
The raw jute market is very firm and, on the whole, prices have risen. Mill Firsts are lowest at £109, but £112 is quite a common quotation, while Mill Lightnings rule from £94 10s. at which business has been done, £83 10s for Mill Hearts and £71 for grade Hearts, £96 for good marks of Daissee-2/3 and £88 for grade £102 10s for grade Tossa-2/3 and £97 for Tossa-4, all c.i.f. U.K., March-April. These are the lowest rates and most sellers are asking for more.

Some irregularity is noticeable in the Calcutta goods market because speculative holders have offered to sell at prices less than the fixed minima. Business can be done in hessians at 60s for 40in. 10oz. and 45s 3d for 7½oz., March, and also April, and at 60s 3d and 45s 3d May-June, with B Twills at 151s 3d, 151s 6d and 152s for the respective positions of shipment,all f.o.b., Calcutta. There is an improvement in demand for Dundee yarns and cloth, and prices are firmly maintained.

SOUTH EASTERN RAILWAY

TENDERS

Sealed tenders are invited for supply of the following materials:—

Tender No. CON/COS/3/WP/CE/7005/H(C) 58 for supply of 500 yds. cable underground LT 3.½ × 0.1 sq. inches PILCDSTA 660 V. grade and for 100 yds. cable underground LT 3.½ × .02 sq. inches PILC 660 V. grade suitable for earthed neutral system. Tender will be opened at 12 noon on 8.4.58.

Tender forms (not transferable) are obtainable from the office of the undermentioned (Construction Section) Garden Reach, Cal-23 at Rs. 2/- (not refundable) per set of form by Money Order to him direct in the case of outside firms and on production of a cash receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Tender forms should accompany the receipt for depositing earnest money Rs. 320/- from this Railway's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1000/- with the undermentioned are exempted.

Plantation Topics

NEW KERALA TAXES AFFECT PLANTERS INDIRECTLY

PROPOSED LEVY ON AGRICULTURAL WEALTH DROPPED

(FROM A SOUTH INDIAN CORRESPONDENT)

NONE of the seven new taxation proposals in the Kerala Budget for 1958-59 will directly affect the plantation industry. This is a welcome departure from the past. In the last Budget, 80 percent of the revenue deficit was covered through the imposition of direct levies on the planting community. Planters in Kerala are already heavily taxed, and any new impost would affect them badly. It is gratifying that the State Government has appreciated this. It has not only spared the plantations from new taxes but has also dropped its earlier proposal to levy a tax on agricultural wealth at the same rate as non-agricultural wealth is taxed by the Centre. This tax would have affected the planters most.

Revenue from Agricultural Income Tax

The State Finance Minister, Mr. Achutha Menon, has said in his Budget speech that the revenue from agricultural income tax (the largest State levy on plantations) fell far short of expectations during the current year. In the preliminary Budget, it was anticipated that besides the expected revenue of Rs. 180.60 lakhs from this tax, it would be possible to realise, through its extension to the Malabar area and the enhancement of the supertax rates, an additional revenue of Rs. 161.85 lakhs, but these expectations were not realised. The supertax rates, which were proposed at the time of the introduction of the Budget, were amended by the select committee, and this resulted in a fall in revenue to the extent of Rs. 30 lakhs. Though agricultural income tax in Malabar was levied from 1st October, 1957, the assessment is not yet complete. At the same time, the tax on plantations levied under the Madras Act was abolished. The slump in plantation products, such as tea and pepper, has adversely affected receipts under this item. Consequently, the revised estimate anticipates a sum of Rs. 180 lakhs only under agricultural income tax. the Minister has said. But among the new taxes, the following will affect the planters indirectly: the tax on forward market transactions in pepper and coconut oil, electricity duty on consumers taking 11 kV and above, and the enhanced rate of sales tax on diesel oil.

Extension of Rubber and Cashew Cultivation

In the Budget, provisions have been made for the extension of rubber cultivation and for accelerating the cashew development schemes which are now being implemented by the State Government. The Finance Minister has said in his Budget speech: "The Government does not intend, when releasing for cultivation forest areas not essential for forest conservation. to allot to cultivators the entire land thus made available. It is proposed to utilise part of the area for rubber cultivation. Rubber now produced in India does not meet the entire Indian demand. Therefore, there are possibilities for further rubber production. The Plantation Enquiry Committee is of the view that in Kerala at least 50,000 acres more can be brought under rubber cultivation. The Government has, therefore. decided that land unsuitable for other purposes but suitable for rubber cultivation should be converted into rubber plantations. A scheme for this purpose will be drawn up during the current financial year in consultation with the Rubber Board. As the scheme has not been formulated, a token grant of Rs. 1 lakh is provided for in the current year's Budget."

The State Government has now two schemes in hand for increasing the production of cashewnut, in which India is not self-sufficient at present. According to one scheme, the Government gives financial assistance to private landowners at the rate of Rs. 150 an acre for extending the cultivation of cashewnuts. Under the other scheme, the Forest Department of the State has planted some 4,398 acres with cashewnuts so far. It cannot be said that both the schemes are progressing satisfactorily. But it is gratifying to hear from the Finance Minister that the Government has decided to accelerate the progress of both schemes.

New State Trading Corporation

The State Government has decided to set up a State Trading Corporation with an authorised capital of Rs. 1 crore and a paid-up capital of Rs. 10 lakhs, wholly subscribed by it for undertaking the marketing of the agricultural products of the State, most of which are facing a slump. The preliminary steps have already been taken for its constitution, the Finance Minister has said.

This proposal was included in the last Budget speech. Many quarters expressed concern over it and pointed to the uselessness of such a Corporation. But the Government kept silence for the last 11 months, and some indications were given that the proposal was almost dropped. Now it has again cropped up. In the course of interpellations in the House, the Finance Minister has admitted that its scope and usefulness will be very limited, for it is with the well-organised and well-established private trade that the Corporation will have to compete. The prices of many of Kerala's cash crops depend on market fluctuations abroad, and very little will be done by the Corporation to raise their prices. In spite of this, it appears that the State Government is not prepared to drop the proposal.

Larger Provision for Coir Industry

The Finance Minister has said that the provision for the coir industry under the second five year plan has been raised by the Central Government from Rs. 54 lakhs to Rs. 150 lakhs at the instance of the State Government. Enquiries have been made by deputing an expert of the Reserve Bank as to what further steps should be taken by the Centre to help the industry. The rate of interest on the loans taken by coir cooperative societies has been reduced from 4½ percent to 2½ percent. The question of enforcing this with retrospective effect is under correspondence with the Government of India, the Minister has said.

Continuing he says that in the course of the last one year, his Government has approved several schemes to end the depression in the coir industry. It has evolved a scheme for the direct purchase of coir whenever it is found that prices are going down in a particular area, and an amount of Rs. 10 lakhs has been allotted for the purpose. So far purchases of Rs. 4 lakhs have been effected by the Government under this scheme. It is also trying out a scheme, on an experimental basis, so that coir co-operative societies could undertake production directly. At present five societies have launched this scheme.

Price Fixing for Coconut Husks

The Kerala Government is of the opinion that unless the price of coconut husks is fixed statutorily at a reasonable level, it will not be possible to enforce the minimum wages for workers or to obtain a reasonable margin of profit for the producer of coir. But it could not be done so far, since according to the Coir Industries Act, the Government of India is also concerned with the control of prices, and according to the State Government, the Centre does not appreciate its importance. The Coir Board which is most directly and immediately concerned with this question, took it up for detailed examination at its latest meeting, and resolved that the enforcement of rules on the licensing of retting places, now being finalised by the Central Government, should be watched before considering other ways and means of controlling the price of husks.

This meeting was held in Puri, Orissa, for two days from 27th February. It was resolved to organise a marketing section to ensure that only quality goods are sold through its show-rooms and sales depôts. The Board has already opened a show-room and a sales depot in New Delhi and two more of the latter are to be opened shortly in Madras and Bombay. The Board has appointed a sub-committee to study how far the National Small Industries Corporation can assist the former in marketing coir goods in India and abroad.

Enactment of Profession Tax Bill

The Kerala legislature has enacted the Profession Tax (Validation and Reassessment) Bill brought forward by the Government to provide for the validation of the levy and the collection of the profession tax and for its reassessment in certain cases. The Minister who piloted this Bill in the Assembly said that consequent on the judgment pronounced by the High Court of Travancore-Cochin, nullifying the retrospective effect given to a certain section of the Tranvancore District Municipalities Act, the municipalities in the Travancore area of the State were faced with the danger of paying back huge amounts collected as profession tax from plantation companies and trading concerns. The purpose of this Bill was to validate the levy and collection of profession tax made by the various municipalities under the District Municipalities Act for the period from 1st April, 1950, to 15th February, 1956, as well as to enable the executive authorities concerned to make a *de novo* assessment of the tax after giving previous notice to assessees.

COCHIN TEA SALES

At Sale No. 6, 1,100,000 lbs of tea were on offer. There was a strong general demand particularly for medium and higher grades. Low mediums were about steady.

At Dust Sale F, 600,000 lbs of tea were on offer. There was a strong general demand. Mediums and good mediums improved by 10nP or 15nP while other grades were irregularly 5nP to 10nP dearer.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for February 1958:

Upper Assam: Weather dull with little rain; in Tingri it is too cold for the time of year and this is checking the leaf.

Central Assam: Weather is wet and cold generally with the exception of Golaghat where it is dry and the prospects are fair.

Lower Assam: Weather favourable; prospects fair.

North Cachar: Weather seasonable and prospects are now brighter; blister blight not so severe.

South Cachar: Weather favourable; rainfall is much above normal for the season todate in many areas; prospects good.

Eastern Dooars: Weather seasonable; immediate prospects fair.

Central Dooars: Weather hot; immediate prospects fair.

Western Dooars: Weather seasonable; good rain has fallen generally and the prospects are fair.

Darjeeling: Weather seasonable.

Terai: Weather dry; rain badly wanted.

Commodity Markets

SLIGHT RISE IN WHOLESALE PRICE INDEX

The official wholesale price index (base: year ended March 1953=100) worked out to 104.9 during the week ended 22nd February, 1958, compared with 104.8 (revised) for the previous week. The index was lower by 0.7 percent and 1.1 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The monthly average for February stood at 104.6 compared with 106.0 (revised) for January 1958 and 106 9 for February 1957. Higher prices of milk in Calcutta (+21%), oranges (+20%), cloves (+9%), urad in Batala (+7%), rice in Nandgarh (+6%), in Marcara and in Balurghat (+5% each), jowar in Surat and in Akola, gingelly oil in Bombay, fish, meat and black pepper (+6% each), barley, mung (+2% each) and bajra, maize, potatoes and groundnut oil (+1% each) raised the index for Food Articles by 0.4 percent to 101.3 compared with 100.9 (revised) for the previous week although masur in Bombay (−12%), gur in Madras and onions (−11% each), wheat in Kanpur (−8%), jowar in Gulbarga (−7%) and in Hyderabad (−6%), mustard oil in Calcutta (−7%), rice in Vijayawada, Trivandrum and Tirunelveli (−5% each) and urad in Bombay and chillies in Calcutta (−5% each) showed declines. The index for Tobacco remained stationary at the previous week's level of 95. The index for the Fuel, Power, Light and Lubricants group also stood at the earlier week's revised level of 114.8. The index for industrial Raw Materials fell by 1.0 percent to 110.8 compared with 111.9 (revised) for the previous week. Items which showed noticeable variations during the week were: linseed in Kanpur (−8%), cottonseed (−4%), raw jute, raw wool and manganese ore (−3% each), raw cotton (−2%) and copra (+2%). An increase in the prices of copper (+4%), aluminium (circles Indian) in Bombay (+3%) and linseed oil, cotton yarn, rayon yarn and brass (+1% each) was responsible for a rise in the index for Intermediate Products by 0.9 percent to 106.3 compared with 105.4 (revised) for the earlier week. The index for Finished Products receded by 0.2 percent to 107.7 compared with 107.9 (revised) for the previous week due to a fall in the prices of quinine sulphate (foreign) in Bombay (−8%), jute manufactures (−2%) and paints (−1%). The prices of handloom cloth and general chemicals (+1% each), however, moved up.

EXPORT QUOTAS FIXED BY INTERNATIONAL TIN COUNCIL

The secretary of the International Tin Council, Mr. W. Fox, has released details of the export quota percentages and tonnages fixed by the Council at its recent meeting. The total permissible exports for six producing countries for the control period from 1st April to 30th June, fixed at 23,000 tons, represent an aggregate cut of 40 percent. The details for each producing country for the first control period (extended to 31st March) and for the second period (to 30th June) are as follows:

Country	Percentage of Total	Current Period (in tons)	Second Period (in tons)
Belgian Congo	8.95	2,416	2,059
Bolivia	20.43	5,516	4,699
Indonesia	20.43	5,516	4,699
Malaya	37.50	10,125	8,625
Nigeria	5.34	1,442	1,228
Thailand	7.35	1,985	1,690
Total	100.00	27,000	23,000

In December, Indonesia was producing substantially below her normal monthly output of 2,300 to 2,500 tons. The Council estimates that Russian exports of tin in 1957 amounted to between 8,000 tons and 9,000 tons. but there may have been further entries into some countries which have not yet been recorded. During the next two or three months, the rate of exports from Russia is likely to be affected by weather conditions. In London metal market circles, it is thought that the price of tin over the next few months will depend largely on the level of demand in the United States. Consumers' stocks there are very low. and although there is still some tin in the pipeline. an upturn in U.S. buying could lead to a sharp price recovery. First reaction in Malaya to the new export restrictions was that the cuts are drastic, but necessary. The president of the Chamber of Mines is quoted as saying that conditions would be very difficult for the industry, but Malaya had entered an agreement and had to see that it worked.

AMSTERDAM TO HAVE NEW FUTURES MARKET FOR HIDES

From 18th March, 1958, Amsterdam will have a new futures market for hides—the first in Europe—in which the Netherlands and foreign parties may participate. Countries interested in this market are the Netherlands. Belgium, Luxemburg, the three Scandinavian countries, the United Kingdom, France, Switzerland. Italy, Austria West Germany. Argentina, the United States, Canada and New Zealand.

SUGAR PRODUCTION INCREASES

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India first estimate of sugar, produced directly from cane in vacuum pan factories. puts the current season's production at 2,067,000 tons, against the actual production of 2,029,000 tons during the previous season. This shows an increase of 38,000 tons or about 1.9 percent in production during the current year compared with last year. The increase is expected to be shared mainly by Bombay (69,000 tons), Punjab (24,000 tons) and Mysore (31,000 tons). The States of U.P. and Bihar are, however. expected to show a decline in output to the extent of 37,000 tons and 27,000 tons, respectively.

Calcutta Markets

FAIR DEMAND AT TEA EXPORT SALE

DUST PRICES EASIER

AT Sale No. 36, held on 10th and 11th March, offerings at the Export auction amounted to 59,525 packages There was a fair general demand, and bright liquoring teas of all descriptions were firm to dearer. Clean black common brokens and Fannings were steady and often dearer but the plain liquoring ones and those with poor leaf appearance were 4nP to 6nP easier. There was fair support for medium C.T.C. Fannings at about last rates, but the brokens often sold below valuations. Any medium C.T.C.'s with autumnal character, however, sold at dearer rates. The best types were a little irregular and declined by about 10nP and sometimes more. Bright liquoring nonwither Dooars were strong and often dearer but the more ordinary types often sold at 4nP to 8nP below valuations. Clean and stylish whole leaf grades were fully firm to dearer but those of inferior leaf appearance were barely steady. Darjeelings sold well, particularly those with autumnal flavour.

	Quotations 1958 Rs.	1957 Rs.
Clean Black Pekoe	2.20	
Plain B. P.	1.42 to 1.46	2 2 0
Medium B. P.	1.52 to 1.56	
Best Assam C.T.C. B. P.	2.60 to 2.80	1 12 6
Plain Fannings	1.56 to 1.60	1 14 0 to 1 14 6
Medium Fannings	1.72 to 1.76	2 2 0 (nom.)
Best Assam C.T.C Fgs.	2.70 to 2.90	

At the Internal Sale, a total of 20,282 chests of Dusts was on offer, and these met with good general demand at easier rates. Middle East buyers again showed interest but orthodox descriptions were generally up to 6nP easier. C.T.C. teas met with irregular demand but bright liquoring powdery types were firm and often dearer. The few best liquoring kinds on offer were easier and the plainer liquoring types, in spite of the better enquiry, were also generally easier.

	Quotations 1958 Rs.	1957 Rs.
Medium Dooars Dust	1.52 to 1.54	1 10 6 to 1 11 6
Medium Assam Grainy Dust	1.54 to 1.56	1 12 0
Medium Assam C.T.C. Dust	1.75 to 1.95	2 0 0 to 2 3 6
Best Assam C.T.C. Dust	2.80 to 3.10 (nom.)	2 12 0

A total of 5,042 chests of Leaf was on offer. There was a good general demand. Orthodox teas were irregular but were generally easier but the brighter liquoring C.T.C. Assams were often dearer although the plainer ones in this category met with less demand at easier rates.

FREIGHT MARKETS DULL

CHARTERING was very slack and the freight markets were dull during the past week. In the grain market, there were few bookings. Northern Range to Turkey was at $(U.S.) 6 with 1,000 tons discharge free. Gulf to Karachi paid $(U.S.) 23.50 free discharge, Gulf to Japan $(U.S.) 8 with 1,000 free discharge. U.S. north Pacific to Bombay paid 57s 6d 1,500 discharge gross terms. Australian grain shippers continued with their interest in March-April space for wheat from the West to the United Kingdom and space for barley to Japan 9,500 tons, 10 percent wheat in bulk for April shipment from Fremantle-Bunbury to the U.K. has been fixed at 60s. Transatlantic coal fixtures did not pay more than 21s 6d. Charterers for coal Poland-Alexandria accepted 33s 6d. A liner vessel has been fixed for a part cargo of 5,000 tons, 10 percent coal Hampton Roads to Japan at $(U.S.) 7.25 with 1,000 tons free discharge; 9,500 tons Cuban sugar to Japan was fixed at 61s, Cuba to Hongkong paid $(U.S.) 9.50 f.i.o.s. and free taxes. Mormugao to Japan 8,000 tons, 10 percent iron ore was fixed at 35s only and Mormugao to Constanza paid 36s 9d. Calcutta to Japan 9,500 tons 10 percent iron ore has been fixed at 40s f.i.o.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks were a little higher than in the previous week.

Bazaar Sales

(Between 4th March and 10th March, 1958)

Cowhides: Wet salted (Ord.) 13,188 pcs. on the basis of Rs. 11 to 12.50; Wet salted (Slaughtered) 11.420 pcs. on the basis of Rs. 19 to Rs. 23.50.

Goatskins: Wet salted (Patna and Daissee) 45,000 pcs. on the basis of Rs. 275 to Rs. 315 and Rs. 330 to 345; Wet salted (he-killed) on the basis of Rs. 4.12 and (she-killed) on the basis of Rs. 3.10 a piece; Assam-Maldah-Dinajpur 96,000 pcs. on the basis of Rs. 345 to Rs. 370 Purneah-Kissenganj 17,500 pcs. on the basis of Rs 327 to Rs. 360; Pakur (Ord.) 37,000 pcs. on the basis of Rs. 280 to Rs. 295; Muzafferpore (Heavy) 7,700 pcs. on the basis of Rs. 375.

Bazaar Stocks

(10th March 1958)

Cowhides: Wet salted 106,300 pcs.

Goatskins: Wet salted (Patna. Daissee and Killed) 21,000 pcs.: Assam-Dinajpur 110,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 448,000 pcs.

COMPANY AND PUBLIC NOTICES

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LTD.

NOTICE is hereby given that the One Hundred and Twenty-third Ordinary General Meeting of the abovenamed Company (being an annual general meeting within the meaning of the Companies Act, 1956) will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 31st March, 1958, at 11-20 a.m. for the following purposes :—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1957, and the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.

(2) To declare a Dividend on the Ordinary Shares

(3) To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 21st to the 31st March, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend, and on a poll, to vote instead of himself. A Proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

RAMPOORIA COTTON MILLS LTD.

NOTICE is hereby given that the Fifteenth Annual Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 147, Cotton Street, Calcutta, on Monday the 31st March, 1958 at 2 P.M.

(a) To receive and pass the Directors' Report and Audited Accounts for the year ended 30th June, 1957,

(b) To declare dividend on Ordinary Shares and Deferred Shares,

(c) To elect Directors,

(d) To appoint Auditors of the Company and to fix their remuneration,

(e) To consider and pass the following Resolution :—

"RESOLVED that the mill Accounts be not audited in view of the delay and expenses involved in such audit and only certified returns from the Mills be submitted to the Auditors for their verification."

EXPLANATORY STATEMENT.

Re: Item (e) of the notice of the general meeting dated 3rd March, 1958 below :— your attention is invited to the fifth paragraph of the Directors' Report. In view of the time and expense that may be incurred in audit of the Mill account and the consequent delay in publishing the balance sheets the Directors propose that a resolution be passed in a general meeting by the shareholders as provided in Sec. 228 of the Companies Act, 1956 to waive the audit of such Mill account. Hence the proposed resolution.

And (f) To transact any other business that may be brought forward.

The Share Transfer Register will be closed from 17th March to 31st March, 1958, both days inclusive.

By Order of the Board of Directors,
NATHMULL RAMPURIA,
Director.

147, Cotton Street,
Calcutta, 3rd March, 1958.

Note :—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE CENTRAL BANK OF INDIA, LIMITED.

NOTICE.

NOTICE is hereby given that the Forty-seventh Annual General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Friday, the 28th day of March, 1958 at 4 P.M. (S.T.) to transact the following business:—

1. To receive and consider and adopt the Report of the Directors and the Audited accounts for the period ended 31st December, 1957.
2. To declare a dividend.
3. To appoint a Director in place of Mr. Cooverji H. Bhabha who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
4. To appoint a Director in place of Mr. Dharamsey M. Khatau who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
5. To appoint a Director in place of Mr. Manmohandas M. Amersey who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr Manmohandas M. Amersey who has attained the age of 67 years and who retires by rotation under Article 92 of the said Articles of Association read with Section 256 of the Companies Act, 1956, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him".

6. To appoint Auditors and to fix their remuneration.

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 3rd March, 1958.

Note :—

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(a) The Transfer Books of the Bank will be closed from Friday, the 7th day of March, 1958 to Friday, the 28th day of March, 1958 (both days inclusive).

(b) Dividend Warrants for the half-year ended 31st December, 1957 will be posted to the Shareholders at their registered address on and after the 31st day of March, 1958. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE.

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To,

The Shareholders of
The Central Bank of India, Limited.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to item 5 mentioned in the accompanying Notice dated the 3rd March, 1958.

2 In respect of item No. 5, it is notified that Mr Manmohandas M Amersey who retires by rotation and is eligible for re-appointment, has attained the age of 67 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item No. 5. Mr. Amersey has been a Director on the Board of this Company since 1947. As a businessman of wide experience, he has proved himself very useful on the Board and it is in the interest of the Company that the Board should continue to receive the benefit of his services.

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 3rd March, 1958.

THE ASSOCIATED HOTELS OF INDIA LIMITED

AGENDA FOR THE 41st ORDINARY GENERAL MEETING.

NOTICE is hereby given that Forty-first Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, Cecil Hotel Annexe, Simla, on Monday the 31st March, 1958 at 3 P.M., for the following purposes :—

1. To consider and adopt the Directors' Report, Audited Balance Sheet and Profit & Loss Account for the year ended 31st March, 1957, and the Auditors' Report thereon.
2. To confirm the payment of 7% dividend on the Preference shares of the two half years ended 30th September, 1956 and 31st March, 1957 respectively.
3. To declare dividend on the Ordinary Shares. (The dividend, if declared, will be paid to the Registered Shareholders or their nominees, whose names are on the Company's Register on 31st March, 1958. The payment will be made within a month after its declaration).
4. To appoint a Director in place of Lord A. K. Sinha of Raipur who retires by rotation and being eligible, offers himself for re-election.
5. To appoint a Director in place of Shri D. N. Bhattacherjee who retires by rotation and being eligible, offers himself for re-election.
6. To elect Auditors and fix their remuneration.
7. To consider and pass, if thought fit, the following as a special resolution :

RESOLVED, as a special resolution, that further to Resolution No. 3 of the Extraordinary General Meeting dated 14/8/1956 approving the payment of Commission of 10% on Board and Lodging charges on customers introduced by Messrs. Mercury Travels (India) Private Ltd., to the hotels owned and run by the Company, the Company further approves that any increase in the usual agents commission which is payable to the other Travel Agents be also paid to Messrs. Mercury Travels (India) Private Ltd.

EXPLANATORY STATEMENT :

Messrs. Mercury Travels (India) Private Ltd., is a private company in which Rai Bahadur M. S. Oberoi, Shri T. R. Oberoi, Shri P. R. S. Oberoi, Shri G. K. Khanna and S. Man Singh are Directors. The first three are also directors and/or members of the Managing Agency Company. The extra commission allowed to Mercury Travels (India) Private Ltd., is the usual commission given to all the Travel Agents in India and abroad who introduce customers to the hotels of the company in two or more different hotels in different cities in the same trip.

8. To transact any other business of the Company, which it may be competent for the Meeting to transact. The Share Transfer Registers will remain closed from 18th March 1958 to 31st March, 1958, both days inclusive

By Order of the Board,
S. S REEN,
Secretary.

Delhi,
7th March, 1958.

Note: A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

MACNEILL & BARRY, LTD.

NOTICE is hereby given that payment of the half-yearly Interest on the 5% Debenture Stock 1966-71 of the Company will be made on 1st April, 1958 to those stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary.

2, Fairlie Place,
Calcutta-1, 12th March, 1958.

STATE BANK OF INDIA'S

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA 5-58-1*

THE UNITED COMMERCIAL BANK LIMITED.

Registered Office: 2, India Exchange Place, CALCUTTA-1.

NOTICE

NOTICE is hereby given that the Fifteenth Annual General Meeting of the Shareholders of THE UNITED COMMERCIAL BANK LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 9th day of April 1958, at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1957, and Profit & Loss Account for the year ended 31st December, 1957.
2. To declare a dividend.
3. To elect four Directors in the place of
   Shri M. L. Tapuriah
   Shri I. P. Goenka
   Shri A. C. Law
   Shri R. L. Nopany
   who retire under Article 92 of the Articles of Association of the Bank, and, being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and, if thought fit, to pass, with or without modification, the following resolution as a SPECIAL RESOLUTION:

   "That Articles of Association of the Company be altered in manner following:

   (a) In Article 22—lines 8, 9 and 10 the words 'or the Directors may agree with such member that the member may participate in profits upon the amount so paid or satisfied in advance' appearing after the word 'upon' in the eighth line of the said Article 22 and ending before the word 'And' in the tenth line thereof be deleted.

   (b) That the first paragraph of Article 87 be deleted and the following be substituted in place thereof: '87. Each Director shall be paid out of the funds of the Company by way of remuneration a sum of Rs. 500/- every calendar month.'"

Note: 1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (a) The transfer books of the Bank will be closed from Monday, the 24th day of March 1958 to Wednesday, the 9th day of April 1958, both days inclusive.

   (b) The dividend, if sanctioned, will be payable on and after the 10th April, 1958, to those Shareholders whose names appear in the Register of Members on Wednesday, the 9th day of April, 1958.

   (c) Dividend Warrants will be posted to Shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise change in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

The item of Special Business to be transacted at the Annual General Meeting to be held on the 9th day of April 1958 is to consider and pass a Special Resolution seeking to alter articles 22 and 87 of the Articles of Association of the Company.

Item 5 (a): The words "or the Directors may agree with such member that the member may participate in profits upon the amount so paid or satisfied in advance" appearing in the 8th, 9th and 10th line of the existing Article 22 are likely to be construed to contravene or violate the provisions of Securities Contracts (Regulation) Act 1956 and the Securities Contracts (Regulation) Rules 1957, which have come into force since 20th February 1957 and which, *inter alia*, provide that any amount paid in advance of calls on any share may carry interest but shall not entitle the holder of the shares to participate in respect thereof, in a dividend subsequently declared. To remove all doubts the Company has been advised to alter the said Article 22 by deleting the above words.

The Directors have no interest in the above amended Article 22.

Item 5 (b): This refers to the remuneration by way of sitting fee payable to the Directors which, in accordance with first paragraph of the Article 87 of the existing Articles of Association, is a sum not exceeding Rs. 100/- for each meeting of the Directors or any Committee of the Directors attended by him.

It is now proposed that a remuneration of Rs. 500/- per month be given to every Director instead of sitting fees of Rs. 100/- per meeting.

The responsibility of the Directors has considerably increased under the new Companies Act and their work has also increased by reason of the increased volume of business that the Bank has to handle compared to what was being done in the first few years. The Directors have to devote a good deal of time for attending to the affairs of the Bank at its meetings or otherwise. In view thereof, it has been proposed that the remuneration of Directors be increased as stated above.

The Directors are interested in the amended Article 87 which seeks to increase their remuneration as aforesaid.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta,
4th March, 1958.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE is hereby given that the Directors have decided to declare a second Interim Dividend on 24th March 1958 (additional to the Interim Dividend of 2%, free of income tax, declared on 13th August 1957) in respect of the Company's financial year ending 31st March 1958, of 2%, free of income tax, payable on or after 8th April 1958 to registered shareholders whose names appear in the Register on 24th March 1958 or to their mandatees.

Transfers received at the Company's Registered Office before 12-30 p.m. on 22nd March 1958, will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

Virginia House,
37, Chowringhee,
Calcutta.
8th March 1958.

N.B. Shareholders should inform the Registrar of any changes in their registered addresses.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

ANOTHER BAD YEAR FOR THE JUTE MILLS

BRIGHTER PROSPECTS IN FUTURE

TWO years of poor trading and the prospects of continued depression in some of its most important markets, are not the kind of thing to encourage any industry to be optimistic. Yet the most notable feature of the speech Mr. D. P. Goenka, chairman, made to the annual general meeting of the Indian Jute Mills Association in Calcutta last week, was the quiet faith it expressed in the future. This was mainly due to the progress the mills have made in their programme of rationalisation and modernisation, although it also owed a good deal to the improvement in the gunny stocks position and to the success which is attending the present efforts towards self-sufficiency in raw material. Demand for jute goods has shown little sign of reviving just yet; the trading losses of 1956 and last year are having what Mr Goenka called a "cumulative effect": no relaxation can be expected in the competition from substitutes; and the movement towards self-sufficiency in many of India's smaller markets shows no sign of slackening. The fact, therefore, that the industry can look forward with some confidence is all the more remarkable, and underlines heavily the importance of the recent efforts to bring the mills up to something like modern standards in both equipment and organisational efficiency. This process, Mr. Goenka reported, is still going on. Perhaps its chief impediment at the moment is the prevailing attitude towards labour redundancy: the Government has helped overcome the shortage of financial resources. This attitude, according to the chairman, is the State Government's rather than the labour unions'. There is nothing surprising in this. Unions are usually more concerned with the interests of members who keep their jobs rather than those who must obviously lose them. The State Government, on the other hand, has to keep an eye on the overall employment position. But what all parties would do well to remember is that the industry's long-term health is the factor which ultimately governs its employment potential and its ability to pay taxes and earn foreign exchange. To ensure this, there should be no hurry to interfere with the present plans for strengthening the industry's competitive position, because it is these and these only which stand between the mills and ultimate capitulation to the rigours of a cut-throat world market.

Even Mr. Goenka's optimism did not altogether offset the fact that the mills had another bad year in 1957. Stocks were reduced, but only from the uncomfortably high levels with which the previous year ended. Offtake was well maintained, but total production had to be reduced by 63,000 tons to achieve the more favourable stock position; and it is output which, in any given market conditions, determines the mills' earnings. The most disturbing feature was the performance of exports, which were reduced by about 15,000 tons. This is not a matter in which the industry has much cause for satisfaction, and it is the one which holds least promise for the immediate future.

The demand prospects in the main world markets for jute goods have altered little since the end of 1957. The United States market is still in the throes of recession and its short-term value will continue to be governed by this factor. In the long run, however, the efforts the industry itself is making should be decisive. Not that there is much chance of this market expanding appreciably in the foreseeable future; jute will have to work hard simply to hold its own. But Mr. Goenka's report was a reassuring one. The industry is alive to its position and is obviously making commendable effort to safeguard it, especially against those two chief competitors, paper and bulk handling. It is probably true that the main hope of expanding sales in this market now is to concentrate promotion activities on the industrial use of jute goods. The problem of the other two large markets for hessian—Britain and the Argentine—appears more political than economic. It is difficult to see what can be done to persuade the U.K. jute control to relax its present restrictions, at least not while the threat of widespread unemployment continues. As Mr. Goenka commented, however, the present position merely encourages the growth of substitutes without materially helping the competitive position of the Dundee mills. Britain might do well to adopt a more reasonable attitude towards imports of Calcutta goods before the market is entirely lost to paper. Prospects in the Argentine market look brighter now that political conditions are more settled, while those in Australia are, according to Mr. Goenka, expected to improve. In the absence of world depression, therefore, demand this year should not fall far behind that of 1957, if in fact it does not show some modest improvement.

Discussions of the demand prospects for jute goods are apt these days to return to the subject of internal offtake. This was disappointing during 1957: showing a total fall of 14.000 tons. What is perhaps most unfortunate about this performance is the fact that it occurred just when the rest of the world as well was buying fewer jute goods. The jute industry is an essential part of the Indian economy, and its stability is a matter of national concern. It does seem, therefore, that there is a strong case for regulating internal purchases so as to compensate, not complement, the unavoidable ups and downs of world demand. This could probably be done without too much trouble. It is true that the actual offtake for any one year is not known until some considerable time after. But it is not impossible to judge roughly what is going to happen in the world's markets at the opening of each year, and for the Indian Government to regulate its purchases accordingly. If some effort is already being made to do this, it is not yet apparent in the results. The cost of it would be negligible because, over time, purchases need not exceed actual internal demand. Official efforts to popularise the use of jute goods in India would be of further assistance to the industry, and one which would help strengthen its competitive position on world markets.

Two factors Mr. Goenka mentioned should contribute to the stability of market conditions in Calcutta. The first is the apparent change in the pattern of demand from a small number of large consumers towards a larger number of smaller ones. This means that the wide variations in the offtake of the chief consumers which often take place in a single year, now stand a reasonable chance of being compensated by fluctuations elsewhere—as happened in 1957. This is no insurance against the trade cycle, but it could help to flatten out the usual ups and downs. The second is the opening of a properly constituted futures market in Calcutta. This has been badly needed for a long time. If now, after such long deliberation, it is finally to be inaugurated, that should be a matter for considerable satisfaction. The damage which can be done by uncontrolled *fatka* trading has nowhere been better shown than during the past few weeks. If this element can be completely eliminated from the trading in jute goods, then both the industry and its customers should benefit. Mr. Goenka may or may not have been wholly correct when he placed the absolute level of prices in secondary importance to their stability, in the minds of buyers. But there is no contradicting the fact that the present wide fluctuations do nothing but harm to the buyers' confidence and have done a great deal to encourage the use of competing packaging materials in preference to jute. It will be interesting to see how the long-awaited futures market works out in practice when it opens "at the end of this month".

One of the most encouraging points which Mr. Goenka raised was the extent to which India has reduced her dependence on Pakistani supplies of raw jute. This is a trend which must continue if the industry is to prosper. It is heartening to find that official circles now appear to be more aware of this problem than they have ever been, and, with certain notable lapses, are doing their best to solve it. A supply of cheap raw material is essential to the mills. Yet, in the past few weeks, a fall in the price of the raw material has given rise to serious doubts about whether cultivators will find it worth their while to sow their jute. This phenomenon may be a function of the present high price of food. But it is unlikely to improve in the foreseeable future, especially in the over-crowded areas in which jute is grown. The only answer to this difficulty is the industry's campaign to increase the yield from each acre already sown to jute. Any move to expand the acreage, although welcome enough so far as the industry's supply problem is concerned, is likely to run up against the increasing need to grow more food. There is obviously room for a great deal more effort in this direction, just as there is in the other steps which are being taken to improve the industry's economic position. There is nothing in Mr. Goenka's speech to suggest complacency in any field. What problems do exist are being tackled to the best of the industry's ability. Those that remain depend a great deal on the sympathy of Government and officialdom.

A BLOW TO DEVELOPMENT

THE development rebate on new industrial equipment is one of the few instances of a genuinely powerful inducement to invest provided anywhere in the Indian tax system. Recommended by the Taxation Enquiry Commission and introduced by Mr. Deshmukh in 1955, it granted a 25 percent rebate on the cost of new plant and machinery installed in a business undertaking. To that extent, therefore, it made the installation of such equipment cheaper to the assessee. A firm buying new machinery worth Rs. 1 lakh, could claim a tax-free allowance of Rs. 25,000. In other words, Rs. 25,000 out of its current income would be deducted in computing the assessable income for tax purposes. For a joint stock company, the tax liability on Rs. 25,000 would work out to about Rs 13,000, at the rate of 51.5 percent income and corporation tax together. Thus, in effect, the machine bought for Rs. 1 lakh actually cost only Rs 87,000; the Government paid the other Rs. 13.000 by way of tax remission. A drastic revision and tightening up of the conditions governing the grant of development rebate, is now proposed for the 1958 Finance Bill. It is to be provided that an amount equal to the allowance on which the rebate is granted, should be debited to the profit and loss account and credited to a reserve account, to be used during the next ten years "only for the acquisition of assets for the purposes of the undertaking or for investment in the undertaking." It provides further that the development rebate be withdrawn if the assessee should sell or transfer the asset, to anybody except the Government, within ten years of the machinery or plant being installed. The Bill also proposes that the development rebate for new ships be increased from 25 percent to 40 percent. But here again the incentive effect is likely to be seriously impaired by the new restrictions.

The ostensible purpose of imposing these new conditions is to prevent the resources represented

by the rebate from being frittered away. In the Government's eyes apparently, one of the ways of "frittering away" the money is by distributing it in dividends. The insistence that the amount be debited to the profit and loss account and credited to a special reserve account, seems to be expressly designed to prevent its being so used. The Government's anxiety to ensure that the maximum possible sum be spent on investment is understandable and commendable. But the method adopted to attain that objective appears to be based on a misunderstanding about the true nature of the development rebate and the way in which it operates. A business incurring development outlay is given the rebate as a reward. The idea obviously is that the prospect of the rebate will attract those in charge of business undertakings to expand operations. The restrictions now proposed consider the rebate, not simply as a reward for development expenditure already incurred, but as a provision reserved exclusively for expenditure of this kind in the future. Hence the anxiety to prevent its distribution as dividends. It is not difficult to show that while the original idea of the rebate as a prize awarded for making development outlay was a powerful inducement, the rebate in its new form, hedged about with restrictions and reservations, will not only lose much of its incentive value, but may, in some conditions, actually discourage investment.

A company spending money on new machinery and plant and claiming the rebate will now be forced to lock up the allowance on which rebate is claimed in a separate reserve, from which drawings will be permitted only for certain strictly defined purposes, notably for further development expenditure. In the case examined above, an enterprise buying new machinery worth Rs. 1 lakh will have to weigh the advantage of a tax concession of Rs. 13,000 against the disadvantage of immobilising Rs. 25,000 for ten years, unless it is prepared to spend that amount on more machinery. There is obviously a limit to the amount of such machinery a business can use. Now, when buying the last lot of equipment it needs, the concern will be faced with the prospect that 25 percent of the price of that equipment will be frozen for ten years, unless it is prepared to forgo the benefit of the rebate. This is a remarkably queer way of encouraging investment. There might be some justification for earmarking the tax-saving itself for whatever purpose the Government thinks necessary. But as things are, not only the amount that would otherwise have gone as tax, but very nearly double that sum, is to be arbitrarily frozen by Government fiat. This would seem to be an altogether unwarranted interference with the freedom of managements to run concerns according to their judgment of how best their resources should be used. And it is difficult to see any sense at all in foisting machinery on a concern for ten years by prohibiting its sale on pain of forfeiture of development rebate. It may become obsolete before that; it may not work out according to expectations; the management may change its plans in the normal course of business. But the Government now decrees that the purchase is irrevocable and that, come what may, the concern must keep the machine, except in the very unlikely event of the Government itself wishing to buy it.

On principle, there should be no objection to allowing the concern to use the development rebate allowance for payment of dividend or for any other legitimate purpose. Unlike depreciation allowance, it is not a cost element and there is, therefore, no justification for insisting that it be debited to the profit and loss account. The provision will fall particularly hard on three types of concern. First, new enterprises will henceforward be less attractive to investors, because when they start earning profits, a proportion of these will have to go towards offsetting the losses accumulated through debiting the development rebate to the profit and loss account. Second, for similar reasons, companies with big expansion programmes (unless they already have large reserves) may find it difficult to maintain dividends until profits are large enough to offset the development rebate. Third, shipping companies, which the Government wishes to assist by raising development rebate from 25 percent to 40 percent, are unlikely to appreciate such solicitude, seeing that a correspondingly larger portion of their available funds will be frozen, and artificial losses created, and these must be made up before dividends can be paid. One wonders if it is the Government's intention to discourage the flow of capital to these three classes of concern. If not, then here is yet another instance of a half-baked fiscal device the implications of which have not been fully realised by those who framed it. One of these implications, worthy of particularly serious consideration, is that spoiling dividend prospects is not the best way to stimulate savings and investment. The additional resources secured by forcing business concerns to re-invest the development rebate allowance, is likely to be greatly outweighed by the damage to incentives to save and invest caused by the restrictions on dividends which are likely to result from the development rebate in its new form.

THE BRITISH "MIRACLE"

NEW RESISTANCE TO WORLD RECESSION

YEAR after year the peoples of other countries have been invited to contemplate "the German miracle". The contrast between Germany, advancing steadily in economic strength, and Britain, staggering from crisis to crisis, has been particularly marked. But now, while the German miracle is faltering, the British economy, seemingly oblivious of economic trends elsewhere, shows signs of unwonted stability. People are beginning to ask whether in the coming years "the British miracle" will be held up as an example. The pointers on which attention is focussed are, of course, the import-export trade and the gold-dollar reserve. The narrowing of the gap between imports and exports and the increase in the reserve have suitably impressed opinion abroad, which is well aware that the crisis of 1957 left the country unfit to suffer another period of difficulty without first enjoying a period of rehabilitation. Financially, that rehabilitation has undoubtedly been in progress in the last few months.

Improvement in the nation's finances would not, however, be adequate compensation for a decline in production and a rise in the numbers unemployed such as some other countries have suffered. In fact, production and trade have been remarkably steady, and the increase in unemployment, though enough to arouse some comment, has not been enough to change the state of "full employment" that seems to be an essential of political stability in Britain. So we have a rather surprising picture of a country lately declared nearly bankrupt by critics abroad, contemplating relaxation of its financial policy, not to reactivate languishing business, as some other countries are doing, but because the financial restraints have (or so it seems) mainly fulfilled their purpose.

This state of affairs requires some explanation —and the happy conclusion requires some qualification. There is no doubt that the restrictive measures imposed last September have been an important factor in the recovery. Nobody can say confidently whether the high Bank rate or the limitation of the banks' lending has been the more effective in a material sense, but all the measures combined—including the Government's not wholly successful efforts to control its own spending—have certainly had a favourable psychological effect abroad, convincing foreign operators of the Government's intention to strengthen the currency. But it must be recognised that the currency is being defended at a relatively low level of activity. One of the more depressing facts officially revealed this year is that Britain's share of total exports of manufactured goods continued to decline last year. The favourable overseas trade figures of recent months result not from an expansion of exports but from a reduction in the value of imports more rapid than the reduction in the value of exports. The decline in commodity prices has so improved the terms of trade that it is comparatively easy to balance the visible trade account. But this achievement cannot give complete satisfaction if the trade in manufactures is being reduced by the decline in the primary producers' purchasing power and if Britain's share of that trade is diminishing.

The fact that Britain's exports have diminished only slightly in recent months while international trade in manufactures generally has been less buoyant than before suggests that Britain's share is no longer diminishing. But (if so) is the explanation that Britain is getting an increased proportion of new orders or that she is still working off old orders after her competitors had fulfilled theirs more promptly? The state of British order-books when the recession of trade began in America and elsewhere may well explain the internal stability of the economy. There was so much work to be done on existing orders that not even the sharp decline in new orders for machine-tools and ships, for instance, has had any effect on output. If the recession in world trade does not last long, new orders will doubtless flow in before it is necessary to reduce output in most industries and the recession in Britain will then have been virtually confined to a few activities, notably building, that are particularly affected by financial restraint at home. But even companies with a large volume of orders on their books—and still getting new ones on a satisfactory scale —admit that they could not remain unaffected by the American recession if it continued through the remainder of this year. Already there are ominously large stocks of coal and steel.

Time is the essential factor in this "British miracle". Britain can live on her fat for some time longer, but she cannot protect herself indefinitely against the chill winds of recession abroad. An appreciable further growth of unemployment at home would put the Government in a most distressing dilemma; for there would be insistent demands for a reflationary policy just when the state of international trade required extra caution. Just when the deflationary policy was on the verge of success—as it will be within very few months at the present rate of progress—its achievements would be jeopardised; for relaxation conceded for political and social reasons would be very different from a calm adjustment of policy to accord with a stabilised position. The British miracle could collapse overnight. However, we ought not to lapse into the pessimism that is almost a habit among observers of the British economic scene—whether at home or abroad, whether hostile or friendly. British exports to the United States (thanks mainly to the motor-car and bicycle industries) have climbed during the American recession to the highest points ever recorded. Even German firms have been buying machinery in Britain—because they can get quick delivery! British prices, eventually stabilised last year, are slowly declining this year and are, in most categories, competitive. Unless the tendency to restrict imports abroad develops, it should be possible to maintain British exports if adequate credit can be arranged: which is, essentially, a problem of strengthening reserves. There is still time to achieve, if not a miracle, at least a sound position.

ASPECTS OF LABOUR POLICY

INCREASING anxiety is being felt throughout the world over the prospect that the recession in world trade might deepen. But, in India, prices and costs remain high because deficit financing continues on a large scale, taxation is heavy and labour welfare burdens on industry have been increasing. The rigidity of the structure of industrial costs in this country will inevitably prove a serious handicap to economic expansion if the world recession continues; as international markets become more competitive, exports will suffer unless they can be sold more cheaply, and that would have far-reaching consequences at a time when there is an acute shortage of foreign exchange. The evolution of a realistic wage policy is therefore urgently necessary if India is to maintain her position in world markets, if domestic inflation is to be checked, and if production is not to suffer through labour unrest.

In his presidential address at the annual general meeting of the Employers Federation of India last week, Sir Homi Mody has reviewed the results of the tripartite Labour Conference held in July 1957. The Conference has laid down certain norms to be adopted for fixing the minimum wage, and for fair wages it has endorsed the recommendations contained in the report of the Fair Wages Committee. Since then, wage boards consisting of an independent chairman, two independent members and an equal number of representatives of employers and workers have been appointed for the textile and sugar industries; similar boards are being considered for other industries. Referring to these developments, Sir Homi emphasises that "a wage, in the last analysis, is a price to be determined by a fair compromise between the parties concerned, on a consideration of the productivity of labour and the capacity of industry to pay consistently with its obligations to the investor and the consumer. Emotional demands for blanket increases in wages, based on notions of a socialist pattern of society, should have no place in any scheme designed to ensure to both capital and labour its just rewards." Some trade union leaders have only recently begun to realise that if wages rise faster than production, ultimately the workers themselves will suffer by having to pay more for their consumer goods. Sir Homi hopes that labour will accept the necessity of linking fair wages to fair work-loads, so that efficiency of production and a lasting improvement in workers' living standards may be achieved.

Considerable interest centres on proposals for workers' participation in management, which were also discussed at the Labour Conference last July. Experiments are to be made on a voluntary basis in 50 selected undertakings, and Sir Homi mentions some of the primary conditions which need to be fulfilled before the experiments are launched. The conditions are that the undertaking should have a strong and well-established trade union; it should have a fair record of industrial relations; and the parties concerned should be ready to carry out the experiment in a spirit of willing co-operation. It has not been easy to find enterprises which satisfy these criteria, and Sir Homi rightly deduces that the time is not yet ripe for a widespread adoption of the principle of labour participation in management. He says, however, that "we have every intention of giving the scheme a fair and full trial, and creating the right atmosphere for co-operation between management and labour." Schemes such as this are apt to sound attractive in theory, but the trade union movement being in the condition it is, their success in the vast majority of enterprises looks doubtful. Instead of distracting the attention of labour by dangling before it the colourful carrots of socialist philosophy, one of the more tangible services which the Government could still render to the trade unions is to help them achieve greater unity and realism. Sir Homi's speech indicates that progress in this direction during the past year has been poor. The current troubles at the steel works confirm the impression, and suggest that the Labour Ministry's smug satisfaction over the results of the Labour Conference held eight months ago may be premature, to say the least.

CURRENT COIN

Competing for Deposits.—The past year has been a difficult one for the banks, because their resources have been inadequate in relation to borrowers' needs. At the root of the problem is the fact that savings are too small because taxation is heavy and inflation continues. Much of the money that is saved does not go into the banking system or the capital market since confidence is lacking in the Government's economic policies. Sir Cowasjee Jehangir, chairman, has told shareholders of the Bank of India at the latest annual general meeting that "there is no sign of any early relaxation in the present scarcity of funds" (extracts from the speech are published on a later page). He points out that banks depend on deposits, but when money is tight, the funds available for deposit are restricted. To attract the funds that are available, banks have to compete more actively, so higher rates of interest have to be offered and paid to depositors. The rise in deposit rates, coupled with the increase in operating costs and in taxation, has tended to absorb the increase in earnings resulting from higher advance rates. These factors seem to explain why the Bank of India's profit of Rs. 93½ lakhs during 1957 shows just a modest increase of Rs. 1½ lakhs over the previous year's figure. Sir Cowasjee nevertheless justifiably points out that "we have real cause for satisfaction in the result of the year's trading, having regard to all the circumstances in which our operations have been conducted." Other features of his speech include a strong protest against the Government's taxation policies. He says "the time is bound to come when the Government will have to retrace its steps from heavy taxation as it will find that the result will be much worse for the country." Taxation is a major reason why the small savings scheme is making poor progress: "How can the Government expect to have anything like a substantial amount from a small savings scheme when it takes away everything it possibly can by taxation?"

* * * *

Repayment of Foreign Loans.—The Prime Minister has just given the Rajya Sabha an idea of the heavy burden that the repayment of foreign loans and credits will entail in the coming years. The "really difficult" time, he says, will start after two years. While India will be required to pay back Rs. 23 crores in 1958-59 and Rs. 35 crores in 1959-60, she will have to repay Rs. 92 crores in 1960-61, Rs. 123 crores in 1961-62 and Rs. 107 crores in the following year. The payment will thereafter taper off to Rs. 48 crores in 1963-64 and Rs. 37 crores in 1964-65. Mr. Nehru says that the "slight consolation" is that there will be only three bad years when a very large sum of money will have to be paid. The repayment during these years will be heavy because the Rs. 95-crore standby credit from the International Monetary Fund will have to be returned. This list of liabilities, however, relates only to loans and credits already received, and does not include any further assistance that might be available later. Although the Prime Minister has not indicated in detail how India will repay the amounts, he says that the capacity to do so will depend greatly on the food situation and on the production of steel. The House is being presented with a paper on the latest foreign exchange situation (which he says has "considerably" improved). There has recently been a surplus in the balance of payments instead of the normal deficit, but there is hardly any reason for complacency over this. At a recent meeting of the Congress Parliamentary Party, there has been strong criticisms of the official policy on exports. Although the high rate of excise duty on textiles might have increased exports, this was achieved by distorting the marketing and production structure, with the result that there has been large-scale unemployment because of the closure of mills. The policy of levying high taxation on major foreign exchange earners is extremely short-sighted, since cloth, tea and jute goods together comprise over 50 percent of India's exports. It is necessary to increase their exports to tide over the peak period of three years when the repayment of foreign loans will fall due. Mr. Nehru has assured the the Congress Parliamentary Party that the Government will seriously re-examine the export duty on low-grade teas. He also agrees with the suggestion that instead of importing large quantities of foodgrains, the Government should use part of the money to import fertilisers, or to import machinery to set up more fertiliser factories. While it is reasonable to try to increase the supply of fertilisers, it is important to remember that this alone will not raise food production unless land reform measures are expeditiously implemented. Some may think it ironic that while people cry for more food, the Government proposes to establish more fertiliser factories. There seems to be a confusion between short-term and long-term remedies, for the establishment of fertiliser factories will take time. On the other hand, a rise in food production is an immediate necessity since it will help check the steady drain on foreign exchange resources.

* * * *

Textile Troubles in Madras.—Following a statement by Mr. R. A. Podar, chairman of the Bombay Millowners Association, Mr. R. Venkataswami Naidu, chairman of the South Indian Millowners Association, has called attention to the crisis in the textile industry. Taxes are blamed, but it is admitted that the increase in spindleage and expansion in cloth output has contributed to the depression. The lack of demand for cloth is not as disturbing as the lack of self-sufficiency in cotton, according to Mr. Naidu. He points out that costs of production have been raised by higher wages and the higher surcharge on electric power. Curtailment of output appears to be the immediate remedy, except that lay-off compensation is involved. Mr. Naidu, however, says that labour should desist from asking for increased wages and an agreement to freeze wages is required in order to boost the export trade. The statement is a clear indication of the unhappy experience of the mill industry in 1957. It shows the unwisdom of starting new spinning mills for the sake of the handloom industry. The high cost of new spindles is one factor to consider; the high cost of cotton is another. The textile crisis suggests that the handlooms cannot flourish if the cotton mills' earnings suffer. The cut in Gokak Mills' dividend for 1957 to 8 percent shows that spinning mills outside Madras have not escaped the consequences of the yarn glut. The position of the textile industry as a whole should, however, improve with the cut in excise duties announced this week.

Up and Down in Agriculture.—The latest summary report of the Central Ministry of Food and Agriculture (Department of Agriculture) says that the all-India index of agricultural production for 1956-57 (1949-50 equals 100) rose to 123 from 115.9 in the previous year, showing an overall increase of more than 6 percent. This was a record level of production coinciding with the first year of the second plan. The rate of increase compares favourably with the target, which expects an

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the **United Bank** is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

annual increase of 5.4 percent. The report says that the production of foodgrains during the year touched the peak level which was reached in 1953-54, and at 68.7 million tons was over 5 percent higher than the 65.3 million tons for 1955-56. But the outlook for the *kharif* crops in 1957-58 is not satisfactory because of unfavourable weather in many areas. Large parts of Uttar Pradesh, Bihar, Madhya Pradesh, West Bengal and Orissa have been affected by a prolonged spell of drought, as a result of which cereals, particularly rice and *bajra*, have suffered considerable damage. In spite of the setback in food production, the prospects for commercial crops are encouraging; preliminary reports indicate a higher acreage under sugarcane and some oilseeds in 1957-58 than in the previous year. Compared with 1955-56, cotton production in the following year increased by 18 percent, sugarcane by 13 percent and oilseeds by 6 percent. Discussing improvements in farming practices, the report says that increased emphasis was laid on minor irrigation works "which yield quick results at cheaper cost." The consumption of fertilisers has increased while a scheme for the multiplication and distribution of improved seeds is being vigorously pursued. Considerable progress has been achieved in most spheres of co-operative activity. The programme for 1957-58 includes the organisation of 497 marketing societies, the construction of 1,455 godowns and the setting up of seven State warehousing corporations. Besides, it has been decided to carry out about 3,000 co-operative farming experiments during the next three years, 600 of which will be taken up in 1958-59. These experiments are likely to assist in the evolution of an appropriate pattern for co-operative farming societies. The programme of research has been expanded by the Ministry to help raise the tempo of agricultural development. The Indian Council of Agricultural Research has sanctioned 189 schemes involving a total amount of Rs. 103 lakhs.

* * * *

Survey of Hire-Purchase Finance.—Hire-purchase plays so large a part in trade these days that it is surprising that literature on the subject is comparatively scarce while such as is available usually emanates from interested sources. It is all the more useful, therefore, that the growing part which hire-purchase finance plays in Britain's economy has led to the publication of a comprehensive survey by the independent Institute of Economic Affairs. The operations and principles of the finance houses have been subjected to close scrutiny. Further growth is anticipated, with important repercussions in other fields of finance. It is expected that some leading English banks will participate in hire-purchase within a few years, and it seems likely that the Building Society movement may have to make major changes to meet the rivalry for deposits. Deposits are already contributing a larger share than previously of the funds required, and this has caused the finance houses to give more attention to the relationship between their various sources of money. The authors doubt, however, whether uniform standards of liquidity are possible. The survey is strongly defensive about inflation, claiming there is no evidence that hire-purchase operations provide a serious independent inflationary element and that the remedy for inflation is in attacking causes, not symptoms. As a result of Capital Issues Committee policy, it is argued that the natural growth of the larger and stronger finance houses has been inhibited, and the establishment of "fringe" companies encouraged. Most of the useful recommendations made follow from this point of view. One suggestion is that finance houses should not be permitted to advertise for deposits until they have a long enough history to enable their status to be assessed. Attention is drawn to the dangers inherent in the policy of financing "stocking plans" for car dealers undertaken by some houses. The security for the loans is considered unsatisfactory.

* * * *

Economic Growth.—In a recent lecture in Madras, Professor Gunnar Myrdal has declared that the increase in south-east Asia's population is retarding economic development. He points out that political changes have preceded the industrial revolution and adult suffrage has been adopted without the time-lag noted in Europe. Greater care is necessary in adopting theories of economic growth, in view of the shortage of capital at home and abroad. At a time when the E.C.A.F.E. meeting at Kuala Lumpur has been examining the needs and problems of the poorer countries, Professor Myrdal's views on the division of labour deserve attention. Regional co-operation should be kept in view while industrial growth is planned. For instance, India can produce iron and steel but it is claimed that rubber manufacture would be more paying in other countries. Professor Myrdal makes the point that India is not a big country in the economic sense and will not become a big industrial power even if she succeeds in her plans 20 years hence. In terms of national income and industrial output, she is smaller than Belgium or Sweden. Planners in Asia need to make sure of food supplies and cultivate greater realism about developing heavy industry immediately. Professor Myrdal's lecture reminds one of a Chatham House publication which urged that efforts be made to raise food production by developing the fertiliser industry, using compost to raise yields, improving water supplies and checking soil erosion.

* * * *

More Factories, More Jobs.—An official report shows that an increase in the number of factories in Madras during 1956 was accompanied by an increase in employment. While many factories did not use power, they were liable to inspection and compliance with the Factories Act. The trends in employment are significant. More than 10,000 workers found jobs in cotton gins and presses, while rice mills provided regular work for more than 10,600 people, including women. The two vanaspati factories were unimportant from the employment angle, but tea manufacture gave work to 5,228 people. Cotton mills offered jobs to over 100,000 but sugar mills employed only 3,650 persons. While the Government-owned and municipal establishments had 34,771 workers, the private sector employed about 260,000. The 85 major tanneries employed about 5,200 persons only. The three cement factories in Madras employed 2,395 men and 49 women, while the 30 small match factories gave work to 2,298 people, including 264 children. Engineering establishments are not big employers, and motor workshops employing over 10,000 workers are more significant than the two automobile plant which employed 1,103 workers. A fall in the number of fatal accidents and efforts to improve the lay-out and design of factories are gratifying features recorded in the report. Few factories worked above 48 hours a week.

* * * *

Insurance of Nuclear Risks.—Faced with the problems that a vast increase in the industrial use of nuclear energy is likely to bring for insurance companies, a special study group of the Chartered Insurance Institute in Britain has met 72 times in the past year to investigate the new perils that may arise. Its report contains some striking conclusions which may have an impact on many types of business during the next few years. While the technical nature of the subject creates difficulties for many insurance men, it can be said that the greatest problem is the now well-known risk of contamination from radiation. This may mean that a fire or explosion in a factory using radio isotopes will create a great and unprecedented danger; the risk of this may be increased as such materials come into more general use. Either products or people can be affected by radiation, and the ultimate damage may not become apparent for several years. The insurance industry is concerned to make its position clear on the claims that may arise. Here there has been a clash of views, particularly about claims by third parties. The British Insurance (Atomic Energy) Committee considers that the industry should continue to accept this possible risk, but now the Institute study group recommends that public and employers' liability policies should exclude all liability arising from radioactivity. This cover should be dealt with separately. To a great extent insurers must be working in the dark at present, without adequate data on which to base their future premiums. With the recent Windscale incident fresh in mind, they are obviously concerned about the wide gaps in existing safeguards. It is suggested that, with minor exceptions, there is no real control over the lending or resale of radioactive materials and, as yet, there are no special Government regulations. Premises other than factories are not under special supervision and no arrangements exist to notify fire brigades of the special risk where radio isotopes are in use. Marine, aviation and life assurance policies will all have to be reconsidered. In all these matters the insurance industry will be probing into the unknown when considering the impact and perils of the nuclear age.

Madras Diesel Oil Sales Tax.—Road transport in Madras will suffer as a result of the recent State Budget, and Opposition speeches in the Assembly have emphasised how the proposed increase in sales tax on diesel oil from 10nP to 35nP a gallon will affect bus-owners and others. No increase in fares can be contemplated. The Motor Vehicles and Allied Merchants Association points out that the tax on vehicles in Madras is the highest in India. It is calculated that the additional tax on diesel oil will work out to Rs. 800 a year for each vehicle. As users now increasingly prefer lorries for carrying small parcels, the imposition of the levy is widely deplored. According to Mr. K. Hariharan, chairman of the M.V.A.M.A., there are 3,500 buses and 7,500 lorries among the 35,000 vehicles registered in Madras. After the increase in tax on diesel oil last year, a further rise will prevent the growth in road vehicles which is required when traffic is expanding. Operating profits will be reduced and the policy of liberal licensing of road transport will be offset by the extra tax, which, like the tax on bus seats, really affects the operator rather than the passenger. The present competition for carrying goods suggests that rates cannot be increased easily. The shortage of rail transport facilities in south India emphasises the need to encourage road transport. The sale of new vehicles and spares might also suffer through the additional tax on the fuel used: the automobile industry's prospects will be dimmer in consequence. The protest may not help in view of the proposals in Bombay and Kerala for enhancing taxation by a surcharge on bus fares and on oil. But it is noteworthy that even after the development of road transport, Madras has only one bus for 16 square miles. For short journeys, buses are invariably preferred, being faster, safer and cheaper.

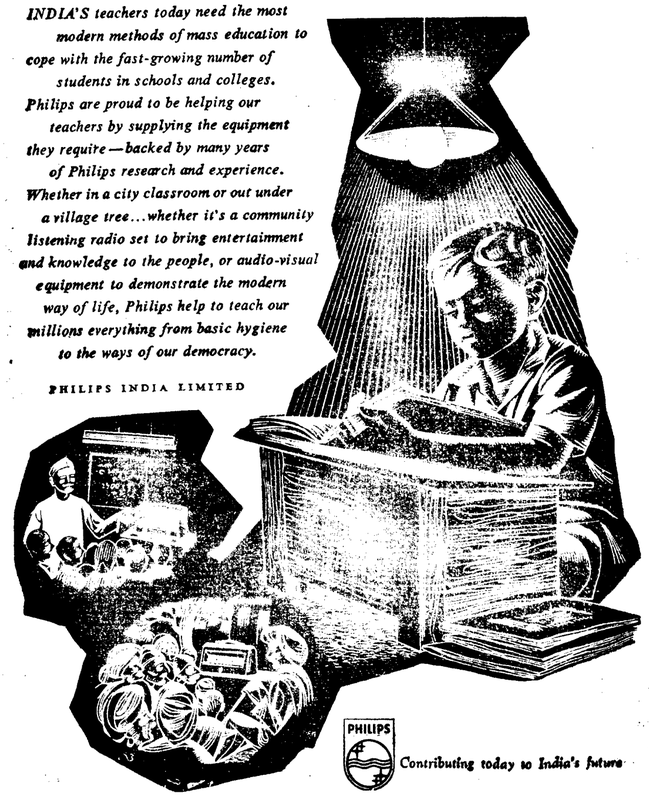
* * * *

Swiss Industries Fair.—This year's Swiss Industries Fair will take place in Basle from 12th to 22nd April. More than 2,300 exhibitors will take part in it, and the exhibition area will be increased to 1,375,000 square feet by the addition of a new machinery hall. There will be a comprehensive display of machine tools and tools for the metal-working and electrical industries. Besides, the products of important groups, such as wood-working and building machinery, transport equipment, watches and textiles, will be displayed at the Fair. Visitors are, therefore, expected to get an idea of the wide range of Swiss manufactures. No less than 30,000 foreign visitors came to the Fair last year, and this shows its international importance.

* * * *

British Machine Tool Industry.—One way or another, the British machine tool industry has come in for a good deal of criticism, on the ground that it has failed to develop in line with demand for its products, leading to over-full order books, delivery delays and other shortcomings. Today, with the postwar boom almost at an end and conditions more normal, it looks as though the British industry was wise not to over-expand. That is the impression given by its latest offering—a reasoned answer to its critics, in an interesting booklet about itself. For instance, the capital employed in "115 representative firms" has risen in the last ten years from £22.5 million in 1948 to £78.5 million at the end of last year. By 1960, it is estimated that they will be using £93 million. Part of this has been used in expanding factory buildings; in these ten years 4.7 million square feet of space has been added at a cost of £8.8 million, and a further expansion of 2 million square feet is proposed between now and 1960, which will cost £5.2 million. New machinery during the last ten years has cost these 115 firms £21.4 million and they plan to invest another £9.6 million on plant during the next two years. This only accounts for £31 million of the new capital employed, so the balance is probably due to price rises. The industry wants to "satisfy fluctuating home demand by varying imports, but not by varying exports." This is the guiding rule. It accounts for the failure to expand capacity during the last few years. Admittedly the object is always to achieve maximum exports: but if domestic production had been larger, exports would surely have been larger as well, and fewer imports would have been needed. On the other hand, it is the Americans who have the excess capacity to worry about now.

CURRENCY CONVERTIBILITY



WE drew attention lately to the unanimity of opinion, both among the leaders of the commercial community and the Indian press, in deprecating any further merely experimental or transitional expedients for fixing exchange, and in demanding an absolute and permanent guarantee on the part of Government of the exchangeability of rupees for gold at fixed approximate rates. The two most obvious defects of the "Barbour scheme" were: 1st, the attempt to secure gold without incurring expense in borrowing by creating stringency in the Indian money markets: 2nd, the resolve to postpone convertibility until gold had been secured to an extent sufficient to give India a gold currency. It is now generally admitted in India that these features of the scheme are impracticable and mischievous: and the desire is that the attempt to establish a gold currency in India shall be abandoned and that immediate arrangements be adopted to make the rupee currency convertible into gold for foreign payment purposes in a manner that will limit demands for conversion to those necessary to fix exchange, and that Government will engage absolutely and permanently to fix the gold value of the rupee currency in this effective and economical manner.

In Education **PHILIPS** help to teach the modern way

INDIA'S teachers today need the most modern methods of mass education to cope with the fast-growing number of students in schools and colleges. Philips are proud to be helping our teachers by supplying the equipment they require—backed by many years of Philips research and experience. Whether in a city classroom or out under a village tree...whether it's a community listening radio set to bring entertainment and knowledge to the people, or audio-visual equipment to demonstrate the modern way of life, Philips help to teach our millions everything from basic hygiene to the ways of our democracy.

Without Prejudice

A LADY IN THE "LADIES"

DAMAGES CLAIMED FOR BREACH OF CONTRACT

(FROM OUR LEGAL CORRESPONDENT)

"LADY locked in 'Ladies'. Leave to appeal on claim for injuries in escape attempt." Such a heading to a law report in the decorous columns of *The Times* promises to be of interest, and the writer is grateful to a Bombay reader for having forwarded a cutting of the report from the issue of 14th January, 1958. Mrs. Eileen Sayers of Parsonage Leys, Harlow, had sued the Harlow Urban District Council on a claim for breach of contract and negligence in attempting to get out of a public lavatory after being locked in by reason of a defective lock. "Breach of contract". What is the contract? In order to ascertain this, let us get out of the way the two silly euphemisms "ladies" and "lavatory". There is no word known to the law as "ladies", any more than there is such a word as "gentlemen's"; and a lavatory is a room for washing hands and face. What is meant is a water closet; and the contract between the owner of the same and its patron is that in consideration of a monetary payment by the latter to the former, the patron is allowed ingress thereto, quiet enjoyment thereof and safe exit therefrom after a reasonable sojourn therein.

The whole point in this case is "safe exit". The lady had paid the consideration money and had been allowed ingress; she had, in the words of counsel later, "fulfilled the purpose for which she entered the 'lavatory'" and then tried to leave. But on account of the faulty lock she found herself locked in, and her case was that after attempting to attract attention she had tried to climb out, fell and injured herself in doing so. The county court judge had found that there was negligence and breach of contract by the Council, but that in attempting to climb out the plaintiff had behaved unreasonably and the damage suffered did not flow from the breach.

We will stop there a moment and consider those last nine words. The law in India is substantially the same on damages for breach of contract as in England but much more clearly expressed. It is expressly laid down by Section 73 of the Indian Contract Act that "when a contract has been broken, the party who suffers by such breach is entitled to receive from the party who has broken the contract, compensation for any loss or damage caused to him thereby, *which naturally arose in the usual course of things* from such breach or which the parties knew when they made the contract to be likely to result from the breach of it." There are two facts we have omitted to mention. All this happened in broad daylight and the lady's husband, who knew where she was, was waiting for her only two minutes away. Now, if I am the owner of a public "lavatory" and one of my lady constituents is locked in one of my water closets through my negligence and I thereby break my contract with her to allow her exit, is her clambering on to the seat and from there trying to climb a seven-foot wall something which "naturally arose in the usual course of things from such breach" or which I "knew.....would be likely to result from the breach of it?" Apart from contract, the principle as to damages is the same in tort, that is, in this case negligence. The Council was without doubt negligent in supplying a lock which imprisoned the lady. But were her injuries such as naturally and in the ordinary course of human affairs flowed from the negligence?

* * * *

Off-hand you may be inclined to answer with a confident negative. His Honour, Judge Lawson Campbell, did so answer in the county court and dismissed the suit. But the lady was advised to appeal and she did. In fact, the answer is not so simple as it may appear. Owners of public "lavatories" cater for all sorts and conditions of men and women, including neurasthenic and hysterical types. The writer remembers a lady, otherwise eminently practical and normal, who had such a morbid dread of closed spaces (claustrophobia) that she could not discuss private legal business with the office door shut. She feared suffocation. The writer feels sure that this lady, finding herself locked in, would in frantic panic have acted in the same way as Mrs. Sayers did. In such a case, one thinks the owner of a public lavatory might well be liable. On the other hand, it is a highly embarrassing thing for a lady to be locked in a public convenience, and finding herself so confined, she might have acted in a violent uncontrollable temper in which event the consequences would, one thinks, fall on her own head.

Returning to Mrs. Sayers's case, the lady was out of time for it and applied to the Court of Appeal (the Master of the Rolls, Sellers L.J. and Harman J.) for leave to appeal notwithstanding that fact. The Council opposed leave being granted.

The Master of the Rolls: "Does the local authority really want to press its opposition?"

Mr. John Elton for the Council: "The Council opposes the application though it does not desire to act unreasonably or shut someone out."

The Master of the Rolls: "Having just shut someone in!.....We do not know what time of day it was, but if you were locked in a public lavatory you might get panic-stricken. And the judge did find you were at fault in some way....."

Counsel: "If the application is granted, it will involve the Council, and in the long run the ratepayers, in a further expenditure of money on a case in which there was no question of the lady succeeding. The judge said it was a perilous manoeuvre on which she embarked. She had a seven-foot flush tiled wall to scale and a flush seven-foot painted door. There was a 2-foot 4-inch gap above that. She stood on the seat, which was 1 foot 5 inches high. She leant forward 2 feet 8 inches to get her right hand on to the door. She got herself spreadeagled by holding on to the lavatory pipe behind her with her left hand and put her right foot on a revolving toilet roller some 2 feet 8 inches above the ground. The inevitable happened and she fell off. This was a well-lighted lavatory in broad daylight with a window at the back, overlooking a car park. Her husband was waiting for her at an omnibus stop two minutes away. He knew where she was and she knew where he was. If she did not join him at the omnibus stop, he would go straight to the ladies' lavatory to find her."

The Master of the Rolls: "I don't know about that. I should not like to go to a ladies' lavatory."

Counsel: "In fact, when she did not arrive at the omnibus stop, he went straight to the ladies' lavatory and found her being carried out. She had fulfilled the purpose for which she entered the lavatory and then set about seeking to escape. The judgment of the county court judge was right on the facts and on the law."

Nevertheless, the Court of Appeal granted the lady's application for leave to appeal, notwithstanding that the time for appeal had expired. So the case is still *sub judice* and we must await the result of the appeal, in the meantime making it clear that our comments on the law are not intended to apply to this particular case but only to the law in India concerning which the writer, rightly or wrongly, has no doubt whatsoever that the claim on the same facts would have no chance of succeeding in this country. It is submitted that the claim would have been shattered by the defence of "contributory negligence".

A final word about that defence. "Contributory negligence" is rather a misleading expression. It would not be a sufficient defence to prove that the lady was herself negligent and that her negligence contributed to what happened. The Council, in India, would have to show that had it not been for the lady's negligence, the accident would not have happened at all; in other words, that the decisive cause of the lady's injuries was her own negligence and not the Council's. True, it is the Council which was negligent in causing her to be locked in by supplying a defective lock. But all she needed to do was to sit tight and wait for the arrival of another candidate for entry or her husband or the attendant, meanwhile knocking and shouting to attract attention. The decisive cause of her injuries was, it is submitted her frantic antics in trying to scale a seven-foot wall.

ONE important qualification Mr. Morarji Desai has for his new post is the support he can expect from the Congress Party. And while Indian Finance Ministers are expected to reconcile the progressive and intelligent conduct of fiscal affairs with the ridiculous dictates of socialist dogma, that will continue to be the *most* important. In fact, if it were not for the political tight-rope all incumbents of this office must walk—and from which all have so far tumbled—the choice would probably not have fallen on Mr. Desai at all. For that, I am sure, he would have been immoderately thankful, because—and I think Mr. Desai will agree with me—his undoubted administrative talents are no substitute for the technical grasp a post of this kind requires, while nobody but a fool likes accepting a job which has marred the political careers of all who have so far taken it on. The Finance Ministership of India nowadays has much in common with the Prime Ministership of France; it is patriotism which prompts a man to accept it, not political ambition. Perhaps Mr. Desai will be more fortunate than his predecessors. That is not as unlikely as it sounds, because he now has one important point in his favour: the growing realisation in the Congress Party that the present socialist taxation policy has gone too far for the health of the economy—how else can one explain the phenomenon of Mr. Nehru, and Mr. Krishnamachari too in his May Budget, having to defend his supposedly sting-the-rich tax measures against critics from his own Party. If these glimmerings of common sense do denote a general change of heart, Mr. Desai would do well to exploit it, because it will make his job a good deal easier. It is simply not reasonable to expect any Finance Minister to combine his real task of raising the maximum resources for development in the least damaging way possible with the thankless and unnecessary one of implementing some entirely theoretical notions of socialism—especially when he is in such a good position to see what harm it is doing the economy. It was Mr. Krishnamachari's stubbornness which made him able to carry out both functions; the same quality, incidentally, which proved his undoing. Mr Desai deserves a better start, if only because stubbornness is not always a virtue in a job which, apart from a smattering of technical and economic knowledge, requires above all, a reasonable, intelligent and unprejudiced mind.

* * * *

The quotation from Shakespeare in the Prime Minister's reply to the Budget debate on Tuesday reminded me afresh how the literary quality of political speeches has declined with the widening of democracy not only in India but everywhere. Mr. Harold Macmillan has rightly been criticised for his unfortunate incursions into the colloquial, almost vulgar, idiom. Here in India before the British, Persian and Urdu were the court languages, and both were highly ornamented; the flourishes often went to ridiculous lengths. The early period of British rule also saw considerable elegance in administrative correspondence, and the names of Hastings, Junius and Macaulay come readily to mind. In more recent times, many will remember Lord Wavell's fondness for deft literary touches; he could handle a Latin quotation without effort and turn such neat epigrams as the coal position being less black. Among India's Finance Ministers, a predecessor of Mr. Nehru's, Sir Archibald Rowlands, quoted Bacon on the impossibility of being in love and wise at the same time. Mr. Chintaman Deshmukh could quote from half-a-dozen languages, and although I do not remember particular instances, Dr. John Matthai too, I am sure, could recount with ease from the Bible and other classics. Up Mr. Krishnamachari's street seemed the *shikar* literature of India, although his analogies were often inapt and unfortunate. If I remember aright, each chapter in Mr. Nehru's *Autobiography* opens with a quotation, sometimes from the most unlikely authors. That most such allusions come from the classics is but natural and does not necessarily mean that Mr. Nehru and the elder leaders are unacquainted with the modern poets. Going back to the passage Mr. Nehru quoted on Tuesday, it seems to me that he might have found equally appropriate lines in *The Waste Land* by T. S. Eliot. A shadow has indeed fallen between the idea and the reality, between the motion and the act, between the conception and the creation—that of, the Prime Minister may not agree, of the socialistic pattern of society.

* * * *

I am not surprised that Indian tributes on the occasion of the Fowler birth centenary on 10th March last contained references to the future of English in this country. As for the present shape of English prose, as written and spoken by English-educated men the world over, it is not a little the Fowlers' work. The most important point about them is that they were *not* tyrants. Admonitions are administered ever so gently, ever so tentatively: and lay down the law on everything they never did. Pedants they were not, but in discipline they certainly believed. (It's a chastening thought that they would probably have disapproved many of the sentences in this very paragraph.) Few scholars have worn their learning less heavily. "Illiteracies" is perhaps the strongest term the elder Fowler uses in *Modern English Usage*. But he does explain: "There is a kind of offence against the literary idiom that is not easily named. The usual dictionary label for some specimens of it at least is *vulg.*; but the word vulgar is now so imbued on the one hand with social prejudices and on the other with moral condemnation as to be unsuitable . . " The recent furore over U and non-U, which before long degenerated into something almost illiterate, had nothing at all to do with the Fowlers' passionate attempt to bring some order out of the chaos of English usage. Indeed, H. W. Fowler's entry under "Superiority" exposes the whole sham with subtle sarcasm: "Surprise a person of the class that is supposed to keep servants cleaning his own boots, and either he will go on with the job while he talks to you, as if it were the most natural thing in the world, or else he will explain that the bootboy or scullery-maid is ill and give you to understand that he is, despite appearances, superior to boot-cleaning. If he takes the second course, you conclude that he is not superior to it; if the first, that perhaps he is. So it is with the various apologies (*to use an expressive colloquialism—if we may adopt the current slang—*" etc., etc.) If there is a better illustration of the nobility's true attitude to manual labour, I would like to see it.

* * * *

When he was in India, Dr. Green-Armytage was well known for his somewhat odd views about medical practice—or so I am told by a former colleague of his. Now, it appears, he is showing his flair for the unusual in his researches as well. If, as he says, "almost all" geniuses have been alcoholics, drug addicts, consumptives, or mentally unstable (what a question-begging term that is), then I submit that he is using a definition which is entirely his own. He would rule out, for instance, Buddha, Confucius, Christ, Gandhi, Shakespeare, Shaw, Napoleon, Galileo, da Vinci, Archimedes, Newton, Keynes, Einstein and many others beside. And why exclude women—what about Madame Curie—especially when their part in driving potential geniuses to drink, or unhinging them mentally, has obviously been such an important one? It is not easy to agree either that almost all candidates for genius have been under five foot three inches tall, although when he says they have usually been important or had weak sexual instincts, he might be on stronger ground. Only with the statement that few have ever become the fathers of other geniuses does it seem possible to concur without reasonable qualification. All the same, no discussion on this subject is likely to be fruitful unless it begins with a definition of what is meant by genius, and that is what Dr. Green-Armytage apparently omits to do. His warning that Prohibition and the scientific conquest of alcoholism, among other things, are likely to reduce the incidence of genius is one which might be recommended to the Congress Party—it was never more in need of this quality than it is now. But it is only fair to point out whereas many geniuses may have been alcoholics, the converse is not necessarily true as well. One significant omission from Dr. Green-Armytage's list of the circumstances which accompany genius seemed to me to be environment. Surely it is no coincidence that it was plentiful among the Ancient Greeks, the Renaissance Italians, or, in our own times, among the Jewish peoples of central Europe?

* * * *

It is no secret that, in India, newspapers must adapt themselves to more conflicting pressures than probably in any other democratic country. But Mr. J. Natarajan, of the *Tribune*, before the Delhi Rotarians last Sunday, did well to reaffirm the situation, because it is showing little sign of improvement. Proprietors, Governments and advertisers all exert some kind of influence, and if Mr. Chaturvedi of the Federation of Indian Journalists has his way, the workers will soon be joining them. And all this is a pretty good reason why Indian newspapers are among the dullest, dowdiest, least readable, most sycophantic and technically shoddy of any in the world. Some papers, of course, are blessedly free of proprietary interference altogether; but that does not alter the fact that "it has increased, is increasing and ought to be diminished". Editorial trusts on the lines of those which direct the financial affairs of, say, *The Times* and the *Manchester Guardian* are what is needed if the editorial independence is to be preserved and if the best Indian newspapers are ever to attain the stature required of a democracy's leading organs of responsible opinion. The influence of advertisers is another matter. This depends to a large extent on the determination of editors themselves; the advertising agents have their own job to do and can never be appointed custodians of the Press's morals. The most invidious pressure of all, however, comes from Governments, both State and Central. There have been all too many instances of advertising being stopped because a paper has published something a particular Minister has not approved. Most have admittedly been due to personal spite. But the fact that the individuals concerned have been able to get away with it is because the general attitude in governing circles is that newspapers exist as convenient propaganda organs for publicising Ministerial views, which by definition are always in the best interests of the country. It struck me as significant that Mr. Natarajan's words appeared in the newspaper I read alongside the report of an address by the Chief Minister of Rajasthan, Mr. M. Sukhadia, in which he expressed the hope that the Press would give a lead to the nation's quest for a new order of things. This is simply not a newspaper's job, it is a Government's.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December 1957.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that in our opinion the Balance Sheet is a full and fair one containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

APPROPRIATION OF PROFITS

The Directors report that the usual and necessary provisions having been made, the net profit of the Bank for the year ended the 31st December, 1957 amounted to Rs. 1,87,45,308.89 which, with Rs. 41,91,361.65 brought forward from last year makes a total of Rs. 2,29,36,670.54.

