 of the Forward Contracts (Regulation) Act, 1952, for futures trading in this commodity, subject to such modifications in its constitution, trading bye-laws and working procedures as might be suggested by the Commission. The Association has now carried out all the modifications which were suggested. Accordingly, recognition under Section 6 of the Act for forward trading in linseed is being granted. The Association will commence trading as soon as it receives the formal sanction.

Dividend Taxable.

BANKS

B indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A FENCE-SITTING BUDGET FOR BRITAIN

FACING THE PROBLEMS OF RECESSION

THE safest comment which can be made about the Budget Mr. Heathcoat Amory presented to the British Parliament last week, is that it was a cautious attempt to meet a tricky situation. Whether it was also adequate to the economic occasion depends, of course, on the view taken of Britain's probable future economic progress—towards recession or inflation. Indeed, the problems the Chancellor faced in compiling his Budget are essentially those which President Eisenhower is just now grappling with (or ought to be), that have been posed lately to Professor Erhard, and which in fact all western Europe's Finance Ministers are at present having to ponder. At the moment, the recession is confined to the United States; Britain's unemployment is structural and frictional rather than cyclical and she has, therefore, less reason for alarm. The chill of depression has scarcely begun to spread to Europe, although only the more optimistic maintain that it is not going to. The problem then—for all western European countries no less than for Britain—is to prepare for what might come, without losing the ground lately gained against inflation. In Britain's case, the risks of making the wrong choice are all the greater because her currency finances over 60 percent of the world's external trade, and at present there is no available substitute for it. Mr. Heathcoat Amory has chosen to meet this problem with caution. It was undoubtedly the best choice to make on the information at present available. His Budget has an "interim" look about it, and it is perhaps this inability to judge exactly which way the cat is going to jump that explains why. It may, therefore, not be the last Budget the British Parliament will see this year.

In manœuvring between the twin requirements of maintaining employment and avoiding inflation, a third important point has apparently had to be neglected, if not altogether ignored. This is the need to stimulate industrial output and resume the upward trend of two or three years ago. If any valid criticism can be levelled against Mr. Heathcoat Amory's Budget, this is probably the one. It is often forgotten how high a price Britain has to pay to maintain the value of sterling. Whether due to lack of confidence in the pound after the 1949 devaluation, or foreign opinion about the British willingness to fight wage inflation, or again to the inadequacy of the reserves on which the sterling area has to operate, it is a regrettable fact that the pound appears to come under severe pressure every alternate year. Up to now, the only effective measures which the Conservative Government has been able to devise have involved, as a side effect, a slowing down in the rate of economic growth. This is a serious drawback; in this age of mass economic awareness, a continuous rise in living standards is the chief guarantee of industrial peace and can only be ignored at great political cost.

The difficulty of Britain's position is immensely complicated, when compared with that of, say, West Germany, or the United States, by the existence of the sterling area. Lately, there has been considerable discussion on whether the advantages of maintaining London as a financial centre—and any others which come from managing a world currency—are enough to offset the lack of autonomy from which the British economy must suffer as a consequence. This dilemma is vividly underlined in the Chancellor's Budget. The number of times the Government has affirmed that it intends to maintain the present parity of sterling, come what may, are all very necessary if confidence in the pound is not to degenerate to the point where devaluation becomes inevitable, as it did in 1949. Sterling is, without doubt, the most vulnerable currency in the world, due to its unique position and to the inadequacy of the reserves on which it is based. Lately, of course, much of the strain on it has been due to the deficits of nations such as India and not to any reduction in Britain's exports. Yet the future of the British economy has become so dedicated to propping up the pound that its further growth is being jeopardised and it may be faced soon with serious unemployment unless events turn out rather better than they are promising to at the moment. This is a difficult position, and one which a future Labour Government might well decide is untenable. The tax concessions introduced last week were useful enough, but it is unlikely they will go even a limited way towards encouraging the expansion which alone will solve the dilemma. Only a much lower level of Government spending and a higher one of personal saving, thus discouraging inflation, coupled with a determined effort to promote exports, so maintaining the general level of private investment and employment, will permit Britain to walk this tightrope indefinitely. There is nothing in Mr. Heathcoat Amory's Budget to suggest that will be done. The Conservative Government continues to pin its hopes on the present high interest rates and selective credit controls—the very measures which, along with the chronically high level of taxation, are chiefly responsible for the present stagnant output conditions—and on the politically explosive wage restraint. It is odd that successive Conservative Governments have been no more successful than their labour predecessors in reducing Government expenditure substantially, or keeping wages from rising. Yet the need is still great. One point which has appeared in Britain's favour lately, but which should not be over-rated, is the improvement in the terms of trade and therefore in the balance of payments. This in itself is no guarantee of the health of the pound in a world which is desperately trying to cut down its imports. Soon Britain might find herself losing more through a decline in export markets than she is gaining from the terms of trade. To meet this by granting long-term credits might help keep up the volume of exports, but would probably be little consolation for a nation attempting to improve its standard of living. If done within the sterling area it might, however, strengthen the British economy and the pound by reducing Britain's own indebtedness.

If Mr. Heathcoat Amory is right, and the time has not yet come for Britain to risk the stability of the pound by introducing a deliberate budgetary based expansion, the same cannot be said for the United States. There, the recession shows no sign of easing. Until it does, Britain's problems, and those of other western European economies are likely to increase. They may even degenerate into crises. It has long been accepted by everybody, except, apparently, the United States Government, that the world's largest economy has an unavoidable responsibility to the economies of the rest of the free world. But the present administration seems determined to show the same incompetence in economic matters as it has now become notorious for in international political ones. In spite of the obvious need to keep itself and its friends from fulfilling the Marxist prophecy that capitalism will eventually collapse under the weight of its own contradictions, the United States is showing extreme reluctance to tackle the problem energetically. This is all the more disappointing when it is so obvious that the inflationary risks she runs are so much less than those Britain, for instance, is facing. Americans would do well to consider the point that if their own and the free world's economies go much deeper into depression, they may well throw away, in the space of a few short months, all the political and military defences against communism that have been so laboriously built up over the last ten years. It is worth while pondering why, in spite of the risks, the United States remains reluctant to act with any degree of vigour and conviction against the recession; and also why Britain too is putting off the crucial decision. The reason is, of course, inflation. And an important one it is.

The difficulties the western economies have experienced in preventing post-war welfare capitalism from evaporating in face of its built-in inflationary tendencies, has an important lesson for India. The wage-price spiral, supported there as it is here by irresponsible trade unionism, a high level of government spending and inefficient and protected capitalism, is much the same in India as it is in Europe and America. The result is inflexibility, which has hitherto been taken care of by continued expansion, but is beginning to make itself felt now the post-war boom is faltering. The paradox of rising living costs and declining economic activity and unemployment is one that can only be explained by an excessive degree of monopoly in an economy. Yet this is what is happening in America and Europe, and to a rather more limited extent here in India. The point is that inflation breeds its vested interests in government activity, labour unionism and protected capitalism, and that these, when flexibility is required, often prevent governments from taking the economic measures which are needed. If Mr. Heathcoat Amory could rely on the British trade unions restricting their wage demands to the increase in the country's productivity, and on manufacturers cutting their prices according to the lower costs of their raw materials, no doubt he would already have a policy of expansion in hand instead of waiting for something to turn up. Similarly, if President Eisenhower could be assured that the public works measures at present demanded would not involve increased prices without any great relief in unemployment, he would probably not be so reluctant that the United States should, for a change, assume readily and competently the economic and political responsibilities that fate has thrust upon her.

DEVELOPMENT REBATE MOVE AMENDED

THE stock market seems mildly pleased with the Government's proposal last week to relax the provisions for the deduction and use of development rebate by companies. These provisions, as contained in the Finance Bill embodying the Central Government's Budget proposals for 1958-59, imposed stringent new conditions for the grant of the rebate, and thereby threatened to undermine the investment attractions of new as well as expanding undertakings. It was stipulated that an amount equal to the allowance on which the rebate was granted, should be debited to the profit and loss account and credited to a reserve account. This amount would have to be used during the next ten years "only for the acquisition of assets for the purposes of the undertaking or for investment in the undertaking." The development rebate, it was stated, would be withdrawn if the assessee sold or transferred the asset to anybody except the Government, within ten years of the machinery or plant being installed. The requirement to create the reserve was to apply only in relation to claims for a development rebate on assets installed after 1st January, 1958. The intention now is to make some important changes in the conditions laid down in the Finance Bill. It is proposed, firstly, that if the total income for any year, before allowing development rebate, falls short of the full amount of the rebate, the rebate to be allowed for that year will be limited to such total income. Secondly, the Government will allow the remainder of the rebate to be carried forward for up to eight years. Thirdly, the amount to be taken to reserve need not exceed 75 percent of the amount of development rebate claimed. Fourthly, the reserve so created can be

used "for all legitimate purposes, as long as it is not used for the distribution of dividends."

It would be unfair to deny that the relaxations now proposed are fairly substantial. But they do not remove the fundamental injustice of the original move. Of the relaxations suggested, the most welcome from a company's point of view are, firstly, the one under which the development rebate reserve can be used "for all legitimate purposes"; and, secondly, the one under which the allocation to such a reserve need be no more than 75 percent of the rebate claimed. Neither of these concessions, however, takes account of the fact that the development rebate is intended essentially to be a reward for expansion already undertaken, and not a method of conserving resources for future expansion. Many companies, encouraged by the tax relief afforded by the development rebate, have purchased assets to increase their capacity; their expansion has thereby gone as far as it needs to, yet they are now required to go on conserving resources, supposedly for further expansion which may not really be necessary. The underlying assumption seems to be that a concern which is expanding now will need to go on expanding almost indefinitely, and therefore must be persuaded to accumulate funds. The fallacy in this assumption is obvious. Many enterprises which have increased their production capacity have already reached the stage where they are able to satisfy fully the market open to them; in some, there is even a margin of idle capacity. Yet they are being urged to hold on to money which they could well distribute to their shareholders, who would propably invest it in other enterprises which are still in need of fresh resources. In sum, the effect of the restrictions even now will be to introduce a certain rigidity and compartmentalisation in the use of industrial finance.

The passion for auto-financing, of which the development rebate restrictions are the latest manifestation, appears to be going to irrational lengths. The most important purpose of these restrictions seems to be to penalise shareholders by reducing the free funds out of which dividends are paid. It is no longer seriously suggested that in the creation of a development rebate reserve, the intention is to prevent the supposed misuse of company funds. In any case, the working of the compulsory deposit scheme for corporate profits and reserves, during the few months it was actually in force, showed that such misuse takes place to only a very small extent where it takes place at all. To restrict dividends, however, is fundamentally illogical, because without the prospect of a fair return savings will not be attracted into industry. There may be some companies on which the development rebate restrictions, especially in their latest form, will have little impact; with money having to be put away into the development rebate reserve, the allocations to other reserves could be substantially cut. But there will be many other undertakings which will not be in as happy a position; their dividends might suffer. The general view is that the restraint on distributions to shareholders imposed by the heavy dividend supertaxes is already sufficient to make any new restraints unnecessary, where they are not positively harmful. That these fresh restraints should be applied to new enterprises and to expanding ones makes them all the more irrational, for it is the shareholders in such enterprises who deserve the greatest encouragement. The Government has offered no evidence to show that new and expanding enterprises have been too liberal in their dividend payments, or that they have unwisely omitted to conserve their resources. The suspicion must remain that the evidence has not been offered because it cannot be found. The development rebate restrictions, thus, even in their latest watered down form, do no more than pander to the fashionable socialist notions about the proper way for the conduct of company financing.

MORE DEFICIT FINANCING

THE Government's decision to return to the original plan estimate for deficit financing is no doubt a reflection of the recent changes at the Finance Ministry. So far as economic facts are concerned, a figure of Rs. 1,200 crores has probably no greater relevance than one of Rs. 900 crores; the actual size of the plan will eventually be determined by the supply of foreign exchange. If it is accepted for the moment that the new total has some connection with actual reality, the decision is a wise one given a certain set of economic circumstances. These are: prospects of a bumper harvest this year, falling internal prices, rising external ones, and a plentiful supply of attractive propositions which will not involve the outlay of foreign exchange. Otherwise, the move will be inflationary.

It is not difficult to see that not a single one of these conditions is fulfilled. Food shortage may not be the chief topic of public discussion just now, but that does not mean it is no longer a possibility. After the performance of the last monsoon, the coming one, at best, will provide an even greater gamble than usual. Deliberately to pump more purchasing power into the economy during the next year or so may, therefore, be a doubly dangerous thing to do. Whether it eventually proves to be so, only the future can say; but on the facts at present available, there is nothing to suggest that it is anything but the wrong decision. Much the same may be said for the next possibility—falling internal prices. At the moment, there is no such thing. Prices are rising, and are likely to continue doing so. To introduce more inflationary potential now will almost certainly encourage them to go even higher. Such a state of affairs would be dangerous enough at a time of rising external prices. But the world is in recession, and international price levels are weakening. India, therefore, could scarcely have chosen a less appropriate juncture at which to increase her own inflationary potential. Finally, there is no guarantee to which the Government has been able to point, that foreign exchange will be forthcoming in quantities adequate for the projects on which it is proposed to spend the resources created through increased deficit financing. No doubt this fact was chiefly responsible for the Government taking the opportunity, when making its announcement, of reaffirming the need for foreign capital.

The decision to increase deficit financing is no substitute for persuading the States to raise the resources promised by them. The crisis in internal resources is entirely due to this fact, and the Centre would do well to spend its time devising means of making the States face their responsibilities, rather than to juggle with hypothetical figures of deficit financing. It is not as if this problem can be expected to solve itself if it is only given time; it threatens to get worse as planning proceeds and as the threat of communism increases. It was one of the unfortunate features of Mr. Krishnamachari's period at the Finance Ministry, that the determination shown in boosting the Centre's tax-raising performance was not repeated with the States. The result is the worst of both worlds: Central taxes are now at or beyond the point of diminishing returns, while the States have merely been served proof that whatever the depth of their political folly or cowardice, the Centre will foot the bill. It is a pity that deficit financing, and therefore inflationary potential, has had to be increased to cover such shortcomings. It is a pity too that the resources cannot be raised another way—for instance by handing some of the projects over to private enterprise and repairing the health of the stock markets to the point where the funds could be obtained from there. As it is, the only factor acting against the increased inflation, which is going to be generated, except of course the shortage of foreign exchange, is the remarkable capacity which this country has shown for soaking up deficit financing and immobilising it in hoards of gold, silver and jewellery. And the sole consolation is that rising prices will relieve the present real burden of taxation.

The Government's re-emphasis of the need for foreign capital is laudable enough; and Mr. Desai's promise that India will honour her obligations is no doubt the right stand to take. But the main arbiter of the foreign capital situation is still taxation, and on this point the Government remains conspicuously silent. The admirable report of the National Council of Applied Economic Research—*Taxation and Foreign Investment*—must be buried away somewhere in a Finance Ministry pigeonhole. Why is it not being acted upon? This matter is urgent enough from the point of view of the country's need for foreign exchange. It is now even more urgent if India is to offset the political reputation which she is acquiring abroad due to the increase in the number and strength of her communists and fellow travelling socialists, and to the efforts of the Government of Kerala. There is a perfect opportunity for a display of statesmanship on this question of private foreign capital, and it is one for which, because of his undoubted moral courage, the present Finance Minister should be admirably suited. Those arch priests of rigidity, the communists, have accused Mr. Desai of lacking flexibility. That may be his reputation. But since he came to the Finance Ministry Mr. Desai has shown every sign of wishing to live it down. He has, in fact, indicated that he is perfectly capable of flexibility when the occasion demands; in this matter of foreign capital, he has a heaven-sent opportunity to prove it.

TRENDS ON THE LONDON STOCK MARKET

MOVING FROM SHORT TO LONG INVESTMENTS

ABOUT the time of the British Budget the London stock market is always somewhat confused, and it has had other problems to consider this second quarter-year. Everyone knows that business is in recession in the United States and in various other countries, but no-one knows either how long the recession will last or how it will affect Britain. The stock market prides itself on its intuitive ability to assess the situation about half a year ahead, but it has to admit that any such assessment at this time is more than usually liable to be confounded by events. Added to the economic uncertainties are labour troubles that may become critical and political changes that may alter the entire economic policy next year—or even earlier. Despite these uncertainties, some underlying trends have been perceptible in the stock market this year. There have been setbacks, but the market has asserted its confidence in the economy, at the same time as it has reflected international trends.

The predominant international trends—which are related—are the recession in trade and the decline in interest-rates. Both tend to favour investment in Government securities; whereas the recession in trade affects industrial ordinary shares adversely and the decline in interest-rates assists them only indirectly. Yet whenever the mood is reasonably confident most attention is directed towards ordinary shares. Cautious observers suggest that neither the New York nor the London stock market has yet realised the full implications of the recession in trade, particularly as it affects profit-margins. Shares should, of course, be valued in relation to future earnings and dividends, but they are naturally affected by good profits and dividends from past periods. British companies whose financial year coincides with the calendar year (an arrangement that many of them favour) have been issuing their reports for 1957, showing varied experience; but on the whole the experience has been more favourable than most investors dared to expect. Some investors have therefore easily persuaded themselves that British companies in general will not suffer much from the recession and that the prices of ordinary shares have fallen too far.

More encouraging than maintained or increased profits are maintained or increased orders. So far, the recession appears to have had surprisingly little effect on companies' order-books, and some companies—big electrical firms especially—have been able to report that orders on hand are larger than a year ago. But many chairmen's statements have warned shareholders that trading will be much more difficult in the latter part of this year if the American recession has not been reversed in the meantime. The argument in favour of ordinary shares, despite these warnings, is that even leading shares yield 6½ percent or 7 percent on current dividends and that in most cases these dividends are so well covered by earnings that the payment can be maintained even if earnings are considerably reduced. It is, moreover, assumed that when trade is expanding again the prices of ordinary shares will be much higher than they are now; so the question is not so much whether as when to buy ordinary shares. The decline in their prices since the peak of the boom in mid-1955 has been severe, and the possibilities of appreciation are correspondingly attractive. On the other hand, the salutary reminder that ordinary shares can fall heavily keeps cautious investors out of this section of the market until the trend of prices is demonstrably upward. High yields and low interest-rates do not harmonise. There is no doubt that much of the strength of ordinary shares this year has been derived from the rise in values of Government stocks, which has widened the yield-differential between Government stocks and industrial ordinary shares to an abnormal degree. At the end of August last year the margin was only about ¼ percent, with long-dated Government stocks yielding about 5¼ percent and high-class ordinary shares about 5½ percent. Recently the margin has been nearly 2 percent, with the corresponding yields below 5 percent and above 6¾ percent. Even when world interest-rates—which directly affect Government stocks more than ordinary shares—are moving downward, so wide a difference in yields must draw some money into ordinary shares.

Yet the most significant feature of the London stock market this year is the restoration of confidence in Government stocks. After an almost uninterrupted decline in their value lasting some three years (from late-1954 to late-1957) the loss of confidence was causing serious anxiety at home and damaging British credit abroad. Even more serious than the fact itself was the reason for it. Successive Governments had failed to grapple with inflation; the value of money was continuously declining; therefore, a fixed income became less and less acceptable. And as long-term Government stocks fell out of favour the problem of funding the huge short-term debt (which has been actually or potentially inflationary throughout the post-war period) became more difficult. The whole structure of the nation's finances was weakened.

The authorities are now gradually pressing money from very short to short, from short to medium, from medium to long, investments, so that the national economy will become less liquid and more amenable to control. They do not desire a low long-term rate of interest, because it would weaken the incentive to "invest long". But as funds move from one category to the next, they tend to reduce interest-rates all along the line. This movement requires, of course, a satisfactory economic and political background; particularly, it requires evidence that the national finances are being strengthened and that inflation will not be allowed to revive. Banks and insurance companies, as well as small investors, have been convinced this year that Government stocks are again a sound proposition.

Current News and Comment

Dunlop Rubber Bounces Along

Mr. John Luckham, managing director of the Dunlop Rubber Company (India) Ltd., has told shareholders at the latest annual general meeting (a fuller version of the speech appears elsewhere in this issue) that during 1957, production has increased in almost all lines: even so, the company has been unable to meet the total demand for its products. There is a marked rise in the net profit; after providing for depreciation, interest and taxation, it amounts to Rs. 80.67 lakhs for 1957, against Rs. 55 lakhs in the previous year. Explaining the circumstances of this prosperity, Mr. Luckham says that the road transport industry has been undergoing tremendous changes and expansion, particularly long-distance goods transport. The modern truck now engaged in this work requires tyres capable of carrying heavy loads at high speeds over long distances. "Such tyres must be built with the best available materials and using the latest manufacturing techniques. It is in this respect that your company is particularly fortunate in having available to it the full resources of the Dunlop worldwide research, technical and engineering organisations". As for other products, Mr. Luckham says that the company's position as the leading motor-car tyre manufacturer has been maintained, although the progress of the motor-car industry is in danger of slowing down because of "the difficult licensing situation of the imported components". Dunlopillo continues to grow in popularity and the additional capacity installed for its production is already being utilised. Cycle tyre production has increased considerably, yet the company is not in a position to meet the demand. The demand for conveyor belting meanwhile has exceeded all expectations.

Referring to expansion plans, Mr. Luckham says that the plant for the manufacture of large earthmover tyres was installed in 1957 and production began early this year. The construction of the new factory in Ambattur, near Madras, is making satisfactory progress. It is hoped everything will be ready for the production of bus, truck and cycle tyres to start at the beginning of 1959. Expansion of the Sahaganj factory is continuing, and the output of giant tyres, cycle tyres and cycle rims has been raised. The company has raised its subscribed ordinary capital to Rs. 3 crores from Rs. 160 lakhs through the issue last year to ordinary stockholders of shares in the proportion of seven for every eight held. Dealing with the raw material problem, Mr. Luckham says that the position has been generally satisfactory during the past year, although stocks of some principal requirements fell dangerously low on certain occasions because of the congestion in Calcutta port. It is suggested that the Government grant the industry licences for its raw materials for a longer period than six months so that much of the uncertainty in planning production can be removed. Rubber production in India during 1957 has been virtually at the same level as in 1956, while industrial consumption has reached a new record. Consequently, large quantities have had to be imported; as prices overseas were for the most part lower than the local price, the company had to pay Rs. 11 lakhs as cess to the Rubber Board in order to neutralise the difference between the landed cost of imported rubber and the indigenous price.

Ferro-manganese from Joda

With a four-fold increase in steel-making capacity, India's demand for ferro-manganese will rise correspondingly. As for exports, although this country is the world's second largest producer of manganese, she sells it abroad only in ore form. It has often been pointed out that if the ore is converted into ferro-manganese before being sold to foreign buyers, the value of exports would be considerably higher. Considering this, the Planning Commission has fixed a target of 160,000 tons for ferro-manganese production by 1961. Accordingly, new plant are being put up in Bombay, Orissa, Andhra Pradesh and Mysore. Of these, the plant in Orissa, located at Joda, has already gone into production. It has an initial capacity of 36,000 tons, which is later to be stepped up to 100,000 tons in stages. It will presumably be the largest of its kind, and its production will now meet the entire needs of Tatas' expanded steel works. A small quantity may even be left over for export. It is estimated that the combined demand for ferro-manganese of all the steel plant in the country, new and existing, will be 60,000 tons by 1961; the balance will be exported, and its value is estimated at Rs. 8 crores. Tatas' Joda plant was formally opened on Sunday by Dr. H. K. Mahtab, Chief Minister of Orissa; actually, it had gone into production about the end of last year, considerably ahead of schedule. Sir Jehangir Ghandy said at the opening ceremony that the plant is located in a State which produces a large proportion of the total of manganese ore. Tatas have old connections with Orissa, and they now propose to participate more in the industrial development of this relatively backward State. The geological mapping of large tracts has still to be undertaken, and the resources of both the public and the private sector should be pooled for this. With the establishment of the Rourkela steel works, there should be more small and medium-scale ancillary industries to ensure all-round development. Sir Jehangir congratulates the State Government on its decision to hold a techno-economic survey of Orissa's industrial potential. A similar survey is under way in Bihar, and its extension to Madhya Pradesh is being considered. With Orissa's co-operation assured, says Sir Jehangir, it should now be possible to make a survey of the entire industrial belt which is spread over these three contiguous States. Technical manpower in Orissa will have to be increased in line with her industrial progress. The Central Government has accepted a proposal to start an engineering school in Bhadrak to meet the urgent demand for overseers. A mining institute in Keonjhar will be started as soon as a suitable building has been acquired.

Outlook for British Exports

The April 1958 issue of the *G. E. C. Export Guide* indicates that favourable prospects for British exports continue in a wide range of markets. The latest information available in the United Kingdom on the export prospects for 36 major groups of British manufactured goods in 34 major markets are detailed, with an indication of current economic conditions in these countries. It is shown that current prospects are "good" in 16 countries, "improving" in six, "deteriorating" in seven and "bad" in five. The countries in the various groups are as follows: "good" includes Argentina, Canada, Hongkong, Iraq, Italy, Malaya and Singapore, Nigeria, Norway, Pakistan, Portugal, Switzerland, Trinidad, South Africa, Russia, Venezuela and West Germany; "improving" includes Burma, Ceylon, Finland, Kenya, Spain and Sweden; "deteriorating" includes Australia, Belgium, Denmark, Ghana, the Irish Republic, the Netherlands and the United States; and "bad" includes Egypt, the Federation of Rhodesia and Nyasaland, France, India and New Zealand. Changes in trading opportunities for British exporters so far this year include better prospects in Argentina, Ceylon, Kenya and Spain, but the outlook has become less favourable in the Irish Republic and the United States.

Britain's export achievements since the war are in many ways impressive. The immediate need in 1945 was to increase exports to compensate for the loss of investment income, and the unfavourable shift in the terms of trade. In 1938, a little over half the import bill was covered by exports; in 1957, the proportion was over four-fifths. Since 1938, the value of all British exports has increased from £532 million to £3,458 million. The changing composition of trade makes it difficult to estimate how much of the rise is due to increases in volume and how much to rising prices, but since 1947 at least, the volume of manufactured goods has multiplied by 73 percent; export prices have increased by just over half. The war and postwar shortages of raw materials and food caused import prices to soar, and the terms of trade turned progressively against Britain until 1951. With the collapse in commodity prices after the Korean boom, however, the terms of trade moved in her favour and by 1957 were no more than roughly 4 percent worse than 1947. Today, manufactured goods provide a larger share of Britain's exports than before the war. In 1938, exports of manufactures were worth £354 million out of a total of £532 million; in 1957, manufactures accounted for £2,754 million out of an export total of £3,458 million. In fact, all exports have increased 6½ times, against 7¾ times for manufactured goods. The *Guide* ranks the groups of manufactured exports which have expanded significantly faster than the general rate of growth. Pride of place goes to scientific instruments, which have grown from £2.9 million to £41.7 million between 1938 and 1957, a rise of over 14-fold. Exports in other groups of products, such as sugar, petroleum products and wool, have also advanced considerably. The *Guide* analyses the changes that have taken place in the distribution pattern of British trade over the past 20 years. Increasing emphasis has been placed on dollar markets, particularly in the past two years. The proportion sold to the sterling area and O.E.E.C. countries (taking a half and a quarter, respectively, of the total) has been fairly constant. Britain's share of world trade has declined since 1951. Concentration on well-proved English-speaking markets, and traditional products has been partly responsible, but probably only a quarter of the fall in Britain's share is due to such structural difficulties. Three-quarters of it, equivalent to some £450 million of export sales in 1957, has been lost for other reasons, such as late deliveries. In view of the apparently static level of home demand, recent additions to productive capacity should mean that extra facilities are available to meet export orders promptly. Thinner order books result in shorter delivery dates, a distinct advantage today in meeting international competition. However, export prices must be influenced by the volume of home sales. It is difficult to hold costs down if the necessary base load provided by the home market is subject to arbitrary curtailment.

Britain is vitally dependent on the Commonwealth as a market for about half her exports, but with the fall in commodity prices last year many Commonwealth countries are finding it difficult to meet the cost of their imports and restrictions are being introduced. Western Europe, which has at its heart the six countries forming the Common Market, is one of the most rapidly expanding markets in the world. It is essential, therefore, to find a formula for Britain to be associated with the new developments. Such association would mean that *some* Commonwealth goods would suffer from the staff advantage conferred on European countries. France has recently suggested that the Commonwealth should extend the preferences already given to Britain to the proposed Free Trade Area. Although Britain cannot answer for the independent members, it is possible that this may open the way for discussing a closer relationship between the Commonwealth and Europe, to their mutual advantage.

Gunnies: The Future of Futures

Greater co-operation between the jute industry and trade should help curb unhealthy speculation in manufactured goods and fibre. The co-operation is particularly necessary in the running of the new futures market. At a function organised last week by the Gunny Trades Association in honour of Mr. D. P. Goenka, retiring chairman of the Indian Jute Mills Association, and his successor, Mr. J. I. Jamieson, the main speakers laid welcome stress on this point. As Mr. Jamieson said, the modernisation and rationalisation of the Indian mills is enabling them to maintain their competitive strength. The tendency is to concentrate production in the more efficient units, and "this closer integration of our manufacturing potential will enable us to meet our competitors on more favourable terms." But apart from reducing production costs, the "immoderate and artificially created" price fluctuations which have done irreparable harm in the past will have to be curbed. The new futures market, once it has had sufficient time to settle down, Mr. Jamieson hopes, will play an important rôle in stabilising prices. If it does not, some other way of reducing irresponsible speculation will have to be devised. Mr. Jamieson welcomes Government measures to achieve self-sufficiency in raw jute; when the aim has been fulfilled the industry will enjoy more stable conditions. In his speech Mr. Goenka stressed the importance of stability in the market, especially when the prospects are of increasing overseas competition. From his visit last year to Europe and the United States as a member of an Indian industrial delegation, the impression he has gained is that the jute industry here will have to put up a very stiff fight to maintain its position in the U.S. market. Mr. Harilal Mehta, president of the Gunny Trades Association, welcomed the recent I.J.M.A. measure recommending minimum selling prices for jute goods. That, he says, has saved the market from a slump. Welcoming the creation of the futures market run by the East India Jute and Hessian Exchange, he declares that all sections of the trade wish it success. The I.J.M.A. is busy in making certain useful changes in the P.D.O. system. The revised system, Mr. Mehta hopes, will save the industry and trade from "unnecessary official control in the internal and export trade." The Government and the Forward Markets Commission have given the assurance that if the system is improved to their satisfaction, they will

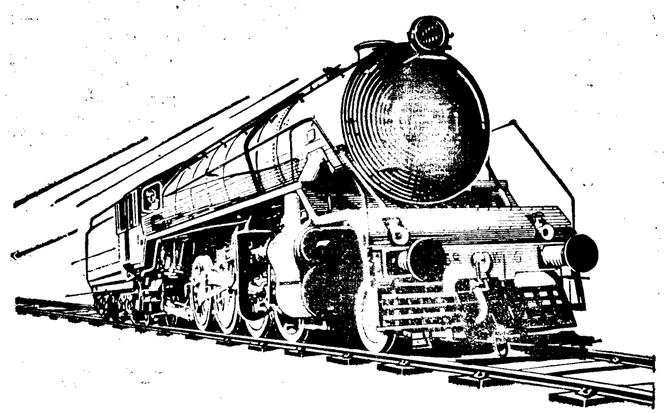
FACTS BEHIND FIGURES

Performing

230,000,000,000 ft. lbs.



per minute

of work

Up and down the railway tracks of India run, on an average, 6,638 locomotives everyday. Together they develop approximately 7 million h.p. and exert a tractive force of 70 million lbs. They thus perform work at the rate of 230,000 million ft. lbs. per minute to carry 1,234,44 million passengers and 115 million tons of freight.

The Second Five Year Plan schedules an expenditure of Rs. 900 crores (18.8% of the total outlay of the public sector) on railway development.

Carriage by rail is the most important method of transporting men, machines and materials across India. Providing steam power to keep the trains on the move are the locomotive boilers manufactured by Texmaco. Texmaco, pioneer in many fields of engineering, designs and builds locomotive boilers for the Indian Railways.

Uncertain Outlook for Tea Gardens

World production of tea has been running ahead of demand since 1954. According to Mr. N. N. Karmakar, chairman, Indian Tea Planters Association, Jalpaiguri, the world crop during the current season might exceed the previous year's figure of 1,345 million lbs by about 20 million lbs. World demand, too, has been increasing, but as the supply has been rising faster, a surplus of 114 million lbs has been hanging over the markets. Mr. Karmakar says that overproduction is no new development. It was experienced on a serious scale in the early 'thirties, which led to the first international tea agreement in 1933 between India, Ceylon and Indonesia—the three major producers of tea. These producers agreed among themselves to maintain control over production and this continued right through the war, by regular five-yearly renewals, up to 31st March, 1955. Since then, unfortunately, no agreement has been possible due to the non-co-operation of a major producing country. Discussing the prospects for the Indian tea industry, Mr. Karmakar feels that keener competition is ahead, not only among the major producers, but also with the comparatively new entrants in the field, such as Kenya, Uganda, Tanganyika, Nyasaland and Southern Rhodesia, who have been increasing their production and exports. In the circumstances, the Indian industry's competitive strength has to be increased. He points out how taxation and welfare burdens have had a crippling effect on the economic working of tea gardens, by adding heavily to their cost of production and denuding them of financial resources. In 1957, export prices realised by Cachar and Tripura gardens were below cost, while those of Dooars and Terai were only slightly above it. At the internal sales, prices of Dooars, Cachar, Terai and Tripura teas were lower than the cost of production. "If the present trend of the market continues, then by the time the season's teas are sold, not less than 50 percent of the estates of Dooars and Terai, 75 percent of Cachar and Tripura, will suffer loss, and the rest of the estates may make a very small margin of profit, if they are fortunate enough to avoid a loss," Mr. Karmakar fears.

Yarn Glut and the Handlooms

The hope that accumulated stocks of handloom goods may be cleared before long has been expressed at a conference of textile interests in Madras. It is felt that the higher rebate announced earlier this month will promote sales. Yarn mills have been asked to curtail output by working shorter time, and the power cut might help achieve the same result to some extent. They, in turn, have asked the State Trading Corporation to buy handloom cloth for export, and have said that the sale of yarn abroad too should be encouraged in order to reduce the glut at home. The Madras Government has come round to the view that spinning mills have a surplus of yarn and can sell only part of their output to the handloom industry; yet, it is felt that tax relief is hardly likely to enable Madras to compete with other States producing the commodity. The assurance that 100,000 bales of yarn will be licensed for export, possibly for three years, provokes questions as to who will handle the business, which are the probable markets, and what will the price be. Millowners do not seem to be cheerful about the immediate prospects for sales abroad. Hongkong can still beat India as a supplier in such places as Burma, while Pakistan can offer strong competition in the Middle East since she uses better cotton for spinning. The millowners' view is that yarn production needs to be curtailed by agreement. Some circles feel that a levy on spindles is called for; so is the scrapping of the out-of-date ones in the older textile units. Labour in big units may soon have to reconcile itself to retrenchment and reduced wages. Although the politicians' pledges do not often take note of economic requirements, the excess in output might, as in the case of the jute mills, have to be dealt with by an agreement to limit hours and seal capacity. The Wage Board enquiry could precipitate a merger movement, leading to the formation of bigger and more economic units. Variations in the size and financial strength of mills tend to hamper recovery and State aid to the weakest producers could be prejudicial to the general health of the industry.

Far East Textile Markets

It would be surprising if Japanese textile manufacturers were not keeping a close watch on the possible outcome of the U.K.-India-Pakistan-Hongkong negotiations for the limitation of duty-free imports into the United Kingdom. If the three Asian Commonwealth territories are unable to take full advantage of their unrestricted market in Britain, they will presumably make greater efforts to increase their textile exports in other directions, so that Japan would have to meet even stronger competition than there is now. This must be an unpleasant prospect for the Japanese, although they have undoubtedly enjoyed a large volume of trade in recent months. New postwar records have been established during 1957 for Japanese exports of both cotton yarn, at 32 million lbs, and cotton cloth, at 1,468 million square yards. Japan is easily first in the list of the world's exporters of cotton piecegoods, India coming second with 889 million square yards, the United States third with 556 million square yards, and the U.K. fourth with 456 million square yards. Cotton yarn production in Japan has increased by 7 percent (compared with 1956) to 1,089 million lbs, while cotton cloth production has increased by 12 percent to 3,706 million square yards. There have also been striking increases in output in the man-made fibre industry. The total of 1957 production is 1,060 million lbs, showing an increase of 8.1 percent compared with 1956 and reaching the highest figure ever recorded. Japan thus comes second to the United States among the world's largest producers of man-made fibres. Compared with Japan, the three Commonwealth textile producers in Asia play only a negligible part in international trade in man-made fibres and their products. In competition, accordingly, Japan has a distinct advantage over them, and it remains to be seen how this advantage will be used.

Promoting Shellac Exports

Exports of lac and its products were slightly higher in 1957 than in the previous year. But the low level of prices, at home and abroad, affected India's foreign exchange earnings. To promote exports, the Government appointed a committee to enquire into the depression in internal prices and to suggest steps for stabilising them at a more economical level. Later, towards the end of 1957, an Export Promotion Council was set up. At the latest annual general meeting of the Calcutta Shellac Trade Association, Mr. M. Russell, vice-president, has welcomed the setting up of the Council, which it is hoped will benefit the trade. When the Export Promotion Committee was investigating the condition of the trade, the Association gave its views on "the difficulties and possible measures to increase prices and stabilise the market." The need for an extensive approach to sales in advertising and public relations, and for developing new markets, was emphasised. Problems of research, colour, quality, handling and transport facilities were discussed; and the Association subsequently sent a memorandum to the Government on all these aspects. The Shellac Export Promotion Council has suggested the opening of a sales room in Calcutta, where all parcels of shellac and lac products for ready sale would be offered for auction. The Association's standards sub-committee, at the suggestion of the United States Shellac Importers Association, has prepared and appropriately graded 11 selected samples of shellac and seedlac which, if acceptable to other sister bodies, will become the Calcutta standards. Mr. Russell makes out a convincing case for exempting shellac from sales tax. "If along with raw materials like cotton, raw jute, essential commodities like coal and steel, hides and oilseeds as foreign exchange earners are exempted from Central sales tax, then the tax remission case for shellac is a very strong one, as the greater part of the trade is concerned with exports."

Raw Film for Marathon Producers

The latest import restrictions, especially as they affect raw film supplies, have caused film producers to complain of a crisis. It is argued that unemployment will hit the film industry and it is not stars alone who will suffer from a fall in output. Entertainment tax receipts too will decrease. Producers claim that since films made for export help to earn foreign exchange, spending on raw film is fully justified. Some newspapers have suggested that raw film should be made in India itself (as is proposed) and feel that the producers meanwhile have a good case. They say that the least the Government can do is to restore the import quota; cynics might suspect that the advertisement revenue of these newspapers is suffering. A contrast is pointed out in the fact that Mr. D. Heathcoat Amory, British Chancellor of the Exchequer, has gone to the rescue of the U.K. film industry by cutting entertainment tax, whereas Madras has increased it since 1st April. Technicians fear that their jobs are in danger. They feel that a cut in production runs contrary to the aim implicit in giving State awards for good pictures. The hint that shorter films, lasting two hours or so, would provide a solution has apparently been ignored, perhaps because four hours' entertainment is what the masses are said to want. The cut in imports of exposed foreign films has not been mentioned, but it is pointed out that the Government now wants to produce more films on its own and its Films Division is going to use more of the raw material. The public sector of the film industry seems to have few friends, and perhaps does not deserve even those.

POLLUTION OF THE HOOGHLY

THE meeting of the Council on Saturday was eminently businesslike; the chief item was, of course, the debate on the Budget. As His Honour the Lieutenant-Governor remarked, it could hardly be a matter of disappointment that the finances of Bengal were not in a more prosperous condition; such a state of things was inevitable after the severe trials in the form of famine and plague that the province has suffered during the past year. His Honour welcomed the criticisms of the non-official members of the Council and acknowledged the moderation and courtesy with which those criticisms were made. He showed good sense and tact in his remark that he regretted the absence from those criticisms of any suggestions of greater economy in the administration of the province. That observation clearly shows that His Honour, while anxious, of course, for the efficient management of the affairs of the province, is desirous that their administration should be characterised, not only by economy but by greater economy than has hitherto been observable. Another practical matter dealt with at the meeting was the pollution of the river Hooghly. The Honourable Babu Surendra Nath Banerjee reverted to the question that he put in the Council last August regarding the defilement of the river by the discharge into it of the sewage of mills on both banks. The reason given by the Honourable Mr. Risley for the delay in the meantime making the enquiry as to the alleged pollution was the pressure on the Medical Service in Bengal due the deputation of a number of officers to active military service and to plague duty. But His Honour the President added to Mr. Risley's explanation his personal assurance that the matter would be enquired into and reported upon with the least possible delay. It is, of course, extremely important that the pollution of our rivers should be kept down to a minimum; and while the community is indebted to the Honourable Babu Surendra Nath for his action in the matter, it is fairly entitled to remind him that although it is quite proper to exercise vigilance for the purpose of detecting a few great offenders (or alleged offenders), it is no less important to prevent, if possible, the thousand and one acts of pollution by individuals, or families, or villages.

HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend

The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

Without Prejudice

LIABILITY TO INCOME TAX FOR RESIDENCE

WHEN HOUSE IS NOT HOME

(FROM OUR LEGAL CORRESPONDENT)

"ON a very few and short facts a very interesting question arises for our decision on this reference." Interesting and, we may add, of importance too, from the point of view of income tax to those who, domiciled, having their places of business and their permanent residence in another country, nevertheless are personally present and remain in India in the course of an accounting year. And when a decision of the learned Chief Justice of Bombay opens with some such observation as that above quoted, we know that we are usually in for some close analytical reasoning well worth studying. The reader who is also a grammarian will find the case, depending as it mainly does on the precise meaning of a plain simple phrase, a good test of his knowledge of the English language. The phrase consists in the words italicised in the following extract from Section 4A(a)(ii) of the Income Tax Act: "For the purposes of this Act (a) any person is resident.....if he .....ii) *maintains or has maintained for him a dwelling place* in the taxable territories for a period or periods amounting in all to 182 days or more in that year and is in the taxable territories for any time in that year."

In this borderline case, the facts were that the assessee went to East Africa in 1931; he had his father and brothers living in Bombay in the Kaira district. The father was possessed of immovable properties and in 1942 he made a gift of four of his houses to each one of his four sons, including the assessee. As the father had then no house left to stay in and as there was no likelihood of the assessee coming to India because he had his business in Africa to look after, he permitted the father to continue to stay in the house which had been gifted to him. The assessee's wife came to India with her four children on 17th April, 1946, and she lived in this house, in which her father-in-law was staying. She lived in India up to 14th February, 1947, and, in the meantime, one of her sons got married on 23rd May, 1946. The assessee himself came to India on 3rd September, 1946, and stayed in the house which had been gifted to him, up to 31st December, 1946. On these facts the taxing department contended that for the assessment year 1947-48, the assessee was a resident; and the question which fell for the determination of the High Court was whether the case of this assessee fell under Section 4-A(3)(ii), above quoted.

Now Section 4A (a) (ii) prescribes two conditions which must be complied with before it can come into operation in any particular case: (1) there must be a dwelling place maintained in the taxable territories either by the assessee himself or by someone else for him; and (2) the assessee must live in the taxable territories for any time, the limit of time in the latter case not being specified. In the case of the dwelling place, it must be maintained for a period of 182 days or more. Note the distinction. The assessee must maintain or have maintained for him the dwelling place for at least 182 days in the relevant year, but he comes within the sub-section as to being in the taxable territories, even if he is therein only for a period of a few hours.

The question the High Court had to decide was whether on the facts of the case it could be said that the assessee maintained or had maintained for him a dwelling place for the requisite period. If the house which was given to the assessee and in which his father stayed, and in which for a short period he himself stayed in 1946 and in which also for a slightly longer period his wife and children stayed, could be considered to be a dwelling house maintained by him or maintained for him, then no difficulty arose about the period because undoubtedly that dwelling place was there for the whole of the accounting period.

According to his custom, when faced with the interpretation of English words, the writer consulted two dictionaries, including the *Concise Oxford Dictionary*, and was surprised to find that the word "dwelling-place" apparently does not exist at all. At any rate, it does not appear in either dictionary. Wherefore Chagla C.J.'s exhaustive investigation into its meaning is the more invaluable. The result was not so much a definition as an explanation: "When we look at the language used by the legislature, it is clear that what is sought to be emphasised is that there must be not only a residence or a house for the assessee in the taxable territories, but there must be a home. The connotation of a dwelling place is undoubtedly different from a mere residence or a mere house in which one finds oneself for a temporary or short period. A dwelling place connotes a sense of permanency, a sense of attachment, a sense of surroundings, which would permit a person to say that this house is his home. Undoubtedly a man may have more than one home; he may have a home at different places; but about each one of these he must be able to say that it is something more than a mere house or a mere residence. Now it will be noticed that the legislature also requires that it is the assessee himself who must maintain a dwelling place in the taxable territories or, if he does not maintain it, someone must maintain it for him. Therefore, it is clear that it is not sufficient in order to satisfy this test that there is a dwelling place in the taxable territories in which the assessee goes and lives.

"What is necessary and what is essential is that the dwelling place must be maintained for him. In other words, there must be a house or a building or a part of the building which must be set apart and made available for him, in which he could live, if he so desired, as a home. There must also be in him a right to live in such a dwelling place maintained for him, because without that right it could not be said that he has either maintained a dwelling place or that a dwelling place has been maintained for him. The right need not be a proprietary right; it need not be a right in any particular property; but the right may be the right of a licensee to live in a place so long as the licence is not revoked. From this point of view, the ownership of the house is immaterial.....Therefore, the vital fact to determine in order to decide whether a case falls under Section 4A(a)(ii) or not, is not the ownership of the property, but the right of the assessee to reside in a building which is ready and fit for his occupation and which is intended to be used by him as his home. The building or a portion of the building must be available to him, and he must be in a position to go and occupy it without the permission or leave of anyone."

The learned Chief Justice then proceeded to apply this reasoning to the facts of this particular case, and asked whether it could be said that the assessee maintained this house in Kaira or that his father maintained it for him as a dwelling place, and answered the question by observing that "as soon as the house was gifted to him, the son allowed the father to remain in that house. There is no suggestion that he made any preparation for setting aside any part of that house to be used as his dwelling place in the event of his ever going to India. As far as the father is concerned, he used the house as his own dwelling house. But again there is nothing on the record to show that he maintained that dwelling house, not only for himself, but for his son. There is no suggestion that, consciously, the father set apart and made available for the son any part of this dwelling house."

The Advocate-General, representing the income tax authorities, had strongly emphasised two factors in the case. The first was that the house belonged to the son. But on this point, his lordship observed: "....The fact that the son was the owner of the house does not lead to the inference that he necessarily maintained that house as his dwelling place." The other factor on which the Advocate-General relied was that both the assessee and his wife and children resided in the house with the father; to which the court's answer was that "mere residence by itself is not sufficient for the purpose of drawing the inference that the residence was in a dwelling house maintained for the assessee: the residence may be as a guest, as a casual visitor, as a licensee. What we require is that, when the assessee and his family lived with the assessee's father, they were living in a dwelling house maintained for him; or, in other words, the son was not merely living in his own house, but he was living in his home."

The court, not being satisfied that the house was maintained for the assessee as a dwelling house nor that the assessee himself maintained it as a dwelling house, found in favour of the assessee and against the taxing department with costs.

(*I. T. Commissioner* v *Fulabhai Khodabhai*. 1958. 45. *A.I.R.* Bombay. 41.)

in a valley called Joda

Amid the silence of the Joda hills in the Keonjhar district of Orissa, a Rs. 17·5 million plant has gone into operation to produce ferro-manganese—a vital requirement in steel-making.

Served by an 18-mile rail link just completed, and power from Hirakud, this new plant starts with an initial capacity of 36,000 tons a year, to be stepped up by stages to 100,000 tons.

This plant has been speeded to completion eight months ahead of schedule, thanks to the invaluable assistance received from the State Government, the Hirakud Dam project and the Railways.

Life in the little-known village of Joda has turned a new chapter, reflecting the increasing importance of ferro-manganese as India strives towards a four-fold increase in steel capacity.

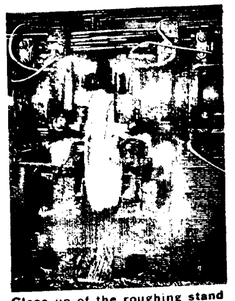
A Ditcher's Diary

I NEVER QUITE UNDERSTOOD WHY HUNDREDS OF hungry refugees were daily being brought to the prohibited areas of the city only to be arrested by the police and then, if reports are true, abandoned somewhere in the suburbs from where they would have to walk back again. Now that the campaign is over, it is even more difficult to understand why it ever began at all. Trained to take an economic view of things, I asked a friend of mine to find out if he could just what the factors were behind these massive demonstrations. (I need hardly add that the curiosity arose from an initial rejection of the advertised political and economic motives.) It is, I learned, not a very difficult thing to muster about a thousand men, women and children for a procession in Calcutta. In and outside the refugee camps there are so many persons doing nothing—itself an indictment of the Government, admittedly—that wage rates are pretty low. For those who do not care for long-distance walking, there are the railways, and ticket-free travel is, on these occasions I suppose, politically excusable. The cash payment for an afternoon's squatting on Esplanade East is more difficult to state. It varies from party to party. The Congress, I understand, has always to pay more than the communists who, contrary to popular belief, are often shrewd business men. A free meal is assured. Presents of *dhotis* and *saris*. I am told, are not unknown. There is at least one reported instance in which a woman demonstrator declined to walk into the police van saying words to the effect, "Hey, I hadn't bargained for this. I was told we would not be arrested." It is difficult not to feel sorry for her. The point I am trying to get at is that although the party in power may be chary of providing sufficient incentives for economic endeavour, the parties in Opposition seem fully aware of the need for incentives for political private enterprise.

THERE IS AN OLD SAYING—IT IS PROBABLY CHINESE—that the ant on the carpet cannot see the pattern. I always bear it in mind when the subject of India's progress in the past ten years is being discussed. And I was forcibly reminded of it when I read Mr. Kingsley Martin's impressions of his recent visit to India in the 12th April edition of the *New Statesman*. Here, one is tempted to dwell too much on the frustrations of economic life, on the impossible level of taxes, on the inefficiencies and corruptions of the petty bureaucracy, and to compare the meagre increase in national income *per capita* with that attained in north America and western Europe under more liberal regimes, without making the necessary allowances for the effort required to make any progress at all in an under-developed country where population is growing so rapidly. In fact, it often takes the views of a sympathetic outsider like Mr. Martin to help us get some reasonable kind of perspective on the matter. That is one reason why I found his article such an agreeable tonic in the present phase of national gloominess. Another is that, although further to the left than I will ever admit to being, his views on the mistakes made in India's planning seem encouragingly close to my own. But the points of criticism he does put forward have not, in my opinion, anything like the same significance as the congratulations implicit in his opening paragraphs. It is a great achievement for India to have confounded the pessimistic prophecies about persistent communal warfare and rapid "Balkanisation", no less than to have avoided dissolving into communism and the temptation to turn away from Britain and the Commonwealth. This is progress indeed—and there is no doubt who Mr. Martin considers responsible for it; in fact, the title of his article is "Ten Years of Nehru's India". Whatever the criticism of Mr. Nehru as a Prime Minister, which one does hear increasingly these days, his achievements as a national-revolutionary leader will assure him a place in history among the greatest of the ages. I agree with Mr. Martin that the key to understanding India's politics today lies in the relation between Mr. Nehru and the Congress Party. But I cannot understand him when he says that: ".....it is silly for the western critic to argue that no one is irreplaceable". I grant there can never be another Nehru, no more than there can be another Churchill or another Roosevelt. But Mr. Nehru's place will soon have to be taken by somebody, and who is to say the person chosen can never hope to achieve the same greatness when the circumstances he will face may prove an even more exacting test of leadership? After all, it is big jobs that make big men.



ONE FACT WHICH STANDS OUT FROM MR. MARTIN'S article is that being a socialist does not, apparently, involve being a silly ass, as it sometimes does in India. He deals, for instance, with one or two of our fashionable fads in most downright terms. On the subject of Hindi *versus* English, I quote, without comment: "The argument in favour (of Hindi) is that a great nation must have its own national language. Like other nations, the Indians wish to make their own contribution to the Tower of Babel at the United Nations; if they were more rational than the rest of us, they would be proud of contributing to world unity by continuing to speak, excellently and fluently, what is increasingly the international language of English. But no. Like the Arabs and the Russians, they would prefer the honour of being listened to in translation". We all know the problem is a little more complex than this. But what an eloquent way of refuting the humbug that India cannot hold her head up among the nations unless she is speaking a language of her own. On Prohibition, he is no less outspoken. For a columnist who has already drawn the parallel with America's blunders, the following comments on the results of Prohibition here are interesting: ".....an altogether undue amount of attention is paid to alcohol. The comparison with America, which I first knew in the early days of Prohibition in 1922, is irresistible". He goes on to say: "The corruption that results from Prohibition far outweighs any possible advantages. I know nothing that so degrades society as the knowledge that you and your neighbour both know that you are both breaking the law; and, what is more, that those whose business is to enforce it are also breaking it. Nor is that the only evil. Many middle-class people who have never learnt to drink, now do so, because Prohibition has made it socially fashionable. And what they drink is to an increasing extent a poisonous stuff, because the more efforts are made to enforce Prohibition, the higher the price of good alcohol, and the greater the efforts made to trick the law by distributing muck." I read somewhere the other day that the Government of Bihar had drawn up a programme for total Prohibition, the bill for which—Rs. 4½ crores—it expects the Centre to pay. I hope those who will be faced with the decision whether to waste the taxpayer's money on a scheme of this kind or whether to spend it on economic development, will read the relevant portions of Mr. Martin's article first.

MR. NEHRU'S APLOMB IN FACE OF SO MANY RECENT electoral reverses for the Congress Party, is certainly admirable. His refusal to be flustered by them bespeaks more than his self-possession; he is rightly aware that the party has never really been completely free from internal dissensions. On the other hand, the differences of today, he will be the first to admit, are of a basically different nature and far more intractable. Watching the Congress over a period one has a feeling that the party alternates between moods of extreme euphoria and bottomless despair, neither wholly warranted by what the communists call "objective conditions". Just which mood is dominant at the moment it is not easy to say. Immediately before the recent New Delhi meeting of provincial party chiefs, there were indications that the Congress was going to engage itself in an exercise of agonising self-examination. Perhaps Mr. Nehru felt that this was going too far, and so in came optimism. Now we have Mr. Dhebar hailing the recent change—if change it is—in the Communist party line as a triumph for the Congress. One of the shrewdest points in Congress policy, I used to think, was that while its leaders preached, not necessarily insincerely, co-existence with the communists everywhere else, internally it knew how to treat them "rough". So far as action is concerned, this is still perhaps true of the Government; it knows the communists for what they are as distinct from what they say. Nor shall I jump to the conclusion that Mr. Dhebar and the Congress have gone through any fundamental change in their attitude to communism. Premature self-congratulation on the score of the communists' conversion to the ways of the Congress and democracy may not confuse the congratulators themselves, but its effect on the public mind may well be different. People may think the communist leopard really has changed its spots—and what could be a graver or more dangerous error than that?

AN ITALIAN WINEGROWERS' SOCIETY LATELY announced that a certain function was to be held "under the patronage of Saint Bacchus" and this improbable piece of news moved an otherwise well-informed Italian paper to protest that it was surely a bit thick when Catholics started canonising pagan deities. The reply came quickly, backed by all the appropriate ecclesiastical credentials: there is a Saint Bacchus. He has his due place in the calendar of saints whence he is reputed to watch over the fortunes of certain groups of winegrowers. Which proves what one suspected, that even pious Italians have difficulty in keeping abreast of the proliferation of their saints. Italians themselves illustrate this difficulty with the story of an Italian aviator who had to jump from his plane and found that his parachute failed to open. As he fell through space, he grasped, "Saint Anthony, Saint Anthony do something for me". At once his fall was arrested by a soft billowy cloud that held him as though in the palm of a mighty hand, and a great voice boomed, "Saint Anthony of Padua or the other?". The aviator hesitated, "Er, ah, Saint Anthony of Padua". The cloud vanished, and as he resumed his free fall through space the great voice boomed: "It was the other".

STATESMEN SPEND THEIR TIME SOLVING COMPLICated problems which would not exist if there were no statesmen.

THE DUNLOP RUBBER CO. (INDIA) LTD.

MANAGING DIRECTOR, MR. JOHN LUCKHAM'S REVIEW

The 32nd Annual General Meeting of The Dunlop Rubber Co. (India) Ltd., was held in Calcutta on the 18th April, 1958, Mr. John Luckham, Managing Director, said :

Gentlemen,

The Directors' Report and Accounts for the year 1957 have been in your hands for some time, and with your permission I will take them as read.

It is with great regret that we have to record since our last Meeting the loss which we have suffered in the passing of two of our Directors.

Mr. George Morgan died in Calcutta on the 26th June, 1957. Mr. Morgan originally came to Calcutta in 1889 and the experience which he gained during his distinguished career was of very great value to your Board of which he was a member since 1945.

On the 19th January this year Mr. Kanai Lal Jatia, who had also been on your Board since 1945, died from a heart attack at his Calcutta residence. His wise counsel was at all times made freely available to the interests which he so earnestly served, and he will be greatly missed in the industrial field with which he was connected.

You will have seen from the notice convening the Meeting that it is proposed to appoint Mr. E. H. Morris to the Board. Mr. Morris first came to India in 1933, and apart from service in this country, has had many years of service with the Dunlop Rubber Co. Ltd., in the Far East. He returned to India in 1956 as General Sales Manager following the untimely death of Mr. Guy Stack. The Company's business is expanding so rapidly that your Board feel it necessary to have a wholetime Director at the head of the Company's selling organisation and Mr. Morris is recommended for this appointment.

The Year's Trading

During the year production increased in nearly all lines, but even so we were not able to meet the demand for all our products. The Government permitted limited imports to help relieve some of these shortages, but particularly in respect of cycle tyres and rims sufficient quantities have not been available to meet requirements.

During the past year the road transport industry has been undergoing tremendous changes and expansion, particularly long distance goods transport. The modern truck now engaged in this work requires tyres capable of carrying heavy loads at high speeds over long distances. Such tyres must be built with the best available materials and using the latest manufacturing techniques. It is in this respect that your Company is particularly fortunate in having available to it the full resources of the Dunlop worldwide research, technical and engineering organisations.

We have continued to retain our premier position in the car tyre market. The progress which the motor car industry has been making in recent years is in danger of slowing up owing to the difficult licensing situation of the imported components. The reasons for this are too well known to everyone and fortunately these are likely to persist for some ne.

The bicycle industry has continued to grow very rapidly and the demand for our products has been well in excess of supply. I will deal separately with our expansion plans to meet this situation.

During 1957 the installation of plant for the manufacture of large earthmover tyres was completed and production commenced early this year. The demand for this type of tyre is increasing.

Good progress was made in our Industrial Rubber products range and in particular the demand for conveyor belting has exceeded all expectations.

The popularity of Dunlopillo for all its various uses continues to grow and the additional capacity which was installed during the year was utilised to the full.

Expansion Plans

I am happy to be able to tell you that satisfactory progress is being made at your new factory at Ambattur, near Madras, and we are hopeful that everything will be ready for the production of bus, truck and cycle tyres to commence at the beginning of next year. The construction of the main buildings is well under way and plant and machinery are beginning to arrive in the country.

Expansion is also continuing at Sahaganj and in particular increased production of giant tyres, cycle tyres and cycle rims is well in hand.

I advised you at the Annual General Meeting last year that an issue of further share capital would form the basis of the Board's plans for raising additional capital. As most of you will be aware, in July 1957, 14 lakhs of new Ordinary Shares of ten rupees each at a premium of five rupees were offered to the Ordinary Shareholders in the proportion of 7 for 8 existing shares. It is gratifying to be able to report that in spite of the difficult conditions, this issue was an unqualified success. The net proceeds of the issue amounted to Rs 203 lakhs. As a result of the issue the Subscribed Ordinary Capital now stands at Rs. 3 crores as against Rs. 160 lakhs at the end of 1956.

Raw Materials

The raw materials supply position was generally satisfactory although on several occasions during the year our stock position became dangerously low in some of our main requirements. There was a period when the congestion in Calcutta port seriously delayed clearance of vital cargoes but the position improved very considerably towards the end of the year. Our production planning problems would be considerably lessened if Government could grant import licences for essential raw materials on a longer basis than six months at a time.

There was virtually no improvement in the production of raw rubber in India during 1957 as compared with the previous year. On the other hand, consumption of rubber reached a new record, with the result that we had to rely on considerable imports. In my report last year I mentioned that import licences for raw rubber issued after August, 1956, were subject to a cess if the imported rubber landed at a cost less than the local price. On imports during 1957 we paid nearly Rs. 11 lakhs to the Rubber Board on this account, and we also had to absorb Rs. 2 lakhs on rubber which was imported at a price higher than the local price.

Prices of raw materials were stable throughout the year but there were increases in import duty on a number of raw materials and machinery parts.

As I have already said, our production is due to expand very considerably in the near future to meet the essential needs of the road transport industry which is so vital in this country. This expansion has, of course, the full support and approval of the Government and we are, therefore, confident that licences to import increased quantities of raw materials will be granted.

Profit & Loss Account

The net profit for the year after providing for depreciation, interest and taxation was Rs. 80,67,449 compared with Rs. 55,09,909 for 1956. In the face of the high level of taxation and the rapid expansion of our business, the building up of our internal resources continues to be of paramount importance. The Directors are, therefore, proposing the transfer of Rs. 30 lakhs to General Reserve. This will increase the General Reserve to Rs. 2,38,83,000 and you will see from the Balance Sheet that the increased Ordinary Share Capital is covered more than one and a half times by the total Reserves and Surplus. The rate of Ordinary Dividend was maintained without change at 15% from 1951 to 1956 and in view of the improved results the Directors consider there should now be a modest increase. They are, therefore, recommending a final Ordinary Dividend of 8½%, which with the interim dividend paid in June, 1957, gives a total of 16½% for the year and absorbs Rs. 38,25,000. The surplus carried forward will then be Rs. 22,23,000.

Balance Sheet

The additions to Fixed Assets during the year amounted to Rs 97 lakhs, most of which was in respect of building and plant additions at your Sahaganj factory. but this also included Rs. 17,80,000 expended on the new Ambattur factory. The amount of depreciation written off in 1957 was Rs. 27,69,000. A special provision of Rs. 6,60,000 made in previous years has now been transferred to Special Depreciation Reserve, and after allowing for this the net value of fixed assets has increased during the year by Rs. 69 lakhs to Rs 382 lakhs.

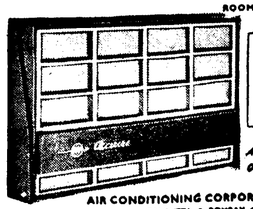
Stock Inventories at Rs. 4,86,84,000 were Rs. 31,37,000 higher than at the close of the previous year, but even so finished goods stocks were abnormally low owing to the ever-increasing demand for the Company's products. Sundry Debtors were up by Rs. 83,66,000 due to the greater sales turnover.

Turning to the liabilities side of the Balance Sheet, I have already commented on the increase in Ordinary Share Capital and Reserves. Compared with the end of 1956 the bank borrowings have been reduced by Rs. 42,79,000 and the unsecured loans of Rs. 76,07,000 have been repaid. In spite of substantial increases in Sundry Creditors and Provision for Taxation there was an overall reduction in current liabilities of Rs. 56,46,000 resulting from the additional share capital subscribed during the year.

Employee Relations

The standards of our welfare facilities and working conditions have been well maintained throughout the year. General labour relations remained cordial and I am sure you would like to join with the Directors in thanking the staff and operatives for their loyal and willing service throughout the year.

NOTE :—This does not purport to be a record of the proceedings of the Annual General Meeting.



Mr. Burrah Saheb and Airconditioning . . .

Mr. Burrah Saheb is really not bothered about the money he spends for his personal comfort. He is only interested in getting the very best and when it comes to airconditioners he just took the ACCAIRE.

What he wanted primarily was a cool, clean room with a minimum of disturbing noises . . . a place where he could work with quiet efficiency. He found the ACCAIRE whisper-quiet and efficient in operation and that satisfied him.

Now his ACCAIRE gives him all that and more. It is a handsome unit, it is low in power consumption and it never lets him down.

SHARES RISE ON BUDGET NEWS

PROFITS TAX CHANGE WELCOMED

London, 23rd April.

THE British Budget proposals were favourably received in the stock market, and as an initial response prices rose over a broad front. The advance was shortlived, however, but the gains were fairly well maintained and the tone of the market remained satisfactory. The Labour victories in the county council elections, continuing nervousness over the U.S. economic situation in spite of the sustained firmness of Wall Street, the uncertain labour situation in the U.K., and new issue prospects all combined to restrain the initial enthusiasm which greeted the Budget proposals. The decision to consolidate the two rate of profits tax into one rate of 10 percent was particularly welcomed, while numerous good rises followed the cuts in purchase tax. Although there was nothing in the Budget directly to help gilt-edged securities, the Government's emphasis on the maintenance of anti-inflationary measures and the defence of sterling favourably affected sentiment. This, coupled with hopes of an early reduction in the British Bank rate, brought a widespread advance, which was subsequently checked by the appearance of a new £20 million New Zealand loan. Nevertheless, gains were maintained and gilt-edged showed some useful rises on the week. Apart from some demand for German issues, there was very little interest in foreign bonds and rails. Dollar stocks were higher in sympathy with Wall Street. Many good features developed in industrials on the purchase tax cuts while the profits tax alteration also had a good effect. Apart from individual issues, however, the general advance was limited to a few pence. South African gold shares drifted lower in idle conditions but base metals generally were maintained. Oil shares gave a somewhat erratic display after the Budget, but went ahead later in response to Wall Street's advance and recorded appreciable gains on the week. Rubbers were quietly firm and United Sua Betong advanced on their increased payment. Tea shares were better where changed, with sentiment favourably influenced by the recent firmness at the auctions.

Activity on Wall Street

Speculative rails, after a long spell of inactivity, returned to the spotlight in bond dealings last week. They forged ahead along a broad front, scoring sizeable gains, with Missouri Pacific and New York Central securities among the leaders. The increase in buying interest was touched off by expectations of some tax relief from Congress for the railways, according to market sources. U.S. Government obligations extended their recent gains with two newer issues reaching new highs. The announcement of a further Federal Reserve reduction in reserve requirements and the rediscount rate last Thursday came after normal trading operations, but the action was generally considered bullish. Investment quality corporates also pushed ahead on a good volume. Convertibles fluctuated irregularly in line with the trend in the stock market.

U.S. Federal Reserve Return

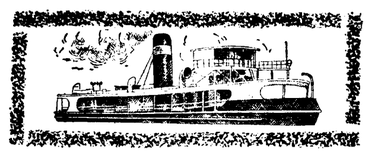
The U.S. Federal Reserve return for the week ended 16th April shows that the gold stock fell by $125 million to $22.170 million. Foreign deposits rose by $6 million to $259 million, while foreign investments fell by $50 million to $3.217 million. The Federal Reserve bought $76 million worth of bills and $92 million worth of securities under the repurchase agreements. Total discounts and advances rose by $157 million to $296 million, while the aggregate excess reserves of member banks rose by $132 million to $764 million. The daily average excess reserves of member banks rose by $2 million to $653 million, while their daily average borrowings rose by $109 million to $199 million. Business loans of New York city banks fell by $61 million to $11.231 million, compared with a rise of $115 million to $11.747 million in the corresponding week a year ago. Gold certificates on hand and dues from the U.S. Treasury were down by $110 million. The deposit member bank reserve account rose by $572 million to $18,870 million.

Stock Market Prospects

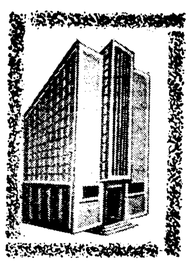
The *Investors' Chronicle* market newsletter writes: The rise in London industrials needs consolidation. Gold shares are affected by the South African elections and counter-attractions from elsewhere, but the overall pattern has continued to be favourable. Wall Street action in the face of poor business news is encouraging. The British Budget struck a nice balance, between stimulation and retrenchment, but with a bias towards a standstill policy of restriction since the Chancellor believes that Britain is unlikely to have a sharp recession and that the main task is still to fight inflation. But he has introduced a welcome degree of economic flexibility. The flat-rate profits tax could have important psychological effects on dividend policy. The prospect is for a brighter Budget some time before the General Elections.

Quicksilver Prospects

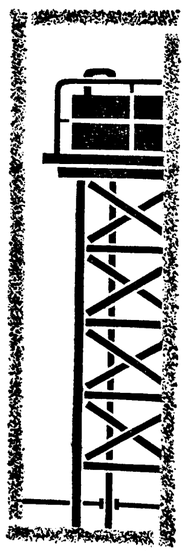
The London ex-warehouse price for quicksilver showed no decisive change during the past week, according to trade sources. Demand remained on the quiet side, and although dealers' ideas on price varied somewhat, they currently suggested that about £77 a flask was still the value for spot material. The tone of the market suggested, however, that a slight easing could not be ruled out, chiefly because of more liberal imports recently from Mexico and other countries. Meanwhile, both Spain and Italy continued to hold for much higher prices—about £80 a flask, f.o.b., or about £81½ on the spot in London.

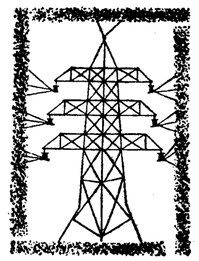


Vegetable Oils and Oilseeds



The vegetable oil and oilseed markets displayed a rather irregular appearance during the past week. In oilseeds, demand was largely concentrated on copra and palm kernels at steadily rising prices, but there were signs at the close of an abatement of enquiries. Business was slow in castorseed but there was no real "give" in prices. Groundnuts were neglected. Linseed was comparatively steady. In general, drying oils followed an easier trend, except perhaps for castor oil. Demand for the latter was quieter, and following an early advance for Indian oil, the market thereafter became erratic. As against a week ago, prices were barely £2 to £3 a ton higher. Linseed oil finished slightly easier. Coconut oil was firm, while palm and palm kernel oil reflected the improvement in the basic materials. Groundnut oil was steadier.





Baar Black on World Economic Situation

Mr. Eugene Black, President of the International Bank for Reconstruction and Development, has said that he is not pessimistic about the current world economic situation. In a speech prepared for delivery to the United Nations Economic and Social Council, Mr. Black declares that whatever the prospects for the short run, in the long run they are good. There is still great momentum in the economic progress of the under-developed countries. It would be deeply unfortunate if a preoccupation with domestic economic problems in the developed countries should lead to such a diminution of international aid and investment that that momentum is lost.

Money

THE CALCUTTA MONEY MARKET

DEMAND CONDITIONS STATIC

Wednesday, 23rd April.

DEMAND conditions have been almost completely static in the Calcutta money market during the past week. None of the chief sources of supply has shown any increase; the needs of the cotton mills, the sugar industry, and on account of grain storage, remain about the same. The jute mills have reduced their demand for funds. The interbank market has also been easier, although the call rate remains unchanged at 3½ percent.

There was a fair showing of export documents during the week, with gunny bills chiefly in evidence. Demand for remittance was about normal. Sterling has been strong against the U.S. dollar throughout the week, but has turned easier today largely due to speculation about Bank rate changes. The pound has shown fractional losses against most Continental currencies.

* * * *

The bullion market continued to rule firm on bull support in face of limited supplies. Silver prices advanced from last week's level of Rs. 198 to Rs. 199.25, quoted today for ready delivery. The rate for forward delivery was Rs. 196.50. London and New York silver prices remained unchanged.

Gold ruled steady in sympathy with silver and the price advanced from Rs. 114.50 to Rs. 115. The sovereign at Rs. 72.50 showed a gain of 25nP.

* * * *

During the week ended 18th April, Government of India Treasury bills for Rs. 148,16,50,000 were sold in favour of the Reserve Bank.

* * * *

A drop of Rs. 10.44 crores to Rs. 1,627.77 crores in active notes was the main feature of the return of the Reserve Bank of India for the week ended 18th April, 1958. The total note issue was Rs. 25 lakhs higher at Rs. 1,651.64 crores. Notes held in the Banking Department consequently rose by Rs. 10.69 crores to Rs. 23.87 crores. Deposits of the Government of India increased by Rs. 3.22 crores to Rs. 52.45 crores, while other Government accounts dropped by Rs. 54 lakhs to Rs. 13.09 crores. Balances of commercial banks at Rs. 90.99 crores showed a rise of Rs. 13.15 crores. Balances held abroad declined by Rs. 9.34 crores to Rs. 42.48 crores. Investments were Rs. 14.20 crores higher at Rs. 230.14 crores. Other loans and advances fell from Rs. 55.53 crores to Rs. 54.37 crores, of which advances to scheduled banks against usance bills amounted to Rs. 17.33 crores (Rs. 19.06 crores). Ways and means advances stood at Rs. 51.17 crores (Rs. 46.59 crores).

* * * *

The return of the State Bank of India for the week ended 11th April, 1958, shows a drop of Rs. 6.90 crores to Rs. 427.35 crores in total deposits. Investments in Government securities are down by Rs. 1 lakh to Rs. 180.36 crores, while other authorised investments remain unchanged at Rs. 10.38 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 36 lakhs to Rs. 209.35 crores. Cash and balances are, in consequence, shown at Rs. 32.81 crores or Rs. 58 lakhs higher.

* * * *

The statement of the position of scheduled banks for the week ended 11th April, 1958, shows Demand and Time liabilities at Rs. 774.45 crores (Rs. 17.46 crores on account of borrowings from banks) and Rs. 757.62 crores (Rs. 15.13 crores), compared with Rs. 767.49 crores (Rs. 15.95 crores) and Rs. 743.11 crores (Rs. 15.02 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 1.82 crores and Rs. 7.19 crores to Rs. 39.92 crores and Rs. 75.89 crores. There is a rise of Rs. 88 lakhs to Rs. 441.44 crores in investments. Advances and bills discounted at Rs. 962.20 crores show a decline of Rs. 7.21 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.6 percent and 62.8 percent, against 8.3 percent and 64.2 percent.

* * * *

The profit of the BANK OF TOKYO amounted to Rs. 2.84 lakhs for the year ended last December. Deposits stood at Rs. 75.61 lakhs. Cash was shown at Rs. 24.66 lakhs. Advances totalled Rs. 8.94 crores and investments stood at Rs. 42.11 lakhs.

B.O.A.C. INTRODUCES ECONOMY CLASS SERVICE TO NORTH AMERICA

From 1st April, B.O.A.C.'s new reduced economy fares between Britain and north America have come into effect offering a new class of air travel which is expected to result in a considerable increase in traffic across the north Atlantic. These fares, which are some 20 percent cheaper than the existing tourist rates, will bring the Calcutta-London-New York single fare down to Rs. 3,187 and the return fare to Rs. 5,737; Calcutta-London-Montreal fares will be reduced to Rs. 3,163 (single) and Rs. 5,694 (return). During the summer, B.O.A.C. will be offering more than 86,000 seats in each direction across the north Atlantic, of which more than half will be economy class. Passengers travelling on this new class of service will fly the Atlantic in B.O.A.C.'s latest aircraft—the *Britannia* and *DC Seven Seas*. As a measure of its popularity, B.O.A.C. announces that already more than half of the economy class capacity available for this coming summer has been sold.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (base: 1939) has now been brought up to December 1957. Compared with November, the December indices for Government securities and preference shares show rises of 0.2 points and 0.6 points, respectively.

There were decreases in banks 1.0 point, cottons 6.6 points, coals 1.5 points, jutes 4.4 points, minings and oils 4.6 points, cements 2.4 points, engineerings 2.4 points, teas 12.0 points, sugars 0.4 points and miscellaneous 6.7 points. Papers increased by 69.5 points.

Combining all the factors, the *Capital* variable yield securities index declined by 4.7 points during December 1957.

Stocks and Shares

UNDERTONE STEADY DESPITE STRIKE THREATS

MARKET WELCOMES DEVELOPMENT REBATE CONCESSIONS

Wednesday Evening.

THE week began well but ended badly for the stock market. At the start, it looked as if a recovery movement was building up, following the fortnight-old pause. On Friday, sentiment received a boost in the shape of the development rebate concessions announced by the Finance Minister. Operators welcomed these as yet another instance of the new spirit of official reasonableness towards the problems of the private sector. Indian Irons responded to the announcement by crossing Rs. 22 after the close of business on Friday. But in unofficial trading during the subsequent holidays, the price slipped down to Rs. 21.84. After the long week-end, the market opened on Tuesday with Indian Irons at Rs. 21.90, and for a while it looked as if another strong upward movement was building up. The incipient recovery was, however, reversed by news of the strike notice served by the United Iron and Steel Workers Union on the Indian Iron and Steel Company. There were reports that a prominent operator, who has been consistently bullish over a long period, had unloaded holdings to the extent of about 100,000 shares. With all this, the price receded to Rs. 21.75 and then to Rs. 21.64 today. This suggests an undertone of confidence and the possibility that, but for the impending labour troubles, there might have been a substantial rise. Even earlier, the operations in Indian Irons were somewhat subdued by the knowledge that T.I.S.C.O had already received a strike notice due to expire on 28th April.

Investment enquiry continues to be disappointing and brokers returning to their desks on Tuesday after the three-day closing found very little business awaiting their attention.

Gilt-edged were strong. It is now thought that the new loans may be announced earlier than expected, perhaps by the first week of May.

Hind Bank were steady at Rs. 53.50 on the announcement of the merger with the Bank of Baroda.

Among the features of the week were Orient Paper, which rose from Rs. 28.30 to Rs. 28.80, Rallis from Rs. 30 to Rs. 33.25 on reports that the company was expanding its activities, and Dyer Meakin Breweries from Rs. 9.44 to Rs. 10 on reports of good working.

There was hardly any activity in tea shares on account of the delay in the expected tax relief. It is rumoured that the Government has now given up the idea of a general relief and has reverted to the original position that the benefit should be restricted to *common* teas. Considerable ingenuity is being exercised in devising a formula for this purpose, and one which will bring the Darjeeling district within the scope of the tax relief and at the same time will not fall foul of the Constitution on account of regional discrimination.

Coals were featureless because of uncertainty over the recommendations of the Coal Prices Revision Committee which is being delayed.

There was little or no business in jute shares and prices showed a generally downward trend. Here is a chart showing representative price movements:

	Opening 17th April, 1958.	Closing 23rd April, 1958.
	Rs.	Rs.
Indian Iron	21.69	21.64
Burrakur Coal	22.75	22.25
National Jute	23.50	24.20
Orient Paper	28.50	28.80
Textile Machinery	18.28	18.20

Metal Box	27.75	27.75
Guest, Keen, Williams	31	30.75
Indian Cable	29.56	29.50
Philips India	14.12	13 87
National Carbon	25.25	25.25
India Steamship	10.81	10.87
3% Loan 1986	71.25	71.25

* * * *

There is a decline from Rs. 9.86 lakhs to Rs. 7.61 lakhs in the profit of the BELSUND SUGAR COMPANY for the year ended 30th September, 1957. The dividend is maintained at Re. 1 a share. Provision for taxation has been allocated Rs. 4.50 lakhs, including Rs. 55,000 in respect of previous years, against Rs. 4.80 lakhs. Provision for contingencies absorbs Rs. 50,000; there was no such provision in the previous year. Depreciation has been reduced Rs. 90,669 to Rs. 84,228. After necessary adjustments, a sum of Rs. 74,946 has been carried forward, compared with Rs. 73,488 brought in. The directors state that the factory commenced crushing on 22nd November, 1956, and finished on 17th May, 1957, with a total crush of 3,411,524 maunds of cane as compared with 3,764,594 maunds in the previous year. The quality of cane available was normal and the recovery was 9.72 percent compared with 10 percent in the previous year.

* * * *

The profit earned by the WESTERN INDIA MATCH CO. LTD. has fallen by Rs. 3.34 lakhs to Rs. 63,78,622 for the year ended 31st December, 1957. The dividend is maintained at 11 percent, including a bonus of 1 percent. The taxation provision is up from R. 29.90 lakhs to Rs. 36.60 lakhs. Depreciation has been increased by Rs. 6.59 lakhs to Rs. 16.25 lakhs, including development rebate of Rs. 5.18 lakhs. After making various adjustments, there remains a balance of Rs. 89,860 to be carried forward, against Rs. 8,59,978 brought in. The directors state that the factories worked satisfactorily during the year and sales were also good but, on account of unabated competition from the subsidised cottage industry, rising manufacturing costs and increased taxation, the profits are less than in the previous year.

* * * *

The profit of the LAKSHMI COTTON MANUFACTURING CO. LTD. has declined from Rs. 21.76 lakhs to Rs. 2.13 lakhs for the year ended 31st December, 1957. The ordinary dividend has been cut by Rs. 27.50 a share to Rs. 15 a share, including an interim of Rs. 7.50 a share. The provision for taxation and wealth tax is Rs. 1.56 lakhs, against Rs. 4.82 lakhs. It has not been possible, in view of the inadequate profit, to make provision for normal depreciation for the year amounting to Rs. 7.89 lakhs, nor for development rebate amounting to Rs. 3.56 lakhs. There are furthermore arrears of initial depreciation in relation to earlier years aggregating Rs. 1.94 lakhs. The carry-forward is Rs. 2,294, compared with Rs. 20,375 brought in. The directors state that "the year under report was most unfavourable for the composite textile industry, and well-nigh disastrous for many upcountry mills".

Bombay Market

SPECULATIVES MARKED DOWN

STRIKE RUMOURS BRING EASIER CONDITIONS

Wednesday Evening.

TRADING in the Bombay stock market during the past week was reduced by the holidays. In spite of a decline in prices because of profit-taking, the undertone was quietly steady. Speculative issues were marked down partly on technical considerations and partly because of lower advices from Lyons Range. In Calcutta, prices fell under speculative pressure, as rumours were circulating about a strike by a section of workers in the Indian Iron and Steel Company. Falls in commodity markets, combined with reports of labour troubles, affected sentiment.

Tata Steel were lowered to Rs. 183 and Indian Iron fell to Rs. 21.68. Alcock Ashdown were freely offered at Rs. 281.25. Premier Construction were supported at Rs. 190. Tata Locomotive were bought at Rs. 165 on hopes of a higher dividend. Automobile shares were neglected as production was being hampered by the shortage of imported components. Premier Automobile came to hand at Rs. 81.50 and Hindustan Motor were available at Rs. 6.96.

Cotton mill shares showed declines all round on fears of a fall in the profits of mills this year. The address of the chairman of Bombay Dyeing was interpreted bearishly and it was thought that the offtake of cloth might be lowered in coming months. Bombay Dyeing fell to Rs. 55.90 and Century were taken at Rs. 428.50. Svadeshi changed hands at Rs. 171 and Kohinoor were transacted at Rs. 266. Simplex were bought at Rs. 154.50 and India United Ordinary were offered freely at Rs. 9.44. Apollo realised Rs. 1.78.

Miscellaneous shares showed mixed movements. Sugars were steady. Belapur were bought at Rs. 244 and Phalton came to hand at Rs. 138.50 due to the higher prices of the commodity. Cement shares were fractionally shaded. Associated Cement fell to Rs. 153.25 and Digvijay were lower at Rs. 142. Steamship company shares were steady on prospects of increased activity and expansion. Scindia gained at Rs. 17.56 and Great Eastern Shipping were done at Rs. 20.12 Mining shares were subdued because of the uncertain outlook. Shivrajpur Syndicate made Rs. 93.50. Bombay-Burmah gained at Rs. 567.90 on the news of a bonus issue. Tata Chemical were steady at Rs. 14.88 on good corporate news. National Rayon reacted to Rs. 222.50 on profit-taking.

Banking shares were steady. Bank of Baroda gained at Rs. 144 on reports that the business of Hind Bank will be amalgamated with its own. Central Bank made Rs. 53. Insurance shares were idle, and New India declined to Rs. 44.25.

Electricity supply company shares met with scattered interest. Ahmedabad Electric made Rs. 96.80 and Tata Hydro were done at Rs. 118.25.

The Story of Oil—8

Trees of steel

When a well strikes oil, the first consideration is to stop it gushing. Such an occurrence, though spectacular and common in the early days of drilling, is wasteful. To counteract the pressure, therefore, the mud used during drilling is pumped into the well. The drill is then replaced by narrow tubing which stretches from the bottom of the newly discovered deposits to the 'Christmas Tree' on the surface. The latter is a system of valves which control the flow of oil.

Crude oil, by itself, cannot move. It usually lies between natural gas (on top) and water, so that when the oil trap is pierced by the well, any gas present seeks to expand and pushes down on the oil, driving it upwards. Or gas may be dissolved in the oil itself, and as it expands it pushes the oil to the surface. If, however, a large quantity of water lies below the oil, it forces the oil out of the porous rock and into the well. Sometimes a combination of gas and water pressure drives the oil to the surface.

Normally this pressure is sufficient to keep a well flowing for some time. But as the porous rocks are drained, the pressure declines. Then one of several artificial methods can be used to keep the oil flowing. The 'Christmas Tree' can be replaced by a mechanical suction pump which draws the oil up to the surface. Or gas can be fed into the deposits (between the casing and the tubing) to mix with the oil and bring it to the surface. Or, as a last resort, gas or water can be pumped down a neighbouring well to recreate the original pressure.

Thirty or forty years ago, only a quarter of the oil discovered could be recovered. With today's production techniques a much larger recovery percentage is possible.

Books

A KALDORIAN DISCIPLE

Capital Taxation in a Developing Economy (India). By I. S. Gulati. (Published by Orient Longmans, Calcutta. Price Rs. 12.50; pages 204).

Dr. Gulati's mind is dominated by the belief that in under-developed economies "the marginal social efficiency of capital for Government investment" is very high, but this is a view which will not be readily accepted by many. For one thing, public expenditure is not mainly for investment. For another it is yet to be proved that the marginal social efficiency of public investment is greater than that of private. The book contains both a theoretical study and an examination of current capital taxation, but the theoretical analysis is not in consonance with the conditions prevailing in India. It is asserted, for instance, that a "fairly large proportion of income from investment would be intended for current consumption" (page 27), but actually money for developing the private sector comes to a large extent from investment income that has been saved. The assumption that corporations do not directly pay capital taxes is strange. So also is the belief that "capital taxes may, on the other hand, encourage investment." The chapter on planning and taxation does not appreciate the crucial need for foreign capital, which will not come if capital taxation is heavy and if the private sector is not healthy. The author pleads for taxation on Kaldorian lines, although it has already depressed the capital market to an extraordinary extent. It is unfortunate that theoretical concepts born to economists accustomed to conditions very different from India's are inspiring official policies here which tend to increase bureaucratic control and the dissipation of scarce resources.

FOR THE INVESTOR

The Investor's India Year Book. Compiled by Place, Siddons and Gough, 6, Lyons Range, Calcutta 1. (Published by Orient Longmans Private Ltd, Post Box 2146, Calcutta 1. Price Rs. 20).

The feature of the 1958 edition of this well-known year-book is an extended preface reviewing the economic developments of the past year. In it, the usual high standards of comprehensiveness, sobriety and shrewd judgment are maintained. After a year in which their pockets have been badly picked, investors will be reassured to learn that a leading stock-broking firm views the future with cautious optimism. It is not suggested that taxation has reached the ceiling, but the feeling is that greater realism will prevail and future increases in fiscal burdens will not be so large as to drive investors to despair. For those particularly interested in individual industries, the preface contains competent surveys of money, coal, cotton textiles, jute, sugar, tea and the miscellaneous group of industries. Details concerning the financial results of important companies, as well as Central, State and municipal loans, have been brought up to date. The publication should prove to be a valuable addition to investors' libraries.

SOME MORE ANNUALS

Industrial India Annual, 1957. Edited by T.V. Jayaraman. (Published by A. MacRae and Co. (Private) Ltd., Bombay. Price Rs. 3.50, pages 239.)

The latest annual number of *Industrial India*, the official organ of the All-India Manufacturers Organisation, contains varied features of topical interest relating to industrial and economic problems. The publication has been divided into four parts. Part I deals with Indian economic problems and includes a thought-provoking article by Mr. Murarji J. Vaidya on the resources required for development planning. Part II discusses the programmes of development and the industrial potentialities of various States; there are articles from some State Chief Ministers. The other two sections relate to the problems of industrialisation and certain important research studies.

The Banking Almanac, 1957-58. (Published by Indian Business Publications, New Delhi. Price Rs. 12.50, pages 670.)

The latest edition of this useful handbook has been made more comprehensive than its predecessors. A large number of institutions have been added, and the section relating to international banks has been enlarged. The bank branches section has been improved and includes the addresses of branches wherever available. The publishers say that the next edition will have many new and additional features, notable among them being a directory of prominent stock and share brokers and of general insurance companies.

Calcutta Port Annual. Edited by Arati Srimal. (Published by Institutional Journals. Price Rs. 5; pages 214.)

The main purpose of this annual is to make a thorough survey of Indian ports and the shipping industry. Sponsored by the Commissioners for the Port of Calcutta, it includes articles of topical interest. The problems of port congestion, the building of an auxiliary port in Geonkhali, expansion of coastal shipping and the rôle of minor ports have been dealt with. Although the editing could have been improved, the publication, by and large, is well arranged. There are many charts, graphs and tables.

HANDBOOK ON BRITAIN

Britain: An Official Handbook. Compiled by the U.K. Central Office of Information. (Price 10s 6d, pages 530.)

This authentic handbook has already proved popular in many countries as a standard reference work about Britain. It gives a useful introduction to the British people, their Government and administration, transport and communications, trade, industry and labour. The 1958 edition covers events up to the autumn of last year and, therefore, contains much fairly topical information. The value of this publication has been increased by the inclusion of neat diagrams, maps and photographs. It contains a comprehensive bibliography which will prove useful to those who want to know more about Britain. The British Information Services are agents for H.M.S.O. publications and this book may be ordered through their offices in Calcutta, Delhi, Bombay and Madras.

MIXED BAG

Diamond Jubilee Number of G. A. Natesan and Co. Edited by Manian Natesan. (Published by G. A. Natesan and Co., Madras. Pages 193).

The publishing firm of G. A. Natesan and Company has celebrated its diamond jubilee by bringing out a souvenir number. The publication contains a mixed bag of articles of uneven quality.

BUSINESS FINANCE

Principles of Business Finance. By A. K. Sur. (Published by the All-India Institute of Social Welfare and Business Management. Price Rs. 4, pages 120).

This book has been written mainly for business executives and Government officials who receive training in the management course conducted by the All-India Institute of Social Welfare and Business Management at Calcutta University. The author covers the theoretical and practical aspects of business finance well. His presentation is clear and precise.

WORK STUDY

Introduction to Work Study. Compiled by the International Labour Office, Geneva. (Price $3.50 or 21s, pages 349).

Work study is a management technique by which productivity can be raised and the costs of goods and services lowered. It is widely appreciated that there is a need to use well-tried methods, which are easy to learn and apply, in order to raise productivity in an industrial undertaking. Although there are many advanced textbooks on the subject, attempts to describe lucidly the problems of work study remain inadequate. The I.L.O. publication examines the causes of low productivity and suggests the use of management techniques to eliminate them. It is comprehensive within its range, and should prove helpful to managers, supervisors and workers' representatives in industry.

RISE IN PLAN ESTIMATES OF PUBLIC SECTOR OUTLAY

NEED FOR REALISTIC ADJUSTMENT

(FROM OUR NEW DELHI CORRESPONDENT)

THE argument about the second five year plan continues. The Planning Commission has been holding a series of meetings here. Enquiries show that, as matters stand, it is not prepared to reduce the size of the plan, as that would be an acknowledgement of its defeat, as well as of the fact that the plan is over-ambitious and unrelated to realities. As the Planning Minister, Mr. Gulzarilal Nanda has said, the total outlay in the public sector is not Rs. 4,200 crores, but at least Rs. 5,200 crores. This is due partly to price increases, and partly to under-estimating the costs of some of the big projects. The Government has declared that the total outlay in the public sector will not exceed Rs 4,800 crores. If that is so, the size of the plan will have to be cut down because of the rise in prices, and to honour the commitments which have already been made.

The tax effort by the States has fallen short of the initial target, and they are not likely to make any contribution towards the uncovered gap of Rs. 400 crores. As for Central finance, in spite of the steps taken to raise additional resources amounting to Rs. 725 crores, the rise in non-developmental expenditure and the transfer of resources to the States, the Centre has no appreciable surplus to meet the Rs. 400-crore gap. The logical conclusion is that the plan outlay should be curtailed by another Rs. 400 crores. In other words, a plan of Rs. 4,000 crores might stand a fair chance of success. But the Planning Commission is not prepared to cut the plan. Its line of action, as usual, will be to make further appeals to the States to raise additional resources.

The performance of the States over the past seven years has been disappointing. In the field of irrigation alone, about 2.5 million acres of potential have not been used. The Union Ministries dealing with the subjects transferred to the States under the Constitution are largely to blame. They are always ready to hand out money to help State Governments.

Over-optimistic Estimates

The Planning Commission knows well that the estimates of resources on which the outlay of Rs. 4,800 crores was based, were too optimistic. With this outlay, further additional taxation of at least Rs. 800 crores was proposed. High taxation has drained the capital market, so it cannot be said that the loan programme will be a success. The yield from small savings is unlikely to reach the target of Rs. 500 crores. Deficit financing is still retained at the original figure of Rs. 1,200 crores; Rs. 1,100 crores are now expected from external sources during the plan period.

The Planning Commission refuses to change its approach. In the case of the railway plan, it has been pointed out that there is not enough money to meet the outlay of Rs. 1,125 crores. The Railway Board wants to know what should be omitted. The reply, according to reports, is that the railways should go ahead with their plan and any shortfall in resources would be adjusted in due course. Suppose the railways ordered a certain number of locomotives to meet the traffic demand out of existing resources. In 1959-60 when funds ran short they would be asked to cut down the outlay. Then they would have locomotives, but no wagons or passenger carriages to go with them. In any case, their appears to be no hope of realism dawning either on the Planning Commission or the Government.

Manufacture of Jax-Board

A proposal to manufacture Jax-boards is being examined here. The scheme is to manufacture reed-boards under the trade name of "Jax-boards". Jax-boards are manufactured by the simple process of weaving reeds with galvanised wire, with the help of a power-driven machine. Reeds are available in India, but wire will have to be imported, the annual requirements being placed at 350 tons valued at Rs. 3,50,000. Messrs Maschinen Fabrik Ludwig Berger of Austria will collaborate in the project. The reeds which it is proposed to utilise grow wild in India, so the project will make for their economic use.

Integrated Rayon Yarn Plant

A firm in south India has applied for a licence to manufacture 8 million lbs of rayon yarn and an equal quantity of staple fibres a year, and 1,050 tons of sulphuric acid and 225 tons of carbon disulphide a month. This company was given a licence last year to manufacture 8 million lbs of rayon yarn and 2,600 tons of sulphuric acid a year since the Industries (Regulation and Development) Act was extended to cover staple fibres. It is pointed out that the second five year plan has placed the target at 32 million lbs for staple fibre, which has already been reached by a factory in Gwalior. In fact, this factory has some idle capacity. The south Indian firm, however, says that it has an integrated scheme for the manufacture of staple fibre, rayon, sulphuric acid and carbon disulphide, and the omission of any item will affect its whole scheme.

Economy in Public Expenditure

Parliament concluded its discussions on demands for grants during last week. It looked as if there was hardly any attempt to reduce expenditure under any head. The emphasis often was on the inadequacy of grants. What happens now is that time is allotted to debate the demands of each Ministry. A discussion is raised by the normal process of "cuts". The Minister-in-charge replies to the debate, after which the House approves the demands. This year in particular, some Ministers prefaced their speeches by making announcements which have been characterised as "wishful thinking". Mr. S. K. Patil took a new line by narrating how unco-ordinated the administration in this country has become. The Home Minister, Pandit Pant, stuck to his old and orthodox practice. Referring to the agitation against the bilingual Bombay State, he said that the present set-up should be given a fair trial. It was during the debate on the Finance Ministry's demands that some reference to the ever-growing administrative expenditure was made. In reply, the Finance Minister said: "Constant attempts are being made. Various committees also are being appointed. A special division has been set up to study this matter. We are trying to find out where we can make retrenchment or economise in administration, and I hope that in course of time, we shall be able to show some results. I am quite new to this Ministry and I cannot say immediately that I will be able to do this or that. It is a collective matter for the Government. I can only say that I will contribute my part of it and we shall try to see that unnecessary expenditure is removed and that wasteful expenditure is completely eliminated. We are, therefore, studying the matter. I have started with my own Ministry, and I am trying to see what results can be achieved." The Finance Minister rightly emphasised the "collective" nature of the problem, but in the last analysis, it is only the Prime Minister who counts.

Central Clerical Employees Increase

For the past ten years, dispersal of offices from Delhi has been under the "collective" consideration of the Government. Some decisions were recently announced, but they have not been implemented yet. Meanwhile, Government estates worth crores of rupees are lying unused, the taxpayer paying their maintenance costs. On the other side, new property worth crores is being built, particularly in New Delhi, to accommodate the growing number of Government employees. That the number is growing every month can be seen from the figures published by the employment exchanges, and the office furniture crowding the Secretariat corridors. According to the Director-General of Employment, the total number of civilians employed under the Central Government, excluding railways, has risen from 590,562 in December 1951 to 689,271 in December 1957, or an increase of 98,609 in seven years. In the 12 months ended December 1957, this number increased from 674,134 to 689,271, or a rise of 14,537. Most of this increase was in clerical staff; they totalled 142,850 in December 1951 and 232,029 in December 1957. In 1957, clerical staff rose by 15,231 to 232,029, or by almost 1,270 clerks a month.

The Finance Minister has said that he will make a beginning with his Ministry. As a first step, he should ask the Union Cabinet not to let the staff increase. The second step should be to determine the correct strength of various Ministries. A cell created in his own Ministry by a former Finance Minister, Mr. Chintaman Deshmukh, has produced enough reports, determining the correct strength of various Ministries. It is not suggested that the surplus so determined should be retrenched, but it should be created into a pool, from which the needs of future expansion can be met. A former Labour Minister once said that at least 33 percent of the clerks under the Central Government were surplus. The question of wasteful expenditure needs further examination.

Development Rebate

Some elucidation is available of the development rebate scheme announced last week in Parliament. This allowance was introduced by the Finance Act of 1965. Under the present law it is fixed at a sum equal to 25 percent of the value of new machinery or plant installed by a business undertaking. This sum is deducted from the profits of the concern in arriving at the total income of the year in which the plant or the machinery is installed. It results in the saving of tax on an amount equal to the allowance. For instance, if machinery worth Rs. 1 crore is installed by a company, that company would be entitled to a development rebate of Rs. 25 lakhs. As the rate applicable to an Indian company of this type will be 51.5 percent of its total income, the tax saved by the company will be 51.5 percent

BRITISH OVERSEAS AIRWAYS CORPORATION

of Rs. 25 lakhs, namely Rs. 12,87,000. This sum of Rs. 12,87,000 is clear gain to the company. Under the present law, the company can do whatever it likes with this sum; it can distribute the whole of it as dividends. New Delhi thinks it unreasonable that when the Government has forgone a substantial sum of tax with a view to helping a company to finance its development, the company should distribute the tax savings soon after obtaining the rebate. It is, therefore, proposed that companies which get the development rebate for the purpose of income tax assessment, should actually write down their profits by the amount of the allowance, create a reserve for a corresponding amount and maintain it intact for a period of ten years. The requirement to create the reserve is to apply only to claims for the development rebate on assets installed on or after 1st January, 1958. The amount of the rebate has been increased from 25 percent to 40 percent of the cost in the case of new ships.

The effect of the amendments will be two-fold. In the first place, if the total income for any year falls short of the full amount of the development rebate, the rebate to be allowed for that year will be limited to the total income. The balance will be allowed to be carried forward for being claimed in the succeeding year or years. The number of years for which it can be so carried forward will be restricted to eight, which is the number of years for which unabsorbed losses can be carried forward under the present law. Secondly, the amount to be taken to reserve need not exceed 75 percent of the amount of the rebate claimed.

Shortfall in Wealth Tax Collections

According to information so far received from the various Commissioners, total collections of wealth tax up to 31st March, 1958, amounted to Rs. 6,69,01,800. This sum includes Rs. 1,73,05,400 in the case of individuals and Rs. 4,77,54,300 in the case of companies. The balance represents collections from Hindu undivided families. The revised wealth tax collection for 1957-58 was estimated at Rs. 9 crores, but it has fallen short of expectations by about Rs. 2.31 crores. The shortfall is mainly due to the following reasons: (i) The Wealth Tax Act, 1957, received the assent of the President on 12th September, 1957, and the time to file the return under Section 14(1) of the Act was available to the assessees up to 31st December, 1957. Assessment work started only from January 1958, and it was not possible to dispose of all the cases during a period of three months ended 31st March, 1958. (ii) As the Act was new and the assessees could not familiarise themselves with its provisions fully, there were frequent requests for extensions which had to be granted in the first year of its working. (iii) In the case of individuals and Hindu undivided families, there was no data available about their net wealth, so estimates were made on the basis of income assessed to income tax. Actual experience has shown that these estimates were too high.

Manganese Mines Labour Welfare Fund

The setting up of a manganese mines labour welfare fund by imposing a levy of Rs. 2 a ton, to begin with, on all exports of ores with more than 40 percent of manganese content, was approved by the Industrial Committee on Mines other than Coal, which concluded its two-day meeting last week. The Union Deputy Minister for Labour, Mr Abid Ali, presided. It was made clear that the exemption of low-grade ores from the levy would not preclude workers employed in such mines from the benefits to be provided by the welfare fund. A proposal to set up a similar fund of workers in iron ore mines is also under consideration. Besides, the feasibility of having an integrated welfare fund scheme for all mine workers eventually, is being examined. The Industrial Committee agreed that the Minimum Wages Act should be extended to all mines as early as possible. It did not consider it necessary to have a phased programme of implementation of the Act. The extension should not, however, adversely affect the existing rights of workers in any way.

Value of Import Licences

Import licences to a total value of Rs. 299 crores were issued during the period, October 1957-March 1958. The total value of the comparable period, January-June 1957, was Rs. 384 crores. The import trade control organisation, under the Central Ministry of Commerce and Industry, issued a total of 80,964 import licences during the October 1957-March 1958 period, against 118,444 licences during January-June 1957.

Indian Labour Conference

The 16th Indian Labour Conference will be held in Naini Tal on 19th and 20th May. The main items on the agenda will be (a) industrial relations; (b) productivity; and (c) the working of the Employees' State Insurance Scheme. Other items to be included in the agenda are being finalised in consultation with the interests concerned.

Trade Agreements

The trade agreements with Rumania, Russia, Austria, Indonesia and Afghanistan are due for renewal in 1958.

Raw Rubber Output

The output of raw rubber in India from 1952 to 1957 was as follows:

Year	Quantity in tons
1952	19,863
1953	21,136
1954	21,493
1955	22,481
1956	23,444
1957	23,767

Motor-car and Cycle Tyre Imports

The amount of foreign exchange spent on the import of tyres for motor-cars and cycles during 1952 to 1957 (January-October) was as follows:

Year	Value in lakhs of rupees
1952	14.65
1953	26.35
1954	33.05
1955	35.88
1956	183.38
1957 (January-October)	96.03

Import Budget for April-September

Some details are now available of the foreign exchange budget for the half-year ended September, 1958. The total import outlay has been placed at Rs. 520 crores, or Rs. 100 crores more than that of the half-year ended March 1958. This includes Rs. 270 crores for new commitments to be financed from "free resources". Priority has been given to the maintenance of the economy, for which Rs. 215 crores has been provided, including Rs. 165 crores for fresh commitments and for such items of maintenance as industrial raw materials, machinery, components and spares. An additional Rs. 15 crores has been provided for commercial imports, Rs. 30 crores for steel, and Rs. 50 crores for food. According to present calculations, the excess of imports over exports during the current half-year comes to Rs. 300 crores. On the assumption that India's foreign assistance, including loans, during the plan period totals Rs. 1,100 crores, repayments will be of the order of Rs. 100 crores annually throughout the third five year plan and a little of the fourth

FOOD for thought

One lump?... or two?... Now you can have as many lumps as you like, thanks to the magnificent job done by sugar producers in this country.

Not only is there enough sugar to go round, but surplus production can now be exported to earn valuable foreign exchange for India. It has been estimated that exports can be increased to 300,000 tons a year: this means no less than *Rs. 15 crores* of foreign exchange.

The country is making steady progress in increasing sugar-cane production. Control of the sugar-cane termite would be an important step in this direction as it is estimated that the sugar-cane termite lowers sugar production by as much as 200,000 tons a year. This quantity of sugar could earn *Rs. 10 crores* of foreign exchange if this wastage could be stopped. *And it can be stopped.*

Consider the facts. A Shell chemical called aldrin applied at the rate of one pound per acre, eliminates soil termites and can increase sugar yields by 300 lbs. per acre. Endrin—another Shell chemical—gives effective, persistent control of the sugar-cane pyrilla and also shows great promise against sugar-cane borers. These petroleum chemicals can protect one of the most valuable cash crops grown in the country.

True—Shell chemicals have to be imported because they are not manufactured in India. Indigenous materials are however, used in their formulations. And for every rupee spent on importing aldrin, enough extra sugar can be produced to earn sixteen rupees of foreign exchange. This is a sensible expenditure whichever way you look at it: food for thought, in fact.

SHELL Chemicals can save crops
and Foreign Exchange too!

London

FAVOURABLE REACTION TO U.K. BUDGET

FLAT-RATE PROFITS TAX: PURCHASE LEVY CHANGES

(FROM OUR LONDON CORRESPONDENT)

THE fact that the Opposition has had to fall back upon the tabling of a motion of censure against the Government's economic policy as a whole, rather than dividing the House of Commons on any detailed provisions of the Budget itself, is perhaps the most eloquent tribute to Mr. Heathcoat Amory's successful tenure of the Chancellorship of the Exchequer. To what extent a Minister is responsible for the decisions of his department, as opposed to the Cabinet, it is very difficult to say. But within the limits imposed by the Government's overall policy, the picture presented by the figures themselves, and Mr. Amory's earlier expressions of opinion on budgetary matters, there are indications here and there of an individual and typically courageous tackling of a difficult task at short notice. It may, as Mr. Harold Wilson suggested, be "a pathetic little mouse of a Budget," but it has nevertheless been widely welcome as a good one in the prevailing circumstances. The taxpayer is relieved of a burden of just over £50 million this year and £108 million in a full year, several anomalies have been set right, and many doubts set at rest. Needless to say, expectations in many quarters went unrealised, but on the whole, such concessions as have been made were overdue, and the decks have now been cleared either for a vote-catching pre-election Budget if things go as well as is hoped for, or effective avoiding action should a trade recession move across the Atlantic to Europe.

Turning to Mr. Amory's detailed proposals, the remodelling of the purchase tax structure ought to go a long way towards easing the lot of the housewife and may react to the extent of a point on the retail price index. The income tax relief for the over-65's and lower stamp duty on house purchase help the old, as well as the young on the verge of marriage—sections of the community to whom financial help has been urged increasingly. Trade and industry get a fair share of assistance in the lowering of purchase tax, the improved initial allowances and the introduction of the flat rate profits tax—a reform which Mr. Amory's predecessors have burked introducing and which has earned him strong criticism from the Opposition. Then there is the reduction in duty on imported heavy wines, and the relaxation of credit restrictions by both the C.I.C. and the banks to ensure adequate finance for worthwhile projects in areas where unemployment is "substantially above the average". Against this, the closing of a "dividend stripping" loophole is no more than a pinprick, although making the legislation retrospective will be strongly opposed. The cinema industry gets some relief as well, while the new-look Defence Bond should help maintain savings and assist the Chancellor's capital market plans.

Trading Position Held

The Chancellor's confidence that the balance of payments position will remain strong is supported by the March overseas trade returns, which continue to show a satisfactory trend. Lower raw material prices and freight rates are longer-term factors now running strongly in Britain's favour. Apart from the record exports to the United States last month and a good recovery in shipments to Canada (raising shipments to the dollar markets to £23 million), total exports were £13 million up on February at £278.1 million. Imports showed a customary seasonal rise and were £33 million higher at £320.8 million, so the trade gap widened to £26.6 million. Although this was £16 million above the exceptionally low February figure, it was still well below the average of the past two years. For the first quarter, the monthly gap average was £24 million, or £37 million less than in the first three months of 1957. In the past two years when the trade gap was running at about £600 million a year, the actual deficit on visible trade in the balance of payments was under £100 million a year. At the same time, there were net earnings on invisible account of more than £325 million a year, so that on current account as a whole there was a surplus of about £250 million a year. This underlines the big difference between the trade gap and the actual state of the balance of payments. On the basis of the visible trading results in the first quarter, this augurs well for the current balance of payments position.

New Export Credits

Steps to increase bank credits for exporters have just been announced in the House of Commons by the President of the Board of Trade, Sir David Eccles. These are expected to make a considerable difference to exporters of major capital goods. The Export Credits Guarantee Department is to issue direct bank guarantees for export orders exceeding £100,000. The effect of these guarantees is to free bank finance to the exporter. Experience has shown that they are the only satisfactory way of doing this, but they have been available hitherto only for big export orders, exceeding £250,000. Export trade bankers in the City of London are delighted to hear of the change.

Production and Employment Trends

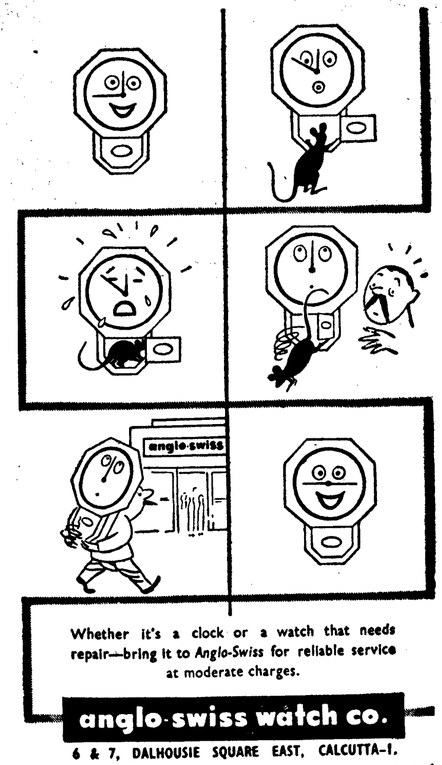
For the third month running, the cost-of-living index figure has remained steady. The Ministry of Labour announces that the figure at 18th March was 108, the same as for January and February. (17th January, 1956, equals 100). Calculated to one decimal, the March index shows a slight rise, from 107.6 to 108.4. The index in March 1957 stood at 104. This stability has not had the effect of dampening down wage claims, which are still being both presented and pressed, though perhaps with a lessening of belligerency, and a greater readiness to compromise. Labour's big fear is of unemployment, and with the latest return (for February) showing a further rise of 9,000 out of work to raise the percentage to 2, this is not surprising, especially as the same trend is evident in short-time and overtime figures. Against 433,000 unemployed, there are still 217,000 vacancies unfilled.

Steel production in March has averaged 432,300 tons a week, compared with 427,500 tons a week in February and 431,000 tons in March 1957. Production of steel ingots and castings in the first quarter of this year amounts to 5,475,000 tons, compared with 5,532,000 tons in the first quarter of 1957. Pig iron production in March has been at the rate of 267,600 tons a week, compared with 272,700 tons in February. Production of deep-mined coal so far this year, on the other hand, is nearly three million tons below that of the corresponding period of last year. The Ministry of Power reports that output in the first 14 weeks of 1958 has amounted to 58,773,900 tons, against 61,538,400 tons last year. Open-cast coal production brightens the situation a little. So far, it has reached 3,460,100 tons, compared with 3,274,500 tons in the same period of 1957.

Hopes for Lancashire

Sir Frank Lee, Permanent Secretary to the Board of Trade, who has been visiting Hongkong to discuss the possibility of a reduction in the island's textile exports, has returned. He has not been able to allay Lancashire's fears, but there is a gleam of hope. Previously the Hongkong industry said that it would not agree to negotiate on limitations; now it has said that it is prepared to negotiate in principle, but on certain conditions. Among the conditions is one that it does not want to negotiate until after discussions with the Indian and Pakistani industries. The Cotton Board has since annouced that these discussions will be resumed in London at the beginning of May. The representatives of the Indian industry will be Mr. Kasturbhai Lalbhai, chairman of the Indian Cotton Mills Federation, and Mr. Neville Wadia, chairman of the Cotton Textiles Export Promotion Council. The Pakistani delegation will include Mr. Naseer A. Shaikh, president of the West Pakistan Textile Industries Federation (the leader); Mr. M. Sayeed Saigol, president of the West Pakistan Textile Millowners Association; Syed Wajid Ali Shah, chairman of the Pakistan Textile Millowners Association and Karachi Cotton Association; and Mr. A. K. Sumar, chairman of the Textile Merchants Association. The U.K. delegation will be the same as that which last year visited India and Pakistan: Sir Cuthbert Clegg, leader, colonel J. B. Whitehead, Mr. C. Henniker-Heaton, Mr. W. Crossley, Mr. W. Hoberts, the Hon. J. S. T. Hawke and Mr T. D. F. Powell (secretary).

The serious effect of imports of grey cloth or the Lancashire textile industry is emphasised in the annual report of the Grey Cloth Section of the Cotton and Rayon Merchants Association. The chairman, Mr. C. G. Hargreaves, states that the revival of trade experienced late in 1956 and the early part of last year was followed by a period of reduced activity due to a falling demand from home and export markets and increased imports, particularly from the Commonwealth. "Such imports," he says, "inevitably undermine the position of those grey cloth merchants who are solely engaged in the distribution of the products of the U.K. mills." The position can be seen from the following table, which shows that total imports have increased by about 40 percent since 1955 and Commonwealth imports by almost 50 percent.



IMPORTS OF COTTON GREY CLOTH
(Million sq yards.)

	1957	1956	1955
Total U.K. imports	372	267	268
Imports from the Commonwealth	260	192	175

The main sources of imports last year were India with 182 million square yards, Hongkong with 71 million square yards, Japan with 56 million square yards, and China with 28 million square yards. Other sources were France, Pakistan, Russia, Eire, Yugoslavia, Bulgaria, and Spain. U.K. output of grey cloth rose from 1,612 million square yards in 1955 to 1,781 million square yards in 1956, but fell to 1,664 million square yards last year.

Suez Canal Company

Once again, there is to be no dividend on the shares of the Suez Canal Company. It made a profit last year of £510,000, but this is to be carried forward. The directors report having entered into negotiation with the Egyptian Government for compensation for their assets in Egypt. They have entered into legal action against the Swiss banks which are holding their assets in Switzerland. Their assets in Britain and in the United States also continue to be blocked, but they are permitted to draw on them to pay for the offices in London and New York. Economies are being made in office costs and new ways are being sought of employing available resources. Most of these are still in an exploratory stage, but an interest has been taken in Sahara oil. Of the 600 employers of the old Suez Canal Company repatriated from Egypt, 350 have found other employment and 150 have retired, states the report. The remaining 100 are still seeking employment. In the balance-sheet published with the report, account has been taken of the 20 percent devaluation of the franc and both assets and liabilities have been accordingly revalued. The company's investments outside Egypt comprise 36.5 percent French securities and 65.5 percent other than French securities.

IMBALANCE IN INDUSTRIAL GROWTH

PREJUDICE AGAINST FREE ENTERPRISE CRITICISED

(FROM OUR BOMBAY CORRESPONDENT)

THE business community is not fighting for an outmoded concept of capitalism, or for the opportunity to enrich itself at the expense of society, or for exploiting any section or class of the people, or for the concentration of wealth or power in a few hands, said Sir Homi Mody, addressing a luncheon meeting of the Federation of Indian Chambers of Commerce and Industry last week. "We fully accept the social objective which the country has adopted through its Government and Parliament. We fully accept the obligations cast on us to implement these objectives and help create a social order in which there shall be equality of opportunities for all and a more equitable distribution of the good things of life." But if the implementation of these objectives placed intolerable burdens on those engaged in the production of goods and services, and if the pace was so fast and the action so drastic that the freedoms which are fundamental to the functioning of a democratic society were threatened, it was clearly the duty of the business community as responsible citizens to raise their voice and point out where the country was drifting. "One has only to look at the vast mass of legislative and administrative controls introduced in the last few years to realise how far the country has progressed in the direction of authoritarianism. No one can afford to be a silent spectator of such a development. As Woodrow Wilson once said, 'concentration of power is what always precedes the destruction of human liberties.'"

Hostility to Capitalism

Sir Homi added, however, that recently there had been a growing awareness of the realities of the situation, and a greater responsiveness to informed criticism. The opportunity should now be taken to come to a closer understanding with the Government. In a reference to the second five year plan, Sir Homi said that the estimates concerning foreign exchange, internal savings, deficit financing and production targets had been proved inaccurate. Beyond a statement in general terms as to what the hard core of the plan constituted, no clear-cut programme seemed to have been framed, estimating the costs of the projects envisaged, the resources that would be available, particularly in the matter of foreign exchange, and the priorities that were to be assigned to the various schemes in hand. There was no assurance that a "halt had been cried to fresh commitments, either concerning the schemes already approved or by way of fresh undertakings." Even if the financial targets were achieved, it was doubtful if the physical targets could be achieved because of rising costs. In any case, the imbalance between heavy industry and consumer goods industries inherent in the plan would remain, he said.

"It is also for consideration" Sir Homi continued, "whether our planners have really learnt the lessons of the last two years. Have they realised that the difficulties which are being experienced are not of a transient character and that nothing short of a radical re-thinking on the programme for the future is called for? I shall give you an instance in point. In the explanatory memorandum on the Budget of the Central Government, presented to Parliament a few weeks ago, it has been stated, 'the target for steel production in the third plan period is likely to be of the order of 15 million tons, that is, an increase of 9 million tons over the target for the second plan.' If this statement is to be taken seriously, we can only conclude our planners are living in a world of their own, in which considerations of men, materials and resources do not seem to worry them much."

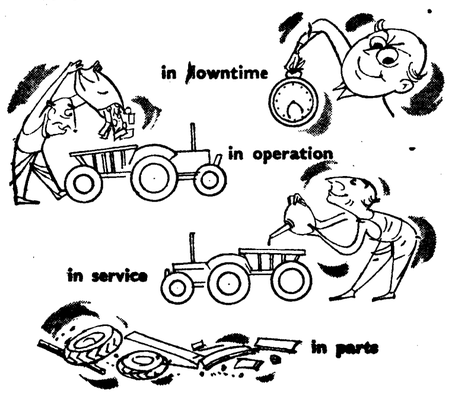
Sir Homi referred to the hostility against capitalism. Its critics "seem to have no understanding of the real character of modern capitalist society, a society in which vast strides towards the attainment of a just social order and a wider diffusion of well-being have taken place in the course of the last half a century. This body of opinion affects to believe that the happiness of the masses cannot be attained except by the uprooting of all that capitalism stands for."

Cotton Depressed

Both the futures and the spot sections of the cotton market were depressed last week. With short sales covered in the previous week and no fresh buying, the market got off to a bad start. There were many factors which contributed to the decline. The approaching end of the current settlement and the high carry-over charges—around Rs. 12—induced the mills to liquidate instead of switching over. Also, the lowering of the rate for the Moglai delivery contract by Rs. 30 to Rs. 690, gave rise to selling pressure. A break of about 20 points in Jaydhar cotton, ascribed partly to the reported deterioration in quality and partly to sluggish demand, and the accompanying break in Wagad cotton by Rs. 10 a candy, contributed to the setback. Fears about the quality of Laxmi cotton and reports of a sharp increase in stocks of unsold yarn with mills and the accumulation of medium and coarse cloth helped depress the market. The Jarilla May contract started at Rs. 665.50, against the previous week's close of Rs. 666.75 and fell to Rs. 653.25. But it recovered towards the end, and closed at Rs. 655.50. The Jarilla August contract dropped from Rs. 675.50 to Rs. 665.50, but closed a shade better at Rs. 688. The spot market was in the doldrums. Mill demand was confined to fine and superfine cottons for immediate requirements only. There was no demand for the coarse and medium qualities. In the export section, there was some interest in Bengal following reports that Japanese importers were interested in Bengal Deshi. There was no demand for Dholleras.

The Cotton Advisory Board, which met here last week, shared the trade's anxiety over the declining trend in prices. Nearly all the suggestions made by the East India Cotton Association to stem the rot, it was reported, were accepted. It was said to have recommended that an export quota for 50,000 bales of cotton stapling ⅞in. and below, should be allowed immediately and that grade stipulations of "fine and below" concerning the latest Bngal export quota should be removed. The Board, it was also said, took the view that the manner in which export licences are distributed should be thoroughly revised so that those who are in a position to export cotton instead of merely earning premiums on their licences get a better chance. The Association's suggestion for raising floor prices for the 1958-59 season by Rs. 53 a candy, it was reported, was approved by the Board. It shared the trade's anxiety over import announcements, and felt the need for early permission to import U.S. cottons. The import procedure for sterling area growths and Egyptian, it was suggested, should be simplified.

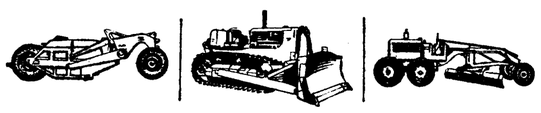
Piecegoods Better



Business in cotton piecegoods improved last week, and there was some rise in prices. Enquiries were received from Punjab, Kanpur and some south Indian centres. Fine and superfine qualities were the most in demand, followed by cloth of medium counts. There was no demand for coarse goods. Some mills have been able to do forward business on the basis of June-July deliveries. There was also some activity in the export markets, although on a restricted sacle. Australia, the U.K., the African and south-east Asian markets all showed interest, but the actual volume of business was small.

Groundnut Futures Rise

Groundnuts touched a new high in last week's trading in the Bombay oilseeds futures market. Buying was prompted by the strong statistical position of the commodity. Spot prices were encouraging. Vanaspati manufacturers and crushers were once again in the market, both for seeds and oil. The previous week's steep rise prompted bulls to cash in, so there was a mild recession. Reports that the Forward Markets Commission intends to apply Section 18(3) of the Forward Contracts (Regulation) Act to groundnuts whereby the non-transferable delivery contracts will be regulated by the Commission had unfavourable repercussions. However, the dearth of stocks, continued buying of ready stocks by crushers and strong advices from Saurashtra revived bullish activity. The gap between the ready and futures prices narrowed. Madras quality firmed up to Rs. 36, while the bold variety increased to Rs. 35.25. Groundnut cake ruled firm. The U.K. was reported to have bought about 400 tons of de-oiled meal. Trading in castor was dull and irregular. In the absence of any fresh export business in castor oil, bulls were reserved. Persistent reports of the impending entry into the market of communist counties failed to keep up sentiment. The increased pressure of arrivals from Gujerat and other upcountry centres induced liquidation. Gujerat offered Commercial quality around Rs. 16.12 and B.S.S. at Rs. 17.25. Linseed was quiet for the most part of the week. Higher floating stocks of around 6,000 tons in the city and the approaching delivery period continued to act as a deterrent to bull buying. But the sentiment improved towards the close in sympathy with groundnuts. Linseed oil, however, was easy because of poor export enquiry. The U.K. quotation for linseed oil was placed around £106 a ton.



What's the job going to cost!

Before you buy your earthmoving equipment find out the job-costs

It's the *total job cost* that should be considered and not *only the purchase price* of equipment. Get the best for your job—buy "Caterpillar" earthmoving machines. You will have less downtime, lower operating costs, better service and ready supply of parts.

Pushing, pulling or carrying, on tracks or rubber, "Caterpillar" will move more earth in less time at less cost per cubic yard than any other machine. The high efficiency of Caterpillar performance more than offsets the initial costs.

Jute

JUTE AND GUNNY PRICES EASE AS RAIN HELPS NEW CROP

STRONG DEMAND FOR MIDDLE QUALITY FIBRE

ON the whole, prices in the Calcutta jute goods markets have been fairly maintained during the past week, and the general trend has been a familiar one. A fair amount of business has been done with overseas consumers. Hessians have been prominent and the publication of the U.S. consumption figures for March has increased confidence. These show that U.S. burlap consumption rose from 70 million yards to 71 million yards last month, in spite of the business recession in that country. The U.K. has shown interest in hessians and mills have sold fair quantities for forward shipment. Sacking is quiet as there have been very few enquiries for heavy goods. Several mills are keen sellers but buyers are difficult to find and even local shippers show only limited interest. All prices remain well above the I.J.M.A. minima. Towards the close, there is a quieter tendency due mainly to the fact that shipping instructions so far this month have been poor. Overseas activity has declined, so conditions are dull.

At this time of year, both goods and fibre prices are invariably ruled by weather conditions in the jute-growing areas, so reports of good rain over the week-end have caused a weakening of markets in general. Conditions upcountry have generally been favourable, and good progress has been made with the new crop. More rain is still required, but the overall situation is satisfactory. Upcountry markets have shown little reaction so far this year, as the demand for jute is strong and supplies are short. The remainder of the crop now consists mainly of low assortment, while the general demand is for middle quality fibre. The continued search for the latter has forced up the price of the lower grades as well. In most cases covering at a profit against existing sales is out of the question. The price of cuttings in Narayanganj has shown a considerable increase due to heavy demand. Several Calcutta mills have been taking interest in cuttings, but a large percentage of the business has been done under sellers' licence and the premium paid for this facility is now about Rs. 10 a bale. Most mills have their own licences for cuttings but their purchases are restricted as the quantity available against them is governed by the amount of long jute taken.

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations during March 1958 amounted to 494,100 bales. Arrivals from Pakistan reached a new low level at 18,700 bales, which was 2,700 bales less than in the previous month. Arrivals from India dropped by 58,000 bales to 475,400 bales, making an overall drop of 60,700 bales from February. Compared with March 1957, arrivals last month showed an improvement of 14,700 bales, mainly due to an increase of 34,700 bales in arrivals from India, which was offset by a drop of 20,000 bales in arrivals from Pakistan. Total arrivals from July 1957 to March 1958 now amount to 5,042,200 bales, made up of 517,750 bales from Pakistan and 4,524,450 bales from India. During the same period of the 1956-57 season, arrivals were 5,108,800 bales, consisting of 524,100 bales from Pakistan and 4,584,700 bales from the Indian Union. Thus, in the current season, total imports are lagging behind last season by 66,600 bales due to a drop in imports from both India and Pakistan. Arrivals from India are down by 60,250 bales and those from Pakistan by 6,350 bales. During the current season, the estimated consumption of raw jute has been 4,609,900 bales, so total arrivals are now 432,300 bales more than consumption. Over the corresponding period of last season, arrivals were 613,200 bales more than the estimated consumption.

THE JUTE MARKETS

Manufactured Goods: The gunny market opened on a very steady note last Thursday following reports of an increase in U.S. burlap consumption, and all sections of the market recorded substantial gains. In heavy goods, B Twills jumped by Rs. 2 to Rs. 104.50, with forward shipment at a premium of Rs. 1.50. This was the highest rate since the end of January. In hessians, 40in. 10oz. advanced by 65nP to Rs. 41.75 for April shipment and Rs. 42.20 for July-September shipment. Keen selling pressure from mills at this stage caused prices to decline rapidly, so that by Friday morning sacking had lost Rs. 1.25 and hessians 35nP. Easier conditions continued to prevail towards the week-end due to reports of poor shipping instructions, and small losses were recorded in all sections. Speculative activity at this stage was small and overseas buyers lost interest, but further falls were prevented by the strength of the fibre markets where raw jute sellers held very bullish ideas. Monday was a holiday for the Id festival and all markets were officially closed. At the opening on Tuesday, interest in hessian was revived on enquiries from the U.K. and 40in. 10oz. rose to Rs. 41.55. Sacking quotations were virtually unchanged and throughout the day the market was dull, with prices receding. Selling pressure in heavy goods brought prices down still further. At the close, the market showed signs of weakening in sympathy with jute, which had fallen back on account of good rainfall in the growing districts.

At the opening on Wednesday morning quotations were as follows:

	April Rs.	May Rs.	June Rs.	July-Sept. Rs.
40in. 8oz.	33.10	33.10	33.10	33.10
40in. 10oz.	41.15	41.30	41.35	41.45
B. Twills	100.70	101.55	101.90	102.60
Heavy Cees (Plain)	100.25	101	101.50	102.75
A Twills	121.50	122.50	123.50	125
Liverpools	113	114	114.50	115
Cornsacks	101.75	102.25	102.50	103.75

Raw Jute: Calcutta mills continued to take up fair quantities of jute almost daily during the past week, and at the opening, the market was very firm. Lack of rain in the jute fields was one of the main factors contributing to the bullish tendency. In upcountry markets, heavy buying pressure in the face of small imports was a regular feature. High assortment jute was in keen demand but most of the imports in this category were already contracted for, leaving an acute shortage of middle quality fibre. It was reported that the mill stock position was fairly good for the time of year, but the grade distribution was very uneven, hence the demand for good jute. Towards the end of the period, the jute markets eased on reports of rain in the agencies and a quieter undertone developed, although sellers' ideas showed little change and only a few offers could be found at the quoted rates. Mills also showed less interest at the close and only small business was reported. Opening quotations last Thursday were based on Assam-Northern jute at Rs. 27 a maund and during the week the top price touched was Rs. 27.50.

Business was done in Assam-Northern jute at Rs. 26.50 to Rs. 27 a maund for assortment, and Rs. 29.50 to Rs. 29.75 for Middles only. Selected Murshidabad Tossa changed hands at Rs. 29.75 basis Bottoms and Daissee-Tossa at Rs. 30. Small lots of Murshidabad White were reported at Rs. 25. There was only a small demand for mesta during the week and Desal mesta fetched Rs. 24. Pakistani cuttings were done at Rs. 84 to Rs. 85 a bale under buyers' licence.

Imports into the Cossipore markets were again small for the time of year, but showed a minor improvement over the previous week. A total of 300 wagons arrived at the Cossipore sidings, compared with 500 wagons during the corresponding period of last year. The majority of the stock in Cossipore consisted of Bottom and B Bottom quality jute and mesta.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	26	April-May
Northern	26	"
Purnea Desal	24.50	"
Daissee	30.50	"

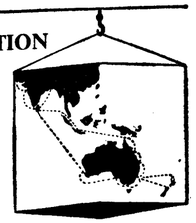
Daissee	31	Oct.-Nov.

THE FOREIGN JUTE MARKETS



MORE BUSINESS IN YARNS

(FROM OUR DUNDEE CORRESPONDENT)

RISING prices for raw jute have induced considerable business in jute yarns and spinners are now more comfortably placed with orders. Indeed, there are some who are not keen to do more business because of the disparity between yarn prices and those now quoted for the raw material. Over the past week, there has been a rise of £2 or £4 a ton, according to grade. Shippers remain reserved and offers have not been freely made. Mill Firsts have risen to £117 a ton and some are quoting £120. Mill Lightnings vary from £105 to £110. Mill Hearts are from £94 to £96 and grade Hearts from £76 to £78, while dark jute is very sparingly offered. Good marks of Daissee-¾ rule from £106 to £110 and grade is nominal in the absence of quotations. Grade Tossa-¾ is now at £115 lowest and grade Tossa-4 at £107. May-June shipment, c.i.f. U.K Dundee spinners are buying quietly but steadily where suitable parcels are offered. It is said that there is a scarcity of good quality jute in Pakistan now and that arrivals are very small for the time of year. It looks as if sellers will be able to maintain values until the end of the season. Prices for both raw jute and manufactured goods have risen because speculators are bullish about the unfavourable weather for sowings of the new crop, which are being held up. It is to be hoped that the crop will not be late for the next season after a quick finish to the present one.

Calcutta goods are all higher and quotations for hessians have been raised to 62s 6d for 40in. 10oz. and 47s 9d for 7½oz., April, 63s and 47s 9d May and 63s 3d and 47s 9d June. B Twills are at 158s, 159s 3d and 159s 6d for the respective positions of shipment, all f.o.b. Calcutta. Actual business in jute

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

cloth and bags manufactured in Dundee has been restricted, but there have been more enquiries. Prices remain firm at 13.26d a yard for 40in. 10oz. hessians and 11.32d for 8oz., less 3 percent. Hessian yarn prices are firm at 15.14d a lb. for 8lb. common cops and 16.29d for 8lb spools.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in March continued the consistent pattern of the two previous months. Demand for burlap bags has held up better than might be expected under present economic conditions. U.S. burlap stocks also showed little change. At 242 million yards, 131 million yards were spots and 111 million yards were afloats. Appearing below are two tables which include the February figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry :

CORRECTION

On page 577 in the issue of *Capital* dated 17th April, 1958, a reference was made to the Alliance Jute Mill in the Bird-Heilgers group. This was an error. It should have been the Lawrence Jute Mill in the Bird-Heilgers group and not the Alliance Jute Mill, which is in the McLeod group. It is the premises of the Lawrence Jute Mill which are to be closed on 3rd May and the loom hours transferred to Auckland, Northbrook and Lansdowne mills.

Plantation Topics

SOUTH INDIA HARVESTS MORE TEA

COFFEE CROP ESTIMATES REVISED

(FROM A SOUTH INDIAN CORRESPONDENT)

PROVIDED the weather remains favourable, south India might this year improve on its record for tea production achieved during 1957. Official figures for the first two months of 1958 show an increase of 2.1 million lbs—the actual crop harvested being 17.7 million lbs. compared with 15.6 million lbs in the same period of last year. Unofficial estimates place the March crop at 14.4 million lbs. as against the March 1957 figure of 11.6 million lbs. Certain estates, it is reported, have produced as much as 50 percent more than they did in the corresponding period of last year. On the basis of unofficial estimates, the south Indian tea crop for the first quarter of 1958 will be 5 million lbs more than in the same period of 1957.

Coffee planters expect a crop of nearly 40,000 tons this season. The Coffee Board has raised its estimate recently to place the 1957-58 season's crop at 39,290 tons. Its previous estimate was less than 38,000 tons. During the next season, planters expect a bumper crop that will exceed the last season's record of 42,000 tons. Their hopes have been shaken a little by reports of scanty and delayed blossom showers in certain areas. However, it is too early to make a reliable forecast about the size of the new crop. The exportable surplus out of the current season's output is now placed at 9,256 tons. Sales have not been moving as expected, on account of the disappointing export prices. The total export sales out of the 1957-58 season's crop till the end of March were only 1,650 tons.

Pepper Exports Declining

India's pepper exports have been declining in recent months. According to figures released by the Pepper and Ginger Merchants Association of Bombay, exports from November 1957 to February 1958 were only 111,887 cwts, compared with 130,997 cwts in the corresponding period of the previous season. The figures show that the United States continues to be the largest buyer of Indian pepper, although this country's share of U.S. purchases has been falling lately. During 1957, U.S. offtake of Indian pepper dwindled to 113,759 cwts, from 147,291 cwts in 1956. Indonesia displaced this country as the largest supplier to the United States by selling 124,213 cwts, against 68,223 cwts in 1956. U.S. imports from Malaya fell from 104,608 cwts to 41,014 cwts. Her total imports (both black and white) fell from 353,977 cwts in 1956 to 312,136 cwts in 1957.

After a period of brisk trading, activity has again declined in the Indian pepper market on account of falling foreign demand, especially from the United States. U.S. buyers, it is reported, have shifted their interest to Indonesian pepper, which is available in Singapore at a lower price than India quotes. Some people do not attach much importance to the decline, and remain optimistic about the revival of foreign demand for Indian pepper. The present U.S. price is below Indian parity, the difference being 1½ cents a lb. The approaching availability of the new Sarawak crop offers a threat to Indian pepper, but certain reports suggest that the pepper growing industry in Sarawak is facing ruin on account of uneconomic prices and pest attacks. However, it seems that the fortunes of Indian pepper depend to a very large extent on the competition from growers in the Far East.

Edible Tapioca Standards

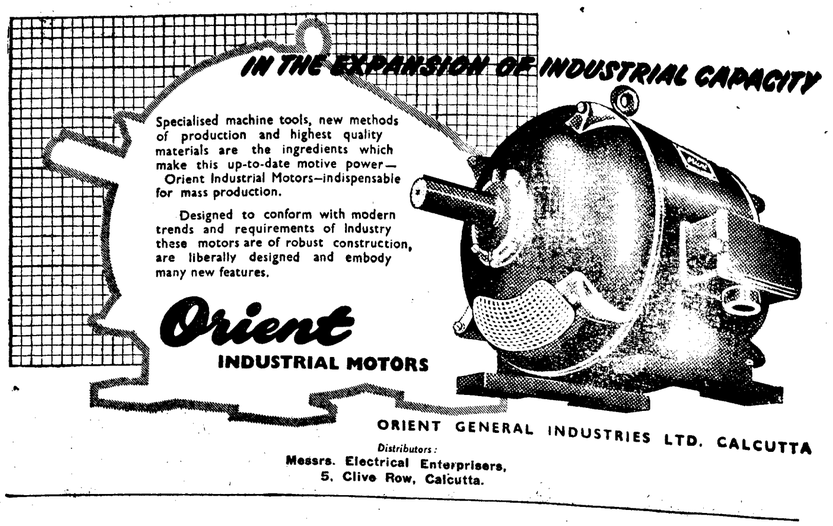
The Indian Standards Institution has formulated draft standards for edible tapioca flour, edible tapioca starch and edible tapioca chips. Foreign and internal offtake of tapioca products has been suffering as there is little quality control. It is hoped that the formulation of the standard will promote the sale and consumption of tapioca products in and outside the country.

COFFEE POOL RECEIPTS BIGGER

RECEIPTS of the 1957-58 crop into the Pool up to the end of March 1958 have amounted to 37,504 tons (20,531 tons of Plantation, 6,513 tons of Arabica Cherry and 10,460 tons of Robusta), which is 2,520 tons more than was received in the corresponding period of last year, says the latest coffee newsletter issued by the Indian Coffee Board. A surplus of 1,367 tons of Plantation received on the coast is being moved to inland centres, after meeting the full requirements for export and internal sales, before the commencement of the monsoon. The crop estimate was received in March and placed at 39,290 tons (19,790 tons of Plantation, 6,600 tons of Arabica Cherry and 12,900 tons of Robusta).

The offtake in March 1958 amounted to 2,187 tons (compared with 2,156 tons during the same period last year) out of the 2,975 tons offered. For the quarter ended March 1958, it was 6,905 tons, an increase of 782 tons over the figure for the corresponding quarter of last year. In order to close the pool account for 1956-57, only 1956-57 stocks of Plantation and Cherry have been put up for sale in April. About 936 tons were sold at the export auction at Mangalore on 26th March out of the 951 tons offered. Total export sales out of the 1957-58 crop till the end of March were 1,650 tons. The prices realised have not by any means been satisfactory. There was a further drop in prices between the export sales on 6th and 18th March. It is hoped that prices will not fall further and there may even be a slight advance. Contrary to expectations, the offer of 2,000 tons to East Germany through the State Trading Corporation has not yet materialised. The exportable surplus is now assessed at 9,256 tons.

The 11th payment to large growers on the 1956-57 crop at 15nP a point has since been declared, bringing the total payment to Rs. 2.65 a point.



The Marketing Committee has decided that the minimum pool release price of Rs. 2.12 a point should continue for a further period of six months from 1st April. It has also considered a scheme put forward by curers for the maximum utilisation of curing capacity by a redistribution of the coffee produced wherever necessary. Under the development scheme, the total amount sanctioned so far is Rs. 5,59,134 to 122 parties.

COCHIN TEA SALES

At Dust Sale No. 1, 885,000 lbs of tea were on offer. There was a useful demand at lower rates. Best liquorings were 20 to 30nP easier, and good mediums 5 to 10nP lower. All others were 10 to 15nP easier.

TRIPARTITE WAGE BOARD FOR CEMENT INDUSTRY

The Government of India has set up a tripartite wage board for the cement industry, with Mr. M. B. Meher, president of the Industrial Court, Bombay, as chairman. The board will be required to prepare a wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages and to lay down the principles for the grant of bonus. The following are its members: Sardar Jogendra Singh, M.P., and Dr. D. T. Lakdawala representing independent members; Mr. P. K. Mistry and Mr. V. H. Dalmia representing employers; Mr. Somnath P. Dave, M.P., and Mr. I. M. Moinudeen representing workers.

Commodity Markets

WORLD TRADE IN COTTON PIECEGOODS RISES

OVER-PRODUCTION OF YARN

COTTON yarn production in those non-communist countries for which regular figures are available was a record in 1957, and about 2 percent greater than the 1956 level. Output was greater than in the preceding year in all countries except the U.S.A., Canada and, probably, Portugal. The Cotton Board's latest *Quarterly Statistical Review* makes it clear, however, that production was greater than final offtake and reports from many countries speak of mounting stocks of cotton goods. The end of the steady rise in world production of cotton yarn was marked by a less-than-seasonal increase in the final quarter of last year. The quarter's total showed a drop of about 3 percent in comparison with the corresponding quarter of 1956 in contrast to an average increase of about 3½ percent in the first three quarters of the year. Output in the U.S.A. and Canada was well below the level of the final quarter of 1956, but the significant new factor in the situation was a sharp cut in Japanese production, as curtailment of activity was re-introduced in that country. Output in the U.K. was virtually unchanged in comparison with a year earlier, while Indian and West European production registered only slight increases. Output in Italy and Belgium was actually less than in the corresponding period of 1956.

Exports of cotton piecegoods from non-communist countries registered an impressive increase of about 11 percent in 1957. This is the more remarkable, in that imports into Indonesia, the world's largest market for imported cotton piecegoods, accounting for about 10 percent of total world trade, were apparently no greater than in 1956, and probably, significantly less. The biggest increases in shipments were recorded by Japan, India and Hongkong. Exports from the U.S.A., West Germany, Italy and Portugal were also greater than in 1956, but exports from the U.K. declined still further. World trade in the fourth quarter of the year was greater than in the third quarter, a normal seasonal expansion, but the increase in comparison with the corresponding period of 1956 was negligible. Japanese exports, accounting for about one-third of shipments from non-communist countries, were at a postwar record level in the final quarter of last year, and exports from Hongkong, West Germany, Italy and the Netherlands were also appreciably greater than in the fourth quarter of 1956. There was little change in comparison with a year earlier in exports from the U.S.A., India and Portugal, while shipments from the U.K., France and Belgium were well down.

Increase in Synthetic Fabric Exports

Exports of fabrics of man-made fibres from non-communist countries in 1957 were about 13 percent greater than in 1956. Most of this increase is attributable to the astonishing expansion in Japanese shipments, which now account for almost two-thirds of the total, but almost all the European countries also succeeded in increasing their exports. The U.K. and the U.S.A. were the notable exceptions to the general tendency. Exports from non-communist countries in the final quarter of 1957 were about 15 percent greater than in the corresponding quarter of 1956, and constituted yet another all-time record. Since the boom conditions of 1950 and 1951, world trade in cotton piecegoods has fluctuated from year to year, but there has been no clearly defined trend. On the other hand, trade in piecegoods of man-made fibres has been expanding steadily since 1952 at an average annual rate of about 15 percent. International trade in fabrics of cotton and man-made fibres considered as a whole reached record postwar levels in 1956 and again in 1957, and in the latter year probably exceeded the 1936-38 average. Whether this is more than a temporary interruption to the long-term downward trend in international textile trade remains to be seen.

General Setback in U.K.

The order books of firms in the producing sections of the United Kingdom cotton industry have been contracting steadily since last July, and now they are, in many cases, uncomfortably short. Extended holidays at Christmas have been followed by growing short-time working and further news of mills closing down permanently. Yarn output in February was 5 percent less than in November. The output of spun man-made fibre yarns and mixtures has been well maintained, but production of cotton and cotton waste yarns has fallen by 6 percent since November, the decrease in Egyptian-type yarns being as much as 14 percent. The rate of cloth output in January was 6 percent less than in November, allowing for working days lost through holidays, and the rate of contraction was rather greater for cotton cloth than for fabrics of man-made fibres. The reasons for this setback are fairly clear. Retail sales of clothing are no longer rising, while exports have fallen and are likely to continue to fall and there is as yet no sign of any diminution in the volume of imports. Available supplies of cotton cloth in 1957 (production plus imports) were greater than requirements (home consumption plus exports), with the result that stocks increased. The raising of Bank rate to 7 percent last September provided an incentive to merchants and distributors to reduce their stocks, and it is known that merchants did, in fact, reduce their committments in the fourth quarter. Uncertainty about the future trend of raw cotton prices may also have played a part, while the general economic outlook may also be inducing a cautious attitude on the part of buyers.

Exports of cotton piecegoods totalled 109 million square yards in the fourth quarter of 1957, much the same as in the third quarter, but almost 17 million square yards less than in the final quarter of 1956. In the first two months of this year, shipments amounted to 76 million square yards. Compared with a year earlier, the principal reductions in the fourth quarter's figures were in shipments to Australia, British West Africa, Burma, India, Pakistan, Ceylon and the U.S.A. In contrast, exports to South Africa and New Zealand were well maintained and there was some increase in trade with Rhodesia, British east Africa and French west and equatorial Africa. Exports of piecegoods of man-made fibres in the final quarter of 1957 were fractionally less than in the preceding quarter and the corresponding period of 1956. Over the year, a big expansion in exports to Rhodesia and Nyasaland almost compensated for reductions in shipments to a number of other markets. After running above the previous year's level for most of 1957, exports of cotton yarn fell off in the final quarter. There were considerable decreases in exports to India, Burma, West Germany and the Netherlands, partly balanced by increased shipments to Australia.

Imports of cotton piecegoods increased moderately from 94 million square yards in the third quarter of 1957 to 105 million square yards in the fourth quarter and totalled 67 million square yards in the first two months of this year. The principal feature of interest in the fourth quarter figures was a further sharp increase in imports of Chinese cloth to a level of 14 million square yards, less than half of which was for re-export after being processed. In January, the Government announced quotas on imported cotton goods from China amounting to £150.000 a year for home consumption, and £1,500,000 for re-export. Imports of piecegoods of man-made fibres increased appreciably again in the final quarter of last year. The principal suppliers are Japan for the re-export trade and Italy for the home market.

U.S. Depression Continues

The depression in the United States cotton industry continued during the final quarter of last year. In terms of current weeks' production, unfilled orders for cotton cloth in October exceeded mill stocks by only three weeks' production, compared with six and a half weeks in October, 1956. These large stocks have held fabric prices rela-

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to March 1958. As compared with February, the March Indices for Food and Miscellaneous show rises of 1 point each, while those for Clothing and Fuel and Lighting remain unchanged at 544 and 281 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 1 point during March 1958.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939 = 100.

Compiled and constructed by the Statistical Department of "Capital"

tively low in spite of higher raw cotton prices. In November, the average price of 17 grey cloth constructions was the lowest since August 1946. As a consequence, mill margins have declined and in January they were 13 percent lower than a year ago. In the last quarter of 1957, the consumption of raw cotton was 8 percent less than in the similar quarter of 1956 while that of man-made staple was virtually the same. The latest figures of cloth production relate to the third quarter of last year, when cotton cloth production was 5 percent lower than in the corresponding quarter of the previous year. The output of rayon cloth was virtually the same, while cloths of both nylon and of other synthetic fibres registered impressive increases.

Exports of cotton piecegoods from the United States in the fourth quarter were about the same as in the comparable period of 1956, but 12 percent higher than in the preceding quarter. The largest increases over the third quarter have been in exports to Canada, Cuba, Haiti, Dominican Republic, Mexico, Guatemala and Venezuela. Exports of man-made fibre piecegoods increased over the level of the third quarter and were about the same as a year previously.

Over-production in Japan

Production of cotton yarn in Japan in the final quarter was 11 percent lower than in the similar quarter of 1956, while the output of spun man-made fibre yarns registered only a minor increase. In the less organised weaving sector, output of cotton and spun rayon cloth was substantially higher while that of continuous filament rayon cloth was reduced. In spite of substantial export shipments, it still appears that production is in excess of current offtake. Stocks of cotton goods in all hands at the end of 1957 were the equivalent of 218 million lbs of cotton yarn—a postwar record. There was only a small decline in January to 216 million lbs. In an effort to relieve the situation the cotton spinners have decided to seal 30 percent of their spindles for the whole of the second quarter of this year. The Government as a measure of assistance has decided to cut raw cotton imports, and is considering including textile goods in reparation payments to Indonesia. To combat similar trends in the man-made fibre textile industry the rate of curtailment of rayon staple production has been raised to 30 percent for the second quarter, while that of rayon filament was increased to 50 percent as from January. The output cut of spun rayon yarn was raised from 20 percent to 32 percent in February and March, and some spun rayon yarn spinners are even proposing total suspension of production for two months.

Japanese exports of cotton piecegoods amounted to 405 million square yards in the quarter under review, compared with 368 million square yards in the preceding quarter and 382 million square yards in the corresponding quarter of 1956. Exports in 1957 were 16 percent higher than in 1956 and constituted a postwar record. Large advances over the preceding quarter's trade were registered in exports to Singapore, Ceylon, Hongkong, Australia, Sweden, Indo-China, Sudan, Iraq, the U.S.A. and Venezuela. Exports of man-made fibre piecegoods from Japan amounted to 419 million square yards in the fourth quarter, exceeding the exports of cotton piecegoods and being a record for any quarter. Exports to the U.K., British West Africa, Singapore, Ceylon, Indo-China, Iraq, Iran, Burma, Siam and Indonesia increased over the third quarter's level while exports to South Africa, British East Africa, Hongkong, West Germany and Afghanistan declined. Exports of these fabrics in 1957 were an all-time record.

Indian Outlook Improves

Production of cotton yarn in India during the fourth quarter was slightly higher than that of the same quarter of 1956. In contrast, mill production of cotton cloth was 5 percent lower. The reason for the divergent records of the two sectors was increased offtake of yarn by the handloom and independent powerloom weavers and overseas buyers. Taking the year as a whole, yarn production was 7 percent higher than in 1956, while mill cloth production was only fractionally higher. The low level of domestic demand was the primary reason for the decline of mill cloth production during the quarter. Deliveries of cloth to the home market were 5 percent lower than in the final quarter of 1956. Unsold stocks of cloth held by the mills increased by 142 million yards to the high figure of 676 million yards at the end of December. There was some reduction in stocks in the first two months of this year (due mainly to a considerable reduction in production) and the prospects for the industry were markedly improved by the announcement on 18th March of considerable cuts in excise duties on cloth.

European Activity Lower

The Continental cotton industries appear to be entering a period of lower activity. Cotton yarn output in these countries taken as a whole in the fourth quarter was only 2 percent above the level of the corresponding quarter of 1956. Italian and Belgian production was, in fact, lower than in the same period of 1956, the decline in Belgian production being of the order of 9 percent. From most of the main manufacturing centres come reports of lower domestic offtake, declining order books and increasing stocks. Thus in Italy, sales of cotton cloth to the home market were 12 percent below the fourth quarter of 1956 and mill stocks of cloth increased by 11 percent during the quarter. In France orders for cloth of all types received by the cotton industry in the last quarter of 1957 were 18 percent lower than those received in the corresponding period of 1956. In Belgium, where the situation is especially serious and mills are working organised short-time, mill stocks of cotton cloth increased by 8 percent in the last three months of 1957. West European exports of cotton piecegoods increased, probably seasonally, over the third quarter of 1957, and were about the same as in the final quarter of 1956. Exports from West Germany, Italy and Holland increased over the previous year's levels, while exports from France, Belgium and Switzerland declined. The main reason for the increase in Dutch exports in face of the decline of trade with Indonesia was increased exports to Belgium and West Germany. Exports of man-made fibre piecegoods from West Europe in the final quarter of last year were slightly higher than the levels of both the preceding quarter and the corrresponding quarter of 1956.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) moved up by 0.5 percent to 106.6 during the week ended 5th April, compared with 106.1 for the previous week. The index was higher by 1.4 and 1.0 percent, respectively, than that of the corresponding weeks of the previous month and of last year. The index for Food Articles advanced further by 0.5 percent to 103.9 due to a rise in the prices of eggs in Madras (+23%), rice in Kalyan (+11%) and in Badati (+6%), gur in Madras (+10%), mung in Patna and mustard oil in Purnea (+9% each), jowar in Rohtak, masur in Calcutta and fish (Hilsa) in Calcutta (+7% ea), bananas and turmeric both in Calcutta (+6% each), ghee in Bombay and coconut oil (+5% each), urad (+3%), bajra and tea for export (+2% each) and maize and arhar (+1% each). The prices of rice in Tihu (-7%) and in Jamshedpur and Raipur (-6% each), betelnuts in Mangalore (-5%), oranges and tea for internal consumption (-2% each) and ragi and chillies (-1% each), however, showed a fall. A decline of 4 percent in the prices of raw tobacco in Madras was responsible for bringing down the index for Tobacco by 1 percent to 92. The index for the Fuel, Power, Light and Lubricants group remained unchanged at its previous week's level of 114.5. Higher prices of raw jute in Barachakia (+8%), gingelly-seed in Nagpur (+7%), linseed in Kanpur, cotton-seed in Hyderabad and copra (+6% each) and raw wool (+1%) raised the index for Industrial Raw Materials by 0.6 percent to 113.6, compared with 112.9 (revised) for the earlier week. The prices of iron ore (11%), lac (-3%) and raw cotton, raw silk and castorseed (-1% each), however, moved down. The index for Intermediate Products rose by 1.2 percent to 108.4, against 107.1 for the earlier week. The prices of rayon yarn (+11%), aluminium (circles) (+3%), coir yarn (+1%) and linseed oil (-1%) showed variations. The prices of quinine sulphate (foreign) in Bombay (+7%), coconut cake in Kozhikode (+5%), paper, and newsprint (+2%) and jute and silk and rayon manufactures (+1% each) moved up, while those of sesamum cake in Bombay (-9%), and sodium hydrosulphate in Bombay (-3%) and handloom cotton cloth (plain gada) in Madras (-2%) showed declines and the index for Finished Products advanced by 0.3 percent to 107.7.

Calcutta Markets

STRONG GENERAL DEMAND AT INTERNAL TEA SALE

GOOD RATES FOR QUALITY DUSTS

AT the Internal Sale, held on 22nd April, Dusts on offer were 20,466 chests. There was a strong general demand, and prices for most sorts were firm to dearer, but towards the close, some descriptions tended to be slightly easier. Clean leafy orthodox types were the strongest feature of the Sale, and their prices showed an advance of 6 to 10nP, while others in this category generally sold 4 to 6nP above valuations. The very best C.T.C's and medium descriptions in this category with useful liquors were in good demand, but the remainder tended to be easier.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.64 to 1.68	1.60 to 1.65
Medium Assam Grainy Dust	1.68	1.72
Medium Assam C.T.C. Dust	1.90 to 2.10	1.70 to 1.80
Best Assam C.T.C. Dust	2.80 to 3.10	(nom.) not

The 4,416 chests of leaf on offer met with a good general demand and most sorts were generally firm and often dearer.

SETBACK IN FREIGHT MARKETS

HOPES of firmer conditions in the Atlantic grain rates in the freight markets were shattered last week-end when several large-sized vessels took advantage of the slightly better rates offered, and left the smaller ships to scramble for the remaining cargoes at discount figures. In the ore trades, Vizagapatam-U.S.N.H. was fixed at $(U.S.)7 f.o.b., and Japanese tonnage accepted 45s 6d f.i.o.t. for India-Japan. Local coal orders number cargoes to Alexandria and Colombo for which 40s and 27s 6d are indicated with no takers. Coal was fixed from Newcastle N.S.W. to Korea at $(U.S.)4.50, and to the Argentine at 48s 9d. A fair number of ship sales have been reported recently with a British-operated *Liberty* changing hands at £130,000 and a new building 13,450-ton motorship launched in March at £1 million. This latter vessel was originally contracted for at about £1¼ million.

LINSEED EASIER

An easier tendency in the linseed market has set in during the past week. Prices have declined gradually to Rs. 22 from their highest level at Rs. 22-10 in the previous week. The undertone seemed to be quiet. With little support from buyers, trading has been small. Crushers have been still working on a limited scale due to a continued lack of parity. The oil market has been dull; the recent weakness in mustard oil has been responsible for poor local demand, and prices have declined to Rs. 51. Small enquiries received from overseas are uneconomical, with local price levels still too high. Latest quotations were as follows: Ready Rs. 22 a maund and April-May Rs. 22 a maund.

HIDES AND SKINS QUIETLY STEADY

The market ruled quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 15th April and 19th April, 1958)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8.50 to Rs. 10.75; Wet salted (Slaughtered) 16,600 pcs. on the basis of Rs. 13.50 to Rs. 21.25.

Goatskins: Wet salted (Daissee and Kustia) 17,500 pcs. on the basis of Rs. 345 to Rs. 360 and Rs. 380 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur 37,600 pcs. on the basis of Rs. 300 to Rs. 380; Purneah-Kissenganj 56,050 pcs. on the basis of Rs. 340 to Rs. 380; Pakur-Patna-Purulia 19,200 pcs. on the basis of Rs. 310 to Rs. 325; Muzafferpore-Patna 14,300 pcs. on the basis of Rs. 330 to Rs. 345.

SHELLAC QUIET

During the week ended 22nd April, the market was steady at the beginning and quiet at close. The range of quotations was as follows:

Pure Buttonlac	Rs 85 done and buyers; 85 buyers.
Lemon No. 1 Shellac	Rs. 87.50 to 84.50 buyers.
Lemon No. 2 Shellac	Rs. 84, 83 buyers; 83, 81 done and buyers.
F.O. Std. 1 Shellac	Rs. 78 to 74.50 buyers.
Pure TN Shellac	Rs. 68 basis done; 66.50, 64 value.
4% I.T.N. Shellac	Rs. 54 to 48.50 value.
No. 1 Kusmi Seedlac	Rs. 77, 75, 73 buyers.
No. 2 Kusmi Seedlac	Rs. 72, 70 value; 71, 68 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 69.50 to 67.50 buyers; 65 done.
Fine Bysaky Seedlac (C.P.)	Rs. 65.50 buyers, 65 done; 63.50, 59 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 58 to 55 buyers.
Ordinary Bysaky Seedlac (C.P.) Kireelac	Rs. 52, 51.50 buyers; 50 value. Rs. 15.50 to 13 value.

Shipments during April until the 18th were 16,110 packages comprising shellac 7,836 packages, seedlac 7,500 packages, buttonlac 128 packages and others 646 packages.

COMPANY AND PUBLIC NOTICES

THE ASSAM MATCH COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Thirty-third Annual General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay at 12-45 p.m. on Monday the 19th day of May 1958 to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1957.
2. To declare a dividend and a bonus.
3. To elect a Director in the place of Mr. Pratapsinh Mathuradas, who retires by rotation but is eligible for re-election and offers himself accordingly.
4. To elect a Director in the place of Mr. Jehangir P. Patel, who retires under section 260 of the Companies Act 1956 and is eligible for re-election and offers himself accordingly.
5. To appoint Auditors for the ensuing year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 8th day of May 1958 to the 21st day of May 1958 both days inclusive.

By Order of the Board,
A. HYDARI,
Joint Managing Director.

11th April 1958.
Indian Mercantile Chambers,
Nicol Road, Ballard Estate,
BOMBAY.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The dividend and bonus when sanctioned will be payable at par at all Indian offices of the Central Bank of India Ltd. on and after the 24th day of May 1958 to those shareholders whose names stand on the Register on the 21st day of May 1958 and warrants will be posted in due course to each shareholder at his registered address. Shareholders are kindly requested to notify immediately any change of address.

EXPLANATORY STATEMENT UNDER SECTION 173 OF THE COMPANIES ACT, 1956.

Mr. Jehangir Pestonji Patel was appointed an additional Director on 21st February 1958 by the Board of Directors. He retires under section 260 of the Companies Act 1956.

Mr. Patel is a well known businessman, being a Director of several leading companies. His wide experience will prove very useful and his re-appointment is in the interest of the Company.

By Order of the Board,
A. HYDARI,
Joint Managing Director.

THE MODERN MILLS, LIMITED.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Twenty-fourth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Wednesday, the 21st day of May 1958 at 4-30 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1957.
2. To declare a dividend.
3. To appoint Directors in place of those who retire but are eligible for re-appointment.
4. To amend Articles 20, 35, 36, 37, 49 and 61 of the Company's Articles of Association.
5. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 25th day of April 1958 to the 15th day of May 1958, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Bombay, 12th April, 1958.

N.B. The dividend when declared will be made payable at the State Bank of India, Bombay, on and after Monday the 26th May, 1958 to those Shareholders whose names stand on the Register of Members on the 25th April, 1958, but only in respect of their holdings of shares allotted prior to 31st October, 1957, i.e. shares bearing Nos. 1 to 66376. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

JESSOP AND COMPANY, LIMITED

NOTICE is hereby given that the Directors have sanctioned payment, on 1st May 1958, of the Dividend on 5 per cent Cumulative Preference Shares of the Company for the half-year ending 30th April 1958, without any deduction in respect of Income Tax which is payable by the Company.

The Preference Share Transfer Register will be closed from 29th April to 30th April 1958, both days inclusive.

Dividends will be paid only to the Registered Shareholders or their Mandataries.

By Order of the Board,
D. D MARKAN,
Secretary.

63, Netaji Subhas Road,
Calcutta-1,
Dated the 17th April, 1958.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of a Final Dividend on the Company's Preference Stock at the rate of £2-10-0 per cent net for the year ended 31st March, 1958. Payment will be made on 15th May, 1958 to those stockholders whose names are registered in the Company's Stock Register on 6th May, 1958.

Applications for transfers received in this office before 12 O'clock noon on Tuesday, the 6th May, 1958, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

Victoria House,
Calcutta.
16th April, 1958.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

WANTED: SUGGESTIONS FOR A NEW TAX SYSTEM

THE PRICE OF INCENTIVES

SINCE he took over at the Ministry of Finance, Mr. Morarji Desai has shown a welcome capacity for imagination. He seems to be approaching his new responsibilities in a spirit of reasonableness—the quality which they most require in present circumstances. The concessions granted on the development rebate restrictions were not all that might have been expected. The announcement, too, that the limit of deficit financing is to be fixed at its former figure, may not have been altogether wise. But it is the spirit that counts, and it is a relief to have a Finance Minister who is neither as rash nor uncompromising as Mr. Krishnamachari was apt to be. It is to be hoped Mr. Desai's open-mindedness will survive his initiation in his new office; after all, his predecessor was only another realist trapped by political restraints which were none of his own making and for which he probably had little sympathy. If Mr. Desai is to preserve his own freedom of action, and make his tenure of the Finance Ministership memorable as the first to see a determined effort made to shape the tax system to the needs of economic expansion, instead of the other way round, he will require some courage and a great deal of ingenuity. For proof that he is already exercising his mind on the problem, we might refer to a statement he is reported to have made last week in the Lok Sabha debate on the Finance Bill—that he is prepared to consider any suggested alternative tax structure that will yield the same return and hold out prospects of a higher one in future. This is a fair proposition, and it should not be beyond the scope of human ingenuity to provide him with what he asks for. It is only reasonable, however, to point out that any alternatives offered are unlikely to be without their political difficulties.

One of the quickest ways to a properly balanced tax system might be to adopt the Kaldor proposals. This may seem strange advice after the 1957 Budget. But in fact, the essential point of the Kaldorian system—the reduction of personal income tax and supertax to a maximum rate of 45 percent—was omitted from that Budget altogether. All that Mr. Krishnamachari did was to lift certain individual proposals from a system of which they formed integral parts. He admitted afterwards he had never read the whole report. This kind of action has little to recommend it, and it is scarcely surprising the results have been disastrous for economic incentive. What Mr. Kaldor intended is that his proposals should be taken or rejected as a whole, not implemented piecemeal. One of the first requirements for a more satisfactory tax system, therefore, would be to jettison such irritating features as the capital gains, the wealth, and the expenditure taxes, or else to supplement them by the essential condition that income tax plus supertax should not exceed 45 percent of income. In the former case, there need be little fear of loss. Only the other day Mr. Desai himself produced figures to show that the wealth tax had not brought in the yield expected; it would be surprising if the other taxes do not turn out to be the same kind of failure. The small amount of revenue lost would soon be made up by the incentive effect the abolitions would have on the economy. If, on the other hand, it were decided to implement the Kaldor system, the rates could easily be adjusted to bring in the same revenue as at present.

The main difficulty of introducing Mr. Kaldor's system is probably psychological. Another important one is administrative. Because it is unique, India would not be able to draw on the experience of other countries. And this is scarcely the time for experiment. A safer move would be to retain the present progressive system—minus those foundlings of the Krishnamachari era, the wealth, expenditure and capital gains taxes—but to change the emphasis from direct to indirect taxation. This would not be easy politically, and it might give rise to widespread wage claims. But its effect on incentives would be invaluable, and it is this element above all which has fallen victim to the present concentration on direct taxing. Lower direct taxes would have a number of important economic effects. First of all, they would benefit work, enterprise and saving; the resources lost by reducing them would be regained from higher output within a year or two. Secondly, they would reduce the incentive to evasion—one of the Finance Minister's most pressing problems. Their results, therefore, would be almost wholly beneficial, while their cost, although heavy politically, would be easily controllable financially. Higher indirect taxes would spread the total burden more widely, help offset the present difficulty of getting the States to shoulder their fiscal responsibilities, and, if used intelligently, have almost no effect on economic incentives. The main danger would be in overdoing the tax on any one type of article, as happened with cotton textiles and tea.

One good way of raising resources for tax concessions would be to ensure that the States played their allotted parts. Both in taxation and saving, State Governments have readily bowed to the political pressures on them. These need not be under-rated. But they cannot be used as an excuse for avoiding unpleasant responsibilities if development is not to suffer. Proposals have been made recently for dividing the plan into two parts, one for the Centre, the other for the States, each to pay its appropriate share. If this is to be avoided, greater efforts will have to be made to bring the States into line, especially with increased land revenues and betterment levies. These represent a source of wealth which is still virtually untapped. Powerful vested interests already exist to obstruct any move designed to draw on them. If they are allowed to succeed, India will eventually be divided—as often pointed out in these pages before—into two communities, one paying the taxes, the other getting the benefit from them. The political dangers in such a situation far outweigh the difficulties of persuading the States to fall into line. Two other sources of revenue will probably not recommend themselves to Mr. Desai personally. They are a salt tax, and the scrapping of Prohibition. Both have excellent ideological justifications. But ideology and expediency make poor bedfellows, and there is no doubt about the particular quality India needs most today. A salt tax would raise considerable resources with scarcely any inconvenience or expense, and with little or no hardship. The abolition of Prohibition would not only save resources which are at present going to waste, it would also provide an almost limitless field for new excise duties. Even more important, it would eradicate a source of lawlessness and corruption which is, at the moment, a malignant growth on the nation's morality.

There are many ways in which the present tax system could be adjusted to increase incentive without seriously affecting yield. But the question Mr. Desai might ask himself is whether indeed it is necessary to collect exactly the same quantity of resources, at least in the short run. This point has already been conceded with the reductions in the cloth excise duty; no arrangements have been made to recoup the losses on this measure because they are likely to be made up soon by an increase in turnover. This principle could well be applied to the whole economy. Mr. Desai is, of course, restricted by the size of the plan—a mistake for which he is not responsible, but in which he undoubtedly concurred. But he will gain himself a leading place in India's planning history if he can establish the principle that the rate of development must be tied to the availability of internal resources; the lesson that it is also limited by external ones has already been learned. In the long run, it is adherence to this principle which will produce the fastest possible rate of growth; anything else will only lead to disappointment and worse. It is rarely appreciated how much the present tax system mortgages the future of planning for the sake of what some people consider to be socialism. If ideology could be put aside in favour of the country's long-term economic health—and not so long-term at that—the present yields of the tax system might go down, but the future ones would certainly rise and the country's rate of growth be accelerated. It would be useful to establish once and for all the proportion of its income which India could afford to spend on its development at any particular level. This figure would rise in the form of a logarithmic curve. It would certainly be lower than the growth curve which is being used as a basis for planning today. But it would be considerably higher than the ones which are likely to be achieved in the future.

The present Finance Minister has a difficult job ahead of him. None of India's institutions is as muddled, confused with ideology and as obstructive of economic progress as the present tax system. If Mr. Desai has already begun to appreciate that it is no longer a vehicle of progress, then half the battle is already won, because some reform should follow and things could scarcely be worse than they are at the moment if economic activity is to continue at all. But he is restricting himself unnecessarily if he clings too firmly to the principle that the present total tax yield is sacrosanct. Reductions are needed just as much as adjustments, and will pay even better dividends in the long run. To adjust the tax system will require hard thinking and specialised knowledge. To scale it down so as to increase the rate of economic development in the future will call for political courage. Fortunately the reward should be well worth the trouble.

COMPETING FOR DEPOSITS

THE past year has been a reasonably good one for the banks, especially the bigger ones. Costs have increased, but so have earnings, and as a result profits have risen in a large number of cases. The growth in deposits has been especially encouraging; although to a substantial extent, it has been due to adventitious factors such as the accumulation of counterpart funds against U.S. aid, the banking system has been able to report some useful achievements in the direction of mobilising new resources as well. Barely a year ago, it was feared that the slow growth of deposits would prevent an adequate increase in advances, and therefore the provision of finance for the smooth running of trade and industry would be hampered. Now, however, it is seen that with larger deposits and with the slow-down in economic activity during recent months, the advance-deposit ratio is down to a healthier level than that reached during the last busy season. The Reserve Bank's policy of selective credit control has done something to bring this about, although in other ways the rigidity with which it has been applied has often been a source of embarrassment to the banks.

The most important factor, however, in the reduction of the advance-deposit ratio has been the slackening of industrial expansion as a result of the drastic import restrictions imposed since last year, and the failure of agricultural production to show any marked increase. Since the import restrictions are likely to continue for an unpredictable period, and since agriculture remains as ever a gamble on the monsoon, no major spurt in economic activity can be confidently foreseen for a considerable time to come. That means that the growing competition among borrowers of funds, from which the banks have steadily benefited in recent years, is waning. In other words, the banks may soon be obliged to compete more strongly among themselves in their lending operations. It is this possibility which is presumably responsible for anxiety about the high level of deposit rates being an outstanding

feature of bank chairmen's annual reviews this year. The speeches by Dr. N. N. Law, of the United Bank of India, and by Mr. S. P. Jain, of the Punjab National Bank (both of which are published on later pages this week) are only two symptoms of the anxiety.

The complaint against high deposit rates is a hardy annual in many bankers' pronouncements, but Dr. Law's speech gives a fair idea why it is now being put forward more strongly. His argument is that the expansion of banking business which is urgently necessary is being hampered by the fact that costs are rising. This rise in costs is damaging growth in a number of ways. Since ultimately it must be reflected in lending rates, it makes the production and distribution of goods and services more expensive; thereby it adds to inflationary pressures. As far as the banks themselves are concerned, a rise in their costs obliges them to boost advances; one result is that liquidity suffers, and another is that the marketability of Government securities is undermined. As Dr. Law points out, the main elements in banking costs are, firstly, the interest paid on deposits, and, secondly, the wages, salaries and other benefits given to personnel. Both, in his view, have been increasing faster than is healthy either for the banks or for the economy in general.

As for the increase in staff expenditure, there need be little debate; bank employees are vocal and well organised, so they have been able to extract additional benefits in recent years without necessarily having earned them by improving their efficiency. It is doubtful, however, whether the banks would gain much in the long run by penalising depositors, who are not well organised, through the restriction of deposit rates. Dr. Law says that the relationship between a depositor and his bank is not the same as between an investor and his enterprise; the interest offered is a relatively minor inducement for somebody to put his money in a bank, and a much more effective way of mobilising deposit resources would be to spread banking facilities. There is an element of truth in this, but many feel that a substantial proportion of the rise in scheduled banks' real deposits during the past year is due to the higher interest offered on them. It is a natural presumption that this higher interest has been offered because the banks concerned have been able to afford it. Dr. Law's speech does not give any precise idea why deposits should have been attracted by providing bigger returns if it was in fact unprofitable to do so. If it did become unprofitable, the banks would automatically begin to reduce the returns offered.

Even if the banks did wish to lower the interest paid to depositors, the manner in which this could be done is not clear. Mr. Jain calls for "some sort of concerted action by leading banks"; Dr. Law, apparently doubtful about whether concerted action is possible, makes the drastic demand that statutory control of interest rates on deposits be imposed immediately. The suggestion is extraordinary, coming as it does from one who cannot be unaware of what such far-reaching legislative control might ultimately imply. Governmental interference of this sort, once begun, will be difficult to restrain. It is interesting to notice that Dr. Law, while in favour of imposing a statutory ceiling on deposit rates, thinks that advance rates should be left free; this latter freedom, he argues, is necessary in order to ensure that marginal borrowers will be able to get their credit requirements, and in order to enable the banks to continue building their reserves. The question inevitably arises why, if competitive interest rates can be good enough for advances, they cannot be good enough for deposits. It is a dangerous sort of optimism to believe that the Government will obligingly stop at the statutory control of deposit rates without imposing any sort of restraint on advance rates. The conclusion is inescapable that any initiative in this direction, if necessary at all, might come best from the banks themselves. The possibility of stiffer competition in lending operations offers hope of greater restraint in deposit rate increases.

AN ENCYCLOPAEDIA OF INVESTMENT

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1958

MORE COMPREHENSIVE THAN OTHERS

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

Contains full particulars relating to the stocks, shares and debentures of all companies and Government Securities and Public Bodies' Loans quoted on the Stock Exchange. Also contains information of general interest to investors including rates of Income and Super-taxes, Wealth and Expenditure Taxes, Capital Gains Tax, Bonus Share Tax, Gifts Tax, and Estate Duty.

Price Rs. 12.50nP. Postage Rs. 1.87nP.

Add 50 Naye Paise to outstation cheques.

NEW COMMONWEALTH BANK PROSPECTS

TALKS IN MONTREAL

IT so happened that at the same time as active discussion on the idea of a British Commonwealth Bank was resumed late in April £20 million of New Zealand Government stock was issued on the London capital market and the issue was a failure, although it offered a yield of more than 6 percent. In such cases, of course, the borrower gets the required money, because the issues are underwritten; but it is evident that the London capital market is not yet in a fit state to provide much money for the sterling countries abroad. Conditions may be more favourable a few months hence; but they may deteriorate again later. As a source of capital, it must be recognised, London is in these times somewhat haphazard.

Against the idea of a Commonwealth Bank it has been argued that such an institution can do nothing to solve the basic problem, which is simply that there is not enough money available to finance capital development and trade within the sterling area; and that if Britain is in effect the only source of capital within the area the existing financial mechanism of London should suffice. When the idea of this new institution was first mooted about a year ago it was regarded almost with suspicion by the overseas sterling countries. Some of them believed that the proposed bank would restrict their withdrawals from their own reserves in London. Some believed that their reserves would be made available to other sterling countries. But it is likely that the revived idea will be discussed more sympathetically at the Commonwealth Economic Conference in Montreal next September. The problem of the sterling area's finance is, of course, a part of the whole problem of international finance, and the proposed Commonwealth Bank would be likewise a part of the whole machinery for financing international trade. In the past year the sterling countries have suffered severely from the decline in commodity prices, and several of them have been unable to pay for their imports otherwise than by drawing on their reserves in London. The sterling balances are a much easier means of finance than the London capital market; at least, if they are in liquid form. But they are not inexhaustible: and the reserves of the newly-independent territories do not seem to be conveniently liquid.

In any case, withdrawals from sterling balances cannot always be supported as comfortably as they have been in the last year. The withdrawals weakened sterling in the third quarter of 1957, but they did no serious damage to the economy of the sterling area, because the decline in prices of imports so strengthened the finances of the United Kingdom that she could counter-balance the deficits of other sterling countries. The U.K.'s terms of trade continue relatively favourable, but they are not perceptibly improving further. Other sterling countries are still drawing on their London balances, and by the time of the conference in September it will be necesary to consult on these withdrawals, particularly if the U.K.'s export trade has contracted in the meantime. This thought was, doubtless, in the British Prime Minister's mind when he made a positive plea for proper consultation within the Commonwealth on its financial problems, but Mr. Harold Macmillan had, obviously, a broader problem in mind when he advocated, in the much-quoted interview with Mr. John Bassett, publisher of the *Toronto Telegram*, the establishment of "a workable Commonwealth organisation similar to the World Bank or the International Monetary Fund". "All Commonwealth countries", he said, "are looking for more investment, but not all of us save enough to make such investment possible." He showed that he was concerned with the whole problem of international trade when he added that such an organisation would "develop into the most important means of expanding Commonwealth trade, and also trade between Commonwealth countries and other parts of the world".

It may be argued that a Commonwealth Bank, being concerned primarily with a particular (albeit a geographically diversified) segment of the world's economy, is not the best means of solving the problem of international liquidity. But the delay in implementing any other ideas seems endless. It has been suggested that gold should be revalued; that more credit should be made available through the International Monetary Fund; that the reserves supporting sterling should be strengthened by a stabilisation loan; that some world-wide organisation should be formed to stabilise prices of commodities. Much is said, but little is done. A Commonwealth Bank could be, at least, a step in the right direction. Mr. Per Jacobsson, managing director of the International Monetary Fund, said in his recent speech before the Economic and Social Council of the United Nations that, after 12 years of reconstruction, the economy of Europe had achieved "a more enduring stability" and that its need for assistance "should be very greatly reduced". He implied that the general problem of finance for world trade might not be so critical as many people had assumed. Such authoritative opinions must be respected—they are, indeed, supported by hard facts. Yet there are obvious dangers in the recession in American trade and in the decline in commodity prices—even though the pace of both has slackened in recent weeks. The crisis that has been foretold may not occur; but there is no harm in guarding against it.

In any case, the proposed Commonwealth Bank is a long-term project. The climate of trade has changed, and it is sensible to assume that the present recession will not be the last of its kind. The American as well as the British Government recognises that sterling is an essential factor in the financing of international trade, and that the problem of liquidity will become more acute unless sterling can be strengthened. A Commonwealth Bank, capable of mobilising all the reserves of the sterling area, could directly strengthen the currency at the same time as it promoted the development of the area. A central banking institution for the whole area would be a better medium than the institutions of Britain alone for the dollar credits that may still be needed to strengthen sterling and to promote trade. Such a bank could issue bonds to attract international capital. And it could initiate plans, such as the Australian delegation may, it is understood, propose in Montreal, to stabilise commodity prices. The discussions next September will certainly be interesting, and they may be very significant.

Current News and Comment

Cloth Output and Exports

The heavy carry-over of cloth stocks from the past year and the low level of domestic and export demand have been affecting mill output seriously. There has been a substantial decline of 132 million yards in production during the first quarter of this year compared with the same period of 1957. Exports also have fallen by about 90 million yards. Mr. E. J. M. Leigh, chairman of the Bangalore Woollen, Cotton and Silk Mills Co. Ltd., has said at the latest annual general meeting that in spite of the unhappy record, the industry can help itself "by improved market research and by restricting production of particular types to quantities that the market can be expected to absorb." (A fuller version of the speech is published on a later page.) He refers to the extraordinary shift which has taken place towards the production of certain varieties, especially coarse cloth, and says that, according to Press reports, the production of coarse *dhotis* and *saris* has risen from 9 million yards and 2 million yards in 1955, to 44 million yards and 27 million yards in 1956, and to 172 million yards and 200 million yards in 1957.

The rise is astonishing, and, in Mr. Leigh's opinion, it indicates a state of serious over-production which could have been avoided if the industry knew the quantity the market could absorb. The paramount need now is to reduce manufacturing costs, particularly in the interests of the export trade. World trade in cotton textiles continues to shrink, as one country after another adds to its spinning and weaving capacity. In the face of intensifying competition, exports will fall if methods cannot be found to reduce production costs substantially. Indian mills have been using increasing quantities of the local raw cotton and this has kept the cost high. Moreover, the wage bill is already unrelated to reasonable workloads of improved efficiency. "The industry certainly cannot afford any addition to this," Mr. Leigh says.

Discussing the working results of his company, Mr. Leigh says that due to heavy excise duties and sales tax rates during the past year, which caused considerable sales resistance, the mill could not put up its price to cover the increase in costs resulting from higher prices for raw materials, stores, machinery parts and wages. The profit for 1957 is, therefore, smaller. The woollen section has incurred a loss, and the silk section has been seriously handicapped by the severe import restrictions on spun silk, which is its essential raw material. The prospects for 1958 cannot yet be accurately gauged, although the reduction in excise duties for all varieties of cloth should lead to higher consumption. Some measure of confidence in the trade has, however, been restored, Mr. Leigh says.

Approaching Crisis in Sugar

Sugar production during the 1957-58 season is estimated at a little over 2 million tons. With the carry-over of 459,000 tons from the previous season, the total supply this year might well be nearly 2.5 million tons. Domestic demand, according to producers, will be less than this, so export markets have to be found. But Mr. C. R. Srinivasan, chairman of the East India Distilleries and Sugar Factories Ltd., tells shareholders at the latest annual general meeting that prospects for exports are by no means bright. (A fuller version of the speech appears on another page.) A promising start was made some months ago in circumstances which were rather fortuitous, but conditions have changed a good deal since. World prices have come down to about £35 a ton, while the average cost of cane a ton of Indian sugar is about Rs. 408. "I am afraid the sugar industry as a whole is heading towards a crisis," he says.

Mr. Srinivasan makes some noteworthy observations about the Government's cane price policy. A recent official Press note has announced that the Government intends to enforce a price formula by which the price of cane will be linked to the profits of sugar factories. Details have yet to be published, but the present is an unsuitable time for introducing such a scheme, he says. "The urgent need at present is to devise a method of payment for cane which will make the *ryots* benefit from growing sugar rather than large tonnages of fibrous matter. In these circumstances, any move to increase the flat-rate payment must be regarded as a retrograde step." Dealing with other undesirable aspects, Mr. Srinivasan points out that with a still higher price, cane-growing will become more attractive than the cultivation of other agricultural crops; as a result, there will be a heavy diversion of land to the former. The effect of a higher cane price on the economic working of the south Indian sugar factories will be adverse. Mr. Srinivasan urges the Government to take a realistic view of the situation, and not do anything which will add to the sugar industry's already high cost of production and completely ruin its prospects of establishing markets abroad. He refers to the preferential treatment meted out to *khandsari* sugar, and says that its production has gone up from 100,000 tons to 300,000 tons in the course of the past few years; next year, the figure might be doubled. It is competing with factory sugar in the internal market on very favourable terms, as it does not have to bear any tax burdens. *Khandsari* production is a wasteful way of utilising cane for sugar-making purposes. Unless action is taken to siphon off the surplus sugar to export markets and check the rise in *khandsari* production, the outlook for the factories is "frankly disquieting". Referring to the working results of his company, Mr. Srinivasan says that almost all activities, both trading and industrial, have shown satisfactory results. The fertiliser business has expanded. Capital expansion plans have, however, had to be shelved for the time being, due, firstly, to the new taxation in the past year's Budget, and, secondly, to the exchange restrictions and controls which render it difficult for a sterling company to make a fresh capital issue.

Making the Most of Imports

The heavy curtailment of imports due to the foreign exchange shortage has led to the closure of several firms. Consequently, unemployment among the middle classes has risen. While imports, especially those of consumer and other goods which are not included in the "hard core" of the plan, cannot be liberalised immediately, the available resources can be put to better use. Mr. L. R. Patel, chairman of the Calcutta Import Trade Association, at the latest annual general meeting has made a number of suggestions for doing this. Firstly, referring to the import of spare parts, he says that although these have been liberalised, they are still inadequate. Imports of new equipment have been cut down, and that is one reason why the import of spare parts should be liberalised. If new equipment is not available, he explains, it is essential to recondition the old, as well as to keep the already imported equipment in good working order. Therefore, until and unless bold steps are taken by the Government, many essential machines already imported will have to remain idle.

Secondly, he points out how the issue of licences to actual users has, in many cases, been leading to a wastage of foreign exchange. There is a tendency among engineers on most projects to order parts far in excess of what they actually require, "taking full advantage of the licence value or foreign exchange quotas allotted to them." Thus spare part stocks have been built up at a large number of sites; there is also considerable duplication in the stocking of some parts. This could be avoided by channelling imports through established houses. The ordering and stocking of spare parts is a highly specialised job, and importers maintain trained staff specialising entirely in parts stock control. Project engineers are well versed in their own specific branches of engineering, but do not have "the specialised knowledge and experience essential for the control of spare parts stocks," Mr. Patel adds. If the imports are channelled through the established houses, it will save foreign exchange and provide a better parts service to the country as a whole.

Dealing with the difficulties which an importer of equipment has to face in getting his licence, Mr. Patel says that he first has to ascertain from local manufacturers whether the equipment he intends to import is produced locally or not. This should actually be the job of the Government department concerned. "I often feel that there is insufficient liaison between indigenous manufacturers and the Government so that the latter is not aware of the actual position and much valuable time is wasted." He mentions the recent case of the West Bengal Government abandoning some of its essential minor irrigation projects because it was not permitted to import the right type of pumps, and the local substitutes were unsuitable. Mr. Patel welcomes the appointment of the Customs Reorganisation Committee, but suggests that the remedy does not "so much lie in the reorganisation as in the complete reorientation of the ideas of Customs officers which would enable them to understand and appreciate the points of view of the trade."

Bouquets from Shipping

The Government has been giving considerable encouragement and aid to the shipping industry. On behalf of the All-India Manufacturers Organisation, Mr. S. N. Haji, chairman, expressed his appreciation of this fact before Mr. S. K. Patel, Central Minister for Transport and Communications, whom he welcomed at a function in Bombay recently. India has a long coastline of 3,500 miles and a developing economy. These require that a strong mercantile marine be built. Referring to the measures the Government has taken to develop shipping, such as an additional provision of Rs. 50 crores during the second plan, and the special concessions in the shape of long-term loans, tax concessions, a higher development rebate and preference to Indian shipping in the allocation of Government cargoes, Mr. Haji praises the policy for its realism. He stresses the need to invite foreign capital to participate in Indian shipping, and says that even the low second plan target of 900,000 g.r.t. will not be reached because of the foreign exchange scarcity. The Government has introduced the Indian Merchant Shipping Bill in Parliament, one of the objects of which is to maintain an "Indian Register." The Register will invest a ship with Indian nationality if it fulfils certain conditions. Mr. Haji is in general agreement with the aims and objects of the law, but would like the definition of the term "Indian ship" to be broadened to mean "one owned by the citizens of India or by a joint-stock company having a majority of Indian shareholders and directors."

Dealing with port conditions, Mr. Haji says that although they have now improved, it is necessary to ensure that congestion does not occur again. He suggests that in shipping contracts, option clauses should be included under which a ship would be authorised to discharge at intermediate or minor ports. Urgent steps should be taken to provide the latter with better equipment and "greater facilities by way of communication by road and rail." When existing port trust boards are reorganised, representation should be given to industrial organisations and shipping interests. Referring to other forms of transport, such as inland waterways, Mr. Haji says that if India's rivers can be connected, the country will have a supplementary and cheap method of transport. A committee has been investigating the possibilities for a long time, but has not produced a report yet. As for road transport, Mr. Haji says that in the United States, a major share of all goods is carried by road and even 25 percent of the long-distance traffic is handled similarly. The Government of India has now realised the importance of this means of transport. An *ad hoc* committee led by Dr. P. Subbarayan has been examining its administration in different States with a view to devising a more rational and uniform basis of operation. Mr. Haji refers to the

Government's decision to appoint a Road and Inland Transport Advisory Committee as well as a Central Transport Co-ordination Committee. These are steps in the right direction. he says, and will promote the formulation of sound policies and their prompt implementation.

Prize Bonds for Small Savers

It has long been urged by some that premium bonds should be issued in India. The wartime experiment with prize bonds is still recalled in hopeful terms. The Madras Finance Minister is credited with a scheme to attract small investors by the offer of prizes. Various bishops' protests notwithstanding, the U.K. has tried premium bonds as a method of stimulating small savings. In India, the existing restrictions on puzzles and prize competitions might leave the field clear for the Government. It is felt that the National Development Council should not ignore the advantages of a scheme for rural areas which will obviate the use of either official agencies or pressure. The sale of prize bonds through rural post offices can be undertaken easily. Finance Ministers are not likely to boggle at the very mild form of gambling implict in prize bonds, since the whole object is to bring out money that now lies idle. Practical difficulties met with in the small savings drive explain the renewed attention to such bonds, and if a fixed return of, say, 2 percent instead of the 4½ percent on savings certificates is guaranteed along with the chance of a prize in a draw after maturity, many small investors will not be able to resist a flutter, especially if sales are made throughout the year. Various people have often pleaded for the issue of premium bonds to help finance the second plan, and in Madras, opinion generally seems to be in favour of the scheme.

Increased Activity in Shipbuilding

During the first quarter of 1958, world shipbuilding activity has been at a higher level than in the last quarter of 1957. According to the Lloyd's Register of Shipping returns for the period,a total of 1,732 steamships and motorships amounting to 10,065,459 gross tons have been under construction in different parts of the world (these figures exclude Russia and China). The latter figure is 117,482 gross tons higher than in October-December last year. Oil tankers being built over this quarter amount to 363 vessels of 5,052,802 gross tons (consisting of 163 steamships of 3,489,900 tons and 200 motorships of 1,562,902 tons), which is 169,241 tons more than in the previous quarter. Britain's share in these activities amounts to 22.5 percent of all steamships and motorships, and she has been building 76 oil tankers. The returns make a country-wise analysis of shipbuilding activity in order to measure changes. Of the leading countries for which figures have been given, West Germany, the Netherlands, the United States, France, Spain, Denmark and Belgium show increases, while the U.K., Japan, Italy, Sweden, Norway, Finland, Poland and Yugoslavia show decreases. The decrease reported by Japan is the first since 1954. West Germany, the Netherlands, France, Spain and Denmark record the highest construction figures in their shipbuilding history, at 1,058,069 tons, 695,364 tons. 557,046 tons, 276,770 tons and 235,639 tons, respectively. The United States has reached her highest peacetime total of 797,496 tons. Japan has maintained her leading place as an exporter of ships. Of the total new constructions, she has 21.9 percent, followed by West Germany with 14.7 percent, Italy (10.8 percent), the U.K. (9 percent), the United States (8.7 percent), Sweden (8.4 percent) and the Netherlands (8.3 percent). The three largest purchasers of ships are Liberia, Norway and Panama, while among the countries which have been making the largest additions to their existing fleets are the U.K., Norway, Liberia, Panama, Japan, the Netherlands, West Germany, France, the United States, Italy and Sweden.

Hongkong Textiles face Difficulties

The reluctance of Hongkong's textile interests to accept any limitation on their exports to Britain takes on a new complexion when the prospects ahead of the industry are examined. Recent developments are reviewed in an article by Mr. C. C. Lee in this year's international edition of the *Cotton Trade Journal* (Memphis), where it is pointed out that increased productive capacity in other Asian countries is causing difficulty. Both Pakistan and South Korea, for example, not long ago took substantial quantities of cotton textiles from Hongkong but they have now ceased to buy any. Pakistan has an exportable surplus, and some of it is being shipped to Hongkong at prices which, according to spinners there, could only cover the cost of the raw material. South Korea, which has been one of Hongkong's best customers during the past five years, has apparently become self-sufficient in textiles and has a spindle capacity as large as Hongkong's. So far Hongkong's trade with other Asian countries has remained satisfactory, but Mr. Lee suggests that this condition cannot last much longer. Meanwhile some encouragement is being derived from the increasing interest which the United States is showing in Hongkong's made-up cotton goods, such as shirts, blouses and pyjamas. A flow of orders for these goods started last year, and the growth of this trade may exert an important influence on Hongkong's production policy. It remains to be seen, however, whether the United States will continue to admit the goods on the present scale. Pakistani raw cotton is used extensively in Hongkong, because products made from it are eligible for Imperial Preference treatment on being imported into the U.K. and Commonwealth countries. American cotton is used for spinning combed yarn in fine counts. Because of the shortage of foreign exchange, however, imports of this cotton can be made only in limited quantities. Hongkong would, therefore, welcome any further invitations to participate in the processing of American raw cotton given as aid to countries in south-east Asia. On the last occasion, in 1956, as a result of the agreement between Hongkong, Indonesia and the United States, Hongkong imported $6 million of raw cotton against shipments of yarn and piecegoods to Indonesia.

Mineral Surveys in Andhra

A preliminary survey of the densely-wooded area around Pakhal Lake, one of the largest lakes in Andhra Pradesh covering 12 square miles, by the Department of Mines and Geology, has indicated deposits of iron and copper ores and barytes. The Department proposes to undertake a detailed survey in the hope of discovering further mineral deposits. Prospecting carried out in 1954 led to the discovery of iron ore, which occurs in bands, lenses and pockets in the Pakhal sandstones. The results so far available show that the deposits are sporadic but contain marketable ore. Five leases were granted in this area for iron ore and the total amount extracted until the end of 1957 was nearly 55,000 tons. Old workings of copper in the same area were found some years ago by Professor C. Mahadevan during the survey work done by him for the Hyderabad Geological Survey Department. The deposits of copper ore near the village of Mailaram were prospected in detail from 1950 to 1954, and it was found that in ancient times the people had scooped away the richer zone near the surface. The reopening of these excavations has not so far revealed any regularly mineralised lodes but only some disseminations in the quartzites. Geophysical survey work near the village of Yellambailu in the Pakhal region, which extends to 1,000 square miles, indicates some possibilities. The area was surveyed in detail with the co-operation of the staff and students of the Andhra and Osmania Universities. This was followed by half-a-dozen shallow drill-holes, and although no workable lode has been encountered, the results are considered to be encouraging. So far, baryte deposits in Andhra Pradesh have been worked in the Cuddapah and Kurnool districts. In 1956, an entirely new area was discovered in Pakhal where limestone and marbles abound. The area has been surveyed in detail with the help of the students of Andhra University and the indications are that there may be a reserve of about 800,000 tons of barytes in this region. The Andhra Pradesh Department of Mines and Geology is considering detailed prospecting in the Cuddapah basin for chemically pure limestone suitable for the manufacture of bleaching powder and high-grade lime for industrial purposes.

Paper Protest from Printers

A conference of printers in Coimbatore has recently been protesting about the high cost of paper. While the protest is understandable, its plea for the nationalisation of the paper industry is unbelievably silly. It has been argued that the industrial and cultural development of the country is being endangered by the scarcity of paper. The printers seem to forget that the restrictive import policy lies at the root of the shortages that vex them at present. Profiteering may to some extent be taking place in the trade; some newspapers, it is alleged, make profits effortlessly by selling the newsprint imported for their own use. The Press Commission, in its report, merely glanced at the ancillary activities of newspapers and did not care to examine how newsprint control had led to a thriving black market for years. Whereas paper mills suffer from the fact that the bulk of their output is taken at fixed prices, a number of presses, assured of paper as an essential material, have been able to make money by selling it to needy customers and small shops. The mills are wrongly blamed instead of the trade, and it is mainly because Madras has no paper factory so far that the printers there seem peeved. Because of the shortage of paper, the working of some presses is suffering, but many printers thrive by preparing labels and cartons for other trades. Their prosperity explains why Sivakasi (where crackers come from) has so many presses today. The printers might be justified in asking for cheaper paper but they seem to know very little about the circumstances of the industry, which has been expanding steadily in order to help reduce imports.

Dim Prospects for Coffee Exports

The disappearance of the sellers' market in coffee in international trade coincides with a time when the Government is trying to step up coffee exports from this country. Almost all producing countries now have a sizeable surplus in stock, which they will have to unload some time or other, and that might bring down prices further. Referring to this prospect in his address at the latest annual meeting of the Coorg Planters Association, Mr. R. C. Paterson has said that the days of easy profits are now a thing of the past. "Our success in the future will be regulated by our husbandry". In the 1956-57 season, output amounted to over 41,600 tons—easily the highest recorded in recent times—of which some 15,000 tons has been exported. The revised estimates for this year, however, put production at 39,920 tons, which is not very much less than the record of the previous year. But export prospects are dim. The recent sharp break in prices has come after six years of boom, when the world price was considerably higher than the internal rates in this country. Those countries which took advantage of the boom, notably Kenya, are now in a much stronger position than India to withstand the slump. Moreover, the competitive strength of the Indian industry has been undermined by the fact that it has not had the same opportunity to "re-equip itself from top to bottom in all its capital requirements," as some of its competitors have done. If the world slump continues for long, Mr. Paterson warns, many estates here will find it difficult to compete with foreign growers, or, "to say the least, would find themselves seriously handicapped, particularly now that wages are so much higher". He, therefore, pleads for a liberal depreciation allowance so that Indian growers might be enabled to make the necessary investment "for the capital re-equipment of their property". This is essential as taxes take away half the earnings.

Mr. Paterson refers to the opinion in some quarters that the existing export auction system should be improved, and says that the Plantation Enquiry Commission, too, has made some recommendations for modifying it in order to increase the efficiency of the Marketing Board. To maintain and expand India's coffee markets abroad, nothing short of a direct assault is necessary on markets which have been monopolised by other

producers for many years. The large potential markets in the eastern and east European countries will have to be developed. "If, however, our coffees can be exposed for export sale by methods popular to foreign buyers; if by greater care on the estate, in the curing works and in bulking, we can improve the quality standard of our export coffees, I see no reason why we should feel apprehensive of the adequacy of the Board to deal with the situation efficiently," Mr. Paterson says. He points out, however, that although the export of coffee is important for the economy as well as the industry, every care should be taken steadily to expand the internal market. "We must never forget that the internal market will always be our mainstay even if, as today, we have to continue to rely for our profits on exports".

Road Transport Difficulties

The difficulties of transport operators have been reviewed by Mr. M. V. Venkataraman at a recent meeting of the Indian Roads and Transport Development Association. He points out that the decisions taken at the Mussoorie conference on transport have yet to be implemented. Measures are awaited to liberalise the issue of permits, modify taxes and remove load restrictions. Permits are still being given only for short periods and renewals have to be obtained for inter-State movement. Parking in city limits remains a problem, but the longer moratorium on nationalisation gives some satisfaction. Proposals for an increase in the length of national highways and for building express roads on the Madras-Mysore border have also been welcomed. Mr. A. E. L. Collins, of Ashok-Leyland, who succeeds Mr. Venkataraman in the chair, might get transport interests the chance of a better hearing in view of the growing preference for heavy vehicles for commercial purposes.

British Carpet Sales

For the British carpet industry, 1957 was a record year with sales at a new high level of £66,862,000. Although the quantity was below the 1954 figure, at 46,537,000 square yards it was more than 11 percent greater than in 1956. The year's trade is reviewed in the annual report of the Federation of British Carpet Manufacturers. The labour force comprised 31,900 workers, the highest figure ever recorded, but it also includes those employed in the tufted carpet industry, about 1,500. Animal fibres still form the larger proportion of raw materials used, although the use of synthetics and other man-made fibres has increased slowly over the past few years. In 1957, the proportions were 89.4 percent for wool and 10.6 percent for man-made fibres. The largest use of man-made fibres was in mixtures containing 50 percent or more of wool, which rose from 5.1 percent in 1955 to 21.9 percent last year. Imports of woollen carpets into the U.K. increased by 19 percent, compared with an increase of only 4 percent in exports. The total value of exports was £10,142,000, against £9,742,000 in 1956. The main market was Australia, which took £3,059,000, followed by Canada with £1,548,000, and New Zealand with £1,432,000. Imports of woollen carpets totalled £5,411,000, of which about 37 percent came from India, Iran and Afghanistan, whose shares of the trade were valued at £2,349,000, £1,678,000, and £671,000, respectively. The effect on the traditional industry of the new tufted carpet industry still remains obscure. The report says that the new industry was slower in getting into its stride than was expected, while the year was comparatively prosperous for the industry as a whole, making it hard to gauge the likely extent of competition from tufted carpets in more difficult times. In the nine months ended November 1957, total sales of tufted carpets were £3,168,000, representing an annual rate of £4,224,000. It is thought, however, that this by no means represents the true potential of the industry, and that it may expand rapidly this year.

New Shuttleless Loom

A shuttleless loom of advanced design has recently been installed at the Manchester College of Technology. Called the "Maxbo," it is claimed to be the only one in the world outside Sweden, where it is manufactured by Aktiebolaget Maxbo. Its main advantages are a higher working speed than any existing loom, compactness, and quieter running. It is claimed that by switching a 200-loom shed to Maxbo looms, a 50 percent production increase is possible. The conventional mechanical shuttle, which carries the weft through the warp, is replaced by a jet of compressed air, giving a speed of 320 picks a minute. In comparison, a conventional loom works at about 180 a minute, and the Swiss Sulzer shuttleless looms—a few of which have been installed in Lancashire—can manage 200 a minute. The width of cloth is limited to 36 inches—a conventional loom can take up to about 50 inches and the Sulzer 40 inches—and the machine is fitted with only four shafts This limits its use to plain weaves, twills and satins.

SHYLOCKS EAST AND WEST

CIVILISATION is still trying hard to clip the claws of the professional money-lender; and, although the operation up to date remains unperformed, there are not wanting signs that civilisation means to succeed. The House of Commons Committee which was appointed last year is still hammering away at the unreasonableness of usury in the United Kingdom, while here, in India, we have the Government girding up its loins to strike a blow at exorbitant rates of interest and cognate abuses, through the machinery of the Contract Act. Leaving the ethical aspects of money-lending for those who care to study them, it is instructive to note how East and West, each in its own way, are grappling with the evil on practical lines. The point to which the Legislature is mainly directing its attention is the protection of the borrower; and here it may be remarked that this must always be the main objective of the Legislature, simply because the "gentleman who lends money on note of hand at 5 percent interest" is always very well able to take care of himself. Moreover, there is never any urgent necessity for him to lend money at all—to the necessitous. The original intention, or suggestion rather, of the Indian Government was to alter materially the Act of 1855, to give the Courts, in fact, the power to go behind a bond. But after much consideration and discussion Government have come to the opinion—wisely we think—that the attempt to alter the law so as to enable any Court to decree in any case such rate of interest as it may deem reasonable, would tend to endless litigation, and interfere largely with legitimate trade, and probably, in the long run, make the state of those who resort to money-lenders worse than now. Consequently, as Sir John Woodburn has explained, Government have determined to look for a remedy, not in the amendment of the law regarding interest, but in an amendment of the substantive law of contract.

Without Prejudice

THE ARTISAN AS A WORKMAN

SCOPE OF INDUSTRIAL DISPUTES ACT

(FROM OUR LEGAL CORRESPONDENT)

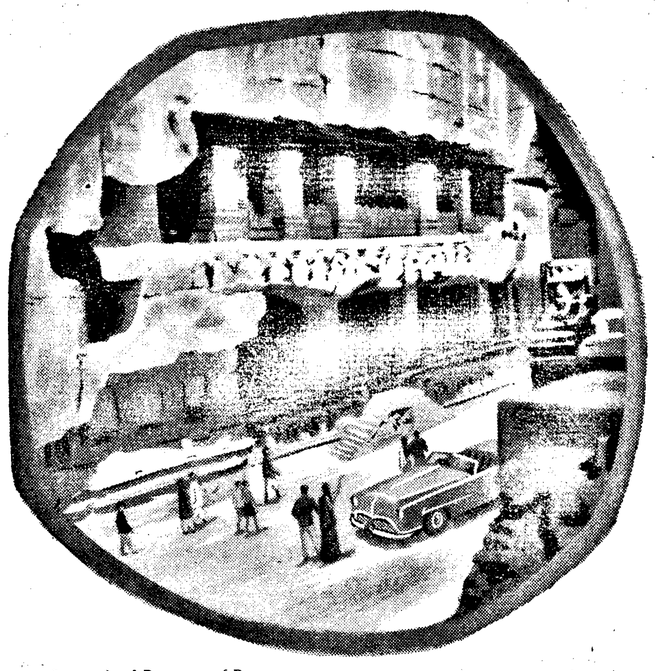
WHAT is an artisan? And is he a "workman" within the meaning of the definition of that word contained in Section 2(S) of the Industrial Disputes Act? In view of one of the latest decisions on the subject, we have been looking into the meaning of the word "artisan", and it is an odd fact that in English and Indian industrial legislation it appears to be nowhere defined. Stroud's *Judicial Dictionary* considers the word as a synonym for "artificer", and an artificer, according to the dictionary, is "a skilled or artistic craftsman; a maker or constructor; an inventor." The word artisan, we learn from the *Encyclopaedia Britannica*, originally meant "artist", but in modern times has been restricted to signify a skilled operative craftsman.

If there is no statutory definition to say what an artisan or artificer is, there are quite a number of legal decisions to say what he is not. For example, it has been held that a barber is not an artificer because he "does something" as distinguished from one who "makes something". By the same token, a designer of patterns for a calico printer was held an "artificer," and so was a journeyman tailor; likewise, so was an engine driver employed on board a steamer at Rs. 100 a month. Now "workman", as defined by Section 2(S) of the Industrial Disputes Act, "means any person employed...in any industry to do any skilled or unskilled manual or clerical work for hire or reward....." True it is and beyond the shadow of a doubt that an artisan or artificer does "skilled manual work for hire or reward", but that fact by itself is not sufficient to constitute him a "workman" within the definition; and you are invited to concentrate on one other word in it. That word is "employed".

For the fact is that a skilled operative craftsman may not be and very often is not an employee but an independent contractor. The word "employ" is often very loosely used. We talk about employing an architect, a solicitor, a doctor, a dentist and in India quite frequently of employing a priest to carry out periodically certain family religious rites. But these persons are not our servants in the sense that our bearers or cooks or, putting it higher, managers, secretaries or clerks are "employed" as servants. Your doctor, your dentist, your lawyer, your music teacher is not your servant in any sense of the word at all. You have no control or disciplinary authority over him. You enter into contractual relations with him, as principal to principal, for him to perform certain special functions in which he is a skilled operator for hire or reward. And the point of this note is this: you may in your factory or workshop enter into a precisely similar arrangement with a skilled mechanic as a private contractor without entering into the relationship of master and servant with him at all. What one has to remember is that "the expression 'employed' in Section 2(S) of the Industrial Disputes Act postulates the relationship of master and servant." (*Per* Rajagopalan J. in 1957. *I.L.R.* 646). And as the same learned judge observed, "the true tests to determine the question as to whether the relationship of master and servant exists between two particular parties are: (1) whether the management exercises control over such persons and (2) whether the stipulated time is really at the disposal of the management."

The latest labour court decision on the subject affords valuable guidance as to the principles involved. It concerned one of the leading firms in Madras engaged in finishing and selling jewellery, goldware, silverware and the like in that city. For the former process, the services of a substantial number of artisans were utilised. These artisans were required to attend and work at making ornaments, in the premises of the establishment daily according to a stipulated time and they were paid on a piece-rate basis. Strict timing in relation to their arrival and departure was not enforced. They did not enjoy leave privileges or retiring benefits as enjoyed by others admitted by the management to be "workmen". It was open to them to engage in other work, provided they completed the firm's work entrusted to them in time. Except by way of general supervision as to whether they were present or not, what sort of work they were doing and how they were doing it, no disciplinary control was exercised over them by the management. These men claimed bonus for the year 1955-56 and the reinstatement of one of them alleged to have been wrongfully dismissed. The defence was that the men were not "workmen", that there was no relation of master and servant between the management and the artisans, and that there was thus no industrial dispute within the meaning of the Act. In short, the artisans were claimed to be independent contractors, not workmen.

In support of the management's contention was the decision of the Labour Appellate Tribunal in the Calcutta case of *Cooke and Kelvey* v *their employees* (1955—II. L.L.J. 532). In that case, where a firm of watchmakers entrusted work to certain persons for execution, and where such persons worked at the firm or at places where they chose or where they were required to attend but strict timing in their arrival and departure was not adhered to, and where they were not paid when they were not at work and where they did not enjoy leave privileges or retiring benefits as enjoyed by workmen employed by the firm, and where the firm never exercised disciplinary powers over such persons, it was held that they were independent contractors and not employees of the firm. Relying on this and other decisions, the management contended that the artisans working in their establishment were contractors and not workmen.



But there was a more recent and, of course, more authoritative decision of a full bench of the Supreme Court on which the so-called workmen relied. (1957—I. *L.L.J.* 447). There the question was whether *agarias* working in a company's salt works in Kuda were contractors or workmen. These *agarias* were engaged by the salt company to work on plots of land to manufacture salt under the general supervision and control (note the latter five words) of the officers of the company at all stages of manufacture from beginning to end, and were held to be "workmen" and not independent contractors even though they had no fixed hours of work, were paid on a piece-rate basis and could employ others and pay them. It was some observations of their lordships in this case on which the artisans' representative relied which really proved fatal to their contention.

"The principles according to which the relationship between employer and employee or master and servant has got to be determined are well settled. The *prima facie* test in order to determine the relationship is the existence of right of control in relation to the manner in which the work is to be done. There is a distinction between a contract for service and a contract of service. In the first case, the master can order or enquire what is to be done, while in the second case, he can not only order or require what is to be done but how it shall be done. The nature or extent of control which is requisite to establish the relationship of employer and employee must necessarily vary from business to business and is by its very nature incapable of precise definition. The correct method of approach, therefore, would be to consider whether, having regard to the nature of the work, there was due control and supervision of work by the employer. It is impossible to lay down any rule of law distinguishing the contract of service and the contract *for* service. (Italics ours.) It is a question of fact to be decided by all the circumstances of the case. The greater the amount of direct control exercised over the person rendering the services by the person contracting for them, the stronger the grounds for holding it to be a contract of service, and, similarly, the greater the degree of independence of such control, the greater the probability that the services rendered are of the nature of professional service and that the contract is not one of service."

These observations are extremely helpful from a practical point of view and with their aid we are enabled to answer the question with which these notes began and to understand the why and whereof of such answer. An artisan may or may not be a "workman" as defined by the Act and whether he is or not depends on the facts of each particular case. In the case of the *agarias* working on the manufacture of salt, the Supreme Court held that they were workmen and not independent contractors. But applying the principles enunciated by their lordships in that case, the labour court in Madurai came to the conclusion that there was no relationship of master and servant between the artisans and the management of the jewellery, gold and silverware merchants, that the artisans did not come within the statutory definition of "workmen" in Section 2(S) of the Industrial Disputes Act, and that, therefore, the court had no jurisdiction to try the so-called industrial dispute.

So the firm's defence was successful. But, said the court: "I make no order as to costs." Why not? No reasons were given.

(*R. M. Appavu Chettiar and Sons*, 1958 (April) *L.L.J.* Vol. I. 407.)

International Panorama of Progress

More time for tradition

The world famous cave-temples of Ellora richly proclaim the glories of the great Hindu medieval renaissance times, when life moved at a more leisurely pace. This proud heritage lives side by side with swift, modern transportation that provides tourists with more time for tradition, businessmen with more time for commerce. Automobiles and trucks around half the world rely on Caltex service for the petroleum products that keep them operating at highest efficiency. Wherever they travel—to distant supply points or on short vacation trips—Caltex rides with them. Through the power of petroleum, Caltex fuels, oils and lubricants help bring mobility and prosperity to over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand,

A Ditcher's Diary

LAST WEEK'S ATTACK ON THE HEADQUARTERS OF THE Calcutta Fire Brigade was another reminder of the violence which lurks only just below the surface of life in this State. There has been no shortage of them lately—the recent examination riots at the University, the disturbance in Balurghat—although none has been quite as large and spontaneous as this one. The estimate of the number of young men involved is probably exaggerated. But if we reduce it by two thirds, even five thousand applicants for a hundred jobs is a startling reflection on West Bengal's unemployment problem. Frustration is not to be wondered at; not even the kind which results, once roused, in attacks on shops, houses and people not even remotely connected with the Fire Brigade. And their ferocity can only be expected to bear a direct relation to the disappointment and desperation which lie behind them. If the temper of Bengali youth is really to be judged from this particular affair, then it is time something really was done about it—before every official and employer suffers the unfortunate fate of the late Director of Operations of the West Bengal Government's transport, for instance. By this suggestion I do not mean more lectures, admonitions or exhortations. Bengalis have had far too many of these in the past forty years or so, and that might be one of the reasons for their present state of mind. I mean more employment, and more opportunities, both in West Bengal and outside it. Economic activity here has probably suffered more than anywhere else from partition, the changes which have taken place in the ownership of foreign business, and, perhaps most important of all, the demoralisation of private enterprise and organised labour which has come with the advance of socialism. It is no use blaming the Bengali, and anyway, there is little consolation in being able to find a culprit. It is fast becoming clear that if this State's unemployment troubles are not to lead eventually to widespread bloodshed and revolution they will have to be treated as a matter of national urgency. A first step might be to persuade those Ministers and higher civil servants who are so ignorant of conditions here to come and see for themselves. But the main thing is that private business should be given some positive incentive to expand its present activities and undertake new ones, however much this conflicts with socialism. There may not be time now for the Government to do the job.