This sum the Directors of the Bank have disposed of as follows :—

		Rs.	nP.
1.	In payment of a Dividend to the Shareholders at the rate of Rs. 16 per share ...	90,00,000	00
2.	Transferred to Reserve Fund	25,00,000	00
3.	Transferred to Pension Funds	6,37,500	00
4.	Bonus to Staff	32,00,000	00
5.	Transferred to Staff Welfare Fund	10,00,000	00
6.	Transferred to Staff Co-operative Housing Fund	10,00,000	00
7.	Balance carried forward to the Profit and Loss Account	55,99,170	54
	Total ...	2,29,36,670	54

THE BANK OF INDIA LIMITED

CHAIRMAN SIR COWASJEE JEHANGIR'S REVIEW

Extracts from the Speech of the Chairman, Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E., at the Fifty-second Annual General Meeting of the Shareholders of The Bank of India Limited held at Bombay, on Wednesday, the 12th March, 1958.

Ladies and Gentlemen,

With your permission the balance-sheet may be taken as read.

At the time of our Annual General Meeting in 1957 the currency in circulation was Rs. 1,515 crores, whilst at the corresponding time in 1956 it was Rs. 1,406 crores. This year it is Rs. 1,546 crores. The increase on last year's figure is Rs. 31 crores. This limited increase, viewed in relation to the requirements of the Second Five-Year Plan, is an indication of attempt at control of inflation.

In present times, each year seems to witness substantial changes. The year 1956 saw the nationalisation of life assurance business and the formation of the Life Insurance Corporation of India. That year also saw that major enactment, the Companies Act, 1956.

The year 1957 has seen the adoption of decimal currency. It has seen revolutionary taxation changes.

Decimal currency is, I think, for the benefit of the country generally. The change-over appears to have been made smoothly. We are now quite used to naye paise in accounts and in our every-day dealings.

The major tax legislation changes during the year 1957 were contained in the following Acts :—

The Finance (No. 2) Act, 1957,
The Wealth-tax Act, 1957,
The Expenditure-tax Act, 1957.

The picture for 1957 was an increased tax burden by enhancement of old taxes and the levy of new taxes.

In the Finance (No. 2) Act, 1957, the rates of income-tax and super-tax were appreciably increased for companies. The increased rates come into force in respect of the Bank's income for the year 1956. These tax increases and the ever-present rise in expenses, not only in the principal item of salaries but in sundry overheads, will, I fear, add to our problems. It may not be easy in the future to maintain our net profits after tax.

New Taxes

Tax-payers have to cope with the Wealth-tax Act from the 1st April, 1957, and the Expenditure-tax Act from the 1st April, 1958. These two new taxes are novel. I believe the Expenditure-tax has not been tried out in any other country. These levies may cause much apprehension. Apart from the doubt whether the yield from either tax will be substantial, the tax-payer will be obliged to furnish extensive information. He will, naturally, regard this as an inquisition. He will have misgivings as to how the new taxes will operate. They are likely, I think, to engender a sense of uncertainty and resentment to a much greater degree than other forms of direct taxation.

The Wealth-tax is objectionable as being a capital levy. Though it does not apply to banking companies because of an exception made by section 45 (a) of the Act, the tax applies to companies generally and is bound to affect their working and financial position. It has a double effect in that it also applies to the shareholders of companies.

The commercial and industrial community were hoping for some relief in taxation in the present budget recently presented but this has not materialised. Taxation has, in fact, become more severe and the Government are expecting to take five crores of rupees more from the people. A major portion of this comes from the Gift-tax, which replaces death duties in cases where donors are in a position to make gifts. Taxation on death also becomes more severe as, not only is the exemption limit for estate duty reduced from Rs. 1,00,000 to Rs. 50,000, but the exemption limit is increased from two years to five years in the case of *bona fide* gifts made before death, as if the Government were ashamed for being even less severe than England in any one direction. In no part of the world would such heavy taxation be tolerated without very severe agitation but, in India, we are a long-suffering people and the time is bound to come when the Government will have to retrace their steps from heavy taxation as they will find that the result will be much worse for the country.

Tightness of Money

During 1957, banks have continued to contend with a persistent tightness of money. This is so stubborn that it almost seems as if it has come to stay. We know, of course, that this is not so. Conditions sooner or later change, often turning completely round. I have seen many examples of this in my time. Even so, there is no sign of any early relaxation in the present scarcity of funds. These tight money conditions and the existence of various restrictions and legislative enactments affecting money and banking can hardly have made 1957 other than difficult for the business of banking. Banks depend upon deposits. In times of tight money the funds available for deposit with banks are restricted. Competition between banks for deposits increases. Higher rates of interest must be offered and paid.

The funds of the Government and of semi-Government bodies are, generally, lodged with the Government banks. These banks also receive the rupee counterpart proceeds of surplus agricultural commodities of the United States of America under that country's Public Law 480. The two main Government banks are the Reserve Bank of India and the State Bank of India. As the central bank of the country, the Reserve Bank of India does not compete for business with the commercial banks, but I must make an allusion to the competition that banks like ours encounter from the State Bank of India which has a monopoly in several directions.

The amount available with ordinary banks for advances to customers does not satisfy the demand. For a considerable time we have been obliged, much to our regret, to restrict or to decline to give credit facilities to many credit-worthy customers. The pressure tends to become intensified at the present period of the year when the tax-gathering season is in full swing.

We have heard a great deal about the Small Savings Scheme but I would like to know which class of people are in a position to effect small savings. The Government and the public are well aware of the very heavy taxation we have to bear. It is said that India is the most heavily taxed country in the world. How can the Government expect to have anything like a substantial amount from a Small Savings Scheme when they take away everything they possibly can by taxation ?

Controlling Interest

As an alternative to direct nationalisation and state ownership, suggestions were recently made in the Legislature for the Government to obtain a controlling interest in important concerns. The method proposed, it seems, would be for the Government to buy enough shares in companies to secure control and, notwithstanding that the amounts required would be large, they are apparently expected to be provided from the funds at the disposal of nationalised institutions like the Life Insurance Corporation of India. A reason given for the proposal seems to be that it would be cheaper to buy a percentage of shares and gain control over a company than to compensate all the owners of or shareholders in a fully-nationalised institution. The repercussions of the idea call for cautious and anxious examination. The Prime Minister, in the course of his address two days ago to the Federation of Indian Chambers of Commerce and Industry, appears to have realised the necessity for such examination. I venture to suggest that there should be official unequivocal disapproval of any such intention. While the Government are not generous in their compensation to owners of nationalised concerns—one school of thought is that they are not even fair—it falls to be considered whether the proposal of divesting existing shareholders of companies of control over their own concerns without paying any compensation on the basis of wholesale nationalisation is fair and justified. To me it savours very much of confiscation and is as objectionable as outright nationalisation, if not more so. Both the Insurance Act and the Companies Act regulate the acquisition of control by companies in other companies, but, when it comes to applying salutary principles like these to themselves, the Government appear to be quite reluctant to adopt them. Such methods, if adopted, would certainly sap the foundations of private corporate enterprise on which the prosperity of the country depends.

The Reserve Bank of India Rate was raised from 3½% to 4% on the 16th May, 1957. In our case, any additional income due to the rise in the Bank Rate and higher rates of interest on advances tends to be cancelled out by the increased interest paid to our depositor-customers and the upward pressure of our operating costs.

I would now refer you, ladies and gentlemen, to the balance-sheet and accounts.

The total at foot of the balance-sheet is over Rs. 98 crores. This is an increase of Rs. 2 crores over the figure of Rs. 96 crores of the previous year.

The profit figure for 1957 is about Rs. 93¼ lakhs. This is an increase of about Rs. 1¼ lakhs over the previous year's profit of about Rs. 92 lakhs. The increase is not great but, at least, there is no recession in the face of increasing costs and difficult trading. Before the profit figure has been arrived at, usual appropriate and prudent provisions have been made.

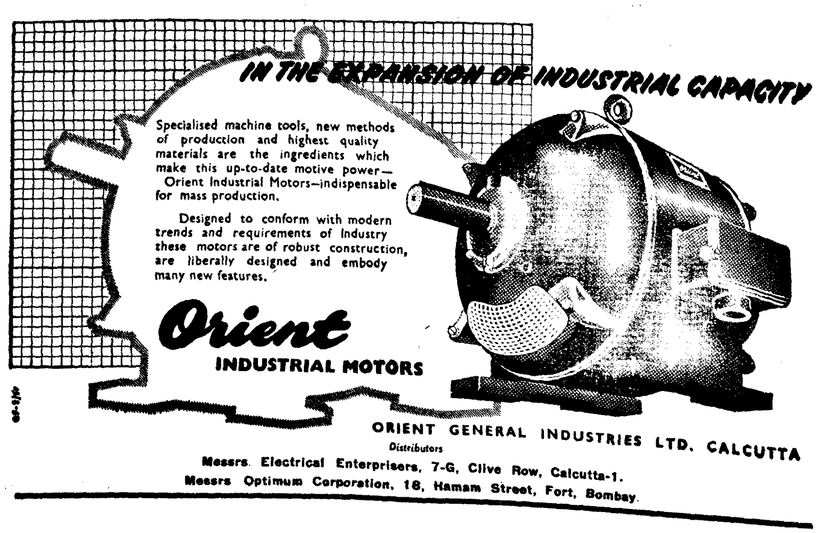
The provision for taxation absorbs Rs. 30 lakhs against Rs. 28 lakhs for the previous year.

Final Dividend

A final dividend of 10 per cent., free of income-tax, is proposed, absorbing Rs. 30 lakhs. This, with the interim dividend of 6 per cent. paid last August, makes the total distribution 16 per cent. per annum, or Rs. 48 lakhs for the year, free of income-tax, on the present paid-up capital of Rs. 3 crores. The proposed carry forward is Rs. 16 lakhs against Rs. 15¼ lakhs the previous year.

I think we have real cause for satisfaction in the result of the year's trading, having regard to all the circumstances in which our operations have been conducted.

Mr. Dinsha K. Daji, who had been a Director of the Bank for 23 years, died on the 8th July, 1957. Mr. Daji was a solicitor of great experience, the benefit of which he ungrudgingly gave to the Bank at all times. My colleagues on the Board and I greatly miss Mr. Daji's wise counsel at our deliberations.



Five days after the death of Mr. Daji, the General Manager, Mr D. R. Thom, died on the 13th July, 1957, following an operation. Mr. Thom served the Bank for 28 years, the last three of them as General Manager. He had the respect and confidence of the Board and, by his death, the Bank has lost an officer of the highest calibre. He was at all times courteous and was popular with both customers and staff.

Mr. T. R. Lalwani, who held the post of Deputy General Manager, has been appointed General Manager. Mr. Lalwani is our first Indian General Manager and is an officer of much experience. He has served the Bank at Head Office and at various branches.

I have the pleasure to record the Board's appreciation of the help rendered during 1957 by our Local Committees at various centres.

I would also express the thanks of the Board, in which I am sure shareholders will join, for the efficient service rendered during the year by the General Manager and the staff of the Bank at Head Office and branches. Their ability and continued hard work in carrying out the directions of the Board are a material contribution to the results of the year's trading which I have placed before you.

NOTE :—THIS DOES NOT PURPORT TO BE A REPORT OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING WHICH WILL BE SENT SEPARATELY TO SHAREHOLDERS.

MERCANTILE BANK LIMITED

SIR KENNETH W. MEALING REVIEWS ECONOMIC CONDITIONS

The Sixty-fifth Annual General Meeting of the Mercantile Bank Limited will be held on April 1, in London.

The following are extracts from the statement by the Chairman, Sir Kenneth W. Mealing :—

There was no change in the directorate during the year. Lord Bicester, who has served on the board for 20 years, has indicated that, owing to the pressure of other commitments, he cannot offer himself for re-election at the forthcoming annual general meeting. Mr. J. B. Crichton, who retired as chief manager in 1947 after 46 years' service with the Bank, and who has been a director since 1945, has also decided not to offer himself for re-election owing to advancing years.

Foreign exchange shortages, restrictions on imports and exports in some territories where the Bank operates have tended to restrict business, and made trading conditions difficult, but nevertheless, the trading profit was larger than the previous year. The balance-sheet total excluding the capitalization of reserves mentioned above is unchanged at £75 million. Deposits are lower by £1 million whilst, on the assets side there is an increase of over £5 million in cash. Investments are lower by nearly £3 million, Bills receivable by over £2 million and loans and advances are practically unchanged. The board is satisfied that our inner reserves more than cover every likely contingency and that it is no longer necessary to build up these reserves at the same rate as previously. Consequently, the profit for the year 1957 is shown at £331,243, after making transfers to the inner reserves, which permits a larger distribution to members. In August, 1957, your directors declared an interim dividend of 12½ per cent. on the then paid-up capital and they recommend a final dividend of 6¼ per cent. on the increased capital referred to above. From the balance the usual allocation has been made to the officers' pension fund whilst the sum of £100,000 has been transferred to the reserve fund which now stands at £2,100,000, leaving the balance carried forward at £231,452 against £224,521 brought forward from the previous year.

India

The outstanding political event in India in 1957 was the General Election which began on February 24, in which 193 million adult voters chose 494 members of the Lok Sabha (Central Parliament) and 3,102 members of State Legislative Assemblies. The Congress Party was returned with a comfortable majority at the Centre and in the States with the exception of Kerala State in Southern India where a Communist Government was returned with a small majority. In Kerala conditions, particularly law and order, have deteriorated to a degree which inspires the hope that the voters in Kerala will give a different verdict when they get the opportunity.

The year was an important one for India. Progress in the second 5-year Plan was made in many directions, but the vast financial implications, and the difficulty in obtaining overseas aid to fill the gap between India's external financial resources and the necessary expenditure, became evident. Mr. Krishnamachari's Budgets on March 19 and May 15 with their steep new taxation, direct and indirect, resulted in heavy falls on the Stock Exchanges, the siphoning off of investment capital and loss of confidence by the private sector and foreign investors in India. The resultant loss of expansion in the private sector may well be greater, and more lasting, than the immediate gain in revenue towards financing the public sector of the 5-year Plan. It is now generally recognized that the latter must be re-phased as finance will only be available for the "hard core" of the Plan : steel, coal, railway, major ports and ancillary power. Whether sufficient emphasis is laid upon increasing food production is a matter of doubt—especially as it seems certain that between two and three million tons of foodgrains will have to be imported annually for the next few years, at a time when the foreign exchange reserves of the country are so greatly depleted. To check the drain a very stringent import policy was adopted and still continues. The overall minimum external reserve to back the Rs. 2,250 crores of currency is now reduced to the equivalent of Rs. 200 crores, of which Rs. 115 crores is to be in gold coin and bullion. There has been a further measure of inflation, inevitable in the circumstances, and, in the second half of the year, a good deal of industrial labour unrest.

Nevertheless, India is struggling, with and through its high 5-year Plan target, to improve the standard of living of its vast population and there is no doubt this endeavour is meeting with some success. The General Election confirmed India's adherence to democracy for the ensuing five years under the guidance of Prime Minister Pandit Jawaharlal Nehru, and the influence of this throughout the whole of South East Asia is of primary importance to the entire free world.

Pakistan

The industrialization of Pakistan continues to expand; the Industrial Development Corporation provided Rs. 12 crores to finance industrial projects, including sugar and jute factories, newsprint, pharmaceutical products and dyestuffs, and fuel and power. The Pakistan Industrial Credit and Investment Corporation was established in October with a capital of Rs. 2 crores and loans from Government (Rs. 3 crores) and the International Bank (Rs. 2 crores), making a total of Rs. 7 crores to assist in the expansion and modernization of industrial enterprises in the private sector, particularly small and medium sized concerns engaged in the processing of indigenous raw materials. On the other hand, agricultural development is not receiving the expansion essential to the country and Pakistan continues to be dependent on large food imports : in 1958 it is estimated that 700,000 tons of rice and not less than 600,000 tons of wheat will have to be imported, whilst the adverse balance of trade for the 10 months ended October, 1957, was Rs. 22.54 crores.

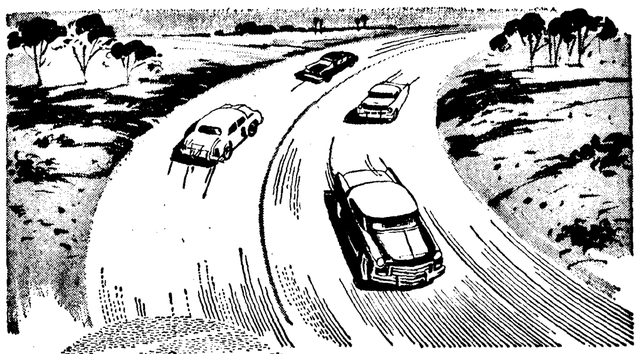
Ceylon

Economically Ceylon has been adversely affected during 1957 by several factors; and the balance of trade for the first 11 months was unfavourable by Rs. 82 million compared with a favourable balance of Rs. 102 million for the same period in 1956 and a favourable balance of Rs. 480 million in 1955. Her Budget estimated for a deficit of Rs. 199.6 million, but this is likely to be greatly exceeded by the great increase in cost of wages in the public sector which must throw a considerable strain on the economy. Labour unrest, strikes, and delays in clearance of goods in Colombo Harbour are all contributing to a serious economic decline.

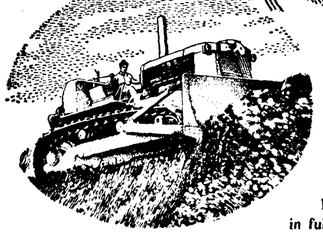
Burma

Early in 1957 the Premier, U Ba Swe, was replaced by his predecessor, U Nu, as I forecast last year. Second thoughts about nationalization seem to be taking place and it is believed that a Bill will soon be passed by the Government to provide incentives to foreign investors to introduce capital into the country by reliefs in taxation and customs and guarantees against nationalization for 10 years with guaranteed repatriation of profits, dividends, and capital. This welcome change in outlook would, and may have beneficial effects provided greater progress can be made in dealing with the problem of the insurgents, and banditry still unfortunately rife in many districts in spite of the surrenders which have so far taken place.

The Four Year Plan has been scrapped and the Prime Minister has stated that in future planning will be a continuous process, revisions taking place in the light of experience. A recent development is the setting up of Joint Venture Corporations to handle the import of consumer goods and industrial requirements. These, having a monopoly, operate profitably.



The country's economy is largely dependent on the export of rice, of which, before the war, Burma was the largest exporter. Although production is still some 20 per cent. below the pre-war figure exports for the year ended September 30, 1957, were estimated at no less than 2,017,000 tons and earned K.87 crores in foreign exchange. The carry-over from 1957 is only estimated at 250,000 tons of rice and rice products. The third crop forecast for 1958 estimates an exportable surplus of 1.3 million tons. Long-term commitments include, to India 500,000 tons, Ceylon 200,000 tons. and Pakistan 100,000 tons.



Bank's Valuable Services

The life-line of trade, both national and international, is through the facilities made available by the banking system and the friendly co-operation between those responsible for commerce, industry and trade and the banks through which their financial business is transacted. Fortunately, this is well recognized by the Governments of the countries in which we have branches and, although legislative controls are increasing and thus adding to the burdens of our managers and staff, the banking service we are able to provide is of considerable value to the national and international trade of these countries. The skilled work and friendly relations between our managers and staff and the customers and other nationals of the countries in which they work is a principal cause of the continued prosperity of the Bank. Our gratitude is due to them.

Mr. R. N. Drake, has been chief manager since 1950. During this period we have made great progress. He will be retiring from the onerous position of chief executive and merits our thanks for his long years of service with the Bank. Mr. C. R. Wardle will be appointed chief manager in his place.

"Our highways of to-morrow ...

can be built by CATERPILLAR*
*Caterpillar and Cat are Registered Trademarks of Caterpillar Tractor Co., U.S.A.
to-day !"

Because India's expansion programme is in full swing many new industries are coming into existence and due to the 'Grow More Food' campaign more food is being produced. More and more goods are being carried by road transport.

To open up new areas, to take care of the increasing traffic, new roads must be built and old roads have to be improved.

Better roads can be built with Caterpillar equipment. You do not save time by stopping the clock. Neither do you save money by buying cheap equipment. Caterpillar equipment will save you both time and money by giving you better output with less downtime and more economical operating costs.

Invariably a first choice among Government engineers and leading contractors, CATERPILLAR will, no doubt, play a leading part in building India's future Highways.

CATERPILLAR* Paving the way to India's progress

The Final Spurt

Tata Steel's two million ton expansion programme is now entering the final phase. Scheduled for completion by mid-1958, it is now a race against time.

Today all over Jamshedpur there is a new sense of urgency...work goes on round-the-clock to complete the expansion programme on time.

Embracing every phase of operation from the winning of ore and the mining of coal to the rolling of steel, Tata Steel's expansion programme will double the annual production to two million tons of ingot steel—one-third of the country's target.

Rapidly nearing completion is this new Blast Furnace which will produce 1650 tons of pig iron per day.

THE CALCUTTA MONEY MARKET

NO FRESH DEMAND FOR FUNDS

Wednesday, 19th March.

FOR the second week in succession, there has been scarcely any change in the total of advances outstanding in the Calcutta money market. Each of the various industries has maintained its total requirements at around the same level. This is a most unusual phenomenon at what is usually the height of the busy season. Conditions in the interbank market have tightened considerably due to demand for funds for tax payments. The call rate has increased to 3¾ percent, but business has been done as high as 4 percent.

It has been another dull week in the exchange market. Very few bills have come to hand. Remittance has been poor. The pound remains strong against both the dollar and most Continental currencies, but it is reported to have lost fractionally against the "D" mark.

* * * *

Silver was firm on a bull squeeze because of shortage of arrivals. The price advanced from the previous week's level of Rs. 192.50 to Rs. 194, quoted today for ready delivery, and the price for forward delivery was quoted at Rs. 192.50. The London price stood at 76¼d and the New York quotation was shown at 88⅛ cents.

Gold, in sympathy with silver, was steady and the price rose from Rs. 112.75 to Rs. 113. The sovereign was 25nP higher at Rs. 72.75.

* * * *

During the week ended 14th March, Government of India Treasury bills for Rs. 87,90,75,000 were sold in favour of the Reserve Bank.

* * * *

There was a rise of Rs. 21 lakhs to Rs. 1,587.86 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 14th March, 1958, but active notes fell by Rs. 41 lakhs to Rs. 1,578.26 crores. Notes held in the Banking Department consequently rose by Rs. 63 lakhs to Rs. 9.61 crores. Deposits of the Government of India declined by Rs. 3.15 crores to Rs. 50.31 crores because of year-end disbursements while other Government accounts improved by Rs. 11.82 crores to Rs. 21.67 crores. Balances of commercial banks at Rs. 67.93 crores were Rs. 9.47 crores lower. Balances held abroad increased by Rs. 3.14 crores to Rs. 36.62 crores. Investments at Rs. 235.82 crores showed a rise of Rs. 6.44 crores. Other loans and advances declined from Rs. 74.30 crores to Rs. 73.11 crores, of which advances to scheduled banks against usance bills amounted to Rs. 21.75 crores against Rs. 22.52 crores. Ways and means advances stood at Rs. 44.84 crores (Rs. 43.91 crores).

* * * *

The return of the State Bank of India for the week ended 7th March, 1958, shows a rise of Rs. 4.75 crores to Rs. 412.62 crores in total deposits. Investments in Government securities remain unchanged at Rs. 173.45 crores, while other authorised investments are up by Rs. 10 lakhs to Rs. 10.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 2.30 crores to Rs. 207.51 crores. Cash and balances are, in consequence, shown at Rs. 33.78 crores or Rs. 1.44 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 7th March, 1958, shows Demand and Time liabilities at Rs. 727.98 crores (Rs. 11.82 crores on account of borrowings from banks) and Rs. 726.48 crores (Rs. 15.85 crores), compared with Rs. 727.79 crores (Rs. 13.16 crores) and Rs. 724.62 crores (Rs. 16.65 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.90 crores and Rs. 4.50 crores to Rs. 40.38 crores and Rs. 77.63 crores. There is a drop of Rs. 16 lakhs to Rs. 433.29 crores in investments. Advances and bills discounted at Rs. 936.44 crores show a rise of Rs. 4.88 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.1 percent and 64.4 percent, against 7.7 percent and 64.1 percent.

* * * *

Replying to a question in the Lok Sabha, the Deputy Minister of Finance, Mr. B. R. Bhagat, has said that the total investments in Government securities, shares, loan stocks, etcetera, made by the Life Insurance Corporation from 1st September, 1956, to the end of February this year was as follows :

	Book value (Rs.)
Central and State Government securities	40,02,61,476
Semi-Government securities	1,75,43,532
Debenture loan stock	1,35,67,035
Preference shares	2,90,85,378
Ordinary shares	10,89,79,519
Total	56,94,36,940

The total investment of Corporation funds in Government and semi-Government securities up to the end of February 1958 was Rs. 41,78,05,008 and in the shares of companies in the public sector Rs. 1,83,632. The total investment in the private sector during the same period was Rs. 15,14,48,300.

* * * *

The STATE BANK OF INDIA has earned a profit of Rs. 1.87 crores for the year ended last December, against Rs. 1.56 crores. Bringing in Rs. 41,91,362, there is a balance of Rs. 2,29,36,671. A dividend of Rs. 16 a share has been declared. Notable allocations include reserve fund Rs. 25 lakhs, pension fund Rs. 6.38 lakhs and staff fund Rs. 32 lakhs, leaving a carry-forward of Rs. 55,99,171. Deposits have increased by Rs. 124.40 crores to Rs. 366.52 crores. Cash is Rs. 12.68 crores higher at Rs. 41.52 crores. Investments have improved from Rs. 106.88 crores to Rs. 183.43 crores. Advances are higher from Rs. 140.16 crores to Rs. 173.48 crores.

LONDON FINANCIAL LETTER

VIEWS OF BRITISH BANKERS ON ECONOMIC POLICY

By Air Mail.

THERE is a common theme these days running through the statements by chairmen of the British banks. The danger of "cheap money", the Government's excessive spending, the burden of taxation, the debasement of the currency—all these have been the themes of past years. This year the bankers have surveyed the general position in the light of last year's events, rather than selected any particular aspect of it which seems to demand particular attention. A few points from the chairmen of the "big five" may indicate the trend of their thinking. The background to this year's comments is, of course, last year's crisis. The bankers are reasonably satisfied with the authorities' handling of the situation, with the qualification, especially by Lord Aldenham, of Westminster Bank, that remedial action should have been taken earlier and need not then have been so severe. Mr. A W. Tuke, of Barclays Bank, believes that the crisis arose from foreigners' miscalculations. It was wrongly assumed abroad that, because France effectively devalued her currency, Britain, having been her ally in the ill-fated venture in Egypt, would necessarily do likewise. But the British authorities knew that the position of sterling was essentially sound, and accordingly, with complete justification, Mr. Tuke believes that they used the sterling area's reserves liberally to defend the pound.

It is not always possible, however, to convince the world that the pound can be defended when the available reserves are slender. Mr. Tuke has said that the international trade financed in sterling is valued in the region of £60 million a day—one-thirteenth of the total first-line reserve. If traders believe that they can benefit by hastening their sales of sterling or delaying their purchases of the currency because it will soon be cheaper, the reserve can decline alarmingly when the normal turnover of sterling is so large. The loss of more than one-fifth of the total reserve in three months of last year (July, August and September) occurred. Lord Aldenham has emphasised, in spite of a surplus of £200 million in the balance of payments in the preceding 12 months, and was attributable, in his opinion, to the widely-held belief that the reserves were quite inadequate to support the pound if distrust in it were prolonged.

Inadequacy of Reserves

Sir Oliver Franks, of Lloyds Bank, has said that the inadequacy of reserves is a general problem, for between 1937 and 1956 world reserves of gold increased no more than a half, while prices rose steeply and the physical volume of trade increased. There was a big increase in reserves other than gold, but, even so, international reserves were little more than doubled while the value of international trade was nearly quadrupled. Existing reserves have been surprisingly successful in financing an almost continuous expansion in the value of international trade, but Sir Oliver asks whether they are now spread so thinly over the system as a whole that shortage of reserves may aggravate deflationary tendencies.

Particular countries' efforts to strengthen their reserves are certainly aggravating the general problem of reserves. Nonetheless, the bankers insist that strengthening the sterling area's reserves must rank first in the order of priorities, even though, as Mr. Tuke suggests, it may be necessary for a time to curtail overseas investment for the purpose. The bankers are well aware that increasing the reserves is not an abstract financial operation; it is, or should be, an outcome of sound policies.

Remedy for Inflation

Questions of financial policy have been forced on the bankers' attention this year not only by the recent crisis but also by the changes in the Government. Mr. D. J. Robarts, of National Provincial Bank, has quoted approvingly Mr. Peter Thorneycroft's statement to the International Monetary Fund last September in which he repeated what he had said in London before departing for Washington : "There can be no remedy for inflation and the steadily rising prices which go with it which does not include, and indeed is not founded upon, a control of the supply of money.....what is needed to bring it to a halt is for the Government to be prepared to deny the extra cash, whatever other painful consequences may follow." Mr. Roberts has the support of the banking community in general when he says it is sincerely to be hoped that the resignation of Mr. Thorneycroft involves no departure from the principles he laid down.

Mr. Tuke believes that Mr. Thorneycroft was right to resign on a point of principle; but he thinks that the former Chancellor's principle was not stern enough and that what is needed is not merely to stabilise but to reduce the Government's expenditure. Lord Aldenham stresses the same point in relation to capital expenditure. Stating that the nationalised industries have no true profits to "plough back" into increased investment, whereas private industry "ploughs back" two-thirds of its net earnings, he questions whether it is possible to continue investing £1,500 million a year in the public sector without further inflation and suggests that this figure should not be stabilised (as it has been) but reduced.

The bankers do not foresee an early relaxation of financial stringency in Britain, though they do observe, on the part of the business community, a new mood of caution which may—they seem to imply—make extreme stringency superfluous, or even damaging. They do not fully approve the methods of deflation which the Government has employed, but they are quite convinced that the broad policy has achieved some success and ought to be followed to its conclusion. This conviction is significant when economists as well as business men are arguing that it is time for a change.

BANKING ALMANAC

1957—58

Acclaimed as the best by the Trade and the Press.

Authentic and up-to-date hand book on Indian and International banking.

Invaluable as a reference book for Bankers, Manufacturers, Industrialists, Traders, and in fact for everybody having dealing with banks.

CONTAINS :

Two years accounts of all Indian and over 300 International Banks, Coins and Notes of the World, Banking Companies' Rules, Negotiable Instruments Act, Bankers Book Evidence and Reserve Bank of India Acts, UP-TO-DATE BANK BRANCHES SECTION—ALPHABETICAL AND TOWNWISE, Reserve Bank Returns, Money Rates, Currency in Circulation, Gold & Silver Production and Prices, Cheques Clearances, Bank Failures, State Government Loans, Organizational Institutions of Banks, Clearing House Members, etc., etc.

Rs. 12.50 plus Rs. 2/- for packing & postage.

NEW DELHI.

COMMERCIAL TRENDS IN EUROPE

NORTHERN COMMON MARKET MOVE SUPPORTED

(FROM A CORRESPONDENT)

THERE are many reasons for creating a northern common market, says the General Export Association of Sweden in its comments on the report compiled by the Nordic Committee on Economic Collaboration. Such co-operation will be fully consistent with the free trade principles traditionally favoured by the northern countries, and it should have tangible value of its own, side by side with the larger west European integration projects It is not possible to take a definite stand on the northern common market until the further investigations which have been initiated are concluded, namely, the extension of the market to include all the northern countries and all commodity groups, the working out of a complete tariff proposal and transition regulations, etcetera. It also seems necessary to know what the current negotiations on a wider European free trade area will lead to. An agreement on a northern market must not take such a form that it might restrict the Swedish liberty of action in the wider European context, the Association says.

Deficit in Swedish Foreign Trade

Sweden's foreign trade in 1957 resulted in a deficit of 1,429 million kroner (£98,600,000) compared with 1,367 million kroner in the preceding year. Imports went up from 11,434 million kroner to 12,533 million kroner, while exports rose from 10,067 million kroner to 11,104 million kroner. The actual figures for Sweden's foreign trade in 1957 are only slightly lower than those estimated in the last Budget report. As the net income of foreign shipping is estimated at some 1,400 million kroner, the balance of payments is likely to result in a deficit of 29 million kroner, against 127 million kroner in 1956. Of the 1,100 million kroner increase in imports in 1957, about 500 million kroner is accounted for by machinery, means of transport and instruments. The value of iron and steel imports rose by 225 million kroner and fuel imports by 140 million kroner.

Of the somewhat more than 1,000 million kroner increase in exports, nearly 300 million kroner was earned through exports of machinery and instruments. Timber exports rose by 100 million kroner, foods by the same amount and iron ore by 130 million kroner. In terms of volume, imports of coal and coke declined from 5.4 million tons in 1956 to 5.1 million tons in 1957 and mineral oils from 9.7 million tons to 9.3 million tons. Iron and steel imports rose from 661,000 tons to 813 000 tons and imports of motor-cars from 94,874 units to 109,017 units. Textile imports rose in value from 1,090 million kroner to 1,227 million kroner. Exports of sawn and planned timber went up. Paper exports rose from 921,000 tons to 961,000 tons, while shipments of chemical pulp decreased from 2,116,000 tons to 2,047,000 tons. A decline was also noted for iron and steel exports, namely, from 330,000 tons to 301,000 tons, whereas iron ore shipments increased from 17.3 million tons to 17.5 million tons. The number of motor-vehicles exported nearly doubled, that is, from 12 399 units to 24,362 units, with an increase in value from 253 million kroner to 323 million kroner. Exports of ships rose in value from 527 million kroner to 797 million kroner.

Indian Order for Swiss Railway Coaches

The Indian railways have given an order to Swiss industry for 16 rail-cars of a special kind. They are multiple units with driving cabins at both ends and power in the central section, capable of carrying 600 to 1,000 persons each. The first of these rail-cars is already on its way to India, where it is expected to arrive during March, when it will be put into service on the lines in the suburbs of Calcutta. This rolling stock is of the most modern construction, and is the work of four Swiss railway-car manufacturers and of three firms in the electro-technical branch of the industry The total value of this order comes to 15 million Swiss francs (about $3,500,000).

Shorter Working Week in Norway

The 48-hour working week in Norway will be reduced by three hours with effect from 1st March, 1959, and full wage compensation will be given for the lost hours. This was an important provision in the agreement recently concluded between the Norwegian Federation of Trade Unions and the Employers Federation after a fortnight's bargaining. Other significant clauses are: the duration of the agreement shall be three years against the normal two years; if the price index rises more than seven points above the present 153 (1949 equals 100), unions shall have the right to start bargaining for compensation; a new retirement pension in addition to that for old age will be introduced; certain low-paid groups will have wage increases. The 48-hour week has been in force in Norway for nearly 40 years. The Government had already proposed a three-hour reduction in two stages, from 1st January, 1959, and 1st January, 1960. The unions, however, wanted the full reduction to come into force from the beginning of next year. As compensation for the employers' willingness to start the full reduction from 1st March, 1959, the unions have agreed to prolong the agreement period. This means that industrial peace has been secured for three years. The agreement directly concerns 230,000 trade union members, and will serve as model for future agreements for unions not affiliated to the Norwegian T.U.C. It is subject to a plebiscite among the individual members.

Declining Imports of W. Germany

According to the Dresdner Bank, imports of the Federal Republic of Germany in November dropped by 129 million deutschemarks below the figure for October, namely, to 2,752 million deutschemarks. Exports declined by 76 million deutschemarks to 3.185 million deutschemarks. For seasonal reasons, a considerable increase in exports occurred in December. On the whole, however, the figures, now available for the first ten months of 1957 on new orders received, indicate that the rate of annual increase of exports will continue to decline. The index of new orders from abroad placed with West German industrial companies was, for the first time, lower in October than a year ago. In the fourth quarter of 1956, it had exceeded the figure for the corresponding period of the previous year by 30 percent, in the first quarter of 1957 by 14 percent, in the second quarter by 12 percent, and in the third quarter by only 4 percent. According to tentative figures published by the Federal Office of Statistics, the excess of exports over imports in 1957 will amount to 4,000 million deutschemarks and will thus be considerably higher than in 1956, when it stood at 2,900 million deutschemarks. Imports increased by approximately 4,000 million deutschemarks to approximately 32.000 million deutschemarks, and exports by 5.100 million deutschemarks to 36,000 million deutschemarks.

Norwegian Industries Fair

This year's Norwegian Industries Fair will open in Oslo on 29th May. Although the first Fair was held 40 years ago, this is the first time in 26 years that the Norwegian capital will be host to those who come from home and abroad to participate in it. The site chosen to display the products of Norway's diversified industry is the historic Akershus Fortress, and will cover 124,000 square feet. For five days a week, the hours from 10 a.m. to 2 p.m. will be reserved for buyers. In the afternoon and at week-ends, the Fair will be open to the general public. The Fair will remain open until 15th June.

Steel Output of Sweden Increases

Sweden's steel output has doubled since the second world war, a result achieved without any noteworthy increase in the labour force, the Svenska Handelsbanken *Index* writes in a survey. Production a worker an hour is now about 80 percent greater than it was ten years ago. Viewed internationally, the Swedish steel industry has high technical efficiency which has helped it to hold its own in the international market, in spite of its being handicapped in many other ways. Swedish wages are higher than those in most competing countries, and the same is true of fuel costs. Present plans envisage a further increase in steel production from 1.72 million tons to 2.6 million tons by 1965. But the problem is whether it will be possible to find a market for this additional output. Statistically the prospects are not unfavourable. In spite of marked increase in steel consumption in the course of several decades, the relative figures for many countries, including certain European countries, are much below the U.S. consumption ones. The *per capita* consumption in Sweden in 1955, which is among the highest in Europe, was 260 kilogrammes compared with 460 kilogrammes in the United States.

Foreign Trade of Denmark

The foreign trade turnover of Denmark developed favourably in December last year when imports were reduced by more than 50 million kroner while exports were maintained practically at the same high level as in November. Accordingly, the result for the month was an import surplus of 19 million kroner only, whereas an import surplus as high as 159 million kroner was registered for December 1956. Over the year, the import surplus amounted to 1.366 million kroner or 87 million kroner less than for 1956 The year, therefore, ended much better than could have been expected judging from its first quarter when the import surplus was 486 million kroner larger than in the first quarter of 1956.

Total exports for 1957 were larger by 419 million kroner than in 1956. This improvement was essentially due to exports of industrial products (including canned meat and preserved milk) having risen by 435 million kroner whereas exports of agricultural products, notwithstanding an increase in volume, yielded 50 million kroner less. Accordingly, the share of industrial goods in the total export value reached 45 percent against 41 percent in 1956 and 38 percent in 1955 Denmark's most important partners in trade in 1957 were Britain, West Germany, the United States and Sweden. Danish imports from these countries amounted to 2.285, 1,803, 927 and 840 million kroner, respectively, or 63 percent of total imports, while exports to the same countries were 2.229, 1.554, 664 and 707 million kroner, respectively, or 65 percent of Danish exports.

Deficit in Swiss Balance of Trade

The year 1957 has been one of the most prosperous that the Swiss economy has ever experienced, even though there was a setback during the second half. The value of Switzerland's total foreign trade amounted to 15,000 million francs. Exports alone accounted for 6,714 million francs compared with 6.203 million francs in 1956: the increase has been general, extending to all sectors. Exports of machinery, for example, increased by 12 percent, watches by 5.5 percent, chemicals and pharmaceuticals by 10 percent and textiles by 4 percent. Imports also recorded a rise from 7.597 million francs in the previous year to 8,447 million francs in 1957 The increase in imports being greater than that in exports, the deficit in Switzerland's balance of trade moved up from 1,939 million francs in 1956 to 1,733 million francs in 1957. The country's foreign trade has developed with almost all countries. West Germany remains her biggest trade partner, being not only her best client (961 million francs), but also her best supplier (2.193 million francs).

European Common Market Scheme

According to *Germany Today*, "Sophisticated German opinion recognises the growing post-Marshall Plan crisis in the west European economy and is aware that European prosperity, like peace, is indivisible. From this viewpoint, the creation of the European common market is necessary—and it is necessary now. As for the basic soundness of the present treaty, the prevalent opinion in the West German business world is that the document itself can best be regarded as a framework for the future—requiring extensive amendment once the project is actually under way. Although the projected six-nation European common market will have a massive population of 160 million, it does not in itself constitute an ideal reciprocal trading area. It is composed exclusively of highly industrialised nations whose economies do not necessarily complement each other. Yet the common market means that these nations will erect a common tariff wall not only towards the rest of Europe, but towards the rest of the world. The danger thus exists that nations outside of the common market may be hampered in selling to its six members, and, in turn, may become less able to buy from them.

"The common market is scheduled to go into effect in another three months, but there is as yet no short-range prospect of arriving at a unified policy to co-ordinate the six separate currencies. A full currency union is out of the question at present. It would require a far greater surrender of national sovereignty than most of the members are prepared to contemplate at the moment. Currency and credit policies will thus remain the prerogative of each individual government and its national bank. Likewise, an approach to the problem *via* full convertibility of currencies inside the common market is rendered impossible by the weakness of individual moneys at the moment, notably the French franc. The capital markets of the six member States are not strong enough to meet the challenge of the common market. The treaty contains no real plans for reinforcing and expanding capital market operations, although there is a capital shortage in each member nation.

Free Capital Movement

"While the treaty provides for free capital movement within the area, this can only become a meaningful reality after there has been a stabilisation of reciprocal currency relationships, and after the capital markets themselves have been solidified and expanded. For example, the French capital market, with interest rates running at 5 percent to 6 percent, functioned more effectively in 1956 than the West German market, where rates ran to 8 percent and over—in spite of the French Budgetary deficit and currency crisis and the contrasting power of the German deutschemark. There is little assurance that the common market will avoid the trap of resorting to various types of inter-governmental social and investment funds to cope with problems that require more basic solutions. The precedent of the European Coal and Steel Community (which is composed of the same six States as the projected common market) has shown a proclivity to fall back on the 'funds' strategy as a means of smoothing over specific problems rather than uprooting them. Mr. Hermann J. Abs, of the Deutsche Bank, recently noted: 'One of the main evils of our time is the faith in the use of funds by international organisations. International financial help should only be applied in situations where national efforts simply cannot solve the problem.'

"The prospects for a far-reaching co-ordination of credit control policies in the six States are currently limited by sharp differences in their national credit structures. The Austrian Finance Minister, Mr. Reinhard Kamitz, a leading European economist, contends that it may be possible to reach international accord to unify Bank rates, liquidity regulations, open market policies, etcetera. However, a number of leading German bankers believe that, if this goal is pursued, it should not be limited to the common market area, and must aim at unifying European credit control practices with those of the United States. The heart of the common market will be its Customs union. Tariffs and contingents are to be progressively razed inside the six-nation area. Meanwhile, an external tariff wall towards the outside world will be erected on the basis of arithmetic formulas for each category of goods In many cases, these formulas may conflict with the special problems of particular industries. For example, they will mean that West Germany will have to raise tariffs in certain areas where serious disruption will result.

"By way of illustration, the Bonn Republic currently imports machine tools duty-free. The common market formula will involve imposition of a 14 percent duty on all machine tools from outside the area This type of cost increase will, in some cases, threaten rationalisation measures in the West German economy. Machine tools are only one instance among many. This question is regarded as a singularly important one. Unless the common market nations succeed in unifying their tax practices, other agreements that they reach inside the Customs union may be imperilled or even completely negated by individual national tax manipulations."

Stocks and Shares

STOCK MARKET WELCOMES TAX CONCESSIONS

HOPE OF MORE REASONABLE OFFICIAL ATTITUDE IN FUTURE

Wednesday Evening.

IT is a long time since the stock market was treated to so much good news in one week. The strike of melting-shop workers in the Indian Iron and Steel Company's Burnpur works, has been settled although inter-union rivalry continues to keep the labour situation tense. Mr. Morarji Desai's appointment as Finance Minister was received with satisfaction. He is known as a realist and there are hopes that, under his leadership, the Finance Ministry will be more responsive to the needs of business and industry. The unusually mild, almost conciliatory, tone of Mr. Nehru's speech at the annual session of the Federation of Indian Chambers, was interpreted as evidence of a new trend in the Government's relations with the private sector, marked by greater awareness of the importance of private enterprise and a more accommodating attitude towards its difficulties. This belief was further strengthened by the Prime Minister's declaration at the Congress Parliamentary Party meeting, that the reduction of excise duties on cotton textiles and common tea was under consideration. Expectations ran high, and were not disappointed when the reductions in cloth excise, involving a loss of Rs. 15 crores of revenue, were announced on Tuesday. What caused even greater satisfaction, because it was unexpected, was the simultaneous announcement that, for the financial year 1958-59, companies would not be called upon to make deposits of either current profits or accumulated profits and reserves. The highly unpopular compulsory deposits scheme, which had already been watered down considerably, is now to be held in abeyance for a year Market opinion hopes that this ill-advised measure will soon be buried once and for all. Interest now centres on the expected relief to the tea industry, although it is realised that this may take a little time as it is not easy to devise a method of giving relief in export duty only to common teas.

In short, market sentiment is now marked by a new spirit of confidence and hope. At long last, it is thought, a solution may be in sight to the hitherto intractable problem of the relation between the Government and the private sector. In that case, the past week may prove to be a turning point for the stock market, marking off the end of the declining trend in share prices that began in September 1956. As against Rs. 20.42 on Thursday last, Indian Irons closed this evening at Rs 21.17 after touching Rs. 21.36 earlier today. Nearly all sections moved up in sympathy.

There was strong enquiry for sugar shares. It is thought that the statistical position is sound, with no large carry-over, and the average recovery percentage is likely to be better than for the last season. If a scheme for continuing sugar exports can be devised and implemented, the outlook for the industry is expected to be good.

The only sections of the share market which failed to participate in the general recovery movement were jute and coal. Here is a table showing representative price movements:

	Opening 13th March, 1958	Closing 19th March, 1958.
	Rs.	Rs.
3% Loan 1963-65	94.20	94.25

KALASA TEA (a south Indian estate) has obtained permission to issue bonus shares worth Rs. 60,000. The present shares of the face value of Rs. 9 each will be sub-divided into shares of Re. 1 each. A bonus issue of one (Re. 1) share for every nine shares of Re. 1 each held will then be made. The Re. 1 shares will thereafter be consolidated into shares of Rs. 2 each.

* * * *

The directors of the INDIAN ALUMINIUM COMPANY have decided to recommend a dividend of 6 percent on the ordinary share capital and a dividend of 5 percent, less income tax, on the preference share capital for 1957. The ordinary share capital of the company has meanwhile been increased to Rs. 3,84,58,900 from Rs. 2,01,10,000 as a result of the convertible loan stock issue and the subsequent conversion of the major portion of the issue into ordinary shares.

* * * *

Providing Rs. 9 lakhs (same) for taxation, the profit of JAY SHREE TEA GARDENS has declined from Rs. 12.54 lakhs to Rs. 9.23 lakhs for the year ended last December. Bringing in Rs 98.818 and making other adjustments there is a balance of Rs. 11,55,367. The ordinary dividend has been maintained at 10 percent to absorb Rs. 5.86 lakhs. Development rebate reserve is allocated Rs. 1 70 lakhs. General resere receives an amount of Rs 3 lakhs, leaving a carry-forward of Rs. 92.757 The average sale price has amounted to Rs. 2.18 a lb up to Sale No. 34 held in Calcutta for the 1957 crop, against Rs. 2.46 a lb for the same period a year previously.

* * * *

The SIJUA (JHERRIAH) ELECTRIC SUPPLY COMPANY has made a profit of Rs 2.96 lakhs for the 15 months ended March 1957. Providing Rs. 1.13 lakhs for taxation Rs 12.000 for wealth tax, Rs. 1.67 lakhs for depreciation and bringing in Rs 19,430, there remains a balance of Rs. 3 46,209, to which is added Rs. 31,175 by a transfer from general reserve. An ordinary dividend of 7½ percent per annum has been declared for the period under review Notable allocations include Rs. 43.227 for contingencies reserve, Rs. 1,621 for general reserve and Rs. 61.000 for debenture redemption reserve. The carry-forward is Rs. 2.346 The directors state that the Damodar Valley Corporation being short of power is restricting the offtake from the system, but "it is expected to meet our contract demand; consumers have been advised that it may be necessary to curtail supply during the period of the peak monsoon load. The Corporation has announced a revision of its tariffs from 1st January, 1959 The effect of this is being studied, but will result in an increase in the cost of energy purchased which will have to be passed on to the consumer."

276 Crores

a new record in life insurance

The Life Insurance Corporation has recorded a spectacular achievement. In 1957, Rs. 276 crores of Life Insurance was sold in India, comfortably exceeding the target of Rs. 250 crores.

This is an outstanding improvement on the comparable figure of Rs. 238 crores in 1955, said to be the peak year for Life Insurance under private management.

The Corporation's signal performance reflects the popularity of Life Insurance as an instrument for social and personal security. Indeed, over 8,00,000 new policies now stand as eloquent testimonials to this conviction.

EFFICIENT
INSULATION

part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

SHARP IMPROVEMENT IN SHARE PRICES

COTTON MILLS EXPECT BIG RELIEF

Wednesday Evening.

THERE has been a considerable improvement in share prices on the Bombay stock market this week. The reduction in the cloth excise duty, coupled with the decision to withdraw the company compulsory deposit scheme for one year, generated a fresh buying spree. It is believed that the cotton textile industry will get relief to the extent of about Rs. 15 crores because of the reduced excise duty.

The fact that the Government is beginning to take a realistic view of economic problems has been interpreted bullishly. It is a good sign that the Government is beginning to appreciate that foreign loans by themselves will be of little avail unless economic development takes place in such a way that the repayment of loans becomes easier in the long run.

Tata Steel were boosted up to Rs. 178.50 and Indian Iron improved to Rs. 21.18 after having suffered a setback during mid-week. Premier Construction were bought at Rs. 166.75 by influential interests and Tata Locomotive improved to Rs. 151 in sympathy with the general trend. Alcock Ashdown were freely offered at Rs. 217.50 on adverse corporate news. Automobile shares met with limited support, and Premier Automobile came to hand at Rs. 78.50. Hindustan Motors were freely transacted around Rs. 6.32.

Textile shares improved on a broad front because of bear-covering induced by the news of a reduction in the cloth excise duty. Century were prominent and gained at Rs. 416 on maintaining the same distribution. Bombay Dyeing recovered to Rs. 55 and Svadeshi were higher at Rs. 182. Simplex changed hands at Rs. 161 and Central were placed at Rs. 83. India United Ordinary gained fractionally at Rs. 9.96 and Apollo were done at Rs. 1.80.

Miscellaneous shares were steady, and prices of cement shares increased in the belief that there might be relaxation in distribution control. Associated Cement spurted to Rs. 149 and Digvijay were quoted higher at Rs. 137.50. Steamship company shares were slightly shaded on profit-taking on the fear that the proposed tightening up of the development rebate provision might damage dividend prospects. Scindia were shaded at Rs. 16.94 and India Steamship reacted to Rs. 12.06. Mining shares showed little variation, and Shivrajpur Syndicate were bought at Rs. 95. Sugar shares were quietly steady, and Belapur Sugar slipped back to Rs. 239. Phalton were taken at Rs. 139. National Rayon jumped to Rs. 237 on replacement buying and Tata Chemical were quoted higher at Rs. 13.48 on investment support.

Banking shares were quiet, and United Commercial Bank were quoted at Rs. 59.80. Bank of India declined to Rs. 135.50. Insurance shares were idle and minor changes in prices were registered. New India Assurance were taken at Rs. 44.50.

Electricity supply company shares were shaded on balance because of profit-taking. Ahmedabad Electric were transacted at Rs. 95 and Tata Hydro changed hands at Rs. 134.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise.]

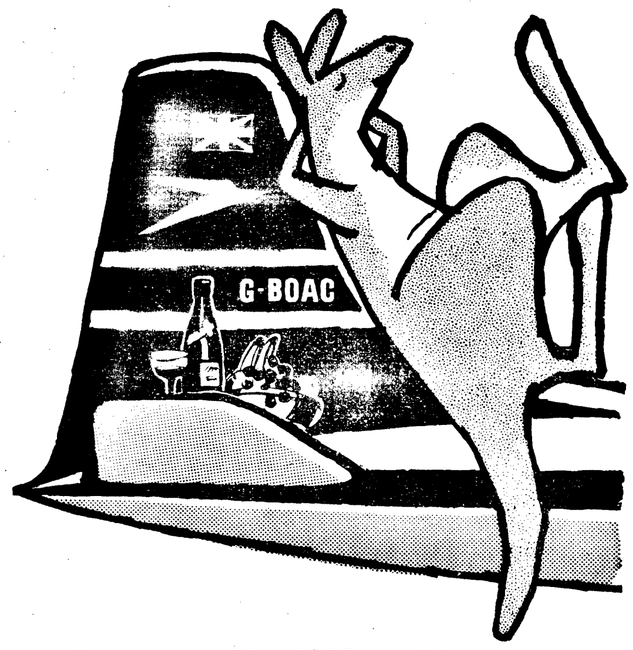
oxygen is the life blood of industry



Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication.

Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

STOCK MARKET DULL AND EASIER

ANXIETY ABOUT FALL IN U.S. INDUSTRIAL OUTPUT

London, 19th March.

THE dull trend which developed in the stock market at the beginning of the previous week continued during the past week, and widespread small falls were seen in most sections. U.S. economic uncertainties were the dominating factor, the fall in the U.S. industrial production index for February being a disturbing influence. U.K. labour and wage disputes caused concern. Gilt-edged fell back on inflationary implications over a broad front. But German and Japanese issues in the foreign bond section responded well to investment buying, and Chinese bonds also improved. Dollar stocks fell back in sympathy with the lower levels on Wall Street, while industrials lost ground in very quiet conditions. Gold shares fluctuated within narrow limits and recorded small declines on balance. Base metals moved rather irregularly and were mostly easier compared with the previous levels. Oils fluctuated narrowly prior to the week-end but fell back subsequently to record widespread losses. Rubbers were an exception to the general trend and were selectively better on dividend hopes. Teas were generally dull and featureless.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: London gilt-edged have maintained their gains, with strength in shorts. After a buoyant rally, industrials give hopes of consolidation. Gold shares have paused for a breather. The opinion is growing that base metals have been the worst. Wall Street's action in the face of unemployment news is encouraging. The underlying considerations point to nothing better than steadiness. Until confidence is restored, Wall Street must remain uncertain. A sterile summit conference could well be harmful. The safest sections should still be gilt-edged and golds.

Oils and Oilseeds Firm

Firm and active conditions prevailed in most sections of the oils and seeds markets during the past week, with both U.K. and Continental dealers and crushers taking up sizeable quantities. Brisk trading in Nigerian groundnuts was reported by the Board for June-August from £52½ a ton, c.i.f. up to £62. The demand reflected the clearance of re-sale lots earlier around £58 or £59 and the sale by U.K. crushers of a considerable tonnage of groundnut oil to Canada at £102 a ton, f.o.b. Afloat Nigerian groundnut oil was sold to the Continent at £101 a ton, c.i.f., with April-May advancing by £2 to £104. Argentine oil was $3 a ton dearer, with April-May sold at $281¾ a metric ton, c.i.f. Continent. Nigerian palm kernels were a brisk trade from £50 to £51 a ton, c.i.f., end-May to early-July, with sellers finally holding for £51½. The demand reflected the low stocks and a feeling that the market was at the bottom was helped by reports of a possible 20 or 30 percent drop in Philippines copra exports. Sellers of palm kernel oil temporarily withdrew, with Dutch oil for May-July valued at up to 101 florins a 100 kilos against 98 florins previously. Sellers offered Sumatra palm oil at 87 florins after business to Italy at 88 florins and 87 florins for March-April. India came out with firm offers of March shipment castor oil, with business claimed at £130, c. and f., for British Standard Specification in drums and £120 for commercial. Over the past week, English mills sold 1,000 tons of coconut oil to Canada and a further 1,000 tons to Black Sea ports, while Russia and China were reported to have bought 1,500 to 2,000 tons of 1 percent oil in Singapore. The market firmed as a result, with Straits 3 percent bulk oil for March sold up to £103¾ c.i.f. U.K. equivalent. Dutch oil was sold to the Continent for April-May at 104 florins. Copra joined in the advance, with March-April Philippines sold to the Continent at $190 a ton c.i.f. Chinese tung oil was traded ex-tank Rotterdam at £114 April-May and £113 June, while B.S.S. linseed oil was sold to the Continent at steady rates of $256 a ton for April-May.

Rubber Steady

During the past week, the rubber market remained about balanced between fears of Indonesian developments on the one hand, and the U.S. business recession and its possible repercussions on the U.K. economy on the other. The result was that although prices were steady for the most part they were often of a nominal character in the absence of trading interest. The small movements in rates reflected fluctuations at Singapore, but when values were advanced to eastern parity, there was not enough demand to raise them further. Patchy business, mainly in the lower grades on U.K. and Continental account, brought a little covering business on the "landed" market. In spite of limited demand, there was no pressure to sell and values finally were ⅛d a lb higher on balance.

ACKNOWLEDGMENT

Mr. S. R. Sarna, who contributed the article, "Under-employment in Backward Economies" published in the supplement to *Capital* dated 19th December, 1957, regrets that he could not appropriately acknowledge certain references taken from pages 25-26, 34 and 41 of Dr. N. L. Gupta's book entitled *The Problems of Unemployment in India*, which is a copyright publication.

New Delhi

EXCISE DUTIES ON MILL CLOTH AND POWERLOOMS CUT

COMPULSORY DEPOSIT SCHEME FOR COMPANIES BEING WITHDRAWN

(FROM OUR NEW DELHI CORRESPONDENT)

THE Prime Minister Mr. Nehru, who still holds the Finance portfolio, replying to the Budget debate in the Lok Sabha, announced the withdrawal of the compulsory deposit scheme for companies introduced last year. He said that apart from the administrative difficulties, the scheme, which was a form of forced loan, had yielded only Rs. 3.36 crores in 1957-58. He also announced reductions in the excise duty on cotton textiles and powerlooms. On coarse *dhoties* and *saris*, the duty has been reduced by 0.125nP to 3nP a square yard. On other coarse fabrics, it has been cut from 9.375nP to 6nP a yard. The remaining reductions include: on medium *saris* and *dhoties* from 9.375nP to 7nP a square yard and other medium varieties from 9.375nP to 9nP a square yard; on fine varieties from 18.75nP to 17nP a square yard; and on superfine fabrics from 25nP to 22nP a square yard. The reductions in the case of powerlooms are as follows: on more than 50 but not more than 100 powerlooms, from Rs. 100 to Rs. 80; on more than 24 but not more than 50 powerlooms, from Rs. 75 to Rs. 60; on more than nine but not more than 24 powerlooms, from Rs. 40 to Rs. 35; and on more than four but not more than nine powerlooms, from Rs. 20 to Rs. 20. The loss resulting from these reductions is estimated at Rs. 15 crores in a full year.

Enquiry Board for L.I.C. Officials

Mr. Nehru has also announced the personnel of the board which is to enquire into the conduct of two civil servants—the Principal Finance Secretary, Mr. H. M. Patel, and the chairman of the Life Insurance Corporation, Mr. G. R. Kamat. The same board might also hold an enquiry concerning the managing director of the L.I.C., Mr. Vaidyanathan. This investigation relates to the purchase of shares in the Mundhra group of companies by the L.I.C. The chairman of the enquiry board will be the Supreme Court judge, Mr. Vivian Bose, and its two members will be Mr. W. S. Sathianathan, I.C.S., Chief Secretary to the Madras Government and Mr. Sukumar Sen, Election Commissioner.

Repayment of External Debts

Mr. Nehru made two other notable speeches, one while inaugurating the annual session of the Federation of Indian Chambers of Commerce and Industry, the other while winding up the Budget discussion in the Rajya Sabha. They reminded one of certain observations which T. S. Mathews has made in his latest book, *The Sugar Pill*: "The Press bears almost the same relation to news as the American drugstore to a pharmacy. It is possible to get a prescription filled at a drugstore, but drugs are a very small part of its business; most of its customers are attracted by the soda fountain, the book and the magazine racks, the tobacco counter, the fountain pens, rubber goods, etcetera, etcetera." Mr. Nehru's speeches were similar in that financial problems were casually treated; the principal emphasis was on the nuclear age, world peace, scientific research, the philosophy of the plan, the human approach and community development. Dealing with financial questions, Mr. Nehru gave the following figures to show how the repayment of foreign loans and deferred payment debts incurred so far will be phased.

1958-59	Rs. 23 crores
1959-60	Rs. 35 crores
1960-61	Rs. 92 crores
1961-62	Rs. 123 crores
1962-63	Rs. 107 crores
1963-64	Rs. 48 crores
Total	Rs. 428 crores

The first year of the third five year plan will thus be the peak year for the repayment of foreign debts. In fact, repayments during the first three years of the third plan amount to Rs. 278 crores, compared with Rs. 150 crores due to be repaid in the last three years of the second plan. These, however, are not the final figures. Mr. Nehru said that on his suggestion, the Planning Commission had prepared a paper showing the causes of the foreign exchange crisis. According to the Commission, heavier imports of foodgrains than were originally planned, increased requirements of raw materials, components, spares, replacements, etcetera, to match the high levels of production, along with increases in price levels and freight rates, were largely responsible for the crisis. Of Rs. 326 crores worth of increase in imports in 1956-57, iron and steel accounted for Rs. 69 crores, machinery for Rs. 51 crores and foodgrains for Rs. 73 crores. An increase in world prices enhanced the cost of these imports.

Unplanned Imports

But the basic question which has not been answered is, why were these unplanned imports permitted? If increased quantities of raw materials, components, spares, replacements, etcetera, to match the high level of production were needed in 1956-57, the volume of imports should have been larger to match the higher level of production in 1957-58. Obviously, the Planning Commission has not disclosed the whole story. The fact is that the administrative control of the Ministry of Finance during the last 18 months of Mr. Deshmukh's tenure became lax. Following the shortfall in development expenditure, spending Ministries assumed an aggressive rôle, defying the Ministry of Finance on every possible excuse. A junior and ineffective officer, who generally represented the Ministry of Finance, was overawed when attending the meetings of the Licensing Committee. Then, again, steel and cement were not imported in a fit of absent-mindedness. The imports were "planned," missions being sent to negotiate purchases in Europe. The foreign exchange spent on missions, cultural or otherwise, was generally of the order of Rs. 1 crore a year. This suggests that either the Ministry of Finance failed to do its duty or, for reasons still undisclosed, its financial controls were allowed to rust.

Warnings Ignored

The rôle of the Planning Commission also needs to be examined. It is said that the Commission, in spite of repeated warnings, particularly from one of its members, Mr. K. C. Neogy, underestimated the deficits in the plan. Foreign exchange costs were never fully calculated. The Commission did not indicate how the sum of Rs. 800 crores which friendly nations were expected to contribute to the second five year plan would be raised. A Joint Secretary to the Finance Ministry was treated to a mild dose of brain-washing when he pointed out that the country's resources could not sustain a plan of more than Rs. 3,400 crores.

That conceit corrodes judgment is well demonstrated by the progress of the second plan. The Government's grim determination to carry it out in full was once constantly reiterated. Now it is worth asking who has been stopping the implementation of the plan. It has often been claimed that the plan was not over-ambitious. Many critics were emphatic in asserting that it was very modest. The Government, however, now declares that considering the availability of resources, only the core of the plan can be implemented; it thereby accepts the contention that the plan was over-ambitious. In defence of the plan, it was also said that there could be no compromise over the "economic emancipation" of the masses. But it is debateable whether anything in the plan would have led to the "economic emancipation" of the masses.

Resources for the Plan

The New India is the title of a book prepared by a study group set up by the Planning Commission. In its chapter on financing the plan, it says: "Non-plan expenditure can easily be met by the Central and State Governments' normal tax and other revenues. The Indian Government expects to raise about a fourth of all the Government's needs for the plan to be met from revenues of the State and Central Governments. When the plan was originally issued, it was expected that Rs. 450 crores would come from new taxes and Rs. 350 crores from the existing taxes, making a total of Rs. 800 crores. The plan had, however, left a gap of Rs. 400 crores. According to a decision made in May 1957, that amount must now also be met largely by additional taxation.

"Taken together, all the new tax measures introduced in 1956 and 1957 will alone yield about Rs. 800 crores over the plan period. While this is promising, a considerable portion must be used for non-plan purposes, including the higher costs of defence, administration and defence services. There is also the possibility that the State Governments may not raise as much of their share of new taxes as expected. The second plan hopes to collect up to Rs. 100 crores a year, or Rs. 500 crores for the plan period, in small savings. Aside from small savings, the Governments, Central and State, expect to float public loans to the average of Rs. 140 crores a year, or Rs. 700 crores for the plan period.

"Over the second plan, the Government had originally hoped it could use deficit financing to a total of Rs. 1,200 crores. Price rises, showing up early in the plan and continually throughout 1956, have made it necessary to limit the amount of deficit financing to considerably less than it had budgeted for in the coming year."

Additional Taxes

The following points emerge from the publication:

1. The additional taxation during the plan period should be of the order of Rs. 1,200 crores, or Rs. 400 crores more during the remainder of the plan.

2. The additional taxes already raised, plus the existing taxes, would yield Rs. 800 crores during the plan period, "a considerable portion of which must be used for non-plan purposes."

3. Small savings must yield Rs. 100 crores a year, or Rs. 500 crores in the plan period. In the first two years of the plan, the yield, however, averaged Rs. 50 crores a year.

4. Public borrowings must be of the order of Rs. 140 crores a year. The net realisation from public borrowings during the five years ended 1957-58 amounted to Rs. 257 crores, or Rs. 51 crores a year on the average of five years. The net borrowings in 1957-58 amounted to Rs. 68 crores.

5. The target of Rs. 1,200 crores set for deficit financing has already been altered.

The New India says: "This presents a dilemma. Can taxes be raised still more on top of the new heavy burden just imposed? Can still more savings and loans be collected? The dilemma is that if the Government takes too much in taxes and loans, it will dry up money needed by private enterprise for expansion. If it takes too little, development cannot progress."

Central Cabinet Re-shuffled

A re-shuffle of the Central Cabinet following the resignation of Mr. T. T. Krishnamachari and the death of Maulana Azad was announced last week. Mr. Morarji Desai has become Finance Minister. His place as Commerce and Industry Minister has been taken by Mr. Lal Bahadur Hafiz Mohammed Ibrahim, succeeds Mr. S. K. Patil succeeds Mr. Shastri as Minister of Transport and Communications. The U.P. Finance Minister, Hafiz Mohammed Ibrahim, succeeds Mr. S. K. Patil as Minister for Irrigation and Power. The strength of the Union Cabinet has been reduced from 13 to 12. The following Ministers now constitute the Central Cabinet: Prime Minister, Mr. Jawaharlal Nehru; Minister of Home Affairs, Pandit Govind Ballabh Pant; Minister of Finance, Mr. Morarji Desai; Minister of Railways, Mr. Jagjiwan Ram; Minister of Labour, Mr. Gulzarilal Nanda; Minister of Commerce and Industry, Mr. Lal Bahadur Shastri; Minister of Steel, Mines and Fuel, Sardar Swaran Singh; Minister of Works, Housing and Supply, Mr. K. C. Reddy; Minister of Food and Agriculture, Mr. Ajit Prasad Jain; Minister of Defence, Mr. Krishna Menon; Minister of Transport and Communications, Mr. S. K. Patil; and Minister of Irrigation and Power, Hafiz Mohammed Ibrahim. On a State-wise basis, there are five representatives of Uttar Pradesh, four of Bombay and one each of Punjab, Mysore and Bihar.

There are 15 Ministers of State, of whom one, Mr. B. Gopala Reddy, is a new entrant. The following eight Ministers of State have been given independent charges: Mr. Mehr Chand Khanna, Minister of Rehabilitation; Mr. S. K. Dey, Minister of Community Development; Mr. K. L. Shrimali, Minister of Education, Mr. A. K. Sen, Minister of Law; Mr. Humayun Kabir, Minister of Scientific Research and Culture; Mr. S. N. Sinha, Minister of Parliamentary Affairs; Mr. D. P. Karmarkar, Minister of Health; and Mr. B. V. Keskar, Minister of Information and Broadcasting.

The remaining seven Ministers of State are attached to the following Ministries: Ministry of Food and Agriculture, Dr. P. S. Deshmukh; Ministry of Commerce and Industry, Mr. Manubhai Shah and Mr. Nityanand Kanungo; Ministry of Home Affairs, Mr. B. N. Datar; Ministry of Transport and Communications, Mr. Raj Bahadur; Ministry of Steel, Mines and Fuel, Mr. K. P. Malaviya; and Ministry of Finance (Economic Affairs), Mr. B. Gopala Reddy.

New Deputy Ministers

There are 19 Deputy Ministers, of whom five—Mrs. Tarkeshwari Sinha, Mr. Ahmed Mohiuddin, Mr. P. S. Naskar, Mr. S. V. Ramaswamy and Mr. R. M. Hajarnavis—are new entrants. Mrs. Sinha is attached to the Ministry of Finance (Economic Affairs), Mr. R. M. Hajarnavis to Law, Mr. S. V. Ramaswamy to Railways, Mr. Mohiuddin to Civil Aviation, and Mr. Naskar to Rehabilitation.

The Prime Minister and the Ministers of Home Affairs and Finance are the "big three" of the Cabinet, with Mr. Shastri as possibly the next in importance. As might be expected, some think that it is a Hindi-dominated Cabinet with no representative of the anti-Hindi areas. In a Cabinet of 12, Mr. Krishna Menon and Mr. K. C. Reddy belong to the non-Hindi areas. Even they have no pronounced views on Hindi. The re-shuffle indicates Mr. Krishna Menon's growing influence. The promotion of Mr. S. K. Patil and the appointments as Deputy Ministers of Mrs. Sinha, Mr. Ramaswamy and Mr. Naskar are attributed to him. The three new Deputy Ministers were included in Mr. Krishna Menon's team to the last U.N. session. The down-grading of the Education Ministry is welcomed here. Like the Health Ministry, it deals with subjects which have been in the State list since 1921. Its importance lay largely in the late Maulana Azad being the Minister of Education. The Health Ministry was down-graded and placed under a Minister of State last year. The same has now been done to the Education Ministry. Maulana Azad also held charge of the Department of Scientific Research. That has now been placed under the independent charge of a Minister of State.

Indo-Japanese Iron Ore Project

The final phase of negotiations for the proposed joint Indo-Japanese project for the supply of iron ore to Japan on a long-term basis began here last week. The Japanese mission is led by Mr. S. Nagano, president of the Fuji Iron and Steel Company, and the Indian representatives are headed by the Secretary to the Cabinet, Mr. M. K. Vellodi. The project proposes the development of new mines and railway and port capacity to ensure

supplies of iron ore to Japan over a long period. In the last few months, two Japanese missions visited India for preliminary discussions and technical studies of the project. A technical report on mining and the development of railway and port facilities was submitted by a Japanese expert mission to the Government towards the end of January.

Japan has recently expanded its steel industry for which it requires additional supplies of iron ore. It has negotiated a five-year arrangement for the supply of iron ore from China. It requires two million tons of iron ore from India. Enquiries show that allocations in the U.S. Special Development Fund, to be utilised for the benefit of at least two Asian countries, are terminable by 30th June, 1958. India and Japan will have to make a joint request for aid for the development of mining, transport and port facilities in Orissa. Enquiries also show that the U.S. assistance and the Japanese contribution will not be adequate to finance the whole project. A sizeable gap will be left unbridged. One suggestion here is that Japan, instead of importing iron ore, should assist India in developing the manufacture of pig iron. This will reduce shipping costs to a large extent and will be of mutual benefit to both countries.

Ships from Japan

An Indian mission, led by Mr. K. B. Lall of the Ministry of Commerce and Industry and including Mr. Nagendra Singh, Joint Secretary to the Ministry of Transport, recently arranged a yen credit for India. It was also able to secure a provision from this yen loan for the purchase of Japanese ships. Credits or loans are generally given as part of the export drive. The Japanese shipping industry needs no export stimulus. It was, therefore, with very great difficulty that India could get a provision from the yen credit for the purchase of three ships. This credit will be for ten years. Japan might agree to sell more ships on a seven year credit basis.

New Ship-building Consultants

Negotiations are in progress with the German firm of ship-builders, Lubecker Flenderwerke, for their appointment as India's ship-building consultants. The agreement with the French shipping consultants is due to be terminated by mutual consent.

Raw Film Manufacture

An East German technical mission is expected here shortly to finalise the raw film industry project, it is learned.

Consents to Capital Issues

Private enterprise is playing an increasing part in economic development. This is borne out by the statistics for consents given to new capital issues:

Year	Number of applications disposed of	Amount asked for (in crores of rupees)	Number of applications consented to	Amount consented to (in crores of rupees)
4th quarter	117	48.07	102	45.28
3rd quarter	123	48.18	101	43.31
2nd quarter	128	49.09	61	31.12
1st quarter	116	37.39	81	31.61
1957 total	484	182.73	345	153.32
1956	362	252.5	297	230.2
1955	372	151.4	289	125.4
1954	267	117.0	220	110.6
1953	272	89.8	232	81.4
1952	326	152.3	254	39.8

In 1957 the number of public companies were 244; and the capital consented to was Rs. 107.8 crores. There were, in addition, 98 private companies, their capital consents being Rs. 42.4 crores. The breakup of the share structure was as follows: ordinary shares Rs. 87.2 crores; preference shares Rs. 9.9 crores; debentures Rs. 9.1 crores; miscellaneous Rs. 47.1 crores; making a total of Rs. 153.3 crores.

Foreign Collaboration in Industrial Schemes

Foreign collaboration was secured in about 100 schemes for industrial development in India during 1957. The collaborating firms belonged to 14 different countries. The U.K. was the most important, and collaboration in 45 different schemes was secured from it. The United States was second with 22 schemes, of which, however, 12 cases for collaboration pertained to a single process. West Germany was third with ten cases and Switzerland fourth with six. There were three cases each of collaboration with firms in Japan, France and Italy, two in the Bahamas and one each in Belgium, the Netherlands, Austria, Australia and Brazil. In as many as 16 cases of collaboration, the foreign firms invested capital in partnership with Indian concerns in varying proportions. The other collaboration schemes took the form of supplying technical know-how or technical consultancy services on payment of royalty or a specific amount as technical fees. The industries for which collaboration was secured covered a wide range from machine tools to textile processing. Those which deserve mention are internal combustion engines, engine valves, bearings, industrial belts, sugar mill and other machinery, lifts, diesel engines, vacuum flasks, precision instruments, refrigerators, water meters, carbon brushes, chemicals, dyes and fertilisers. These cases of collaboration were in addition to those for which Indian firms were able to secure deferred payment terms from suppliers of machinery abroad. They did not include cases of collaboration in projects in the public sector.

Tourism and Bureaucracy

The annual report of the Transport Ministry says that with effect from 1st March, 1958, a separate Tourist Department under the charge of a Director-General has been set up. A Deputy Secretary in the Ministry has been promoted to the status of a Joint Secretary and made the Director-General. The report adds: "From all indications, it is apparent that tourism, which is an important source of foreign exchange, besides being an active force for promoting international understanding, is growing in India. The number of foreign tourists visiting India has more than trebled since 1951. The foreign exchange earnings from tourist traffic have increased from Rs. 10.1 crores in 1955 to Rs. 15.45 crores in 1956."

The Cabinet Secretariat has a statistical organisation, which publishes a monthly abstract of statistics. On page 109 of the January 1958 issue are given figures for the balance of payments, which has a column for foreign travel. In 1955, India earned Rs. 10.1 crores from foreign travel, her outgoing on that account being Rs. 12.3 crores, resulting in an adverse balance of Rs. 2.2 crores. The figures given for 1956 are as follows:

	Receipts	Payments
First quarter	Rs. 2.6 crores	Rs. 2.4 crores
Second quarter	Rs. 1.1 crores	Rs. 4.3 crores
Third quarter	Rs. 1.1 crores	Rs. 4.0 crores
Fourth quarter	Rs. 1.3 crores	Rs. 2.7 crores
Total	Rs. 6.1 crores	Rs. 13.4 crores
	or (—) Rs.	7.3 crores.

In the first two quarters of 1957 the receipts were Rs. 2.8 crores and payments were Rs. 3.4 crores, again leaving a deficit balance of Rs. 60 lakhs against India. Many wonder on what basis the Ministry in its official report says that earnings from foreign travel have jumped up to Rs. 15.45 crores, when the Reserve Bank's accounts show a decline to Rs. 6.1 crores. One comment made here is that if the creation of departments could achieve results, India would have been self-sufficient in food, for example, some years ago. There is an old saying that bureaucracy and departmental proliferation are like husband and wife. Government jobs breed faster than locusts. Two more organisations were created last week. They were the Atomic Energy Commission and the Tourist Department. A Scientific Policy Resolution was also published. They are intended to achieve full employment in India's free society.

Mission to West Germany

The Governor of the Reserve Bank, Mr. H. V. R. Iengar, and the Secretary to the Industries Ministry, Mr. L. K. Jha, are shortly leaving for West Germany to negotiate the financing of industrial projects such as heavy engineering, fertilisers, drugs and chemicals. The negotiations will be aimed at securing deferred payment terms, India initially paying 20 percent. The total value of the projects to be discussed is placed at 300 million deutschemarks. Mr. Iengar and Mr. Jha will also visit Britain to finalise arrangements for financing the heavy electrical project now under commission by Associated Electrical Industries. Mr. Iengar will thereafter visit some other European countries, and Mr. Jha will proceed to Geneva to preside over the G.A.T.T. session which will commence on 14th April to discuss a report on the European common market scheme. The session will last up to 2nd May, 1958.

Report on Re-rolling Industry

In order to formulate the principles which should govern the examination of applications for setting up new re-rolling mills and to enquire into the re-rolling industry in general, a committee was constituted under the Ministry of Commerce and Industry's resolution dated 24th July, 1956. The committee submitted its report in June 1957. Among other things, it has observed that:

1. The existing capacity of the re-rolling mills of various categories, including secondary producers, as on 1st November, 1956, is about 700,000 tons a year on a one-shift basis. As certain returns need re-checking, the figure should be taken as provisional. All the existing capacity is not covered by valid sanctions. In some cases, the plant and machinery which was mainly for the purpose of replacement has been put up along with plant already in position. Strictly speaking, the capacity created without proper sanction should not be recognised. It would not, however, be in the national interest to ignore its existence.

2. In addition, some plant and machinery has been licensed by the Iron and Steel Controller, to be obtained from abroad or from indigenous sources, mainly for replacement. There is reason to believe that most of the plant and machinery now to be arranged will have the effect of increasing the capacity. It has been assessed at 104,760 tons a year and may be taken as the projected additional capacity.

3. While the major part of the existing capacity is based on the use of billets, quite a few units, particularly the smaller ones, depend on re-rollable scrap for their operation. Re-rollable scrap is not the proper material for the manufacture of a quality product, but its use will be continued in mills below eight-inch sizes. The capacity of such units which can suitably run on re-rollable scrap is 26,200 tons a year. The remaining capacity should be taken as based on billets. It comes to 1,325,746 tons on a double-shift basis. No difficulty is expected in the mills below eight inches in size getting their future requirements of re-rollable scrap as hitherto. As for the units based on billets, a number of them have had to restrict their operations to a single shift or even less. It is a generally accepted practice for such units to work double shift to ensure economic production. Allowing for wastage at 10 percent their total requirements of billets on a double-shift basis work out to 1,458,024 tons a year. Indigenous supplies of billets and imports under a liberal policy have not proved sufficient to meet the requirements of the re-rolling industry, according to the general practice in the line. The total expected availability of billets and electric furnace ingots for re-rolling purposes by 1960-61 is 890,000 tons a year. This quantity, in terms of billets, comes to 876,250 tons.

Billet Supplies

4. Nothing can be said about the quantum of billets that will be available in the near future. Anyway, it is clear that it will not be possible to cater for the entire industry as it exists today on a two-shift basis, which represents the general practice to achieve economic production. It will, therefore, be necessary to regulate billet supplies in a manner which more or less maintains the present pattern of distribution.

5. In spite of the Government of India's liberal import policy for billets, it was found necessary to obtain from abroad substantial supplies of certain sections for which capacity existed in the country. It is difficult to get billets from foreign countries. The Government should, therefore, make a special effort to get from steel-producing countries, through trade agreements or otherwise, as much of billet supplies as possible to supplement the indigenous production and thus enable re-rollers to work on an economic basis.

6. If adequate supplies of billets cannot be arranged, the available supplies may have to be rationed among the re-rollers *pro rata* according to the capacity as recently assessed by the Iron and Steel Controller. In such allocations, (i) the units which were given the option recently to change over to billets but preferred to continue to operate on scrap; and (ii) the unauthorised capacity; will have to be ignored. Unless supplies for one shift at least are assured to the industry, there will be a danger of larger units having to suspend their operations.

7. The re-rolling industry is amenable to regional development. New capacity should be established so as to fill the gap locally as far as possible. The following States are deficient in re-rolling capacity: Andhra, Assam (including Manipur, Tripura and N.E.F.A.), Bihar, Himachal Pradesh, Jammu and Kashmir, Madras (including Pondicherry), Madhya Pradesh, Mysore, Kerala and Orissa. The other States have surplus re-rolling capacity.

8. For all billets allocated, production orders should be planned by the Iron and Steel Controller in the same way as with the main and secondary producers.

Revised Classification

9. The existing classification of re-rollers ("registered" and "unregistered") should be revised and in future there should be only two categories on the basis of the type of raw material used—billets or scrap. Only mills of below eight inches may continue to base their operations on scrap.

10. The estimated total liquid metal capacity of steel furnaces, existing and projected, will be utilised both for castings and for the production of ingots or billets. The melting scrap expected to be available by 1960-61 would be 260,000 tons a year. This would hardly be sufficient to meet the needs of the existing and projected steel furnaces, as their actual requirements of scrap would be about 285,000 tons a year. The capacity of the existing steel foundries is 21,000 tons a year. They expect to increase their capacity to 36,000 tons a year by 1960-61. These foundries should be encouraged to expand and to utilise all their liquid metal for castings purposes only.

11. The estimated demand for steel castings by 1960-61 is 72,000 tons a year and the steel foundry capacity is expected to be 86,000 tons by that time. This will take care of the entire demand for steel castings. Therefore, there is no need to create any additional casting capacity before 1960-61. The position should be reviewed thereafter.

12. The estimated availability of melting scrap (other than re-rollable industrial scrap) now is 200,000 tons a year. This, together with about 200,000 tons now being exported, makes up a total of 400,000 tons, and with the ingot production of 6 million tons a year after 1960-61, the expected availability of scrap by 1961-62/1965-66 is expected to be 1 million tons, that is, 600,000 tons over and above the 400,000 tons. There is definitely a need for additional steel furnaces for the manufacture of steel ingots or billets to meet the requirements of the steel rolling industry. By 1960-61, 250,000 tons of Grades 2 and 3 scrap, now being allowed to be exported, will be available. About 20 percent of this scrap is comprised of very light varieties, which arise in all parts of the country. Besides, other types of light scrap can be had throughout the country. Efforts should be made to use such scrap in the regions where it arises. In all, about 80,000 tons of this type of scrap would be available each year. Mains frequency induction furnaces, with a monthly capacity of 150 to 300 tons, should be set up to convert this scrap into billets for rolling mills, at least one in each State and more than one if an assessment of scrap availability warrants such addition.