IT IS NOT OFTEN AN EMINENT MAN LIVES LONG enough to celebrate his own centenary. The cares of a busy life have usually been too great, or, as often perhaps, the weight of guilt too heavy. It is possibly because the life of Dr. D. K. Karve has been so completely useful and satisfying that he has proved the exception. And even at the end of his one hundredth year, he is still spending his energy in the work to which he has devoted the larger part of his life—the progress of Indian women. I saw and enjoyed a documentary film about this courageous and independent man just a week ago. The present generation of young Indians might benefit from it. His crusade against cruelty to Hindu widows was an inspiration. So was his courage in marrying one himself, and facing the social boycott he knew would follow. Such determination is proof against all opposition; it eventually led to his famous widow homes in which these unfortunate refugees from a tyrannical social custom could take shelter from the evils which assailed them. His greatest achievement, of course, is the Hindu Women's University in Bombay. I believe that English is a compulsory subject in its curricula. It has long been Dr. Karve's belief that for the intellectual and cultural progress of this country, as well as for promoting national unity, English is essential. It is said that while he was struggling to set up his university, he went to Mahatma Gandhi for support. The Mahatma, on learning that English was to be a compulsory study, opposed its inclusion, and even expressed his unwillingness to help. But Dr. Karve did not give in. He is said to have told the Mahatma that he would rather do without his blessing than shut a great international language out of an educational institution. The Mahatma gave in. A spirit like Dr. Karve's is immortal.

WHEN THE ILLUSION IS GAINING GROUND IN secretariats and Cabinets that a few civil servants or a trades union can run an industry better than its professional managers, it is refreshing to hear that the failure of popular representation in the Corporation of Calcutta might at last be officially admitted and the city handed over to one of these same professionals. Mr. P. C. Sen was quick to remind the Calcutta Citizens Association that any drastic revision of the Calcutta Municipal Act was out of the question, but if his intention was to surprise, he did not wholly succeed with me. In a politician's calculations a city's good may take a subordinate place, and the Corporation of Calcutta has at one time served pretty nearly every purpose except the needs of city administration. A Minister is not to be blamed for being chary of parting with so much power and patronage. I am myself not wholly "sent" by the idea of city managers. I have not seen them at work; and although I have not seen the Calcutta Corporation working either, I would need to know more about the system of managers before I committed myself. Who appoints them? To whom are they accountable? What are the qualifications for the job? Any extension of the area of private enterprise delights me, and if the Eiffel Tower in Paris can be run by a joint-stock company there is nothing inherently absurd in Calcutta being managed by a managing agency. But what's the use of discussing these possibilities when there is not a political party which is in the least bit likely to consider them? The drains may stink, the roads may go under water and stay there, dead rats may rest in pipes carrying drinking water, ambulances may slumber in dry docks for months together, epidemics may rage—the primacy of politics must not be challenged. The answer, I think, is not to waste time discussing alternatives to politics-ridden municipalities, but to bleach politics itself as far as possible—to cleanse it a little. But then, that is certainly no easier an assignment than keeping the streets and water-mains clean.

THERE WAS SOMETHING SO SIGNIFICANT ABOUT THAT Press photograph of Marshal Voroshilov shaking hands with the Dowager Queen Elizabeth of the Belgians in Moscow. It was so symbolic of change —like a bullock cart with pneumatic tyres or a Calcutta cocktail party where they actually serve cocktails. And talking of cocktail parties, if the Russians really are beginning to liberalise their social contacts, how long before we can expect to see more of them around Calcutta? In Delhi, I believe, they do get about a bit, although even there they always act as if Big Brother is watching them. But here, apart from the anniversary of the odd revolutionary massacre now and again, it is difficult to meet them at all socially. Not that a blood-sucking, proletariat-grinding member of the crypto-imperialistic, capitalist Press like myself could expect to be among the first people they seek out when they do leave their shells; although I am certainly no more a representative of a decadent feudal *bourgeois* past than is the Dowager Queen of the Belgians. It is also true that they might not be altogether welcome additions to the social round in these hard times; they have a reputation for being monumental drinkers, and although I have noticed that vodka is rather easier to get in this city than good scotch whisky, for some odd reason, I do not suppose that its price is any more reasonable. Nevertheless, it would be a good thing to see the Russians mixing a little more with people whose countries do not happen to be provinces of their empire, or who do not necessarily see eye to eye with them politically. It may be that the barriers are already coming down. I met a friend the other day who claimed to have been to one of their official parties. He explained that the women did the waiting on; which might be good socialism, but which does not help the unemployment problem in this State. He also said the whole business was carried out with the dedicated gravity of a military operation; promptly at 7-30 the drinking began and the silence was relieved only by the creaking of elbows for exactly one hour, after which nothing more was served and the company filed out in gloomy procession. I suspect this is what the Russians might call capitalistic propaganda, or a mechanistic way of looking at things, and what I would call a leg-pull. But then, how is one to know what is true about them while they persist in spending their evenings like recluses behind those grimly drawn metal gates in Bishop Lefroy Road?

"POLITICIANS," WRITES THE *New Statesman* editorially, "should never read history books: and they should cultivate short memories." First, I was not aware that the average politician read any books at all, let alone ones on history. Second, to my knowledge he has rarely been accused of a very long memory. (Only this week *Newsweek* credits ex-President Truman with a "phenomenal ability to forget things he doesn't want to remember.") But seriously, what books should Ministers read? Mr. Punch's famous advice to those about to be married could be repeated: Don't. A more constructive way, I suppose, would be to recommend some authors. Wodehouse, it is safe to say, would do no politician any harm; livelier public speeches may be an additional gain. The Prime Minister's reading habits are known; he reads history and is unlikely to be deterred by the *New Statesman*. Mr. Morarji Desai, I take it, has read—or, may be, like me seen the film—*The Lost Week-End* with. I need hardly add, very different reactions. As Home Minister, Mr. Pant probably goes in for Agatha Christie and others of the *genre*, although he may be reading some anthropology too—as much to administer Nagaland as to understand politi al behaviour, including political cannibalism. Mr. Jagjivan Ram may or may not have heard of a book called *Journey Into Fear*, and the new Minister of Communications, Mr. S. K. Patil's, favourite is probably James Agate's *L. of C.* Nearer home Dr. Roy, whose familiarity with the latest in medical research surprises younger doctors, is, I am told by a friend, catching up with George Orwell—an author I would recommend to any Minister. Minister or no, everybody should of course read *Capital* every week. "The top people" do.

UNITED BANK OF INDIA LIMITED

CHAIRMAN DR. N. N. LAW'S REVIEW

Speech delivered by Dr. N. N. Law, Chairman of the United Bank of India Ltd., at the Annual General Meeting of the Bank, held at its Head Office, on Monday, April 28, 1958.

Gentlemen,

It is my pleasant duty to submit to you the Accounts of the Bank and I take this opportunity to welcome you all to this meeting of the shareholders of the Company. The economy of the country witnessed two contrasting features during the year 1957. Tight money conditions prevailed during the first half of the year and the general price level went up sharply between March and August. Thereafter, the position eased, the general index number of prices recording a fall. Increase in money supply for the year ended December, 1957, was of the order of Rs. 97 crores as compared to Rs. 120 crores in the previous year. Of this, expansion in note circulation accounted for Rs. 41 crores as against Rs. 100 crores in the previous year. Bank deposits as a constituent of the money supply were proportionately much higher during the year under review, and this is a welcome development. A large part of the rise, however, does not represent savings in the economy or a new turn in the flow of money. In this respect our economy has to make further headway and at a quicker pace. The year under review also witnessed so severe a strain on the country's foreign resources that the Second Plan had to be somewhat rephased. Despite the stresses and strains on the banking system due largely to inadequacy of resources, particularly in the first half of the year, the banks did meet the situation to the best of their ability. In the latter part of the year a considerable accretion to the banking resources reduced the strain, up to a point, and, consequently, Indian Scheduled Banks' borrowings from the Reserve Bank of India and the Deposit-Advance ratio registered a decline.

Bank's Progress

The Bank's Accounts for the past year, copies of which have been in your hands for some time, reflect the progress achieved. The deposits of the Bank at Rs. 38.36 crores were higher by about Rs. 4.4 crores, i.e., roughly 13% over the previous year's figure. Although the advances were correspondingly higher by about Rs. 3.4 crores the increase in revenue from this source was, as in the previous years, more or less absorbed by increased interest charges and higher salaries and allowances to the staff resulting in a smaller rise in net profits.

Operating Costs

An expansion of banking business in the country is the *sine qua non* for any increase in economic activity. But that expansion has to be achieved without any substantial addition to the cost of production and distribution of goods and services within the country. In the present context of certain trends in the banking system, a word of caution is necessary in respect of expansion of banking activities. It must be borne in mind that the banking system is generally working under the pressure of ever increasing operating costs. The extent of the pressure of operating cost can be seen from the fact that the overall cost of procurement of resources and utilization thereof for the Indian Scheduled Banks moved from 3.2% in 1950 to 4.2% by the end of 1956. The ratio of 1950 by itself might be considered high. The figure must have gone up still further in 1957. A disproportionately high operating cost causes a disproportionate rise in banks' advances ratio. An expanding economy no doubt requires that banking resources should be put to fuller use; such expansion, however, should be in conformity with the priorities of the Plan. But as banks function under the disadvantage of mounting operating costs they are naturally obliged to seek an increase in their earning assets viz., advances, irrespective of the said consideration. For, to match a rupee of disproportionate rise in the operating cost, a bank may have to increase its advances by hundred rupees. The pressure on the economy implied in this trend can hardly be exaggerated. A high Bank cost ratio reduces bank liquidity substantially, undermines marketability of Government Securitits and disturbs greatly the normal income *vis-a-vis* the real income.

Rate of Interest on Deposits

Of the components of banks' costs, two, as is well known, are the most important : (a) Interest on money lodged with banks and (b) Cost of personnel. The rate of interest paid on deposits has for sometime past been going up steadily and the rate of interest paid for various deposits is by itself well above the yield on medium dated gilt-edged securities and the effective lending rate of the Central Bank of the country. In the context of steady depreciation of securities for some years past, this hardly facilitates marketing of Government Securities, at least to the Banking sector.

In the case of the major banks the ratio that interest bears to deposits varied, in 1957, between .92% and 2.67% from bank to bank as against .65% and 1.68% five years ago. High rates are being offered, it is said, to attract deposits to the banking system as a whole.

In my address to you in the past two years, I pointed out that the rising trend of interest rates on deposits is anything but helpful either to the economy in general or to the banking system in particular, and this bears repetition. On various occasions we have urged that 'the relation between the depositor and the bank is not that of the investor and the enterprise, but of a depositor and a depositary. Bank deposit is not the equivalent of investment by the depositor and the interest that bank deposit earns is but a marginal inducement against the retention and use of money away from the banking system.' We have also emphasised that 'a careful analysis will reveal that the formulation of a Deposit-Interest-Plan should proceed on the consideration as to what the economically active producer and distributor can bear without presenting any hazard to the expanding national economy', and not on the basis of the concept of attracting deposits by offering higher return on the money of a depositor. We are of the view that 'deposit money in aggregate is possibly attracted better by adequate spread of banking service than by hawking higher rates of interest to shift or prevent a shift of deposits from one bank to another'. Apart from the steady rise in Time Deposits a good portion of the rise in Demand Deposits consists of money obtained at about the Bank Rate. I wonder whether there is really any convincing argument against the introduction of ceiling rates on bank deposits. In the nature of things, such ceiling cannot be voluntary. I would, therefore, suggest that the introduction of the statutory control of interest rates on deposits brooks no delay. We now have a situation wherein the producers and distributors not only try to pass on to the consumers the incidence of higher interest charges that they have to pay but become inclined to compete directly for funds by offering prohibitive rates of interest in preference or in addition to Bank credit. Funds so diverted should normally flow to the banking system. I would, therefore, reiterate that the interest rate for a bank's deposits should be statutorily controlled in order that the highest return on deposits does not go beyond, say, two-thirds of the Bank Rate in force for the time being. Of course, there should be a cushion allowed for the smaller regional banks, enabling them to pay a bit more.

Our emphasis on the need for imposition of a statutory ceiling on the rate of interest on Deposit may suggest to some that there should, at the same time, be an examination of the question of similar control being imposed on the rates of interest charged for advances. Such a suggestion could arise from an apprehension that, in the absence of any control on the interest for advances, the banks would be widening their margin of profit which would not be in the wider interest of the national economy. There need be no such fear because of the steadily rising operating cost and because of inter-bank competition exercising necessary moderating influence on the rates of interest on advances.

On the other hand, if a ceiling on the rates of interest on advances is imposed a trend will develop under which banks will tend to neglect the marginal borrowers who, in the present social context, require to be encouraged in their enterprise. When the need is felt that the banks should take wider risks, by stretching the maturity of advances to medium and long term, it would be better to leave the rates of interest on advances to adjust themselves and find their proper levels in the normal process by the pressure of competition. The need for building up of reserves has been emphasised even by the Bank Tribunals. Hence, if any counter step is at all to be considered, it should be enough to ensure only that

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd., as at 31st December, 1957 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949 read with the provisos to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956 the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required for banking companies and give a true and fair view of the affairs of the Bank as at 31st December, 1957, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

the small transitory gains, if any, accruing from the control on the interest for deposits is, wherever possible, conserved.

Establishment Cost

The other major component of banks' cost structure is the cost of personnel which, over the past few years has been expanding at the expense of users of the banks' resources and of the general run of consumers, the Government, commercial and industrial producers alike. We are never averse to any gain conferred by a rise in cost on those who make, develop, and serve the banking system for the public benefit. But there is cause for anxiety when the increase in monetary benefits does not lead to any improvement in the work-norm, nor checks the slipping back in output, but arises the ratio that such costs bear to deposits. The earning potential per capita of the personnel employed in a bank, is the average of deposit per head. If the banks, therefore, have to bear the existing terms of employment, without running into hazards, such earning potential will have to go up substantially.

Change in Outlook Necessary

In the recent years the tendency of seeking sectional advantages, in disregard of the interest of the society, is becoming a matter of great concern. All the more so, when planned efforts are being made to achieve certain physical and social objectives within a given period. The various branches of the economic activity being inter-linked and inter-dependent, any attempt on the part of the organised sectors of the people to secure advantages for themselves without correspondingly raising their output would only go to burden the other spheres and render the planned efforts ineffective. The point is better appreciated when it is realised that, a given productive effort does not obtain for the worker in the unorganised agricultural sector the same economic satisfaction, as it does in the organised plantations or the industrial undertakings. Thus an important sector of our economy, i.e., all activities other than the organised agricultural and industrial sectors, continue to remain difficult and unattractive. This is a major factor which causes imbalance in our economy. As long as this situation is not corrected, the economic progress is bound to suffer from a major drawback. If, therefore, the country is to attain the objectives set before it, it is essential that there should be a proper realisation of this fact on the part of every organised sector of the people.

Our Programme for New Branches

In the hope that proper understanding will be reached, we are adhering to our programme of branch expansion and improvement in regard to the places of business of the Bank. I may mention here that during the last year, it was possible for us to open four branches, one in the State of Madras at Coimbatore, and the other three in West Bengal at Katwa, Santipur and Ranaghat. A branch of the Bank was also shifted from North Calcutta to Tollygunge in the South of the city where previously there was no banking office. A larger number of new branches will be opened under this scheme during the year 1958—one has already been opened at Rourkela. Convenience of transacting business being a factor that helps growth, every attempt is being made to improve the location and the premises of the branches. Wherever this has been done, the consequent rise in business has paid for the extra expenses involved. During the last five years 30 offices have been so improved. In 1958, remodelling of the Delhi office has been taken up. In Bombay, the branch has been shifted to the Bank's own seven-storeyed fully air-conditioned building on Sir Pherozeshah Mehta Road. The yield from the building is likely to be more than 6½% per annum.

East Pakistan

The general economy in East Pakistan, where we have 15 branches, suffered during the past year from severe imbalance. A fall in jute prices had its repercussions. Developmental activities were, however, not discontinued and during the latter part of the year the situation was brought under a degree of control. Our branches there continued to make their usual contribution to the economic progress of this region.

Problem of Resources

To come back to the general economic situation in the country, inadequacy of investible resources both internal and external was felt acutely during the last year and the Plan had to be rephased. An underdeveloped country cannot leave to chances the issue of economic uplift of the people, and this has to be dealt with on a planned basis. Obviously, such planned efforts will tend to create progressively larger gaps between the resources currently available through limited organisations and mechanisms and the unavoidable minimum social and material targets. As such the question of husbanding the national resources for the purpose of proper utilisation assumes a great magnitude. In these days of rapid technological improvement and increasing social consciousness, internal resources alone do not serve the purpose and external resources in Know-How and equipments are also needed Thus grows and has grown the problem of external resources

In the immediate future a great demand for finance for industrial expansion is bound to develop. On the basis of foreign loans secured recently from the Export Import Bank and other sources, some industries will be in a position to go ahead with their plans for expansion, for they are no longer handicapped for foreign exchange. But availing of the external finance to the extent it is allotted for the private sector will require raising of the rupee counterpart by the industrial enterprise. In addition probably an equal quantum of funds, if not more, will be necessary to supplement it for the installation of the local components and working capital In some quarters it is estimated that about a hundred crore of rupees may become necessary to be found by the industrial enterprise in the private sector within a short period, if the foreign assistance is to be fruitfully utilised. In the present economic situation it will not easily come from the capital market and the specialised institutions such as the proposed RFC, and IFC. ICICI. NIDC. SFCs. etc. will not be able to cater to these projects except to a limited extent. To the best of its ability the banking system will come forward to render assistance to the extent that five or seven year amortized loan would serve the purpose. But industrial corporations will be able to raise funds from the banks only up to, say, five times of the net savings after paying for the taxes, depreciation, dividend etc. Viewed that way, the ability of the industrial enterprise to raise adequate resources from the banks may also be limited unless there be the prospect that this medium term finance could easily be converted into long term finance or equities within a short period. This points to the necessity of permitting larger individual and corporate savings, and also of activising the market for equities and bonds.

As for the public sector the Government is rightly anxious to raise the necessary resources through marketing of securities and also to attract small savings direct to the Treasury. Such procurement of resources will have to be fast and economical. Otherwise several essential projects ancillary to the Plan 'core' may have to be elongated for want of resources and the likely impact of this on the community should not be lost sight of. It would, therefore, be worthwhile to make a closer study of this aspect of the collecting resources for the State sector through the marketing of Government loans as well as attracting the small savings. It should be considered whether the purpose would not be better achieved by including the use of the existing banking system in this effort, and if so, whether quicker expansion of commercial banking would not further facilitate the realisation of the targets. It, however, will have to be appreciated that to enable the banking system to be in earnest in this regard, it will be necessary to treat all the banks on the same basis, irrespective of ownership, in-so-far-as they qualify for such trust, so that efforts made by the banks to popularise Government obligations do not mean a corresponding loss of resources to themselves. This is not a new suggestion. There are countries where funds held by the Government in the State-owned organisations are relatively small compared to the funds collected, retained and spent through the commercial banking system.

Conclusion

In concluding I thank the Managing Director and my other colleagues on the Board as also the Chairmen and the Members of the Local Advisory Committees for the very valuable assistance I received from them As you are aware, during the last year we had the pleasure of including in our Board two new Members, Sir Chunilal B. Mehta and Mr Murarji J. Vaidya, both of whom are men of eminence I also thank the Secretary, the senior Executives of the Bank and other members of the staff who have rendered useful service to this institution throughout the year.

I thank you all for coming here today and I am glad to observe that my hopes expressed at last year's meeting have been borne out by this year's results. It is true, as I have mentioned earlier in the speech, we are still faced with some difficulties but it is inherent in all progress that difficulties will have to be faced and I feel that we shall be able to overcome the difficulties that remain, as we have done so far, and that we can look forward with optimism towards continued advancement in the Bank's progress during the coming year.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

THE PUNJAB NATIONAL BANK LIMITED

CHAIRMAN MR. S. P. JAIN'S REVIEW

The 111th Ordinary General Meeting of Shareholders of The Punjab National Bank Ltd. was held at Delhi on Friday, the 25th April, 1958.

Following is the speech delivered by the Chairman, Mr. S. P. Jain :—

Gentlemen,

I have pleasure in extending to you all a hearty welcome to the 111th Ordinary General Meeting of the Bank. It is a matter of additional pleasure that we are able to meet today in the Hall in our new building. The Head Office of the Bank will also gradually move into this building and the hopes of our being able to render still better service to our large constituents from this central place will be fully realised.

Balance Sheet 1957

Profits :—You will find from the Statement of Accounts already with you that the Bank has maintained its stride of progress. The profit for the year under review has crossed the one crore mark and was Rs. 117.27 lakhs including the Rs. 6.20 lakhs brought forward, against Rs. 90.20 lakhs in 1956. This has been arrived at after a contribution of Rs. 9.32 lakhs to the Gratuity Fund Trust. The Board has proposed after transfers—Rs. 50 lakhs to taxation, Rs. 22.5 lakhs to reserves, Rs. 18 lakhs to bonus for staff and Rs. 1 lakh for charity—a final dividend of Rs. 2/8/- per share on the increased capital. This raises the dividend to 20% per annum. The bonus to staff has been raised to 3 months basic salary for 1957 against that of 52½ days for 1956.

Deposits :—The Paid up Capital has increased from Rs. 87.5 lakhs in 1956 to Rs. 1.25 crores in 1957. The deposits rose nearly to Rs. 125 crores registering an increase of Rs. 18 crores during the year against Rs. 16 crores in 1956. In the background of stringency of money in the country, your Bank has had throughout surplus funds. Your Bank did not for a certain part of the year compete with other banks for deposits. Your Bank had, however, to yield to the pressure of valued clients and agree to the same rate of interest as offered by others. The Bank's large funds were lent to other banks as short-term deposits. The rise in the cost of money is slower in your Bank as compared to others, but still high. This is a matter that calls for some sort of concerted action by leading banks.

Advances :—Our loans and advances showed only a moderate increase of Rs. 13.09 crores from Rs. 54.86 crores in 1956 to Rs. 67.96 crores in 1957. In view of the Reserve Bank's policy of credit squeeze on advances against foodgrains and availability of large funds with us, the Bank has to diversify its advance policy and is now looking into the credit-worthiness of different industries that have developed during the last few years and attempting to increase advances in fields not hitherto covered by the Bank.

Branch Offices

Your Bank's policy of extending its services in areas not being served by banks continues. The number of offices increased from 340 to 353 during the year. One of the handicaps with regard to the opening of new offices in areas with insufficient or no banking facility at present is the difficulty of building up a reasonable advance portfolio. This position was brought to the notice of the Reserve Bank. Certain modifications were made by the Reserve Bank in their policy regarding advances on foodgrains. But they do not meet the situation. If banking has to expand in new areas, the policy needs further revision.

The space problem at the Head Office will be eliminated with the shifting to our new building. The enlarged organisation of the District Managers has now been well consolidated for rendering better and prompt service to our varied clients. The Foreign Exchange Department is also being organised on a regional basis and I hope it will take its proper shape during the present year.

1957 : Retrospect

The past year has been in a way a complex and difficult one. Viewing the economy of the country, however, as a whole in retrospect, we find that we have fared better than we thought we would. A big storm that appeared to gather force blew over and though there has remained much dust and some dislocation we are still on our feet. We have not only to continue to remain on our feet but also grow up.

Higher Production Trends

At the beginning of last year, there was apprehension of a declining trend in agricultural production and consequent rise in the price level. It was further feared that the stricter import control over general consumer goods would also be an inflationary factor. There was failure of monsoon and serious drought occurred in many parts of the country. By the middle of 1957, the price of foodgrains had gone up. The Government of India and the Reserve Bank took concerted measures to keep down the level of prices by importing foodgrains and by the policy of credit squeeze and other steps. In line with this policy, your Bank also limited advances on foodgrains. At the end of 1957, the foodgrains prices came down to more or less the level that was prevailing at the end of 1956. The price index for food articles in December 1957 was 102.9, the same as in December 1956. The general price level at the end of 1957 was same as at the end of 1956 in spite of the sharp increase in the excise duties on a number of items in the middle of 1957. The index for all commodities was 106.3 in December 1957 against 106.9 in December 1956. Having regard to the increase in the money supply, excise impositions and import restrictions on consumer goods over a wide front, this trend in the price level affords considerable satisfaction.

Taking the picture of production in the fields of agriculture and industry, we find that there has been during 1957 an increase of 6% in the agricultural production and 11% in industrial production. Ltaving the peak production in 1953-54, the production of foodgrains in 1957 showed the highest increase during the last eight years. In wheat, gram, cotton, coffee, rubber and sugarcane, the production in 1957 set new records. The rate of industrial production during the year as a whole was the highest in the past many years The index rose from 103.6 in 1952 to 133.0 in 1956 and 147.6 in 1957 (11 months). The rate of increase in 1957 over 1956 is 11% against 8.9% in 1956 over the previous year and the highest over the past five years.

The foreign exchange position that was extremely tight and which, it was apprehended, would adversely affect production in the country has since improved though not adequately. Though the problem of non-availability of foreign exchange for development purposes continues, the utilisation of available foreign exchange by providing matching rupee capital is assuming serious importance. It is thus a picture that carries the hope of progress emphasising the need for serious efforts in all directions. I agree with the analysis of Mr. Iengar, the Reserve Bank Governor, that "there is no reason why we should take a gloomy view of the situation". But the rate of increase in industrial production since the end of the year is falling and is a disturbing factor which must be taken into account for adjustment of policies fiscal and monetary. We have definite objectives and if they are better secured by adjustment in the fiscal and other Governmental policies, doctrinaire considerations should not stand in the way.

Foreign Exchange and Development

We have three more years of the Second Plan to go. Our ultimate objectives have to be realised. Also, as the Prime Minister stated in Parliament, our under-developed country has somehow to break the barrier and cross into a dynamic and self-progressing economy. We have, therefore, to go on with the scale of expenditure proposed if not on a larger scale. We have to realise that the development programme we seek to implement cannot be achieved without a substantial measure of foreign assistance. There is a feeling among certain sections in our country that by embarking upon a heavy development expenditure now with foreign assistance, we shall be mortgaging our Third Plan. It was inherent in the Plan itself that we would take foreign assistance to complete our development programme, but, of course, the size of our requirement compared to estimates has considerably increased. Development is a continuous process. The creation of additional resources and increased credit-worthiness of the economy achieved through such development will enable us to meet our liabilities. There is nothing inherently wrong in going ahead at a faster speed with our development programme with foreign assistance. If the foreign exchange obtained is used for development purposes even with the admixture of created credit of Indian rupee such development would itself be an anti-inflationary measure.

As regards the shape in which the foreign capital should flow into our country, opinion seems to be divided. Some consider that deferred payment system carries with it a heavy liability. This liability is precise and fixed in advance. In the case of equity capital it is not so. The liability is rather permanent and growing especially with reference to large profit-yielding industries. The choice may be a matter of preference with reference to individual schemes depending upon their profitability. The shipping interests who are willing to borrow money are opposed to foreign ownership through flow of equity capital. In their opinion, the yield on shipping investment is not large by industrial standards.

In whatever shape the foreign capital may come, its utilisation for achieving our development programme is linked up with our ability to find requisite finance from within the country.

Finance for Agriculture and Industry

The crux of the problem is thus internal resources and striking a proper balance between consumption and savings in the increased national income. The Governor of the Reserve Bank explained in his speech at Madras that the essential points of the economic policy in India today were to raise the maximum resources from within the country and to follow a correct monetary policy which would prevent inflation. He went on to say that the monetary policy had to be geared to a rapidly developing economy in which deficit financing necessarily played an important part. He said "the policy had, therefore, to be at the same time expansionary as well as restrictive, the expansion and contraction being operated on different sectors of the economy". It can be agreed that the policy has borne fruit in particular directions and the Reserve Bank must be congratulated on its achievements. The Governor of the Reserve Bank is doubtless aware, of the need of expanding credit to agriculture and industry in the coming years which is vital to achieve a level of production essential for equilibrium and progress in our economy. He has recently held meetings at Calcutta and Bombay to ascertain the nature and extent of the requirements.

The agricultural and industrial production, though higher last year, is showing signs of weakness. A continued accelerated rate of production is a prime necessity whether to feed the people or to give them gainful occupation and improve their standard of living or to check inflationary upheavals from dislocating the economy. The expansion of rural credit is appreciable in recent years but considering the needs of the cultivator for increased production, the efforts in rural credit expansion need to be greatly stepped up. I mentioned last year also, and I again repeat this year, that the services of commercial banks can be profitably employed in this field. This will also help commercial banks to have branch banking in rural areas.

The financial resources accumulated in the past with the industry are now largely exhausted. The heavy taxes have further affected their capacity to make available enough funds from current profits. For the efficient and effective utilisation of the foreign capital that may be available, requisite Indian Rupee finance has to be raised. The Refinance Corporation that has been organised is likely to commence working within a few months with certain resources. These investment corporations are able to supply credit to industry only to a limited extent, but not to the full extent of the requirement. The monetary authorities must evolve a machinery for meeting the needs of internal resources for development. The services of commercial banks individually or through a consortium of banks may be utilised to meet this situation. We have a heavy task. With his thorough grasp of the fundamental aspects of our monetary problems and broad vision, I am sure Mr. Iengar will contribute to the initiation of a policy that will vitalise our economy.

Plan Effort and Fiscal Policy

Mr. Nehru in his Budget Speech stated : "The crisis through which we are passing is a crisis of development, a crisis of resources. We must try to produce more, export more, and save more to find the resources for implementing the Plan." The public also in all walks of life are deeply concerned about the implementation of the Plan. The success of the Plan naturally depends on the creation of conducive conditions for development and the avoidance of policies and forces that debilitate the efforts towards the achievement of our objectives. It is by this standard that we have to assess the merit or otherwise of the fiscal and related policies of the Government. Are the efforts of the Government in accord with what has been laid down in the Plan? To what extent have the fiscal policies pursued militated against the cherished objectives?

The Second Plan estimated the total receipts of the Central and State Governments over the five year period at Rs. 5,000 crores at the rate of taxation prevailing in 1955-56. It also estimated that non-development and maintenance expenditure under development heads would take up Rs. 4,650 crores leaving for Plan expenditure the sum of Rs. 350 crores. To be able to obtain this, it was stressed that a careful watch would be necessary on non-development expenditure. On this assumption, they calculated further resources of Rs. 450 crores by way of additional taxation to make up Rs. 800 crores for development expenditure under the Plan. These estimates do not seem to have been followed by Government in implementation. Against the estimated annual average expenditure of Rs. 930 crores plus Rs. 200 crores on account of current developmental plan expenditure making a total of Rs. 1,130 crores, the estimated expenditure during 1956-57, 1957-58 and 1958-59 is of the order of Rs. 1,126 crores, Rs. 1,390 crores and Rs. 1,500 crores respectively. The estimated revenue during these years has gone up to Rs. 1,167 crores, Rs. 1,356 crores and Rs. 1,500 crores as compared to an average income of Rs. 1,090 crores including the revenue through additional taxation estimated in the Plan. Obviously, the calculation of resources for development under the Plan has been upset by the non-development and non-plan expenditure in both the Centre and the States having gone very high. The States have continued to show budgetary deficits. The Centre in their hunt for funds embarked upon the policy of a series of new taxes which, without helping to stimulate and aid Plan efforts, were effective in undermining the capacity and stifling the initiative of the investor. This created many problems affecting more particularly the value of savings and in consequence the psychology of the people to save which is of cardinal importance for the successful implementation of the Plan. The value of the Government securities fell to the lowest level in the past many years. The prices of Preference Shares and Ordinary Shares were subject to sharp falls.

The drop in the price of Government and Trustee Securities, Preference Shares and Equity Shares was to the extent of 2%, 9% and 16% respectively. The level of prices in 1957 was substantially lower than that in 1951. The average price index of Government and Trustee securities, Preference shares and Equity shares in 1957 was 89.4, 76.7 and 104.5 against 96.2, 98.6 and 112.9 in 1951 respectively. It is relevant to note here that during the First Plan and the first two years of the Second Plan, very heavy industrial expansion has been achieved and most of the companies ploughed back their profits increasing the production and earning capacity of the units. This should have been represented in the appreciation of the value of the investments. Only this would have given the encouragement to ploughing back and created the confidence as regards the benefit of such ploughing back to the investor and to the development of the country. As things are at present, the depreciation in equity share values as a direct consequence of Government's fiscal policy has wiped out the savings of the investors and has given a shock to the confidence of the investor and the industrial management in the policies of the Government. The Government's policy has not been such as to keep the value of the people's savings intact. Obviously, the people can be induced to save only if they are assured that the value of their savings will appreciate and not depreciate. What confronts the economy today in this respect is really a serious situation.

The Government and the Planning Commission should make an urgent study of the effect of last year's fiscal policy on the implementation of the Plan. They should see how far the policy has been helpful towards the achievement of our objectives. Saving is the fulcrum of the Plan or for any development and if the psychology to save is affected as has been done by the last year's fiscal policy of the Government, it is essential in national interests to adjust the policy or even to reverse it. The withdrawal of the compulsory Deposits Scheme, the reduction in the excise duties on cotton textiles and the new variations regarding development rebate are indicative of an awareness on the part of the Government of the serious repercussions of their policy and I hope this flexibility will be extended further to smoothen the path towards the successful implementation of the Plan and rousing the enthusiasm of the people in maximising savings for the fulfilment of our objectives regarding greater employment and improved living standards. To this task, the new Finance Minister, Mr. Morarji Desai brings his mature experience and sober analysis of the country's economic and financial problems. I have every hope that under his able stewardship of the portfolio of Finance we shall progress without setback.

NOTE :—This does not purport to be a record of the proceedings of the annual general meeting.

THE BANGALORE WOOLLEN, COTTON & SILK MILLS CO., LTD.

CHAIRMAN MR. E. J. M. LEIGH'S REVIEW

Presiding at the Seventy-fifth Annual General Meeting of the Shareholders held at the Registered Office of the Company, Agraharam Road, Bangalore City, on Saturday, 26th April 1958, Mr. E. J. M. Leigh said :

Gentlemen,

The Directors' Report, Balance Sheet and Profit and Loss Account for the year ended 31st December 1957, having been in your hands for some three weeks, I propose with your consent to adopt the usual procedure and to take them as read.

The year 1957 will long be remembered as a most difficult trading year for the Cotton Textile Industry as a whole and I only wish I could see prospects of an early liquidation of the heavy stocks carried forward into the current year.

In my speech yesterday to the members of your Sister Company, I tried to diagnose the causes of the malady and to suggest some remedial measures, but it is a complex problem and there can be no short period of convalescence.

Painful corrective forces are already in operation and Mill output in the first quarter of 1958 fell by 132 million yards compared with the corresponding period last year, but exports also fell by about 90 millions. The Industry can help itself by improved market research and by restricting production of particular types to quantities that the market can be expected to absorb. There has undoubtedly been a shift towards the coarse end of the trade and serious overproduction in certain items, notably coarse dhoties and sarees. According to Press reports the production of these two items rose from 9 and 2 million yards in 1955 and 44 and 27 millions in 1956, to the astonishing figures of 172 and 200 million yards respectively in 1957.

Cotton Consumption

The increased consumption of Indian cotton has kept up market prices and affected India's competitive position in Overseas markets.

It is not only the composite Mills which are in difficulty ; several have closed down and others have suspended shift working : but the Spinning Section is also hard pressed to finance stocks which the Handloom Industry has been unable to absorb, and for which there is little, if any, export outlet.

World trade in Cotton Textiles continues to shrink as one country after another, including cotton producing countries, adds to its own spinning and weaving capacity. In the face of intensifying competition India's export trade must fall unless ways and means can be found substantially to reduce manufacturing costs. The Industry certainly cannot afford any additions to wage bills which are unrelated to reasonable workloads and improved efficiency.

In the face of intensifying competition in Overseas markets your Company was unable to do more than retain its previous year's volume of exports at Rs. 19.5 lakhs.

In spite of the generally adverse circumstances, your Company achieved reasonably successful trading results and was not embarrassed by an accumulation of stocks. In the face of very heavy excise duties and sales tax rates which caused considerable sales resistance it was not possible to increase prices to cover the rising costs of raw materials, stores, machinery parts, wages and especially Dearness Allowance. These developments have in no small measure contributed to the lower profits earned in 1957.

In the Woollen Section the high prices that had to be paid for raw materials during the greater part of the year, coupled with keener competition, prevented this department from maintaining the improvement recorded in 1956 and I regret to report that a loss was incurred in this department. However, with an alteration in your Company's Manufacturing Programme, we hope to improve sales and take full advantage of the recent trend towards better quality purchasing on the part of the public.

Import Restrictions

The Mill's Silk Section has been seriously handicapped by severe import licence restrictions on Spun Silk. From our point of view, to be deprived of supplies of an essential raw material was a disaster, but it was our duty to produce acceptable substitutes from indigenous material as in times of foreign exchange shortage, the import of luxury raw materials naturally has to be curtailed. We were able to introduce other varieties, but I must make it clear that the consumer is not prepared to buy an expensive product like silk unless the quality is of a high standard. The Government is aware of the necessity to improve the quality of indigenous filature and spun silk and it is not beyond the capacity of local producers to achieve the high standards of quality that are recognised internationally. The Sericulture Industry has therefore an opportunity and it is hoped that it will take advantage of it. In spite of our best efforts, mainly due to the quantity of suitable indigenous spun silk being limited, the Company was compelled to shut down part of its Silk Plant.

During the year, sales of our popular Union fabric, Cotswol, and of the heavier cloth, Angola, were maintained and it is gratifying to note that Angola continues to be supplied to the Armed Forces and that the demand for it by the general public is increasing.

In his speech last year, my predecessor, Mr. Castell, mentioned that your Directors had accepted an allocation of 96 new automatic looms from Government, 24 of which were to be made in the country. However, the installation of these looms was made subject to such exacting and penal conditions with regard to exports, that the scheme proved impracticable but your Directors will pursue this proposal should it become possible later on to install additional plant on acceptable terms.

Excise Duties

Two measures of relief were introduced in December last in the shape of a reduction of 6 pies per square yard in the rate of excise duty applicable to "Medium" cloth, in which category stocks were the highest, and replacement of all Sales Taxes on cloth, Central and State, by additional excise duties. Further concessions were announced in March this year applicable to all categories and advantage was taken at the same time to express the rates in naya paisa. Supplies can now reach the consumer at lower prices and some measure of confidence within the trade has been restored, though it is too early yet to determine whether these concessions will prove adequate in the long run and permit a reduction of stocks to normal levels.

Your Company's programme for rehabilitation and replacement of machinery has been retarded by the difficulty in obtaining Import Licences for essential plant and spare parts, not yet manufactured in the country.

Your Directors are fully alive to the vital necessity for improving plant efficiency and installing machinery of the latest type. I am glad to report that the new Molten Metal dyeing range went into operation during the year.

The water supply position in Bangalore is giving your Directors some concern particularly so in view of the fact that at times our intake of Corporation water is restricted by the Authorities at very short notice.

Government's difficulties in this matter are understood but, whilst we fully appreciate that the requirements of a growing industrial area must be carefully considered, we are left sometimes with the impression that those in control seek an "easy solution" by curtailing first, their largest consumer, incidentally one of their oldest customers.

In an endeavour to solve this problem, bore wells have been sunk and everything possible will be done to make the Mills as independent as possible. Nevertheless a considerable quantity of water will always be needed from the Corporation Authorities.

Labour Relations

Our relations with our labour have not been entirely happy during the year. Much time has been devoted to considering very comprehensive demands from our workers and a great deal of time has been spent arguing issues before the Industrial Tribunal and other Authorities. At times production has suffered because of indiscipline. However, I am pleased to inform shareholders that wiser counsels in the Association appear now to be prevailing and it is very much to be hoped as a result of current negotiations, which are being conducted in a spirit of give and take, that a compromise agreement will be reached with the Labour Association which will go far towards ensuring industrial peace for some years to come.

Turning to the accounts, you will see that the Balance Sheet reflects the steps which were taken during the year to bring the capital more into line with that employed in the business when Rs. 81,00,000/- of the General Reserve were capitalized by the issue of Bonus Shares involving a liability to tax amounting to Rs. 24,30,000/-. Unfortunately the terms of the 1958 Finance Bill offer no relief in respect of this controversial tax. As mentioned in the Directors' Report this liability has been provided for partly by the transfer of Rs. 20,00,000/- from the Reserve for Taxation and the balance from the Rs. 8,00,000/- drawn from the General Reserve to meet additional tax burdens.

By the transfer from the reserve for "Reconstruction" to a "Deferred Taxation Reserve" provision has been made against the diminution of the allowances for Depreciation in Income Tax Assessments in future years resulting from the substantial reduction in the income tax written down value of assets acquired in recent years due to the allowance on initial and extra normal depreciation.

The liability of the Workpeople's and Employees' Provident Funds as at 31st December 1957 amounted to Rs. 74,30,758/- and Rs 4,70,519/- respectively ; corresponding amounts have been invested in Trustee Securities and these are held by the Trustees of the Funds.

I feel you will wish to join me once again in expressing appreciation of the valuable work done by the executive and supervisory staff of the Management and the Mills in a very difficult year.

I cannot conclude my review without reference to my friend and colleague Mr. R. E. Castell, who retired from India at the end of March this year, and who has been your Chairman since 1952. Mr Castell won the affection and esteem of all those with whom he came in contact and his services as Chairman and Director were invaluable. I am happy to say that Mr. Castell will maintain an association with your Company and during his visits to India in the future we hope to draw on his experience and benefit from his wise counsel.

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LIMITED

CHAIRMAN MR. C. R. SRINIVASAN'S REVIEW

At the Sixtieth Annual General Meeting of The East India Distilleries and Sugar Factories Limited, held at Dare House, Parry's Corner, Madras on Friday the 25th day of April, 1958, the Chairman, Mr. C. R. Srinivasan, said :—

"I extend to you all a cordial welcome to the Sixtieth Annual General Meeting of the Company. During these sixty years the Company has moved from strength to strength and occupies today an outstanding position in the economy of the country. Among its notable achievements is the absorption of Messrs. Parry & Co. Ltd., its erstwhile Managing Agents. This deal has amply justified itself in the scale of profits recorded during the year under report. As a Director-managed company with a majority of Indians on the Board, its potentials for service are great indeed and with your goodwill and support, I have no doubt, we shall acquit ourselves with credit in the specious days that lie ahead of us.

The Second Planning Period with its emphasis on industrial development is designed to give a balanced economy to the country by opening up profitable avenues of employment to many who are now crowding the agricultural sector to its detriment ; and a note of urgency is imparted to this much needed reform by the steady growth of population in terms of millions every year. We have adequate knowledge, the requisite experience and a well-knit organisation to make a worthwhile contribution to the build-up of the new economy. The only limiting factor is the resources at our disposal.

In my address to you last year I mentioned to you that we were exploring various alternatives for reinforcing the capital structure of the company and that we would be coming to you presently with proposals to this end. We had almost completed arrangements for a fresh issue of substantial capital with assured response but we were thrown off our stride by the new taxation proposals introduced last year. In addition, as a sterling company we had to face further difficulties following constriction and control of exchange facilities. In the result much to our regret, we had to put into cold storage the proposals we had canvassed and wait on future developments.

Stupendous Task

I recognise that Government have set their hands to a stupendous task in the Planning they had programmed. Resources, on a scale, hitherto unknown and even undreamt, had to be found to service them. These can only be raised by tax or loan and the discerning public will easily recognise that there is an intangible link between the two as high taxation is bound to react on the savings potential of the community. In the marginal economy that prevails, the limits of taxation lie to the surface. Any attempt to overlook or override them may well provoke a chain reaction with prices spiralling and wages chasing them. Apart from these direct results, I am afraid, a psychological malaise may well set in, inducing a crisis in confidence, with effect fundamental and far reaching in servicing the new deal. It is not my desire or purpose to hold an inquest on the particular measures of taxation that have been placed on the Statute Book. In my view there are quite a few which certainly call for re-thinking. I only hope that no considerations of prestige nor short term advantage will block the way to a reasoned review of these measures.

Reverting to what we are directly and immediately concerned with today, the Report of the Directors and Accounts for the year ended 30th September 1957, together with explanatory notes, have been in your hands for the statutory period and with your permission I shall take them as read. Last year I expressed the hope that it may be possible to present these accounts earlier, particularly with a view to ensure payment of dividends within the current fiscal year ended 31st March 1958. On second thoughts I am not sure this is altogether an advantage. The budget of the Union Government is presented on the last day of February every year and it is better to know what additional burden by way of taxation is imposed in the budget before recommendations are made in respect of dividends. Although we have been spared any further imposts this year, you will see from the Directors' Report, a very heavy burden of retrospective taxation has been cast on the Group by the provisions of the Indian Finance Act (No. 2) of 1957.

Additional Taxation

This is because the Bill was not introduced until May 1957 and was passed into law later in the year ; it was not therefore possible for your Directors to know prior to the publication of the Report and Accounts what additional taxation might thereby be incurred. Under our present assessment procedure I doubt if there is any way to avoid this retrospective effect, even though we were to alter our accounting year to coincide with the official year which, incidentally, it may be pointed out, cuts across the sugar cane crushing season. On balance therefore it seems to me it is better to allow things to continue as they are at present. So far as dividends are concerned, shareholders have been saved any possible embarrassment by the declaration and payment of a second interim dividend of 10% within the current fiscal year. There was a fugitive hope that the current budget might offer some relief in corporate taxation. This is proved a forlorn hope. You will notice that this year the Group have had to pay out as much as £423,069 by way of tax ! A drain of liquid resources on that scale, I need hardly say, is bound to react adversely on the development potential of the Company. The only relief announced in the Lok Sabha was in respect of compulsory deposits. This offers no relief to this company as it had already been exempted from such deposits when we established that all our available resources were usefully employed in the business. In view of the heavy burden of taxation and the need to conserve liquid reserves under present trading conditions, I regret your Directors are not able to recommend any further dividends on the Ordinary Share Capital of the Company for the year ended 30th September 1957.

Before proceeding to make any comments on the trading and industrial activities of the Compny, may I say a word about the Group's organisational set-up. I referred last year in my speech to the manner and measure of Indianisation we had attempted and achieved. Last year we had on our Board of seven, a majority of Indians namely Mr. V. Ramakrishna, Dr. U. Krishna Rau and Mr. R. Venkataswamy Naidu besides myself. Dr. U. Krishna Rau resigned from the Board when he was elected Speaker of the Madras Legislative Assembly and I take this opportunity to record our appreciation of his services ; in his place we have been fortunate to secure the services of Mr. T. S. Krishna whose knowledge and experience have already proved of immense value to the Company. On the Parry Board we have one more Indian Mr. K. P. Ramsami, in addition to the two already there, namely Messrs. S. Krishnamurti and John K. John. Below the Board level, as opportunities occur, we are placing in positions of responsibility Indian nationals with the requisite qualifications and experience. I need hardly add that British employees can rest assured that their claims for preferment will in no circumstances be overlooked. In this context I may mention that both the sugar factories of the Deccan Sugar & Abkhari Company Ltd., of which Messrs. Parry & Co., Ltd., are the Managing Agents and whose service pool provides all staff requirements, are now entirely run by Indians; it is to their credit that they have measured up fully to the responsibility vested in them. In respect of the covenanted staff, recruitment is largely confined to promising Indian and we are satisfied there is ample material available for our purposes. There is no need to refer to recruitment at lower levels as they are all Indians.

Turning now to our trading sector, distribution and sales are largely handled by Messrs. Parry & Co. Ltd. I must confess that import restrictions have to some extent retarded the rising tempo of our trading activities. To offset these we had concentrated on maintaining and improving our connection with products of Indian manufacture and the results proved heartening. For instance our sales of engineering products manufactured in India increased substantially, especially small diesel oil engines and electric motors and transformers. Our light engineering works at Kidderpore was able also to double its output of tipping wagons and various ancillary items. In addition negotiations are afoot for enlarging the range of our selling agencies of products of Indian manufacture and if our expectations are fulfilled. I believe, we shall be able to cover more ground than we have lost by reason of restriction on imports. We already possess a well-set and widespread organisation in this country for rendering incomparable agency and sales service and by way of abundant caution we are engaged at the moment in broadening and deepening the structure of our organisation, especially in Northern India, with a view adequately to service the new Indian agencies. It is this new approach that has enabled the company to avoid any major retrenchment which otherwise might have become a matter of compelling necessity. I may say that in facing up to the needs of the situation we are moving not merely with care and caution but also with courage and confidence.

Industrial Activities

Next, let me turn to the industrial activities of the Company. You will be glad to hear that our sugar factory at Nellikuppam had a record crush and, with improving recovery, comparatively disease-free cane, and a good mixture of cane strains we were able to achieve quite a successful season. I may take this opportunity to compliment the factory staff for their vigilance and foresight and I greatly appreciate also the willing co-operation readily forthcoming from the cane growers. I am afraid the sugar industry as a whole is however heading towards a crisis. The all-India production for 1957/58 season is expected to be 20.60 lakhs of tons There was an all-India stock carry over of 4.59 lakhs tons on the 31st October 1957. Thus the total available supply during the current year is likely to be of the order of some 25 lakhs of tons. Internal consumption has not kept pace with increasing production. It is still at the level of about 19.5 lakhs tons. This may involve a carry over of over 5 lakhs tons on 31st October this year. I need hardly say this is a heavy stock to carry forward into the next season and must inevitably cause pressure on internal selling prices at a time when the industry has not found it possible to pass on to the consumer the full incidence of the 100% increase in excise duty levied in May 1957. Thanks to fortuitous circumstances we were able to make a promising start in our export trade of sugar but conditions have altered since and world prices have come down in marked measure. The present level of world sugar prices is round about £35/- per ton while the average cost of cane alone per ton of sugar in India is about Rs. 408/- per ton !

Cane Prices

The Government apparently do not seem to be content to leave cane prices even at this level. Some of you will have seen the Government of India's press note announcing price linking or profit sharing formula. Details of this have not yet been published but a note of caution in this behalf is indicated. The urgent need at present is to devise a method of payment for cane which will enable the ryots to benefit from growing sugar rather than large tonnages of fibrous matter. In these circumstances, any move to increase the flat rate payment must be regarded as a retrograde step. Again, a higher price for cane that is delivered to sugar factories means an even greater difference than currently exists between the earnings of a grower who supplies to a factory and the grower who has not this privilege. Lastly, but by no means least, is the direct bearing of increased payments for cane on the fortunes of the South Indian Factories. I wonder if sufficient thought has been bestowed on the reactions that may register in the agricultural sector ; more and more land will be diverted to cane production as the profit of cane cultivation will take the lead in agricultural economy. This surely is a matter for anxious consideration in the context of sugar production and consumption in the country as well as shortage of food supply in this country. Apart from this, Government stand to lose considerable revenue in corporate taxation when the profits of the mills go down and the amount thus lost gets distributed in the agricultural sector. Without taking an overall view if Government yields to pressure from sectional or regional interests in this behalf, I must point out that it will introduce one more defeatist factor in the build-up of an export market for sugar. Already at the current level of world prices, the loss on export for every lakh of tons would be of the order of 2½ to 3 crores, after making due allowance for full drawback of excise duty and cane cess on sugar exported ; and sugar must be exported if the pressure on the internal market is to be relieved. Various proposals for this purpose are being canvassed by the Indian Sugar Mills Association in consultation with the Government. You will be glad to hear that Mr. P. Hadfield, the Deputy Managing Director of our Company is now the President of the Association. My sympathies are with him in the difficult task that lies ahead of him. It is not an easy problem to resolve and the intrusion of fresh complications in such resolution must be deprecated. Alongside of this, another disquieting symptom must also be taken note of. There has been a great stimulus in the production of Khandsari sugar and the total tonnage produced in this country has moved up from one lakh tons to three lakh tons and bids fair to double itself again next year unless corrective action is taken immediately to save further investment in a wasteful economy. Khandsari sugar has neither cane cess nor excise duty to pay. Owing to poor extraction it registers a loss to the country at the source and by competing with mill sugar at two-thirds its price, it is spoiling the pitch for the sugar industry. Altogether the outlook before the industry is frankly disquietening and on the way in which the outstanding problems are solved will depend the future prospects of the industry.

Fertiliser Business

I will now deal with the expanding fertiliser business of our Company. The integration of our fertiliser interests was completed last year and during the year under review both manufacture and sales have greatly advanced. Sales of fertilisers have moved up from £1½ million sterling to £2¼ million and imports of sulphur and phosphate from £457,000 to £1½ million. This remarkable progress reflects largely the growing consciousness on the part of the agriculturists of the beneficent results accruing from judicious application of fertilisers. We have done propaganda for many years to build up this atmosphere and latterly Government have also come to recognise the value and importance of fertilisers in food production It is much easier and much simpler to raise a larger crop on land already under the plough than to open out new land for cultivation. Indeed the real remedy to cover the basic needs of the very large and growing population in the country lies in intensive cultivation with suitable fertilisers and the potentials in this direction are most promising if it is recognised that the yield per acre in the country is much smaller than what is raised in other countries by scientific cultivation. Government have on hand large fertiliser projects, at Bhakranangal and Neiveli for example, but against the expanding needs of the country fertiliser business offers quite a promising adventure to private enterprise and our company which has played no small part in the build-up of the fertiliser business of the country is naturally anxious to play its allotted role in this direction. To this end we have been planning to set up a factory at Bezwada for fertilisers to cover the needs of the Krishna and Godavari delta. The Andhra Fertilisers Private Limited was integrated last year with Messrs. Krishna Industrial Corporation Limited as equal partners to establish a superphosphate manufacturing unit. Side by side with this manufacturing unit, the E.I.D. proposed to set up a factory for mixing fertilisers. The mixing plant has been set up and will shortly go into production with ingredients brought from other factories. There has however been some delay in the establishment of the superphosphate manufacturing unit and your directors have in consultation and agreement with Messrs. Krishna Industrial Corporation Limited revised the basis of operation in such a way that the manufacturing unit which is to be established next door to the mixing plant, will be wholly owned and operated by the E.I.D., and Krishna Industrial Corporation Limited will set up independently another manufacturing unit within the limits of the original licence granted. These arrangements are subject to Government approval which it is hoped will be forthcoming shortly, and it is expected that between these two units fullest co-operation in the matter of sales will prevail. In addition you will be interested to hear that another project for the manufacture of fertilisers is being seriously examined both in respect of technical and financial aspects and I hope by the time we meet next year, I shall have more to say about this.

Apart from Sugars and Fertilisers there is one other branch of our industrial activities which has grown from small beginnings to large proportions today and calls for attention in respect of its future development. I refer to our pottery works at Ranipet. This was originally started about 35 years ago as a subsidiary to manufacture acid jars to serve as containers for acids and chemicals. Reserve capacity was utilised for the manufacture of a range of brassware which found a popular market as years passed. During the war period when the imports of crockery were severely rationed and restricted, opportunity was availed of to enter that field also and later the manufacture of sanitary ware was also taken on hand. In the result what started fortuitously as a subsidiary has now developed to the proportions of an industry by itself. We have two kilns at our Ranipet factory and between them they have been trying to cover an expanding market. Production of all types of ware registered an increase of 30% over the previous year. The emphasis in recent years has shifted to sanitary ware for which the market seems to be unlimited at the moment, with an export market in the Near East also awaiting exploitation. We can therefore no longer afford to neglect the potentials of a promising line of activity. We are now engaged in examination of the further investment called for to take advantage of the tide and we are also canvassing the issue whether it can be usefully promoted as an independent unit like the Confectionary Company or given fuller scope to develop as a subsidiary of the Company. I will only add that we have quite a good margin on

(Continued on page 642, column 3).

INDIAN ALUMINIUM COMPANY LIMITED

CHAIRMAN MR. K. C. MAHINDRA'S REVIEW

The Annual General Meeting of Indian Aluminium Company, Limited was held in Calcutta on April 28th, 1958. The following is an abbreviated version of the Speech made at the meeting by the Chairman, Mr. K. C. Mahindra.

Your Company has completed two decades and we are holding our 20th Annual Meeting today. Over the past year sales and gross profits have continued to grow as anticipated and the Company's functional organization has kept pace with the demands made by the widening market. We have exceeded the Rs. 5 crore mark in the sales turnover this year, and profits before provision for income and wealth taxes is over Rs. 65 lacs or 12% of sales, as against Rs. 43 lacs or 10% of sales in 1956. But new patterns of taxation were being experimented with in 1957 and the impact of tax burden has meant a heavy impost on corporate earnings.

You will recall that in 1956, only Rs. 7 lacs was provided for income tax owing to the carry forward of development rebate and accelerated depreciation on new plant and machinery allowed for tax purposes. The Finance Act of 1957 increased the rate of corporate income tax from 43.4% to 51.5%, and in addition a wealth tax imposing a one-half percent levy on the net assets of the Company was introduced with retrospective effect from 1956. The Accounts accordingly make a provision of Rs. 37 lacs for current income tax and Rs. 4.5 lacs for wealth tax for two years, which together amount to nearly six times the sum provided in 1956.

While the amount available for distribution to shareholders had thus been reduced, the ordinary share capital of the Company has increased from Rs. 201 lacs at the end of 1956 to Rs. 385 lacs by December 31st 1957, following the conversion of the major part of the Convertible Loan Stock issue into ordinary shares. Some further conversion has taken place during the current year, and the dividends which you will declare at this meeting are payable on the capital outstanding on this day.

Hirakud Project

Shareholders will recollect that early last year additional finance was secured for the purpose of implementing the Hirakud smelter project. It inevitably takes a few years before new production facilities can get under way. In the meanwhile, there is a heavy pressure on the ways and means position of the Company, and your Directors would have been well-advised in recommending patience to shareholders and withholding disbursement on dividend payments. Conservation of cash resources is a sound practice during an expansion phase. The Board, however, took into consideration the general stresses in the Indian economy today and have recommended for your approval a dividend of 6% on the enlarged capital. Your staff is well on the top of the Hirakud job and I am glad to report that time schedules of construction have been closely maintained to date, with the hope that the new smelter will go on stream as planned, early in 1959.

In my address last year, I referred to the new pattern emerging in sales of the Company's products, which was reflected in a lower offtake of circles with a more than corresponding increase in sales of sheet and plate products. This trend continued in 1957, and we find that whereas circle sales declined by 430 tons, the sales of flat and corrugated sheet and plate increased by 991 tons as compared with 1956. The strength of the trend is more clearly apparent from the fact that sheet products, which amounted to only 39% of the total rolled product sales in 1955, increased to almost two-thirds of the total in 1957.

Simultaneous, and perhaps even more striking, has been the growth in demand for extrusions from early 1955, when we installed a press at Alupuram. Extrusion sales have increased from 119 tons in 1955, to 342 tons in 1956 and 673 tons in 1957.

These are only some of the more vivid examples of the increasing acceptance of aluminium in the country, particularly in the transportation field, and which is mainly the result of patient and persistent development efforts of the Company's sales and production personnel.

You will, I am sure, have derived satisfaction from the plans mentioned in the Directors' Report for further expansion of the Company's production facilities, beyond the programme now under way. The demand for aluminium in the country is anticipated to increase to 35,000-40,000 tons per annum by 1961, and from the start, plans were established to double the Hirakud production as soon as practicable. Large financial resources are required and your Directors have had this problem continuously under study.

Convertible Loan Stock

After the successful issue of Convertible Loan Stock last year, the Board felt a bit hopeful, but the subsequent tax enactments and disincentive measures brought about a chill in the investment climate and prospects of raising any further substantial funds on the Indian market, whether by the issue of shares or debentures, did not look too good. Your Directors nevertheless pursued their objective and succeeded in persuading Aluminium Limited, our Canadian associates, to the view that early completion of the original plan would be most desirable, and the offer of a loan up to 5 million dollars from Canada, just sufficient to cover our foreign exchange requirements for this purpose, is indeed to be most heartily welcomed, as also the Government announcement that the second stage of development at Hirakud including additional generators comes within the "core" of the Plan. It is hoped that the Government will facilitate early completion of the arrangements with Aluminium Limited and accord their approval of the Company's expansion plans.

At a time when numerous development projects in the country are held up for want of foreign exchange or technical know-how or non-availability of suitable raw materials upon which they are based, it is encouraging to find your Company well placed. A claim can be made with pride that the contribution that your Company has made, and is making, towards the growth of the aluminium industry in India is an exemplary illustration of the part foreign investment and technique in collaboration with private Indian capital can play in the rapid development of the country's resources, and we may justly look forward to a future where your Company's efforts for the further progress of the industry will receive support and encouragement.

Over the last twelve months the strains on Indian economy have been severe and unprecedented. Foundation was boldly laid in the First Plan period for a prosperous future, but at the very commencement of the Second Plan wide cracks have appeared in these foundations. There has been rapid depletion of sterling balances; exports have barely maintained their level and savings have dried up. Import restrictions became inevitable; even the supply of key industrial raw materials has been affected. All these total up to a severe lack in available resources. Such a situation under any circumstances would have led to rigidity of administrative thinking. It is our good fortune that, by design or accident, the Government has been able to loosen their previous rigorous approach and through swift adaptation of realistic measures and policies, coupled with generous help from the United States, Canada, Germany, Britain and Japan, they have been able to avoid a collapse of the Plan.

Second Plan

Many learned discourses have appeared on the overbounding ambitions which governed the formulation of the Second Plan—its lack of realities, its over emphasis on heavy industries, insufficient care for agricultural advancement, haphazard and expensive social theories and a general poverty of resources.

I do not propose to enter into a detailed argument on the merits or otherwise of planning. The past is a bucket of ashes. What should be recognised is that to stand still will be to stagnate. It is also to be recognised that the most prominent feature of Indian economy in the last 12 months has been the pulling up of socks in the most classic orthodox manner—inflationary prices, particularly in foodgrains, have been halted, bank advances and credits controlled and directed into worthier channels, and even tax adjustments, although minor, admitted into the new pattern. Despite the pedestrain budget, the keel of the ship of the realm has been righted and set on a straight, although austere course. I do not decry controversy and argument over past mistakes, but, quoting to the British Prime Minister, why look up a train in last year's Bradshaw? The need of the moment is to find equilibrium in motion. "History does not linger long in the 20th Century; the world alters as we walk in it." (Oppenheimer).

We are all aware of the severe deficiencies in planning which have shown up; we are only too aware of the injustice and the disincentive impact of the new pattern of taxation. It is also recognised, I hope, that labour legislation and labour awards have made confusion worse confounded. The difficulties in which some of the textile units in the industry find themselves are perhaps indicative of serious imbalances in our economic arrangements. We are in the midst of a deep crisis of confidence as well as of physical limitations. Solutions would require faith and effort. That government is aware of the implications of the crisis economy is evident from their latest Economic Survey, presented with the Budget.

Mr. S. K. Patil, now the Minister of Transport and Communications, described the other day, in his characteristic style, the interdepartmental labyrinths which a file on food has to traverse, and if by luck it strikes the open, the file becomes a problem! All of us recognise now that food and soil productivity is our problem Number One, and that increasing returns per man-hour in the field and per acre of the arable soil are the only stable bases for advancement of the economy in India. It is to be regretted therefore that policies bearing on agriculture do not show any significant appreciation of the issues involved. It is to be hoped that Mr. Patil's plea will lead to better co-ordination at official levels, but means must be found to enlist the co-operation and the enthusiasm of the non-agricultural sector. It has to be both an individual and State effort. At Government levels general policies and plans will continue to be evolved; I suggest that at the local and regional level individuals should get mixed up actively in this programme. This is easier said than done. It is perhaps a most difficult thing for a lawyer, an accountant, an industrial executive or a shop assistant to become enthused over how better food can be grown, what helps soil conservation, why water is needed in regulated measures and when. Yet in my opinion, it is most important that at this stage of our fight for economic survival the ordinary non-farming citizen from the city, the town or the village should not only know these things, but know how to help advance knowledge and modern practice in these matters.

Soil Improvement

I make an unusual suggestion: There are a little over half-a-million people in the country who pay income tax. Over 80% of them are undoubtedly of the small-tax-class—only a small percentage bear the bulk of the burden. My suggestion is that each tax-payer should be permitted to "invest" 10% of his tax amounts in soil improvement and soil productivity in the locality of his choice and in the manner he wishes, save that the contributions can not be used for lending purposes. Bulk of the small tax-payers may be given the option to contribute their tithe to the local co-operative of their choice, as long as the co-operative does not engage in purely credit operations. Those who pay a significant amount in taxes, individuals and corporations, may choose to select a village area or a block of villages for such "investment". The main thought behind the suggestion is that the non-agricultural sector in responsible positions should develop knowledge and interest and enthusiasm for land improvements. Government assistance at State and local levels should be willingly forthcoming for any measure or programme so suggested by the individual tax-payers for the selected area. Questions of control and of possible abuses in the spending of this ten percent of tax-money are no doubt vital to the success of the scheme. The Central Board of Revenue have enough ingenuity of mind to devise checks and cross-checks for the purpose. The Community Development projects have developed a basic cadre of trained workers and evolved an organization which can be utilised for checking on the veracity of individual expenditures. The Central Government will lose 10% of the income-tax collections, but the positive gain in the enlistment of individual zeal for matters agricultural will be immense. The ten percent reduction in tax collections is not lost; it is being diverted to a sector of the economy where responsibility has to become collectively universal; "invested" in what may be called unit programmes of enthusiasm, leading to fruitful abundance of the soil—every new blade of corn will amply repay the tax money spent on growing it.

But no one can doubt, nor would it be proper to deny, that high vision and endeavour has been behind these planned efforts and that the various disquieting features which have emerged have really been thrown up by the hurry and the flurry to get somewhere fastest so that the average citizen can feed a little more, clothe a little better and have a roof over his shack. These are the tribulations of economic growth, exceedingly painful but nevertheless necessary and therefore inevitable. If, therefore, there has been a fault, it is one of overzeal, of failure to recognise or appraise correctly the inexorable law of economic growth in a democratic set up and in its consequences, the very rigidities of processes involved. These are grave problems worthy of serious, prolonged and continuous study by the administrators, the learned hierarchy of economists and the industrialists. There should be no quarrel with the ultimate of true socialism. To the humanity that inhabits India, socialism should have the meaning that none shall starve and none shall beg; in the meaning that human dignity shall remain and human rights shall prevail; and, finally, in the meaning that to the riches of the earth, whether of human endeavour or of economic growth, all shall inherit.

I should also like to welcome, on your behalf and mine, Mr. H. Vance Echols, who assumed charge as Managing Director of the Company in January 1958, in place of Mr. E. S. Greenwood, who, during his stay in India worked industriously for the growth and development of your Company. Mr. Echols has been connected with the aluminium industry in Canada and British Guiana for many years, and I am sure the Company will benefit from his wide experience and continue to prosper under his management.

Finally, an expression of our appreciation is due to the employees of the Company for the diligence and loyalty with which they have continued to serve the Company during the past year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LIMITED—Cont'd.

(Continued from page 641)

current sales and in respect of sanitary ware in particular we carry today a back log of orders covering six months production! I hope to report further progress in this direction when we meet next.

Managing Agency

The Managing Agency side of our business has progressed satisfactorily and you will be particularly pleased to hear that Parrys Confectionary Ltd. which was the child of the E.I.D. has made remarkable progress. The Deccan Sugar & Abkhari Co. Ltd. has continued with its programme of modernisation of both factories to which I referred to last year; but unfortunately owing to shipping delays it was not possible to instal the new mill at Samalkot for the season. It is ready at site to be installed immediately after the season. The capital issue made by the Company to cover this expansion was fully subscribed by the shareholders. I value it as a vote of confidence in particular in the management of the Company. In Kerala in which State is situated the factory of Travancore Sugars & Chemicals Ltd., of which Company Parry & Co. Ltd. are the Managing Agents essential progress is satisfactory. In respect of the Pamba River Starch Co. (Private) Ltd., in which the E.I.D. are equal third partners with Messrs. Corn Products Co. (India) Private Ltd., and Travancore Sugars & Chemicals Ltd., I am afraid that mounting labour difficulties and political unrest are to some extent responsible for holding up further progress in the integration of the factory. Our American partners have called a halt until conditions improve and until there is a relaxation of the terms proposed by the Government of India over the question of loan capital for the purchase of plant. Finally, progress in the erection of the factory of Cauvery Sugars & Chemicals Ltd. has been satisfactory.

I believe I have covered almost every aspect of our organisational, industrial and trading activities and the overall picture is certainly heartening. I commend the Report and Accounts to your notice and before formally moving for their adoption, I shall be glad to answer to the best of my ability any questions which any shareholder desires to put to me concerning them."

The Directors' Report and the Accounts for the year ended 30th September 1957 were unanimously adopted. Mr. C. R. Srinivasan, Mr. H. I. Wonfor, and Mr. T. S. Krishna were re-elected to the Board, and the Auditors, Messrs. Lovelock & Lewes, were re-appointed.

N.B.—This does not purport to be a Report of the Proceedings at the General Meeting.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN DEMAND

Wednesday, 30th April.

ONCE again, there has been very little change in the total of advances outstanding in the Calcutta money market this week. Most of the main sources have maintained their offtake round about the same level, with the exception of grain storage. Accommodation against this item shows a slight decrease. The interbank market has continued fairly easy and the call rate is unchanged at 3¼ percent.

The number of export documents in the exchange market this week has been round about the same. Gunny bills are more plentiful at the moment than tea bills. Sterling began the week with heavy speculation encouraged by rumours of impending strikes and the possibility of a change in Bank rate. The recovery came later after it was made clear that Bank rate was not to be changed yet. The pound is now firm against both the American and Canadian dollars, but is weak against most Continental currencies.

SILVER REACTED ON PROFIT-TAKING. THE PRICE dropped from the previous week's level of Rs. 199.25 to Rs. 198. quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 196.25. The London price was the same at 75¾d. and the New York quotation stood at 88⅜ cents.

In spite of the fall in silver, gold was steady on good offtake. The price rose to Rs. 115. The sovereign realised Rs. 72.50.

DURING THE WEEK ENDED 25TH APRIL, GOVERNMENT of India Treasury bills for Rs. 101,08,50,000 were sold in favour of the Reserve Bank.

A DECLINE OF Rs. 8.64 CRORES TO Rs. 1,619.13 CRORES in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 25th April, 1958. The total note issue was Rs. 43 lakhs higher at Rs. 1,652.07 crores. Notes held in the Banking Department consequently rose by Rs. 9.07 crores to Rs. 32.94 crores. A decline of Rs. 1 41 crores to Rs. 1,173.50 crores in rupee securities was offset by a rise of an equivalent amount to Rs. 228.80 crores in the foreign securities of the paper currency reserve. Deposits of the Government of India rose by Rs. 60 lakhs to Rs. 53.05 crores and other Government accounts were up by Rs. 2.55 crores to Rs. 15.64 crores. Balances of commercial banks improved by Rs. 3.15 crores to Rs. 94.14 crores. Balances held abroad fell by Rs 3.48 crores to Rs. 39 crores and investments were Rs. 2.87 crores lower at Rs 27.27 crores. Other loans and advances increased from Rs. 54.37 crores to Rs 54.72 crores. out of which advances to scheduled banks against usance bills amounted to Rs. 17.72 crores (Rs. 17.33 crores). Ways and means advances stood at Rs. 54.72 crores against Rs. 51.17 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 18th April, 1958, shows a drop of Rs. 5.80 crores to Rs. 421.55 crores in total deposits. Investments in Government securities remain unchanged at Rs. 180.36 crores, while other authorised investments are down by Rs. 5 lakhs to Rs. 10.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 1.33 crores to Rs. 208 02 crores. Cash and balances are, in consequence, shown at Rs. 34.99 crores or Rs. 2.18 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 18th April, 1958 shows Demand and Time liabilities at Rs. 772.88 crores (Rs. 18.18 crores on account of borrowings from banks) and Rs. 763.31 crores (Rs. 15.29 crores), compared with Rs. 774.45 crores (Rs. 17.46 crores) and Rs. 757.62 crores (Rs. 15.13 crores), respectively, in the previous week. Cash has declined by Rs. 60 lakhs to Rs. 39.32 crores, while balances with the Reserve Bank have advanced by Rs. 10.93 crores to Rs. 86.82 crores. There is a rise of Rs. 1.83 crores to Rs. 443.27 crores in investments. Advances and bills discounted at Rs. 957.44 crores show a drop of Rs. 4.76 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.2 percent and 62.3 percent, against 7.6 percent and 62.8 percent.

THE UNITED BANK OF INDIA MADE A PROFIT OF Rs. 17.94 lakhs, including Rs. 1,73,147 brought in, for the year ended last December. Reserve is allocated Rs. 325 lakhs and the taxation provision amounts to Rs. 4.92 lakhs. A dividend of 3 percent has been declared, leaving a carry-forward of Rs. 1,77,452. Deposits increased by Rs. 4.4 crores to Rs. 38.36 crores. Cash was Rs. 1.60 crores higher at Rs. 5.86 crores. Investments declined by Rs. 1.66 crores to Rs. 12 25 crores, and advances increased by Rs. 3.38 crores to Rs. 23.56 crores.

LONDON FINANCIAL LETTER

MAINTAINING DOLLAR PRICE OF GOLD

By Air Mail.

AN interesting situation arose in the London gold market in April. Gold rose to the highest level in years, appreciably above the equivalent of the international price of $35 an ounce; and the Bank of England took positive action to restrain the rise. When the price reached $35.13, the Bank intervened with abnormal sales and brought it down a few cents. Selling gold at favourable rates is one method of acquiring dollars on favourable terms, but in the present state of the foreign exchange market, the authorities can achieve the same purpose more simply by selling sterling. The London bullion market has, therefore, concluded that the Bank's main purpose was not to exchange gold for dollars, but to halt, and reverse, the rise in the price of gold.

If this was, indeed, the intention, the Bank's action is significant: it may even have been, as some people have surmised, undertaken in collaboration with the U.S. authorities. Resisting demands (particularly from South Africa) for a more realistic official price for gold, the authorities have consistently argued that a rise in the price would be inflationary. It has, therefore, been assumed that their resistance to raising the price would be withdrawn in circumstances requiring reflation; and in the United States these circumstances appear to exist.

Apart from the problem of inflation (which has been regarded in London as an excuse rather than a reason, for the inflationary effects of a rise in the price of gold could surely have been counteracted technically), there are two main reasons why the American authorities have insisted on the unrealistic price of $35 an ounce. One is that Russia is now a major supplier of gold and would benefit from a rise in its price. The other is that foreign-owned dollar balances would automatically depreciate in terms of gold if the price of gold were raised; and the mere suspicion that a higher price was contemplated would cause a massive flight from dollars into gold. If the British authorities have been putting out a warning sign to indicate that the price will be kept down it may be assumed that the sterling balances concern them at least as much as the dollar balances, for a flight into gold would certainly involve conversion of some sterling balances by one means or another. However, it is necessary to keep a sense of proportion in these matters. The recent rise in the London gold price exaggerated the strength of demand. Until the Bank intervened more actively, supplies were rather less than normal. There has been nothing like the flow of Russian gold this year that came onto the European markets in the same period of last year—perhaps because Russian exports of "base" metals are earning more foreign exchange. At the same time, central banks have been reluctant sellers.

Fears of U.S. Recession

The British Budget has certainly not the last word to say on the question that has evidently troubled the Government as much as the business community, deflation or reflation? The situation is not at all similar to that in the United States: there is no appreciable contraction in trade, either domestic or external, no recession that may or may not soon correct itself. Yet various authorities—company chairmen, the Federation of British Industries, the Government itself in this year's Economic Survey—have emphasised the dangers of the American recession. They fear that its impact—whether directly or by reducing the incomes of the primary-producing countries—has been not averted, but only delayed. The Prime Minister has seen fit to assure the business community that the Government has plans ready, as and when they may be needed, to counteract recession in the U.K.

So far as sterling is concerned, it is encouraging to find that these doubts refer more to domestic business than to the external financial account. The increase in the gold and dollar reserve this year has been more than most people dared to hope, and the Economic Survey, anticipating a substantial surplus in the external account for the whole year, has strongly hinted that there is no reason to fear another sterling crisis next autumn. When the situation is changing so rapidly the White Paper on the balance of payments, relating to 1957, is, perhaps, of more academic than practical interest, but its salient point should be noted. The new figure is the surplus of £122 million for the second half of 1957, compared with £98 million for the second half of 1956. All of the improvement is attributable to current transactions with the other sterling countries, whereas transactions with the non-sterling countries resulted in a substantial deficit. It is well to be reminded—lest the recent strength of sterling arouse undue optimism—that such deficits are customary in the second half of each year.

Withdrawal of Sterling Balances

The most significant figure of all is the reduction by as much as £226 million in the balances held in London on behalf of the overseas sterling countries; whereas (after crediting a special repayment of debt by the West German Government amounting to £67½ million) the balances of the non-sterling countries were virtually unchanged. The sterling countries' withdrawals are essentially a healthy phenomenon, for they show that the reserves held in London can be used when needed (as they were last year), without causing a crisis, if the U.K.'s own financial position is sound. Relative prices are now much more favourable to the U.K. than to the primary-producing countries of the sterling area, and it is appropriate that these countries should draw on their balances while the U.K.'s external finances are stronger than theirs. It is indeed, suggested that the British Government's policy should be directed towards repayment of sterling balances, rather than stimulation of demand at home, if it becomes necessary, to act more positively against recession. The Chancellor of the Exchequer could not give a clear lead on this problem in his Budget, because he did not profess to know whether the recession would become serious. So he made no major changes that might be inflationary; and he insisted that monetary stringency must be maintained, and emphasised the authorities' intention to continue funding short-term debt.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection, and Breakdown and Boiler Explosion risks.

City Cable

WIDESPREAD FALLS IN INDUSTRIAL SHARES

ANXIETY ABOUT LABOUR TROUBLES

London, 30th April.

THE stock market did not establish a definite trend before the past week-end, but a satisfactory undertone was maintained. There was some deterioration later, however, and prices in most sections fell. On balance, gilt-edged securities and oil shares were higher though below the best, while small declines were recorded elsewhere. Apart from the activity in gilt-edged, business remained small. The deterioration after the week-end reflected a lack of support and a small increase in selling prior to the end of the account. There was very little to stimulate interest. Among the adverse influences were the cautious statements made by the chairmen of the Cunard Steamship Company and the Shell Transport and Trading Company at the annual meetings. The breakdown in the London busmen's wage talks and the decline on Wall Street affected sentiment. Uncertainty concerning the future course of the U.S. recession and the general labour situation at home were the chief restraining influences. Gilt-edged securities were the outstanding feature. Bank rate hopes were mainly responsible for the renewed advance there but the best prices were not fully held. The conversion offer to holders of Conversion 4 percent 1957-58 was well received, and short-dated stocks maintained their firm trend. The failure of the £20 million New Zealand issue, 68 percent of which was left with the underwriters, had very little effect on gilt-edged. The only feature among foreign bonds was the firmness of German issues. Dollar stocks were slightly better in response to the earlier firmness of Wall Street. Industrials moved irregularly prior to the week-end but subsequently lost ground and recorded widespread and small losses on balance. With the seasonal flow of company news approaching its peak, many of the movements were in response to company statements. South African gold shares, after earlier dullness, rallied in response to the firmness of gold shares in New York and recorded very little change on balance. The weakness of Australian lead and zinc shares following reduced interim dividends was the feature in base metals. Copper shares moved within narrow limits. Oils recorded a general advance prior to the week-end, but gains were subsequently reduced following the cautious statement by the chairman of Shell Transport and the reaction on Wall Street. Dull conditions prevailed in rubbers following the fall in the price of the commodity. Indian tea shares were generally better, reflecting the higher prices obtained at the auctions, and many firm spots developed. Ceylon tea shares, however, were neglected on nationalisation fears.

The Money Market

There was keen demand for credit in the money market during the past week. With no special Government disbursements to affect the situation, the supply of funds was barely sufficient to meet the requirements and the market had to borrow a fair amount from the Bank of England. As a result, the rate for non-regular money ruled between 5 percent and 5½ percent. One redeeming feature was the good demand for bills from the clearing banks, and on one or two occasions large business was done in July and hot maturities at 5⅛ percent. In view of the tightness of money, the money market made no change in its bid for Treasury bills at the weekly tender. But in spite of this, there was a further fall in the average rate to £5 3s 6.97d percent.

World Requirements of Sugar

The revised estimate of world market requirements of sugar during 1958 is put at 5,610,000 tons (raw value), by the statistical committee of the International Sugar Council. The committee's previous estimate was 5,515,000 tons. This was announced in a statement after the two-day meeting of the Council which was held early this week. The Council has noted that 22 countries have ratified the protocol amending the International Sugar Agreement and these include the Republic of Indonesia. The Council also considered the progress made in connection with the arrangements for the negotiations of a new international sugar agreement at a conference to be held under U.N. auspices in September this year. The next meeting of the Council will be held after the conference, unless circumstances make an earlier meeting necessary.

Textile Talks

The discussion between the representatives of the U.K. Cotton Board and those of the Indian and Pakistani cotton industries are likely to be resumed in London soon. The talks will be held in the Tothill Street offices of the Federation of British Industries. A spokesman for the Cotton Board has said that it is not yet known when the Indian and Pakistani representatives will arrive in the U.K. The talks will be started soon after their arrival, and will last for several days. It is intended to issue a statement at the conclusion of the discussions.

U.S. Lead and Zinc Imports

A high Congressional source has said that the U.S. Tariff Commission will present to President Eisenhower soon its recommendations on the escape clause investigation of lead and zinc imports. The source understands that the Commission has unanimously found that U.S. lead and zinc producers are being injured by the imports of the two metals from Canada, Mexico, Bolivia, Peru, Australia, South Africa, the Belgian Congo, Yugoslavia and other countries. However, the members of the Commission are divided, strictly on party lines, as to how relief should be granted. The three Republican members of the Commission, it is said, are in favour of both higher tariffs and the imposition of country-by-country import quotas. The three Democrats are said to approve the increase in tariff duties, but reject the idea of import quotas. Both the Republicans and Democrats on the commission have voted for increased duties, but the Republicans advocate higher tariffs than those recommended by the Democrats. The proposed new rates will specify one set of tariffs for lead and zinc in ores and another set of rates for lead and zinc in pig and bars. The quotas proposed by the Republicans will exempt lead and zinc entering the country for smelting, refining and export as well as foreign metals coming into the United States under barter arrangements or for inclusion in the national stockpile. The source has added that the Republican-sponsored quotas will limit annual imports to slightly more than 200,000 tons of lead ore metal content, and to a little more than 300,000 short tons of manufactured zinc, also metal content.

Outlook for Oil Companies

A note of caution concerning the short-term outlook for the company and the oil industry in general is sounded by Lord Godber in the annual report of the Shell Transport and Trading Company. He says that during the present period of uncertainty, the Royal Dutch-Shell group is adopting a cautious attitude towards capital expenditure. But although adverse conditions will have some effect on the rate of expenditure in the immediate future, the prospects for the oil industry remain good in the longer term. The combination of a surplus of oil and of tankers has naturally resulted in an intensification of competition in the industry, which is now as severe as it has ever been. The effect of these trading conditions on realisations is bound to be substantial and, as long as they persist, they can be expected to have an adverse effect on profits. The group, however, is well placed to withstand the impact of such events because of the strength derived not only from its past investment policies but also from the widespread nature of its resources and interests and the flexibility of its operations. The present difficulties, although severe, should not prove of long duration.

U.K. Rubber Statistics

Statistics issued by the International Rubber Study Group show that in the U.K. during February consumption of natural rubber totalled 16,089 long tons, imports were 12,884 long tons, re-exports were 14,801 long tons, and stocks held by manufacturers and in warehouses (exclusive of Government stocks) at the end of the month were 51,441 long tons.

Stocks and Shares

PRICES RECOVER ON STEEL STRIKE SETTLEMENT HOPES

POSSIBLE RESIGNATION OF PRIME MINISTER DISTURBS OPERATORS

Wednesday Evening.

THROUGHOUT the major part of last week share prices remained fairly steady, although sentiment suffered a setback today following the announcement of Mr. Nehru's possible resignation. Against an overnight quotation of Rs. 21.80, Indian Irons declined this morning to Rs. 21.62, but recovered at the close to Rs. 21.90. The improvement was due to a statement made this afternoon by the General Secretary of the Asansol Iron and Steel Workers Union. This announced that an agreement had been reached between the union and the management whereby 30,000 employees of the Indian Iron and Steel Company and the Standard Wagon Company would receive, from 1st April, 1958, a flat rate increase of Rs. 10 in dearness allowance. In addition, there will be an increase of 15 points in the rate of profit-sharing bonus of employees of the blast furnace and coke oven departments, thus raising the rate of bonus to a maximum of 85 percent of the basic wage. The strike notice given by the communist-sponsored A.I.T.U.C. union still stands, but operators believe that as a result of the decision of the Asansol Iron and Steel Workers Union, the prospects of a settlement are now definitely brighter.

The outstanding feature of the week was the strong enquiry for gilt-edged securities following the withdrawal of the Reserve Bank from the market last Monday. Hitherto the Reserve Bank had been selling the following loans :—3½% 1962, 3½% 1965, 3½% 1967, 3½% 1967, 3½% 1974 and 4% 1972. The present condition of the Government security market suggests that an announcement on the Central Government's new loan is imminent. There is plenty of money about, and although interest rates have not declined, the slack season this year is a good deal slacker than usual. In such conditions, there can be little doubt that the loans, if announced as expected, will be a success. The market expects three new loans consisting of a short-dated issue redeemable in 1963 and carrying interest at 3½%, a medium-dated loan redeemable in 10 years and carrying interest at 3½%, both to be offered at a discount, and a long-dated issue redeemable in 15 years and carrying interest at 4% to be issued at par. Reports also suggest that the loans will be on a cash-cum-conversion basis.

In other sections, business has been small, although there have been glimpses during the week of some investor interest. Whether this will continue in the light of the latest political developments, remains to be seen. Hopes of an early increase in retention prices of steel helped to maintain confidence, and this was further strengthened by the decision to raise the target for deficit financing to Rs. 1,200 crores during the second five year plan period. A large investment company has been taking a keen interest in the market after receiving compensation from a nationalised insurance company whose shares it held. Buying, however, was concentrated on selected blue chips and it is particularly for this reason that prices of such shares have held up well.

In the banking section, Hind Bank firmed up to Rs. 54 because the terms of the merger with the Bank of Baroda were favourable to Hind Bank shareholders.

In the miscellaneous section, the two bright spots were Aluminium Corporation and Rallis. The former shares improved to Rs 11.25 on reports of good working. Rallis, however, were bid up to Rs. 34.50 on what seemed over-optimistic expectations of the prospects of the new lines of business which the company has already undertaken and is still in the process of developing.

In the jute section, selected shares met with enquiry, particularly Howrah which improved from Rs. 14 to Rs. 15.37. Chitavalsah from Rs. 12.50 to Rs. 13.75 and Nellimarla from Rs 11.12 to Rs. 11.69. Lawrence encountered selling pressure on news of the impending closure, and the price at one time receded to Rs. 71. However, it was known later that the company will not actually go into liquidation and that the prospects of profit have in fact improved as a result of the management's decision to lease the loom hours; the shares accordingly recovered to Rs. 74.

Except for Raneegunge Coal, Bengal and Katras Jherriah which were fully steady at Rs. 11.50, Rs. 230 and Rs. 58, respectively, the rest of the shares in this section were sluggish.

Sugar shares were steady on account of good prices for the commodity and the expectations that there would be no substantial margin of production over consumption, particularly if, as is hoped, a scheme for sugar exports can be implemented. Belsund were steady at Rs. 11.25, Darbhanga were better at Rs. 21.87 and U.P. were well maintained at Rs. 14.25. Dyer Meakin rose from Rs. 9.44 to Rs. 10 on hopes of increased profits from the sale of beer, imported varieties of which are scarce and expensive.

Tea shares have been sluggish. Operators appear to have lost interest in this section on account of the long delay in granting the promised tax relief. Not even Mr. Kanungo's hint that a decision on this matter might be expected shortly has succeeded in reviving investment interest.

In the mining section, Indian Coppers were neglected at the lower rate of Rs. 3.15 while Orissa Minerals were unchanged at Rs. 23.75.

THE BOMBAY DYEING AND MANUFACTURING Company has made a profit of Rs. 1.81 lakhs for the year ended last December after transferring Rs. 48.12 lakhs to depreciation. Rs. 45.80 lakhs to development rebate, Rs. 3 lakhs to taxation provision and Rs. 3.40 lakhs to wealth tax. Bringing in Rs. 2,41,366 and transferring Rs. 23 lakhs from dividend equalisation reserve, there is Rs. 27.22.050. An interim dividend of Rs. 7.50 a share was paid and a final dividend of Rs. 1.75 a share has been declared, leaving a carry-forward of Rs. 85.708. The directors say that the year under review was a most difficult one for the textile industry in general. The heavy increase in the excise duty on mill cloth levied in September 1956 reacted very unfavourably on the cloth market, resulting in a large increase in stocks. At the end of December 1957, the total stocks with mills in India amounted to 659.885 bales, of which 450,699 bales were unsold. As a result of this heavy accumulation, mills were compelled to reduce prices, and in some cases to effect distress sales to ease the stock position. On 13th December, 1957, however, the Government gave relief to the industry until 31st March, 1958, by reducing the excise duty on medium cloth from 2 annas to 2¼ annas a square yard. At the same time, the rebate of 6 pies a square yard allowed to mills producing cloth in excess of their average normal packed production was withdrawn from 1st January, 1958. The Government also announced the amalgamation of the sales tax with the excise duty. This, instead of relieving the burden on mills, was expected to result in the Government receiving Rs 4 crores more by way of excise duty. Simultaneously, the Bombay Government withdrew the exemption given to mills on the purchase of raw materials and stores without payment of sales tax. In 1957 the new machinery received amounted to Rs. 1,64,19,864 and an amount of Rs. 37,43,757 was spent on the construction of new buildings. By the end of December 1957, 904 automatic looms had been installed at the Spring Mills out of the 1,206 ordered. Exemption was granted to the company from making the compulsory deposit with the Government for the year 1956 under the income-tax allowances (current deposit) rules, 1957, as its financial resources were being utilised for the large-scale renovation and reorganisation of the mills.

THE PROFIT OF THE ASSAM MATCH COMPANY HAS improved by Rs. 9,000 to Rs. 10.33 lakhs for the year ended last December. Setting aside Rs. 5.70 lakhs (against Rs. 4.80 lakhs) for taxation provision and transferring Rs 1.92 lakhs (against Rs. 1.37 lakhs) to depreciation, there is a balance of Rs. 4,63,871. Bringing in Rs. 1,72,873, there is Rs. 6,35,944 available for distribution. The dividend has been maintained at 12½ percent, including a bonus of 2½ percent. General reserve is allocated Rs. 50,000, leaving a carry-forward of Rs. 1,83,944. The directors say that in May 1957 the excise duty on matches was increased very steeply so that a gross of 60's match boxes previously subjected to a duty of Rs. 3 now bears Rs. 4.90, or considerably more than half the wholesale price. This development, coupled with competition from the subsidised cottage industry, "affected our sales which are lower, together with production, than in the previous year."

Bombay Market

MARKET CLOSES QUIETER

OPERATORS CAUTIOUS ABOUT STRIKE PROSPECTS

Wednesday Evening.

THE Bombay stock market closed in a subdued mood last week after having a steady spell of activity during the early part of the period under review. In the beginning, share prices improved substantially on a broad front because of concessions made in the development rebate. Minor changes in the gift tax helped sentiment. Towards the close selling pressure, especially in speculative scrip, reduced values. Operators took a cautious view of the labour unrest at the steel factories at Burnpur and Jamshedpur. Recent developments in the Indian political situation also called for caution.

Tata Steel declined to Rs. 181.50 and Indian Iron were lowered to Rs. 21.87 on pressure from Calcutta interests. Tata Locomotive were shaded at Rs. 163 on the report that the Public Accounts Committee had spoken against the high price paid to the company for locomotive boilers. Alcock Ashdown were shaded at Rs. 255 on a disappointing dividend being declared contrary to market expectations. Automobile shares were idle, and Premier Automobile came to hand at Rs. 82.50. Hindustan Motor were transacted at Rs. 6.92. Larsen and Toubro improved to Rs. 15.62 on the report that the company had secured some profitable orders.

Textile shares were lower on balance, because it was feared that the working of the mills during the first half of the current year would be adversely affected by lower cloth prices. Bombay Dyeing reacted to Rs. 55.50 and Century were available at Rs. 430. Kohinoor were bought at Rs. 263.50 and Simplex were taken at Rs. 152. Standard Mills, however, improved to Rs. 472 on interested support. India United Ordinary were sold at Rs. 9.08.

Miscellaneous shares declined in sympathy with the general trend. Sugar shares were quietly steady, and Belapur realised Rs. 244.50. Phalton were done at Rs. 138. Cement shares were steady in the expectation of an increase in the price of the commodity. Associated Cement were bought at Rs. 154.75 and Digvijay Cement were quoted around Rs. 146.25. Steamship company shares were maintained as earning prospects were considered good. Scindia Steam changed hands at Rs. 17.72 and India Steamship were transacted at Rs. 11.08. Mining shares were subdued, and Shivrajpur Syndicate declined to Rs. 93. Bombay-Burmah reacted to Rs. 555 on the rumour that the Government might not sanction the company's application for the issue of bonus shares. It was also thought that the company's profit might be lower. National Rayon reacted to Rs. 223.50 on profit-taking and Tata Chemical were transacted at Rs. 15.12.

Banking shares were steady in minor fluctuations. Bank of Baroda came to hand at Rs. 117 and Central Bank realised Rs. 53.50. Insurance shares were idle, and New India were done at Rs. 44.

Turnover in electricity supply company shares was restricted and prices showed little change. Tata Power were taken at Rs. 1.200 and Ahmedabad Electric came to hand at Rs. 94.80.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. New Delhi

ESTIMATES COMMITTEE SUGGESTS CHANGES IN PLANNING COMMISSION

NEED FOR ASSOCIATION OF CABINET MINISTERS QUESTIONED

(FROM OUR NEW DELHI CORRESPONDENT)

A REALISTIC approach to the organisation of the Planning Commission has been made by the Estimates Committee of Parliament in a report published last week. The Committee has raised the question whether it is still necessary for the Prime Minister to remain the chairman of the Commission. A similar view, it will be recalled, was expressed in these columns some months ago, when it was pointed out that many of the difficulties of the second five year plan were due to the fact that the chairman of the Commission was the Prime Minister. The plan has been given a strange sanctity and has, therefore, never been adequately scrutinised by the Central Government.

The Estimates Committee doubts the wisdom of associating Ministers with the Planning Commission. "The association of Ministers is justified mainly on the ground that it facilitates close consultation and co-ordination with the Ministries. This can, however, be effected by the Minister being invited to attend the meetings of the Commission when a subject with which he is connected is discussed. The co-ordination with the Cabinet can also be maintained by a representative of the Commission attending the meeting of the Cabinet when a matter of interest to the Commission is considered."

The Committee observes an anomaly in that the Planning Minister has no secretariat. "Further, he is not the head of the Commission nor even the deputy chairman. It is no doubt necessary to have a spokesman of the Planning Commission in Parliament so as to explain matters relating to planning in the House. In the circumstances, the Committee feels that the time has come when a review of the entire position concerning the formal association of Cabinet Ministers of the Central Government with the Planning Commission should be made."

The Committee thinks that the present position of the *de facto* member of the Planning Commission, namely, Professor P. C. Mahalanobis, is anomalous. If the Commission wishes to get advice and assistance from a person who is not able to become a whole-time member, it could be so arranged that he is available for advice, if and when necessary, without making him a *de facto* member of the Commission. The Committee, therefore, recommends that this anomalous position be rectified. It considers that the present arrangement, under which the Cabinet Secretary functions as Secretary to the Planning Commission, "is neither necessary for high-level contacts nor conductive to efficiency." The appointment of a whole-time Secretary for the Planning Commission is, therefore, recommended.

Full-time Officers

The Committee wants the officers in the Planning Commission to be full-time staff as far as possible. "Besides the Secretary, there are four other officers who are part-time officers in the Planning Commission. The Chief Economic Adviser to the Ministry of Finance is the chief of the Economic Division in the Planning Commission. An officer of the Ministry of Food and Agriculture is chief of the Land Reforms Division in the Planning Commission. A Deputy Secretary in the Ministry of Labour and Employment is the Director of Labour and Employment in the Commission. The Director of Information is an officer in the Ministry of Information and Broadcasting. All these officers draw their salaries from their respective Ministries.

"The Committee feels that it is neither in the interest of efficiency of the work of the Planning Commission, nor fair to the officers themselves, that they should be required to play this dual rôle. It is of the view that the officers who are engaged in planning should be free from the burden of day-to-day administration. Even though planning has to be done in close coordination with practical administration, it requires freshness of outlook and independence of judgment which are difficult to secure if officers have to serve simultaneously both the Planning Commission and the administrative Ministries. The Committee would, therefore, suggest that, except when it is unavoidable, officers should be full-time in the Planning Commission." It thinks that the post of Adviser (Transport) might be abolished, "as it is not necessary to have a whole-time adviser to advise the Planning Commission on transport problems only."

Rôle of Commission

The Committee has made some far-reaching recommendations about the rôle of the Planning Commission itself. "It is understandable that a feeling should grow that the Planning Commission was not just an advisory body but that it was an additional authority to be reckoned with, which, though not a part of the ordinary machinery of the Government of India, decided every programme of work and whose decisions were to be carried out by all. The Committee would, however, suggest that the entire procedure now adopted should be reviewed, so that if any practice has grown which lends support to this feeling, it should be rectified."

The Committee suggests that "the utility to the State Governments and the Central Ministries of the rôle at present played by the Planning Commission in the annual and periodical allotment of finances, should be reviewed in the light of the experience gained in the last two years. It should also be considered to what extent this function should be performed by the Planning Commission and whether it should not be left to the Government itself, leaving the Planning Commission to concentrate on the evaluation of the current plan and formulation of future plans. The Committee would suggest that for the purpose of getting schemes approved for Central assistance, the procedure should be so revised that the State Governments should approach directly the Central Ministries concerned. The Ministries should take decisions on all such matters in consultation with the Planning Commission and the State Governments concerned. In case there is any difference of opinion between the Planning Commission and a Central Ministry, the difference should be resolved by the Cabinet, and in case there is any difference between the Planning Commission and a State Government, it should be resolved by the National Development Council."

Separate Staff

The Committee considers that "it is not necessary for the Planning Commission to maintain separate staff just for the purpose of watching the progress made by the States and to bring their difficulties to the notice of the Ministry concerned. This work could be done by the Planning Commission in the same manner as it watches the progress of plans in other spheres, by maintaining suitable liaison with the central committee, from whom the Planning Commission could obtain information whenever required." In view of the Committee's earlier recommendation that the Planning Commission should divest itself of executive work relating to public co-operation, it is suggested that the question of having an officer on special duty as the head of the Public Co-operation Division should be reviewed.

Other recommendations of the Committee include the following:

"It is not necessary for the Planning Commission to examine as a matter of routine all pieces of legislation or proposals received from the States relating to land reforms. These matters should be dealt with by the Ministries."

Then, "in the Land Reforms Division of the Planning Commission, there is no person who has personal experience of land tenures and their problems in the States. The Committee feels that the absence of experienced people in this division might, to a certain extent, account for the lack of progress in land reform work. Persons who have field experience as well as academic attainments and have attained the necessary stature, should be appointed to this division."

The Committee "notices with regret" that adequate arrangements have not been made for commencing the preparation of the third five year plan. Methods of framing the third plan should receive urgent attention.

The Committee "considers it unfortunate" that a start on the work of perspective planning was not made much earlier. Planning at the State level is at present mostly done by the officers of the State Government under the general direction and control of a committee of Ministers. In a vast country, with a variety of natural regions, climatic conditions, social and economic developments, etcetera, planning can be effective only if it is decentralised.

The process of building a plan from the village level will necessarily take some time. But the process should be set in motion early.

The Committee has discussed at great length the shortcomings of various divisions of the Planning Commission and made suggestions to remedy them. Some of the steps suggested would, if accepted, result in economies. The recommendations of the Estimates Committee will be examined by the Government soon. It is likely that those which are considered practical will be implemented when the Planning Commission is reorganised.

National Development Council Meeting

Meanwhile, the Commission is getting ready for the two-day session of the National Development Council commencing here on Saturday. A comprehensive paper on the achievements of the second five year plan, together with a paper on resources for the plan, has now been circulated to the members of the Council. There is a French saying that even the loveliest woman cannot give more than she has. Nor can a country. It is understandable for the Prime Minister to make "fighting speeches" in defence of the plan formulated by a body of which he is chairman. That the plan is not over-ambitious may also be conceded for the time being. But the basic issue is whether there are enough resources to implement it. The administration's viewpoint has again emphasised the inadequacy of the resources to meet an outlay of Rs. 4,800 crores, which has now been raised to Rs. 5,200 crores.

The Finance Minister, Mr. Morarji Desai, has just made the first move in the direction of mobilising resources. He has followed the line of least resistance. He says that the limit for deficit financing, which had been brought down to Rs. 900 crores, will again be restored to the plan target of Rs. 1,200 crores. Like two of his predecessors, he has been warned of the dangers of large-scale deficit financing to the economy. Even the enhanced target of Rs. 1,200 crores for deficit financing will leave an uncovered gap of Rs. 800 crores as far as internal resources are concerned.

Uncovered Gap

At the risk of repetition, it may be pointed out that the plan outlay, as far as the public sector is concerned, has been stepped up from Rs. 4,800 crores to at least Rs. 5,200 crores. The Government has, however, decided that the plan outlay will not exceed Rs. 4,800 crores. Thus the extra expenditure of Rs. 400 crores has to be dealt with either by raising additional resources or by cutting the plan by Rs. 400 crores. It is to be remembered that the resources estimate of the Planning Commission left an uncovered gap of Rs. 400 crores, which still remains uncovered. It can be eliminated either by raising additional revenue or by cutting the size of the plan. In other words, the resources available for the second plan are of the order of Rs. 4,000 crores. Even these resources are based on the following assumptions:

Loans from the public	...	Rs. 600 crores
Small savings	...	Rs. 425 crores
External assistance	...	Rs. 1,100 crores
Deficit financing	...	Rs. 1,200 crores
Additional taxation	...	Rs. 100 crores

With the exception of deficit financing, all the others are mere hopes. In the case of deficit financing, of course, money can be created by working overtime at the Nasik Printing Press. As for the hopes, the main ones are that borrowings from the market will be increased from Rs. 72 crores in 1957-58 to Rs. 125 crores in 1958-59. Small savings, similarly, will have to be stepped up to Rs. 80 crores in 1958-59, Rs. 100 crores in 1959-60 and Rs. 131 crores in 1960-61. External assistance will have to be Rs. 1,100 crores during the plan period, as against the target of Rs. 800 crores provided in the plan and the actuals amounting to Rs. 443 crores during the first three years of the plan.

Prohibition and Salt Tax

As for additional taxation, the Government, for ideological reasons, is not prepared either to abolish Prohibition or to reintroduce the salt tax. The States have refused to enhance land revenue rates. There has even been a reluctance to collect fully *taccavi* and other loans. Hardly any State has begun to collect betterment levies. Direct taxes, as far as the Centre is concerned, have been very nearly exhausted. This leaves the nearly dead horse of excise duties. If, however, the intention is to have another round of increases in excise duties or other indirect taxes, a firm decision will have to be taken to freeze wages and salaries at their present levels. Otherwise, demands are bound to be made for wage increases as soon as the rises in excise duties are reflected in the cost of living. If the past decade is any guide, such a wage freeze is an impossibility. In other words, the rise in the pay bill may eat up at least part of the yield from the proposed increases in excise duties. The Government will also have to freeze rigidly its non-plan expenditure at least as low as its March 1958 level. Past experience has shown that such a course is almost impossible.

It is generally unwise to make forecasts. It may, however, be predicted that the National Development Council will refuse to look into the realities of the financial situation. The Prime Minister will make another "fighting" speech. The Finance Minister has already indicated how his mind is working; he may do better than his predecessor by declaring that the plan can be implemented. The Chief Ministers of States will vie with each other in reiterating their faith in the basic soundness of the plan. They will also express their unflinching determination to carry it through, without being called upon to raise additional taxation. The Planning Minister, Mr. Gulzarilal Nanda, may refer to the Sadhu Samaj and its potentialities for the implementation of the plan. These discussions will probably be carried on in a spirit of great cordiality.

Increasing Food Production

The Standing Committee of the National Development Council at its meeting on 12th January, emphasised the need for increasing food production more rapidly. It felt that the country could not afford to think in terms of importing foodgrains year after year, and thought that there should be a nationwide campaign for carrying out the agricultural production programme embodied in the second plan. It was noted that strenuous efforts were required to ensure the full utilisation of the irrigation potential created by major and medium irrigation works. The failure to utilise irrigation facilities was due either to the canal,

system not being completed, or to the small distributories and field channels not being excavated, or to agriculturists not being adequately assisted in adopting the new crop patterns through demonstration farms and other measures. As for the proper maintenance of minor irrigation works, especially tanks, it was recommended that full use be made of State legislation, wherever it existed, under which village *panchayats* would be enabled to enforce the obligation of the beneficiaries for constructing and maintaining field channels. In the absence of such legislation, the States were to be requested to enact the necessary laws. With a view to taking positive action, it was decided that the Advisers to the Planning Commission should examine the position relating to the availability of the irrigation potential in each State and find out from officials the exact reasons why the potential was not being fully utilised.

The Advisers have so far visited Uttar Pradesh, Bihar, Orissa, West Bengal, Andhra Pradesh, Madhya Pradesh, Bombay, Mysore, Punjab and Rajasthan. The reasons why irrigation facilities are not being used have been discussed at length with State Governments and high officials. In most States, legislation has still to be enacted making it obligatory for cultivators to construct field channels. In the former *jagirdari* and *zamindari* areas of some States like Madhya Pradesh, the responsibility for a number of tanks has now come to vest in the Government and the Government is required to maintain them. There is, however, no legal provisions under which the Government can recover even the cost of maintenance from cultivators. In some of the areas which have recently come under irrigation, the cultivators are not irrigation minded, and intensive propaganda needs to be done by way of demonstration, developing new crop patterns, etcetera. Progress in establishing seed farms has not been satisfactory as only 95 percent of the farms necessary have been set up in the first two years of the second plan. Although State Governments have considerably accelerated their programmes for 1958-59, it appears that it will not be possible to set up all the farms by the end of the third year plan, as was visualised by the Planning Commission. The plan target for seed farms will be achieved only by the end of 1960-61. The conclusion to be drawn is that the plan might or might not have been over-ambitious; but expectations of human effort, under the ideology of the welfare State, have certainly been over-ambitious.

Production of Streptomycin

India will be producing streptomycin in early 1960 as a result of an agreement signed at the State-owned penicillin factory in Pimpri between Hindustan Antibiotics Ltd. and Merck and Company Inc. of the United States. The latter is one of the world's leading manufacturers of chemical and pharmaceutical products, and holds worldwide patents for the production of dihydrostreptomycin. Under the terms of the agreement, the penicillin factory has been licensed by Merck and Company to manufacture streptomycin and dihydrostreptomycin in India. The agreement has been signed by Mr. S. T. Raja, managing director of Hindustan Antibiotics Ltd. and by Mr. Huskel Ekaireb, vice-president of Merck and Company. With the production of streptomycin two years hence, the country will be able to save foreign exchange to the extent of $3 million annually, besides getting the antibiotics at a cheaper rate. The new plant for streptomycin is estimated to cost Rs. 1½ crores. It will be able to manufacture 45,000 kilogrammes annually. The construction of the new plant and buildings will commence soon near the penicillin factory. At least 25 or 30 percent of the plant is to be fabricated in India itself. The new factory, when it goes into production, will employ nearly 600 workers. Merck and Company Inc. has not charged any fee for the licence given to manufacture in India this important drug in the fight against T.B. It will, however, charge 2½ percent on the net proceeds of sales of streptomycin and dihydrostreptomycin by the Indian plant as a fee for making available the results of all its research work on the subject in its laboratory in the United States. Hindustan Antibiotics Ltd is also considering taking up the manufacture of the tertracycline group of antibiotics, such as auriomycin, terramycin and avromycin.

New Type of Penicillin

Hindustan Antibiotics has also undertaken the manufacture of a new drug, "penicillin V". Penicillin V, also known as phenozymethyl penicillin, as distinguished from penicillin G normally used for injection, is a type of penicillin which is administered orally. This drug has the same effect as an injection of penicillin G. If penicillin G tablets are taken by mouth, a good deal of their effect is lost due to the acids in the stomach. Penicillin V, on the other hand, is resistant to these acids. Its special advantage is that it can be taken by mouth by all those, especially children, who do not like to take injections. As the drug can be taken by the patient himself, people in the rural areas, where medical facilities are not always adequate, can take it without having to go to a doctor for injection, although the tablets should be taken only under proper medical advice.

The present vialling capacity of Hindustan Antibiotics is only about 8 million mega units of penicillin, against a total production of slightly over 21 million mega units of finished penicillin. Steps have been taken to increase the vialling capacity by another 8 million mega units by the installation of a new fully automatic plant which, it is expected, will be received during the current financial year. Penicillin is also being given to other bottlers, who have been importing penicillin hitherto, for vialling and marketing.

New Tyre Manufacturing Company

A licence under the Industries (Development and Regulation) Act, 1951, has been issued to Messrs. R. Ricciardi to manufacture automobile tyres and tubes in collaboration with Messrs Ceat S.P.A., Corso Palermo 1, Torino (Italy), under "the name and style" of Ceat Tyres (India) Ltd near Kalyan (Bombay). The company will manufacture tyres and tubes for cars, trucks, tractors, motor-cycles, aeroplanes, etcetera, and other technical rubber articles. Its annual capacity will be as follows: First stage by July 1959—150,000 tyres a year (passenger tyres for cars, giant tyres for buses and trucks). Second stage by the end of 1962—450,000 tyres a year (passenger tyres for cars, giant tyres for buses and trucks).

The Italian firm will be establishing this new undertaking in collaboration with Tatas. It proposes to invest 60 percent of the capital, the remaining being Tatas' share. The Italian firm maintains a research department, but depends on the General Tyres Company of the U.S.A. for techniques and the results of research being carried out there. Some technical fees on account of contributions towards research are paid annually on a sliding scale. A lump-sum will be payable towards engineering and project charges. According to the conditions of the licence granted, the firm is to "take effective steps" by 16th May, 1959. A licence of the value of Rs. 65,94,875 for importing capital equipment for the first stage was granted on 17th March, 1958.

Motor-cycle Manufacture

The present annual demand for motor-cycles is estimated at about 3,000 to 4,000 units. The licensed capacity, on the basis of single-shift working, of Enfield India Ltd, Madras, for the manufacture of motor-cycles is 5,000 a year. The programme of complete manufacture in India is spread over a period of five years. This firm produced 1,827 units in 1957. Its capacity is considered sufficient at present to meet the full requirements. Parts and accessories other than the following are being imported, which constitute about 60 percent of the c.i.f. value of a complete motor-cycle: piston complete, seat, petrol tank, spark plug, silencer, inflator, frame, tyres and tubes, battery, rubber parts, bolts, nuts, pins and studs, etcetera.

Tea Board Help for Small Planters

The Tea Board has decided to constitute an *ad hoc* Advisory Committee to assist small planters through the dissemination of useful information. Smaller gardens in northern India are also at present entitled to a subsidy for obtaining advisory service on payment from the research station run by the Indian Tea Association. At the instance of the Himachal Pradesh administration, a technical expert from the Tea Board undertook a survey of the plantations and the administration has been requested to publicise the recommendations made by him. In Punjab, the industry is located in small holdings in Kangra, and the State Government has been requested to submit a detailed scheme for the reorganisation and rehabilitation of the industry; the Tea Board intends ultimately to give one-third of the estimated cost of the co-operative factory to be set up, as a grant to the State Government. No expenditure, specifically attributable to these arrangements, has been incurred.

Footwear Industry Expands

There are at present 19 units in the country registered under the Industries (Development and Regulation) Act, for the manufacture of rubber and canvas footwear. The total installed capacity is 48,663,660 pairs a year. The actual production in the past three years has been as follows:

1955	...	34,891,045 pairs
1956	...	36,117,048 pairs
1957	...	36,891,767 pairs

Two schemes are still being implemented. A licence was issued to the South India Rubber Works, Alleppey, for setting up a factory with a capacity of 2.4 million pairs a year. The second licence for a capacity of 1.5 million pairs a year was issued to the Carona Sahu Company Private Ltd, Bombay. The entire machinery has already been installed and production to the extent of 60 percent of the capacity has commenced. Full production, it is expected, will be reached this month.

New Newsprint Factory

The National Industrial Development Corporation is implementing a scheme to establish another newsprint factory in Shakkarnagar (Andhra Pradesh) with a capacity of 30,000 tons a year, in addition to the one already in existence in Nepanagar of the same capacity. The indigenous production of paper, although on the increase, is still short of the rising demand. In order to cover the gap, licences under the Industries (Development and Regulation) Act have been issued to several units to expand their existing capacities and also to establish new units, both small and big. Special varieties of paper, such as cigarette tissue paper, are even now being exported. The inclusion of the item "paper" in trade agreements concluded with foreign countries and the display of samples in exhibitions held abroad are among the steps taken for exporting more of these varieties.

Promoting Exports of Coir and Tea

A four-man delegation from India will visit the United States, Canada and the U.K. to popularise coir products. On an invitation from Russia, another delegation is shortly leaving for that country to popularise Indian tea. Russia has a limited and unstable market, and she herself is a producer of tea. Another proposal is to appoint a couple of "tea boosters" in the U.K.

Indo-Tibetan Trade

Only limited land Customs checks are maintained for India's trade with Tibet. Except for a few specified commodities, the trade in general is not subject to quantitative controls or Customs duties. As far as the Government of India is aware, the main item which it is sought to smuggle is Chinese silver dollars.

Ferro-Manganese Plant in Orissa

Three licences for setting up ferro-manganese plant in Orissa have been granted to the following:

Name of firm	Installed capacity tons a year
Jeypore Sugar Company Ltd.	12,000 tons
Joda Ferro-Alloys Private Ltd.	30,000 tons
Kalinga Industries (P) Ltd.	7,500 tons

No Wage Board for Plantations Now

The sub-committee of the Industrial Committee on Plantations, at a meeting last week, decided that the setting up of a wage board for the industry should be postponed. The representatives of workers, it is said, urged at the meeting that a wage board should be constituted immediately to standardise and regulate wages, while employers' representatives pointed out that agreements on wages had been reached by the workers and employers in a number of States, and that nothing should be done to disturb those agreements for the time being. The representatives of State Governments, particularly of West Bengal and Kerala, also felt that since they had appointed tripartite committees to go into the question of wage revisions for plantation labour under the Minimum Wages Act, the setting up of a wage board on top of these committees at present would be inappropriate and inopportune. The sub-committee approved the code of discipline in industry with a few modifications. On the question of housing for plantation workers, the employers' representatives pointed out that the rules governing the grant of loans under the Plantation labour housing scheme were rigid, and that they were unable to take advantage of the financial assistance fully. In particular, they urged that the provision relating to the furnishing of security for loans be modified. Among the suggestions made by them were: (a) giving advance loans on promissory notes, namely, on the stability of the estate; (b) part of the Tea Board fund may be used for the purpose of guaranteeing loans; and, (c) provision for immediate depreciation allowance made to the extent of 100 percent of the cost of a *pucca* house. It was agreed that these suggestions should be examined by the Centre and the State Governments concerned.

West German Help for Institute

Technical assistance of 15 million deutschemarks (about Rs. 1.7 crores) will be forthcoming from the West German Government for the Higher Technological Institute to be started soon in Guindy near Madras. Dr. R. A. Kraus, a West German professor of mechanical engineering, was deputed by his Government to help in the planning of the Institute. Dr. Kraus, now attached to the Technical University in Braunschweig, West Germany, was associated with the Institute of Technology in Kharagpur for over six years, and he has already had detailed discussions with the officials of the Central Ministry of Education in New Delhi in this connection. The West German Government will be providing the necessary euipment, as also the required technical personnel. In addition, it will be giving higher training in technology to nearly 20 Indian students in various branches of engineering. Dr. Kraus also visited the site in Guindy near Madras which was chosen for locating the Institute.

About Rs. 2 crores has been set apart under the second five year plan for the Institute, and it is learnt that steps are being taken to expedite the work. Dr. Kraus had discussions recently with State Government officials and the officials of the Ministry of Education of Madras concerning the courses of study to be provided and other details. He ascertained the technical requirements, and it is expected that he will submit his proposals shortly. The Institute is likely to start functioning from July next year. Even if it is not possible for the Indian Government to construct the buildings for housing the Institute, workshops and laboratories can be set up in the neighbouring buildings, in the Engineering College and the Highways Research Laboratories, as a temporary measure. There is scope for higher training being imparted in mechanical, electrical and other engineering subjects. Dr. Kraus also had detailed discussions with Dr. A. Lakshmanaswami Mudaliar, Vice-Chancellor and chairman of the southern regional committee of the All-India Council for Technical Education, on the various aspects of the Institute. A list of machinery required, which may be supplied by the West German Government, is under preparation. The blueprint for discussion with the West German Government about the shape of assistance which it will provide has been prepared and will soon be handed over. It is to be expected that Dr. Kraus will be one of the principal advisers to the new Institute on returning from his country. It has been decided to get the Institute going as expeditiously as possible. The 680-acre site selected and approved is near Tharamani village and includes 200 acres of the Raj Bhavan site at Guindy.

London

IMPROVEMENT IN FOREIGN TRADE MAINTAINED

SHARP RISE IN SHIPMENTS TO NORTH AMERICA THIS YEAR

(FROM OUR LONDON CORRESPONDENT)

WITH warnings increasing against the possible effects on Britain's economy of any long continuance of the American recession or its spreading to the world at large, the U.K. Board of Trade has done well to produce an analysis of overseas trade in the first quarter of this year. The analysis shows that Britain's position is sounder than might have been expected and that the end of 1957 improvement has been maintained into 1958. The long period of expansion in exports ended in the fourth quarter of last year, but since then they have run fairly steadily. The surprising thing is that shipments have not only risen sharply to north America but have also remained fairly buoyant to the primary producing areas as a whole. Compared with the first quarter of 1957, exports in January-March this year have fallen off sharply to the markets of Europe, particularly France and the Netherlands. This shows that the cause of the slight downward trend in exports has been the control of inflation on the Continent and not (so far) the decline in world commodity prices. Exports to Denmark, Belgium, Switzerland and Norway are somewhat lower this year. Those to Japan, another country where inflation has recently been curbed, have also fallen off. Dollar exports have, of course, been running at record values, particularly to the United States.

But, as the Board of Trade points out, the "most dynamic element in the trade situation" has been the fall in import prices, which has reduced the visible trade deficit in the first quarter of this year to only half the average level of 1956 and 1957. Of the fall of about 10 percent in import prices since last May, between a third and a quarter was due to lower freight charges, which have mainly affected the landed cost of petroleum, grain, iron ore and other bulky commodities. The most significant price reductions in the U.K. import bill have been in copper, wool, rubber, dairy products, bacon, and mutton and lamb. The Board of Trade points out that the downward trend in commodity markets appears to have slackened somewhat in the last few weeks and the decline in import prices in coming months may not be as rapid as during the past year. If these assumptions are borne out, the outlook seems reasonably assured for some time ahead.

The Industrial Outlook

This situation goes a long way in explaining the Government's refusal to be stampeded by the Opposition's predictions of deflationary dangers during the Budget debate, although Mr. Amory maintained to the end that Britain must not ignore the possible eventualities. The only concession he is prepared to make is a promise to "think again" about retrospective legislation against "dividend stripping" before introducing the Finance Bill. At the same time, the Prime Minister has been discussing wage claims by meeting the representatives of both sides to the railway dispute and in effect saying: "Prove that quicker modernisation will save money, and we will help you to finance it. If this enables you to pay higher wages to a smaller staff, you are free to do so." This might work if the will to make it do so is really there, but at the moment the outlook, especially as far as the bus strike is concerned, is not happy. A speedy settlement of the railway troubles could well set the pattern for a widespread solution of a difficult problem.

Meantime, industrial output is well maintained, although there are inevitably one or two black spots. The latest coal figures show a slight improvement, even though they make little impact on the overall shortfall so far this year. On the other hand, the motor-car industry is doing extremely well. Britain's workers made 109,000 motor-cars in March, the first month that the 100,000-mark has ever been topped. In the first quarter of the year, 365,000 motor-vehicles of all kinds were produced—5,600 every working day. The period also produced a new record in motor-car exports, with 37,000 of the total of 132,000 going to the United States. The outlook for steel, which is good, has already been referred to in some detail. One of the less satisfactory reports comes from the shipbuilding industry, where the picture is muddied by over-full order-books. British shipyards had orders on the books at the end of March worth £900 million, covering 765 ships of 6,331,000 tons. Of this total, 39 ships, totalling only 41,000 tons, were ordered in the first quarter of 1958, none on foreign account. In the first quarter of this year, 14 ships of 183,000 tons were cancelled. Of these, six were for foreign owners. Six of the 14 were tankers and seven were cargo ships. Issuing these figures, the shipbuilding conference points out that cancellations have so far been much more numerous in some other shipbuilding countries than in Britain, and that these countries are engaged almost wholly in export work in the form of cargo ships and tankers. But that is poor consolation, for, according to Lloyd's Register, U.K. yards are hardly holding their own in the keen competition which now prevails. Covering the first quarter, the returns show that the total 307,758 tons now being built abroad for Britain is the highest ever recorded, showing an increase of 34,488 tons over the figure for the end of 1957. In Britain, tonnage totalling 366,432 tons is being built for registration abroad, leaving an "export surplus" of 58,674 tons. "This could in effect be nullified by a higher rate of completion abroad." The tonnage being built for foreign registration is 35,726 tons less than in the previous quarter, and is the lowest since June 1946.

Basic Materials Cheaper

Prices of basic materials used by British industry continued their steady fall in March. The Board of Trade's index (1954=100) dropped from 98.4 to 97, which compares with 111 in March last year, a fall of about 13 percent. In March, commodity prices continued the decline which has been apparent since the spring of 1957. The fall of 1.4 percent during March 1958 in the wholesale price index of basic materials, excluding fuel, was accounted for mainly by lower prices of textile fibres, especially wool, which fell by 7.1 percent. For the second month running, there was a slight fall in the price index of British manufactured goods. This was spread over a wide range of products, but among the items which showed significant decreases were most textiles, chemical products, tyres and domestic hollow-ware. The decrease in iron and steel prices announced at the end of March has not been taken into account.

No Rise in Capital Spending

Final estimates published by the Board of Trade suggest that fixed capital expenditure by companies during the last quarter of 1957 was hardly higher than in the same period of the previous year. This is slightly worse than was suggested by the provisional figures published a month ago, and brings the 1957 total to only 6 percent more than in 1956, against rises of 20 percent and 27 percent in the previous two years. The rate of increase tapered off throughout the year, the first three quarters being respectively 13 percent, 9 percent and 5 percent higher than the corresponding periods of the year before. Building expenditure was a tenth lower than in 1956. Only shipping expenditure (60 percent up because of tanker buying by the oil companies) rose greatly.

Better Prices for Tea

Week after week recently, the prices fetched by the better quality teas now being sold at the London auctions have been well above last year's. For example, a couple of weeks ago the average price realised was 4s 9d a lb against 3s 7d for the corresponding week of 1957, and this week prices are up again. As a result of this revival from the lower levels ruling earlier in the season, the average price of tea sold for the current season to date is around 4s 6d, against 4s 8¼d for the previous season. If the trend continues, this season might well end with a better average price than the last one. Meanwhile, stocks of tea in Britain are still fairly small at 137 million lbs, against 173 million lbs a year ago. The interim dividend of Brooke Bond and Co. has been raised from ¾d to 1¾d a share, tax-free. But this should not be taken as indicating a larger total for the year. It will be recalled that the chairman promised an increase to reduce the disparity between the two payments made each year.

Cotton Cloth Imports

In March, the U.K. exported less cotton cloth than it imported. June 1957 was, it is believed, the first month in 200 years or so when Britain was a net importer of cotton cloth, and there was an excess of imports over exports again in October. Exports of cotton cloth in March were the largest for any month since May 1957, but imports rose sharply compared with recent months to an unusually large yardage. In view of the negotiations now proceeding for a limitation of cloth exports from India, Hongkong and Pakistan for home consumption in the U.K., it seems possible that importers here will be anxious to secure the largest possible supplies from abroad while the trade remains unrestricted. Imports, therefore, may continue to be at a higher rate than they were last year. A move to broaden the basis of the negotiations on the import problem shortly to begin between representatives of the textile industries of Lancashire, India and Pakistan has been made in Manchester by the Overall Manufacturers Association. After being told of the possibility of a substantial increase in shipments of made-up garments from Hongkong, the Association has adopted a resolution urging that any agreement reached should include the limitation of imports of garments. The conference has been told by Mr. J. S. T. Hawke, who will take part in the negotiations as a member of the Lancashire mission to the Far East, that according to the latest information, Hongkong is determined to extend its textile finishing plant very greatly. The object is to ship as many garments and as little grey cloth as possible in the future. Unless something is done, garment shipments will increase tremendously. Last year, Hongkong supplied the equivalent of about 30 million yards of cloth in made-up shirts.

Brevities

The World Bank has approved a loan equivalent to $14 million for the expansion of electric power production in Pakistan.

Britain's hire-purchase debts at the end of February, according to the Board of Trade, amounted to £487 million—a decline of £1 million from the end-January figure.

Thomas De La Rue and Company is the first British firm to get the job of printing currency notes for Nepal. Its tender for the printing of Rs. 200 million worth of notes has been accepted by the Nepal Government.

The British Overseas Airways Corporation's loss for the year 1957-58 is now estimated at about £2,750,000, according to the Minister of Transport.

Bombay

STATE FINANCIAL BODY OPENS NAGPUR BRANCH

PLANS FOR INDUSTRIALISATION OF VIDARBHA AREA

(FROM OUR BOMBAY CORRESPONDENT)

THE Bombay State Financial Corporation has established a new branch in Nagpur to meet the needs of the Vidarbha area. Inaugurating the branch, Dr. Jivraj N. Mehta, the State Finance Minister, reviewed briefly the progress made by the Corporation since its inception on 21st December, 1953. He said: "The Corporation has increased its financial transactions, which now cover an aggregate sum of sanctioned loans to the extent of Rs. 321 lakhs. Apart from its paid-up capital of Rs. 2 crores, the Bombay State Financial Corporation was the first such State financial institution in the country to raise a sum of over Rs. 116 lakhs by the issue of bonds last year, a year witnessed by monetary stringency in the open market which forced several States to stay away from open market borrowing. It was particularly commendable that within a few hours of the issue, the bonds were sold out and the borrowing was eminently successful. I have great pleasure in associating myself wholeheartedly with the remarks of the chairman that the opening of this branch of the Bombay State Financial Corporation in Nagpur indicates the desire of the Corporation, and, may I add, also of the Government of Bombay, to assist effectively in the industrial development of Vidarbha."

Vidarbha has an abundant supply of raw materials including mineral deposits. There is a surplus of food, and a good deal of raw cotton and oilseeds are grown there. It has a forest area of over 7.2 million acres, which represents a little less than one-half of the forest area of the entire State. Vidarbha accounts for three-quarters of the State's manganese ore supply and it is the only region in Bombay which has iron ore and coal. In addition, there are also substantial deposits of limestone. The resources have not yet been fully exploited. Although Vidarbha has about 1,000 registered factories, 600 of these function on a small-scale basis. The small units include 281 cotton gins and presses, 67 vegetable oil factories, 111 saw mills and 83 rice mills. The large-scale establishments include such enterprises as 12 cotton textile mills, with 5,810 looms and over 300,000 spindles; the Ballarpur Paper and Strawboard Mills, which have a modern large-scale paper manufacturing unit; and the fruit canning plant operated by Central Hindustan Orange and Cold Storage. Near Nagpur, a safety fuse manufacturing company is now functioning, while there is also a fairly advanced shellac industry.

New Industries

Among the industries likely to be established in the region, the Finance Minister has listed steel rolling mills, electrical goods, chemicals, machine tools, pig iron, ferro-manganese and cement. "Towards such development, licences have been issued for the production of cotton oil in Buldhana District, ferro-manganese plant in Ramtek and Tumsa in the Nagpur district, cement in the Yaotmal district and chemicals in Kalmana. It is also proposed to establish an industrial estate in Nagpur during the second five year plan and another in Amraoti. The site for the purpose in Nagpur has been selected and steps are now being taken to complete the preliminary arrangements." Referring to the finance needed for industrial development, Dr. Mehta said: "Industrialisation on an adequate modern scale is no longer a successful feasible proposition for a single industrialist or a business man. In a number of ways, the assistance of the public sector and the people is invariably required. So far as industrial finance is concerned, the Industrial Finance Corporation of the Government of India gives assistance on applications for loans which in a single individual case requires more than Rs. 10 lakhs. The Bombay State Financial Corporation looks after small and medium-scale industries. A small-scale industrial unit is one with an invested capital of up to Rs. 5 lakhs and the medium-scale concern is one which has a share capital or fixed assets up to the value of Rs. 20 lakhs. Generally, the Bombay State Financial Corporation renders assistance to applicants, each of whom individually requires an amount of between Rs. 1 lakh and Rs. 10 lakhs. On behalf of the Bombay Government, the Corporation also disburses, as described by the chairman, financial assistance required for sums between Rs. 10,000 and Rs. 1 lakh. For financial requirements of less than Rs. 10,000, the Director of Industries can be approached. Such assistance for small-scale industries on behalf of the Government is being liberally given at rates of interest of 3 percent for individual sums up to Rs. 50,000; at 5 percent for sums between Rs. 50,000 and Rs. 1 lakh; and at 6½ percent for sums larger than Rs. 1 lakh. The period of repayment depends on the purpose of the loan and is generally up to five years for working capital and up to ten years for the construction of fixed assets."

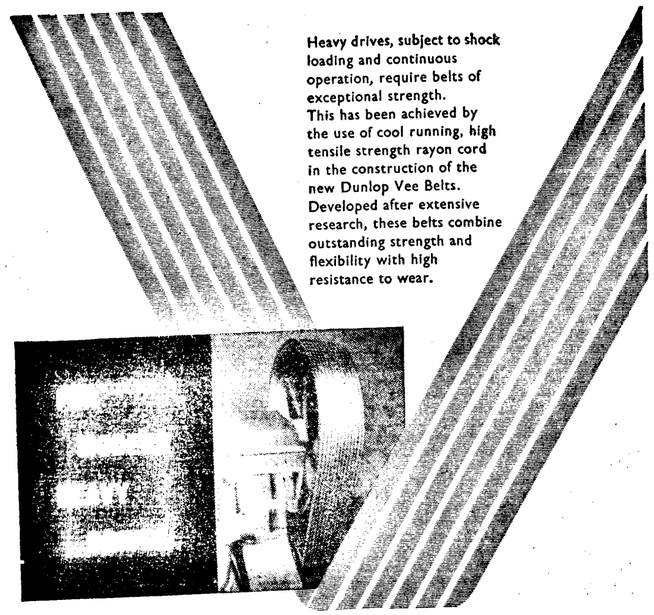
Dr. Mehta urged the people of Vidarbha to take advantage of the new branch of the Bombay State Financial Corporation and added: "Industrialisation to be conducted by private enterprise requires a spirit of adventure and risk-bearing, the quality of innovation and organisational efficiency. I have no doubt in my own mind that with the environmental facilities that are now available and with

the contact that will now develop with the enterprising people of the rest of the State, particularly Bombay city, the people in this region will rise to the occasion and organise fresh industrial pursuits on an ever-growing scale."

Russian Cotton Plans

There is considerable speculation here over Russia's plans for raw cotton. It is reported that she proposes a production increase of 10 million bales over the next 13 years. To carry out this programme, sown areas will have to be at least doubled, as also will the target for seed production. At the end of 1956, Russian output of raw cotton was officially given as 6.26 million bales. Production, it is believed, has increased last year. At present, most of Russia's cotton is 1¼ inch staple but considerable progress is reported in the production of staples of 1⅛ inches to 1⅛ inches. Much of this new production is coming from the Uzbekistan area. The question is, why should Russia, when her production is sufficient to allow considerable exports, find it necessary to compete in the market for Egyptian and Sudan cottons? Her exporting ability is demonstrated by the fact that her shipments of raw cotton to the Lancashire mills alone last year were valued at over £1.5 million. Statistics show that Russia's raw cotton production exceeds not only her own needs but also those of the satellites with whom she deals on a barter basis. During the past year, much of the cotton which she has obtained either directly or through communist countries, as a result of purchases or in barter deals for arms and ammunition supplied to Egypt, has made its way to the European market. There it has been offered to Egypt's and the Sudan's own customers at prices lower than those ruling on the regular market. The point is, will Russia, with her economic policy in relation to foreign markets geared to political exigencies, upset the cotton markets of the world with her increased production or upset the textile markets of the world by converting the cotton into cloth and offering the finished materials at prices lower than those of other manufacturing countries?

Cotton Prices Fall



The Bombay cotton market was in a state of panic during the past week and trading consisted mainly of liquidation. It was reported that more than 100,000 bales of Kalyan cotton, valued at Rs. 3 crores, had accumulated in north Gujerat. This was ascribed to the uncertainty facing the textile industry. Cloth stocks with mills were rising once again, so the latter were following a cautious policy in making fresh purchases of fibre. It was reported that the demand for Kalyan cotton, a popular variety, was dwindling because the quality of the crop this year was affected by inadequate rains. It was also stated that the production pattern in the textile industry, in Ahmedabad and elsewhere in this State, had changed since the cuts in the excise duties on fine and superfine cloth. The spot market was in distress. Mills continued to restrict their purchases to immediate needs, with the result that inferior quality cottons lost further ground. Prices of Kalyan and Wagad dropped considerably and most of the available stocks were not sold. Although about 10,000 bales of Wagad cotton were bought by a Delhi mill, the quotation for this quality dropped to Rs 604 from Rs. 615 a candy. The Wagad May delivery contract was quoted at Rs. 608.

Piecegoods Steady

In spite of the unsatisfactory position of the cloth trade, piecegoods prices were steady. Some enquiries were received for fine and superfine varieties from Delhi, Kanpur, Calcutta and south India, but in actual fact little business was transacted. As for exports, apart from some enquiries from Africa, other markets were quiet.

Oilseeds Ease

Both castorseed and groundnut dropped on distress selling during the past week, with linseed following suit. The steady decline in rapeseed prices in Agra had unfavourable repercussion on all edible oils. Sentiment in castorseed was also severely affected. The continued offerings from Gujerat even at lower rates in oils (with Commercial around Rs. 15.31 and B.S.S. around Rs. 16.50) weakened the technical position. No business was reported with foreign markets. The United Kingdom wanted Commercial castor oil only around £113 to £114 for bulk. A good deal of selling was said to be against the options near the end of the week. Linseed was easy. The premium in futures prices disappeared. The U.K. quotation for linseed oil was mentioned around £104 10s. Reports that Australia was interested in linseed oil arrested the decline towards the end. The groundnut May contract opened at Rs. 172.50 and closed at Rs. 169.52. The castorseed May contract opened at Rs. 153.25 and closed at Rs. 147.87. The linseed May contract opened at Rs. 29.94 and closed at Rs. 29.69.

Heavy drives, subject to shock loading and continuous operation, require belts of exceptional strength. This has been achieved by the use of cool running, high tensile strength rayon cord in the construction of the new Dunlop Vee Belts. Developed after extensive research, these belts combine outstanding strength and flexibility with high resistance to wear.

Plantation Topics

REVISION OF RUBBER PRICE SUGGESTED

BONUS DISPUTE IN PLANTATIONS OF DEVICOLAM-PEERMADE AREA

(FROM A SOUTH INDIAN CORRESPONDENT)

THE industrial relations committee for plantations in Kerala, which is headed by the State Labour Commissioner, it is understood, has decided to send a deputation to New Delhi to urge the Central Government to raise the statutory price of raw rubber. This will be done on the grounds of increases in production cost, and the rubber growing industry's inability to implement certain provisions of the Plantation Labour Act.

For some time now, this committee has been considering the draft rules under the Plantation Labour Act, published a few months ago by the State Government. Although the rules are almost the same as those existing formerly in the Travancore-Cochin and Malabar areas of the State, certain rules relating to medical facilities for plantation workers are much beyond the capacity of the plantations in the State to implement. This is the opinion of the estate owners. They want more time for implementing the relevant section of the Plantation Labour Act, although some of the plantations are now providing the medical facilities specified in the rules. If it becomes statutorily binding immediately, many estates will be in difficulties. The planters are however prepared to implement all reasonable rules framed under this Section of the Act gradually.

Wide Range of Agreement

It is understood that at the recent meeting of the committee, a wide range of agreement was reached on many of the rules relating to the powers and functions of the inspecting staff, drinking water, latrines, canteens, crèches, recreational and educational facilities and housing accommodation. As for medical facilities such as the construction of group and garden hospitals, the committee, it is understood, has taken a decision in favour of extending the time limit to 1960. On certain other rules, the management and labour representatives have not come to an agreement.

The employers' representatives, it is understood, have pleaded that those rules which would entail extra cost on the management should not be implemented immediately, in view of the heavy burdens the industry is bearing already in the form of taxation, etcetera. They point out that some of the rules which the committee has agreed to finalise would bring about financial burdens heavier than the industry can carry. The labour representatives, while appearing to appreciate the difficulties, have stated that they cannot concede the plea that the implementation of the provisions of the Plantation Labour Act should be postponed, it is understood.

Bonus Dispute

To a deputation of a section of plantation workers in the Devicolam-Peermade area, the Kerala Labour Minister, it is understood, has given the assurance that he will convene a tripartite conference on 3rd May to settle the question of bonus for 1957. The workers have already taken a 4 percent bonus from their employers. The deputation was organised by the communists. A by-election is due on 16th May in this area. It is learnt that the Labour Minister has already approached the planters there with a request that an agreement should be reached on the question of bonus before the election date. But the planters' reply is that the issue can be taken up only after the presentation of the report by the Mammen Tharakan Committee which has been appointed to recommend a satisfactory formula for the payment of bonus. This committee is now taking evidence from the parties concerned, and it is unlikely to present its report before the election date. So it is doubtful whether the State Labour Minister's efforts at bringing about a settlement on the bonus question before the election will succeed.

Caffeine Manufacture

For the production of caffeine from tea waste, Unifine Pharmaceuticals of Bombay will soon start a factory in Devicolam in Kerala. Production, it is expected, will start by July this yaar. The firm's plan is to install equipment to manufacture 1,000 lbs of caffeine a month initially, with provision for expansion within a year or two to 2,000 lbs a month. The Kanan Devan Hills Produce Company has agreed to supply tea waste to this firm at reasonable rates. The Kerala Electricity Board has agreed to make available one of its buildings in Devicolam for the location of the Rs. 10-lakh caffeine plant. The State Government has exempted the firm from payment of sales tax on tea waste for a period of five years. This plant will employ 20 persons to begin with. Under the expansion programme, it is proposed to undertake the preparation of liver extract and crude drug extracts from nux vomica, etcetera.

COCHIN TEA SALES

At Sale No. 10, some 1,925,000 lbs of tea were on offer. There was a strong general demand, particularly for low mediums and medium fannings, which were irregularly 10nP dearer. Low mediums and medium brokens opened dearer and closed about steady, good mediums were 20 to 30nP easier, and highgrowns were up to Re 1 lower. Whole leaf grades were stronger and dearer.

Jute

U. K. CARPET MAKERS COMPLAIN ABOUT DUNDEE JUTE YARNS

FREEING OF IMPORTS SUGGESTED

THERE has been a good deal of controversy lately about the quality of the jute yarns supplied to the carpet industry in Britain. A number of prominent carpet manufacturers there think that some of the Dundee-made yarns for carpet backing are below standard. Many have expressed the opinion that the reason for the fall in standards is lack of competition, and they would like to see a relaxation of the U.K. Government's restriction on jute yarn imports which have been subject to Board of Trade licensing since the war. Last year, carpet manufacturers used about 25,000 tons of yarn. Of this amount, only 1,500 tons came from abroad, the balance being supplied from Dundee. The matter has come to a head since the publication of the annual report of the Federation of British Carpet Manufacturers. On the subject of jute yarns, it has this to say: "Admittedly the Dundee industry has done much to modernise and render its plants efficient, but lack of competition from overseas leads to higher prices which are inevitably passed on to the public." It is the considered opinion of the members of the Carpet Manufacturers Federation that if they were allowed to use more of imported yarns, the standard of those Dundee yarns which are at present considered unsatisfactory would improve. Healthy competition is the remedy if the poorer types of yarn are to be eliminated. Many of the yarns supplied by Dundee are of perfect quality, but in the opinion of a spokesman of the industry, the imported yarns, which come mainly from a firm in India, are thought of highly.

Change in Gunny Freight Rates

An increase in gunny shipments is expected with the latest reduction in freight rates. These concern U.S. Atlantic and Gulf ports, and apply to steamers sailing from Calcutta on or after 1st May. The rate for gunnies has been reduced to $27.50 for 16 cwt. or 40 cubic feet, and that for jute scrim to $24.50.

Reports of overseas interest have helped the gunny market during the past week, and after a quiet opening, prices have recovered. Enquiries from the U.K. and Egypt have brought steadier conditions in hessians, while sacking has been influenced by fresh enquiries from Russia (which, it is reported, is interested in hessian also). Following reports of a new Indian Government tender for heavy goods, prices have reacted strongly towards the close, but the rise has been halted by heavy mill selling pressure at the higher levels. The total quantity of business transacted during the past week is not large and prices are maintained more in anticipation of orders. Local shippers have taken little interest, as most of the orders they have to cover are at lower levels.

The fibre markets have been steady and have helped gunnies. Mill interest has been small, and business over the past week has been limited to about 200,000 maunds. Buyers' indications are invariably below the current rates and although these prices have usually been conceded, most sellers are reserved in their ideas. This is because the majority of them are holding only small stocks, and imports are so low that these cannot be replaced once they are released. Many prominent operators have finished for the season, and are now interested only in new crop sales. There has been little interest from mills in new crop jute, as they think that prices will fall. This view is based on favourable crop reports from most of the Assam and Northern districts. It is said that good rain alternating with sunshine has promoted the growth of the plants, and in most areas sowing has been almost completed. In the Daissee districts, more rain is required, but that which has fallen recently has allowed sowing in many places where previously the ground was too hard. River levels in all areas are reported to be normal.

Licences for Cuttings

In recent weeks, those mills which are in need of cuttings have been held to ransom by sellers who have licences. The quantity that mills can buy under their own licence is limited by the amount of long jute they purchase over a specific period. In many cases, this is not adequate, and a "grey market" has developed for the supply of cuttings against sellers' licences. When licences were first issued, the difference in price between sales on buyers' licence and sellers' licence was only a few rupees. But demand has now increased, and recent purchases have been noted at a premium of Rs. 10 or Rs. 11 a bale. Current quotations for cuttings are based on about Rs. 75 a bale, and it is significant that at this time last year they were Rs. 112 a bale. Present practices are liable to drive the price back to those high levels unless a more liberal quota is allotted to actual consumers.

THE JUTE MARKETS

Manufactured Goods: The gunny market opened on a quiet note last Thursday mainly due to continued selling pressure from mills. At this stage, there were no buyers and prices weakened. B Twills dropped to Rs. 100.40 in the near positions, with forward shipment at a premium of Rs. 1.85. In hessians, the premium for forward shipment narrowed to 25nP and 40in. 10oz. quotations were based on Rs. 41.05 for ready shipment. There was little change during the day and rates fluctuated within narrow limits, opening on Friday at a slightly higher level. Towards the week-end, there was an improvement as reports of fresh enquiries circulated. Both sacking and hessians came in for attention. Over the week-end, sentiment strengthened and Monday's opening prices showed an advance of 80nP in B Twills. Hessians were slower to react and improved by only 10nP; the premium for forward shipment was again reduced. The strength of the forward section in sacking, however, increased, and July-September shipment was quoted at a premium of Rs. 2.05. This was thought to be the result of a new Government tender for heavy goods for these deliveries.

At the close, quotations were as follows:

	Ready Rs.	May Rs.	June Rs.	July-Sept. Rs.
40in 8oz.	33.35	33.40	33.40	33.40
40in. 10oz.	41.45	41 70	41.60	41.60
B Twills	102.25	103 15	103.50	104.25
Heavy Cees (Plain)	101	102.50	103	104.25
A Twills	121	122.50	124	125
Liverpools	113.50	114.25	114.75	115.25
Cornsacks	103	103.75	104	105

Raw Jute: There was a lull in the fibre market following the previous week's business, and prices began to fall. Only small transactions were reported and sellers' offers were limited. Although upcountry markets eased during the past week, prices in the mofussil remained above the parity of Calcutta indications. Good quality jute continued to be in demand and in most cases the difference in price between the Bottom and Middle qualities reverted to Rs. 3. Towards the end a stronger undertone developed in sympathy with the manufactured goods market, and although little business was done, sellers were reserved. Quotations at the opening last Thursday were based on Rs. 25.75 for Assam Bottoms, and fell back by 25nP, only to rise to Rs. 26 before the end.

Business was done in Assam and Northern jute at Rs. 25.50 to Rs. 25.75 a maund basis Bottoms. Middles only were sold at Rs. 29.25 to Rs. 29.50. Tossa fibre from the same districts changed hands at Rs. 28.75 to Rs. 29. Mesta came in for more interest. Desal and Northern mesta passed at Rs. 24 to Rs. 24.75, and Assam mesta at Rs. 24.50. Jungli mesta was reported at Rs. 22.75 and bimli at Rs. 22 for F.A.Q. In pucca bales, Pakistani cuttings were done at Rs. 85 a bale for sellers' licence and Rs. 74 a bale for buyers' licence.

Imports in Cossipore were good and wagon arrivals, at 425, were 125 more than in the previous week. During the same period of last year, 435 wagons were reported at the Cossipore sidings.

On Wednesday morning, following good business, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs a md. basis Bottoms	Shipment
Assam	26 25	April-May
Northern	26 25	"
Purnea Desal	25	"
Daissee	30	"
Assam Tossa	29.50	"
Murshidabad Tossa	29	"
Northern ex Calcutta	26	"
Mesta:		
Assam-Northern	25	"
Desal	25	"
Daissee	24 75	"
Jungli	23.50	"
Bimli F.A.Q.	23	"
Pakistani Cuttings	75 a bale	"
New Crop:		
Assam	27.25	Aug.-Sept.
Daissee	31	Oct.-Dec.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th April, 1958	2,309.3	10,909.0	13.218.3
1st to 20th March, 1958	1,586.3	14,965.1	16,551.4
1st to 20th February, 1958	1,268.0	19,964.3	21,232.3
	Sacking		
1st to 20th April, 1958	14,658.2	332.1	14,990.3
1st to 20th March, 1958	16,428.0	153.6	16,581.6
1st to 20th February, 1958	19,863.4	234.5	20,097.9

THE FOREIGN JUTE MARKETS

SENTIMENT EASES ON REPORTS OF RAIN IN PAKISTAN

(FROM OUR DUNDEE CORRESPONDENT)

REPORTS that rain has fallen in the jute-growing districts of East Pakistan during the past week have changed sentiment in the markets radically. From a firm and advancing tendency, the position has weakened and quotations have been falling at the rate of about £1 a day for raw jute. Calcutta goods were dearer for a time, but lately they too have displayed weakness. Still, the values of goods are better than they were some weeks ago and it is said that the condition of the Indian jute mills is not so depressed. There is a fair amount of short-time working and standing machinery in Dundee as business is very quiet. Both spinners and manufacturers are booking only small orders. Since 18th April, the prices of some yarns, including the common spins such as C.H.W. and J.C.H. warp and weft, have been raised by about £5 a ton to 15.72d a lb. for 8lb. C.H.W. and to 16.86 a lb. for 8 lb. J.C.H. warp, due to the rise in raw jute rates. It was apparent that a change was pending and consumers bought fairly freely just before the rise, as they did on the last occasion when £5 a ton was added to some qualities of yarns and ordinary jute cloth and bags. The spot price for imported 40in. 10oz. hessians was raised by 3s to 95s a 100 yards and 40in. 7½oz. to 87s 3d from 84s 11d, both net. Dundee hessians were raised from 13.26d to 13.64d for 10oz. and 11.32d to 11.62d for 8oz. Twist was advanced from 18.13d to 18.70d for 3-ply 8lb., but rove remained unchanged, as did sacking yarns and the Rio qualities.

Raw jute quotations have fallen by £3 a ton to £117 for Mill Firsts, £102 for Mill Lightnings, £91 for Mill Hearts and £72 for grade Hearts. Dark jute is not so weak at £105 for good Daissee-2/3 and £99 for grade, £115 for grade Tossa-2/3 and £106 for grade Tossa-4, all c.i.f. U.K., May-June shipment.

At the close, Calcutta goods prices are 61s 9d for 40in. 10oz. and 47s for 7½oz., April, and 62s and 47s for May and June. B Twills are at 152s 3d, 153s 3d and 153s 6d for the respective positions of shipment, all f.o.b. Calcutta.

Imports of raw jute into the U.K. during the first quarter of this year have been 152,220 bales, costing £3,481,336, compared with 368,350 bales worth £6,311,312 for the same three months of last year. Imports of jute fabrics are also considerably less at 33,568,000 square yards (£1,042,783), against 66,243,000 square yards (£2,189,277). Imports of sacks and bags have been 96,140 cwts (£526,120), against 72,771 cwts (£392,083).

Commodity Markets

BRITISH TEXTILE REVIEW

VOLUNTARY LIMITATION OF SUPPLIES OPPOSED

THE problem of duty-free imports of cotton goods has reached a critical stage. In March, the British Government took direct responsibility for negotiating with Hongkong, leaving the cotton textile industry's representatives to arrange for further discussions with their counterparts in India and Pakistan. The formal recognition of Hongkong's colonial status did not, however, impress the millowners of Hongkong, and the Permanent Secretary of the U.K. Board of Trade, Sir Frank Lee, found that their opposition to voluntary limitation of supplies was as strong as ever when he arrived in the colony for negotiations. Meanwhile, the industry is initiating changes which reflect the damage, and at the same time acknowledge the permanence of low-priced imports.

The organisational change of particular importance is the formation of Weaving Reorganisation Ltd. Sponsored by the Cotton Spinners and Manufacturers Association and the Rayon Weaving Association, it is intended to facilitate the closing of uneconomic mills. There is, of course, no question of compulsion. The idea is that there are too many looms in the cotton and rayon-weaving industry and that some of the equipment is out of date and should be scrapped rather than replaced. Some smaller units have little incentive to undertake the financial risk of re-equipment, even if the necessary finance is available, and will, it is believed, be glad too have an opportunity to close their mills on reasonably advantageous terms. The new company will offer such terms, for it does not intend to operate for profit, and will expect the industry itself to provide a part (though not the greater part) of the compensation money.

Organised Rationalisation

The contraction of the cotton textile industry has been in progress not only years but decades, and the industry has experience of organised rationalisation. But there has been no comparable development since 1936, when the object of attention was the spinning industry. In that year, a surplus spindles board was established (not by the industry but by Act of Parliament); it existed for three years and eliminated more than 6 million spindles in that time. There is an essential similarity but also an important difference between the circumstances of 1936 and 1958. The common factor is Eastern competition, though in the 1930's it was mainly from Japan, whereas now it is mainly from India, Pakistan and Hongkong. The difference is in the new emphasis on the U.K. market. Over many years the British industry's export trade has been declining as productive capacity has increased in countries with cheaper labour; only comparatively recently has the home market been invaded by these suppliers.

Case for Protection

Long Easter holidays for many thousands of operators are evidence of the present state of the cotton textile industry, and an illuminating background to this has been provided by the insistence of the president of the Federation of Master Cotton Spinners Associations, Mr. Ernest Hirst, that imports from low-wage textile-producing countries must be restricted. Outside the industry, however, Mr. Hirst's arguments have been severely criticised. He points out that the Lancashire cotton textile industry's expenditure of more than £100 million on new equipment between 1948 and 1957 compares favourably with that of other countries' cotton industries. The vigour of the British industry in introducing new equipment and methods is commendable. But does it prove that the British industry is entitled to protection? Or does it suggest that the British Industry, however efficient technically, cannot be competitive economically?

The opponents of protection (who are not unmindful of the British consumer, whose interests are often overlooked in these discussions) point out that good equipment can be operated as efficiently by workers with low wages as by those with high wages, and that British labour may be employed more economically in other industries which are not yet firmly established in low-wage countries. They point out, too, that if wage rates are accepted as a main element in the case for protection, the British textile industries' arguments against protection of the north American textile industries will be seriously weakened. This point is especially important because it seems that no change in British policy, particularly in relation to imports from other members of the Commonwealth, can be drastic enough to change the general trend of the cotton industry towards high quality goods produced in relatively, but not absolutely, small quantities. The main threat to the high-quality trade is import restrictions abroad; it is not affected by imports of cheap goods at home. No action by the British Government can protect the industry from the competition of low-cost producers in the world market, and any action against this competition in the home market will naturally be used as an argument for protection against imports of British textiles abroad. And, if living standards generally are tending to rise, Britain can return a substantial share of the world trade if she can continue to produce high-quality goods relatively cheaply.

Recession in Wool

It has often been possible to contrast the strength of Yorkshire's trade with the weakness of Lancashire's, and there is still no evidence that the wool industry is suffering a long-term decline. It is, however, suffering a cyclical recession. Declining raw material prices have depressed the industry's profits before, but the present recession in activity is the first real downturn since the prewar era, and the relative stability of the raw material in recent months has not reversed the trend, as was hoped. The turnover of the Bradford Conditioning House is a reliable guide to the state of the trade. The total weight of material handled last year was 115¾ million lbs—4½ million lbs more than in the previous best year, 1956. In the first quarter of this year, the turnover was 28¼ million lbs—2½ million lbs less than in the first quarter of last year.

Activity began to decline in the latter part of last year, the main factors being the decline in primary values, the raising of the U.S. tariff, and the raising of the U.K. Bank rate. With values steadier, the U.S. quota and tariff at least no worse, and Bank rate reduced, it might have been supposed that trade would expand, although Japan's restrictions caused some disturbance last month. The explanation seems to be that retailers and manufacturers of clothing have not yet regained confidence in values and have further reduced their stocks, a tendency that has been accentuated by the price-cutting campaign of big retailers. Consumer demand, however, seems to be well maintained, and some measure of restocking cannot be long delayed.

UNCERTAIN OUTLOOK FOR TIN

The International Tin Council's export quota scheme has been in operation for almost four months, but the price of the metal remains stubbornly around the "floor" level of £730 a ton, at which the Buffer Stock manager has to support the market. The first Russian tin to be sold through the London Metal Exchange, it is expected, will be delivered to the market soon, and there have been tentative approaches for refined Chinese tin to be registered. Meanwhile, argument continues as to whether the Tin Council, through the operation of its Buffer Stock can hold the £730 "floor" level. In their latest monthly review of the tin market, A. Strauss and Company, the metal merchants, say it is improbable that although the Buffer Stock manager must have about 20,000 tons in hand, there is enough money from earlier contributions to buy another 3,500 tons. Their view is that, with the "pipeline" flow drying up and the 40 percent export cut likely soon to have its full impact, there should be little surplus for the manager to take up. He also has in reserve the special fund which the Council agreed to ask for at its January meeting. No advantage would be gained, the review asserts, by reducing the basic price below £730, as this would not ease the problem of coping with surplus supplies. Moreover, any significant cut would result in most of the world's tin producers working either at inadequate margins or at a loss. The review produces figures which suggest that even if tin rose to the Council's minimum selling price of £781 a ton, the percentage increase in the price of the metal over the past 20 years would still be less than that of copper, lead and zinc.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced further by 0.5 percent to 107.1 during the week ended 12th April, 1958, compared with 106.6 for the previous week. The index was higher by 1.4 percent and 1.0 percent, respectively, when compared with the corresponding week of the previous month and that of last year. Higher prices of barley in Jaipur (+27%), potatoes in Patna (+20%) and in Mettupalayam (+7%), mung in Bombay and eggs (+11% each), milk in Bombay and fish in Calcutta (+9% each), rice in Balurghat, wheat in Abohar and cashewnuts (Indian) at Quilon (+6% each), arhar and tea (+4% each), groundnut oil (+2%) and urad, mustard oil and gur (+1% each) raised the index for Food Articles by 0.9 percent to 104.7, compared with 103.8 (revised) for the earlier week. The prices of rice in Kotma (−15%) and in Badati (−5%), cashewnuts in Mangalore (−11%), potatoes in Kanpur (−8%), onions and oranges both in Calcutta and meat in Ludhiana (−7% each), jowar and chillies (−2% each) and bajra (−1%), however, moved down. The index for Tobacco remained stationary at the previous week's level of 91.7. The index for the Fuel, Power, Light and Lubricants group stood at 114.6, compared with 114.5 for the earlier week. The price of castor oil (+1%) showed an advance. A decline in the prices of raw cotton in Tirupur (−5%), tanning materials (−4%), raw silk (−2%) and rapeseed, cottonseed and lac (−1% each) was almost neutralised by an advance in the prices of groundnuts (+2%) and raw wool and castorseed (+1% each) and the index for Industrial Raw Materials stood unchanged at its previous week's level of 113.6. The index for Intermediate Products rose by 0.6 percent to 109.1, compared with 108.4 for the earlier week. Items which showed noticeable variations were: rayon (+4%), aluminium circles (+3%) and zinc (+2%). The prices of oilcakes (+1%) showed an advance while those of bobbins moved down by 1 percent and the index for Finished Products stood at 107.8, compared with 107.7 for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 12-4-58	5-4-58	15-3-58	13-4-57
I Food Articles:	104.7	103.8(R)	102.4	103.3
(a) Cereals	96.6	96.3(R)	95.0	100.7
(b) Pulses	82.2	81.2(R)	78.1	83.7
(c) Fruits and vegetables	97.2	97.5(R)	95.4(R)	119.3
(d) Milk and ghee	104.6	103.5(R)	104.6	103.2

PRODUCTION OF IRON ORE INCREASES

The production of iron ore in India increased during 1957 to 5,020,000 tons, according to the Indian Bureau of Mines. During the preceding year, it was 4,858,000 tons. The two major producing States—Bihar and Orissa—accounted for 1,935,000 tons and 2,042,000 tons, respectively. In the previous year, they produced 1,848,000 tons and 1,770,000 tons. Among the minor producing States, Andhra Pradesh accounted for 267,000 tons, Mysore for 532,000 tons and Bombay for 119,000 tons in 1957, against 402,000 tons, 541,000 tons and 127,000 tons, respectively, in 1956.

Engineering and Transport

INDIA-CEYLON AIR AGREEMENT REACHED

MOSCOW-NEW DELHI SERVICE LIKELY TO START SOON

(FROM OUR NEW DELHI CORRESPONDENT)

AN air agreement has been concluded between India and Ceylon, under which the latter has agreed to satisfy India that the aircraft on its international services are its "own property." Ceylon will have two services a week through Bombay. According to normal practice, a contracting country is eligible to pick up 40 percent of its carrying capacity as "fifth freedom" traffic, namely, traffic picked up *en route*. In the case of Ceylon a slight liberalisation has been agreed to. For instance, if the 40 percent is equal to 12 seats in a plane, Ceylon will be permitted to pick up 14 passengers on the way to India or in India for destinations in Ceylon, or in outward journeys beyond India.

Moscow-New Delhi Flight

Air-India International and Aeroflot will begin weekly services between Moscow and New Delhi, shortly after an agreement has been signed by India and Russia within the next six weeks. Moscow Radio has said that the services to New Delhi and to London will start this summer. The Russians claim that Aeroflot's jets, *Tu-104s*, will make their flight from Moscow to New Delhi in about seven hours, compared with Air-India International's 12 to 13 hours with its *Super-Constellations*; moreover, the Russian planes, it is claimed, will "leap over the Himalayas," while the Indian aircraft will have to make a detour of 200 kilometres around them. For the Moscow-London route, Aeroflot still has to negotiate rights through Copenhagen. The negotiations with the Scandinavian countries have been suspended, as they insist on reciprocal rights for S.A.S. to stop at Moscow *en route* to Tokyo. The Russians want the right eventually to fly to the United States. An agreement concluded last January provides for negotiations to work out a reciprocal arrangement. The United States recently turned down a Moscow request to fly a dance team in two *Tu-104s* to New York. The U.S. State Department said that it welcomed Russian plans to bring the dance troupe to that country, but pointed out that the proposed flights were "unofficial", unlike the three previous flights by Soviet *Tu-104* jets which brought Government representatives to the United States. No agreement yet existed to allow such flights, the State Department said.

K.L.M. Plans Polar Service

Air talks between India and the Netherlands have just been held. K.L.M. hopes to inaugurate its polar service this autumn from Amsterdam to Tokyo. It is considering medium-range jets, and expects to decide this autumn whether to buy them or to order additional *DC-8s* for use on medium runs, Mr. J. J. Mulder, vice-president for operations, has said. Under study are the *Boeing 720*, the *Convair 880*, the de Havilland *Comet IV* and the Douglas *DC-9* planes. The airline would require ten to 20 aircraft initially, and would introduce them in service in 1962 or 1963, if an order is placed this year. Mr Mulder says that K.L.M. is also looking for a turboprop all-cargo plane.

P.A.A. Transatlantic Jet Service

Pan American Airways, it is reported, will soon announce the starting of its *Boeing 707* jet transatlantic service on 1st November, with one flight daily between New York and London and one between New York and Paris. One of its *Boeing* planes will be equipped with interior furnishings prior to its first flight. Meanwhile, American Airlines' first *707*, the seventh on the line, has been moved to final assembly.

New Aviation Fuels

New aviation fuels which will improve the performance of all engines, from the conventional piston to rocket types, are being produced and will be in use soon, an oil company official has told a meeting of the American Society of Mechanical Engineers. Among the new types is a gasoline additive which will give commercial piston-engined transports more power a gallon. In spite of higher costs for the fuel, he has said, it will bring a net saving in the operating cost of approximately 3 percent, not taking into account the anticipated savings in engine overhaul costs. Other fuel developments he has explained are pyrophroc fuels (liquids that ignite spontaneously in air) for jets, which will "virtually eliminate flame-outs." Such fuels produce more thrust so that smaller engines can do the equivalent work of larger ones.

B.O.A.C. to Put Jets on Commercial Routes

B.O.A.C. may be the first world airline to fly jets in commercial service since the *Comet I* was grounded in 1954. The Corporation, it is said, is considering the introduction of the *Comet IV* on the north Atlantic route this autumn before Pan American Airways begins its transatlantic flights with *Boeing 707s*. The use of *Comet IVs* on the north Atlantic would represent a switch in B.O.A.C.'s previously announced plans. The Corporation is awaiting the delivery of its *Boeing 707s* in December 1959 before offering jet services across the Atlantic. It has just been announced that *Comets* will enter service first on the Far East routes to Tokyo and Australia in the spring of 1959. The range of *Comet IVs* is 3,000 miles which is not enough to assure a non-stop service across the Atlantic in both directions. B.O.A.C. began its once-a-week London-New York *Britannia* flights last December, and it was announced on 17th March that *Britannias* would take over the daily Monarch service now operated with *Stratocruisers* in September. Other transatlantic flights are now flown with *DC-7Cs*. B.O.A.C. has 19 *Comet IVs* on order, nine for delivery this year and ten during 1959. B.O.A.C. says its summer bookings for transatlantic travel are 30 percent higher than they were last year at this time, and attributes the increase largely to the new economy class service which was introduced on 1st April. Some 60 percent of the booking is for this class. With 32 flights weekly between New York and the U.K. alone, and a daily service for the first time between Boston and Britain, B.O.A.C. is offering the highest transatlantic frequency in its history. *Britannias* will operate seven flights weekly on the midwest route to Chicago and Detroit and two a week between London and San Francisco.

Proposed New S.A.S. Route to Canada

The Scandinavian Airlines System is planning a new route to Montreal, subject to Canada's approval, the company reports. The plans are for two services a week between Copenhagen and Montreal, as from 1st May. The service will be operated only with the new economy class, and as it is intended for emigrants, there will only be westbound flights. Upon arrival in Montreal, the airliners will continue their flight to New York and return to Scandinavia on the regular route *via* Gander in Newfoundland. On S.A.S.'s Scandinavia-South Africa route, flying time was cut by ten hours from 1st April, when the *DC-7C* "Global Express" service began between Stockholm and Johannesburg. The aircraft are scheduled to leave Stockholm on Friday mornings and to arrive in Johannesburg by noon next day. Intermediate landings will be made in Hamburg, Zurich and Athens, while there is also a technical landing in Nairobi. The service includes both first and tourist classes, and the number of passengers has been limited to 57.

Third S.A.S. Polar Flight

The Japanese authorities have approved a third weekly S.A.S. polar flight between Europe and Tokyo. The service started under S.A.S.'s summer schedule on 1st April. The airline also operates two weekly services to the Far East *via* India, one weekly flight *via* Manila and one *via* Djakarta. By 24th February, the first anniversary of the transpacific polar service, S.A.S. had flown 7,000 passengers over the route.

Developing Australian Airports

The Australian Civil Aviation Department is planning the development of five airports capable of handling jets. A new airport may be built in Melbourne, and that in Perth will undergo major expansion. At Sydney, Darwin and Brisbane, measures will be taken to reduce noise, heat and blast. Qantas has announced its own plan for expansion at Mascot airport, Sydney, in preparation for the introduction of *Boeing 707s* in service in May 1959.

Reconfirming Reservations

The airlines' best advice to tourists this season is "enjoy yourself—but re-confirm your reservation if you want to get home on time." New rules now effective on all scheduled transatlantic airlines require passengers holding reservations on westbound flights out of Ireland, the U.K. and Continental Europe to the United States and Canada, to re-confirm their space not less than 48 hours before the flight time. If they do not, the airlines will be free to cancel the reservations and to sell the space to other passengers. To re-confirm, the passenger need only contact the office of the airline on which he holds space at the point from which the return flight is to depart. The requirement does not apply, however, if the passenger is stopping over there for less than 48 hours on a continuing journey. "If in doubt, of course, the best thing is to re-confirm anyway," Mr. John Brancker, Traffic Director of the International Air Transport Association, advises. "Particularly in the peak tourist season, a telephone call is a small price to pay for the absolute assurance of getting home as planned. If language is a difficulty, or if the telephone system seems strange, any airline ticket office in Europe will be glad to help. Re-confirmation can, of course, also be effected in person, by telegraph or by letter. The new rule is part of a concerted effort by the airlines to end the 'no show' problem, which is created by passengers who make reservations and then change their minds, but who fail to notify the airline in time to release the space for others who want it. We want to make 100 percent certain that there is a seat for every passenger who wants to travel and a passenger in every seat—particularly during the peak vacation season, when transatlantic space is at a premium."

A similar re-confirmation rule now applies to passengers who hold reservations on international flights out of the United States and Canada to all points. They are required to re-confirm their reservations not less than six hours before the scheduled departure, unless their stop-over is for less than 12 hours. In addition to the re-confirmation requirements, the airlines have also set up new ticketing time limits which have been applicable on international bookings out of Canada, the United States, Mexico and Cuba since 1st April. Passengers making reservations on these flights earlier than three days before the scheduled departure, must purchase their tickets not less than 72 hours before the take-off or within 48 hours after the airline has confirmed their reservation. If they make their reservations less than 72 hours before the take-off, they must buy their tickets at the earliest practicable time, which is to be determined by agreement with the reservation agent.

Calcutta Markets

IRREGULAR DEMAND AT TEA EXPORT SALE

STRONG SUPPORT FOR DUSTS

AT Sale No. 43, held on 28th and 29th April, export offerings amounted to 38,800 packages. There was a strong and fairly general demand which, however, became irregular and easier as the Sale progressed. "Teas for price" opened strong, but the demand weakened except for the Fannings which were appreciably dearer. Plain black brokens were from 4 to 6nP dearer, but although the Fannings in this category were keenly sought after, there was little quotable change in prices except for the best which frequently sold well above valuations. A strong feature of the Sale were the bright liquoring mediums and these showed irregular advances, while the lower mediums, opening steady, were sometimes easier at the close. The small amount of C.T.C. teas on offer were readily taken up at about last rates, but non-wither Dooars teas declined by 4 to 8nP. Clean and well-made whole leaf grades were fully firm to dearer, but the inferior stalky kinds realised lower prices and were difficult of sale.

Quotations

	1958 Rs.
Clean Black Pekoe	2.25 to 2.30
Plain Broken Pekoe	1.58 to 1.62
Plain Fannings	1.68 to 1.72
Medium Broken Pekoe	1.64 to 1.68
Medium Fannings	1.84 to 1.88
Best C.T.C. Assam B.P.	2.60 to 2.80 (Nom.)
Best C.T.C. Assam Fgs.	2.80 to 3.00 (Nom.)

At the Internal Sale Dust offerings amounted to 19,594 chests, for which there was a very strong and general demand, and prices were firm to dearer. Commons, Dooars and Assams of orthodox manufacture were a strong feature, particularly the cleaner leafy types, and all descriptions were generally 4 to 8nP dearer. C.T.C. Assams were generally irregular, the best liquoring kinds being barely firm while the brighter liquoring mediums were often considerably dearer. The poorer descriptions on offer generally sold at about valuations.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.68 to 1.70	1.60 to 1.65
Medium Assam Grainy Dust	1.70 to 1.74	1.63 to 1.70
Medium Assam C.T.C. Dust	2.00 to 2.20	1.70
Best Assam C.T.C. Dust	2.80 to 3.00	Not available

Leaf teas on offer were 1,434 chests and these met with a fair general demand at irregular rates.

FREIGHT MARKETS DULL AND EASIER

THE brighter trend in Atlantic freight rates over the past week-end deteriorated later and conditions became very dull. Shipowners expected no relief in the immediate future. The absence of tramp cargoes and other circumstances prompted certain owners to compete in the established liner trades. Rate-cutting had the unwelcome effect of reducing such business as was available to a mere trickle, with buyers and sellers holding off in anticipation of the next cut in freight rates. On the other hand, some Conferences were maintaining inflated freight rates in spite of genuine requests from shippers for reductions, and were thereby preventing the expansion of business.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks were less than in the previous week.

Bazaar Sales

(Between 24th April and 28th April, 1958)

Cowhides: Wet salted (Ord.) 7,000 pcs. on the basis of Rs. 8.75 to Rs. 10.50; Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 13.50 to Rs. 25.

Goatskins: Wet salted (Patna, Daissee and Kustia) 13,600 pcs. on the basis of Rs. 320 to Rs. 330, Rs. 350 to Rs. 360 and Rs. 380 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur 13,000 pcs. on the basis of Rs. 345 to Rs. 370; Purneah-Kissenganj 6,000 pcs. on the basis of Rs. 355 to Rs. 370; Pakur-Patna (Ord.) 16,500 pcs. on the basis of Rs. 320 to Rs. 340; Muzafferpore-Patna 8,000 pcs. on the basis of Rs. 330 to Rs. 350; Muzafferpore (heavy) 3,000 pcs. on the basis of Rs. 380.

Bazaar Stocks

(28th April, 1958)

Cowhides: Wet salted 66,400 pcs.

Goatskins: Wet salted (Daissee, Patna and Kustia and Killed) 23,000 pcs: Assam-Dinajpur-Jalpaiguri 37,000 pcs.; Muzafferpore-Patna-Pakur-Kissenganj 78,500 pcs.

COMPANY AND PUBLIC NOTICES

KYANG TEA SEED COMPANY, LIMITED.

NOTICE is hereby given that the Thirtieth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 22nd May, 1958 at 3 P.M., for the following purposes :—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1957.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 15th May, 1958 to 22nd May, 1958 both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 17th April, 1958.

THE RAMNUGGER CANE & SUGAR COMPANY LTD.

NOTICE is hereby given that the Twenty-first Ordinary General Meeting of the Shareholders of the Ramnugger Cane & Sugar Co., Ltd. will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, on Friday, the 30th May 1958, at 12 noon, to transact the following business :—

1. To receive the Directors' Report and pass the Audited Accounts for the year ended 31st August 1957.
2. To declare a dividend on Preference Shares.
3. To declare a dividend on Ordinary Shares.
4. To elect Directors.
5. To appoint Auditors and fix their remuneration.
6. To transact any other business which may properly be brought before the Meeting.
7. To consider and, if thought fit, pass with or without modification, the following Resolution as a Special Resolution :

"In view of the limitation imposed by Section 309 (4) (a) of the Companies Act, 1956, IT IS HEREBY RESOLVED that the total amount of commission due to the Directors of the Company with effect from the 1st September 1956 shall not exceed 1% of the nett profits of the Company, payable in such proportions as the Directors may decide, or failing decision, to be shared equally by them."

Explanatory Note :

Prior to 1st September 1956, the Directors were entitled to a commission of 2% on the nett yearly profits of the Company. Section 309 (4) (a) of the Companies Act, 1956, provides, *inter alia* that a Company having a Managing Agent, may, by special Resolution, authorise the payment to Directors of a commission not exceeding 1% of the nett profits of the Company. It is proposed to move the above Resolution so as to authorise payment of commission to Directors in accordance with the provisions of the above Act.

NOTICE is also given that the Share Transfer Registers will be closed from the 15th to 30th May 1958, both days inclusive.

A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

By Order of the Board,
ANDERSON WRIGHT LTD.,
Managing Agents.

Calcutta, 28th April 1958.

DIVIDENDS DECLARED OR PROPOSED—Budge-Budge Jute Mills Co. Ltd.—Nil (o); Lucky Valley (Nilgiri Hills) Tea Estates Ltd.—10 p.c.; Coonoor Tea Estates Co. Ltd.—7½ p.c. (f) (o); Shree Krishna Gyanoday Sugar Ltd.—16 p.c. (o); Seebpore Coal Co. Ltd.—Re. 1 per share (o).

SUGAR RISES

During the week ended 30th April, sugar sales in the Calcutta market averaged 3,000 to 4,000 bags daily. Arrivals a day were 2,000 bags and stocks totalled 40,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-12 for ordinary grain and Rs. 39-8 to Rs. 39-12 for big grain. Ex-mill rates varied between Rs. 35-11 and Rs. 35-13. The market rose due to the expectation that the export policy for sugar would be announced soon.

SHELLAC QUIET

During the week ended 29th April, the market was quiet. The range of quotations was as follows :

Pure Buttonlac	Rs. 82 done, 81 value; 80 done.
Lemon No. 1 Shellac	Rs. 83, 81.50 buyers; 80 done and buyers; 78.50 buyers.

T=Dividend Taxable.

BANKS

H indicates that Share capital is half paid. O., C. and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE INDIAN FINANCIAL REVIEW

70th YEAR OF ISSUE — CALCUTTA, 8th MAY, 1958. — Vol. CXXXX No. 3508

A YEAR OF STRAIN FOR THE INDIAN ECONOMY

EXCHANGE BANK CHAIRMEN'S REVIEWS

THE past year has been a period of political uncertainty and economic instability in large parts of southern Asia. It is not surprising, therefore, that a mild anxiety should feature the annual reviews circulated by the exchange bank chairmen to their shareholders this year. The political uncertainty is highlighted by an open rebellion in Indonesia, continuing lawlessness in extensive areas of Burma, and frequent Government reshuffles in such countries as Pakistan. The economic instability is marked by high domestic prices, food shortages, deficits in external trade, foreign exchange crises and widely fluctuating primary product earnings. The steady expansion in the production and trade of the free world during recent years seems to be slowing down; for the under-developed countries of Asia, this might well have dismal implications, since their progress depends greatly on the business activity of their western trading partners. As their economies are based narrowly and heavily upon an agricultural system which remains vulnerable to the vagaries of the weather, the increasing international competition is a genuine source of anxiety. It is particularly so because many of these countries have launched ambitious development programmes to expand and diversify their production. The financing of these programmes is becoming more and more difficult: domestic savings, already small, are hard to mobilise, current earnings are being squeezed by the international recessionary trends, while the prospects of attracting foreign capital have been undermined by unrealistic governmental policies born of political expediency.

Such is the broad picture which emerges from the exchange bank chairmen's reviews, and it is a picture that has considerable relevance to Indian conditions. In surveys that are marked by caution and restraint, the chairmen point to the serious difficulties which this country has run into; yet the undertone seems to one of hope that the difficulties will ultimately be surmounted. Concentration is inevitably on the foreign exchange shortage, which has not only affected the working of the exchange banks but has thrown the entire second five year plan out of gear. Mr. V. A. Grantham, of the Chartered Bank, describes it as "the country's main problem", and while avoiding mention of the administrative mismanagement which has brought it about, outlines some of its more serious consequences. The fundamental cause of the shortage is that the second plan is too big in relation to the available resources. Huge import commitments have been made in former years for capital goods, for food, and to a lesser extent for consumer goods, while not much thought has been given to how these commitments would be financed. For many months, the financing has been done by drawing on the sterling reserves at an extraordinarily rapid rate; this has caused much embarrassment to the sterling area in general and to Britain as its banker in particular. Sir Oliver Franks, of Lloyds Bank, therefore, justifiably stresses the importance of members of the area recognising their growing inter-dependence and their obligations to one another. It is true, as India claims, that the sterling balances are her own, to be used as she likes; yet, the fact remains that as long she is a member of the sterling system and derives large benefits from it, it is her duty to see that her actions do not undermine its strength.

The sterling reserves standing to this country's credit cannot be run down much further without seriously undermining her economic stability. Already, the drain has been reduced with the help of drastic import restrictions. The restrictions have contributed to a rise in domestic prices, and there would be little to justify them apart from the expediency imposed by excessive prodigality in the past. Ultimately, they will even affect exports, and encourage a trend towards bilateral trade which cannot do much good in the longer run. Already, as Mr. J. K. Michie, of the National Overseas and Grindlays Bank, points out, the prices of the main commodities which India sells abroad are low. Yet export earnings have to be substantially increased in the near future—not only to finance external trade deficits but also to ensure the smooth servicing of the loans and credits which have been obtained from abroad. Mr. Michie does well to stress that these loan commitments will be heavy in the future. This is a point which the Indian Government has only lately begun to recognise; the first flush of enthusiasm seen a year ago on hatching the scheme to finance imports through deferred payments or medium-term credits is now waning as its less happy implications are better appreciated.

The important contribution which foreign private investment could make in easing the foreign exchange shortage is still inadequately recognised. Loans and credits are rarely long-term; only in exceptional cases can they be amortised fully by using the earnings of the projects which they have been used to finance. The Government does not appreciate that private investment in industry, especially equity investment, is intrinsically of a more permanent nature. Its superiority over ordinary loans and credits lies in the fact that whereas the latter have to be definitely returned after a certain lapse of time, investment does not necessarily have to be returned; on the contrary, the inflow of private equity capital into a country tends to have a "snowballing" effect in that it creates interest and brings forth more capital from other sources, especially for ancillary industries. That is probably the aspect where the Government's economic policies have done most harm in this country. Sir Kenneth Mealing, of the Mercantile Bank, points to the disastrous effect which Mr. T. T. Krishnamachari's Budget last year has had on the confidence of foreign as well as domestic investors. Taxation has reduced savings and discouraged investment in productive fields; it has become a strong disincentive to effort and enterprise. The Hon. C. Blaker, of the Hongkong and Shanghai Banking Corporation, reiterates in this connection the main conclusion of the Birla industrial delegation's report when he says that "the slow growth of domestic savings, which has resulted in a shortage of local capital, could have an unfortunate influence abroad." Few will deny that the flow of foreign private investment into India is badly restricted by the fact that matching domestic capital cannot be found.

The Government's growing administrative and defence expenditure, as well as its inflated industrial ambitions, are primarily responsible for taxation being so heavy. Sir Kenneth Mealing makes a valid point when he suggests that, as a result of the large fiscal burdens, the loss to expansion in the private sector has been more than the gain to expansion in the public sector. The Government's anxiety about industrialising the economy rapidly would be unnecessary if fiscal reliefs were given in order to create a more favourable climate for foreign and domestic investment; such investment would before long cater for the industrialisation that is required. The Government could then devote itself more vigorously to a field which has hitherto been badly ignored—increasing agricultural, especially food, production. The uncertain nature of the achievements there is primarily responsible for the stresses and strains which have developed in the economy in recent years. Food output is liable to vary quite considerably; it remains as ever a gamble on the monsoon. In spite of the Food and Agriculture Ministry's cheerful claims, the outstanding feature of the situation is that prices are high, increases in food production have been inadequate, especially in relation to the growing population, and imports are contributing a good deal to the loss of foreign exchange. Mr. Grantham makes an important reference to the danger of having a substantial food deficit at the same time as the foreign exchange reserves are low. The Government has hitherto been apt to ignore such warnings in the hope that generous commodity aid will continue to come from the United States; although the hope is not unfounded, it is unwise to rely on it as heavily as India seems to be doing.

While food imports are large, prices are high and inflation continues in the economy. This is mainly because demand has been rising faster than supplies. The growth in population makes it doubtful whether a healthy balance can be achieved between the two in the near future. Meanwhile, another factor promoting the rise in demand for food, and therefore inflation, is that investment is too large in relation to savings. Mr. Michie points out that industrial expansion has to be conditioned by the savings available if progress is to be stable and sure. The recent discussions at the National Development Council meeting in New Delhi suggest that the dangers of deficit financing, which has hitherto been coolly accepted as the easiest way of bridging the gap between savings and investment, are still far from adequately realised. This is unfortunate; one would have thought that after a year during which there has been considerable labour unrest, among the Government's own employees too, the implications of inflation would be more realistically understood. The steady rise in prices, which has only recently been stemmed to a limited extent, has been giving rise to wage claims, and thus been pushing up the costs of trade and industry. Much of the stagnation in the level of exports is directly attributable to the fact that production costs in India are high. Another aspect of the problem is that irresponsible behaviour in the trade unions has been encouraged; strikes have been threatened or started for flimsy reasons by leaders who are anxious to exploit the working class unrest which develops when living costs are increasing. Labour psychology in a period of inflation is such that it is much more receptive to ideas of subversion and indiscipline. Any excuse becomes good enough if it can be used to harrass the employer. It would be a dangerous error if the Government assumed that inflation can be controlled by tightening bank credit along the lines attempted in recent months. Credit controls can at best be patchy, and they touch only the organised sectors of trade and industry; the vast sectors which are not organised, and where much of the current hoarding, especially of foodgrains, is taking place, are left relatively unaffected.

The problems which the exchange bank chairmen have reviewed are undoubtedly serious, and as far as India is concerned, they will not be easily solved. Austerity is likely to remain the order of the day. Yet, beneath the strong current of anxiety and disappointment, there is to be found in these surveys a measure of hopefulness for the future. Vigorous efforts are being made to close the foreign exchange gap, although the emphasis unfortunately is still on restricting imports rather than increasing exports. Foreign aid, especially in the form of loans, credits and deferred payments, is being negotiated. As a result of recent agreements with various countries, particularly the United States and West Germany, the immediate outlook, in the Hon. C. Blaker's words, has become "more promising." The Government's reluctance to trim the second five year plan continues, but it may perhaps reasonably be expected that in spite of the recent brave words spoken in New Delhi, the inherently unrealistic nature of the plan will be recognised as circumstances prove it impossible to fulfil. The one sphere where hardly any signs of realism can yet be recorded is in promoting savings and creating a proper climate for attracting domestic and foreign investment. Perhaps it is towards this aim that the Government's most urgent efforts could now usefully be directed.

THE GOVERNMENT'S NEW LOANS

A WELL-TIMED ISSUE

THE Central Government's annual borrowing has begun early this year. It is no secret why this should be so. The money market has been slacker than usual at this season and for some weeks now the total of advances outstanding has been almost stationary—a sign that the "busy" period is over. The loans have, therefore, been well-timed, and the States' borrowing, which is expected to be heavier this year than last, will not need to be crowded into what is usually a brief interval between the launching of the Central loans and the end of the slack season. As was expected, the new loans are three in number and have been spread fairly evenly over the range of official borrowing. They consist of a short-dated issue of 3½ percent bonds, price Rs. 98.75, redeemable in May 1963; a medium-dated 3½ percent issue of National Plan bonds, price Rs 99.50, repayable in May 1968; and a 4 percent loan, issued at par and redeemable in May 1973. No limit has been set for any particular loan, but the total amount required is Rs. 135 crores, and the right has been reserved to accept up to 10 percent more than the ceiling figure if the loans are over-subscribed. The list is due to open for public subscription on 12th May and will close two days later. Full details may be obtained from an official announcement appearing on another page of this issue of *Capital*.

There is no question of whether or not the loans will be a success. The amount involved is large; allowing for the conversion of the 3 percent 1958 and 4½ percent 1958-68 loans which together should total about Rs. 21 crores, the quantity of cash which the market will have to find is round about Rs. 114 crores. This figure compares with last year's total new Central Government raisings from the market, allowing for conversions, of about Rs. 85 crores. Monetary conditions then, of course, were considerably tighter than they are promising to be in the next three months. This year, banks have enjoyed a substantial rise in their deposits, due to a number of reasons discussed in a leading article which appeared on this page last week. The calls made on their resources, however, have not risen in proportion, and liquidity positions are now considerably better than they were at this time last year. Further, a fair proportion of the increase in deposits is accounted for by the U.S. rupee counterpart funds which are lying with the State Bank and will, therefore, be readily available for the new issues. The Life Insurance Corporation, too, after getting its fingers burned with the Mundhra shares, has followed a more conservative investment policy and will by now have surplus funds for investment—it is, in fact, reported to have been accumulating them for some time.

An important selling point is that the loans are reasonably attractive propositions, judged by present market standards. They conform fairly closely with the terms of last year's offers. The short-dated loan will give a gross running yield of 3.54 percent and a redemption yield of 3.77 percent. Its attractions for the banks are obvious, and it is this issue which will probably find the best support. Corresponding details for the medium-dated issue are 3.77 percent and 3.81 percent. This, and the long-dated loan, should be an attractive investment for the Life Insurance Corporation, while the 4 percent 1973 issue will undoubtedly interest provident fund institutions. The yields of both these loans are competitive with those of issues already existing.

In view of the size of the borrowing programme this year, the question arises whether the money market can be expected to be unduly starved of funds for the next few months, and whether the equity sections of the stock markets will be doomed to another protracted period of inactivity. There is no evidence to suggest this will be the case. The amount of cash required is certainly larger than last year, but the state of the capital market should be well able to take care of the difference. The view has been expressed that because the total of the loans—Rs. 135 crores—is Rs. 10 crores less than the figure for the Government's borrowing programme mentioned in this year's Budget, therefore another approach to the market can be expected on the style of last year. This view can be discounted because, in announcing the loans, provision has been made for retaining up to 10 percent in amounts over-subscribed. This could add as much as Rs. 13.5 crores to the Rs. 135 crores already being asked for, which would bring the total well above the Budget's borrowing target. A further approach to the market is unlikely, therefore, to be necessary. The intentions of the States are not so easy to predict. It is confidently expected that they will require more than last year, when only the Bombay and Mysore Governments approached the market for a total of Rs. 9 crores and were met with a response of Rs. 12.45 crores. A large programme of State borrowing would certainly leave the market fairly tight, unless liquidity increases beyond even the level at present promised during the next three months. But it does not seem likely on current showing that loan financing will be required on a scale which will embarrass the market. Indeed, it appears quite likely that the present availability of funds will take care of the States' requirements as well as those of the Centre without undue strain.

CREDITS AND GUARANTEES FOR BRITISH EXPORTS

RESPONSE TO COMPETITION

THE U.K. Export Credits Guarantee Department was recently authorised to extend its cover over a wider range of transactions. Soon afterwards, Lord Mancroft, Minister without Portfolio, hinted in Parliament that the Government might further extend the facilities available to British exporters if foreign governments allowed more liberal facilities to their countries' exporters. The conditions for competitive export credit appear to be emerging. Lord Mancroft referred particularly to the West German proposal for providing long-term export credits. He added that the West Germans had not indicated any intention to provide facilities for credit-insurance in excess of the five-year limit agreed by the Berne Union, but there is a feeling in Britain that the intentions of the Berne Union will be evaded. Lord Mancroft's statement that the British Government would necessarily consider extending cover if British firms were excluded from business because competitors granted credit terms beyond those normally insurable was doubtless intended as a warning.

The extension of cover previously announced did not in any way contravene the Berne Union agreement, but it was certainly intended to assist British exporters. The minimum sum qualifying for a guarantee was reduced from £250,000 to £100,000, and the proportion of a contract that the Export Credits Guarantee Department would cover was increased from 85 percent to 90 percent. The effect of the changes is greatly to extend the range of capital goods for which credit granted by the banks to exporters can be directly guaranteed. Guaranteeing credit does not, of course, automatically make credit available, and some exporters requiring credit for periods of some years have had difficulty in obtaining it. To investigate the adequacy or inadequacy of existing facilities the official bodies concerned—the Treasury, the Bank of England, the Board of Trade, and the Export Credits Guarantee Department (which is a Department of the Board of Trade)—have recently formed a committee.

This move does not necessarily imply that the British Government is relaxing its restraint of credit, which supplies in some measure to export trade as well as to domestic trade. One of the grievances of British exporters is that the authorities do not do enough to assist them in this respect, but there are some indications that the authorities' attitude may be gradually changing. The Government would almost certainly act—in moderation—if there were evidence of appreciable contraction of demand for British capital goods abroad. Mr. Heathcoat Amory Chancellor of the Exchequer, pointed out in his Budget statement that there were reserve powers, outside of the normal insurance scheme, in the Export Guarantees Act, whereby guarantees or finance could be provided over longer periods than at present. Another suggestion is that the facilities of the London money market should be extended to provide full discounting facilities for paper related to exports of capital goods on credit covered by the export credits guarantee. Such paper, secured as to 90 percent by a Government Department's guarantee, has almost the quality of a Government security, and if it were freely marketable as such, credit for exports would certainly be more freely forthcoming.

In this matter of availability of credit British exporters are certainly at a disadvantage compared with their main competitors. In the United States and Germany, for instance, there are institutions in which credit-insurance has been arranged; whereas the British exporter whose transaction is similarly covered has to seek credit where he may find it—and if he is operating on a relatively small scale he is not always able to find it. In his statement above-mentioned, Lord Mancroft made a clear distinction between the provision of export credit and the provision of insurance for such credit. There is evidence of an intention to evade the purpose of the Berne Union agreement by providing, with governmental aid, such abundance of export credit as will make the limitation on the periods of insurance for export credit largely irrelevant. Some of this export credit is, in fact, for long periods—up to 10 years with the facilities to be provided by the government-sponsored fund whose establishment was recently announced in West Germany, more than 10 years with the facilities that have been provided for a considerable time past by the U.S. Export-Import Bank.

In Britain the only official institution providing some kind of assistance to exporters is the Export Credits Guarantee Department, and this body is intended to operate on commercial principles. That it earned a surplus in the year to end-March last may be seen as evidence that this intention is effective. It appears, however, that the additional facilities for exporters that the Chancellor of the Exchequer mentioned in his Budget statement would be more in the nature of disguised export subsidies. The British Government has hitherto stood firmly against the principle of export subsidies (though some people argue that the provision of cheap fuel and power to industry through the nationalised coal and gas and electrical industries is effectively subsidising exporters). But governmental assistance—in one form or another—to the export trade is undeniably increasing in many countries; and in the capital trades it is a serious threat to British interests. If demand for capital goods continues to decline, competition in these trades will become keener and, almost certainly, some governments will grant further assistance to exporters by means of export credits. The possibility of an "export credit race" is causing some anxiety in the countries that export heavy capital goods. In the developing countries, on the other hand, it should offer some consolation for the deterioration in the terms of trade that has resulted from the decline in commodity prices. Prices of capital goods may remain relatively high, but it should be possible to buy more of these goods on credit—and, perhaps, credit of longer term.

Current News and Comment

Aluminium Consumption Rising

The second plan estimate that aluminium consumption will reach 35,000 or 40 000 tons by 1961, seems likely to prove correct. Offtake has been steadily rising, and the sales of the Indian Aluminium Company, one of the two major producers, have shown a marked overall increase in 1957. Circle sales have declined by 430 tons, but this has been more than offset by an increase of 991 tons in the sales of flat and corrugated sheet and plate. The consumption pattern has been changing, and the company has adjusted its production accordingly. The proportion of sheet products to the total has risen from 30 percent in 1956 to almost two-thirds last year. The extrusion press in Alapuram has done good business, its sales having risen to 673 tons in 1957 from 342 tons in 1956 and only 119 tons in 1955. Mr. K. C. Mahindra, chairman of Indian Aluminium, has told shareholders at the latest annual general meeting that the higher offtake of aluminium products indicates a growing demand for the metal, especially in transport. (A fuller version of his speech appeared in last week's issue of *Capital*). He also says that the time schedule for commissioning the Hirakud plant has been closely maintained, and it is hoped that the new smelter will go on stream, as planned, early in 1959.

The company has a plan to double the production from this smelter as soon as practicable. The directors are studying the expansion programme, especially the financial aspects. After the successful convertible loan stock issue of 1956, the board was "feeling a bit hopeful". But subsequent tax enactments and disincentives have chilled the investment climate, so the prospects of raising any further substantial funds in the Indian market, whether by the issue of shares or debentures, do not look good, Mr. Mahindra says. The directors have nevertheless succeeded in persuading Aluminium Ltd., the Canadian associates, that the early completion of the original plan is desirable. The latter has offered a loan of up to $(C)5 million from Canada, which is just sufficient to cover the foreign exchange requirements for this purpose. The Government, too, has announced that the second stage of development in Hirakud, including additional generators, comes within the "core" of the second five year plan. Mr. Mahindra hopes that the Government will facilitate an early completion of the arrangements with Aluminium Ltd. and accord its approval to the company's expansion plans.

Discussing the general economic situation, Mr. Mahindra makes a suggestion which he justifiably describes as unusual. There are over half a million people paying income tax; he says that they should be permitted to "invest" 10 percent of their tax amounts in soil improvement and productivity in a locality of their choice and in the manner they wish. The contributions would not be used for lending purposes. Most taxpayers may be given the option to contribute their tithe to the local co-operative of their choice, as long as the co-operative does not engage in purely credit operations. Those who pay a significant amount in taxes, individuals and corporations, may select a village area or a block of villages for such "investment". "The main thought behind the suggestion is that the non-agricultural sector in responsible positions should develop knowledge and interest and enthusiasm for land improvement," Mr. Mahindra explains.

Small Savings Becoming Smaller

In his Budget speech in Parliament about two months ago, the Prime Minister said that although net receipts under small savings had been rather disappointing, the Government hoped for a substantial improvement in 1958-59 "with more intensive development of the movement with the co-operation of the States." But looking at the dismal picture presented by some States, it is doubtful if the total small savings target of Rs. 100 crores will be realised. According to figures published by the U.P. Directorate of Small Savings, against a target of a little over Rs. 20 crores for the financial year 1957-58, the actual collections amounted to only Rs. 9 crores. This works out to a bare 45 percent of the target. In view of this performance, which is disheartening, the target for the current financial year has been placed at Rs. 9 crores. Whether even this modest figure will be realised, is open to doubt, especially if there is any truth in the allegations which have been freely made in the State Legislature that part of the *taccavi* loans advanced to *kisans* are deducted by the officials for investment in savings certificates. It is also said that promises of firearm licences are made to prospective investors. Such tactics savour of forced loans, which have no place in a scheme for voluntary savings. A comparatively backward State like U.P. should not ordinarily have attempted to raise as much as Rs. 20 crores in small savings, but it is possible that the Centre's decision last year to discriminate against States raising loans in the open market was responsible for the unrealistic targets.

Slow-down in Industry

The rate of expansion of the Indian economy has slowed down. Mr. Nehru pointed to the fact in his Budget speech, but did not indicate clearly what the Government proposes to do about it. There appear to be three main reasons for the decline: first, a shortage of industrial raw materials due to the foreign exchange scarcity; second, a fall in demand in certain sectors of industry, notably textiles; and, third, the disincentive effect of the Krishnamachari Budget last May. In his address to the latest annual general meeting of the Indian Chamber of Commerce, Sir B. P. Singh Roy, the outgoing chairman, has devoted a considerable part of his speech to this question. He does not discuss the reasons, as he thinks that they cannot be correctly assessed at present, but he is quite emphatic in his view that where the slowing down is a result of falling demand, corrective steps need to be taken. "While just at present the lowering of the offtake of goods has not affected production substantially, yet I do feel that the trends in certain industries deserve our serious attention. We are reaching a stage in some of the industries where consumption has not kept pace with production. It will be obviously difficult to increase production without simultaneously creating an expanding market for industrial products." A fall in consumption is to be guarded against.

Discussing the second plan, Sir B. P. Singh Roy declares that the people support the broad ideas underlying it. The business and industrial community is no less keen in its support than any other. In fact, it realises that it has been given a great responsibility under the plan. While it follows that in order to discharge that responsibility, "the community should be given proper and adequate facilities", this is not what is being done in practice. The high level of taxation, along with the falling purchasing power of money, has reduced savings and created disincentives for investment. The level of personal taxation in this country is among the highest in the world; new taxes on wealth and expenditure have been levied and a levy is proposed on gifts. While introducing his Budget last year, Mr. Krishnamachari claimed that the measures he was introducing would encourage investment. But the facts have belied that assertion. "It is well known," says Sir B. P. Singh Roy, "that the Reserve Bank index number of variable dividends declined by as much as 25 points in one year. The stock market has steadily deteriorated. Even the Government's small savings scheme has produced highly discouraging results. According to the latest report on the working of the Company Law Administration, it appears that in the latest year, 848 new companies were registered, as against 1,448 in 1955-56 and 1,203 in 1954-55. Thus, not only were the incentives for investment reduced, but even the availability of capital itself became difficult." Sir B. P. Singh Roy points out that even if the purpose is to divert savings from the private to the public sector through a high level of taxation, the net result will be that no new wealth will be created, and that investment in the aggregate will remain the same. The creation of wealth must necessarily precede the establishment of a welfare State if the latter is to have any meaning at all.

Tea: Concern about the Future

There was a sharp decline in India's tea exports in 1957—the quantity dropping to 447 million lbs from 523.6 million lbs in 1956. The U.K., which is by far the best customer, bought only 247.2 million lbs of north Indian tea last year, compared with 308.2 million lbs in the year before. The decline in volume has been duly reflected in value, the amount falling to Rs. 107 crores from Rs. 143 crores in 1956. Tea's contribution to the total of foreign exchange earnings has declined to 16 percent from 23 percent. Mr D. C. Ghose refers in detail to the fall in exports and the factors responsible for it in his presidential address at the latest annual general meeting of the Tea Association of India, at which Mr. Nityanand Kanungo, Central Minister of Commerce, was present. Mr. Ghose stresses two facts as chiefly responsible for the shrinkage in overseas demand—increasing competition from other producers, notably Ceylon and East Africa, and the high rate of taxation on the commodity in India. The East African territories, he explains, are able to get a ready market in the U.K. because they sell at lower prices and are at an advantage where labour matters and taxation are concerned. In the U.S. market, Ceylon is faring better, because in price as well as quality her tea is proving more attractive to the American consumer. The linking of the Indian export duty to the monthly average of London auction prices has introduced an element of uncertainty for the foreign buyer, Mr. Ghose says. "This fluctuating nature of the export duty puts a check on the expansion of our exports by deterring to some extent foreign buyers. This variable nature of the duty is said to have adversely affected forward buying by the U.S.A."

In the circumstances, the industry expects the Government to consider its suggestions sympathetically, but Mr. Kanungo's speech does not sound very helpful. He merely says that the Central Finance Minister has given an assurance that he will look into the industry's case for removing the export duty and it is hoped that a conclusion will be reached soon. "In this connection, you will pardon me if I say the Government has not received from any quarter a rational definition of common tea which could be differentiated from others. Revision of export duty is being considered and will be done, but seeing the possibility of keen competition in the export markets, I wonder if it would not be wise to cultivate the home market so that it can consume more and more of the production." Mr. Kanungo is correct in suggesting that the future stability of the industry depends heavily on the home market, but developing the latter is essentially a longer-term problem. In the short-term, the industry has to be kept alive by taking those measures which will enable it to compete successfully in its traditional foreign markets. Moreover, foreign exchange has to be earned for the five year plans.

Merchant Shipping Bill

The Indian Merchant Shipping Bill has been severely criticised by domestic shipping interests in Bombay. Mrs. Sumati Morarjee, president of the Indian National Steamship Owners Association,

declares in a statement that the main objection is to the proposed definition of an Indian ship under the Bill. The definition makes it possible for a company owned, controlled and managed entirely by foreign interests to be considered the owner of an indian ship. The second criticism voiced by Mrs. Morarjee relates to the reduction to 51 percent from 75 percent in the holdings reserved for Indian interests. She denies the suggestion made by Mr. S. N. Haji, chairman of the All-India Manufacturers Organisation, that the Government of India has had no authority so far to control Indian shipping in the absence of a Register. She says: "While the Indian Register as such did not exist so far for the registration of ships, it is not correct to infer, as has been done by the chairman of the A.I.M.O., that the Government of India, independently constituted since 1947, has had no authority over Indian ships. Under the Control of Shipping Act, 1947, which has now been incorporated in the Bill, the Government of India had the full authority to control and regulate the movements not only of Indian ships in the coastal trade, but they had the authority also to regulate and control the movements of Indian ships in international waters." Mrs. Morarjee thinks that the best way to develop shipping is not to invite foreign participation in the industry, but to seek foreign loans and credits for the purchase of new vessels. The recent Rs. 20-crore loan from the World Bank for the development of Bombay and Calcutta ports shows that external assistance is forthcoming for the development of Indian transportation facilities. Moreover, she says, the Government should contribute from its own resources for the expansion of merchant shipping, which is recognised as the country's second line of defence.

Taxation and Incentives

At business men's gatherings, it has become customary, and necessary, to emphasise the disincentive effect of Indian taxation. Mr. F. C. Badhwar, chairman of the Punjab and Delhi Chamber of Commerce, has done this forcefully in his address at the latest annual general meeting of that body. He points out that corporations now have to pay in taxes over half of their incomes after meeting normal commitments. In addition, many of them are subject to other levies such as royalties, cesses, sales taxes, and octroi duties on the materials they use and the goods they produce. The final result, for example in the case of a mining company, may well be payments to Central and State Governments of between 70 percent and 80 percent of such income as it is possible for it to collect after meeting its rising expenditure. "Let us be quite honest and ask ourselves whether it is reasonable, under conditions of this kind, to expect such companies to incur the high cost of introducing modern techniques and of expansion? Equally, is it natural to expect shareholders to invest their hard-earned savings in companies which are subjected to such penal impositions? " Mr. Badhwar asks. He suggests that the total of taxes, direct and indirect, collected by the Central and State Governments should be limited to about one-third of the sums left after meeting legitimate commitments. Special consideration should be shown to professional and self-employed individuals such as doctors, engineers, accountants, scientists, lawyers, artists and authors, who have to struggle hard for many years before they establish themselves and earn a living wage. Most countries recognise the need for a preferential rate of taxation in favour of these classes of people.

Analysing the figures of tax collections for the past three years, Mr. Badhwar says that it looks as if the point of diminishing returns has been reached. He quotes the familiar proverb about the goose which lays the golden eggs, and says that although the "taxpayer goose" is not yet dead, it is in a bad way and needs nourishment if it is to lay more and better eggs. Mr. Badhwar's discussion of the Government's various policies is forthright. To improve the economic basis of agriculture in cash crops, he suggests that factories using particular raw materials should be allowed to set up industrial farms on an experimental basis, that is, farms for cash crops such as jute, sugarcane, cotton and tobacco. Modern techniques and the results of research can be applied to the farms, and quality crops best suited to the needs of the factories can be grown. "The employment potential in such arrangements will, I am sure, be better than in fragmented land holdings under ideological schemes, based on some arithmetical yardstick of so many acres per head of population." This principle might usefully be pursued further and considered for adoption in the case of factories which process dairy products, fruits, vegetables and even hides, Mr. Badhwar suggests.

Second Thoughts on Prohibition

The Planning Commission made an unsuccessful bid to convince the Estimates Committee of Parliament of the importance of its prohibition section. The Commission claimed that it was due to the co-ordinating activities of this section that there was a "constant improvement in the working of the phased programme of Prohibition in the various States." The Estimates Committee, however, is not convinced, and has recommended that the section be wound up as it has insufficient work. The Commission's claim of "constant improvement in the phased programme of prohibition" is, incidentally, not borne out by the decision of some States to call a halt to Prohibition on financial grounds. The Economy Committee of the U.P. Government has just recommended that the experiment should be confined to the 11 districts where it is now in force, and should not be extended to the remaining 40. If it is extended throughout the State, the loss in excise revenue would be over Rs. 5 crores. A sub-committee appointed by the Economy Committee, which has enquired into the working of Prohibition in the 11 dry districts, has reported that the addicts have taken to drinking methylated spirits. The week-end increase in tipsy motor traffic between Kanpur and Lucknow also indicates that wet and dry districts cannot co-exist comfortably. The Economy Committee suggests that should the Centre at any stage call for total Prohibition, the State should press its case for adequate Central aid to compensate it for the resulting loss in revenue. This is reminiscent of a passage in Mr. Kodanda Rao's dissenting minute to the report of the Prohibition Enquiry Committee of 1955: "There does not seem to be a single Government which professed such zeal for Prohibition as to give it first priority, surrender current excise revenues and impose other taxes. But every Government was willing to introduce Prohibition forthwith if it was subsidised by the Central Government."

Scrap Exports

The recent reduction in freight rates has helped ferrous scrap exports. It is reported that Bombay merchants have booked business for 10,000 tons with Japan for immediate delivery. About 5,000 tons have already been shipped. Freight rates have dropped from 100 or 120 shillings a ton to around 50 or 60 shillings a ton. The current price in Japan is £17 a ton for heavy melting scrap and £12 a ton for the low-grade material. These rates are considered satisfactory; with good business prospects in view, Bombay dealers have increased their prices from Rs. 90 to Rs. 150 a ton for heavy melting scrap and from Rs. 75 to Rs. 110 a ton for the lower-grade material. They are pressing the Government of India to increase the ratio of heavy melting scrap and the lower grade allowed for export. The increase, they say, will not only help exports to Japan but might also induce the Montan Union to buy scrap from India. At present the Montan Union group, consisting of Belgium, West Germany, Holland, France and Italy, is not inclined to do business with India because of the meagre supply of the heavy melting quality available from this country.

FOOD FOR THOUGHT

How do you like your coffee?

Black or white?... Hot and strong? The coffee stem borer likes his neat, preferably when the young shoots of the coffee bush are juicy and tender. He eats his way through the stem, destroying new growth before the valuable beans are formed.

India grows some of the finest coffee in the world—a fact which overseas buyers are not slow to recognise. At the moment, they are willing to pay Rs. 5,000 a ton, which means that even a small increase in annual production could bring in many lakhs of valuable foreign exchange every year.

Here are some interesting facts. Dieldrin—a Shell Chemical—is remarkably effective in controlling the coffee stem borer and can increase coffee production by up to fifteen pounds per acre.

True—dieldrin has to be imported because it is not manufactured in India. Indigenous materials are however used in its formulations, and for every rupee spent on importing dieldrin, enough extra coffee can be produced to earn as much as seven rupees of foreign exchange. This is a sensible expenditure whichever way you look at it: food for thought in fact.

SHELL Chemicals can save crops

and Foreign Exchange too!

Khatima Hydel Troubles

The future of the Khatima hydro-electric project in Uttar Pradesh, on which about Rs. 8 crores has already been spent, seems to be hanging in the balance. Although the plant has generated at least 20 million units of electricity during the two years of trial runs by the manufacturing company, the State Government is refusing to take it over. The grounds for refusal have been set forth in the report of an enquiry committee headed by Mr. Siddiq Hussain, I.C.S. Unofficial circles describe the report as being biassed against the manufacturers. According to these circles, the weaknesses in the conception of the project itself and the subsequent survey of site conditions have still to be explained. In fairness to the Siddiq Hussain committee, however, it must be said that the report does concede the manufacturers did not get the co-operation they were entitled to from the Electricity Department. The committee also takes strong exception to the Department's failure to post an officer of the rank of executive engineer in Khatima during the execution of the project. Besides the various "structural defects" of which the Department has complained, it appears that the plant is threatened by the high silicon content of the nearly 1,000 tons of sand which pass through the machines during every 24 hours of working. Consequently, it is stated, the life expectancy of the machines is reduced from seven years to two.

The manufacturers contend that they are in no way responsible for this state of affairs, which they ascribe solely to the inadequate water analysis data provided by the Electricity Department. The departmental analysis placed the maximum concentration of solids in suspended water during high floods at 14 grams a litre. The data are at variance with those obtained by the manufacturers independently from the U.P. Government's Public Analyst and from a reputed firm in Calcutta. The Electricity Department's analysis did not properly assess the silicon content of the sand which corroded the turbines. The Rasool hydel project in West Pakistan is believed to be encountering a similar difficulty. A better alloy than the one at present used to manufacture turbines is one of the solutions suggested, but the company argues that the world has yet to see such an alloy. Meanwhile, the Government has withheld payment of 20 percent of the price of the imported machinery. It would be a pity if the Khatima project, which was ceremonially opened two years ago to serve 12 districts of Uttar Pradesh, were to be written off because of the differences between the Government and the manufacturers. The differences, if necessary, could be settled by arbitration, but the important thing is to see whether measures could not be devised for ensuring the longevity of the machines by the provision, for example, of sand protectors. It is also not inconceivable that an independent enquiry, as distinguished from a departmental enquiry, might arrive at somewhat different conclusions from those which have now been reached and to which the State Government is holding fast.

Stock Exchange Working

The regulation of stock exchanges under the Securities Contracts Act has provoked many complaints. But it is reported that Mr. Nadkarni, who heads the stock exchange division in the Finance Ministry, has praised the Madras market as being a model. Perhaps the reputation has been earned because it has so few members and they know each other well. The market actually got going in 1937 on the initiative of Sir William Wright of Parry. Official recognition was easily given last year, since no rivals had sprung up. While the protection of the investor is the major aim of Government legislation, it tends to limit stock exchange activity. Middle-class investors are an important element in providing capital, and pools for rigging prices are virtually unknown in the Madras market. The idea that forward trading there in a few sound shares would make for greater marketability and fairer prices has been in the air; the question, however, is not whether it should be allowed but whether enough business can be obtained locally, since the following in Tata Steel and Indian Iron is greater than for any Madras share. In spite of its 620 pages, the second plan report does not mention the stock exchange in connection with investment for the still prominent private sector. The stock exchanges are regulated, but their health depends on many outside factors. The point that higher yields can be obtained on many Madras shares has been emphasised in order to suggest that forward trading, with some outside operators taking a hand, may lead to reduced yields and appreciation of prices. A representation has been made about the stamp duty payable on debentures. Some in the stock exchange feel that the rate of 75nP percent charged for share transfers should apply to debentures also if the Government seeks uniformity. Insistence on the use of particular State stamps for transfers has led to complaints, but no estimate has been given of the gains arising from the virtual prohibition of blank transfers under the new Companies Act.

Land Mortgage Banks

Madras, which is a pioneer in co-operative agricultural credit, thanks to the initiative of Sir F. A. Nicholson, has often to examine the problems of the movement. A recent conference of co-operators discussed the difficulties of land mortgage banks in providing long-term agricultural credit on an adequate scale, and the complaint was voiced that the Life Insurance Corporation is not investing in the debentures of these banks, although they have been guaranteed by the State Government. It was also pointed out that since land mortgage bank debentures have to compete with those of joint-stock companies which offer a better return, the market for the former is restricted. The Central Land Mortgage Bank is hardly in a better position since it, too, has to compete for deposits with the Industrial Finance Corporation, which is not only issuing bonds, but is also accepting deposits for fixed periods at rates exceeding 4½ percent a year. This the latter has been doing because of the greater demand for industrial finance in spite of the State Financial Corporation's liberalised lending policy. The interest rates on deposits have consequently risen, which some bankers think is a sign of "unbalance". In the circumstances, the land mortgage banks have to accept fixed deposits for seven years at a higher rate of interest than they have been offering so far, and it is thought that because of the increased Bank rate, they now have to offer something like 5 percent a year. These banks get little support from the co-operative movement, which itself depends heavily on the Government for loans at a low rate of interest. It was pointed out at the conference that the existing system of valuation of the real property offered as security has been discouraging borrowing from these banks. Something like the current market value should be fixed and the methods of valuation changed, it was suggested. Other topics of discussion concerned the effect land reforms will have on the working of these banks even after the proposed concessional interest rate of 3½ percent is given: it is feared that the richer class of agriculturists might not then be in a position to borrow from these institutions.