13. Until the furnaces are erected to utilise the scrap exported at present, permits may be given for export, subject to review every six months and the exporters making a certain percentage available to electric furnaces. Eventually the export should be stopped. Scrap should be de-controlled, so that it may find a price level through normal trade channels.

Bigger Capacity

The Government has accepted recommendations 4, 8, 10 and 11. As for recommendations 1, 2, 3 and 6, it says that the capacity, as assessed on 1st November, 1956, is higher than the estimates made earlier. It considers it necessary to carry out a further detailed technical assessment before adopting figures of capacity of individual re-rolling mills for the allocation of raw materials. While recommendation 5 would ordinarily have been worth considering, the present foreign exchange position would hardly justify any further increases in imports of billets. On recommendation 7, the Government notes that, in spite of the overall capacity being in excess of both demand and the availability of raw materials, new capacity is recommended for certain States on grounds of regional development. There is no case, on merits, for any new units, except in areas which have little or no capacity at present and which might justify the location of new units on considerations of convenience of transport and economic production. In determining the location and size of such units, it is important to bear in mind the possible disturbance to the pattern of distribution in a scarce market. The Government proposes to consider such cases on their merits.

With reference to recommendation 9, it is the intention of the Government, as soon as the supply position of indigenous billets permits, to allocate billets to re-rolling mills of 8 inches and above. In the meantime, the allotments of billets will continue to be made on the basis adopted hitherto, subject to such modifications as the availability of billets may, from time to time, permit. While recommendation 12 is acceptable in principle, it will be necessary to examine the availability and the suitability of such scrap and also the economics of production before considering applications for the installation of furnaces. The economic size of each unit will be determined, taking into account the particular circumstances of the case. As for recommendation 13, on scrap, the Government proposes to consider it on its merits at the appropriate time.

Expansion in Ferro-Manganese

Ferro-manganese is one of the key raw materials used in the manufacture of steel. As against a target of 160,000 tons a year fixed for the second five year plan, licences for setting up ferro-manganese plant have been granted to seven parties for a total capacity of 123,000 tons. Of these, three units have started production. Licences for a further capacity of 54,000 tons a year are likely to be issued shortly to two more parties. India has large reserves of manganese ore, the primary raw material for ferro-manganese. The ore is at present mainly exported. As against a price of nearly Rs. 150 a ton for high-grade ore, processed ferro-manganese would fetch over Rs. 800 a ton. Therefore, the development of the ferro-manganese industry would help earn foreign exchange. The export of the finished product will also save shipping space. In January 1958, the export of 5,000 tons of ferro-manganese was permitted, subject to the indigenous demand being met.

Coal Supplies for New Steel Works

Details are now available of how coal supplies for the three steel plant in the public sector will be arranged. For Rourkela, they will be drawn from the Kargali-Bokaro and Jharia fields. A washery has been constructed in Kargali to wash the coals from Kargali-Bokaro. Tenders have been obtained for a washery in Dugda to wash the Jharia coals. Until this washery is ready for operation, selected unwashed coals will be used. The location of limestone of suitable quality is presenting difficulties.

For the supply of washed coal from Kargali-Bokaro to the Bhilai steel plant, a washery has been constructed. The Dugda washery, for which tenders have been received, will not be ready until 1960. Meanwhile, unwashed coals from the Jharia fields will be selected and used. Limestone quarries are being developed in Nandini, about 12 miles from Bhilai. Plant and equipment for these quarries will be obtained from Russia. Until mechanisation is completed, the quarries will be worked manually.

For the Durgapur steel plant, the metallurgical coals of Jharia will be blended with the high volatile semi-coking coals of Barakar. The Jharia coals will be washed in a washery which is being put up as part of the main steel plant in Durgapur. It was expected that it would be possible to obtain limestone for the Durgapur steel plant from the same sources as for the Rourkela steel plant, namely, the Birmitrapur-Hathibari areas. A preliminary project report prepared for the opening of the quarries there shows that the cost of mining might be very heavy because of the difficult nature of the deposits. To obtain limestone of the right quality, it appears to be necessary to mine nearly three times the quantity required. The existing railway line will also be inadequate and even with the construction of a new line—part of the future Bondamunda-Muri line—it might not be possible to maintain supplies for both the Durgapur and the Rourkela steel plant beyond their one million ton stage. Hindustan Steel Private Ltd. is examining alternative sources of supply.

Failure of Irrigation Schemes

After more than a decade of the "grow more food" campaign, India continues to depend on imports of foodgrains. Crores have been spent on minor irrigation works since the inception of the campaign. But enquiries show that in Mysore 10,000 tanks are in need of repairs and 14,000 need de-silting. In Andhra, 3,000 tanks have been completely breached while a large number require restoration. Similar is the case with Madras. Before independence, there was a law for the compulsory maintenance of water tanks. This has been abolished without anything taking its place, with the result that the tanks are either silted or badly spoilt. In either case, they go out of use. Side by side, new tanks are being built. The sinking of wells is another way of stepping up food production. But instances are not wanting where the money advanced for sinking wells has been used for other purposes. The potential for private irrigation is very large because once a well is sunk, it is in the interests of the cultivator to keep it going.

In major irrigation schemes, canals generally are not dug during the building of a dam. The Tungabhudra high-level canal has yet to be completed. As for the low-level canal, it runs through a stony and uneven area having a very small population. Having built a canal, the next problem is to take the water through innumerable channels into the fields. These channels in the olden days were made by the cultivators themselves. With the spread of a welfare State ideology, the cultivator now wants this to be done by the State. It is suggested that the State should make the channels and charge the cost to the cultivator. In some areas, the cultivator does not know the uses and advantages of canal irrigation, yet hardly anything has been done to make him irrigation-minded. Irrigation extension schemes are needed. The financial aspect of irrigation projects is also giving trouble. To provide water free as an incentive for a fixed period is understandable. What is not understandable is to give it free for all the time, as is being urged by several States.

Inland Water Transport

The Inland Water Transport Enquiry Committee set up to assess the transport needs of Bihar has submitted its interim report. Its principal recommendations are as follows:

1. A traffic survey in the Bihar region should be undertaken and completed urgently.

2. Pending completion of the survey: (a) the Ganga Brahmaputra Water Transport Board should endeavour to maintain the triangular service between Calcutta-Bihar, Bihar-Assam and Assam-Calcutta, through a private agency if necessary, giving that agency appropriate assistance; (b) until the triangular service is re-established, the inland water transport services between Buxar and Rajmahal on the Ganga and Patna and Darauli on the Gogra should be maintained; (c) the south Bihar-Assam traffic should move by the rail-*cum*-steamer route *via* Calcutta as long as it is not possible to move the entire traffic by the Assam rail link; and (d) the Calcutta-Bihar (river stations) traffic should move by the rail-*cum*-river route *via* Rajmahal.

3. The north Bihar-Assam traffic may move by the all-rail route, as at present.

4. The restricted inland water transport service in Bihar should be operated by the Ganga Brahmaputra Water Transport Board, through a suitable private agency, if necessary.

5. Suitable craft should be obtained from the Joint Steamer Companies.

6. The floating workshop at Patna should be handed over to the Government by the Joint Steamer Companies.

Manufacture of Alloy and Special Steels

There is a proposal to put up a plant in the public sector for the manufacture of alloy and special steels. Preliminary reports were received from four foreign firms. These were examined with the assistance of the general consultants to the Department of Iron and Steel. It was found that, *prima facie*, certain of the proposals were worth pursuing further. An assessment has since been made of the likely demand for alloy and special steels. The steel consultants are drawing up an invitation to tender and it is proposed to invite detailed project reports. The selection of the site, suppliers of plant and equipment, the agency for construction, the nature of management, etcetera, will all have to be determined after receiving the tenders. No specific provision has been made in the second plan for this plant, but it is expected that the funds will be available from the total provision for the National Industrial Development Corporation.

Foodgrain Stocks and Supplies

Except in the case of rice, the prices of all foodgrains are now substantially lower than at this time last year. This has been stated by the Minister for Food and Agriculture, Mr. A. P. Jain, at a meeting of the informal consultative committee of Parliament for his Ministry. Even in the case of rice, he says, while the all-India index remains higher than last year's, it has fallen from 112 in August 1957 to 99. Some of the steps taken by the Government to conserve stocks in certain areas have borne fruit. For instance, in Orissa and Madhya Pradesh, which have been cordoned off, it is felt that there is enough rice for these two States' own requirements. West Bengal's deficit is estimated to be less than before. The southern rice zone as a whole is a surplus area. According to the long-term agreement with Burma, rice imports from that country should be of the order of 500,000 tons again this year, "but Burma may not be able to supply the full amount." To make good the deficit, internal procurement is being arranged in Andhra and Punjab.

As for wheat, arrangements have been made to import 1.5 million tons of it during 1958. Besides, internal stocks of foodgrains at present stand at 900,000 tons, one-fourth representing rice and the remainder being wheat. Mr. Jain thinks that internal supplies and the import programme will carry the country through to September or October 1958, when there might be a new arrangement with the U.S.A. under P.L. 480. "We do not apprehend any lack of foodgrains this year", he declares, "but we may not be able to meet the demands of the States in full in regard to rice; many will have to take both wheat and rice."

London

BUDGET MAY REFLECT LESS STRINGENT POLICY

HOPES OF BANK RATE CUT

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer, Mr. Heathcoat Amory, will open his Budget on 15th April, the day Parliament resumes after the Easter adjournment, for which it will rise on 3rd April. The last time the Budget date coincided with the re-assembly of Parliament after Easter was on 19th April, 1955. Hopes are rising that the Budget will initiate a cautious return by the Government to an expansionist economic policy, including a reduction in Bank rate. Much will depend on the outcome of the current round of wage claims, especially those involving London Transport and British Railways. If these can be settled at the expense of a "reasonable" increase, the Government may be prepared to consider some relaxation of the credit "squeeze". But few M.P.s on either side of the House expect a popular Budget, in the sense of tax concessions, although the economic indicators continue to be reasonably encouraging. It is felt that Mr. Amory may well find himself in a postion to make a few concessions and/or adjustments at a cost of about £100 million, as Mr. Thorneycroft did last year. Anything more far-reaching would be justified only to avoid a deterioration in the present 2 percent level of unemployment.

Trade Gap Halved

The provisional foreign trade figures for February suggest that the U.K. is standing up well in the face of the recession being felt elsewhere. The trade gap, measured by the excess of imports over exports, was appreciably narrower. It fell from £34.8 million in January to £11.3 million. This is the lowest figure for any month since the war, with the exception of October 1954, when the figures were affected by the dock strike, and July 1946. A sharp reduction in the import bill was the main contributory factor. Imports in February cost £288.7 million, a drop of over £36 million compared with January, and the lowest figure since the autumn of 1954. This reduction in the cost of imports reflects the steep fall in world commodity prices and in shipping freight charges. February exports at £265.4 million were £12 million down compared with January, a seasonal movement. January and February exports together were practically unchanged compared with the corresponding period in 1957. An outstanding and encouraging feature of the February trade figures is the sharp rise from £29.5 million to £35.3 million in exports to the vital dollar markets. Britain's sales to the United States jumped from £18.7 million to £22.8 million. This is the highest monthly figure recorded, excluding silver bullion shipments. It indicates that, in face of the down-turn in American business activity, British exporters have succeeded so far not only in maintaining but in increasing their sales. Motor-cars have probably made the biggest contribution. Exports to Canada were also higher at £12.5 million, against £10.8 million in January. Taking January and February together, exports to the United States show a 10 percent rise and exports to Canada a 5½ percent rise compared with last year.

Steel Output Improves

Although coal production still gives cause for dissatisfaction, it is good to learn from the Iron and Steel Board that steel production was higher in February than in January, with a weekly average of 427,500 tons, even though it was still slightly below the output of a year ago, as it has been since the beginning of 1958. Cuts in output have apparently been due to special reasons rather than to any general fall in demand. Meanwhile, steel-making capacity is steadily increasing and will grow further this year. Capacity to produce steel during the whole of 1958 is expected to be 1½ million tons higher than the actual production in 1957. The Board adds that actual output is likely to be determined more by demand than supply considerations, except for strip mill products and heavy plate, for which demand still outruns the supply from home production. Stocks of finished steel in the hands of consumers and merchants increased further last year. At the end of 1957, total stocks amounted to 4,578,000 tons, nearly 10 percent up on the end of 1956. There was a particularly large rise in stocks of steel plate, which was scarce throughout the postwar period and is still not in easy supply.

Retail trade in January showed the usual fall from the December peak, and only a 2 percent rise in value from January 1957. Last year, there was a rise of 4 percent from 1956 in the March-September period, and a 4 percent in the final quarter. Clothing and footwear shop sales were 2 percent lower than in January 1957, and those of department stores were 4 percent down. Sales of household goods were 2 percent compared with a 16 percent rise a year earlier. Food shop sales were 3 percent up.

Cotton Delegation Sees Prime Minister

A delegation from the Lancashire cotton industry has met the Prime Minister at No. 10, Downing Street to discuss the financial difficulties which are arising because unrestricted quantities of cheap cotton goods originating from India, Pakistan and Hongkong are being sold in Britain's shops. Mr. Macmillan, accompanied by Sir Frank Lee, Permanent Secretary to the Board of Trade, has

assured the delegation that the Government is "seriously concerned" about the problem and will keep in close touch with the Cotton Board. The cotton representatives have explained their fears about the growing volume of what is known in the industry as "retained imports" of duty-free cotton goods. According to Cotton Board estimates, only about 35 percent of the "grey" or unprocessed cloth imported duty-free from India for processing in Lancashire is re-exported. The remaining 65 percent is 'retained" and sold in the home market at a price below that of the cotton cloth manufactured by British mills. For Hongkong cloth, the figure is even higher—85 percent of it being sold in Britain. Last year, Britain imported 122 million square yards of grey cloth from India, 71 million square yards from Hongkong, and 7 million square yards from Pakistan. A deputation from the United Textile Factory Workers Association has met Sir David Eccles, President of the Board of Trade, and pressed for the recommendations of its policy manifesto, *Plan for Cotton*, to be carried out.

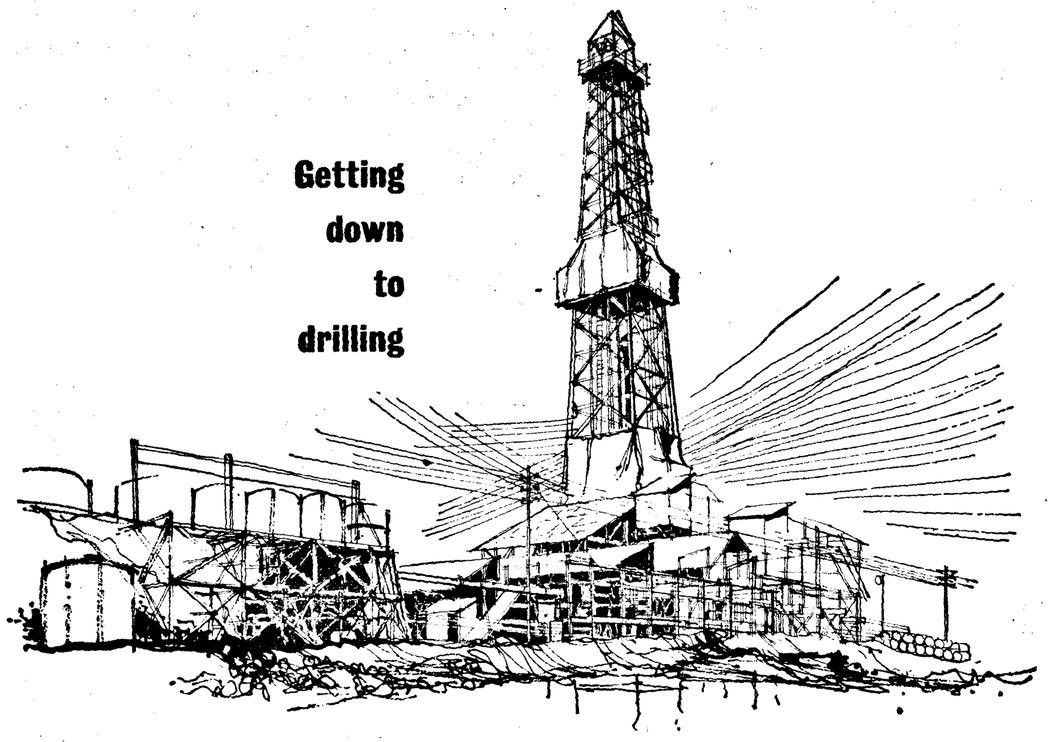
Commonwealth Telecommunications

The first transatlantic telephone cable, brought into operation in September 1956, "has exceeded the most optimistic hopes of its sponsors, in traffic carried and revenue earned," states the report for 1956 of the Commonwealth Telecommunications Board The Board suggests that repeatered telephone cables to carry telegraph, telephone and telex traffic might well form the future pattern for the main routes of the Commonwealth cable network. In comparison with the previous year, the number of telephone calls passing over the Commonwealth communications system showed an increase averaging about 8 percent. Telegraphic traffic was up by 4½ percent. Phototelegraphic traffic increased by 22 percent and telex traffic by 40 percent.

Lord Cohen and the Trade Unionists

Lord Cohen's meeting with trade union M.P.s attracted about 60 of the latter, lasted an hour and a half, and was obviously a success. The time was apparently evenly divided between an exposition by Lord Cohen of the Council's report and his replies to the many critical questions which members of the audience put to him. Afterwards Lord Cohen said he had a very courteous reception, and had learned a good deal. He added that it would be inappropriate of him to speak about the nature of the meeting because the work of his Council was still going on and he had two colleagues. The members displayed a similar reticence in deference to Lord Cohen's wishes, but it is disclosed that Viscount Chandos, chairman of Associated Electrical Industries, will face cross-examination by the trade union group on 1st April. They want him to expound his plan for 2½ percent wage increases annually for five years.

Brevities



The Derby Tea Co. is to be renamed Derby Investment Holdings and Bruseh Rubber Estates is to become Scotia Investments.

Malaya has become a member of the International Monetary Fund and of the World Bank, with a quota in the I.M.F. of $25 million, and a subscription to the capital stock of the World Bank of 250 shares with a total par value of $25 million.

All the share capital of Ceylon and Eastern Agency has been acquired by Arbuthnot Latham and Co. with effect from 1st January last. The directors will remain in office, and Mr. J. N. McNeile, of Arbuthnot Latham has joined the board.

The Story of Oil—9

Getting down to drilling

The oil driller's derrick looks imposing and strange as it stands silhouetted against the sky, but it is merely a sturdy steel support for lowering and raising jointed lengths of heavy pipe into and out of the well during the drilling operations.

In modern drilling, a sharp-toothed bit is first attached to a length of steel pipe called the drill pipe. The drill pipe, held vertical by a giant block and tackle system in the derrick, is lowered into a pilot hole and revolved by means of a turntable on the derrick floor. The turntable is rotated by powerful engines behind the derrick. As the pipe is turned, the bit cuts a hole in the earth's rocks and lengths of drill pipe are added as the hole becomes deeper.

When the bit becomes worn the entire length of drill pipe must be removed, unjointed, and stacked in the derrick. After the new bit is attached the pipe is joined together and drilling begins again.

All during drilling, specially-prepared mud is pumped down inside the drill pipe. It passes through perforations in the bit and is forced back to the surface outside the drill pipe. This mud has many useful functions. It flushes rock cuttings back to the surface for examination, cools the bit and plasters the walls of the hole to prevent them from caving in. As drilling progresses the hole is lined with successive lengths of steel pipe called casing.

An oil well has been drilled to a depth of four miles, but a 10,000 foot well is still considered deep. Drilling at such depths is an extremely delicate operation, requiring great skill and long experience. Only by drilling, however, can the oil prospector prove the presence of mineral oil.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

BAC

Jute

NEW FUTURES MARKET TO START NEXT WEEK

GAMBLING EXPECTED TO DECREASE

THE Government of India has announced its decision to regularise forward trading in raw jute and jute goods by recognising the East India Jute and Hessian Exchange Ltd. as the only body eligible to conduct futures trading in these commodities. The decision takes effect from 29th March. Any such contracts entered into after that date outside the recognised association will be considered illegal. Futures contracts in jute goods are at present prohibited in West Bengal under the West Bengal Jute Goods Act, 1950, although trading in all types of forward contracts in these goods has been free in the rest of the country. This has led to many malpractices. Violations of the Act through unofficial bodies have been very common and detrimental to the trade, in that heavy gambling has taken place among prominent operators with the intention of swaying the market. It has long been the opinion of many that a well-regulated futures market is essential to the well-being and the smooth running of the industry; recognition of this fact by the Government has, therefore, been welcomed. It is hoped that the new facilities offered will stamp out the gambling and illegal practices in speculative trading which over the years have caused heavy fluctuations in prices within very short periods.

It is further stated that forward trading in raw jute and jute goods in other parts of the country will simultaneously be prohibited by the application of the various provisions of the Forward Contracts (Regulation) Act. It is not yet known what the effect of the new regulations will be on legitimate business between mills and their recognised brokers under the auspices of the I.J.M.A. Contracts between these parties are made direct, and by a strict interpretation of the phrase could be deemed to be forward contracts. It is understood that the Government intends to make exceptions to these specific contracts following representations from the trade, but that this has been strongly opposed by the Forward Markets Commission (itself a Government body), which maintains that no such exceptions should be granted. The Commission bases its argument on the fact that I.J.M.A. contracts account for the bulk of the forward business, and if they are exempted there is no point in applying the Act to raw jute and jute goods at all as there would be little left to regulate. What the Forward Markets Commission has lost sight of is the fact that I.J.M.A. contracts call for the specific delivery of goods, whereas the transactions which the Government wishes to regulate are gambling contracts which entail no transfer of goods but merely call for a market difference becoming payable on due date.

Market Reaction

The reaction to the introduction of an officially regulated futures market has been slight, as the move has been anticipated for some time. It has lent strength to the jute goods market, however, and a steadier undertone has developed. Prices have advanced steadily throughout the past week, and before the close, rates in all sections are above the minimum laid down by the I.J.M.A. Mills are keen sellers at the enhanced rates, especially for forward shipment, and a fair amount of business has been reported, although very little appears to have been with genuine overseas customers. One of the main reasons for the improved confidence in the market is the confirmation of a further Central Government order for sacking goods amounting to 12,500 bales. This is over and above the order for 15,000 bales placed in recent weeks and has helped the heavy goods section to rule firm.

The raw jute markets have also improved and there has been a slight increase in the volume of business. Mills have found difficulty in obtaining their requirements of specific types of fibres at the current levels as higher prices are ruling in upcountry markets. Even towards the end of the week, when raw jute prices are about Re. 1 above the opening levels, the disparity remains. Sellers are reserved and are only willing to sell small lots. One of the main reasons for the steadiness of the upcountry markets is the recent reduction in arrivals in the main receiving centres. These have fallen considerably in the past week, but cannot be construed to indicate any radical change as the reduction is seasonal, and normally can be expected at this time of year. Many farmers are busy preparing land for new crop sowings, but have been held up slightly during the past week by the lack of rain. In some Assam districts and in Cuttack, no rain has fallen for the past week and the total rainfall is well below the average. This has no special significance, however, as it is too early in the season for any predictions to be made.

I.J.M.A. Production Figures

The production of jute goods during February 1958 amounted to 85,300 tons, which was 13,000 tons less than in the previous month. The fall was due almost entirely to a decrease in working hours from 217.5 to 192. A slight reduction in tonnage was due to a small increase in the percentage of hessian manufactured. Hessian production stood at 30,100 tons (35.3 percent) while sacking amounted to 49,300 tons (57.8 percent) and other goods to 5,900 tons (6.9 percent). In February 1957, production totalled 80,200 tons for exactly the same number of working hours, but the proportion of hessian manufactured was 43.6 percent, of sacking 49.4 percent and of other goods 7 percent. Thus, last month, production was up by 5,100 tons compared with the corresponding period of 1957. This was mainly due to a transfer in production of 8.4 percent from hessian to sacking.

Raw jute consumption last month was 497,300 bales, making a total for July 1957 to February 1958 of 4,112,600 bales. In February 1957, the consumption was 467,600 bales, and for the 1956-57 season up to that month, it was 4,001,600 bales. Thus, in the current season, consumption is up by 111,000 bales, in spite of there being nine working hours less this season than during the same period of last season. The increase in consumption is due to the larger percentage of heavier sacking fabrics being produced.

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations during February 1958 amounted to 554,800 bales. The significant feature of arrivals was the amount from Pakistan. At 21 400 bales, imports from this source were the smallest since May 1953, and were 40,500 bales less than during the previous month. Arrivals from India also showed a decrease of 163 550 bales, making a total drop of 204,050 bales from January. Compared with February 1957, arrivals last month showed a drop of 10,700 bales, mainly due to a fall of 18,900 bales from Pakistan, offset by a rise of 8,200 bales from India. Total arrivals from July 1957 to February 1958 now amount to 4,548,100 bales, made up of 499,050 bales from Pakistan and 4,049,050 bales from India. During the same period of the 1956-57 season, arrivals were 4,605,800 bales, consisting of 462,000 bales from Pakistan and 4,143,800 bales from India. Thus, in the current season, total imports are down by 57,700 bales, due to imports from India dropping by 94,750 bales. In spite of February's small imports from Pakistan, arrivals this season show an improvement of 37,050 bales. During the current season, the estimated consumption of raw jute has been 4,112,600 bales, so total arrivals are now 435,500 bales more than the consumption.

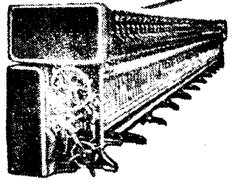
THE JUTE MARKETS

Manufactured Goods: At the opening last Thursday, the market firmed up because of a further Government order for 12,500 bales of heavy goods. B Twills were quoted at Rs. 98.70 for March shipment, with forward shipment at a premium of Rs. 1.05. Overseas buyers stayed out of the market. Speculative activity was heavy at the time, and operators succeeded in pushing up rates considerably. Local shippers were also active, and covering in sacking for steamers loading in port added to the bullish tendency. Hessians followed the trend in heavy goods and made a steady advance from an opening of Rs. 39 for 40in. 10oz. By Saturday, B Twills were quoted at Rs. 99.60, with mills taking an interest. After the week-end, events moved rapidly and many mills did good business for forward shipment. Towards the close, the publication of the U.S. burlap consumption statistics proved a further bullish factor, and for the first time in exactly a month, all B Twills quotations were back to the three-figure level. U.S. burlap consumption was reported as 70 million yards, which was 1 million yards less than in the previous month, but 8 million yards more than in February 1957. The undertone of the market became very steady and mills were keen sellers at the higher levels.

At the close, all sections of the market were firm and opening quotations on Wednesday morning were as follows:

	March Rs.	April Rs.	Apl.-June Rs.	July-Sept. Rs.
40in 8oz.	31.80	31.85	31.85	31.85
40in. 10oz.	39.40	39.40	39.45	39.50
B Twills	100.75	100.75	100.75	101
Heavy Cees (Plain)	100.50	100.75	100.75	101
A Twills	121	121.50	122.50	123
Liverpocis	114.50	114	114	114.50
Cornsacks	101	101	101.25	102

Raw Jute: The fibre markets showed a trend similar to gunnies. From a quiet opening, prices made a steady advance, with mills showing a little more interest. It was reported that during the



MACKIE-LAGAN

SLIVER SPINNING FRAME

OVER 140 MACHINES

NOW OPERATING SATISFACTORILY

IN THE INDIAN JUTE INDUSTRY

THE LAGAN JUTE MACHINERY COMPANY PRIVATE LTD.
24, CHITTARANJAN AVENUE, CALCUTTA-12.

past week, about 350,000 maunds of jute was purchased at rising prices, with business reported every day. Sellers were inclined to be reserved towards the close, however, due to the high prices ruling in the mofussil. Good jute was scarce and the majority of holders were all asking for higher prices than those indicated by mills. Quotations for Assam jute at the opening last Thursday were based on Rs. 23.75 a maund for March-April shipment, but by Saturday this had risen to Rs. 24.25. After the week-end, a further 25nP had been added, and sellers were still looking for higher prices in sympathy with the firm goods market.

Business was reported in Assam and Northern jute at Rs. 23.75 to Rs. 24.50 for assortment and Rs. 27.50 for Middles only. Daissee and Tossa were done at Rs. 27 to Rs. 27.75. Once again, mesta was in good demand; prices paid ranged from Rs. 22.25 to Rs. 23.50 for Northern and Desal mesta, and Rs. 22 to Rs. 23.50 for Daissee mesta. Jungli mesta was done from Rs. 20 to Rs. 20.75.

Wagon arrivals in Cossipore during the past week reflected the general state of the upcountry markets. Arrivals dropped to 285 wagons, as against 400 in the previous week and 537 during the corresponding week of last year. The market was very steady throughout, with the rise in prices tending to anticipate Calcutta indications.

On Wednesday morning, opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	25	March-April
Northern	25.25	"
Purnea Desal	23.50	"

Bimli F.A.Q.	20	"
Pakistan Cuttings	71 a bale	"

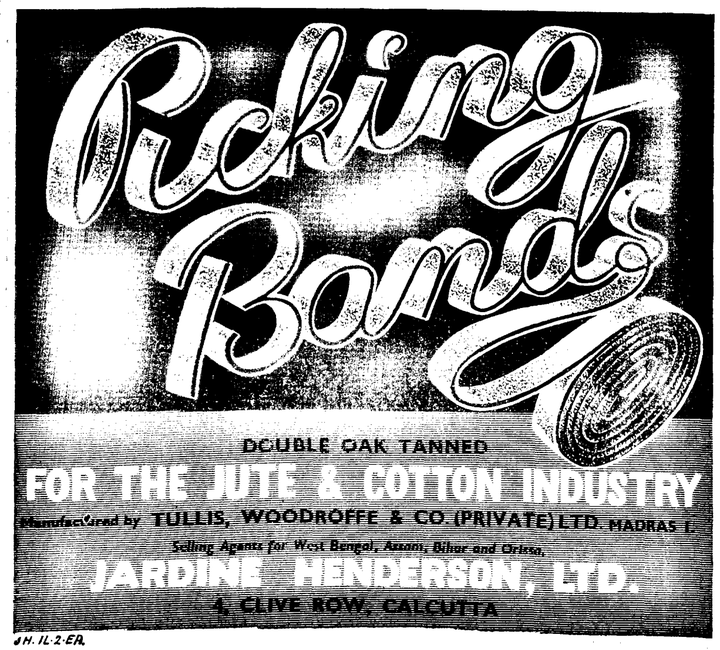
I.J.M.A. PRODUCTION FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total production of jute goods for the month of February as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	2,179 tons
	71.1 lakh yds.
(b) Sacking	53.9 lakh Nos.
	48.180 tons
	11.75.1 lakh yds.
	5.06.0 lakh Nos.
2. Gunny Cloth	
(a) Hessian	27.968 tons
	10.95.8 lakh yds.
(b) Sacking	1,100 tons
	24.9 lakh yds.
3. Other Manufactures	5.876 tons
4. Total production (above figures combined)	
(a) All kinds	85.303 tons
(b) Hessian (both bags and cloth)	11.66.9 lakh yds.
(c) Sacking Do.	12.00.0 lakh yds.

Summary

	(00,000 Yds.) Feb. 1958	Jan 1958	Feb. 1957	(000 Tons) Feb. 1958	Jan. 1958	Feb. 1957
Hessian	11.67	13.24	13.50	30.1	34.4	35.0
Sacking	12.00	13.93	9.30	49.3	57.3	39.6
Others				5.9	6.6	5.6
Grand Total:				85.3	98.3	80.2
Hours Worked:				192.0	217.5	192.0



N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th March, 1958	756.8	11,483.7	12,240.5
1st to 10th February, 1958	347.8	14,356.6	14,704.4
1st to 10th January, 1958	910.2	9,062.7	9,972.9
	Sacking		
1st to 10th March, 1958	7,641.3	75.1	7,716.4
1st to 10th February, 1958	7,840.7	113.6	7,954.3
1st to 10th January, 1958	8,958.8	8.3	8,967.1

THE FOREIGN JUTE MARKETS

DEMAND FOR CLOTH AND YARNS IMPROVES

(FROM OUR DUNDEE CORRESPONDENT)

THE Pakistanis are leaving no doubt in jute circles here about their intentions concerning raw material prices. Shippers are reserved since offers are not freely made, even at about £2 a ton rise in prices. There is a great scarcity of offers in Daissee, the quality which spinners mostly used at one time. Mill Firsts are seldom quoted from £111 to £114, and Mill Lightnings are lowest at £96, Mill Hearts at £85 and grade Hearts at £71, many sellers asking £3 to £4 a ton more for March-April shipment, c.i.f. Good marks of Daissee-2/3 are now up to £100 and grade to £92 due to the scarcity of offerings, while grade Tossa-2/3 can still be bought at £104 and grade Tossa-4 at £97, though quotations are usually higher, same shipment.

Spinners have been buying quietly but steadily, having cleared out all the afloat or spot material available at around these shipment rates. They say that they are losing about £4 12s a ton at the current prices for yarns. Prices of the fibre have to go up by about £2 a ton to bring about a rise in the fixed rates for yarns. The demand for both yarns and cloth has noticeably improved and, as a result, spinners and manufacturers are more comfortably placed with orders than has been the case for some months past. Still they are not in a position to refuse orders for early despatch but the improvement has been brought about by the firmness of the raw jute market. Stocks of yarns and cloth in the hands of consumers have been reduced to dangerously low levels, and there is always the fear that, in the event of any sudden spurt in demand, it would be difficult to secure supplies.

Prices of Calcutta goods are fluctuating but there is an undercurrent of strength in their position. Hessians have become firmer at 59s 3d for 40in. 10oz. and 44s 6d for 7¼oz., March and April, and 59s 6d and 44s 6d May-June, with B Twills at 150s, 150s and 151s for the respective positions of shipment, all f.o.b., Calcutta. B Twills were down to 147s 6d and hessians to 59s a few days ago, and the recovery is general.

Plantation Topics

CALCUTTA TEA AUCTIONS IN FEBRUARY

KEEN COMPETITION FOR QUALITY GRADES

FOUR tea sales were held during February, and a total of 242,100 packages were offered. In the first two sales, there was a strong and fairly general demand, and during this period plain B.P.'s advanced by 2nP or 4nP and Fannings in this category were 4nP or 6nP dearer. Medium B.P.'s showed little change but there was a good demand for Fannings grades and these appreciated by 4nP or 6nP in the first two sales. Low medium B.O.P.'s and O.F.'s were well supported at about last rates, the latter, being stronger than the former, and these were frequently dearer. The brighter liquoring Assam B.O.P.'s and O.F.'s, however, were keenly sought after, and while B.O.P.'s appreciated by 5nP or 10nP, O.F.'s showed irregular advances of greater magnitude, say Messrs Carritt Moran and Co. Private Ltd. in their monthly tea market review. Good C. T. C. grades sold well at or about valuations, but the best, particularly the Fannings grades, were frequently dearer. The poorer types, however, declined by 10nP or 15nP over these two sales and there were some withdrawals. Legg-cut teas were a little irregular although they showed no notable change on balance; the brighter liquoring sorts were keenly sought after and were frequently dearer. Whole leaf grades were well supported, but except for the more stylish, showed a slightly easier tendency, and B.P.S.'s lost their popularity and were considerably easier. There was a fair demand for Darjeelings and, while the more ordinary kinds were purchased at or a little below valuations, the more stylish grades and those with autumnal flavour were frequently dearer. The highest priced tippy grades, however, frequently failed to realise valuations. In the last two sales of the month, there was a fair demand, but it was rather less general, and rates for plain B.P. and Fannings grades declined by about 4nP or 6nP, respectively. Low medium B.P.'s and P.F.'s displayed a similar tendency, but the brighter liquoring mediums in this class showed a smaller decline. Medium B.O.P.'s and O.F.'s continued to receive very fair support at steady rates, while those with improved quality came in for keen competition and were strong to dearer. In Sale No. 33, there was a very strong demand for the best C.T.C. teas, especially Fannings grades which were frequently up to 20nP or 30nP dearer, and this class of tea was about steady in Sale No. 34. Other good C.T.C. teas sold readily in the region of valuations or 10nP below, but the poorer types were not sought after and were difficult to sell at 10nP or 15nP below previous levels. In Sale No. 33, Legg-cut teas were about steady but they eased by about 4nP or 8nP in Sale No. 34 except for the best bright liquoring invoices which sold well, sometimes at dearer rates. Whole leaf grades showed little change in the last two sales and the demand for Darjeelings was very similar to that noted in the first half of the month.

The teas from Darjeeling district continued satisfactory in appearance for the time of year, and there were some quite attractive tippy F.O.P. and B.O.P. grades. Some of the lower grades, however, became rather brown and flaky towards the end of the month. Cup quality was of a useful description and some invoices had attractive autumnal flavour. In the first sale of the month, the bulk of the offerings from Assam were of an ordinary description although leaf appearance continued satisfactory. There were, however a few bright liquoring invoices with a nice touch of cold weather character. In the later sales, there was improvement in the liquors and some useful cold weather teas were catalogued, especially in the case of some C.T.C. teas. There was the normal seasonal deterioration in leaf appearance and many of the lower grades became duller, and stalk and fibre became more noticeable. There was little change in the appearance or cup quality of orthodox teas from Dooars. Dry leaf in many cases was clean and black in appearance, but cup quality was mostly of an ordinary description, although here and there a few brighter liquoring invoices made their appearance. Some useful non-wither Legg-cut teas were catalogued, however, and some of these had quite fair autumnal character, although there was some falling away in appearance as fibre became more prominent. There was little change to note in the offerings from Cachar. Some of the lower grades showed more stalk and fibre but leaf appearance generally was about average. The liquors of a number of teas were plain and ordinary, but others were sweet in character, and a few of the better estates produced some invoices that were bright in cup.

Quotations

	1957-58 Rs. nP	1956-57 Rs. nP
Sale No. 31 Plain B.P. ...	1.54	1.95
Sale No. 32 " " ...	1.56	1.94
Sale No. 33 " " ...	1.54	1.83
Sale No. 34 " " ...	1.50	1.87

Internal Market

A total number of 12,122 chests of Leaf was offered for sale. Quality continued to be of a fibrous and residue description. There was a good general demand throughout the month from internal buyers but prices were generally easier. A total quantity of 77,733 chests of Dust was catalogued for sale. Occasional invoices showed some improving quality. Demand strengthened as the month progressed and in the final sale, it was strong and general. Orthodox descriptions from all districts were dearer, particularly the black leafy grades, suitable for export. Good C.T.C. Assams were about firm, those with improving quality being occasionally dearer, but the poorer plainer liquoring kinds continued to be a weak feature and prices were again in buyers' favour.

Quotations

	1957-58 Rs. nP	1956-57 Rs. nP
Sale No. 31 Clean Common Dust	1.53	1.84
Sale No. 32 " " "	1.55	1.82
Sale No. 33 " " "	1.59	1.80
Sale No. 34 " " "	1.61	1.78

Export sales up to and including Sale No. 34 totalled 1,678,241 chests at an average price of Rs. 2.18 compared with 1,794,362 chests at an average price of Rs. 2.47 during the corresponding period of the 1956-57 season. Internal sales at 65,258 chests of Leaf and 562,542 chests of Dust (Rs. 1.47 and Rs. 1.90) go against 55.417 and 588.714 (Rs. 1.68 and Rs 2.18) for the same period last year.

The Export quota market fluctuated between 14nP and 15nP a lb, rising to 16nP a lb on 10th February, and again declining to 14½nP a lb on 15th February. On 16th February, a further release of Export quota amounting to 8.44 percent of a garden's crop basis, or a further 61.32 million lbs, was announced in the Press. This news had an immediate effect on the price of quota, which fell to 8¼nP a lb on 17th February, reaching 5nP a lb by the end of that week. The price hardened slightly thereafter and the last quotation at the end of the month was 5½nP a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th January, 1958 to 23rd February, 1958 with the corresponding figures of the previous year in parentheses were as follows: by steamer 128,626 (311,234), by rail 45,002 (47,963), by air 16,218 (10,847), making a total of 189,846 (370,044). Since the beginning of the season 1st April, 1957 to 23rd February,1958 arrivals have been by steamer 3,057,896 (3,321,334), by rail 1,065,526 (1,049,805) by air 183,912 (160,293), making a total of 4,307,334 (4,531,432) chests.

RUBBER ACREAGE IN SOUTH INDIA INCREASES

EXTENSIVE PLANTING BY SMALL HOLDERS

(FROM A SOUTH INDIAN CORRESPONDENT)

THERE was a remarkable increase in rubber cultivation in south India during 1956. According to the figures just released by the Rubber Board, nearly 16,000 acres were newly planted during that year. Out of this, just over 6,000 acres were planted with clonal and 1,669 acres with budded rubber, and 8,279 acres with ordinary seedlings New plantings by estates having 50 acres or more form only one-third of the total, the rest having been carried out by small holders. Small holders went in for the widespread planting of unselected ordinary rubber, which accounts for over 60 percent of the total new planting. There was also extensive new planting in 1955. Although the expansion of cultivation is a welcome development, the indiscriminate use of the available land is to be discouraged. Land suitable for rubber cultivation is very limited, especially because of the proposed land reforms in Kerala.

Larger Tea Output

South India produced 9.4 million lbs of tea during January this year, compared with 8.1 million lbs in the same month of 1957. Estates in Kerala contributed 4.8 million lbs, in Madras 4.3 million lbs and in Mysore 250,000 lbs. The February crop is estimated at 8.4 million lbs compared with 7.5 million lbs in February 1957. Exports of tea from south Indian ports during the first two months of the year amounted to 14.2 million lbs, against 12.8 million lbs during the same period of last year.

Improved Demand for Pepper

For about a month, the pepper market in India has been fairly active on account of improved demand from the United States and Russia, combined with bear-covering in India. Prices have risen by Rs. 100 a candy during this period. The U.S. demand was largely influenced by the Indonesian political situation. Whatever might be the reason for the U.S dealers being active buyers of Indian pepper, spot prices in New York recently went up to 25½ cents a lb. Subsequently, there was a mild recession, the latest quotation from New York being 24 cents a lb. Besides Russia is said to have again made arrangements for a substantial shipment during this month. Local bulls are active in the market. Although the present activity is not as brisk as a couple of weeks ago, fairly large business is taking place, according to reports.

The United States continues to be the largest market for Indian pepper. During the 1956-57 season, she and Canada together took 44 percent of the total exports amounting to 14,678 tons. The export figures for the first 11 months of 1957 show a disquieting feature: the U.S. offtake has gone down to 4,800 tons from 5,510 tons in the corresponding period of 1956. On the other hand, Russia and her satellites have increased their offtake substantially during this period. The former has imported 3,300 tons, compared with 2,000 tons in the first 11 months of 1956. Poland and Rumania together have taken another 530 tons. The total Indian exports during January-November 1957 amounted to 12,900 tons, showing an increase of 2,150 tons over the corresponding period of 1956. Since the beginning of the current year, Russia has lifted 2,700 tons of pepper from India. The U.S. offtake this year is reported to be lagging behind that of last year.

Uncertain Prospects

The prospects for pepper are uncertain. Overproduction continues to be a damper on the market. Until Indonesia settles down to normal conditions, reports about political developments there will influence price trends. The market will, to a very large extent, be guided by U.S. demand, which is still far from satisfactory. Things would have been much worse for India if the home market did not absorb as much as 40 to 50 percent of the output. Brazil is a new producer of pepper, accounting for 2 million lbs last year. If she considers her production profitable, she will probably find the U.S. market more accessible than the traditional producers in the East.

BIGGER POOL RECEIPTS OF COFFEE

POOL receipts of the 1957-58 coffee crop up to the end of February were slightly higher than in the corresponding period of last year, says the latest newsletter of the Coffee Board. They amounted to 25,662 tons consisting of 18,506 tons of Plantation, 4,081 tons of Arabica Cherry and 3,075 tons of Robusta. The receipts on the west coast for this period amounted to 13,044 tons, consisting of 10,595 tons of Arabica and 2,449 tons of Robusta. The surplus on the coast, after meeting the export and internal sale requirements up to the end of May, is being shifted to inland centres as usual. About 220 tons were moved by the end of February. During February, 2,336 tons, consisting of 966 tons of Plantation, 338 tons of Arabica Cherry and 1,032 tons of Robusta, were released in the internal market, compared with the offtake of 2,019 tons in the same month of last year.

Export Offerings

Out of 915 tons of Plantation offered at the export sale during February, 213 tons were sold. A quantity of 702 tons was offered for sale on 12th March, 1958. Tenders for a further quantity of 750 tons offered for export are to be received not later than 26th March. The offer of 2,000 tons of Plantation to East Germany through the State Trading Corporation is still under negotiation. The view expressed in some quarters that all the best coffee produced is retained for home consumption and only inferior grades are exported is not correct. The Coffee Board takes the greatest care to see that only the best grades are offered for export, and these are screened by special committees. In accordance with the recommendations of the sub-committee, which was appointed by the Board for suggesting measures to improve the quality of Indian coffee offered for export, trial consignments totalling 30 tons out of 90 tons of Plantation from selected estates have been sent to London to observe market reactions there. Small parcels of Plantation coffee from research station selections are also being sent to London.

COCHIN TEA SALES

At Sale No 7, 1,350,000 lbs of tea were on offer. There was a strong general demand. Improved quality Nilgiris advanced irregularly by 20nP or 25nP and mediums by 10nP or 15nP. Low mediums and commons were 5nP to 10nP easier.

a pilfer-proof package

for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

RAW WOOL MARKET REMAINS SUBDUED

SHIPMENTS STILL BELOW CEILING

(FROM A CORRESPONDENT)

ALTHOUGH reports suggest that wool prices in Britain and Australia have recently recorded moderate gains, presumably because of the latter's lower clip this year and active buying by Japan, raw wool prices in India remain subdued in the absence of support at higher levels. Enquiries from traditional buyers like Britain, the Continent and the United States have been sufficient of late, although at lower prices. But shippers are not able to accept commitments in view of the uncertainty about the wool export policy beyond March 1958.

The present prices are around 25 to 30 percent below those prevailing in September last year. Superior white Bikaner is around Rs. 3 a lb, against Rs. 3.87 a lb. Superior Bikaner tint white (pale yellow) is Rs. 2.31 a lb against Rs 2.87 a lb. Among Beawars, superior whites are around Rs. 2.69 a lb (Rs. 3.44 a lb) and pale yellow at Rs. 2.12 a lb (Rs. 2.87 a lb). Other quotations include: Joria superior white Rs. 2.75 a lb; Joria superior shravni white Rs. 2.44 a lb; Fazilka superior white Rs. 2.62 a lb and average yellow Rs. 2.06 a lb. Among coloureds, clipped grey (Poona and Hubli) is available for Rs. 2.06 a lb, clipped Hyderabad black for Re. 1 a lb, tannery Bombay grey for 75nP a lb and tannery Bombay black for 84nP a lb.

New Season Arrivals

New season white wool, which normally begins to arrive in March or April, has started coming this year in mid-February. Growers, who are unable to hold the unsold stocks of yellow clip lying with them, are anxious sellers, partly because of their incapacity to hold huge stocks and partly because of fears that prices might decline further. There is good demand for these whites from Britain and the United States. The wool season in Tibet is in full swing now, and all qualities are reported to be available at around 64d to 65d a lb. Tibetan prices are higher compared with those in India, and a further decline in Tibetan prices to around 57d or 58d is not ruled out.

Export Surplus

India's export surplus of wool is estimated at around 47 million lbs, based on an annual clip of 72 million lbs and a domestic consumption of 25 million lbs. Actual shipments from Bombay last year have been put at 30.11 million lbs (97,114 bales of 310 lbs each), against the overall exports in previous years of around 35 million lbs. New Delhi has put an export ceiling of 18 million lbs a half-year, comprising 10 million lbs from Bombay port, 6 million lbs from Bedi, and 1 million lbs each from Calcutta and Madras ports. Bombay has already touched the ceiling for the half-year ended March, and a fresh quota was announced for it because the overall ceiling is still to be attained.

Although Britain, the United States and the Continent continue to buy Indian wool, Japan has been keeping away from the market for a couple of years. Russia, which lifted about 13.95 million lbs in 1956 and 1957, has not entered the market recently. Some reports suggest that she is buying from South America—one of India's competitors, like New Zealand and Pakistan, in world markets. A breakdown of last year's exports from Bombay indicates that the United Kingdom lifted the biggest quantity, taking 33,819 bales (310 lbs each), while the United States took 26,704 bales. Shipments from Bombay also included 16,887 bales for Russia, 2,520 bales for Australia and 17,184 bales for the Continent. The latter consisted of 6,207 bales for France, 5,601 bales for Belgium, 2,899 bales for West Germany, 2,037 bales for Holland, 326 bales for Denmark and 114 bales for Italy.

Exports below Ceiling

In spite of the availability of a quota of 18 million lbs for export for the half-year ended March, actual shipments against this till mid-February have not been satisfactory. It is difficult to be optimistic, therefore, that the entire quota will be utilised by shippers. Exports from Bombay and Bedi are estimated at about 12.5 million lbs and although the ceiling for Bombay has been reached, that for other ports is still far away. With the approach of the white wool season, the trade is hopeful that the carpet industry in the United States, Britain and the Continent will buy most of the Indian white wool since this is cheaper and good for value compared with other varieties. As such, a further decline in wool prices here is not likely.

With the earlier arrival of the new season white wool, the trade has approached New Delhi for an earlier announcement of the export policy for the period beyond March, to enable shippers to plan in advance. The trade is also anxious that the present export restrictions should be withdrawn. The present policy allows free exports within the ceiling against firm contracts, besides 25 percent of past individual allotments on "consignment accounts." Since Indian wool is cheaper than carpet wools of New Zealand, Britain and other countries, and in as much as there is a large surplus in the country, the trade feels justified in expecting an early removal of the export restrictions. Although present exports do not touch the ceiling and it might appear that the export curbs matter little, the port-wise distribution of the ceiling or quota, the limiting of consignment account shipments to 25 percent of past individual allotments, and the insistence on firm contracts, etcetera affect the bargaining capacity of the Indian shipper. The removal of these curbs might leave the shipper free to bargain with foreign buyers, irrespective of the availability of the quota or other factors. This might also help set a better export record and earn more foreign exchange.

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) stood at 104.8 during the week ended 1st March, 1958, compared with 104.9 for the previous week. The index was higher by 0.2 percent when compared with the corresponding week of the previous month but was lower by 0.6 percent when compared with that of last year. The index for Food Articles worked out to 101.5 against 101.4 (revised) for the earlier week. The prices of potatoes in Mandi (+28%) and in Delhi (+7%), masur in Bombay and eggs in Madras (+8% each), maize in Bhilwara (+6%), rice in Tihu, mung in Bombay, tea for internal consumption and black pepper in Madras (+5% each), onions (+4%), betelnuts (+3%), jowar, gram and urad (+2% each) and groundnut oil and fish (+1% each) recorded an advance while those of turmeric in Calcutta (−11%), mustard oil in Purnea (−10%), rice in Nagpur (−9%), in Tirunelveli (−8%) and in Marcara (−7%), potatoes in Kanpur, oranges and cummin (−9% each), meat (−3%), coffee and salt (−2% each) and barley, ragi, arhar, cashewnuts, gingelly oil, tea for exports and chillies (−1% each) witnessed a decline. There was a fall of 1 percent to 94 in the index for Tobacco due to a decline in the price of raw tobacco (−2%). The index for the Fuel, Power, Light and Lubricants group remained unchanged at the previous week's level of 114.8. The index for Industrial Raw Materials drifted down by 0.8 percent to 109.9 as a result of a decline in the prices of linseed in Sahibganj (−10%), bamboos (−5%), castorseed (−4%), raw silk, groundnuts and copra (−3% each), lac (−2%) and raw cotton, raw jute and raw hides (−1% each) although the prices of raw wool in Fazilka (+7%), cottonseed (+6%), tanning materials (+4%) and gingellyseed and rapeseed (+1% each) exhibited an advance. The prices of aluminium circles (Indian) (—3%), copper (—2%) and cotton yarn and zinc (−1% each) declined while those of linseed oil, tin and lead (+1% each) showed an advance and the index for Intermediate Products registered a fall of 0.4 percent to 105.9. The index for Finished Products stood at 107.6 compared with 107.7 for the previous week. Items which showed noticeable variations were quinine sulphate (foreign) in Bombay (+25%), paints (red lead dry genuine) in Calcutta (+8%), rubber shoes (+6%), silk and rayon manufactures (+3%) and jute manufactures (−2%).

COAL PRODUCTION DURING 1957

The total quantity of coal raised during 1957 was 43,504,071 tons, Mr. K. D. Malaviya, Central Minister of Mines and Oil, has said in the Lok Sabha.

Engineering and Transport

BOEING ESTIMATES PASSENGER AIRCRAFT NOW IN USE

SIX thousand passenger aircraft are in use in world airlines and nearly 1,500 aircraft are on order, according to a study recently completed by the Boeing Airplane Company's transport division market research group. The results, just made public, show that late last year the total number of airliners in use was 5,996; 1,433 were known to be on order. Of these totals 99 were in use by Indian airlines and 19 were on order. Included in the total for the latter are the three *Boeing 707 Intercontinental Jet Stratoliners* ordered by Air-India International and scheduled to enter service in 1960. The study also shows that 757 all-cargo aircraft were in use by airlines throughout the world and 25 were on order. Of these totals, six were in use by Indian airlines. The Boeing Airplane Company, which conducted the study, is the manufacturer of *Boeing 707* long-range jet airliners and *Boeing 720's* for intermediate-range use.

B.O.A.C. TO OPERATE BRITANNIA SERVICES TO LONDON VIA TEHERAN

From April B.O.A.C. will operate two of its *Britannia* services to London *via* Teheran. Subject to Government approval, one of these flights will provide a direct air link between Delhi and Teheran. The other service will connect the Iranian capital with Calcutta. In both cases, Karachi will be the only intermediate stop. The overall journey time to Teheran will be six hours from Delhi and nine hours from Calcutta. Other countries served by the *Britannia* services *via* Teheran will be the Lebanon and West Germany in the west, and Burma, Thailand, Malaya, Hongkong and Japan in the east.

LONDON FIRM TO SUPPLY THREE DIESEL LOCOMOTIVES TO INDIA

Three diesel locomotives of 70 horse-power are to be supplied to the National Coal Development Corporation (Private) Ltd., of Calcutta, by a London firm. This order is the first of its kind received from the Corporation. The value of the order for the three diesel locomotives is placed at £22,000.

GOOD DEMAND AT TEA EXPORT SALE

DUST PRICES DEARER

AT Sale No. 37, held on 17th and 18th March, offerings at the Export auction amounted to 60,788 packages. There was a good general demand which strengthened as the sale progressed. Bright liquoring teas and orthodox Fannings were the strongest feature, and were generally dearer although the plain and medium liquoring brokens were often 2nP to 4nP easier. There was a fair demand for C.T.C. teas which were fully firm while the poorer and more fibrous kinds met with better enquiry than in recent weeks and were 10nP to 15nP dearer. Brown Dooars met with limited demand and the Fannings were 5nP to 10nP easier. The Darjeeling teas on offer sold well while whole leaf grades sold at about last rates, particularly the stylish ones which often fetched prices above their valuations.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.25 to 2.30	
Plain B.P.	1.38 to 1.42	2 3 9
Medium B.P.	1.50 to 1.54	1 11 0
Best Assam C.T.C. B.P.	2.60 to 2.80	1 12 6 to 1 13 0
Plain Fannings	1.56 to 1.60	
Medium Fannings	1.72 to 1.76	
Best Assam C.T.C. Fgs.	2.70 to 2.90	Not quotable

At the Internal Sale, there was a strong general demand for the 20,229 chests of Dust on offer, and prices were generally dearer particularly for those suitable for the Middle East. The best C.T.C.'s and the better liquoring medium C.T.C. Assams with bright liquors were fully firm and occasionally dearer but the plainer and fibrous kinds were often easier. Orthodox descriptions from all districts with a clean black leaf appearance sold well and were 2nP to 4nP dearer at the close. The poorer liquoring kinds, however, were easier. The Darjeeling teas on offer met with irregular demand.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.54 to 1.56	1 10 0 to 1 10 6
Medium Assam Grainy Dust	1.56 to 1.58	1 11 0 to 1 11 0
Medium Assam C.T.C. Dust	1.85 to 2.05	2 0 0 to 2 3 0
Best Assam C.T.C. Dust	2.85 to 3.15	2 14 0

There was a good general demand for the 5,478 chests of Leaf on offer, and with the exception of better C.T.C.'s, prices were generally irregular and easier.

FREIGHT MARKETS QUIET

THE freight markets remained quiet but there was a slight tendency for rates to improve during the past week. American freight markets fixed a few vessels for grain U.S.N.H.-west coast of India at 57s 6d. In the Pacific coast, grain charterers accepted 60s with 1,000 tons discharge free, for 9,500 tons, 5 percent wheat to one port north China and paid $ (U.S.) 5.50 for 9,500 tons, 5 percent wheat to Japan. Transatlantic coal fixtures have been repeated at 22s. Australian coal charterers are open to move two cargoes of 7,000 tons coals from Newcastle to Buenos Aires at 47s 6d f.i.o. and trimmed. Mormugao ore charterers paid a better rate of 48s 6d f.i.o. for 9,500 tons, 5 percent iron ore to the U.K. Pakistan coal charterers from Calcutta to East Pakistan are in the market for a fair-sized vessel for three consecutive voyages, first voyage 25th March-25th April, ideas 19s f.i.o., to which there is practically no response from the owners.

HIDES AND SKINS FIRM

The market was firm, and prices showed an upward tendency. Stocks were less than in the previous week.

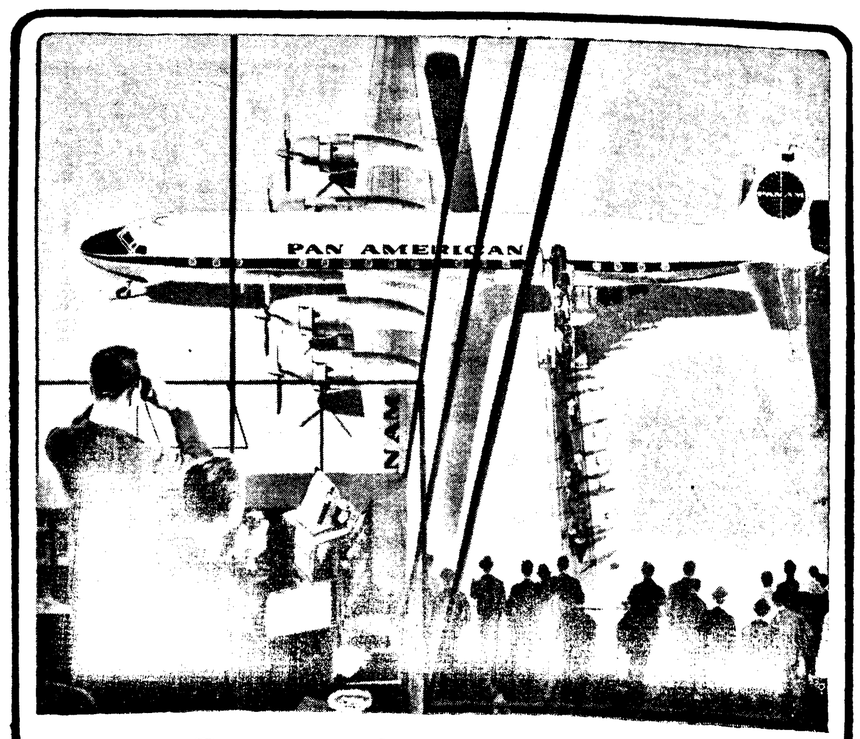
Bazaar Sales

(Between 4th March and 17th March, 1958)

Cowhides: Wet salted (Ord.) 15,520 pcs. on the basis of Rs. 10.50 to Rs. 12; Wet salted (Slaughtered) 18,660 pcs. on the basis of Rs. 14.25 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee and Kustia) 42,800 pcs. on the basis of Rs. 310 to Rs. 325, Rs. 360 to Rs. 370 and Rs. 390 to Rs. 410; Wet salted (he-killed) on the basis of Rs. 4.12 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur 44,550 pcs. on the basis of Rs. 350 to Rs. 370; Purneah-Kissenganj 11,500 pcs. on the basis of Rs. 360 to Rs. 370; Patna-Pakur 28,150 pcs. on the basis of Rs. 280 to Rs. 330; Muzafferpore-Patna 9,500 pcs. on the basis of Rs. 325 to Rs. 345.

Bazaar Stocks



(17th March, 1958)

Cowhides: Wet salted 95,500 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia and Killed) 23,800 pcs.; Assam-Dinajpur 92,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 4,15,000 pcs.

SUGAR UNCHANGED

During the week ended 19th March, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 4,000 bags and stocks totalled 70,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-2 for ordinary grain and Rs. 38-8 for big grain. The market was unchanged.

For people in a hurry...

The "Super-7" Clippers—nonstop to the U.S.A. When you're in a hurry to get to the U.S.A., be sure you're aboard one of Pan American's radar-equipped "Super-7" Clippers* (Douglas-built DC-7Cs) — fast — quiet over-ocean airliners. Already they hold 20 official speed records over transatlantic routes.

And even when you're flying tourist-fare *Rainbow* service aboard Pan American's Clippers, you get the extra speed of the "Super-7s". Putting our finest equipment on tourist runs has been traditional at Pan American. As host to the world, Pan American makes you feel at home whatever your origin. For instance, 36 languages are spoken by flight personnel on Pan American's transatlantic services. Meals served aboard the Clippers have been recently awarded three international prizes for excellence.

For reservations, call your Travel Agent or Pan Am—over 800 offices throughout the world.

COMPANY AND PUBLIC NOTICES

THE JAY SHREE TEA GARDENS LIMITED.

NOTICE is hereby given that the Twelfth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at India Exchange (2nd floor), India Exchange Place, Calcutta 1 on Wednesday the 23rd April, 1958 at 3-00 P.M.

(1) To receive and consider the Directors' Report and pass the Audited Accounts for the year ended 31st December, 1957.

(2) To declare dividend on Preference and Ordinary Shares.

(3) To elect a Director in place of Shri N. C. Mehta who retires by rotation and in respect of whose re-appointment, to consider and if thought fit to pass the following resolution of which a special notice has been received by the Company.

"RESOLVED that Shri N. C. Mehta who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To transact any other business that may be transacted at such meeting.

(6) As a special business to consider and if thought fit to pass the following special resolution with or without modification:

"RESOLVED that for a period of five years from 1st January, 1957, payment of commission to the Directors up to a maximum of one per cent. to be decided by the Directors from year to year, on the nett profits of the Company in respect of each financial year, as determined in accordance with and subject to the provisions of the Companies Act 1956 be and is hereby sanctioned to all the Directors of the Company and that the same be distributed amongst such Directors and in such manner as may from time to time be thought fit by them."

The Share Transfer Registers will remain closed from 25th March, 1958 to 23rd April, 1958, both days inclusive.

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, India Exchange Place,
Calcutta, the 4th March. 1958.

Note.—1. A member entitled to attend and vote at the meeting may appoint a proxy in place of himself and that the proxy need not be a member.

The Explanatory Statement as required in pursuance of sub-section 2 of Section 173 of the Companies Act 1956 in respect of item Nos. 3 and 6 is given below.

ORDINARY RESOLUTION NO. 3.

Shri N. C. Mehta, I.C.S. (Retd.), Bar-at-Law, Director of the Company retires by rotation. As he has attained the age of 65 years his re-appointment as a Director of the Company requires the resolution of shareholders specifically declaring that the age limit prescribed in Section 280 of the Companies Act 1956 shall not apply to him. The Company has received special notice from a member notifying his intention to move the resolution set out in the item. Shri N. C. Mehta has been a member of the Board of Directors of the Company since long and it is in the interest of the Company that he should continue to be a Director of the Company.

SPECIAL RESOLUTION NO. 6.

Under Section 309 (4) of the Companies Act 1956, Special Resolution is required for the payment of Directors' commission not exceeding one per cent of the nett profits of the Company. The said resolution is to be for the period beginning from 1st January. 1957 onwards and subject to its being passed the Directors' commission @ 1% of the nett profits of the Company for the year 1957 and subsequent years will become payable to the Directors.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

NOTICE

THE Preference Share Registers of the Company will be closed from the 2nd April, 1958 to the 10th April, 1958, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LTD.,
Secretaries.

Calcutta,
19th March, 1958.

THE SAMNUGGUR JUTE FACTORY COMPANY LIMITED

THE Directors of this Company regret that on account of the continued adverse trading conditions during the year ended 31st December, 1957, which have resulted in a substantial loss, they are unable to recommend payment of any dividend on the Ordinary Shares.

The Directors have declared on the Preference Shares a Dividend at the rate of 6% per annum for the half-year ended 31st December, 1957. This Dividend will be paid on 28th March, 1958, less Income Tax at 8/6d per £1 and the Transfer Books will be closed from 21st March to 28th March, 1958, both dates inclusive.

On account of certain Budget proposals announced by the Government of India on 28th February, 1958, it is not possible at this stage to determine the results for the year, but it is, however, known that it will be necessary to transfer a sum from General Reserve to meet the loss on the year's working and the payment of the year's Dividend on the Preference Shares.

P. WILLIAMS,
Secretary.

Dundee.
18th March, 1958.

THE BOMBAY DYEING & MANUFACTURING COMPANY, LIMITED.

NOTICE

THE Eighty-sixth Annual General Meeting of The Bombay Dyeing & Manufacturing Co., Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 17th April 1958 at 4-30 P.M. to transact the following business:—

1. To adopt the Directors' Report, and the audited Balance Sheet and Profit & Loss Account for the year ended 31st December 1957.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in the place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and, being eligible, offers himself for re-appointment; and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and who is a Constituted Attorney and holding an office of profit under Messrs. Nowrosjee Wadia & Sons (Private) Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

4. To appoint a Director in place of Mr. N. K. Petigara, who retires by rotation and, being eligible, offers himself for re-appointment.
5. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA,
Director,
Managing Agents.

Bombay, 7th March, 1958.

NOTES:—

(a) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under item 3 set out above is annexed hereto.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(c) The Share Transfer Books of the Company will remain closed from Tuesday, the 25th March, 1958 to Thursday, the 17th April, 1958, both days inclusive.

(d) The Dividend when declared will be made payable at the National Overseas & Grindlays Bank Ltd., Bombay, on or after the 28th April, 1958, to those Members whose names stand on the Register of the Company on the 17th April, 1958, and the Dividend Warrants will be duly posted to them.

(e) Members are requested to notify immediately any change of address to the Company.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956, ANNEXED TO THE NOTICE.

Item No. 3—Sir Jamsetjee Jejeebhoy, Bart., is a Director of the Company who retires by rotation and is eligible and offers himself for re-appointment. A Special Notice under Section 190 of the Companies Act, 1956, has been received proposing the appointment of Sir Jamsetjee Jejeebhoy, Bart., as a Director in accordance with the provisions of Section 261. As set out in the Special Notice received by the Company, the reasons which make it necessary to have a Special Resolution are as under:—

Sir Jamsetjee Jejeebhoy, Bart. has been a Director of the Company since 1934, and the members of his family have been associated with the Company for nearly half a century. Sir Jamsetjee Jejeebhoy, Bart. is on the Board of many reputed concerns. He joined the Managing Agents in connection with their other activities. He has a very wide and varied experience, and during his long period of association with the Board has rendered valuable services to the Company. As it is in the interests of the Company that the Board should continue to receive the benefit of his advice, it is desirable that he be re-appointed a Director.

TO
THE MEMBERS OF
THE BOMBAY DYEING & MFG., CO., LTD.

THE ORISSA MINERALS DEVELOPMENT CO., LTD.

THE Board of Directors of the Company has recommended a final Dividend on the Ordinary Shares @ 10% per annum, making a total Dividend of 20% per annum in respect of the year ended 30th June, 1957, without any deduction for Income Tax payable by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CASE FOR HIGHER COAL PRICES

EXPANSION THREATENED BY FINANCIAL SHORTAGES

OF the industries which are indispensable to the five year plans, probably none has suffered more from neglect and sectional hostility than coal. The condition of the coal share market shows that investors have for years been shying away from it, because its profitability has been eroded and because its prospects have been made uncertain by the ideological shibboleths of the Government's industrial policy statements. It is widely recognised that economic development as a whole will suffer if there is inadequate exploitation of energy resources, which in India are constituted primarily by coal. Already many industries, in the south and west of the country especially, have suffered from a shortage of fuel. Although the shortage has resulted mainly from the railways' inability to provide the carrying capacity rather than from any inadequacy in production, it gives an idea of what might happen in future years if the mining of coal does not keep pace with the rapid growth in the demand for it. Considering the serious handicaps under which the industry has had to work, it has managed a remarkable record of achievement in recent years. Production has been steadily rising and, as Mr. D. Hogg, chairman, told the annual meeting of the Indian Mining Association last Thursday, it touched 43.5 million tons last year, against 39.43 million tons in 1956. Approximately 3.1 million tons out of this increase of just over 4 million tons was accounted for by the private sector. That is a tribute to the vigour and enterprise which private collieries have shown in meeting the growing requirements of an industrialising economy. But it would be an error to regard last year's remarkable record as portending a similar rate of expansion in future years, unless the limitations under which the industry has been working are relaxed. As Mr. Hogg puts it, this progress, "in view of certain deficiencies, can only be regarded as 'short-term.'"

It would be a pity if it were to prove so ultimately. Under the second plan, the production target for private and State collieries together has been fixed at 60 million tons annually by 1960-61. But now doubts are arising that this figure might turn out to be too low. There is also a disturbing likelihood that the public sector will have difficulty in expanding output by the 12 million tons required of it. The responsibility for bridging the gap between supply and requirements might well, therefore, fall more heavily on private producers, particularly since they have the willingness and the ability to expand output much faster than they have been asked to. But if this responsibility is to be met adequately, an essential prerequisite is that coal mining be made more remunerative. The financial results of coal companies in recent years have shown how profit margins have been shrinking steadily as costs have risen while selling prices have been pegged at too low a level. This state of affairs cannot be allowed to continue if coal development, now included in the hard core of the plan, is not to suffer. Mr. Hogg hopes that the Coal Prices Revision Committee, set up by the Government, will take a realistic view of the problem, and recommend an increase in selling prices which not only covers cost rises but also bears in mind the investment needs of the industry. Among the recent cost increases which he specifically mentions are those "on account of implementing the Appellate Tribunal's decision, recurring increases due to annual increments which have to be introduced, the cost of issuing clothing and boots to workmen at concession rates which are 50 percent of the cost, the supply of free rations to workers' children in the *crèches*, the provision of canteens and many other welfare amenities, and last, but by no means least, the cost of implementing the new Coal Mines Regulations, necessitating the appointment of additional staff."

In relation to the industry's investment needs, the main point to note is that the capital market as a whole is sluggish, and where capital for coal mining is concerned, it is especially so. Unless the working of coal companies becomes more profitable and they are assured of greater security, new capital will be extremely difficult to raise and expansion will therefore suffer. For the time being, the main source of investment will necessarily have to be the resources the companies themselves can accumulate by being allowed to charge an economic price for their products. It is sometimes argued that coal prices should not be increased because such a move would push up industrial costs generally. But Mr. Hogg counters the argument effectively by pointing out that coal producers cannot be expected to subsidise other industries, or the railways, by suffering a loss themselves—as seems to be the case at present. Mr. Hogg also puts forward the argument that if coal is made dearer, its use will become more efficient and less wasteful.

How coal development is suffering because of producers' financial difficulties may be judged from an analysis referred to by Mr. Hogg of the accounts of 19 coal companies in the Indian Mining Association's membership which together raise about one-third of the country's total output. The analysis shows that their profit after taxation averaged Rs. 1.21 a ton, out of which shareholders were paid Rs. 0.54 a ton in dividends. The latter figure represented a return of 6.3 percent on the paid-up capital or a mere 3.4 percent on the total investment—a return that is considerably lower than that given by other industries (especially if one considers the special risks inherent in mining) and certainly a good deal lower than the 4 percent on total capital invested that the Government collects from the biggest of its own commercial enterprises, the railways. After providing for taxes and distributing dividends to shareholders, these 19 companies were left with Rs. 57 lakhs, out of which sums had to be set aside for depreciation. Against this total retention, there was a capital expenditure of Rs. 88 lakhs; the companies' financial resources were thus depleted by as much as Rs. 31 lakhs in a single year. Projected over the whole industry, the total depletion would come to somewhere around Rs. 1 crore, which Mr. Hogg justifiably describes as "a staggering figure."

Although pricing uncertainties are at present the main preoccupation, their removal would not alone usher in an era of uninterrupted progress for the industry. Many old problems remain and many new ones have cropped up—all symbols of the fact that coal is still the Cinderella of Indian industry. Mr. Hogg reports that transport facilities have improved during the past year, but they continue to lag behind production. Stocks in West Bengal and Bihar, as a result, have risen during 1957 by more than 1 million tons to 3 million tons. Much more vigorous measures will be necessary to expand railway capacity, particularly in eastern India: in the short-term, it might be helpful to transfer certain sections from the overloaded South-Eastern Railway to the Eastern Railway in order to improve operating efficiency. Absenteeism among colliery labour remains a problem, the unfortunate feature being that it has tended to increase since the implementation of recent industrial tribunal awards giving large new benefits to workers. The fear that bigger earnings would induce colliery labour to work less, not more, thus seems well on the way to materialising. This reflects, in part, the fact that trade unions are oblivious to their more positive responsibilities, such as ensuring that productivity and discipline rise in accordance with the new benefits and privileges that workers get.

The tendency to introduce legislation and controls vitally affecting the industry without even consulting it, remains regrettably frequent. Mr. Hogg mentions that a joint committee of Parliament has made far-reaching amendments to the draft Mines and Minerals (Regulation and Development) Bill, 1957. The most important of these amendments would increase coal royalty rates sharply. There is no justification for such an increase, especially since the conditions governing coal mining are basically different from those governing other mining enterprises. Mr. Hogg quotes the passing of the Coal-Bearing Areas (Acquisition and Development) Act, 1957, as another example of how the industry is not even consulted in the framing of legislation with which it is vitally concerned. It is time the Government realised that the omniscience it assumes in itself does not exist; no possible harm can result from discussing laws and rules with the mining industry before they are finalised. If coal is to support the economic expansion that the Government has in mind, the immediate tasks seem clear: selling prices have to be raised so that the industry's working becomes more economic and financial resources are found to increase output; transport capacity has to be improved; facilities have to be provided to obtain mining plant and machinery; and producers have to be allowed the security and freedom which will enable them to invest in expansion on the scale that the second plan requires.

THE NOT-SO-BUSY SEASON

FOR some weeks now the demand for funds in the Calcutta money market has been virtually stationary. This is unusual at a time of year which is normally regarded as the height of the busy season. Whether these circumstances have been reproduced completely in all monetary centres throughout India is doubtful, but it is reasonably safe to conclude that what happens in India's largest industrial and commercial region is fairly representative of conditions in the country as a whole. The impression is confirmed that although India may not yet have been influenced strongly by the recession which is at present affecting most of the free world, her economy is, for some reason, duplicating the events which are taking place outside it. This analogy is not completely justified. A more appropriate comparison might be with the United Kingdom which is still relatively free from the adverse repercussions of world recession, but is nevertheless going through a period when the expansion of economic activity is being deliberately interrupted by official measures to curb inflation. This is not to criticise that aim. In both India and Britain, the primary purpose of economic policy must be to combine stability with the maximum rate of production growth. If any comment need be made in India's case, it is simply that current and prospective economic circumstances are providing a sober reflection on some of the more unrealistic ambitions of the early days of the second plan.

The reasons for this levelling off in the demand for funds can only be a matter largely for conjecture. Taking the economy as a whole, there has probably been a heavy reduction in the credit requirements of importers of raw materials and semi-finished goods. The selective credit restriction policy which the Reserve Bank has been following for the past year is no doubt discouraging all applicants who now know from experience their requirements will not be met, from approaching the banks at all. The state of the stock markets has certainly reduced the demand for funds for the holding of shares, while the continued high price of credit must have discouraged the accumulation of all but the minimum necessary stocks throughout the country. The circumstances of the various industries vary widely. In cotton textiles, production is lower this year, stocks of unsold goods are high and mills have a strong inducement to keep them from rising. The

result is that the demand for funds is showing considerable resistance to the usual seasonal rise. Jute mills are holding lower stocks of goods than at this time last year. Their buying policy for raw jute has been on a relatively hand-to-mouth basis for some time, and production is not rising. Advances to the jute industry too, therefore, are tending to level off. The sugar mills have just completed a good trading year and are probably fairly flush with cash which, because of recent increases in corporate taxation, they are not particularly keen to distribute in dividends. Stocks in this industry too are being kept to the minimum. Foodgrain storage is another item for which accomodation is rising at a slower rate this season. Little explanation is needed; crops were down considerably last year and credit requirements are unlikely to top those of the previous period until imports increase well beyond their present level.

The general slowing in the rate of increase in demand for advances this busy season is one of the factors which has contributed to the improvement in the liquidity of the banking system. This has been a marked feature of the present season following the tightness of last. The percentage ratios to total liabilities of cash and balances and of advances and discounts, for all scheduled banks during the week ended 14th March, 1958, were 6.9 and 64.3, respectively, compared with 7.4 and 74.7, respectively, in the corresponding week of the previous year. This represents a substantial improvement in the banks' liquidity positions. Similar figures for the State Bank are 5.9 and 50.1 compared with 6.0 and 64.7. Clearly the improvement is general throughout the whole commercial banking system. The reasons are numerous. Notes in circulation have increased from Rs. 1,470.44 crores at the beginning of the busy season (1st November, 1957) to Rs. 1,578.26 on 14th March this year. This represents a rise of about 7.3 percent and compares with one of 5.6 percent in the corresponding period a year ago. Scheduled banks' advances have risen by 15 percent in the period from 1st November, 1957, to 14th March, 1958, compared with 15.9 percent in the corresponding period a year ago. Similar ratios for the State Bank are 12.5 percent and 21 percent.

A notable feature of the current busy season is a sharp rise in scheduled banks' time liabilities. The main reason for this improvement is, of course, the persistent high level of interest rates. Others are probably better trading results in industry and commerce—together with the present disincentive to distribute cash in the form of dividends—the accumulation of the counterpart funds used for the sale of wheat which has arrived in this country under the American P.L. 480, and increased deficit financing. The general result is a greater all-round flexibility in commercial banking circles.

SIX PERCENT IN BRITAIN

THERE has been some confusion in interpreting the reduction in Britain's Bank rate from 7 percent to 6 percent—just six months after it was raised from 5 percent to 7 percent. The immediate reactions were conflicting. In the foreign exchange markets sterling was almost unaffected; so foreign operators were evidently satisfied with assurances that no change in policy was implied. Whereas in the stock markets ordinary shares rose sharply; so investors seemed to believe that the restraints imposed six months earlier were being dismantled, having supposedly fulfilled their purpose. The simple explanation of the authorities' move was that the emergency that required the 7 percent rate had ceased to exist, that the rate could be reduced without weakening confidence in sterling, and that it ought to be reduced, to lessen the cost of the national debt and to allow room for manoeuvre in case it should be necessary to raise the rate later in the year to support sterling. Yet it is difficult to believe that the authorities had not also at the back of their minds the idea that a recession of trade, of which the first symptoms had appeared, ought to be corrected in its early stages.

Economic opinion was, and is, divided. The cautious opinion was that no relaxation at all was permissible until the gold and dollar reserves had been further increased, wages had been stabilised, and the smouldering embers of inflation—that could so easily be fanned into flame again—had died out. The bolder—but more apprehensive—opinion was that the cut in Bank rate should be only the first move in a broad policy of re-expansion. Apprehension arises from a belief that the recession of world trade is not nearly ended, that its effects on Britain will grow much more serious as it develops, and that unless counter-measures are undertaken as a matter of urgency this recession will be a menace to "the western way of life". This idea has taken hold not only on business men and politicians, but also on some eminent economists. It has already generated some quite startling proposals.

Mr. Roy Harrod, the Oxford economist, writing in the *Financial Times*, has faced frankly the implications of the undertaking agreed between the two main political parties in 1944 to sustain a high and steady level of employment in Britain. Are we to assume, he asks, that this undertaking is in abeyance because the balance of payments may be weakening? Does the commitment become invalid when international trade is declining, when its main purpose was to maintain employment *"even when there was a world slump"*? Mr. Harrod's argument is that Britain must promote expansion in a limited, but expanding, field, in a world that is tending towards depression. He suggests that Britain should, as quickly as possible, co-ordinate policies with other members of the Commonwealth, with the intention of increasing investment in the Commonwealth with the aid of British finance; that other members will then be willing to economise their imports from outside the Commonwealth; and that Europe, seeing that something is being actually done to maintain trade, will then be willing to associate itself with the Commonwealth, so that such problems as the Free Trade Area will fall naturally into place. He believes that if a Commonwealth-Europe plan involved (as it probably would) more severe restrictions on imports from the dollar area, the American Congress would be persuaded to evolve "some great imaginative scheme for dealing with the world recession".

Profesor James Meade, the Cambridge economist, in two articles published in the *Manchester Guardian*, has followed the same line of thought with more particular reference to the United Kingdom. He too envisages more serious difficulties in the balance of payments; but again he has "no hesitation in advocating reflation for the prevention of unemployment". We cannot, argues Professor Meade, rely on the old-fashioned remedy of "public works", because it is too slow. (Mr. Percival F. Brundage, former director of the U.S. Budget, said much the same thing before his recent resignation.) Lowering interest rates and easing credit are useful but not sure stimulants to capital development in a general atmosphere of depression. The only promptly effective measure would be a reduction of taxation, leaving the public with larger tax-free incomes to spend. (In this respect also there is a strong body of American opinion supporting the professor.)

Professor Meade faces unflinching the financial implications of such a policy. Reflation would inevitably affect the balance of payments. To counteract the strain Britain could either restrict imports from and payments to other countries (as Mr. Harrod envisages) or let the exchange rate between the pound and other currencies go free. It might be necessary to do both. "But it is my belief", says Professor Meade, "that our first and basic step should be to let the exchange rate go." This proposal may be alarming; for the circumstances in which sterling would be freed from its present parities are precisely those in which sterling would depreciate. Sterling would be sacrificed because its value could not be secured within the framework of a policy of full employment. But this authority regards the move as dangerous only in a period of uncontrolled domestic inflation; which is not, of course, what he intends. What he envisages is that some depreciation of the pound in a period of world slump would prevent the fall in foreign prices from exerting deflationary pressure on sterling prices, at a time when the economy would be already suffering from deflation. Professor Meade's idea is that if each national government takes responsibility for maintaining activity in its own territory it will be possible to prevent the widespread re-erection of barriers to world trade. International action to cure the depression itself could then follow. But it must be said that the idea of devaluation is utterly opposed to the British Government's policy.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Calcutta 1.