THE SICK NATIONS

IT is doubtful whether at any time in the history of the world so many communities of men still bearing the outward attributes and titles of nations have ever been tottering to their fall as at present. Some of these are, as might be supposed, in a more advanced condition of weakness and decadence than others, but upon all that come within the category, the signs of constitutional infirmity are plainly visible. To the intensely practical man, the man of action—a Bismarck, a Rhodes, or a Chamberlain,—whose political motto is *carpe diem*, or to the man who can so detach his consciousness from mere material national evolution, the world phenomena now rapidly unfolding are equally attractive. A Tolstoi, striving through ideals of sublime renunciation for some far-off consummation of his sociological dreaming finds himself as irresistibly appealed to as a Roberts whose political creed, even when at rest, must perforce repose within a scabbard. And unless the signs of national decrepitude mean nothing we can in a territorial sense form some idea of the geography of the future. Moreover, speculation hardly waits to be asked. China, the Austro-Hungarian Empire, Persia, Siam, Spain, Turkey and France, all these are afflicted, though it is only possible to note very briefly the symptoms of their disease. So far as China is concerned, her very antiquity and conservatism are against her long-continued solidarity. As a nation she is the Nestor of the earth, and the earth has never yet furnished us with any example of national immortality. Why should we believe that the Celestial Empire will form an exception to this rule? To no small extent the very exclusiveness of China has saved her from disintegration in the past, but this exclusiveness is now doomed.

Without Prejudice

DAMAGE TO GOODS WHEN FIGHTING A FIRE

THE RESPONSIBILITIES OF A PUBLIC CARRIER

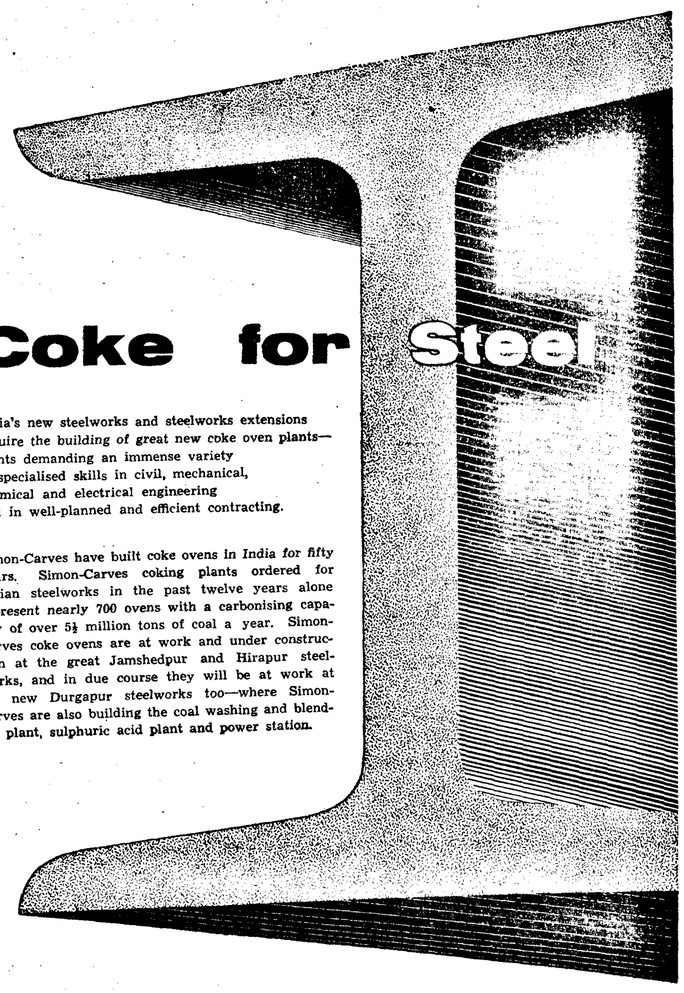
(FROM OUR LEGAL CORRESPONDENT)

THIS case involves the consideration of the meaning of the word "misconduct"; not in any special sense as it is used, for example, in matrimonial litigation, signifying adultery, but in its ordinary everyday meaning as applied in this particular matter to a claim against a railway administration for loss of, or damage to, goods in the administration's custody, such loss or damage being allegedly sustained through the "misconduct" of the administration or its servants. The dictionary meaning is: "Improper conduct; bad management." That description is misleading when applied to the word as used for the protection of railway administrations under Section 72 of the Indian Railways Act in claims against them. Misconduct is a very strong word. In ordinary usage, do we not mean, when we employ it, something of moral turpitude, dishonesty, deliberate and intentional wrong-doing? Something more culpable than carelessness and negligence, something done or omitted to be done with such utter recklessness and disregard of consequences and so wilful and perverse as almost to amount to a criminal act or omission? Well, the ordinary usage by educated persons of a word is generally a pretty safe guide as to its meaning and while the law in its interpretation of "misconduct" does not go so far as above suggested, it comes within measurable distance of it as we shall now see.

The case was an appeal to an appellate bench of the Madras High Court by the Government of India, owners of the Madras and Southern Mahratta Railway administration, now the Southern Railway, against the judgment and decree of Basheer Ahmed Sayer J. in the High Court confirming the decree of the City Civil Judge, Madras, granting the respondents, the Madras Handloom Weavers Provincial Co-operative Society Ltd., damages concerning five kegs of hydrosulphate of soda solidified by the water used by the appellant-railway's servants (the fire-extinguishing squad) for putting out an accidental fire in a wagon containing 300 kegs of hydrosulphate of soda got by the Society for its own use.

What had happened was this. The Society had ordered 600 kegs of hydrosulphate of soda from their suppliers. These were sent to Salt-Cottaurs, Madras, in two wagons of 300 kegs each. When the respondents went to take delivery of the 600 kegs, they found that one wagon of 300 kegs had not been affected by fire or water but that in the other wagon 22 kegs were completely burnt out by the accidental fire, and the contents of five more kegs had become solidified on account of the water used by the railway's servants to extinguish the fire. The respondents, therefore, filed a suit in the City Civil Court, Madras, for recovery of Rs. 2,605-12 from the railway towards the value of 27 kegs, *viz.* the 22 kegs completely burnt out by the fire and the five kegs whose contents were solidified by the water used for extinguishing the fire. The judge considered that there was not even negligence, let alone "misconduct", on the part of the railway administration concerning the fire or the accidental destruction of the 22 kegs which were burnt out by the fire, but that the use of water by the fire-extinguishing squad, the railway administration's servants, for putting out the fire instead of using gas or sand was a negligent act, amounting to "misconduct"; and that but for the use of such water, the contents of the five kegs would not have got solidified and become useless; and that since the contents of the five kegs had been rendered completely worthless by such misconduct, the railway administration was liable for the value of the contents so damaged. Accordingly the trial court granted a decree for the amount of that value alone with interest and costs. The railway administration appealed to the High Court, which confirmed the findings of the court below that although the railway had not been responsible for the fire by any negligence on its part, still less by any misconduct, and had used water to extinguish the fire in all good faith, yet it had, by error of judgment "amounting to misconduct", not used gas or sand but water, and so was responsible for the spoiling of the contents of the five kegs by solidification by water, as the use of water amounted to misconduct, although it was not responsible for the loss of the 22 kegs by fire. From this decision of the Madras High Court, the railway administration appealed to the appellate bench thereof.

We will stop at this point for a few general reflections on what the law expects of a man faced, through no fault of his own, with a sudden, totally unexpected emergency involving risk of life or limb or damage to the goods of others. Say you are competently driving your car along a street and to avoid a valuable Alsatian dog which runs in front of it, you swerve, mount the pavement and your car knocks down and kills a pedestrian thereon. Admittedly, being startled by the sudden emergence of the dog, you did not in those few seconds of the swerve drive your car with your accustomed skill and caution. What will be your legal position in relation to the dependants of the man you have killed? Well, the law does not condone a man, in a dangerous emergency, completely losing his head, and panic-stricken, virtually running amok. On the other hand, neither does it expect him to be a model of tranquil composure and self-possession. It will make allowances. And these, in the words of the Privy Council in *Dwarkanath's* case, are the allowances it makes: "In a moment of extreme peril and difficulty, we cannot expect perfect presence of mind, accurate judgment and promptitude on the part of persons facing an extremely difficult situation, and a thing done with want of nerve or skill then should not be made the ground for holding a tort or misconduct to be proved and for awarding damages for any loss caused by such error."



Returning to the matter of the ruined contents of the five kegs, and bearing in mind that by reason of the statutory protection afforded to the railways the plaintiff had to prove not mere negligence but actual misconduct, you may think that although he had the advantage of two concurrent findings of the courts below in his favour, the plaintiff was not at all in a sure position in the appeal. "Misconduct," said the Appellate Court quoting an earlier Calcutta decision, "is not necessarily established by proving even culpable negligence ..... It (misconduct) is something opposed to accident or negligence, and is the intentional doing of something which the doer knows to be wrong, or which he does recklessly, not caring what the result may be." The fire squad was faced with an emergency caused by a fire starting suddenly and accidentally in the wagon containing 300 kegs. The squad of 33 persons was rushed to the spot. There was only one basket of sand and no fire extinguisher with it. It did not want to waste time in getting the fire extinguisher and more baskets of sand as the fire would not wait for them. It used water readily available there and extinguished the fire, although at the cost of 22 kegs burnt out by fire before it could be extinguished and five more kegs spoilt by the water.

The Appellate Court held that the use of water, the less desirable method compared with the use of gas and sand, was only an error of judgment in an emergency in an honest attempt to put out the fire quickly, and did not amount to misconduct or recklessness so as to entitle the plaintiffs to claim damages from the appellants. It was a case of one honest party, the plaintiffs, being saddled with loss by an accidental fire, claiming the loss from another honest party, the railway administration, which put out the fire in one of the known ways, although it was not the best way, due to some error of judgment and negligence. The appeal was allowed.

MERCHANT SHIPPING BILL

The Joint Committee on the Merchant Shipping Bill, 1958, met in Parliament House on 22nd April, and decided that public bodies associations or individuals desirous of submitting memoranda on the Bill for the consideration of the Committee should send 55 copies of such memoranda so as to reach the Secretary, Lok Sabha Secretariat, Parliament House, New Delhi, on or before 31st May, 1958. The Committee will meet next on 7th July.

Coke for Steel

India's new steelworks and steelworks extensions require the building of great new coke oven plants—plants demanding an immense variety of specialised skills in civil, mechanical, chemical and electrical engineering and in well-planned and efficient contracting.

Simon-Carves have built coke ovens in India for fifty years. Simon-Carves coking plants ordered for Indian steelworks in the past twelve years alone represent nearly 700 ovens with a carbonising capacity of over 5½ million tons of coal a year. Simon-Carves coke ovens are at work and under construction at the great Jamshedpur and Hirapur steelworks, and in due course they will be at work at the new Durgapur steelworks too—where Simon-Carves are also building the coal washing and blending plant, sulphuric acid plant and power station.

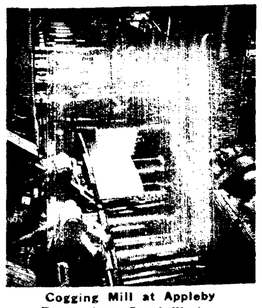
A Ditcher's Diary

AM I BEING MERELY CLEVER IN SUGGESTING THAT Mr. Nehru himself may not know all the reasons just why he thought of taking a long holiday or retiring indefinitely? Such an explanation is certainly comforting to all those who have been spending anxious hours in the past week or so trying, as the Americans say, to "figure it out". Some of the speculation, I thought, was wide of the mark. To say that Mr. Nehru spoke of retirement only to find out who could hardly wait to step into his shoes is to misunderstand the man completely. His disgust at the quarrels within the Congress, with the continuing language controversy, with the spreading corruption and coarseness in public life, is true enough. Others have reacted not wholly dissimilarly. All this, however, hitherto constituted a challenge to Mr. Nehru; but this time he seemed, perhaps wrongly, to have wanted to call the battle off. One of the theories current was that he might try and reorganise the Congress Party. If anyone can do it at this late date it is surely Mr. Nehru and nobody else. But then, those who think a country and its Government more important than a political party, be it the largest and the oldest, must have been relieved that, after all, Mr. Nehru's talent and influence will continue to be at the disposal of the former rather than the latter. These, however, are the public aspects of a question which he has more than once described as personal. He is indeed a man of many moods. From this point of view, the shock-therapy line of argument seems of very limited significance. In any event, the shocks the first announcement created appear to have largely disappeared already. Those who remember an essay published some time before the war know that Jawaharlal has always been mildly suspicious of the activities of Panditji the public figure. In the latter, he then wrote, are characteristics that make dictators. This was a very wild exaggeration, of course, but it never does anybody any harm to have a critical look at himself. On the personal level, therefore, Mr. Nehru may still consider it a pity that he has not been given an opportunity for self-examination. It is hardly necessary to add that this is by no means the first personal sacrifice he has made for his country and its people.

THERE HAVE BEEN NO REPORTS THAT I HAVE SEEN about whether or not Calcutta's Safety-first and Courtesy week was a success. If the results are any guide, one can only conclude that it was not. Indeed, the traffic jungle in this city grows worse every day—so much so, that it is becoming a danger to use the roads at all. And for this the police themselves must take their full share of blame. If they really want to encourage safety and courtesy, they could make a start with their own vehicles and drivers, which I have always found to be among the worst in the city. I wish I had a rupee for every time I have been cut in on, shouldered into the kerb, overtaken on a bend, passed on the inside, obstructed, frustrated or downright endangered by a police van or jeep—often with a fairly senior officer aboard. It is difficult to judge the mechanical condition of a vehicle from its outward appearance. But if their state of cleanliness, and the number of times they are seen on the road without doors, headlights, spare wheels, and easily readable number-plates, is any help in judging police vehicles, I shudder to think what is under their bonnets. As to the way the traffic is regulated: well, there is a fair touch of comic opera about that. Who but the Calcutta police, for instance, could command the sense of humour necessary for leaving those ugly upturned oil drums in the middle of Chowringhee, opposite Harrington Street, without so much as a reflector to help the south-bound night driver? The ordinary traffic policemen themselves make a substantial contribution to the sum total of road hazards. I have never found a single one who has given the impression of knowing what a motor-car or lorry is capable of when stopping, starting, turning or parking. Most of their time seems to be spent in a condition of complete and unqualified acceptance of what is going on around them; that is when they are not engrossed in some act of personal service such as hawking, yawning, picking their noses or scratching themselves in unmentionable places. Perhaps the heat is to blame; or as I suggested a few weeks ago, it might be the effect of constantly inhaling exhaust fumes. But whatever it is, the police have far more to answer for than can be excused by gestures like Safety-first and Courtesy weeks.



THE PRESS, LIKE MOST THINGS HUMAN, IS AN imperfect institution. But it is one which, on the whole, welcomes criticism, especially when it comes from a quarter as estimable as the Chief Minister of West Bengal. Dr. Roy's speech a week ago, before an assembly of industrialists and business men, no doubt reflected his concern over the growing and disruptive restlessness in this State. It is a feeling shared by many besides those immediately concerned with the demonstrations in Calcutta's streets. The Chief Minister appealed to business men to do something about it; his audience could no doubt have countered with the claim that the Government's own labour policies must take a fair share of the blame. What the reaction was, however, to the suggestion that, as advertisers, they should make irresponsible newspapers see reason, is something at which I cannot even guess. The Press Commission declared that the Indian Press is not influenced by advertisers, and the advertisers could claim, with some justice, that they never even attempt to influence newspapers. It is said, however, that this has not always been true of the largest advertiser—the Central Government. It would be unfortunate if the suspicion that official circles still try to influence the Press should appear to be confirmed by Dr. Roy's perhaps casual remarks on the subject. It was good of the Chief Minister to describe journalism as a noble profession. Well, some of us try our best. But I do not altogether agree with him that the Press generally encourages disruptive activities. News of such things is published, as it should be; but equally fairly handled are the Government's own activities, all of which Dr. Roy must be presumed to regard as wholly constructive. As a believer in freedom, which he amply demonstrates by his participation in democratic government, Dr. Roy should be pleased that opinions contrary to his, sometimes even mine, are not denied a hearing.

THE GRAND BIBLICAL IMAGE OF MEN "BEATING swords into ploughshares" represents one of humanity's oldest hopes, and one at no time more lively than today. While we wait for the great Powers to decide to beat the biggest and most lethal sword of all into the most productive of ploughshares, two unexpected illustrations of the principle come to us from Europe, one from England and one from France. In experiments now going on in the former country, apparatus designed for the remote control of teleguided planes and rockets is being applied to the working of (quite literally) ploughshares. A farmer sits at a corner of his field and by manoeuvring the command controls guides a pilotless tractor. He can start it, accelerate it, brake it and turn it about when it completes a furrow. The hitching on of the plough is remotely controlled and so is the depth of the furrow dug by the shares. Even more curious (and no doubt typical of the French genius) is the use of apparatus designed to detect submarines, in the examination of live pigs to determine the quality of the pork chops they potentially contain. An agricultural engineer at the French national zootechnical centre has adapted the submarine detector, in a machine that looks like two portable typewriters, to the exploration of pigs' muscular constitutions. "Ultra-sound" waves are broadcast into the pig through his hide and the echoes recorded on a cathode-ray oscillograph, yielding a faithful picture of the proportion of fat and flesh within. Neither of these enterprises can be briefly described in terms to match the vividness of the Biblical admonition to warlike princes, but they are scarcely the less interesting for that.

THE DESIRE TO GET RICH QUICKLY IS JUST ABOUT AS understandable a human emotion as wanting to put one over on the Customs officer or get even with the income tax people. Some of us do eventually reach a stage in life when we stop believing such things possible, but others go on doing it to their dying day—witness the millions who fill in crosswords, do football pools, or bet on horses which they admit afterwards a blind man would have recognised as fit only for the knacker's yard. It can happen, of course, and one of the most spectacular cases I have heard of comes in a recent report from Ontario, Canada. There, a thirty-nine-year-old widow, Mrs. Maizie Christine Eady, discovered a short time ago among some family effects stored in a attic, two dusty stock certificates which she would have burned after her father's recent death if her lawyers had not insisted on an inventory being taken of his property. The certificates represented forty-five ordinary and one hundred and sixty-seven preference shares in a company called Imperial Royalties. They dated from 1932, and they were found to be worth $18 million. What had happened was this: In 1940 the firm had merged with Toklan Royalty Corporation, and ten shares of Toklan were exchanged for one of Imperial. In 1955, Toklan had merged with Kirby Petroleum Trading, and eight thousand four hundred shares of Kirby were traded for one of Toklan. The price of Kirby shares in New York is now about $2, and the unsuspecting Mrs. Eady is a multi-millionaire. An appropriate postscript to the report, I think, is the news that she has been under the doctor's care since she learned the news. To think one might have burned $18 million is enough to give the strongest man a few bad moments.

AFTER A STORY OF MONEY MADE, HERE IS ONE OF money lost. The April issue of *Pick's World Currency Report* carries the somewhat unimpressive news that during the first two months of 1958, the dollar declined in value by 0.8 percent. The significance of such a figure is not properly appreciated until it is taken along with that of the U.S. national debt—$1,420 billion, as it was at the end of 1957. Then, it represents a total loss to the general public of no less than $186,739,720 a day, or $7,780,000 *an hour*. The *Report* estimates that if the dollar continues to fall in value at the same rate for the remaining months of this year, the total lost by debasement will amount to nearly 94 percent of the U.S. Budget receipts for 1958. I wonder how many years in prison a man would get if he were to rob, say, a bank of that much money.

THE DITCHER.

THE UNITED STEEL COMPANIES LTD

MAKING NEW RECORDS...

Continuing an unbroken run of steel production records, for the sixth year in succession, United Steel, produced 2,903,809 ingot tons during the calendar year 1957, an increase of 217,973 tons over the 1956 figure.

United Steel recognise that all industrial development depends upon assured steel supplies and, by such increases in production (together with constant modernisation and research), continue to play a leading role in meeting the world wide demand for this vital commodity.

CHINA SPEEDS UP STEEL EXPANSION PLANS

CONSTRUCTION OF IRON FURNACES

(FROM A CORRESPONDENT)

AN accelerated plan to bring five medium-sized integrated iron and steel plant into operation before the end of 1960 has been announced by the Chinese Ministry of Metallurgical Industry. The time now given is two years ahead of the original schedule. The plant are in Hunan, Taiyuan, Shihchingshan, Maanshan and Chungking. They will have their own iron and steel smelting and steel rolling departments. The Hunan plant is a new one and the other four are being reconstructed from existing smaller plant. The first blast furnace of the Chungking iron and steel plant will begin production on 1st July next year, according to the new schedule. But the builders there expect to cut the target time by another two months. The Maanshan plant has added two medium blast furnaces to its capital construction plan for this year. In addition to expanding a blast furnace, a coke oven, an open hearth furnace and an ore sintering workshop, the Shihchingshan plant in Peking will also begin the construction of a small steel rolling mill and two other workshops this year.

Using the new steel tapping method successfully tested recently by smelters in Taiyuan, an open-hearth furnace in Chungking has increased its per heat output by almost two-thirds. This has been achieved by using three troughs to lead molten steel into casting ladles, instead of using only one trough as previously. The per heat output of the furnace, as a result, has shot up to 114 tons, as against 70 tons. Operators of the furnace, which is in the Chungking iron and steel plant, have used the new method for two heats of steel and have now adopted this method in regular production. The three-trough steel tapping method was first tested successfully by steel smelters in Taiyuan on 13th March. This method makes it possible to use the latent capacity of open-hearth furnace workshops. The modern international practice is to use two troughs to tap a heat of steel. The construction of more than 1,200 small and medium iron furnaces will be started this year in Honan province. They will have a total annual capacity of 1.6 or 2 million tons by the end of 1959. The decision to build these furnaces was taken at a Honan provincial conference of representatives of the iron and steel industry. Honan has rich iron ore deposits.

Roads to Oil Areas

Roads linking the new oil areas in centfral Szechwan with other cities are now being built. When completed, they will facilitate the transport of equipment and materials needed at the new oil wells. About 120 deep wells will be sunk in an area of 10,000 square kilometres for test drilling. In central Szechwan, three economically workable oil-bearing structures have been found recently. A greatly extended plan for oil drilling has now been drawn up, which is ten times larger than the original one for the area this year.

Producing More Silk

China plans to become the world's biggest silk producer in five years, overtaking Japan and France. The target set at a national conference of workers' representatives of the silk industry is to turn out five or six times as much as the 1957 output by the end of the second five year plan. This year will see 1,600 new varieties and 13,000 new patterns of silk products, which will surpass by far the original target of 200 new varieties for the year. The Vice-Minister for the Textile Industry, Chen Wei-chi, has said at the conference that the achievements in this field during the first five year plan are unprecedented in the history of China.

Increasing Tobacco Yields

China's major tobacco-growing province of Honan will increase its tobacco yield a hectare more than five-fold this year, according to a decision adopted at the provincial conference on tobacco production. Output is expected to rise from half a ton to an average of 2.7 tons a hectare in the more than 100,000 hectares which are to be sown to tobacco in that province this year. About two-fifths of the area will produce from 3.75 tons to 11.25 tons over each hectare. The principal measures to ensure the fulfilment of this target include applying more fertilisers, using better strains, timely planting, eliminating tobacco pests and intensive cultivation. The adjoining province of Shantung, another major tobacco producer, has decided to increase its output to 180,000 tons this year, or 153.4 percent higher than last year. But the local county authorities have pledged to add another 20,000 tons to the figure. The south-western province of Yunnan, which produces China's best tobacco strains for colour, taste and aroma, plans to double its output this year with the acreage only 3.7 percent bigger than it was last year.

Fertiliser and Chemical Output

With the construction of 87 new factories and workshops, production will start this year of synthetic ammonia, nitrogenous and phosphate fertilisers, synthetic rubber, synthetic kapron fibre, penicillin, streptomycin and other chemicals. This has been announced at a national conference of the chemical industry. The expanded plans mention the following production targets: nitrogenous fertilisers 230,000 tons; phosphate fertilisers 400,000 tons; soda ash 130,000 tons; streptomycin 36,000 kilogrammes; penicillin 50,000 kilogrammes; plastics 3,000 tons; and 240,000 lorry tyres. The construction of three new plant and the expansion of three other big nitrogenous fertiliser plant will be speeded up. They are to be completed six months to 1½ years ahead of schedule. By the end of the second five year plan, the production capacity of these plant will be over six times the nitrogenous fertiliser output in 1957, the last year of the first five year plan. The plant will be located in the Kirin, Liaoning, Shansi, Kansu, Szechwan and Kiangsu provinces.

The 13-day conference has discussed the popularisation of various high-speed building methods and the wide use of pre-fabricated concrete elements and pre-assembled units in construction. It has also studied the application of advanced experience in designing and methods of economising in building materials. Engineering and construction companies under the Ministry for the Chemical Industry plan to reduce construction costs by 15 percent or 20 percent this year. The investment thus saved will be sufficient to construct a synthetic ammonia plant with an annual capacity of 75,000 tons. This amount of ammonia can produce 300,000 tons of nitrogenous fertiliser (ammonium sulphate).

Air Services Extended

Two regular civil airlines have extended their services to the remote regions in the Szechwan and Yunnan provinces of south-west China, for the first time in history. One of the airlines links Chengtu, capital of Szechwan, with the mountain city of Sichang, about 340 kilometres to the south-west. Travel by bus between the two cities usually takes five days. The other line plies between Kunning, capital of Yunnan, and Paoshan, in the western part of the province. This cuts down the travel time from four days to about 1½ hours. The freight charges of the two airlines are about the same for some commodities as those for sending goods by road, and passenger fares are slightly higher.

Savings Campaign

In most countries, the saving of money is a voluntary act of the people who, on their own personal initiative, may want to put aside sums for a rainy day or for retirement. In communist China, however, it has become a measure of expediency for the régime to control the people's consumption and accumulate capital for construction. Peking apparently thinks that to have private savings is a bourgeois practice contradictory to proletarian principles, and a person having a sizeable bank deposit is likely to become vulnerable to bourgeois ideas. Yet, during the drastic thrift and anti-waste campaign now under way, the communists have found it valuable to make use of this bourgeois idea to bring floating money back into the hands of the State. With a forcible savings deposit policy, by the end of 1956 the State had made 23.68 million people deposit money with the banks, and by the end of 1957 the total of savings deposits reached 2,790 million yuan. To accomplish this, some 30,000 branch offices and agencies of savings banks have been established to cover every main thoroughfare in the cities, and over 350,000 so-called "savings assistants" have been trained to go to the masses and solicit deposits.

Student-Worker System

In February, the Chiaotung University called on all technical institutes in China to enforce the industrious-in-work, thrifty-in-study system, and the half-work, half-study policy. It put forward the slogan that "schools are factories and students are workers", suggesting that all students in technical institutes should engage in production for about six months in each year, first as apprentices and then as workers, studying and working simultaneously. It also suggested that thought should be given immediately to revising the teaching plans of various technical schools, so that by prolonging the period of study and shortening the period of holidays, the requirement of half-study and half-work could be met. It should be ensured that a student is trained as a labourer, and has better knowledge. The university has already set up an "industries-in-work, thrifty-in-study committee." It has decided to make full use of the school's repair and assembling shops, experimental workshops, and other laboratories which can accept production tasks; to draw up plans; and to get in touch with the relevant industrial departments in Shanghai immediately to procure orders and production tasks.

CONSULT US ON YOUR FOREIGN BUSINESS PROBLEMS

Do you have any special problems connected with your trade or travel abroad?

Do you wish to know more about the currency or customs of foreign countries?

Do you require any specific information on trading opportunities in overseas markets?

The State Bank of India has now established for the benefit of its constituents a full fledged INFORMATION SERVICE to provide answers to these questions and many more—all free and without obligation.

Here is an opportunity for expanding existing connections and building up new ones in your overseas trade. Your enquiries will receive individual and prompt attention.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to offer you complete banking facilities for overseas trade.

Money

THE CALCUTTA MONEY MARKET

EXCHANGE BILLS SCARCE

Wednesday, 7th May.

CONDITIONS in the Calcutta money market have altered little during the past week. The total of advances outstanding is roughly the same, and none of the chief sources of demand has shown any substantial change in its requirements. The present dullness appears to make it clear enough that the busy season is ending and that a decline in advances can be expected to set in soon. The interbank market is easier. The call rate is unchanged at 3½ percent, but business has been done down to 3 percent.

There have been very few bills in the exchange market during the past week on account of either gunny or tea. Remittance has been poor. The strength of sterling has suffered from the evidence of growing labour unrest in the U.K. and the pound has been marked down against the dollar and most of the leading Continental currencies.

SILVER REACTED ON PROFIT-TAKING. THE PRICE declined from the previous week's level of Rs. 198 to Rs. 154 for ready delivery, and the rate for forward delivery was quoted at Rs. 192.50. The London price was the same at 75⅛d and the New York quotation stood at 88⅛ cents.

In spite of a fall in silver, gold was steady and the price was quoted at Rs. 115. The sovereign realised Rs. 72.62.

DURING THE WEEK ENDED 2ND MAY, GOVERNMENT of India Treasury bills for Rs. 1,45,64,000 were sold in favour of the Reserve Bank.

A DECLINE OF Rs. 11.29 CRORES TO Rs. 1,640.78 CRORES in the total note issue was the outstanding feature of the return of the Reserve Bank of India for the week ended 2nd May, 1958, while active notes were Rs. 49 lakhs higher at Rs. 1,612.62 crores. The currency contraction was adjusted by reducing foreign securities by Rs. 24.09 crores to Rs. 204.71 crores and by increasing rupee securities by Rs. 11.09 crores to Rs. 1,187.59 crores in the paper currency reserve. As a result of the transfer of securities, balances held abroad in the Banking Department rose by Rs. 19.02 crores to Rs. 58.03 crores. Deposits of the Government of India fell by Rs. 3.40 crores to Rs. 49.65 crores but other Government accounts rose by Rs. 48 lakhs to Rs. 16.12 crores. Balances of commercial banks were Rs. 4.35 crores higher at Rs. 98.49 crores. Investments declined by Rs. 2.69 crores to Rs. 224.58 crores. Other loans and advances increased from Rs. 54.69 crores to Rs. 57.02 crores, of which advances to scheduled banks against usance bills amounted to Rs. 18.16 crores against Rs. 17.72 crores. Ways and means advances stood at Rs. 53.11 crores (Rs. 54.72 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 25th April, 1958, shows a rise of Rs. 57 lakhs to Rs. 422.12 crores in total deposits. Investments in Government securities are up by Rs. 10 lakhs to Rs. 180.46 crores, while other authorised investments remain unchanged at Rs. 10.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have decreased by Rs. 1.62 crores to Rs. 206.40 crores. Cash and balances are, in consequence, shown at Rs. 37.37 crores or Rs. 2.38 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 25th April, 1958, shows Demand and Time liabilities at Rs. 774.79 crores (Rs. 17.36 crores on account of borrowings from banks) and Rs. 768.70 crores (Rs. 14.74 crores), compared with Rs. 772.88 crores (Rs. 18.18 crores) and Rs. 763.31 crores (Rs. 15.29 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.65 crores and Rs. 3.96 crores to Rs. 41.97 crores and Rs. 90.78 crores. There is a rise of Rs. 1.74 crores in investments to Rs. 445.01 crores. Advances and bills discounted at Rs. 956.27 crores show a drop of Rs. 1.17 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.6 percent and 62.0 percent, against 8.2 percent and 62.3 percent.

THE GOVERNMENT OF INDIA HAS ANNOUNCED THE simultaneous issue of the following three new loans for a total sum of Rs. 135 crores: (a) 3½ percent bonds 1963—issue price Rs. 98.75 percent and repayable at par on 12th May, 1963; (b) 3¾ percent National Plan Bonds—fifth series (3¾ percent 1968)—issue price Rs. 99.50 percent and repayable at par on 12th May, 1967; and (c) 4 percent loan 1973—issue price Rs. 100 percent and repayable at par on 12th May, 1973. Interest on the new loans is payable half-yearly on 12th May and 12th November, and will be subject to income tax. Subscription lists will open on 12th May, and close on 14th May, but may be closed earlier without notice as soon as the total subscriptions to the bonds and loan amount to Rs. 135 crores approximately. The Government reserves the right to retain subscriptions up to 10 percent in excess of the notified amount. Subscriptions may be in the form of cash or cheque or securities of the 3 percent Loan 1958 or 4½ percent Loan 1958-68, which will be accepted for conversion at Rs. 99.75 percent and Rs. 100.10 percent, respectively. Applications for the bonds and loan will be received at (1) offices of the Reserve Bank of India in Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi; (2) branches of the State Bank of India at other places in India except at the places mentioned in (3) and (4) below; (3) branches of the State Bank of Hyderabad conducting Government business; and (4) branches of the Bank of Mysore Ltd. in the State of Mysore.

NEW COMPANIES IN EASTERN INDIA

MOST FLOATATIONS IN WEST BENGAL

DURING the period from 1st October, 1957, to 31st March, 1958, 15 public companies with an authorised capital of Rs. 6.77 crores and 214 private companies with an authorised capital of Rs. 9 crores were registered in the eastern region comprising West Bengal, Assam, Bihar and Orissa under the Companies Act, according to the Regional Director, Eastern Region, Company Law Administration, Calcutta. Some 77 companies went into liquidation in this region during the same period.

WEST BENGAL: The total number of registrations of public companies in West Bengal was 14 with a total authorised capital of Rs. 1.8 crores. During the same period, the number of private companies incorporated was 177 with a total authorised capital of Rs. 6 crores. These new floatations include two big concerns, viz., Karnani Investments Private Limited with a capital of Rs. 2 crores and Alco-Chem. Limited with Rs. 50 lakhs.

S.No.	Class of industry	Public	Private	Total
1.	o-Agriculture and allied industries	6	1	7
2.	1-Mining and quarrying	6	—	6
3.	2-Processing, manufacture, foodstuff, textiles, leather products thereof	10	3	13
4.	3-do-(Metals and Chemicals)	48	4	52
5.	4-do-(others)	16	1	17
6.	5-Construction and utilities	6	—	6
7.	6-Commerce (Trade and finance)	60	4	64
8.	7-Transport, communication and storage ...	5	1	6
9.	8-Community and business services ...	5	—	5
10.	9-Personal and other services	15	—	15
	Total	177	14	191

The corresponding figures of public and private company registrations with their authorised capital for the period of six months commencing from 1st October, 1956 to 31st March, 1957, were 10 public companies with an authorised capital of Rs. 2.6 crores, and 138 private companies with an authorised capital of Rs. 6.1 crores. The following is the industry-wise classification of the companies registered in West Bengal during this period.

The number of companies that went into liquidation during the same period were 32 public limited and 36 private limited companies with an authorised capital of Rs. 5 crores and Rs. 1.3 crores, respectively. One private company limited by guarantee went into liquidation. Ten public limited companies with an authorised capital of Rs. 5.75 crores, 13 private limited companies with a total authorised capital of Rs. 71.9 lakhs and one public company limited by guarantee (association not for profit) were finally dissolved during the same period.

Prosecutions Under Company Law

Some 549 cases were filed against companies and directors during the aforesaid period out of which 189 cases were for not filing annual returns as required under Section 32 of the I. C. Act, 1913 or Section 162 of the Companies Act, 1956, 154 cases were for not adopting balance sheet in general meetings as required under Section 131-134 of I. C. Act, 1913 or Section 210-220 of the Companies Act, 1956 and 198 cases for not holding general meetings as required under Section 76 of the I. C. Act, 1913 or Section 166 of the Companies Act, 1956. Four cases have been made out under Section 142(1)(a) and 142(1)(b) of the Companies Act, 1956, for non-registration of charges or satisfaction thereof. In two cases, one under Sections 86D and 282 of I. C. Act, 1913 as well as Sections 49 and 295 of the Companies Act. 1956, and another under Section 282 of the I. C. Act, 1913, as also Sections 465 and 471/465 of I.P.C., police investigation has been ordered by the magistrate.

BIHAR: Some 12 private companies with an authorised capital of Rs. 2.25 crores were incorporated during the period including two big concerns, namely, Darbhanga Investments Private Ltd. and Darbhanga Properties Private Ltd., with an authorised capital of Rs. 1 crore and Rs. 50 lakhs, respectively, while three companies with an authorised capital of Rs. 8 lakhs were finally dissolved and one public company with an authorised capital of Rs. 5 lakhs went into liquidation.

ASSAM: One public company (Assam Pulp Mills Ltd.) with an authorised capital of Rs. 5 crores and eight private companies with a total authorised capital of Rs. 45.5 lakhs were incorporated, while two private companies with an authorised capital of Rs. 6 lakhs were finally dissolved and one private company with an authorised capital of Rs. 1 lakh went into liquidation.

ORISSA: Some 17 private companies with an authorised capital of Rs. 31.8 lakhs were incorporated during the period, while three public companies and three private companies with an authorised capital of Rs. 15 lakhs and Rs. 3.8 lakhs, respectively, have gone into liquidation. During the same period, one public and one private company with an authorised capital of Rs. 20,000 and Rs. 1 lakh, respectively, were dissolved.

GOVERNMENT OF INDIA

3½ PER CENT. BONDS 1963.

ISSUE PRICE Rs. 98.75 PER Rs. 100 (NOMINAL). REPAYABLE ON 12th MAY, 1963.

3¾ PER CENT. NATIONAL PLAN BONDS—FIFTH SERIES (3¾ PER CENT. 1968).

ISSUE PRICE Rs. 99.50 PER Rs. 100 (NOMINAL). REPAYABLE ON 12th MAY, 1968.

4 PER CENT. LOAN 1973.

ISSUE PRICE Rs. 100 PER Rs. 100 (NOMINAL). REPAYABLE ON 12th MAY, 1973.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 135 crores (approximately). Subscriptions may be in the form of (i) Cash/Cheque or (ii) securities of the 3 per cent. Loan 1958 or 4½ per cent. Loan 1958-68, which will be accepted for conversion at the following rates:—

3 Per cent. Loan 1958 ... Rs. 99.75 for Rs. 100 (Nominal)

4½ Per cent. Loan 1958-68 ... Rs. 100.10 for Rs. 100 (Nominal)

Interest will be paid on the 3 per cent. Loan 1958 and 4½ per cent. Loan 1958-68 tendered for conversion upto 11th May, 1958 inclusive.

The new bonds and loan will bear interest from 12th May, 1958. Interest will be payable half-yearly on 12th May and 12th November.

Subscription lists will open on 12th May, 1958 and close on 14th May, 1958 or earlier without notice.

Applications for the bonds and loan will be received at:

(1) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;

(2) Branches of the State Bank of India at other places in India except at places mentioned in (3) and (4) below;

(3) Branches of the State Bank of Hyderabad conducting Government business; and

(4) Branches of the Bank of Mysore Ltd. in the State of Mysore.

For full particulars apply to any of these offices or branches or treasuries.

THERE IS HARDLY A TOWN OF ANY IMPORTANCE IN SOUTH INDIA WHICH IS NOT SERVED BY A BRANCH OF

D. P. PARTHASARATHY,
Secretary.

Bringing wealth and prosperity to the wide world, she flows with milk and honey for those who dwell on her banks—thus sang the Aryan settlers in their hymns to their river goddess, who brought fertility to the land. Today, we are giving life to the words of our ancient bards, by harnessing the ceaseless flow of India's river water to bring food to the people and power to industry. The target of the Second Five Year Plan is to raise the installed capacity from 3.4 to 6.9 million kW, in order to double the per capita consumption from 25 to 50 units per year. Texmaco is helping the country fulfil this target. It has erected some of the largest spillway and sluice gates in India at Rupar, and giant penstock liners at Hirakud. With the best technical know-how of its collaborators of world repute, Texmaco is equipped to manufacture and supply a wide range of equipment for hydro-electric projects. This is how Texmaco serves India's basic industries.

FEARS OF INCREASED TAXATION DEPRESS PRICES

NEW LOAN TERMS AS EXPECTED

Wednesday Evening.

THE announcement last Wednesday of three new Central Government loans (3½% bonds 1963 at Rs. 98.75, 3¾% National Plan bonds, 1968, at Rs. 98.50 and 4% loan 1973 at Rs. 100) on a cash-cum-conversion basis, for a total of Rs. 135 crores, was in accordance with the market expectations. For this reason, prices of existing Government securities were not affected to any great extent. It is expected that the short-dated issue will be taken up mainly by banks, for reasons of liquidity, and that the medium and long-dated issues will attract provident fund institutions and the Life Insurance Corporation. Price movements of a representative list of securities on the eve of the announcement and at the close of business today are given below:

	Price on 30-4-58. Rs.	Price on 7-5-58. Rs.
3 % Loan 1986	71.25	71.28
3 % Loan 1959-61	99.18	99.10
3 % Loan 1964	95.25	95.25
3¾ % Loan 1967	99.75	99.75
4 % Loan 1972	100.15	100.15
3 % Loan 1970-75	86.60	86.80

The concession suggested by the Select Committee in the Gift Tax Bill and Mr. Nehru's announcement last Saturday that he would not pursue his earlier decision to retire temporarily from office, were welcomed in market circles. Indian Irons recovered from Rs. 21.55 to Rs. 21.75 during the weekend. On Monday, however, there was renewed anxiety and the shares receded again to Rs. 21.44 following the Planning Commission's suggestion that it was necessary to raise additional plan resources amounting to Rs. 240 crores, of which Rs. 100 crores may have to be obtained through additional taxation.

Other restraining influences were the proposed strike in the two leading steel units—T.I.S.C.O. and I.I.S.C.O.—the delay in announcing retention prices, and reports of the continued accumulation of cotton textile stocks despite the reduction in excise duties last March.

The Commerce Minister's statement in the Lok Sabha on Friday that the Government was actively considering whether relief should be given to the tea industry in the shape of a rebate in export duty failed to produce even a flicker of interest among operators in this section. Tea shares continued dull.

More business was done in preference shares during the week with buyers for selected issues, in view of the attractive yields offered. Shares sought after included Alkali & Chemical, Burn & Co., Kumardhubi Engineering, Shaw Wallace, Indo-Burma Petroleum and Metal Box.

With the exceptions of Punjab National Bank, which were slightly better at Rs. 52.25 and Hind Bank at Rs. 55, quotations for all other shares in this section were unchanged.

The possibility of a strike in 51 collieries in the Raneegunge area, and the continued uncertainty about selling prices, kept away buyers from this section. The exceptions were Katras Jherriah which improved to Rs. 59 and Pench Valley to Rs. 20.12. Bengal eased to Rs. 228 as did New Beerbhoom to Rs. 14.75.

In railways, business was reported in Arrah Sasaram at Rs. 55 and Howrah Amta at Rs. 54.50.

In cotton, Elgins were shaded at Rs. 11.75 x.d., as were Kesoram at Rs. 11.25. Swadeshi Cotton Preferred Ordinary were crossed at the higher rate of Rs. 10.37.

With Argentina off the hessian market for the time being owing to exchange difficulties and an increase of 2,900 tons in the April stock figures, there was some weakness in the jute goods market, and this in turn adversely affected prices of jute shares. Contrary to the general trend, Gourepore improved from Rs. 235 to Rs. 240 and Alliance from Rs. 66 to Rs. 70.

In electrics, Agra were easier at Rs. 134, while Calcutta were unchanged at Rs. 13.87.

In sugar, Carew dropped to Rs. 7.19 as did Champaran to Rs. 20 and Dyer Meakin to Rs. 9.87. Cawnpore Sugar, however, hardened to Rs. 10.62.

In the engineering section, the announcement today that the Government had declared illegal the strike proposed to be launched by a section of workers of the Indian Iron & Steel Company, belonging to the United Iron & Steel Workers Union, brought a small recovery at the close to Rs. 21.68. Braithwaites were better at Rs. 26 and Burn & Co., at Rs. 332. Jessops met with some selling pressure and dropped from Rs. 20.37 to Rs. 18.94. Textile Machinery were fairly steady at around Rs. 18.20.

In paper, Orient eased from Rs. 29.90 to Rs. 29.45, while Titaghur rose further to Rs. 36.50.

In shipping, India Steamship were steady at Rs. 11.19 and India General Navigation were Rs. 2 lower at Rs. 52. Among miscellaneous shares Indian Oxygen continued to meet with investment enquiry and were well maintained at around Rs. 18.12. Similarly, Britannia Biscuits were wanted at Rs. 13.31. Alkali & Chemical were taken up to Rs. 14.62 as were National Rubber to Rs. 12.25. Metal Box met with some profit-taking and closed slightly lower at Rs. 27.87. National Tobacco improved further to Rs. 11. The recent enquiry for Rallis appears to have petered out and there were sellers of the shares at the close at Rs. 34. Indian Cables were enquired for at the higher rate of Rs. 30 because of the impending rights issue. Clive Row Investment were also in demand at Rs. 8.69. Dunlop Rubber continued their advance and closed at Rs. 25.75 against an opening quotation of Rs. 25.25. In the mining group, Indian Copper were quiet at Rs. 3.10.

BHARAT COMMERCE AND INDUSTRIES, LTD., has made a profit of Rs. 27,890 for the year ended last December. The debit balance is therefore reduced to Rs. 41,19,181. The dividends have again been passed over. The directors state that the charter operations of the company's aircraft continued to give satisfactory results. The spinning factory for staple fibre yarn, consisting of 14,520 spindles, established in Nagda, commenced work in the middle of March 1957. "For the current year, so far, the trend of production and sales has been satisfactory and your directors expect that this year should prove to be a good one."

THE PROFIT OF THE UNITED FLOUR MILLS COMPANY has improved from Rs. 3.62 lakhs to Rs. 5.81 lakhs for the year ended last November. A dividend of 40 percent has been declared, including an interim of 25 percent, on the increased capital. Taxation provision is allocated Rs. 4.04 lakhs against Rs. 2.34 lakhs. There is a carry-forward of Rs. 22,061 against Rs. 17,273 brought in.

THE PROFIT OF THE PUNJAB MINERALS COMPANY has amounted to Rs. 660 for the year ended last September. The debit balance to be carried forward is Rs. 1,34,171.

MESSRS. TATA INDUSTRIES PRIVATE LTD., MANAGING agents for the Tata Iron and Steel Co. Ltd., report that the total approximate production of iron and steel at the steel works in Jamshedpur during April 1958 was: pig iron 95,000 tons; steel ingots 100,300 tons; semis for sale 15,800 tons and finished steel 47,200 tons.

THE STEEL

Quick and easy communications are essential for the fulfilment of India's targets for steel. The Indian Railways are accordingly devoting their allotment under the Second Five Year Plan to develop and improve their capacity

LINE

to handle traffic for the five steel plants. Thousands of labourers and hundreds of technicians and engineers are working round the clock on difficult terrain, levelling the earth, clearing thick forests, building embankments and bridges and laying over 700 miles of track over a vast area covering four major States.
The Indian Iron & Steel Co. Ltd. is also helping the Indian Railways by providing...150,000 tons of steel per annum for the Steel Line.

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

Bombay Market

BRIGHTER CONDITIONS AT THE CLOSE

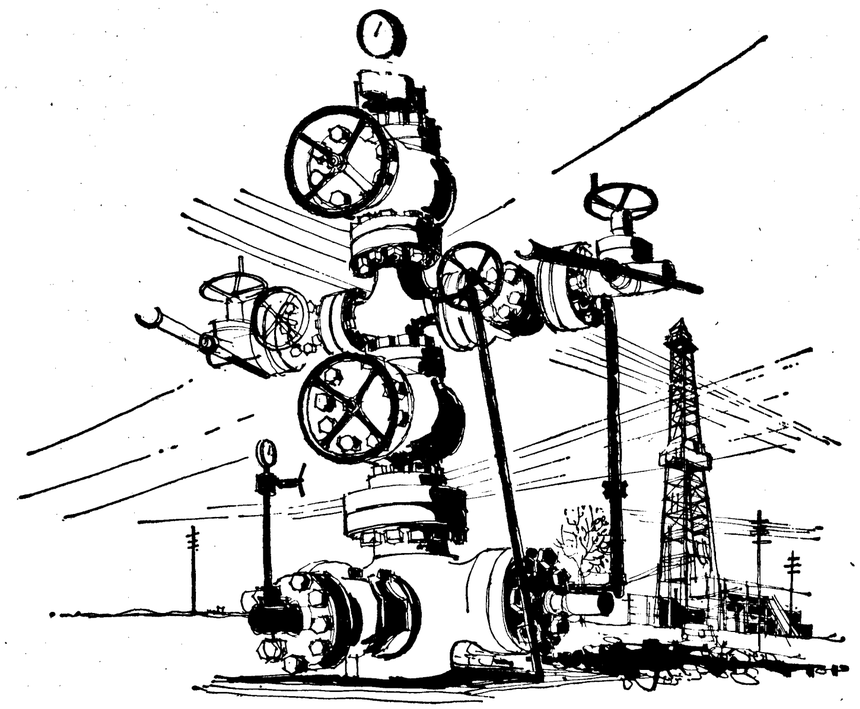
OPERATORS OPTIMISTIC OVER STRIKE SITUATION

Wednesday Evening.

THE Bombay stock market closed on a steadier note after having remained quiet during the greater part of the period under review. A number of unfavourable items of corporate news, combined with political developments relating to the Prime Minister's retirement made operators cautious. It was also feared that the new Central loan offer might siphon off a substantial portion of liquid funds from the market.

Towards the close sentiment improved on renewed bull support, especially in steels, because of optimism over the labour situation in Burnpur and Jamshedpur. A report that the strike which has been threatened by steel workers in Burnpur would be considered illegal by the Government has generated considerable cheerfulness. It is believed that, with the recent concession given to workers of the Indian Iron and Steel Company, the strike might be averted.

Tata Steel improved to Rs. 181.75 on short-covering and Indian Iron recovered to Rs. 21.68 on support from Calcutta interests. Alcock Ashdown were freely offered at Rs. 250 on the declaration of a lower dividend. Tata Locomotive recovered to Rs. 166 on replacement buying. Premier Construction were bought at Rs. 192.50 by knowledgeable quarters. Automobile shares were idle and fluctuations were narrow. Premier Automobile came to hand at Rs. 82 and Hindustan Motor were sold at Rs. 6.88.



Cotton mill shares were quiet with sellers predominating, as the offtake of cloth during the first part of this year might be substantially lower. Bombay Dyeing realised Rs. 54.40 and Century improved to Rs. 427.50 on bear-covering. Kohinoor were bought at Rs. 268 and Simplex changed hands at Rs. 153. Standard Mills were steady at Rs. 426 on prospects of improved working. Svadeshi came to hand at Rs. 178.50 and India United Ordinary were transacted at Rs. 9.28. Apollo were freely offered at Rs. 1.70, with few buyers in evidence.

Miscellaneous shares declined in sympathy with the general trend. Sugar shares were selectively bought, and Belapur were done at Rs. 245.50. Phalton were transacted at Rs. 141. Cement shares were quietly steady, and Associated Cement were taken at Rs. 155. Digvijay Cement were bought at Rs. 146.50. Steamship company shares were steady on hopes of expansion in activity. Great Eastern Shipping were transacted at Rs. 19.84, but Scindia Steam reacted to Rs. 17.56 on profit-taking. Mining shares were subdued, as the outlook for the metal market continued uncertain. Shivrajpur Syndicate were freely offered at Rs. 89. Bombay-Burmah declined to Rs. 553 on pressure because of uncertainties relating to the bonus issue. National Rayon recovered to Rs. 233 on short-covering and Tata Chemical were taken at Rs. 15.04.

Turnover in banking shares was restricted and prices were maintained. Punjab National were done at Rs. 52.30 and Central Bank changed hands at Rs. 53.30. Insurance shares were quietly steady, and New India Assurance were bought at Rs. 44.25.

Scattered investment interest was taken in electricity supply company shares, and Ahmedabad Electric were bought at Rs. 94.50. Tata Power were taken at Rs. 1.225.

The Story of Oil—8

Trees of steel

When a well strikes oil, the first consideration is to stop it gushing. Such an occurrence, though spectacular and common in the early days of drilling, is wasteful. To counteract the pressure, therefore, the mud used during drilling is pumped into the well. The drill is then replaced by narrow tubing which stretches from the bottom of the newly discovered deposits to the 'Christmas Tree' on the surface. The latter is a system of valves which control the flow of oil.

Crude oil, by itself, cannot move. It usually lies between natural gas (on top) and water, so that when the oil trap is pierced by the well, any gas present seeks to expand and pushes down on the oil, driving it upwards. Or gas may be dissolved in the oil itself, and as it expands it pushes the oil to the surface. If, however, a large quantity of water lies below the oil, it forces the oil out of the porous rock and into the well. Sometimes a combination of gas and water pressure drives the oil to the surface.

Normally this pressure is sufficient to keep a well flowing for some time. But as the porous rocks are drained, the pressure declines. Then one of several artificial methods can be used to keep the oil flowing. The 'Christmas Tree' can be replaced by a mechanical suction pump which draws the oil up to the surface. Or gas can be fed into the deposits (between the casing and the tubing) to mix with the oil and bring it to the surface. Or, as a last resort, gas or water can be pumped down a neighbouring well to recreate the original pressure.

Thirty or forty years ago, only a quarter of the oil discovered could be recovered. With today's production techniques a much larger recovery percentage is possible.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

STOCK MARKET IRREGULAR

LITTLE CHANGE IN INDUSTRIALS

London, 7th May.

GENERALLY irregular conditions continued to prevail in the stock market during the past week, and on balance, there was not much change in prices. Oil and copper shares were the exceptions, and recorded some useful gains. Firm conditions developed at the start of the new account, but subsequently the market became uncertain and generally dull. The earlier firmness reflected the mildly optimistic statement of the chairman of British Petroleum at the latest annual meeting and his forecast of a fresh share issue later in the year—which created interest in oil shares. Subsequently, there was an optimistic speech by the British Chancellor of the Exchequer, in which he expressed confidence in the economic future. Other favourable influences included Wall Street's improvement and President Eisenhower's reaffirmation of his belief that the American recession was "grounding." Conditions deteriorated later under the influence of the London bus strike and the critical stage reached in the negotiations with the railway men who were due to strike soon. With buyers reluctant to extend commitments, and in the face of small routine selling orders, prices tended lower after the week-end, but losses usually were small. The volume of business contracted. Gilt-edged securities lost ground after their earlier firmness in spite of the highly satisfactory end-April gold reserve figures, and the further sharp fall in the Treasury bill rate. The firmness of German bonds was the only noteworthy feature of foreign bonds and rails. Dollar stocks were higher, mainly in response to Wall Street's advance to a 1958 peak. Industrials recorded very little change on balance, with earlier gains reduced or eliminated. In South African gold shares, finance house issues attracted some attention at the beginning of the account, but earlier gains were subsequently lost and prices were occasionally lower on balance, following suggestions that uranium production might be restricted. Apart from copper shares, which were firm, base metals lost ground. Wide-spread losses were recorded in rubbers, reflecting a further decline in the price of the commodity. Indian tea shares were firm due to the prices obtained at the auctions, but Ceylon issues remained neglected and dull.

The Money Market

Conditions on the money market during the past week were difficult, being adversely affected by end-of-month influences. Funds were withdrawn on a heavy scale, with the turn of the month failing to bring any improvement in the position. The authorities gave a certain amount of assistance, but the scarcity of funds forced several houses to take recourse to the Bank of England. The rate for day-to-day loans remained high, generally ranging from 5 percent to 5⅛ percent. In view of the tight cash position, the demand for bills was not so keen and a rate of 5⅛ percent had to be conceded for July and hot maturities. In view of the need to build up portfolios and in spite of the high cost of money and reduced profit margins, the money market raised its bid for last Friday's offer of Treasury bills by 9d, with the result that there was a fall of 2s 6d in the average rate to £5 1s 1.93d percent.

U.S. Federal Reserve Return

The U.S Federal Reserve return for the week ended 30th April shows that the gold stock fell by $509 million to $21,996 million. Foreign deposits rose by $30 million to $257 million, while foreign investments fell by $84 million to $3,068 million. The Federal Reserve sold $23 million worth of bills, reducing total *holdings of U.S. Government* securities to $23,681 million. Total discounts and advances fell by $86 million to $156 million, while the aggregate excess reserves of member banks fell by $21 million to $633 million. The daily average excess reserves of member banks fell by $58 million to $657 million, while their daily average borrowings rose by $13 million to $125 million. Business loans of New York city banks fell by $8 million to $11,045 million, compared with a rise of $43 million to $11,662 million during the corresponding period of last year.

Hongkong Gold Lower

The gold market moved aimlessly during the past week, with the strength of sterling countered by labour unrest in Britain. It was thought that any large-scale strikes would bring about an easing of sterling abroad. Prices softened slightly before climbing, and then profit-taking and short-selling appeared to force the market down. Fractional fluctuations followed and the market ended the period slightly lower. Carry-over charges totalled 68 cents in sellers' favour. The official offtake was 920 taels and the unofficial 6,440 taels. Arrivals totalled 40,000 ounces. Forward contracts were done at $(U.S.)38.02, c.i.f., Macao.

Vegetable Oils Unchanged

Trading in vegetable oils and seeds during the past week opened quietly in most sections, with prices showing little material change. More general enquiry from the Continent was noted for early May-early June shipment, making £104 c.i.f., with Genoa and Hamburg buyers, it was said, providing the main interest. Ceylonese oil remained largely nominal, and first-hand selling ideas for early shipments were well above the likely European trading levels. Near deliveries of linseed oil ruled fully steady with buyers working close by, but forward deliveries lacked attention and tended to weaken. Canadian linseed prices ruled steady, and a mild interest was again noted on U.K. account with business including 1,000 tons to Avonmouth for June shipment at slightly under £48 c.i.f. Brazilian No. 1 grade castor oil was traded at £125, ex-tank Liverpool, for May delivery, but forward shipment rates from India were usually repeated in a dull market, while Chinese British Standard Specification grade bulk oil was claimed to be available for May-June shipment to the U.K. down to £118 c.i.f. duty paid. General selling levels for Malayan palm oil were reduced by £1 to £86 c.i.f., in line with the last reported business.

Textile Workers Demand Import Restriction

Britain's participation in the European free trade area is necessary in order to prevent her gradual elimination from the European market, according to Mr. W. Roberts, retiring president of the United Textile Factory Workers Association. He said at the Association's conference in Lancashire on 1st May that he thought the Government would have to provide reasonable safeguards to ensure fair treatment before members could feel more confident about participation. On the other hand, non-participation would present some major problems as it would be difficult to maintain British exports to Europe. Therefore, there was little choice left except to participate. An emergency resolution condemning duty-free cotton goods imports was moved at the conference.

Tin Export Quota

The International Tin Council has announced that it is leaving the overall export quota for the third quarter of this year unchanged at 23,000 long tons, but altering the individual allocations slightly. It would continue to allow the buffer stock manager to operate within the middle price range of £780 to £830 a ton. Buffer stock holdings on 31st December were 15,300 long tons. Its next meeting will be held in Paris on 17th June. Individual percentages of the export quota will be: Belgian Congo and Ruanda Urundi 8.92 against 9.95 in the second quarter, Bolivia 19.92 against 20.43, Indonesia 19.41 against 20.43, Malaya 37.50 against unchanged, Nigeria 5.90 against 5.34 and Thailand 8.35 against 7.35.

New Delhi

SECOND PLAN ESTIMATES REVISED

WORLD BANK LOAN FOR CALCUTTA AND MADRAS PORTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE two-day session of the National Development Council was held here last week with the Prime Minister in the chair. The question of resources for the second five year plan was the most important item on the order paper. The revised estimates place the total resources at Rs. 4,260 crores, or nearly Rs. 1,000 crores less than is required to implement the original plan. The Planning Commission has revised its estimates of resources as follows (figures in crores of rupees):

	Total for the first three years	Estimates for the last two years	Total for 1956-61
Balance from current revenues	439	320	759
Railways' contribution	129	121	250
Loans and small savings	544	440	984
Unfunded debt, etcetera	(—)11	40	29
Total	1,101	921	2,022
External assistance	438	600	1,038
Deficit financing	917	283	1,200
	2,456	1,804	4,260

On a closer examination, the Commission has rejected the suggestion to fix the outlay at Rs. 4,500 crores. It says: "The problem is to find additional internal resources of the order of Rs. 240 crores." The following are the main lines along which, in the Commission's view, this effort can be, and has to be, made:

Additional taxation	Rs. 100 crores
Loans and small savings	Rs. 60 crores
Economies in expenditure	Rs. 80 crores
	Rs. 240 crores

It says that "readjusting the plan outlay to the level of Rs. 4,500 crores is obviously going to be difficult." The total of domestic resources on the basis of an expenditure of Rs. 4,260 crores comes to Rs. 921 crores, or an average of Rs. 460 crores of extra revenue a year, against the annual average of Rs. 367 crores for the past three years and the estimated availability of Rs. 445 crores in 1958-59. "It would hardly be realistic to assume any larger increase in internal resources on the basis of current efforts at resource mobilisation," it points out. The Commission considers that the expectation of external assistance of Rs. 600 crores in the last two years of the plan is optimistic, while it thinks that deficit financing of Rs. 1,200 crores for the plan period is dangerous. In other words, even the outlay of Rs. 4,260 crores is based on unrealistic assumptions.

For direct investment in industrial projects in the public sector, the plan originally allocated a sum of Rs. 524 crores. In addition, an allotment of Rs. 60 crores to Rs. 65 crores was made in favour of the National Industrial Development Corporation, of which Rs. 35 crores was to be set apart for new basic and heavy industries. In certain cases, the provisions made were not adequate, and subsequently they had to be revised upwards. Thus, for the steel works, the plan provided Rs. 350 crores, but finally, the figure had to be raised to Rs. 510 crores. The foreign exchange required for these projects, which had been initially calculated at about Rs. 229 crores, was later revised to Rs. 302 crores.

Industrial Projects in Public Sector

During the first three years of the plan, the total outlay on industrial projects in the public sector (including schemes relating to scientific and industrial research) is estimated at about Rs. 430 crores, of which the schemes in the States account for about Rs. 9 crores. During the first two years of the plan, against a budget provision of about Rs. 267 crores, the expenditure incurred was about Rs. 240 crores. By 1957-58, a number of industrial schemes begun during the first plan were completed. These included the D.D.T. plant in Alwaye, expansion of the D.D.T. plant in Delhi, expansion of Hindustan Antibiotics, the porcelain insulator scheme at the Government porcelain factory in Mysore, the Government soap factory in Bangalore, the spun-pipe plant of the Mysore Iron and Steel Works, the Bihar superphosphate factory and the provision of balancing equipment in the N.E.P.A. plant. On the completion of these schemes, the capacity for the manufacture of D.D.T. rose by 2,100 tons, of penicillin by 19.2 million mega units, and of superphosphate by 33,000 tons. The N.E.P.A. mill has achieved its full capacity of 30,000 tons of newsprint a year, and capacity for the manufacture of 2,500 tons of insulators has been established. The total outlay on these schemes during the first plan was about Rs. 3 crores.

During 1958-59, the following industrial schemes, it is expected, will be completed:

Project	New or additional capacity
Expansion of the Sindri fertiliser works	47,000 tons of nitrogen a year
First blast furnaces in Bhilai and Rourkela	700,000 tons a year of pig iron forming the first phase
The Durgapur coke-oven project in West Bengal	285,000 tons of hard coke a year
Hindustan Machine Tools, stepping up of production of milling machines and lathes	400 lathes, milling and drilling machines (ultimate capacity)
Hindustan Cables—co-axial cables project	530 miles of cables and 300 miles of co-axial cables

These projects involve a total cost of about Rs. 21 crores and foreign exchange expenditure of over Rs. 12 crores. This is exclusive of the investment in the blast furnaces at the Bhilai and Rourkela works.

The following industrial projects, it is expected, will be fully implemented by the end of the second five year plan:

1. Bhilai, Rourkela and Durgapur steel works	2.2 million tons of finished steel and 600,000 tons of pig iron a year
2. Nangal fertiliser project	70,000 tons of fixed nitrogen a year
3. Mining part of the lignite project	3.5 million tons of lignite a year
4. Streptomycin project at Hindustan Antibiotics	15,000 k.g. of streptomycin a year
5. Ferro-silicon expansion at the Mysore iron and steel works	15,000 tons of ferro-silicon a year
6. Porcelain insulators project in Bihar	2,000 tons of insulators a year
7. Hindustan Shipyard	Expansion of capacity to build 8 to 12 ships a year
8. U.P. Government cement factory expansion.	231,000 tons of cement

The total cost of these projects during the second plan is estimated at about Rs. 558 crores, and the foreign exchange expenditure at about Rs. 328 crores. Projects involving a total cost of Rs. 169 crores and a foreign exchange cost of Rs. 107 crores are likely to be completed during the early years of the third five year plan. These include the following: the foundry-forge project; the heavy machinery project; the mining machinery project; the remaining part of the expansion of the Mysore Iron and Steel Works steel-melting shop and finishing mill, etcetera; the thermal power plant and fertiliser factory in Neyveli; the fertiliser project, Rourkela; the optical glass project; the first phase of the heavy electrical project; the raw film project; the intermediates for dyestuffs and drugs project; the Assam oil refinery; and the alloy and tool steel plant.

Due to the shortage of foreign exchange and larger commitments of rupee expenditure for several other projects, the following schemes are likely to be deferred or substantially slowed down: the scheme for carbonised briquettes under the lignite project; the bank note project; the marine diesel engine project at Hindustan Shipyard; the Hindustan Shipyard dry dock project; the project to produce newsprint from bagasse; the synthetic rubber project; the scheme for a structural, plate and vessel shop; the heavy machine tools project; the scheme to manufacture tungsten carbide; the Salem aluminium plant project, and some other projects of the State Governments.

Together, these involve an investment of about Rs. 64 crores and foreign exchange expenditure of about Rs. 40 crores. It will thus be seen that the completion of a number of industrial projects in the public sector is likely to be delayed, and the benefits from investments on these projects may not materialise before the early years of the third plan. On account of this, there will be shortfalls in the targets for certain industries, namely fertilisers, heavy castings and forgings. The foreign exchange difficulty has been mostly responsible for the slowing down in several cases.

Programme for Private Industry

The second five year plan envisaged a total investment of Rs. 685 crores in industries in the private sector. Of this, Rs. 535 crores was to be new investment and Rs. 150 crores was to be for replacement. The total foreign exchange expenditure was calculated at about Rs. 320 crores, of which Rs. 250 crores was for new investment. Subsequently, the targets in certain industries have been revised upwards, notably for rayon, electrical equipment and in the textile industry. The cost of construction and import prices of capital goods have also increased. Consequently, the total investment required to fulfil the programmes approved for the private sector, it is estimated, has increased to about Rs. 840 crores. The foreign exchange cost has gone up by about Rs. 120 crores.

The studies made so far indicate that in the first year of the plan, the overall investment was between Rs. 135 crores and Rs. 140 crores in this sector. It will probably be of about the same order during the second year. It is asserted that there was no difficulty in finding the resources for this investment in 1956-57 as market conditions were favourable in 1955 and 1956, and a considerable increase in raisings from the market was achieved. Further, the Industrial Finance Corporation increased substantially the volume of its loans (Rs. 10.4 crores in 1956-57 against Rs. 2.2 crores in 1955-56) and substantial foreign capital (including loans) flowed in for the steel expansion programmes and the Caltex refinery. It is, however, open to question whether in face of the measures which are being taken by the Government to mobilise resources for the public sector, the private sector will be able to raise funds so readily in future. Apart from the overall provision of funds, there is the difficulty of foreign exchange. Considerable foreign exchange commitments were made by the private sector before the first year of the plan had expired, but with the strict rationing which has had to be introduced since early 1957, the release for new private investment has now been reduced to a mere trickle, and is likely to continue at a low level. Another factor which is likely to retard progress is the shortage of power that will probably develop in certain regions because of the slowing down of power projects, also due to foreign exchange difficulties. In the circumstances, the industrial programme of the private sector may not be carried out in full.

U.K. Aid to India

The Government of India has accepted the U.K. Government's offer to contribute £14,000 towards the consultancy fees of W. S. Atkins and Partners to prepare a project report on the most effective economic units of production for heavy structurals and vessel plate, as recommended by the Coates mission. The Government of India will meet the balance of £4,500. A contract is now being drawn up on this basis. The consultants' report is likely to comprise a detailed description of the lay-out of the undertakings, and the plant, manpower and management which will be required; it will not, however, contain detailed specifications of the plant although an estimate of costs will be drawn up. Representatives of the firm, it is expected, will be visiting India.

Commonwealth Conference on Trade

The Finance Minister, Mr. Morarji Desai, will lead the Indian delegation to the forthcoming Commonwealth conference on trade, which is scheduled to be held in Canada next September. The agenda-making meeting of the officials for this conference will be held in London early in June, and will be attended by the Finance Secretary, Mr. B. K. Nehru. He will be away from New Delhi for about three weeks. Later, he will accompany the Finance Minister to Canada. The Secretary for Revenue, Mr. A. K. Roy, will visit London and West Germany in connection with the agreements for avoidance of double taxation. Mr. Roy will be accompanied by Mr. V. V. Chari.

Loans for Ports

The World Bank has announced two loans totalling $43 million for port improvements in Calcutta and Madras. One loan of $29 million is being made to the Commissioners for the Port of Calcutta; and the other of $14 million, is being made to the Trustees of the Port of Madras. Three private banks in the United States will participate in the two loans for a total amount of $1,705,000. The Bank of America and the Chase Manhattan Bank together are providing a total amount of $1,113,000 in the $29 million loan for Calcutta port. This represents all of the first maturity and part of the second maturity repayments which fall due in 1963. The Irving Trust Company is participating in the $14 million Madras port loan to the extent of $592,000, representing the first two maturities which also fall due in 1963.

Improvement of transport, especially of the major ports and the railways, has been given high priority in the second plan. Calcutta and Madras are two of the main ports where measures will be taken to relieve congestion, expedite the handling of cargo, and improve general operating efficiency. The *improvements being undertaken in Calcutta* concern mainly the replacement or rehabilitation of existing facilities; they will also allow a modest increase in capacity. In Madras, the port will be expanded to provide for the expected growth of traffic for the next ten years or more. Both loans will be for a term of 20 years and bear interest at 5½ percent, including the 1 percent commission for the World Bank. The amortisation of the loans will begin in April 1963. They will be guaranteed by the Government of India.

Traffic through Calcutta port now totals about 9 million tons annually and, in terms of value, constitutes nearly half of India's imports and exports other than petroleum. The area served by the port produces most of India's coal and iron ore deposits. It is the site of practically all of India's iron and steel plant, her jute mills, numerous engineering and chemical industries, locomotive factories and a variety of other industries based on local raw materials. The Bank has already made several

loans for electric power, steel and other projects in the area.

The port is situated on the Hooghly river some 120 miles from the Bay of Bengal. The approach is difficult because of sandbanks at the estuary and 11 large sandbars in the river itself; navigation is seldom possible for large, modern ships having a draft of more than 26 feet, and on many days of the year, impossible for even smaller ships. Port facilities have been in a poor condition for some years because of overworking during the war, inadequate maintenance and the excessive age of many installations and much of the equipment. The handling of cargo has become more difficult because of the increasing quantities of such traffic as machinery, iron and steel. These factors have been the principal causes of congestion in the port, involving serious and costly delays to ships and freight.

Because of the importance of the rapidly developing area which it serves, adequate port facilities in Calcutta are essential to the Indian economy. The authorities are now faced with the two-fold problem of eliminating congestion at the port, and making long-range plans for additional port facilities to handle the growing volume of traffic. The rehabilitation now being undertaken with Bank assistance will help solve the immediate problem; it will not only relieve congestion, but enable the port to handle nearly 2 million tons more of traffic annually. According to traffic estimates, these facilities will be fully utilised at the end of the construction period. There will still be no reserve capacity in Calcutta and the port will probably continue to be threatened with congestion; furthermore, it will still not be able to handle modern deep-draft vessels. The Indian authorities are aware of the need for a long-term plan to provide further port capacity for the Calcutta area and the Port Commissioners are making a thorough study of the problem.

The main work now being undertaken consists of improvements in berthing capacity, together with transit and storage facilities and water supply, extension of the railway marshalling yard, the replacement of harbour floating craft, the acquisition of electric cranes and mechanical cargo-handling equipment, and dredging and river training works at Fulta Point on the Hooghly river. At King George's dock (one of the two main dock systems), two old berths will be converted into new general cargo berths and two new ones built; and at Kidderpore docks, 12 berths (70 years old) will be repaired and strengthened and equipped with electric cranes; some mechanical equipment will be provided to speed up the handling of cargo, and two floating cranes will be acquired for heavy lifts. The improvement of railway facilities will more than double the number of freight cars which can be received daily. New harbour craft of various types, including two dredgers and a pilot boat, will be purchased to replace deteriorated vessels, and repair facilities for such craft will be improved. A new tea warehouse will be built to provide more space for the transit of 500 million lbs of tea which annually pass through the port. Navigation of the Hooghly river is most difficult around Fulta Point, some 90 miles upstream from the Bay of Bengal. This point of land will be cut back 1,200 feet by dredging, and training works will be built to improve flow conditions in this stretch of the river and to increase the depth. As a result, ships of 26-foot draft will be able to reach Calcutta on many more days of the year. All the works being undertaken will be finished in 1962. The total cost is estimated at Rs. 28 crores or $59 million. The Bank's loan of $29 million will cover the foreign exchange requirements, and the remaining costs will be met by the Commissioners for the Port of Calcutta with some assistance from the Government of India.

Madras Port Project

Madras is the third largest port in India, now handling about 2½ million tons of traffic annually. In recent years, approximately 1,000 seagoing vessels have been using it each year, or about 30 percent more than before the war. Bulk exports of manganese ore have grown to almost 500,000 tons a year; and imports of general cargo have risen markedly, especially iron and steel, machinery, chemicals and fertilisers. This change in the composition of traffic has necessitated new methods of handling and new equipment. Port facilities have not been expanded significantly since before the war, and the growth of traffic has resulted in serious congestion. The modernisation and expansion project now being undertaken will reduce congestion by speeding up the turn-round time of ships in the port, lower the cost of handling cargo, and increase overall operating efficiency. Furthermore, it will enable the port to handle over 4 million tons of traffic annually. This should be ample to accommodate the expected traffic growth for the next ten years or more.

Madras has an artificial harbour, built into the Bay of Bengal; it encloses about 200 acres of sheltered water, affording protection to ships during all seasons of the year. The principal work now being undertaken to modernise and expand the port includes the following: a new ship basin will be excavated and quay walls built to accommodate six new berths, of which only two will be fully equipped at the present time; two old general cargo berths will be reconstructed and equipped with modern cargo-handling equipment, railway connections and transit sheds; a third berth used for general cargo and passengers will be improved and provided with a combined passenger station and transit shed; two new berths will be constructed and equipped, one for handling coal and the other for ore; a new railroad marshalling yard will be built; workshops will be extended and provided with additional equipment; a new transit shed, an administrative office and other buildings will be erected; a dredger, a 60-ton floating crane, four tugs and other harbour floating craft will be purchased. The entire project is scheduled for completion by 1962. The project will cost a total of Rs. 15.3 crores ($32.2 million). The Bank's loan of $14 milion will meet the foreign exchange requirements, and the Madras Port trustees will finance the local currency costs.

U.S. Aid for Port Development

India will receive anything between $20 million and $25 million from the U.S. President's $100 million Regional Development Fund, which is scheduled to lapse on 1st June this year, says a report from Washington. This will be in response to a request from the Government of India for the development of port facilities and rail links to step up iron ore exports from the Rourkela region to Japan. India's request is backed by Japan, which will contribute an estimated $68 million for the project. An announcement is expected to be made by the U.S. Government about this assistance to India, soon after Congress passes the aid legislation currently before it. The idea is not to have this $25 million aid programme bogged down in Congressional debates.

Purchase of Japanese Ships

India proposes to buy five ships from Japan out of the 500 million yen loan received from that country, thereby adding 50,000 tons to her existing shipping capacity. Three of the ships will be bought by the public sector, including a tanker for the Western Shipping Corporation. The Central Transport Ministry will soon place orders for these vessels. Each ship is expected to cost £1 million. The private sector, which has been allotted two of the five ships, has been invited by the Government to place orders for them in Japan. Negotiations have begun in Tokyo for delivery dates. Meanwhile, informed sources do not believe the report that a U.S. bank has offered to provide a loan of $25 million to the Union Government for the purchase of ships. The offer, it is stated here, was mentioned indirectly through Japanese firms and no immediate talks are likely to be held.

Developing Masulipatam Port

The following schemes for the development of Masulipatam port have been included in the second five year plan:

Name of work	Approved estimated amount	Provision made in second plan
	Rs.	Rs.
Electrification of wharves	25,000	25,000
Resurvey of anchorage	30,000	30,000
Continuous survey and observation of bar fluctuations, survey of spit soundings in creak and collection of hydraulic data	15,000	15,000
Provision of stabilising works for the bar	6,00,000	2,00,000
Shifting of lighthouse to the sand spit at entrance	50,000	50,000
Reclamation of low-lying areas including purchase of sand pump, directing pump, etcetera	1,00,000	1,00,000
	8,20,000	4,20,000

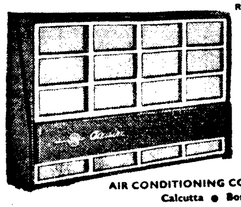
Proposal for Dredger Pool

The technical sub-committee constituted on the recommendation of the National Harbour Board suggested some time ago the establishment of a dredger pool under the control of the Central Government for Kandla and certain minor ports, consisting of two suction dredgers and one bucket dredger with the necessary auxiliary equipment and craft like survey launches. The total cost of the dredger-cum-survey launch pool is estimated at Rs. 214.5 lakhs, with a foreign exchange component of Rs. 155 lakhs. The World Bank was approached for the grant of a loan to meet the foreign exchange expenditure, but without success. Efforts are, however, being made to purchase the dredgers with a loan from the U.S. Export-Import Bank. In the meantime, the maritime State Governments have been asked to agree to the proposals made for the allocation of the operational cost of the pool. The pool will be established after the craft and equipment have been received, and the consent of the State Governments will be obtained on the sharing of the operational cost.

Manufacturing Carbon Black

The Government has invited two Rumanian experts to explore the possibilities of manufacturing carbon black in India. It is also investigating the scope for manufacturing carbon black by utilising coal tar fractions in consultation with a German firm. Further, an Indian industrialist is negotiating with a leading U.S. firm for starting the manufacture of carbon black in this country. The following statement shows country-wise imports of carbon black into India during January-November 1957.

Name of the country from which imported	Quantity imported (in tons)
United Kingdom	1,677.5
West Germany	238.9
France	318.4
Italy	0.5
Greece	4.5
Canada	33.9
U.S.A.	5,994.3
	8,268.0



Mr. Burrah Saheb
and Airconditioning

Mr. Burrah Saheb is really not bothered about the money he spends for his personal comfort. He is only interested in getting the very best and when it came to airconditioners he just took the ACCAIRE.

What he wanted primarily was a cool, clean room with a minimum of disturbing noises... a place where he could work with quiet efficiency. He found the ACCAIRE whisper-quiet and efficient in operation and that satisfied him.

Now his ACCAIRE gives him all that and more. It is a handsome unit, it is low in power consumption and it never lets him down.

Unutilised Import Licences

A special enquiry was made in March into the outstanding import licences, especially those presented at the major ports of Bombay, Calcutta, Madras and Cochin. The results obtained show that during the period of October 1957-March 1958, out of a total number of 72,000 licences issued, only 9,000 were presented for clearance of goods at the ports. The balance of 63,000 licences, it may be assumed, was unutilised up to 1st March, 1958. It is, however, possible that some of these licences might have been presented at some of the minor ports for clearance, but this is not definitely known. Moreover, information relating to periods prior to October 1957-March 1958 for all licences is not available. During this period, the number of partially utilised import licences is placed at 13,000. The value of valid licences not presented at the ports of Bombay, Calcutta, Madras and Cochin for clearance up to 1st March, 1958, is estimated at Rs. 189 crores. The total outstanding value of partially utilised import licences in the same period was Rs. 374 crores

Cotton Imports

The total quantity of foreign cotton licensed for import so far during the 1957-58 season is 307.760 bales of 400 lbs each, comprising 165,000 bales of Egyptians, Sudans, East Africans and other sterling area cottons, and 142,760 bales of American cotton under the U.S. aid programme. Actual arrivals, as on 5th April, were 215,703 bales. The estimated annual consumption of foreign cotton by mills in India is about 600,000 bales of 400 lbs each. With the carry-over from last season, together with the imports in the current season, it is expected that the supply position of foreign cotton will be comfortably maintained. The Government's policy is to import only such varieties as are not grown in the country in sufficient quantities to meet the requirements of the mills.

Tussar Silk Exports to United States

The Government has ordered Mr. A. R. Takyar, Assistant Secretary, Central Silk Board, Bombay, specially to look after the implementation of the agreement signed with the U.S. Government in February 1958, for the export of tussar silk fabrics to the United States. Mr. Takyar will tour different districts in West Bengal, Madhya Pradesh, Bihar and Orissa where tussar silk is produced and establish contacts with the exporters and the district industries officers concerned.

Conference on Labour

Amendments to the Industrial Disputes Act, 1947, industrial relations, evaluation and implementation of labour legislation, awards and agreements, the working of the Employees' State Insurance Scheme and the subsidised industrial housing scheme are the items which have been included in the agenda for the Labour Ministers Conference and the Indian Labour Conference to be held in Naini Tal this month. The Labour Ministers will meet on 15th and 16th May and, if necessary, on 17th May. The Indian Labour Conference will be held on 19th and 20th May. The Ministers will, in addition, discuss the closure of industrial units and unemployment. Notes on productivity, workers' participation in management, workers' education and the steering group on wages will also be placed before the two conferences.

Alcohol Industry

The present position of the alcohol industry is as follows:

		Capacity
Existing Units	47	29.6 million gallons
Schemes which have been licensed and which are under implementation (six new units and ten for substantial expansion)	16	11.4 million gallons
Schemes which are approved, but licences have not yet been issued (three new units and two for substantial expansion)	5	4.8 million gallons
Total	68	45.8 million gallons

The question of extending power alcohol mixing schemes to certain parts of north Bengal and Madhya Pradesh, as well as Jammu and Kashmir, has been taken up so that more alcohol can be utilised as motor-fuel. The following schemes which are designed for the use of alcohol as raw material have been approved:

Number of units and articles to be manufactured	Quantity of alcohol proposed to be used a year
Two units for the manufacture of acetic acid	900,000 gallons
Two units for the manufacture of polyethylene	4,200,000 gallons
One unit for the manufacture of acetone	350,000 gallons

Tractors and Spare Parts

The import policy for tractors and spare parts has become restrictive since January-June 1957, on account of the foreign exchange shortage. The value of imports of agricultural tractors and spares during the last two years has been as follows:

	Agricultural Tractors	(Value in lakhs rupees) Spares
1955-56	280.98	118.66
1956-57	548.92	115.36
April-November 1957	290.90	64.93

It is likely that on account of the restrictive import policy, a shortage of agricultural tractors will develop. During 1957, about 150 to 200 tractors were imported by the State Trading Corporation in addition to those imported by established importers. The number assembled by two established importers, whose figures are available, was 2,269. During the licensing period April-September, 1958, a small quota has been prescribed for established importers. In addition, the State Trading Corporation will import about 400 tractors on the basis of payment in rupees.

Motor Vehicle Imports

It was alleged in Parliament last week that in the matter of granting licences for the import of baby cars and trucks, the Government has shown some partiality to a firm of manufacturers at the cost of others. The following questions and answers were interesting.

Dr. Ram Subhag Singh: The question was why there was discrimination.

Mr. Speaker: There is no discrimination so far as the Minister is concerned. He says this matter was taken up as early as 1953, and so on.

Mr. Feroze Gandhi: Is it a fact that the import licences for an established manufacturer whose indigenous content had reached 38 percent in the case of Fiat and 30 percent in the case of Standard 10 were drastically cut due to the foreign exchange crisis, and whether these cuts were restored prior to Hindustan Motors being granted Rs. 17 lakhs in foreign exchange for the import of 500 Baby Hindustans in completely knocked-down condition for subsequent assembly?

Mr. Manubhai Shah: No, Sir. I would also add this, in answer to what the previous Hon. Member asked and which escaped my attention. No other baby cars were taken. Standard 10 is still being manufactured. So there was no question of denying Standard 10 anything. As far as Fiat is concerned, Fiat 1100 was the only car licensed, and when we speak of these baby cars, Fiat 1100, Standard 10 and Baby Hindustan were classed together. There is another baby car which was never licensed, that is the car of 600 to 800 c.c. It was never manufactured nor licence allowed for it. So, there was no discrimination or discriminatory treatment between any three of these baby cars.

Foreign Exchange for Manufacturers

In the January-July-September period, Hindustan Motors was given Rs. 98 lakhs; Premier Automobiles was given Rs. 21.6 crores; Telco was given Rs. 4.24 crores; Ashok-Leyland was given Rs. 41.95 lakhs; Mahindra and Mahindra was given Rs. 86.41 lakhs: and Standard Motors was given Rs. 50 lakhs. These make a total of Rs. 9.17 crores. In the October 1957-March 1958 period, Hindustan Motors was given Rs. 1.17 crores; Premier Automobiles Rs. 2.42 crores; Telco Rs. 2.44 crores: Ashok-Leyland Rs. 1.2 crores; Mahindra and Mahindra Rs. 65 lakhs; and Standard Motors Rs. 39.93 lakhs. The total is Rs. 8.29 crores. As for trucks, Hindustan Motors also obtained complete approval by its foreign collaborators, General Motors, for the manufacture of Bedford diesel-cum-petrol truck and by the end of January 1958, the Government completed its examination of the entire programme and gave its approval.

Hindustan Motors was making Studebaker trucks in the past. As the technical collaboration with Studebaker did not prove fruitful to the extent desired, it was only a question of change in foreign collaboration and not one of licensing any additional or new manufacturing capacity with the technical collaboration of General Motors. Again, the investment made in the existing plant, equipment and buildings will prove helpful in reducing the additional outlay for the new truck programme. The Government, therefore, has approved this collaboration programme of Hindustan Motors and General Motors.

Import licences for 1,008 General Motors trucks were issued to Hindustan Motors in February 1958 for the period October 1957-March 1958. This includes 600 Bedford and 408 Chevrolet trucks. The foreign exchange involved for Chevrolet trucks as a part of the licence will be about Rs. 35 lakhs and for Bedford trucks about Rs. 49 lakhs, making a total of Rs. 84 lakhs for the October 1957-March 1958 period. The manufacturing programme, with approved progressive deletion percentages, begins from 1st April and further licences, if any, will strictly be considered on the basis of deletion percentages. According to the approved programme, it is expected that within a period of four years, the indigenous content of the truck will rise to about 70 percent or 75 percent, which will be about the same final percentage as the indigenous contents in other trucks manufactured in the country.

Mr. Feroze Gandhi: The foreign exchange component of this licence is about Rs. 85 lakhs. I would like to know, in view of the fact that the indigenous content of the Mercedes-Benz truck is 43 percent and that of the Dodge is 49 percent, why the reduced quotas of these manufacturers were not restored before the grant of this licence to Hindustan Motors for importing 1,000 trucks in a completely knocked-down condition in terms of the Government resolution on the Tariff Commission's report?

Mr. Manubhai Shah: I would like to clarify some of the misunderstanding in the question itself. This is not at the cost of any other manufacturer. Hindustan Motors was getting for the Studebaker truck a certain amount of foreign exchange; it only wanted substitution of another type of manufacture, which was because the technical collaboration with Studebakers could not be fruitful. General Motors' programme was found to be entirely satisfactory. As a matter of fact, for the whole year, we have not been able to give them any foreign exchange for trucks in spite of the fact that to the other two manufacturers we have given a very sizable quantity. The Tariff Commission's report which the Government accepted through the resolution mentioned has recommended that the first priority be given to commercial vehicles. The figures of production have been in line with this resolution.

Mr. Feroze Gandhi: My question was a direct one and that was whether the quotas of other manufacturers were reduced and whether those quotas were restored before this licence was given for importing trucks in a completely knocked-down condition.

Mr. Manubhai Shah: I am answering specifically that particular question. There is nothing like a fixed quota for anybody. As I mentioned previously also, the total volume of foreign exchange is given for the entire factory and not for the different units.

Mr. Sinhasan Singh: Has any reduction in quota at any time been restored before licence for these 1,000 trucks was given?

Mr. Manubhai Shah: I have mentioned that the truck programme of none of the other two manufacturers has been affected. As a matter of fact it has gone up. The production of T.E.L.C.O., Tata-Mercedes-Benz, which was 2,338 in 1955, went up to 5,153 in 1956 and to 7,041 in 1957. The production of Premiers, which was 3,885 in 1955, went up to 5,285 in 1956 and to 5,572 in 1957. So, as I was urging, this quota to Hindustan Motors could oe considered as a quota which would have normally been available to them even if Studebakers had continued. Unfortunately, in the year 1957, Studebaker fell through and discontinued the production. It was late in the year 1957 that the General Motors combination became practicable and we gave it permission only in January. That is why for the period October-March a quota of 1,000 trucks was given to them. It is not at the cost of any other manufacturer of trucks.

Mr. Feroze Gandhi: I am very sorry that I have to bring to your notice that I am asking for information whether the import licences to the manufacturers were reduced and the Hon. Minister is giving a reply about production. Production will be for past licences and not for the present ones. I am asking a direct question. Why has he withheld the information about licensing in 1957?

Mr. Manubhai Shah: I can assure the House that no quota has been given from other manufacturers' quota Even in the normal course, every six months we review them. There is no fixed allocation for the six months. The only consideration which has weighed with the Government for 1957 is to maintain the level of production and employment so that the quantities produced in any particular year do not go below what was produced in 1955 or 1956. Also, the licences given to them will come somewhere in the end or middle of 1958. It is not going to affect either the prospective or the retrospective production.

Dr. Ram Subhag Singh: May I also know whether they reduced the import licence of T.E.L.C.O. by 800 trucks during the same period?

Mr. Manubhai Shah: The real position is this. I will first read the licence figures so that the House will know what is the amount of foreign exchange involved. To Premiers, in the October-March period, a quota of Rs. 1.45 crores was released for trucks. To T.E.L.C.O., the quota released was Rs. 2.44 crores. To Hindustan, it was Rs 84 lakhs. These were the allocations. What I am urging is this. All these allocations are made without any particular period and a large number of trucks are made. The offtake in the next period is always taken into consideration. If the figures of the last few years are seen, it will be seen that there is no strict quota for the same type. We take an overall picture: what are the sales, what is the production, what is the manufacturing capacity, what will be the level of foreign exchange now required because the indigenous content has gone up? All these are taken into consideration. I can assure the House that the level of production of none of these two factories, Premiers and Tatas, is going to suffer during the year 1957-58.

U.K. PLANS TO RELAX FINANCIAL CURBS IF IMPROVEMENT CONTINUES

TWO BUDGET PROPOSALS MODIFIED

(FROM OUR LONDON CORRESPONDENT)

THE Prime Minister has been the luncheon guest of the Conservative back-benchers' 1922 Committee, and has taken advantage of the opportunity to speak informally about political and economic developments and the future prospects. It is understood that he has emphasised the rightness of the measures adopted by the Government last autumn to check inflation, for they have achieved results. Economically. Britain has now reached the turning point—the "Alamein" is how Mr. Macmillan puts it—and if things continue to improve, the present financial restrictions can be eased in a few months' time But a stable currency and the safeguarding of the reserves remain the top priorities. The Government has no intention of being rushed into abandoning either of those objectives. The Chancellor of the Exchequer has meanwhile made changes in the Finance Bill concerning the two points which have occasioned most criticism. The proposed stoppage of the "dividend stripping" loophole is to be effective from Budget day and will not be retrospective. while miners and quarrymen's protective boots and helmets have been replaced on the list of articles exempt from purchase tax. Mr. Amory has announced the changes in the House, and has earned applause for the first from the Conservative and for the second from the Labour benches.

Labour Troubles

Markets, and the City in general, however, are much more concerned at the moment with the uncertainty of the labour situation. Efforts to avert the threatened bus strike have proved abortive and it started at midnight on Sunday. It is evident that the busmen and their leaders are far from happy about the situation in which they find themselves—at the head of the queue. setting the pattern for other workers—and especially in view of the fact that fresh claims continue to be made, either for wage increases or a shorter working week without loss of pay. As far as the Government is concerned. it has made its attitude on the subject clear to both sides of industry, and is now leaving it to them to find a way out of the difficulty. It is not proving easy. and the workers' approach—as demonstrated, for instance, at the annual conference of the Amalgamated Engineering Union—is not making things easier. But for the uncertainty in this connection, the economic indicators are reasonably satisfactory. On the basis of information so far received, the index of industrial production for March is expected to be 144-145 (1948=100). The index for March last year was 145. In the first three months of this year, the index averages 142, the same as in the corresponding period of 1957. The indices before and after adjustment, to exclude movements due to regularly recurring seasonal factors. including holidays. so far this year are: January, 138 and 137 (the same as for January 1957). February, 144 and 139 (143 and 138); March, 144-145 and 137-338 (145 and 138). Since the March 1957 figure was affected by the shipbuilding and engineering strikes, it seems the trend is slightly downward.

Bank Advances Seasonally Higher

Following the increase of £37.2 million in the preceding month, bank advances rose by another £46.9 million between 19th March and 16th April. Of the latest increase, £15.1 million reflects additional borrowings by the nationalised industries, which rose from £50.7 million to £65.8 million. For the increase of £31.8 million in bank lendings to the private sector. seasonal influences are probably mainly responsible. Although the advances total has now reached £1,964 million, it is still at a level which implies that the banks have some room for manœuvre within the ceiling imposed by the official directive. Deducting the borrowings of the nationalised industries, the average figure for the first seven months of the year covered by the directive works out to no higher than £1,834 million. This is well below the permitted average for the 12 months of £1,885 million. Moreover, the calculation takes no account of any additional credits for medium-term exports of capital goods, which are excluded from the scope of the credit squeeze.

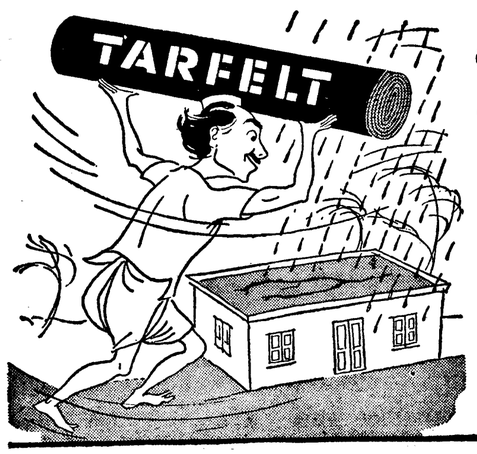
A further fall in the price of British imports is reported for March. The Board of Trade index for the month is a point down at 98, the lowest level since the base year 1954. Prices are two points lower for basic materials, fuels and manufactured goods. Foods, on the other hand, are steady. Bacon is higher and butter is lower. But the fall in import prices has not on this occasion been reflected in the terms of trade. because export prices have also fallen back after the rise in February. Prices in all the main groups of exports are easier. with the result that the index has fallen a point to 110, which is the same as it was in January. The terms of trade, which are the ratio of import prices to export prices, are steady at 89 (1954=100).

Commonwealth Economic Problems

Economic and trade problems associated with agriculture and other primary products will be the main item on the agenda at the Commonwealth Trade and Economic conference to be held in Montreal in the autumn. This fact emerges from an interesting debate on Commonwealth economic affairs which developed in the House of Commons and produced a wide measure of agreement between the parties. It arose on a Conservative member's resolution urging closer co-operation in financial and economic affairs. and the creation of a committee to meet regularly under the Governor of the Bank of England to devise measures to strengthen sterling and help the control of sterling balances. Many suggestions came from speakers on both sides of the House, favouring an import-export bank. a permanent secretariat on the lines of O.E.E.C., a Commonwealth bank, etcetera. The Government's views have been put forward by the Parliamentary Secretary for Commonwealth Relations, Mr. Alport, who has said: "We are seeking, among other things, to find ways of improving the existing methods of consultations and co-operation within the Commonwealth. If the creation of some new institution can achieve this, we would be in favour of it, but we have no wish to duplicate machinery already working efficiently or create a Commonwealth bureaucracy. There was constant consultation along a number of different channels within the sterling area." Any new institution should not limit the freedom of action and independence of the members of the Commonwealth. It has to be something in which each member of the Commonwealth can play a constructive part, in spite of there being wide differences of resources and needs between them. Any plan for a Commonwealth Bank or similar institution should have as its main purpose mobilisation of additional resources. He hopes something might be worked out before the conclusion of the Montreal conference.

Asian Textile Industries

A new light on developments in the textile industries, as seen from the viewpoint of a trade unionist, is provided, in his latest half-yearly report as General Secretary of the Rochdale Weavers and Winders Association, by Mr. Ernest Thorton, M.P., who has recently visited the East on behalf of the International Confederation of Free Trade Unions. This has enabled him to see at first hand what is taking place in the Asian textile industries. He has visited 26 textile mills in India. Pakistan, Hongkong, Japan, and South Korea, and he finds that the textile industries are having increasing difficulty in running to capacity. In some. curtailment of production is already taking place. Competition, not only between East and West. but between the Asian countries themselves. will grow fiercer. These countries depend heavily on exports of cotton textiles to balance their economic and to pay for their capital development programmes. In consequence, there is likely to be something approaching cut-throat competition for the stagnant or shrinking world market in cotton textiles. All the Asian countries are likely to out-price Britain in a widening range of fabrics. Greater emphasis is being placed on quality, and finishing plant for dyeing, printing and the new-type finishes are being extended or installed. The field of competition, both in the U.K. and in export markets, is therefore likely to be broadened.



Anglo-Japanese Trade Pact

After two months' negotiations, new trade arrangements have been finalised between this country and Japan. They cover a period of one year ended 31st March, 1959, and provide for import facilities and related matters between Japan. on the one hand, and the United Kingdom and its dependent territories, on the other. In the case of Japanese imports from the United Kingdom, the quotas for nine items. of which the most important are sheet-glass and acetone, have been cancelled or reduced. but new or additional quotas have been agreed for a number of other items. including motor-cycles, dump trucks. various chemicals, and certain types of textile machinery. According to the Board of Trade these changes provide. on balance. for additional U.K. exports to Japan of about £165,000 in 1958-59. The majority of the quotas, including the quota for wool textiles (£2.8 million), remain unchanged. For U.K. imports from Japan, the quota for canned salmon has been fixed at £6 million, an increase of £1 million over the previous rate. Provision has been made for small increases in the quotas for canned fruit, toys and sports goods, and oleylacetyl alcohol, and for small new quotas for transistor radios and electric clocks for domestic use. Other quotas, including the quota for cotton and rayon grey cloth for re-export, remain unchanged. The greater part of the trade between the United Kingdom and Japan takes place outside the quota arrangements. In 1957, U.K. exports and re-exports to Japan amounted to £29 million f.o.b., and her imports from Japan to £24 million c.i.f.

Brevities

It is reported that the Ceylon Government has been asked by Professor Kaldor, the Cambridge economist, to assure foreign tea planters that it will not nationalise foreign-owned plantations for the next 20 or 25 years. In return for such an undertaking, foreign estate owners should guarantee to invest more money for the development of plantations and assure the Government of an annual increase in production targets.

The Central Provinces Magnese Ore Company is paying a final dividend of 1s 8d as before, but the bonus is increased from 8d to 1s 4d. making 4s 2d, tax-free, a unit, against 3s 6d. tax-free. The profit for the past year, after transferring £200,000 (£225,622) to stock reserve, has increased from £1,529,067 to £2 932,340, before charging £1,925,000 against £1,080,000, for taxation.

SIGNIFICANCE OF THE KERALA BY-ELECTION

A CRUCIAL CONTEST FOR COMMUNISTS

(FROM A SOUTH INDIAN CORRESPONDENT)

ON 16th May, a by-election will be held in the predominantly plantation constituency of Devicolam-Peermade. The result will decide the future of the one-year old communist Government, which continues to be in office with only a single-vote majority. In the last general election, a communist candidate was returned from the general seat in this double-member constituency. She was Mrs. Rosamma Punnose, who has been unseated by the Election Tribunal on a petition filed by her Congress rival, Mr. B. K. Nair; his nomination paper was rejected on some technical grounds by the returning officer at the last general elections. Both Mrs. Rosamma Punnose and Mr. B. K. Nair are contesting the by-election again, along with two other independents.

There are 150,000 voters according to the revised voters' list, against 141,809 during the last election. The increase of 17,000, it is alleged, is largely due to manipulation by the communists. It is also alleged that people with votes in other constituencies are now on the roll for the Devicolam-Peermade by-election.

In the last general election, nine people stood for the general and reserved seats from this constituency. The total number of votes polled for the two seats together amounted to 163,982, divided among the nine candidates in the following order: Rosamma Punnose (General Communist) 33,806; N. Ganapathy (Reserved Congress) 31,887 (both declared elected); Karuppayya (Independent) 26,567; Ramayya (General Congress) 24,123; S. Sarma (Independent) 11,779; Thankayya (Independent) 8,759; Bhaskaran (P.-S.P.) 6,204; Pachu Pillai (R.S.P.) 7,098; Rajaram (Reserved R.S.P.) 6,530; invalid 7,197.

Workers Among Voters

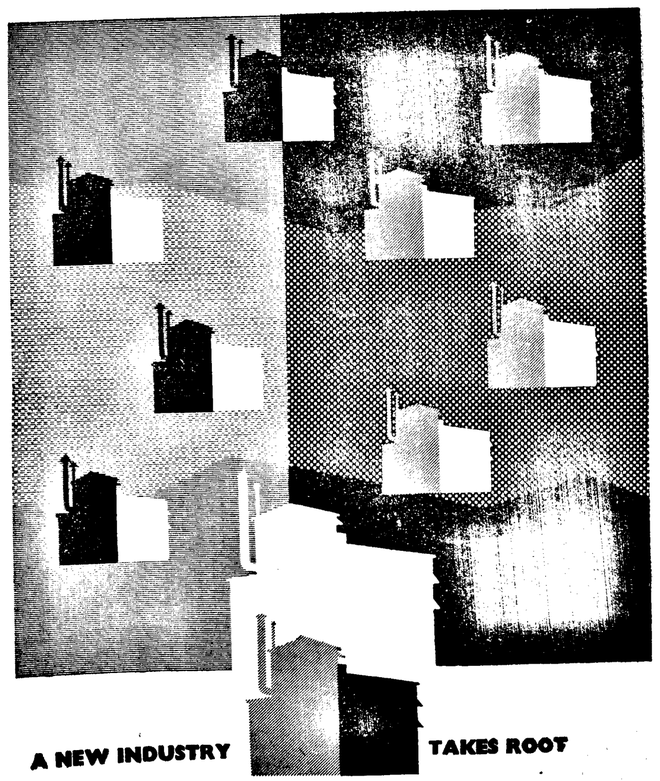
Of the total of 150,000 voters, more than 100.000 are plantation workers. They are well organised under four different banners, with the I.N.T.U.C. claiming the largest following. The Congress candidate for this by-election, Mr. B. K. Nair, is the president of the Kerala branch of the I.N.T.U.C. and he has played a significant rôle in organising the plantation workers in the locality. Since his nomination paper was rejected in the last election, somebody else had to be given the Congress ticket, but he was not liked by certain sections of the I.N.T.U.C. workers. A serious rift developed on a Tamil-Malayali basis, leading to the defeat of the Congress candidate. Through the intervention of the Madras Chief Minister, Mr. Kamaraja Nadar, and the Tamilnad I.N.T.U.C. leader, Mr. Ramanujam, this conflict between the Tamil and Malayalee sections of the I.N.T.U.C. unions functioning on the High Ranges of the Kerala State, has recently come to an end. Congress circles claim that there is now full support for the candidature of Mr. B. K. Nair from all sections of the I.N.T.U.C. workers as well as Congress workers in this constituency.

The communist unions, under the leadership of Mrs. Rosamma Punnose, have been able to strengthen their position to a considerable extent since the last election. They have penetrated into and organised splinter unions in almost all the strongholds of the I.N.T.U.C. As a matter of fact, the communists have gained some strength in the plantations within the last one year, and to that extent, the I.N.T.U.C. hold has weakened. But the latter still is numerically the strongest. The communists come second.

Socialist Support for Congress

The Praja-Socialist Party and the Revolutionary Socialist Party also are in the field. Their respective unions claim the support of 7,000 and 6,000 workers, which is justified by the polling figures in the last election. All the efforts of the ruling party to win over the support of the R.S.P. in this by-election have failed, and the latter is supporting one of the independents, Mr. Subramaniam. The P.-S.P. union is likely to support the Congress candidate in view of the understanding which has developed between them since the communists came to power. Although the Muslim League as an organisation is not well established in this area, the co-operation which exists between the Congress and the Muslim League in Kerala will enable the Congress candidate to get that organisation's support to win over the Muslim votes in this constituency amounting to a few thousands. The Catholics, who form a good percentage of the voters, are solidly behind the Congress and the Congress candidate is likely to get their full support, although an independent, who is a Catholic by birth, is in the field.

Thus the Communist Party is fighting single-handed, whereas the Congress has with it the support of all the democratic parties in the State. The R.S.P. support for an independent might actually result in splitting the votes which might have gone to the communist candidate otherwise. Still the latter has a fair chance of victory as his Party excels in the field of organisation and electioneering. Financially, too, it is stronger today. It is alleged that Government machinery is being used to the Party's advantage in this election. It has started election work much earlier than the Congress. A 5,000-strong squad of the Communist Party is now working in the area day and night. Top-ranking communist leaders are camping in the constituency, and supervising the election campaign.



Congress Campaign Poor

But the Congress, as the P.-S.P. leader, Mr. Pattom Thanu Pillai, has observed, does not seem to have taken this election with all the seriousness it deserves. Congress sympathisers grudgingly say that the local leadership was more interested in conducting a Pradesh Congress Sammelan in Cannanore in the northern end of the State. In fact, the election work of the Party is yet to gather momentum. It is even stated that the Pradesh Congress leaders have not shed their camp rivalries, and are yet to contribute their full share to the fight for the election. Only the Kottayam D.C.C., which is immediately concerned, has started sending volunteers in large numbers to the constituency for squad work, and a few leaders are in the field campaigning for Mr. B. K. Nair. But much will depend, as far as the Congress chance of success is concerned, on how the Party conducts its electioneering.

Neither the Congress nor the Communist Party is sure of the planters' support. The Communist Party has often alleged that the planters are interested in bringing about the failure of its candidate. Some of the communist Ministers of Kerala are still after the planters with requests for assistance. They are forcing the employers to settle the question of bonus for 1957, about which the workers are agitating, before the election date arrives. Certain circles also allege that the planters are extending financial and other assistance to the communist candidate, probably at the instance of the Government. But a spokesman of the planters has declared that they have absolutely no politics of their own, and they will not do anything which will help one party against the other. They, as a body, are keeping aloof from the election. It would also be wrong to presume that the planters are in a position to play any effective rôle in the election, because in a system of adult franchise, the number of votes the employers can manage to secure for any candidate will be very limited.

International Interest

The result of this by-election will be of international interest. It will provide an opportunity to test the people's reaction to one year of communist rule in Kerala, where the Communist Party came into power through the ballot box. This is a life and death problem for the communist administration, because if it loses this by-election it is likely to lose power also as its one-vote majority in the State Legislature will then vanish. If the Government falls by losing the by-election, it will amount to a great setback for the communist movement in the country as a whole.

A NEW INDUSTRY TAKES ROOT

The Tata Ferro-manganese Plant at Joda was designed, engineered and erected by
DASTURCO
eight months ahead of schedule

Manufacture of ferromanganese is developing rapidly under the Second Five Year Plan with a target of 160,000 tons a year by 1961. The output of the plants, now complete or under construction in Orissa, Andhra, Mysore etc., will not only meet the needs of the country's growing steel industry but also leave a large surplus for export, earning over Rs. 10 crores of foreign exchange.
Dasturco is proud of its close association with this new industry. As an organisation of consulting engineers, it is responsible for over half of the total ferromanganese capacity being developed in the country.

LONDON INSURANCE LETTER

THE CASE FOR PRIVATE PENSIONS

AS both Britain's major political parties are planning to attract voters with a national insurance scheme at the next general election, and as the present administration has, at most, less than two years to run, it is not surprising that the insurance companies' chairmen have discussed national insurance scheme in their statements this year. Nor is it surprising that they have argued a strong case for the private and voluntary, as against the public and compulsory, schemes. The politicians' main concern is to provide attractive retirement benefits, and it is, therefore, their plans for pensions that concern the chairmen. The case for the existing schemes provided by the companies has been, perhaps, most cogently argued by Mr. Geoffrey Kitchen, chairman of Pearl Assurance. Mr. Kitchen's argument is based on the proved success of saving through the medium of life assurance. According to the official estimates, he points out, the U.K.'s total personal saving amounted to £1,619 million in 1957, compared with £1,467 million in 1956 and with only £89 million in 1948. Of the total, the proportion saved through the medium of life assurance continues to grow. The latest available figure for net increases in funds of life assurance and pension funds, combined, is £513 million for 1956 (including £262 million for life assurance), compared with £483 million for 1955. The corresponding figures for the National Savings Movement, building societies, and personal bank deposits, are much smaller.

There is, of course, a distinction between saving in the general sense and saving specifically for retirement. Mr. Kitchen sees, and approves, a growing awareness of the huge costs of the present national insurance benefits and of possible further increases in benefits, and also of the impact of these commitments on personal saving and on the national economy. He is, moreover, satisfied that the private schemes already available provide adequately for retirement with pensions based on previous earnings. Already, Mr. Kitchen points out, approximately one half of the male working population of the U.K. is included in occupational pension schemes additional to the national insurance pension; and in the next ten years, he believes, most of the workers not yet included can be brought into occupational schemes. Only for that area which the private sector cannot reasonably cover (including casual and mobile labour) does he see a good case for national insurance pensions. Certainly, the Government has an important part to play. It can legislate to ensure that pension rights are transferable. It can even make pension schemes compulsory in every business employing more than a few people. Rather than introduce extravagant publicly-financed pensions in competition with private schemes, it can insist that the community make full use of the existing facilities.

Investment Trends

One point that Mr. Kitchen stressed was the contribution made by these private savings "to the expansion of the capital equipment of industry and the increasing productivity upon which our future so vitally depends". That the insurance companies have increasing resources to invest is a well established fact. Whether they are investing them in the way most beneficial to the community is sometimes debated. Up-to-date information on the size of investments such as the banks provide (with other statistics) monthly is not available from the insurance companies; and aggregate figures would not, anyway, be so informative, as insurance companies' investments are spread much more widely than banks. Combined figures of all the companies for 1957 are not yet available, but from some of the leaders it can be deduced that the trend towards ordinary shares has continued.

The biggest company is Prudential Assurance, with total assets of £906.4 million at the end of 1957—nearly £50 million more than a year earlier. During the year the Prudential increased its holdings of gilt-edged securities only £½ million, of debentures and gold and sterling bonds £11 million, of ordinary shares as much as £14¼ million—and as this is the smallest general category the proportional increase is even more impressive. The Pearl reduced its holdings of gilt-edged securities £4½ million, and increased its holdings of debentures £7 million and of ordinary shares £5½ million. The general trend towards ordinary shares is familiar, but such movements are a little surprising in view of the rapid decline in values of ordinary shares in the second half of last year. To increase the totals of ordinary shares held, new purchases during the year must have been relatively substantial. The depreciation of investments has not troubled the companies, because, as a general rule, their long-term liabilities are more or less covered by fixed-interest securities of equivalent periods. In the current year there has been evidence of decidedly more active interest in the gilt-edged market. The banks' figures have shown appreciable increases in investments (which in their case are mainly short and medium-term gilt-edged stocks), and it is known that the insurance companies have also been buying (in their case longer-term stocks). But there is no reason to suppose that the insurance companies have switched their interest from ordinary shares: they have probably been adding to their holdings of them proportionally more. It can thus be argued that insurance funds are moving into industry, directly or indirectly, on an increasing scale. Whether they reach the places where they are needed most cannot, of course, be deduced from the figures.

Longevity

So far as the essentially human element is concerned, some thoughts were put into the minds of life assurance men by the Watson Memorial Lecture to the Institute of Actuaries at the end of April, delivered this year by Dr. Alex Comfort. This authority gave some account of researches into the factors of aging. If we knew more of the pattern of mortality in animals and man, he said, we could seriously consider methods of altering the rate of mortality—possibly by dietary manipulation or by anti-mutagenic drugs. Actuaries are, of course, familiar with the lengthening of life that has already resulted from improvements in social conditions. Some enthusiasts believe that a similar change, similarly affecting the actuarial basis of life assurance can be brought about deliberately.

HESSIAN SLUMPS AS ARGENTINA CANCELS IMPORT LICENCES

RENEWAL CONSIDERED LIKELY LATER

THE Calcutta markets have shown a marked reaction to the news from Argentina and prices have slumped to their lowest level in several weeks. It is reported that in an attempt to stabilise her economic position, that country, like India, has decided on drastic cuts in imports and one of the commodities affected is hessian. This is a serious blow to India, as Argentina is a major market for the hessian produced here. It is not certain, however, whether the import licences have been completely cancelled or merely suspended. Speculation has been going on since Tuesday, when a steamer scheduled to take gunnies to Argentina was withdrawn after loading had commenced. It was then learnt that banks in Argentina have been instructed not to issue any letters of credit, irrespective of whether licences have been granted or not. Prices have been depressed since this news, but the trade in general is optimistic about the ultimate outcome, as hessian has a very high priority on the list of imports.

In the past few years, the buying policy of Argentina has undergone a considerable change. Formerly tenders were invited for very large amounts covering a shipping period of several months. Invariably this had a bullish effect on the market and prices went against the buyers. In recent years, however, they have followed a hand-to-mouth policy like other big buyers have done, and the effect on the market has been negligible. Consequently, in spite of the fact that she has been steadily purchasing for some time, the internal stock position has suffered under the existing policy and no large stocks have been built up. Thus Argentina cannot afford to restrict hessian imports for any length of time without seriously affecting her economy, especially since burlap is essential for many of her own exportable commodities. Many local shippers have been caught by the latest developments, as they had been taking up hessian in anticipation of Argentina's entry into the market. They are now left with these goods on their hands and have little hope of making a profit, as most of their purchases were made at prices higher than those ruling at present. The general state of the hessian market is reflected in the closing of the gap between the near and forward shipping positions. At one stage, these were quoted on par with each other, but towards the close, there is a price difference in favour of forward shipment of about 25nP. Sacking, on the other hand, continues to command a premium for forward shipment, although in its case also there has been a slight reduction.

The weakness of gunnies has caused a recession in fibre and prices have fallen rapidly. The fall cannot be attributed wholly to this, as it has been assisted by weather reports from the jute-growing areas. Conditions have been very favourble recently with alternating rain and sunshine, and the health of the plants in all areas is said to be good. As a result, rates have fallen, and mills in general have held off the market. Imports of old crop jute remain very small, and prices upcountry, although lower, are still above the parity of Calcutta rates. More business has been reported in new crop jute at a reduced premium, but sellers have refused many indications at just above the old crop levels.

The comparison made this week at the annual meeting of the Pakistan Jute Mills Association between the jute industries of Pakistan and India has caused considerable comment in local circles. It indicates that all is not well with the Pakistani mills. The list of their handicaps is largely true, but is almost embarrassing as an expression of jealousy. The frequent comparison between Indian and Pakistani conditions is unlikely to increase the prestige of the East Bengal jute mills abroad.

THE JUTE MARKETS

Manufactured Goods: The market opened last Thursday on a confident note, with both sacking and hessian prices showing considerable advances. The rise was due to reports of business with Egypt in cotton packs, coupled with the placing of a Indian Government order for heavy goods. B Twills went up by Rs. 1.75 to Rs. 104 with forward shipment at Rs. 105.75. Hessians rose by 45nP for 40in. 10oz. to be quoted at Rs. 41.90 in the near positions and Rs. 42.15 for July-September shipment. Mills took interest at these levels but selling pressure weakened the market and prices fell back. There was no fresh interest from overseas and sentiment was quietly steady. The situation changed rapidly towards the week-end, however, following reports of the cancellation of import licences by Argentina. A fair amount of business had been reported with this buyer recently, so the future was viewed with concern. Quotations changed rapidly and prices sagged. On Monday, B Twills had lost about Rs. 3.50 from the opening and were quoted at Rs. 101.20. Hessians were about Re. 1 lower and 40in. 10oz. stood at Rs. 40.30, with very little premium for forward shipment. Thereafter, depressed conditions prevailed, and prices in both sections fell almost to the I.J.M.A. minimum levels. The position was aggravated by the cancellation of a steamer due to load for Argentina, and towards the close sentiment was weak.

On Wednesday morning, opening quotations were as follows:

	Ready	May	June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32.40	32.45	32.45	32.50
40in. 10oz.	40.20	40.45	40.50	40.55
B Twills	100.75	101.35	101.75	102.25
Heavy Cees (plain)	100.25	101	101.50	102.50
A Twills	119.75	120.75	121.75	123
Liverpools	111.50	112	112.75	113.75
Cornsacks	101.25	101.75	102.25	103.60

Raw Jute: Conditions in the fibre market were governed to a large extent by events in the gunny section. Although the opening was confident following good business towards the end of the previous week, the rise was short-lived. Mills lost interest at the higher levels and for the next few days the only buyers were Indian mills for limited quantities. Sellers were reserved as the amount of jute available was very small. As the week progressed, rates fell daily and very little business was reported. The weakening of upcountry rates due to favourable weather conditions in the growing areas was reflected in the local markets, causing a total reduction during the past week of about Rs. 1.25 a maund from an opening price of Rs. 26.75 for Assam-Northern Bottoms. At the lower levels, some mills began to take interest, but had difficulty in finding sellers when they tried to cut prices. Business was reported in new crop jute at a reduced premium over old crop, but on the whole new crop sellers were reserved.

During the past week, about 150,000 maunds was purchased by mills, who paid Rs. 25.75 to Rs. 26.75 for Assam Northern assortment jute, and Rs. 29.50 to Rs. 30 for Middles only. Small lots of Daissee-Tossa were reported at Rs. 28.75 to Rs. 29 basis Bottoms. Interest in mesta was limited, but business was done at Rs. 23.75 for Daissee mesta and Rs. 24 to Rs. 25 for Desal and Northern mesta. All shipment dates were for May-June. In new crop jute, Northern Assam was done at Rs. 26.75 to Rs. 27 basis Bottoms for August-September shipment.

In Cossipore, arrivals dropped to 350 wagons last week as against 425 wagons in the previous week and 465 wagons during the corresponding week of last year. Quotations in Cossipore at the close were based on Kishanganj jute at Rs. 24.25 for average quality.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms.	Shipment
Assam	25.75	May-June
Northern	25.75	"
Purnea Desal	24.75	"
Daissee	29.50	"
Assam Tossa	29	"
Murshidabad Tossa	28.50	"
Northern ex Calcutta	25.50	"
Mesta:

Desal	24.25	"
Daissee	24	"
Jungli	22.50	"
Bimli F.A.Q	22 50	"
Pakistani Cuttings	74 a bale	"
New Crop:		
Assam-Northern	26.50	Aug-Sept
Daissee	30.50	Oct-Dec

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

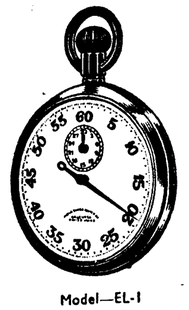
	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 30th April 1958	4,162.9	19,900.6	24,062.9
1st to 31st March 1958	2,014.9	31,128.1	33,143.0
1st to 28th February 1958	1,510.3	29,409.1	30,919.4
	Sacking		
1st to 30th April 1958	25,301.8	911.1	26,212.9
1st to 31st March 1958	27,133.4	679.4	27,812.8
1st to 28th February 1958	32,287.3	322.7	32,610.0

THE FOREIGN JUTE MARKETS

FIBRE PRICES REMAIN HIGH

(FROM OUR DUNDEE CORRESPONDENT)

THE maintenance of fibre prices is perplexing the industry. Conditions are somewhat irregular, but no seller is willing to accept lower rates. Most shippers are firm, and many are inclined to increase their quotations for fibre. The fact that prices for Calcutta goods are also firm gives the industry some hope that there may be an improvement in the general trade. There has been a long spell of quiet trading, so the feeling is prevalent that it is time for a "break". There are still no sellers of new crop jute in Dundee, but buyers would probably be interested if shippers were to make offers. There is still a fear of offending the Government in East Pakistan. Even old crop jute is not freely offered to spinners, who are buying very little, and Continental spinners have also apparently bought their requirements for the time being. Little change in prices has taken place over the past week. Mill Firsts are still lowest at £116 and up to £120 wanted, while Mill Lightnings are quoted from £102 to £106, Mill Hearts from £92 and grade Hearts £74, the last two being 20s up from the previous week. Good marks of Daissee-2/3 are quoted from £105 and grade £99, with grade Tossa-2/3 from £116 and grade Tossa-4 from £107, all c.i.f. U.K., May-June shipment.



The Calcutta goods market has ruled with a very firm undertone and, although there is some irregularity from day to day, the level is much improved. Hessians have come up to 63s 6d for 40in. 10oz. and 47s 6d for 7½oz. May to September, with B Twills at 157s 6d May, 158s June and 159s for July-September, all f.o.b. Calcutta.

I.J.M.A. STOCK FIGURES FOR APRIL

The Indian Jute Mills Association reports the total stocks of jute goods at the end of April as follows:

Description	30th April, 1958. Lakh Yds.	000 Tons	31st March, 1958. Lakh Yds.	000 Tons	Increase over (+) or decrease from (−) last month Lakh Yds.	000 Tons	30th April, 1957. Lakh Yds.	000 Tons
Hessian cloth and bag	7,77	20.4	8,92	24.5	−1,15	−4.1	13,15	35.1
Sacking cloth and bag	14,44	60.0	13,10	54.8	1,34	+5.2	14,07	58.3
Others		16.8		15.8		+1.8		10.8
Grand Total (000 Tons only)		97.2		94.3		+2.9		104.2

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

YARN SUPPLY FOR ART SILK MILLS

AGREEMENT WITH PRODUCERS ON DISTRIBUTION

(FROM A CORRESPONDENT)

DOMESTIC producers of art silk yarn and the Textile Commissioner have evolved a scheme for distributing Indian rayon yarn to the weaving mills. The scheme hopes to ensure that the mills get their raw material at reasonable prices. The curb on imports of art silk yarn has created considerable scarcity. Prices of imported 120D dull Snia cones, April delivery, are around 925 a case of 200 lbs, against Rs. 908 in mid-February. National Rayon's 150D bright cones were quoted at Rs. 6.37 a lb recently against the manufacturer's selling price of Rs. 3.44.

The scheme stipulates that sales should be made to actual users only. Manufacturers will distribute 70 percent of their total production directly to consumers, and 30 percent will be marketed through their authorised dealers, with a directive to sell only to actual users and that, too, at a fixed margin of 3 annas a lb. In cases where the mill price is the same for the dealer or consumer, this will mean that those consumers who are able to draw directly from the mill will get the benefit of a lower price. The arrangement is applicable to the sales of all the four domestic producers of rayon yarn—National Rayon, Century Rayon, Travancore Rayon and Sirsilk—with effect from 1st April. They might have their own quota arrangements, and an announcement by National Rayon specifies that only those who made direct purchases from the firm would be entitled to a quota on the basis of their average purchases in 1955, 1956 and 1957. The selling prices of this producer, which have also been notified, are stated to be the same as those at which its January-March production was sold.

Imports Decline

The arrangement is expected to help check the rising tendency in art silk yarn prices, and assure weaving mills of at least a part of their requirements. The capacity of domestic producers has recently been stepped up. According to present expectations, National Rayon, Travancore, Century and Sirsilk should be able to provide about 35 million lbs during 1958. Imports have been declining because of the restrictive official policy. Although imports in February at 1.97 million lbs were 350,000 lbs higher than in January, they were still below the average monthly figure for 1957. On the basis of January-February imports, and assuming that the present import curbs will continue, total imports in 1958 might not exceed 24 million lbs, even taking into account the modest *ad hoc* quotas. Domestic production and overall imports make available only about 60 million lbs, against 100 million lbs required annually by the 48,000 art silk looms installed in the country. The industry is, therefore justified in its demand for larger imports until domestic output has been substantially raised.

Fabric Exports Rise

The art silk industry's demand for sufficient supplies of yarn follows the growing demand for rayon fabrics in the recent past. The Silk and Rayon Export Promotion Council has spread its activities over a wide range and Indian rayon fabrics now have a good market in Aden, Ceylon, Zanzibar, Saudi Arabia, Ethiopia, Singapore, the Sudan, Jamaica and Hongkong. The recent concession in the export promotion scheme to grant licences for art silk yarn imports against a guarantee to export rayon fabrics of an equal value, instead of double the value of the import licence for yarn, has encouraged the industry to devote more attention to exports.

India's rayon cloth exports have of late been steadily improving. New Delhi's export incentives and the general consumer preference for cheap and rayon fabrics all over the world have helped this improvement. Figures relating to the shipment of rayon fabrics from India in the first three months of 1958 are lower at 740,000 yards, against 900,005 yards in January-March 1957. But a big quantity, it is reported, has been despatched abroad by post parcel, although figures are not available. A brisk and remunerative trade is growing through such despatches, and this practice has grown more popular since mid-1957, especially for consignments to Ceylon and other nearby markets.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.7 percent to 108.0 during the week ended 19th April, compared with 107.3 (revised) for the previous week. The index was higher by 2.3 percent and 0.7 percent respectively, when compared with the corresponding weeks of the previous month and that of last year. The index for Food Articles advanced by 0.7 percent to 105.8, compared with 105.1 (revised) for the previous week due to a rise in the prices of milk in Calcutta (+20%), bananas in Nagpur (+12%), cloves (+8%), wheat in Dhanduka (+6%) and in Kanpur (+5%), jowar in Ujjain (+6%) and in Hyderabad (+5%), gram in Delhi, arhar in Madras and oranges (+6% each), rice in Badati and Jaynagar and maung (+5% each), barley, potatoes and tea (+3% each) and onions, groundnut oil, gingelly oil, black pepper and betelnuts (+1% each). The prices of jowar in Rohtak (-7%) and in Hubli (—6%), gur in Madras (-7%), ragi in Bangalore and bananas in Calcutta (—6% each), chillies (-2%) and masur, urad, mustard oil, eggs and coffee (-1% each), however, moved down. The index for Tobacco stood unchanged at its previous week's level of 91.7. The index for the Fuel, Power, Light and Lubricants group also remained stationary at the level of 114.6. Higher prices of raw jute in Barpeta Road (+12%), raw hemp (+8%), groundnuts (+2%) and raw cotton, rapeseed and copra (+1% each) raised the index for Industrial Raw Materials by 1.2 percent to 115.0, although the prices of raw wool in Fazilka (-8%), manganese ore (7%), lac (—4%), raw silk and cottonseed (—2% each), raw wool in Fazilka (—8%) and manganese ore (—7%), each) showed declines. A rise in the price of lead (+6%) was almost neutralised by a decline in the prices of aluminium circles (-3%) and rayon yarn (-1%) and the index for Intermediate Products stood unchanged at the previous week's level of 109.1. The prices of quinine sulphate in Bombay (+10%), sesamum cake in Bombay (+6%) and jute manufactures (+3%) moved up while Taffeta Kora art silk piecegoods in Bombay (-4%) showed a fall and the index for the Finished Products rose by 0.3 percent to 108.1.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 19-4-58	12-4-58	22-3-58	20-4-57

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production during March was 378,000 tons, bringing the total production up to 31st March, 1958, to 1,714,000 tons. The corresponding figures for the 1956-57 season were 379,000 and 1,548,000 tons, respectively. The offtake of sugar from factories during the month was 172,000 tons, against 202,000 tons during the corresponding period of last season. This brings the total despatches from factories up to 31st March, 1958, including despatches for exports, to 808,000 tons, against 837,000 tons on the same date last season. The total closing stock of sugar with factories on 31st March was 1,334,000 tons, against 1,235,000 tons on the same date of last season.

COMMERCIAL TRENDS IN EUROPE

WEST GERMANY SUPPORTS FREE TRADE ZONE MOVE

(FROM A CORRESPONDENT)

WEST German Ministers described the final session of the Anglo-German talks in London devoted entirely to economic affairs—as a successful meeting. In the words of the *communique* issued on these discussions, Chancellor Adenauer and Mr. Macmillan agreed upon the "cardinal political and economic importance in the interest of European unity of complementing the European Economic Community of the six States by the European Free Trade Area." They agreed to work "closely together in order to maintain a high and expanding level of international trade, and reaffirmed their intention of following policies designed to achieve this end."

Imports of West Germany declined by 302 million deutschemarks to 2,410 million deutschemarks in February, compared with January this year. But exports increased by 349 million deutschemarks to 2,949 million deutschemarks. The trade balance closed with a surplus of 539 million deutschemarks against an adverse balance of 112 million deutschemarks in the previous month.

Money Supply and National Income in Austria

During the four-year period, 31st December, 1953, to 31st December, 1957, the volume of money in circulation in Austria rose from 23 million schillings to 33 million schillings. This increase bears a fair proportion to the simultaneous growth in the gross national product, from 776 million schillings in 1953 to 1,218 million schillings in 1957.

Developments in Austrian foreign trade during the past 20 years are marked by an enormous expansion, both in terms of volume and value, as well as by vital structural changes indicating major shifts in the importance of individual trading partners. A strong decline affected especially the trade with the successor States of the ancient Austro-Hungarian empire, now all integrated into the communist bloc, while trade relations with Russia have improved. A greater expansion has taken place in her trade with western neighbours in Europe, as well as with the U.S.A. As for imports, the proportion of goods purchased from West Germany has risen from 16.4 percent of the overall volume in 1937 to a current 36.2 percent, excluding the 1.3 percent of imports from East Germany. The share of the United States has increased from 6 percent to 12.5 percent, that of Italy from 5.5 percent to 7.9 percent, of Switzerland from 3.2 percent to 4.9 percent, and of Russia from 0.4 percent to 1.9 percent. Trade with her eastern neighbours has declined. The share of Czechoslovakia has decreased from 11 percent to 1.7 percent, of Yugoslavia from 7.9 percent to 1.7 percent, of Hungary from 9.1 percent to 1.3 percent, and of Poland from 4.6 percent to 2.9 percent.

Austrian exports by volume to West Germany have increased from 14.8 percent of the total in 1937 to 23.8 percent; 1.7 percent of her exports go to East Germany. The share of Italy has risen from 14.2 percent to 17.6 percent, of the United States from 2.5 percent to 3.9 percent, of the Netherlands from 1.7 percent to 3 percent, of Russia from 0.8 percent to 2.8 percent. Trade with the east European countries, has fallen, and the same is the case with Britain and France. Trade with Hungary has declined from 9.2 percent to 2.4 percent of the total, with Czechoslovakia from 7.2 percent to 2.3 percent, with the U.K. from 5.3 percent to 2.5 percent, with Yugoslavia from 5.5 percent to 2.7 percent; with France from 4.3 percent to 3.0 percent, and with Poland from 4.4 percent to 3.3 percent. Austrian exports to Canada rose from a value of $(C)2.7 million in 1955 and over $(C)3.9 million in 1956 to $(C)4.4 million in 1957. The respective increases from 1955 to 1956 and from 1956 to 1957 amounted to approximately 44.4 percent and 12.8 percent.

Dutch Production Increases

The Dutch Central Bureau of Statistics has published figures relating to the production of pig iron, crude steel, iron foundry and rolled steel products in the Netherlands in 1957. They show that in comparison with 1956, pig iron production rose by 6 percent, crude steel by 13 percent and rolled steel products by 6 percent. The output of iron foundry products was practically unchanged. The table below shows the figures for the last three years.

(in 000 tons)

Production	1955	1956	1957
Pig Iron	670	662	701
Crude steel	980	1,050	1,185
Iron foundry products	212	224	220
Rolled steel products	866	852	903

Tin Output Rises

According to provisional figures issued by the International Tin Study Group, Dutch production of tin in 1957 amounted to 29,200 tons. The table below shows the Netherlands' production figures for the last three years, and the percentages they constituted of the total world production excluding Russia.

(Production in long tons of 1,016 kg.)

	1955	1956	1957
World	170,000	177,000	170,000
The Netherlands	26,600	28,200	29,200
The Netherlands output as a percentage of the world's	15.6	15.9	17.2

Demand for Danish Farm Products

Demand for Danish animal agricultural produce did not improve in February, especially for butter. Although low prices led to increased consumption by the U.K., stocks were abundant, and importers were cautious. Accordingly, butter prices have remained at the low level to which they have fallen since January. The British bacon market, on the other hand, has shown a marked improvement, and there has been better demand for Danish bacon, the prices of which steadily rose to 262s a cwt by the end of February. There was a further rise to 272s in early March.

Swedish Butter in U.K. Market

That Swedish butter exports to the U.K. may have contributed to the recent fall in U.K. prices, as has been alleged by British and New Zealand producers, has been refuted in a Swedish memorandum to the U.K. Board of Trade. It furnishes an account of the rules governing Swedish agricultural pricing and export policy, and point to the fact that Swedish producers themselves are responsible for the marketing of their products and that no Government subsidies exist for possible export losses. It is further emphasised that in January 1957, when no Swedish butter was exported to the U.K., a sharp fall in prices occurred. During the following months, when Swedish butter exports were of insignificant proportions, prices fluctuated rather widely. Whereas Sweden's share of total U.K. butter imports in 1957 was 3.9 percent, compared with 3.2 percent in 1938, New Zealand's share of these imports during the same year amounted to no less than 40 percent, against approximately 30 percent in the years immediately before the war.

Finally, it is pointed out that the situation on the international butter market has caused grave concern in Sweden, and that the losses already suffered by Swedish producers constitute in themselves a very strong reason to try to achieve sound market conditions. The Swedish authorities have suggested that a meeting be held as soon as possible between the representatives of the U.K. on one side, and on the other, interested exporting countries, in order to reach an agreement on the measures for achieving a better balance in their sales of butter to the British market.

Automatic Packaging Machine

An interesting all-automatic machine for simplifying netweight packaging was put on the market a couple of years ago by the Swedish firm of A. B. Akerlund and Rausing, manufacturers of packaging papers and films. This firm generally designs its own machines for printing, assembling, etcetera, and makes them in its own workshops. It also makes and markets through a subsidiary firm packaging machinery for use by the food industry, wholesalers or retailing chains, as the case may be. This Swedish machine, named Expresso, packs and closes bulk product cartons for such articles as peas, beans, spinach, shrimps, etcetera, at the rate of about 50 packages a minute. The cartons are lined with polyethylene film, and heat-sealed at both ends with polyethelene-coated paper before the end flaps are closed, which makes it unnecessary to use the inner bag. They are introduced into the machine as flattened units. The machine opens them and first seals the bottom with the cover paper—an endless strip which is automatically cut off after the sealing operation. One pair of flaps is then closed over the seal, the commodity is automatically portioned into the box, the cover-paper is applied, and the second pair of flaps is closed.

Norwegian Fishery Output Drops

Although the general economic conditions in Norway in 1957 were somewhat unsatisfactory, production was the highest ever attained. Employment and the level of economic activity in the country as a whole were also higher than before. According to Norwegian Commercial Bank annual review, the fisheries, which are so important for the employment of the population as also for exports, had a relatively unsatisfactory year. The yield of the large winter herring fisheries dropped considerably from the 1956 level, and was appreciably less than the average yield for the last five years. The cod fisheries produced a much smaller yield of about 112,000 tons, compared with 163,000 tons in 1956. In agriculture, conditions were less favourable. Growth was good, but harvesting conditions were poor in large parts of the country. On the whole, the agricultural crop was 2 percent below a middling year, while the grain crop which has been estimated at 495,000 tons was only 89 percent of an average crop. In 1956, the grain crop was 545,000 tons. The potato crop was also much less than the year before, but the hay crop was larger. Industrial activity made further progress during the first three quarters of the year. Relatively, the output index of manufacturing, mining and engineering industries during this period was about 4½ percent higher than in 1956. Only the herring oil industry suffered a setback because of a reduced supply of raw materials. In the last quarter, however, the picture was different. In October and November, for which figures are now available, total industrial production was at the same level as the year before, but there were great differences between the various branches of industry. The electro-chemical industry continued to make progress. In the wood-processing industries, the output of the paper mills was going up, while output was beginning to fall off in the mechanical pulp mills. The textile and footwear industries were also less active in October and November than in the corresponding months of 1956. It is probable that industrial production has levelled off during the following months, particularly in the industries which are dependent on foreign markets for their products. The situation has gradually deteriorated in the wood-processing industries. Some branches now produce more than they can sell. Prices have been falling for sulphite cellulose as well as for mechanical pulp, while their production has been higher than before. About 675,000 tons of mechanical wood-pulp were produced last years, compared with 658,000 tons in 1956. The output of chemical pulp was about 650,000 tons, against about 590,000 tons in 1956. The total output of paper and cardboard in 1957 was about 640,000 tons, compared with 590,000 tons in 1956. Employment in the country has risen. The average number of employed wage earners during the first 11 months of the year was 9,300 higher than in the same period of 1956.

Swiss Dye Exports Higher

Swiss exports of dye materials increased in value by 12 percent in 1957, over 1956. About 4.4 percent of the country's total exports were these. The most important market is western Europe, which accounted for more than half of such exports. On the other hand, exports to east European countries have again dropped, excepting Yugoslavia and Bulgaria. Switzerland expects a rise in dye exports, especially to developing countries, where there has been a notable rise in living standards. The general increase in world population is also likely to help increase her exports.

TEA EXPORT DUTY UNCHANGED

THE Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3.24 a lb, against Rs. 2.95 a lb in force from 1st April, 1958. There is no change in the existing rate of duty of 38nP a lb.

RAPID INCREASE IN WORLD CAPACITY FOR SYNTHETIC RUBBER PRODUCTION

By the end of 1958, world capacity of man-made rubber will be almost level with natural rubber output. This will be the result of the coming "on stream" of four major European plant. In Britain, where synthetic output is at present confined to pilot plant, the International Synthetic Rubber Company's 50,000-ton Fawley plant is scheduled to start operations before year-end. In West Germany, a 45,000-ton plant in the Ruhr is expected to go into production in a few months. Italy is about to enter the field with a huge natural gas plant in Ravenna, with an ultimate capacity of 65,000 tons, and in France, production will start soon at a 20,000-ton butyl rubber plant. These projects, with existing facilities in Britain and West Germany, will raise west European capacity to 200,000 tons. Plans for two more plant, in France and Holland, will raise capacity by another 100,000 tons. A 300,000-ton level would represent about 40 percent of west Europe's current total rubber consumption. North American capacity, now one and a half million tons, is expected to reach about 1.8 million tons by next year, or just about the level of tree-grown output. Surplus capacity in the United States by the end of 1957, it was estimated, was at about 250,000 tons.

COCHIN TEA SALES

At Sale No 11 1,200,000 lbs of tea were on offer. There was a strong general demand for low medium and medium teas, particularly for fannings grades. B.O.P.'s were 5 to 10nP dearer, and fannings were 10 to 20nP higher. Highgrowns were in less demand, and often 50nP below valuation. Whole leaf grades were about steady.

Our new Analytical Laboratory offers its services to the trade for the competent analysis of

Acids and Alkalies. Oils. Fats. Waxes. Shellacs. Oil Seeds. Heavy & Fine Chemicals. Ores. Minerals. Soils. Drugs Coals. Pharmaceuticals. Vitamins. Alkaloids. Water. Salts, Metals and Alloys, etc.. etc.

Engineering and Transport

CONSTRUCTION OF LARGE STEAM TURBO-GENERATOR SETS

AT the Heaton works of C. A. Parsons and Company Ltd., Newcastle-upon-Tyne, England, work is proceeding on many large steam turbo-generator sets of advanced design. Machines under construction include 100, 120 and 200 M.W. sets arranged in one line and 200, 300 and 550 M.W. cross-compounded sets arranged in two lines. The 550 M.W. set is for the new Thorpe Marsh station of the Central Electricity Generating Board and C.A. Parsons are supplying the turbo-generator set, together with the associated condensing and feed heating plant. This machine will be the largest steam turbo-generator set in the world. A description of this 550 M.W. set is as follows. Martin Burn Ltd. are the agents of C. A. Parsons and Company Ltd. in India.

The turbine will operate with steam at a pressure of 2,300 lbs. a square inch at the stop valve and a temperature of 1050°F with reheating to 1050°F, the steam being supplied to the machine through two steam chests arranged on each side of the high-pressure cylinder. The unit consists of two lines arranged in line ahead, each line comprising four cylinders driving a 275 M.W. three-phase generator. All eight main cylinders are of the double-flow type with the high-pressure cylinder on "A" line taking the 550 M.W. steam flow. From the exhaust of this cylinder the steam is reheated and passed to the first intermediate-pressure cylinder on "B" line. On leaving this cylinder, the steam divides equally between duplicate second intermediate-pressure cylinders, one on each line. Final expansion of the steam is then through two low-pressure cylinders on each line. A single low velocity wheel is used in the initial stage of the high-pressure cylinder and first intermediate-pressure cylinder, the remaining blading and all the blading in the other cylinders being of the reaction type. Seven-stage feed water heating is emoloved to heat the feed water to a temperature of 486°F.

Operating Speed

The generators will operate at 18,000 volts, .85 P.F., 50 cycles a second when driven by the turbine at 3,000 r.p.m. The rotors are of the direct gas-cooled type, operating in hydrogen at a pressure of 45 lbs. a square inch. Each stator has a direct cooled winding, by means of demineralised water circulated through hollow conductors. General construction of the stators and rotors follows normal practice with minor modifications being made for arrangement of the gas circuits and coolers. Excitation for each generator is provided by a main and pilot exciter driven from the generator rotor shaft through reduction gearing. Both exciters are separate units with their armature shafts being solidly coupled. Ventilation of the exciters is effected by an enclosed air circuit system, the air being circulated by a blower mounted on the pinion of the gear drive to the main exciter shaft.

U.K. SHIPPING LINE CELEBRATES CENTENARY

A British shipping line whose pioneer transworld service played a part in building up one of the Commonwealth nations celebrates its centenary this year. The line—the Shaw Savill Line of London—was founded by a young Scotsman, Robert Shaw, in partnership with Walter Savil to develop the trade with New Zealand. Today, the fleet bearing their names lists 26 vessels of over 250,000 gross tns, with four more building. The latest, the *Southern Cross*, is the only large liner that caters for passengers only and carries no cargo. Because of her freedom from loading and unloading cargo, the *Southern Cross* makes four round-the-world voyages a year. On the occasion of the centenary, a brief history of the line written by the noted historian, Sir Arthur Bryant, has been issued.

GROWING INDIAN DEMAND FOR U.K. ELECTRONIC EQUIPMENT

"Indian demand for electronic equipment is growing rapidly, and there is a keen desire to make use of the latest products of the U.K. industry". This is the view of Mr. Ambika Prasad, Indian export sales executive with a British electronic instruments firm. He has just returned to the U.K. well satisfied with his three-month Indian market survey tour of educational establishments, research units of the three Services, and large industrial concerns. Mr. Ambika Prasad has been with the British firm since 1954. Demonstrating a full range of the latest equipment, he found wide Indian interest in one of the firm's latest products—the Electronic Reading Automaton (E.R.A.), which allows a computer to be used in an office at its natural swift pace instead of being restricted to the speed at which human operators can feed in information on a punched tape. Other instruments in the company's range, which he displayed in India and which aroused keen interest, included radar simulators for training operators, and power-supply equipment for use in laboratories where delicate instruments call for a highly regulated source of power.

Calcutta Markets

STRONG GENERAL DEMAND AT INTERNAL TEA SALE

FIRM PRICE TREND

AT Sale No. 44, held on 6th May, the Dusts on offer totalled 19,318 chests. There was a strong general demand with exporters showing interest in orthodox as well as C.T.C. teas. C.T.C. Assams were a strong feature, particularly the grainy types, and prices were firm and generally dearer, especially at the close. The clean leafy orthodox descriptions were fully firm, while the remainder in this category opened from 4 to 6nP easier, but improved as the Sale progressed, and at the close, commons were about firm while the mediums were firm and sometimes dearer.

Quotations

	1958 Rs	1957 Rs.
Medium Dooars Dust	1.68	1.60
Medium Assam Grainy Dust	1.70 to 1.74	1.60 to 1.65
Medium Assam C.T.C. Dust	2.10 to 2.30	1.65 to 1.70
Best Assam C.T.C. Dust	2.80 to 3.00	not available

Only 77 chests of Leaf were offered for sale.

FREIGHT MARKETS ACTIVE

THERE was a fair miscellaneous enquiry in the freight markets over the past week, and a number of grain cargoes were arranged to India. U.S. Gulf-West Coast India paid 78s 9d and Northern Range-West Coast India 72s 6d, while British Columbia or U.S. North Pacific to East Coast India was done at 60s. Sugar from Cuba to Colombo attracted tonnage at 80s f.i.o., and fertilisers from Hamburg to Cochin and Bombay, 49s 6d f.i.o. A full cargo of rails up to 42 feet in length is offering from Antwerp to Calcutta for May at 55s f.i.o.s., and local coal charterers are still looking vainly for tonnage to Colombo and Alexandria. The former rate is now indicated at 37s 6d and the latter is still unwanted at 45s. A remarkable feature of the State Trading Corporation's activities is the quoting in London of a shipment of gunnies from Calcutta to Haiphong. With some five to six vessels a month on this run regularly, space can be offered freely by local agents.

LINSEED UNCHANGED

There has virtually been no change in prices during the past week but a firm undertone has prevailed. Business has been small. Arrivals from the centres were below normal levels. With crushers' working reduced due to lack of parity, small daily transactions took place. The oil market was firm with poor stocks available in Calcutta. Shippers have been more or less idle, and only small business has been reported at lower levels. The overseas market was dull and the price was quoted nominally at £104. Latest quotations were as follows: Ready Rs. 21-14 a maund and May-June Rs. 21-14 a maund.

HIDES AND SKINS FIRM

The market was firm and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 29th April and 5th May, 1958)

Cowhides: Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 9.75 to Rs. 11.25; Wet salted (Slaughtered) 18,700 pcs. on the basis of Rs. 13.50 to Rs. 22.

Goatskins: Wet salted (Patna, Daissee and Kustia) 52,550 pcs. on the basis of Rs. 330 to Rs. 340, Rs. 360 to Rs. 375 and Rs. 400 to Rs. 410; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur 32,900 pcs. on the basis of Rs. 300 to Rs. 385; Purneah-Kissenganj 3,000 pcs. on the basis of Rs. 355 to Rs. 375; Patna-Pakur (Ord.) 11,800 pcs. on the basis of Rs. 320 to Rs. 335; Muzafferpore-Muzafferpore (Heavy) 800 pcs. on the basis of Rs. 370.

Bazaar Stocks

(5th May, 1958)

Cowhides: Wet salted 55,500 pcs.

Goatskins: Wet salted (Daissee, Kustia and Killed) 20,000 pcs.; Assam-Dinajpur-Jalpaiguri 40,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 67,000 pcs.

SUGAR RISES

During the week ended 7th May, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 8,000 bags and stocks totalled 50,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 38-4 for ordinary grain and Rs. 40-12 for big grain. The market again rose.

COMPANY AND PUBLIC NOTICES

GODFREY PHILLIPS, INDIA, LIMITED.

ANNUAL GENERAL MEETING.

NOTICE is hereby given that the Twenty-first Annual General Meeting of the members of the above-named Company will be held at the Registered Office of the Company at Chakala, Andheri, Bombay, on Friday 30th May 1958 at 4 o'clock in the afternoon, in order to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1957.

   To declare dividends.

   To elect Directors in place of those retiring.

   (a) Mr. A. M. Phillips retires by rotation under Article 116 of the Company's Articles of Association. In addition he has attained the age of 65 years. Notice has been received by the Company and a resolution will be moved to the effect that he be re-appointed a Director of the Company and that the age limit shall not apply to him. Mr. A. M. Phillips has signified his willingness to stand for re-election. The following resolution will therefore be proposed as an Ordinary Resolution:—

   "RESOLVED that Mr. A. M. Phillips who was born on the 27th August 1883 and has therefore attained the age of 65 years be and is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Companies Act, 1956 shall not apply to him"

   (b) Mr. D. S. Barron retires by rotation under Article 116 of the Company's Articles of Association and offers himself for re-election. Mr. Barron holds an office of profit under the Company and consequently, having regard to the provisions of Section 314 of the Companies Act, 1956 the following resolution will be proposed as a Special Resolution:—

   "RESOLVED that Mr. D. S. Barron be and is hereby appointed a Director of the Company and that the Company hereby accords its consent to Mr. D. S. Barron holding an office of profit under the Company".

   (c) Mr. A. B. Bilimoria was appointed a Director on 20th March 1958 under Article 104 of the Company's Articles of Association to fill the vacancy created by the resignation of Mr. B. A. Bilimoria. He now retires in accordance with the provisions of the same Article and being eligible offers himself for re-election.

4. To appoint Auditors and fix their remuneration.

5. The following resolution will be proposed as an Ordinary Resolution:—

   "RESOLVED that the Company hereby accords its approval to the appointment of D. Macropolo & Company Private Limited as its Sole Distributors for the Republic of India and Kingdom of Nepal, for a further period ending on 30th June 1959 on conditions stated in the Letter of Appointment dated 14th December 1957".

Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

The Share Transfer Register will be closed from 24th May to 30th May 1958, both days inclusive.

By Order of the Board,
D. K. MITRA,
Secretary.

Bombay, 30th April, 1958.

EXPLANATORY STATEMENTS IN RESPECT OF ITEMS 3(a), 3(b) AND 5 AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

ITEM 3(a)—Mr. A. M. Phillips has been a Director of the Company since its inception. His long experience in the cigarette and tobacco trade are of great value and the Board of Directors recommend that the Company should continue to have the benefit of his advice by his re-appointment as a Director.

ITEM 3(b)—Mr. D. S. Barron was formerly Chairman and Managing Director of this Company. He is now serving as Chairman of the Board and continues to advise on the policy of the Company. Mr. Barron is a Director of Godfrey Phillips Limited, London, and in respect of his services to Godfrey Phillips India, Limited receives a monthly salary of Rs. 1,500/-. His passage and travelling expenses are borne by this Company. It is therefore necessary, having regard to the provisions of Section 314 of the Companies Act, 1956 to pass the resolution set out under Item 3(b).

ITEM 5—Messrs. D. Macropolo & Company Private Limited have acted as Sole Distributors of the Company's Brands since the commencement of their manufacture in India. The Letter of Appointment is available for inspection by any Shareholder at the Registered Office of the Company between 11 a.m. and 4 p.m. on any working day except Saturday.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE is hereby given that the Fiftieth Annual General Meeting of the Members will be held at the Registered Office of the Company at Gillander House, Netaji Subhas Road, Calcutta, on Friday the 30th May 1958, at 10 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1957.
2. To sanction the declaration of a dividend.
3. To consider and, if thought fit, to pass the following Resolution of which a Notice as required by Section 257 of the Companies Act, 1956, has been received by the Company.

   As an Ordinary Resolution:

   That H. H. Maharaja Sir Pratap Chandra Bhanj Deo, K.C.I.E., LL.D., of Mayurbhanj be appointed a Director in place of Mr. M. I. Kee Kee Bhai who retires by rotation but does not seek re-election.
4. To consider and, if thought fit to pass the following Resolution of which Special Notice, as required by Section 261(2) of the Companies Act, 1956, has been received by the Company.

   As a Special Resolution:

   That Mr. J. N. C. Killick, who is an employee of Messrs. Steel Brothers and Company Ltd., the Managing Agents, be and is hereby appointed a Director of the Company in place of Mr. W. Hutchinson who retires by rotation but does not seek re-election.
5. To appoint Auditors for the year ending 31st December, 1958 and to fix their remuneration.

Notice is further given that the Ordinary Register of Members will be closed from the 20th May 1958 to 29th May 1958, both days inclusive.

By Order of the Board,
STEEL BROTHERS AND COMPANY LTD.,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta.
25th April, 1958.

N.B. (1) A member entitled to attend and vote at the above-mentioned Meeting may appoint a proxy who need not be a member to attend and, on a poll, to vote on his behalf.

(2) An explanatory statement concerning item 4 as required by Section 173(2) of the Companies Act, 1956, has been posted to the shareholders.

MORE LEYLAND VEHICLES FOR INDIA

Additional orders for diesel-engined Titan buses and Comet trucks obtained by Ashok Leyland Ltd. of Madras, are announced in the latest bulletin issued by Leyland Motors, Lancashire. Kerala State Transport has ordered 10 Leyland double-decker buses from Leylands' Madras associate. They will be the first of the kind in Kerala, as the rest of that State's transport fleet consists of 140 Indian-built Leyland Comet single-deckers. Leylands also report that several orders for diesel-engined trucks placed by companies working on India's largest development projects have again been secured by Ashok Leyland. All these vehicles are to be supplied from the range of Indian-built Comets.

T=Dividend Taxable.

BANKS

H indicates that Share capital is half paid. O., C. and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

RESOURCES FOR THE SECOND PLAN

BIGGER EXPENDITURE ON SMALLER ACHIEVEMENTS

AN air of unreality seems to have surrounded the discussions on the second five year plan at the meeting of the National Development Council a few days ago. Many, not excluding those in the Planning Commission and the Government, have long realised that the plan is far too big—if not in relation to the country's needs, then at least in relation to the real resources available. The feature of the Council's discussions has been a strange reluctance to accept this fact. Not that the plan has been retained intact; the acute difficulties into which it has run would have made nonsense of any attempt to do that. The strange thing is that the folly of over-ambition seems to have had little impact on the minds of the policy-makers. For some years now, schemes have been launched without much thought having been given to the question where the men, money and materials necessary to implement them would come from. As a result, the economy has been placed in a vulnerable position; industrial expansion has slowed down, agricultural production remains uncertain, prices are high, foreign exchange resources are badly depleted, and labour unrest is growing. Yet the decisions which the National Development Council has taken suggest that the very policies which have fathered these troubles are to be retained, although perhaps in somewhat diluted form. Broadly, what its recommendations seem to imply is that deficit financing is to be increased notwithstanding its inflationary effects in the past; taxation is to be raised even though it is already providing a serious disincentive to effort and enterprise; substantial resources are expected from borrowing, both in the open market and through small savings schemes, in spite of recent achievements in this field having been poor; and as for foreign exchange, the Council has little to offer except pious hope.

The whole emphasis now, in fact, seems to be on spending a certain amount of money, regardless of how it is to be raised and with not very much regard for what it is to be spent on. It is true that a number of "fringe" projects are being dropped; and that the first priority remains for food production and for the "hard core" of the plan, including the steel plants, railways, and certain other transport and power projects. Almost as high a priority has been given to schemes which are nearing completion and those which are described as "inescapable". From this decision flows the reckoning that at least Rs 4,500 crores will have to be spent over the plan period in the public sector; it is hoped that it will be possible to spend another Rs. 300 crores also, bringing the total outlay to Rs. 4,800 crores. Why such sanctity should attach to this figure will not be clear to everybody. It represents the estimate of the outlay originally proposed in the second five year plan—an estimate which subsequently had to be revised upwards because domestic and external prices rose and because expenditure on schemes outside the plan continued on a lavish scale. Reports from New Delhi suggest that it is primarily on the insistence of State Chief Ministers that the outlay total of Rs. 4,800 crores is being adhered to. The suspicion arises that the inspiration for doing so is mainly political; Governments, both Central and State, apparently feel that there are major political advantages in being able to say at the end of the plan quinquennium that they have spent all they intended to spend, even if what they have achieved is much less than they hoped. The "success" of the plan, in other words, will be advertised in terms of money spent rather than concrete benefits obtained.

It is a saddening reflection on public intelligence that Governments can expect to get away with this sort of thing. There can be no inherent sanctity attaching to any figure for public sector expenditure—whether it be Rs. 4,800 crores or Rs. 480 crores. All that can be demanded is that it be related to the realities of the situation. A special brochure prepared by the Planning Commission entitled *Appraisal and Prospects of the Second Five Year Plan*, which has formed the basis of the National Development Council's discussions, shows that a plan of this size is in fact far removed from realities. The Commission points out that tax revenues raised so far have been inadequate, especially in the States; borrowing has been running behind schedule, and the small savings scheme is virtually in a shambles. Almost the only aspect in which considerable energy has been shown is in printing currency notes for deficit financing. Meanwhile, expenditure which was not originally included in the plan has remained at a high level. It is estimated that the resources available, even after making certain optimistic assumptions about the external assistance that will be forthcoming and about the fresh deficit financing that the economy can stand, amount to Rs. 4,260 crores. Having said this, however, the Commission goes off at a tangent to assert: "A pruning of the plan to the level of resources indicated above, *viz.* Rs. 4,260 crores, is not only undesirable; it presents very great practical difficulties." Why it is undesirable, and what precisely the very great practical difficulties are, is left largely to the imagination. On economic grounds alone, one would have thought that there is desirability as well as great practical justification for having a smaller plan if the Commission's estimate of resources means anything at all.

Having decided on the biggest possible plan that its optimism will allow, the Commission goes on to discuss how an extra Rs. 240 crores can be raised at home, in order to increase the total outlay to Rs. 4,500 crores. In the process, some remarkable suggestions emerge. It is calmly assumed that an additional Rs. 100 crores can be obtained through new taxation; Rs. 60 crores from loans and small savings; and Rs. 80 crores from economies in expenditure and collection of arrears of taxation as well as loans due. The Commission asserts that "*prima facie*, difficult though the task is, it is one that can, with determination, be accomplished." Some of its suggestions for new taxation, especially those concerning land revenue, irrigation rates and betterment levies, are economically sound. But it remains open to question how many States are prepared to implement them. Exhortations on this subject have been addressed to them steadily for years, but have been almost as steadily ignored. There is a real danger that Finance Ministers, especially in the States, when presented with the demand to increase revenues will take the politically easier course of imposing heavier taxes on sections of the community which are already over-burdened. Recent Budgets have shown that although the general election is passed, the political courage necessary for evolving a more equitable system of taxation is lacking.

It is in the effort to raise more money through loans and small savings, and by cutting superfluous expenditure, that the real difficulties are likely to arise. Perhaps the prospects of borrowing from the money market have improved with the onset of easier credit conditions; even so, in the case of some State Governments at least, it is doubtful if enough funds can be raised without the deplorable forms of pressure imposed on reluctant investors in the past. The small savings scheme offers little hope of quick recovery; apart from organisational difficulties, the real problem in its case is that the section of the community which has traditionally been constituted of small savers has been impoverished by the rise in living costs. The National Development Council's latest deliberations, especially in their emphasis on inflationary financing, offer little promise of a decrease in these living costs. As for cutting expenditure outside the plan, this remains a subject for pious exhortations which are duly heard and then ignored. The Central Government itself may not have set the worthiest example possible, for the States to follow, in the manner in which it has inflated defence expenditure.

The implications for the private sector of an over-ambitious plan are disturbing. Recent experience has shown that governmental resources are raised under the banner of development needs, and then frittered away on purposes which have little to do with economic progress. Rational planning demands that actual resources be carefully assessed in the light of the complementary needs of the public and the private sectors. To starve the latter of funds in order supposedly to boost the progress of the former can do little good. The National Development Council's latest decisions offer no hint that this fact is being recognised. To fix expenditure targets first, and to relegate the purpose and financing of the expenditure to a position of secondary importance, is a poor commentary on the way in which planning is still being done.

THE GLITTER OF GOLD

THE point has often been made in these columns that the greater part of India's development problems would be solved if private bullion hoards could somehow be persuaded into productive investment. That is not as easy as it sounds. The urge for monetary security is as fundamental to human beings as the need for food and water. The holding of gold and silver provides a convenient way of satisfying this feeling, and one which has proved its worth over scores of generations. Only a revolution in human attitudes towards the earning and holding of money can change a public preference for bullion into one for stocks and bonds as a means of holding wealth. In some Continental and north American countries, this has already taken place. In others, and India is one, it has not. How much of the relatively greater industrial prosperity of the former group can be traced to this single factor is impossible to estimate—but it is probably a good deal. At any rate, if a country has industrial ambitions the habit of investing instead of hoarding is well worth the trouble needed to cultivate it. The alternative is all too often the kind of crippling tax system from which India is suffering today.

The April issue of the *Reserve Bank of India Bulletin* contains an article dealing with the probable extent of India's bullion hoarding. The estimates it gives are worth examination. For gold, total private holdings are thought to be about 105 million ounces. This figure is arrived at by taking the estimated private gold stocks of undivided India, including Burma, in 1834, adding to it estimated imports from that year to 1850, plus known imports and production from 1850 onwards. The share of India is then deduced on a population basis, a total of 7 million ounces is subtracted for the Reserve Bank's currency reserve, and a further few million ounces are added to represent imports, production and smuggling in recent years. The result is a figure of about 105 million ounces, valued at Rs. 3,035 crores in terms of current prices in India and at Rs. 1,750 crores at world prices. For silver hoards, an estimate of 4,235 million ounces is given, arrived at in much the same way. At current prices, the value of this is roughly Rs. 2,075 crores. The conclusion from these figures, therefore, is that resources to the value of something like Rs. 5,000 crores are at present being lost to industrial investment, and about Rs. 3,700 crores of foreign exchange is going to waste. Such estimates do not, of course, allow for the price changes

which would take place if this bullion began to flow into productive investment and, therefore, by implication, come to be regarded less highly as a means of holding wealth. There is probably no way of making such a calculation. On the other hand, there is every reason to suspect that the estimates are too low. The figures up to 1850, for instance, are almost entirely guesses, although certainly not wild ones. A great deal of bullion must have been deliberately concealed throughout the centuries; some of it lost altogether for the time being. The extent of smuggling, too, is something about which it is difficult to be accurate. The chances are that considerably more than this amount of bullion would come to light if a reliable census could be made. One fact supporting this view is that India's gold stocks bear almost exactly the same proportion to the world total for private hoards as India's population does to the world's population. This seems to imply that the habit of hoarding gold is neither greater nor less in India than it is elsewhere—a conclusion which is certainly not borne out by the difference in the internal and external prices of the yellow metal. For the purpose of this comparison, the world's private store of gold is taken from the value figure given in *Pick's Currency Yearbook* for 1957, divided by the present international dollar price. This gives a figure of roughly 687 million ounces. The population of the world is about 2,500 million, and India's population about 380 million.

The preference for hoarding rather than investing is not reserved to bullion. The value of jewels and precious stones held by private individuals in this country must be considerable—it is probably even higher than the estimate for bullion, and has very likely fluctuated in direct relation to it throughout the ages. If a figure for this additional method of hoarding could be calculated and added to that for bullion hoards given by the Reserve Bank, it might be possible to judge the extent of the resources which are being lost to this country's development programmes through unpopular economic policies, the fear of inflation, or downright prejudice which little or no effort has yet been taken to dispel. Various suggestions have been made from time to time for bringing these resources into the economic system. One of the more promising was made in New Delhi last Saturday by Mr. S. N. Haji, in his address from the chair at the annual conference of the All-India Manufacturers Organisation. He proposed the issuing of certificates by the Government against the deposit of gold and silver, convertible after 10 years and bearing an attractive rate of interest. It is not the first time such suggestions have been put forward, but Mr. Nehru, in his reply, promised to consider this one. It should not be beyond human ingenuity to devise other schemes to suit more varied tastes.

The prerequisite of all such projects is that the hoarder of gold, silver and jewellery should be willing to change his old-established habits. This is partly a question of attractive incentives, but it is far more a matter of overcoming the traditional fear of the expropriation of declared wealth which has been such a feature of the Eastern way of life for centuries. The process of improvement might be a very slow one. And the first step would be to drive home the fact that there is no question of the holder being deprived of his holdings by edict, or through official and political dishonesty. In other words, the hoarder has to have faith in his government and its intentions. This is not easy for people holding wealth in the political climate which exists in India today. The second need is to convince holders that by declaring their possessions they will not be victimised by higher tax assessments and retrospective levies. Once again, that is not a simple matter in this country at present. In the past few years the threats about equality, the impossibly high taxes, the often unnecessary tenacity of tax inspectors, and the tendency towards greater regulation and interference in the life of the individual, are all factors working against the growth of investor confidence. In fact, they have come the nearest for some centuries to reproducing the rapacious and arbitrary behaviour of ancient and mediaeval officials which was so largely responsible for the establishment of the bullion habit in the first place. Other important factors are, of course, law and order and the degree of inflation. On the former matter, the evidence recently has not been reassuring. On the latter, the recent decision to increase the target for deficit financing said almost the last possible word. Before leaving this question of incentives, it would not be reasonable to forget the factor which has done more to popularise the hoarding of bullion in India in the past few years than probably any other—the virtual extermination of the equity stock markets. It will be many a long day before the lessons of the past two years are forgotten by those who were innocent enough to put their money into India's industrial development instead of keeping it safely in their stockings. If there is any doubt about this, an examination of the movement of bullion prices, compared with those of equities, will dispel it.

The regrettable conclusions from this discussion would appear to be that the chances of making any substantial impression on the old habits of hoarding bullion and precious stones are remote for many years to come. That is not to say that a start should not be made now. But it would be short-sighted not to appreciate from the very beginning that the problem is not so much the economic one of providing sufficient and attractive incentive to invest, so much as the political and psychological one of giving the people who hold the hoarded wealth the confidence that to bring it out and put it into industrial development is not simply to throw it into the bottomless coffers of improvident, greedy and unsympathetic governments.

DEFINITELY "NO HANDS"

PROGRESS OF MECHANICAL HANDLING

UNKIND critics have said that the too-numerous exhibits in the British industrial pavilion at the Brussels Exhibition are trying to compensate for the lack of the British Industries Fair. This was a regular postwar event, each May, in London and Birmingham, until, last year, it was confined to Birmingham and subsequently abandoned altogether. But the world's industrialists cannot complain that they have lacked opportunities to see British equipment this year, for specialised trade fairs have followed each other in quick succession—if, indeed, they have not overlapped. It may be conceded that the most important of these many displays is the Mechanical Handling Exhibition now being held in London from 7th to 17th May. Its sponsors have, indeed, described it as "one of the most important industrial exhibitions the world has ever seen", and they have given some striking facts to show why it is so important.

Handling, it has been said, adds much to the cost but nothing to the value of a product. Without it there would be no product, and the product, if there were one, would never reach the markets. But its high cost and unproductive character make handling an obvious target for economy. At least, it should be an obvious target, though not all firms seem equally aware of it. Raw materials, parts, tools, semi-finished and finished products, all have to be handled; so do waste and scrap—even food for the works canteen. If these various elements can be moved just once the task is not unduly burdensome; but most have to be moved many times in the process of manufacture. If every operation in the process involves two handling operations and the process itself involves only two operations, four handling operations are required to complete the process. So even on this reckoning, a factory with a total input of 20 tons of materials a day could expect to handle 80 tons a day.

In fact, of course, the process is much more complicated. The sponsors of this exhibition have calculated that 50 to 150 tons of materials must be handled in factories today to produce one ton of finished goods. If costs are to be appreciably reduced, that ratio must be improved. All unnecessary handling operations must be eliminated; mechanisation must be increased. That statement needs qualifying. It refers particularly to countries where the cost of labour is high; and its force is certainly reduced where the cost of capital equipment is also high. One must distinguish between effort that is needless in the sense that more careful planning could eliminate it, and effort that can be transferred from a human to a mechanical operator. All needless effort should, of course, be eliminated; but to substitute mechanical for human operation, regardless of their relative costs, would be very uneconomic. Yet cost is not the only factor to be considered. Not many people believe, these days, that repetitive physical labour is a noble activity for human beings. Drudgery ought to be reduced, even if the final product is not thereby made cheaper. A profound social, as well as economic, change is implicit in the idea of automation.

An important benefit of mechanical handling is its ability to perform tasks that unaided human beings could not perform at all. We may marvel that the Egyptian pyramids were built without such aids, but not even the pyramid-builders could lower into place the huge sections of the pressure-vessel, made of steel plate inches thick, that contains the core of the reactor of a nuclear power station: that task is performed by a gigantic "goliath" crane, that has to be constructed on the site with the aid of a series of smaller cranes. It is, perhaps, unwise to emphasise the immensity of some mechanical-handling devices. It is commonly imagined that mechanical handling is necessarily elaborate and costly, whereas in fact there are many small and inexpensive devices that can facilitate and accelerate the flow of materials in small factories. Yet it must be recognised that full use of mechanical handling implies large-scale operations: big buildings, big organisation—in a word, mass-production. In many industries the conveyor-belt has transformed the process of production; it would be useless in a firm that produced only small quantities of finished goods.

The lay-out of a modern factory, usually low and widely spread, is governed by the handling equipment that will be installed in it more than by any other factor. In the productive part of the factory (as distinct from, for instance, the storage bays, where a different type of handling appliance is employed), the handling equipment is so closely integrated with the process of production that it is sometimes impossible to distinguish clearly between handling and processing. Handling devices can completely change the process of production; as when batch-production (of chemicals, or margarine, for instance), whereby the process is repetitive, is changed to continuous production, whereby materials are fed into it in carefully regulated proportions and it goes on all the time. The highest form of continuous production is the automatic factory, which receives its materials at one end and gives forth its finished products (fully packaged) at the other with no human intervention between. The world has only one or two of them, and it will be a long time before we see many. But we can content ourselves in the meantime with such devices as the "remote—and independently-controlled "Robotug", demonstrated at the Mechanical Handling Exhibition this year. This is a new device whereby industrial trucks without drivers move materials from place to place with the aid of an electronic guidance system—a wire (under the flooring if permanent) through which an electric current of specified frequency is passed, so that the signals from the magnetic field thus made can be picked up by sensing coils on the front of the trolley. First we put the toiler in a driver's seat; then we remove him altogether!

SOLVING THE TRANSPORT PROBLEM

THE transport shortage remains acute. While the railways are finding it difficult to cope with the increasing volume of traffic, road transport is unable to develop adequately and rapidly because of various adverse factors, the principal of which is the high level of taxation. A clear analysis of the problem is contained in the address by Mr. K. C. Mahindra, chairman of Mahindra and Mahindra Limited, to shareholders at the company's latest annual general meeting. Mr. Mahindra offers some constructive suggestions on how best to expand road transport. (A fuller version of his speech appears elsewhere in this issue of *Capital*.) Transport, he points out; has been sometimes defined as the conveyor belt of industry; so its inadequacy is bound to create many bottlenecks. The railways are the chief means of transport, and it is natural that they should be entrusted with the major share of the traffic arising from plan activities. But as things are now, they are not in a position to handle the job alone.

With an expenditure of over Rs. 1,000 crores, says Mr. Mahindra, the railways are expected to be able to haul 162 million tons by 1960-61, an increase of about 47 million tons over 1955-56. When it is considered that the expansion of the steel industry alone will require a movement of 36 million tons a year, the increase in the carrying capacity of the railway system appears completely inadequate. Mr. Mahindra also points out that the "eruption" of high food prices in various parts of the country is principally due to "maldistribution and the failure to reach the foodgrains to the hot-spots in time." The matter, therefore, needs exhaustive re-examination. "It would appear that in spite of the best efforts to rehabilitate track and extend rolling stock it will still not be possible for the railways to service the distribution needs. A medium with greater flexibility and accessibility must be found." Mr. Mahindra goes on to say that in considering the various alternatives, the choice is naturally narrowed to lorries, lorry-trailers and tractor-trailers alone. These would ease the burden on the overloaded railways and on the meagre coastal services. Discussing the deterrents to the development of an extensive lorry haulage service, Mr. Mahindra says that the importance of this problem is being increasingly realised. The appointment of the inter-State Road Transport Commission, the Transport Development Council and the Road and Inland Transport Advisory Committee are clear indications. But nothing has been done to reduce the high level of taxation—the highest in the world—which is the biggest single impediment to the progress of the system. Inter-State control on movement is another deterrent, while the threat of nationalisation in various States continues to be a strong disincentive. These impediments need to be removed.

The production of lorries in the country is far short of demand. The Minister of Transport has stated in Parliament that in the plan period a total of 136,000 vehicles will be produced. "This volume, even if achieved, plus the existing fleet computed to be about 130,000 vehicles less obsolescence, is hardly adequate for what is estimated as the minimum requirement for moving the products of the second plan economy." Mr. Mahindra calculates that a minimum of 50,000 lorries and 5,000 tractor-trailer combinations a year will have to be made in India, which the local producers are not in a position to provide. Finance is likely to be a difficult problem in speeding up the programme of manufacture, so the proposed Refinance Corporation for Industry should take on this responsibility. The requirements of manufacturers, he thinks, will be Rs. 10 crores. Mr. Mahindra goes a step further and suggests the setting up by the State of a "Truck Finance and Development Corporation" as a hire-purchase agency, offering operators easy terms for payment on an instalment basis. This institution should have a capital fund of Rs. 50 crores and should provide finance to manufacturers if the Refinance Corporation fails to do so. Referring to the working results of the company, Mr. Mahindra says that during the past year, operations were very satisfactory, with a bigger turnover and higher earnings. The sales of jeeps and allied vehicles, particularly, showed a 33 percent increase; they more than offset the falls in tractor sales and in other lines of business.

Current News and Comment

Investing Life Insurance Funds

The view that the Life Insurance Corporation should be guided in its investment activities by the salutary provisions of Sections 27 and 27A of the Insurance Act, 1938, was voiced during the enquiry conducted by Mr. Justice Chagla. It is now understood that the Government has, in principle, accepted the view that a modified version of Section 27A of the Act should apply to the Corporation. A comprehensive investment policy for the guidance of the L.I.C. is being worked out, in which the provisions of Section 27A are likely to be an important item. In investing life funds, the main point to keep in mind is that they virtually constitute a trust. Therefore, all the implications of running a trust have to be accepted by the Investment Committee of the Corporation. Apart from the fact that the funds have to be inviolate and secure, the investments should promote the welfare of policyholders. The restrictive provisions of Section 27A were conceived in order to safeguard the interests of policyholders. If the investment policy of the Corporation, therefore, is guided by the restrictions, the large number of people insured will benefit. A former Finance Minister, Mr. T. T. Krishnamachari, once proposed the introduction of an official Bill to entrust the investment of L.I.C. funds to an Investment Board. Apparently his ideas have now been dropped and the Investment Committee will, to all intents and purposes, take the place of the Board which he had in view. Whether the policyholders' money should be used to support the equity market is a controversial question. The Investment Committee will, no doubt, be guided by the instructions which are to be drafted by the Government. In whatever way the intricate problem of daily investment is handled, the interests of policyholders should be the guiding principle. There has been no announcement so far from the L.I.C. about the rate of bonus. The return from investments necessarily affects the bonus fund. Within the limits set by these broad principles the Investment Committee will need to be allowed a reasonable measure of freedom if it is to function effectively.

Raw Materials for Industry

The shortage of raw materials which most industries have been experiencing since the drastic cut in imports is among the major reasons for the slow-down in production. This is the view which Mr. S. N. Haji, chairman of the All-India Manufacturers Organisation, has expressed at that body's latest annual general meeting in New Delhi recently. The Prime Minister was the chief guest. Mr. Haji points out that the general index of industrial production has risen by only 3.9 points in 1957, against 11 points in 1956 and 9 points in 1955. Several complaints have been received by the Organisation from the engineering, chemical, pharmaceutical, dyestuff, food preservation and other industries to the effect that the Government's policy on the import and distribution of such vital raw materials as steel, non-ferrous metals, basic heavy chemicals, fine chemicals, intermediates, textile auxiliaries and dyestuffs is leading to "serious setbacks in production." A large number of manufacturers using steel have not only been refused licences, but their allocations of local steel have been badly cut. "As though that were not enough, they are not receiving the physical delivery of steel even against those truncated quota allocations". Mr. Haji appreciates the seriousness of the foreign exchange shortage and agrees that the needs of economic development are largely responsible for the import restrictions; but he feels that large-scale imports in the past of goods not required for the plan have done much to reduce the sterling balances. "We only wished that there was a better phasing of these imports, even when they were considered essential, and spread over a longer period than one year." The solution, he suggests, is that a foreign exchange budget should be drawn up at the beginning of each financial year; it can be released along with, or as part of, the General Budget or the annual plan. The foreign exchange budget should cover both imports and exports with individual targets fixed for commodities.

Lack of co-ordination between various Central Ministries is aggravating the shortage of raw materials. Mr. Haji gives a specific example. The Ministry of Commerce and Industry has to recommend the types of tool and special steel alloys which need to be imported because they are not produced in the country. At times, the Ministry of Steel, Mines and Fuel, which has to issue licences on the basis of the former's recommendations, either completely disagrees and refuses to issue any licence at all, or drastically curtails the quantity. Mr. Haji suggests that a good deal of the trouble caused to industry could be avoided if the assessment of requirements as well as the issue of licences were entrusted to one Ministry, preferably the former. As for the foreign exchange difficulty, he makes the interesting suggestion that gold certificates be issued against ornaments or hoarded bullion deposited with the Government. This, he says, will help tap resources which could be used as a "further reserve against the expanding note issue as well as for augmenting the foreign exchange resources either by way of sale to obtain foreign currency or for being deposited with the International Monetary Fund to enable the Government of India to obtain further loans of foreign exchange". The certificates should be made attractive by offering a reasonable rate of interest, but they should be convertible only after a period of ten years. The Prime Minister, in his speech at the meeting, dealt generally with the economic philosophy of the Government. He and Mr. Haji seemed to be speaking at cross-purposes on most issues, but Mr. Nehru thinks that Mr. Haji's suggestion about the gold certificate scheme is good; it will be considered by the Government.

Textile Profits Down

The crisis in the textile industry is highlighted by the annual reports issued by various concerns. At least four mills have reported either declining profits or losses. The Aruna Mills Limited showed a loss of Rs. 691,000 in 1957, against a profit of Rs. 879,000 in the previous year. The Arvind Mills of Ahmedabad made a profit of Rs. 74.09 lakhs last year, against Rs. 99.47 lakhs in 1956. The gross earnings of the Ahmedabad Manufacturing and Calico Printing Company Ltd amounted to Rs. 128.20 lakhs during the last financial year, against Rs. 186.23 lakhs in the previous year. The Asoka Mills Ltd reports a Rs. 14 lakh drop in sales, and a reduced profit, which amounted to a mere Rs. 45,523 after providing for depreciation, managing agents' commission, taxation and development. Meanwhile, it is possible that textile exports will suffer further. It is reported that Uganda is thinking of imposing new import duties on cheap textiles. Although the impost will bring a revenue of around £1 million to the Uganda Government, the primary object is to protect East Africa's own newly started industry in Jinga. The Uganda market has been a valuable outlet for Indian textiles.

U.S. Business Outlook

The business decline has continued during April, although there are signs that the rate of fall is moderating, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Apparently the industrial production index, which by March had declined by 12 percent in seven months, has dropped further; most weekly production figures, including those for steel, motor-vehicles, paperboard, petroleum and coal, have been down more than seasonally. In retail trade, the pinch of rising consumer prices on reduced incomes is being felt. The seasonal revival in outdoor work has brought greater employment in agriculture and construction. However, total unemployment has declined by only about one-sixth, the usual seasonal amount, and the number of people receiving unemployment compensation has risen slightly. Business sentiment remains cautious, with the emphasis on inventory reduction and no general move toward forward buying. On the other hand, some business reports have a little more favourable tone. Chiefly they take the form of a levelling out in the drop of new orders, or even modest improvement, in individual companies or industries. The significance of such reports is the indication that curtailment of output and inventory reduction are beginning at last to exert their corrective influence. Hope that the recession is entering or is about to enter the "bottoming out" stage seems to be spreading. Good support for this hope can be adduced, but so far there is little statistical proof. The only certainty is that final demand and consumption are in general running above production, and that sizable inroads on inventories are being made. At some point, such drafts will no longer be possible and production and consumption will come closer together.

The great question is how much the gap will be closed by increasing output, and how much by a further decline in consumption. In 1953-54, sustained personal consumption provided an anchor around which inventory adjustments were made and the economy rallied. Now the anchor does not seem to be holding quite so firmly. Nevertheless, consumption is holding up better than production, for disposable income is supported by unemployment compensation, and by many forms of social security payments. Government expenditures, financed by deficits, are rising. For the first impetus to "bottom out," and then to improve, the economy should look to corrective progress in inventory adjustment, and a subsequent stabilisation of production, rather than to a higher level of business investment, which is likely to be much longer coming. Corporation executives in such diverse fields as nylon fibre, appliances, aluminium, apparel and machinery have stated publicly in recent weeks that the inflow of orders is improving. In scattered instances, scheduled lay-offs have been cancelled and workers on furlough are being recalled. Machine tool manufacturers report that new orders received in March rose for the third month in a row; the starting point in December 1957, however, marked an eight-year low. The Defence Department stepped up contract letting sharply in March. A continued high rate of new obligations will be necessary in the remaining months of fiscal 1958 to meet the goals announced by the Administration in mid-March. All these straws in the wind do not necessarily mean that an economic turn-around is imminent or even that the economy is entering the bottoming-out stage. They do, however, point up the existence of areas where counter-recessionary forces are gathering strength.

Poisonous Pulse

While the Government of Kerala is engaged in investigating the causes of mass food poisoning which was responsible for the death of many people in that State, Uttar Pradesh, it is reported, is fighting the menace of a poisonous pulse known as *khesari* or *lattri*—the eating of which, it is said, causes lathyrism—a malaise responsible for not only premature bent-backs, but also stiffness and paralysis of the lower limbs. In many districts of Uttar Pradesh *khesari* is the poor man's food, for the simple reason that the yield is heavy while very little of ploughing, watering or manuring is required to raise the crop. It is used both as pulse and flour. A nutrition survey officer who conducted sample surveys in Banaras, Ghazipur and Basti, has reported that the majority of the patients of lathyrism are young adult males between the ages of 20 and 40, on which age group, naturally falls the maximum burden of sacrifices in a family. Intensive campaigns to discourage people from cultivating this pulse may not succeed to the desired extent, unless the Government follows up by the provision of irrigation facilities which alone can permanently stop the inducement for *kesari* cultivation. If people are prevented from eating *khesari*, the Government must also be in a position to supply them with alternative food. The Indian Council of Medical Research, Delhi, and the Central Food Technological Institute, Bangalore, have both been approached to find out if by any process the pulse could be made harmless. Under the circumstances, this would seem to be the better course.

Check on Cornering

At a meeting organised by the Hindustan Chamber of Commerce, Mr. T. Viswanathan, chairman of the Company Law Advisory Commission, has indicated that the proposed amendments to the Companies Act will have the effect of checking cornering and subsequent take-over bids. Purchasers of shares bought in order to gain control will find their voting power rendered valueless for a few years by regulations devised to shatter corners *ex post facto*. This is perhaps meant to protect the average shareholder from the consequences of a change in company management for which he is not prepared. The lessons of the change in B.I.C. control have apparently prevailed, although it is confessed that reports by inspectors

into company affairs have not yielded much in the way of positive results. How far the advent of new entrants into the managing agency field left open by the withdrawal of British interests has affected the standing of old investments and the prospects of old shareholders may be an important issue for some; but it does not really arise in Madras since in the last ten years, there have been few cases of joint-stock companies in that area passing under the control of new interests. The difference as compared with Calcutta is real; little disinvestment has taken place and efforts to corner shares available in the market have been few for the size of the existing agents' holdings in some cases is known widely. The new attitude to changes in control may not even help boards of directors to replace any managing agents displaced by special resolutions.

The Paint Picture

The paint industry has made considerable progress and has diversified its output. There has been a steady increase in production in recent years; it has risen to nearly 42,000 tons in 1957 from 27,950 tons in 1950. But these figures relate to the organised sector of the industry. Apart from large-scale factories, a number of units produce paints and varnishes on a cottage industry basis but reliable figures relating to their output are not available. It is likely, therefore, that the actual production of paints is much more than that indicated by the official statistics. Speaking at the annual general meeting of the Indian Paint Manufacturers Association, Mr. C. L. Jhunjhunwala, president, has said that the industry will achieve the production target of 60,000 tons of paints and varnishes fixed under the second plan. The increase in production will be possible if factories are assured of regular and adequate supplies of raw materials. They have to depend largely on imports for their essential requirements. It is necessary that effective steps be taken for the indigenous production of raw materials. The establishment of a central paint research laboratory will be helpful, since it can carry out research on achieving self-sufficiency soon. "But till such time the industry should be provided with adequate facilities for improving its requirements of raw materials. We are, of course, aware that the position in relation to the availability of foreign exchange continues to be very difficult, but it must be remembered that the paint industry is asking only for the import of those materials which are absolutely essential to enable it to fulfil its target under the plan."

Mr. Jhunjhunwala criticises the Government Test House, and says that samples continue to be rejected for unconvincing reasons. The authorities of the Test House, he maintained should pursue a realistic policy in order to help increase production and improve quality. It is necessary to set up a central testing organisation to which cases of dispute might be referred. Referring to paint exports, Mr. Jhunjhunwala says that there is scope for increasing sales to neighbouring countries. In spite of various difficulties, exports of paints and varnishes have increased from Rs. 24 lakhs in 1954-55 to Rs. 35 lakhs in 1956-57. If a further increase is to take place, manufacturers will need various facilities, apart from the drawback of import duty paid on raw materials. Mr. Manubhai Shah, Central Minister for Industry, has said that there are hundreds of brands of paints of varying quality, and the bewildered consumer prefers the one which is cheapest. This leads to unfair competition and hinders progress. A minimum standard of quality will, therefore, have to be maintained. The organised units may need to rationalise their formulations in order to manufacture only a few grades or qualities.

Power From Rihand

It has been rumoured for some time that the proposed aluminium factory in Uttar Pradesh might not in fact be set up there. Sponsored by the private sector, the factory has been offered some inducements by the State Government, but other States, it is reported, have been offering counter-attractions to lure the enterpreneurs away. How far such inter-State rivalries conform with the larger national interest is a different question, but the fact remains that the present situation need not have arisen but for the uncertain economics of the Rs. 45-crore Rihand hydro-electric project. On the basis of the official estimates of the cost of energy produced from Rihand, the aluminium factory, even if the site is not far off, will find it expensive to produce 20,000 tons, for which it will need 40,000 kW of energy. Official circles, it is believed, are at present examining a scheme for subsidising power supply to the factory, or inducing Bihar to pay part of the cost of the Rihand project. The irrigation part of the project, it is expected, will cover 500,000 acres in Bihar, so a representation has been made by the U.P. Government to the Centre that the Rihand dam should be treated on the same basis as Hirakud and D.V.C., which serve more than one State. If Bihar fails to oblige, then U.P. will be left with no alternative but to subsidise power supply to the proposed aluminium works in the hope that it will yield more jobs for the people as the factory starts functioning and subsidiary industries get started. But political opposition to the move is certain. Already accusations have been made both in the State Legislature and Parliament that electricity dues amounting to Rs. 27 lakhs have been allowed to accumulate with the Kanpur mills after the nationalisation of electric supply in the city. The insinuation that the lenient treatment has been earned by the mill-owners for their contributions to the Congress Party chest has also not been wanting. Another worry of the U.P. Government is that if the aluminium factory is ultimately located in the State, all the energy to be produced from Rihand will be immediately consumed leaving little surplus for future contingencies. The aluminium factory itself would require 40,000 kW, the Churk cement factory another 15,000 kW, the soda ash factory in Banaras 12,000 kW and the Centre has now made a demand for 40,000 kW for the electrification of the railway line between Howrah and Moghulserai. The estimated energy production from Rihand is not more than 100,000 kW.

Transport and Power in Bombay

The administration report of the Bombay Electric Supply and Transport Undertaking for 1956-57 records satisfactory progress. The supply of electricity has improved with the commissioning in December 1956 of the first thermal generating set at Tatas' new power station. The Government has, therefore, been able to release additional electric power, both for industrial and for domestic consumption. The total of extra quantities sanctioned during the year amounted to 45,126 kW. The B.E.S.T. has reached an agreement on the bulk supply of energy with Tatas, providing as well for the revision of tariffs from time to time. The first stage of the Undertaking's power development programme, involving the remodelling of the five existing receiving stations with a view to augmenting their capacities, and the establishment of a new receiving station, was almost completed at the end of the year. The total estimated cost was Rs. 96.76 lakhs. Good progress has been made with the second stage, which provides for some additional receiving stations. The conversion programme in the supply system has gone forward—some 6,776 consumers have changed over to A.C. from D.C., and some 826 D.C. service lines have been completely converted into A.C. There was an appreciable increase in the total number of consumers, from 201,373 to 220,637; accordingly, the offtake of energy increased from 349.8 million units in the previous year to 386.5 million units. As for transport services, the fleet of buses rose from 631 to 750. The scheduled turnout of the vehicles, including those meant for schools, rose from 463 to 567 during the morning hours, and from 506 to 582 in the evening. The average vehicle utilisation (the number of miles covered by each vehicle a day) was lower at 123.75 miles against 125 miles during the previous year, the additional fleet being used to cater to the peak-hour traffic, but the daily earnings from each vehicle increased to Rs. 185.13 from Rs 181.02. The number of passengers carried rose by about 13.71 percent, the total, in absolute terms, moving up from 323.58 million to 367.9 million. The route mileage, too, increased substantially. The unpopular tram service in the city, however contracted, the number of cars owned and in use falling from 298 to 275 and from 240 to 213, respectively. The service was discontinued in one section. The number of passengers declined appreciably, as did revenue.

Workers in Management

The scheme for workers' participation in management is taking concrete shape, and over 30 units in the public and the private sectors have agreed to constitute joint councils of management. The scheme has been prepared by private employers. They have told the Government that they are willing to introduce workers' participation in the form of joint councils in selected industrial units on a voluntary basis. In his presidential address at the annual session of the All-India Organisation of Industrial Employers, Mr. G. D. Somani has said that employers look upon the scheme as not only unique but also a "worthy one". They attach great importance to the code of discipline in industry which has been evolved after discussions between representatives of the Government, employers and workers. The code directs employers and workers to settle all disputes through negotiation, conciliation and arbitration. Harmonious relations are necessary not only for industrial peace but also for larger production. The implementation of the code in the right spirit will help maintain amicable labour relations.

So far, wage boards have been constituted for the cotton textile, sugar and cement industries. The Central Labour Minister has told Parliament that a few more boards will be set up soon. In making recommendations, they are expected to take into account the needs of industries in a developing economy, the requirements of social justice and the case for adjusting wage differentials in such a manner as to provide incentives to workers. These are salutary principles, and employers and workers should await the findings of the boards. But some national federations of labour are still agitating for an outright increase in wages. The demand, apart from being improper now that wage boards have been constituted, seems to be aimed at increasing the importance of particular trade unions in the eyes of workers. Referring to the employees State insurance scheme, Mr. Somani says that complaints have ben made and it is necessary to improve it in some ways. Workers feel that the standard of medical treatment is low and that in filling up forms much time and money is wasted. The Employees State Insurance Corporation has unutilised funds amounting to Rs. 12 crores. Yet it is not extending facilities sufficiently on the plea that it is short of money. Furthermore, a proposal has ben made for raising the employers' contribution. Mr. Somani suggests that the Government and the Corporation should try to improve the working of the scheme rather than increase revenues by imposing additional burdens on employers.

National Rayon

The National Rayon Corporation Ltd announces that it has been able to complete negotiations with

American interests for setting up a tyre cord plant. The plant will cost around Rs. 3 crores, half of which will be needed in dollars. The U.S. Export-Import Bank has sanctioned a credit of $1.8 million, which represents 60 percent of the cost of the machinery. A further credit covering 20 percent of the cost has been obtained from the machinery suppliers themselves. The company believes that it will be able to find Rs. 80 lakhs, including the remaining 20 percent of the cost of the machinery, from its own resources. But a further Rs. 1 crore will be needed and this will be raised by the issue of 80,500 new equity shares of Rs. 100 each at a premium of Rs. 25. The plant is expected to be ready in two years. It is meanwhile reported that the chemical factory of the company is working satisfactorily since it came into production last year. The daily output is 20 tons of rayon grade electrolytic caustic soda, five tons of liquid chlorine and 16 tons of commercial hydrochloric acid. Production is being maintained at 75 percent of the rated capacity. It is claimed that the quality of the rayon grade caustic soda produced at the works compares favourably with the imported product.

Adulteration of Coffee

Adulteration of coffee is widespread. Justification for the south Indian practice of buying seeds and getting coffee roasted and ground at home or in small mills for a fee, usually two annas a lb is found in the complaint that tamarind seeds are powdered and mixed with coffee. In the past, bags of tamarind seeds were bought in the mofussil to provide starch for grey yarn. A big trade with north India was built up after 1940 in tamarind seeds, which previously had little commercial value. But now demand in the north itself has increased and many flour mills are said to be grinding roasted tamarind seeds and sending out the powder in bags. While the use of chicory, which is imported mainly from Holland, is technically treated as adulteration, the mixture of tamarind in coffee tablets sold to the poor raises a problem for those engaged in checking adulteration. A ban on the milling of seeds in flour mills or for human use may be one remedy, although the trade between Madras and Andhra, the main supplier of tamarind, will diminish in consequence. Fried date seeds too have been used as adulterants but tamarind seeds are easier to get. Tea is held to be relatively safe but, as sample surveys have shown, coffee is more popular as a beverage in the south. The well-to-do realise that famous brands sold in tins are safe and buyers abroad appreciate that a guarantee justifies the premium paid for purity.

New Textile Finishes

The application of the numerous new textile finishes which have attracted so much attention in the last year or so was at first largely confined to apparel fabrics in Britain. Few attempts were made until recently to extend them to household and furnishing textiles, although these obviously form a field where they would prove of considerable advantage. Curtains and loose covers are often cumbersome to iron after being washed, and are liable to shrink and to lose shape. A process has now been developed for furnishing fabrics by the Silver Springs Bleaching and Dyeing Co. Ltd. of Congleton, Cheshire, which effectively combines a drip-dry finish with shrink and stretch resistant properties. The process, to which the trade name of "Star Sylene" has been given, can also be used with an abrasive resistant finish, and is applicable to all types and weights of fabrics, up to 70 inches wide. The finishes impart body to the fabric, improve handling, and reduce shrinkage to 2 percent. The minimum iron properties of the finish are better called "hang-dry" rather than drip-dry, as the weight of the fabric is the agent used to remove creases completely. The application of the finish is not expected to add greatly to the cost of the best quality cloths, and the cost a yard for the cheaper qualities will be proportionately less. The anti-abrasive properties and the resistance to bleaches and detergents ensure a long hard-wearing life for the material treated. At the Textile Fair at Earl's Court, London, recently, a new development in tufted carpets was to be seen. Hitherto the general range of tufted carpets has been confined to plain self-colours and mottled effects produced by using fancy dyed yarns. Now, however, figured tufted carpets are being produced by printing on specially developed machinery made by the Stalwart Manufacturing Co Ltd, of Holmes Mill, Bacup, which has considerable experience in the dyeing of this type of carpet. It is claimed that the fast colours are comparable with those used in normal carpet manufacture, the difficulties of colour penetration having been sucessfully overcome: a close examination will show that the colour penetrates through to the back of the carpet. It is claimed, moreover, that the process leaves the carpet soft and supple. Contemporary geometrical and spot designs, flecked effects, and leaf designs are available. As more machines are built, it will be possible to increase the numbers of colours used in the various patterns.

EXODUS FROM EPIDEMIC

THE flight of so many persons from the city has had and is likely to have far-reaching effects. Some of these are pointed out by Messrs. Bird & Co., of 5, Clive Row, Calcutta, who have addressed the following letter to the Chairman of the Indian Mining Association: "Dear Sir,—We beg to call your attention to the fact that large numbers of panic-stricken people are leaving Howrah daily for the various stations on the E. I. Railway, some having—so we are informed—travelled as far as Asansol. It need hardly be pointed out that this movement of the population from plague-stricken areas of this city constitutes a serious danger to the labouring population of the coal districts of Bengal. It is notorious that most of the Indian Railway—including the N.W.R., I.M.R., and B. and N.W.R.,—have barely enough fuel to keep them running, and the mills, both in Cawnpore and in and around Calcutta, have no stocks whatever. A partial stoppage of despatches from the Mines for only a few weeks would, therefore, cause a disaster of enormous magnitude. We trust that your committee will take the earliest opportunity of impressing upon Government, not only in the interests of the coal trade, but also in their own interests as large railway proprietors, the importance of taking prompt measures with the view of safeguarding the coal districts of Bengal from an incursion of plague, and we remain, your faithfully, Bird & Co."

FOOD FOR THOUGHT

A handful of Rice

India has more acreage under rice than any other country in the world.

Yet production is not large enough to meet the demand. During 1957 it was found necessary to import 7,00,000 tons of rice at an estimated cost of Rs. 30 crores.

The country has been making steady progress in increasing production by improved methods of cultivation. Among these, control of the paddy stem borer is of special importance as it has been estimated that this deadly insect pest costs the country over Rs. 30 crores a year. The States worst affected are those of Andhra, Kerala, Madras, Mysore and Orissa.

Shell endrin provides effective, persistent control of the paddy stem borer and can thus increase rice yields on affected fields by up to 50%.

True—Shell endrin has to be imported because it is not manufactured in India: indigenous materials are however used in its formulations. And for every rupee spent on importing Shell endrin, as much as ten rupees worth of rice can be protected—which is a sensible way of saving foreign exchange whichever way you look at it.

SHELL Chemicals can save crops

and Foreign Exchange too!

Without Prejudice

REFUSAL TO OBEY LAWFUL ORDER

DAMAGES CLAIMED FOR DISMISSAL

(FROM OUR LEGAL CORRESPONDENT)

IN this note it is proposed to consider, with special reference to the Industrial Disputes Act and the penalty of dismissal for insubordination, the question as to how far, if at all, a servant is entitled to disobey, an order which he considers will involve him in the doing of an illegal act.

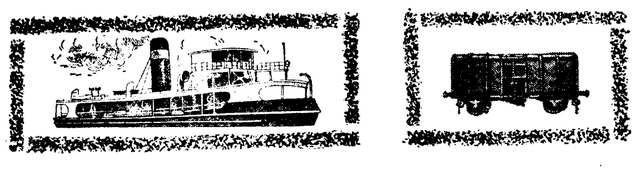
It will be useful and informative if we first look at the matter from the aspect of the ordinary common law of the land. The principle is that the relation of master and servant implies obedience, submission and respect on the part of the servant. "The general rule is obedience. The master is the judge of the circumstances under which the servant's services are required subject to this that he is to give only lawful commands."[1] Thus sternly did the learned Baron Alderson, 113 years ago, animadvert upon the misconduct of a little cockney housemaid in a great London house. We have mentioned this young person with affection before in these notes but will recount her adventure again. Her name was Emily Turner and one afternoon she secured news that her sick mother was dying; whereupon Miss Emily went to her employer and civilly asked leave to go and sit with her mother, after explaining the facts.

Leave was refused by her ladyship who told the housemaid to go back to the kitchen and her work. The maid went below, where she dropped her cap and apron, put on her bonnet and mantle and went to her mother by whom she sat all night. She returned next morning, reported for duty and was turned out neck and crop, with forfeiture of pay. Instant dismissal for disobedience. To indulge in High Court litigation was, generally, out of the power of the poor in those days. The expense was prohibitive. There was no free legal aid for the pauper. Manle J. sardonically accounted for this omission by quoting, in reverse meaning, the maxim: "The Law is no respector of persons." How this young woman managed to raise from £150 to £200 does not appear. But she did and filed a suit against her employer for damages for wrongful dismissal.

It is with an odd feeling of regret that one records the fact that the indomitable little woman lost her case which, however, established finally the principle that refusal to obey a lawful order subjects a servant to liability to summary dismissal. *Lawful* order. Let us examine the position where the order is not or probably or possibly is not a lawful one. Has the servant a discretion in such a case to decide for himself whether to obey the order or not? Or must he obey first and complain afterwards. Take the case of a soldier. He has a double duty, namely, to obey his superior officer and to obey the law of the land. The two duties may conflict. Which of them is to prevail? Professor Dicey has not much doubt about the answer and puts a suppositious case. "An officer orders his soldiers in a time of political excitement then and there to arrest and shoot without trial a popular leader against whom no crime has been proved but who is reasonably suspected of treasonable designs. In such a case, there is (it is conceived) no doubt that the soldiers who obey, no less than the officer who gives the command, are guilty of murder and liable to be hanged for it when convicted in due course of law. In such an extreme case as this, the duty of soldiers is, even at the risk of disobeying their superior, to obey the law of the land."

Quite so, but what about the consequences to the soldier of disobeying in times of riot, civil commotion or war the orders of his superior officer by refusing to fire? The great authority on constitutional law answers with a kind of macabre cheerfulness which makes one wonder whether he ever emerged from the cloisters of All Souls into the practical affairs of life. Opening with the rather remarkable understatement that in such an event "the position of a soldier is in theory and maybe in practice a difficult one," Dr. Dicey adds complacently as one saying: "Just too bad but there it is". "He may, *as it has been well said* (italics ours) be liable to be shot by a court-martial if he disobeys an order, and to be hanged by a judge and jury if he obeys it."[2] To which observation in the safe obscurity of an anonymous scribe one would venture to add the one word. rubbish! And that no jury would convict of murder and. though the ways of courts martial are incalculable, no Commander-in-Chief would confirm a death sentence in such a case even in the wildly improbable event of its being imposed. All the same, the professor's views are worth remembering in India where firing upon and gassing riotous mobs by military and police parties are not altogether unknown.

Under the Industrial Disputes Act, the position of a workman called upon to obey an order which he believes to be an illegal one and whom the employer seeks to punish by dismissal on account of his (the workman's) disobedience to it is not altogether clear but, strange to say, appears on the whole rather more favourable to the employer than is the common law. One of the latest cases on the subject was an appeal from an order of the Labour Court. Ahmedabad. dismissing an application of a workman for a declaration that an order of dismissal passed against him by his employers. the New National Mills Company Ltd., was improper and illegal and for reinstatement with full back wages. The workman's claim having been dismissed by the Labour Court, he appealed to the Industrial Court, Bombay. His case was that he was an old employee of the company and had been discharging his duties satisfactorily without giving occasion for any complaint during 11 years prior to his dismissal. He was given what he claimed to be an illegal order relating, so he alleged, to the working of two machines simultaneously. And deeming the order to be an illegal one, he refused to obey it and was dismissed in consequence. The Labour Court upheld the dismissal and the workman appealed. He lost again: and the Industrial Court made the following instructive observations on the duty of obedience to orders:



"The first objection taken on behalf of the appellant is that introduction of doubles was an illegal change, and, since the order was not legal, the appellant was justified in refusing to do it. It is true that there may be cases where an order is, on the face of it, obviously illegal, or where it is unreasonable or impossible, or in case where insubordination of the workman was deliberately provoked by the management in which refusal to obey an order may be justified. But, as a rule, a worker must obey the order and, if in his opinion, the order is illegal, and the illegality is technical and of a nature against which remedy is open to him under the law, the proper course for him is to obey the order when it is given, and protest about its illegality in a separate proceeding. If it is allowed to a worker to judge about the legality of every order and to disobey it if he thinks it is not legal, it would be impossible for the management to control the workers and to get the work done. If the workers are allowed to disobey such orders it will be impossible for the industrial establishment to maintain discipline. Reliance is placed by the union on an earlier case in 1950 *I.C.R.* 607. In that case it was observed that if a change is illegal and the employer insists upon enforcing it. there is no reason why the operatives should not be allowed to judge of its legality or otherwise though it will be ultimately left to the labour court to decide the question. As pointed out. however, in the later case of *Rashtriya Girni Kamgar Sangh* (1951. *I.C.R.* 603), this. as a general rule, cannot be applied to all cases. (In *Rashtriya's* case, it was held that disobedience to an order cannot be justified merely because the order is technically illegal.) Whether a worker is justified in refusing to obey or not is a question which will depend on the particular facts of each case. As already said above. if the order is obviously illegal there may be cases in which disobedience to it may be justified. But in most of the cases. it will not be advisable to allow the workmen the liberty to judge of the legality or illegality of an order. In a case like the present where it is open to the worker to apply for the withdrawal of the illegal change. the disobedience is clearly not justified. The proper thing to do is for the employee aggrieved to seek the remedy provided by law." The dismissal was upheld.

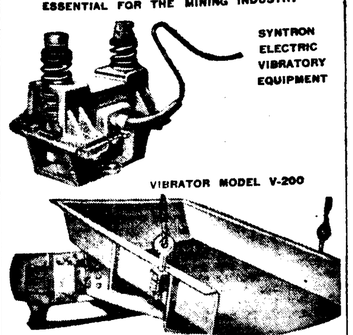
A Ditcher's Diary

DR. KHAN SAHIB'S DEATH AT THE HANDS OF AN ASSASsin in Lahore last Friday may or may not have had anything to do with the political rivalries of Pakistan. With the last word still unsaid about the murder of Liaquat Ali, it may be years before we know. While the circumstances of the death have undoubtedly added poignancy to the event, it would have saddened many in India and Pakistan at any time. And this, as Mr. Pyarelal has said in a touching obituary tribute, is "a rare honour for any individual in these days of strained Indo-Pakistani relations and, may I add, by the same token also a promise of hope for the future." One of the inevitable incidental consequences of partition was that it left, on both sides of the uneasy border, a very large number of political orphans: Congress men in Pakistan and Muslim Leaguers in India. Dr. Khan Sahib, together with his more famous brother, was one of the former; and it is not altogether surprising that it took him a long time to live down the Congress past. That he did eventually secure for himself a place in the fitful political sun of Pakistan was a tribute to the man's tenacity and character. Both these qualities had earlier been required in full when the two Khan brothers first thought of planting the seed of Mahatma Gandhi's *ahimsa* on the stony and turbulent soil of the North-West Frontier Province. There is the apocryphal but significant story of a Pathan, absorbed by a speech on non-violence, who was so irritated by some noise in the audience that he took out his knife, stabbed the disturber, and then went on listening. The forces in favour of Pakistan had gained so much in strength by 1947 in the rest of India that the Khans could resist it no longer. But the fidelity with which they stood by the Congress is the sort of thing Pakistani politics need today.

FOR THOSE IN SEARCH OF PROFOUND TRUTH, speeches by Congress party members are generally a waste of time. Normally, I would not count the utterances of Mr. Dhebar as exceptions, although I have occasionally found something important in them. For instance, the note he circulated to the A-I.C.C. last week-end expressed views on the party's present motives which deserve closer study than they are likely to get from those they were intended for. Of course he is right when he says about Congress: "There is a natural love of power to do good". But "good" is such a question-begging word, and I suspect not only Mr. Nehru is beginning to realise the truth in the old saying that the way to hell is paved with good intentions. It is one of the disappointing features of Indian democracy that it has failed to develop its own defences—those forces and institutions which automatically check the growth of power, whatever the motives behind it. A democracy has to learn to keep all power in check, or it will not remain a democracy for long. But free India's progress has been towards the concentration of political power into fewer hands, and even to supplement it with economic power as well. While Mr. Nehru is alive there will not be any serious abuses; but I wonder if Congress realises how its actions have paved the way for complete dictatorship of the country by an opposition party when one eventually wins a general election. All the instruments of power which Congress has collected into its own comparatively benevolent hands could then be turned against it as weapons of oppression. And how many well-intentioned Congress men appreciate the extent of the lust for power which is represented by the growth of the public sector and the building of such spectacular projects as steel plants before the food supplies of the people have been adequately secured? No, power to do good is as much a tyranny as any other, and the history of successful democracies is one of constantly devising ways of limiting and decentralising it.

I HAVE JUST FINISHED READING, IN THE *New Statesman*, a very learned and theoretical dissertation on why Belgrade and Moscow have fallen out again; and I had better confess frankly that I am still no master of the subject. In my own simple-minded fashion the way I argue is: if A, a communist, behaves in given circumstances like B, a capitalist, then had we not better keep political ideology out of it all? Bertrand Russell's *Power* is not a book much read now, but I still think the official policies, foreign and internal, of most governments are better explained in terms of such concrete criteria as national self-interest, political expediency and the lust for power than in those of abstract ideas of revolution and what have you. It is quite possible that there is a substantial difference between the ideological formulations of the Yugoslav Communist Party and those of the "parent" party. It may also be conceded that the difference between one way to socialism and many ways to socialism is as fundamental as the two parties to the dispute apparently believe. Neither seems to me inescapably relevant to an analysis of the sources of the current Tito-Khrushchev dispute. What is wrong with the following exposition except that it is simple?—Tito is proud of his record as a revolutionary, and is naturally chary of sharing the honour with the Kremlin. He is aware that Russia is powerful and that to maintain his personal existence he must have powerful friends too. There are other ways in which understanding with the United States is a paying proposition. Why then fall at Khrushchev's feet? On the other hand, Khrushchev knows that time is on his side, and there are other foreseeable dangers in making Tito too many concessions. Why not just wait? In however distorted a form. Marxism lives after Marx. Lenin and the lot. What hope has Titoism after Tito?



WHEN I READ IN THE PAPERS THAT THE HIGH Command was still insisting on the resignation of the Congress Ministry in Orissa, in spite of its victory in the Legislature and the by-elections, my reaction at first was one of surprise. But when I began to think a little more deeply, it seemed after all that another blow had been struck for the health and future of democracy in this country. The Ministry had been able to win back the two members who crossed the floor, but in the process it had lost the confidence of the people in its *bona fides* as a democratic political party. I do not presume to, judge whether the charge of "kidnapping", levelled against the Ganatantra Parishad leaders, is genuine or not—it is for the court to decide that. But the defections and the arrests took place at a time when the Ministry was barely managing to survive with a single-vote majority, which position it clearly lost with the resignation of two of its members, one of whom was a deputy Minister. Hence the general tendency among political observers to put two and two together and come to the conclusion that the Mahatab Ministry was guilty of a gross violation of the Constitution. A representative Ministry must necessarily live down such a stigma. Moreover, the majority which the Congress Party commands in the Legislature seems to be an uncertain one. It is ridden by factions, and obviously includes members who are quite capable of crossing and re-crossing the floor all on the same day if suitable inducements are offered. In the circumstances, the High Command did right to demand its resignation. But loss of office should be adequately compensated for if it succeeds in regaining the people's confidence. Besides, it gives the Congress Party an opportunity to test the loyalty of its members, especially when the Opposition parties are going all out to entice its M.L.A.'s to their side in order to get the requisite majority in the 138-member House. But an alternative Government, I am afraid, seems most unlikely. The Ganatantra-P.S.P. coalition can at best command the support of 65 or 66 votes if the eight communists throw their weight wholly on its side, so at least another five members will be necessary. The Jharkhand Party could provide the support, but it has already declared its policy of sinking or swimming with the Congress in power or out of it. So there is no immediate prospect of a new and stable Government in Orissa, which will probably be the first State to pass under Governor's rule since the last general elections, and the second to have slipped from Congress's hands.

CONGRATULATIONS ARE DUE TO THE *Statesman* FOR the article it published last Monday on the increase in the European and better-off Indian costs of living. It is, of course, unlikely to evoke much sympathy in those circles which could do something about it, but no harm is done by stating the facts. While confirming all the writer said, I would like to add a complaint of my own—it concerns the speed with which the prices of many locally-manufactured foodstuffs have caught up with and even passed those of former imported articles. The most flagrant example is canned goods. I am assured by an incontrovertible authority that the prices of good-quality tinned peaches, pears and fruit salads have almost all increased from well below to well above the prices of the best imported varieties, as they were before imports were banned. The same is true of tinned beans, soups and other vegetables. Butter, too, is an excellent example. Before import restrictions, Anchor butter was selling at Rs. 3-4 a pound. Now its nearest local rival is commanding that price and looks like going even higher. Cheese is another case in point. Indian Cheddar is at present bringing Rs. 6-8 a pound, compared with about Rs. 4 for Danish Blue before imports were stopped. As for beer, everybody knows what has happened there. Imported beer used to be about Rs. 3-8 a bottle. Now best-quality local beer is sometimes sold for Rs. 4-4 a bottle, some of which is increased tax. The quality of most of these local items, of course, is not to be compared with the foreign article; so import restrictions have cut living standards and put large fortuitous gains in the hands of local manufacturers. These have, in some cases, actually reduced the quality of the products since their competitors were excluded. All this may be saving India foreign exchange. But it is impoverishing salaried people, and encouraging a certain class of business morality, in a way which will do the country little good in the long run.

MAHINDRA & MAHINDRA LIMITED

CHAIRMAN MR. K. C. MAHINDRA'S REVIEW

The following is an abbreviated version of the speech made by the Chairman, Mr. K. C. Mahindra, at the Annual General Meeting of Mahindra & Mahindra Limited, held in Bombay on 12th May, 1958.

It is my privilege to welcome you to the 12th Annual General Meeting of your Company today. The Report that has been presented to the shareholders shows a year of very satisfactory operations with a bigger turnover and higher earnings.