CURRENT COIN

Good Year for Alkali Chemical.—In his address to shareholders of the Alkali and Chemical Corporation of India Ltd. at the latest ordinary general meeting (a fuller version appears on another page of this issue of *Capital*). Mr. N. D. Harris, chairman, reports a successful year of working. Record levels of production and sales have been achieved. The latter have risen from Rs. 192 lakhs in 1956 to Rs 230 lakhs. Since 1954, which was the first full trading year after the sale of the Khewra factory in Pakistan, the turnover has nearly doubled. The Rishra factory has been busy throughout the year, and record levels of production have been achieved in almost every unit; paints, chlorine and caustic soda, in particular, have shown large increases. The extensions to the paints plant were completed in the latter part of the year; these will help meet the increasing demand for "Duco" and "Dulux" products. Plans for extending the chlorine and caustic soda plant are in an advanced stage. Arrangements have been made with Imperial Chemical Industries Ltd for the sterling finance required for this purpose. The polythene plant will begin production early in 1959 "provided nothing unforeseen occurs." "Alfloc" products have been sold by I.C.I. for many years for the treatment of industrial and locomotive boiler waters. "There is, therefore, an established market and we have recently been licensed under favourable terms to manufacture them at Rishra." Great difficulty has been experienced in obtaining foreign exchange for essential imported plant, engineering stores and raw materials. To help conserve foreign exchange, the company has paid, and is continuing to pay, great attention to the use of indigenous plant and raw materials. The prices of the latter have increased substantially. Although the company has assured the Government that it will try to avoid an increase in selling prices, the time has come when an increase may be necessary. The company needs more capital, and although its internal resources will increase over the next few years, they will not be sufficient, so the directors are thinking over the problem. "All I can say at the moment is that our immediate requirements will be met from loans from banks, including a loan of Rs. 100 lakhs already negotiated for the polythene project," Mr. Harris says.

* * * *

Consolidated Tin Mines.—The statement circulated to shareholders of the Consolidated Tin Mines of Burma Ltd by Mr W. J. C. Richards, chairman, along with the report and accounts for the 15 months ended last June, reflects the abnormal conditions in which the company has had to operate because of insecurity and the vagaries of Government policy in Burma (the statement appears on a later page). Prospects for the resumption of profitable mining operations are described as poor. Two of the company's mines are being re-equipped to produce ore in sight, but Mr Richards points out that "rehabilitation can only be embarked upon on a modest scale until security is restored and and until long-term leases are issued to us." The Burmese Government seems intent upon making it difficult for the foreigner to continue in business. Bankers are now forbidden, without the sanction of the Burmese exchange control authorities, to grant overdrafts to businesses which are not directly controlled in that country. The Burmese Government has frequently promised that it will allow profits to be freely remitted from that country, but in fact Consolidated Tin Mines has not been able to remit its profits for the years ended March 1954 and March 1955, although all Burmese taxation has been paid.

* * * *

U.S. Credits for Private Industry.—A *Gazette of India Extraordinary* announces that it will now be possible for the Government of India to issue import licences, without any conditions concerning deferred payments, for certain industrial projects which it considers to be of sufficient importance for financing out of the dollar credit from the U.S. Export-Import Bank. The industries are: (1) engineering, (2) chemicals, (3) cotton textiles, (4) automobiles and (5) coal mining. As already announced, the U.S Export-Import Bank has offered the Indian Government a credit in dollars for purchases to be made in the United States. To obtain the Government's approval in principle to the inclusion of any project under this credit, industrialists will have to apply to one of the following authorities for the industrial groups mentioned: (1) Industrial Adviser (Engineering), Development Wing, Udyog Bhavan, New Delhi; (2) Industrial Adviser (Chemicals), Development Wing, Udyog Bhavan, New Delhi; (3) Textile Commissioner, Bombay; (4) Industrial Adviser (Engineering), Development Wing, Udyog Bhavan, New Delhi; and (5) Coal Commissioner, Calcutta. A copy of the communication in each case will have to be sent to the Deputy Economic Adviser, Ministry of Commerce and Industry, New Delhi. The details, which the applicants should furnish, have been set out in a public notice published in the *Gazette of India Extraordinary*. These include details of licences held under the Industries Act, the estimated value of the equipment to be purchased in the United States and the cost of insurance and freight, the commitments already entered into, the value of the output to be achieved from the project, the value of raw materials and components required annually and arrangements made for rupee finance. The equipment referred to includes not only the plant and machinery, but any constructional material required for completing the project, including steel for structures, earth-moving equipment, electrical fittings, essential supplies of spares that may be necessary as an initial reserve to start the operations, etcetera, which may need to be imported. In other words, the picture should be as complete as possible and should include all items that will need to be imported in order to start production, other than raw materials, with an indication of the likely sources of supply in each case. In all cases, the normal import licensing restrictions will be applicable and goods and equipment indigenously available in adequate quantities will not be allowed for importation. Although no last date has been fixed for making applications, applicants are advised to apply as early as possible. As the credit is available for purchases in the United States only, applicants who find that they have to spend substantial sums for purchases outside that country may indicate whether they have in view any arrangements for financing them, such as investments from abroad.

* * * *

Raw Materials for Paints.—Rapid industrial expansion under the second plan has increased the demand for surface coating paints in both the public and the private sectors. But it seems ironical that at a time when the industry has received an impetus for growth, its ability to meet the increased demand has been undermined by a restrictive import licensing policy. Speaking at the annual general meeting of the Paint Federation, Mr. R. S. T. Cooke, chairman, has said that manufacturers appreciate the vital need to conserve foreign exchange. The members of the Federation limit their licence applications strictly to quantities they believe they will need, but it is seldom that an application is granted in full; most are cut drastically, if not refused altogether. This policy has greatly affected the industry, since its products are composed of many ingredients. Quite a few raw materials have to be imported, especially because the demand for specialised finishes is increasing. The restriction of imports, therefore, affects production programmes. "Yet ours is an industry which can indisputably claim to be essential, for it serves virtually all other industries. Whether for decoration, protection, prevention of corrosion, the finishing of manufactured goods or for any other purpose, surface coatings are indispensable to the country's economic welfare. I would suggest that the saving of a certain amount of foreign exchange by the slashing of import licences for raw materials destined for use in surface coatings may very well turn out to be a false economy. We look towards the Development Wing to protect our interests in this vital matter." There has been a serious shortage of anatase titanium dioxide, but the situation has been saved as permission has eventually been granted to import it from abroad. It is necessary to make arrangements for the indigenous production of rutile titanium dioxide. In the meantime, the continued grant of import licences for this raw material is vitally important. In common with all other industries, paint manufacturers have been urged by the Government to increase exports. Actually, much paint is exported in the form of industrial finishes applied to manufactured goods. Almost every article has a paint finish of some sort, whether it is a motor-car or a bicycle, a typewriter or a pencil. It is necessary to consider this point when judging the industry's export performance. The main foreign markets for paints as such are restricted to Pakistan, Burma and Ceylon. Of these, the first virtually no longer exists, while the third can buy paints cheaper from elsewhere and, therefore, has lost almost all interest in buying from India. Burma has a barter agreement with China, which limits opportunities for sale in that country, so the industry is exporting less than it was doing a few years ago. Export prospects will not improve unless the Indian products are competitive, and to achieve this, manufacturers should be granted the drawback of import duty on raw materials. Referring to the introduction of the metric system, Mr. Cooke says that the time is fast approaching when liquid paints and varnishes will be sold in litres. But until a satisfactory range of package dimensions is decided upon, manufacturers of drums, kegs and tinplate containers cannot take steps to switch their production from gallon to litre size packages. The Government should consider such factors while deciding how and when the change-over should be brought about in the industry.

* * * *

Labour Relations.—In his speech from the chair at the annual meeting of the Employers Federation of Southern India, Mr. M. J. Edwards mentions proposals to integrate the existing employers associations and indicates that his Federation is willing and ready to work with other regional bodies. A welcome feature is the increase in membership; Indian firms are joining the Federation. Mr. Edwards calls attention to the growth of a new privileged class—constituted by the industrial worker—which is favoured by awards and statutes, and enjoys better pay and conditions than agricultural labour. As for workers' participation in management, he declares that joint management councils might harm nascent industries and urges the Government to be very cautious in proposing any dilution of management's powers. Trade union rivalry is not the only danger; it might prove harder to get fresh capital for industry's growth. The problems of employers on the west coast are outlined by Mr. Edwards in his critical survey and he urges that in Kerala employers should have more encouragement and less interference. At official conferences intended to stimulate small savings, employers have been asked to lend money to workers for investment in savings certificates. At a recent conference, Mr. F. W. A Morris expressed genuine doubts about the implications of compulsory saving, however good its objects, as deduction from pay would lead to argument. Mr. Edwards points out that the operative word is saving and urges that employers should not be called upon to advance money. Most workers are already in debt sufficiently without anything being done to increase their indebtedness. There is a real fear that once savings certificates go into the hands of workers, they will be discounted with moneylenders in the bazaar for about 50 percent of their face value. Mr. Edwards, however, says that employers would be willing to collect voluntary subscriptions from a worker on pay-day and hold them until enough has been collected to purchase a savings certificate in his name. This would be genuine saving, but the Government would have to wait longer to get the money.

* * * *

Plea for Lower Taxes.—Speaking at the annual general meeting of the Bombay Chamber of Commerce and Industry, Mr. E. Parker, president, has complained that taxation is too heavy. He points out that if one possesses capital, the Government

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

takes part of it; if one earns an income, one has to give away a substantial portion; if one spends money, one has to pay for the privilege of doing so; and now, even if one gives it away as a gift, the Government wants a share. Not content with all this, it also wants part of what is left behind after one's death. At the same time, there is hardly any check on its own expenditure. "There must surely be something wrong in a country's tax structure where it is possible for an individual to have to pay to the Government in any one year, a sum greater than the amount of his total income for that year. And yet one hears, regularly, all over the country, Government spokesmen, whether Central or State, exhorting business men and industrialists to 'see the light', to realise that times have changed, even as the Prime Minister himself said in Bombay recently, to appreciate that nineteenth century capitalism is dead. And really what they are saying is pay up, pay up, pay up!" Of the taxes in force, the wealth tax is particularly objectionable. There is no justification for including companies within its purview. If the Government does not want the slow strangulation of everything outside the public sector, it should make a reappraisal of the position of companies in relation to the tax. The former Finance Minister indicated last year that it might be possible to continue the reduction of the high rates of income tax and supertax. Professor Kaldor also envisaged such a reduction in order that the overall effect might be in balance. It is regrettable that there is no reference to this in the latest Budget. Discussing the activities of the State Trading Corporation in relation to cement, Mr. Parker says that the main purpose was to correlate output with imports in order to meet the domestic demand. As imported cement was much more expensive than the indigenous material, an equalisation price was fixed, and all transactions were to be canalised through the Corporation. But the latter had no selling organisation of its own, so it appointed the existing sales organisations of producers as its agents. The net result has been that within one year of its entering the business, the price payable by the consumer has increased from approximately Rs. 90 a ton to Rs. 117.50 a ton exclusive of sales tax. So far as trading in manganese ore is concerned, the Corporation's recent decision to secure the co-operation of several hundred private concerns to act as its associates is seemingly an admission of failure on its part in meeting the exacting demands of a ruthlessly competitive world market.

* * * *

Tory Tax Talk.—Seven Conservatives, all under 36 and trained in economics, law and accountancy, call for a bold programme of tax reform in *Taxes for Today*, a pamphlet issued recently by the Conservative Political Centre in Britain. It is published on behalf of the Bow Group, which is made up of Conservatives with an upper age limit of 36. The authors of the pamphlet base their suggested reforms on one basic assumption—that the present tax yield of about £5,200 million would have to remain roughly the same at current prices. Claiming that there is full scope for raising revenue by more sensible means, even within the present high levels of revenue, the group says that the Government "has been singularly shy of using the tax weapon to further Tory aims." One of the more radical reforms suggested is an expenditure tax to replace the standard rate now levied on income. Food and rent would be excluded, but a rate of about 10s in the pound or 33⅓ percent gross of tax would apply to other purchases. This would reduce the disincentive to earn, since the only tax on earnings would be surtax, which affects only a very small proportion of the community. "It is legitimate to hope that some of these increased earnings would be saved." The group advocates a new single-rate corporation tax instead of the present income and profits taxes on companies. Taxation of dividends from taxed profits in shareholders' hands would be at the appropriate individual rate. This would have important implications for Britain's industrial competitive strength in a European free trade area. The pamphlet's solution to the problem of depreciation allowances is that each firm should be entitled to claim as allowances the depreciation charges it makes in preparing its legal accounts. "This system would be likely to lead to a more realistic view of obsolescence than many businesses now adopt." The group is strongly opposed to a capital gains tax, and urges the wider spread of property by assessing death duties on legacies received rather than on the whole estate of the testator. Suggested incentives for saving and for earning include: freeing investment income from tax over the first £250; freeing investors from liability to stamp duty on smaller share purchases (up to £500); taxing married women as individuals for surtax and investment income; and making the surtax starting point £5,000 and eventually £10,000. In so far as this may be taken as Party policy or a guide to the Chancellor of the Exchequer in framing his Budget proposals, present circumstances render it little more than wishful thinking, but as a long-term possibility it certainly merits study.

* * * *

Favours to State Collieries.—The Government feels that its own collieries should be responsible for most of the additional output required under the second plan, even though this might involve a large investment. The present production of coking coal is about 14 million tons, and the target for 1960 has been fixed at 16.5 million tons. Speaking at the annual general meeting of the Indian Mining Federation, Mr. Inder Mohan Thapar, chairman, has said that requirements of coking coal can easily be met from the existing public and private collieries. The working of the mines can be extended by introducing more sand-stowing and by going into deeper seams; this will require a much smaller capital outlay than the opening of new mines. Coal from the Dishergarh seam having proved suitable for blending with coking coal, it will augment supplies required for the steel works. "It is, therefore, not understood why the Government is in such a hurry to open the Kathara field where 1 million tons a year of coking coal will be raised by open-cast mining. The capital outlay in this field will be quite heavy and the foreign exchange component considerable. The point I wish to make is that, in view of our reserves of metallurgical coal being comparatively limited, resources in such areas could be held in reserve for emergencies and the meagre resources of foreign exchange that are now being utilised for these mines could easily be diverted to more fruitful purposes." Mr. Thapar complains of discrimination against private collieries. This is most noticeable in the allocation of transport facilities; State collieries have been able to reduce their stocks expeditiously, while those with private collieries have gone on mounting. The same discrimination is seen in the supply of steel materials. The Planning Commission has recently advised the Steel Controller's office that higher priority should be given to supplies for the State collieries. Such discrimination cannot be justified, since both sections of the industry are engaged in the common task of reaching the plan targets.

* * * *

Sterling Stabilisation Loan.—Sir Oliver Franks, of Lloyds Bank, recently made the thought-provoking suggestion that what was really needed to counter the low gold and dollar reserves of the sterling area was a stabilisation loan. He has now been supported by Professor J. R. Hicks, Drummond Professor of Political Economy at Oxford, who in addressing the Manchester Statistical Society has said: "Our position is not that of a bankrupt who has to struggle back towards solvency or to throw himself on the mercy of his creditors; it is nearer to that of a firm whose capital resources are insufficient for the business—the good business—that it is doing." Professor Hicks also agrees with Sir Oliver that the loan should come from the International Monetary Fund, rather than through a private transaction. Although the shortage of reserves is in the first place a problem for sterling, it is also a world problem and should be faced as such. Interest rates have risen in other countries too, largely for similar reasons. So far, he says, Britain's inflation has not been the major threat to the stability of sterling. The devaluation of the pound in 1949 reduced it to a level which gave her a great advantage in international competition. The current balance of payments remains in fairly good condition. What makes Britain so weak, and prone to repeated exchange crises, is the lack of reserves. Because these are low, she has to go on jabbing at the money rate in the face of temporary accidents, which with adequate reserves she could ride out. It is often supposed that Britain could replenish her reserves by maintaining a favourable balance of payments. But an adequate replenishment by these means would take many years and even if she could practise the necessary long-continued restraint, she would be doing to her neighbours just what West Germany has lately been doing to hers. There is no sense in this. As long as the reserves are weak, says Professor Hicks, high interest rates are to be expected. But he is sure that with sufficient determination, Britain can conquer inflation; and if that is conquered, the problem of reserves can also be overcome.

Increasing Oilseeds Output.—At a Hyderabad meeting, the agricultural research sub-committee of the Central Oilseeds Committee has examined nine technical programmes concerning various agricultural research schemes, and has scrutinised 32 progress reports on the schemes now being implemented in a number of States. The oilseeds extension schemes in ten States are estimated to cost a total of Rs. 26.94 lakhs. The sub-committee has recommended extending the scheme for research on oilseeds in West Bengal up to the end of the second five year plan. Other research programmes recommended for extension include one in Punjab for *toria*, *raya* and castor. The schemes for oilseeds research at Raichur in Mysore State, and for crop competitions in Madras, are to be extended for three years. Information from different States about the yields obtained under crop competition schemes is to be collected and published in leaflet form for circulation among extension workers. The sub-committee recommends setting up a special committee to tour various States and examine the progress of work under oilseeds extension schemes. After discussions with workers, it will suggest measures to increase production. To stimulate interest, the sub-committee proposes awarding annual prizes to plant breeders who evolve the best strains in each of the five major oilseed crops—groundnuts, castor, linseed, rape, mustard and sesamum. Apart from this, it suggests awarding prizes to extension officers who have done most to spread the cultivation of the improved varieties of oilseeds. Immediate steps are considered necessary for extending the area under castor. It is suggested that about 10,000 lbs of castorseed be distributed among cultivators in Bombay, Andhra Pradesh, Mysore, Madhya Pradesh and Punjab. The sub-committee stresses the need for stepping up the yield an acre of groundnuts. It feels that a special committee should be set up to indicate measures for the intensive cultivation of groundnuts on lines similar to the Japanese method of paddy cultivation.

THE DEVELOPMENT REBATE

(To The Editor of "Capital")

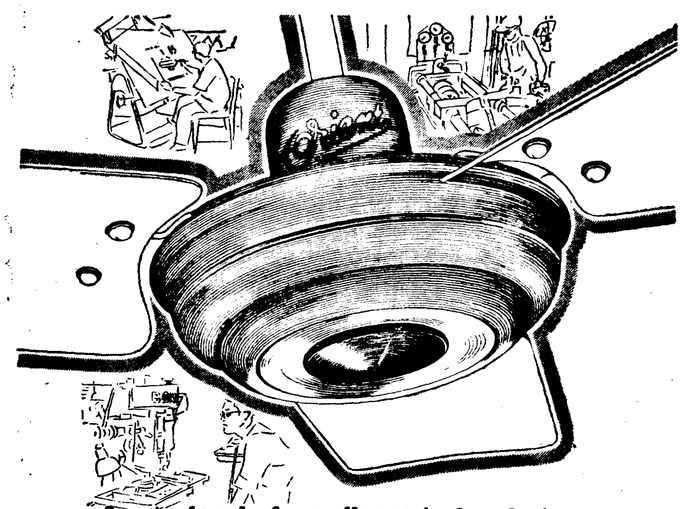
Your leading article on the recent Government proposals on development rebate, under the title "A Blow to Development" appearing in your issue of 20th March, 1958, gives rise to a number of thoughts from a different angle. You must be aware of the accounting formula followed by industrial courts in deciding the issue of bonus payable by a company to its workmen. Starting with the interpretation given by the full bench of the Labour Appellate Tribunal, judges have applied a number of "notional" charges, one of them being income tax. As the amount of income tax provided for in a company's profit and loss account is a mere provision, judges have generally accepted, in the list of prior charges, a notional amount of income tax by applying the standard rate of income tax applicable to the company. In other words any reliefs from income tax obtained by the company by way of initial and special depreciation, or development rebate, have been overlooked, on the assumption, one should imagine, that these were intended by the law-makers as special inducements for capital development, and therefore were not to be frittered away as dividends or bonuses.

While this general rule has been followed in the majority of industrial tribunal judgments, a recent Supreme Court award has followed a different line. (*Meenakshi Mills v. Workmen. Labour Law Journal*, February 1958, pages 239 ff.) Apparently in this case the court disallowed the calculation of notional income tax on the lines understood so far, and instead stuck to the actual provision for income tax made in the company's balance-sheet.

If now, therefore, the contention is made that the development rebate ought to be allowed to be used for payment of dividends, there would seem to be no getting away from the other contention, i.e. that by inclusion in a company's surplus, a portion should be available for the payment of bonus. One hopes that the intentions of the Legislature will be brought out more clearly in the ensuing debates and the precise position established for the guidance, not only of investors, but of those who have to deal with bonus claims, in industrial disputes.

Yours etc.,
N. K. Roy

Calcutta, 25th March.



BUDGET AND THE MARKET

THERE was naturally some speculation on the probable contents of the Budget and the effect likely to be produced on exchange and Government paper; the careful manner in which the actual contents were guarded from prying eyes added to the excitement of suspense. Speculative operations however, were not freely indulged in. Money was too tight, finance too inelastic, and the uncertainty was too great to encourage punting, and probably, now that the designs of Government are laid bare, nobody is one penny the worse or the better, as in fact the Budget leaves the prospects of the market in *status quo ante*. If the Finance Minister had studiously set himself to veil the future from too curious gaze he could not have succeeded more completely than he has done. Even the announcement of a fresh Government rupee loan of Rs 3 crores and the proposed allotment of £16,000,000 council bills are mere figures of speech which, like rain-clouds on the horizon may mean nothing or a great deal. If, for instance, there is no legislation to protect exchange, rates are nearly certain to fall as soon as exports slacken off and money cheapens, and Government paper will be subject to violent fluctuations. If, on the other hand, a minimum of exchange is fixed, the whole future of rates will be changed and re-sales will be freely offered as a hedge against purchases already contracted for at 1s. 3d to 1s. 3¾d. Government paper will probably be in demand for London, and Sir James Westland's hope of placing another rupee loan at 3 percent will be realised.

A new level of excellence in fan design

Here is the fan that combines beauty, comfort, performance and durability that every one looks for. Orient Fan, replete with many features, is a technical masterpiece—a result of a new level of excellence in design and technique that is achieved by the vast funds of engineering 'know-how' accumulated over the years.

Its pressure die cast, dynamically balanced rigid rotor complete die cast casing, centre less ground shaft, stove enamelled paint are the reasons for its remarkable performance and incomparable finish.

Here is the fan created by Orient's highly skilled technicians backed by their modern designers, tool engineers and other specialists to meet the exacting demand of the users all over the country and abroad.

Orient FANS

Years ahead in look and performance

ORIENT GENERAL INDUSTRIES LTD.

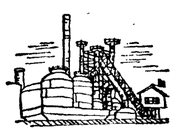
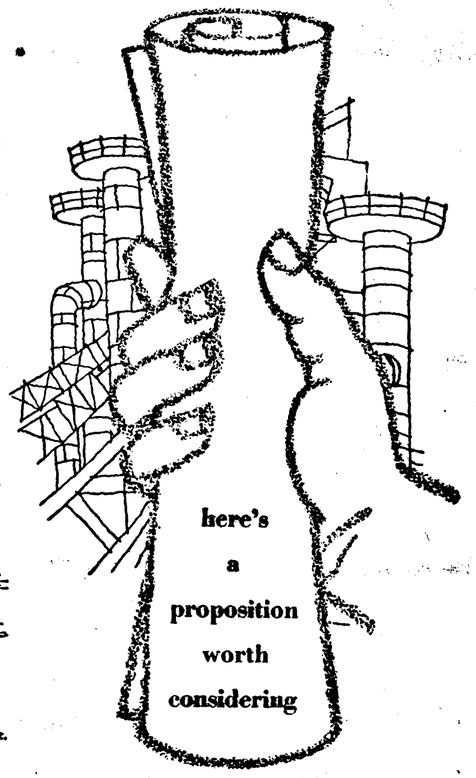
SERVICES OFFERED BY US



SURVEY & REPORTS
on raw materials, markets and distribution, selection of plant site, manufacturing processes, general plant layout, and estimates of capital and operating costs.



ENGINEERING & DESIGN
of complete plants, including detailed layout and construction drawings and specifications for structures, materials and equipment.

CONSTRUCTION & OPERATION
supervision of construction and organisation of key personnel for the operation of the plant.

MODERNISATION & EXPANSION
of existing plants and facilities.

here's a proposition worth considering

If you are thinking of the modernisation and expansion of your iron and steel works or of building a new mill, just call us in. As consulting engineers to the iron and steel and allied industries, we have a team of highly trained and experienced technicians to assist you.

CLEAN COAL

India's expanding steel industry needs huge quantities of blast furnace coke, yet precious reserves of coking coal must be carefully conserved. Millions of tons of coal a year must therefore be scientifically washed and blended for steelworks coke ovens.

Simon-Carves have half a century's world-wide experience of the complete design and construction of large-scale plants for coal washing, grading, blending, storage and handling. In conjunction with The Automatic Coal Cleaning Company they offer the most advanced range of mechanical equipment for Baum jig washing and for two-product and three-product dense medium separation. These great resources are being applied to the construction of the complete coal preparation and blending plant for the new Durgapur steelworks —where Simon-Carves are also building the new coke ovens, by-product plant, sulphuric acid plant and power station.

REVOCATION OF WILL AFTER MARRIAGE

OBLIGATION OF SOLICITOR TO ADVISE

(FROM OUR LEGAL CORRESPONDENT)

CONCLUDING this series of notes on English cases, the decisions in which may or may not be adopted in India where the legal principles involved are the same, here is an interesting case on wills and lawyers' negligence in advising on them. If you go to your solicitor and instruct him to draw up your will, at the same time giving him specific instructions as to the legacies and bequests you wish to make, and without asking for his advice on any point, is he under a legal obligation to you to go out of his way to question you as to whether you are married or not and, being told by you that you are unmarried, is he obliged to give you unsolicited advice that if you marry, the will will be revoked by the marriage? Not an easy question to answer, but we get some guidance in the recent case of a Mrs. Hall.

The lady (then a widow) and Mr. Hall consulted a solicitor in 1949, each wishing to make a will benefiting the other. At this interview, it was evident that the lady and Mr. Hall would probably marry and they did marry in 1950. The solicitor carried out his instructions and made the mutual wills, which were duly executed. He did not warn either party at the interview that the wills would be revoked by marriage; nor did he inform them that the executed wills were revoked when he was informed of the marriage in 1950. In 1952, the lady consulted the solicitor again about changing her will. He then destroyed the earlier will without informing her that it had been revoked by the marriage and drafted a new will for her which was duly executed.

Later in 1952 Mr. Hall died. As his will had been automatically revoked by his marriage, he died intestate; so that, instead of receiving Mr. Hall's whole estate under the will, his widow received only her intestacy benefits as widow. She thus sustained a heavy financial loss for which she sued the solicitor for damages for negligence in failing to warn her of the effect of marriage upon a will. The solicitor was held to have been negligent in not giving the warning in 1949 when he was acting for both husband and wife; but not in 1950 or 1952 when he was acting for the wife alone, to whom at those times he owed no duty to advise about her husband's will. The solicitor was mulcted in substantial damages.

But this was a special case. You will note that in it the judge (Ashworth J.) held that the solicitor was negligent only in 1949 when he was acting for both parties jointly consulting him at an interview, at which he learned that they would probably marry. In 1952, he was, when the lady consulted him, acting for her alone and in the writer's view had not only no duty but no right to make any comment on her husband's will at all. At the joint interview, the solicitor knew, in the judge's words, that "marriage was not just a fanciful possibility but was a contingency with an aspect of reality about it." That means, in effect, that they were making their wills with marriage in view; and both of them being his clients and jointly seeking his advice, it was held that he should have warned them that the intended marriage, when effected, would revoke the wills.

Nevertheless, there is all the difference in the world between seeking advice and giving instructions. If you walk into a lawyer's office and produce a sheet of paper saying, "These are the bequests I intend to make and the persons to whom I wish to bequeath them. Please prepare a will to that effect", all the lawyer has to do is to prepare the will. There is no occasion for him to proffer unasked-for advice. Nor, if he reads in the newspaper, a couple of years later, that you have got yourself married, is there any legal duty on him to communicate with you and tell you that your marriage has revoked your will. As the learned judge put it in Mrs. Hall's case, any general rule to that effect would place "an intolerable burden" on solicitors. All the same if, when you produced that sheet of paper, you had added some such words as: "I'm getting married next week and want my affairs shipshape" by that last remark you would, one thinks, be impliedly asking for the lawyer's advice. Of course, from a common sense point of view, any lawyer not a blockhead would thereupon tender it, but it is submitted that it would be his legal obligation to do so and he all a matter of contract really. (*Hall* v *Meyrick*. 76. *Law Notes*. 1957. pp. 64 and 70.)

* * * *

And, talking about wills:

WHAT IS WRONG HERE?

Samuel, when serving in the merchant navy in 1950, instructed a solicitor to prepare a will for him. The will was duly executed, and Samuel took the will with him on his return to his ship from shore leave. He retired from the sea in 1954 and devoted his retirement to cultivating his garden. He died recently from boredom. After his death, his will was found in a heap of old papers with the words "This will is revoked" written across it. There is no evidence to show when or where these words were written and they were neither signed nor attested but they are admittedly in Samuel's handwriting. "Splendid", said the person entitled to Samuel's intestacy. "The will is finished with and I inherit everything". But the executor under the will disagreed. "Nothing of the sort. Samuel may have intended to revoke the will but he failed to do so. He should have destroyed it, or else the words saying it was revoked should have been signed and witnessed. So the will still stands. Hard cheese on you, but there it is. Who was wrong?" Think that one over before looking at the answer at the end of this note.

* * * *

Two companies which occupied adjoining premises in London and manufactured carbon papers, typewriter ribbons and similar articles entered into an agreement by correspondence whereby each company undertook that it would not, without the written consent of the other company, employ any person who during the past five years should have been a servant of that other company. The constant handling of dyes and dyed material created some difficulty in the recruitment of manual labour, and there were trade secrets which both companies desired to guard. The parties to the agreement were two only of some 20 competitors in the same business in the London area. The agreement had been operated benevolently by the companies. Is it void as being in unreasonable restraint of trade.

"Yes", said Lloyd-Jacob J. There was no evidence that a five-year ban was appropriate to any category of employees, and it was longer than the interests of the parties required, both for manual and skilled workers. It was equally objectionable from the standpoint of the public interest, since it restricted an employee's freedom to choose his employment for a period of such duration as to deny him the opportunity of alternative employment in his trade within easy reach of his home when no interest of the employers reasonably required such protection. "Benevolence in operation, although it may mitigate the effect, cannot remove the evil of tyranny." [*Kores Ltd.* v *Kolok Ltd.* 76. *Law Notes* (1957), 240.]

* * * *

Answer to "What is wrong here?"

The statutory requirements and formalities as to wills and their execution do not apply to mariners "at sea". No particular formalities are requisite. As to revocation, though the mere writing of the words "This will is revoked" would not be sufficient to revoke the will in the case of an ordinary citizen (*Chease* v *Lovejoy*), yet a will which does not require any formality as to its making, and execution, such as that of a seaman "at sea" can be equally well revoked without any formality: and if there is nothing to show whether the words were written before or after Samuel's retirement from the sea, the presumption is that the words were written while he was "at sea" (*In the estate of Newland*. 1952). So the executor is wrong, the will is validly revoked and there is an intestacy. (76. *Law Notes*. 71).

CALCUTTA has been saying its good-byes to two prominent leaders of its business community just lately, one of them a former President of the Bengal and Associated Chambers, both of them well-known equestrians. I am referring, of course, to those two Fairlie Place neighbours, Sir Allan Eliott Lockhart, C.I.E., Chairman of Gladstone Lyall, and Mr. John Latimer, Chairman of Macneill and Barry.

Sir Allan came to India in 1926 as an assistant in Gladstone Wyllie. From a partner in 1937, he became managing director of Gladstone Lyall in 1948 and Chairman in 1951. Outside the office, his services to the business community comprise a list so long that I will have to leave its details to the daily newspapers for publication, although not for appreciation. He first served the Bengal Chamber as its representative on the C.S.P.C.A. in 1931. For seven years he was a member of the Committee, and became its President in 1951. The debt owed him by the British community is no less impressive —from the European Association to the U.K.C.A. A member of the Calcutta Branch Committee for fifteen years and Vice-President for three, he was President in 1954 and 1955. The C.I.E. came in 1943 as a result, among other things, of his services during the war in the Government of India's Department of Supply. Sir Allan's interest in horses has occupied a good deal of his leisure time. He was a member of the Calcutta Light Horse from 1926 up to its being disbanded in 1947; two of his pastimes are riding and racing. He has been a steward of the Calcutta Turf Club for the last six years, and was one of those who helped to start the Indian Society of Equitation and Horsemastership in 1947. Few business men can claim a more distinguished Indian career. The many activities he has supported and the many friends he has made, will all miss him greatly.

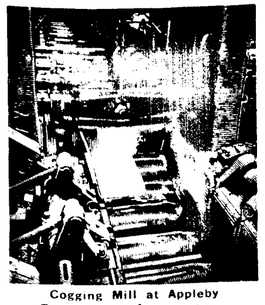
John Latimer is a Manxman who came to this country over thirty-three years ago—incidentally, on the same ship as Sir Anthony Elkins. He joined the Inchcape-group firm of Macneill and Company. From being a partner in 1945, he became a director of Macneill and Barry in 1948 and Chairman in 1953. His services to the business community include membership of the Committee of the Bengal Chamber. Like Sir Allan, he served with the Calcutta Light Horse for many years. He has been President of the Tollygunge Club and a steward of the Tolly races; he has also been President of the Himalayan Club. Calcutta may not have seen the last of John Latimer; he is to join the company's London office and seems likely to become one of that fortunate troop—the cold weather visitors.

* * * *

Readers have been asking me how I enjoyed Marius Goring and his English Comedians. I would very much like to say, but I did not see them. It is one of a columnist's few consolations that he is often asked to comment on cultural and entertainment events, if only because his readers might then be persuaded to pay their money to see how fallible his judgment is. I cannot remember the last occasion of this kind in Calcutta on which my views were not invited. But this time, the British Council did not see fit to include me along with the other newspaper men who were asked to see the show and have a word with the players. The party to meet them came and went —but no invitation. When the week's performances looked like doing so as well, I began to feel I owed it to my readers to find out why *Capital* should be alone among Calcutta's important newspapers in being ignored. It could have been that the British Council was acting on the opinion so prevalent among professional culture-mongers that business men are morons where the arts are concerned, and that to invite any columnist who writes chiefly for the business community is casting pearls before swine. Or it might simply have been another example of the British Council's notorious ineffectualness. I risked a discreet telephone call to find out. As might have been expected, it appeared somebody had blundered. But apologies were made and tickets promised for Thursday's performance three days ahead; in all, a gallant attempt to make up for the mistake, if a little too late for last week's edition of *Capital*. A request to meet the players was received without enthusiasm. I learned later that many of them had serious complaints about the way their visit had been handled and the people they were allowed to meet: perhaps by then it had become essential to keep them away from a columnist with a grievance similar to their own. I looked forward to my Thursday evening's Shakespeare. But the tickets did not arrive until Friday morning. By then it was too late to go along even for my own personal enjoyment—no respectable columnist will comment on performances to which he is not invited. It was all most disappointing; and my apologies are due to my readers for being unable to put my views before them. But I have no doubt the players performed brilliantly. I only hope they left Calcutta more impressed with the efficiency of the British Council than I am. After all, as British taxpayers, it is their money that keeps it going.

* * * *

As far as I can make out, and I do not claim to have read the Supreme Court judgment in its entirety, the Journalists Wage Board decisions have been held *ultra vires* of the Act mainly on procedural grounds. Newspaper proprietors' relief —and industry's in general—that capacity to pay has for once been upheld as a decisive principle in the determination of wages, should not perhaps be overdone. Not every dispute goes to the Supreme Court, and many lesser labour tribunals may go on giving awards regardless of their consequences on the industry or the unit concerned. With the lengthening shadow of a recession in the United States, where unemployment figures continue to rise alarmingly, these arbitrary ways of fixing wages may begin to wear an increasingly unrealistic look. When a situation arises in which a man is glad to have a job at all, something like which unfortunately already obtains in India, statutory definitions of what constitutes the minimum wage may be less popular than they appear to be at present. I was never happy that journalists felt obliged to go to the Government for help, and it may still not be too late for newspaper owners to arrest the growing bitterness of their employees. Parliament has, of course, placed itself in a very awkward position, for which it has largely itself to blame. But it should yet realise that the Press is not always improved by interference from men who understand as little of owners as of working journalists. I have seen it suggested in print that the militancy of the Indian Federation of Working Journalists, which met at Jaipur the other day, is in part the result of callousness on the part of some managements. If true, now is the time for them to rid their employees of any feeling of being treated unjustly. *Per contra*, there is a good deal that journalists have still to do to enable their employers to earn more money; and it is only in this respect too that the Government can do something useful to improve wages in the newspaper industry. The latter can stop cutting down the advertisement budgets of big concerns on the unproven plea that they conduct near-monopoly businesses. For the rest, the Government will be wise to let newspaper owners and journalists come to terms on their own.



* * * *

It would not surprise me at all if Colonel Nicholson, the protagonist (to use the word once in its correct meaning) of that excellent film *The Bridge on the River Kwai*, seems just stupid and pig-headed not only to Indian audiences, which naturally know little of the ways of professional soldiers, but also to many of the younger generation in Britain. He is unimaginative, and stands by rules even when this entails suffering for himself and his officers and men, whom, of course, he loves in his aloof way. By contrast, Shear the American, seems so human, so fond of life and abhorrent of war, and so full of what is called common sense. A very perceptive review of the film in that excellent American fortnightly *The Reporter* goes deeper, and I find this American reaction most refreshing. The reviewer writes, "Well, admiration for the Guinness (Nicholson, that is) world is going, and regrets about it are possibly romantic. But extend the frame of reference from the military...take it into life around us, and one can doubt that absolutely all the fruits of 'Holdenism' (the *Weltanschauung* of Shear) are good. If the Guinness ethos is reactionary and smug, it nevertheless produces loyalties and idealism that seem beyond our present grasp. The Holden ethos eliminates fogeyism, but perhaps it also breaches the way for a range of vulgarisations that lead progressively to, among other things, the anti-intellectualism we current.y bewail." Actually, Nicholson is anti-intellectual too; of such stuff Blimps are made. But the sheer character of the man, his unquestioning devotion to duty as he conceives it, his determination to keep faith with the baffled Japanese colonel—these are qualities an army, perhaps a nation, is the poorer without; and I like to think that the Indian Army, alongside which Nicholson served in India, still values these virtues of a true soldier. Talking of audience reactions, I first saw the film in Japan a few weeks ago, with truly helpful Japanese sub-titles, and my efforts to gauge what the Japanese thought of the many cruelties inflicted by Colonel Saito were totally frustrated, and not merely by darkness alone. Practically nothing seemed to be written on those pretty but rather inexpressive faces, and certainly no sense of shame or regret. It may, of course, be that I am no better at reading Japanese faces than at deciphering Japanese picture-words.

* * * *

The statement Mr. Siddhartha Ray has made on his reasons for leaving the West Bengal Cabinet has provided quite the spiciest piece of newspaper reading since the Chagla enquiry. That, at least, is how most people in West Bengal have probably received it. But I doubt if very many of those who are not temperamentally inclined to attack the Government anyway, are going to regard it as particularly important. Mr. Ray made a number of telling points, and some of his allegations might repay thorough investigation. But the impression he succeeded in making, I felt, was not so much that of a well-briefed accuser, as of an inexperienced Minister disillusioned with the realities and responsibilities of office. It is usually considered the path of political discretion for a renegade to keep his own counsel when he leaves a Government—except, of course, on general issues—lest his allegations be eventually discredited and his own reputation for political reliability lost. I am not condoning any of the sins Mr. Ray has listed; the West Bengal Government would do well to look into every one of the charges made and take action where necessary. But to turn on a Government of which one was so recently a member and to excuse one's own failures by pointing the finger at others is not a course of action which, in my opinion, has much to recommend it. I am not surprised that Mr. Ray should also be contemplating resigning from the Congress Party. He is not the first politician to find that the freedom of opposition is much more exhilarating than the thankless drudgery of office.

THE DITCHER

Cogging Mill at Appleby Frodingham Steel Works.

THE UNITED STEEL COMPANIES LTD

MAKING NEW RECORDS...

Continuing an unbroken run of steel production records, for the sixth year in succession, United Steel, produced 2,903,809 ingot tons during the calendar year 1957, an increase of 217,973 tons over the 1956 figure.

United Steel recognise that all industrial development depends upon assured steel supplies and, by such increases in production (together with constant modernisation and research), continue to play a leading role in meeting the world wide demand for this vital commodity.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the annexed Balance Sheet of the Central Bank of India Ltd., as at 31st December, 1957 and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 51 branches audited by us, 21 branches audited by other auditors and the unaudited returns from 85 other branches and 118 Pay Offices not visited by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949 read with the provisos to sub-section (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956 the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

EN. 204/2

THE INDIAN MINING ASSOCIATION

CHAIRMAN MR. D. HOGG'S REVIEW

Addressing the Annual General Meeting of The Indian Mining Association held in Calcutta on 20th March, 1958, Mr. D. Hogg, Chairman of the Association, said :—

Gentlemen,

The most outstanding feature of the year has been the fact that coal production has increased from 39.43 million tons in 1956 to 43.50 million tons in 1957. Of this increase of just over 4 million tons 3.1 million tons were produced by the Private Sector. The year 1957 may be regarded, therefore, as the first year of achievement after the Private Sector of the Coal Industry had been given the "green light" to go ahead to produce its additional 10 million tons of coal during the Second Five Year Plan period.

It has always been said that the goal of an additional 10 million tons in five years was well within the ability of the industry, provided that there was sufficient inducement, and incentive and various handicaps were removed. Last year has proved that the Private Sector has not been found to be lacking in its desire to achieve its objective. But is sufficient inducement and incentive present for progress to continue at this rate and have many of our handicaps been removed? The Industry has tackled its problems realistically in an effort to produce the goods, but I would venture to say that our progress, in view of certain deficiencies, can only be regarded as "short term." There is, therefore, no room for a feeling of complacency on the part of Government and the many authorities to which the Coal Industry is subjected that this progress can be maintained unless urgent action is taken to remove many of the difficulties which stand in the way of long term planning and security for the Industry.

Some Difficulties

It is tedious to recount our difficulties yet again, as these have been publicised over the past decade on so many occasions and voluminous memoranda have been prepared at various times by the Association on these subjects. However, I feel I must enumerate the more important items again. Briefly they are :—

1. A realistic price structure.
2. Security of tenure for lease-holders.
3. Adequate transport to remove coal from where it is raised, throughout the year.
4. Facilities for the provision of the required plant and machinery.
5. A little relaxation from the spate of legislation which has been imposed on this Industry constantly throughout the last few years.
6. A realistic approach to both the controls which bind the Industry and the labour problems with which it is constantly faced.

With regard to a revision in the price structure, Government wisely appointed a Coal Prices Revision Committee about a year ago to examine and report upon the costs of production of coal and coke and to take into account all relevant factors which have a bearing on the coal production programme envisaged in the Second Five Year Plan and to recommend whether any changes and, if so, what changes were necessary in the present price structures. The Committee is eminently composed but it is constituted of Government officials only, who are mostly concerned with consumers' interests rather than those of the producers. This Committee therefore, may not hold such impartial views as are so necessary when consideration is being given to such a complex problem as the fixation of prices for a wasting asset where both technical and commercial problems are involved. However, this Association has extended its fullest co-operation by providing the Committee with various information and has had the privilege of formally meeting the Committee on one occasion, shortly after its formation. It is to be hoped that the Industry will have another opportunity to participate in a joint consultation before the Committee makes its final recommendations or draws any conclusions. The complexity of the problem under investigation makes it desirable, if not essential, for further meetings to take place.

Production Costs

In the meantime, the Coal Prices Revision Committee has investigated the production costs of selected collieries and has made a comparison of the costs obtaining during the second half year of 1955 with the second half year of 1956. While this will no doubt serve as a basis for their deliberations, it is considered that the information collected is now completely out of date as costs have risen considerably subsequently and other elements must now be taken into account. To mention a few, they are, increases in labour costs on account of implementing the Appellate Tribunal's Decision, recurring increases due to annual increments which have to be introduced, the cost of issuing clothing and boots to workmen at concession rates, which are 50% of the cost, the supply of free rations to worker's children in the crèches, the provision of canteens and many other welfare amenities and last but by no means least, the cost of implementing the new Coal Mines Regulations, necessitating the appointment of additional staff and other statutory obligations which result in a never ending increase in production costs.

The fate of the Coal Industry rests, no doubt, at present, with the Coal Prices Revision Committee and it is to be hoped that they will take into consideration the fact that credit facilities for future expansion are strained and large capital investments are required in mining to achieve the target. There must be an adequate margin of profit, therefore, to enable money to be ploughed back into the industry for future development since in mining, development is a continuous process which requires continual expenditure of a capital nature. The maintenance of coal prices at an absolute minimum really means that the Coal Industry is being utilised to subsidise manufacturing industries and national transport—the railways. Should a wasting national asset like coal be treated in this way to subsidise other industries, particularly when the nation's industrial future, steel production, is inextricably linked with the future of the Coal Industry? Should not others help to subsidise our future expansion?—Particularly when the country's Fuel Research experts tell us that there is a terrific wastage in the utilisation of coal in industry in India, and when there is a need to make them fuel efficiency minded. In other words, an increase in coal prices should not affect the general economy of other industries but should help them to achieve greater efficiency and at the same time provide the necessary funds for capital investment in the Coal Industry where it is urgently required to provide the necessary resources for increased production.

Company Accounts

An analysis of the financial accounts of 19 coal producing companies of this Association which, between them, raise about one-third of the total output of the country, reveals some very interesting information. The profit remaining after providing for taxation averaged Rs. 1.21 per ton. Out of this, the shareholders were paid in dividends Rs. 0.54 per ton. This represents a return of 6.3% on the paid up capital involved. It will be seen, therefore, that the share of profit distributed to shareholders was low compared with the general level existing for other industries, and this despite the additional risk involved in investing in mining enterprises. Now, the real value of the shareholders' investment must include amounts which are available for distribution but which are shown in balance-sheets under the heading "Reserves and Surplus." In this analysis, the total dividends paid to shareholder are found to be 3.4% on the total value of the investment.

It is the complaint of the Industry that there are insufficient profits available to meet current needs and the analysis of these 19 Companies' accounts certainly illustrates that this is true. It is found, after providing for taxation and distributing dividends to shareholders, the balance remaining is Rs. 57 lacs, out of which, amounts have to be set aside for depreciation. Against this total retention, there was spent on capital expenditure a sum of Rs. 88 lacs. It will be seen, therefore, that the financial resources of the 19 Companies were depleted to the extent of Rs. 31 lacs in one year only. Taking this to be the average for the remaining producers, the total for the Industry is in the region of Rs. 1 crore—a staggering figure. Investigation also shows that this trend has existed for many years. It will be obvious that no industry can continue to suffer this serious depletion of its resources in this way. The Coal Industry is one which has to meet regular demands for capital expenditure due to its very nature. Underground plant and equipment require continual repairs and replacement and it is a fact that capital expenditure becomes heavier after complete development to the boundary. Then comes the additional capital costs for pumping and stowing operations.

While, in theory, the amounts set aside for depreciation are intended to equal the original cost of an asset and to be available to meet the cost of replacement, it is well known that present day costs for replacing identical assets are very much higher than the original cost. It was argued before the Tariff Board on behalf of several important industries that the cost of replacement was 3 to 4 times greater in 1948 than in 1939 and it is common knowledge how much prices have risen in the last decade. This deficiency in funds has, therefore, to be made up in some way out of the Companies' own resources. It is true that the Finance Act of 1955 recognised this need and with the object of providing funds to be retained in the business, reduced the liability for taxation by providing a free allowance of 25% of the cost of the new assets (Development Rebate). It would be interesting to consider an example of the position on the basis that a new and identical asset will cost 4 times more than the one replaced and taking into account the Development Rebate.

As the selling prices for coal are controlled, the onus is clearly on Government to fix these at such a level as to ensure that sufficient nett earnings to meet present day requirements, will be available for ploughing back. It is hoped that the Coal Prices Revision Committee will take this realistic view as a basis for its recommendations.

Wagon Offerings

To revert to the year's working, credit must be given to the Railways for their increased wagon offerings. Unfortunately, however, wagon availability has not kept pace with production and coal stocks in Bengal and Bihar at the end of 1957 stood at over 3 million tons and were over a million tons higher than at the end of the previous year. While the Railways' performance improved considerably during the year (an average movement of 3,667 wagons per day with coal from Bengal and Bihar compared with 3,405 wagons per day in 1956), they have a colossal task ahead of them if they are to move over 5,000 wagons per day from Bengal and Bihar by 1961. The Industry's fears over sufficient improvement not being achieved by the South Eastern Railway during the Second Five Year Plan period, appear now to be confirmed by the Railway Board themselves. Unfortunately, the South Eastern Railway System appears to have been strained to the extreme already in its efforts to meet its commitments under the Second Five Year Plan. These are extremely heavy as it serves Bhilai, Rourkela and Tatas' and is responsible for almost all the ore traffic both for export and internal consumption and serves a large percentage of the coking coal collieries and Selected Grade High Volatile coal collieries from where expansion is required. The South Eastern Railway also service all collieries in Central India. There have been rumours that coal targets for the Second Five Year Plan are to be revised and the Private Sector welcomes the thought that a larger share may be allotted to it. However, rumours that this increase is to be given to collieries in Central India cannot be received with much enthusiasm as production there is already much in excess of the Railways' capacity. In fact, there was no increase in wagon availability in the Central India and Talcher Fields in 1957.

The minimum guaranteed supply of wagons for the movement of coal by the South Eastern Railway in 1957 was 950 wagons per day. The Coal Industry maintained that the figure should have been 1,050 wagons but even the lower target set was not achieved. Further increases in wagon offerings are required in 1958 and in the years to follow. An increase in coal production in the collieries served by the South Eastern Railway is now vitally required. With the present strain on its resources it appears to be impossible for this Railway to move the number of wagons required. I would, therefore, emphasise the necessity for a regrouping of certain sections of the Railways to relieve this strain. The Eastern Railway appear to have the capacity to operate adjoining sections of the South Eastern Railway (some of which they already operated in the past) and I would humbly suggest that they should now take over these sections with the least possible delay.

Discrimination in Transport

Another feature regarding transport which gives cause for great concern is the discrimination which is shown over the allotment of wagons between the Public and Private Sectors. The Industry has drawn Government's attention to this on many occasions during the year but controls are still being used to the advantage of one sector. While it may be expected that Government will wish to purchase its coal requirements from the N.C.D.C as far as possible, it does not appear to be in keeping with equity that controls should so be used that in effect priority which is given to one sector of the Industry is not shown to the other. The replies from the Secretariat on this vexed question of discrimination cannot be considered as satisfactory and there would appear to be a need for an impartial committee to enquire into this matter. Facts must be faced—why are heavy stocks held by one sector and not by the other?—should greater priority be given to the movement of coal to burn bricks for government staff quarters in preference to industrial housing or a housing estate?

The implementation of the Appellate Tribunal's decision in June last year has brought greater benefits to our workmen. In fact, they have probably received greater benefits in the last two years than workmen in any other industry. I have used the term workmen which also covers our female workers who are now in receipt of equal pay. We welcome these improvements, if they result in increased production, a more contented labour force and better relations. But, so far, there have not been noticeable changes in these directions and there is great scope and need for improvement. In fact, absenteeism has tended to increase since the All India Industrial Tribunal's Award and the Appellate Tribunal's decision were implemented. One of the greatest problems which has faced the nationalised coal industry in the U.K. since wages increased so considerably there, has been absenteeism. It has been estimated that a reduction of 1% in absenteeism in the U.K. would probably result in an additional 2 million tons of deep-mined coal per year being produced. It is interesting, also, that a solution has been offered by the Lancashire Mineworkers who have agreed, under the auspices of their local area National Union of Mineworkers, to set up "Attendance Committees" to scrutinise attendances and ultimately withdraw protection from a consistent offender if the management were to resolve, after warning, to sack him. Their Area Secretary has said that "there is no room in the industry" for a man who will not put in a full week's work.

Our Industry is by no means backward in its structure. Our workmen have their own Bonus Scheme. They have their own Provident Fund and Welfare Organisation with separate Commissioners to look after their interests. We have our pithead baths, our crèches where food and other facilities are provided for children—clothing and boots are to be provided to workmen at concession rates and canteens are being introduced on an increased scale. The Welfare Organisation has built hospitals. In addition, it has built Multi-purpose Institutes and Miners Institutes and while more could be built and are being built, in keeping with the availability of materials, their construction is, unfortunately, in excess of our workers' ability to utilise these facilities to the full. We, for our part, wish them to be utilised to the full because we realise that they should bring about greater happiness and contentment. I cannot help but think sometimes that Union Leaders would be doing a great service to those whose interests they claim to represent and to the country as a whole if they were to concentrate more of their attention on encouraging and influencing their members to use the facilities which are offered at present and educating them for better things to come. It might be asking too much to expect Union Leaders to be social workers but surely we can expect them to have a more active social conscience. How many do we see encouraging such activities as Sports or even attending Sports Meetings?

Multiplicity of Unions

Unfortunately, our workmen are divided by a multiplicity of Unions which vie with each other for their support and which all claim, in their dealings with employers, to represent the workers' interests. Many Union Field Workers are divided by differences in political ideology and, in many cases, self-interest. In order to gain popularity and even maintain their position, these union officials organise demonstrations to attract support which leads to indiscipline within the Industry. The present activity of these leaders is not only destroying good relations between employers and employees but also between supervisory staff and workers and is also making the formation of responsible and properly constituted trade unions virtually impossible. In view of the unruly elements present, few collieries can afford to organise Pit Committees and sometimes the formation of such Committees is even opposed by Unions.

While the Association welcomes the formation of a Steering Group to consider the question of safety in mines, the irresponsible nature of some Union leaders, on occasions, must not be lost sight of. Mining is a hazardous occupation and while a miner is constantly faced with the immediate perils of nature, good leadership and discipline is essential. Where the safety of the miner is involved there is no conflict of interests between the Unions, the employers and the employees. Petty difference of opinion or of viewpoint must be subordinated to the overriding interests of providing safe conditions for mine workers.

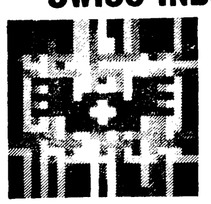
I sincerely hope that the Steering Group will bring to light defects, if any exist, but our new Mines Regulations, based on past experience in India and the regulations existing in other countries, appear to be exhaustive and comprehensive. A most fundamental point is that education of our miners will require to be undertaken vigorously in order to achieve results and greater safety. Constructive help from the Unions is necessary to achieve this. This Association is at present bringing out a series of Safety Posters but it is difficult to make them sufficiently simple for illiterate labour to understand. Unfortunately, the required standard of education cannot be achieved in one generation but I am pleased to be able to say, that there has been a revitalisation of our Labour Welfare Fund Organisation and the appointment of a new Commissioner has brought about greater interest in Multi-purpose Institutes where, among many other activities, adult literacy classes are held. It is hoped that our posters will be utilised to serve the dual purpose of teaching literacy and safety at the same time, at these Multi-purpose Institutes. In addition, several of our members have made their own safety slides which are shown at cinema performances in their collieries. I would emphasise the greater need for such activities and request Government to produce suitable safety films. Their Films Division are producing some very excellent films on other subjects and might well devote a few films to the subject of safety in mines. Such films would earn their real reward in the form of a reduction in the number of accidents in mines in India.

Mine Accidents

Mines in India have recorded one of the lowest fatal accidents rates in the world in recent years but the recent disasters at Chinakuri and Central Bhowrah have brought home to us all once again the stark realities of mining. While we express our sincerest sympathy to the relatives of the victims and sufferers of these recent disasters, we must also record our appreciation to the very high standard achieved by our Rescue Station Organisation which compares favourably with similar organisations in other countries. It is only at times like this that the public hears of their existence. They were present at Chinakuri and I understand did an excellent job of work. They are a brave band of citizens, largely voluntary, who turn out unfailingly, on such occasions not only to assist in rescue operations in emergencies but in mine recovery also.

The spate of legislation, not only concerning mining, but seriously affecting the stability of the Industry appears to be unending. I see from the Ministry of Labour and Employment's latest Report that they had a total of only nine enactments under consideration during the year and five of them specifically concerned the mining industry and another one affected us. In addition, we are constantly affected by legislation brought out by other Ministries, not to mention the controls and regulations which are imposed upon us by our own Ministry.

During the year, the Draft Mines and Minerals (Regulation and Development) Bill, 1957, was considered by the Lok Sabha and was then referred to a Joint Committee of both Houses. The Bill had been discussed with the Industry at the Mineral Advisory Board meetings held since 1956 but, without reference to the Industry, the Joint Committee made far-reaching amendments to the Bill, which was passed at the end of December last year. The most important amendment was that royalty would have to be paid at 5% of the f.o.r. value of coal, subject to a minimum of 8 annas per ton, immediately the Act became law. Also, the rights of intermediaries appeared to be liquidated without payment of compensation. The amendment concerning royalty rates meant that on an average collieries in Bengal and Bihar would immediately have to bear an increase of 12 annas per ton in the royalty payable and in some cases the increase would be as much as almost Re. 1/- per ton. Royalties in Bengal and Bihar at present range from Zero in some cases to about Re. 1/- per ton and average about 4 annas per ton. It will be appreciated that royalty is a fixed charge for the privilege of exploiting natural resources and is an item in the cost of production. If the rate of royalty is increased by Statute, a Court of Equity, I would expect, would consider that selling prices should be increased correspondingly. The Industry has taken the opportunity of explaining to Government the far-reaching effects which the Mines and Minerals (Regulation and Development) Act, 1957, will have and it is to be hoped that amendments will be made to this Act before the effective date from which it will come into force, is gazetted.



Under the Coal Bearing Areas (Acquisition and Development) Act, 1957, the State has been empowered to take over unworked land containing or likely to contain coal deposits. Although the Bill in draft form was never placed before the Coal Industry for comments, the Industry has taken the opportunity to point out the difficulties with which it is now faced as a result of this Act. These are only two of the cases where drastic changes have been made affecting the Industry without reference to or discussion with them. In addition to the many Advisory Committees on which the Coal Industry is represented, we have our own Coal Controller and also the Coal Council which has recently been formed to act as the future policy makers for the Coal Industry. I would strongly urge Government to make the fullest use of these various Advisory Committees and the Coal Council before formulating policies or amending legislation, in future.

Foreign Exchange Shortage

The foreign exchange shortage which has hit all industries throughout the country has also been acutely felt by the mining industry as a large percentage of mining equipment and machinery has to be imported from abroad. I would, however, express our grateful thanks to our Coal Controller, who, at the end of 1956, started what is known as the Progress Review Committee, which has achieved results in some directions. This Committee held monthly meetings throughout last year and as a result of this presence of representatives from the Joint Chief Controller of Imports and Exports, the Regional Honorary Cement Adviser, the Iron and Steel Controller and other officials, a few of our shortages have been eased and we have at least had the opportunity of explaining our difficulties to the different representatives concerned. This has given the various Government Departments a greater insight into the problems which confront us. As far as the import of mining equipment and machinery is concerned, we have been allowed more scope to obtain essential items under Actual Users' Licences but we have lost or have had curtailed many facilities which existed previously, such as drawing our requirements through established importers. In many cases this has resulted in a loss of efficiency in those collieries which are no longer able to draw their requirements from established importers, who previously handled the items required, or from the stocks of spares normally held by them. There is no doubt, particularly as far as spares are concerned, that the present Import Policy results in a wastage of foreign exchange as it is abundantly obvious that it is preferable for spares to be canalised through one source, or a restricted number, rather than for each actual user to have to import his own requirements. Our grateful thanks are also due to the Deputy Coal Controller (Production) who is the sponsoring authority for licences required by the Coal Industry. Unfortunately, however, a sponsored application does not always mean that a licence will be issued in due course. In the case of certain items, there appears to be no provision in the present Import Policy. Also, our requirements so often are far in excess of foreign exchange allocations. Collieries have continued to experience serious shortages of iron and steel materials, particularly rails which are of such vital importance to the Coal Industry but at least we have the consolation of knowing that while there is an acute shortage of both indigenously manufactured iron and steel materials and foreign exchange to import them, at least we have had an opportunity of bringing our shortages to the notice of the authorities on one occasion each month.

Before I conclude, gentlemen, I want to pay a tribute to the valuable assistance which has been given to me by your Committee during the past year and to the Vice-Chairman, Mr. W. D. Forrest, who retired during the year after long service to the Industry, both in the Coalfields and in Calcutta. I would particularly like to thank Mr. Maulik and refer to the devoted service which he has continued to render to the Industry as a member of your Committee, after having been Chairman of this Association on two previous occasions. I thank the members of the Standing Coalfields Committee and their two hard-working Honorary Joint Secretaries and wish to record my appreciation of the services rendered by the Secretariat of the Association and the Joint Working Committee. I would also thank the Indian Mining Federation and the Indian Colliery Owners' Association for the co-operation which this Association has received from them during the year.

SWISS INDUSTRIES FAIR

BASEL

12 to 22 APRIL 1958

An extensive display of Swiss manufacturing skill in Machine-tools, Electrical and Watch Industries, Transport Equipment, Textile Machinery and a wide range of other products.

CONSOLIDATED TIN MINES OF BURMA LTD.

REVIEW BY MR. W. J. C. RICHARDS

The twenty-seventh annual general meeting of The Consolidated Tin Mines of Burma, Limited, was held on March 14, 1958, in London.

Mr. W. J. C. Richards, Chairman, presided, and the following is his Statement circulated with the Report and Accounts for the fifteen months ended 30th June, 1957 :—

The Accounts which we are asking you to pass to-day are unavoidably complicated as the reorganisation of the Company, which was fully described in the circular to shareholders dated 21st May, was in progress and not completed. The reorganisation was sanctioned by the Court on the 29th July last and, to enable shareholders to see the effect of the reorganisation, a *pro-forma* Balance Sheet showing on adjustment the Company's position at the close of business on 30th June is being sent to you. Fixed Assets in Burma have been written down to £81,107 which, in the Directors' opinion, is a proper figure based on the material value of the assets and also having regard to their revenue earning ability. It takes into account the damage the property suffered during the war and from subsequent civil disturbances.

The holding in Mineral Products Ltd. has also been removed from the Balance Sheet, as that Company is now a subsidiary of Contin Finance and Mining Co. Ltd. Since the date of the accounts Contin Finance and Mining Company Ltd. has ceased to be a subsidiary, as the shares in that Company have been sent to shareholders who have returned their certificates issued by this Company.

Wolfram Prices

The operations in Burma during the fifteen months made the meagre profit of £541 compared with £9,567 in the previous twelve months. We were unable to buy concentrates produced at other mines, and this form of trading has been an important part of our business since Burma was re-occupied. The price of wolfram fell heavily during the period under review, and the price of tin also fell. As the price we pay tributors for ore they produce is related to the price at the date of delivery, and the product is not sold until it is afloat or subsequently, a trading loss is almost inevitable. We cannot enter into forward contracts, as we operate in disturbed conditions and output cannot be anticipated. Burma is not included in the International Tin Regulation Scheme, but lawlessness imposes a greater measure of restriction on output than anything likely to arise from the International Agreement.

Our properties have not suffered as much from insurgency and dacoity as in the immediately preceding years, but the indiscipline of labour and the theft of ore from our mines has increased alarmingly. We are not masters in our own house.

Negotiations with Government for a joint venture were resumed in Burma nearly a year ago, and reached a point where a valuation of the properties was made by Government. As far as we are aware no decision has been taken by Government.

Rehabilitation and Re-equipment

We are re-equipping two of our mines to enable us to produce ore in sight. Rehabilitation can only be embarked upon on a modest scale until security is restored and until long-term leases are issued to us.

Government measures recently introduced or put in force in Burma make it difficult for the foreigner to continue in business. The Bankers are now forbidden, without the sanction of Burma Exchange Control, to grant overdrafts to businesses which are not directly controlled in Burma, the object no doubt being to see that the maximum transfer of capital is made to Burma.

In spite of the Union Government's frequently made promise that profits may be freely remitted from Burma, we have not yet obtained remittance of our profits for the years ended 31st March, 1954 and 1955, although all Burma taxation has been paid. It is possible that the remittance of profits would be permitted if a joint venture with Government were arranged. Given security and peaceful possession of the mines, it is our belief that with Government as partners we could restore the production to its pre-war level of about 1,000 tons of mixed concentrates a year.

I regret to say that the prospects for the resumption of profitable mining operations in Burma are poor.

The report and accounts were adopted.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

REVIEW BY MR. N. D. HARRIS

Speech delivered by the Chairman, Mr. N. D. Harris, at the Twenty-first Ordinary General Meeting held at Calcutta, on Wednesday, 19th March, 1958.

Gentlemen,

The Audited Accounts and Directors' Report for the year ended 30th September, 1957 have been in your hands for some time. With your permission I propose to take them as read.

But I should draw your attention to the new form of our Annual Report. Its photographs and diagrammatic representation in the centre pages showing your Company's income and distribution of expenditure will I believe, be of informative interest to all shareholders.

Accounts

I do not propose to comment in particular on the Balance Sheet as the main points of interest are dealt with in the Directors' Report. Suffice it to say that your Company's financial position is sound and that the continued increase in turnover and net profit is satisfactory.

A significant point is that the Dividend Equalisation Reserve now stands at Rs. 24.8 lacs. You will appreciate that this is a substantial sum which should enable the Company to maintain a satisfactory rate of dividend for many years.

Trading Results

Once again we have had a most successful year and record levels of production and sales were attained. Sales increased from Rs. 192 lacs in 1956 to Rs. 230 lacs. It is of interest to note that since 1954, which was the first full trading year after the sale of the Khewra Factory in Pakistan, the Company's turnover has nearly doubled.

These results have been achieved by intense and loyal efforts on the part of all your Company's staff which are gratefully acknowledged. I should like also to record our appreciation of the good work done by our selling agents Imperial Chemical Industries (India) Private Limited whose staff of trained salesmen and technicians have been of invaluable service in expanding and developing the range of sales of your Company's products in the face of keen competition. We are glad to know that they will be handling our sales of Polythene when production starts next year.

I think it is my duty to make it clear at this stage that your Board view with concern the rising cost of raw materials and stores caused no doubt by the inflationary pressure now becoming evident in the country. While we recognise the realistic efforts which Government are now making to check this pressure we do not believe that there will be any significant fall in these costs for some considerable time. We have given some assurance to Government that we shall endeavour to avoid increasing selling prices but the time has come when we shall have to consider informing Government that price increases are necessary and, in fact, reasonable in fairness to our shareholders. This is particularly true for the Chlorine plant where the return is uneconomic.

Production

This has been a very busy year in the Rishra Factory and record outputs have been achieved in almost every unit: Paints and Chlorine/Caustic Soda showing in particular gratifying increases. Extensions to our Paints Plant were completed in the latter part of the year enabling us to meet the increasing demand for our well-known range of "Duco" and "Dulux" products. At the same time production of our metal pre-treatment products showed a substantial increase.

Our "Gammexane" formulations of Benzene Hexachloride also registered a satisfactory increase.

I have seen our latest production figures which encourage me to predict that in the current year all previous records will be beaten.

Extensions and New Projects

We are well ahead with our plans for extending our Chlorine and Caustic Soda plant and arrangements have been made with Imperial Chemical Industries Limited for the sterling finance required.

Polythene

I have little to add to what has been already said in the Directors' Report. The plant will begin production early in 1959 provided nothing unforeseen occurs.

"Alfloc" Products

A range of products under this well-known mark has been sold by Imperial Chemical Industries (India) Private Limited for many years for the treatment of industrial and locomotive boiler waters. There is therefore an established market and we have recently been licensed under favourable terms to manufacture them at Rishra.

Foreign Exchange

Your Company has felt keenly the difficulties in obtaining foreign exchange both for essential imported plant and engineering stores for construction and maintenance, and for raw materials for production.

Government's policy in present circumstances is naturally to restrict such imports to the minimum and, in order to play a full part in assisting the country's present foreign exchange difficulties your Company has paid, and is continuing to pay great attention to the use of locally manufactured plant and indigenous raw materials.

Productivity

Your Company has recently set up a Work Study section under an experienced Work Study practitioner with the object of increasing productivity and thereby the effective use of capital employed on our plants. Already promising results have been achieved.

Finance

Contrary to the pessimistic view taken by a shareholder at the last meeting our recent rights issue of Rs. 248 lacs was a success in the market conditions prevailing at the time and a reflection of the confidence in the Company's future and its management. Only 6.5% of the issue was not taken up by shareholders. This represents in value Rs 16 lacs which Imperial Chemical Industries (India) Private Limited were called upon to pay—an additional British investment in India over and above the figure of Rs. 175 lacs I gave you last year.

I would like to repeat for the information of those shareholders concerned that Section 56A of the Indian Income Tax Act applies to this issue and companies are exempt from super tax on the dividends received by them on the new shares.

The Company must find more money as its requirements of capital are not yet fully filled. Our internal resources which we hope will increase over the next few years will not suffice, and so your Directors are giving much thought to this problem. All I can say at the moment is that our immediate requirements will be met from loans from Banks including a loan of Rs 100 lacs already negotiated for the Polythene project.

Personnel

Our relations with our employees have been maintained on a cordial basis. Recently we have arrived at an amicable settlement with two unions operating in our Factory on questions relating to wages, bonus, promotions and other terms. The Company has agreed to meet as reasonable a bonus liability for past years involving an additional amount of Rs. 74,000/- and an increase in wages of Rs. 1,60,000/-. Negotiations took place in a friendly atmosphere and the eventual agreement reached is significant. There is encouraging evidence that workers and their representatives share the feeling that such differences as may arise are capable of solution by direct negotiation with management.

Last year I mentioned that we were endeavouring to introduce improved terms of service based on job appraisement. I am glad to say that despite initial scepticism we have been able to introduce the scheme with workers' approval.

To meet a long felt want a training school for tradesmen has been started. This will go some way to meeting the shortage of skilled men in our Factory and particularly for the Polythene unit.

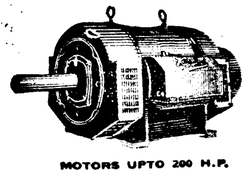
In line with the Company's policy more and more Indians are participating at all levels. Several promising young Indians have already been sent to the United Kingdom for training in the factories of Imperial Chemical Industries Limited and more are to follow.

In an industry so highly technical as ours it is essential that we attract the best men from the universities. A system of recruitment by a panel of judges including a representative from a university has assisted in the selection of suitable technical staff.

I am happy to announce that your Factory was recently visited by Sir Alexander Fleck, F.R.S., the Chairman of Imperial Chemical Industries Limited, London, and Mr S P Chambers, the Deputy Chairman of that Company. They both expressed appreciation of the fine work being done by the staff and workers at the Factory.

This will be my last address to you as Chairman of this Company as I shall soon be leaving India on retirement. I would like to take this opportunity of introducing to you my successor, Mr. J. M. Lall who will be your future Chairman. In Mr Lall I am sure you will have a very able and efficient executive who will steer the Company through the difficult years ahead to even greater prosperity. I have every confidence that this Company will prosper under his guidance.

The Directors retiring by rotation are myself and Mr. B R Goodfellow. Mr Lall who was appointed during the year as an additional Director vacates office. His election comes up as special business and Mr. Goodfellow and I offer ourselves for re-election in the ordinary way.



The Auditors also retire and you are asked to re-appoint them at a fee of Rs. 7,500/- the same as that of the previous year.

This document does not purport to be a Report of the Proceedings of the General Meeting.

POWER YOU CAN DEPEND ON

Power for industry, power for the ever-growing needs of India, for steel, for agriculture, for textile mills. POWER YOU CAN DEPEND ON. In the field of electric motors KIRLOSKAR are playing their part. AND

WHOLLY OWNED SUBSIDIARIES

THE UNITED COFFEE SUPPLY CO., LTD., & STANES MOTORS (SOUTH INDIA) LTD.

With the Directors' 47th Report, and in addition to separate Statutory Balance Sheets and the various Account Statements which go with it, the Company has published a condensed Group Consolidated Balance Sheet and Trading Account as at 30th September 1957 of the Parent Company, combined with its subsidiaries and adjusted for different closing dates, which is a very revealing statement, and is to be commended.

The Trading Turnover for the Group has exceeded Rs 200 lakhs (Rs. 170.66 lakhs). After providing for all usual working charges and Depreciation the Group Profit is Rs. 11.99,742 (Rs. 9,52,472). The Provision for Taxation is higher at Rs. 6.35 lakhs (Rs. 5.87 lakhs). The dividend on Ordinary Shares has been stepped up to 20% (17½%) absorbing Rs. 2.41 lakhs while Reserves are strengthened further by Rs 4.24 lakhs (Rs. 2.76 lakhs). The figures in brackets represent corresponding figures of the previous year.

A summary of the combined Balance Sheet of the Group as at 30th September 1957 and a consolidated Profit & Loss Account for the year ended that date is given below:

(In lakhs of rupees)

Capital, Liabilities and Reserves.	As on 30th September 1956	1957	Assets.	As on 30th September 1956	1957
Capital:					
Preference	1.50	1.50	Fixed Capital Expenditure	29.63	33.06
Ordinary	11.56	11.56	*Less* Depreciation to-date	15.18	17.20
Capital Reserves ...	4.21	4.70		14.45	15.86
Revenue Reserves including Surplus in Profit & Loss a/c	28.65	33.70	Investments	7.88	7.98
			Current Assets ...	57.70	63.94
			Cash and Bank Balances ...	6.01	5.72
	45.92	51.46			
Minority Interest ...	0.44	0.28			
Liabilities	38.54	40.89			
Difference in consolidation	1.14	0.87			
	86.04	93.50		86.04	93.50

(In lakhs of rupees)

Profit and Loss Account	For the year ended 30th September 1956	1957
By Sales	170.66	202.79
Miscellaneous Income	9.36	10.60
Closing Stock	24.23	35.60
	204.25	248.99
To Opening Stock	23.00	32.53
Purchases	132.96	161.27
Administrative Charges, Directors' Fee, Working expenses and Provisions	36.75	40.84

Less:	5.87	6.35
Provision for Taxation	—	0.29
Other Provisions	2.76	4.24
Transfer to Reserves	2.12	2.41
Dividends	0.76	0.82
Carried forward ...		

A strong financial position is revealed by the Group Balance Sheet as at 30th September 1957. The Reserves and Surplus aggregate to Rs. 38.40 lakhs excluding Minority Interests as against a Paid-up Ordinary Capital of the Parent Company Rs. 11.56 lakhs. The Investments in subsidiary companies stand at Rs. 10.25 lakhs while the Issued Paid-up Capital of the subsidiaries is Rs. 12.91 lakhs and the difference is credited in the Consolidated Reserves shown above. The Investments in other Companies stand at cost Rs. 7.98 lakhs, the market value of which on the date of the Balance Sheet is considerably higher. The current liabilities including taxation stand at Rs. 40.89 lakhs while the current assets aggregate to Rs. 69.66 lakhs. The Gross Block of the value of Rs. 33.06 lakhs has been written down to Rs. 15.86 lakhs.

The various Directors' Reports appended show an expanding business. The Assets backing to Rs. 10/- Ordinary Shares of the Parent Company have increased to Rs. 43.60 per share, the current market quotation being Rs. 19.50 C.D. to yield on the 20% Dividend to be paid, a return of over 10.9% Free of Income Tax on an ex-dividend basis. Share quotations on the Madras Stock Exchange in 1957 have been Rs. 25.00 High and 19.20 Low.

The Trading Business of the Company, with headquarters at Coimbatore, covers through the United Coffee Supply Co., Ltd., the manufacture and sale of Stanes Coffee & Tea, a Brand well known throughout India. To this has recently been added a Plant for the manufacture of Stanes Instant Soluble Coffee, the plant being the only one in India producing this commodity, which has already a wide distribution, backed by the expert experience of the company in the production of quality coffee over the past 50 years.

The second wholly owned subsidiary Stanes Motors (South India) Ltd., are dealers in Hindustan Cars and Studebaker Trucks in Coimbatore, Standard cars in Kerala and for Ferguson Tractors over the same areas, with their head office in Coimbatore and 3 branches. In addition they operate 5 factories in South India and one in Calcutta for what is probably the best known tyre retreading process of "TyresoleS". A recent addition in the factory in Coimbatore is the "Vaculug" process for the reconditioning of Tractor and Earthmover tyres and is the only factory dealing with the reconditioning of this class of tyre in India and for which there is a largely increasing potential demand in the present 5 Year Plan. Stanes Motors also operate a Town Bus Service in Coimbatore through Stanes Transports (Private) Ltd.

The Parent Company operates two Fertilizer factories, a Coffee Curing Factory and a general business largely connected with the Southern India Plantation Industry. The two well-known Rupee Planting Companies, started by T. Stanes & Co., Ltd., and under their Managing Agency are Messrs. United Nilgiri Tea Estates Co., Ltd., and Stanes Amalgamated Estates Ltd., which together last year produced over 20,00,000 lbs. of Tea, as well as some 54 Tons of Coffee. With development and expansion the Tea crops have doubled over the past 10 years. The Parent Company and subsidiaries own together 43.4% of the Share Capital of Stanes Amalgamated Estates Ltd., The Estates are all in the Nilgiri District of South India.

It is of interest to note that the Founder of the business in Coimbatore Mr. (Later Sir Robert) Stanes left the U.K. for India in March, 1858, a 100 years ago. He died in Coonoor in 1936, age 96, having spent nearly all his life in India, and was always intimately connected with the Plantation Industry in the South. His son. Mr. F. J. Stanes, who retired in 1939, is now on a visit to India. The present Managing Director, Mr. E. H. Stanes, as also the Visiting Agent for the Estates, Mr. N. J. Stanes, are grand-nephews of the Founder, Sir Robert Stanes.

The Company became a Public Company in 1956, when also, on re-organisation, Messrs. The United Coffee Supply Co., Ltd., and Stanes Motors (South India) Ltd., became wholly Owned Subsidiaries. The Directors are Mr. E. H. Stanes, M.C., Mr. C. E. Wootton, B.Sc., F.R.I.C., Mr. M. S. Ramaswamy, B.A., G.D.A., A.C.A., and Mr. N. J. Stanes.

STOCK MARKET RISES ON BANK RATE CUT

GILT-EDGED AND INDUSTRIALS SHOW SUBSTANTIAL GAINS

London, 26th March.

THE cut in the British Bank rate brought a sharp response from the stock market immediately after the announcement, but there was no sensational advance and little further improvement took place subsequently. Nevertheless, gilt-edged securities and industrial equities recorded appreciable gains compared with the previous levels. Other sections showed no marked change on balance. While the market registered its satisfaction with the Bank rate reduction, other factors soon asserted themselves to dampen enthusiasm. Primarily, the U.S. recession again became the major disturbing influence. In addition, equities were restrained by the Chancellor of the Exchequer's warning that the cut was not a signal for expansion, and gilt-edged by his statement that the Government intended to maintain a high long-term rate of interest. Renewed nervousness developed over the London bus men's wage negotiations and particularly over the possibility of a strike. Gilt-edged responded quite well to the Bank rate cut but became subdued after the week-end. Nevertheless, rises extending to about half a point were recorded on balance. Foreign bonds were firm, with German, Japanese, Chinese and Baltic issues all attracting attention. Dollar stocks fluctuated with Wall Street and showed small changes. South African gold shares were quietly maintained, while coppers responded to the rise in copper shares on Wall Street and the improvment in the metal price. Industrials recorded widespread gains. All groups rose with the leaders showing useful gains. Banking and insurance shares were firm. Oils recovered the falls sustained prior to the Bank rate cut and showed very little change on balance. Rubbers were irregular. Tea shares developed a firm trend under the influence of Ceylon's decision to give rebates to low-grade producers and because of the prices obtained at the auctions.

The Money Market

The big event for the money market over the past week was the cut in Bank rate from 7 percent to 6 percent. Although a reduction was expected, the general idea was that it would be of ½ percent, so the larger cut caused some surprise. This brought a general downward adjustment in all other rates. The credit situation was very tight at times and discount houses found it necessary to borrow direct from the Bank of England both before and after the Bank rate change.

Mixed Trend in Hongkong Gold

The trend in the Hongkong gold market was mixed during the past week and trading was very quiet. The cut in the British Bank rate did not affect sentiment as traders were awaiting the reactions in the local money market. Bullion dealers believed that the lower Bank rate would stimulate trading in the Hongkong gold market and that sterling would maintain its present steadiness. The official offtake totalled 3.830 taels and the unofficial offtake was 8.600 taels. Carryover charges were 115 cents in sellers' favour. Arrivals at Macao totalled 38,000 ounces. Forward contracts were done at $37.98, c.i.f. Macao.

Silver Touches Three-year Low

Silver prices in the London market during the past week have touched their lowest level in nearly three years after a declining movement lasting four consecutive sessions. The main reason for the weakness is that large shipments have arrived in London, including some 40,000 ounces from Australia and south America. At the same time demand has been falling away both at home and on the Continent. Users are reluctant to carry large stocks when the costs of doing so at the present money rates are so heavy.

U.S. Nickel Deals

The United States is trying to negotiate with nickel companies for "some relief" from its commitments under long-term incentive contracts, it was stated in closed session testimony before a U.S. House of Representatives appropriations subcommittee recently. Mr Franklin Floete, head of the U.S. General Services Administration, told the group in February that he was negotiating for the cancellation of Korean wartime contracts for Canadian nickel which committed the United States to pay $1.14 a lb. The G.S.A. was trying to persuade the Hanna Coal and Ore Corporation to buy a nickel plant which it had built with $22 million advanced by the Government. Under the 1953 agreement, the United States was paying Hanna 75 cents to 104 cents a lb for the metal. The G.S.A. was having difficulty in trying to find a buyer for its $75 million nickel plant at Nicaro, Cuba. One reason was that the Cuban Government had not made an attractive tax proposal for a prospective owner to succeed under the present tax-free arrangement. Another reason was the drop in nickel prices. Mr Floete told the committee. The Government had decided upon the large-scale subsidising of nickel to ensure ample supplies in an emergency: the metal, once in short supply, was now plentiful but the Government was still committed by long-term contracts. A more recent deal, about which the sub-committee showed special concern, was signed with the Freeport Sulphur Company in 1957.

Money

THE CALCUTTA MONEY MARKET

A BETTER WEEK FOR BILLS

Wednesday, 26th March.