The Company is fortunate in having two new Directors on your Board. Sardar H. S. Malik has a long and meritorious record in the Government, serving the country as her representative overseas for many years, and finally retiring from service as our Ambassador to France. His varied experience and mature judgement will be available for directing the policies of your Company. At the last Annual General Meeting I expressed our appreciation of the assistance received from our American associates, the Willys Overland Export Corporation, who helped the Company to overcome the difficulties caused by shortage of foreign exchange. As a measure of further confidence in the future of your Company, and in their earnest desire to assist in its operational activity as an automobile manufacturer, their President has accepted the invitation extended by your Directors to join the Board. Mr. Stephen A. Girard is our new Director and his rich experience in the automotive field will assist the Company in the many intricate problems which arise day to day in processing the progressive manufacture of a complex and high precision engineering product.

The turnover in Jeeps and allied vehicles was about 33% higher than in the previous year. The Company's dealers and distributors have added additional facilities in order to meet the growing demand for after-sales service. Their co-operation has been forthcoming very readily in spite of reduction in their gross remuneration made last year by the Tariff Commission.

Tractor Sales

Tractor sales show a heavy decline due principally to the severe restrictions imposed by Government on import quotas. Unfortunately for your Company, Government chose to base the licence quota on the imports for the year 1954/55 which was the first full year of our handling the David Brown franchise, and when our sales were comparatively small. Repeated representations to Government for additional *ad hoc* licences have not borne any fruit. To me it is surprising indeed that with the continuous threat of food-grains deficiency and the urgent need for substantial increase year by year in the quantum of our agricultural products, the very highest priority is not being given to such instruments of higher productivity as tractors and implements. Even our programme for the progressive manufacture of Tractors in India prepared in collaboration with David Brown, and submitted in November 1956 to Government, is still awaiting decision.

The Trailer Division shows a turnover of about 35% over last year's figures. In order to meet the expanding need for Trailers in the country, your Directors have decided to separate this activity in a new subsidiary company. Import licences have not been readily forthcoming for essential components which are not available locally. Arrangements have therefore been concluded with the well-known British firm of Rubery Owen & Co. Ltd., to provide the Plant, Tooling and Designs required to commence the manufacture of these components. In return for the supply of these equipments Rubery Owen will be allotted equivalent shares in the new company up to 49% of the total capital. The balance 51% will be held by your Company. This arrangement will not only ensure the production of complete Trailers in the country, but will enable the new company to enlarge the range, size and scope of Trailers. The excellent research facilities and design improvements available with Rubery Owen in Britain will be at the disposal of the Indian company.

Steel Division

The turnover of the Steel Division shows a phenomenal increase. As I reported to you last year, the margin of profit on this type of business is small, and large volume is necessary to show appreciable earnings. It has been possible to reach these high figures of sales as the Division maintained an active and detailed up-to-date study of the varying conditions effecting the world prices of steel and its availability. Your Company has been vigilent in keeping abreast of the changing circumstances and were able to negotiate successfully for large contracts. With the completion of Tata and Indian Iron and Steel expansions this year and the nearing completion of the three new steel works in 1959/61, the business in import of steel must decline. Currently, and the next two years, shortage of foreign exchange will restrict severely the steel incomings from abroad. The future of your Company's Steel Division would appear gloomy but for the fact that as approved controlled stockists, your Company hopes to participate in the internal distribution of the increasing amount of steel that would become available as expansions and new plants get into production. The volume passing through the stockists will perhaps decline as compared to the imports, but it is hoped that the margins per ton of steel so processed will increase as compared to the very low present margin in the import business. The large business in steel has led to the development of a very efficient and technically well equipped steel division in the Company, and new avenues for utilisation of this skill are being investigated.

In accordance with the findings of the Tariff Commission that the demand in the country for Jeeps would progressively increase to 5,000 units by 1961, a phased programme for increasing the production capacity of your Company was submitted to the Government. The progressive schedule to double the rate of production in order to cater for this growth in demand has now received approval. The details of the foreign exchange required for additional plant, machinery and tooling are with the Government and receiving their consideration. Indications are that sanction for this purpose will be forthcoming soon, particularly as plans relate to the manufacture of special utility vehicles.

Integration of Facilities

In planning manufacturing facilities to produce automotive vehicles in volumes of 5,000 units or more, the basic requirements for an economic operation change. On a small volume production even scattered facilities might suffice, but for larger volumes the economics of the scheme dictate the need for consolidated and integrated facilities. Systematic storekeeping and straight line flow of production, efficient handling of component manufactures and good housekeeping both in the factory and the warehouses become an economic essential. Need for flexibility for further expansions calls for meticulous planning in great detail. With this in view, the engineers of your Company have been making elaborate studies and although a year or two ago it was not possible to contemplate a large building programme, the easing of construction materials in the market makes it now a practical proposition. Your Company already owns over 100 acres of land at Pimpri near Poona, and provided further facilities like water, power and railheads can be arranged, plans to build in that area may materialise. For the purpose of doubling our present targets for production of Jeeps and for integrated development, substantial finance will be required. Recognising such a need, your Directors recommend as a first step that the authorised capital of the Company be increased and certain resolutions have been placed before you for consideration at today's meeting. The Company's application for issue of additional capital is under discussion with the Controller of Capital Issues and as soon as the details are finalised the shareholders will receive prompt intimation.

In concluding this survey of Company's operations and hopes for the future, may I say that despite stringent conditions of operations in an economy presaging a worldwide recession amidst inflationary potential, the results of the current half year indicate that your Company's executives have been adapting themselves to meet these new and diverse circumstances and have maintained a high level of management efficiency. These are relative terms. In the ultimate analysis volume of sales, quality production, development outlook and profits are the criteria of your judgement. Of sales and profit, the balance sheet is a good testimony; of the quality of the product made in India, Willys engineers have spoken highly. The design and development section of your Company is today in an embryonic stage, but a sound beginning has been made and the basic thinking behind these developments is under proper guidance. I place considerable emphasis on this aspect, as in my opinion with our present knowledge of automobile designs and with the scanty manufacturing facilities in the country, lot of useful effort is being wasted in attempting to do too much.

Government deserves praise for initiating an aggressive programme for increasing industrial production, and a considerable measure of success has attended these efforts, but to sustain the increase and keep on a progressive rate of growth two essential conditions must be satisfied, namely, demand to keep pace with supply and raw materials to be made available in abundance and in time. To create temporary employment is not the answer to the four hundred million problem. A modern socialist planner asks us never to forget that the "end of a rational economic activity is to make possible more production and more consumption and that expansion of employment has to allow the maximum expansion of production, but should not be made in a way as to be detrimental to the latter". Yet, today industries in India face serious dislocation. In the engineering field non-availability of even the essential raw materials like pig iron and coke dictates a position of almost complete helplessness and warrants a justifiable criticism of inadequate instruments of Government planning. Planning postulates that correct emphasis is placed on the right industries and once included within the Plan no effort is spared to provide the means for that industry to reach maximum production desired and to ensure consumption of the products of industry.

Food Problem

Take the problem of food which would need first attention of planners in India for many decades to come. It is becoming apparent that the luxury of fractioning the landholdings may have to be abandoned in favour of a policy which will produce more food immediately; acreages need to be worked out to permit economic mechanical cultivation and steps taken to provide the cultivators with the means by which they can increase production per acre. As the food situation is tackled, serious examination is needed of the methods of transporting what the soil produces from the areas of cultivation to the regions of consumption. In an economy like ours the need to develop artefacts against the overpowering pressure of population is urgent and it is slowly being recognised that a more than cursory study is required of the problems of distribution, which in simple words means distribution to the consumers at the right time, at the right price and in the cheapest manner.

Transportation has been sometimes defined as the conveyor belt of industry. India has a widespread and complicated railway system originally established to cater for activities in port towns in so far as industrial economy was concerned. The overhaul and rehabilitation of the system has consumed vast sums of money. With the increased demands placed on this system by the contemplated growth in the economy it was correctly recognised that a major effort would be required in expanding the system and almost 25% of the Second Plan outlay was decided for this purpose. With the expenditure of over Rs. 1,000 crores on the system the railways are expected to be able to haul 162 million tons by 1960/61, an increase of about 47 million tons over 1955/56. When we consider that the steel industry expansion alone will require a movement of 36 million tons a year, the added increase in the carrving capacity of the railway system appears much too inadequate for the rest of the economy in India. When we consider that the eruption of high food-grain prices in various corners of the country is principally due to maldistribution and to the failure to reach the food-grains to the hot-spots within time the matter becomes extremely urgent for an exhaustive re-examination of the transport position. It would appear that despite the best efforts to rehabilitate track and extend the rolling stock it will still not be possible for the railways to service the distribution needs. A medium with greater flexibility and accessibility must be found. In considering the various alternatives there is but little choice. It is the use of trucks, truck-trailers and tractor-trailers alone which would ease the burden on the overloaded railways and on our meagre coastal services.

Truck Haulage Service

There are a number of factors which act today as deterrent to the development of an extensive Truck Haulage Service. The recent announcement of an Inter State Transport Commission with comprehensive powers over development, co-ordination and regulation and of Transport Development Council at the ministerial level and of Road and Inland Water Transport Advisory Committee composed of official and non-official members is a welcome recognition of the importance of the distribution problem. It is acknowledged that the level of taxation in India so far as transport is concerned is perhaps the highest in the world; that Inter State controls on movement from one State to another are irrational and obstructive without yielding a single tangible benefit to any party; that threat of nationalisation of Goods Haulage Services in various States is a positive dis-incentive to development. There are not sufficient trucks coming off the manufacturers' lines, nor are operators coming forward in sufficient numbers to take up the service. The Minister of Transport and Communication stated the other day that the Plan provides for the production of 136,000 vehicles between the years 1957 and 1961. This volume, even if achieved, plus the existing fleet computed to be about 130,000 vehicles less obsolescence is hardly adequate for what is estimated as the minimum requirement for moving the products of the Second Plan economy. Some special effort would be necessary as much for supply of more vehicles as for improving the road system, including the bridging of important rivers and provision of feeder roads from and to centres of production and consumption. We have the triple problem in road transport which must find a solution if the planned economy is to achieve even a modicum of success in operation. There is first the problem of building the balance of 114 bridges as planned; of extending the mileage of national highways to a minimum of 15,000 miles; of a concerted and intelligent development of feeder roads and bye-ways. This problem, we are assured, is being energetically tackled by the Transport Ministry. The second problem is the quick supply within the next few years of an adequate number of trucks with pay-loads ranging from one-ton to ten-tons and of truck-trailer and tractor-trailer combinations for service on the main routes. I reckon that from now provision of a minimum of 50,000 trucks a year and say 5,000 tractor trailer combinations should be made. The producers of trucks, tractors, trailers in India are not equipped today to furnish this quantity of vehicles. A concerted and co-ordinated programme as between the various manufacturers, a decision to speed up local manufactures and a direction to get the results at any cost is the desideratum of planning in this context. Finance is the mobilizer and I suggest that while the Ministry and the Planning Commission engage themselves in devising methods of co-ordination and direction, the proposed Refinance Corporation for Industry Private Limited should take up, as a matter of priority, the requirements for capital finance of the various manufacturers for the speedup. I reckon that a matter of Rs 10 crores will be needed and this is not a large amount for insuring the production of 50,000 trucks and 5,000 tractor trailer combinations a year in the country.

Incentive to Buy

Alongside such production there will be the question of off-take—who will buy these vehicles and who will operate? This is problem number three. The decision that the moratorium on the nationalisation of goods transport has been extended till the end of the Third Five Year Plan period is good as far as it goes, but it is not enough. Apart from long-term inducements for people to engage themselves in this service with its high obsolescence mark, there is the vital question of finance. Money for financing the purchase every year of 50,000 truck services and for finding operating costs thereof is simply not there in the country. I suggest a Truck Finance & Development Corporation which would guarantee the manufacturers the purchase of all the vehicles they can produce and which would simultaneously offer the operators easy payment terms on an instalment basis. The Hire Purchase System has become a normal and essential part of the automotive trade in America and in Europe. Private agencies no doubt have flourished in India too, but their scale of operations is too small and their finances insufficient. The Truck Finance & Development Corporation which I am asking the State to sponsor should be able to meet the demands of the problem as posed by me with capital fund of say Rs. 50 crores—a small sum as compared to the huge outlay on the railways system. If the charter of the Refinance Corporation cannot be specially amended to render assistance in full scale to the present manufacturers for they may not come in the category of "medium industries", their capital finance will need to be provided by the Truck Finance & Development Corporation which I have proposed.

Railway transport in India quite correctly received priority, but there are physical limitations to its quick growth. For a Road Haulage Service the limitations are minor and of not such colossal magnitude in capital expenditure as in the railways. Rupee for Rupee, investment in a properly co-ordinated Road Transport organisation will yield much richer dividends than in the railways. I am convinced that what I have suggested in the matter of transport organisation will not only provide prominent additional employment, but also lay securely the foundations of a modern transport system as has been the experience in other countries.

With the result of operations over last year as presented to you today, you will join me, I am sure, in expressing our appreciation as shareholders of the Company of the very fine effort made by the staff and the workers, and I hope that they will continue to work with equal zeal and enthusiasm over the coming years.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

STERLING RATES IMPROVE

Wednesday, 14th May.

TRENDS in the Calcutta money market in the past week differed little from those of the previous fortnight. Once again, there was no appreciable change in the total level of advances outstanding. The main sources of demand kept their requirements round about the same level, but slight falls were noted in accommodation received by the sugar and jute mills. Although it is clear that the busy season has passed its peak, there is scarcely any sign yet that funds are beginning to return to the banks. The interbank market was tighter, and the call rate has increased to 3½ percent, from the 3¼ percent quoted last week.

The exchange market was almost completely devoid of interest. The few bills which did come to hand were chiefly on account of gunny shipments. Tea bills were negligible. Remittance improved slightly. At the beginning of the period, sterling ruled weaker against most currencies. But subsequently the pound met with strong demand and firmed against the Canadian and U.S. dollars and against all leading Continental currencies. The reason for this is not clear, but it might have something to do with the improved chances of avoiding a railway strike in Britain, and the determination the Government is showing in fighting the bus stoppage to the end.

SILVER REACTED ON PROFIT-TAKING. THE PRICE declined from the previous week's level of Rs. 194 to Rs. 192 for ready delivery. The rate for forward delivery was Rs 190.25 The London price stood at 73¾d and the New York quotation amounted to 88⅜ cents.

Gold was quiet in sympathy with silver and the price was quoted at Rs. 115. The sovereign realised Rs. 72.75.

DURING THE WEEK ENDED 9TH MAY, GOVERNMENT of India Treasury bills for Rs. 58,38,50,000 were sold in favour of the Reserve Bank.

AN INCREASE OF Rs. 10.34 CRORES TO Rs. 1,629.96 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 9th May, 1958, while the total note issue fell by Rs. 1.47 crores to Rs. 1,639.31 crores. Foreign securities of the paper currency reserve were reduced by Rs. 19.89 crores to Rs. 184.83 crores and rupee securities were increased by an equivalent amount to Rs. 1,207.47 crores. As a result of the transfer of securities from the Issue Department of the Bank to the Banking Department, foreign balances abroad rose by Rs 15.60 crores to Rs. 73.63 crores. Deposits of the Government of India increased by Rs. 3.64 crores to Rs. 53.29 crores, but other Government accounts declined by Rs. 39 lakhs to Rs. 15.73 crores. Balances of commercial banks were Rs. 13.50 crores higher at Rs. 111.99 crores. Investments rose by Rs. 20.38 crores to Rs. 244.96 crores. Other loans and advances fell from Rs 57.02 crores to Rs. 55.95 crores, of which advances to scheduled banks amounted to Rs. 17.10 crores against Rs. 18.16 crores. Ways and means advances stood at Rs. 57.53 crores (Rs. 53.11 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 2nd May, 1958, shows a rise of Rs. 8 lakhs to Rs. 422.20 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 14 lakhs and Rs. 5 lakhs to Rs. 180.59 lakhs and Rs. 10.38 crores, respectively. Advances, including loans, cash credits and bills discounted and purchased, have decreased by Rs. 51 lakhs to Rs. 205.89 crores. Cash and balances are, in consequence, shown at Rs. 40.38 crores or Rs. 3.01 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 2nd May, 1958, shows Demand and Time liabilities at Rs. 752.50 crores (Rs. 18.77 crores on account of borrowings from banks) and Rs. 791.06 crores (Rs. 16 crores), compared with Rs. 774.79 crores (Rs. 17.36 crores) and Rs. 768.70 crores (Rs. 14.74 crores), respectively, in the previous week. Cash has decreased by Rs. 1.82 lakhs to Rs. 40.15 crores, while balances with the Reserve Bank have increased by Rs. 8.38 crores to Rs. 99.16 crores. There is a drop of Rs. 95 lakhs to Rs. 444.06 crores in investments. Advances and bills discounted at Rs. 955.39 crores show a drop of Rs. 90 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 9 percent and 61.9 percent, against 8.6 percent and 62 percent.

The following is a statement of the cash balances of the Central Government on the last day of February 1958:

		Rs.
(1)	At the Reserve Bank of India in India	73,40,53,000
(2)	At treasuries in India ...	32,20,000
(3)	In England (Sterling converted at 18d the rupee) ...	1,31,65,000
	Total ...	75,04,38,000

STOCK MARKETS SUBDUED BY STRIKE THREAT

GILT-EDGED AND OIL SHARES FALL

London, 14th May.

THE progress of the negotiations to avert a railway strike overshadowed all other considerations on the Stock Exchange during the past week. Their course virtually dictated the trend of the markets. Widespread losses were recorded under the lead of gilt-edged securities, when it seemed that negotiations were deadlocked and that a railway strike was a virtual certainty, but a recovery developed when it became known that the Minister of Labour had invited the Transport Commission and the railway unions to a meeting. This gave rise to hopes that the strike would be averted and helped the market to maintain a recovery movement. Apart from gilt-edged securities and oil shares, there was very little change on balance. Gilt-edged securities did not fully recover their earlier losses which were accentuated by the decline in sterling in the foreign exchange market following the railway strike threat. Oil shares, after rallying, reacted again under the influence of the latest developments in the Middle East with the cutting of the Iraq Petroleum pipeline in the Lebanon. Although fears of a railway strike tended to override all influences, the bus strike and other labour troubles contributed to the general uncertainty and nervousness prevailing in the market, and the better tendency which subsequently developed was attributed to a cessation of the small selling rather than an increase in buying. German bonds were again prominent in an otherwise very quiet foreign bonds market. Dollar stocks were mainly higher in response to Wall Street and a rise in the dollar premium. The rally in the industrial market was helped by the excellent results of Dunlop Rubber Company and enabled prices to recover a good part of their earlier small losses. Where changed, they were only slightly lower on balance. South African gold shares went ahead after earlier dullness and also recorded very little change on balance. Coppers and other base metals moved irregularly, but were mainly lower. Rubber shares were generally dull reflecting the recent fall in the commodity. Small losses predominated in tea shares.

The Money Market

Although discount houses were taking up fewer bills, short loan conditions in the money market continued to be difficult with the supplies of day-to-day money rather limited. The market had to rely on the authorities to bridge the gap, and on two days large assistance was provided. The rate for non-regular money remained at the high level of 5 percent and 5¼ percent, while there was a restoration of borrowing from the Bank of England, although the amount required was very small. The low cash positions of the clearing banks restricted their purchases of bills and the market had to concede the firm rate of 4½ percent for July and "hots" up to the time of the weekly Treasury bill tender, and subsequently, 5¼ percent became the rate for the same bills following a sharp rise in the rate to £5 3s 10.81d percent.

U.S. Federal Reserve Return

The latest U.S. Federal Reserve return shows that the gold stock fell by $49 million to $21,947 million. Foreign deposits rose by $31 million to $288 million while foreign investments advanced by $64 million to $3,132 million. The Federal Reserve bought $170 million worth of bills, making the total holdings of U.S Government securities of $23,851 million. Total discounts and advances fell by $31 million to $125 million, while the aggregate excess reserves of member banks rose by $116 million to $749 million. The daily average excess reserves of member banks rose by $33 million to $690 million, while their daily average borrowings fell by $7 million to $118 million. Business loans of New York city banks fell by $28 million to $11,017 million compared with a decline of $71 million to $11,591 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were $45 million lower at $20,518 million. Federal Reserve notes in actual circulation were $75 million higher at $26,450 million. The deposit member bank reserve account was $68 million higher at $78,322 million.

Hongkong Gold Irregular

The undertone of the Hongkong bullion market was initially steady following labour unrest in the U.K. but this was later offset by more spot supplies of gold to the market together with the steadiness of sterling. Most of the larger traders, however, remained on the sideline awaiting further developments concerning the railway strike threat in Britain. Prices rose slightly as the interest rate favouring sellers was cut from 15 to 5 cents a ten taels daily, and the market rallied further on the reported break-down of British railworkers' negotiations for higher wages. Values then eased on a slightly more hopeful labour news from Britain, and closed at the opening values. Carry-over charges totalled 63 cents in sellers' favour. The official offtake was 2,090 taels and the unofficial 5,600 taels. Arrivals at Macao were nil. Forward contracts were done at $(U.S.) 38.03 c.i.f., Macao.

Fall in Castor Oil Prices Likely

London traders anticipate a sharp fall in castor oil prices due to actual and prospective offers from China and eastern Europe, which are relatively new sources of supply as far as the United Kingdom is concerned. Chinese oil, which in the past has been virtually confined to small quantities of pharmaceutical grade, now includes oil of a grade required to meet ordinary B.S.S. quality at prices decidedly more attractive than those for current shipments from India the United Kingdom's traditional supplier. At the same time, it is learned that some of Britain's largest users are now testing samples of oil from Rumania and Bulgaria. If they are found suitable, they will be available at appreciably cheaper prices than are now asked for Indian oil. Of the two varieties, Rumanian oil should be the most important. Its initial samples have had a favourable reception from prospective buyers, and sellers are confident that the general grade will be good enough to secure a B.S.S. rating. The projected supply from Bulgaria will consist of solvent extracted oil which is unlikely to be better than a low quality commercial oil, but its prices are expected to be extremely low. It is reported that a small quantity of Chinese oil in bulk has already been sold to the United Kingdom for May-June shipment at a parity of about £117 c.i.f., duty-paid and traders believe that it can be bought for less. At the same time, it is thought that Rumanian bulk oil could be brought down to £114 c.i.f., duty-paid. United Kingdom which would compare with the cheapest offer of bulk oil from Bombay for similar shipment at £118 c.i.f.

U.S. Bill to Suspend Duty on Carpet Wool Imports

The U.S House of Representatives has passed and sent to President Eisenhower a Bill for signature. It will suspend for two years the duty on imports of carpet-type wools. The House has accepted some amendments which were previously made by the Senate. The Bill directs the U.S. Tariff Commission to undertake a study on the import of carpet wool. The duty-free status is restricted to coarser grades of wool generally used for carpet and rug manufacture.

"...and a bonus of goodwill to the management —for installing the 'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

'Tushar' WATER COOLERS
A modern must for factories, offices, schools, hotels, hospitals and colleges

With the TUSHAR you get
- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

LABOUR TROUBLES CAUSE SHARP CONTRACTION IN BUSINESS

NEW CENTRAL LOANS FULLY SUBSCRIBED

Wednesday Evening.

THE stock market appears again to have reached a stage of almost complete inactivity and a feeling of despondency is developing. The volume of business has shrunk considerably. The main talking point among operators has been the labour trouble at the T.I.S.C.O. and I.I.S.C.O. works, and the one day token strike at Jamshedpur last Monday did little to relieve the general gloom. Other factors said to be affecting market sentiment adversely are the possibility of a return to stringent conditions in the money market, owing to the Central Government loans. Subscriptions for these opened on Monday, and closed today (12 noon). They will be followed soon by a further issue of State loans. It is not yet known whether these will be announced separately or together. Previous experience of a combined issue was not satisfactory and the market feels that it would be better if the States launched their programmes one at a time. The crisis in the cotton textile industry, as reflected in the reports recently published by some of the leading textile companies in Ahmedabad, the threatened all-India strike of port and dock workers, and of 600,000 coal miners in West Bengal and Bihar, together with fears of additional taxation, have added to operators' worries.

The news that the investment policy for the Life Insurance Corporation is expected next week, was received with some satisfaction in investment circles. This is because it is anticipated that, instead of buying shares by means of offers, the Life Insurance Corporation may, in future, place

It has been announced that the Central Government is to take control of the management of Jessop & Co., formerly in the Mundhra group, by appointing its own nominees to the board of directors. It is also understood that the Government will be providing the company with financial support.

direct orders with brokers. That would be a more satisfactory way of doing business, because it would be easier to execute the orders and the rates would be more in line with actual market quotations. This, however, appears to be the only rainbow in the investment sky at present.

Towards the end of last week, Government security prices tended to ease owing to small offerings of existing loans for reinvestment in the three new Central Government loans. Since the opening of the lists, however, the selling pressure has abated and there has been a recovery in all dated issues, including long-dateds.

Preference shares, with the exception of jutes, continued to meet with keen enquiry and the more popular issues were difficult to obtain in the absence of sellers. In the miscellaneous group, Alkali and Chemical were crossed at Rs. 98, as were British India Corporation at Rs. 100 and Burrakur 1st at Rs. 95 x.d. Calcutta Tramways changed hands at Rs. 8 and a transaction was reported in Birds Investments at Rs. 50. Martin Burn were crossed at Rs. 95 and Metal Box at Rs. 82, with further buyers at this rate. There were buyers of Rallis at Rs. 53.

In jutes, Anglo-India were sold at Rs. 84 and Auckland 2nd at Rs. 50. Hooghly Mills were crossed at Rs. 7.75 and Naihatti were offered at Rs. 80.

In the banking section, Punjab National were better at Rs. 53.50 and Hind Bank were marked at Rs. 52 x.d. United Bank "D" recovered to Rs. 4.25.

Only one share was transacted in the railway section, namely Dehri-Rohtas at around Rs. 10.75.

The difficult trading conditions being experienced by the cotton textile industry were reflected in the prices of cotton shares. Dunbar were marked down to Rs. 118 and Bowreah were offered at Rs. 104. Contrary to the general trend, Elgin Mills were slightly better at Rs. 12.31.

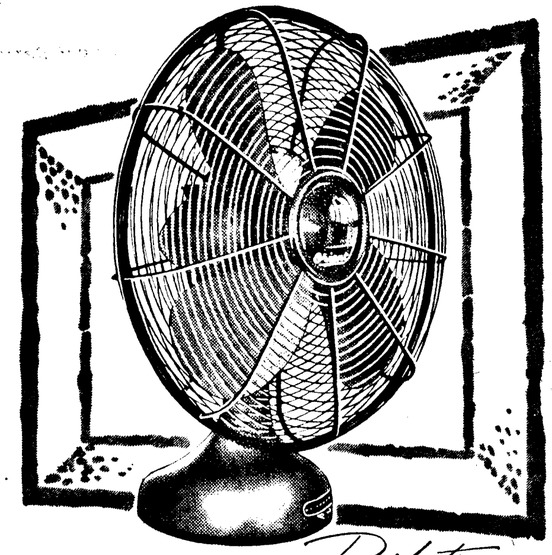
Despite the threatened strike on 19th May of 600,000 miners in the West Bengal and Bihar coalfields, coal shares kept reasonably steady, particularly Bengal which advanced from Rs. 230 to Rs. 242. Burrakur were unchanged at Rs. 22, as were Katras Jherriah at Rs. 59 and New Beerbhoom at Rs. 14.75. Central India and West Bengal were steady at Rs. 7.75 and Rs. 5.75, respectively. East Indian and Equitable, however, were slightly easier at Rs. 20.87 and Rs. 26, respectively.

Very little business was reported in jute shares but prices on the whole were well maintained, and in some cases were improved upon. Barnagore were Re. 1 better at Rs. 83.50 and Alliance moved up further to Rs. 74.50 against an opening price of Rs. 72. Birla were higher at Rs. 15.06, Auckland at Rs. 84 and Ganges at Rs. 45. Howrah were taken at Rs. 15.25 while New Central registered a further advance to Rs. 14.44. National rose today from Rs. 22.75 to Rs. 23.50.

In electrics, Calcutta were firm at Rs. 14.06 while both Benares and U.P. were easier at Rs. 13.12 and Rs. 120.

The reduction in the Ramnugger Cane & Sugar dividend from Rs. 2 to Rs. 1.50 a share brought out sellers and the price receded to Rs. 20.50. Champaran were lower at Rs. 19.25 while S.K.G. recovered to Rs. 10.06, following the announcement of a 10% distribution which is the same as the previous year.

In the engineering group, Indian Iron & Steel fluctuated between Rs. 21.74 and Rs. 21.37 to close at Rs 21.68. Braithwaite were unchanged at Rs. 26 but both Burn & Co., and Guest, Keen, Williams were taken at the higher rates of Rs. 332 and Rs. 30.69, respectively. The report in the Press today that the Government of India was likely to take over the management of Jessop & Company for three years had little effect on the shares which closed at Rs. 19.25 against Rs. 19.12 yesterday. Textile Machinery fluctuated narrowly at around Rs. 18.25.



In paper, Bengal spurted from Rs. 60.50 to Rs. 65.75 while Orient were unchanged at around Rs. 29.55 and Titaghur were slightly better at Rs. 32.62. Indian Paper Pulp rose today from Rs. 19.75 to Rs. 20.44.

In cement, Ashoka were reported at Rs. 8.06 and Dalmia at the previous rate of Rs. 10.06. Sone Valley were offered at about Rs. 4.94, while Orissa were shaded at Rs. 12.19.

In shipping, India Steamship were fairly steady at Rs. 11.12 but India General Navigation receded further to Rs. 50.

Among miscellaneous industrials, Alkali & Chemical were in strong demand and rose further

A PORTRAIT OF Perfection

Human search for perfection is endless. Here you find the fruit of the combined efforts of many highly skilled people such as, designers, tool engineers and technicians whose minds and hands transform raw materials into the best possible components of an Orient fan. The fan that bears testimony to man's never-ending endeavour for perfection.

In Orient's factory much thought goes into planning and research—planning the kind of fan that will serve you most and the search for ways and means to make it. New methods are constantly being replaced by newer methods resulting in fans of remarkable performance and incomparable finish.

Orient FANS
Years ahead in look and performance

ORIENT GENERAL INDUSTRIES LTD.

to Rs. 14.94 with few declared sellers. Aluminium Corporation were higher at Rs. 10.94 while Angelo Brothers were unchanged at Rs. 17.62. British India Corporation were marked down from Rs. 3.70 to Rs. 3.40, and there was good enquiry for Clive Row Investment at Rs. 8.75. Imperial Tobacco were quiet at Rs. 11.87, while Indian Aluminium improved from Rs. 13.19 to Rs. 13.69. Following the confirmation of a rights issue by the Indian Cable Co. Ltd., in the proportion of one for two at par, the shares came in for sustained investment enquiry at around Rs. 30.50. Hindustan Lever were quoted at Rs. 21.12 and Indo-Burma Petroleum, after being done up to Rs. 26, closed slightly easier at Rs. 25.62. Metal Box were in demand at Rs. 28 and National Insulated Cables were wanted at Rs. 27.12. National Carbon recovered to Rs. 25 and National Rubber were dealt in particularly at around Rs. 12.25. Rallis were unchanged at Rs. 34 but there were buyers of Triton at Rs. 120. Martin Burn were steady at Rs. 25.12.

In the mining group, Indian Copper were dull at Rs. 3.12 while Orissa Minerals advanced to Rs. 24.

Tea shares were devoid of interest owing to the continued delay on the part of the Government in making a decision on the question of a reduction in the export duty on common teas. Banarhat were easier at Rs. 297, Basmatia at Rs. 21 and Hantapara at Rs. 111. Contrary to the general trend there was a small enquiry for Hasimara, on reports of good working, at the higher rate of Rs. 21.50.

THE INDO-BURMA PETROLEUM COMPANY HAS MADE a profit of Rs. 55.25 lakhs for the year ended last December, against Rs. 50.72 lakhs. The dividend has been maintained at 20 percent, including an interim of 10 percent. The taxation provision has increased from Rs. 28.93 lakhs to Rs. 30.43 lakhs. Depreciation is allocated Rs. 4.09 lakhs (Rs. 3.91 lakhs). The carry-forward is Rs. 1,06,640, against Rs. 67,682 brought in.

THE PROFIT OF GUEST, KEEN, WILLIAMS, LTD. HAS declined from Rs. 1.53 crores to Rs. 1.41 crores for the 52 weeks ended 28th December, 1957. The dividend has been reduced from 23 percent to 20 percent, including an interim of 8 percent. The taxation provision amounts to Rs. 77.76 lakhs, leaving Rs. 25,90,741 to be transferred to general reserve.

THE PROFIT OF GODFREY PHILIPS, INDIA, LTD. HAS declined by Rs. 3.86 lakhs to Rs. 18.52 lakhs for the year ended last December. Providing Rs. 11 lakhs (Rs. 11¼ lakhs) for taxation provision and Rs. 4.84 lakhs (Rs. 4.60 lakhs) for depreciation, there is a balance of Rs. 18,60,343, including Rs. 13,04,518 brought in. Gratuity reserve is allocated Rs. 57,000. The ordinary dividend is reduced by 5 percent to 15 percent to absorb Rs. 6 lakhs, leaving a carry-forward of Rs. 10,90,318.

PROVIDING RS. 5.94 LAKHS FOR DEPRECIATION AND Rs. 5.41 lakhs for taxation provision, the profit of the National Iron and Steel Company has amounted to Rs. 6.56 lakhs for the year ended last March. A dividend of 10 annas a share has been declared, leaving a carry-forward of Rs. 8,28,211.

Bombay Market

OPERATORS TURN OPTIMISTIC ABOUT LABOUR PROSPECTS

MORE RETENTION PRICE RUMOURS

Wednesday Afternoon.

THE Bombay stock market was quietly steady last week and prices see-sawed gently in moderate turnover. Towards the close, sentiment improved on optimism about labour unrest in the steel works at Jamshedpur and Burnpur. It was believed that the threatened strike might be averted.

Rumours of an increase in the retention price of steel and cement encouraged replacement buying. A section of the market thought that the Government might reduce the cloth excise duty further to increase domestic sales.

Tata steels rose to Rs. 181.75 and Indian Irons were quoted higher at Rs. 21.68 on support from Lyons Range. Tata Locomotive were bought at Rs. 167 on hopes of a rise in the dividend. Premier Construction were taken up at Rs. 191.25 by knowledgeable quarters. Alcock Ashdown recovered to Rs. 247.50 on bear-covering. Automobile shares were steady but fluctuations were narrow. Premier Automobiles were transacted at Rs. 81.20 and Hindustan Motors realised Rs. 6.88. Larsen and Toubro gained at Rs. 15.80.

Cotton mill shares were bought selectively but poor results achieved by the companies in 1957 were a principal restraining factor. Bombay Dyeing came to hand at Rs. 54.20 and Kohinoors were bought at Rs. 267. Standard Mills were prominent at Rs. 422 on interested support. Simplex made Rs. 153.50 and Century rose to Rs. 430 on short-covering. Svadeshi were taken at Rs. 175 and India United ordinary were absorbed at Rs. 9.12. Apollo were freely offered at Rs. 1.70.

Miscellaneous shares were fairly steady but turnover was restricted. Among sugars, Belapur were dealt in at Rs. 244.50 and Phalton came to hand at Rs. 142. Cement shares were maintained. Associated Cement realised Rs. 153.25 and Digvijay changed hands at Rs. 143. Steamship company shares reacted on profit-taking. Scindia were lowered to Rs. 17.48 and Great Eastern Shipping lost at Rs. 19.96. Mining shares were subdued as the outlook for metals was uncertain. Shivrajpur Syndicate were available at Rs. 92.50. National Rayon recovered to Rs. 236 on replacement buying and Bombay Burmah were higher at Rs. 554. Tata Chemicals were quietly steady at Rs. 15.

Banking shares were steady around previous levels. Central came to hand at Rs. 52 and United Commercial were placed at Rs. 58.80. Insurance shares were idle. New India were offered at Rs. 45.50.

Scattered interest was shown in electricity supply shares. Tata Hydro were quoted at Rs. 118 and Ahmedabad Electric were maintained at Rs. 94.10.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise.]

There's a new way to fly to LONDON

Finest in the skies

THE SWIFT TWA JETSTREAM*

EQUIPPED WITH RADAR AND SYNCHROPHASED (ANTI-VIBRATION) PROPELLERS

OVER 23 JETSTREAM FLIGHTS EACH WEEK TO THE U.S. FROM:-
LONDON • PARIS • ROME
ATHENS • LISBON • CAIRO
FRANKFURT • MADRID
ZURICH • SHANNON

Largest, longest-ranged of them all, TWA JETSTREAM flies high above the weather, can even reach and ride the swift smooth winds of the jet stream.

Fly the finest... FLY TWA
TRANS WORLD AIRLINES

TWA's MULTI-STOP-OVER PLAN
Twice weekly from Bombay, TWA's great Super-G speeds you to Europe from where frequent TWA JETSTREAM flights are available to LONDON and the U.S.

Take your time. Visit as many of the 28 cities en route, as you like, for a day, a week, or longer—*at no extra fare.* Of the European cities served by TWA, 9 (besides CAIRO) are now connected to the U. S. by TWA's spectacular JETSTREAM *non-stop* flights.

*JETSTREAM is a service mark owned exclusively by TWA.

TWA/G/120

Take your time.... from this moderately Priced Wall Clock....

Specially made in England for Anglo-Swiss Watch Co., and best time-keeper for Homes, Offices, Schools, Factories, Railways, etc. Well designed and fitted in solidly built teak wood cases, these clocks have solid steel pinions and brass plates highly polished throughout. Equipped with precision made 8-day movement. White enamel dial and bold arabic numerals.

Particular care taken to secure close and dust-tight fittings. Sent to any part of India securely packed. Our clocks last as many as 20 to 30 years. Easy to operate.

NO MAINTENANCE REQUIRED.
Overall Diameter 14"
Depth 6" — Dial 12"
Pendulum Movement.

Model No. CL-3
Non-Striking Clock.
Rs. 104/- each.

Model No. CL-4
Striking Hour & Half-Hour
Rs. 135/- each.

GUARANTEED FOR 12 MONTHS

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

EFFECTS OF PRICE CUTS

(FROM A SPECIAL CORRESPONDENT)

WITH few fresh developments in the international field, and the conception of the European free trade area still making slow progress against the opposition of France, issues which have cropped up during the past month have been mostly of a domestic nature. There has been much discussion on the "cut-price shops" which are making their existence felt in all the big towns. Traders or rather the syndicates sell goods below the average market price. In the United Kingdom, they became prominent immediately after the first world war, but then their activities were almost universally frowned upon. The position today is different, and he who practises price-cutting may find his name in the Honours List. The Government wants, above almost everything, to see that prices of goods fall, particularly those of foodstuffs, and it is in the latter that the price-cutter specialises. The orthodox retailer binds himself to sell the wares he handles at prices fixed by manufacturers or wholesale merchants. Theoretically, this is reasonable enough, and under ordinary circumstances, it contributes to market stability. But in the abnormal economic conditions which have prevailed during the last five years or so, there have been many instances of manufacturers putting the prices of their goods too high, partly to ensure that they themselves secure the maximum possible profit, and partly to stimulate the retailer's interest, by enabling him to obtain larger returns than would otherwise be feasible. In other words, the shopkeeper has been given every inducement to push certain products. It looks as though the drive against existing price levels is being powerfully reinforced by decisions not of Parliamentary committees, but of sources more serviceable to the Cabinet. It is virtually impossible to prevent supplies reaching the cut-price shops. Moreover, not every maker of branded goods is eager to interrupt the flow, and, as might be inferred from what has been already said, one who did might be severely reprimanded by the Government for a "restrictive practice."

Company Profits

Company reports and chairmen's statements continue to reflect cautious optimism. The reduction of £2,180,000 of the Cunard Steamship's operating surplus in 1957 is substantial, and it supports the claim that shipping companies generally are having a difficult time. But it is not clear, on the basis of the published facts, why there should be, as has been forecast in some quarters, a setback to the prosperity of the Royal Dutch Shell, granting that there may be a temporary excess of oil supplies. That it is hard to see far ahead is evident from the preliminary statement of Babcock and Wilcox, the well-known boiler engineers. Less than five months ago, the directors stated that the company might earn lower profits: actually, the profits have increased by 11 percent. The chemical industry is still one of the most expansive, as is evident from Imperial Chemical's increase of £6 million in its profit for 1957. A considerable part of this rise appears to be due to the activities of the plastics division. But it has also to be taken into account that the company's man-made fibre "Terylene" is making headway at an accelerated pace, causing an upward revision of the production plans.

Carpets Made from Wool

A reference to carpets in the report of the Wool Industries Research Association may be of interest to Indian readers. It has been said that the discovery has been made that East Indian wool may have a density as much as 30 percent less than that of New Zealand wools, because of the presence of medullated or hairy fibres. "Therefore, a carpet made from East Indian wool may have as much as 30 percent greater bulk of fibre than one of equal weight made from New Zealand wool. This may explain to some extent the absence of shading due to pile deformation from carpet made from East Indian wool."

Concern has been expressed in wool manufacturing circles at the success which has attended the campaign for selling "care-free", "easy-care", and similarly named garments. Such descriptions have been applied to garments made from cotton or man-made fibres, and possessing a number of attributes connected with quick washing and drying, no ironing or nominal ironing, retention or resumption of shape and so forth. It is felt that whatever the precise merits of these claims—more justifiable in some cases than in others—the woollen industry will have to be put in the position of being able to make identical claims for its products. The International Wool Secretariat has, therefore, as a first step, sponsored research programmes throughout the world with the object of improving shrink-resistant processes, and of ensuring stability of shape after washing. In the most conservative quarters of the woollen industry, regret is expressed on this, it being held that wool has its own intrinsic merits, and that anything which shows a semblance of imitation, lacking its natural virtues, should be strictly avoided.

Commercial Advertising

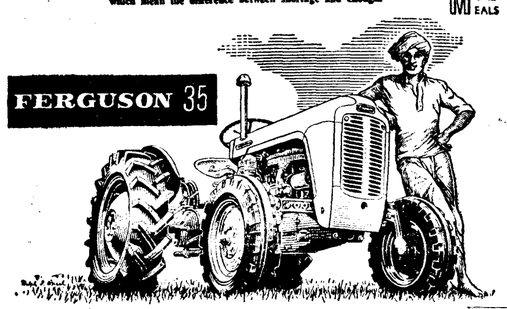
Large figures, indicating the vastness of the amounts which modern companies think it essential to spend on advertising, have been given by Lord Heyworth, chairman of Unilever Ltd., at the latest annual meeting. His own company, which has many associated concerns, spent £83 million in this way during 1957. The sum was spread over more than 100 countries, 50 of them being where the company both manufactures and markets its products, the others being where it is simply a seller of products it manufactures elsewhere. North America alone accounted for half the expenditure. Lord Heyworth is aware that the public opinion which is critical or sceptical of much of modern advertising is not entirely uninfluential. But he contends that the shopper would often find it hard to make her choice without the aid of advertising. "And to us advertising is a necessary part of our business, because it is the way we communicate with our customers. 1,800 million consumers make up the potential market for our goods, and there is no other way to communicate with them." The cynic might observe that millions of consumers might really be no worse off without some of the goods which they are persuaded to buy.

Lord Heyworth has made no attempt to disguise that "in a sense, the consumer always pays for advertising, and that is part of the cost of the product." But he has followed this admission with the argument that advertising means large-scale production, and this means lower prices to the consumer than would otherwise be possible. He does not agree that commercial television has been responsible for a great deal of vulgarisation in the methods of publicity. Lord Heyworth has made out a good case for the latter. But it does not remove the impression that there is something wrong with commercial publicity of the present age.

Importance of Beryllium

Beryllium has been one of the rarer metals which, for certain limited uses, goes a fair way back in history. It is also one of those metals which has gained much importance with the development of nuclear physics. Some authorities say that its days as a rare metal are numbered. Difficult extraction problems have to be solved before its new uses can be put on any ordinary industrial footing. A writer in the *Industrial Chemist* gives a reminder that beryllium poisoning offers serious industrial hazards. It is true that many beryllium workers remain immune after many years of contact. On the other hand, beryllium poisoning is often delayed and can be fatal after a lapse of ten years. Here is yet another instance in which the price which has to be paid for progress towards the nuclear world may be very high.

Who wants *more* food ?



My basic job is to assist in raising this country's food production from its present low level—*so low that we have to buy abroad.*

The extent to which I can help is very often not realised—it certainly is not realised enough.

Whether it is wheat or rice—gram or grass—sugar or groundnuts—whatever it is, *only I can reliably and economically :*

- Have the soil ready for the rains or water,
- Prepare the best tilth to suit the crop,
- Sow quickly and well on the right day,
- Give the crop attention whilst it grows,
- Harvest at the right time,
- Do, in time, all those never-ending duties such as agricultural bunding, soil conservation, water distribution and so on—which mean the difference between shortage and enough.

NEW ORDER OF PLAN PRIORITIES

BIGGER PAYMENTS DEFICITS ANTICIPATED

(FROM OUR NEW DELHI CORRESPONDENT)

THE National Development Council concluded its two-day session last week. It has decided that the total outlay under the second five year plan should be maintained at Rs. 4,800 crores. In view, however, of the reassessment of resources made by the Planning Commission, the Council has concluded that the projects and programmes to be undertaken within the ceiling of Rs. 4,800 crores, should be divided into two parts. Part A of the plan, involving a total outlay of Rs. 4,500 crores, should include, besides projects and programmes directly related to increased agricultural production, the "core projects" and those projects which have reached an advanced stage and other unavoidable schemes. The remaining schemes should be included in Part B of the plan, costing Rs. 300 crores.

This is in keeping with the Council's policy of drift. The Planning Commission and the Finance Minister, Mr. Morarji Desai, have unequivocally stated at the proceedings of the Council that the maximum resources available for the plan are of the order of Rs. 4,260 crores. This sum includes foreign assistance of Rs. 1,038 crores, or Rs. 600 crores during the last two years of the quinquennium, Rs. 1,200 crores of deficit financing, or Rs. 283 crores during these two years, and loans and savings amounting to Rs. 440 crores in the same period, compared with Rs. 544 crores in the first three years. The Planning Commission has made it clear that the plan outlay of Rs. 4,500 crores will be possible only by mobilising additional resources of Rs. 240 crores—Rs. 100 crores in additional taxation, Rs. 60 crores in loans and small savings, and Rs. 80 crores by economies in non-plan expenditure.

Reduction Opposed

The Chief Ministers were definitely opposed to any reduction in the plan outlay of Rs. 4,800 crores. They were equally opposed to raising any additional resources themselves. A compromise was reached, which maintained the facade of the Rs. 4,800-crore outlay, but adopted a system of priorities for projects (1) directly related to an increase in agricultural production, (2) the "core projects" and (3) the projects which have reached an advanced stage and other "inescapable schemes." What constitute the latter remains deliberately undefined in order presumably to include all the left-out schemes. For instance, the National Theatre project, which has reached an advanced stage, has been included in this category.

On the prospects of getting external resources, the Planning Commission says: "The current account deficits in the balance of payments totalled Rs. 591 crores over the period April 1956 to September 1957. The deficit for the half-year, October 1957 to March 1958, has been of the order of Rs. 230 crores. The total drawing down of the Reserve Bank's foreign exchange assets since April 1956 to the end of March 1958 works out at Rs. 479 crores. In addition, the I.M.F. credit of Rs. 95 crores has been used up. External assistance authorised since the second plan began and committed so far totals Rs. 679 crores. It is difficult to assess the future trend in the balance of payments and, therefore, the minimum gap in foreign exchange resources still to be filled. But, on broad calculations, the second five year plan appears likely to end up with an aggregate deficit of about Rs. 1,700 crores, compared with the original estimate of Rs. 1,100 crores. The further requirements of foreign exchange—over and above the amounts authorised and still to be utilised—might approximate to Rs. 500 crores."

A recent appraisal shows that foreign exchange amounting to Rs. 429.97 crores will have to be earmarked for the repayment of capital and interest against loans received so far, in the third five year plan, and further commitments are likely to be of the order of Rs. 126.02 crores. Thus the next plan will start with a total commitment of Rs. 555.99 crores.

Repayment of Foreign Loans

The repayment programme on the basis of foreign loans so far contracted is as follows:

	Capital Repayments	Interest	Total
		(In crores of rupees)	
1957-58	9.42	3.06	12.48
1958-59	11.88	11.03	22.91
1959-60	21.02	14.37	35.39
1960-61	76.92	17.69	94.61
1961-62	107.70	26.33	134.03
1962-63	98.79	19.41	118.20
1963-64	48.11	25.78	72.89
1964-65	37.86	15.59	53.45
1965-66	36.26	14.14	50.40
1966-67	41.88	12.39	54.27
1967-68	41.38	10.36	51.74

If fresh assistance of Rs. 350 crores is received during the remaining plan period, as expected, the repayment programme should be slightly revised as indicated below:

	Capital Repayments	Interest	Total
		(In crores of rupees)	
1959-60		9	9
1960-61		16.09	16.09
1961-62		16.09	16.09
1962-63		16.09	16.09
1963-64	11.80	15.76	27.56
1964-65	18.50	15.14	33.64
1965-66	18.50	14.14	32.64
1966-67	21	13.14	34.14
1967-68	21	11.99	32.99

On the basis of loans so far negotiated and anticipated, the repayment programme should be as follows:

Total outstanding on 1st February, 1958—Rs. 1,031.50 crores (Capital)	Capital Repayments	Interest	Total
		(In crores of rupees)	
1957-58	9.42	3.06	12.48
1958-59	11.88	11.03	22.91
1959-60	21.02	23.37	44.39
1960-61	76.92	33.78	110.70
1961-62	107.70	42.42	150.12
1962-63	98.79	35.50	134.29
1963-64	59.91	41.54	101.45
1964-65	56.36	30.73	87.09
1965-66	54.76	28.28	83.04
1966-67	62.88	25.53	88.41
1967-68	62.38	22.35	84.73

Here foreign assistance is placed at Rs. 350 crores against Rs. 600 crores as originally calculated. In order to finance a plan outlay of even Rs. 4,260 crores, a sum of Rs. 250 crores will have to be added to the repayment programme, increasing the third plan commitments to Rs. 806 crores. What scope is left for adding new projects requiring foreign exchange expenditure needs no explanation. The latest appraisal by the Planning Commission has thrown fresh light on the problem of resources. It has shown that even if foreign exchange is forthcoming, there will be difficulty in finding internal resources to match it. Even the plan outlay of Rs. 4,260 crores will need loans, small savings and deficit financing, the targets for which are by no means certain of achievement.

Assessment of Achievements

On the achievements of the plans, the Planning Commission says: "At the end of the first plan, against a target of 8.5 million acres, the irrigation potential amounting to about 6.3 million acres had been created. The actual area irrigated was, however, only a little over 4 million acres. The lag in the use of irrigation facilities was greater in areas in which the existing legislation does not provide for a compulsory charge for lands for which irrigation is available, whether or not the supplies are utilised. It has also been very marked in the case of tubewell irrigation and for certain projects in the southern and in the eastern regions. In a number of projects, the failure to utilise irrigation facilities has been due to the fact that sufficient attention had not been given to the construction of distributaries and field channels along with the provision of storage capacity, and to such measures as the setting up of demonstration farms, introduction of new crop patterns and assistance to cultivators."

Referring to Uttar Pradesh, the Commission says: "Against the five-year provision of Rs. 25.8 crores, the expenditure on irrigation in the first three years would be about Rs. 13.41 crores, or a little over 50 percent. The total irrigation potential of the schemes included in the first and second plans is 3.4 million acres, out of which the potential created up to March 1956 is 1.5 million acres, leaving a balance of 1.9 million acres. The actual irrigation in 1957-58 is a little over 1 million acres against the total irrigation potential created of 2.5 million acres. This lag in the utilisation of the irrigation potential created is mainly attributed to the following factors: (a) absence of field channels; (b) lack of realisation on the part of farmers of benefits of the use of water; and (c) lack of a crop pattern.

In Bihar, the expenditure in the first three years on agricultural production amounted to Rs. 10.47 crores, or 76 percent of the plan outlay. The target of food production for the State was fixed at 1 million tons, against the actual achievement of 840,000 tons in 1956-57 and 285,000 tons in 1957-58. The irrigation potential created was 420,000 acres, against the actually irrigated area up to 1957-58 of 310,000 acres. Under tubewells alone, the irrigation potential created up to the end of first plan was 224,000 acres and the area actually irrigated was 119,000 acres.

In Madhya Pradesh, against the five-year target of 1.46 million tons of additional agricultural production, the actual achievement in the first three years is 477,000 tons. The shortfall is largely due to the irrigation potential not being utilised. The revised target of additional food production in Punjab over the five-year period was fixed at 1.4 million tons. Achievements were 131,000 tons in 1956-57 and 153,000 tons in 1957-58. The target for 1958-59 is 330,000 tons. Even if this target is reached, the progress will be slow. The State had to set up 228 seed farms in the first three years.

West Bengal Plan

The plan outlay of West Bengal is Rs. 157.67 crores, including an amount of Rs. 4 crores transferred from Bihar consequent on the States' reorganisation. The actual expenditure in 1956-57 was Rs. 22.36 crores, the revised estimates for 1957-58 amount to Rs. 31.63 crores, and the approved plan outlay for 1958-59 is Rs. 29.67 crores. On this basis, the expenditure in the first three years amounts to Rs. 83.66 crores, leaving a balance of about Rs. 74 crores for the remaining two years. In terms of the outlay, the fulfilment of the plan in the first three years comes to about 53 percent. The target of additional food production for the second plan has been fixed at 932,000 tons. The achievement in 1956-57 amounted to 84,000 tons and in 1957-58 to 127,000 tons.

During the first plan period, irrigation potential was developed for 465,000 acres, but only 239,000 acres were actually irrigated. Against the second plan target of 385,000 acres of additional irrigation, 35,000 acres received irrigation in 1956-57 and another 52,000 acres are likely to have been irrigated in 1957-58. Although 36 tubewells were sunk as late as September 1955, the earthwork on channels and work on falls and culverts, etcetera, was completed only between January and May 1957. Of these tubewells, 16 located in Habra have not yet been energised, so very little irrigation has been done through them. Under this head, there are three major schemes—the Damodar Valley Corporation, Mayurakshi and Kangsabati. The target of additional irrigation under the second plan for major and medium schemes was fixed at 1.2 million acres. It is now expected that only 1 million acres will be irrigated during the plan period.

The project report for the Damodar Valley Corporation envisaged the full development of irrigation for 840,000 acres of *khariff* and 300,000 acres of *rabi* over and above the 185,000 acres already under irrigation, to be reached in 1958-59. The expectations for 1957-58 were 798,000 acres of *khariff* and 256,000 acres of *rabi*. The area irrigable under the second plan was estimated at 750,000 acres. It is now learnt that the target for *khariff* irrigation will be reached by 1961-62 and that of *rabi* by 1966-67. The lag in development of irrigation is due to: (1) gaps in canals, side slips, breaches due to floods and the unwieldy size of blocks; (2) a shortage of technical staff at the lower levels and paucity of construction materials; and (3) there being no compulsory levy for the utilisation of irrigation supplies.

The State Government feels that dual control in the management of canals and irrigation stands in the way of utilising the full potential. The chairman of the Damodar Valley Corporation has been addressed by the Planning Commission recently to intimate the steps the Corporation proposes to take to expedite the completion of the canal system and construct additional distributaries and canals. The total irrigation potential of the Mayurakshi project is estimated at 600,000 acres of which 420,000 acres will be available during the second plan period. Against the original target of 600,000 acres, about 400,000 acres are expected to benefit. It is estimated that an additional expenditure of Rs. 1 crore might increase the area benefited to 525,000 acres.

Shortfalls in Industrial Targets

This is the sorry tale of achievements from some of the leading States. On the industrial front, there will be a substantial shortfall in the original targets for capacity in the aluminium, ferro-manganese and caustic soda industries. The original target for heavy chemicals (some miscellaneous chemicals and caustic soda excluded) will be substantially achieved, but there will be appreciable shortfalls in the case of cement and dyestuffs and relatively smaller shortfalls under refractories. In the field of engineering industries, there will be shortfalls in structural fabrication and in all types of machinery, except sugar machinery, but the targets for locomotives, wagons and bicycles will be achieved. In the case of motor vehicles, the manufacturing programme will considerably lag behind the schedule in the achievement of the target of 80 percent self-sufficiency. The original targets of capacity for the electrical engineering industries will be achieved and even exceeded in certain lines, but some shortfalls in V.I.R. and plastic cables is likely. The capacity targets for consumer goods industries will be achieved except in the case of paper and newsprint. The rayon industry will, however, exceed the norm. The sugar production target will be achieved. On an overall view, it can be very roughly said that about 70 to 75 percent of the original targets of capacity will be achieved. The modernisation and replacement programmes will not be carried out in full, unless more foreign exchange of the order of Rs. 35 crores is made available. It cannot at present be said whether this will be forthcoming and whether the private sector will be able to find the required resources, particularly if there is a curtailment of the quantum of assistance which it was proposed to provide through the National Industrial Development Corporation for the rehabilitation of the cotton and jute textile industries.

Talk on Ceylonese Exports

Representatives of the Governments of Ceylon and India recently discussed problems of mutual interest, particularly those relating to the export

of copra and coconut oil from Ceylon. They shared the hope that the grant of actual users' licences to oil crushers and soap manufacturers will adequately safeguard the interests of the two countries. It has been agreed that soap manufacturers, who are at present permitted to import only copra, will be given the option to import 50 percent of their requirements in the shape of coconut oil. It was also agreed that, if this fails to meet the difficulties of Ceylon, the Government of India will consider according additional facilities for the import of coconut oil on a global basis.

Outlook for Indian Wool

The weakness in the world wool market has not affected that in India, which has remained steady. This is due mainly to Russian buying, especially during the past fortnight. The neighbouring mill and cottage industry is showing a continuous interest in greys and light greys as a result of which the rates have become firmer. There is an indication of a dwindling of stocks of white qualities, as the daily average arrivals have decreased by 10 percent. Meanwhile, the U.S.A. and the Continent have not shown any notable interest in the Indian market.

Exports of home-grown wool from India during the third quarter of 1957 amounted to 10.4 million lbs, or 7 percent less than a quarter earlier; they were, nevertheless, one-third greater than in the comparable quarter of 1956. This brought the cumulative total for January-September 1957 to 31 million lbs—17 percent up on the same nine months of 1956. Shipments to the United Kingdom, the chief destination, at 13.2 million lbs were 16 percent more than a year earlier, and those to Russia, West Germany and France were more than twice as great. Smaller increases were recorded for Belgium and the Netherlands, but those to the United States, the second largest market, fell by 26 percent to 7.4 million lbs. Re-exports came to only 18,000 lbs during the quarter under review, thus bringing the nine-month total to 76,000 lbs, compared with 2.6 million lbs during the same months a year ago. Sea-borne imports of raw wool declined further in the third quarter of 1957, when they amounted to only 100,000 lbs, compared with 800,0000 lbs in the corresponding quarter of the previous year. This brought the cumulative total from January to 2.7 million lbs. or 19 percent less than in the corresponding months of the previous year. The decline was mainly in receipts from the U.K. (consisting predominantly of transhipped wool) which, at 300,000 lbs. were less than one-third their former level. On the other hand, imports from Australia and New Zealand amounting to 1.3 million lbs and 1.1 million lbs. respectively, were 6 percent and 5 percent higher than a year ago.

Decline in Imports

Tops imports also declined between the second and third quarters from 5 million lbs to 4.4 million lbs. The January-September total at 12.5 million lbs was, however, 1 percent more than a year earlier, with larger shipments from "other" countries (chiefly Australia) just offsetting a 7 percent reduction in receipts from the U.K. to 8.5 million lbs. Yarn imports during July-September amounted to 1.2 million lbs, which was lower than in either the previous quarter or a year earlier. This brought the nine-month total to 3.1 million lbs, 9 percent less than a year earlier, with receipts from Italy, the chief source, falling by 8 percent to 2.8 million lbs. Imports of wool tissues fell from 325.000 linear yards in April-June to 322.000 linear yards during the third quarter of 1957. This brought the cumulative total from January to June to 907.000 linear yards. The 1957 series is not, however, strictly comparable with the figures for previous years, as the classification has been revised to include a number of categories (particularly roller and clearer cloths) which had not previously been included in the figures. However, leaving these out of account, it would appear that imports during the first nine months of 1957 were about the same as in the comparable months of 1956. There was a marked reduction in the supplies from Italy, an increase in those from Japan, while there was not much change in the amount supplied by the U.K.

Sleepers for Railways

Messrs Bunning Brothers and Kauri Timber Company, both of Australia, have been given contracts to supply 372.950 and 376.500 wooden sleepers for the Indian railways. The contracts are on an f.o.b. basis.

Indian Officers in Japan

An Additional Member of the Railway Board and two senior officers have left for Japan at the invitation of the President of the Japanese National Railways. They are: Mr. E. W. Isaacs. Additional Member of the Railway Board in charge of mechanical engineering, Mr. S. S. Mukherjee, Deputy Chief Engineer, South Eastern Railway and Mr. G. P. Warrier, Deputy Chief Engineer, Southern Railway. In the course of their stay, they are likely to discuss the modernisation of the railways, particularly matters concerning A.C. current railway electrification.

Import Licences

The following statement shows the total number of import licences together with their value issued during the 30 months ended June 1957:

Licensing Period	No. of licences issued. (thousands)	Total value of licences issued (Rs. crores)
January-June 1955	109	381
July-December 1955	123	498
January-June 1956	139	690
July-December 1956	145	631
January-June 1957	123	425

During the period April-December 1957, for which information is available, payments amounting to Rs. 199.70 crores were made against licences issued during 1956 and payments amounting to Rs. 132.58 crores against licences issued during the half-year, January to June 1957. Details are also available of deferred payment cases to which consent was given since January 1957. There were 34 such cases in the public sector and 91 in the private sector. The details concerning the latter are as follows:

Name of the Industry	Number of consents given
Paper industry	8
Non-ferrous metals industry ...	5
Textiles (non-cotton) industry ...	7
Motor-car industry	5
Chemical and pharmaceutical industry	15
Engineering industry	11
Electrical industry	4
Cement industry	5
Rubber industry	1
Glass industry	2
Refractory industry	3
Plywood industry	1
Ceramics industry	2
Sugar industry	6
Cotton textile industry	9
Power generation industry ...	6
Printing industry	1

New Coal Mines

No coal mines were nationalised during 1957-58. During 1956-57, two units in Korba (Madhya Pradesh) were opened. They consisted of a quarry and a pair of inclines on the thick seam and Ghordewa seam, respectively, on the east bank of the Hasdeo river. During 1957-58, the following new units were opend: Kathara. Gidi, Saunda. Bachra and New Bhurkunda (adjacent to the existing colliery of the same name). During the year 1958-59, the following new units, it is proposed, will be started by the National Coal Development Corporation (Private) Limited: Sayal A and D and Chordhao, both in the Karanpura coalfield; New Kurasia (adjacent to existing mine of the same name) in Madhya Pradesh; and Korea in Madhya Pradesh.

Dividend Supertax Collections

The tax demand by way of additional supertax on excess dividends for the year 1956-57 is Rs. 3.67 crores. For 1957-58, the tax demanded is Rs. 4.11 crores. For the financial year 1958-59, the revenue expectation is about Rs. 4 crores. The full effect of the development rebate will not immediately be felt on revenue in all cases. However, the total effect on revenue over a period of years will be as follows:

Financial year in which the rebate is given	Effect on revenue
1955-56	Rs. 4.47 crores
1956-57	Rs. 5.57 crores
1957-58	Rs. 8.04 crores

For the financial year 1958-59, the effect is estimated at about Rs. 8 crores.

Participation in Trade Fairs

India will participate in as many as 23 international fairs during the current year, five of which will be wholly Indian exhibitions to be organised in Budapest. Russia, Saigon, east Africa and in three south American countries, namely, Brazil, Argentina and Chile. Some of the other fairs, in which India will participate, are: Padua International Fair. Padua (Italy) (May 1958), San Francisco Fair, San Francisco (U.S.A.), (18th to 24th May), Trieste International. Trieste (Italy), (June), Poznan International Trade Fair, Poznan (Poland), (June), International Exhibition on the occasion of Jashan Celebration in Kabul, Kabul, (August). Canadian National Exhibition. Toronto (Canada), (20th August to 6th September), Frankfurt International Autumn Fair. Frankfurt (W. Germany), (September), Zagreb International Fair, Zagreb (Yugoslavia). (September), Leipzig Autumn Fair, Leipzig (E. Germany). (September), and St. Eriks Fairs, Stockholm (Sweden), (September). The Chicago International Trade Fair, in which India will participate, will be held in Chicago in 1959.

Electrification of Railways

The power needs of railway electrification are to be met from the following sources, it is reported: (1) the D.V.C. power system, (2) the Rihand hydel scheme in Uttar Pradesh, (3) the Hirakud power system in Orissa. (4) the West Bengal State Electricity Board, and (5) the Calcutta Electric Supply Corporation. A separate power station with one 125 mW thermal generating unit will be set up immediately in the eastern region for meeting the needs of railway electrification. It has been decided to locate this power house near Dugda, because of technical considerations. Another power station with two 50.000 kW generating units, it is proposed, will be set up with the assistance of Russia, essentially for meeting the needs of the Russian-sponsored heavy machinery manufacturing plant. The estimated outlay on this power station is Rs. 10 crores. Its location is still to be finally decided.

Economy in Public Expenditure

A statement was made in Parliament last week, indicating economies in expenditure of Rs. 25 crores. The Prime Minister paid tribute to the newly-created Organisation and Methods Division for this achievement. Savings are attributed either to projects wholly or partially postponed or abandoned or reduced in scope; (2) to posts abolished, kept in abeyance or unfilled; (3) to reduced expenditure on the purchase of stores, equipment and contingencies. The bulk of the savings were in the Railways and Steel, Mines and Fuel Ministries where over Rs. 16 crores was "saved by postponing, abandoning or reducing the scope of the projects." The total saving effected by abolishing or holding posts in abeyance under all heads was Rs. 1,51,40,530, compared with Rs. 20,18,83,370 saved by abandoning or reducing the size or postponing the execution of projects.

Model Public Enterprise

A Committee with the Defence Minister, Mr. Krishna Menon as its chairman, has been set up here to recommend a model set-up for enterprises in the public sector. This Committee will have for its consideration the report of the Estimates Committee and a memorandum prepared by Mr. Feroz Gandhi, who has suggested special legislation regulating all enterprises in the public sector. Unlike the Estimates Committee, Mr. Feroz Gandhi would have whole-timers as directors of the board of management. To whole-timers, the Home Ministry's rules of conduct for Government employees will be applicable. Mr. Gandhi would also like accountability to Parliament to be coextensive with the Ministerial powers of supervision, direction and control over a particular unit of industry. This is not so at present. For example, a Minister can seek information about the price at which, say, iron ore is sold by the State Trading Corporation. He is, however, not bound to disclose it to Parliament, which, in fact, he does not. The general opinion in Parliament, it is gathered, is opposed to the conception of complete autonomy for public corporations. This is borne out by the number of questions asked about the working of the Indian Medical Institute during a recent session.

Watch-making Proposal

The Minister for Industries, Mr. Manubhai Shah, replying to a question in Parliament last week, indicated a proposal to start in the public sector a watch factory, which would manufacture a complete watch within five years. The first question is at what cost to the consumer will these Indian watches be manufactured? Will the manufacture be on the pattern of the motor-car industry? Both from the point of view of price and durability, the Indian-manufactured motor-cars are the costliest in the world. Because of the foreign exchange crisis, exports are subsidised in order to earn foreign exchange. Take the case of sugar, for instance. An industry is nursed by the consumer to make the country self-supporting. Thereafter, the consumer is called upon to "nurse" the foreign market as well.

As for watch-making, a question raised is whether the Government has had the suitability of this industry examined from the climatic point of view. It is true that there are watch-making units in Japan, the U.S.A., the U.K., France, West Germany and Switzerland. Experience has, however, shown that for durability, price and time-keeping, Swiss watches stand out among their competitors.

In the 11 months ended November 1957, India imported 792,317 wrist watches, of which 660.679 came from Switzerland, 16,085 from France, 3,947 from the U.K., 1,053 from the United States, 5,635 from Hongkong and 9,201 from other countries. This information is collected from the import licences issued by the Government of India. The following statement shows country-wise imports of watches and their value during January-November 1957:

			Rs.
U. K. ...	...	3.946	99.000
West Germany	...	95,724	1,946,000
France ...	...	16,085	230.000
Hongkong	...	5,635	15.000
U.S.A. ...	...	1,052	28.000
Other countries	...	9,195	160.000
		131,637	2,478,000
Switzerland	...	660,679	194,434,000

Shellac Price Problem

Problems of the shellac industry were discussed by the Joint Secretary, Commerce, Mr. K. B. Lall, during his recent visit to Calcutta. Rapid and continued fall in shellac prices was the principal worry of all concerned. The Government, it was pointed out, realises that like the synthetic product, the prices of natural shellac should be stabilised at a reasonable level. The State Trading Corporation entered the field when the private trading failed to maintain economic prices. It was felt that private trade should be given another opportunity to stabilise shellac prices. The Price Stabilisation Board is among the long-term measures which are being taken to put the industry back on its feet. Another suggestion was to levy a cess, the proceeds of which could be utilised in guaranteeing a minimum price. An association of exporters has also been suggested.

Government Control over Jessops

The Government of India has decided to acquire control over the Calcutta engineering firm of Jessops for a period of at least three years. This control will be exercised through a Government-nominated board of directors and it is understood that financial support will be provided. Meanwhile, the Government is carefully watching the developments which are taking place in the affairs of the British India Corporation, Kanpur. Mr. Haridas Mundhra, who is the chairman of the board of directors, has succeeded in eliminating Messrs Christie and Powell from the board, it is learned here. He is also, it is reported, trying to acquire controlling interest in another British concern, Begg Sutherland. A similar watch is being maintained over the affairs of Richardson and

London

WIDESPREAD WAGE DEMANDS BY U.K. WORKERS

REPHASING OF RAILWAY MODERNISATION PROGRAMME PROPOSED

(FROM OUR LONDON CORRESPONDENT)

NOT surprisingly, markets generally are hesitant, if not actually weak, in view of the London bus strike, the threat of a railway strike, the demand for further wage claims by large bodies of workers, and the risks and dangers attaching to the economic situation unless a satisfactory solution of this recurring problem can be found. Rightly or wrongly, this question carries great weight on opinion in foreign financial circles, which, surprisingly enough, are affected alike by the granting of wage claims because of their inflationary aspect, or by resistance to them and the resort to strikes and their effect on production! In spite of the favourable trend of Britain's external trade, it would not take much to put sterling under pressure again. In the circumstances, it is particularly unfortunate that the Labour Party should have made a political issue out of the bus strike to the extent of tabling a vote of censure against the Minister of Labour and the Government's policy, and that the T.U.C. should have adopted a similar line publicly, though it is difficult to see what other attitude it could take with so many trade union M.P.s voting in the House on a three-line whip. The Government's position was made clear long ago, and it has stuck to its guns. Mr. Ian Macleod was particularly forthright in his speech during the Commons debate. The defeat of the Opposition motion was never in doubt, but "smear campaigns" such as these are always difficult to catch up with, and a lot of damage will have been done in the meantime.

That the Government is anxious to find a solution to industrial troubles is evident in its offer of an extra £25 million for railway investment this year and next to accelerate the more remunerative items of the modernisation programme and thus to enable the B.T.C. to earn enough to pay a higher wage later this year. On the other hand, it is equally clear that it has no intention of relaxing its determination not to finance inflation by finding the money to meet wage claims in nationalised industries. The bulk of public opinion will support that view.

Good Gold Reserve Figures

There was a further rise of $144 million in the gold and dollar reserves during April, which raises them to $2,914 million, or a little over £1,000 million—the first time Britain has exceeded that level since November 1954. If allowance is made for the $11 million received from the European Payments Union in March, and other special payments of $3 million on the outgoing side, the April residual surplus amounted to $136 million. This compares with a surplus of $148 million in March (aided by the Royal Dutch Oil Group's large sterling purchases) and of $116 million in February, and so carries on the improving trend which has been in evidence since last autumn.

The fall from £5 million to £2 million in the E.P.U. surplus, although slightly disappointing at first sight, can probably be linked with the renewed strength of the *deutschemark*. Recently, there has been a moderate flow of money to West Germany, but not on anything approaching the scale which disrupted the foreign exchange market last summer. On the other hand, the United Kingdom is still vulnerable, and this development will bear watching. At their present level of $2,914 million, the gold reserves are still inadequate, and the Chancellor gave a reminder the other day that the favourable conditions now arising out of Britain's terms of trade must be used to strengthen the reserve position and must not be "frittered away." At the same time, he made the encouraging point that the recent rise in the reserves has been accompanied by a reduction of overseas sterling debts.

Chancellor Warns

The Chancellor of the Exchequer, Mr. Heathcoat Amory, has commented on these figures at the regular meeting of the National Production Advisory Council. He says that the rise is "quite good going." It is not, however, the time to risk the chances of keeping sterling strong. On the contrary, Britain must continue to use it to good purpose so as to strengthen her external monetary position, for this had been one of her main continuing weaknesses since the war. "At present the reserves are going up and our liabilities are going down and though we are benefiting from better terms of trade, these are being used to strengthen the position and not frittered away." The Chancellor does not think that this implies a purely passive policy of "wait and see." Britain should consolidate her recent progress so that she could resume steady expansion just as soon as she could be sure of doing so without raising prices.

The Chancellor says that the more effectively people in Britain use whatever influence they have to help keep incomes and output in step, the quicker will come the day when production will be encouraged to rise again, without any danger to prices and the pound. "We are all agreed that we want expansion, but there are other things which we have to think about, too. We all want to keep the pound safe and prices steady. There is certainly nothing in our present situation—or the world situation—which would suggest that it would be right to expand regardless of other considerations."

Prices Move the Right Way

Prices of materials used in non-food manufacturing industry have been falling unchecked since last spring. In March, the index was 12 percent below that for March last year and 12 percent below the last year's monthly average. This index excludes fuels and products like steel and textile yarns, which are bought by one industry from another for further processing. Individual industries, therefore, have had varying experience in the prices they have had to pay.

In the latest *Bulletin for Industry*, the U.K. Treasury stresses that the scope for price reductions following a fall in costs of materials should not be exaggerated. Prices are mainly dependent on labour costs, which are influenced by productivity. Imported materials account, on average, for about 20 percent of the ex-works cost of finished manufactures. There also appears to be a time-lag of at least six months before any reduction can be passed on. Nor can the consumer always get the full benefit. There can be little doubt, however, that the fall in material costs has been the main factor in the stabilisation of prices of manufactures in recent months. "The trend of the wholesale price index does not mean that the retail price index must also necessarily stabilise in the months ahead." The retail price index (or cost of living) is affected by other things besides manufactures, such as food, drink and tobacco, housing, fuel, light, transport and services, the prices of all of which have risen a good deal more than those for manufactures.

Check to Industrial Building

In the first quarter of this year, Industrial Development Certificates were granted for a total area of just over 12 million square feet, about 11 percent less than in the previous quarter and in the first quarter of 1957. It is estimated by the U.K. Board of Trade that in the third quarter of 1957, 10.7 million square feet of industrial building were started, about 7 percent less than in the previous quarter, and that 14.1 million square feet were completed—the highest quarterly total since 1945. This latter record cannot be maintained, of course, as new orders decline, but there is little indication of any slump, and the general trend of new construction contracts, estimates of which have been collected by the Ministry of Works and published for the first time in the April issue of *Economic Trends*, gives no indication, in spite of the cutting back of housing plans, that building and civil engineering contractors will find themselves short of work in the immediate future. Indeed, their output is only just catching up with the volume of orders booked, after having tailed behind for the past 12 months.

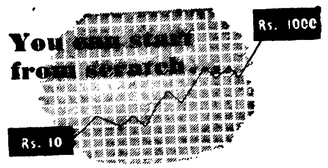
Hire-purchase business continues to flourish in spite of everything. In April, *Hire Purchase Information* reports 11,861 contracts for new motor-cars, compared with 11,083 in March and only 8,339 in April last year, when the trade was still inhibited by petrol rationing. Contracts for used motor-cars totalled 58.450, compared with 51,935 in March and 50,336 in April 1957. Increases are also reported in contracts for commercial vehicles, motor-cycles, farm equipment, and caravans. Total hire-purchase contracts in April were 114.139, compared with 101,953 in March and 105,083 in April 1957.

Farm Engineering College

Britain, the world's largest exporter of agricultural machinery, will soon give another lead by establishing a college of agricultural engineering. The appointment of a chairman of the Board of Governors will be announced shortly. Provision for the building of the college was made by the Chancellor of the Exchequer, Mr. Heathcoat Amory, in his Budget last month. A site near Bedford has been chosen, and it is hoped to start building soon. It will probably take two years. Plans are to cater for 35 to 50 students. The college will be open to "all nationalities," and a high proportion of students from overseas is aimed at to spread still further knowledge of British achievements and techniques in agricultural machinery and to promote sales.

The International '500' in Italy

proved the TYRE for Safer motoring



The International "500" at Monza, Italy, was famous for tyre safety as well as speed. The same quality control and the same manufacturing skill built into those race winning tyres are the things that create that *extra* safety you too can have by fitting Firestone "family type" tyres on *your* car.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) declined by 0.3 percent to 107.7 during the week ended 26th April, 1958, compared with 108.0 for the previous week. The index was higher by 1.5 percent and 0.4 percent, respectively when compared with the corresponding week of the previous month and that of last year The monthly average for April 1958 worked out to 107 4 compared with 105.4 for March 1958 and 106.5 for April 1957. The prices of milk in Calcutta (−17%), masur in Bombay (−9%), jowar in Gulbarga and arhar in Bombay (−8% each), oranges in Nagpur (−7%), potatoes in Shillong and chillies in Patna (−6% each), eggs (−5%), tea for internal consumption (−4%), mustard oil (−2%) and mung, bananas, groundnut oil, coconut oil and black pepper (−1% each) moved down while oranges in Calcutta (+19%), potatoes in Farrukhabad (+18%) and in Mandi (+11%), meat in Ludhiana (+8%), maize in Bhilwara (+7%), milk in Bombay and gur in Madras (+6% each), barley in Jaipur and Dalda (+5% each), coffee (+2%) and rice wheat, urad and cashewnuts (+1% each) showed advances and the index for Food Articles receded by 0.2 percent to 105.7 compared with 105.9 (revised) for the previous week The index for Tobocco remained stationary at the last week's level of 91.7. The index for the Fuel, Power, Light and Lubricants group stood at 114.5 compared with 114.6 for the earlier week; castor oil (−2%) showed a fall during the period Lower prices of raw jute (Middles) in Barpeta Road and lac (−6% each), rapeseed (−4%), copra (−3%), castorseed and cottonseed (−2% each) and raw cotton (−1%) brought down the index for Industrial Raw Materials by 0.7 percent to 114 2 compared with 115 0 for the earlier week The index for Intermediate Products receded by 0.4 percent to 108.7 compared with 109 1 for the previous week due to a fall in the prices of linseed oil (−2%) and brass (−1%) although those of zinc and lead (+2% each) showed advances. The index for Finished Products stood unchanged at the previous week's level of 108.1 in spite of variations in the prices of sesamum cake in Bombay (+12%) bricks and tiles (+6%), castor cake in Bombay (+5%), sesamum cake in Salem (−10%), coconut cake in Kozhikode (−5%) and jute manufactures (−1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base : 1952-53=100)

FAIR PROSPECTS FOR TIN

The prices of tin on the London metal market have been quietly firm since the announcement was made that permissible exports for the third quarter of 1958 have been fixed by the International Tin Council at 23,000 tons, the same as for the current quarter. The buffer stock stood at 15,300 tons at the end of last year. M. Georges Peter, chairman of the I.T.C., said in London at the time of the announcement that he thought there was growing confidence in the Tin Council's scheme. The situation was better now than in January and February. Questions were asked at the meeting of the Council about the special fund for the buffer stock, but M. Peter said he could not go beyond the recent statement that contributions had been received. The amount of the fund would never be made public. The Council expects that tin exports from Russia and the eastern "bloc" will be slightly higher in the second and third quarters than in the corresponding period of 1957.

Super quality
ACC alumina
REFRACTORIES

... are available with medium, high and super alumina content, to meet all your requirements
... are made to the shape, size and quality you require
... are *far more economical* than ordinary fire-bricks
... have great resistance to spalling and abrasion
... fully comply with I.S. Specifications 6-1953 and 8-1953

And remember, the ACC hallmark on them is your guarantee of high quality and dependability.

Jute

SACKING SOFTENS BECAUSE STOCKS INCREASE

NEW JUTE CROP MAKING GOOD PROGRESS

THE Calcutta gunny markets in general have been depressed over the past week, and heavy goods prices have shown a weaker tendency. This is mainly due to the lack of overseas enquiries, and also to reports early in the period of an increase in mills' stocks of sacking. The only redeeming feature is the apparent steadiness of hessian, which seems surprising in view of last week's news concerning Argentina. Operators' confidence is based mainly on the fact that mills' stocks of hessian at the end of April showed a drop of 4,100 tons, and the percentage of hessian held fell to 21 percent of the whole. These figures, however, give a false impression as, at the time they were compiled, shipments destined for Argentina had already left the mills, but the bulk of the despatches have now been returned. The effects will not be apparent until the end of the current month. Total jute goods stocks at the end of April show an increase of 2,900 tons—sacking and other goods showing rises of 5,200 tons and 1,800 tons, respectively. Hessian stocks, at 20,400 tons, are the lowest since December 1956, but total stocks are the highest since July last year.

Weather conditions in the jute-growing areas continue to be favourable. In several northern agencies, sowings have already been completed, and the progress of the young plants is good. Conditions there are better than for several years, and the alternate rain and sunshine augur well for the future. Only from Assam are there any unfavourable reports, and in this area many fields are waterlogged due to excessive rainfall. The position is not serious, however, as the young plants are well set and above the level of the water. No damage has been reported, and a few days of sunshine is all that is required to bring conditions back to normal. In general, the picture is very good, and both upcountry and local markets have reacted to the favourable crop reports. Business in Calcutta has been small, but as it has been done every day, it has given the impression of larger quantities than have actually been transacted. Sellers are reserved, but it is significant that the bulk of the business reported has been done at below the quoted rates. Mills' stock position is reported to be fairly good, but the general opinion of sellers is that they still have to buy large quantities over the next few months until the arrival of the new crop.

Reduction in Gunny Freights

Following closely on the reduction of freight rates to the U.S. Atlantic and Gulf ports comes the news of a reduction in freight rates for cargoes destined for New Guinea. For the shipments of gunnies from Calcutta to that destination *via* Hongkong, the freight rates have been reduced from 379s to 365s a 50 cubic feet, less 10 percent deferred rebate. This is a further indication of the general decline in world demand for shipping space, with too many ships chasing too few cargoes. Competition is so keen these days that freight rates in all parts of the world are being slashed in an attempt to secure business.

I.J.M.A. Production Figures

The production of jute goods during March 1958 amounted to 88,000 tons, which was 2,700 tons more than during the previous month. This was mainly due to an increase in working hours from 197.5 to 200.5, and a general improvement in labour efficiency following the end of the Ramzan period. Hessian production increased by 500 tons to 30,900 tons (35.1 percent) and sacking output by 1,100 tons to 50,600 tons (57.5 percent). The production of other goods rose by 1,100 tons to 6,500 tons, this being 7.4 percent of the total output. In April 1957, production totalled 86,800 tons for a 209-hour working month. The proportion of hessian manufactured was 41.7 percent, of sacking 51.6 percent and of other goods 6.7 percent. Thus, since last year, there has been a general transfer of production from hessian to sacking.

Raw Jute Consumption

Raw jute consumption last month was 513,000 bales, making a total for July 1957 to April 1958 of 5,222,900 bales. In April 1957, the consumption was 506,000 bales and in the 1956-57 season up to that month it was 5,001,600 bales. Thus, in the current season, consumption is up by 221,300 bales.

THE JUTE MARKETS

Manufactured Goods : There was a slight recovery in the jute goods market at the opening last Thursday. The ready position no longer commanded attention, but October-December indications appeared on the lists for the first time. The latter had a weak opening, however, and was at a discount compared with the July-September quotations. Opening B Twill rates were based on Rs. 101.70 for May shipment, Rs. 102.75 for July-September and Rs. 102.35 for October-December. Similar conditions existed in hessian, where 40in. 10oz. was quoted at Rs. 40.70 for May shipment, Rs. 40 80 for July-September and 40.60 for October-December. Over the next few days, sacking prices showed a gradual decline, and by the week-end, due to the absence of business, B Twills had dropped to Rs. 100.60. The forward position was well maintained, however, and the October-December position commanded a premium of 90nP. During the same period, hessian prices were relatively steady, and in spite of the lack of overseas enquiries, 40in. 10oz. remained at Rs. 40.60. After the week-end, following some speculative covering, heavy goods prices tended to rise, and B Twills gained about 60nP. Hessian continued to maintain its position and its prices improved by a further 75nP. Very little business was reported at this stage, except some covering at lower levels, and indications could be taken as nominal. The undertone of the market was steady and prices were maintained up to the close.

On Wednesday morning, opening quotations were as follows :

	May Rs.	June Rs.	July-Sept. Rs	Oct.-Dec. Rs.
40in. 8oz.	33	33	33.05	33
40in. 10oz.	41.30	41.35	41.45	41.25
B Twills	101	101.40	102.10	102
Heavy Cees (Plain)	100.15	101.25	102.25	102
A Twills	120	121.50	123	125
Liverpools	112	112.75	114	114
Cornsacks	101.40	102	103.50	103.25

Raw Jute : During the past week, business was transacted almost every day, and although the daily quantities involved were small, over the period they amounted to about 175,000 maunds. The main buyers were the Indian mills, and prices paid were invariably below the quoted rates. This was an indication that sellers were not quite so strong in their ideas as they made themselves out to be, and that, given the opportunity to do business, their prices could be broken. Nominal quotations throughout the week were based on Northern-Assam jute at Rs. 25.75 a maund basis Bottoms. Upcountry markets weakened due to the promising crop reports, but this was partially counteracted by a rush to cover outstanding contracts at the lower level.

Business in Assam-Northern jute was reported at Rs. 25.50 to Rs. 25.75 a maund for May-June shipment. Middles only of the same fibre were bought at Rs. 29 and Rs. 29.50. Small lots of Tossa passed at Rs. 28.50 to Rs. 29 a maund, and Daissee Tossa at Rs. 29.50. Only small business was reported in mesta, mainly at Rs. 24 for Desal. In new crop jute, Northern-Assam was done at Rs. 26.50 to Rs. 26.75 for August-September shipment.

In Cossipore, wagon arrivals improved to 400, and were thus 50 more than during the previous week but 100 less than during the corresponding week of last year. Stocks remained at about 100,000 bales, but most of them were low quality jungli and mesta fibres. High prices were being paid for good quality jute. Quotations at the close were based on Kishanganj jute at Rs. 24.25 for average quality.

On Wednesday morning, opening quotations were as follows :

Indian Jute :	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	25 75	May-June
Northern	25.75	"
Purnea Desal	24.75	"

GUNNY SHIPMENTS DURING FEBRUARY

The following are the total net figures of manufactured jute goods shipped from Calcutta during February 1958 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	1,510.5	29,409.2	30,919.7
Short Shipped	54.1	1,495.6	1,549.7
February 1958 (Net)	1,456.4	27,913.6	29,370.0
January 1958 (Net)	1,462.8	19,276.9	20,739.7
December 1957 (Net)	1,147.1	26,281.2	27,428.3
	Sacking		
Gross	32,287.4	322.7	32,610.1
Short Shipped	599.8	15.1	614.9
February 1958 (Net)	31,687.6	307.6	31,995.2
January 1958 (Net)	22,005.0	414.0	22,419.0
December 1957 (Net)	32,624.5	738.9	33,363.4

I.J.M.A. PRODUCTION FIGURES FOR APRIL

The Indian Jute Mills Association reports that the total production of jute goods during April was as follows :

Description	Quantity
1. **Gunny Bags**	
(a) Hessian	3,109 tons
	93.0 lakh yds.
	64.3 lakh Nos.
(b) Sacking	49,277 tons
	12,01.4 lakh yds.
	5,27.6 lakh Nos.
2 **Gunny Cloth**	
(a) Hessian	27,814 tons
	11.01.0 lakh yds.
(b) Sacking	1,336 tons
	28.9 lakh yds.
3. **Other Manufactures**	6,496 tons
4 **Total production** (above figures combined)	
(a) All kinds	88,032 tons
(b) Hessian (Both bags and cloth)	11.94.0 lakh yds.
(c) Sacking (do)	12,30.3 lakh yds.

Summary	('000 Yds) Apr 1958	Mar. 1958	Apr. 1957	('000 Tons) Apr. 1958	Mar. 1958	Apr. 1957
Hessian	11.94	11.66	14 13	30.9	30.4	36.2
Sacking	12,30	12,01	10,53	50.6	49.5	44.8
Others				6.5	5.4	5.8
Grand Total :				88.0	85.3	86.8
Hours Worked :				200.5	197.5	209.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE FOREIGN JUTE MARKETS

FIBRE PRICES UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

DEALERS thought that the Calcutta jute goods market would crack badly due to the declaration by Argentina that all import licences for goods would be withdrawn. After a sharp fall, the position has changed a little, and it appears that the Indian mills were in a favourable position so far as their sales are concerned.

The raw jute market has shown little change. Mill Firsts are still lowest at £116, but the price is quoted up to £120, while Mill Lightnings rule from £102 to £106 and Mill Hearts are 20s lower at £91, but grade Hearts are at £74. May-June, c.i.f. U.K Good marks of Daissee-2/3 are quoted lowest at £106 and grade from £98 10s and in one instance to £100, the usual rate, while grade Tossa-2/3 is from £116 and grade Tossa-4 £107, same shipment. Local spinners are not buying much, and it is reported that the Continent is showing little interest. Buyers in Dundee might be interested in new crop fibre, but no shippers are willing to risk naming a price. Usually, a fair quantity of new crop jute is bought by this time.

Values of Calcutta goods have steadied up and quotations are at 61s 6d for 40in. 10oz. and 46s 3d for 7½oz., May to September, with B Twills at 154s 3d, May, 154s 9d, June and 155s 3d, July-September, all f.o.b., Calcutta. The Jute Controller is reported to have bought some hessians at around the current rates. The demand for raw jute is declining. This is due to various reasons. Firstly, it is too dear and manufacturers are unable to compete with substitutes. In some cases, they are manufacturing the substitutes, such as paper and synthetic goods. Secondly, prices are very unstable, and it is difficult for consumers of jute goods to determine when to buy Jute yarns remain firm, but buyers are purchasing only for their urgent needs and spinners are unwilling to book for any distances ahead. Numerous small orders make production difficult and increase costs. Prices remain firm all round and unchanged, and much the same conditions apply to the cloth section of the trade.

Engineering and Transport

FINALISATION OF INDO-RUSSIAN AIR AGREEMENT

PROVISION AGAINST UNDER-CUTTING OF FARES

[FROM OUR NEW DELHI CORRESPONDENT]

A RUSSIAN team of experts will arrive in New Delhi on 18th May to finalise the Indo-Russian air agreement. This will enable the contracting parties to operate air services between New Delhi and Moscow *via* Tashkent. Air-India International will operate its services with *Super-Constellations*, while the Russians will use *TU-104* jet planes. The earnings of the contracting parties will be pooled and divided equally. A provision is being made to prevent the under-cutting of fares. The latter will be raised by a certain percentage above their existing level. Under the Anglo-Russian air agreement. British European Airways and Aeroflot will shortly be operating the London-Moscow service.

Indo-Dutch Air Talks

Indo-Australian air talks will begin in Bombay on 19th May. They will be carried on between Air-India International and Qantas. India has been eager to revise the air agreement with Australia for some time. Indo-Italian air talks are also envisaged at an early date. The Italian airline is keen to extend its services to India.

The Central Minister for Communications and Transport, Mr. S. K. Patil, has struck an "optimistic note" about civil aviation, saying that it has a bright future. He has said this while speaking during a two-hour discussion in Parliament. Civil aviation has been popularised everywhere after years of hard work and "colossal losses" in making the people air-minded. While warning members to be prepared for "losses" in running the airlines for another ten years, Mr. Patil says that the experience of the first five years is encouraging. The introduction of the *Viscounts* has greatly increased traffic. This is an indication of the public response to better planes with greater safety and comfort.

Civil aviation cannot be run on a merely commercial basis. It has to be popularised in every region: State capitals have to be linked and feeder services started in other areas. These services might not be a paying proposition in the beginning. But as air-mindedness grows, they will eventually become popular. The Minister has said that the wage bill alone rose by Rs. 84 lakhs after the airlines were nationalised. There were losses. "I would be a happy man if the losses could be eliminated. If you take all these factors into consideration, you will find that the losses we have suffered are negligible." Mr. Patil envisages a rise in the fares of the Indian Airlines Corporation.

Indo-Dutch air talks have ended in a deadlock. K.L.M., it is learned, wanted to increase its frequency from three to four while India wanted to reduce it by one. Negotiations between K.L.M. and the Australian Government for additional traffic rights at Sydney for the Dutch airline have reportedly broken down. The existing rights for K.L.M. for one flight a week to Sydney have been extended for one year. The airline plans to operate its projected polar route from Amsterdam to Tokyo with one stop at Anchorage. The route is to be opened in November this year

Italian Air Services

A representative of the Italian Airlines is new in New Delhi, presumably to survey the possibilities of extending Italian air services to the East. A representative of Canadian Pacific Airlines has also come with the same object.

C.P.A. to Introduce Britannias

Canadian Pacific Airlines is to introduce its Bristol *Britannia 314* long-range turbo-prop airliners in service on 2nd June. They will be used on the Arctic route between Amsterdam and Vancouver, making a refuelling halt at Frobisher (Baffin Island) on the flight to Canada and flying non-stop on the east-bound services. The aircraft will carry *de luxe* tourist and economy-class passengers. The airline plans to put *Britannias* on its services between Vancouver, Tokyo, and Hongkong on 1st August and between Vancouver, Australia and New Zealand in early October to supplement the existing services.

Sandwich in Economy-Class

A description of the "simple, cold and inexpensive sandwich" for passengers on the economy-class services of the scheduled transatlantic airlines has been issued by the International Air Transport Association. It was arrived at by a special I.A.T.A. commission after two days of hearings which fully explored the conflicting views of carriers as to what actually constitutes a sandwich in the context of the I.A.T.A. Traffic Conference resolution which created the new low-cost transatlantic service. Sir William P. Hildred, Director-General of I.A.T.A., has announced the findings of the commission as follows: 'In the opinion of the commission, after examining the whole background against which economy service came into being, and the various agreed conditions of that service, a meal service in terms of the stated resolution should be on the following lines:

"A—meals to consist of sandwiches which may be of the open or closed variety.

"B—each sandwich is to be a separate unit, the whole meal not to give the appearance of a cold plate.

"C—a substantial and visible part of each unit should consist of bread, roll, or similar breadlike material.

"D—each unit should be cold.

"E—each unit should be simple, that is not complicated; unadorned. This calls for a minimum of garnishing.

"F—each unit should be inexpensive. This calls for the avoidance of materials normally regarded as expensive or luxurious, such as smoked salmon, oysters, caviar, lobster, game, asparagus, *pate de foie gras*—and also for the avoidance of over-generous or lavish helpings of permissible commodities, such as meat, which affect the money value of the unit and destroy the necessary conditions of low-cost simplicity."

But the controversy still continues. The Scandinavian Airlines System will go on serving Danish "smorrebrod" open-faced sandwiches on its low-cost north Atlantic *Globetrotter* economy-class flights, the S.A.S. president, Mr. Ake Rusck, has announced. He says that by using Scandinavia's widely-varied and inexpensive sandwich cuisine, S.A.S. has satisfied the definition of an economy-class sandwich issued by the International Air Transport Association. "We feel, as far as S.A.S. is concerned, that this closes the entire issue of what does or does not constitute a sandwich. We in S.A.S. will now turn our attention to problems of importance to the travelling public." The S.A.S. president adds: "Complimentary open-faced sandwich meals on our low-cost *Globetrotter* economy flights are and will be—to quote the I.A.T.A. definition—'simple, inexpensive and cold.' Danish open-faced sandwiches—or 'smorrebrod', as they are known throughout the world—are a tradition in Scandinavia dating back for centuries. In that time, we have learned a great deal about making these sandwiches. They can be produced quite inexpensively—for less than 75 Swedish ore (13 to 15 U.S. cents) a piece—without losing anything in quality, taste or appearance. They are available in a very wide variety, using many different kinds of materials that are delicious without being costly. As a result, S.A.S. will continue to provide open-faced Danish sandwiches on its economy flights without departing from I.A.T.A.'s requirements."

Air Agreement between Russia and Denmark

Russia and Denmark have signed an air agreement which gives Aeroflot the right to fly beyond Copenhagen on its projected Moscow-London route. The exact terms of the arrangement with Denmark are not yet available, but it is known that the Danes did not get the desired authority for S.A.S. to extend its present route to Moscow on to Tokyo. A U.S. State Department spokesman has said that it is understood that Aeroflot will now be able to fly beyond Copenhagen to England, Belgium, Holland and France. It could not be determined whether or not there are passenger on-loading or off-loading restrictions in Copenhagen. In return, the Danes have received permission to fly over Russian territory to Ankara and the Arab States. Certain navigational aids, such as weather reporting, will be helpful on polar flights. The Russian territory involved amounts to one small corner over what was once Poland.

Ruling of P.A.A. on Tu-104 Twin Jet

The Paris Airport Authority has ruled that, for the time being, the Russian *Tu-104* twin jet cannot be used for regular commercial flights to the Orly and Le Bourget airports. A request from C.S.A. for permission to introduce the *Tu-104* on the Prague-Paris route on 1st April was rejected. French engineers found that although the jet's noise on the ground was acceptable, limits were exceeded during take-off. It has also been found that the aircraft creates a number of traffic control problems. Since the *Tu-104* is not equipped with air brakes, it cannot adopt the special procedures for jets in the neighbourhood of the airport, which need a rapid descent. It cannot fly safely at low speed, its turns are unusually wide and its high landing speed requires a very long runway.

Swissair to Increase Frequencies

Swissair will increase its frequencies considerably on some of its routes but not open any new ones under its summer time-table. A weekly non-stop Zurich-New York service with *DC-7Cs* and an all cargo *DC-4* Zurich-New York flight will be added. Between 1st June and 5th October, there will be 12 flights a week between Switzerland and the United States.

Expansion Programme for Berlin Airport

Russia has directed East Germany to go ahead with its plans to make Berlin's Sohonefeld airport a first-class inter-Continental field able to accommodate big jets. The first stage of the expansion will begin this year with the construction of an 11,800-foot runway.

CERTIFICATION TESTS FOR BOEING JET AIRLINERS BEGIN

Boeing 707 jet airliners took one more step towards the introduction of its airline service on world routes with the beginning of tests by the U.S. Government agency in charge of certifying aircraft for passenger carrying. The first three *Boeing 707 jet Stratoliners*, which have been produced, will be used in the intensive certification programme. The latter is expected to be completed in late summer, the Boeing Airplane Company's Transport Division has said. *Boeing 707* inter-Continentals and other variations of the 600 miles an hour (965 kilometres an hour) *Boeing* jet airliners will also be presented for certification as they are completed. *Boeing 707* inter-Continental jet airliners have been ordered by Air-India International for delivery in 1960.

Plantation Topics

CALCUTTA TEA AUCTIONS IN APRIL

STRONG GENERAL DEMAND

ONLY three tea sales were held during April, at which a total of 155,300 packages was catalogued. There was a strong general demand throughout the month, although a slightly irregular and easier tendency developed for the plainer and more stalky types towards the end of the final sale, say Messrs. Carritt Moran and Co. Private Ltd. in their monthly tea market review.

Very little Darjeeling teas were catalogued during the month, and the small quantity available was rough in appearance with "woody" end of season liquors. In the first two sales, there was a fair selection of Assam teas and although stalk and fibre were more noticeable, a fair quantity of tea on offer had satisfactory appearance and bright liquors. In the final sale, however, both leaf appearance and cup quality fell away to an ordinary "end of season" description, although a few Assams were quite bright in cup. Both appearance and cup quality of Dooars teas were fully average for the time of year, and although the offerings were comparatively small, there was some tea with quite bright liquors and fair appearance. Non-wither Leggcut teas were in short supply and these became browner and more fibrous with rather raw and "woody" liquors. In Cachar, although stalk and fibre generally became more prominent, and the dry leaf duller in appearance, the general standard was satisfactory and a number of invoices with clean black leaf and sweet liquors were catalogued.

Quotations

	1957-57 Rs. nP	1956-57 Rs. nP
Sale No. 40 Plain B.P.	1.52	Not quoted
Sale No. 41 " "	1.56	"
Sale No. 42 " "	1.60	"

Internal Market

A total of 21,307 chests of Leaf was offered for sale. There was a good general demand in all the five sales held during the month and prices rose until the final sale on 29th April, when an irregular and slightly easier tendency was noticeable for the limited number of offerings. A total quantity of 99,606 chests of Dust was on offer. There was little change in the quality which was fairly ordinary apart from occasional invoices which had autumnal character. Towards the end of the month, most of the invoices had been stored in the warehouses for anything up to four months before being offered for sale, due to the restriction in the size of the sales, and this delay naturally affected the quality. There was a good general demand throughout the month and it was particularly strong during the final fortnight. The market was easier in the third sale, but prices showed a marked recovery during the final two sales and orthodox descriptions sometimes rose by as much as 14nP during the fortnight. C.T.C. Assams continued to receive irregular support. The best liquoring kinds were barely firm but any useful liquoring mediums were frequently dearer. The plainer fibrous descriptions were generally about firm. Only a few Darjeeling invoices had any flavour and these sold well, but the remainder were an irregular feature.

Quotations

	1957-58 Rs. nP	1956-57 Rs. nP
Sale No 40 Clean Common Dust	1.58	1.62
Sale No. 41 " " "	1.57	1.66
Sale No 42 " " "	1.65	1.66
Sale No. 43 " " "	1.66	1.66

Export sales up to and including Sale No. 43 totalled 2,127,580 chests at an average price of Rs. 2.10 compared with 2,137,758 chests at an average price of Rs. 2.37 during the corresponding period of the 1956-57 season. Internal sales at 105,601 chests of Leaf and 740,432 chests of Dust (Rs. 1.42 and Rs. 1.88) go against 92,600 and 749,061 chests (Rs. 1.57 and Rs. 2.10) for the same period last year.

The revised estimate for the north Indian crop till the end of December 1957, is 528,357,894 lbs compared with the original estimate of 521,365,843 lbs. The price of special export licence rose in the first half of the month from 3nP a lb to 4¼ nP a lb, but thereafter declined, and business was done at the close at 2¼nP a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th March, 1958 to 23rd April, 1958 with the corresponding figures of the previous year in parentheses were as follows: by steamer 1,923 (6 783), by rail 3,427 (2 234) and by air 2,432 (3,205), making a total of 7,782 (12,222). Since the beginning of the season 1st April, 1957 to 31st March, 1958 arrivals have been: by steamer 3,094,532 (3,335,786), by rail 1,078,314 (1,056,367) and by air 187,941 (164,982), making a total of 4,360,787 (4,557,135) chests.

COCHIN TEA SALES

At Sale No. 12, 1,200,000 lbs of tea were on offer. There was a strong general demand, particularly for clean black leaf medium types which were irregularly 10nP dearer. Low mediums, medium brokens and fannings were firm. Stalky kinds were weak and were sometimes neglected. Whole leaf grades were firm to dearer.

Calcutta Markets

GOOD GENERAL DEMAND AT INTERNAL TEA SALE

ACTIVE SUPPORT FOR NEW SEASON DARJEELINGS

AT Internal Sale No. 45, held on 13th May, there was a good general demand for the 20,150 chests of Dust on offer and when the sale opened, orthodox types were 4nP to 6nP easier, but this strengthened as the Sale progressed, and towards the close were only 2nP easier. The black leafy descriptions were again in demand and were generally about firm. There was an irregular demand for the best liquoring C.T.C.'s and prices tended easier especially towards the close when these were selling up to 20nP below valuations. The medium liquoring C.T.C.'s with bright liquors, however, were a strong feature and often sold at dearer rates. The Darjeeling teas on offer were of ordinary quality and sold at about valuations.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.68	1.55
Medium Assam Grainy Dust	1.70 to 1.72	1.60
Medium Assam C.T.C. Dust	2.15 to 2.35	1.60 to 1.65
Best Assam C.T.C. Dust	2.80 to 3	Not quotable

There were 557 chests of Leaf on offer.

At supplementary Sale A, offerings amounted to 6,636 packages consisting exclusively of the New Season's Darjeeling teas. There was a strong and active demand and some high prices were realised for the finest of the offerings. However, a slightly easier and irregular tendency was noticeable. Several teas failed to realise valuations and sold as much as 50nP below, while there were a few withdrawals.

BETTER OUTLOOK FOR FREIGHT MARKETS

A FIRMER tone in the grain section of the freight markets has given owners some hope that the rates may be on the increase. Many charterers are now showing interest in consecutive voyages for transatlantic coals. The grain rate from U.S. Gulf to India advanced further to 78s 9d for May-June loading and for the U.K. 50s was paid, that is, 2s 6d above the last rate. Australia continues to outsell India in the Japanese coal trade and two vessels were fixed to Japan at 32s 6d and 33s from Newcastle N.S.W. A large modern carrier accepted $(U.S.) 7.30 for 5,500 tons manganese Calcutta-U.S.N.H. combined with 8,000 tons Visakhapatnam to the same destination at 15 cents less. This compares with $(U.S.) 7 from Visakhapatnam fixed only last month.

LINSEED FIRM

Firm conditions continued in the linseed market during the past week, and there was no further rise. Price levels were maintained. There was a shortage of supplies and practically no offers of new crop seeds from upcountry centres were made. The price of oil advanced slightly as a result of scarce supplies. Enquiries from shippers were negligible and fresh business could not be transacted except from Bombay where cheaper charter freights were available. Latest quotations were as follows: ready Rs. 21-14 a maund and May-June Rs. 21-14 a maund.