DEMAND for money has been slightly better in the Calcutta money market this week, with sugar mills, in particular, increasing their offtake. Requirements on account of foodgrain storage have also risen, but the needs of the cotton mills remain about the same, and there has been a small decline in those of the jute industry. The inter-bank market was tight at the beginning of the week, but easier conditions have since asserted themselves. Earlier, business was done up to 3¾ percent, but the call rate has now declined to 3½ percent.

The fall in the U.K. Bank rate has brought with it increased activity in the exchange market. A fair showing of both gunny and tea bills has been reported. Remittance remains poor. Sterling has strengthened against most currencies except the German D-mark. The pound is now quoted at a U.S. dollar rate higher than what was ruling before the reduction in the Bank rate from 7 to 6 percent.

* * * *

Bullion was steady because of good buying on account of the Ramnavami festival. Silver advanced from the previous week's level of Rs. 194 to Rs. 195.75, quoted today for ready delivery. Forward delivery rose from Rs. 192.50 to Rs. 194.81. The London price was the same at 76⅛d and the New York quotation stood at 88⅛ cents.

Gold improved in sympathy with silver to Rs. 112.50. The sovereign was fractionally shaded at Rs. 73.

* * * *

During the week ended 21st March, Government of India Treasury bills for Rs. 87,84,00,000 were sold in favour of the Reserve Bank.

* * * *

The return of the Reserve Bank of India for the week ended 21st March, 1958, shows a decline of Rs. 6.43 crores to Rs. 1,571.83 crores in active notes while the total note issue was Rs. 94 lakhs higher at Rs. 1,588.80 crores. Foreign securities of the paper currency reserve were reduced by Rs. 74.35 crores to Rs. 171.19 crores and rupee securities were increased by an equivalent amount to Rs. 1,171.10 crores. As a result of the transfer, balances held abroad in the Banking Department rose only by Rs. 66.38 crores to Rs. 103 crores. Deposits of the Government of India declined by Rs. 60 lakhs to Rs. 49.71 crores but other Government accounts rose by Rs 55.91 crores to Rs. 77.58 crores. Balances of commercial banks at Rs. 67.89 crores were fractionally higher. Investments improved by Rs. 4.43 crores to Rs. 240.25 crores. Other loans and advances rose from Rs. 73.11 crores to Rs. 74.56 crores, out of which advances to scheduled banks amounted to Rs. 23.53 crores (Rs. 21.75 crores). Ways and means advances stood at Rs. 24.20 crores against Rs. 44.84 crores.

* * * *

The return of the State Bank of India for the week ended 14th March, 1958, shows a rise of Rs. 3.52 crores to Rs. 416.14 crores in total deposits. Investments in Government securities are up by Rs. 6.91 crores to Rs. 180.36 crores, while other authorised investments remain unchanged at Rs. 10.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 81 lakhs to Rs. 208.32 crores. Cash and balances are, in consequence, shown at Rs. 24.71 crores or Rs. 9.07 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 14th March, 1958, shows Demand and Time liabilities at Rs. 739.65 crores (Rs. 13.66 crores on account of borrowings from banks) and Rs. 722.98 crores (Rs. 15.46 crores), compared with Rs. 727.98 crores (Rs. 11.82 crores) and Rs. 726.48 crores (Rs. 15.85 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 2.02 crores and Rs. 4.47 crores to Rs. 38.36 crores and Rs. 63.16 crores. There is a rise of Rs. 6.80 crores to Rs. 440.09 crores in investments. Advances and bills discounted at Rs. 940.11 crores show an increase of Rs. 3.67 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.9 percent and 64.3 percent, against 8.1 percent and 64.4 percent.

* * * *

The CENTRAL BANK OF INDIA has earned a profit of Rs. 1.09 crores for the year ended last December. Deposits amounted to Rs. 154.87 crores. Cash stood at Rs. 18.39 crores. Investments totalled Rs. 49.47 crores and advances were shown at Rs. 1.01 crores.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea, land and air Customs revenue collected in the Indian Union during November 1957 amounted to Rs. 1,595 lakhs, compared with Rs. 1,529 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year, except in the case of air Customs for which the previous year's figures are not separately available. Of the total Customs revenue collections, import duties accounted for Rs. 1,266 lakhs against Rs. 1,229 lakhs, export duties for Rs. 258 lakhs against Rs. 267 lakhs land Customs and miscellaneous for Rs. 60 lakhs against Rs. 33 lakhs and air Customs for Rs. 11 lakhs. The total gross collection of Union excise duties amounted to Rs. 2,424 lakhs compared with Rs. 1,623 lakhs. During the eight months, April to November 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 29,480 lakhs compared with Rs. 22,904 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 10,536 lakhs against Rs. 9,044 lakhs, export duties for Rs. 1,582 lakhs against Rs. 1,828 lakhs, land Customs and miscellaneous for Rs. 325 lakhs against Rs. 236 lakhs, air Customs for Rs. 162 lakhs and Union excise duties for Rs. 16,875 lakhs against Rs. 11,796 lakhs.

* * * *

Rules framed by the Central Board of Revenue under the Expenditure Tax Act of 1957 have now been published. These rules take effect from 1st April, 1958, on which date the Act comes into force. Under the Act, every person who is liable to pay expenditure tax is required to submit a return of his expenditure in the prescribed form before 30th June, 1958, for the assessment year 1958-59. Liability for the assessment year arises on the basis of the expenditure incurred during the previous year. The rules prescribe, *inter alia*, the form of return of expenditure. They also prescribe the form of appeal to the Appellate Assistant Commissioner and the Appellate Tribunal. Printed forms of return of expenditure are expected to be available shortly with Income Tax Officers, who are also Expenditure Tax Officers under the Act. Expenditure tax is payable by individuals and Hindu joint families. No expenditure tax is, however, payable if the assessee's income during the previous year from all sources after payment of taxes is Rs. 36,000 or less. Certain types of expenditure such as business expenditure, insurance premia, investments, repairs to buildings, donations for charitable purposes are totally exempt from expenditure tax. The Act also provides for a number of deductions, the most important of which is a basic allowance of Rs. 30,000. This basic allowance is also fixed at a higher figure in certain cases.

THE WORLD SILVER MARKET IN 1957

PRICES REMAIN STABLE

THE following are extracts from *The Silver Market in 1957*, the annual review compiled by Handy and Harman of New York. "The silver situation during the past year has been largely a repetition of 1956. The market continued to be dominated by the U.S. silver laws and the Treasury's policy under them. In New York, the average price for 1957 was virtually the same as for 1956, and its fluctuations were limited. The high was 91⅛ cents a troy ounce and was in effect as the year started. It compares with the 1956 high of 91⅛ cents. The low for 1957, established on 17th December, was 89⅛ cents, and compares with the previous year's low of 90 cents. The total range covered only 1⅞ cents compared with a spread of 1⅛ cents in 1956. These quotations, as well as subsequent ones, refer to the published rate, which is the price paid in settlement for silver in unrefined silver-bearing materials and is ⅛ cent below the market price for refined bullion.

"We estimate that 95 million ounces of silver were used in the arts and industries in the United States during the year just ended. This was 5 percent below the 1956 rate and compares with an average of 97 million ounces during the last five years. Moderate declines in the amounts used in both the arts and industrial categories caused the drop, and industrial uses continued to account for substantially better than half of the total U.S. silver consumption. In the arts, most of the drop resulted from reduced production of silver plated ware, with sterling holding up to 1956 levels. In the industrial field, the number of applications of silver and silver alloys continued to increase, but the total amount of metal consumed was lower due largely to the general decline in the production of consumer durable goods. The significance of a stepped-up defence programme cannot be evaluated as yet, but it is already clear that there are new and growing uses of silver in the missile field and other advanced weapons, together with their increasingly technical control mechanisms.

"An outline of the market demonstrates anew the influence of the U.S. silver laws on the price of the metal. We noted last year that the 84th Congress took no action on legislation providing for the repeal of existing silver purchase laws. Proponents for repeal, however, have renewed their efforts. On 3rd January, Representative Sadlac introduced a Bill, H. R. 448, and on 7th February, Representative Celler introduced a Bill, H. R. 4562, in the House of Representatives, which were referred to the Committees on Banking and Currency and Ways and Means, respectively. On 14th February, Senator Green introduced a Bill, S. 1201, in the Senate which was referred to the Committee on Banking and Currency. These Bills provide for the repeal of all existing silver purchase legislation, including the transfer tax on profits made in trading in silver. It remains to be seen what action will be taken by the 85th Congress.

U. S. Imports and Exports

"Once again the return of lend-lease silver accounted for the major portion of silver imports during 1957, which reached a new postwar high of 198.4 million ounces. Lend-lease amounted to 138.3 million ounces, and was divided as follows: from the United Kingdom, about 21.2 million ounces were received; from Netherlands, about 4.7 million ounces; from India, about 82.1 million ounces; and from Pakistan, about 30.3 million ounces. About 60.1 million ounces were available to the market, which was 7.8 million ounces less than in 1956. Imports from the western hemisphere amounted to 56 million ounces, a decline of 7 percent from the previous year, and the lowest level in any of the last five years. Reduced arrivals from Canada and Mexico accounted for most of the drop. Imports from Peru increased substantially, but shipments from Bolivia dropped by almost an equivalent amount. Supplies from other South and Central American countries remained virtually unchanged. From countries outside the western hemisphere imports consisted primarily of returns against lend-lease obligations. There was almost a complete absence in 1957 of imports of Saudi Arabian coin, which had been a feature of the market for the previous three years.

"Total exports for 1957 amounted to 10.3 million ounces, nearly double the 1956 rate. The United Kingdom and West Germany received 3.9 million ounces and 2.8 million ounces, respectively, during the year, and together accounted for nearly two-thirds of the total. Next in importance were shipments of about 1.4 million ounces to the Royal Canadian Mint, purchased at times during the year when local supplies were insufficient to meet the Mint's requirements. Other exports included 1.2 million ounces to Mexico, and a total of 1 million ounces which went to Colombia, Thailand, France and various other countries.

"The terms of the original lend-lease agreements provided for the repayment of silver in kind within five years after the cessation of the second world war. The signing of the Japanese Peace Treaty in April 1952, officially brought hostilities to a close, and accordingly April 1957 became the repayment date, subject to certain provisions in the agreement for extensions. Arrangements for repayment have been completed in all cases, except Saudi Arabia and Ethiopia. These two countries have availed themselves of the extension provisions.

Consumption in India

"Silver consumption in India, estimated at about 15 million ounces, declined somewhat from 1956 but remained high compared with recent years. Imports and exports of silver continue to be prohibited except under Government licence, but the import of about 13 million ounces in the form of Tibetan silver coins was authorised in 1957 through a bilateral trade agreement with Tibet. More than 30 million ounces of silver from this source has reached India since the first arrivals in 1956. No licences were issued for exports during the year.

"Prices in the Bombay market during 1957 continued to be higher than in other centres because of that market's isolation. Quotations ranged from a low of Rs. 174.25 a 100 tolas established on 4th January, to a high of Rs. 191 recorded on 21st May, equivalent to 97½ cents and $1.07 a troy

ounce, respectively. At the year-end, the price was Rs. 187.25, or about $1.05 a troy ounce.

World Demand and Supplies

"According to our estimates, consumption of silver throughout the world in 1957 totalled 289 million ounces, an increase of about 6 percent over 1956. Of this total, about 209.8 million ounces were used in the arts and industries, and about 79.2 million ounces in coinage. Consumption of silver in the arts and industries was virtually unchanged from the previous year, registering a decline of less than 1 percent. A 5 percent decline in the United States was offset by a 10 percent increase in West Germany. Canada showed a slight increase, as did Great Britain, France and Japan. Consumption in India, on the other hand, was down somewhat, and we estimate that other countries also decreased slightly.

"As for coinage, the most significant rise was an increase of over 20 million ounces in the amount of silver used in the United States, which more than accounted for the entire increase in world coinage use. Canada was higher, registering a gain of more than two-thirds, but Mexico declined by an almost equal amount. Information on other countries is incomplete, but we are advised that Austria used perhaps 5 million ounces in 1957 and that Japan also used about 5 million ounces. For all other countries, we estimate that a total of 10 million ounces may have been consumed.

"The total production of silver in the world during 1957, amounted to approximately 222.7 million ounces, virtually unchanged from 1956. We estimate that the production of the western hemisphere totalled 144.7 million ounces, about 1 million ounces less than the previous year. Such information as we have for countries outside the western hemisphere indicate that on balance production increased somewhat, and therefore we are estimating the total for this area as 78 million ounces.

"Consumers, of course, have never been wholly dependent on new production for supplies. In recent years, demonetised coinage provided a very important source of silver. We have noted that India received approximately 13 million ounces in the form of demonetised Tibetan coin during 1957, and we are advised that moderate quantities of demonetised Saudi Arabian coin found their way into the London and European markets, although in much smaller volume than in previous years. The Bank of England during 1957 provided the market with some 7 million to 8 million ounces of silver received from demonetised coin, a significant addition to supplies.

"In view of the potential importance of stocks of demonetised coin, it is appropriate to discuss those situations about which we have any information, particularly those which have been a source of silver in the past. As we have noted before, the Japanese Government holds about 60 million ounces, partly in the form of melted coin and partly refined. The status of this stock, so far as we know, has not changed since last year, and we are advised that it will probably be retained for future coinage requirements. Saudi Arabian coins continue to find their way into the market, although at reduced volume, which may be the result of more success on the part of the authorities in preventing their export. Since 1950 Saudi Arabia has used about 60 million ounces in the minting of coins and the records indicate that about 20 million ounces are still in Government stocks. As for the Tibetan coins, presumably they will continue to provide a source of silver for India, but we have no information as to existing stocks.

Future Prospects

"If there is no change in the silver policies of the United States, it is probable that a pattern of price stability will continue. The current slowdown in business activity is generally expected to last into the months immediately ahead, and its effects are being felt not only in this country but abroad as well. Demand for silver is below the level of a year ago with no evidence of any nearby recovery of significance. Under these conditions, the amount of domestic silver needed by the market will undoubtedly be limited.

"As for supplies, the recent cut-backs in production of copper and other non-ferrous metals are bound to have some effect on silver. We do not believe, however, that this will result in an immediate reduction in refined output, because the mines being closed down are probably those with the poorest grade ores, and also there will be a time lag before the effect will be noticed in the output of silver bullion. In addition to new production, there are potential non-producer sources, as we have discussed, which could at some time in the future become active sellers. The extent to which this may happen will be important in determining whether or not current price levels will be maintained."

Stocks and Shares

STOCK MARKET IN BUOYANT MOOD

LITTLE INVESTMENT SUPPORT: GOOD RESULTS FOR DUNLOPS

Wednesday Evening.

THE reduction of excise duty on cotton textiles, the suspension of the compulsory deposits provisions and the promise of tax relief for common teas, have kept the stock market buoyant during the past week. The advance, however, was punctuated by bouts of profit-taking. This slowed down the rise, but was welcomed in market circles as a healthy sign, since weak holders have been shaken out and the technical position improved. There is little evidence yet of a revival in outside investment support. This may be because many investors are still holding shares bought at higher prices and are reluctant to sell out and cut their losses. Except for the Life Insurance Corporation, which acquired selected miscellaneous shares on a modest scale, there was little new money to be seen in the market. The settlement of the strike of contractors' labour at Burnpur and Kulti banished fears that labour trouble would interfere with the Indian Iron and Steel Company's expansion programme. Hopes ran high that the new-found sympathy of the Government for the difficulties of the private sector would find concrete expression in some further fiscal reliefs, notably in some relaxation of the development rebate provisions. It is thought that the amount to be debited to a company's profit and loss account and credited to the special reserve may be limited to the tax relief, instead of the full allowance, or that the process may be spread over two years instead of one.

The opinion seems to be spreading that the stock market may have turned the corner and is at the beginning of what is expected to be a prolonged bull phase. Those who still had qualms about the crippling effect of last year's taxes on companies' working, may have been partly reassured by the excellent results of the Dunlop Rubber Company (India) Limited. In spite of a tax provision of Rs. 86.5 lakhs in 1957 against Rs. 47.3 lakhs in 1956, the figure of net profit after depreciation, interest and taxation, rose from Rs. 55 lakhs in 1956 to over Rs. 80 lakhs in 1957. The final dividend of 8¾% on the increased capital following the rights issue of seven for eight in July 1957, was in addition to the interim dividend of 7½% on the smaller capital in June 1957. Shareholders were rightly jubilant and the shares celebrated the occasion by moving up to Rs. 23.50, at which price they yield 6.9% tax-free.

The Government securities market continued firm and for the fourth time in the past month, the Reserve Bank raised its selling prices; 3½% Loan 1964 was put up from Rs. 97.95 to Rs. 98 and 4% 1972 from Rs. 100.05 to Rs. 100.10. Market expectations are that the new Central Government loans are likely to be launched in May and that the State Governments will follow approximately one month after. Market opinion generally favours a 3¾% medium-dated loan with a maturity of eight to ten years, at a small discount, and a 4% long-dated loan with a maturity of 15 years at par. It is anticipated that the most likely maturity date for the medium-dated loan will be 1968, as there are no Central Government loans maturing in that year. The possibility of a five-year short-dated loan being issued is also not ruled out, because of the popularity which short-dated loans have enjoyed in recent months.

The list for the 4¾% West Bengal Financial Corporation Bonds 1968 for a sum of Rs. 50 lakhs opened on 24th March and will close on or before 31st March, 1958. No particulars are available at the time of writing about the response.

There has been a little more enquiry for selected miscellaneous preference shares, but jute preference issues continue to be completely neglected.

In the coal section, some enquiry was noticeable in Bengal and Pench Valley and their quotations advanced from Rs. 205 to Rs. 210 and Rs. 18 to Rs. 18.75, respectively.

Cotton shares improved further with Dunbar rising from Rs. 127 to Rs. 130 and Kesoram from Rs. 11.25 to Rs. 11.62.

In the engineering section, Indian Iron & Steel came in for good business with the price fluctuating between Rs. 21.05 and Rs. 21.54; tonight's closing quotation is Rs. 21.49, but after hours, the price rose to Rs. 21.64. Guest, Keen, Williams were taken at the higher rate of Rs. 29.87. Contrary to the general trend in this section, Jessops reacted from Rs. 22.50 to Rs. 21 on rumours of a one-for-one rights issue. Textile Machinery advanced further to Rs. 18.55.

Jute shares were better and there were widespread gains in this section during the week.

In the miscellaneous section, the outstanding features were Dunlop Rubber and Indian Oxygen which spurted to Rs. 23.50 and Rs. 17.37, respectively. Other enquiries included Alkali & Chemical at the higher rate of Rs. 13.50 ex-dividend, Orient Paper at Rs. 28.30, Angelo Brothers at Rs. 17.75, Hindustan Lever at Rs. 22.50, Indian Cables at Rs. 29, National Insulated Cables at Rs. 24, Metal Box at Rs. 26.50, Sirpur Paper at Rs. 9.31 (these shares are now officially quoted in the Calcutta Stock Exchange) and Titaghur Paper at Rs. 34.87.

In sugar, Balrampore advanced to Rs. 6.30 on the publication of a satisfactory report while Champaran and Samastipur had sellers at Rs. 21 and Rs. 11.50 following the announcements that both these companies were passing their ordinary dividends.

In the mining group, Indian Copper was the outstanding feature following an improvement in the indigenous price of the metal and the shares rose sharply from Rs. 2.95 to Rs. 3.28.

Investors in the tea section were still anxiously awaiting an announcement on the reduction in the export duty on common teas and the recent enquiry appears to have petered out for the time being.

* * * *

STANES AND CO. LTD has earned a profit of Rs. 7,48,279 for the year ended last September. An ordinary dividend of 20 percent has been declared, including an interim of 8 percent. This absorbs Rs. 2.32 lakhs. Taxation reserve is allocated Rs. 2½ lakhs. Dividend equalisation receives an amount of Rs. 25,000. Development and stock reserve is given Rs. 1 lakh. The carry-forward is Rs. 51,548, compared with Rs. 40,256 brought in.

* * * *

There is a profit of Rs. 360,698 for the BALRAMPUR SUGAR COMPANY for the year ended last June, against a loss of Rs. 48,371. A dividend of 25nP a share has been declared. The taxation provision amounts to Rs. 2.90 lakhs. Rehabilitation reserve is allocated Rs. 70,000, against nil. Depreciation is Rs. 5,000 less at Rs. 1.30 lakhs. The carry-forward is Rs. 57,702. The Balrampur factory crushed 2,998,215 maunds of cane with a recovery of 8.93 percent. The crush of the Tulsipur factory amounted to 3,966,299 maunds with a

recovery of 9.19 percent. It is feared that in the current season the crush at the Balrampur factory will decline to 2,600,000 maunds and that of the Tulsipur factory will fall to 3,000,000 maunds because of drought.

* * * *

The CHAMPARAN SUGAR COMPANY has incurred a loss of Rs. 568,172 for the year ended last June, after increasing depreciation by Rs. 45,000 to Rs. 3.70 lakhs. The dividend has been passed over. Bringing in Rs. 29,503, there is a debit of Rs. 343,163 which is carried forward. The directors mention that the adverse trading results are due to the poor quality of the cane. "For the current season, the prospects appear somewhat brighter in that the very dry conditions have assisted in improving the quality of the cane, which may increase its sugar yield." The Barrah factory crushed 3,532,463 maunds of cane, against 3,552,767 maunds, and the crush of the Chanpatia factory increased from 2,069,019 maunds to 2,760,361 maunds. The recovery of the former factory fell from 9.54 percent to 8.57 percent, and that of the latter from 9.89 percent to 9.31 percent.

* * * *

The profit of BRAITHWAITE AND COMPANY (INDIA) LTD. has improved by Rs. 8.22 lakhs to Rs. 38.70 lakhs for the year ended last December. Bringing in Rs. 1,99,299, there is a balance of Rs. 40,89,227. The taxation provision amounts to Rs. 25.55 lakhs (Rs. 15.70 lakhs). General reserve is allocated Rs. 2 lakhs (Rs. 11.98 lakhs). The dividend has been maintained at Rs. 2 a share. The carry-forward is Rs. 1,82,269. The directors say that both the structural and wagon shops achieved record output during 1957 and "capacity remains fully booked." Orders on hand are principally for the company's largest customer, the Government of India. The shortage of foreign exchange, which has received much publicity, has restricted the import programme and the industry as a whole is faced with a shortage of raw material which may "adversely affect your company's production. It is fortunate that being engaged on work of national importance carrying high priority, the company may reasonably expect the Government's support to maintain output at as high a level as possible." During the year, Jardine Henderson, Ltd. acquired from the original holding company, Braithwaite and Co. Engineers Ltd., London, a major block of shares in the company. The company is no longer a subsidiary of Braithwaite and Co. Engineers Ltd., London, which however retains a substantial interest.

Bombay Market

PRICES IMPROVE ON BROAD FRONT

NEW GOVERNMENT ATTITUDE WELCOMED

Wednesday Evening.

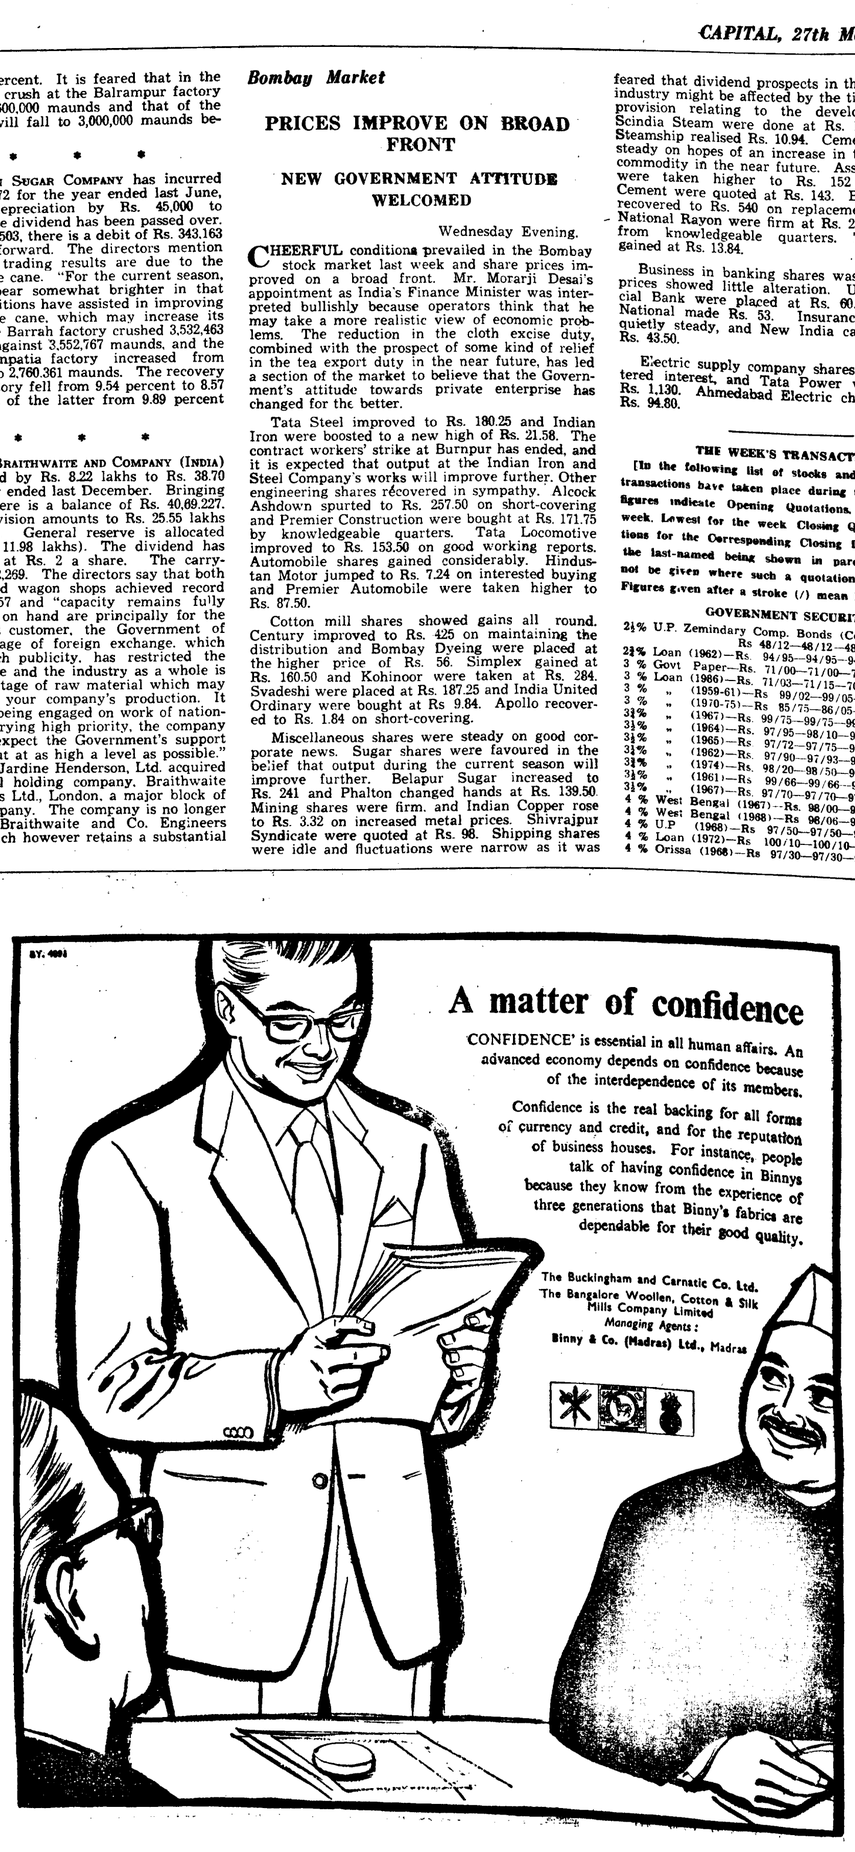
CHEERFUL conditions prevailed in the Bombay stock market last week and share prices improved on a broad front. Mr. Morarji Desai's appointment as India's Finance Minister was interpreted bullishly because operators think that he may take a more realistic view of economic problems. The reduction in the cloth excise duty, combined with the prospect of some kind of relief in the tea export duty in the near future, has led a section of the market to believe that the Government's attitude towards private enterprise has changed for the better.

Tata Steel improved to Rs. 180.25 and Indian Iron were boosted to a new high of Rs. 21.58. The contract workers' strike at Burnpur has ended, and it is expected that output at the Indian Iron and Steel Company's works will improve further. Other engineering shares recovered in sympathy. Alcock Ashdown spurted to Rs. 257.50 on short-covering and Premier Construction were bought at Rs. 171.75 by knowledgeable quarters. Tata Locomotive improved to Rs. 153.50 on good working reports. Automobile shares gained considerably. Hindustan Motor jumped to Rs. 7.24 on interested buying and Premier Automobile were taken higher to Rs. 87.50.

Cotton mill shares showed gains all round. Century improved to Rs. 425 on maintaining the distribution and Bombay Dyeing were placed at the higher price of Rs. 56. Simplex gained at Rs. 160.50 and Kohinoor were taken at Rs. 284. Svadeshi were placed at Rs. 187.25 and India United Ordinary were bought at Rs 9.84. Apollo recovered to Rs. 1.84 on short-covering.

Miscellaneous shares were steady on good corporate news. Sugar shares were favoured in the belief that output during the current season will improve further. Belapur Sugar increased to Rs. 241 and Phalton changed hands at Rs. 139.50. Mining shares were firm, and Indian Copper rose to Rs. 3.32 on increased metal prices. Shivrajpur Syndicate were quoted at Rs. 98. Shipping shares were idle and fluctuations were narrow as it was feared that dividend prospects in this sector of the industry might be affected by the tightening of the provision relating to the development rebate. Scindia Steam were done at Rs. 17.16 and India Steamship realised Rs. 10.94. Cement shares were steady on hopes of an increase in the price of the commodity in the near future. Associated Cement were taken higher to Rs. 152 and Digvijay Cement were quoted at Rs. 143. Bombay-Burmah recovered to Rs. 540 on replacement buying and National Rayon were firm at Rs. 240.50 on buying from knowledgeable quarters. Tata Chemical gained at Rs. 13.84.

Business in banking shares was restricted and prices showed little alteration. United Commercial Bank were placed at Rs. 60.30 and Punjab National made Rs. 53. Insurance shares were quietly steady, and New India came to hand at Rs. 43.50.



Electric supply company shares met with scattered interest, and Tata Power were bought at Rs. 1,130. Ahmedabad Electric changed hands at Rs. 94.80.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week Closing Quotations. ACC HONOURS THE CODE

4

". . . . . reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research."

Code of conduct—**FORUM OF FREE ENTERPRISE**

To ensure a continuous and growing supply of quality Portland cement to its customers, the ACC "ploughs back" every year a substantial portion of its earnings, to rehabilitate, expand and modernise its existing plants; to make its business grow and so to provide the country with the much-needed cement which goes into all types of construction, from the modest needs of the small village to the hungry demands of gigantic power and river valley projects, industrial development, housing schemes, hospitals, schools and the like.

This "ploughing back" of a portion of the ACC's earnings — though reduced last year owing to lower profits, resulting from higher costs and increased taxation — remains a vital factor in the production and supply of quality cement in increasing quantities to millions of satisfied users throughout India who have learned to depend on — ACC CEMENT.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

FRANCE OPPOSES FREE TRADE AREA PLAN

(FROM A SPECIAL CORRESPONDENT)

INDUSTRIALISTS have followed with anxiety the course of the recent events in relation to the proposed creation of a free trade area in Europe, due to come into existence on 1st January next. As is well known, all but a few of the leading British industrial companies are strong supporters of the idea, and have spent a good deal of money on advance publicity within the markets which the area should provide. The cause for anxiety is principally the increase of French opposition to the proposal. France has her own opinions on the manner in which intra-European trade should be encouraged. She was largely responsible for the Treaty of Rome, signed more than a year ago by France herself, and by West Germany, Italy, Belgium, Holland and Luxembourg. Its provisions seek to promote a common market for the countries named. The free trade area proposal includes all the O. E. E. C. countries—a total of 17. Its aims are more radical than those of the common market, as might be gathered from the emphasis on free trade in its title. It has been argued that the two proposals ought to be complementary, and that any difficulty which might arise could be forestalled by the simple expedient of common market members having a block membership of the free trade area as well. France does not hold that view: on the contrary, she is urging that some members of the area, especially the United Kingdom, should join the common market group. One of her contentions is that there are too great disparities between the financial and other status of the 17 countries which will comprise the free trade group, and this will make it difficult for them to co-operate in practical things, however much they may be attracted by a theory.

Struggle for Leadership

Nevertheless it has to be recognised that the European free trade area is being planned to come into existence over a period of approximately 15 years, and that its sudden fulfilment is not a condition of success. There is the further fact, as hinted earlier, that France looks upon the common market as her own conception, and subject to her own leadership or, as some would say, to her own sovereignty. It needs but little imagination to foresee that the common market could be a channel for bringing her a much needed restoration of prestige. It is, therefore, felt by British industrialists that if the United Kingdom were to abandon or seriously modify the proposal for a free trade area to which she is so much committed, she would be unable to win the leadership. Mr Macmillan has proclaimed that "we must urgently seize the opportunity to build on the foundation already provided by the Treaty of Rome: we must not allow the impetus of the movement towards European unity to be lost."

Safeguarding the Cotton Textile Industry

Lancashire has witnessed a pronounced revival of the demand for protectionist measures to safeguard her principal industry. The mayors of five cotton towns are to go in a deputation to the President of the Board of Trade to demand restriction of imports. It has been said that the heavy poll against the Government at the Rochdale by-election is attributable to the dissatisfaction of millowners with the Government's cautious attitude on this question. There is no doubt that many powerful cotton textile firms support the Cotton Board's policy of still patiently striving through negotiations to bring about a reconciliation of interests, at least as far as India, Pakistan and Hongkong are concerned. However, it must be said that textile interests have been impressed by some of the recommendations in the *Plan for Cotton*, recently issued by the Labour Party. It has been suggested that a Government Imports Commission be set up with power to deal with unfair competition. "With this proposal," says the *Journal of the Textile Institute*, "most people in the industry would agree: it is the most positive contribution that has yet been made to this thorny problem, and would probably be of more value to the industry than any other single measure."

Competition from Substitutes

While the consumption of jute may gain through the rapid growth of the tufted carpets industry, both in the United Kingdom and in the United States, its use for packaging purposes may decline. The great increase in the use of plastics for packaging materials has not much affected jute so far, but it will probably do so in the long run. It is evident, however, that the multiwall paper sack and container continues to make great strides. According to Mr Brackley of the chemicals division of Imperial Chemical Industries, far-reaching improvements to paper, provision of a wide range of water, vapour and corrosion resistant linings and coatings, together with much study have established the importance of paper sacks in the chemical industry. Silicones are being used more and more for the treatment of paper. It may be wondered if jute research is taking sufficient account of the additional properties of silicones. Books on their use mention their application to man-made fibres such as rayon, wool, cotton and linen, but not to jute. It is for the jute research workers to study the possibilities of silicones in their field.

New Delhi

TOO LITTLE CONTROL OVER FOREIGN EXCHANGE EXPENDITURE

FAULT OF GOVERNMENT ADMITTED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Prime Minister, Mr. Nehru, winding up the Budget debate in Lok Sabha early last week, has made a significant admission which is repeated in the White Paper on the foreign exchange crisis that has been placed on the table of the House since. The White Paper says that "since January 1957, the system of foreign exchange budgeting which was previously in vogue has been revived." The Prime Minister admits that "there were lapses in this matter. That is to say, we were not fully seized of what was happening and there was lack of co-ordination. Otherwise, we could have taken steps which we took later. We used to have a kind of foreign exchange budget some years ago and it is not clear to me how it lapsed—partly, I suppose, because we were actually gaining in foreign exchange and there was a period of boom and optimism as the first plan succeeded. It was wrong that it lapsed. Different Ministries went on ordering things without anybody knowing the entire picture for some time. Since the beginning of 1957, strict budgeting of foreign exchange is being kept."

This is a significant statement, and it creates serious doubts about how the Central Cabinet functions. One of the Cabinet's important purposes is that, "as a supreme executive body, it has the duty of conducting national affairs according to the national interest and of co-ordinating and supervising the various departments, included in the Cabinet or not." The Prime Minister confesses that "there was lack of co-ordination. Different Ministries went on ordering things without anybody knowing the entire picture." The basic question which arises is, what was the Cabinet doing? How was the lack of co-ordination possible without its knowledge? What action was taken against Ministries which were ordering things, presumably without the Cabinet's approval or authority?

Import Policy

The Cabinet is supposed to approve the import policy every six months. A foreign exchange budget is inevitably the basis of any import policy. How can a Government prepare an import programme without knowing its foreign exchange budget? In other words, on what basis could the Cabinet have been approving its import policy if the system of foreign exchange budgeting had lapsed? These are serious issues which cannot be dismissed merely by issuing a White Paper, as has been done. Mr. Nehru might consider why the British Chancellor of the Exchequer, Mr. Thorneycroft, and two junior Treasury Ministers in the U.K. resigned two months ago. They resigned because they refused to allow an increase of £50 million in the ordinary Budget expenditure. The question, therefore, is whether the Indian Finance Ministry did its duty, as Mr. Thorneycroft did in Britain.

Enquiries show that the Finance Ministry did give repeated warnings. The point of view of the administration, for example, was expressed in the following terms: "We generally agree with the estimate that in order to implement the plan, imports of Rs. 1,400 crores to Rs. 1,600 crores of capital goods would be necessary and that, out of this, we could finance Rs. 500 crores from current earnings. We feel, however, that the foreign exchange savings on items like petrol, raw cotton, sugar, etcetera, would be more or less offset by increases in the imports of other raw materials and semi-finished products necessary to sustain a higher level of production and consumption. There will be little scope for import savings on luxuries, as such imports are already insignificant. We agree that it would not be wise to place much reliance on additional exports. It follows, therefore, that even if Rs. 200 crores are drawn from the sterling balances, the external assistance required would be of the order of Rs. 800 crores. A deficit in internal resources can be met by a further dose of deficit financing. These methods, however, are not available for getting foreign assistance.

Small Savings

"Small savings: It would not be safe to assume more than an average of Rs. 50 crores a year for the next five years.

"Public borrowings: From past experience, it would be reasonable to assume a gross borrowing of Rs. 30 crores a year, on the average, for all the States and Rs. 100 crores a year for the Centre. This would give for the five-year period a net receipt from borrowing for both the Centre and the States of Rs. 200 crores."

The Chief Minister of West Bengal, Dr. B. C. Roy, tried to introduce a certain realism in planning. In a letter to the Planning Commission, he stated that "the entire approach in these imposing calculations is an example of putting the cart before the horse. The level of our targets should be pitched according to capacity and not according to what we wish for. How high we may aspire to reach in the next five years depends on how strong we are at present. The measure of this strength lies in the size of our current investible surplus. The margin of saving left after meeting our requirements of essential consumption is very narrow. Most of our resources are used up barely to support life."

Warnings Ignored

All these warnings, which were given while the plan was still being formulated, were ignored. It is said that the Planning Commission is largely responsible for the foreign exchange crisis. But the Planning Commission is not the Government of India, even though its chairman is the Prime Minister. The Commission, in the White Paper referred to, makes the following significant statement: "The plan, as finalised, had a large foreign exchange gap. It was anticipated and explicitly stated in the plan document that the foreign exchange situation was going to be difficult throughout the plan period and that difficulties were likely to be particularly serious in the early part of the plan period. The acceptance by the Government of a plan of the dimensions proposed implied, firstly, a definite decision to run a measure of risk in relation to the foreign exchange position, and, secondly, the readiness to adopt appropriate corrective measure at short notice." The White Paper goes on to say that "while it was recognised that there was a large foreign exchange gap, it was not appreciated how swift and severe its impact would be on the balance of payments position and what strict and vigilant control was required from the very outset over foreign exchange commitments."

Some deductions may be made from all this. Firstly, the Planning Commission was warned that the economy could not sustain a plan of more than Rs. 3,000 crores, but this warning was ignored. Secondly, the Government was warned that accepting a plan of the dimensions proposed implied a definite decision to run a measure of risk concerning the foreign exchange position; but its reaction was to do away with the budgeting of foreign exchange and permit different Ministries to order things without anybody knowing the entire picture. To this may be added the Prime Minister's statement in the Lok Sabha on 28th November, 1957, when he referred to the functioning of the Cabinet and said: "We are not a regimented school where we speak with one voice, one tone, one intonation. We speak sometimes in somewhat different languages, but we are together, because we have, broadly speaking, a common approach, even though we differ in many other ways. That is the way of democratic Governments." No comments are necessary.

Imports of Consumer Goods

The White Paper, and the Industries Minister, Mr. Manubhai Shah, have shown that excessive imports of consumer goods are not responsible for the foreign exchange crisis, as is often alleged. The White Paper says that although the increase in imports of items constituting consumer goods during 1956-57, as compared with the preceding year, was only Rs. 6 crores, some of them should be considered as falling in the category of producer goods. Mr. Shah, intervening in the debate on his Ministry's demands for grants, has said: "In January-June 1955, plant and machinery worth Rs. 45 crores were imported. It rose to Rs. 55 crores in July-December 1955. It touched Rs. 67 crores in January-June 1956. It was Rs. 74 crores in July-December 1956, and it was Rs. 84 crores in January-June 1957, for which we have the final figures. I know that that trend is being maintained even in the latter half of 1957. So the House will be able to see that from a sum of Rs. 45 crores for plant and machinery to be imported in the first half of 1955, the figure in the first half of 1957 was Rs. 84 crores, almost a 90 percent rise in the import of capital goods.

The second item which plays a very major rôle, as a matter of fact the most vital rôle, is the import of industrial goods, that is, the producer goods which are the raw materials for different types of industries. There also the trend is visible. The House will be glad to note that in the first half of 1955, the import of industrial goods was Rs. 177 crores, while it touched Rs. 196 crores in July-December 1955. Again, it rose to Rs. 229 crores in January-June 1956 and touched Rs. 252 crores in July-December 1956. It was Rs. 292 crores in January-June 1957. That is, within the course of two years, the import of industrial raw materials which directly contributes to the production of capital goods, machinery and different types of industries in this country rose from Rs. 177 crores to Rs. 292 crores. This vital trend is being maintained even in the latter half of 1957 and the beginning of this year.

Need for Reclassification

"On the other hand, as far as consumer goods are concerned, the position is the reverse. I may here caution the House that the definition of consumer goods as mentioned now, as being followed now, is also not strictly a very correct definition. It includes all sorts of things, and at the earliest possible time we may have to reconsider the question of classifying consumer goods correctly as they are understood in economic terminology. But even as the definition stands, the House will be pleased to know that gradually the licensing of consumer goods, which was Rs. 214 crores in 1955 and which stood at Rs. 216 crores in 1956, was reduced to Rs. 163 crores for the total of 1957. There, again, we have made a drastic saving of almost 25 to 30 percent within a period of two years."

U.S. Credit Negotiations

The Secretary to the Finance Ministry, Mr. B. K. Nehru, has returned to New Delhi after negotiating the credit deal with the U.S. Export-Import Bank and the U.S. Government. Much was done to bring about this deal by the Birla mission, the former Finance Minister, Mr. T. T. Krishnamachari, the Principal Finance Secretary, Mr. H. M. Patel, and the Governor of the Reserve Bank, Mr. H. V. R. Iengar. They helped dispel some of the impressions prevailing against this country and tried to promote a more favourable attitude towards investment in India. A big rôle was played behind the scenes by Senator Sherman Cooper and the U.S. Ambassador to India, Mr. Ellsworth Bunker. By their favourable appraisal of the economic and political situation in this country, they were able to convince the U.S. administration of India's creditworthiness. Many who speak from personal experience say that there is no hostility to India's neutral policies in the United States. But this neutrality, it is urged, should be unequivocal, undiluted and positive. It is in the fitness of things that Indian leaders, during the last six months at least, have kept to the conception of neutrality in letter and in spirit.

Although the United States stands for free enterprise, Americans appreciate the reasons which have made India enlarge her public sector. The U.S. investor would be satisfied if the principle of "peaceful co-existence" were adopted as far as relations between the private and public sectors are concerned. The Indian Government's policy during the last six months has been to consolidate the public sector rather than to crusade against the private sector. The withdrawal of the scheme for the compulsory deposits of company profits and reserves indicates this. It is unfortunate that India has no public relations organisation worth the name. Although there are military attaches everywhere, no economic attaches of the right type are to be found in most places abroad. In several places in the United States, for example, commercial counsellors were blissfully ignorant of the fact that "Indian" goods "made in Japan" had invaded the market.

Russian Aid Shrinking

Russian aid to this country is apparently coming to an end. She has very extensive commitments for industrialising China and the east European countries within its orbit. Although there are no obvious political strings attached, each item of aid has a certain publicity value. Additional aid for an item which has exhausted its publicity value is, therefore, meaningless. This explains the poor response to India's request for additional allocations of aid for the Bhilai steel project. There has been hardly any response to India's request for credit to finance the pharmaceutical project, the offer for which was widely advertised by a local scientist. It looks as if Indonesia and Egypt are becoming better potential material for Russian publicity.

Iron Ore for Japan

Survey reports have been submitted by a Japanese mission on developing Indian resources for the long-term supply of iron ore to Japan. Further discussions have since taken place between the Indian Iron Ore Negotiating Committee led by Mr. M. K. Vellodi, Cabinet Secretary to the Government of India, and the Japanese steel mission led by Mr. S. Nagano, president of the Fuji Iron and Steel Mills. As a result of these discussions, a broad agreement has been reached on the sale of two million tons of iron ore annually to Japan from 1964 onwards from the Rourkela area through the port of Visakhapatnam. An understanding has also been reached concerning the basis on which the prices of iron ore will be determined from year to year.

The Government of India will now apply to the U.S. Government for assistance from the U.S. President's Asian Economic Development Fund. The Government of Japan will support the application. The Japanese Government has also undertaken to assist by supplying machinery and equipment on a long-term deferred payment basis. The agreement is subject to ratification by the two Governments. By a separate exchange of letters between Mr. K. B. Lall, Joint Secretary to the Ministry of Commerce and Industry, and Mr. Nagano, it has been agreed that the possibility of supplying 250,000 tons to 450,000 tons of iron ore a year from the Sukinda area, through the port of Paradip in Orissa, in addition to the quantities covered by the current contract between the State Trading Corporation and the Japanese steel industry, should be explored.

Under the project, benefits will accrue to both countries. India will gain from the installation and improvement of railway and port facilities and the development of the mining industry. Japan will get iron ore on a long-term basis at fair and reasonable prices. This makes the project eligible for assistance from the U.S. President's Fund as it benefits more than one country. The project will earn a considerable amount of foreign exchange for India on a long-term basis.

Improving Facilities

India will complete the railway line between the mines and the port and will mechanise the facilities at the port suitable for loading ore-carriers. The construction of new railway lines and the improvement of the existing railway lines from the mine area to Visakhapatnam *via* Sambalpur and Titlagarh are proposed. In Visakhapatnam, the harbour channel will be deepened to make it

suitable for ore-carriers and two exclusive berths will be set apart and suitable ore-loading machinery will be installed. It is hoped that a loan of $23 million will be available for the project from the U.S. President's Fund. Japan has agreed to give $8 million for the purchase of equipment, machinery and other materials on a deferred payment basis. The price formula to operate between 1964 and 1974 is a feature of the agreement. The prices will be such as to be neither unfair to Japan nor unremunerative to India. The pact marks a new phase in Indo-Japanese trade relations. At one stage, this country dreaded Japanese incursions into India's markets. This was followed by Japanese fears of India intruding in her Asian and African markets. Now India will supply iron ore to assist in the expansion of the Japanese steel industry, which may compete with the Indian steel industry in later years.

Italians and West Germans Interested

Negotiations are going on with Italian and West German steel interests to develop iron ore resources on the west coast of India. The Indo-Japanese agreement will enable India to develop ore mining and transport facilities, including Visakhapatnam harbour. There is a possibility of a similar development of transport and port facilities on the west coast in case the negotiations with the Italians and West Germans materialise.

Double Tax Avoidance Pacts

An Indian delegation will visit Bonn to sign an agreement on the avoidance of double taxation with West Germany. The details of the pact were settled last winter, when a West German delegation visited New Delhi. Similar negotiations are in progress with the United Kingdom. The Indian mission going to Bonn will visit London provided the negotiations there warrant it.

Textile Exports to U.K.

Negotiations are continuing between Indian and Lancashire textile interests. Lancashire has been demanding a ceiling on imports into the United Kingdom of cotton textiles from Hongkong, India and Pakistan. Following the visit of a Lancashire delegation, a tentative agreement was reached, under which, subject to an agreement with Hongkong textile interests, India would have placed a ceiling on her textile exports to Britain. As the delegation could not persuade the Hongkong textile industry to agree to a ceiling on its exports to the United Kingdom, the agreement fell through. The Lancashire textile industry, which is in a bad way, made another attempt to reach an agreement by inviting an Indian delegation to Britain. Indian textile interests did not respond to this suggestion. It is in this context that negotiations between the two countries are in progress.

U.K. Firm to Supply Coal-Washing Plant

A coal-washing plant for the State mines near Durgapur in West Bengal, where a steel works is being built by a consortium of British firms, will be supplied by a U.K. firm which helped equip Britain's biggest coal washery and recently manufactured plant for an Australian colliery. The firm, Automatic Coal Cleaning Co. Ltd., of Carlisle, is designing and making the plant on behalf of Simon-Carves Ltd. This will be the second plant made in Carlisle for India in recent years. The first went to the Lodna colliery in Bihar, and was India's first jig washery. This washery was erected by local colliery labour under the supervision of a Carlisle engineer and was completed in five months. The firm supplies plant covering the whole range of coal washing from 30 tons to 400 tons an hour in a single unit. The biggest plant in Britain for which it has supplied part of the equipment is at a colliery near Rotherham in Yorkshire. It has a washing capacity of 1,320 tons an hour. The firm's plant have been installed in many British and overseas coalfields.

Output of Tata Steel

The output of the Tata Iron and Steel Company after its expansion is completed will be as follows:

	(Tons)
Heavy rails	135.000
Heavy structurals	110.000
Sleepers	50.000
Crossing sleepers	30.000
Medium and light structurals	297.000
Bars ½in. and above	144.000
Plates	100 000
Sheets	150.000
Strips up to 12in.	148.000
Wheels, tyres and axles	30,000
Semis including blooms, billets, tin bars, etcetera.	306.000
Total	1,500,000

Installed Capacity of Hindustan Machine Tools

The present installed capacity of the Hindustan Machine Tools, Bangalore, is estimated at about Rs. 1.56 crores worth of machine tools a year. The total number produced at the factory during the period 1st April, 1957, to 28th February, 1958, was 348, worth Rs. 1.31 crores. The following are its products: lathes 1,000 millimetre centre distance, lathes 2,500 milimetre centre distance, horizontal milling machine, size 2, vertical milling machine, size 2, universal milling machine, size 2, horizontal milling machine, size 3, vertical milling machine, size 3, universal milling machine, size 3.

Difficulties of Tea Trade

Parliament has discussed and approved demands for grants of the Central Ministries of Commerce and Industry and Education. In his reply to the debate concerning his Ministry, Mr. Morarji Desai has made a pointed reference to tea. The Government is aware of the difficulties which common teas are facing. Sixty percent of India's tea belongs to this category. At present, there is a uniform duty on tea regardless of its quality or price. This is mainly responsible for the difficulties. The Minister has assured the House that the Government is trying to find a solution and will announce its decision at an early date. Referring to tea gardens, he has said that the Government of Assam is considering whether it might take over some of them. "It is easy to say that the Government should take up some of these estates and work them. But when the Government takes them up and loses money, I do not know what will happen to the Minister who will be in charge of it. He will certainly have to go. I do not think any Minister will hesitate to go in doing his duty and if he fails in his duty, he should go and he will go."

Mr. Morarji Desai has been more emphatic in his reply to the demand that the tea trade should be taken over by the State Trading Corporation. "I have no doubt that if the State Trading Corporation takes up the export of tea and the business of tea, not only the Corporation will have to be wound up but perhaps the whole Government will be in danger. Because, it is not a business which can be carried on by people who neither know anything about its business nor have they any experience of it. Monopolies cannot always be avoided. Therefore, in the matter of tea, it is not a question of monopoly. The tea trade is a highly technical business. If there are foreigners, they are in that trade for many years. They started it. They were pioneers in that industry. If they exploit us today, certainly it will be an excuse for us to take some action. But I see no reason today to say that we are being exploited in any way. On the contrary, I find that they are not exploiting us in any way. They are helping us in what we are doing."

The demand of the communists to take over the rubber industry is another topic which Mr. Desai has discussed. The Minister says: "The Government cannot go on taking up every industry, managing it, launching it and maintaining it. It is not possible for the Government to do so at any time." He adds that the communist Government in Kerala "has been after me, requesting me to request Mr. Birla to start a factory."

Deshmukh Committee Report

A series of important announcements on the implementation of the Deshmukh Committee report for a three-year degree course in universities, the appointment of a committee headed by Mrs. Durgabai Deshmukh to go into the question of women's education, and the establishment of a scheme of national awards for teachers who have done meritorious work, have been made by Dr. K. L. Shrimali, Central Minister for Education, in the course of his reply to the debate on the demands for grants for his Ministry in the Lok Sabha. The House voted the grants. Financial assistance to State Governments for meeting the increased expenses for teachers of all categories, reorganisation of the All-India Council of Sports and the integration of the Rajkumari sports coaching scheme with other schemes of this nature are some of the other decisions announced by the Minister. Stressing the increased interest which the Central Government is taking in the progress of education although it is a State subject, the Minister has referred to the various schemes in relation to elementary, secondary, university and women's education, physical education and teachers' salaries, etcetera, and the financial assistance given by the Centre to State Governments.

Installation of Silo in Hapur

A silo of 10,000-ton capacity is nearing completion in Hapur, about 30 miles from Delhi. Another of the same capacity is being installed in Calcutta for the mechanical handling of foodgrains. equipment was ordered and has been lying unused in Bombay. Port labour has been resisting the installation of the equipment.

New Sugarcane Prices Announced

New sugarcane prices have recently been announced by the Government. They are as follows: (1) A basic minimum price of Rs. 1.44 a maund for delivery at the gate of the factory and Rs. 1.31 a maund for delivery at rail centres; and (2) a deferred payment of an amount which may be found due under the formula prescribed by the Government for linking the price of cane with the price of sugar as realised by the factories concerned. A formula for exporting sugar possibly by pooling prices, is being discussed here.

Amendment of Minerals Regulation Act

The Government has reiterated its intention to bring forward an amendment to the Mines and Minerals Regulation Act, excluding the royalty on coal from its provisions.

Payment Arrangements with Egypt

The Government of India has agreed that as long as the current foreign exchange regulations remain in force in Egypt, contracts for the import of tea and jute goods from India and the export of cotton to India will be made in terms of Egyptian pounds, instead of in Indian rupees as provided in the Indo-Egyptian trade agreement. The State Bank of India will open an account in Egyptian pounds with the National Bank of Egypt to provide banking facilities to exporters of tea and jute goods and importers of cotton in this country. Enquiries show that this will enable Egypt to subsidise her cotton exports to India. The prices of Egyptian cotton are higher than those of Sudanese cotton and the former has, therefore, so far been uneconomic for India to buy.

London

REACTIONS TO BANK RATE CUT

MONETARY RESTRAINT TO CONTINUE

(FROM OUR LONDON CORRESPONDENT)

THE 7 percent Bank rate, having been in force for exactly six months and having in that time achieved its main purpose of putting an end to last autumn's speculative pressure against sterling, was reduced to 6 percent last Thursday. This took the City by surprise, for although there was one body of opinion which held that the time was ripe for such a move and that it would not be misinterpreted, the majority view was that action would be deferred until the presentation of the Budget. What is more, the Governor of the Bank, Mr. Cameron Cobbold, is in Nigeria, and such changes are seldom made in his absence. The announcement was accompanied by an explanatory statement which read: "The abnormal rise from 5 percent to 7 percent in September 1957 was required both to defend sterling against the marked lack of confidence in the exchange markets of the world and also to support Government measures to maintain the real value of the pound. While there is still a need to strengthen further the overseas monetary position, the speculative pressure against sterling has ceased, and such an exceptionally high level of short-term interest rates in London is no longer justified. But at home, although inflationary pressures are moderating, the reduction in Bank rate does not imply any general relaxation in monetary policy."

Clear Warning

In spite of the clear warning against overoptimism, the Stock Exchange has reacted with an all-round rise in prices, both for gilt-edged as well as equities, but on the exchange markets the pound has weakened. Unlike the situation in other countries, Britain is not faced with a recession, so there is no need to risk the success already achieved through the anti-inflationary measures by too rapid a relaxation. It is true that the indicators are favourable, with a further half-point drop in the cost of living index on 18th February at 107.6 (compared with 108.1 on 17th January). But wage claims are awaiting settlement and the effect on the U.K. economy of American developments and the drop in commodity prices is yet to be seen. Caution is still necessary, and the City's second thoughts on the Bank rate reduction—which provides the Chancellor of the Exchequer with more room for manoeuvre later on, if it is necessary—will be watched with interest. The "crisis" has passed, but any attempt to look upon the cut in Bank rate as a stimulant to personal purchases, wage claims or capital expenditure, especially at a time when a recession is developing abroad, could do severe damage. For the time being, the squeeze must go on and the emphasis be on restraint.

This is certainly the watchword so far as the banks are concerned. Advances have been slowly declining in the past year, and the usual increase during this tax-paying season has been very small. According to the quarterly analysis issued by the Bankers Association, total advances in February were £1,940,850, against £1,931,271 in November 1957 and £2,000,317 in February 1957. Compared with a year ago, loans for the steel, base metals, and food, drink, and tobacco trades were lower; builders and farmers also borrowed rather less. On the other hand, loans to shipping and shipbuilding, the retail trade, and "unclassifiable" industry and trade were higher. An important cause of the fall in the total has been the reduction of loans to local authorities and public utilities.

Capital Spending

Fixed capital expenditure by British manufacturing industry continues to rise, but at a much slower rate. Provisional Board of Trade estimates show that expenditure in the final quarter of last year was 2 percent up on the corresponding period of 1956. This goes against the corresponding increases of 13 percent, 9 percent and 5 percent, respectively, in the first three quarters of the year. For the whole of last year the rise was 7 percent, against 20 percent in 1956. The further slackening in the fourth quarter was due largely to a sharp decrease in building work. Expenditure on building shows a fall of 2 percent compared with a rise of 28 percent in 1956. Capital spending on plant and machinery showed a fresh rise and for the year was 11 percent higher. Furthermore, for the first time since the quarterly figures were published early in 1955 there has been no increase in the stocks and work-in-progress of manufacturing industry.

Free Trade Area Difficulties

Mr. Maudling, Paymaster-General, has been authorised by the Cabinet to insist that agreement in principle on the major features of the European free trade area plan be reached by the end of July. He will put this view as strongly as possible at the next meeting of the European Ministerial group, of which he is chairman, when it starts in Paris on 31st March. Public opinion in Britain, he will point out, is now at the stage where the idea of European free trade is broadly acceptable to all political parties and many major industries. But the Government cannot guarantee that it will remain favourable indefinitely. Another reason for the Government's insistence on the "deadline" is that unless agreement on major issues is reached by then, it will be impossible to start the free trade area on 1st January, 1959, simultaneously with the European common market. That the two should begin together has always been the British aim. France is proving the stumbling block, but has not yet suggested firm alternative proposals to those put forward by Britain.

Crisis in Coal

It is typical of the slightly less belligerent attitude now being shown by trade union leaders—in view of the slight rise in unemployment and the recession news from other countries—that mineworkers' leaders are this week to discuss with the National Coal Board, at the latter's invitation, the growing deficit resulting from dwindling orders, in the hope of arriving at a joint policy to meet the crisis. Attention has been drawn to the fall in coal consumption, the accumulation of stocks and the need for economies in labour and operating costs. Three measures to meet the situation have been suggested: (1) a temporary halt in recruitment and the compulsory retirement of men aged 65; (2) the closing of unprofitable pits and measures to increase the efficiency of others; and (3) the reduction, and possible abolition, of all Saturday shifts during the summer, and a review in October of the Saturday-shift agreement.

Troubles of Shipowners

Tramp ship freight rates fell last month to their lowest level since 1952. The Chamber of Shipping index (1952 equals 100) declined from 64.9 in January to 64.0. Time charter rates at 54.4 touched a new low level. Very few vessels can hope to make a profit at prevailing rates. It is not surprising, therefore, that figures for laid-up tonnage are at their highest level since the early 1930's. Discussion on the possibilities of controlled laying-up of tramp ships is still going on at the Chamber of Shipping, but so far no official policy has been formulated. The general feeling among British shipowners is that such a plan would need to have worldwide support to have any chance of success. Greek shipowners from Britain and the United States are expected to meet shortly in London, to talk over the details of a plan aimed at stabilising tramp freight rates. It aims at a mass withdrawal of shipping, without compensation.

Commonwealth Capital Needs

The capital needs of the Commonwealth countries have been discussed by Mr. Macmillan in his address to the Royal Empire Society on impressions gained during his recent tour. He says: "Capital investment in the Commonwealth is not primarily a matter for our Government. It lies in private hands and the capital will go, according to the natural laws of commerce, to the place where it is going to earn its greatest reward. In all the Commonwealth countries, there are great schemes of development, but if British capital is to help, there must be an inducement—or at any rate no deterrent—or the capital will go elsewhere."

Lancashire and Imports

Questions and answers in the House of Commons last week about imports of cotton goods and other problems of the Lancashire textile industry have not added much to what is already known on the subject, but have demonstrated that Lancashire is not letting up in its efforts to secure some official action. The Government has apparently not abandoned its hope that negotiations with the millowners of India and Pakistan will lead to an arrangement for the voluntary restriction of imports from those two sources. The new development—the visit to Hongkong of the Permanent Secretary of the Board of Trade—suggests the persistence of a belief that the industry in that colony can be persuaded to co-operate in such an arrangement.

Brevities

The former British destroyer *Crispin*, 1,710 tons, has been transferred to the Pakistan Navy at Southampton and renamed *Jahangir*.

The giant Prudential Assurance is proposing to divide its fully paid £1 "A" shares into five 4s shares and the £1 (4s paid) "B" shares into four 5s shares with 1s paid.

The Titaghur Jute Factory Co, the Victoria Jute Co and the Samnuggur Jute Factory Co. announce that no ordinary dividends will be paid for 1957. The usual half-year's dividend on the 6 percent preference shares of the three companies will be paid on 28th March.

As acceptances are still considerably short of the minimum percentage required, the offer for Pandan Tea Co. has been increased from 6½d to 7d for each preference and from 4d to 4¼d for each ordinary. Shareholders who have already accepted will receive the increases if the offer becomes unconditional.

Splitting the atom is not the only source of chain reaction. India's immediate target for steel has a chain reaction too.

Six million tons of steel mean 7,200,000 tons of coking coal, 15,000,000 tons of iron ore, three new works and industrial townships, a new mining region, over 700 miles of railway tracks linking the steel belt.

CHAIN REACTION

80,000 tons of nitrogenous fertiliser, and immense saving of foreign exchange.

This is the starting point of new industries, more employment, lower prices, exports, and expanding markets, hence more industries, more steel . . . and it starts all over again.

The Indian Iron & Steel Co. Ltd. form a vital link in this mighty chain.

STEEL IS THE STARTING POINT

INDIAN IISCO STEEL

Use steel only when you must today, there will be more tomorrow.

CLOTH PRODUCERS WELCOME EXCISE DUTY CUTS

NEW COTTON MILLS FEDERATION FORMED

(FROM OUR BOMBAY CORRESPONDENT)

THE textile industry has been the centre of interest since the reduction of the excise duty on cloth and the inauguration of the Indian Cotton Mills Federation. The reaction to the excise duty cut has been quick. Textile shares have risen and enquiries in the local cloth market have improved perceptibly. Consuming centres in south India, Bihar, Delhi and Uttar Pradesh have shown interest in almost all qualities. Mills and stockists hope that they will now be able to dispose of their accumulated goods. Almost the first act of the Indian Cotton Mills Federation since its inauguration has been to welcome the relief in excise duty. In a cautiously phrased statement, it says: "The Indian Cotton Mills Federation welcomes the announcement by the Government of India reducing the cotton excise duties in different categories, to a certain extent. The Federation welcomes the timely step by the Government in granting the much-needed relief to the cotton textile industry of India, though in some cases it may not be sufficient to meet the exigencies of the situation." Mill circles thus seem satisfied with the concessions. A leading millowner told this correspondent that nothing more could really be expected at this juncture.

Cotton Mills Federation

The millowners associations of Bombay, Ahmedabad, West Bengal, the two organisations of Kanpur, Indore, Baroda, Nagpur and Saurashtra and Rajasthan have joined together to form the Indian Cotton Mills Federation under the chairmanship of Mr. Kasturbhai Lalbhai. The other members of the committee are: Mr. Krishnaraj M. D. Thackersey (vice-chairman), Mr. Ramnath A. Podar, Mr. D. S. Bakhle, Sir Vithal Chandavarkar, Mr. T. V. Baddeley, Mr. Nevil N. Wadia, Mr. G. D. Somani, Mr. Arvindbhai Narottambhai, Mr. Jayantilal Amratlal, Mr. Madanmohan Mangaldas, Mr. B. K. Birla, Mr. Sitaram Jaipuria, Mr. J. K. Srivastava, Mr. Piarelal Seksaria, Mr. Ramanlal Chimanlal, Mr. P. H. Bhutta, Mr. Shantilal Mangaldas and Mr. Sobhaglal Lodha. Mr. B. G. Kakatkar, secretary of the Bombay Millowners Association, will be honorary secretary of the Federation.

"The object of the Federation is to maintain close liaison between the textile industry as a whole, the Government and the consumer," says Mr. Krishnaraj M. D. Thackersey. The member associations will continue to be autonomous within their regions and in relation to local needs. Questions affecting the industry on an all-India basis will be dealt with by the Federation. In his inaugural speech, Mr. Ramnath A. Podar, chairman of the Bombay Millowners Association, has said: "Efforts to set up a central organisation for the industry were started as far back as 1950 and a draft constitution of the proposed Federation was drawn up and circulated in February 1951 to all the associations in the country. For reasons into which we need not enter here, the matter could not be pursued, although it continued to occupy the thoughts of the sponsors. The scheme was again actively taken up last November and I am happy to say that our renewed efforts to form the Federation have at last been crowned with success."

In giving the immediate reason for the formation of the Federation, Mr. Kasturbhai Lalbhai, chairman, says: "The wider aspects affecting the industry were left between the individual units and regional organisations of the industry and there is no single body to communicate between the Government and the industry. During the last 50 years, the Bombay and the Ahmedabad Millowners Associations used to take the lead in discussing the various issues affecting the industry and they presented the case of the industry to the Government and the Tariff Boards and other enquiry committees oppointed from time to time. The expansion of the industry, under the impact of the decentralisation policy of the Government of India, has taken place in what were known as the deficit areas, and industrial units in these areas have assumed economic significance. In the conditions of a growing economy which our country is facing, the problems of the industry assume an all-India character It is, therefore, fit and proper that a Federation of this nature should come into existence to serve the interests of the industry, the Government and the community."

Greater Competition

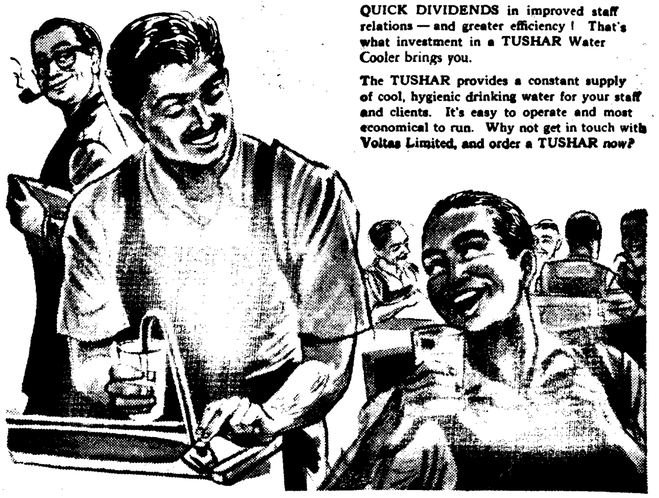
Mr. Kasturbhai Lalbhai points out that serious competition is being offered by Japan, Hongkong, Pakistan, western Europe and some communist countries in export markets. These countries are able to sell their products at attractive prices because they have the advantage of automatic looms. "Our buyers are becoming apathetic to paying increased prices and we are losing our edge in competition. The industry has been clamouring for the installation of automatic looms in replacement but somehow the issue has remained undecided because of the attitude of labour or apathy of the Government. Unless we are able to improve the quality and compete favourably, we will be ousted from foreign markets. I, therefore, appeal to the Government to pay immediate attention to this issue and allow the industry to install automatic looms and adopt more modernised techniques."

This criticism is fair even though the Government has authorised the installation of some automatic looms with the proviso that the cloth so produced would be reserved for the export market. It seems, however, that effect has not been given to the scheme because of the foreign exchange crisis. Efforts have been made to obtain automatic looms on the basis of a seven-year credit but no supplier is prepared to accept these terms. An exception is East Germany, but it appears that the industry is not prepared to experiment with equipment manufactured by an unknown factory. The stalemate, therefore, continues. It is well worth considering whether textile machinery should be purchased on a cash-and-carry basis, even if it means cutting down expenditure elsewhere. An important point to remember is that a modernised textile industry will immediately earn more foreign exchange. The investment, therefore, is likely to yield dividends in a short period. On the other hand, if no positive steps are taken the country might lose its export markets and foreign exchange. Textile cricles here feel that under the existing circumstances, it will be extremely difficult to fulfil the 1,000 million yards a year export target. Failure to promote cloth exports may cost a good proportion of the Rs. 375 crores expected from this industry in terms of foreign exchange during the second plan period.

Labour Attitude Criticised

Mr. Kasturbhai Lalbhai is correct in criticising labour for resisting modernisation schemes. It is a pity that labour unions have not recognised the fact that the prosperity of workers in the long run depends on efficient methods of production. The main fear seems to be that there will be mass unemployment following the introduction of improved techniques. But labour leaders would do well to study carefully the report submitted to the Government of India by the International Planning Team of the Ford Foundation, which said: "Many of these fears stem from the belief that rationalisation is an overnight process, throwing workers out of jobs in masses, as machines and labour-saving methods are introduced. On the contrary, rationalising industry is a relatively slow, evolutionary process, which takes years and which India should accelerate. In large part, workers by improved methods will be shifted to other jobs created by the modernisation process. Any temporary unemployment should be absorbed by setting in motion a challenging works programme; a capital investment in the human welfare of the people of the nation should be made. Without modernisation, Indian industries, which cling to obsolete equipment, are condemned to mediocrity and eventual elimination."

Discussing the wage structure of mills, Mr. Kasturbhai Lalbhai urges the Wage Board to keep three factors in mind; wherever the existing workloads in any categories are lower than those prescribed, the workloads should be raised to the prescribed limit without any increase in wages; where higher workloads are prevailing, the workers should be paid extra wages for extra workloads; and wages in the cotton textile industry should not fall out of line with wages in other industries as well as other occupations, keeping in view the regional differences.



Cotton Improves

Bullish conditions prevailed in the forward cotton market during the past week. The outlook for the spot market brightened following mill purchases occasioned by the cloth excise duty cuts. Futures prices forged ahead in spite of profit-taking at higher levels. Broadening activity in the spot market and the price increase of about five or ten points for popular varieties added to the bullish tone of the market. Calcutta operators appeared to be profit-taking at higher levels. Following earlier inactivity, the spot market was firm in sentiment. In the foreign section, African prices ruled slightly easy. It was reported that the Sudanese Government had reduced the export tax on cotton by 1.25d a lb.

"...and a bonus of goodwill to the management —for installing the 'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR *now?*

With the TUSHAR you get
- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar' WATER COOLERS
A modern must for factories, offices, schools, hotels, hospitals and colleges

Jute

RAW JUTE STEADIES AS UPCOUNTRY PRICES RISE

DRY WEATHER DELAYS NEW CROP PREPARATIONS

ALTHOUGH the gunny market has shown definite signs of easiness during the past week, fibre has been steady. The volume of business transacted by mills has not been large; it has, in fact, been much smaller than in previous weeks. The improvement in the mills' raw jute stocks as a result of recent deliveries has encouraged them to delay purchases. Nevertheless, business has been done daily, and this has given the impression of a larger turnover than is actually the case. Raw jute sellers are inclined to be reserved towards the end as indications have been given out at below the market rates. Buyers have found difficulty in obtaining their full requirements at the lower prices. The upcountry markets are mainly responsible for the change as arrivals there are very small and continued demand against sales has forced up prices. The gap between mofussil and Calcutta rates has widened. Another factor which has had a considerable influence on the upcountry markets is that the weather is unfavourable from the farmers' point of view. For some weeks, preparation of land in the jute-growing areas has been going on, but it has now been held up by the lack of rain and by the need to sow seeds on land already prepared. Except for a few isolated cases, there has been no rain in most of the jute-growing districts for about two weeks, and this fact has had a steadying influence on the market.

The gunny market has been quiet during the past week, with rates in both sacking and hessian falling back to below the I.J.M.A.'s minima. Local speculators have been particularly active and one of the main reasons for the recession is the heavy selling pressure in the fatka by operators prior to the last settling day before the official futures market opens. Mills have lost interest at the lower rates and dull conditions have prevailed. Shipping instructions so far have been good, but the bullish sentiment they usually provoke has been counteracted by the absence of large-scale business from overseas buyers. Although orders have been received daily from foreign interests, the quantities have been so small as to have had no effect. Most mills appear to be giving their full support to the I.J.M.A.'s indication of minimum prices, and whenever rates fall below those levels, they withdraw from the market.

Futures Trading

More details are now available about the commencement of futures trading on 29th March. Genuine trading in both raw jute and gunnies between members of the I.J.M.A. and their recognised brokers will be allowed to continue in the normal way for at least a year, when the position will be reviewed and a decision made as to whether the East India Jute and Hessian Exchange will handle this side of the trade also. For the time being, the Exchange will deal only in futures contracts having a tenure of three months. There will be weekly clearings, at which settlements will be made. Money deposits will have to be made by intending traders, and the rules and regulations have been so framed as to eliminate excessive speculation.

THE JUTE MARKETS

Manufactured Goods: There was heavy speculative activity at the opening of the jute goods market last Thursday and selling pressure from bull operators depressed prices. B Twills dropped by 85nP in the near position to open at Rs. 99.90, but the forward position was not affected to the same extent and lost only 50nP at Rs. 100.50. Hessians were quiet and reacted in sympathy with the speculative promptings of sacking; 40in. 10oz. recorded a fall of 20nP in all sections and opening quotations were based on Rs. 39.20 and Rs. 39.30, respectively, for the near and forward positions. Mills were keen sellers at this stage, especially for forward shipment, but there were very few genuine buyers, and most of the business was absorbed by the bazaar. Prices fluctuated within narrow limits throughout the day but the general tendency was downwards. Towards the week-end, rates again eased due to heavy selling pressure in the fatka, and at the opening on Saturday all deliveries of heavy goods were once again below the minimum prices recommended by the I.J.M.A. Hessians kept pace with the fall in sacking, but only in the near position, other deliveries remaining unchanged. After the week-end, the decline continued in sacking, with B Twills dropping a further 25nP or 30nP. But hessians, as a result of some small enquiries and local shipper covering, staged a revival and showed fractional gains. Dull conditions prevailed at this stage, with little business reported, and speculative activity was on the increase with the approach of the final fatka settlement date.

At the close, the market was firm and opening quotations were based on the following:

	Ready	April	Apl.-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	31.70	31.75	31.75	31.80
40in. 10oz.	39.25	39.25	39.35	39.45
B Twills	98.70	99.15	99.45	100
Heavy Cees (Plain)	97.50	98.75	99.25	100
A Twills	118.75	120	120.50	121.50
Liverpools	113	112.75	112.75	113
Cornsacks	99	99.75	100.25	101.50

Raw Jute: The market for raw jute was unchanged at the opening but the undertone was steady. Mills concentrated on buying small quantities daily, and in this way took about 150,000 maunds over the week. This quantity was small compared with previous weeks, but the market was quietly steady. Sellers were reluctant to reduce prices to meet some of the mills' counter-bids. They took this attitude mainly because of the continued small imports upcountry and the steady markets that prevailed there. As a result, offers of raw jute were very small and it was difficult to obtain any quantity. Imports into the main centres were negligible and there was practically no fresh business in loose jute. Transactions are restricted to inter-seller sales of assorted jute in kutcha bales against outstanding contracts for March shipment. As a result of mill purchases over the past month, sellers' stocks were considerably depleted, and they were no longer in a position where sales had to be effected to obtain working capital. Consequently, most of them were reserved and any fresh business had the effect of strengthening rates. Prices throughout the week were based on Assam jute at Rs. 24.50 to Rs. 24.75 basis Bottoms for March-April shipment, but generally sellers were looking for more.

Business was reported in Assam and Northern jute at Rs. 24.35 to Rs. 24.50 for assortment jute and Rs. 27.25 to Rs. 27.50 for Middles only. Selected Murshidabad Tossa was done at Rs. 27.50 basis Bottoms. Small lots of Daissee were bought at Rs. 27.75 to Rs. 28 basis Bottoms. Daissee mesta passed at Rs. 22.50 a maund but the quantities of mesta bought were much smaller than in previous weeks.

Arrivals in Cossipore showed an improvement and a total of 410 wagons were reported, as against 285 wagons in the previous week. Arrivals during the corresponding period of last year were 435 wagons. Sellers were reserved and there was keen demand for all arrivals, especially for Middle quality jute which was in short supply. Prices were up to Re. 1 higher than in Calcutta and were based on upcountry indications. In the Daissee markets, imports were practically nil and sellers' ideas of prices were about Rs. 1.50 to Rs. 2 above buyers' ideas. Demand increased but sellers were very reserved and the markets were firm.

On Wednesday morning, the market was firm, and opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	24.50	April
Northern	24.75	"
Purnea Desal	23.25	"
Daissee	28.50	"

Jungli	21.50	"
Bimli F.A.Q	20	"
Pakistani Cuttings	71 a bale	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th March, 1958	1,586.3	14,965.1	16,551.4
1st to 20th February, 1958	1,268.0	19,964.3	21,232.3
1st to 20th January, 1958	1,148.0	11,409.2	12,557.2
	Sacking		
1st to 20th March, 1958	16,428.0	153.6	16,581.6
1st to 20th February, 1958	19,863.4	234.5	20,097.9
1st to 20th January, 1958	15,881.0	92.3	15,973.3

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in February was good. At an estimated 70 million yards, it was 1 million yards below that for January and 8 million yards more than for February last year. U.S. burlap stocks were unchanged from January. At 240 million yards, 116 million yards were spots and 124

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE.
Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

THE FOREIGN JUTE MARKETS

PRICES OF CLOTH AND YARNS RAISED

(FROM OUR DUNDEE CORRESPONDENT)

THE local industry was not surprised when it was informed that prices of some descriptions of jute yarns and cloth have been raised. Ordinary hessian yarns have been left unchanged, for the price of C.H.W. (common hession weft) has been fixed at 15.14d a lb for 8 lbs. It is 16.29d for 8 lbs J.C.H. warp, a rise from 15.72d a lb. Furthermore, the price for 3 ply 8 lbs twist has been raised from 17.56d to 18.13d and 14 lbs carpet twist from 15.02d to 15.59d a lb. The fine yarns and small sizes remain unchanged. Cloth prices have also been raised, 40in. 10oz. hessians from 12.88d to 13.26d a yard and 8oz. from 11.01d to 11.32d, while sacking rates are up about £5 a ton, though the weft yarns are unchanged. Imported goods in the "depressed widths" (40in. 10oz., 36in. 10oz. and 45in. 11oz.) are unchanged but the prices of other widths have been increased in conjunction with the Dundee rates.

Business improved during the past week until the rise took place. Because of the steady rise in raw jute prices last month, good business was done to replenish the depleted stocks. Both spinners and manufacturers are now in a better position so far as employment is concerned. In his speech at the annual meeting of the British Jute Trade Federal Council, Mr. W. H. Valentine, retiring chairman, has said that the jute trade will benefit if certain political influences affecting it could be clarified. The home industry, with its heavy expenditure on modern plant and equipment in recent years, coupled with its new research foundations, active salesmanship and publicity, has already done much to adjust itself to modern conditions. He hopes that the difficulties will pass quickly. Referring to the problems of supply and price of raw jute, he has said: "So long as Pakistan pursues a policy of unenlightened self-interest, her economic future and the future of the world jute industry will remain uneasy and unsure." Mr. T. D. Bruce, the new chairman, has said that during 1957 the sum spent on modernisation in the jute industry was approximately £1 million, making a total in postwar years of over £10¼ million.

Prices for raw jute have risen to £113 lowest for Mill Firsts, £100 for Mill Lightnings, £88 for Mill Hearts and £73 for grade Hearts, £102 for crack Daisse-2/3 and £95 for grade, and £108 for grade Tossa-2/3 and £100 done for Tossa-4, all c.i.f. U.K., April-May. Calcutta goods have continued to fluctuate to some extent, closing at 59s 6d for 40in. 10oz. hessians and 45s 3d for 7½oz., March, 59s 9d and 45s 6d April and 60s and 45s 6d May-June, with B Twills at 151s 6d, 151s 6d and 152s 3d for the respective positions of shipment, all f.o.b., Calcutta. B Twills were 1s 6d down and 40in. 10oz. hessians 3d lower compared with the prices quoted recently.

NEW CORPORATION FOR THE CASHEW INDUSTRY

COMPLAINTS ABOUT CLOSURE OF KERALA FACTORIES

(FROM A SOUTH INDIAN CORRESPONDENT)

A TRADING Corporation for the cashew processing industry is being constituted by the Kerala Government. It will take over the cashew factories in the State. The corporation will be jointly owned by the Government, factory-owners and workers. The Government feels that this is the only solution for the many ills from which the industry is suffering, according to Kerala's Labour Minister Mr T. V. Thomas. A member of the State legislature has said that a fresh crisis is brewing in the industry because of the impending closure of the factories owned by a certain person. The latter has issued closure notices on the ground that the Government has failed to fulfil its promise concerning financial assistance on the basis of which he opened his factories last year. A few other groups of factories either remain closed or are about to be closed.

About 25,000 workers will be affected by this large-scale closure of factories in and around Quilon. The M.L.A. holds the Government responsible for not taking any action to avert the crisis or to put an end to the frequent crises in the industry. Two suggestions have been placed before the Government by workers, one for setting up a trading corporation and the other for introducing workers' co-operatives to take over the factories which are closed by the management. The Government should take an immediate decision on these suggestions to avert the impending crisis, the M.L.A. says.

The Minister has said in reply that the only remedy for the ills of the industry is a trading corporation organised on the lines of the Water Transport Corporation now being constituted. In the latter, the Government takes 51 percent of the shares, boat-owners 40 percent and workers 9 percent. The shares of boat-owners will be adjusted from the value of the boats to be taken over by the corporation. The latter will have a monopoly in the field in which it operates. The Minister says that the other proposal of workers, namely, the reorganisation of the industry on a co-operative basis, is not workable. Steps are being taken for the constitution of the corporation, and pending its formation, the Government will take measures to avert any immediate crisis.

Causes of the Crisis

The cashew processing industry is one of Kerala's major industries and it gives direct employment to about 45,000 workers in 155 factories. Most of them are concentrated in and around Quilon. Unhealthy competition, the industry's dependence on East African supplies for 50 percent of its raw nut requirements and labour troubles create frequent crises in the industry, which has earned the notoriety of being the "sick man" among the west coast industries.

Slump in the Coir Industry

The coir industry's problems have recently been discussed at length in the Kerala legislature. Several members have stated that it is in the grip of a severe slump. Furthermore, workers' earnings have gone down by 60 percent or 65 percent, so much so that near-famine conditions prevail in the State's coir belt where nearly 1 million people depend on the industry. The most pressing problem facing it is to find more markets for its goods, both in India and abroad. Some members have suggested the setting up of an export trade corporation which could enforce quality control and undertake the marketing of coir goods abroad. One member, who was formerly a Minister, has pointed out the difficulties in controlling the price of husk, but several others have demanded price control.

The Industries Minister has said in his reply that the Government recognises the magnitude of the problem. But it is doing whatever is possible to improve the condition of the industry. He has welcomed the suggestion for an export trade corporation. The Government is trying to recognise the industry on a co-operative basis although some of the existing co-operatives are not functioning properly. The Government has decided to improve their working. The financial assistance received from the Central Government will be used in the best interests of the industry as well as the large number of workers who depend on it. The Minister is unable to appreciate why there should be difficulties in controlling the price of husks. He has said that the Government cannot allow husk dealers to exploit workers by raising prices to unreasonable levels. In his opinion, husk dealers are responsible to a certain extent for the present crisis in the industry. He has further said that the coir purchasing scheme has been kept in abeyance except in one or two centres, for prices in the open market rose above the floor levels fixed by the Government. The latter allotted Rs. 10 lakhs for this purpose, out of which a sum of only Rs. 4 lakhs has been spent so far. The Minister agrees with the argument that the industry is overloaded with labour and to reduce it the Government is considering certain schemes to start other industries in the coir belt.

New Industrial Relations Bill

An industrial relations bill which will be the first of its kind in India, is being prepared by the Communist Government in Kerala. The State Labour Minister Mr. T. V. Thomas, believes that it will ensures industrial peace in Kerala for at least three years. He says his Government has amended the draft rules under the Plantations Labour Act incorporating medical, educational and recreational facilities which were omitted by the previous Governments. Furthermore, cardamom estate workers in the State will be given the protection of minimum wages from 24th March, 1958. The Minister claims that plantation workers have been given more facilities by the Communist Government than by any of its predecessors.

Minimum Wages for Cardamom Workers

The minimum wages fixed for cardamom estate workers by the State Government are as folows: men Rs. 1 72 a day, women Rs. 1.31 a day and adolescents three-fourths of the above rates. These wages have been fixed on the recommendation of the minimum wages committee which was appointed by the previous Government. Minimum wages for tea, coffee and rubber estate workers were fixed five years ago. The wage rates now fixed for cardamom workers compare favourably with those for other estate workers; but they are very high compared with the existing wages in the Vandiperiyar Munnar area where the largest concentration of cardamom estates is found. Kerala has about 90,000 acres under cardamom cultivation and her annual harvest is about 1,600 tons. One lb of cardamom is now sold at Rs 8 to Rs. 10. Unlike others, cardamom plantations are not allowed to change hands without the previous consent of the Government, since the lands are only leased out for cultivation by the latter and the proprietory right to the land is vested with it. This has been made clear by the Revenue Minister in the State Assembly while replying to a question.

Tax Receipts from British Plantations

The Kerala Government received from British plantations Rs. 48.6 lakhs as land tax and Rs. 20.9 lakhs as agricultural income tax during the year 1956-57. Figures on the total area and investment are not available. The Finance Minister has given this information in reply to a queston in the State legislature.

Regulated Markets

As part of its scheme to arrest the decline in prices of agricultural products, the State Government is taking measures to open regulated markets for pepper, cashew, ginger, lemongrass oil and cardamom. Quality control for the first, third and fifth is also to be introduced. This will ensure that only quality goods are exported to foreign markets. A laboratory in Cochin functions under the control of the Central Government. It checks the quality of lemongrass oil which is exported from India.

Diet Survey

The Statistics Department in Kerala is now conducting a diet survey among plantation workers in the Munnar area at the instance of the Central Government.

Supplementary Import Quotas for Corpa

The Central Government's recent allocation of Rs. 61 lakhs worth of supplementary quotas for the import of copra has had a moderating influence on oil prices. Oil prices declined to Rs. 591 a candy at Cochin from Rs. 620 a candy. Later there was an improvement and the latest quotation is Rs. 603 a candy.

COCHIN TEA SALES

At Dust Sale G, 525.000 lbs of tea were on offer. There was a strong general demand. Prices advanced irregularly by 5nP or 10nP all round.

NUCLEAR PROPULSION FOR SHIPS NOT YET AN ECONOMIC PROPOSITION

Nuclear propulsion for ships is a long way from being an economic proposition for their owners, says the P. and O. group in its annual report, in replying to criticisms that British shipping is technically unenterprising and does not take advantage of such developments. Criticism of this nature, it says, sometimes clouds the issue by lumping the shipowner and the shipbuilder together as though they were a single interest. Shipowners have never thought themselves qualified to initiate technical development of the machinery they use. This is not to say that they are uninterested in it, or that they do not do all they can to improve designs and ideas by applying the knowledge and experience they have as users. The engine builder is the expert in producing the most economical and reliable machinery. The shipowner's job is to operate his vessels at a profit, the machinery he uses being only one of the many factors in his success or failure. There is sometimes a tendency to pay too much attention to the value of technical progress and novelty for its own sake. Not enough importance is attached to the economy and reliability of developments in relation to the work they are called upon to do. It is possible to operate a ship by substituting nuclear fuel for oil, but developments must go a great deal further before this becomes economic and, therefore, attractive to commercial shipping. Not only has the best type of reactor not yet been developed, but the many operating hazards have hardly yet been assessed, even in the laboratory stage. Nuclear fuel can at present be used only as a substitute for oil to produce inefficient low-temperature steam.

Commodity Markets

BRITISH TEXTILE REVIEW

ADVANCE IN DESIGN AND PROCESSING

THE interests concerned with particular fibres do not always see the consumer's view on the competition among them. At Britain's Textile Show at Earls Court, London, in February, the competition was more than usually obvious. It was equally clear that it was bringing great benefits to consumers. Most visitors agreed that the standard of products, whether of traditional or of newer fibres, or of blends of both was so much improved that it could expand demand for textiles in general; and British producers are modestly confident that, if the opportunities are open, they can increase their share of the world trade in textiles, at least in the higher quality range. When the President of the Board of Trade, Sir David Eccles, opened the Fair, he mentioned that he had been congratulated because at the International Fabric Exhibition last June, British exhibitors won more awards than those of any other country except the United States: and there is no doubt that the British Textile Show last month presented a further advance in design.

There are two facets to this development. Cotton and wool, threatened by the newer fibres, are being processed more skilfully and are being used more imaginatively. Rayon, threatened by the true synthetics, is presented in improved forms, notably triacetate. The synthetics themselves—which, it must be remembered, have very large capital outlays to justify—are in the aggregate rapidly increasing their small share of the total market, but they have to compete with one another as well as with established fibres. (Chemstrand's "Acrilan" was prominent at the Textile Show this year: but it is strongly challenged by Courtaulds' acrylic "Courtelle", and both will be in vigorous competition with I.C.I.'s "Terylene".) The result of all this competition is a variety of materials such as Britain has never before seen—enlivened in some cases by such specialities as "Lurex" metallic yarn. And these materials—this is the second facet—are being used in much more imaginative designs.

Advance of Fashion

In the choice of his attire, the British male is surely the most conservative in the world, but not even he can stop the advance of fashion. It is suggested that, the British female having borrowed masculine styles for informal wear and having brightened them, these brightened styles were reconverted to masculine use, at least for casual occasions. One result of the change is an extension of the male wardrobe to include more clothes for different occasions. Another result, potentially more important, is an extension of the range suitable for export. "I can see", said Sir David Eccles, "that we are becoming more internationally minded in fashion, and that the days when British clothes sold well because they were always the same are probably over."

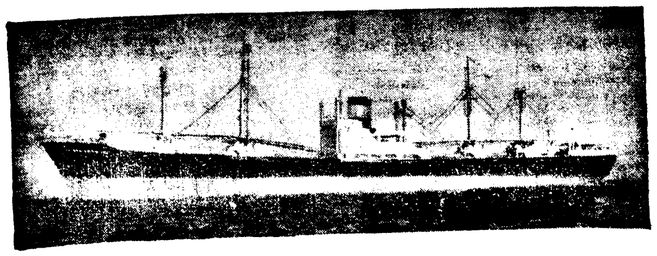
Emphasis on Exports

British firms are not, however, content to treat the overseas markets as a spillover from the home market. Especially in light suitings and shirtings, many of them are designing specifically for export, with particular attention to the north American, African, and (on the assumption that the European free trade area will somehow be brought into being) the European markets. Methods of delivery, too, are being restudied. One firm, Steegan (a member of the Moygashel group), sent to Africa last month the first consignment of men's wear in a new kind of crate in which the clothes can be hung as in a wardrobe and freighted by air: the crate being returned—or, indeed, retained for use as a wardrobe. The speed with which goods can be got into the shops by such means, a matter of days instead of weeks, is considered fully to justify the additional expense.

New Blends

The Textile Show was a composite affair, the largest of its kind ever held. It comprised the British Cloth Fair, the National Men's and Boys' Trade Fair, the National Household Textiles and Soft Furnishings Fair, and the National Carpet, Linoleum and Floor Coverings Trade Fair. The new trends in materials and designs were clear in every section. A few examples will serve to illustrate these. There are new developments in blends containing "Terylene". It is claimed that last year sales of "Terylene" wool sports trousers exceeded sales of trousers made from any other blend or fibre: that "Terylene" wool suits became a commonplace item in nearly every men's outfitter's range; that more 100 percent "Terylene" ties were sold than those made from any other fibre. Many of the best known manufacturers of cotton goods have introduced "Terylene" cotton fabrics into their range, and widening use of such fabrics is expected to be an outstanding development of the current year. These fabrics are generally 67 percent "Terylene" 33 percent cotton—a blend suitable for raincoats as well as shirts. Raincoats made from 55 percent "Terylene" and 45 percent wool are also becoming widely available. "Terylene" wool suitings and sports coats are generally 35 percent "Terylene" and 65 percent wool: a blend of 55 percent "Terylene" and 45 percent worsted is favoured for trousers. It is evident however, that silk, mohair, and Irish linen, as well as man-made fibres, are strengthening their position in the trade in lightweight materials.

In household textiles "Lurex" is a special feature, embodied in furnishing fabrics, net curtains, towels and quilts. "Terylene" seems to be dominant in lace furnishing nets, but cotton is making a comeback in this range. In curtaining, however, not merely for bathroom or kitchen but also for dining room or lounge, there is a perceptible tendency to use plastics in place of any kind of textile: in appearance, the new plastics are almost indistinguishable from ordinary fabrics. In many household textiles, notably sheets, nylon has made rapid progress.



Superiority of Nylon

Nylon is also remarkably successful in upholstery fabrics and carpeting, either on its own or in blends. All-nylon fabrics are moth-proof, non-inflammable, and easily cleaned, and, though strongly resistant to wear, the new textured yarns are warm and soft to handle. In blended fabrics—nylon-viscose, nylon-cotton, nylon-wool—the nylon is thrown to the surface of the cloth to achieve its maximum effect. Blends of nylon and rayon are transforming the carpet trade; for tufted carpeting can be made 20 times as quickly as traditional carpeting, and nylon-rayon tufted carpeting has been shown to be six times as hard-wearing as carpet with all-rayon pile. Newer still is a tufted carpet with an all-nylon pile, which seems to be almost indestructible by wear.

The emphasis this year is, certainly, on newer fibres and on serviceable products. But some qualifications are necessary. The Scottish Woollen Publications Council, especially, has shown what a high-city quality branch of the wool industry can do with its traditional raw material; it has shown a wide range of colour and texture in wool fabrics and has proved that traditional-style cloth does not necessarily lag behind in fashion. As for the whole textile industry's "new look", it is only sensible to point out that there is much under-employed capacity in the industry, and that a more aggressive appeal to consumers, at home and abroad, is the only way to recover trade.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.3 percent to 105.0 during the week ended 8th March, 1958, compared with 104.7 (revised) for the previous week. The index was higher by 0.9 percent when compared with the corresponding week of the previous month but was lower by 1.0 percent than that of last year. The prices of onions (+16%), milk in Bombay (+15%), rice in Nandgarh (+14%), fish (Pomfret) in Bombay (+12%), eggs in Bombay (+12%) and in Madras (+8%), oranges in Calcutta (+11%), gur in Madras (+10%), ghee in Khurja (+7%), masur in Bombay (+6%), mustard oil in Purnea (+5%) and bajra, urad, cashewnuts and gingelly oil (+1% each) recorded an advance while those of fish (Hilsa) in Calcutta (−25%), rice (new crop) in Nandgarh (−16%) and in Marcara (−5%), arhar in Patna (−15%), potatoes in Mandi (−11%), eggs in Calcutta (−9%), gram in Patna, chillies in Madras and cloves (−8% each), jowar in Haspet (−7%), wheat in Chandausi and barley in Jaipur (−5% each), tea (−4%), and ragi, coconut oil and coffee (−1% each) witnessed a decline and in the result the index for Food Articles rose by 0.2 percent to 101.6 compared with 101.4 (revised) for the previous week. The index for Tobacco remained stationary at the earlier week's level of 94. In spite of a rise in the price of castor oil in Bombay (+6%), the index for the Fuel, Power, Light and Lubricants group stood unchanged at its previous week's level of 114.8. The index for Industrial Raw Materials moved up by 0.5 percent to 110.4 compared with 109.8 (revised) for last week due to a rise in the prices of avaram bark in Madras (+8%), castorseed (+4%), raw jute (+2%) and raw cotton, groundnuts, linseed, gingellyseed and cottonseed (+1% each). The prices of galnuts in Salem (−5%), raw wool (−3%), lac (−2%) and rapeseed and copra (−1% each), however, showed declines. Higher prices of rayon yarn (+5%) and aluminium circles (+3%) raised the index for Intermediate Products by 0.4 percent to 106.4 compared with 106.0 (revised) for the previous week although the

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to February 1958. As compared with January, the February Index for Food shows a drop of 1 point, while those for Clothing, Miscellaneous and Fuel and Lighting remain unchanged at 544, 285 and 281 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 427 points during February 1958.

Compiled and constructed by the Statistical Department of "Capital"

DEVELOPING ALCOHOL-BASED INDUSTRIES

EXPERT BODY STRESSES NEED FOR HIGHER PRIORITY

THE Government of India has accepted the recommendation of a committee of experts that the development of industries such as synthetic rubber, D.D.T., pharmaceutical products and acetate rayon, which are based on industrial alcohol, should be encouraged on a priority basis. The committee, of which Dr. A. Nagaraja Rao, Chief Industrial Adviser, Central Ministry of Commerce and Industry, was chairman, was asked to study the present state of the alcohol industry and recommend measures for its development. It has estimated that the industrial requirements of alcohol will increase to 31 million gallons a year, from the present consumption of 3 million to 4 million gallons a year. This estimate is based on the expected development in certain alcohol-based industries and the targets fixed for them under the second plan.

As for using alcohol in admixture with petrol, the committee is of the opinion that it will be necessary to continue to use alcohol as an admixture in order to provide a flexible demand for the product. It has estimated that about 12 million gallons a year will have to be utilised as power alcohol. The Government has accepted this recommendation. The suggestion that a development council for the fermentation industry, including alcohol products based on it, should be set up, has also been accepted by the Government.

Export Prospects

The committee has indicated the possibility of building an export market for a few million gallons of alcohol a year if its price is pegged at a level recommended by it. The Government has accepted the view that suitable assistance should be given in relation to the excise procedure, availability of tank wagons and storage at ports to encourage exports.

In the committee's view, the total production of alcohol from the available raw materials—molasses and *mahua* flowers—will be of the order of 46.8 million gallons a year. This means that the production capacity should be of the order of 52 million gallons a year. The recommendation that the basic ex-factory price for alcohol used as an industrial raw material should not be higher than 14 annas a gallon is being examined by the Government. In the committee's view, an ex-sugar factory price of 4 annas a maund for molasses will be reasonable. Since the latter will continue to be the principal raw material for the production of alcohol, it feels that control over its price and distribution is essential. This recommendation is also being examined. Some other recommendations, particularly those relating to the mechanism of control over the prices and distribution of molasses and alcohol, revision of excise laws and transport facilities are still being examined by the Government.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IMPROVE

AT Sale No. 38, held on 24th and 25th March, offerings at the Export auction amounted to 58,418 packages. There was a good general demand with internal operators lending more support than in recent weeks. The strongest feature of the sale were the bright liquoring teas and black Fannings of all descriptions and these were 2nP to 4nP dearer. There was also good support for "teas for price" while plain brokens and medium teas were fully firm and sometimes dearer. Medium Assam B.O.P.'s and O. Fgs. came in for good demand and sold above valuations. C.T.C. teas, particularly those with seasonal quality, were keenly bid for and were dearer. The poorer sorts however did not receive the same attention and were often 10nP easier. Brown Doars were 4nP to 6nP easier, except those with quality which were dearer. Stylish whole leaf grades and B.P.S. were well sought after and sold above valuations, while the ordinary Pekoes were about steady. The stylish flavoury Darjeelings on offer sold well as also the tippy teas.

	Quotations 1958 Rs.	1957 Rs.
Clean Black Pekoe	2.25 to 2.30	
Plain B. P.	1.38 to 1.42	
Medium B. P.	1.52 to 1.56	
Best Assam C.T.C. B.P.	2.60 to 2.80	
Plain Fannings	1.58 to 1.62	1 10 6
Medium Fannings	1.74 to 1.78	
Best Assam C.T.C Fgs.	2.70 to 2.90	Not quotable

At the Internal Sale, a total of 18,896 chests of Dust was on offer. There was a good general demand for most descriptions which improved as the sale progressed. Orthodox descriptions from all districts with a clean black leaf appearance were well supported and were frequently up to 6nP dearer. The poorer sorts in this category, however, were a weak feature and were generally easier. There was less support for C.T.C. Assams than in recent weeks and the best liquoring grades were up to 20nP and the medium sorts up to 10nP easier.

	Quotations 1958 Rs.	1957 Rs.
Medium Dooars Dust	1.58 to 1.60	1 10 0 to 1 11 0
Medium Assam Grainy Dust	1.60 to 1.62	1 11 6 to 1 12 0
Medium Assam C.T.C. Dust	1.85 to 2.05	2 0 0 to 2 2 0
Best Assam C.T.C. Dust	2.75 to 3.05	2 12 0

There was a strong general demand for 4,780 chests of Leaf on offer and prices were generally dearer. C.T.C. Assams were a strong feature of the Sale.

FREIGHT MARKETS QUIET

THE chartering section remained quiet in the freight markets during the past week, except the South African markets where three vessels were fixed for maize; this is the first business concluded on that market for some time. The odd fixtures made in the Pacific grain trade paid the old rate of 60s f.i.o. for discharge in the east coast of India, option west coast, at 62s 6d. Burma rice shippers paid at the steady rate of 25s f.i.o. for Colombo discharge. In the ore market, 7,200 tons 10 percent ilmenite, 24th to 29th March Koilthottam to New Orleans paid $(U.S.) 8.40. Mormugao to the U.K. 9,500 tons 10 percent iron ore was fixed at 48s f.i.o. Other markets for ore or coal from India were lifeless.

LINSEED RISES

A very firm tendency prevailed and a further rise was recorded in all sections of the linseed market during the past week because of the shortage of supplies and of the firmness in mustard and groundnut. The movement of new crop seeds was very slow and Calcutta offerings were meagre. Ready supplies were negligible. Some interest was shown in linseed oil by Calcutta shippers but sellers were reserved and only small business resulted. Linseed oil abroad improved to £107, with Indian shippers coming nearer into line. Latest quotations were as follows: ready March Rs. 23-4 a maund and April-May Rs. 23-2 a maund.

HIDES AND SKINS FIRM

The market was firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 18th March and 24th March, 1958)

Cowhides : Wet salted 10,500 pcs. on the basis of Rs. 10.87 to Rs. 11.87; Wet salted (Slaughtered) 15,600 pcs. on the basis of Rs. 13.50 to Rs. 25.

COMPANY AND PUBLIC NOTICES

THE SOORAH JUTE MILLS COMPANY LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, at 8, India Exchange Place, Calcutta, on Wednesday the 7th May, 1958, at 2-30 P.M. for the following purposes :—

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st December, 1957.

(2) To declare Dividends on Preference and Ordinary Shares.

(3) To elect Directors in place of those retiring by rotation.

(4) To appoint Auditors and to fix their remuneration.

The Register of Members and Share Transfer Books of the Company will remain closed from the 24th April, 1958 to the 7th May, 1958, both days inclusive.

By Order of the Board,
HINDUSTHAN INVESTMENT CORPN. LTD.,
Managing Agents.

Calcutta,
Dated, 19th March, 1958.

N.B. (i) The Directors have recommended dividends on Preference Shares @ 7% per annum (free of income-tax) and on Ordinary Shares @ Rs. 1.50 nP. per share (free of income-tax).

If dividends on shares as recommended by the Directors are approved at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 7th May, 1958, or to their order or to their bankers. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders by the 31st May, 1958.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE is hereby given that the 32nd Annual General Meeting of the Company will be held at the Registered Office at "Dunlop House" 57B. Free School Street, Calcutta, on Friday the 18th day of April, 1958 at 11 a.m. for the following purposes :—

1. To consider the Profit and Loss Account for the year ended 31st December, 1957, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in place of those who retire by rotation.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolution which will be proposed as an Ordinary Resolution, namely :

"That Mr. Eric Henry Morris be and is hereby appointed a Director and Deputy Managing Director of the Company with effect from 18th April, 1958 upon the terms and conditions presently governing his employment and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him."

By Order of the Board,
P. B. SEN GUPTA,
Secretary.

Dunlop House,
57B, Free School Street,
Calcutta,
24th March, 1958.

NOTE :—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 7th April, 1958 to 27th April, 1958, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 7th April, 1958.

THE PREMCHAND JUTE MILLS LTD.

NOTICE

NOTICE is hereby given that the Forty-ninth General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 81, Sovabazar Street, Calcutta, on Friday, the 11th April, 1958, at 11-30 a.m. to receive the Directors' Report and to pass the following Resolutions :—

As an Ordinary Resolution : (1) To pass the Audited Balance and Profit & Loss Account of the Company for the year ended 13th April, 1957.

As an Ordinary Resolution : (2) To elect Sri S. K. Ghosh who retires by rotation as a Director of the Company and to appoint the remaining Directors.

As an Ordinary Resolution : (3) To re-elect Messrs. Lovelock & Lewes as Auditors of the Company on their previous remuneration.

SPECIAL BUSINESS.

To consider and if thought fit to pass with or without modification the following Resolution to be proposed as a Special Resolution :—

1. To resolve that the Age Limit for Directors under Section 280 of the Companies Act 1956, shall not apply to Director S. K. Ghosh.

Share Transfer Books of the Company will remain closed from the 3rd April to 11th April, 1958, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member.

Explanatory Statement for Special Resolution No. 1.

Sri S. K. Ghosh, Director of the Company, has now attained the age of 65 years. In view of his long standing association with the Company, his services to the Company is indispensable. It is, therefore, recommended that a Resolution be passed declaring that the age limit of Directors provided under Section 280 of the Indian Companies Act 1956, shall not apply to Director Sri S. K. Ghosh. Special Resolution No. 1 is intended to provide for it.

By Order of the Board,
P. N. ROY,
Director.

81, Sovabazar Street,
Dated, Calcutta,
The 15th March, 1958.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SAVINGS AND THE BANKS

GROWTH IN HOARDING AND CASH TRANSACTIONS

THE rise in bank deposits has been among the more encouraging features of monetary activity during the past year. Less than ten months ago, acute anxiety prevailed that economic expansion would suffer because the banks' deposit resources were too small to enable them to meet the large demands for advances from trade and industry. Since then, a variety of factors have supervened to ensure that not only are the monetary requirements of the busy season increasing at a much slower pace than usual, but also that banks' resources are growing at a rate fairly adequate for the needs that are likely to arise. Mr. C. H. Bhabha, chairman, has told the annual general meeting of the Indian Banks Association in Bombay that the scheduled banks have striven hard to attract savings. As a result, although the note circulation increased by only Rs. 40.72 crores during 1957, their deposits rose by as much as Rs. 293 crores, to reach Rs. 1,405 crores at the end of the year (there has been a further growth since). It is true that special factors have contributed to the rise. For instance, about Rs. 123 crores of the Rs. 293-crore increase was accounted for by the State Bank: a substantial proportion of the former figure is represented by the U.S. rupee counterpart funds and by the rupee accounts which various countries have opened under bilateral trade agreements. But even so, the rise in deposits, of the State Bank as well as of other scheduled banks, signifies a fairly creditable achievement.

But it is not an achievement which offers scope for complacency. Already far too large a proportion of the money supply remains outside the banking system. Mr. Bhabha reports that, in spite of the recent increase in deposits, the tendency to hoard currency and bullion, and the preference for cash transactions, is growing at a "very disturbing" pace. This is happening not only in small towns, where the shortage of banking facilities might be considered to have encouraged it, but also in cities and large towns, where banking facilities are fairly adequate. The reasons underlying the tendency are not difficult to discern. The sharp fall in investment values over the past couple of years, brought about by the Government's fiscal and general economic policies, has shaken confidence. To protect themselves from capital depreciation, savers are going in more and more for bullion and currency hoarding. The preference for cash transactions is directly connected with the growing arbitrariness of an income tax administration which finds itself poorly equipped for its heavy new responsibilities.

No less disturbing than the growth of private bullion and currency hoards is the fall in voluntary savings that has featured the economy in recent years. This is partly a consequence of inflation; as Mr. Bhabha points out, the purchasing power of the rupee today is 28 percent less than what it was a mere ten years ago. Taxation, too, has impinged heavily on the class of people who were accustomed to saving and who devoted their surpluses to productive investment. Now, as Mr. Bhabha says, savings with individuals "seem to be a thing of the past". It might have been expected that the shortage would be bridged partly by corporate savings, but these have also been reduced by heavier taxation and rising costs, especially of labour. Governmental savings meanwhile are being steadily soaked up by the growth in administrative expenditure. Mr. Bhabha makes an interesting criticism of the socialistic attitude which connects saving with the Government rather than individuals, by saying that "through this process an increasing number of individuals feel the sacrifice without experiencing the satisfaction of savings."

Perhaps the most impressive example of how savings have suffered is to be found in the small savings schemes of the Government itself. Progress there has been deplorable. Mr. Bhabha points out that during 1956-57, the total amount collected in the form of small savings was only Rs. 68 crores, as against an expectation of over Rs. 100 crores. During the first nine months of 1957-58, the figure shrank to hardly Rs. 30 crores. This happened in spite of the fact that many important incentives have been given to small savers. The rate of interest and other terms have been fairly attractive. Governmental small saving schemes, furthermore, have had the discriminatory advantage that "the deposits in postal savings banks as well as investments made in National Plan Savings Certificates and other specified Government securities are exempted not only from income and supertaxes but also from the recently enacted, onerous wealth and expenditure tax legislation. In contrast, no exemption is granted to those citizens of the country who keep their savings with commercial banks." Officials tend to give the impression that the failure of the small savings schemes is due to organisational deficiencies and can be remedied if greater administrative efforts are made. This is only partly true; State Governments, which are to some extent responsible for the organisation of these schemes, have during the past year had a much greater incentive to ensure their success because the proportion of the collections promised to most of them is greater. Yet, as the results show, any extra efforts they may have made have mattered little.

For the banks, one of the more puzzling developments of recent months has been the Reserve Bank's attempt gradually to suffocate the bill market scheme. The growing success of the scheme was one of the major boasts of the authorities in earlier years. It was a boast which the banks warmly approved of, since the scheme provided them with a medium of attractive, self-liquidating investments, and thereby enabled them to serve trade and industry more adequately. Mr. Bhabha says that the scheduled banks have recently suffered a random cancellation of limits under the bill market scheme. Since "at present there is no properly organised bill market, and a long way has to be traversed to increase the velocity of circulation of money through such instruments, it is unfortunate that the good beginning that was made in this direction in the money market of the country seems to be losing ground now." The Reserve Bank has cancelled limits under the scheme, presumably as part of its anti-inflationary policies of selective credit control. The cancellations seem to have been not only arbitrary but also irrational, since it is unlikely that the funds obtained under the bill market scheme were in any true sense inflationary; they could not, for instance, have been used for speculation, to clamp down on which was the primary aim of the selective credit control policy. The nurturing of a well-organised bill market would provide a useful adjunct to the banking system, and it is a usefulness which will increase as economic expansion is resumed. It is unfortunate that the official authorities, in fighting an inflation for which they themselves are primarily responsible, should have short-sightedly pruned a feature of banking growth which promised to prove of steadily increasing utility.

TAX RELIEF FOR TEA

THE fact that the tea industry has succeeded in convincing the Government of India of the need for a measure of tax relief, must be counted a major achievement. On the Government's side, it represents a triumph of common sense and realism. Even allowing for the fact that the all-time record exports of 1956 were due to a fortuitous combination of circumstances which could not be expected to last, the steep fall in 1957, both in quantity and value, drew pointed attention to the threat to India's position in the world market. The world as a whole is tending to grow more tea than it wishes to drink; competition is, therefore, becoming more intense. Hopes of international agreement on the restriction of output are remote. Heavy taxation and the burden of welfare legislation in India are a subsidy to competing countries. Political disturbances in Indonesia have restricted production there but the prosperity of the Indian industry should be based on something less precarious than the difficulties of others. Ceylon has already reduced the export duty on inferior teas, but the effect has been, in part, offset by a simultaneous increase in the duty on high-grown varieties. East Africa is reported to be developing tea cultivation at what is, from India's point of view, an alarming rate.

The need for relief is urgent, but it is to be hoped the value of the concession the Government is devising will not be limited by its being applied only to common teas. Apart from the almost insurmountable difficulties of working out a method of tax relief that would apply to common teas only, the principle itself is open to strong objection. It has been the constant endeavour of enlightened producers' organisations to improve quality by insisting on the need for finer plucking and for the destruction of tea waste and residual teas on the gardens. If common teas are given the benefit of a tax concession which is denied quality producers, or what is worse, if quality teas are subjected to further burdens to subsidise common teas, it would amount to rewarding those producers who have debased quality and penalising those who have tried, at considerable sacrifice, to produce the best tea they can, within the limits imposed by soil and climate. As Mr. C. D. Wilson said at the annual meeting of the Indian Tea Association: "Quality is not merely an accident of location, but is the reward of long years of patient husbandry and constant attention to details, in field and factory." It would be unfortunate if, in the name of relieving the needy, the tax policy were to encourage producers to ignore quality and flood the market with cheap, rubbishy teas. To quote Mr. Wilson again: "If we are to recruit and hold new consumers, it will not be by putting inferior goods on the market at tempting prices, but by an endeavour to sell good teas as cheaply as our obligations permit."

It is true that there are certain areas, Cachar, for example, where soil and climate are such that even the most assiduous care cannot produce tea of high quality. These cases deserve consideration and sympathy. But their prosperity is bound up with that of the tea industry in general and they will share in any measure of tax relief granted to the industry as a whole. This seems a better way of meeting their difficulties than the vicious principle of denying relief to, or even adding to the burden on, those sections of the industry which are doing most to give consumers of tea, all over the world, the finest value for their money.

The practical difficulties involved in devising tax relief that will apply only to common teas, are enormous. An *ad valorem* duty is the most obvious method of relating a tax to the quality of the taxed commodity. But the fact that it would almost certainly mean that relief to common varieties would be at the expense of an increased burden on quality teas, ought to be sufficient reason for its being rejected. There is the added difficulty that, being based only on price, it takes no account of costs of production. Clearly, ability to pay, in the case of a business enterprise, depends on the margin between cost and price, not on price alone. The most striking example of the injustice that would result from disregarding this principle is provided by Darjeeling. There, selling prices are relatively high, but so are costs of production, and profit margins are consequently low. It would be most unfair if preoccupation with common teas led

to Darjeelings being denied tax relief on the specious ground that they are not common and do not, therefore, deserve relief. An *ad valorem* duty would, in addition, face the complex problem of valuing teas for the purpose of assessing export duty; bidding at the auctions would then be affected by the knowledge that an increase in price would attract an increased duty.

Other devices for relieving common teas are equally open to objections. The plan for a zonal export duty, by which a separate duty would be fixed for tea grown in each district according to the average price of that district's tea at the Calcutta and Cochin auctions, is unacceptable because there is no region where only common teas, or only quality varieties, are grown. In fact, almost every garden produces some common teas. The zonal duty would be unfair to Darjeeling, unless some special provision were made for the high costs of that area. The Ceylon system, in which all teas selling below a certain price would be given a rebate in export duty equal to the difference between the sale price and that predetermined norm, or a variant of this system, by which teas selling for less than the standard price would be granted a flat rate of rebate or even exemption from export duty altogether, are all likely to create confusion in the sale room when bids approach the standard price.

Mr. Morarji Desai has given the impression that the Government is determined to ensure that any relief granted should apply exclusively to common teas. There is still hope that the virtual impossibility of devising a satisfactory method of doing this will induce a more flexible approach, and that the concession will take the form of a general reduction in the rates of export duty irrespective of quality. In the long-term interests of the tea industry as well as the economy as a whole, such a general concession is greatly to be preferred.

DARK SPOTS IN ENGINEERING

THE remarkable expansion which has featured the engineering industry in recent years is slowing down. During the past few months, the production of a number of items, such as hurricane lanterns, motor vehicles and bicycles, has fallen. The sectional falls may be disguised by the production total for engineering products during 1957 being higher than during the previous year; but it is the trend which has set in since the second half of last year which is highly significant. Essential raw materials, particularly steel, have run into short supply because of import restrictions dictated by the foreign exchange stringency; this is primarily responsible for the slowing down of activity. The address from the chair delivered by Mr K. J. Cleetus at the annual meeting of the Indian Engineering Association last Friday suggests that acute anxiety is spreading. Many concerns "are experiencing serious difficulty, and partial closure of their works is becoming inevitable and imminent." Retrenchment has already taken place in certain cases, and Mr Cleetus says that "the employment situation in and around Calcutta in the engineering industry is deteriorating slowly and steadily." Vigorous efforts, therefore, have to be made to ensure that the industry gets the raw materials it needs, if the unpleasant consequences of unemployment are to be avoided.

How acute the raw material shortage is may be judged from two examples which Mr Cleetus quotes. An important concern, the steel demand of which was duly certified by the Development Wing, has been given an import licence for only 25 percent of its requirements. "Unless further import licences are granted to this concern, it will be faced with closure in the middle of this year." For another important unit, components, consumable stores and certain other raw materials have been licensed in the normal way, but the steel licences it has been given cover only about 13 percent of its normal requirements. Mr Cleetus justifiably asks how "the country can afford licences for some materials on a certain level of production and then not be in a position to grant licences for the steel required to attain that production." The vagaries of the import licensing administration are contributing not a little to the industry's difficulties, and since there is little likelihood of import restrictions being relaxed substantially for some years yet, the outlook is discouraging. In any case, even if the steel shortage eases after the three new units at Bhilai, Rourkela and Durgapur start production, the scarcity of other essential raw materials is likely to remain. The unfortunate consequences of overambitious planning may soon be seen in bolder relief in the engineering industry. It has invested much in expansion already, and certain schemes to increase capacity which were framed earlier are still being executed. Costly machinery has been imported and installed. Considerable sums of money have been spent on recruiting and training technical personnel. If all this expenditure is to be justified and resources are not to be wasted, greater stability in the Government's policies is necessary. During the past year, that stability has been badly lacking.

Mr Cleetus reports that certain sections of the engineering industry have begun to face consumer resistance. If development in the country generally slows down as a result of the second five year plan being chopped and changed, competition is likely to grow in intensity and extent. That would, perhaps, be no bad thing, but it emphasises the need to keep down production costs. Much has already been done to remove the heavy backlog of repairs and renewals, but re-equipment and modernisation are constantly necessary in order to maintain efficiency. In many cases, machines are being over-worked, with the result that wear and tear are accelerated. Technological progress has also quickened the rate of obsolescence. Replacement and modernisation costs are heavy, but the Government's taxation policies leave producers with very little money to meet these costs. Frequently, greater efficiency cannot be achieved because of the short-sighted official and labour attitude which opposes the rationalisation of production. Workers have yet to realise that their true interests lie in encouraging the use of more and better machinery, supporting better organisation, and doing harder work. Only thus can costs be brought down and consumption increased.

IMPORT POLICY FOR APRIL-SEPTEMBER

THE Government of India has announced its import policy for the six-monthly period April to September 1958. It was not to be expected there would be any significant increase in quotas considering the continued foreign exchange difficulties. A fair attempt has, however, been made to help industry maintain production at the present level, by ensuring an adequate supply of raw materials. A policy of this kind has little to recommend it in the long run. If industrial production is to increase, it is clear that an expanding programme for imports will somehow have to be reconciled with the country's foreign exchange difficulties. Although it was scarcely to be hoped for, it is still regrettable that a return, however modest, could not have been made to the system of token imports which ranked first on the list of casualties of the Commerce and Industry Ministry's decision to abolish the import of all but immediately essential items. The impact this has had on internal prices cannot be minimised and the effect it is likely to have in future on the growth of quality consciousness is a matter about which the Ministry might profitably concern itself. The small increase which is to be allowed in the import of certain consumer goods does not go any significant way towards meeting this point. But the main point at the moment is to keep production from slowing down and to permit companies to plan their output programmes for some reasonable time ahead. On this score, the new policy is to be welcomed.

The Government of India has announced that quotas have been increased mainly for items required for industry, namely textile chemicals and accessories, component parts of taper roller bearings, spare parts for machinery, chemicals not otherwise specified, industrial gums and resins and certain abrasives. Under the heading of machinery, quotas have been given for two items, printing machinery and agricultural tractors. Increases have also been authorised for a few essential consumer goods such as photographic sensitised material and paper items. Quotas have been reduced for items of which indigenous production is expected to make good the shortage, namely, coal tar dyes, a few types of motor vehicles parts, P.V.C. compound, steel files, etcetera. Important consumer goods for which quotas have been reduced are fish, fruits and milk food. For items such as studio lamps, copra and solonium, quotas have been withdrawn or drastically reduced, but a provision has been made for the grant of licences to actual users so that the level of supply will not suffer.

A somewhat higher foreign exchange ceiling has been allocated for raw materials for industries. Although the foreign exchange available will not be sufficient to maintain peak production in all industries, it is hoped that it may be possible to grant licences for larger values on a selective basis in the case of certain essential industries, than in the half-year just ending. For non-ferrous metals, licences for the half-year April-September 1958, have already been issued. In view of the reported shortages, it may be necessary to issue a few additional licences for which a small foreign exchange provision has been made. The question of granting in advance actual user licences for the period October 1958 to March 1959 will also be considered to enable advance purchases to be made and shipments to be arranged at the beginning of the period. The generally strict policy will be continued with capital goods. Import licences will be issued for approved cases where the value of the imported plant and machinery is covered by long-term overseas investment. In other cases, it will be necessary for the importer to satisfy the Government that the terms of payment are such that they can be met from the saving in foreign exchange which the project will achieve. The recent Export-Import Bank loan and assistance from the Development Loan Fund of the U.S.A., as well as the agreement concluded with Japan, are expected to help new development schemes. The procedure for imports against the Export-Import Bank loan was announced on 18th March. The procedure to be followed in those cases not already included in the Red Book, will be announced separately in public notices in the immediate future. The import licensing of wire nails, barbed wire, stainless steel pipes and tubes and earthwire has been transferred to the import trade control organisation under the Chief Controller of Imports and Exports from the Iron and Steel Controller, Calcutta. The import policy for these items has been announced in the new Red Book.

CURRENT COIN

Realism in Planning.—In his address from the chair at the annual general meeting of the Central Bank of India (a fuller version of which appears on a later page), Sir Homi Mody emphasises the difficulties into which the second five year plan has run. Economic activity during the past year has been at a higher level, but inflationary pressures have grown, internal resources have proved inadequate, the foreign exchange reserves have been depleted, and the Government's non-development expenditure has continued to increase. Stringent import restrictions have been imposed to meet the foreign exchange shortage, and they have inevitably caused a great deal of hardship and dislocation. The Reserve Bank's foreign assets have declined and substantial amounts have been borrowed from abroad; yet, even after taking into account the recent aid promised by the United States, a gap of Rs. 600 crores remains to be bridged. Sir Homi says that "when we take into consideration the heavy demands which the future is going to make upon us, we have to be prepared to face, as far ahead as we can see, conditions of acute stringency and ever-increasing controls." The rise in the Government's revenue expenditure is "alarming." Sir Homi admits that not all of it can be called unproductive, "but the rate of increase in non-developmental expenditure is sufficiently high to cause concern." It may be costly to run modern Governments, but India can hardly afford to allow such expenditure to rise so fast. Ultimately economic expansion depends on resources and priorities. "These who are confronted with the task of transforming our age-old economy cannot brush aside financial considerations and cannot go on indefinitely imposing a strain on the economy which it cannot bear." Already taxation has reached an extraordinary level, and it is doubtful whether present attempts to force the pace of development can continue without "gravely imperilling" the capacity for the production of goods and services. Greater realism is necessary; in relation to concepts of social justice, the recognition is lacking that wealth has to be produced before it can be distributed.

* * * *

Equity Issue by Greaves Cotton.—It has been announced by Messrs. Greaves Cotton and Company Ltd. that an issue is to be made of 46,600 new equity shares of Rs. 100 each, at par. The subscription list will be opened on 14th April. A total of 11,600 shares will be taken up by the present shareholders. The remainder will be offered to the public in order that the shares may be listed on the Bombay Stock Exchange. The company's present issued equity capital is Rs. 88.40 lakhs. The last dividend declared was 7½ percent. The new issue will participate in the dividend to be declared for the year ended March 1959. The directors have stated that they hope to maintain the dividend on the expanded capital. The company, in co-operation with the British company of Crompton Parkinson Ltd., is managing the Crompton Parkinson (Works) Private Ltd. which is engaged in the manufacture of electric fans, motors, transformers and switchgear. In collaboration with Ruston and Hornsby Ltd., also a British firm, it is engaged in the manufacture of diesel oil engines and pumps. Greaves Cotton hold 50 percent of the share capital of Crompton Parkinson (Works) Private Ltd. and 74 percent of the share capital of Ruston and Hornsby (India) Private Ltd. A new factory, which is expected to go into production by the end of this year, is being built to meet the increased demand on the facilities of Crompton Parkinson (Works) Private Ltd. in Bombay. The capital of the company will be increased from Rs. 60 lakhs to Rs. 1.25 crores for financing this expansion. The capital of Ruston and Hornsby (India) Private Ltd. is Rs. 50 lakhs. The turnover of the Poona factory is progressively increasing. Greaves Cotton and Co. manufactures, through another subsidiary, inter-stranded ropes and bandings, paper iones and tubes at its own plant. Arrangements have been made for the manufacture of foundry fluxes in association with Foundry Services International Ltd., and of emery fillet in association with Dronsfield Bros. Ltd., and of worm reduction gears in association with David Brown Corporation Ltd. The company also holds selling agencies for other essential equipment like road rollers, woven and leather belting, etcetera.

* * * *

Prospects for Jute Goods.—The demand for jute manufactures during the past year has been reasonably well maintained. Although the final figures for 1957 are not yet available, it seems that there has been a decline of about 15,000 or 16,000 tons in the total exports of gunnies compared with the previous year. Speaking at the annual general meeting of the Calcutta Jute Fabrics Shippers Association, Mr. N. K. Jalan, chairman, has said that there has been a decline of nearly 50 percent in the hessian offtake of the United Kingdom, but it has been counter-balanced by increased exports to Argentina and other markets in south and central America. Total exports to the United States show a slight decrease compared with 1956, but excluding the latter year they are still the highest since 1948-49. The prices of jute manufactures have remained within competitive limits, and supplies have been readily available at all times, so these factors have not been responsible for the changes in demand. The decline in exports to the U.K. might have been due to the greater use of substitutes, especially paper. "It is most important that the prices of jute containers should be competitive with those of paper, so as to ensure that there is no chance of our market in the United Kingdom being lost by a process of attrition." Although the "mark up" of prices in the case of imported jute goods was reduced last year, the reduction is not likely to be sufficient to counter the competition from substitutes. Business with the United States has not been unsatisfactory, although the consumption of burlap has declined. It is difficult to say whether the decline is due to the economic recession in that country. In spite of the fall in Australian offtake provisional statistics show that sacking exports as a whole were a little higher

out and about with RODALUX & RURALUX

It takes a pretty tough reflector to withstand *all* the rigours of Mother Nature and still carry on, unperturbed, as bright as ever. But that's exactly what RODALUX and RURALUX reflectors – products of The Benjamin Electric Ltd. – are doing on countless highways, streets and works' roadways the world over. Weatherproofed in 'Crysteel' vitreous enamel, this brilliant pair have cast grip flange mountings allowing easy adjustment after erection. Small wonder RODALUX and RURALUX reflectors are earning Benjamin a great reputation in so many corners of the earth.

Available in alternative side or top entry flanges.

than in 1956. It is unlikely that exports to Australia in the coming year will increase, since drought in the wheat-growing States has affected the demand for cornsacks, resulting in a substantial carry-forward of stocks. Referring to the sharp fluctuations in prices due to manipulation by speculators in the local *fatka* market, Mr. Jalan says that it was as an answer to such activities that the Indian Jute Mills Association announced its proposal not to sell manufactures below specified minimum prices. The absence of a properly regulated market for hedge trading has contributed to harmful speculative manœuvres, and the establishment of the new futures market for jute and jute goods will help counter this tendency. Its success will mainly depend on the support it receives from the various sections of the trade.

* * * *

Rail Freights for Sugarcane.—The Mudaliar Committee has suggested an increase in rail freights for sugarcane, but the sugar industry in U.P. and Bihar fears that this will adversely affect production. During the past season, sugar factories in U.P. received more than 65 million maunds of cane by rail and those in Bihar received about 28.6 million maunds. On the whole, the cane received by rail accounts for the production of nearly 400,000 tons of sugar. With the steady freight increases of the last eight years or so, the present rates are about 500 percent higher than those prevailing before October 1948. The recommendation of the Mudaliar Committee would mean an increase of up to 80 percent over the prevailing rates. Although a deduction of 2 annas a maund of sugarcane is allowed to the mills by the Government for freight, the actual expenditure incurred by the industry works out on an average to 3 annas 4 pies a maund; this will go up to 5 annas a maund if the Mudaliar Committee's recommendation is implemented. The factories, therefore, argue that unless the rebate is raised, it will not be possible for them to draw cane by rail from distant places, while the use of motor transport is ruled out because proper roads and lorries are lacking. If, however, a higher rebate is allowed, it will affect millions of cane growers. The price received for cane supplied to the mills is Rs. 1-5 a maund, compared with 14 annas a maund realised for cane utilised in the manufacture of *khandsari* and *gur*.

* * * *

Tax Holiday for Agriculture.—The tax structure has been changed radically during the last two years. It is sometimes claimed in its defence that even with the new imposts, the ratio of taxation to national income will be only about 8 percent or 8.5 percent. But if it is remembered that almost no tax is levied on nearly half the national income, which comes from the agricultural sector, the level of taxation works out to about 14 percent of 15 percent of the income from the non-agricultural sector. This is not less than was the case in other developed countries at their early stages of gowth. In his presidential address at the annual general meeting of the Bharat Chamber of Commerce, Mr. K. L. Dhandhania has said that an under-developed country like India suffers from the vicious circle of low income resulting in low savings, low capital accumulation and therefore low productivity, which in turn are responsible for low income. The agricultural sector has to be made to contribute to the success of economic planning since 50 percent of the national income comes from there. "Chinese agriculture pays annual taxes amounting to Rs. 550 crores to Rs. 600 crores, against India's Rs. 90 crores to Rs. 90 crores. Even taking note of the fact that the productivity is double in China, it is to be admitted that Chinese agriculture contributes very largely to the development in that country." There is a need to reconsider the taxation structure since India has surpassed even Britain in daring to introduce the tax proposals of Professor Kaldor. Referring to the need for foreign capital at the present stage of development, Mr. Dhandhania urges a more cautious policy in securing loans. The country's commitments are already too heavy considering that the Government will need Rs. 49.50 crores every year during 1960-70 to repay the loans already taken, while another Rs. 42.56 crores will be needed for the payment of annual instalments for the purchase of machinery on deferred payment terms. A tremendous effort will be necessary to meet the commitments already incurred, and it is essential that all the capital goods imported be fully used for productive activity.

* * * *

Foreign Investment Handicaps.—Addressing the annual meeting of the Madras Chamber of Commerce, Mr. G. N. Noel-Tod has called attention to the disquieting trends in the cement, steel and textile industries. Stocks have been rising, indicating that the growth in consumption has slowed down, even if it has not yet actually been reversed. Mr. Noel-Tod asks if it is just a coincidence that those three industries are very heavily taxed, so that the cost of the commodities to the consumer is artificially high. Referring to the deferred payment scheme for capital goods imports, he points to two deficiencies. One is that no means have been provided by which a private entrepreneur wishing to import capital goods on long-term credit can be protected against the risks of exchange fluctuation which are completely beyond his control. Another weakness is the failure to make India a really attractive field for foreign investment. Mr. Noel-Tod criticises the tax on royalties, which is much higher than in the U.K., and complains that the compulsory deposit scheme for companies, "mercifully lifted for a year," has still not been entirely abandoned. As the Governor of the Reserve Bank was the chief guest at the meeting, Mr. Noel-Tod has referred also to exchange control. He cites the case of a sterling company with assets and management in India, and with share registers in Britain and India. A non-Indian who is non-resident in India and holds shares on the Indian register is not allowed to sell them in India for rupees and remit the proceeds. On the other hand, a non-Indian who holds shares in a rupee company may do so without let or hindrance. A non-Indian who is resident in India may sell his shares and receive reasonable remittance facilities. These regulations, according to Mr. Noel-Tod, need to be rationalised. A comparison of the current quotations of shares in sterling companies whose assets and management are in India is interesting. The wide variations in the rates for Indian Copper and Calcutta Electric shares, as between the London and Indian markets, is clearly due to the exchange regulations in force. Mr. Noel-Tod stresses the need to enable a man to enjoy a fair income on retirement. As capital accumulation has been rendered difficult, compensatory action to ensure the provision of adequate pensions is called for, even after tax relief is given on contributions to a provident fund.

* * * *

Breezy Optimism in Fans.—The progress of the electric fan industry during the past year has been remarkable. Its total production has increased to 520,000 from 338,000 in 1956, thereby indicating a rise of nearly 54 percent. When the draft of the second plan was being discussed, some doubted whether it would be possible to achieve the production target of 600,000 fans by 1960-61. Speaking at the annual general meeting of the Fan Makers Association of India, Mr. I. Sukumar, president, has said that the industry reached a record figure of 50,200 fans in November last year, and the level of production is being gradually raised. There will be an expanding demand due to the availability of cheap electricity in many areas, improvement in the standard of living, increased industrial activity and the construction of new factories, staff quarters and houses. "I have no doubt in my mind that very soon, at the present increasing rate of production, improved mass production techniques and lower costs, electric fans will be considered a necessity rather than a luxury item in the country, laying open unprecedented demand far from the present target of 600,000 fans a year at the end of 1961. Our exports are also expanding fast. I, therefore, feel that we shall have to revise our target for the second plan, and we can with confidence keep a million fans by March 1961. This target will be achieved by the existing units, if necessary by working increasing shifts." There is considerable scope for exports; the industry claims to produce the finest ceiling fans in the world and is keenly competing with established brands. In spite of many difficulties, exports have increased by 42.5 percent in 1957 compared with the previous year; they go to no less than 35 countries. If proper publicity is done and agencies are placed in good hands so that after-sales service is satisfactorily organised, it is possible to reach the export target of 40,000 or 50,000 fans a year. But Mr. Sukumar says that competition abroad is severe from established manufacturers, and in order to capture markets the Indian industry sometimes has to offer its products at prices which are below production costs. There is a shortage of essential raw materials such as pig iron and steel. Their prices too have increased during the last three or four years and labour wages have gone up. Manufacturers, therefore, now have less incentive to export.

* * * *

Aluminium Plant in U.P.—According to a U.P. Government spokesman, work on the Rs. 20-crore aluminium plant project near the Rihand Dam will begin within three months. An expert team going on behalf of Birla Brothers will shortly survey the project site. It will draw up a phased programme of the plant's power requirements and of the wagons needed for the transport of bauxite ore from Katni and Amarkantak in Madhya Pradesh. The U.S. Export-Import Bank is underwriting arrangements for the deferred payment of the foreign exchange equivalent. India's present aluminium production is estimated at 7,500 tons. It is expected that, by the end of the second plan period, total annual production may go up to 42,500 tons. Apart from the aluminium plant in U.P. at the Rihand Dam site which will produce 10,000 tons, there will be two more plant—one at Mettur in Madras and another at Hirakud in Orissa, each with a capacity of 10,000 tons. The Hirakud project, in fact, is already under way and is scheduled to go into production by 1959. One of the existing plant is being expanded to produce an additional 5,000 tons annually. All the aluminium factories, incidentally, are in the private sector. As the production of aluminium progresses a large number of medium and small-scale industries may be expected to grow.

* * * *

Coal Transport Shortage.—The transport shortage presents the coal industry with one of its biggest difficulties. Although the railways have increased the daily average loading in the Bihar and West Bengal fields by about 270 wagons during 1957, the improvement has not been commensurate with the increase in output, so pit-head stocks have risen to 3 million tons. Speaking at the annual general meeting of the Indian Colliery Owners Association, Mr. D. Samanta, president, has said that to clear the accumulated stocks, an additional 375 wagons a day, over and above the present allotments, will have to be provided in West Bengal and Bihar throughout the current year. In order to enable the industry to fulfil its expansion target under the second plan, an integrated approach to the problems of transport has to be made by the Ministry of Railways, in consultation with the Ministry of Steel, Mines and Fuel and the Planning Commission, so that a master plan or a blueprint might be prepared. "Movement of coal from collieries served by the South-Eastern Railway is found at present to be extremely unsatisfactory; it is not adequate to move the present output, not to speak of any increased production during the current and subsequent years." It is necessary to fix a minimum daily target of 1,100 wagons for the current year and to raise it progressively to 1,350 wagons by the end of the second plan. The policy for granting loading and siding accommodation to collieries is still too rigid. They will be unable to proceed with their development programmes unless they get such facilities more easily. Referring to mining accidents, Mr. Samanta criticises the tendency to blame employers for them. Coal-mining is hazardous, and accidents occur in spite of the best efforts to avoid them. Even in industrially advanced countries such as the United Kingdom, the United States and Japan, where workers are trained, safety-conscious and co-operative, many lives are lost in mining operations. The fatal injury rates are much lower in India. Employers cannot afford to do away with precautionary measures in coal mines, since they themselves would pay dearly for such negligence.

* * * *

Road Transport in Madras.—The report of one advisory committee in the past is perhaps not enough, so the Madras Government intends to get an I.L.O. expert to investigate the working of its road transport undertakings. Anomalies in pay for workers, it is stated, are to be put right, but an official reply to questions about a recent disaster due to overcrowding in a bus has given little satisfaction to the public, which notes that a similar happening in Anantapur led to vigorous action by the Andhra Pradesh authorities against the bus owner as well as his employees. The extension of nationalisation by stages on specified routes outside the city and the reluctance to lower the motor vehicles tax are still the features of policy in Madras. Another minor feature is the replacement of petrol by diesel vehicles; the Government plans to spend Rs. 30 lakhs in 1958-59 on buying new buses. Passengers' grievances about overcrowding and breakdowns, the Madras Corporation's complaints about damage to roads, and the cost of maintenance are problems which have been almost overlooked in a complacent review which indicates that the Government treats the monopoly as complete and public relations as unnecessary.

* * * *

Somersaults in Coffee Exports.—Speaking at the annual general meeting of the Mysore Planters Association, Mr. U. K. Laxman Gowda, chairman, has said that the official policy on coffee exports has undergone a rapid change. From 1948 to 1952, the Central Government was eager to export as much as possible even if it led to a shortage in the home market. This policy was reversed in 1953, when greater attention was paid to the expansion of internal sales. There has once again been a change, and the industry has been asked to export all it can. "By the time this swing in Government opinion has taken place, the foreign market has gone against us, and the position might be far worse before the end of this year, unless the recent international negotiations for a World Coffee Agreement are successfully concluded. Our own attitude to coffee marketing is that the internal market should be adequately supplied and encouraged to consume more at a reasonably held price." The decline in world coffee prices is of considerable importance to growers. For the past ten years, it has been possible to hold internal prices well below the world level because of the extra earnings from exports. But now the industry is faced with the prospect of shrinking profit margins as a result of the steep fall in world coffee prices. With the increase in supplies in the world market, the chances of Indian coffee establishing its position there depend on quality, price and the regularity of supplies. The Coffee Board has paid attention to the first. But it is yet to be appreciated that only with the active co-operation of curers can quality coffees be exported. Mr. Gowda suggests that some form of incentive should, therefore, be given them.

* * * *

Insuring Nuclear Risks.—The "special perils" confronting underwriters from nuclear-powered merchant ships have been referred to by Mr. E. E. Griffith, chairman of the Liverpool Underwriters Association, at the annual meeting recently. He stresses the urgent need for research and study before any reliable assessment of risks can be made. In his report, he says that while only two nuclear-powered merchant vessels are reported to be under construction, in Russia and in the United States, it is expected that work will start soon on one or two more. The time will come when the question of insuring these vessels will have to be faced. What is of more pressing importance is the insurance of radioactive cargoes and of non-atomic marine property, hull and cargo, which may be exposed to atomic perils. The latter is probably the most hazardous feature. A number of overseas marine markets have already begun a thorough investigation into the whole question. Underwriters in Britain, he says, would do well to take similar action. To a considerable extent, Mr. Griffith's advice has already been anticipated, as a result of which the British insurance market expects to earn a substantial premium income as its share of insuring the world's atomic energy risks. Already it has received 17 enquiries for cover from all parts of the world and has nine quotations out on offer. Furthermore, the second International Atomic Energy Insurance Conference, held in London, has endorsed the general approach of the British market to the insurance of risks arising out of the use of atomic energy reactor installations. The host was the British Insurance (Atomic Energy) Committee, which represents British insurance companies and Lloyd's underwriters in marshalling the market's resources to form a single insurance pool. This international agreement will mean that the general public will not need to consider insuring itself against atomic risks. In the event of damage or injury, the member of the public will claim against the owner of the reactor, and the latter will have comprehensive insurance cover against such third-party risks. This principle has already been accepted by the British Government, which intends to introduce legislation requiring a reactor owner to insure his liability for a minimum of £5 million for each installation or show that he holds adequate liquid assets available to that amount. Other European insurance interests will press their Governments to take similar action. The structure of the world's atomic insurance market is now taking shape. Each country will have its own pool, made up of local interests to insure local risks, but the cover will be spread internationally by means of reinsurance. There is general agreement on how the pools should be managed and the types of risks which should be pooled. The British pool is by far the strongest of those organised or being organised, and it expects to get a large share of the available business, either directly or by reinsurance, because it represents such a significant part of the available international resources. The committee is working closely with British manufacturers and contractors engaged in selling reactors abroad. It is a valuable sales aid to know during negotiations the broad terms upon which a particular type of reactor can be insured. The problem of atomic risks for marine underwriters is being considered separately.

* * * *

Cine Technicians Grouse.—Cine technicians are now well organised and have a professional consciousness. At least that is what one would imagine from certain speeches made at their conference in Madras recently. They feel that they should share in the cash awards given to producers of meritorious films. But this seems to be just slightly less silly than suggesting, for instance, that the Nobel Prize for Literature should be shared with printers and publishers, or the Nobel Prize for Medicine with pharmaceutical equipment manufacturers. Cine technicians recognise that money is the real power behind the screen. The lack of a training centre and a good library are more reasonable causes for complaint. It is felt that film stars get too much and technical workers too little by way of pudding or praise. The technicians have also drawn attention to the lack of regular holidays and the excessive working hours, which are items not wholly within the average producer's control.

THE DESPATCH ON CURRENCY

ALL interest in the currency question is now centred on the despatch of the Government of India and the committee of referees about to be formed in London. All curiosity as to the nature of the despatch and the composition of the committee will soon be allayed, as the Viceroy stated in his speech on the Budget that it is the intention of the Secretary of State to publish the despatch as soon as the committee is appointed. To the ordinary man of business it would appear better in every way to have published the despatch the moment that publication was decided upon, and thereby mitigate the uncertainty that at present hampers all operations in the Indian exchange, but this is a consideration that weighs little with a politician; and Lord George Hamilton probably thought it advisable not to expose the Government plan until the House of Commons had dealt with the resolution brought forward by the bimetallists on Tuesday. With regard to the contents of the Government despatch, Sir James Westland deserves credit for the absolute secrecy with which he has shrouded his proposals. The prevailing idea is that the gold-standard plan formulated by the Financial Member and his departmental assistants will be much on the lines of the "Lindsay scheme;" but seeing that as late as 16th September last, the Government of India spoke of opening the Indian mints to the coinage of gold, it is unlikely that Government will turn their back entirely at this stage on that part of the Barbour scheme; and some excuse or other will doubtless be found for employing gold in India to a larger extent than is contemplated by Mr. Lindsay.

LOSS OF GOODS IN TRANSIT

DAMAGES CLAIMED FOR NEGLIGENCE

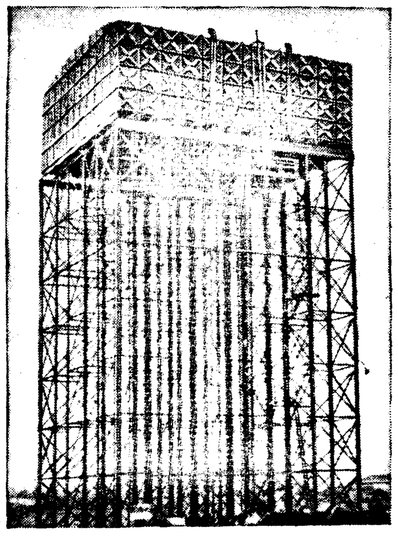
(FROM OUR LEGAL CORRESPONDENT)

"THIS case appears to have had a chequered history." It had indeed, and the laconic comment of the learned Chief Justice of Assam on the said history is an excellent example of understatement in relation to the maxim "justice delayed is justice denied". The facts were perfectly simple and commonplace. The plaintiff was a business man of Dhubri. He had a contract with the Bhararia Cotton Ginning Factory (afterwards joined in the suit as *pro forma* defendant No. 2) for supplying 270 maunds of cottonseeds. In pursuance of that contract, the plaintiff was to despatch by railway wagon the cottonseeds in question. He accordingly packed 270 maunds of cottonseeds in 194 bags and loaded them at the Dhubri Railway Station in a wagon belonging to the contesting and not merely *pro forma* defendant, the railway administration. The plaintiff with a witness approached the station master for a wagon; the latter referred them to the assistant goods clerk, who allotted to the plaintiff wagon No. 23003, and, at the instance of the goods clerk, the plaintiff loaded the cottonseeds in the said wagon.

The plaintiff claimed that he also handed over the forwarding note to the assistant goods clerk through one Mr. K. B. Dutta with instructions to book the goods from Dhubri to Jumna Bridge in the name of the *pro forma* defendant, the Bhararia Cotton Ginning Factory; but the goods clerk could not, or at any rate did not, issue the requisite railway receipt, and though on several occasions the plaintiff thereafter tried to obtain the railway receipt from the station authorities, it was not supplied to him and finally on 6th October, 1947 (just about ten years before the plaintiff's suit was disposed of in the Assam High Court), the assistant goods clerk refused to issue the railway receipt. It was also discovered that wagon No. 23003, in which the goods had been loaded, was, through some mistake of the railway employees, despatched to Rasra Station on the O. T. Railway under a wrong label appertaining to wagon No. 23007.

On these facts the plaintiff claimed that on account of the negligence of the servants of the Assam Railway administration belonging to the (then) Union of India, the said wagon was sent to Rasra Station without the railway receipt, and not to Jumna Bridge as requested by the plaintiff, as a result of which the plaintiff had suffered loss and the cottonseeds could not reach their destination; wherefore, the requisite notices on the General Managers of the Assam Railway and the O. T. Railway having been served as required by the Railway Act, the plaintiff filed his suit, claiming Rs. 3,128, together with interest while the suit was pending, as damages for non-delivery of the goods.

Such was the plaintiff's case, and at this point we will stop in order to make a rueful and regretful comparison. If the facts in this case had occurred in England, say, in the course of the attempted despatch of goods from Manchester to Bristol, the suit, if not settled by amicable negotiation as it most probably would have been, would have been heard and disposed of by the Manchester County Court Judge or by a High Court Judge on circuit at Manchester Assizes within a matter of about three months of the date when the suit was filed. It has taken the plaintiff in this case a matter of nearly a decade before he has been able to obtain a decree of the High Court and even that may not be the final decision.



It is interesting and instructive to look back on what his lordship Sarjoo Prasad, C.J., referred to as the "chequered history" of the case. The trial judge found for the plaintiff and decreed the suit with proportionate costs. It would have been well if the matter had ended there, for in the eventual result the High Court found that the trial judge was right and restored his decision. But the contesting defendant, not being satisfied with the trial judge's decision, appealed from it. At the appeal the Additional District Judge set aside the decree of the trial court on the ground that the suit was bad by reason of non-joinder of certain necessary parties and sent it back for retrial after giving the plaintiff an opportunity to amend his plaint. The plaintiff, not being satisfied with this order, appealed against it to the High Court. This was way back in 1952. The appeal was allowed and the High Court set aside the order of the Additional District Judge and sent back the case to the Court of Appeal below for disposal of the appeal according to law. This time again the learned District Judge, who heard the appeal, reversed the decision of the trial court and dismissed the suit. Against this dismissal, the plaintiff appealed to the High Court again, whose decision, restoring that of the trial judge, is now reported in this year of grace 1958.

There were two main questions which arose for determination in the case: (1) whether the plaintiff was entitled to sue for recovery of damages on account of the loss of the goods? and, (2) whether, in fact, there was delivery of the consignment in question to the railway administration or its employees? On the first point, the trial court held that it was quite clear on the evidence that so long as the railway receipt had not been issued, the goods belonged to the plaintiff and, therefore, the plaintiff was entitled to sue for damages on account of the loss of the goods. On the second point, also, the trial court was of the view that the goods had been actually delivered to the railway administration and loaded into the wagon with the knowledge and consent of the railway employee concerned, and, therefore, the plaintiff was entitled to recover compensation for the loss from the railway administration because the latter was constituted, under the law, bailee of the goods in question. But, on both those points, the lower Court of Appeal reversed the trial judge's decision.

The reader experienced in matters of railway transport of goods may have spotted the red herring, the scent of which led the Appellate Court, so to say, off the track. It was the mythical railway receipt. "The learned District Judge was in error," said the High Court later, "in thinking that the suit was based upon some railway receipt or consignment note. Of course, if there had been a consignment note, in that event it was only the consignor or the consignee, or the person in whose favour the consignment note was endorsed, who could sue for recovery of damages on account of the loss of the goods. But where there is no railway receipt, as in this case, the matter has to be decided not on the footing as if there was such a receipt, but on the clear issue that the goods had been delivered by the owner (to the railway) for carriage, and that the goods were lost while in the custody of the defendant. In such a case, the liability of the defendant is that of a bailee and is covered by Sections 151 and 152 of the Contract Act.....It appears to have been assumed by the learned District Judge that under Sections 24 and 25 of the Sale of Goods Act the property in the goods had irrevocably passed to the *pro forma* defendant (the Bhararia Cotton Ginning Factory) and thus the latter alone could sue upon the contract. This is fallacious because the Sale of Goods Act has nothing to do with the case before us and it is not for the defendant No. 1 (the railway) to question in this case as to whom the title to the goods belonged.....The learned District Judge, therefore, misdirected himself on the point in allowing these false questions to cloud the issue. It was rightly contended before him that, there being no railway receipt in this case, the question as to who the consignor or consignee was, did not, in terms, arise and the plaintiff was entitled to sue as the person in whom the property in the goods was vested for the time being."

The decision of the Court of Appeal below was set aside and that of the trial judge in favour of the plaintiff restored, with costs to the plaintiff throughout.

WHATEVER the order of the day in the Peking garden (and it may not be all that different after all), in the Kremlin, apparently, the number of flowers is now a hundred *minus* ninety-nine—if, that is, so ungainly a person as Mr. Khrushchev's can be likened to a flower. For all that, Mr. Isaac Deutscher is probably right in suggesting that Mr. Khrushchev's assumption of the Premiership is a step "not so much in order to strengthen his position internally as to regularise his standing in relation to other Heads of State in preparation for a summit meeting." There again the outside world was never in any doubt as to who was behind the numerous missives signed by Marshal Bulganin, with whose elimination should now go the many protocol *contretemps* the B and K travelling circus gave rise to in most countries it visited. In India, I understand, the External Affairs Ministry went to absurd lengths to ensure that the two guests were always treated on absolutely equal terms in every respect—equal garlands, equal chairs and all that. Whatever "the single-hearted wish of the Soviet people," in accordance with which Mr. Khrushchev is supposed to have become Prime Minister, there is no doubt at all that the man has before him now a truly tremendous opportunity of doing something for peace. What use he will put it to I will leave it to "experts" like Mr. Deutscher to prophesy. As far as one can judge, Mr. Khrushchev is not much given to introspection or literary reading. His *métier* is more the common proverb and the repetitive *cliché*. But if he will look up, as I have been doing, Tolstoy's *War and Peace*, together with Isaiah Berlin's commentary on the former's epilogue, he may acquire a soberer view of history and his possible rôle therein. In one place in the epilogue he will find: "The life of nations is not contained in the life of a few men." Perhaps, but what of the death of nations? It is alarmingly true that war and peace can now be determined by one or two men, and one of them is Mr. Khrushchev. I have no callow faith in summit conferences as such, but if one is to be held with any success at all it is Mr. Khrushchev again who will have to show at least as great a hunger for peace as he has so far shown for power.

* * * *

Just how incompetent, I often wonder, can Western diplomacy become. For weeks now the world has been expecting an announcement from Moscow about the suspension of nuclear tests. The circumstances could not be more obviously propitious: Russia herself has just finished a massive test programme; the United States has not yet begun her much-publicised spring series; and Mr. Khrushchev needs something to distract his people's attention from the marked resemblance he is beginning to assume to the late Marshal Stalin. Yet the West has stood apparently hypnotised while Russia's new "Premier", whose skill in the new art of diplomacy by public relations should already be well enough known, has quietly taken the initiative. The spectacle would be amusing if it were not so tragic. Now the United States and Britain will be forced to fall into line or stand condemned as potential nuclear aggressors in the eyes of the uncommitted world. Any attempt to go ahead with the tests as planned, on the plea that Russia has already made hers, will give Mr. Khrushchev exactly what he wants—an excuse for starting his tests again and putting the blame on the West. And peevish mumblings about Russia being able to carry on without being detected, are not going to help either. It is now too late for remedies; somehow the Western allies have got to go the way they have allowed Russia to push them and contrive to look as if it was their idea in the first place. They will deceive nobody, but the alternative is too dreadful to contemplate. With the money they save, they might profitably institute

A DITCHER'S DIARY

a study into the reasons why they have been so completely out-manoeuvred. Apart from the axiom that until Mr. Dulles retires, the free world cannot hope to prosper diplomatically, there must be some explanation for the unbelievably inept performance the West seems to put up these days in almost every field where a knowledge of human psychology, especially in the so-called uncommitted world, is concerned. After reading Mr. Khrushchev's latest open letter to Lord Russell, published in the *New Statesman*, I have come to the conclusion that this man is either the possessor of an intellect appropriate to a fifteen-year-old, which is ridiculous, or combines a complete lack of scruples with a commendable grasp of the prejudices and thought processes of ordinary people. Is it too much to hope that Western diplomats might ever acquire such assets?

* * * *

With the future of English still undetermined, it is not wholly surprising that the recent Delhi conference on methods of teaching the language did not accomplish more than it did. Mr. Deshmukh spoke courageously—but unpolitically; and the trouble is that this question is going to be decided, if at all, by politics. The well-meaning efforts of scholars, professors and legislators to retain English in India need not be under-estimated to see, still, that reason is not going to be the decisive factor. I remember some time ago on this page regretting this fact; now I am beginning to wonder whether it is at all possible to avoid it. While I welcome all that is being done to prevent a violent and harmful break with the past and the present, I can see that it is a more political and practical approach which is going to pay the best dividends—given the present state of popular opinion on the subject. Mr. Rajagopalachari, for instance, need not deny Mr. Sitaramayya's accusation that the former may have political motives; it has already been pointed out that the latter's motives may not be entirely apolitical either. It would seem logical enough for Mr. Rajagopalachari to declare that even as some quarters in the north have seized on Hindi as an instrument of political power, the south proposes to resist it through exactly the *same means*. The point worth noticing is that while Mr. Rajagopalachari and Mr. Deshmukh never say that Tamil or Marathi should be *the* official or national language (the distinction is often forgotten) Hindi enthusiasts in the north do think, and say, that Hindi must be learnt by all. Mr. Deshmukh stressed the cultural and educational consequences of giving up English. To many cultures it is an expendable commodity, and education can wait. Such persons, I think, might with advantage be confronted with the easily foreseeable political consequences of any imposition of Hindi on the unwilling; and this is to conduct the debate on a political plane which even Mr. Nehru will find difficult to disapprove of. Then, of course, there are the economic consequences, equally as foreseeable and persuasive.

* * * *

Driving down Chowringhee the other day, I ran into a dense, evil-smelling, blue-black fog. For a full three hundred yards it showed no sign of thinning; visibility was down to fifty yards or less. It was only after the bus in front pulled into the kerb that I found myself clear, and, incidentally, realised what was causing all the trouble. The answer was, of course, the bus's exhaust. I am not suggesting this is a unique experience. It must have happened to others, and I can recall myself a few similar incidents, although not quite as bad as this one. A technically-minded friend tells me it is a question of engine adjustment. If he is right, then it is time something was done about improving the servicing standards of public vehicles; diesel buses emit enough poisonous fumes without adding to them unnecessarily. In fact, I often wonder if we realise what a danger they are to public health. I have seen diesel-oil fumes listed along with tobacco as a contributory cause of lung cancer. It is no secret that they can cause bronchitis and pneumonia; I wonder how high is the incidence of these diseases among Calcutta's traffic policemen. We have all been watching the air in this city become steadily more polluted in the last few years with the growth of industries and population; it may not be long now before motor exhaust fumes are making the major contribution. That can happen. I see from a recent W.H.O. report that the bad fogs which Los Angeles often gets are mainly due to the unburned hydrocarbons from motor-car exhausts. These average, so the report says, a thousand tons a *day*. The damage to crops in the area is estimated at $3 million a year. For the whole of the United States, the annual bill for damage from air pollution reaches $1,500 million, or $10 a head of the population; in France it is $14 a head. The cost in the U.K. in 1947 alone was estimated at £100 million, while in the London fog of December 1952—the direct result of air pollution—the death roll was between 3,500 and 4,000. This excess of deaths over normal in London has been exceeded only once in the last hundred years—during the influenza epidemic in November 1918. It even beats the worst of the cholera in 1866 and, of course, the blitz. I wonder how long it will be before more people are being killed in Calcutta by exhaust fumes from buses than are being run over by them.

* * * *

I have just come across a rather remarkable instance of the efforts this country is making to reduce inequalities and abolish privilege. It came in the form of a Lok Sabha announcement by the Minister of Education. Dr. K. L. Shrimali, that the Government is considering giving free meals to children of employees in State industrial undertakings. Why, may I ask? If it is a question of making a start somewhere with the provision of free meals for all school children—as the Minister suggested—then surely there are more deserving cases than the offspring of State industrial employees. Whatever constructions can be placed on this, it is quite clearly a straight-forward example of the creation of a privileged class—as was the concession on civil servants' entertainment allowances in this year's Budget. The time is approaching when the only way to get a house, feed one's children properly and entertain adequately in an over-taxed socialist economy will be to work for the Government. I am not denying this is socialism; it is precisely what has been going on in the Soviet Union since the Revolution. But I venture to believe that it is not the sort of thing the people of India are bargaining for. It was George Orwell who coined the immortal phrase: "All animals are equal, but some are more equal than others". It is one which is fast becoming applicable to Government employees in India today. On my way to and from my office I pass a large colony of Government flats, brand new and at present being cut off from the contamination of unofficial humanity by a wire fence, a high wall and two pairs of wrought iron gates. I often wonder what understanding and sympathy the inmates of this colony, insulated as they are from the housing and security problems of ordinary mortals, and mixing socially chiefly with their own kind, can have with the difficulties of those less fortunate people with whom they have to deal.

THE CENTRAL BANK OF INDIA LIMITED

CHAIRMAN SIR HOMI MODY'S REVIEW

Speech delivered by the Chairman, Sir Homi Mody, at the Annual General Meeting of the Shareholders, on Friday, the 28th March, 1958.

Ladies and Gentlemen,

I have pleasure in presenting to you once again the Annual Statement of Accounts and the Directors' Report.

The year under review was marked by increased economic activity in India. Both agricultural and industrial production was generally on the upgrade. At the same time, serious difficulties were experienced in the implementation of the Second Five Year Plan. The growth of inflationary pressure, the shrinkage of internal resources, the depletion of foreign exchange reserves and the continuing increase in Government's non-developmental expenditure brought about a serious strain on the economy and threw out of gear the programmes of development in the public and private sectors.

In my speech last year, I referred to the rapid deterioration that had taken place in our foreign exchange resources. The situation became particularly acute during the year under review. It compelled Government to adopt stringent measures of import control which, whatever their justification, were bound to cause a great deal of hardship and dislocation. The Plan estimated that the total foreign exchange requirements over the five year period would amount to Rs. 1.120 crores; it is now calculated that the actual amount needed would be of the order of Rs. 1,600 crores. Owing to the gaping deficit in the balance of payments, India had to draw heavily on her foreign balances and borrow substantial amounts from the International Monetary Fund. Even after taking credit for the loan of Rs. 95 crores from the Fund, the foreign assets of the Reserve Bank of India declined from Rs. 749 crores at the beginning of the Plan to Rs. 280 crores at the end of February 1958. After taking into account the external assistance promised so far, including the American aid recently announced, the gap yet to be bridged is estimated to be in the neighbourhood of Rs. 600 crores.

The Difficulties

The full extent of the difficulties can be appreciated from the figures which Pandit Jawaharlal Nehru, as Finance Minister, placed before Parliament in the course of the Budget Debate. They relate only to loans already taken, and when we take into consideration the heavy demands which the future is going to make upon us, we have to be prepared to face, as far ahead as we can see, conditions of acute stringency and ever increasing controls. There are no short-cuts to Foreign Exchange; it has to be earned by hard work, enterprise and efficiency.

There are other aspects of the economic situation, of equal concern to the public. One of them is the alarming growth in the revenue expenditure of Government. In the 10-year period ending with the Budget Estimates for 1958-59, there has been a rise in such expenditure from Rs. 317 crores to Rs. 796 crores, of which the allocation for Defence is Rs. 278 crores. Civil Expenditure as such amounts to Rs. 517 crores, as against Rs. 168 crores in 1949-50. Not all of this can be called unproductive, but the rate of increase in non-developmental expenditure is sufficiently high to cause concern. As the Chairman of Barclay's Bank has observed, "little babies have a way of growing into ugly old men". We are aware that modern governments with their greatly expanded sphere of activities are costly affairs, but it is a question for serious consideration whether India can afford to step up her non-developmental expenditure at such a rapid pace. In a growing economy many things are urgent, and in a Welfare State there is bound to be a gathering momentum for all manner of nation-building activities, but ultimately it must all come down to a question of resources and priorities. Those who are confronted with the task of transforming our age-old economy cannot brush aside financial considerations and cannot go on indefinitely imposing a strain on the economy which it cannot bear. It is simply not possible to run too far ahead of the resources of the nation.

Already, in these ten years, in the range and incidence of direct taxation, we have achieved the unenviable distinction of being among the most heavily taxed countries in the world. We are the only country in which there is a direct tax on personal expenditure and where the combined rate of taxes on individual earnings and wealth can exceed 100 per cent. of income. So far as individuals, firms and companies are concerned, nowhere else are people called upon to bear so many different taxes and imposts. Can India, in her present stage of development, afford the pace which is being forced upon her, without gravely imperilling her capacity for the production of goods and services? No one can possibly question the concept of social justice and the compelling necessity of a wider diffusion of well-being throughout the community. But it is axiomatic that wealth has to be produced before it can be distributed. If the incentive to earn, to save and to spend is increasingly to be denied, where is it ultimately going to end up? If the answer is that, whatever happens, there can be no retreat from the Plan, it may well be asked whether the Plan is to be the master or the servant of the economy? In these last few months, there has been a greater responsiveness to informed criticism, and I would earnestly urge the need for a closer understanding between Government and the business community. The so-called vested interests may be conservative and their outlook may sometimes be suspect, but they have learnt a great deal in the last few years and have a real desire to employ their experience and resources for the general good; and they can inject a sense of realism into our planning which is sorely needed.

Selective Control

Turning to events in the field of Banking, the Reserve Bank adopted during the year a series of measures in order to keep under control the inflationary pressure generated by the heavy capital outlay and by the large volume of deficit financing, which was expected to increase from Rs. 250 crores in 1956-57 to Rs 366 crores in 1957-58. The technique of "selective control" introduced in the previous year was continued and reinforced by other steps. In February 1957, the Stamp Duty on Usance Bills was drastically stepped up so as to raise the effective cost of borrowing under the Bill Market Scheme to 4 per cent. Lending rates against Government and other securities were also brought into line. Finally, in May 1957, the Bank Rate itself was raised to 4 per cent. In addition, the Reserve Bank issued a directive to the Scheduled Banks to cancel the unutilised portion of their overdraft advances so as to bring down the level of bank credit to Rs. 800 crores before the start of the busy season. The volume of Advances and Bills dropped accordingly from a peak of Rs. 933 crores in May 1957 to Rs. 858 crores in the last week of December.