HIDES AND SKINS FIRM

The market in skins ruled firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 6th May and 12th May, 1958)

Cowhides: Wet salted (Ord.) 15,500 pcs. on the basis of Rs. 9.25 to Rs. 10.50; Wet salted (Slaughtered) 21,600 pcs. on the basis of Rs. 13.50 to Rs. 24

Goatskins: Wet salted (Patna, Daissee and Kustia) 45,600 pcs. on the basis of Rs. 325 to Rs. 335, Rs. 350 to Rs. 370 and Rs 400 to Rs. 425; wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece: Assam-Dinajpur 35,300 pcs. on the basis of Rs. 300 to Rs. 380; Purneah-Kissenganj 26,200 pcs. on the basis of Rs. 360 to Rs. 375: Pakur-Patna (Ord.) 7,800 pcs. on the basis of Rs. 310 to Rs. 340; Muzafferpore-Patna 6,200 pcs. on the basis of Rs. 330 to Rs 350; Muzafferpore (Heavy) 8,500 pcs. on the basis of Rs. 365 to Rs. 375.

Bazaar Stocks

(12th May. 1958)

Cowhides: Wet salted 30,200 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia and Killed) 4,000 pcs.; Assam-Dinajpure-Jalpaiguri 41,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 21,500 pcs.

SUGAR SOFT

During the week ended 14th May, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 7,500 bags and stocks totalled 60,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-14 for ordinary grain and Rs. 41 for big grain. The market was soft due to lower demand

COMPANY AND PUBLIC NOTICES

THE INDIAN CABLE COMPANY LIMITED

ISSUE OF 8,28,848 ORDINARY SHARES OF Rs. 10/- EACH AT PAR.

(THIS IS NOT AN OFFER)

NOTICE is hereby given that the Board of Directors have determined to issue 8,28,848 new Ordinary Shares of Rs. 10/- each at par. The new Ordinary shares will be offered for subscription at par for cash to members whose names are registered in the Register of Members of the Company on 11th June 1958 in the proportion of one new Ordinary share for every two shares, Ordinary and/or Preference held by the member on that date (no fractional entitlement being given) with the right to renounce all or any of the shares so offered in favour of third parties.

The aforementioned members will also be entitled to apply for additional shares at par for cash, to be allotted to them subject to the conditions laid down by the Controller of Capital Issues and the Reserve Bank of India in the event of any Rights Shares not being taken up as aforesaid.

The Register of Members of the Company will remain closed from 28th May 1958 to 11th June 1958 (both days inclusive).

Persons holding shares on blank transfer deeds are advised in their own interests to lodge properly completed transfer deeds with the relative share certificates at the Company's Registered Office, 9, Hare Street, Calcutta, for registration of the shares in their names before 28th May 1958 in default of which no claims by such persons shall lie against the Company.

Circular Letters setting out the terms of the offer and detailing the procedure to be followed and Letters of Rights with forms of Renunciation, Acceptance and Request for additional shares will be issued to the aforementioned members on 11th June 1958 or as soon as practicable thereafter.

By Order of the Board.

THE INDIAN CABLE COMPANY LIMITED,
B. J. WOODLEY,
Chairman.

9, Hare Street.
Calcutta, 8th May 1958.

RAJNAGAR TEA COMPANY, LIMITED.

NOTICE is hereby given that the Sixty-fifth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Monday the 9th June, 1958 at 3 P.M. for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the year ended 31st December, 1957.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 3rd June, 1958 to 9th June, 1958, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 9th May, 1958.

BANKS

H indicates that Share capital is half paid. O., C. and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

REASONS FOR CONFIDENCE ABOUT THE COURSE OF THE SLUMP

THE REPUBLICAN PARTY'S RECORD IN RECESSIONS

IN 1935, Lord Keynes wrote a letter to George Bernard Shaw in which he said: "I am engaged on writing a book on economic theory which, I think, will largely revolutionise—perhaps not immediately, but within the next ten years—the way the world conceives economic problems". Recalling this prophecy before an official American commission lately, the eminent U.S. economist, Professor Galbraith, wisecracked that Lord Keynes gave the world ten years to understand his theory but would doubtless have allowed twenty years for the special case of Republican politicians. This ironical observation typifies the general distrust, shared by professional economists and laymen alike, of a Republican Administration's ability to deal with cyclical recession in the American economy. The Republicans have made for themselves a reputation as fanatically sound-money men, and the Democrats (especially when they are in opposition during a recession) have generously gilded the lily by portraying the Grand Old Party as a band of narrow-minded bankers who would rather organise a depression than maintain full employment at the price of a touch of inflation. This reputation is responsible for much of the nervousness that is being felt about the course of the current recession. People feel that the dear money and budgetary orthodoxy of the Eisenhower Administration are to blame for the slump, or at least that a Democrat President would have been much more responsive to the situation. The stubbornness with which the President declines to accept tax cuts, and the lavishness of ex-President Truman's suggested antidotes, tend to confirm this opinion.

To lack of confidence in the Republican Party, is added the special circumstance that the American people's childlike faith in Mr. Eisenhower's infinite wisdom has been severely shaken during his second term. The President is now regarded as old, sick and undecided, and nobody can imagine his reacting to a serious deterioration in the situation with the vigour and independence of Franklin Roosevelt. Moreover, his conception of collegiate government places him, as regards economic affairs, totally in the hands of a small group of Republican bankers and officials, some of whom do indeed resemble the popular picture of die-hard financial pietists—silver-haired, gnarled old gentlemen who put inflation and bolshevism in the same basket and have apoplexy at the mention of public works programmes. With several millions already out of work in the U.S.A., this distrust of the Republicans has naturally assumed considerable proportions; a labour leader asked bitterly the other day: "How many men have to lose their jobs before Eisenhower does his?" Before accepting this widespread opinion about the Republicans' special predilection for slumps, it is necessary to observe (at the risk of being impolite) that nine-tenths of what is said in the U.S.A. on economic questions is hot air and demagogy. This applies as much to the proclaimed Republican attachment to sound money as to the vociferous Democrat recipes for magical cures of recessions. What the party bosses say about economic policy (particularly in election years or in critical situations) often bears no relation at all to actual economic practice as implemented either by Republican or Democrat Administrations. Underneath the advertised doctrinal differences there in reality lies a large measure of financial "bipartisanship"; that is, once in office both parties follow very similar policies and those policies are to a surprising extent modified Keynesianism. The Republicans, though more reluctant to admit the fact, have learned no less than the Democrats the new way of looking at economic problems which Keynes spoke of in his letter to Shaw.

There is nothing in the course *to date* of the current American recession to conflict with this assertion. Keynesianism (i.e. what the learned world has retained of Lord Keynes's doctrines after abstracting from the peculiar conditions of Britain in the 1930's) provides a battery of techniques for dealing with cyclical depressions. It does not contain any simple formula for deciding when a setback or recession has become dangerous. *That* has to be estimated by other means, and these are as much political as economic. One can have rather different ideas about how much unemployment is "too much", and thus different proposals for the timing of remedial action, and still be an advocate of Keynesian remedies.

Nor can we draw any conclusions from the discrepancy between present Republican practice and the extravagant suggestions of Democrats out of office. At moments like this it is as well to remember that if the U.S.A. is the last stronghold of financial orthodoxy, it is also the home of some of the wildest and crankiest inflationary doctrines ever known; if Hamilton was an American, so was William Jennings Bryan. Once business falls off, the American demagogue out of office can reach down into a deep tradition of cheap-money mythology that stretches back to the first years of the Republic and come up with a spectacular scheme which, even if no one takes it very seriously, at least serves to make the Administration appear criminally cautious and stingy. Several of Mr. Truman's criticisms of the Eisenhower régime belong exactly in this class; educated Americans know this instinctively, but foreigners can be misled to the conclusion that Washington is dozing (or playing golf) while clear-headed statesmen propose urgent courses. A good example can be drawn from the last recession in 1954, the Administration accepted an anti-cyclical housing construction programme of 35,000 houses a year, whereas Mr. Truman demanded the construction of several hundred thousand houses—while the American Federation of Labour went one better and solemnly urged the lunatic figure of *two million houses a year.*

Positive proof of the U.S. parties' financial bipartisanship is provided in a recent study by a British economist, A. E. Holmans, *The Eisenhower Administration and the 1953-55 Recession* (Oxford Economic Papers). Mr. Holmans begins by noting that the first Eisenhower term opened with a rather frightening series of deflationary declamations. The budget was to be balanced at whatever cost to foreign aid and defence, and money was to be tight, dear and sound. An unnecessarily rigid monetary policy was indeed followed for a time but was abandoned well before the 1953 recession began and appears to have played no part in the onset of that recession. This exculpation (which incidentally endorses the view of American economists expressed in *The Economics of Eisenhower* in 1956) is important because it invalidates the claim that the present depression was brought on by the financial rigours of last summer. Both the present recession and that of 1953-55 must be traced to a stocks cycle and to cuts in military outlay; they cannot be laid at the door of the Federal Reserve, whose efforts to control inflation have been quite laudable. Once the recession had set in, which it clearly had by the end of 1953, the Eisenhower Administration reacted with a programme that moderate Keynesians now judge, with all the facts before them, to have been exemplary. At no time was any of the famous Republican prejudices about money and budgets allowed to obstruct reflationary action. Mr. Holmans meticulously compares Republican management of the 1953-55 recession with Mr. Truman's Democrat measures during the 1949 recession—and finds them identical. With a touch of malice, he also contrasts Democrat action in 1949 with the panaceas the Democrats canvassed in 1954—and finds them very different.

This is history, but it is very recent history. It involves the same men and the same agencies as are today burdened with the great responsibility of steering America (and the rest of us) through a difficult phase. It proves two things that should be borne in mind when we try to foresee the outcome of the present recession. Firstly, with a Republican Administration in Washington, the Americans and ourselves are in just as safe hands as we would be with a Democrat Administration; electioneering by the opposition party, and gloomy references to Mr. Hoover should not persuade us otherwise. This applies even to the hotly debated issue of tax cuts; all economic theory aside, there is nothing curious in the spectacle of an opposition party demanding tax reductions which the party in power refuses to accept. Secondly, American economic thinking, political and official, has taken account of everything that established economic science can teach on the management of the business cycle. There is absolutely no reason to suppose that this great issue is being met today in Washington with any trace of prejudice, ignorance or conservatism. Does this prove that the American economy is safe from mishap? Obviously not. To show that Eisenhower is as good as Truman does not get us far, and even to show that both of them swore by Keynes would not dispel all apprehension. The real grounds for confidence lie elsewhere, and were mentioned by Mr. Colin Clark in the *Manchester Guardian* last month. Mr. Clark was explaining why he thought the current recession would not become seriously worse—and incidentally explaining why he made his famous mistake of prophesying that the 1953-55 recession would do so. What led to catastrophe in 1929, he argues now, was that agricultural prices and incomes had been depressed for some years before, and moreover, the American population increase was slowing down. The reverse of both of these circumstances holds today and this is why the U.S.A. can suffer moderate setbacks due to a stocks cycle without plunging into a snowballing depression.

On one point however (some people will think it is the main point) American economic thinking on these matters is quite opposed to that of British Keynesians and Mr. Clark. The latter think that depressions should never happen, that the trade cycle should be quite smoothed out. As Mr. Clark put it last month, a recession, however moderate, means losses—avoidable losses—human suffering and an impairment of American prestige throughout the world. It is unlikely that responsible American economists and officials (as distinct from business men) will ever be persuaded of this. What is lost in a mild recession, they argue, is better lost—unhealthy businesses, investments that can only pay off in a hothouse inflation, foolishly optimistic attitudes that assume that economic progress is a law of nature. Better that these things be pruned out every five years or so than that they multiply until their eventually inevitable collapse produces serious damage. Recalling that the worst sufferers in the present slump to date are manufacturers of motor-cars with three-foot-high tail fins that nobody wants to buy, one might be inclined to agree. But with the Soviet Union breathing fiercely down America's neck and Mr. Khrushchev making all sorts of wild economic promises, which at the moment he appears to be keeping, there is an important political incentive to sustain economic progress at a rate which is both rapid and continuous. But even a Republican government cannot be completely unaware that the eyes of the world are anxiously watching it.

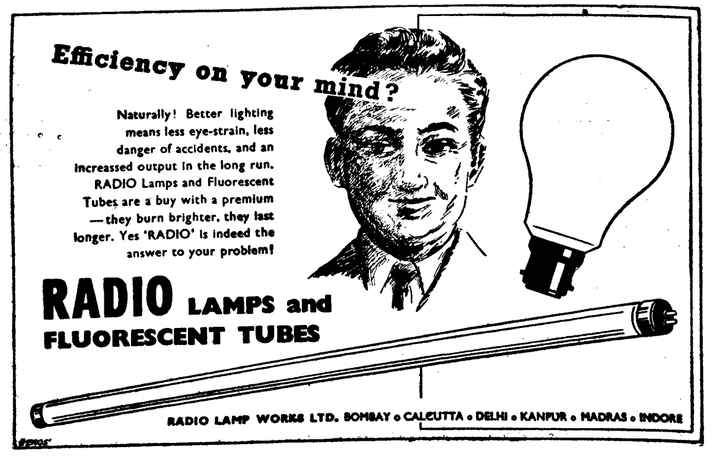
THE GHOSTS OF CONGRESS PAST

THE PARTY AS SEEN FROM KULU

As Mr. Nehru sat back and relaxed for a while in the lovely Kulu Valley on Tuesday last, many thoughts must have been crowding in on his mind. Just before leaving on his richly earned holiday, the Prime Minister heard the news from Devicolam. Although the communists did no more than retain their seat, evidence suggests the Congress had hoped to win it. News from Bhubaneswar and Chandigarh too cannot have been unduly cheering. The earlier meetings of the All-India Congress Committee and the Working Committee must also have left impressions of, to put it non-committally, a mixed character. It would not, therefore, be surprising if, as Mr. Nehru cast his sensitive and poetically inclined eye on the fascinating and peaceful landscape around him, he were to find its harmony somewhat at variance with the state of the country in particular, and the world in general. This contrast is precisely what a change is for; but, as he has said, he is no escapist.

In any examination of the Congress Party, still the largest in the country, it is necessary to remember, something even Congress men often forget, that many of its evils are the inescapable consequence of ten years of untrammelled power. Many another party might have been found in much worse shape. Secondly, these periodic exercises in self-examination are a trifle unbalanced, because every time they are indulged in, two equally unhealthy tendencies are encouraged. First, Congress men think something has happened of a sudden to bring out instances of corruption, and that these are isolated cases which do not affect the generally angelic character of the Party. This is certainly not true. Iron got into the soul of the Congress some time ago, and corruption has gone on steadily corroding its organisation ever since. Secondly, when confronted with Mr. Nehru's sporadic outbursts against corruption in the Party, which are not always followed by visible action, the public comes to develop a cynical attitude towards politics and politicians. In many areas this has already set in, and anyone familiar with the climate of opinion prevailing in, say, the Weimer Republic, or even in France today, will not need to be told the dangers of political cynicism.



In a society that has no laws there obviously cannot be any illegal action. In a free market, for instance, there is nothing which can, strictly, be called black marketing. Disapproval of any action or thought presupposes the existence of some code, some norm on which society is generally agreed. It may be a not altogether unhelpful enquiry whether the Congress's bouts of penitence and contrition do not owe their origin to something akin to a sense of original sin. Under the leadership of Mahatma Gandhi, the Congress never really functioned as a purely political party. While relentlessly pursuing the country's political objective, the Congress was made the vehicle of a number of social, economic, religious and philosophical activities. The *charkha*, for instance, came to acquire a symbolic and semi-mystical place far removed from the tangible tactics of hurting Lancashire. Alcohol could be cited as another instance of extra-political thinking in the Congress. Not all these ideas have exhausted themselves with the attainment of the political struggle around which they once flourished and took root, hence the almost exaggerated sense of sin. A Congress man who has a drink or drives a car or wears a garment of silk does these things with a heavier sense of guilt than is generally realised. And yet, *per se* none of them really needs be regarded as offences against God or man.

Where this approach to life has done the gravest injury is with the individual Congress man's ingrained aversion for office, which is today engaged in a bitter battle with a lust for power. A political psycho-analyst may be able to show that the moment a Congress man has assumed office he *believes* he has *fallen*. He denies it vehemently even to himself, but there it is—he *knows* that men out of office are better men than he. The pattern of behaviour ascribed by La Rochefoucauld to a woman who has been unfaithful once, then comes into play. There are few inhibitions left. And the need to pretend otherwise, to keep up pretences, only leads to ever increassing corruption. The line of thinking, often only semi-conscious, then becomes: if assumption of power and office is itself an offence, does it matter much how one secures office, retains it, and uses power? These are details; the big sin has already been committed!

In strictly political terms it would, certainly, all be very different. In a democracy, a candidate seeks office, satisfies the electorate that he will make better use of it than any other contestant in the field, and then assumes power for the fulfilment of his promises—never becoming ashamed of any of the processes. His preoccupation then is to demonstrate to the electorate that in none of these processes has he ever adopted illegitimate means. "Illegitimate" gives a clue. If the Congress could boldly abandon the attitudes of mind bred by years of non-co-operation and passive resistance, then the political ends and means in India today would begin to be seen more clearly and correctly. It would then be possible to declare as legitimate a Congress man's desire for office—and there would be no complaint of jobbery, one of Mr. Nehru's more serious charges against Congress men recently. Even as a free market has its rules not necessarily worse than those of the controlled, free politics will in due course evolve its own code of conduct. It is the present hypocrisy that a good Congress man, by definition, is indifferent to office and power which has, on the one hand, invested office with the additional attraction of a forbidden fruit, and, on the other, implanted in the Congress mind a wholly unwarranted sense of guilt which distorts the means of seeking, securing, retaining and using power.

Viewed from this point, by no means the only one, all Mr. Nehru's recent efforts to make the Congress a "purer" organisation look less than certain to yield abiding results. It was a revolution Mahatma Gandhi brought about in the political thinking of this country when he took charge of the Congress Party. A whole series of fundamentals was challenged. Something as sweeping, as comprehensive and as drastic may be what has *not* been forthcoming in the years since Independence. Nobody has done anything terrible to make the Congress the sorry thing it is today. It is rather the absence of positive and creative growth which has been the cause of decay. This question of fundamentals is raised now because, as Mr. Nehru looks back on the last ten years, he may find that all petty repairs and patch-ups have availed the Congress little. The roots of the evil remain almost untouched.

And while contemplating the frailties of political man, with the *Gita* and the *Sayings of the Buddha* by his side, Mr. Nehru may wonder whether there is not something inherently corrupting in power—and not even the greatest among men can wholly escape its effects. Whatever else this means, it certainly does not have to lead to resignation and fatalism. Indeed, this is rather a challenge—a challenge to live in the midst of corruption and yet remain pure, to function on the political plane and yet remain inspired by the spiritual springs of good work to live as a man and yet retain something of the divine. Who but Mr. Nehru would dare accept a challenge so awesome?

DISPARITIES IN WORLD PRICES

RIGID ELEMENTS IN THE COST STRUCTURE

A CURIOUS fact that requires serious investigation is the persistence of high prices of finished goods when primary prices have declined and trade generally is tending to recede. This phenomenon has been particularly noticeable in America, where the cost of living has continued to rise during the recession, although unemployment is, of course, a feature of the recession. In Britain final prices have been unusually stable over more than half a year, but they have not generally responded to the decline in primary costs. To discuss prices in general terms is, however, somewhat misleading. The U.K. Treasury's *Bulletin for Industry* has lately analysed them in some detail, and has shown that, while prices of some goods continue to rise, price reductions are now taking effect over a fairly wide range, while in another broad sector of trade, prices have at least stopped rising. It is the average, not the whole range, that has been stabilised.

The Treasury has suggested that the main stabilising factor has been a reduction of 12 percent in costs of basic materials over the past year. But experience has varied. For instance, prices of textile materials have been markedly reduced, but prices of materials for mechanical (as distinct from electrical) engineering have been raised. Prices of fuel, after rising appreciably, have begun to fall. The time-lag between a reduction in primary prices and a reduction in wholesale prices of related manufactures seems to be about six months. But even after that lapse of time there is no automatic adjustment in manufactures, for wages may have risen in the meantime, or it may be considered necessary to widen profit margins to provide finance for development. The relative importance of materials and labour varies widely in different industries: if labour is a large element in costs, wage increases will probably raise prices even if costs of materials have declined. Because labour is the main element in fuel and power and transport, their cost has tended to rise, so offsetting much of the benefit of the decline in material prices.

The Treasury has mentioned the British Government's sterner policy, applied since last September, as "creating a climate inimical to price rises". It cannot be assumed, however, that a restrictive policy tends always to reduce prices. In so far as it slows the rate of production, it tends to increase costs because productive resources are not fully employed. The difficulty in reducing British prices is certainly caused partly by under-employment, and the even stronger resistance to price reduction in America can perhaps be explained by the higher degree of under-employment there—though it should be remarked that the U.S. Government's various aids to primary producers prevent manufacturers from getting the full benefits of the decline in primary prices in the world in general. However, it may be explained, this resistance to price reduction in the manufacturing countries raises serious problems for the primary producing countries. Their earnings from exports are reduced by the decline in primary prices, but the prices of their imports of manufactures are not reduced correspondingly. This disparity can raise, in turn, serious problems for the manufacturing countries. If they cannot reduce their prices to accord with their customers' incomes, they cannot maintain the volume of their sales—unless the whole mechanism of international credit can be adapted to the situation.

There are, however, some signs of change. The U.K. Treasury's analysis has shown that wholesale prices of many important manufactures—including steel products, rubber goods, chemicals, cotton and rayon yarns and wool textiles—were reduced in the half-year to March 1958, and that in February and March the index of wholesale prices of manufactured goods fell, "slightly but significantly", for the first time in more than three years. Moreover, since March various goods—including, again, steel products—have been reduced in price. About the same time, the U.K. index of export prices began to fall. The long-awaited decline in prices of manufactures has, apparently, begun. How far can this downward movement go? It seems that manufacturers' costs have declined appreciably only in those industries (relatively few) in which raw materials are the main element in costs. Some firms have appreciably reduced their costs by improving their equipment and methods; but the full benefit of such improvements is denied to those

that cannot keep their works fully employed. We must conclude that, so far, prices of manufactured goods have been reduced more by competitive trimming of profit margins than by reductions in the costs of manufacture: and it is doubtful if profit margins can be cut much further.

Overall costs cannot be much reduced while wages are rising. But efforts to prevent a rise in wages will always cause disputes unless the cost of living is seen to be declining. The surest way to stabilise wages, and thereby stabilise or lower costs, is to cut prices in the shops. Can retail prices be reduced while manufacturers' costs remain high? In Britain, retail prices of many goods have been reduced already. The abundance of butter and eggs has helped to bring down the average price of food. Trade-marked goods are a more complex case. The manufacturers are empowered by law to enforce the retail prices that they specify; yet many retailers are selling goods below the stipulated prices, and the manufacturers cannot take action against them all individually. The truth is that distribution adds too much to the price of many goods, and economies in distribution—made possible by better organisation and necessary by stronger competition—are naturally reflected in prices. The multiple stores are taking an increasing share of total trade—and this year, especially, they have been cutting prices. The cost of living is gradually, after many years, tending downward. Perhaps the habits of inflation will be gradually changed. But it is hardly imaginable that prices of manufactures will come down as much as prices of primary products have done already.

Current News and Comment

Burmah Oil Results

The volume of trading of the Burmah Oil Company during 1957, says Mr. W. E. Eadie, chairman, in a statement circulated to shareholders for the annual general meeting to be held in the first week of June in Glasgow, was higher than that of 1956. Business in Burma, Pakistan and India, the three countries with which the operations of the group are chiefly concerned, increased by 10 percent, 7 percent and 8 percent, respectively. Yet the profit was down, due entirely to the Suez crisis. (A fuller version of the statement appears elsewhere in this issue of *Capital.*) "Although the Group's main supply sources lie east of Suez", Mr. Eadie explains, "the cost of obtaining crude and petroleum products and especially the cost of transporting them to the countries in which we operate, increased materially as a result of the Suez crisis. We were unable fully to recover these increased costs from the market and for this reason, the group's profit on trading in 1957, which is after charging the cost of the extensive programme of prospecting during the year, amounted to £6,241,411 compared with £7,584,750 in 1956, a reduction of £1,343,339."

Reviewing the economic trends in the above countries, Mr. Eadie says that a common feature was foreign exchange shortage which is having its repercussions on trade. India's five year plan, a serious drought in Pakistan which necessitated higher food imports and Burma's poor harvest, were at the root of their foreign currency scarcity. But once these stresses are over, "we should be able to look forward to a steady increase in demand for petroleum products." It is of interest to note in this context, he continues, that the annual *per capita* sale of these products in India, Pakistan and Burma, with a total population of some 500 million, is less than five gallons, whereas the corresponding figure for the U.K. is around 120 gallons and for the U.S.A., 600 gallons. The production of oil and gas in these countries is, however, increasing. In Burma, the new Syriam refinery of the Burma Oil Company which is a semi-State concern, went on stream in February 1957. Consequently, part of the crude output from Chayk and Lanyawa fields was processed at this refinery. The volume of gas production in Pakistan increased from 7,422 million cubic feet to 10,874 million cubic feet in 1957, although there was no improvement in petroleum output. In India, the processing operations by the Burmah-Shell refinery amounted to 2,297,000 tons, which was a "valuable contribution" to her economy. Mr. Eadie, however, says that the known resources of the Digboi field are declining and further drilling has been undertaken in that area in the hope of finding fresh reserves. The field is structurally complicated, and the result of this further drilling is awaited with interest. In Nahorkatiya, Hugrijan and Moran areas, 13 wells were drilled in the year of which eight were oil producers, two gas producers and three dry holes. A reassessment of the reserves continues to indicate a production potential of 2.5 million tons a year. Prospecting for further discoveries is continuing in all the three countries, especially in Pakistan. That country has offered suitable tax incentives, which have attracted several new companies besides the Pakistan Petroleum Limited, and a vigorous exploration programme is being implemented.

Mr. Eadie refers to the formation of Oil India Private Ltd. as the successful outcome of long-drawn-out negotiations between the Government of India and the Burmah Oil Company. The latter will hold two-thirds of the share capital of the rupee company, the remaining one-third being the Government's subscription. The task of Oil India will be to develop the Nahorkatiya, Hugrijan and Moran areas and to arrange for the transport of crude oil to the refineries where it will be processed. These refineries will be Government-sponsored. Arrangements are being made for the construction of a pipeline to carry the crude oil to the first of these refineries, which is to be located near Gauhati in Assam, a distance of some 280 miles. The cost of the pipeline from the oilfields to this refinery will be financed on loan terms and the company has undertaken "to arrange to provide up to £10 million against the sterling exchange element of this cost," Mr. Eadie adds.

The Nanda Approach to Labour

It was not unexpected that the only advocate of voluntary arbitration at the Labour Ministers' conference in Naini Tal was Mr. V. V. Giri—and he is no longer Labour Minister. The Union Minister for Labour, Mr. Gulzarilal Nanda, did indeed pay lip service to the principle of voluntary settlement, but he was emphatically of the view that for the time being at least, there is no escape from compulsory arbitration. He has been outspoken in the past against "dilatory and frivolous" references of cases to high courts and the Supreme Court, but in Naini Tal he did not make any proposal for putting labour legislation outside the purview of the highest judiciary. He merely made the suggestion that the Supreme Court might set up special benches to ensure expeditious disposal of labour cases. In response to queries on the subject, Mr. Nehru answered at his recent Press conference: "How can you put anything outside the scope of the Supreme Court?" Mr. Nanda may have taken his cue from the Prime Minister. Another interesting suggestion made by him was that a sort of limited unemployment insurance scheme might be started for the relief of those rendered unemployed by the closure of industrial units. The opening of test works in rural areas affected by natural catastrophes is already part of the Government's social policy, and he wondered why the principle could not be extended to the urban sector also. The Labour Minister for U.P., while not directly commenting on this proposal, expressed the view that the closure of industrial units could perhaps be more effectively prevented if certain powers new exercised by the Centre under the Industries (Development and Regulation) Act were delegated to the States. Other Labour Ministers were generally in agreement with Mr. Nanda that the Government cannot relinquish the power to intervene in labour disputes when all other methods have failed. The Central Labour Minister spoke of the need for workers' participation in State-owned industries, but Mr. Giri stated unequivocally that "there shall be no distinction between private and public sectors in the matter of industrial relations." Meanwhile, the private sector will have reason to complain against discrimination if additional burdens are imposed on it in the name of integrated social security services. The V. K. R. Menon Committee which has reported on the question has said that employers' liability for social security measures expressed as a percentage of wages is higher in other countries than in India. But workers' productivity is also higher in other countries. Centralised administration of the various social security measures will be good, provided it does not enhance administrative costs.

No Revision of Cloth Excise Duty

Mr. Lal Bahadur Shastri, Central Minister for Commerce and Industry, has turned down a demand by the Indian Cotton Mills Federation that the excise duty on cloth should be reduced. Mr. M. D. Thackersey, vice-president of the Federation, pointed out to the Minister that the textile industry was facing a grave crisis. Some 26 mills have already gone out of business, while 37 others have cut down production. The accumulation of stocks is another disturbing factor. If there has been a decline in the rate of stock accumulation, this has come about not by an improvement in the offtake, but because of reduced production. The Minister has been requested to take steps to stimulate domestic consumption and erports, and to restrict sales abroad of ¾" staple cottons which are needed for the home industry. Mr. Thackersey also suggested that the level of excise duties be brought down to that prevailing in 1955-1956, when the Government collected Rs. 28.18 crores. Mr. Shastri has assured the Federation that the Government will carefully consider the issues involved, but has stated that decisions will have to be taken at the highest level. The Minister has promised that the Government will appoint a "small expert committee" consisting of representatives of the Central Government, the industry, labour and consumers to discuss the problems facing the textile industry and to make suitable recommendations.

Investment of Sterling Balances

Later this year, the Ghana Government might well take a decision that will have an important bearing on the future of the sterling balances of the former colonies which have achieved political independence. A committee of four financial experts, headed by Lord Piercy, which has been formed in London to advise the Ghana Government on the investment of her sterling funds of about £160 million, is expected to report before the end of June. The committee is to consider the present investment portfolio of the Government and of the Cocoa Marketing Board, and to formulate the general principles of an investment policy suitable for the particular needs of Ghana. It is also to advise on administrative arrangements for managing the funds in London. Lord Piercy is the chairman of the Industrial and Commercial Financial Corporation. Although circumstances are better at present, the Ghana Government recognises that the developments which caused it concern last September could recur at any time. It wishes, therefore, to work out a policy to avoid capital losses on investments as far as possible, and to establish effective machinery for that purpose. The funds involved in this examination include the surplus balances of the Ghana Treasury, development funds, pension funds, and various other Government funds. They also include the stabilisation fund and general reserves of the Ghana Cocoa Marketing Board. Together, the face value of fixed interest securities —other than Treasury bills—in which the major part of these funds are at present invested is of the order of £104 million.

Bombay Irrigation Board

The Bombay State Irrigation Board has been inaugurated. Set up under a resolution passed recently by the Bombay Government, it will consist of 24 members, of which 13 will be non-officials. Its functions will be: "(a) to advise the Government on all general questions of irrigation development—it will be consulted by the Government on important individual schemes and on general policies concerning irrigation development and management; and (b) to report on such matters as are referred to it by the Government; it may also on its own initiative suggest new projects which may be investigated or suggest policies to be adopted in irrigation development." The Board will meet at least twice a year, but the chairman may call special meetings, if necessary. In his opening remarks, Mr. D. S. Desai, Bombay's Minister for Public Works, has said that the proportion of the irrigated area to the total cultivated area in Bombay is a mere 5.6 percent, against 17.3 percent for the country as a whole. A provision of Rs. 22 crores was made in the first five year plan for irrigation schemes in Bombay State. This figure has been raised to Rs. 88.12 crores for the second plan period. The Chief Minister, in his inaugural speech, has said that it will take several plans over the next 15 years to harness the water resources of the State adequately. "As far as I can see, various problems arise in this context. Sometimes short-term solutions are inimical to long-term optimum utilisation. Sometimes there are questions of apparent regional rivalries for the utilisation of water resources. Rivers do not respect administrative boundaries, whether of States or of districts or linguistic regions. More and more as we finish the easier and more obvious projects, we will be coming up against the more difficult, complex and controversial schemes."

Seksaria Cotton Mills

The Seksaria Cotton Mills are to close down their business following an order by the Bombay High Court. The total assets of the company were computed at Rs. 1.2 crores. On the other hand, liabilities amounted to Rs. 1.55 crores. Among the arrears are the Rs. 5,50,000 payable towards the company's provident fund; Rs. 3 lakhs in income tax; and Rs. 30 lakhs towards a decree passed against the company in a suit filed by the Shri Govindram Seksaria Charity Trust. It was stated that the company owed Rs. 4,50,000 in salaries for the month of January alone. The provident fund and the income tax authorities had already asked

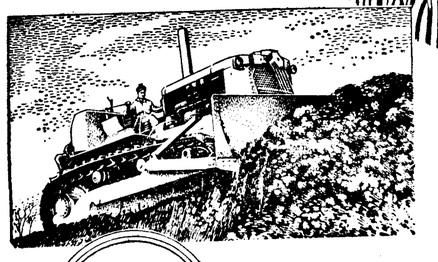
TENDERS

Sealed tenders are invited for Tender No. CON/GM/11/234/CS/FI/58 for supply of Non-Return. Air, Foot, Scour Valves of various sizes. Approximate value Rupees one Lakh. Tender will be opened at 12 noon on 24-6-58.



Tender forms (not transferable) are obtainable from the office of the Controller of Stores, (Construction Section) Garden Reach, Calcutta-23 at Rs. 5/- (not refundable) per set by money order to him direct in the case of outside firms and on production of cash receipt from this Rly.'s Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs. 1,000/- from this Rly.'s Chief Cashier without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1,000/- with the Controller of Stores are exempted. Firms not on this Rly.'s list of approved contractors must enclose a valid Income Tax clearance certificate with the tender.

for attachment orders against the company's property. In delivering judgment, Mr. Justice Shelat held that the company was insolvent and accordingly appointed an official liquidator. A last-minute attempt to save the company failed. The management made the proposal that the mills should be worked on a co-operative basis with labour participation. This would have entailed permission from the labour organisations to use Rs. 40 lakhs now accumulated in their provident fund. In addition. a loan of Rs. 20 lakhs would have been necessary and it was proposed that this sum should be advanced by the Government of India. But there was no unanimity among the workers about the use of their provident fund for running the mills. In the circumstances. Mr. Justice Shelat ruled that no useful purpose would be served in allowing the Seksaria Mills to continue and accordingly passed a liquidation order.

Japanese Cloth Export Drive

Tokyo reports indicate that Japanese manufacturers propose to increase textile exports by at least 3 percent during the current financial year. The Japanese Ministry of International Trade estimates that such exports will be valued at $22,590,000 for cotton yarns, $317,460,000 for cotton cloth, $76,740,000 for rayon fabrics, $164,640,000 for staple fibre textiles and $208,720,000 for secondary products. It is feared that exports to the United States will fall this year because of the recession. Exporters will, therefore, attempt to intensify their sales campaign in other markets, mainly in south-east Asia. Concern has been expressed by the more responsible sections of the Japanese textile trade at the effects of excessive competition in some of these markets. Many trading concerns, however, are not members of their organisations, and have ignored all appeals for voluntary production cuts aimed to stabilise prices. These firms, it is officially stated, are responsible for driving Japanese textile prices overseas to levels which result in charges of dumping. Some firms are now finding that prices in the export market are below their own production costs. but are compelled to sell their goods at reduced rates to clear excessive stocks. The members of the Japanese Textile Goods Export Conference, alarmed at the effect this type of trading is having on the industry both at home and abroad, has asked for Government aid to enforce measures against cut-throat competition. Japan exported 331 million square yards of cotton textiles during the first quarter of this year. Exports for the current quarter are estimated at 100 million yards a month, but this figure, it is believed, will be exceeded later in the year.

Development of Shipping

The Central Minister of Transport and Communications, Mr. S. K. Patil, has said in Bombay that Indian shipping will touch the 1 million g.r.t. mark by the end of the second five year plan. He has said that the present tonnage of 600,000 will be augmented by another 120,000 tons, when vessels now on order are delivered within the next few months. In addition, the Government proposes to place orders for another 120,000 tons later this year. The balance of the tonnage to make up the 1-million ton mark will be made up by the private sector by purchasing second-hand ships. The Minister has said that the Government is considering ways and means of raising the funds required to expand the country's merchant fleet. A number of private industrialists have offered to launch shipping schemes and the Government will encourage such enterprise. In addition, efforts are being made to raise funds abroad for the development of Indian shipping. One of the countries with which the Government is negotiating is the United States, Mr. Patil has disclosed.

Experiment in Decentralisation

Although the need for decentralisation of planning is readily recognised in theory, it is seldom translated into practice. The proposed *zila parishads* or district councils of Uttar Pradesh, according to one report, "are more revolutionary than the State's *panchayat* raj set-up" and they would "bring about a degree of decentralisation unheard of in any other State." The State's 51 district boards have already been dissolved by an ordinance, and have been replaced by interim *zila parishads*. A District Councils Bill is to be introduced in the next session of the Vidhan Sabha. When it is duly enacted, the first elected *zila parishads* will be constituted. These *parishads* will both devise and execute development schemes at the district level, and in order to eliminate duplication, the dictrict planning committees have already been incorporated in the former. A cabinet subcommittee which reported on the problems of the district boards and *panchayats* about five years ago held that the relationship between these two institutions was the main problem of local self-government. The *gaon-sabhas*, which look after the development activities of the *panchayats*, and the *Gaon Samajs* which control the common lands, will now

cease to be separate entities, and the integrated panchayat will become a constituent unit of the *zila parishad*. The Government considers that "the balance of convenience" is in favour of indirect elections to the *parishads*. Direct elections, besides being expensive, lead to factionalism, which was the besetting sin of the now defunct district boards. Although the *zila parishads* are designed to take over planning, it is not proposed to hand over to them the Government's administrative and technical personnel.

Railway Electrification in The South

On the occasion of the visit to Madras of Mr. S. V. Ramaswami, Central Deputy Minister for Railways, the question of railway electrification in the south was discussed. The Minister has stated that the cuts in the plan expenditure will not affect the schemes, and the Central Government is not neglecting the interests of the region. Southern M.P.'s feel that the electrification of the broad-gauge section from Madras to Arkonam is a more urgent problem than the extension of the electric train service from Tambaram to Villupuram. As industry is now moving to the west of Madras beyond Avadi and the broad-gauge track has been renewed and new bridges put in, the 43-mile long line to Arkonam appears to be more suited. When the Neyveli power plant is in commission, the railways will be in a position to use power from that source and an early electrification of the metre-gauge line to Villupuram can be undertaken. The provision of transport for the lignite briquettes to be produced from Neyveli is an important question. But the other scheme for electric service to Arkonam is equally important for many reasons including defence. The Deputy Minister seems to have an open mind on this, as he has declared that both the schemes deserve equal consideration. The survey of new lines is more or less over, but their construction at present seems unlikely. Assurance has been given for the provision of tanker wagons to carry molasses for export to Japan from the E.I.D. sugar factory in Nellikuppam, in response to a representation made by the Madras Chamber of Commerce. Nothing, however, has yet been said about the "own your wagon" scheme. The construction of tanker wagons was undertaken in the past by the United Molasses Company of Britain to carry molasses from Bihar sugar mills, so the scheme could be renewed easily. The Government has guaranteed a supply of those 30 wagons for this purpose which were lying surplus because of the restrictions on the southern distilleries, imposed by the Prohibition policy.

CORRESPONDENCE

THE REAL CAUSES OF UNEMPLOYMENT

(To The Editor of "Capital")

Sir,

I notice in your Ditcher's Diary in *Capital* of 1st May, that Ditcher points to the Bengal unemployment problem I agree with him that the way affairs have been handled is very unsettling and a reflection has occurred recently when 5,000 applicants applied for 100 jobs. As an industrialist of 50 years standing in this country, I have viewed the taxation problem with grave apprehension for the last 10 years and really, had I considered my own interest, I would have left India some years ago. Moreover, taxation has been so great that it has deprived many firms of all working capital, as all reserves, which should have gone to the extension of businesses, have had to be set aside for taxation. In my own case, I think I could have started at least new factories from the money which has been taken from my businesses, and I could have given employment to many hundreds. I think the same argument applies to practically all employers who have been ruthlessly exploited. It would not be so bad if one felt that the money was being spent wisely, but undoubtedly a lot of it goes astray.

There are signs that India is following in the footsteps of the United Kingdom and is trying to start a welfare State, which has brought the U.K. to the brink of disaster and has deluded a large number of its people from being hard-working and thrifty to forsaking their old virtues. In a country like India, which is over-populated, one finds maternity centres and meals for school children and such incentives for increasing the population, rather than family planning which might tend to keep the population within reasonable limits. This, of course, is only a small instance of how things are being misdirected. I am afraid until common sense and a return to realities appear in Delhi, we shall continue to suffer, and the evils which Ditcher adumbrates are likely to become realities.

Yours etc.,
An Industrialist.

South India 12th May.

EPIDEMICS IN CALCUTTA

The committee of the Bengal Chamber of Commerce have suggested to the Bengal Government the advisability of engaging, as early as possible, the services of a bacteriologist of the highest attainments to investigate and report on the cases of plague that have recently occurred in Calcutta. They think that the appointment of such an officer should be made a permanent one; so that, whenever outbreaks of epidemic diseases take place, prompt investigations will be secured. Having regard to the liability of a city like Calcutta to attacks from plague and other epidemic diseases, the suggestion seems an eminently sound one. The Committee further recommend that until the appointment of such an officer it would be a satisfaction to many persons in both the European and Indian communities if a committee of medical experts—consisting both of official and non-official medical men—were formed to determine whether the disease can really be said to exist in the city now. The Government long ago took the advice of some of the leading medical men in India, who, after examination of the suspected cases, have unanimously agreed that they are cases of true plague. The suggestion, however, is by no means useless. The third suggestion made by the Committee is that it might tend to restore confidence in the minds of the people generally if an official declaration were made that plague did not exist in the city in an epidemic form. This is essentially a matter for the Government of Bengal to consider, more perhaps with regard to its own responsibility as to making a specific declaration on such a matter than anything else. The public, however, is greatly indebted to the Committee of the Chamber of Commerce for the practical manner in which they have shown their interest in its welfare.

In an old temple in Egypt, a scientist named Hero devised an instrument using steam pressure to force wine along a tube to be poured out on a sacrificial altar. That was in 100 B. C. Nearly two centuries ago, a small storm in a tea-kettle, noticed by James Watt, made it possible to use the mighty power of steam to change the face of the world. In India today more than 50% of the power produced is derived from steam. Texmaco in 1952, was the first to build a Lancashire boiler in India. It has since considerably expanded its range of production. With the fabrication of water-tube boilers, for the first time in India, in collaboration with the world's best technical know-how, Texmaco is now equipped to manufacture and supply the complete range of industrial Fire Tube, Water Tube and Locomotive boilers. This is how Texmaco serves India's basic industries.

THE RIGHTS OF A BANK CREDITOR

CLAIMS ON LIQUIDATION

(FROM OUR LEGAL CORRESPONDENT)

QUESTION no. 1. Who was the Chief Justice of the Calcutta High Court, who, in open court accused a senior lawyer thereof, while acting as the Sheriff of Calcutta therein, of being probably semi-drunk; and who was the said lawyer who shouted in reply: "Sir——you are a contemptible animal?" What did the Chief Justice and his two colleagues do about it?

Question no. 2. Who was the Chief Justice who caused a dying colleague, semi-conscious and delirious to be carried from his death bed into court notwithstanding medical opinion that the result might be fatal, in order to obtain a majority decision in a case in which the Chief Justice disagreed with a colleague? What happened? The answers, the accuracy of which depends on the veracity of one man, and he a hot-tempered Irishman of strong likes and dislikes will be found at the end of this note.

This is one of those interesting points on the law of banker and customer which so often arise when banks go into liquidation. The customer considers that he is entitled to be considered a preferential creditor and the liquidator, having regard to the general body of creditors, thinks otherwise and treats him as an ordinary creditor only; wherefore there is litigation in which more often than not the customer is unsuccessful if between him and the bank the ordinary contract created by the account current is the only one that exists. That contract is that the bank undertakes to receive money and collect bills for its customer's account. The proceeds so received are not to be held in trust for the customer, but the bank borrows the proceeds and undertakes to repay them at the branch of the bank where the account is kept and during banking hours. In short, on a current account the moneys are lent by the customer to the bank. There may be a different relationship in particular cases, that of principal and agent, or beneficiary and trustee, for example, in which a claim to be treated as a preferential creditor may succeed; but if all that subsists between the bank and the customer is the relationship of borrower and lender, such a claim will usually fail. And that brings us to the latest Indian case, which was a claim against the Exchange Bank of India and Africa (in liquidation) Ltd., Bombay, by one of the bank's constituents to be treated as a preferential creditor. The claim had been disallowed as such by the liquidator who treated and admitted it only as an ordinary debt. The liquidator's view was upheld by the High Court whereupon the constituent appealed.

His claim was that he was entitled to be treated as a creditor who should be paid in priority to the other creditors because the amount of Rs. 30,199, in respect of which his claim was allowed, was held by the bank in trust for him. The facts were that on 18th April, 1949, the constituent (referred to from now on as the appellant) delivered to the Madras branch of the bank four bills of exchange for collection at Aden. On 25th April, 1949, three of these bills were collected and the fourth bill was collected on 26th April, 1949, and the aggregate amount of these four bills was Rs. 30,199. The respondent bank received intimation that these bills were collected on 2nd May, 1949, and on that same day a petition was presented for the winding up of the bank and a winding up order was made. On those facts the trial judge held that the appellant was not entitled to be treated as a creditor who was entitled to be paid in priority to the other ordinary creditors and it was the soundness of this decision which was contested in the appeal.

At the appeal, the learned Chief Justice (Chagla C. J., Desai J. concurring) held that the only fact upon which the appellant's counsel relied, and indeed the only fact upon which he could rely, was that the bills were handed over to the bank for collection. In other words, the bank was the agent of the appellant for collection of these moneys. No instructions whatever were given by the appellant about the bills. The appellant did not instruct the bank as to what was to be done when the bills were realised and the proceeds came to the bank. But, argued Mr. Parpia, appellant's counsel, the law clearly establishes that if a bank is an agent for collection for a customer, that agency brings about a fiduciary relationship, and that agency is not terminated till not only the amount is realised, but the amount is credited to the account of the customer. Chagla C. J. proceeded: "It may be stated that the appellant is a customer of the bank and has a credit account with the bank. As we shall presently point out from the authorities, the position is this. The bank may receive a cheque or a bill either as a holder for value or as an agent for collection and Mr. Parpia is right that when the bank receives a bill or a cheque as an agent for collection the bank is acting as the agent of the customer, and there being a fiduciary relationship, a trust is constituted. But the question is, up to what point of time that relationship of principal and agent continues between the bank and its customer? It is clear, as we shall presently point out, that such relationship may end at any point of time and a relationship of debtor and creditor may come into existence; then the customer *quae* the proceeds of the bill or the cheque is a creditor and not a *cestui que trust** and the bank is a debtor and not a trustee. Therefore, what we have to decide in this case is whether on the facts thus stated, the relationship of principal and agent continued right up to 2nd May, 1949. If it did, then undoubtedly the appellant is entitled to say that in respect of the proceeds of the four bills the bank was his trustee. The undisputed and most important fact in this appeal is that the four bills were collected on 25th and 26th April, 1949, before the bank went into liquidation, and, in our opinion, when the bills were collected, inasmuch as the appellant had given no instructions to the bank as to what should be done with those proceeds the bank became entitled to use those proceeds for its ordinary business. Those proceeds became the ordinary assets of the bank and were not impressed with any trust. The position would have been different if the appellant had given instructions to the bank to the effect that after the bills were collected the bank should either keep these moneys for him, or should pay them to someone else or do something definite or specific with regard to these proceeds. But in the absence of any instructions, the function of the bank as an agent for collection came to an end when the bills were collected and the sale proceeds not being impressed with any trust the bank became entitled to use those sale proceeds for its ordinary purposes.....On the facts of the case before us it is clear that on the bills being realised, there being no instructions from the appellant, and the bank still functioning as a bank, it was entitled to use those sale proceeds as part of its general funds."

In a previous decision of the Bombay High Court (*Bank of India* v *Official Liquidator*, *A.I.R.* 1950. Bom. 375) Tendolkar J. had laid it down that "the mere fact that a bank acts as an agent for collection necessarily leads to an inference that the bank becomes a trustee of the sale proceeds of the bills or cheques." The learned Chief Justice and his colleague pronounced this *dictum* as "not correct" and it must be deemed therefore no longer to represent the law, at any rate within the jurisdiction of the Bombay High Court. (1958. *A.I.R.* Bom. 100).

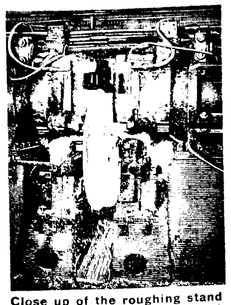
Answers to questions nos. 1 and 2 above. 1. The Chief Justice was Sir Robert Chambers, successor to the famous or infamous Sir Elijah Impey. The period, 1780. The lawyer was William Hickey who narrates both incidents with great bitterness in his memoirs. Nevertheless, though Hickey gives one the impression of being absolutely truthful and fearless, there is probably another side to the picture. Sir Robert Chambers was a very distinguished man noted for his urbanity and courtesy. He had been Vinerian Fellow at Oxford and was not only the friend of men like Dr. Johnson, Goldsmith, Sir Joshua Reynolds, Edmund Burke, David Garrick, Dr. Burney and William Cowper, but Dr. Johnson described him as "one of the ablest lawyers in the kingdom." As for Bill Hickey, he was on his own admission constantly drunk, and he even tells us of his drunken brawling at the consecration of a new Calcutta church and of the Archdeacon denouncing him for it to his face in his sermon. So he would not have bothered about a bout or two while officiating as Sheriff. The writer's guess is that Hickey *was* drunk and didn't know it. To call a judge—and the Chief Justice at that—"a contemptible animal" in open court would ordinarily, then as now, involve the speaker in instant committal to jail for contempt. Sir Robert passed the incident over without a word thereby showing his innate kindness of heart towards one whom he knew as a lovable character, who was a personal friend and to whom he afterwards lent his town house in Esplanade.

2. The judge who was carried in and carried out to die was Mr. Justice Hyde. He collapsed on the bench and could not deliver his judgment. If the Chief Justice was guilty of the conduct which the impetuous Hickey attributes to him he would have been an inhuman scoundrel, which we know he was not. A simple explanation would be that when Sir Robert sent his message he did not know of Mr. Justice Hyde's critical condition and that the judge himself insisted on complying with the request.

*i.e., beneficiary.

A Ditcher's Diary

AT ALL LEVELS BUT THE LOWEST, EVERY LANGUAGE represents not merely a way of speaking and writing but a way of life and thought, and such contrition as Mr. Nehru may have succeeded in inducing among Congress men for their negligence or suppression of Urdu will yield no results at all if corrective efforts now are only linguistic. A few more chairs in the universities for Urdu studies and a few more scholarships or literary awards are not what Mr. Nehru had in mind. The linguistic minority in this instance is also a religious minority, and the Prime Minister's reference to Urdu is to be related to all his recent remarks on communalism, obscurantism and revivalism. Mr. Nehru knows the attitudes—social, religious, historical—that lie behind the opposition to Urdu, and it is the former he dislikes. He should not, however, assume that the targets of his criticism do not know it equally well. Those who are working, so hard and so disastrously, for the imposition of Hindi—or Sanskrit—have much more on their agenda than a mere language. They know, even if they do not always say so, that language can be an instrument not merely of self-expression but also of self-assertion. India's treatment of her minorities has deservedly won the approbation of the world, but it is not a thing to be taken for granted. The contrary tendencies, now dormant, are there still; and while the aversion from English is at bottom really a deliberate revolt against modernism, that against Urdu has its roots in the religion of the majority. It can have done no harm to the country to be reminded that all this fight is not really about language at all, but something far deeper.



IF PRINCE PHILIP ACCEPTS THE INVITATION TO the next session of the Indian Science Congress, there is no doubt he will make many friends in this country. He has that brand of genial informality which did so much for the popularity here of his relatives, the Mountbattens. Next to the Queen herself, he is, in fact, developing into Britain's best Commonwealth public relations officer. A visit from Philip may not be intended as a prelude to one from the Queen. But his experience is bound to weigh with Her Majesty's advisers if the Indian Government should ever consider extending an invitation. Philip is known to be one of those who has been urging the Queen to become more Commonwealth-minded. That is not as easy as it sounds, at least where the Asian and African members are concerned. Old associations are not all that easily forgotten. Nor is the phenomenon of Constitutional Monarchy widely understood in countries such as India. No, it would be a mistake for Britain's Queen, even if she is recognised as the head of the Commonwealth, to come to this country while popular taste still favours such political carnivals as the visit of Messrs Bulganin and Khrushchev. After all, she is not a politician. I read in the *New Statesman* a short time ago a suggestion by Mr. Kingsley Martin that the Queen should have flown out to commisserate with the victims of last year's floods in Ceylon, just as she would have done if they had occurred in Britain. I agree that might have been a good idea, and I am sure Her Majesty would have welcomed the opportunity. But such things only come with time. With all the goodwill in the world, it is not easy to present yourself to people who, up till recently, have been urged by their leaders to regard you as the symbol of responsibility for every disaster that ever befell them.

MR. KHRUSHCHEV HAS INDEED WARNED THE UNITED States that his country is prepared for economic competition, but the Pentagon is not to be blamed for refusing to see only that in the discovery recently of a Russian rouble on Miami beach. Even in the Soviet Union a dollar is a much more precious possession than a rouble, and the despateh of one of the latter is unlikely to be the Kremlin's opening gambit in the economic battle. Whether Soviet submarines have ever been anywhere near the coast of Florida I would not claim to know, but if a Russian sailor did in fact drop a rouble into a patch of seaweed, I would be inclined rather to dismiss it as an indication of what he thinks of his country's currency. At a recent fancy dress party, an American woman arrived with a series of dollar bills round her neck, the former tied with a "string." It would be interesting to know whether the rouble appearing in Miami had any such accompaniment, or whether it was like one of those gifts the Russians tell the Middle Eastern peoples they are just giving away with no other thought than the well-being of the recipient. For me, however, the whole question still turns on the purchasing power of the rouble—nil abroad and only a little more inside Russia. The latter was brought home to an Indian friend who went to the Soviet Union as a tourist recently. Being a *bourgeois* he was unsure what the tipping system would be. At the end of his first breakfast he sheepishly left a rouble under the plate. No improvement in the service, rather slow and cold. Two roubles at lunch. Still no improvement. Three did not make any difference either. Then he went and unburdened himself to a countryman now resident in Moscow, with whom he also had a meal—thus saving a coupon. As advised by the friend, he then left the spare coupon under the plate; and at the very next meal my friend discovered that even a largish Russian waitress can walk fast and smile when serving borsch.

ALONG WITH THE FILTH, THE HEAT AND THE CHAOS, one of the more noticeable features which strikes the airline passenger's eye on his way into Calcutta from Dum Dum, is a large neon-lit sign, somewhere in the region of Shambazaar, entreating him to "Buy Soviet Books and Periodicals". And if, subsequently, he complies, he is likely to find it a most agreeable experience for his pocket. I have mentioned this fact because I am always being asked by friends what the Russians are doing with the large rouble-counterpart funds they are accumulating in this country against their unrequited exports. The official answer is, of course, "diplomatic purposes"; but that can cover any number of sins. Apart from the more obvious commitments for supporting India's Communist Party, paying for disruptive strikes and having something set aside for that revolutionary "rainy day" which every true Marxist believes will dawn for all non-Marxist countries sooner or later, there seems little doubt that a good proportion of Russia's rupee earnings is being spent on subsidising book and periodical production here in India. Much the same can be said, I imagine, for those of Russia's satellites, such as Czechoslovakia. Not all these publications are pure propaganda. There is a fair percentage which can be included under that head, and are thereby less dangerous for being easier to recognise. But a far larger proportion is disguised in the form of, say, space fiction, designed to give the impression that Russia has invented everything from the steam engine to the jet plane, or worse still, children's reading books cleverly worded so as to plant a prejudice in young minds against the West and in favour of the Soviet Union. The Russians have been wily enough to season this huge flow of semi-propaganda with a fair sprinkling of world literary classics, of both their own and Western authors, which are all the more valuable to readers and students in this country because local printers cannot produce them at anything like the same price. How much of this activity is financed from counterpart funds, is for obvious reasons not easy to judge. But it is being paid for somehow, and not all the money is coming directly from Moscow. Cheap, well-produced communist literature is still, of course, arriving in India from Russia. I see from a recent article by the New Delhi correspondent of the *Daily Telegraph* that in 1957, 2,900,000 copies, under 135 different titles, were sent to this country from the Foreign Language Publishing House in Moscow, compared with only 17,000 copies under two titles in 1955. All this makes a formidable total of communist books and publications, to which the Chinese have lately been adding their quota. I would like to think that it is evidence of a solicitous regard for the objective enlightenment of India's reading public, especially its youth. But it is now some time since I ceased to believe in Santa Claus.

IF SYMPATHY FOR THE MALIGNED, THE MISUNDERstood and the downright hard-pressed is a virtue among human beings, then it is time non-communists throughout the world shed a tear on behalf of the United States. I cannot remember any time since the war when the leader of the Western world has appeared to be more up against it than in the past week. Any reader could open his newspaper at one page and see a photograph of French Algerians demonstrating outside their local U.S.I.S. office, which they no doubt consider too pro-Arao, then turn to another and find a photograph of Nasser-inspired crowds in the Lebanon doing the same thing because, apparently, they do not consider it pro-Arab enough. Mr. Nehru, by implication, has condemned the alleged, but unproven, American intervention in Indonesia, but has not, however, condemned Egypt's interference in the Lebanon's internal affairs, and has therefore ensured that the rest of the uncommitted countries will not support American action in bolstering the legal government there. Mr. Nixon has been stoned in Latin America in a way which I have no doubt the Paris crowds are at present itching to imitate. The Russians have launched a bigger and better *Sputnik*, putting American efforts completely in the shade. And the slump in the United States looks like getting worse before it is better. Perhaps most significant of all, the fall in American steel production because of the recession has brought actual output, as distinct from capacity, below that of the Russian steel industry for the first time. What is the Eisenhower Administration doing about it all? Apparently nothing; although the attacks on Mr. Nixon's person do seem to have shaken complacency a little. One thing is certain—if we have to wait till the next presidential election before something is done to stop the rot, the non-communist world can look forward to being considerably smaller than it is at present.

THE BURMAH OIL COMPANY LIMITED

CHAIRMAN MR. W. E. EADIE'S STATEMENT

The Fifty-sixth Annual General Meeting of The Burmah Oil Company Limited, incorporated in Scotland, will be held on Friday, 6th June, 1958, in the Merchants' Hall, 30, George Square, Glasgow.

The following statement by the Chairman, Mr. W. E. Eadie, has been circulated with the Directors' Report and Accounts for the year ended 31st December, 1957 :—

Directors

Since our meeting last year there has been a number of changes in the membership of your Board.

Sir Kenneth Harper, your Chairman since 1948, made known some time ago his feeling that the time was approaching for handing over his responsibilities and on 1st November last he conveyed to the Board his desire to retire. I need not say how regretfully Sir Kenneth's decision was accepted by the Board. His retirement means a loss of wise and experienced guidance for which he was so well fitted by over 44 years' service, 20 of which were on the Board. These last 20 years covered not only the period of the Second World War, with its own special difficulties, but also the strenuous years of rehabilitation with the readjustment of policies consequent upon the political and economic changes in the East. Sir Kenneth's leadership over these difficult years has been greatly valued by us all. We wish him many years of good health and happiness in retirement.

I have been honoured by your Board by my appointment to take Sir Kenneth's place as Chairman.

It is with much regret that I have to report the retirement in August of last year, and subsequent death, of Colonel Hugh B. Spens who had been a member of your Board since June, 1937. His wise counsel was always greatly valued by his colleagues. We have been fortunate in the acceptance by Mr. James Alexander Lumsden of the Board's invitation to fill this vacancy. Mr. Lumsden is well known in Scottish business circles and I am confident that his sound judgment will add to the strength of your Board.

For some time it has been felt that the executive of your Board required strengthening and accordingly Mr. John Ferguson Strain, who was Chief Accountant, and Mr. David Cuthbert Robertson, who was the most senior member of the Group's Eastern Management, were invited to join the Board on 1st November last. Both Mr. Strain and Mr. Robertson, by long experience in their respective spheres of responsibility, are well equipped for these appointments and I have complete confidence in recommending them for election by stockholders.

Mr. R. P. Smith, Assistant Managing Director, has been appointed an additional Managing Director.

Accounts

Although the Group's main supply sources lie East of Suez, the cost of obtaining crude and petroleum products and especially the cost of transporting them to the countries in which we operate increased materially as a result of the Suez crisis. We were unable fully to recover these increased costs from the market and for this reason Group Profit on Trading in 1957, which is after charging the cost of the extensive programme of prospecting during the year, amounted to £6,241,411 compared with £7,584,750 in 1956, a reduction of £1,343,339.

There is an increase in the amount charged for depreciation in 1957, compared with 1956, resulting from the additional assets employed and, in particular, from the new refinery at Syriam erected by The Burma Oil Co. (1954) Ltd. and brought into commission in February, 1957.

As a partial offset to the lower Profit on Trading, Dividends from Trade Investments in 1957 show an increase mainly because of the dividend received on our holding in Burmah-Shell Refineries Limited. The amount of the dividends received during 1957 from our other Trade Investments was little different from that for 1956.

The amount of Other Dividends and Interest increased because of the larger dividends received on our holding in The "Shell" Transport and Trading Company Limited following the free issue of one share for four in 1956 and for the reason that the "Shell" interim dividend for 1957 was paid earlier with the result that three dividends instead of the usual two were received in 1957.

You were informed last year that we pay relatively little U.K. taxation on the profits of our overseas trading Subsidiaries by reason of double tax relief and that it was unlikely that any material benefit would accrue to us from the 1957 budget proposals regarding Overseas Trade Corporations. We have, however, submitted claims to treat our wholly owned overseas trading Subsidiary Companies as Overseas Trade Corporations so as to obtain such benefits as are available, but, pending agreement by the Inland Revenue authorities to these claims, provision has been made in the normal way for U.K. and overseas taxation based on the profits for the year.

After charging taxation, the net profit for the year is £7,056,056 compared with £7,123,896 in 1956, a decrease of £67,840. Including the balance brought forward from 1956, there is available for appropriation £7,666,454 from which has to be deducted the Preference Stock dividends for the year and the Ordinary Stock interim dividend of 1s. per £1 unit of Ordinary Stock free of income tax which was paid on 20th December, 1957. Out of £5,433,477 remaining for disposal your Board have appropriated £1,500,000 to General Reserve and recommend that an Ordinary Stock final dividend of 1s. 7d. free of income tax should be paid on 27th June, 1958. This, if approved, will absorb £3,262,422 and leave a balance of unappropriated profit of £671,055 to be carried forward to 1958.

The lower Group Profit on Trading is reflected in the reduction in Accrued Dividends from Subsidiary Companies appearing in the Parent Company's Balance Sheet which also shows that net Advances to Subsidiary Companies have increased by some £3 millions. Part of these advances has been used to finance the cost, which has again been carried forward, of prospecting in and developing the areas in Assam outside the Digboi Field and the Nahorkatiya Mining Lease. I refer later to the formation of a new Rupee Company in India which will take over this expenditure and need only mention here, in the context of the Accounts, that the further expenditure under this head in 1957 is the reason for most of the increase in Fixed Assets appearing in the Consolidated Balance Sheet. The other items in that Balance Sheet calling for comment are Debtors and Creditors, the increases in which result from the continuing expansion of the Group's trade.

Our share of capital expenditure for 1958 of our Subsidiary Companies and the Burmah-Shell refining and distributing companies in India and Pakistan is estimated to amount to £2,100,000.

Oil India Private Limited

I am glad to be able to report that the discussions with the Government of India regarding the formation of a Rupee Company were successfully completed in December, 1957 and an Agreement was signed on 14th January, 1958, to provide for the incorporation of the new company to be named Oil India Private Limited. Your company will hold two-thirds and the Government of India one-third of the equity capital. This new company's task will be to develop the Nahorkatiya, Hugrijan and Moran areas and to arrange for the transport of crude oil to the refineries where it will be processed. These refineries will be Government sponsored. Arrangements are being made for the construction of a pipeline to carry the crude oil to the first of these refineries, which is to be erected near Gauhati in Assam, a distance of some 280 miles. The cost of the crude oil pipeline from the oilfields to this Government refinery will be financed on loan terms and we have undertaken to arrange to provide up to £10 millions against the sterling exchange element of this cost. The Government of India anticipate that this refinery will come on stream early in 1961.

British Petroleum and "Shell" Issues

Your Board were able to arrange that the rights which accrued to the Company under the terms of the issue of Convertible Debentures by The British Petroleum Company Limited were passed on to stockholders. It was decided, however, in the case of the rights issue of "Shell" Ordinary Shares in January, 1958 that these should be taken up and our allotment of 303,600 shares has been duly received.

Trading

The year 1957, like its recent predecessors, was one of import controls with attendant difficulties in maintaining stocks.

The trade in Burma increased by 10 per cent. Since the Syriam Refinery came on stream in February, 1957 the major part of Burma's trade is now in indigenous oil.

Sales in Pakistan, through our Subsidiary and Associated Companies, increased in 1957 by 7 per cent over 1956, despite a shortage of transport facilities in the eastern wing of the country and an inadequate supply of tinplate due to the limited foreign exchange made available for imports. The new seaboard installation at Chittagong was officially opened by the Chief Minister in March, 1957.

In India, the volume of trade in petroleum products continued to expand, the increase in the Group's sales, in comparison with the previous year, being 8 per cent.

While sales of aviation gasolines still continue to expand, there is an increasing demand for aviation turbine fuel by civil aircraft. The national airlines of both India and Burma already have Viscount aircraft in operation and as more turbo-engined aircraft come into service over the next few years there will be some material change-over in offtake.

Although in all areas together there was a small increase in the demand for motor spirit over that in 1956, the trade in this product in India was below the level of the previous year due to increasing use of diesel vehicles. There is a similar trend towards the increased use of diesel road vehicles in Pakistan but in Burma these have not as yet been introduced in any large number.

Sales of gas by Sui Gas Transmission Co. Ltd. through the Sui-Karachi pipeline continued to improve throughout 1957. At the end of the year offtake was averaging 32 million cubic feet per day compared with 23 million cubic feet at the end of 1956. The saving of foreign exchange to Pakistan in terms of coal or fuel oil which otherwise would have had to be imported, was of the order of £1.7 millions in 1957. The gas retailing companies have now got into their stride and there is every reason to expect a continuing steady increase in sales.

A feature common to the economy of the three countries where we operate and trade is a shortage of availability of overseas exchange. In India this stems from the application of foreign exchange control in the interests of the large capital requirements of the Second Five Year Plan. Pakistan and Burma also have programmes for industrial development. The economy of these two countries, which is primarily agricultural in character, suffered from low rainfall resulting, in the case of Pakistan, in the need to import large quantities of food and, in the case of Burma, in a poor rice harvest which will seriously curtail the quantity of rice available for export.

These economic stresses have repercussions on the rate of trade expansion but once they have been overcome we should be able to look forward to a steady increase in demand for petroleum products. It is of interest to note in this context that the per capita sales of these products per annum in India, Pakistan and Burma, with a total population of some 500 million, is less than 5 gallons, whereas the corresponding figure for the United Kingdom is around 120 gallons and for the U.S.A. 600 gallons.

Oilfields Operations

Burma. The Oil Companies and their Government Partner in The Burma Oil Co. (1954) Ltd. work together in a spirit of co-operation and an atmosphere of goodwill.

Drilling and production at Chauk and Lanywa fields proceeded normally throughout the year and the production from these fields was processed at the Chauk and Syriam (Rangoon) refineries which supply the whole of Burma's increasing requirements of the principal petroleum products.

Pakistan. The small volume of production, of which the Balkassar field of Pakistan Petroleum Limited is capable, remained steady and the volume of gas produced from the Sui Field increased from 7,422 million cubic feet in 1956 to 10,874 million cubic feet in 1957.

Arrangements have been made for the drilling jointly by Pakistan Petroleum Limited and Pakistan Oilfields Limited, a Subsidiary of the Attock Oil Co. Ltd., of adjoining concessions at Karsal in Western Punjab.

India. The known resources of the Digboi field are declining and further drilling has been undertaken in that area in the hope of finding fresh reserves. The field is structurally complicated, however, and the result of this further drilling is awaited with much interest.

In the Nahorkatiya, Hugrijan and Moran areas, 13 wells were drilled in the year of which eight were oil producers, two gas producers and three dry holes. A re-assessment of the reserves continues to indicate a production potential of 2½ million tons per annum.

Progress in improving drilling speeds continued and some wells have been drilled and completed to 10,000 feet in approximately 30 days.

Prospecting

Burma. During the year the Government of Burma granted to The Burma Oil Co. (1954) Ltd. an exploring licence covering 11,360 square miles in the alluvial belt of the Irrawaddy Delta. The first phase of the seismic survey was completed during the year and a deep test well has been located.

A test well was started at Ondwe, 30 miles south of the old Yenangyaung field, and this was drilling at the end of the year.

The discussions with the Government of Burma, referred to last year, regarding the taxation treatment of prospecting expenditure were concluded satisfactorily.

Pakistan. Encouraged by the taxation incentives provided by the agreement with the Pakistan Government which was reported to you last year, Pakistan Petroleum Limited has continued its vigorous exploration programme in East and West Pakistan. In this it has several new competitors and there are now eight oil companies actively interested in the search for oil. Approximately one-third of the exploratory drilling by all companies during the year was done by Pakistan Petroleum Limited. In addition, a considerable programme of geophysical work was carried out. To date, the only success achieved outside the proved oil belt in the Punjab has been the gas discovered at Sui and Sylhet by Pakistan Petroleum Limited.

Meanwhile the deep test well at Lalmai in East Pakistan, to which reference was made last year, made good progress in difficult conditions up to the end of the year. Pakistan Petroleum Limited had three test wells drilling at the end of the year in areas separated by as much as 1,500 miles. This gives some idea of the scope and range of the effort involved.

India. Apart from the seismic work and drilling at Nahorkatiya, Hugrijan and Moran, the Assam Oil Company has undertaken no further prospecting.

Refineries

Burma. A significant development of the oil industry in Burma was accomplished when the new Syriam refinery of The Burma Oil Co. (1954) Ltd. came on stream in February, 1957. All plant was brought into commission with no more than the usual teething troubles. The Deputy Prime Minister performed the official opening ceremony in March, 1957.

The same company's refinery at Chauk operated trouble free throughout the year and with some expansion in capacity.

India. For the second year in succession the rail communications between Assam and the rest of India were free from major interruptions with the result that Digboi refinery operated at a new record of 423,000 tons.

At Bombay, the Burmah-Shell refinery processed 2,297,000 tons, making a valuable contribution to India's economy.

Personnel and Training

When operating and trading in overseas territories we employ nationals where possible in place of expatriate personnel and we have been at great pains to see this policy developed while maintaining the efficiency of our organisations.

To carry out this policy we have set up training establishments locally and also brought to this country trainees and employees who we consider would benefit by attending one or other of the training schemes we have inaugurated or have assisted in inaugurating here.

A school for training apprentices and artisans which was established at Chauk, in Burma, during 1955 has now been raised to the status of an Institute of Technology and is recognised by the City and Guilds of London Institute, which allows the Guild's examinations to be held at Chauk. In India and Pakistan we make contributions to educational and training schemes conducted under the auspices of the respective Governments who select the candidates.

Labour

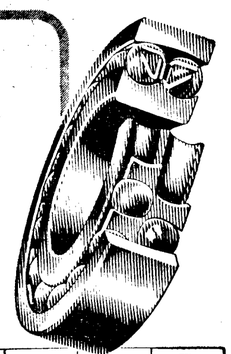
In the year 1957 we were free from any major labour trouble. This is not to say that we were free from the customary series of demands for higher pay and changes in conditions of service but I am glad to say that, on the whole, a spirit of negotiation prevailed. In the last resort, strikes are generally averted owing to the system of compulsory adjudication by a Government-appointed Tribunal when the normal course of negotiation fails to arrive at a settlement.

Tankers

Our small fleet continued to operate satisfactorily and without incident throughout the year.

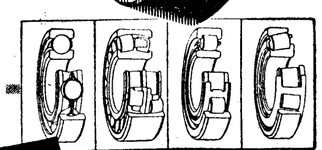
We endeavour to keep our vessels equipped with the most modern amenities for the comfort of the ships' companies. We took the opportunity, therefore, during the first Special Surveys in the United Kingdom last year of m.v. "Burmah Star" and m.v. "Burmah Sapphire", to install plant for air conditioning. When our other vessels next visit the United Kingdom they also will be fitted with similar equipment.

At the end of 1957 it was decided that s.s. "Badarpur", after 35 years of steady and profitable service, had reached the end of a useful career and she was sold for scrap early in 1958.



Staff

It is with great regret I have to report the loss of two members of our staff, Mr. R. M. Johnson and Mr. A. J. Brent, in an air accident last July in East Pakistan. Both were men of much promise and were held in high esteem by their colleagues.



Our operations in three separate countries continue to bring a great number of new problems and last year was no exception. The manner in which our staff at home, overseas and afloat have tackled and surmounted these problems is a matter of sincere appreciation by us all.

SKF

Manufacturing the most comprehensive range of ball and roller bearings...

In every division of India's industry—in heavy steel plants, in large textile mills, and in small workshops—wherever Ball and Roller Bearings can make operations smoother and production cheaper, there you will find SKF. SKF has its own organisation in India with a technical staff always at hand to help you select the most suitable and economical bearings from a range so complete that the correct bearing-type for any application can be supplied and installed.

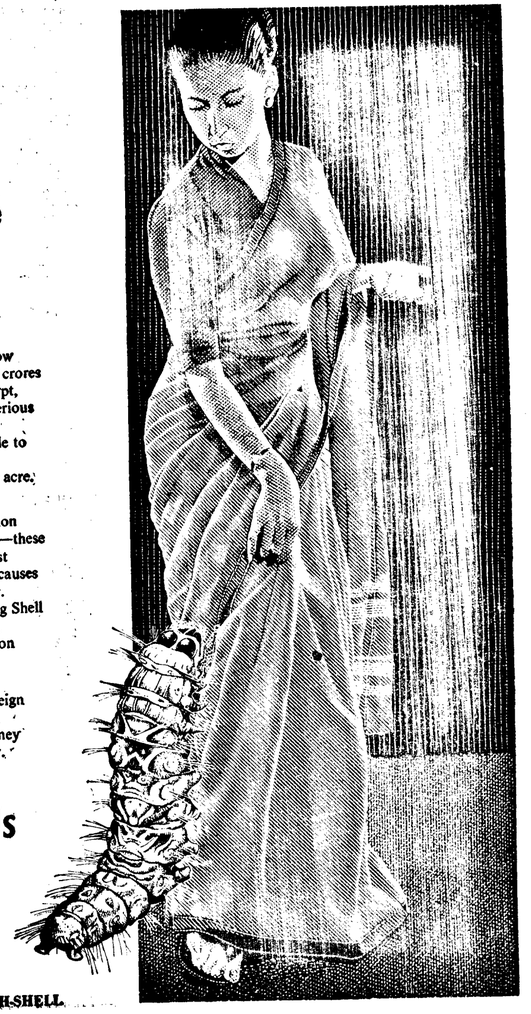
"I'll tell you something else about cotton"

Talking about cotton...very few people know that the country spends something like Rs. 50 crores a year importing superior cotton—from Egypt, U.S.A. and East Africa. This is indeed a serious drain on the country's foreign exchange resources, but a genuine effort is being made to increase indigenous production of superior cotton primarily by increasing the yield per acre.



How is this being done?

Improved seed and fertilizers, wider irrigation and the control of cotton pests and diseases—these are the main lines of attack. By far the most serious pest is the cotton bollworm, which causes a tremendous amount of damage each year. Control can be effectively achieved by using Shell endrin—a Shell petroleum chemical which, as field tests have shown, can increase cotton production by up to 40%.

And for every rupee spent on importing Shell endrin, as much as five rupees of foreign exchange can be saved through increased production of superior cotton. So it's money well spent—from everybody's point of view.

SHELL Chemicals can save crops

and Foreign Exchange too!

COMMONWEALTH COMMERCIAL TRENDS

ISSUES FOR THE MONTREAL CONFERENCE

(FROM A CORRESPONDENT)

INCREASED trade within the Commonwealth, convertibility of currencies, the European common market and finance for the development of under-developed countries are some of the items on the agenda of the Commonwealth Economic Conference meeting in Montreal, Canada, in September. The major problem, it would seem, is that of finances. The Conference, it is hoped, would have definite proposals to attract new capital into the Commonwealth for detailed examination. The British Prime Minister's suggestion is for setting up a Commonwealth development bank As for the currency convertibility question, the Canadian Prime Minister. Mr. Diefenbaker, is stated to be hoping that the Conference will be able to find solutions for a greater flow of trade between the sterling and dollar areas of the Commonwealth, which the inconvertibility of currencies has restricted in recent years. The Commonwealth officials' conference is meeting in London from 2nd June to discuss the agenda for the Economic Conference. The Secretary to the Economic Affairs Ministry. Mr. B. K. Nehru, is leaving New Delhi on 28th May to attend the London talks.

Canadian Wheat Sale to China

The sale of wheat by Canada to communist China has been a subject of comment in the Press. The *Montreal Star*, writing editorially, has said: "U.S. policy may keep us from selling to Red China products manufactured by Canadian-based American-owned firms, but when it comes to wheat, we seem to be on our own. Within recent weeks four cargoes totalling 45,000 tons have been sold to the Chinese Republic for about $2.5 million. At least one of the transactions was made by the Canadian branch of a U.S. firm and there has been no indication that Washington intends to impose sanctions against the owners. It was the threat of a possible $10,000 fine or 10 years' imprisonment which blocked the sale of 1,000 motor cars made in Ontario by Canadian workmen for a company incorporated under Canadian laws. But since the United States says its citizens may not trade with China, executives of the parent company vetoed the deal which would have been a boon to our slowing production lines.

"The same principle would seem to apply for the trading agency involved in the wheat sale. But its owners are reported ready to fight if action is taken. We should still be able to sell to China as much as she wants to buy—and indications are that her objective is about 200,000 tons. The only reason the Americans have figured in the transactions so far, apparently, is that they have been smart enough to land the business! At least one Canadian exporter has arranged for a cargo as well. It seems to be strictly a matter of salesmanship and if the Americans do find themselves cut off, the field is clearer for our own business men. So far the Canadian and U.S. Governments have avoided coming to grips with the basic problems involved. But the day cannot be far distant when there is a collision. We are seeking new markets, and communist China is interested in buying. Naturally we are not interested in providing a backdoor for Americans trying to defeat their country's laws. On the other hand, there is no reason why the Canadian economy should suffer because Mr. Dulles still considers China an enemy country."

Pact on Double Tax Avoidance

The Canadian Department of External Affairs announces that two conventions between Canada and Belgium for the avoidance of double taxation and the prevention of fiscal evasion of taxes on income have been signed. The first applies to Belgium and Canada. The second applies to the Belgian Congo and the trusteeship territory of Ruanda-Urundi, on the one hand, and to Canada on the other. The conventions are of the standard type which Canada has with a number of countries. They provide generally that each country or territory retains the right to tax income leaving it, while at the same time undertaking to grant relief from taxation on income on which a tax has already been imposed in the other country or territory.

Australian Wool Clip

In Australia, the first estimate of the wool clip for this year—1,603 million lbs (greasy)—has proved over-optimistic because of the drought which prevailed over much of the growing season. A revised estimate has reduced the figure by at least 5 percent. The drought, which has reduced the weight of the clip, has also curtailed the quantity of full-length warp wools, so importers have been informed that these will form a progressively smaller proportion of the remaining offerings.

News of another advance in wool processing comes from Australia. A method of reducing the loss of wool which occurs normally during the carbonising process has been developed in the Melbourne wool textile laboratories of the Commonwealth Scientific and Industrial Research Organisation. It is estimated that the discovery is worth more than £A1 million a year to the industry. From about 10 percent of the Australian wool clips, burr and grass seed must be removed by carbonising, and it is estimated that in the usual process between 8 percent and 9 percent of the wool may be lost.

Research has shown that this can be reduced considerably by adding wetting agents to the process, and the method has now been applied commercially. An extra 4.6 percent of the wool processed can be recovered as clean wool, it is estimated. Scientific equipment for the purpose has arrived in Melbourne. Included in the consignment were delicate instruments to be installed in the laboratory of the newly-formed Australian Wool Testing Authority.

Lower Sales

The value of wool sold in the first eight months of 1957-58 was £A53.8 million less than in the corresponding period of 1956-57. Details are shown below:

EIGHT MONTHS ENDED 28TH FEBRUARY

Bales Sold ('000)	1958	1957
Greasy	3,014.6	3,045.2
Scoured	23.0	34.7
	3,037.6	3,079.9
Total Proceeds (£A million)		
Greasy	248.3	300.9
Scoured	2.1	3.3
	250.4	304.2
Average value a lb (pence)		
Greasy	67.3	80.0
Scoured	95.5	98.9
Greasy and scoured ...	67.4	80.2

Expansion of Motor Plant

The managing director of General Motors-Holdens Ltd has announced plans for a three-year expansion programme estimated to cost £A8.7 million. It is designed to increase the production of Holden vehicles from 100,000 to 125,000 a year. The programme will be financed by the company's own funds and will bring post-war expenditure on new plant and equipment to about £A57.5 million. Of the total new investment, £A7.6 million will be spent in South Australia and the remainder in New South Wales and Victoria.

Steel Works Project

The South Australian Premier and the chairman of the Broken Hill Proprietary Co. Ltd., have announced that the Broken Hill Proprietary Company has agreed in principle to build a £A30-million steel works in Whyalla, Spencer Gulf, South Australia. The decision to establish the new works follows a search by the State Government for high-grade iron ore deposits outside the leases held by B.H.P. The search to date indicates the presence of 30 million tons of high-grade ore. The Company will be given the right to take out fresh leases and has agreed to pay a royalty of 18d a ton on all high-grade ore. The steel project will commence by 1960 at the latest, and will include added blast furnace capacity, steel-making plant, rolling mills and associated works. It will also involve the construction of a narrow-gauge railway between Port Augusta and Whyalla and duplication of sections of the Morgan-Whyalla pipeline at an estimated cost of £A5 million.

Wool Exports

The value of wool exports for the seven months ended 31st January, 1958, amounted to £A240.6 million, 1.2 percent less than in the same period of 1956-57. Details, classified by currency areas, are set out below:

	Seven months ended 31st January.			
	1958		1957	
	Quantity* (Million lbs)	Value† (£m.)	Quantity* (million lbs)	Value† (£m.)
Sterling area	181.4	54.3	210.9	65.6
Dollar area	40	11.8	43.9	13.9
Other non-sterling areas	552	174.5	492.2	164
	773.4	240.6	747	243.5

* In terms of greasy.

† f.o.b. port of shipment.

New Zealand Meat Exports to Japan

The most welcome feature in New Zealand's meat export trade last year was the spectacular increase in sales to Japan. Receipts rose from approximately £14,000 in 1956 to approximately £2,369,000 in 1957. To ascertain the prospects for 1958, Mr. J. W. de Gruchy, general manager of the New Zealand Meat Producers Board, along with Mr. J. S. Scott, New Zealand's Commercial Secretary in Tokyo, recently held discussions with various Japanese trading houses. They believed that domestic economic conditions and prices remaining at a reasonable level, Japan represented a long-term market for New Zealand beef. Frequent references were made to the current tight money policy in Japan, but it was felt that this might ease a little later in the year. In late January, storage stocks amounted to about 3,000 tons (mainly boneless from New Zealand), and exerted a depressing effect on the market. It was expected that stocks would be sufficiently reduced soon to permit new shipments to be ordered forward. Two other points of interest are that, firstly, the market demand now is for G.A.Q. rather than boneless, perhaps to the extent of 70 to 80 percent; and, secondly, that imports this year are likely to be on a more orderly basis, with fewer speculators involved.

Trade Deficit of Nyasaland

Nyasaland last year, had a deficit of £408,049 in its visible trade balance with countries outside the Federation, compared with the favourable balance of 1956 amounting to £11,408, according to a Government report. In spite of this, however, exports rose by £383,748 to £8,658,487 in 1957. Imports and re-exports totalled £9,066,527—an increase of £909,196 over 1956. The Protectorate's biggest classes of import—metals and their manufactures, machinery and vehicles—rose by nearly £500,000 over the 1956 figures to £3,147,266. Tea exports rose by about the same amount, the value coming to £3,456,351, displacing tobacco from the first position. Tobacco exports were worth £3,232,005.

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 21st May.

THE Calcutta money market has been quiet again this week. The total of advances remained more or less the same as in the previous fortnight. Three of the main sources of demand—accommodation against grains, and advances to the jute and cotton mills, have all been about the same. The requirements of the sugar industry have been slightly less. The interbank market remained steady and the call rate is unchanged at 3½ percent.

The exchange market has been generally dull in the past week, although there was a rather better showing of tea bills. Gunny documents have been neglected. Remittance was moderate. Sterling has improved against the U.S. dollar and all important Continental currencies except those of Sweden and Norway.

SILVER SLUMPED LAST WEEK ON LONG LIQUIDATION combined with bear pressure which large arrivals induced. The price declined from the previous week's level of Rs. 193 to Rs. 186.50, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 185. The London price was 75⅞d and the New York quotation stood at 88⅜ cents.

Gold was quiet in sympathy with silver and the price declined from Rs. 115 to Rs. 114.50. The sovereign lost 25nP at Rs. 72.50.

DURING THE WEEK ENDED 16TH MAY, GOVERNMENT of India Treasury bills for Rs. 15,05,75,000 were sold in favour of the Reserve Bank.

THE EFFECT OF THE CENTRAL LOAN SUBSCRIPTION has been reflected in the return of the Reserve Bank of India for the week ended 16th May, 1958. Active notes were Rs. 15.13 crores lower at Rs. 1,614.83 crores, while the total note issue rose by Rs. 17 lakhs to Rs. 1,639.48 crores. Notes held in the Banking Department consequently increased by Rs. 15.29 crores to Rs. 24.65 crores. Foreign securities in the Issue Department increased by Rs. 24.85 crores to Rs. 209.68 crores, as a result of transfer of securities from the Banking Department, but rupee securities were reduced by an equivalent amount to Rs. 1,182.62 crores. Balances held abroad in the Banking Department fell by Rs. 30.79 crores to Rs. 42.84 crores. Deposits of the Central Government increased by Rs. 21.78 crores to Rs. 75.07 crores, while other Government accounts lost Rs. 2.04 crores at Rs. 13.69 crores. Balances of commercial banks were Rs. 38.11 crores lower at Rs. 73.88 crores. Investments declined by Rs. 17.92 crores to Rs. 227.04 crores. Other loans and advances were higher from Rs. 55.95 crores to Rs. 69.33 crores, of which advances to scheduled banks against usance bills amounted to Rs. 26.32 crores (Rs. 17.10 crores). Ways and means advances stood at Rs. 59.80 crores against Rs. 57.53 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 9th May, 1958, shows a drop of Rs. 3.92 crores to Rs. 418.28 crores in total deposits. Investments in Government securities are down by Rs. 19.78 crores to Rs. 160.81 crores, while other authorised investments remain unchanged at Rs. 10.38 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 1.23 crores to Rs. 204.66 crores. Cash and balances are, in consequence, shown at Rs. 54.30 crores or Rs. 13.92 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 9th May, 1958, shows Demand and Time liabilities at Rs. 752.17 crores (Rs. 19.84 crores on account of borrowings from banks) and Rs. 790.20 crores (Rs. 16.24 crores) compared with Rs. 752.50 crores (Rs. 18.77 crores) and Rs. 791.06 crores (Rs 16.00 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 20 lakhs and Rs. 8.15 crores to Rs. 40.35 crores and Rs. 107.31 crores, respectively. There is a drop of Rs. 18.60 crores to Rs. 425.46 crores in investments. Advances and bills discounted at Rs. 948.64 crores show a decline of Rs. 6.75 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.6 percent and 61.5 percent, against 9.0 percent and 61.9 percent.

PROVISIONAL FIGURES FOR INDIA'S FOREIGN TRADE by all routes—sea, air and land—on private and Government accounts during January 1958, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise:* excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 5,325 lakhs, re-exports Rs. 153 lakhs, imports Rs. 6,548 lakhs; total trade Rs. 12,026 lakhs. *Treasure:* exports (including re-exports) of currency notes Rs. 41 lakhs, gold Rs. 5 lakhs, current coins (excluding gold coins) negligible; imports of currency notes Rs. 421 lakhs, gold Rs. 3 lakhs, current coins (excluding gold coins) nil. *Balance of trade:* the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 1,068 lakhs.

LONDON FINANCIAL LETTER

ECONOMIC ISSUES OF COMMONWEALTH

By Air Mail.

THIS year, whenever the U.K.'s preliminary figures for overseas trade are due, rather before the middle of each month, the London financial community feels slightly tense, and there is a perceptible sense of relaxation when the figures are satisfactory. They have, indeed, been remarkably satisfactory this year, and everyone says "it is too good to last". In mid-May, the relaxation was rather more cautious than previously. The visible deficit for April, £33¾ million, was still abnormally small, though a little larger than the figure for March. But there was a perceptible, though also slight, decline in the daily rate of exports. Exports to the United States, in particular, were reduced quite sharply. It must be recognised that the U.S. recession is now affecting the British export trade, even though the remarkable success of British motor-cars in the U.S. market this year is still concealing the main effects of the recession, as far as Britain is concerned.

Hitherto the overseas sterling countries have been able to maintain their imports, generally speaking, by drawing on their reserves, but they cannot do so indefinitely. Just as everyone knew last year that the recession in the U.S. must affect Britain's trade with the former, so everyone knows this year that the recession in the commodity-producing countries must affect British exports to them sooner or later, most probably in the latter part of this year. The question is how rapid will be the deterioration in the export trade when the decline sets in? Figures are now available for one-third of the year, and they show a much healthier position than last year's in the same period, with an adverse visible balance of only £106 million, compared with £252 million in the first four months of 1957. The deterioration will probably be gradual rather than sudden; so it might be expected that the figures would be better than normal (if "normal" means anything) some months longer. It is perhaps not too rash to assume, even at this stage of the year, that Britain will earn a handsome surplus in the overseas payments account for the whole of this year, and if the foreign exchanges are conditioned mainly by the state of Britain's finances, nothing like a crisis in sterling can be envisaged this year.

Sterling Area Trade

The Board of Trade has published, opportunely, this month, an analysis of the broader trends of the sterling area's trade. It shows how necessary it is to keep a sense of proportion when considering the U.K. figures; for the rest of the sterling area exported goods to an aggregate value of £4,020 million last year, while the value of the U.K. exports was £3,460 million, that is, considerably less than a half of the sterling area's total. The U.K. exports in the first four months of 1958 were slightly less in value than those of the same period of 1957, but the value of imports was reduced considerably more, because import prices had fallen. The figures available for the overseas sterling countries show much more serious declines in exports—in the first quarter of this year, compared with the same period of last year, 25 percent in the case of South Africa, 30 percent in the case of Australia—and these countries do not similarly benefit from lower import prices, because their imports consist largely of manufactures, whose prices have been maintained. In the first quarter of this year, the value of South Africa's imports increased by 18 percent and of Australia's 15 percent.

It is because this divergence between the earnings from exports and the cost of imports cannot be allowed to continue that a considerable decline in the U.K. exports seems inevitable. The overseas countries are compelled to restrict their imports; and the U.K. is their principal supplier.

Commonwealth Conference

This is the background to the Commonwealth Conference in Montreal in September, a conference which will take place not, it is hoped, in a situation of crisis but certainly in a situation of difficulty. All the countries involved are directly concerned with the problem of receding international trade, and it is reasonable to assume that all of them will co-operate in any workable plan to facilitate the movement of goods within the Commonwealth, and if possible beyond it. The British Government has not revealed any precise thoughts on this subject, and some of its critics suggest that it has not yet begun serious work on a plan for Montreal, hoping that some development will give a useful lead between now and September. But most people in the City are inclined to believe that the Government will be prepared by then to make full use of the financial strength which Britain has built up since the crisis of last September. Some believe, indeed, that the reluctance of the Government (particularly of the Chancellor of the Exchequer) to allow any easing of economic policy at home and the insistence (particularly by the Chancellor) that sterling must be further strengthened before a more venturesome policy is permissible, reflect a broad plan to offer more liberal financial facilities to the other countries participating in the conference. The idea makes sense. The Government is being pressed to do something to stop the incipient recession in British industry. It replies that the time is not yet opportune, but that it has plans to counter a recession.

FIRM UNDERTONE IN STOCK MARKETS

GILT-EDGED STEADIER: DEMAND FOR GOLD SHARES

London, 21st May.

THE stock markets maintained a generally firm undertone during the past week on the expectation, eventually fulfilled, that the threatened railway strike would be averted. On balance, prices in most sections were slightly better with South African gold shares particularly firm on American, London and Johannesburg buying in a market short of shares. The favourable effects of the peaceful settlement of the railway dispute were largely offset however by the continued labour troubles in other industries at home and, more importantly by political events abroad. By far the most disturbing of these were the developments in France and Algeria followed by those in the Lebanon. The markets stood up very well to these events which did little more than counteract the favourable effects of the removal of the railway strike threat. Business throughout was at a very low level and barely sufficient to create a decided trend. Activity in the gilt-edged market was on a reduced scale, but prices were fully maintained, or slightly higher on balance. The foreign bond market attracted very little attention and there was no material change in prices, but the feature of rails was the weakness of Antofagasta issues following the passing of the preference dividend. The industrial market fluctuated narrowly and recorded small irregular price movements on balance. The undertone, however, was firm with sentiment assisted by satisfactory company news. Oil shares receded, but staged a good recovery later. Rubber shares were quiet, but there were occasional firm spots. United Sua Betong were notably firm, but Dalkeith were dull following the dividend. Tea shares showed earlier dullness, but subsequently improved. Among Ceylon issues Craigmore and Standard improved, while in Indian issues, Anglo-American Direct Tea Trading, Amalgamated Tea Estates and Consolidated Tea and Lands improved on their dividend statements.

The Money Market

In spite of reduced requirements by the discount houses, stringent credit conditions continued to operate in the the money market last week. The movement of funds was slow on most days and the usual assistance was provided by the authorities. The rate for money remained on the basis of 5 percent for non-regular balances. Bill business was limited by the cash position and August and "hot" were sold at 5⅛ percent. There was a slight increase in the bill rate at last Friday's weekly offering of Treasury bills, although the money market itself paid 3d more for its bills. This was the result of a better approximation of bids between the market and outside quarters. The average rate for treasury bills last week was quoted at £5 3s 11.49d percent.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: "London gilts have rallied on rail settlement hopes. Industrials have reflected a brighter view of the labour situation and some good company news. After a full-scale reaction which failed to penetrate the February resistance level, gold shares have turned upward helped by good American buying. Wall Street industrials look tired for the moment, but rails have been active and strong on the pending legislation. The threat of a major transport strike brought no selling pressure in London. Given more propitious domestic news, the market should go ahead as sentiment is bullish."

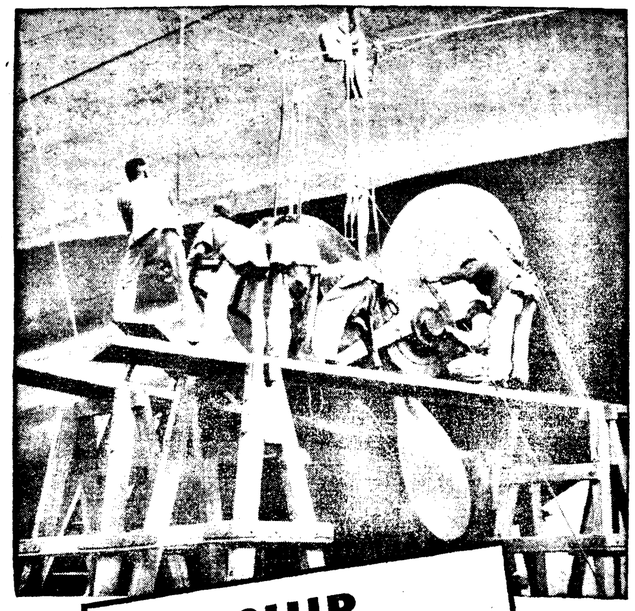
U.S. Federal Reserve Return

The Federal Reserve return for the week ended 14th May shows that the gold stock fell by $74 million to $21,873 million. Foreign deposits rose by $19 million to $307 million but foreign investments declined by $36 million to $3,096 million. The Federal Reserve bought $85 million worth of bills, making the total holdings of U.S. Government securities $23,936 million. Total discounts and advances fell by $9 million to $116 million, while the aggregate excess reserves of member banks declined by $36 million to $713 million. The daily average excess reserves of member banks increased by $30 million to $720 million, while their daily average borrowings rose by $5 million to $123 million. Business loans of New York city banks declined by $26 million to $10,991 million compared with a rise of $49 million to $11,640 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were $75 million lower at $20,443 million. Federal Reserve notes in actual circulation were $50 million higher at $26,500 million. The deposit of member bank reserve accounts was $152 million lower at $18,180 million.

Outlook for U.S. Foreign Trade

The major part of the downward adjustment in the United States exports might well now be behind, according to Mr. M. S. Szymczak of the Federal Reserve Board. He has told the Illinois Bankers Association that further contraction is to be expected, mainly in U. S. exports to the less developed countries of the world. Many of those countries have had balance of payments difficulties and have lost foreign exchange reserves because of their domestic inflationary policies. Their problems have been aggravated, in some instances, by the declines in international prices and demand for their raw material exports. Economic activity, however, has remained at high levels in Europe and Japan, while in Canada there are indications that the recession has evened out and many nations have already made substantial readjustments. There are reasons to believe that there will be a relaxation of the fiscal and monetary restraints abroad which have had a marked effect on U.S. exports. While economic conditions in the United States and abroad thus presage moderate further declines in exports and imports during the current fiscal year, Mr. Szymczak concludes that the long-term outlook is for a considerable expansion of U.S. foreign trade.

Restoration of Basic Raw Material Prices



Australia is trying to give a lead to the world to take steps to restore the prices of basic raw materials, the Minister for Trade, Mr. John McEwen, has told the House of Representatives. He says that the Government is aware that unless there is a restoration of prices, there will be neither economic nor political stability in the exporting countries of the world. Mr. McEwen has said this while replying to a question on whether economic conditions in south-east Asia will materially affect the sales of Australian goods in that area. There is a growing disparity in prices for raw materials and industrial products. Conditions are not as bright in south-east Asia as Australia could hope since there had been a decline in rubber and tin prices and the rice crop had been less than average. To that extent, it will be a little more difficult than normal to do business in that area. But Mr. McEwen believes that with Australian salesmanship and good quality goods, a market will be secured.

Belgian Steel Market Stagnant

The Belgian iron and steel market remains stagnant with few orders being received either from the home trade, from the pool countries or from overseas. Business done so far includes (in terms of U.S. dollars a ton, f.o.b. Antwerp) angle irons for Scandinavia at $90; cranked bars for the United States at $80; concrete reinforcing bars for West Africa at $78, merchant steels for south-east Asia at $88, sections at $87 to $89 and U-bars at $93 for the Antilles (Central America), joists at $91 and American standard joists at $90 for the Pacific coast of South America. The optimists point out that Belgian steel production, although contracting, remains relatively high and compares favourably with the United States where output has fallen to half the production capacity.

Dundee Jute Goods Better

The blow the goods market received in the previous week has apparently been mitigated to a great extent. After their initial weakness, prices have developed a decidedly firmer tendency again in Calcutta. It is understood that several consuming centres including the United States and Russia have been enquiring for fair supplies. Recent reductions in the freight rates on jute goods from Calcutta to the United States should help reduce prices to consumers there. The Indian Government has been buying fair quantities of heavy goods lately. Increased stocks with the Indian mills are expected at the end of this month in view of the ban on imports of jute goods into Argentina.

SHIP REPAIRING

All classes of structural and machinery repairs carried out to river, coastal and ocean-going vessels.

JAMSHEDPUR STRIKE BRINGS SHARE PRICES DOWN

FORWARD LIST EXTENDED

Wednesday Evening.

THE feeling of despondency among stock market operators has increased during the past week, the dominating influence being the serious deterioration in the strike situation at the Jamshedpur works of the Tata Iron & Steel Company. The sit-down and stay-in strike launched by over 10,000 workers in various departments on 15th May has continued and, according to the management, has resulted in "disruption and considerable loss in production". The steel smelting shops had to be closed on Monday due to the reduced supply of gas from the coke ovens. Meanwhile, the management has served notice on the strikers that, if the illegal action continues, their services will be terminated. On Tuesday, eight departments were closed. Today, the strike had also affected some of the associated companies of Tatas, including T.E.L.C.O.

The announcement by Mr. Lal Bahadur Shastri, Union Minister for Commerce and Industry, at the conference of the Indian Cotton Mills Federation on 16th May, in Bombay, that no further reduction in the excise duty on textiles was contemplated by the Government, added to the prevailing gloom. In the meantime, the Government proposes to set up an expert committee, including representatives of the industry, labour, consumers and officials to examine the problems facing the industry. This means that the prevailing crisis is likely to be long drawn out. The experience of the coal and tea industries substantiates these fears.

The market leaders in the Bombay and Calcutta Stock Exchanges—Tata Iron and Indian Iron ordinary shares—declined steadily from Rs. 181.25 and Rs. 21.56 on 15th May to Rs. 175.50 and Rs. 20.92 at the opening today; tonight's closing quotations were Rs. 177 and Rs. 21.06, respectively.

As was anticipated, the three new loans floated by the Central Government last week were a great success, with total subscriptions amounting to Rs. 141.87 crores against the Rs. 135 crores asked for. Out of the total subscriptions received, conversions amounted to Rs. 9.47 crores. The short-dated loan, 3½%, 1963, attracted the largest amount of subscriptions namely, Rs. 58.06 crores. Next came the 4% loan, which drew a sum of Rs. 49.47 crores, and lastly the 3½% Loan 1968, which accounted for Rs. 34.34 crores.

The view is now gaining ground that most jute mills on the river are working satisfactorily and in consequence prices of selected jute shares improved somewhat during the week under review.

The Government of India, at long last, announced yesterday a general increase in coal prices of 75nP a ton, effective from 17th May, 1958. A corresponding increase of Re. 1 a ton has been effected in the price of hard and soft coke. The increase in prices, which is to enable the industry to offset the increased allowances to which workers have become entitled, will be effective for six months. The general reaction from coal producers was one of quiet satisfaction although it was agreed that the increase in selling prices amounted to nothing more than "robbing Peter to pay Paul". But everybody will agree that, in these days, the private sector must be grateful for small mercies. Investors feel that the latest increase in selling prices will enable well-run companies to earn reasonable profits, and coal shares were steady, particularly Bengal, which improved to Rs. 242. Another factor contributing to the improvement in the coal section was the withdrawal of the strike notice by the Colliery Mazdoor Union following a settlement between labour and management.

Tea shares attracted a few bargain hunters due to the good prices realised for the new season's Darjeeling teas at the last auction.

An important event of the week was the decision of the Calcutta Stock Exchange authorities to include two more shares in the forward list, namely, Indian Aluminium and Indian Cables. This brings the total number of shares on the clearing list to eight. Perhaps, if the forward list were expanded further, as in the Bombay Stock Exchange where there are no less than 66 shares on the clearing list, the liquidity position of the stock market might improve, bringing with it an expansion in the volume of business.

Price movements in the various sections of the market are illustrated in the following table:

The Lotus Circle

Among the many treasures of Indian art, is this exquisite piece which dates back to 158 A.D. It is now a part of the rich collection of Amaravati sculpture at the Madras Museum. The "Lotus Circle" is a common but significant decorative motif in Indian art.

A pleasure to smoke

Issued by The Imperial Tobacco Company of India Limited TC/143

reports for the year ended last November that with a view to having direct contacts with overseas markets, they together with the directors of other jute mill companies under the same group management, have resolved to form a company under the style of the Budge-Budge and Allied Jute Mills Exports (Private) Ltd. This Company, having been registered, commenced business on 31st July, 1957. Each of the participating jute mill companies has subscribed equally to the capital. Messrs Andrew Yule and Co. Ltd. have no interest in the Budge-Budge and Allied Jute Mills Exports (Private) Ltd., but they have been appointed its secretaries.

The loss of Cheviot has amounted to Rs. 82,708. Transferring Rs. 70,000 from dividend equalisation reserve and Rs. 80,000 from general reserve and bringing in Rs. 8,563, there is Rs. 75,857. The usual preference dividends have been paid, but the ordinary dividends have been passed over. There is a carry-forward of Rs. 5,857.

Delta has made a loss of Rs. 2,70,304. Transferring Rs. 25,000 from dividend equalisation reserve and Rs. 2.70 lakhs from general reserve and bringing in Rs. 4,547, there is a balance of Rs. 29,243. The ordinary dividends have been passed over, but the usual preference dividends have been paid. A balance of Rs. 4,243 is carried forward.

THERE IS A DECLINE OF Rs. 9.40 LAKHS TO Rs. 27.08 lakhs in the profit of the Shivajpur Syndicate Ltd. for the year ended last November. The dividend is maintained at Rs. 8 a share, including a bonus of Rs. 3 a share. Mine development and prospecting reserve is allocated Rs. 3.30 lakhs against Rs. 7 lakhs. Dividend equalisation reserve receives Rs. 2 lakhs (Rs. 1½ lakhs). The taxation provision is Rs. 5.75 lakhs lower at Rs. 15.75 lakhs. The carry-forward is Rs. 52,523 against Rs. 9,485 brought in.

The directors state that the prospect for the current year depends mainly on the trend of the market which has of late been showing a marked tendency to reduce from the high levels of the past one or two years, partcularly in the case of low grade ore. "In view of the foregoing, it is unlikely that the high profits of previous years will be maintained, although it is anticipated that there will be a tendency for market prices to rise towards the end of the year." The directors have, for the time being, postponed their decision to issue loan shares by capitalising reserves because of the high tax on bonus shares.