In spite of these measures against inflationary trends, economic activity in the country remained brisk throughout the year and the demand for credit was pressing. When bank credit is controlled, customers are to some extent compelled to obtain credit from non-banking sources at a higher cost. This trend is noticeable even in countries where the money market is well organised. Referring to the credit squeeze in the U.K., the Chairman of Martin's Bank at its annual meeting observed: "This has caused the determined borrower to go outside his normal banking sources, often paying a high rate of interest but still obtaining the funds he required." Whether or not customers of Indian banks are in a position to resort to non-banking sources of credit, the pressure of the demand was fully reflected in the operations of Scheduled Banks. The Economic Survey, issued along with the Budget, admits that the high level of investment in the economy and the large step-up in imports have strained the resources of the banking system.

The Deposit liabilities of Scheduled Banks at the end of 1957 reached an all-time high of Rs. 1,406 crores, as compared with Rs. 1,114 crores in the previous year, the increase in time deposits being more marked than in demand deposits. The Rupee Counterpart Funds and the Compulsory Rupee Accounts with the State Bank of India contributed not a little to this upward swing. Notwithstanding an increase in the volume of Advances, the rise in Deposits brought down the ratio of Advances from 71 per cent. to 61 per cent. towards the end of 1957.

This sharp increase in Deposits considerably altered the structure of the Scheduled Banks' liabilities and assets. In 1956, banks had to approach the Reserve Bank for increased accommodation, liquify their gilt-edged portfolio and draw upon their till money. By contrast, the increase in Advances in 1957 was less than the expansion of Deposits. While the latter increased by Rs. 292 crores, advances went up by only Rs. 70 crores. The Scheduled Banks were, therefore, able to reduce their indebtedness to the Reserve Bank from Rs. 79 crores to Rs. 24 crores. Simultaneously, they were able to increase their investment portfolio from Rs. 365 crores to Rs. 433 crores. The proportion of Investments to Deposits, however, went down from 33 per cent. to 31 per cent.

U.K. Bank Rate

The reduction announced last week in the Bank of England Discount Rate is welcome as indicating a lessening of the pressure against Sterling and a general easing of money rates. It should not affect the Discount Rate in our country, but it might have some effect on our economy in the field of export trade. However that may be, a high bank rate is generally restrictive in character, and the recent change, which may possibly be followed by further reductions, can be taken as signifying a return to a healthier economic climate.

I shall now turn to the Balance Sheet and the Statement of Accounts presented to you. There has been a further growth in our earnings and resources as a result of larger deposits and more active conditions in trade and industry. Gross earnings at Rs. 780 lakhs recorded an increase of about 19 per cent., but with the rising cost of working funds, the increase in gross profits was only a little over 6 per cent.

With the rise in the Bank Rate from 3½ per cent. to 4 per cent. during the first half of the year, there was a general stepping up of our rates of interest on Advances, but the advantage gained thereby was to a large extent nullified by the higher rates that had to be paid for Deposits. In the result, the net earnings under Interest and Discount increased by only Rs. 10.36 lakhs over the previous year. In consonance with the rise in the rates paid by other Banks and the suggestions made by our shareholders at the last meeting, we put up our rate of interest on Savings Deposits Accounts. Even though the increase ranged from ½ to 1 per cent. only, it added substantially to the cost of our working funds, in view of the fact that the average amount held in this account throughout the year was over Rs. 28 crores.

Apart from the rise in the Bank Rate and the expanding demand for money, higher rates for Deposits were also due to Governments, both Central and State, coming into the market for large borrowings at 4 to 4½ per cent. and for small savings on still more attractive terms. This helped to accentuate the shift from Demand to Time Deposits, that is, from low interest to high interest bearing Deposits, and that, without an all-round corresponding increase in the rates for Advances, resulted in reducing the margin of profits of banks.

Establishment Charges

There was a further increase of Rs. 16.72 lakhs in Establishment Charges. These Charges stand at a very high figure, and their adverse effects on our working can be minimised only if the Staff at some of the centres were to show a greater awareness of their responsibilities and a greater devotion to the interests of the Bank. In this connection, I would particularly refer to a disturbing factor in our working, namely, Overtime. Despite increases in Staff, payments under this heading have been mounting up and they nearly doubled themselves during the year. They amounted to over Rs. 8 lakhs. I appeal to our Staff for its co-operation in cutting down Establishment Charges, which already account for as much as 61 per cent. of our gross profits.

By reason of the rise in salaries and allowances, the figure of Bonus to Staff has also appreciably gone up and amounted to Rs. 30 lakhs, showing an increase of Rs. 2½ lakhs over the previous year.

The Industrial Dispute (Banking Companies) Decision Act, 1955, imposed a heavy burden on most of the banks, but it was hoped there would be some return for it in happier relations with the Staff and more efficient working. It is extremely unfortunate that that expectation has not materialized, and pen-down strikes and go-slow tactics are still in evidence. It is time the staffs of banks realized that their interests were bound up with those of the institutions they were serving, and that increases in their emoluments and amenities could only come from greater stability and higher profits. There should be no room for any antagonism between staffs and managements, which can only result in impairing the fortunes of both.

I must make special mention of the increase in our resources which took place during the year. Shareholders will have been gratified to note that, for the first time, our total Deposits crossed the Rs. 150 crores mark. They recorded a significant increase of Rs. 16 crores, the highest rise in any one year, and this, in spite of the fact that our rates were often somewhat lower than those offered by other banks. Increased resources arising out of this growth in Deposits, coupled with the liquidation effected in our Investments and the comparatively easy money conditions towards the close of the year, made it possible, despite an increase in Advances, to keep down our borrowings from banks, which at the end of the year stood at Rs. 7 crores less.

On the Assets side, despite an expansion in business, the ratio of liquid resources to Deposits was maintained at the level of 42 per cent.

In view of the higher cost of working funds and the more remunerative rates obtainable for Advances, our Investments in Government and other Securities were further liquidated, and in spite of the support we continued to extend to the new Loans floated by the Central and State Governments, we could reduce our holdings by Rs. 3.5 crores during the year. Owing to a further set-back in values, the gap between the book and market values of Securities unfortunately widened further and stood at the close of the year at the figure of Rs. 254 lakhs. There has, however, since been a fairly substantial narrowing down as values have been rising.

Higher Price Levels

The higher price levels arising from the expanding economy of the country, the sluggish conditions in the trade in piece-goods and some other commodities, and the demand for working capital needs, all created conditions which kept up a sustained demand for Advances throughout the year, which at one time, reached a peak of Rs. 115 crores, representing a ratio of 78 per cent. to total Deposits. At the close of the year, though the busy season had not set in, Advances recorded an increase of Rs. 10.73 crores over the figure of the previous year.

In pursuance of our policy in respect of non-remunerative offices, eight of those showing consistently poor results were closed down during the year. In the past two years, as many as 30 such offices have been discontinued, and though new offices have been opened in centres considered more promising, the total number has gone down and stood at the end of the year at 286.

It is now my pleasant duty to make the customary acknowledgments. Our Vice-Chairman, Mr. C. H. Bhabha, has continued to devote himself to the interests of the Bank with a single-minded zeal. His knowledge and experience have been of inestimable value, and I am sure shareholders will join me in conveying to him our warmest appreciation of all he has been doing for the Bank. We are fortunate, also, in having as our General Manager Mr. N. K. Karanjia. His long association with the Bank, his ability and his thorough knowledge of every aspect of banking have been not a little responsible for the progress maintained by the Bank in spite of some adverse factors, and I hope we may look forward to having him with us for many more years. To Mr. F. C. Cooper, the Deputy Manager, Branches, and to the Local Advisory Committees at the various centres, I would also like to convey our grateful thanks. Ours is a vast and widely spread business, and it is not possible to maintain the close personal contacts which are so essential to the success of an organization, but I have every hope that, more and more, in the years to come, from the General Manager down to the humblest member of the Staff, everyone may come to feel a sense of pride in his work and satisfaction in seeing it well done.

We the undersigned, Accountantskantoor Bakker & Co., of Amsterdam (Holland), accountants and auditors, members of the Nederlands Instituut van Accountants, have audited the above consolidated Balance Sheet as per 31st December, 1957 and the Profit and Loss Account for the year 1957 of the branches of Nederlandsche Handel-Maatschappij N.V. (Netherlands Trading Society) in the provinces of India i.e. at Bombay and Calcutta drawn up in accordance with the requirements of the Banking Companies Act 1949 of the Republic of India.

We have examined all records and have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit.

In our opinion the said Balance Sheet and Profit and Loss account are correct.

MODEST IMPROVEMENT IN STOCK MARKET

GOOD COMPANY NEWS LIFTS INDUSTRIALS

London, 2nd April.

THE stock market continued to lose ground during the early part of the past week, but developed a distinctly better tendency prior to the week-end and the firmer conditions were maintained subsequently. The earlier losses were more than recovered and a modest improvement was recorded in most sections compared with the previous levels. At the beginning, the Chancellor of the Exchequer's statement that the Bank rate cut was not a green light for expansion and that the intention was to maintain a high long-term rate of interest dampened enthusiasm. The U.S. recession, the possibility of labour troubles at home and new issue talk contributed to the uncertainty. The tone improved later following a number of good dividend statements, particularly that of Imperial Chemical Industries. The approach of the Easter holiday and Budget day kept interest and activity at a low level. The better trend was attributed more to sentiment than to actual business, which remained small. The further fall in the Treasury bill rate, the reduction in new issue interest rates and expectations of highly satisfactory end-March gold reserve figures induced a better tendency in gilt-edged and prices were slightly higher on balance. Foreign bonds and rails recorded very little change, apart from the German issues which improved on small demand. Dollar stocks moved lower in sympathy with Wall Street but Canadian dollar issues advanced in response to the Canadian election results. The Imperial Chemical Industries dividend and a number of other satisfactory preliminary statements encouraged small support in industrials, which more than recovered their earlier minor losses to show gains on balance. South African gold shares ruled quietly firm on selective demand but diamonds were easier. Coppers and other base metals were fairly well maintained. Oil shares generally showed very little change. Tea shares maintained their recent firm trend. Ceylon issues were particularly strong, and Indian issues also improved. Rubber shares developed a firmer tendency after early irregularity.

The Money Market

A lack of maturities due to the incidence of the Christmas holiday three months ago and to official operations kept credit conditions stringent in the money market. Credit was comfortable on one day but on others it was difficult and high rates had to be paid for day-to-day loans. During the most acute phases, up to 5½ percent was paid, while the market was forced to borrow from the Bank of England on two occasions. Bill business fluctuated with the day-to-day credit situation, June and hot maturities changing hands at 5⅛ percent and 5¼ percent, respectively. In spite of the high rates which the market had to pay for a portion of its money requirements, it offered a few pence more for Treasury bills at the tender on Friday. The average rate for Treasury bills was approximately ½ percent lower at £5 10s 5.54d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: Gilt-edged have fully discounted the Bank rate cut. Industrials are consolidating. Gold shares have drifted through lack of interest and should revive shortly. The technical rally in base metals has gone far enough unless it is backed by news of a genuine U.S. business recovery. Oils are consolidating after the recent technical rally, with America buying Shell again. Wall Street is still moving sideways and is bolstered by specialities. London's price rises partly represent marking up by jobbers who are short of stock. The Bank rate cut was largely technical and the 6 percent rate is still high. Industrial profits are shrinking and Wall Stret remains uncertain.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 25th March shows that gold stocks fell by $19 million to $22,494 million. Foreign deposits rose by $13 million to $256 million, while foreign investments declined by $29 million to $3,376 million. The Federal Reserve bought $87 million worth of bills. Total discounts and advances fell by $113 million to $118 million, while the aggregate excess reserves of member banks decreased by $27 million to $415 million. The daily average excess reserves of member banks rose by $77 million to $684 million, while their daily average borrowings increased by $39 million to $164 million. Busines loans of the New York city banks fell by $98 million to $11,510 million, compared with a fall of $119 million to $11,697 million in the corresponding week a year ago.

Dull Trading in Rubber

Patchy business was reported on home and Continental account in the London rubber market during the past week, although some enquiries from eastern Europe enlivened interest at first. Values lost an interim gain of ¼d and closed unchanged to a farthing a lb lower on balance. The sole crepe market remained very quiet. Since sellers wishing to dispose of stocks inside their financial year accepted prices ranging down almost to those of ordinary standard crepe, other sellers quoted on the basis of 26d a lb for 1 inch smooth No. 1 on the spot.

Money

THE CALCUTTA MONEY MARKET

ADVANCES DECLINE

Wednesday, 2nd April.

THE total of advances outstanding in the Calcutta money market declined during the past week. The total figure was probably not large, but the performance is nevertheless remarkable at this particular stage in the busy season. Of the main sources of demand, the sugar industry was the only one to show any appreciable increase in requirements. There was a sharp decline in the offtake of the jute and cotton mills. Accommodation against grain and seeds storage remained about the same. The interbank market was easier, but there has not been any change in the call rate which is standing at 3⅜ percent.

Following the previous week's improvement in the exchange market, conditions last week turned slack. This has continued a trend which has been evident for some months now. Remittance has been better. Sterling has strengthened against the U.S. dollar but has been marked down against the Canadian dollar and most Continental currencies.

* * * *

Bullion was quiet on profit-taking in the absence of demand after the Ramnavami festival. Silver declined from the previous week's level of Rs. 195.75 to Rs. 194.50, quoted today for ready delivery. The rate for forward delivery was Rs. 192.75. The London price was 76d and the New York quotation stood at 88⅜ cents.

Gold was quiet in sympathy with silver and the price fell from Rs. 112.50 to Rs. 112. The sovereign fell by 25nP to Rs. 72.75.

* * * *

During the week ended 28th March, Government of India Treasury bills for Rs. 118,32,75,000 were sold in favour of the Reserve Bank.

* * * *

A rise of Rs. 7.30 crores to Rs. 1,579.13 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 28th March, 1958. The total note issue was Rs. 55 lakhs higher at Rs. 1,589.35 crores. Notes held in the Banking Department consequently fell by Rs. 6.76 crores to Rs. 10.21 crores. Deposits showed an all-round decline. Deposits of the Government of India dropped by Rs. 1.38 crores to Rs. 48.33 crores and other Government accounts were Rs. 22.73 crores lower at Rs. 54.85 crores. Balances of commercial banks at Rs. 67.83 crores showed a fall of Rs. 6 lakhs. Balances held abroad declined further by Rs. 7.19 crores to Rs. 95.81 crores. Investments were Rs. 1.81 crores lower at Rs. 238.44 crores. Other loans and advances increased from Rs 74.56 crores to Rs. 78.40 crores, of which advances to scheduled banks against usance bills amounted to Rs. 26.58 crores (Rs. 23.53 crores). Ways and means advances stood at Rs. 21.23 crores (Rs. 24.20 crores).

* * * *

The return of the State Bank of India for the week ended 21st March, 1958, shows a drop of Rs. 1.96 lakhs to Rs. 414.18 crores in total deposits. Investments in Government securities are up by Rs. 1 lakh to Rs. 180.37 crores, while other authorised investments remain unchanged at Rs. 10.33 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 3.47 crores to Rs. 211.79 crores. Cash and balances are, in consequence, shown at Rs. 23.65 crores or Rs. 1.06 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 21st March, 1958, shows Demand and Time liabilities at Rs. 740.88 crores (Rs. 12.14 crores on account of borrowings from banks) and Rs. 724.51 crores (Rs. 16.06 crores), compared with Rs. 739.65 crores (Rs. 13.66 crores) and Rs. 722.98 crores (Rs. 15.46 crores), respectively, in the previous week. Cash has declined by Rs. 1.46 crores to Rs. 36.90 crores, while balances with the Reserve Bank have increased by Rs. 70 lakhs to Rs. 63.86 crores. There is a rise of Rs. 17 lakhs to Rs. 440.26 crores in investments. Advances and bills discounted at Rs. 951.90 crores show an increase of Rs. 11.79 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.9 percent and 65.0 percent against 6.9 percent and 64.3 percent.

* * * *

The consolidated balance-sheet of NEDERLANDSCHE HANDEL-MAATSCHAPPIJ N.V., for business transacted at Calcutta and Bombay, shows a profit of Rs. 9.22 lakhs for the year ended last December. Deposits amounted to Rs. 2.32 crores. Cash stood at Rs. 1.11 crores. Advances were shown at Rs. 4.51 crores and investments totalled Rs. 42.94 lakhs.

UNITED INDUSTRIAL BANK LIMITED

A SCHEDULED & CLEARING BANK

(Established 1940)

Head office:

7, Wellesley Place, Calcutta.

'Phone 23-3481 & 23-3482.

BANKING BUSINESS OF ALL DESCRIPTIONS TRANSACTED.

Chairman:

Sri JADU NATH ROY

Branches:

Burra Bazar, Shambazar, Hatkhola, Ballygunge, Dum Dum (Calcutta), Patna and Narayangunge.

M. K. BHATTACHARYYA, C.A., I.B (Lond.), *General Manager*

SOUTH EASTERN RAILWAY TENDERS.

Sealed Tenders (Tender No. S/CAL-TRNS/58) are invited for transport of wooden sleepers and timber from Calcutta Docks and Jetties by lorries to the Railway's Dump or elsewhere in Calcutta Port Commissioners' area or Shalimar Stores Depot.

Tender Forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rupees Five (not refundable) only per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, by local firms.

Earnest money Rs. 1,000/- is to be deposited with this Railway's Chief Cashier and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit or Rs. 1,000/- with the Controller of Stores are exempted.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Tenders will be opened at 12 noon on 30.4.58 in the office of the General Manager.

GENERAL MANAGER

United Bank of India Ltd.

Head Office:

4, CLIVE GHAT STREET, CALCUTTA

TOTAL ASSETS

OVER Rs. 48,00,00,000/-

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.

With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

SOUTH EASTERN RAILWAY TENDERS.

Sealed Tenders (Tender No. S/CAL-Boating/58) are invited for boating wooden sleepers and timber from chartered or liner vessels arriving at Calcutta Port on Railway Account.

Tender Forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rupees Five only (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach, by local firms.

Earnest Money Rs. 1,000/- is to be deposited with this Rly's Chief Cashier and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores are exempted.

Firms not on this Railway's list of approved Contractors must enclose a valid Incomt Tax Clearance Certificate with the tender.

Tenders will be opened at 12 noon on 30.4.58 in the office of the General Manager.

GENERAL MANAGER

RAPID GROWTH OF THE U.K. CHEMICAL INDUSTRY

PROBLEM OF CLASSIFICATION OF PRODUCTS

(FROM A SPECIAL CORRESPONDENT)

THE title of the Sir William Jackson Pope Memorial Lecture, to be delivered in May at the Royal Society of Arts, London, by Sir Ian Heilbron, is "Expanding Horizons in Organic Chemistry". The choice of subject for the occasion indicates its importance for the United Kingdom at this stage of its history, when the expansion of exports is vital, and chemical products are one of the most promising means for its realisation. The rapid growth of the industry in recent years has caused difficulties in the classification of its products. Organic chemicals were originally so called because they were derived from living organisms, the term "inorganic" being reserved for those which were derived from inert sources. It was never an accurate description, and, in fact, as long ago as 1828, it was proved to rest on an untenable assumption. The definition of organic chemicals which is acceptable today is that they contain carbon This can be said to be fairly satisfactory. But it cannot be said that the problem of a precise and yet comprehensive definition has been solved, as is admitted by chemists themselves. It may be noted that in the official report on the British chemical industry, issued a year or two ago, the industry was divided into 17 distinct groups, of which heavy organic chemicals comprised one. The products of this group were stated as methanol, formaldehyde, ethanol and solvents generally, and "products from petroleum."

Large Capital Investment

Petroleum chemical products, as has just been noted, are included in heavy organic chemicals; they are probably responsible for the largest individual output within that section. It is this branch of the chemical industry which has had the second largest amount of capital spent on it in recent years. The remarkable expansion in the output of petroleum chemicals is largely the result of the necessity of finding by-products for the petroleum industry. The rate of development has been accelerated by the ever-increasing amount of petroleum consumed, chiefly by motor-vehicles of all kinds and aeroplanes. This has necessitated the refining of a continuously greater amount of petroleum and a correspondingly larger amount of residues whose commercial possibilities demanded full exploration. As the consumption of petroleum shows no sign of having reached its maximum, there must be an endless quest for new petroleum by-products, accompanied by still further expansion of the uses already known. This statement remains broadly true, although it is not free from over-simplification. While many of the petroleum by-products represent the recovery of chemical properties already present in the crude petroleum, and which can be obtained by extraction or distillation along usual lines, some of the most important of them fall into another category. These are certain petroleum constituents which have to be modified, often by elaborate methods, the effect of which is to provide raw materials for chemical products rather than the finished products themselves, and which undergo much processing before they reach the stage of being chemical manufactures.

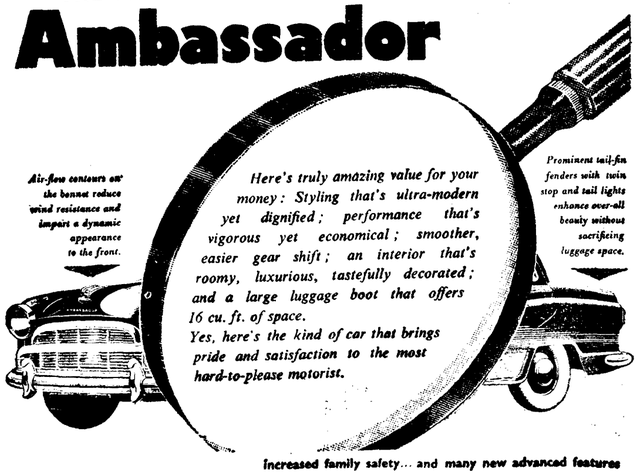
Petroleum Chemical Products

The petroleum chemical industry in the United Kingdom has a longer history than is usually recognised: it was established some 28 years ago, and was at first related chiefly to the paint and artificial leather industries. In January 1957, the Imperial Chemical Industries decided that the industry had reached such proportions that it had become essential to separate the company's interests in organic chemicals from other connections, and to create a new heavy organic chemicals division. The division's field of manufacturing operations is in Billingham (Durham) and Wilton (Yorkshire). Both these plant, especially that in Wilton, manufacture petroleum chemical products. The two plant are situated on Tees-side, and are often spoken of as one. Billingham more often receiving preference to Wilton. This customery reference will be better understood when it is known that the two plant are linked by pipelines ten miles in length. By the aid of these pipelines (and facilitated by the general planning schemes) the plant are closely related in their working. This is illustrated in a pictorial process flow diagram issued by Imperial Chemicals, whereon some of the consequences of this inter-relationship are shown. Thus, to give a few examples, ammonia from Billingham reaches the terylene plant in Wilton, alkyl phenol from Billingham goes to the lissapol plant in Wilton, methanol from Billingham to the moulding powder plant in Wilton; and so on. The powerful and highly efficient nature of such co-ordination needs no emphasis.

I.C.I. is among those industrial concerns which have taken a strong interest in the proposed European free trade area. It has declared that "its immediate task is to create a new attitude of mind—we must now think of Europe as a whole, not the United Kingdom alone, as our home market." Its selling policy and organisation are being arranged accordingly. The company is already well represented by agents throughout Europe.

Industrial Importance

The 60 or 70 chemical products now made at Billingham are mostly familiar. It has been stated that the products are used in every British industry of importance, and, indeed, they enter into every phase of modern life. The chief reliance at Billingham has been on fertilisers, for which there is no decline in demand. But the Wilton area is to be much more diversified in scope, in which Billingham will play a leading part. It should be borne in mind that, in addition to Billingham and Wilton, various other I.C.I. units are situated on Tees-side and that these have their own specialities which add to the variety of the company's products.



Lower Production Costs

It would be interesting to know what are the new petroleum chemicals which are likely to make their appearance over the next decade. The enterprise which shares with Imperial Chemicals the foremost part in developing petroleum chemical products is the Shell Chemical Company. This company has announced the elimination of some of the processes formerly considered necessary in obtaining chemical raw materials from petroleum, thereby reducing the cost of their production. It seems that this reduction would have a special bearing on applications of ethyl alcohol. An authoritative list of the uses of ethylene oxide, "one of the most versatile of organic chemicals", mentions the paper and printing industries, pharmaceuticals, cosmetics, rubber, aircraft, detergents weed-killers, dyestuffs and textiles.

Stocks and Shares

UPWARD TREND CONTINUES IN SHARE PRICES

INVESTMENT SUPPORT RETURNING

Wednesday Evening

MARKET sentiment suffered a temporary setback at the beginning of the period, reflecting the prevailing anxiety about the political developments in West Bengal. The undertone, however, remained firm. Indian Irons lost some of the ground gained earlier and fell to Rs. 21.17, but recovered subsequently to close this evening at Rs. 21.56. The big event of the week was the important concession to the West Bengal and Bihar coal industry in the matter of royalty rates and mining leases. This meets the industry's pleas for special consideration on these points, and has been interpreted by the market as yet another example of the new spirit of sympathy towards the private sector. The effect was not limited to the coal section, where prices responded with a rise in Bengal to Rs. 222 and Pench Valley to Rs. 19.31.

Business in tea shares improved on reports that a concession in export duty is imminent. It is believed that the earlier insistence that the relief should be limited to common teas has been given up and that a general reduction of export duty of about 12nP a lb is likely.

The jute section was more active and expectations have been raised that the results of some companies, which are due to appear shortly, will show an improvement over the previous period. The effects of modernisation and rationalisation and the easier availability of raw jute are thought to have made working more profitable, although low goods prices continue to cause anxiety. The opening of the new futures market is welcomed in the hope that irresponsible speculation will not be allowed to drag down prices as it has done before. Nuddea, Megna, Chitavalsah, Nellimarla and Fort Gloster were particularly active and recorded moderate gains.

The bulls were undaunted by the slight pause in the recovery movement. Yesterday and today there have been signs of reviving confidence and even a broadening of investment interest. The Greaves Cotton issue of 35,000 ordinary shares of Rs. 100 each for public subscription out of a total issue of 46,600 (11,600 being taken up by the present shareholders) has attracted interest. If the 7½ percent dividend can be maintained on the increased capital, as the directors hope it will, it should be an attractive investment holding good growth prospects.

The gilt-edged market continued firm and for the fifth time in the past five weeks the Reserve Bank raised its selling prices for certain loans. On this occasion the selling prices of 3½% loan 1964 were increased from Rs. 98 to Rs. 98.10, 3½% 1967 from Rs. 99.70 to Rs. 99.75 and 4% 1972 from Rs. 100.10 to Rs. 100.15.

Although little business was reported in preference shares during the week, there were definitely more buyers than sellers of selected issues. It has been mentioned in market circles that the L.I.C., which has hitherto taken little interest in preference shares, is now keen on acquiring selected scrip yielding a minimum return of 6% tax-free.

So far as the various sections of the market are concerned, no useful purpose would be served by commenting on individual scrips, as the enquiry embraced all sections. The following table of representative price movements gives an overall view of the general trend during the past week:

	Opening 27th March, 1958 Rs.	Closing 2nd April, 1958 Rs.
Bengal	210	222
Pench Valley	18.75	19.31
Guest, Keen, Williams	30.50	30.69

The profit of the INDIAN ALUMINIUM COMPANY has increased from Rs. 42.8 lakhs to Rs. 60.9 lakhs for the year ended last December. The ordinary dividend has been reduced from 10 percent to 6 percent but the capital has meanwhile been increased. The taxation provision absorbs Rs. 37 lakhs (Rs. 7 lakhs) and depreciation is allocated Rs. 26.30 lakhs (Rs. 22.80 lakhs). The carry-forward is Rs. 7,20,182, against Rs. 7,97,410 brought in. Sales increased from Rs. 42.8 lakhs to Rs. 60.9 lakhs. Work on the expansion programme is making excellent progress. It is hoped that the construction of the new reduction plant at Hirakud in Orissa will be completed on schedule, and that the 10,000 tons annual production capacity being installed will come into operation early in 1959. The expansion of the existing alumina plant at Muri to 18,000 tons of annual production capacity will, it is expected, be completed during 1958, and further expansion to 30,000 tons of alumina capacity will be taken in hand for completion by 1961. In order to facilitate further expansion, the company's Canadian shareholder, Aluminium Ltd., has expressed its willingness to make to the company a loan of up to $5 million, which is equivalent to the foreign exchange required to expand the Hirakud smelter from 10,000 tons to 20,000 tons and the Muri alumina plant from 30,000 tons to 40,000 tons annual production capacity. An application for a licence under the Industries (Development and Regulation) Act, 1951, to proceed with the expansion has been made to the Government.

* * * *

The profit of the ORISSA MINERALS DEVELOPMENT COMPANY has increased by Rs. 6.80 lakhs to Rs. 15.03 lakhs. The taxation provision absorbs Rs. 10.90 lakhs (Rs. 2.80 lakhs). Bringing in Rs. 1,00,667, there is a balance of Rs. 5,75,147. Allocations include general reserve Rs. 315 (Rs. 232), tax contingency reserve Rs. 24,000 (Rs. 34,200) and development rebate reserve Rs. 5,300 (Rs. 12,340). The dividend of 20 percent has ben maintained, including an interim of 10 percent. The carry-forward is Rs. 1,15,708. The directors mention that Bolani Ores (Private) Ltd., was incorporated on 5th June, 1957, with an authorised capital of Rs. 1 crore, divided into 100,000 equity shares of Rs. 100 each. The Central Government and Orissa Minerals are participating in the capital of Bolani Ores (Private) Ltd., in the ratio of 50.5 percent and 49.5 percent, respectively. Bird and Co. (Private) Ltd have been appointed secretaries and treasurers of Bolani Ores (Private) Ltd. for a

In Health **PHILIPS** aid the science of healing

INDIA's doctors need the most modern medical aids in tackling their tremendous problems. They are aided in this noble task by organisations like Philips who are proud to place their many years of research and experience at their disposal. Whether it's the highly intricate X-Ray unit, which is one of modern science's contributions to accurate diagnosis; or the super-sensitive cardiograph which registers every tremor of the heart; or whether it's the assured supply of flawless lighting or a whole range of tested pharmaceuticals, Philips aid in many ways the noble science of healing and point the way to recovery.

PHILIPS

Contributing today to India's future

period of 15 years. Iron ore raisings increased from 339,722 tons to 411,993 tons. Despatches improved from 358,250 tons to 411,767 tons. The steel works order was increased from 40,000 tons to 50 000 tons a month from February 1957. Manganese ore raisings fell from 42,671 tons to 34,700 tons. Sales, however, increased from 36.132 tons to 43.477 tons. Manganese dioxide raisings were nil, compared with 1,195 tons in the previous year. Sales fell from 3.196 tons to 2,951 tons. Prospecting operations to prove the deposits are continuing and the indications so far are favourable.

* * * * *

Transferring Rs. 7.83 lakhs to fixed assets replacement reserve, the profit of HINDUSTAN LEVER LTD. has amounted to Rs. 2.23 crores for the year ended last December, against Rs. 2.24 crores. Higher costs have offset gains from increased sales tonnages. Sales turnover has improved from Rs. 29.19 crores to Rs. 33.19 crores. A dividend of Rs. 1.40 a share has been declared and it absorbs Rs. 77.98 lakhs. "This will leave Rs. 22.24,000 to be added to the profit retained in the business, and the balance carried forward on profit and loss account will then be Rs. 89.94.000 and on general and fixed assets replacement reserves Rs. 49,15,000".

Bombay Market

PRICES IMPROVE ON BROAD FRONT

HOPES OF FURTHER TAX RELIEF

Wednesday Evening.

THE Bombay stock market closed last week on a firm note and share prices improved substantially all round. Excellent corporate news, combined with the prospect of further reliefs in fiscal burdens, especially in the tea export duty, generated bullish enthusiasm. Steels were prominent on hopes of an increase in the retention price of the commodity.

The publication of the Government's import policy has been welcomed, as consideration has been given to providing industry with increased supplies of raw materials.

Tata Steel were boosted up to Rs. 183.50, but the closing price was shaded at Rs. 182.50 on profit-taking. Indian Iron gained in sympathy to Rs. 21.59. Tata Locomotive recovered to Rs. 159 on fresh investment support and Premier Construction were bought at the higher price of Rs. 174.25 on reports of capital reorganisation. Alcock Ashdown were higher at Rs. 282.50. Motor-car shares improved mainly on speculative interest. Hindustan Motor rose to Rs. 7.32 and Premier Automobile were transacted at Rs. 86.50.

Coton mill shares showed widespread gains in the belief that the proposal to place increased fiscal burdens on the unorganised sector will help expand the sale of mill-made goods. Bombay Dyeing improved to Rs. 56.40 and Century rose to Rs. 438. Kohinoor were transacted at Rs. 286 and Svadeshi came to hand at Rs. 186.25. Simplex were placed at Rs. 159.50 and India United Ordinary were wanted at the higher price of Rs. 9.96. Apollo were done at Rs. 1.86.

Miscellaneous shares were very steady in sympathy with the general trend. The increase in the price of sugar lifted shares in that group. Belapur recovered to Rs. 240.50 and Phalton were quoted higher at Rs. 141.50. Hopes of an increase in the price of cement induced fresh support in Associated Cement at Rs. 152.25. and Digvijay gained at Rs. 143.75. Mining shares were firm on replacement buying because of an improvement in the international price of copper. Indian Copper improved to Rs. 3.32 and Shivrajpur Syndicate were taken at Rs. 99.50. Steamship company shares were steady on scattered interest. Scindia Steam changed hands at Rs. 17.60 and Great Eastern Shipping came to hand at Rs. 20.28. National Rayon were done at the higher price of Rs. 219 and Tata Chemical gained at Rs. 14.36 on reports of good working. Bombay-Burmah recovered to Rs. 552.

Banking shares were steady but turnover was restricted. Central Bank came to hand at Rs. 52 and Bank of Baroda were bought at Rs. 111.50 on reports of amalgamation of the institution with the Hind Bank. Insurance shares were steady on selective support, and Oriental improved to Rs. 4,300 on reports of its amalgamation with the India Investment Corporation. New India Assurance were transacted at Rs. 44.

Electricity supply company shares were steady and investment support was forthcoming. Ahmedabad were quoted higher at Rs. 96.30. Tata Hydro realised Rs. 117.

The Story of Oil—7

Getting down to drilling

The oil driller's derrick looks imposing and strange as it stands silhouetted against the sky, but it is merely a sturdy steel support for lowering and raising jointed lengths of heavy pipe into and out of the well during the drilling operations.

In modern drilling, a sharp-toothed bit is first attached to a length of steel pipe called the drill pipe. The drill pipe, held vertical by a giant block and tackle system in the derrick, is lowered into a pilot hole and revolved by means of a turntable on the derrick floor. The turntable is rotated by powerful engines behind the derrick. As the pipe is turned, the bit cuts a hole in the earth's rocks and lengths of drill pipe are added as the hole becomes deeper.

When the bit becomes worn the entire length of drill pipe must be removed, unjointed, and stacked in the derrick. After the new bit is attached the pipe is joined together and drilling begins again.

All during drilling, specially-prepared mud is pumped down inside the drill pipe. It passes through perforations in the bit and is forced back to the surface outside the drill pipe. This mud has many useful functions. It flushes rock cuttings back to the surface for examination, cools the bit and plasters the walls of the hole to prevent them from caving in. As drilling progresses the hole is lined with successive lengths of steel pipe called casing.

An oil well has been drilled to a depth of four miles, but a 10,000 foot well is still considered deep. Drilling at such depths is an extremely delicate operation, requiring great skill and long experience. Only by drilling, however, can the oil prospector prove the presence of mineral oil.

Tata-Fison hit Calcutta

When Mr. Tata and Mr. Fison joined hands in July of 1957 a chill of terror was struck in the heart of every insect pest. For the combined resources of Tata Chemicals and the Fison Group put the widest, most effective range of insecticides and fungicides into the hands of Agricultural and Public Health authorities, planters and cultivators.

Now Tata-Fison have arrived in Calcutta. From April 1 they have taken over the Geigy agency previously held by Gladstone Lyall. In conjunction with their new distributors, Shaw Wallace & Co. Ltd., Tata-Fison are laying their plans to deal with all pests and diseases in West Bengal, Bihar, Assam and Orissa

As the Red Spider said to the Helopeltis

TATA-FISON

will be the death of us!

New Delhi

CENTRAL AID FOR STATE SCHEMES CRITICISED

MONEY BEING DIVERTED TO PROJECTS OUTSIDE PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

THERE have been some significant Ministerial announcements in Parliament during the recent discussions on various Ministries' demands for grants. In a democracy, outgoing Ministers do not normally commit their successors to a certain line of policy. But in India, this is just what they have been doing. In democratic societies, Constitutions are honoured, respected and implemented in letter and in spirit. But the Education Minister has just told the Lok Sabha that "though education is a State subject", the Central Government is subsidising various schemes for elementary, secondary and university education, women's education, physical education, teachers' salaries, etcetera. In 1958-59, the Centre will be giving financial assistance for paying higher salaries to all categories of teachers from the primary to the university stage. The expenditure involved in introducing the three-year degree course in the universities will be shared between the Central and State Governments in equal proportions. It is expected that over the next three years, 1,500 intermediate colleges will be upgraded and 360 degree courses will be reorganised.

There are some important aspects of this question which need to be examined. The Planning Commission has allocated Rs. 307 crores for education as follows:

	(In crores of rupees)
Elementary education	89
Secondary education	51
University education	57
Technical and vocational education	48
Social education	5
Administration and miscellaneous	57
	307

Of this Rs. 95 crores is to be provided by the Central Government and the remaining Rs. 212 crores by the States. In addition, the allotment for national extension and community projects includes about Rs. 12 crores for general education and about Rs. 10 crores for social education. Considerable sums of money have been provided to finance programmes in different sectors such as agriculture, health, welfare of backward classes and the rehabilitation of displaced persons.

Local Authorities

On elementary education, the Planning Commission has said in its second five year plan report: "In many countries, the principal responsibility for providing elementary education rests with the local authority. Even in India, for centuries the tradition was that most of the expenditure on education was to be met by the community. What is now required is, in addition, a contribution towards the cost of maintenance of schools. To enable local authorities to shoulder in some measure the continuing responsibility, it is recommended that each State should consider enabling the legislature to enable local authorities to levy a cess for education." On university education, the plan report says: "The total provision for university education in the second five year plan is about Rs. 57 crores, of which Rs. 22.5 crores are provided in the State plans and Rs. 34.4 crores at the Centre, the latter provision including an allotment of Rs. 27 crores for the University Grants Commission. The greater part of the expenditure will be on consolidation and increased provision for technical and scientific education in the universities."

Apart from the constitutional issue, elementary education, as recommended by the Planning Commission, should have been financed by a levy on education. Dr. Shrimali has not disclosed what has happened either to the enabling legislation or to the yield from the levy, if it has at all been imposed. The fact is that the Central Ministry of Education, in order to justify not only its existence but also its expansion, continuously formulates schemes, such as those for subsidising teachers' salaries and for subsidising elementary, secondary and university education. In order to force those schemes on the States, the bait of matching grants is given. Many schemes are outside the plan. This often invites a protest from the States.

As for the three-year degree course, the Planning Commission has not recommended a dole from the Centre to implement this scheme. The Education Ministry has been given a total allocation of Rs. 95 crores under the second plan. This includes a provision for buildings which, due to the scarcity of steel and cement, are not likely to be built. In other words, there can be a saving from the provision of Rs. 95 crores made for education. But instead of surrendering it, the Ministry is diverting the unused part of the allocation to new schemes or to schemes for which no allocation from the Central funds has been made.

It is said that there is nothing final in democracy. On this principle, presumably, constitutional provisions can be evaded and the recommendations of the Planning Commission can be brushed aside, but an allocation once made to the Ministry of Education cannot be reduced. Although money is needed for providing elementary sanitation and water supply facilities in the rural areas, culture is apparently considered more important than the basic needs of the masses.

Money for Oil Schemes

The total outlay on the public sector under the second plan is fixed at Rs. 4,800 crores. It is obvious that this could never have been intended to cover the entire cost of the various projects included in the plan. Developments concerning oil and aviation illustrate the point. The plan makes a provision of Rs. 11.5 crores for oil exploration, adding that "further proposals for oil exploration are being formulated and as programmes are approved from time to time, additional resources will be provided. The financial aspects of the Government's participation in oil exploration with private firms are yet to be worked out. Resources needed for the purpose will be provided at the appropriate time." Enquiries show that the money required for producing and refining the oil found in Assam is Rs. 82 crores, including Rs. 44 crores in foreign exchange. The authorised capital of the rupee company which is to be floated in conjunction with the Assam Oil Company will be Rs. 50 crores, one-third of which (Rs. 16⅔ crores) will be contributed by the Government of India. The first issue of the authorised capital, it is expected, will be Rs. 12 crores, one-third of which (Rs. 4 crores) will be contributed by the Government. As matters stand two refineries are to be built in the public sector—one in Assam and the other in Bihar. They will be connected with the oil wells by pipelines. The Assam Oil Company has offered to advance a loan of £10 million to the rupee company to meet the foreign exchange cost of the first stage of the pipeline. The second part of the pipeline connecting the oil sources to the second refinery at Barauni will involve a still undetermined expenditure in rupees and foreign exchange, perhaps of the order of another £10 million. The first refinery itself should cost at least Rs. 10 crores, including Rs. 6 crores as the foreign exchange element. The rupee expenditure on the first section of th pipeline is placed at Rs. 11 crores. Luckily, the Assam Oil Company has offered to finance the foreign exchange part of the pipeline and Rumanians the foreign exchange part of the refinery. But the Government has given an assurance that the second refinery at Barauni will be ready less than 12 months after the small one in Assam starts working. The recent U.S. loans are not available for refineries or pipelines in the public sector. The search for financial resources from communist countries might, therefore, become urgent.

Some members of Parliament have recently visited oil prospecting operations in the West Bengal and the Jwalamukhi areas. They did not bring any good impressions from Jwalamukhi, where the prospecting is going on under State auspices. The Planning Commission is extending its appraisal of projects to the public sector. A visit by its adviser to Jwalamukhi and other areas would be useful, it is started here.

Aircraft for A.-I.I.

As for aviation, the Planning Commission declared that "for Air-India International, the programme provides for the purchase of a few turbo-prop or jet aircraft." but has made no financial provision. Air-India International has since taken a loan from an American institution to buy the aircraft. When they are used, airports will have to be enlarged but no provision has been made in the plan for this. Work is already being done at Bombay airport and proposals are being examined to modernise and enlarge the New Delhi and Calcutta airports. The projects will require both rupee and foreign exchange expenditure.

The Problem Summarised

The problem can now be summarised as follows:

1. There are projects even outside the hard core of the plan which require both rupee and foreign exchange expenditure.

2. As far as foreign exchange for the core of the plan is concerned, there is still a large gap and external assistance is required to bridge it.

3. The rupee expenditure is normally met from internal sources such as taxes and loans.

4. As recommended by the Planning Commission, the Centre has raised additional taxation of the order of Rs. 100 crores a year. Part of this additional yield has been transferred to the States as a result of the Finance Commission's recommendations. Inroads on the additional yield have also been made by non-developmental expenditure.

Against this background, it was expected that the Planning Commission and the Finance Ministry would ban expenditure on projects outside the plan and would re-allocate money for projects to which they were already committed. For instance, the money saved from the unused allocations for the Education Ministry could, and should, have been made available to other Ministries to implement schemes which are more urgent than the promotion of culture. State Governments have, during the first five year plan, demonstrated their unwillingness to levy additional taxation, particularly direct taxation. This unwillingness springs from political considerations. Direct taxes lead to unpopularity, which politicians are always reluctant to face.

Criticism of Food Policy

The outgoing Central Minister for Irrigation, Mr. S. K. Patil, made the best speech of the session when he wound up the discussion on his Ministry's demands for grants. It was a severe criticism of the Central Government as far as the production of food is concerned. Mr. Patil said: "At the top, there is the Planning Commission. There ought to be a Planning Commission. The Planning Commission plans. But even beyond planning, it must also supervise. Therefore, it supervises. Even beyond supervision, it also sends working groups and so on. It goes into the actual fields everywhere. It is very good and sound. But I am just telling you how many authorities are working in order that food production should increase, what great interest they are taking to streamline it and co-ordinate the activities so that there may be no hindrance at all, so that ultimately everything may conduce to greater efficiency in the administration. After the Planning Commission comes my Ministry of Irrigation and Power. My Ministry is a technical Ministry with engineers, experts and statisticians—leave aside politicians. They say: 'Our business is to prepare the plan, estimates, etcetera, and then have the dams or power houses or whatever it is; they are also in food production.'

"Then comes the Ministry of Food and Agriculture. It is its responsibility to see what is produced is utilised in the thousands of villages in our country. Then there are the Agricultural Ministries in the States. They are lords or monarchs by themselves. They naturally say that agriculture is, after all, a State subject. Who are you to tell us about our crop pattern and what we should do and should not do? Therefore, they also come in food production. As if that was not enough, the community projects also come in. These community projects are spreading far and wide—more and more villages are being brought into their orbit. Between all these five, sometimes there are lapses, there are omissions and sometimes loose ends are not tied together. Although we created a water potential of as much as 6.5 million acres, only 4 million acres was used."

Lack of Co-ordination

In some cases, it appears that when a dam is completed, the canals to carry the water from the reservoir to lands which need it have not been dug. In others, as under the Durgapur barrage, agriculturists were not willing to pay the water rates demanded by the State Government. In yet others, *ryots* who are used to cultivating dry crops require to be educated to change over to wet crops. That there does not exist sufficient co-ordination between the authorities carrying out the irrigation projects and those engaged in providing various services to the agriculturist is evident because new irrigation facilities have not been properly utilised. Hundreds of tube-wells have been sunk in Bihar, Punjab and Uttar Pradesh during the past few years, but their utility in increasing food production has been a fraction of what was expected from them. If a tube-well which is expected to irrigate 200 acres is used only for irrigating 20 acres or 30 acres, it can be well imagined how expensive and uneconomic it must be.

The Asoka Mehta Committee found that, in addition to non-utilisation of new sources of irrigation, there were cases of neglect of old ones. In an atmosphere in which the emphasis is virtually on new projects, the routine job of maintaining the traditional sources of irrigation in good repair is apt to be neglected. In Andhra Pradesh alone, the committee said, an additional allocation of Rs. 5 crores would be required during the second plan period "for bringing into commission the thousands of tanks which are in need of repair." It also noted that while canal irrigation had brought water supply to new lands, it had caused water-logging in many places because of "defective drainage, planning and designing." In Punjab, approximately 2 million acres are said to have become unsuitable for cultivation due to water-logging. To make these areas cultivable once more will take many years of intensive effort. In other areas, flood protection measures have affected the natural drainage and reduced the fertility of the soil in lands adjoining river banks.

State Governments, it is said, have not been doing their duty. After all, why should they when everything is being done by the Centre at its own expense? One of the defects of the welfare State ideology is that the emphasis is transferred from the first person singular to the third person plural. It is the Central Government which must do everything at its own expense.

Postal Efficiency Deteriorates

The outgoing Central Transport Minister, Mr. Lal Bahadur Shastri, imitated the Education Minister by flushing the House with announce-

ments. He frankly admitted that efficiency in the Posts and Telegraphs Department has deteriorated. But post offices have increased on a colossal scale and so have telegraph offices. The total number of the former up to 30th November, 1957, was over 60,000 and telegraph offices over 10,000. "In the circumstances, when certain complaints are made about the delay and late delivery of telegrams, they have to consider the work and scope of the department and judge such complaints in the correct perspective. If out of 320 million letters and money orders, say, 1 percent are sometimes delayed or few of them are not able to reach the proper address, it should not mean that the whole department is functioning in an inefficient manner." Mr. Shastri's remedy for this inefficiency is to follow the example of the railways and convert the Directorate of Posts and Telegraphs into a Board, the presumption being that the railway administration under the Board is free from the 1 percent inefficiency from which the Posts and Telegraphs Department suffers at present.

The Minister has admitted that there has been a decline in traffic both in relation to postal articles and telegrams. But the revenue from both these sources has gone up. Postal rates in India are the lowest in the world, and Mr. Shastri has suggested the possibility of a readjustment in some postal and telegraphic rates.

Mr. Shastri has announced that the World Bank has agreed to give a loan of $14 million (about Rs. 7 crores) to the Government of India for the development of Madras port, following the recent negotiations. He has encouraged road operators by announcing a moratorium on nationalisation of goods transport till the end of the third plan period —five years more than was contemplated earlier. He has further said that through the yen credit, liberalised deferred payment facilities and barter arrangements, India is trying to get "at least ten new ships" from Japan.

Referring to the Buckingham Canal in south India, the Minister has said that the Government has set apart a sum of Rs. 115 lakhs in the second plan for its development. "The State Governments were requested to prepare detailed estimates of the cost of improvement. As the canal passed through two States, Andhra and Madras, it was considered necessary that there should be proper co-ordination between the two States. They had been advised to make a careful assessment of the traffic potentialities. The report of that survey is expected to be received by July 1958."

National Highways

Mr. Shastri says that the road programme will have to be reviewed in the context of States' re-organisation. The States he has in mind are Mysore, Madhya Pradesh, Bihar and West Bengal. New areas have merged with the old States, and it is necessary to provide them with the necessary communications. The needs of areas such as Manipur, Tripura, some parts of Assam and Himachal Pradesh have also to be borne in mind. It is essential, therefore, to raise the plan target of national highways from 13,800 miles to 15,000 miles. Mr. Shastri has announced a scheme of providing "express highways" on roads where there is heavy traffic such as the area between Bihar and West Bengal in the "so-called industrial belt", and the Madras-Bangalore road. The roads will be widened and there will be separate lanes for fast and slow-moving vehicles. In view of the vast changes which have taken place since the Nagpur Plan was drawn up, a committee of Chief Engineers is now drawing up a new all-India road development plan. Its report will be submitted soon. The plan aims to increase the total mileage from 370,000 to 650,000. It will be helpful to establish a separate rural road fund.

Duty Exemption for Aviation Fuel

Mr. Shastri says that his Ministry has taken up with the Central Finance Ministry the question of exempting aviation fuel from duty so that the Indian Airlines Corporation's working might be stabilised. Another question which is being considered relates to an increase in the rate of payment for conveyance of mail by the Corporation. The Director-General of Posts and Telegraphs has been asked to examine this question. A suggestion was made during the debate that a corporation should be set up in order to operate a service from Raj Mahal to Patna. If the Bihar Government likes to set up a corporation, "we will gladly welcome it and make our contribution," Mr. Shastri says. The Inland Water Transport Board is now operating a small service in a restricted area, between Patna and Chhapra. "If the Bihar Government and the people there will help us and co-operate with us in providing more traffic, I think this experiment could be further extended."

Progress of Plan

The Planning Commission has on its staff five advisers whose main duty is to keep it informed of the progress in the implementation of the plan. As far as the Central Ministries and schemes and projects under them are concerned, the advisers are now allowed to appraise them. In a letter, addressed to Central Ministries, the Commission says that "it is as much interested in seeing that the schemes and projects which are directly administered by the Central Government or their agencies are satisfactorily completed. It is the desire of the Commission that the assistance of the advisers should be freely availed of by the Central Ministries as well. It is suggested that the best way to arrange this is for the advisers to visit the Ministries in Delhi regularly and discuss with the officers of the Ministries problems connected with Central Government schemes and projects; and also to visit these projects on their tours and report to the Ministries and to the Commission the impression which they have formed of the progress of the projects. In short, it is the desire of the Commission that its advisers should function *vis-à-vis* the Central Ministries in the same manner in which they function *vis-à-vis* the States."

Officers of the Ministries also occasionally have to visit the States for identical purposes. The Commission suggests that the visits of its advisers and those of the officers should be co-ordinated. For this purpose, before officers of Ministries draw up their tour programmes, they might consult the adviser concerned and endeavour to draw up a joint tour programme.

U.K. Foreign Investments

Foreign business investments from the United Kingdom in India are as follows:

	(In crores of rupees)
30th June, 1948	209.95
31st December, 1953	347.28
31st December, 1955	391.99

Bank Rate and British Investments

Some indications are available as to how the rise in the British Bank rate affected U.K. investments in India. Prior to the rise in Bank rate and up to 19th September, 1957, 12 cases of imports on a deferred payment basis were approved by the Government involving Rs. 885.26 lakhs. In none of these cases was the rate of interest expressly linked with Bank rate and in only three cases, involving a sum of Rs. 435.59 lakhs, was the rate of interest specified as 6 percent. From 20th September, 1957, when Bank rate was raised to 7 percent, till now, 15 cases of imports of the total value of Rs. 434.21 lakhs were allowed. Of these, in only four cases of the total value of Rs. 251 lakhs was the rate of interest specified as follows:

(In lakhs of rupees)

74.63	7 percent interest
135	2 percent more than Bank rate
6.67	1 percent more than Bank rate
34.70	7 percent interest

Trade Delegation from W. Germany

The West German althorities have been informally requested to sponsor a trade delegation to visit India. No delegation however is expected until next winter.

French Collaboration for Aluminium Plant

Messrs Pechiney, a French firm interested in extending collaboration to India for the establishment of aluminium plant in Mettur and Rihand, deputed one of their experts, M. Sabot, to examine the main bauxite deposits in the country and to advise on the best and most economical way of estimating the total amount of the reserves suitable for the production of aluminium. The expert visited India in October-November last year. His report is still awaited. The two plant will have an initial production capacity of 10,000 tons and may cost Rs. 15 crores each. Both of them will be in the private sector. If internal and external resources are available the Government will consider the establishment of one or more aluminium projects in the public sector as well, it is learnt.

Investment in Shipping Companies

A sum of Rs. 1,654.82 lakhs has been invested by Indian nationals in the paid-up capital of the various shipping companies in the private sector. The Government of India has invested a sum of Rs. 9 crores in the Eastern and Western Shipping Corporations, the two companies in the public sector. In addition, loans have been advanced by the Central Government to the extent of Rs. 2,469.19 lakhs to the shipping companies in the private sector and Rs. 162.50 lakhs to those in the public sector. Of these, a sum of Rs. 340.87 lakhs has been repaid by the private sector and Rs. 34.11 lakhs by the public sector companies. It will be seen that the amount of loans is in excess of the total capital of the companies in the private sector.

Sale of Iron Ore by S.T.C.

The following statement shows the State Trading Corporation's sale of iron ore:

Country	Contracts for supply of iron ore during 1957-58 which the price has been fixed.	Contracts for supply of iron ore during 1958-59 which the price has been fixed.	Contract for supply of iron ore during 1958-59 and afterwards for which the price has not yet been fixed.
Japan	1,529,886		5,900,000
Czechoslovakia	461,855	175,000	700,000
Italy	151,159	50,000	—
Poland	110,774	60,000	300,000
Hungary	22,080	—	—
Yugoslavia	48,286	—	—
East Germany	18,000	—	—
West Germany	2,000	—	—
Total	2,343,960	285,000	6,900,000

Effect of Port Congestion

How expensive the port congestion has been may be gathered from the following figures relating to the public sector (similar figures for the private sector are not available): Demurrage payable in the beginning of 1958 for the Bhilai project, Rs. 45,66,000; demurrage payable in the beginning of 1958 for bulk purchases paid from the steel equalisation fund during the period 1st January, 1957 to 25th July, 1957, Rs. 5,56,371; demurrage payable, at five major ports on 31st August, 1958, Rs. 1,08,997; demurrage payable at five major ports on 30th September, 1957, Rs. 40,687; demurrage paid on imports through the port of Bombay from 1st April, 1957 to 31st August, 1957, Rs. 57,347. During May, June and July 1957, the following amounts were paid as demurrage on Government account: Department of Agriculture, Rs. 1,10,000; Department of Food, Rs. 23,00,000; and Department of Iron and Steel, Rs. 44,00,000. The State Trading Corporation paid Rs. 8,76,839 during 1st May, 1957 to 31st December, 1957.

Speculation in Mining Properties

The Central Government views with grave concern the increasing tendency on the part of some sections of the mining industry to speculate in mining properties. Such speculation hinders the growth of the industry and is inimical to the national interest. The transfer of mining properties has, therefore, been made subject to the prior approval of the Government. Of late, however, this legal requirement has been increasingly circumvented by having recourse to such devices as the appointment of "raising contractors" and the execution of "powers of attorney". The Government has accordingly taken steps to amend Rule 37 of the Mineral Concession Rules, 1949, in order to prevent this.

Wheat Imports

In the Budget for 1958-59, there is a provision for importing 2 million tons of wheat, estimated to cost about Rs. 77 crores. This was said by the Central Food Minister in Parliament last week. Under the current agreements with the United States and Canada, about 500,000 tons may remain to be shipped at the beginning of the next financial year. The foreign exchange requirement, mainly on freight, may be approximately Rs. 2 crores. Further shipments and the foreign exchange required will depend on the terms of the agreements which may be arrived at with the exporting countries.

Trade Marks Bill

The Trade and Merchandise Marks Bill, 1958, introduced in the Lok Sabha last week, aims at enacting comprehensive legislation on the subject of trade and merchandise marks. It proposes to amend the Trade Marks Act, 1940, and the Merchandise Marks Act, 1889, and incorporates the provisions on trade marks contained in the Indian Penal Code. The Bill recognises the importance of protecting trade marks in the interests of trade and commerce and the suppression of unfair trade practices without undue interference with fair and legitimate competition. An important feature of the Bill relates to the development of India's export trade. A number of trade marks are used in the internal and export trade which cannot be registered under the present law. In many countries, Indian exporters cannot get their trade marks registered because they are not registered in the home country. The Bill provides for the introduction of a new part of the Trade Marks Register, called Part B, which will permit the registration of trade marks for which the test of registration will be less stringent than hitherto. This will enable exporters to register their trade marks at home and get protection in foreign countries.

Part A of the Register will include those which may be registered in future after satisfying the tests of distinctiveness prescribed under the existing Act. It will also include trade marks already registered. The protection which trade marks registered in Part B will enjoy will be of a lower order than that provided for trade marks registered in Part A. The introduction of the Part B Register, apart from facilitating registration of trade marks by Indian exporters in foreign countries, will also bring Indian trade mark practices in line with those of other industrially advanced countries.

Punishment to Offenders

Considering that a fresh approach to problems of false trade marks and false trade descriptions has become necessary in view of the development of commercial advertising, the Bill aims at strengthening the law on trade descriptions and merchandise marks. The definition of "trade descriptions" and "false trade descriptions" has been expanded providing for punishment to offenders. These are not punishable under the existing Indian Merchandise Marks Act. Secondly, punishment for offences relating to merchandise marks is to be enhanced, particularly where the offences relate to drugs and articles of food. The Bill will also empower the Central Government to notify any case in relation to which it may require the name and address of the manufacturer or the person for whom the goods are made to be given.

Home Leave Passages

With effect from 1st April, the Government has withdrawn the rules governing the grant of exemption from payment of income tax for non-Indian nationals on their home leave passages. The free or concessional passages which can now qualify for exemption under the statutory provisions, however, are only those given by the employer in India to the foreign employee, his wife and children in connection with the employee's home leave outside India.

London

BUDGET PROSPECTS SINCE THE BANK RATE CUT

IMPORTANCE OF CHECKING INFLATION

(FROM OUR LONDON CORRESPONDENT)

WITH the excitement occasioned by the Bank rate cut at an end, business men have been thinking how the move will affect the Budget. Generally speaking, there is cautious optimism that it represents a good omen. Whether that is justified or not will depend to a large extent on what Mr. Heathcoat Amory intends to do about financing "below the line" expenditure. The latest Treasury returns, which take us to within nine days of the close of the 1957-58 financial year, suggest that there will be no significant changes from Mr. Thorneycroft's estimates. Up to 22nd March, ordinary revenue is given at £5,202 million and ordinary exenditure at £4.749 million, yielding a curent surplus of £453 million. "Below the line" there is a deficit of £617 million, advances being £1,318 milion and repayments £681 million, so that there is an overall deficit at the moment of £164 million. Mr. Thorneycroft's estimates for the year were for a current surplus of £462 million, a capital account deficit of £587 million and an overall deficit of £125 million. On the basis of the figures alone, the Chancellor of the Exchequer is not unfavourably placed to be lenient. But many other factors have to be considered in framing a Budget, and of these only the sketchiest of ideas exist so far, except that the over-riding necessity is to check inflation.

International Obligations

Following the new policy he has laid down for himself, Mr. C. F. Cobbold, Governor of the Bank of England, has dealt with some of these "other" considerations at the annual dinner of the Machine Tool Trades Association. For instance, he points out that it would be a major disaster for British trade and for world trade if the U.K. tries to retreat from obligations of having an international currency. It is nonsense to maintain, he says, "that the international strength and utility of sterling, and the banking and financial services which London has to offer, are things which merely concern the City of London." While these financial services bring in valuable earnings, they have much more than that to contribute. The country's interests require an increasing level of world trade and an increasingly multilateral basis of world trade. The wide use of sterling is essential to that kind of world trade system. If the U.K. tries to back out, it will fall into a world of "compartmentalised and bilateralised" currency arrangements. The occasional strain caused by its overseas liabilities would probably be worse if it attempts to retreat. Referring to the cut in Bank rate, Mr. Cobbold says that inflationary pressures, though damped down, are "still lurking around." The world situation is rather more threatening than it looked six weeks ago, and Britain cannot do worse than allow inflation to continue and so price itself out of world markets. People have to get used to seeing Bank rate frequently adjusted without heralding minor reductions from crisis levels as a signal for new excesses of spending. The authorities should not be hampered in lowering the rate when that is justified on merit, otherwise they will feel less free "to use Bank rate with vigour, and for as long as may be required, at the decisive moments." If the Chancellor accepts the Governor's views, Budget hopes will need to be damped down considerably.

The Background

Members of Parliament will really get down to assessing the complexities, with which Mr. Amory is struggling with the publication of the series of pre-Budget documents dealing with the economic situation. These documents include the final Exchequer returns, the national income White Paper, the Economic Survey, the balance of payments White Paper and the monthly statement of the gold and dollar reserves. The Economic Survey is likely to be examined for any sign it may contain of the Government's assessment of the circumstances in which the present anti-inflationary phase should end and expansion should start. The Chancellor is expected to repeat his predecessor's warning that the balance of payments must be placed on a secure footing before there can be further progress in industrial investment and further improvements in living standards. He will stress the need for a still greater expansion of exports, and urge manufacturers to take full advantage of the favourable terms of trade to make their prices more competitive. For all its apparent acceptance of President Eisenhower's reassurances, it can be said that the Government is getting a little anxious about the recession in the United States and its possible consequences for world trade. It is watching with some apprehension for signs that action by the U.S. Administration will have speedy and recognisable effects.

Better Trade Position

Britain's terms of trade are now at their best since the war, following a 10 percent fall in import prices in the past year. February's trade gap of £11 million, almost the lowest since the war, was the result of these favourable trends rather than of any underlying change in trading. For the past four months the trade gap, averaging only £21 million, has been smaller than in any postwar period except for a similar spell in the autumn of 1950. In relation to the balance of payments, the recent big reductions in the trade gap must imply a substantial rise in the current account surplus. According to the Board of Trade, a surplus is probably now being earned on visible trade alone. The terms of trade in February moved by two points in Britain's favour, from 91 to 89. The import price index showed a further fall of one point to 99, while the export price index was up one point at 111, the level maintained in the last quarter of last year. The rise in export prices was most marked in the metals and textiles groups. Engineering products also were dearer. On the import side, foodstuffs, raw materials and fuels became cheaper. The trend towards lower raw material prices is also reflected in the February index for basic materials, which declined from 98.8 to 98.4. A year ago, this index stood at 111.4. It is questionable whether this can last, but it is encouraging to find U.K. exports being supported by the buoyancy of sterling area markets and long order-books.

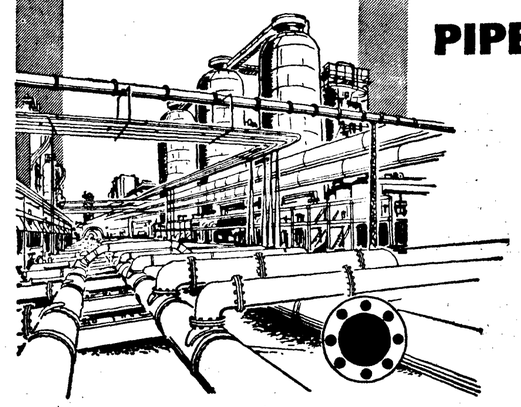
Rise in Bank Advances

In the four weeks to 19th March, advances of the London clearing banks have risen by about £37 million to £1,917 million, but as the bulk of the rise is confined to one bank it is probably due to special factors. The March figure of bank overdrafts of the nationalised industries is not yet available, but, assuming that it shows no material change from the February level, it appears that the monthly average loans figure for the past six months will work out at about £1,820 million. This compares with the target figure, for the purpose of the official credit squeeze, of about £1,885 million. The banks at last appear to have some room for manoeuvre. Orders for metal-working machine tools from the home trade rose to £5.05 million in December, thus more than maintaining the gain made in November. Then the value was £4.72 million, against £4.60 million in October. In the third quarter of 1957, the monthly total of orders averaged £4.76 million, or £560,000 below the 1956 average. Machine tool orders for export were worth only £1.37 million in December, against £1.39 million in November and a monthly average of £1.89 million in 1956. At the end of 1957, total orders, at £78.7 million, were £19.7 million below the end-1956 level. Deliveries in December were valued at £7.32 million, making about £95 million for the year. The 1956 total was £85 million.

Self-Help Scheme in Lancashire

While by no means abandoning hope of assistance in meeting the threat of cheap imports, the weaving section of the cotton industry has embarked on a scheme to contract production. Formed under the auspices of the Cotton Spinners and Manufacturers Association and the Rayon Weaving Association, a new company, Weaving Reorganisation Ltd., aims at taking over and closing cotton and rayon weaving firms. This plan differs in several ways from the scheme introduced in 1936 to scrap redundant plant in the cotton spinning trade. Then a board set up by the Government operated a purchase scheme on a compulsory levy basis. There is no Government backing for the weavers' plan and participation will be purely voluntary. According to the sponsors of the scheme, most of the capital for buying out firms willing to close down will come from outside the industry. Only part will be sought in the form of interest-bearing loans from the stronger weaving companies. This clearly implies that financial support will be available from banking quarters. Here it may be relevant to point out that the chairman of Weaving Reorganisation is Mr. J. H. King, who is an ex-general manager of Martins Bank, while Sir Cuthbert Clegg, prominent in the weaving industry and also on the board of Martins Bank, is among the prime movers in the scheme. In recent years, the weaving section, which is the soft spot in the cotton trade, has been steadily contracting. It includes a large number of small units, many of them family businesses which are operating out-of-date plants, and which are understandably reluctant to embark on expensive re-equipment in the present depressed conditions. Since many of these firms are in quite good financial shape, the new plan, offering a means of disposing of fixed assets, may well accelerate the necessary process of contraction.

Brevities



Mr. A. P. Cameron and Mr. N. S. Golder have retired from the board of the Eastern Bank.

Seven tea companies in the Walter Duncan and Goodricke group are passing their interim dividends. They are Allynugger, Assam-Dooars, Hope, Kukicherra, Lankapara, Leesh River and Meenglas. All seven companies paid 2½ percent interims for 1956.

Messrs R. Y. Pickering, carriage and wagon builders, of Wishaw, Lanarkshire, have been given a contract, worth £2,250,000, to build 1,364 freight vans and 400 cattle wagons for the Pakistan State Railways.

The production of motor-cars at nearly 83,500, and exports at 42,000, during February were greater than for any previous February. Exports for commercial vehicles, worth nearly £8 million, also established a February record.

CAST IRON FLANGED PIPES

Cast Iron Pipes with flanged joints are impervious to rust and corrosion and particularly suitable for pumping and high pressure mains as well as for conveying acid, sugarcane juice and other liquids of commercial value. They are manufactured at Kulti to British Standard Specification.

TALKS ON LIMITING INDIAN TEXTILE EXPORTS TO U.K.

DELEGATION LEAVING FOR BRITAIN THIS MONTH

(FROM OUR BOMBAY CORRESPONDENT)

THE question of limiting textile exports to Britain is to be re-examined. It is announced here that an Indian textile delegation will leave for the United Kingdom this month to discuss with the Lancashire industry the possibility of "a voluntary agreement" on the reduction of Indian cloth exports to Britain. The delegation will consist of Mr. Kasturbhai Lalbhai, chairman of the Indian Cotton Mills Federation, and Mr. Neville Wadia, chairman of the Textile Export Promotion Council. It is believed that a similar delegation from Pakistan will attend the talks in Britain.

The need for such an agreement arises from complaints that the indiscriminate import of cheap textiles into Britain has proved to be far too detrimental to the interests of the Lancashire industry. These complaints are based on the view that the relatively cheap labour available to manufacturers in India, Pakistan and Hongkong constitutes an unfair element rather than a genuine point of competitive power. So far, the U.K. Government has refused to take action on the ground that it would be against its policy to impose restrictions on the import of Commonwealth goods. It has, therefore, been left to the industries of the countries concerned to come to some sort of a voluntary agreement. It seems that there is sympathy for Lancashire's case here. In 1955, the Government of India made some adjustments concerning the import of British textiles into this country on the basis of representations made to it by U.K. interests. Similarly, when a British textile delegation visited India last year, Indian millowners agreed to evolve some sort of a compromise formula but stipulated that Pakistan and Hongkong must fall in line and agree to a reduction in their export quotas as well. Pakistan agreed but Hongkong would not even consider the question.

Hongkong Attitude Changing

It now seems that Hongkong has decided to reconsider the matter. Reports indicate that Sir Frank Lee, who is sounding producer interests there on behalf of the U.K., has had some success. Although no formal proposal has yet emerged and there is a considerable difference of opinion within the Hongkong industry itself, it seems that an agreement may be possible provided that it does not lead to demands from other countries for similar restrictions on the colony's exports; that a voluntary ceiling on grey cloth exports will not be taken as a precedent for action against other exports; that the general expansion of the colony will not suffer; and that the British Government will help Hongkong solve its unemployment and refugee problems. If an agreement is reached with Hongkong, India will have to make her position clear. On the last occasion, a ceiling was provisionally agreed upon and it was based on the average exports over a defined period. The position has now changed because at that time India's exports were running at a high level. They have now dropped considerably and the question is what should be the basic period for the purpose of determining a ceiling. If the former ceiling is advocated by India, Lancashire might well claim that such a computation would be unfair in view of present exports. On the other hand, if a lower ceiling is proposed, it would be unfair to India in view of her foreign exchange difficulties and in view of the fact that last year's move failed not because Indian goodwill was lacking but because of the obstinacy of Hongkong producers. Presumably, the Indian delegation has a proposal in mind which would be acceptable to Lancashire and also to the Government here.

Japan May Cut Output

Meanwhile, Tokyo reports indicate that the Japanese Government is considering the introduction of legislation which would severely reduce the quantity of textiles produced in that country. It is claimed that Japanese interests are finding it increasingly difficult to dispose of their production in home and foreign markets. The basic problem seems to be that they have expanded too rapidly during the recent boom years. Now that demand has eased, stocks are piling up and manufacturers are trying to get orders by undercutting their competitors. It is thought likely that the Government will insist on the output of rayon filament yarn being reduced by 50 percent, with cuts of 30 percent in the case of staple fibres and woollen yarn and 20 percent in cotton yarn. This means that the industry would produce only what it can sell and no more, thus preventing stocks from becoming still heavier. Rayon producers are the worst off. Their capacity for manufacturing staple fibre rose by 60 percent between the end of 1955 and October 1958—from 800 tons daily to 1,300 tons.

Japanese Investments Abroad

Another interesting development is that the Tokyo Government is considering the whole question of investments abroad by Japanese private interests. The Ministry of Finance is becoming stricter about allowing such investments because those undertaken in recent years have not brought what officials consider an adequate return. From the beginning of 1955 till the end of last year, overseas investments by Japanese companies amounted to more than $62 million. It is now estimated that the Ministry has applications for investments abroad amounting to a further $250 million. In some instances, say its officials, ventures undertaken jointly with overseas firms have suffered delays, so that factories into which money has been put have not yet begun to work.

Cotton Futures Slackens

With the maturing of the Jarilla March contract, interest in the cotton futures market declined during the past week and there was a corresponding drop in prices. A feature was the release of the export quota of 50,000 bales of short staple varieties of raw cotton not above 23/32in. Speculators who had bought in anticipation of the quota announcement chose to book their profits. The absence of a quota for ⅞in. stapling cottons encouraged liquidation. In the Sewri spot market, prices of exportable varieties declined by about Rs. 15 a candy. Fears were expressed whether the inferior qualities permitted for export would be acceptable to foreign buyers. This induced selling in both the spot and the futures section.

Buoyancy in Castorseeds

Buoyant conditions prevailed in the castorseed market during the past week. Prices rose to new highs on bull manipulation and short-covering. Rumours about the abolition of the export duty on castor oil and about Russian interest in the commodity kept the tendency firm. Linseed and groundnut followed suit. The steady improvement in ready groundnuts was a feature. In the spot section, the Madras quality hardened from Rs. 32.50 to Rs. 33.50 on buying by vanaspati manufacturers and crushers. Arrivals from upcountry centres remained small and were readily absorbed. Groundnut oil attracted interest. Groundnut oilcake rose from Rs. 244 to Rs. 250 a ton on buying by shippers. Overseas enquiries were received for groundnut oilcake of the expeller variety at £26 10s. Linseed was steady in sympathy with other seeds. There was increased buying by Saurashtra and Punjab interests following the rise in rapeseed prices in north India. Considerable business was put through in linseed oil. Shippers bought about 200 tons. Ratlam and Indore also bought sizeable quantities of oil.

ACC HONOURS THE CODE

4

". . . . . reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research."

Code of conduct — FORUM OF FREE ENTERPRISE

To ensure a continuous and growing supply of quality Portland cement to its customers, the ACC "ploughs back" every year a substantial portion of its earnings, to rehabilitate, expand and modernise its existing plants; to make its business grow and so to provide the country with the much-needed cement which goes into all types of construction, from the modest needs of the small village to the hungry demands of gigantic power and river valley projects, industrial development, housing schemes, hospitals, schools and the like.

This "ploughing back" of a portion of the ACC's earnings — though reduced last year owing to lower profits, resulting from higher costs and increased taxation — remains a vital factor in the production and supply of quality cement in increasing quantities to millions of satisfied users throughout India who have learned to depend on — ACC CEMENT.

OFFICIAL FUTURES MARKET MAKES A GOOD START

MORE GUNNY ENQUIRIES FROM OVERSEAS

INTEREST in the Calcutta jute and jute goods trade during the past week has been concentrated on the opening of the futures market run by the East India Jute and Hessian Exchange Ltd. At first, there was a pause in activity while operators took stock of the position and awaited the progress of the new venture. Since then, the changeover has been conducted smoothly and satisfactorily, and it has not taken long for the organisation to gain the confidence of the market. Business has been put through on an increasing scale, so prices have shown a gradual improvement. Reports indicate that overseas business during the past week has been larger than for a considerable time—the United States, the Argentine, Australia and the U.K. all entering the market at various stages. This has given an additional impetus to specific categories of goods. As orders have been divided between sacking and hessian, both sections of the market have benefited. Australia, it is reported, has asked for tenders for 20,000 bales of cornsacks, which has taken the market rather by surprise as this is the first major enquiry from this source since the failure of the grain crop there. The U.K.'s interest has been in hessian but the prices offered have been low and have not aroused a great deal of interest. At the end of March, the sacking section wavered, and sentiment weakened because the issue of delivery orders on due date was larger than had been expected. This led to a temporary fall in heavy goods prices, but hessian remained firm. In general, rates have been fairly steady at just below the I.J.M.A.'s minimum level, but the forward quotations have been above that level.

The fibre market has been steady and daily buying has continued. Indian-owned mills in particular have taken up fairly large quantities, but interest from other groups has been limited. The nearness of the yearly financial closing has hampered large-scale operations. Sellers started by remaining reserved, as in previous weeks. But with reports of rain in both Assam and East Pakistan, their attitude has changed, offers have become larger and there is a greater eagerness to sell. Some are still reluctant to reduce prices and many mill indications have been ignored for being too low. Once again, imports into the upcountry agencies have, it is reported, been small. With heavy business passing against March shipment contracts, the undertone in the mofussil has been steady.

The rain in many jute-growing districts over the past week-end has had a stimulating effect on the market. Many operators, who were previously reluctant even to discuss business, have begun to offer freely. The general situation has not changed a great deal, and much more rain is required before any attempt at general sowing can be made. So far, the preparation of land is slightly behind schedule as rain has been scanty. The situation is not yet comparable with last year's, when the prolonged dry spell lasted nearly until the end of April, with the result that there was a shortage of water throughout the year. The next two weeks are very important from this aspect, and the situation will be watched carefully. Reports from the jute-growing areas are slow in coming this year, but river levels are well below normal.

THE JUTE MARKETS

Manufactured Goods: There was a general improvement in the jute goods market at the opening last Thursday because of U.S. interest in 7½oz. hessian. Good business was reported, and other sections responded to the news. B Twills rose by 45nP to Rs. 99.15 for ready shipment. Hessians advanced by 15nP or 20nP and 40in. 10oz. opened at Rs. 39.25. In the absence of any follow-up support, rates eased on the following day. The previous gains were lost and up to the end of the month rates were depressed due to unloading in the fatka market. Local shipper covering at the reduced rates tended to strengthen the position, but mills were not sellers at this stage. The new futures market began to operate on Saturday. There was a lull in business following the opening as operators held back, each waiting for the other to make the first move. Impressed by the smoothness with which the initial transactions were conducted, however, they soon began to give it support. For the next few days prices advanced and confidence was restored. Overseas enquiries from the U.K. boosted hessians and by Tuesday 10oz. quotations were back to the opening levels of Rs. 39.25, with forward shipment showing an increased premium of 50nP. Similar conditions existed in sacking, but although ready prices fell short of the opening indications, the forward section ruled firm due to the effect of enquiries from Australia. July-September shipment B Twills touched Rs. 101, which was a Rs. 2.20 premium over the near position as compared with Rs. 1.10 in the initial stages. The upward tendency persisted and the undertone of the market became firm, with prices once more moving to levels at which mills were willing to operate.

At the close, the market was very steady, and quotations on Wednesday morning were as follows:

	Ready	April	April-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32.20	32.20	32.20	32.20
40in. 10oz.	39.70	39.85	40	40.15
B Twills	99.50	100.35	101	101.35
Heavy Cees (Plain)	99.25	100.25	100.75	101.35
A Twills	119.50	120.50	121.25	122.25
Liverpools	114	113.75	113.75	114
Cornsacks	100	101	101.50	102.75

Raw Jute: During the past week, business was conducted daily in raw jute. As mills generally paid the full market rates, a steadier tendency developed. Assam jute throughout was quoted on the basis of Rs. 25 for Bottoms, but purchases were not confined to this category and a wide range of fibres came in for attention. Early in the period, offers were small due to unfavourable reports from the growing areas, but with rain over the week-end, small though it was, sellers' attitude changed, and the quantities on offer increased. There was little change in upcountry markets and imports were still small enough to warrant the premiums asked and paid in these areas. Arrivals were not large enough to satisfy current demand due to the heavy increase in business on account of March shipment covering. Increasing interest was shown in new crop jute, and several contracts were put through for August-September shipment. The prices paid were generally lower than those at which most sellers were willing to do business.

During the past week, a total of about 250,000 maunds of jute was purchased, mainly on the basis of Rs. 24.75 to Rs. 25 for Assam-Northern. Heavy business was done in Middles only in this category of fibre, and prices paid ranged from Rs. 27.75 to Rs. 28. Tossa from the same areas fetched Rs. 28 to Rs. 28.25, while Rs. 30 was paid for Agartala Tossa Middles alone. Only small business was reported in Daissee at Rs. 28 to Rs. 28.50. Interest in mesta lagged but small business was done in Daissee mesta at Rs. 22.50 to Rs. 23.25, Northern and Desal mesta at Rs. 22.50 to Rs. 23.50, and in jungli mesta at Rs. 21.25. Bimli was done at Rs. 20. Business was reported in cuttings at Rs. 78 a bale for ready shipment.

In new crop jute, transactions were put through at Rs. 25.50 to Rs. 26.50 basis Bottoms for Assam-Northern for August-September shipment.

The Cossipore markets were steady under the influence of heavy covering business. Wagon arrivals showed a drop compared with the previous week, totalling 345 as against 419. During the corresponding week of last year, arrivals were 436 wagons. Imports showed an increase of jungli and mesta jute. Good quality Assam and Northern were at a premium. Daissee was in very short supply, and quotations at the main receiving centres were still well above Calcutta indications. The main reason for the increase in the price of this fibre was that mills had opened their own agencies in the Daissee districts. Sellers preferred to sell direct to the mill agents as they were paying well above the current rates.

On Wednesday morning, the market was firm and opening quotations were as follows:

Indian Jute:	Landed at Mills	Shipment
	Rs. a md. basis Bottoms	
Assam	25.25	April-May
Northern	25.25	"
Purnea Desal	24	"
Daissee	29	"
Assam Tossa	28.25	"
Northern ex Calcutta	24.25	"
Mesta:		
Assam Northern	23.50	"
Desal	23.50	"
Daissee	23.25	"
Jungli	22	"
Bimli F.A.Q.	20.50	"
Pakistan Cuttings	71 a bale	"
New Crop:		
Assam	26	August Sept.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th March, 1958	1,820.0	17,836.5	19,656.5
1st to 25th February, 1958	1,395.7	21,778.0	33,173.7
1st to 25th January, 1958	1,226.8	11,929.3	13,156.1
	Sacking		
1st to 25th March, 1958	18,412.9	153.6	18,566.5
1st to 25th February, 1958	22,745.1	234.5	22,979.6
1st to 25th January, 1958	17,455.9	126.0	17,581.9

THE FOREIGN JUTE MARKETS

CLOTH AND YARNS QUIET BUT STEADY

(FROM OUR DUNDEE CORRESPONDENT)

SHIPPERS are not still making many fibre offers to this centre, but there is a large stock to meet the needs of spinners, who are buying only occasionally. Values are a little irregular, with one or two sellers sometimes offering at a slightly lower price, while others are waiting for high rates. Mill Firsts are offered £1 lower at £112 a ton and Mill Lightnings are available at £99, with Mill Hearts unchanged at £88 and grade Hearts at £73, April-May. There are few sellers of Daissee and Tossa. The former is quoted at £102 for crack marks and £95 for grade, with grade Tossa-⅔ offered at £108 and grade Tossa-4 at £100, same shipment, c.i.f. U.K.

Calcutta goods are of some interest at various prices. Sales are somewhat irregular at around 59s 6d for 40in. 10oz. and 45s for 7½oz., April and May and 59s 9d and 45s June-September, with B Twills 150s 6d, 150s 9d and 151s 6d for the respective positions of shipment, all f.o.b., Calcutta. Jute yarns and cloth are quiet but steady, although the outlook for the trade is not good on the whole. There are 1,000 unemployed workers in the jute trade alone in the Dundee district—the highest figure for many months. Short time is being worked, in addition to standing looms, and the recent enhancement of prices for some yarns and cloth has made the position worse. At present, prices remain firm and unchanged all round.

A meeting of the Dundee Jute and Linen Goods Merchants Association has recently been held in Dundee. Mr. Arthur J. Miller, the retiring chairman, has stressed the part played by merchants in promoting the jute trade. The trade is passing through a difficult time, but has weathered similar storms in the past. Mr. Miller feels that co-operation between merchants and manufacturers should be extended to their mutual benefit. The former are doing their utmost to keep the trade moving against the present background of high raw material prices, the credit squeeze and the general world uncertainty. Referring to the raw jute position, he says that the World Jute Conference in Pakistan created hopes for an improvement but subsequent events have belied this optimism. Some method will have to be found to persuade Pakistan that the present level of prices and other restrictions are hampering both her own and the world trade in jute and jute goods. The new chairman of the Association is Mr. Andrew S. Kyle, (Robertson Ireland and Co. Ltd.) who was recently appointed vice-chairman of the British Jute Trade Federal Council. Mr. James Low (Alexander Low and Co.) has been appointed vice-chairman.

PAYMENT OF WAGES AMENDMENT ACT COMES INTO FORCE

The Payment of Wages (Amendment) Act has come into force with effect from 1st April, 1958. The Act, which amends the principal Act of 1936, will provide benefits to a larger number of workers as the wage limit has been increased to Rs. 400 a month, the original Act being applicable to persons drawing an average of Rs. 200 a month as wages. Other important provisions of the amending Act relate to its extension to workers in the construction industry and a revision of the definition of the term "wages" so as to include remuneration payable under any award or settlement or order of a court. It further provides that deductions towards the payment of insurance premium and on account of penalties imposed under the service rules will be "authorised deductions". A new section has been added in the amending Act to safeguard the interest of workers where the recovery of wages according to the direction of an authority under the Act takes a long time, and where arrears of wages do not get sufficient priority in case the concern is wound up. In order to meet such cases, it empowers the authority to order conditional attachment of the property of the employer when it is apprehended that he is likely to evade payment.

Ship, Marine, General Engineering and Foundry work of all descriptions is undertaken at competitive rates at the RAJABAGAN DOCKYARD of

ECONOMIC PROSPECTS FOR COMMUNIST CHINA

PLANS TO INCREASE OUTPUT OF HEAVY MACHINERY

(FROM A CORRESPONDENT)

A HEAVY machine tool plant is being set up in Wuhan, central China. It will begin production before the end of the year, the National Economic Commission of China has announced. It will turn out 260-ton vertical lathes with an eight-metre working table, 200-ton gear hobbing machines with an eight-metre working table, heavy horizontal boring and planer-type milling machines and planers which are indispensable for manufacturing big parts for electric motors, electric generators, locomotives, giant blast furnaces and open-hearth furnaces. This is one of the 27 major machine-building plant which are being built, expanded and reconstructed. All of them are for making heavy machine tools, metallurgical equipment, mining and ore-dressing equipment, cranes, ball-bearings, forging and press equipment, tractors and other heavy and precision equipment. When they begin production the prospects for the relatively backward heavy machinery and ball-bearing industries will improve. An annual production capacity of over four times as much metallurgical equipment and of over twice the output of ball-bearings as last year will be added to China's industry by these plant. When the first section of the Taiyuan heavy machinery plant is completed this year, it will produce complete sets of steel rolling equipment for making big structural shapes, medium steel plates and seamless tubes. The plant will produce 2,600-ton hydraulic presses and other forging and press equipment, 350-ton overhead travelling cranes for steel ingot casting, complete sets of equipment for coke oven batteries and powerful air compressors for the synthetic ammonia and nitrogenous fertiliser industry. A mining and ore-dressing equipment plant in Loyang, central China, will begin to produce hoisting machines and ore-dressing equipment this year. A tractor plant in Tientsin will, for the first time, manufacture tractors on a small scale.

Manufacture of New Products

New products to be made on an experimental basis this year include electric and steam locomotives. 10,000-ton ocean-going vessels, various types of motor-vehicles, complete sets of television equipment and electronic computing machines. New products for agriculture include tractors, automatic combine harvesters, small-type coal gas engines and hydraulic turbines. Trial production will also begin this year for blast furnaces, each with a capacity of 1,513 cubic metres, complete sets of medium steel rolling equipment, high-pressure boilers each with a capacity of 230 tons of steam an hour, complete sets of 25,000-kilowatt steam turbine power generating equipment, 72,500-kilowatt hydraulic turbines, new types of machine tools and complete sets of cement mill equipment. The output of the machine-building industry will go up this year by 20 percent compared with last year, according to the preliminary plans of the National Economic Commission of China. The figure will be still higher if the economy expands faster than is envisaged in the original plan for 1958. Last year the production of the machine-building industry increased by 10 percent compared with 1956—a year of rapid progress. The production of most of the 70 major items manufactured by it are expected to increase as heavy orders have been made for agriculture, capital construction, industry, transport and communications.

The industry is expected to produce 430 percent more equipment for nitrogenous fertilisers, 120 percent more metallurgical equipment, and 110 percent more A.C. electric generators in terms of kilowatts. The increases in production over last year are as follows: 51 percent more steam locomotives, 34 percent more railway passenger-cars and 73 percent more "Liberation" lorries, 96 percent more paper-making equipment, 55.6 percent more sugar processing machinery and 51.9 percent more bicycles. In all, the industry will manufacture steam, coal gas and diesel engines and electric motors of at least 590,000 horse-power for agricultural irrigation and drainage. A considerable proportion of the orders is made up of electric power equipment required for small steam and hydro-electric stations, a large number of which will be built in rural areas this year.

Increased Capacity of Steel Industry

In addition to a larger output from existing plant and equipment, the iron and steel industry is planning to add considerably to its production capacity this year. The units under the Ministry of the Metallurgical Industry will increase their pig iron production capacity by more than 1.036 million tons and their steel production capacity by 1.38 million tons. This increase amounts to 44 percent of the total pig iron and 43 percent of the steel production capacity added during the whole of the first five year plan. The first blast furnace belonging to the great new integrated iron and steel works, which is being built in Wuhan in central China, will begin production before the end of this year. Other projects there on which work is being expedited are coke oven batteries, chemical works, iron mines, railway lines and a water supply system.

At the second new integrated iron and steel works which is under construction, the big Paotow complex in inner Mongolia, work will begin this year on the first big automatic blast furnace, a coking plant, an iron mine and other projects. Work on several medium and small metallurgical plant will begin in Yunnan, Hunan, Hopei, Shansi, Anhwei and other provinces on a smaller scale. Nearly nine-tenths of this year's capital investment in the metallurgical industry is going to the major projects to complete them early, but greater attention is being paid to small projects which need comparatively small investment and little time to build. Work will begin, too, on certain projects which were not originally included in the construction target for 1958. This is in keeping with the aim of catching up with Britain in steel and other major industrial output in 15 years.

New Fertiliser Plant

China is investing twice as much money this year as last in the capital construction of the chemical fertiliser industry. Seventeen major plant have been placed on the building programme. They will have an annual production capacity of 1,668,000 tons of nitrogenous fertiliser (in terms of ammonium sulphate), 800,000 tons of phosphate and 100,000 tons of nitro-lime fertilisers. Roughly one-tenth of the nitrogenous and half of the phosphate fertiliser equipment will go into production this year. This scale of construction is unprecedented in Chinese history. In 1949, China produced only 27,000 tons of ammonium sulphate and no phosphate fertiliser. Seven of the scheduled projects are to be built directly by the Ministry of Chemical Industry. They comprise new nitrogenous fertiliser plant in Lanchow (north-west), Szechwan (south-west) and Taiyuan (north China); extensions of the existing nitrogenous fertiliser plant in Kirin (north-east), Dairen (north-east) and Nanking (east China); and a new phosphate fertiliser plant in Nanking. The ten other plant, in eight provinces, will be built with local Government allocations. Measures are being taken to reduce the time required for building a nitrogenous fertiliser plant from the present three years to two years. One of the principal methods which is being followed is to carry on building construction and the assembly of machinery simultaneously.

Larger Output of Vegetable Oil

China's output of edible vegetable oil last year was 1.45 million tons or double the output of 1952, Mr. Chia To-fu, director of the Fourth Office of the State Council has announced at a conference, *Ta Kung Pao* says. The aim is to increase the output to 3.1 million or 3.2 million tons by 1962, the final year of the second five year plan. The supply of vegetable edible oil in the past few years has fallen short of demand. There are great possibilities of raising the output by increasing the oil extraction rate and making a fuller use of the oil-bearing crops not previously used on a large scale in the oil industry. Mr. Chia To-fu says that there is considerable leeway in the extraction rate of oil pressing mills, especially small mills in rural areas which should be improved. After discussion, delegates at the conference have pledged to extract 150,000 tons to 200,000 tons more edible vegetable oil this year than the amount proposed in the State quota. They have agreed that this should be done by using better extraction methods. Besides efforts will be made to increase the output of the major oil-bearing crops, to take steps to use pepperseeds, quinceseeds and other oil-bearing plants with high oil content.

About 150 different plants of this kind have proved usable for oil extraction in the past few years. Half of these have an oil content as high as 30 percent to 50 percent. It is estimated that 30,000 tons of oil might be extracted from such crops this year for kitchen and industrial use. The proposal has also been made at the conference that sunflowers be cultivated on abandoned saline, alkaline and bog lands and castor oil plants be planted along roadsides, river banks and other vacant areas. Stress has been laid on the value of oilcakes and other by-products of the oil-pressing mills for the use of peasants as fertiliser and fodder. It has been agreed that low-cost, small oil-pressing mills should be built in greater numbers in rural areas so as to reduce the cost of transporting raw materials and to co-ordinate the oil industry with local agriculture.

Outlook for the Tobacco Industry

China's tobacco industry will now turn its attention to producing high-quality cigars for export. It has also decided to extend the production of popular quality cigars to cater for home demand. A total of over 385 million cigars were manufactured last year, about one-fourth more than in 1956. The output will be increased by 12.5 percent this year, and is expected to double during the second five year plan. The types of cigar most common in China are Corona, High Life, Invincibles and Nueve Cartade and smaller cheroots. Cigar producers discussed their experience in curing, fermentation and blending, and there was a careful discussion, too, of foreign techniques to see what might be learned from them with a view to improving the industry's technical efficiency. The meeting has appreciated the need for the extension of cultivation of cigar leaf tobacco and scientific research work to improve quality and to reduce costs. The biggest cigar producing centres in China are Szechwan, Shanghai, Canton and the chief markets are in north-west China. The country grows over 60 varieties of good cigar leaf tobacco for both wrapper and filler uses, and for exports to Russia and other communist countries. But many Chinese smokers still roll their own cigars with home-made tobacco leaves and city smokers rely on imports for high-grade cigars.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.5 percent to 105.5 during the week ended 15th March, 1958, compared with 105.0 for the previous week. The index was higher by 0.7 percent when compared with the corresponding week of the earlier month but was lower by 0.3 percent than that of last year. The index for Food Articles advanced by 0.7 percent to 102.4 compared with 101.7 (revised) for the previous week due to a rise in the prices of arhar in Patna (+25%), fish in Calcutta (+20%), milk in Delhi (+13%), rice in Kalyan (+11%), and in Trivandrum, Marcara, Nowgarh and Nagpur (+5% each), ghee in Bombay (+10%), jowar in Hubli, gram and black pepper (+5% each), mung (+3%) and groundnut oil, gingelly oil, coconut oil, gur and salt (+1% each). The prices of eggs in Bombay (−19%), onions (−18%), wheat in Saugar (−8%), oranges in Nagpur and milk in Bombay (−7% each), rice in Nandgarh, potatoes in Delhi and bananas in Calcutta (−6% each), cashewnuts in Quilon (−5%), chillies (−2%) and barley, ragi and betelnuts (−1% each), however, moved down. The index for Tobacco stood unchanged at the previous week's level of 94. The index for Fuel, Power, Light and Lubricants group remained stationary at the earlier week's level of 114.8 in spite of a fall in the prices of castor oil (−1%). Higher prices of konam bark (tanning materials) in Madras (+13%), gingellyseed (+5%), castorseed (+4%), linseed, rapeseed, copra and raw hides (+3% each), raw silk (+2%) and groundnuts (+1%) were responsible for raising the index of the Industrial Raw Materials group by 0.8 percent to 111.2 compared with 110.3 (revised) for the previous week. The prices of lac (−2%) and raw jute and raw wool (−1% each) showed declines. The index for Intermediate Products also rose by 0.9 percent to 107.4 as a result of an advance in the prices of brass sheets in Calcutta (+7%), rayon yarn (+5%), linseed oil (+2%) and copper and German silver (+1% each). The prices of glass bangles (reshami red yellow) (−6%), drugs and medicines (−3%) and jute manufactures and silk and rayon manufactures (−1% each) moved down while those of oilcakes (+2%) and general chemicals (+1%) showed advances, and in the result the index for the Finished Products group receded 0.2 percent to 107.7.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

SUGAR PRODUCTION AND STOCKS

The production and despatches of sugar amounted to 1,523,000 tons and 716,000 tons, respectively, up to 15th March, 1958, in the current season, against 1,359,000 tons and 740,000 tons during the corresponding period of last year. The stocks with the factories stood at 1,236,000 tons compared with 1,146,000 tons during the same period of last year.

GOVERNMENT DECISIONS ON COFFEE AND RUBBER

REPORT OF PLANTATION BODY EXAMINED

THE decisions of the Government of India on the recommendations contained in the reports of the Plantation Enquiry Commission on the coffee and rubber industries have recently been announced in two separate resolutions published as *Gazettes of India Extraordinary*. Before reaching these decisions, the Government has had consultations with the State Governments concerned, the Coffee and the Rubber Boards and representatives of the industry and trade. The Commission was asked to make a comprehensive enquiry into the economic conditions and the problems of the tea, coffee and rubber plantation industries and to recommend measures concerning fair prices, marketing, finance and development and expansion of the three industries. The Government's decisions on the tea report were announced some time ago.

The Government has accepted the recommendation that the area under coffee should be regulated by the Coffee Board in the interests of the orderly development of the industry. All new planting and replanting in future will be done only after taking licences from the Board. This will ensure that only suitable areas are taken up for plantation and that approved planting materials are used.

Export Trade

The Commission proposed that the export trade in coffee should be undertaken directly by the Coffee Board as the number of registered dealers in export sales is too small to enable it to get the best possible price. It has been decided that the Board will modify the system of export sales to allow foreign importers to participate in these sales along with the registered dealers in the country. As an experimental measure, it has also been decided that it should arrange to dispose of a portion of the exportable surplus by direct sales to foreign purchasers. To promote the export of coffee powder, the premium collected by the Board on the export of roasted and ground coffee has been suitably scaled down, as proposed by the Commission.

Supply to Co-operatives

As for the release of coffee to co-operative societies, the Government does not propose to discontinue supplies to them at a concessional price. The Commission's recommendation was that coffee should be sold to co-operatives at the pool-auction price, which is generally higher than the release price.

As the price at which coffee is available to the domestic consumer is far below the world price, the Government does not consider it necessary to create a separate Consumers' Subsidy Fund. The Commission's proposal to create a Price Assistance Fund has not found favour with growers. The former suggested that these two funds should be created out of the excess price realised in the export auction and the sale proceeds of coffee represented by the gain in weight due to absorption of moisture while in storage.

The arrangements made by the Board for the processing and sale of coffee powder at several centres will be continued and enlarged to the extent possible. It is, therefore, not necessary to start a separate organisation under the Board for the manufacture and sale of coffee powder, as suggested by the Commission. The co-operative societies will be utilised to the fullest possible extent for the internal distribution of the additional output of coffee.

Propaganda Activities

The Board has already taken suitable measures to change propaganda activities on the lines recommended by the Commission. The latter said that there was no need for continuing coffee houses in the coffee-growing areas. Propaganda through mobile vans and cinema shows, visiting rural areas, advertising campaigns in urban areas and industrial communities and participation in fairs and exhibitions, would fulfil the needs better than running coffee houses.

Curing Charges

The Government has decided that, as recommended by the Commission, a committee should be appointed to examine the existing rate of curing charges for coffee and of the commission paid to pool agents. This body will recommend, where necessary, reasonable rates of remuneration. It will not be advisable to separate the curing and pool agency functions.

Levy on Dusts

The Commission recommended that a countervailing export duty equal to the Central excise duty should be levied on coffee. At present there is no duty on exported coffee. In the Government's view, export duty is levied on considerations which do not apply to the levy of excise duty. It will levy the former when circumstances warrant. The Commission's suggestion that the excise duty on coffee should be levied at a different rate for Arabica and Robusta has not been found practicable.

Rubber Replanting

As for rubber, the recommendation that replanting and new planting should be allowed only with high yielding seeds approved by the Rubber Board has been accepted by the Government. On the subject of extension of rubber cultivation, the Commission's recommendation was that small growers, having individual holdings of 50 acres and less, should be permitted to extend the area of cultivation by 25,000 acres and estates by another 25,000 acres. Already the Rubber Board has issued licences for new planting to small holders covering an area of over 46,000 acres. There has been little expansion of rubber cultivation by estates. It does not seem necessary, therefore, to lay down any fixed proportion between small and big growers.

Similarly, the Government does not consider it feasible to alocate rigidly the proportion of the area to be replanted by small and large growers. The Rubber Board is trying to carry out the replanting programme in a phased manner, and there is no need at present to introduce an element of compulsion in the scheme. Small holders are taking advantage of the scheme of assistance for replanting in an adequate measure. The Commission said that the scheme for the production of synthetic rubber should be co-ordinated with that for natural rubber. The Government will take adequate care to ensure that in developing the production of synthetic rubber, the legitimate interests of the industry are not adversely affected.

Development of Co-operatives

The Government has accepted the recommendation that special officers should be appointed by the Coffee and the Rubber Boards for encouraging the setting up of multipurpose co-operative societies, to help small growers. The Commission recommended the setting up of a co-operative supply organisation, each for the rubber and coffee plantation industries, under the aegis of the respective Boards, for distributing chemical fertilisers and mixtures to growers, particularly small growers. In the Government's view, co-operative organisations being set up by State Governments under the community development and national extension service programmes are expected to look after the needs of coffee and rubber growers also. State Governments concerned are being requested that in setting up co-operative organisations for agriculturists, the needs of coffee and rubber growers should also be borne in mind. There will be no particular advantage in giving a monopoly right of sale to one organisation, as the object is to increase existing facilities for the supply of manure.

The Government does not think that there is any necessity for setting up a separate body to advise it on matters concerning the tea, coffee and rubber industries, as recommended by the Commission. The control over these three industries is at present exercised by the Central Ministry of Commerce and Industry, in the interests of their development as well as of workers, growers and consumers. This ensures co-ordination in the working of the three statutory Board, namely, the Tea, Coffee and Rubber Boards.

A few recommendations of the Commission, including the one relating to the creation of a replanting fund for coffee and rubber, are still under consideration. Some of them have been brought to the notice of the State Governments concerned.

NEW TEA CENTRE OPENED IN MADRAS

NEED TO DEVELOP INTERNAL MARKET STRESSED

(FROM A SOUTH INDIAN CORRESPONDENT)

THE second centre of the Tea Board has recently been opened in Madras by the Central Minister for Commerce, Mr. Nityanand Kanungo. The air-conditioned centre has a well-furnished lounge where tea and snacks will be served. A small demonstration unit will teach the housewife and the professional caterer how tea is correctly prepared, and an auditorium will have facilities for the display of tea films. An information desk will give visitors the facts about Indian tea. The chairman of the Board, Mr. U. K. Ghoshal, has stated that the object of this propaganda campaign is to promote the internal and external consumption of tea which is one of the largest foreign exchange earners. Mr. Kanungo has said that since tea is a major export commodity, it is dependent on foreign consumers, so the preservation and expansion of the export market should be the major pre-occupation of the Tea Board. He admits that excessive dependence on foreign markets will be a source of weakness. Therefore, the Board should develop the internal market as well.

Showroom for Coir Products

Madras has had the privilege of getting the second showroom and sales depôt of the Coir Board recently. The first one was established by the Board in Delhi. The showroom in Madras has been inaugurated by the State Minister for Industries and Labour, Mr. R. Venkataraman. In his opinion, the main weakness of the industry is its dependence on foreign markets for the disposal of its products. It is necessary, therefore, that a better balance be maintained between home and foreign markets. Without reducing exports which earn foreign exchange, the home market for coir should be expanded. The Minister thinks that there is much scope for improvement in efficiency and in quality by modernising methods of production and improving techniques of dyeing.

Complimenting the Board on its useful work in undertaking a study of the basic problems confronting the industry, the Minister has said that the reports of the *ad hoc* committes on various aspects such as husk, fibre and coir yarn, were very useful in planning the development programme. The ultimate success of all development schemes depends on the marketing of the products. The Minister says he is glad to learn that the Board appreciates the desirability of joining hands with the National Small Industries Corporation in expanding its activities and that it has appointed a committee to study the question and work out the details.

Referring to poor internal consumption, he says that coir matting is a comparatively cheap floor covering, and if more people are not buying mats and mattings, it is because they are not fully aware of the special advantages of these materials. The public has to be educated about the damp-resistant and hard-wearing qualities of coir products. The Government of Madras is trying to open a few co-operative societies in which villagers may join and try to manufacture coir goods.

Development Schemes

In a rejoinder to the Central Minister for Industries, Mr. Manubhai Shah, who is reported to have said in reply to a question in Parliament that no scheme has been received from the Kerala Government for the rehabilitation and development of the coir industry, the State Government says in a Press note that it has submitted a detailed scheme involving an expenditure of Rs. 2.46 crores to the Central Government and the Planning Commission. The State Ministers had discussions on the subject with the Deputy Chairman of the Commission and the Central Minister for Industry and some other members of the Central Cabinet. As a result of these discussions, the Central Government first enhanced the provision for the coir industry in the second plan to Rs. 90 lakhs, and it was later raised to Rs. 150 lakhs. This apart the State Government has taken up with the Central Government and the Coir Board such questions as the licensing of dealers and retters of husks and retting places under the Coir Industry Act, the confirmation of the rules framed in this behalf by the Central Government, the regulation of the price of husks under the Essential Commodities Act, transport facilities by railways at reduced rates and the accommodation in ships for the export of coir yarn and coir goods.

As the slump in the coir market is mainly due to a decline in exports the possibilities of expanding the internal market by popularising coir goods in other States as also exploring foreign markets through embassies abroad were studied by the State Government from time to time. It is on the basis of such repeated requests that the Central Government has agreed to send a trade delegation abroad to find new markets for coir. The question of reducing the rate of interest on loans granted to coir co-operatives was taken up with the Central Government. Accordingly, the interest rate has been reduced from 4½ percent to 2½ percent. The Press note further says that the State Government has always been vigilant about the changing conditions of the industry, but as its development is within the purview of the Central Government, necessary measures are subject to its approval.

Rubber Planting Scheme

The Kerala Government has approved a scheme for planting 2,000 acres with rubber in Koothali estate in Malabar. This is part of its new scheme for utilising the surplus forest lands with the Government for opening up rubber plantations. In the State Budget, a provision of Rs. 1 lakh has been made for this purpose. A detailed planting scheme will be prepared in consultation with the Rubber Board.

Conference on Tribunal Awards

The Kerala Minister for Industries, Mr. Gopalan, is convening a conference of representatives of cashew factory owners and workers' and staff unions to find a solution to the outstanding disputes concerning the implementation of tribunal awards. A crisis is brewing on this issue in the industry in Kerala. According to the State Labour Minister, over 160 prosecution cases have had to be launched against factory owners for their refusal to implement the tribunal awards.

Higher Salary for Mysore Plantation Workers

In Mysore, planters and their staff members have come to an agreement on the latter's demand for higher emoluments. An agreement has recently been signed by the representatives of the planters' associations and the staff unions in the presence of two State Ministers and officers of the Labour Department. According to the agreement, the staff members will get a higher salary and allowance as well as some other improvements in their service conditions. This agreement, when implemented, will cost the industry an additional Rs. 10 lakhs a year.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2.95 a lb against Rs. 2.87 a lb in force from 1st March, 1958. There is no change in the existing rate of duty of 38nP a lb.

COCHIN TEA SALES

At Sale No 8, 1,450,000 lbs of tea were on offer. There was a good but irregular demand. Best quality grades declined by 25nP or 50nP while good mediums were strong and dearer. Mediums were barely steady, low medium broken were easier and medium fannings with colour were dearer.

Engineering and Transport

DETAILS OF INDO-RUSSIAN AIR AGREEMENT SETTLED

POSSIBILITY OF DELHI-PEKING TRAVEL VIA MOSCOW

(FROM OUR NEW DELHI CORRESPONDENT)

DETAILS of an Indo-Russian agreement to operate a New Delhi-Moscow air service have now been settled. This will enable India to operate a Delhi-London service *via* Moscow, which will reduce flying time by six hours—to 18 hours. Aeroflot operates a twice daily Moscow-Peking service, and in the absence of an India-China air agreement, it might be possible for India to make arrangements for direct air travel from Delhi to Peking *via* Moscow.

Aeroflot's *Ilyushin 14s* and jet *TU-104s* make regular flights to Denmark, Sweden, Norway, Finland, Poland, East Germany, Czechoslovakia, Hungary, Bulgaria, Rumania, Albania, Yugoslavia, Mongolia, China, North Korea and Afghanistan. The Russians have had talks with the French and the Dutch on the possibility of extending their service to Paris and Amsterdam in exchange for return facilities. But the problem of air travel over West and East Germany has not been solved so far. They are also preparing to negotiate on an air link within New York. The U.S.-Russian cultural pact which was signed in January included an "agreement in principle to establish on a reciprocal basis a direct air service between Russia and the United States." The air link between Moscow and London is the result of lengthy negotiations, in the course of which an inter-Governmental and an inter-airline agreement were concluded. It is not known whether Scandinavian Airlines will allow the Russians to fly to London *via* Copenhagen.

Another point which has not yet been settled is what aircraft Aeroflot will use. The two possibilities are the 50-passenger *TU-104* jet, which has been in service for two years now, and the new *Ilyushin 14* turboprop *Moskva*, carrying 75 to 100 passengers. But the latter is still undergoing tests. If the *TU-104* can pass the noise restrictions at London airport, the Russians will probably start using it. British European Airways will use *Viscounts* for the flight to Moscow. After the end of this year, when the *Comet IV* enters its services, it is expected to switch over to this aircraft. A delegation of Russian technical experts from Aeroflot will shortly go to London to discuss airport regulations, radio communications and other problems.

Turboprop Airliners for Aeroflot

The *Tupolev TU-104* turboprop aircraft will be added to Aeroflot's fleet this year, M. Pavel Zhigarev, chief of the airline has announced. M. S. Eger, Aeroflot designer, says that the new *Tupolev* in its 220 and 170 passenger versions will be a major threat to the dominance of railroad in long-haul travel in Russia. The 120-passenger inter-Continental version, with a maximum speed of 600 miles an hour will fly non-stop from Moscow to New York in ten or 12 hours. It will also be used on routes between Moscow and New Delhi, Vladivostok and Peking, and probably on the Moscow-Irkutsk and Moscow-Alma Ata services.

Review of Indo-Dutch Air Agreement

As previously reported, the representatives of K.L.M. will arrive in New Delhi early in April for a periodical review of the air agreement between India and Holland.

Deadlock over Palam Airport

The deadlock over Palam airport has deepened. The military authorities, to whom this aerodrome originally belonged, have refused either to hand it over or to share it with the civil authorities. A new aerodrome for civil aviation is the only alternative. According to one proposal, such an airport should be located across the river Jumna. Meanwhile, sanction has been accorded to modernise Santa Cruz airport in Bombay to suit jet aircraft traffic.

Air Agreement between India and Lebanon

An agreement between India and the Lebanon for air services, the draft of which was prepared by the representatives of the two Governments, has recently been signed in New Delhi. Under this agreement, the airline designated by the Government of India will be entitled to touch the Lebanon in Beirut, and, if desired, beyond, except points in Egypt. Similarly, the airline designated by the Government of the Lebanon is entitled to touch India in Bombay and proceed, if desired, beyond.

Britannia Flight between London and Teheran

A B.O.A.C. *Britannia* has flown 3,200 miles between London and Teheran non-stop in seven hours 39 minutes. This is preliminary to the operation of regular B.O.A.C. services between India and Britain *via* Iran which are due to begin in April. The one-hop flight of the *Britannia* brings to mind the difficult conditions under which the first Indo-British services were opened in March 1929. In those days, the journey took one full week and involved leap-frogging across Europe, the Mediterranean and the Middle East in two land-planes, a flying boat and two trains. Passengers were flown from London to Basle, transferred to a train on the journey to Genoa and then put aboard a Calcutta flying boat for the Mediterranean crossing to Alexandria. A train took them to Cairo, where they boarded yet another "aeroplane for the flight to India."

T.W.A. Predicts Increased Air Traffic

Trans World Airlines is predicting a 41 percent increase in the volume of U.S. air traffic to overseas countries during the 1958 vacation season, according to Mr. Clyde S. Fullerton, T.W.A. vice-president and general sales manager, now circling the world on a tourist survey trip. The newly-adopted economy air fare across the Atlantic will be responsible in part for the increase. The upsurge in overseas "vacationing" will also be felt on round-the-world routes. Advance bookings indicate that many travellers destined to visit the Brussels fair and the Lourdes centennial celebration in France are planning to fly around the world over the new T.W.A.-Northwest airlines route.

The economy fare over the Atlantic will make it possible for a family of four to arrive at many overseas points with an extra $273.60 to spend this year. The new fare agreed upon by the world's airlines came into effect on 1st April. T.W.A.'s forecast for the 1958 season was completed after reports were collected from its 73 U.S. offices. It has scheduled 68 percent more passenger seats to overseas points in preparation for the increase in tourist traffic, Mr. Fullerton says.

New B.E.A. Services to East Europe

In declaring a record net profit of £1.2 million for the year 1957, B.E.A. has made an announcement on more flights than ever this summer and on the inauguration of new services, notably to eastern Europe. Almost all international routes will be flown with *Viscounts* and the new *806* type, now available, will make it possible to offer 12 first-class seats on aircraft in certain important lines, particularly to Scandinavia, Switzerland, Paris and Frankfurt. On 1st April, B.E.A. will open a twice-weekly non-stop London-Warsaw service with *Viscounts*; the Polish carrier *Lot* will operate thrice weekly with its newly-acquired *Convairs* calling intermediately at Berlin (East Germany) and Brussels. Under the agreement recently reached by the Russian Government and that of the United Kingdom, B.E.A. hopes to start its services to Moscow in early autumn in co-operation with Aeroflot. Lord Douglas of Kirtleside, B.E.A. chairman, has recently described these pending new services as "a contribution to improved East-West relations." From 9th June, B.E.A. will start using the new airport for London in Gatwick. Most services between London and the Channel Islands will use the Gatwick airport from that date. Special reserved coaches for air passengers will be attached to the half-hourly fast trains between Victoria Station and the Gatwick airport station which adjoins the possenger buildings.

Flights between New Castle and the Continent

After a period of virtual isolation from the European air network, the U.K. north-eastern city of Newcastle will again have direct services to the continent of Europe this summer. Beginning in May, Silver City Airways will operate a twice-weekly service to Amsterdam, a one-weekly flight to Dusseldorf, a twice-weekly service to Brussels calling intermediately at Leeds and Bradford (Yeadon Airport) and a weekly service to Hamburg. In addition, there will be a new domestic route between Newcastle and Blackpool and another between Newcastle and the Isle of Man, the latter to operate five times a week.

Summer Schedule of Swissair

Swissair has announced an important feature of its summer programme, namely, a considerable increase in the frequency of its Middle East services, all of which will have a same-day connection from London, Amsterdam, Brussels, Paris and other *European cities*. There will be a new weekly non-stop Zürich-Tel Aviv flight in addition to the present service *via* Athens; a second weekly service will be started to Damascus *via* Athens and Beirut supplementing the present flight *via* Istanbul and Beirut; there will also be a new Zürich-Cairo non-stop service once a week. All flights will be with first and tourist class *DC-6B's* and including flights extending to the Far East. Swissair will thus serve Athens seven times, Beirut and Cairo four times and Baghdad and Dhahran once a week.

Services of Canadian Airline

As summer schedules, incorporating the economy class service are being introduced by T.C.A. in April, Brussels will be added to the European cities served by the Canadian carrier. Initially the Belgian service will be on the Toronto-Montreal-Brussels-Dusseldorf route. On 17th May, the Montreal-Paris service will be extended to Zürich. There will be a minimum of two daily round trip flights from Canada to the United Kingdom and Europe this summer. Another innovation in May will be a direct link between the Canadian west coast and London with a new weekly Vancouver-Winnipeg-Gander-London flight.

Qantas Accorded Traffic Rights at Shannon

Qantas Eimpire Airways has been accorded full traffic rights at Shannon. It becomes the 11th airline to serve the Irish gateway. The others are Air France, Alitalia, El Al, K.L.M., P.A.A., T.W.A., Sabena, Seaboard, Swissair, and Lufthansa. The United Kingdom and Australia have signed the air agreement which authorises Qantas to operate its round-the-world route *via* London.

Calcutta Markets

PRICES MOVE UP AT TEA EXPORT SALE

GOOD BUYING IN DUSTS

AT Sale No. 39, held on 31st March, and 1st April, offerings at the Export auction amounted to about 52,047 packages. There was a good but irregular demand, prices being generally dearer. Commonest sorts and "teas for price" were strong and dearer, while plain B.P.'s advanced by 4nP to 6nP. Plain Fannings frequently sold above valuations but were irregular while black clean Dooars were also irregular and sometimes easier. Medium B.O.P.'s and O. Fgs. with improved quality were fully firm to dearer while B.P.'s and P. Fgs. in this category showed irregular advances. There was less competition for ordinary Mediums and these tended easier. Good C.T.C.'s were readily taken up at about last rates, while a few selected lines met with keen competition and sold up to 20nP above valuations. There was good enquiry for the cheaper sorts, but prices were irregular and generally in buyers' favour. There was good demand for Legg-cut teas, but the poorer liquoring ones often sold below valuations. Whole leaf grades were steady, but a few stylish ones tended dearer. There was less competition for a small quantity of tippy teas on offer.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.25 to 2.30	Not available
Plain B. P.	1.44 to 1.48	
Medium B. P.	1.56 to 1.59	
Best Assam C.T.C. B. P.	2.60 to 2.80	
Plain Fannings	1.60 to 1.64	
Medium Fannings	1.74 to 1.78	
Best Assam C.T.C. Fannings	2.70 to 2.90	

At the Internal Sale, 20,417 chests of Dust were on offer, for which there was a good general demand, although prices generally showed an easier tendency. There was good support for orthodox descriptions, but were generally up to 6nP easier and occasionally some small powdery kinds declined by more. The few best liquoring C.T.C.'s on offer as well as the medium descriptions with improving liquors tended dearer, but the plainer kinds were sometimes up to 10nP easier. The very few Darjeeling teas with flavour sold well, but demand was limited for the remainder which were irregular and often easier.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.54	1.58 to 1.62
Medium Assam Grainy Dust	1.56	1.70
Medium Assam C.T.C. Dust	1.85 to 2.05	1.94 to 2.00
Best Assam C.T.C. Dust	2.75 to 3.05	2.75

There was a good general demand for the 4,801 chests of Leaf on offer and prices were dearer.

FREIGHT MARKETS WEAK

THE condition of the freight market remained weak during the past week and rates continued to be poor due to the absence of any testing business. There were very poor enquiries in the Far East. The transatlantic coal market made a few fixtures at 21s. Fixtures of sugar from Cuba to Japan were concluded at 60s a ton. Burmese rice shippers accepted three handy vessels Rangoon-Chittagong or Chalna at 25s f.i.o. Mormugao ore charterers have accepted two vessels and paid Mormugao-Nordurham 46s 6d f.i.o., Mormugao-Antwerp 41s f.i.o. A motor vessel 9,000 tons 10 percent ilmenite ore Koilthottam to Sayreville or New Orleans, was fixed at $ (U.S.) 2.25. In the time charter section, an oil burner of 10,800 d.w. tons has been reported to be fixed for 12 months trading delivery Northern Range at $ (U.S.) 1.75.

LINSEED FIRM

Firm conditions continued in the linseed market during the past week and prices were maintained. The shortage of supplies was the main feature, and there were virtually no offers of new crop seeds from upcountry centres. The price of oil advanced slightly as supplies were scarce. Enquiries from shippers were negligible in spite of an increase in U.K. prices to £110. Fresh business was difficult, except from Bombay where cheap charter freights were reported to be available. Latest quotations were as follows: ready Rs. 23-6 a maund and April-May Rs. 23-4 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 25th March and 31st March, 1958)

Cowhides: Wet salted 6,000 pcs. on the basis of Rs. 10.75 to Rs 12; Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 13.50 to Rs. 25.

Goatskins: Wet salted (Patna, Daissee and Kustia) 32,900 pcs. on the basis of Rs. 290 to Rs 315, Rs. 340 to Rs. 355 and Rs. 385 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 3.62 a piece; Assam-Dinajpur-Jalpaiguri 27,300 pcs. on the basis of Rs. 295 to Rs. 365; Purneah- Kissenganj-Maldah 14,500 pcs. on the basis of Rs. 350 to Rs. 365; Muzafferpore-Patna 67,300 pcs. on the basis of Rs. 325 to Rs. 345.

COMPANY AND PUBLIC NOTICES

WAVERLEY JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Seventy-ninth Annual General Meeting of the Members of WAVERLEY JUTE MILLS COMPANY LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th day of April, 1958, at 3 O'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the eleven months ended 31st May, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To appoint Directors in place of Messrs. D. P. Goenka and B. L. Bajoria, the Directors retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   (i) "That Mr. D. P. Goenka be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   (ii) "That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

   Special Notice of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Messrs. D. P. Goenka and B. L. Bajoria are "associates" of the Managing Agents within the meaning of the Act and that, therefore, they can only be re-appointed by special resolutions as Directors of the Company liable to retirement by rotation.
3. To appoint Auditors and fix their remuneration.

As Special Business

4. To appoint a Director in place of Mr. R. G. Edwards who resigned from the Board in March, 1958, and in this connection, to consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

   "That Mr. D. N. Kapur be and is hereby appointed a Director of the Company *liable to retirement* by rotation in place of Mr. R. G. Edwards."

The Share Transfer Books of the Company will be closed from 16th to 30th April, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 3rd April, 1958.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

Mr. R. G. Edwards resigned from the Board at the end of March, 1958 and a Special Notice has been received from a member of the Company notifying his intention to propose a special resolution as set out in item 4 of the above notice appointing Mr. D. N. Kapur as a Director of the Company liable to retirement by rotation, in the place of Mr. R. G. Edwards. In the said Special Notice it has been pointed out that Mr. D. N. Kapur is an "associate" of the Managing Agents within the meaning of the Companies Act, 1956, and that, in view thereof, it will be necessary for the members to pass a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company liable to retirement by rotation since McLeod & Co. Ltd. the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

The Company Meetings and Dividends table appears on page 487

THE CALCUTTA STEAM NAVIGATION CO., LTD.

A dividend of 6¼% or 65 nP. per share for the half-year ended 30th June, 1957, has been declared payable on or after 1st May, 1958, in the Indian Union to those shareholders registered in the Company's books on the 28th March, 1958.

HOARE MILLER & CO., LTD.,
Managing Agents.

5, Fairlie Place,
Calcutta, the 28th March, 1958.

THE GANESH FLOUR MILLS CO. LTD. DELHI.

NOTICE.

NOTICE is hereby given that the 66th Annual General Meeting of the Shareholders of the Ganesh Flour Mills Co. Ltd., Delhi, will be held at the Registered Office of the Company at Subzimandi, Delhi, on Wednesday the 30th of April, 1958, at 10-30 A.M. to transact the following business:—

1. To receive, consider and adopt the Directors' report and the Audited Balance Sheet and Profit & Loss Account of the Company for the year ending 30th September, 1957.
2. To declare Dividends.
3. (a) To elect a Director in place of Shri Satya Narain Gupta who retires by rotation and being eligible for re-election offers himself for re-election:

   (b) To elect a Director in place of Shri Om *Parkash who* retires by rotation and being eligible for re-election offers himself for re-election;
4. To appoint Auditors for the year 1957-58 and fix *their remuneration.*

   N.B. Special notice, as required under Section 225 of the Companies Act, 1956, has been received from a Shareholder that in the next Annual General Meeting of the Company he shall propose the following resolution:—

   (a) That Messrs. S. P. Gupta & Co. Chartered Accountants, Chandni Chowk, Delhi, be appointed as Auditors of the Company for the next year on such terms and remuneration as may be fixed by the Company in the General Meeting in place of the retiring Auditors, Messrs. A F. Ferguson & Co., Chartered Accountants, New Delhi.

   (b) In case it is decided not to appoint the said firm as independent Auditors of the Company their name may be considered for acting as joint Auditors alongwith Messrs. A. F. Ferguson & Co., on such conditions as may be decided by the Shareholders in the Annual *General Meeting.*
5. To consider and if thought fit to pass the following as Special Resolution:—

   "Resolved that in Article 128 of the Articles of Association of the Company para 19 of the existing Articles be deleted and in place thereof the following be inserted":—

   19. At any time from time to time by Power of Attorney under the Seal of the Company, to appoint Manager, *Officers of the Company* and any person or persons to be the attorney or attornies of the Company and delegate or confirm upon them such powers including the power to sub-delegate, authorities and discretions (not exceeding those vested in or exercisable by the Board under these presents and excluding the power to make calls and excluding also except in their limits authorised by the Board, the power to make loans and borrow moneys) and for such period and subject to such conditions as the Board may from time to time think fit.

By Order of the Board of Directors,
For THE GANESH FLOUR MILLS CO. LTD.,
DELHI,
Sd/- KIRPA NARAIN,
Secretary & General Manager.

Delhi.
Dated 27th March. 1958.

N.B. (a) The Share transfer books of the Company will remain closed from 16th April to 30th April, 1958 (both days inclusive).

(b) Members unable to attend are requested to send their Proxy Forms (sent herewith) duly stamped, signed and witnessed in favour of a person attending the meeting. Forms not properly witnessed or stamped or received less than 48 hours before the meeting will be treated as invalid.

(c) A member entitled to Vote is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a member of the Company.

Explanatory statement in regard to the special business under item No: 5 of the agenda set out above as required under Section 173(2) of the Companies Act:—

In the present Articles of Association of the Company, the Directors are authorised to delegate any of their powers to a Manager or any other person or Officer, holding power of attorney for and on behalf of the Company. Such a Manager, person or Officer of the Company is not, however, authorised to *sub-delegate* his power to any other person. This is likely to create difficulties in the ordinary course of business and day to day working of the Company's affair and as such it is considered necessary and desirable that sub-delegation of powers be authorised under the Articles of Association, hence this amendment.

THE TITAGHUR PAPER MILLS COMPANY LIMITED.

NOTICE OF INTERIM DIVIDENDS.

THE Board of Directors of the above Company has sanctioned payment of the following Interim Dividends in respect of the Company's Financial *year ending 31st March* 1958, without any deduction for Income Tax payable by the Company:—

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FOREIGN TRADE REALITIES FOR COMMUNIST CHINA

INDIAN EXPERIENCE SIMILAR

IN spite of great differences in ideology and political organisation, India and China have a way of running into similar economic troubles at about the same time. These coincidences are calculated to disconcert those who think that in the two countries, two opposed political doctrines are "on trial" and that one or other of them is going "to win" by showing that it can "deliver the goods". On the contrary, it seems that in some of the fundamental problems of economic development, political dogma is just irrelevant. Totalitarians and libertarians both discover that over-investment produces inflation, and that you can run short of roubles just as you can run short of dollars. In other words, there are economic necessities which over-ride political considerations, and these former are especially prominent during a period of fast and forced economic expansion. This is why, at the same time as India's plan went through its crisis, China found herself faced with domestic inflation and foreign exchange difficulties. Her leaders also had to go begging foreign aid, new credits and delays in the repayment of old ones, and eventually the national plan had to be cut back, perhaps more drastically than India's.

Naturally we are told very little of all this by the Peking authorities. Chinese plans are like Russian rockets—you only hear about them when they work. India follows another precedent and gets some of the best publicity for her failures. But it is possible to reconstruct much of China's internal scene from her foreign trade figures, which have been rather more generously published of late. These allow us, first, to conclude that Indian and Chinese experience has been surprisingly similar. Where they permit us to go further and make a comparison between the economic achievements of the two countries, they suggest that India's performance has been better and that she has certainly retained the considerable lead she started with. Talk of vast expansion in China and of rapid, smoothly planned progress—talk which has not by any means come only from communists—has been much exaggerated. Even more wildly magnified has been the extent and the efficiency of Russian aid, concerning which we now at last possess some hard facts and figures. Disillusionment has been keenest among—not communists—but those western European exporters (especially British) who last year pressed the U.S.A. to amend the blacklists on trade with China and who thereafter expected a considerable increase in Chinese purchases abroad. Instead, Chinese foreign trade declined by 8.5 percent last year, including even her trade with Russia and the communist bloc.

China's external trade (adding together its exchanges with the communist bloc and the rest of the world) more than doubled between 1952 and 1956. This sounds impressive, but it is as well to remember that in the former year it was equal to Switzerland's and in the latter year it was still only the equal of Belgium's foreign trade. In other words, in dealing with Chinese foreign trade, even including the supposedly massive exchanges with Russia, we are still down among the midgets of the world trading community—well below the achievements of the middling members of the Commonwealth, like Canada or Australia, and not even half way towards the performance of France. If we leave aside China's trade with the communist bloc, we see that her commerce with the free world in a boom year like 1955 is no greater than the external trade of Algeria.

The peak performance of 1956 was evidently the result of inflationary over-trading, for it was followed in 1957 by cuts in the plan, cuts designed to reduce the foreign-exchange element in various projects: and a notable decline in foreign trade was the consequence. Even in 1956, the communist bloc's share in Chinese trade had fallen and this reflected the difficulties that Russia and her European satellites were having in meeting China's growing needs and the embarrassment China was experiencing in promoting exports to balance her imports and debt payments. Her trade with the communist countries results in a deficit, even after she has surrendered the currencies earned in favourable trade with the rest of the world, especially southern Asia. To cover this deficit, China needs delayed payment arrangements, special credits and capital loans; and she finds it no easier to get them from her ideological partners than India does from the West.

Lines of credit allowed China by Russia have now been exhausted; according to the Chinese Finance Minister, the total of these loans since China became communist is $(U.S.)2,276 million. An important part of this debt is the price Russia charged for surrendering her share in the joint Sino-Russian enterprises created in 1953 for the exploitation of oilfields, mineral deposits and airlines. According to the terms of these agreements, China is now in the stage of paying off Russian disinvestment, but of course she is seeking to obtain both delays in this reimbursement and new credit facilities. Discussing this situation lately, the *Economic Review of China, North Korea and Hongkong* said: "From remarks made by the Chinese Finance Minister it appears that not only are Soviet credits almost exhausted, but that China can no longer hope to receive fresh financial aid from Russia. She will continue to use Russian technicians and will be able to rely on Russian machinery and equipment supplies, but she is forced to reach the stage of autonomous financing much earlier than she expected. It is hard to say which of the two countries is responsible for this change but certain speeches made at the National Popular Congress (in Peking) suggest that it was Russia that rejected Chinese demands for assistance".

This drying up of credit between "fraternal socialist republics" will surprise only those who forget the enormous burdens cast on Russia by her own expansion, her fantastic armaments charges, her expensive progress in nuclear and ballistic research, her subsidies to her European satellites and her ostentatious assistance to non-communist countries. But even those of us who have borne these facts in mind and who have not swallowed accounts of lavish Russian aid to the Chinese, must be astonished at the modesty of Russian physical assistance as reckoned by the official Chinese Press lately. According to this source, China received from Russia between 1953, and 1956: two million tons of steel, five million tons of petroleum products, 2,580 machine tools and 9,000 agricultural machines. India gets as much as this from the Colombo Plan. The flow of generous Russian aid to China is evidently a myth.

Something can be learned too of China's internal situation from the nature of the fall in exports last year. Peking had for some years been following the policy of exporting foodstuffs to southern Asian countries where it hoped to increase its influence, even at the cost of allowing its own people to go short. (Hence the typical communist paradox of flood and famine at home, and increased rice sales abroad.) But last year, after the abortive attempt at de-stalinisation and the subsequent renewed repression, domestic supplies had to be improved as a matter of urgent political necessity. So in 1957 foodgrain exports were cut by 40 percent, although the previous harvest had been more successful than usual. Exports of edible oils were cut by 100,000 tons, meat exports were halved and sales abroad of cotton manufactures heavily reduced. It is plain that even communist repression is inadequate to smother the discontent produced by domestic inflation. Increased demands for consum.: goods, caused by heavy investment and a rising population, had to be met by reducing publicity-stunt exports, and then by attacking the causes of increased demand, that is, by reducing inflationary plan outlays and by pushing the birth-control programme.

The pruning of the Chinese plan necessitated by these developments has been every bit as severe as in India and, given Chinese dogma on the question, has constituted a much more frank "retreat from socialism". The industrialisation effort has been concentrated on medium-sized projects which in fact would correspond exactly with what in India constitutes the private sector. The grandiose multi-purpose schemes which require more imported materials have been put on ice. While Delhi is holding on to "the core of the plan", Peking has seen that there may be more juice in the rind. The utilisation of home-produced raw materials and of cheap manual labour has become a stricter test for priority than in India. Imports of machinery and transport equipment have been cut back and more reliance is being placed on the local industries that produce these goods; India has to some extent been saved this diseconomy by continued support from the Colombo Plan donors and by credits from the West.

Thus the decline in the value and volume of China's foreign trade, caused by a fall both in exports and imports, reflects a domestic situation not very dissimilar from India's. It shows once again that the planners of economic expansion, whether communist or not, always under-estimate the import burden of an industrial programme and always over-estimate the ability of an expanding economy to maintain exports. This lesson may now, we hope, have been learned once and for all in India at least. In China's case, it was not only the Peking planners who made this error, but also the European Governments who hoped for such spectacular results from the liberalisation of American prohibitions on trade with China.

If the foregoing shows conclusively that the Chinese communists have no special secrets for avoiding the banal embarrassments of over-investment, it does not show that China's case is any more grave than India's. It does not demonstrate, for instance, that failure of communism that certain American observers are so confidently awaiting. It is pretty near certain that China's difficulties will last through all of this year, as will India's, but that exports will begin to rise thereafter, though slowly. Her trade balance with the communist countries of Europe will remain adverse for some time and she will only slowly be able to take advantage of the greater freedom to import from the West allowed her by the new "Chincom" regulations. Her exports to southern Asia, which have been the most satisfactory part of her foreign trade in recent years, might develop further thanks to the expansion of her light industries and mechanical engineering plant, but the prospect here is a short one and Peking has no illusions about it. The Foreign Trade Minister said lately that China would soon encounter limits in that direction because of the competition of other countries, especially Japan, and because of increasing protectionism as Asian countries seek to develop their home industries.

The fact that 58 percent of China's trade is with Soviet Russia and 70 percent to 85 percent with the communist bloc, might protect her better against the trade recession that is promised us for this year, whereas India, whose trading relations are with the countries most exposed to depression (America, Britain and Australia), may feel the full blast of it. But it remains to be seen how serious this much advertised recession turns out to be. The fact that India is only just beginning to exploit the full possibilities of foreign aid from the West, when China has already pushed the generosity of her communist allies to the limit, indicates that even from this point of view her position is no less comfortable than that of her more populous neighbour.

CONTINUED PROGRESS IN THE SUGAR INDUSTRY

PRICE POLICY FOR THE HOME CONSUMER

FEW of India's large industries have been prone to such violent fluctuations of fortune as sugar. Until a few years ago, production rose and fell with amazing rapidity. Consumption varied sharply from year to year. Foreign trade plans for the commodity were sometimes in forward gear and sometimes in reverse, with sluggish export promotion schemes suddenly being jettisoned in favour of vigorous import programmes. It is a measure of the progress which the industry has made, and of the relative stability which it has achieved, that since 1953-54 production has risen steadily, and during 1956-57 reached a new record of 2,026,000 tons. In his presidential address at the annual general meeting of the Indian Sugar Mills Association last Thursday, Mr. B S. Sawhney pointed to the achievement with justifiable pride, and doubted "if any other established industry has such a promising record to show." (A fuller version of the speech appears on a later page.) Rising production has been accompanied by higher consumption, with the result that, during the past year at least, stocks have been kept down to manageable levels and prices have been highly remunerative for the efficient mills. A moderate quantity of sugar has been sold abroad in the face of stiff competition from other producing countries. In the light of these achievements, it might have been expected that the Indian sugar industry would be looking forward to the future with buoyant optimism. But, in fact, the underlying theme of Mr. Sawhney's speech is one of uncertainty.

The pessimism is not wholly unjustified, and there are four main reasons for this. The first is that sugar prices are too high, with the result that consumers will have little hesitation in switching from mill-made sugar if suitable, cheaper alternatives such as *khandsari* and *gur* become more freely available. The second is that little has been done to improve the quality of cane, which has traditionally been the major source of weakness in the industry. The third is that taxation is too heavy, so that although a large proportion of it can at present be passed on to the consumer, the time may come when this will no longer be possible. The fourth is that India, during the current year at least, has little hope of being able to continue exporting sugar, unless exports can be subsidised by mulcting the reluctant indigenous consumer.

It is in relation to cane development that the most urgent efforts need to be made. Mr. Sawhney quotes statistics to show that in this country not only is the yield from each acre of cane much less than in other major sugar-producing territories; the sugar content of the cane is much lower too. The difference is striking. Hawaii harvests as much as 62 tons of cane from an acre of land, and Java harvests 56 tons. For India, the figure is a mere 13 tons. As for sugar recovery, the percentage in this country is only 9.73, as against 12.25 in Cuba and 14.33 in Australia. The main blame for the poor progress which has been made lies with State Governments, especially those of U.P. and Bihar. For years, the sugarcane cess which they h[illegible] collected from the industry has been used not for the purpose for which it is meant (cane development), but to cover deficits arising from expenditure elsewhere. Now that the cess has been increased, the case for preventing its misuse is stronger. Mr. Sawhney's suggestion that all cane research be supervised by a single autonomous agency devoted exclusively to this task, on which the industry and growers would be represented, has its theoretical attractions. The more important problem, however, is to ensure that the results of such research as has been done are carried to the fields. This would be easier if the system of incentive payments to farmers who grow better cane were more widely adopted. A large part of the south Indian sugar industry has already shown that major benefits can be gained by linking the price paid for cane to its quality. Mills in the north might well emulate the example. Mr. Sawhney's speech unfortunately omits to mention how far efforts in this direction have progressed.

There are three main aims towards which cane research needs to be directed. The first, is to improve the yield per acre. The second, is to increase the sucrose content of the cane. And the third is to develop early and late maturing varieties, so that factories can have longer crushing seasons, reduce overheads and thereby become more economic. If achievements in any of these aspects had been substantial, the organised industry would probably have been less vociferous in its complaints against the growth of *khandsari* manufacture. As things are, much of Mr. Sawhney's speech is devoted to reiterating such complaints. The real conclusion to be drawn from what he says, however, is that the healthy expansion of the sugar industry is being threatened by its products having become too expensive. The growing consumer preference for *khandsari* sugar, to which he refers, is directly attributable to its cheapness. The I.S.M.A. president claims that the difference in price arises primarily because factory sugar is heavily taxed while *khandsari* is not (he estimates the tax advantage enjoyed by the latter as Rs. 13-3 a maund); the assertion is to a large extent correct, though the estimated difference in the tax burden does not fully explain the usual difference in the retail prices of the two. He points out that *khandsari* manufacture is wasteful, as sugar recovery in its case is only 6 percent or 7 percent, while in the case of the organised industry it is nearly 10 percent. The inclination to expand sugar factories will decrease if competition from *khandsari* becomes stiffer. Mr. Sawhney says that sugar exports and Government revenues will also suffer with the growth of *khandsari* manufacture. Such pessimism might have been more justified if sugar factories had been finding it difficult to sell their output or had been getting unremunerative prices, but that is not yet the case. None of Mr. Sawhney's arguments will change the consumers' view that while the ease for reducing the fiscal burdens on sugar is strong, there must be some assurance that a reduction in taxes will be followed by a reduction in prices.

Judging from the speech made by Mr. A. P. Jain, Central Food and Agriculture Minister, at the I.S.M.A. meeting, the Government is even less keen than the industry to reduce prices. Mr. Jain apparently remains a victim of the fallacy fathered by Mr. T. T. Krishnamachari that the best way to increase exports is to impose taxes which make things far too expensive for the domestic consumer. The absurd lengths to which this policy can be carried has only just been belatedly recognised in the case of the cotton textile industry. It seems Mr. Jain is waiting for a similar crisis to overtake sugar also. Why the domestic consumer, who has subsidised the growth of the sugar industry for nearly three decades, should now be obliged to subsidise its export programmes is not very clear. Sugar mills should be hesitant to recommend such subsidy schemes; in the longer term, they may find, as indeed they are already beginning to, that the growth in local consumption (which is their only guaranteed market) has stopped and that Indians are munching more and more of *khandsari* and *gur*. If the Government and the industry are keen to boost exports, the former has to learn to help grow better cane, and the latter has to learn to use that cane better—for instance, by modernising its equipment.

PROBLEMS OF THE PRIMARY PRODUCERS

SPREADING THE RECESSION

THE present phase may be crucial. If primary prices generally are stable or inclined to rise the recession in world trade can probably be checked within a few months: but if the trend of commodities is still downward the effects of the decline will probably be long-lasting. The trend is not yet clear. Most attention is focussed on copper (the time when wheat was the barometer of economic trends is almost forgotten), and copper has been so many weeks above its low-point of £160 a ton that many people believe that the trend has turned. That the price of aluminium (which competes with copper) has lately been reduced is not necessarily significant, for aluminium had lagged behind the general movement of metals. Yet the recovery in prices of metals—as of wool and other commodities whose decline has been checked—is hesitant and subject to relapses. What is needed to strengthen commodities is, of course, a positive upturn in the American economy. The basic cause of the decline in commodity prices was not so much the American recession (which the beginning of the decline in metal prices, for instance, preceded by many months) as the commodity-producers' over-estimation of the industrial countries' requirements. But the American recession gave impetus to the decline, and it is doubtful if prices can recover until the American economy resumes expansion—or until its re-expansion is foreseen.

The American recession has not yet seriously affected Britain or other European countries, and they will not necessarily suffer much from a decline in their direct trade with America. The more serious danger is that the American recession will act on other manufacturing countries indirectly, through the medium of commodity prices. The sequence would be recession in America, recession in the commodity-producing countries, recession in the export trades, and therefore in the industries, of manufacturing countries that sell to the commodity-producers. It is feared that the relative stability of such countries as Britain and Japan (the German economy already shows signs of weakening) will not be maintained much longer unless the purchasing power of the commodity-producing countries expands soon. While commodity prices were high the producing countries could devote a considerable part of their earnings from exports to the financing of capital projects. At current prices most of them have to use these earnings entirely to pay for imports for consumption. Capital projects must be deferred, and trade in capital goods must decline, unless adequate loans and credits can be arranged. Britain may suffer more than other exporters of capital goods, because her credit is still tightly restricted and her money rates are still high.

The primary-producers themselves are in an awkward predicament. While other countries are mainly interested in the effects of low commodity prices on international trade, these countries are equally concerned with their effects on domestic trade. Low incomes in the primary-producing sector of their economies are depressing business in other sectors. Ought they to impose internal restraints to conserve foreign exchange, or stimulate activity and so risk a crisis in their external payments? Whatever the answer (there is no unanimity of policy in the countries concerned), exporters of manufactures cannot find much comfort. The countries whose internal policy appears to risk a crisis are in fact averting it by direct controls on imports. Consumer goods are mainly affected by these controls, but low national incomes must also restrict imports of producer goods. It would be foolishly complacent to suppose that the full effects of the weakening of commodities had yet shown themselves in international trade.

It is already evident that European demand is incapable of sustaining trade in commodities, and so counteracting the American recession, as it did in 1953-54. The output of Europe's industries is no longer generally increasing, and if it decreases so will Europe's consumption of commodities. The European free-trade plans have matured (in so far as they have matured at all) too late to affect the position. Later this year representatives of the nations of the Commonwealth will be in conference together and will discuss plans for maintaining and expanding trade, but their task will be the more difficult if trade contracts in the meantime, and no action that they may agree can become effective immediately. The American economy, confounding the pessimists, may recover soon, but if it continues to languish the maintenance of activity in the non-American manufacturing countries will be supremely important. If these countries can maintain their consumption of commodities the decline in primary prices will probably go no further. If a European recession is superimposed on the American recession the recent stability of commodity prices will presumably not be maintained: then, on a reduced volume of sales at lower prices, the primary-producers' incomes will be further curtailed.

This process cannot be allowed to continue; and that is the best reason for believing that it will not be. After years of unhealthy inflation we ought to be able to take advantage of lower prices, not allow them to cause more disturbance. The manufacturing countries cannot expect to enjoy indefinitely the improvement in the terms of trade, and consequently in their balance of payments, that is, for them, the most notable result of the decline in import prices; for the primary-producing countries the effect is, of course, the opposite. It should be possible to work out some policy whereby both groups of countries can be relieved of inflation without suffering the ill effects of the change. The plain fact is that we were not adequately prepared for this change. For the first time since the war, virtually no food or material is scarce, in the ordinary commercial sense, and the effective demand for nearly all manufactured goods is satisfied. If we cannot adapt ourselves to a situation that is thus essentially favourable we have evidently wasted the opportunity to learn from the errors of inflation.

TEACHERS SEEKING JOBS

TEACHING in India, especially in the schools, is hopelessly underpaid. Yet it is to this profession that a progressively increasing proportion of the country's educated population is turning for employment. This may be largely because applicants expect quicker chances of employment in the teaching field, due to the rapid rise in the number of schools, rather than to any special aptitude for the work. The fact that the majority of those seeking employment through the exchanges have no training for the profession, also points to this conclusion. A study by the Directorate of Employment Exchanges of the supply and demand for school teachers shows that the number of applicants registering for these jobs in high, middle and primary schools has been steadily increasing over the years. During the period January 1955-November 1957, which this study covers, the numbers increased progressively, and on the last day of November 1957, 34,000, or 3.8 percent of the total number of applicants on the live register, were seeking employment as teachers. This rise corresponded to the increase in the flow of the trained teachers passing out from schools and colleges, from 45,821 in 1952-53, to 54,015 in 1953-54, to 59,540 in 1954-55 and to 67,200 in 1955-56. A particular feature of the situation was that of those having the right qualifications for the profession, women applicants greatly outnumbered men, a result, one might think, of the effects which inflation is having on middle class notions of family life and respectability.

The dark spot in the statistical picture was that overall demand, as represented by the vacancies notified to employment exchanges, fell seriously short of the supply. The study shows a gradual fall since 1955 in the number of the vacancies so notified, both in absolute numbers and in relation to total vacancies notified to the exchanges. Only 12.6 vacancies were available for each 100 persons (trained and untrained) registering for such employment. The prospects, however, are not quite so bad for trained hands. On the contrary, in some States, demand for trained teachers exceeded supply. A shortage was particularly noticeable in Madhya Pradesh where, according to this study, vacancies were 18 times the number of available trained teachers. In Manipur, Assam, Tripura, Himachal Pradesh, Orissa, West Bengal and Rajasthan also, there was a dearth of such candidates.

Punjab led in the supply, both in the trained and untrained categories. Punjab and Madras ranked first and second, respectively, in the supply of trained teachers, while the third and fourth positions were occupied by Kerala and Andhra. Delhi came fifth on the list. As for women teachers, Madras supplied the highest number, followed by Punjab, Kerala, Delhi, Mysore and Andhra; 95 percent of the trained women teachers seeking jobs through the exchanges were concentrated in these States. Of the total teacher applicants, 11 percent were trained graduates wishing to teach in high and higher secondary schools; there was a shortage of trained teachers for high schools in several States. With the exception of Delhi and Punjab, where, respectively, 749 and 592 high school teachers were available, the supply of this category in other States was low. Only Uttar Pradesh had 121 applicants; in the rest, the scarcity was prominent equally in male and female groups. The bulk of trained middle school teachers (87 percent) was concentrated in the States of Madras, Kerala, Andhra, Bihar and Mysore, the numbers available in all other States being insignificant. Over 90 percent of the primary-elementary school teachers were located in the States of Punjab, Madras, Delhi and Kerala. Thus, there was an obvious maldistribution of trained teachers. A degree of mobility, were that practicable, could mitigate the problem to a certain extent. But the generally low rate of remuneration and, above all, the language barrier, make the movement of teachers from one State to another a completely impossible proposition. Moreover, only a small percentage were willing to go anywhere in India.

CURRENT COIN

Marketing Research in Hindustan Lever.—The chairman of Hindustan Lever Limited, Mr. S. H. Turner, made a welcome departure from normal in his speech at this year's annual general meeting of the company. Instead of relating past achievements and listing problems faced and complaints outstanding, he has chosen to explain one important feature of the company's operations—its marketing research. This is a science which is still in its infancy in India, and which probably faces far more complications and frustrations than it does in a developed country. Nevertheless, as Mr. Turner points out, it is essential to the efficient marketing of consumer goods, such as Hindustan Lever is largely concerned with. Mr. Turner defines marketing research as ".... the study of consumer preferences, habits and attitudes". These, he contends, are what must condition the activities of any manufacturer who aims to expand his market of satisfied customers. Students of the science, as well as those only mildly interested in it, will do well to study carefully the interesting and amusing speech which is published in full on another page of this issue of *Capital*. It outlines the prejudices, regional or class, and the attitudes based on social convention or ignorance and suspicion, which determine the market for a particular product and the technique of investigation which has to be used for learing the details of this market. It then goes on to describe the uses to which the knowledge is put. Why, for instance, it is decided that Punjab offers a better opportunity, say, for increasing the sales of Sunlight soap than West Bengal. Marketing research, says Mr. Turner, helps the company to decide "the shape" of its market. With such knowledge it is then able to direct its advertising and its selling energy into the most profitable channels. Another important part of the process is product testing. Different products must be suited to the circumstances under which they will be used; these are usually peculiar to India and cannot necessarily be deduced from experience elsewhere. The final step—when the company has decided that it is making the right product—is advertising. Mr. Turner has done well to show advertising as merely a part of the process of bringing the appropriate product into the hands of consumers; nowhere more than in India is this fact misunderstood. This speech is a first-class account of the complexities of modern marketing. Mr. Turner is to be congratulated on his choice of topic; other chairmen would do well to copy this innovation. Marketing research is a valuable tool in the efforts of Hindustan Lever to "try and give the consumer products which he will like and which will do the job he wants them to do". It would help other companies in their efforts to do the same.

The U.S. Recession Debate.—The public, political and Press discussion of the U.S. business decline and measures to combat it reached a crescendo, if not a climax, during March, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Paradoxically, argument is gathering momentum just at a time when the decline itself may be lessening in intensity. There is little doubt that the March figures on unemployment will be up, and production and income down. Recent surveys confirm expectations of further declines in business spending and further hesitation by consumers, at least in the case of major items. On the other hand, the *month-to-month change* from February to March, in such key indicators as production, unemployment and retail sales, seemingly has been less than in earlier months, and there are signs that any

downward movement in April may also be more moderate. New claims for unemployment insurance have declined in March, and purchasing agents report little further decline in new orders. In part, slackening in the rate of decline reflects sizeable adjustments already made, notably the curtailment of output in steel and other metals and resulting inventory liquidation. In part, it reflects only seasonal tendencies and better weather. A lessened rate of decline will not necessarily mean that the actual bottom of the recession is imminent. Adjustments in many lines, particularly capital goods, still have a long way to go. There is as yet no convincing evidence of a general upturn in orders, which would be a necessary forerunner of improvement in production and employment. Some individual firms or industries feel, however, that they are reaching for bottom. Certain appliance firms, metal producers and machine tool and other machinery manufacturers report a slight improvement in orders, which may or may not hold. The best reason for thinking that the slope of the decline may be flattening is that production in many lines is clearly below consumption, which implies a slow restoration of market equilibrium. The apparent drop in industrial production in March reflects further cutbacks in automobile, steel and petroleum production. In February, the Federal Reserve production index (seasonally adjusted, 1947-49 = 100) dropped to 130, climaxing a fall of 10 percent in five months. For the first time since the decline started, all major manufacturing and mining industries reporting in February were operating at a lower rate than a year earlier. A drop in demand for capital goods appears likely throughout 1958 and possibly into 1959, according to a survey made during the first quarter by the Securities and Exchange Commission and the U.S. Department of Commerce. Business men are planning to cut plant and equipment expenditure in 1958 to $32,000 million, down 13 percent from the record 1957 total of $37,000 million. The implied level in the second half of 1958 is nearly one-fifth below the corresponding 1957 period. Even so, outlays in 1958 will be greater than in any previous year in the nation's history, other than 1956 and 1957.

* * * * *

Ambar Charkhas in the Deep Freeze.—The news that 10 percent of the 40,000 *ambar charkhas* distributed in U.P. are lying idle should cause some concern, though hardly any surprise. Even the output of those which are being used is reported to be far below expectations. Spinners are not keen to buy the yarn made by *ambar charkhas*, as it is rough and consumers prefer fine cloth. The problem of *khadi* is, from this aspect, not much different from that of handloom cloth. A subcommittee of the All-India Handloom Board has issued an alarm recently that the excise duty relief given to mill cloth will hit handloom weavers all over the country. Madras and Andhra, it is pointed out, have Rs. 2 crores and Rs. 1½ crores, respectively, worth of handloom cloth in stock. The statement adds that as against the reduction in excise duty on mill cloth, the rebate on handloom cloth has been cut from 1½ annas to one anna. The claim of the handloom industry for preferential treatment is supported by mentioning that it gives employment to a larger number of persons; the mills employ about 200,000, compared with the 7.5 million who work with handlooms and support 15 million persons in rural India. These are arguments which have been recognised by the Government and which have already influenced textile policy, as in the freezing of mill output at 5,000 million yards, and in the allocation of the production of an additional 1,700 million yards of cloth to the handlooms. But in spite of encouragement, handloom output has not only lagged behind schedule; the price of handloom cloth has also remained too high for the ordinary consumer. An A.I.C.C. study group last year considered the question and naively suggested what it called a "pool price" for cloth, according to which cloth was to be priced according to its variety and not its method of production. The study group fortified its plea by citing the example of pool prices in cement and steel. What the Congress economists forgot was that pool prices for cement and steel were introduced to achieve parity with imports. The truth is that the Government's policy of assisting the handloom industry has always been at the expense of the mill industry, and therefore indirectly at the expense of the consumer of mill cloth.

* * * *

Sweet and Dear.—The second plan proposes a production target of 10,000 tons of confectionery for the organised sector of the industry. No provision has been made for increasing the capacity since a large part of it has been lying idle due to the lack of demand. In his presidential address at the annual general meeting of the Indian Confectionery Manufacturers Association, Mr. Khanchand J. Pamnani, has said that a large part of the population is unable to purchase quality products, as the high cost of raw materials makes them expensive. Demand can be increased by drastically reducing raw material prices. Sugar is a basic raw material which accounts, on an average, for about 40 percent of the total production cost. Against an f.o.b. price of about Rs. 17 a maund ruling in world markets, the price which confectionery manufacturers have to pay for it in India is Rs. 35 or Rs. 36 a maund ex-factory. Any measure that might be taken to ensure supplies at international prices will enable the industry to reduce production costs. It is the normal practice in other countries to allow rebates of internal taxes on sugar used for the manufacture of confectionery. The Government should follow a similar policy to encourage the growth of the indigenous industry. "Another concession which, I feel, the industry can legitimately expect is the remission of cane cess by State Governments on sugar used in the manufacture of confectionery. This would reduce the price of sugar used by the industry by another Rs. 2 a maund. The grant of these reliefs should not be difficult for the Government as the total quantity of sugar required by the confectionery industry will be only about 5,000 tons a year, which is a very insignificant percentage of the total sugar production of more than 2 million tons in the country." The cost of other raw materials such as liquid glucose, essences and wrapping papers, which the industry now gets from indigenous sources, is too high. For example, the price of indigenous glucose at producing centres is Rs. 56 a cwt, against the f.o.b. price of Rs. 28.5 a cwt., ex-American ports. As for cellophane wrapping paper, the indigenous product costs about Rs. 5.28 a lb, against Rs. 3.36 a lb, f.o.b. French ports for the imported varieties. Furthermore, the Government has completely stopped the import of liquid glucose since January 1957. In the case of cellophane and waxed wrapping papers and tinplates, a drastic cut has been made in the quotas of established importers through whom manufacturers obtain their supplies. Referring to the need to explore markets in neighbouring countries, Mr. Pamnani says that exports have declined from 11,423 cwts. in 1948-49 to 661 cwts. in 1956-57. This decline is mainly due to the inability of the industry to compete with foreign producers. But it could compete effectively if it secured raw materials at favourable prices.

* * * *

Distribution of Imported Copper.—The announcement from New Delhi last Thursday imposing price and distribution controls on imported non-ferrous metals has not surprised the trade. The general principles underlying the announcement were discussed with a team of established importers which met the authorities recently. But the order has created a stalemate in the market because uncertainty exists as to whether it covers previous forward sales. Issued under Section 3 of the Essential Commodities Act, 1955, the order regulates, with immediate effect, the purchase and sale of imported non-ferrous metals in different forms at a price not more than 3½ percent above the landed cost. It is applicable only to copper in the first instance. About 2,500 tons of the metal were actually being unloaded in Bombay port at the time the order was issued. The stalemate in the market is not surprising, especially as it is necessary to notify the authorities about any quantity of non-ferrous metal "imported or cleared on or after 3rd April. 1958". Importers were called upon to declare their stocks around the middle of February and after that the New Delhi talks were held. It is reported that they agreed to make available the uncommitted portion of the copper (about 3,000 tons) expected against their April-September quota to consumers on a margin of 3 or 3½ percent. The directive might help reduce speculation in copper, the price of which has been quoting about 33 or 35 percent above the landed cost. The regulation of distribution through permits should ensure that actual users alone will get the material. Non-scheduled industries which do not enjoy quota benefits might get priority in securing goods from importers, because scheduled industries have been given actual user licences for the period to March. If scheduled industries are also allowed to draw from the notified stocks against permits, such drawings will probably be against the actual user licences obtained for the April-September period. Against a domestic demand of about 50,000 tons, import licences for about 27,000 tons were first issued. About 7,500 tons of Canadian copper will be coming in April-May for actual users as Colombo Plan aid, and 2,500 tons will be imported by the State Trading Corporation. All these should raise the total available to around 37,000 tons. Indications are that *ad hoc* licences for a further 3,000 tons might be issued, most probably to the State Trading Corporation. Small consumers of sheets are reported to be complaining about the prices charged by sheet rollers, who are probably basing these on the high price of copper. It is possible that the Government might fix some priority in the utilisation of copper by rollers, specifying the percentage for industrial sheets and commercial sheets. The State Trading Corporation might be able to distribute sheets to small consumers at "fair prices", getting the copper imported by it converted into sheets of the required specifications by rollers, who claim to have sufficient additional capacity.

* * * *

Small Industries in Madras.—The Madras Government's growing interest in the small industries which have been set up in the new industrial estates suggests that the creation of a managerial class of Government servants may be considered necessary. The training of artisans is to be followed by the offer of work. In a pronouncement made before the State Assembly, it is pointed out that the prospects for steel-making still depend on a report about ore supplies. The manufacture of pig iron, however, is to start under private auspices. Industrial co-operatives are expected to take over the new small industries launched with State aid. Expenditure on schemes for making surgical instruments, electrical goods and hand tools from the Budget provision made last year suggests that the new industrial units have made a start. The manufacture of sports goods has begun and most of the initial output has been sold. The production of scientific glass apparatus will start only after machinery has been installed, but the making of laboratory equipment has already arrived. The lock unit in Dindigul has started production and the entire output is being sold through the Vulcan Trading Company. The making of hurricane lanterns in Palni is a new venture. Whether new units for brassware are needed when the old cottage industry is finding its raw material scarce is open to question. The Madras Government now runs footwear units. Sales emporia are to be set up soon in 11 districts and the Government intends to sell cottage industry products on its own. According to a statement presented to the Assembly, the Government plans to spend Rs. 147.02 lakhs on a variety of new small enterprises, in addition to the Rs. 55.12 lakhs spent in 1957-58 This investment is to supplement what has been allotted for the handloom industry.

* * * *

Wagons for Moving Coal.—The increase in the output of the coal industry during the first two years of the second plan has been encouraging, but the benefits of the increase are limited by the fact that transport facilities are not adequate. The railways are trying to expand track capacity and provide more wagons, but are still unable to meet the demand for their services. Speaking at the annual general meeting of the Indian Coal Merchants Association, Mr. Devchand A. Mehta, president, has said that in 1956, despatches amounted to 34.9 million tons, against a total production of 39.4 million tons. In 1957, despatches were 37.7 million tons against a production of 43.5 million tons. In many collieries, pithead stocks have reached levels which prohibit a further increase in output. "We were told that the railways would be in a position to supply 4,965 wagons on a daily average for coal loading from the West Bengal-Bihar fields by the end of the plan period, that is, more than 1,700 wagons a day more than what they were supplying just prior to the commencement of the second plan. Two years of the plan period are over and yet the railways have achieved an increased supply of 400 wagons a day only. This is hopelessly unsatisfactory and unless the railways accelerate appreciably the rate of increased supply of wagons, the prospect of fulfilment of the plan target of the industries by regular supply of their coal is dismal indeed". During the last quarter of 1957, wagon offerings to collieries served by the South Eastern Railway declined and there was a big increase in stocks. Furthermore, consumers were in distress. The railway later agreed to guarantee a minimum supply of 1,000 wagons a day, but even this minimum is not being maintained. Stocks with collieries are, therefore, increasing, and coal merchants having failed to keep their promises to customers stand discredited through no fault of their own.

administration in this country, but an instance of how the lack of it holds up much-advertised schemes of social welfare is furnished by Uttar Pradesh where the workers' health insurance scheme covers seven towns and 150,000 workers. In Kanpur alone, it is stated, Rs. 50 lakhs are collected but only Rs. 25 lakhs are actually spent. It is difficult to account for this shortfall in expenditure for it cannot be the case that workers there are extraordinarily healthy. Indeed, the extent of absenteeism on account of sickness would suggest exactly the contrary. This year it is proposed to extend the scheme to four more towns, and the State Government has accordingly made a provision in the current year's Budget. But as much as 87.5 percent of the contribution comes from employers and employees; this amount, as the regional board of the Employees State Insurance Corporation has belatedly discovered, is collected every quarter and put in a separate account which cannot be adjusted against expense accounts. The Corporation, it may be recalled, is entitled to collect 5 percent of an employee's salary from the employer and 2.5 percent each from the employee himself and the State Government. At present, it collects only 1.25 percent each from the employer and the State Government, besides the employee's contribution of 2.5 percent. In other words, it collects only one-half of what it could collect and then spends only one-half of what it does collect. To get over the difficulty of extending the scheme to the four other towns, the Corporation, it is believed, has asked the Planning Commission to advance the money to the State Government at the beginning of each quarter instead of paying it at the end. It is by no means certain that the Commission will agree to the suggestion. Corporation executives profess to be very keen on starting the scheme, "even from tomorrow" as they put it. But considering that ten years after its introduction in Kanpur, the Corporation has no hospital of its own (it has only dispensaries) it might be best to hasten slowly.

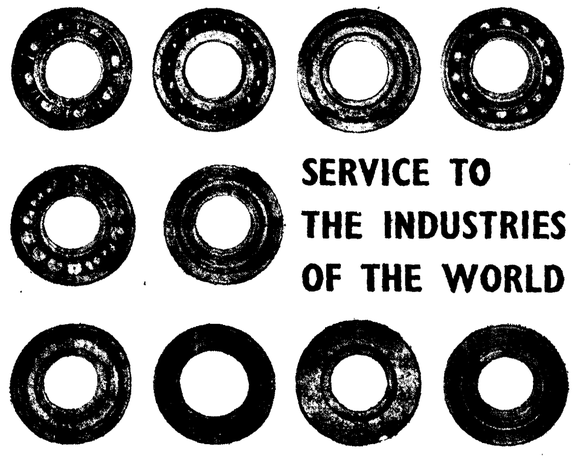
* * * *

Groundnut Oil Trade.—The power cut in Madras has affected the groundnut oil trade. Prices are maintained as expellers cannot produce enough even for the usual sales to Calcutta. The fall in kernel prices has been checked, and only small business has taken place in oil with vanaspati factories outside Madras. Reviewing the trade in 1957, the Madras Chamber of Commerce points to the results of the ban on exports of groundnut oil. Some markets have been wholly lost because licences and quotas have not been given. African competition has been keen and the United States has sold more out of its surplus to Europe lately. Freight rates for oil from Madras to Calcutta have been raised and the oilseed crushing industry is handicapped by the excise as well as the sales tax. An important point which is made is that mills which are careful about complying with labour laws are placed at a disadvantage by some unscrupulous rivals; as a result, many large units have remained closed in 1957. The smaller crop did not benefit growers as prices did not rise as was expected and many small shippers of oil to Burma were put out of business because of the prohibition of exports of oil and kernels. The stability of oil prices after forward trading started in Madras deserves attention. The price spread as compared with mofussil centres is small and local groundnut oil prices have not strengthened in sympathy with coconut oil, for which European demand seems to be increasing.

* * * *

The Export Price of Coffee.—The Central Ministry of Commerce and Industry has drawn the attention of *Capital* to what it considers to be certain errors in the passage headed "Coffee Export Prices" published on page 306 of the issue of 27th February, 1958. A statement from the Ministry reads as follows: "Your South Indian Correspondent has given an entirely wrong picture. Anyone conversant with the world coffee position will know there is a decline in prices of all coffees in general and not merely of Indian coffee, and this is because of supplies exceeding the demand. It is common knowledge that Brazil and Columbia, the largest producers, are driven to the necessity of support buying of their own coffees. Your correspondent has also not considered the efforts made by large coffee producing countries in South America, their entering into an agreement in Mexico City in October last, and the further attempts made by them to establish an International Coffee Organisation at a meeting of these countries on 20th January, 1958, at Rio de Janeiro. The other mistake of fact he makes is that the best grades are not put on the export market but are diverted to meet the internal demand. This is entirely erroneous as what is put on the export market is the best of all the available coffees. It is no doubt true that only the surplus after meeting the demand for internal needs is put on the export market and some part of good coffee is also retained for internal consumption."

PEACE, PLENTY AND PROSPERITY



THE three P's, like the three R's and the three Graces, are always in demand. The demand, it is true, often exceeds the supply, but with our friends the Afridis now as gentle as sucking doves and a spring campaign banished from the riotous imaginations of the forward party, and moreover with bountiful harvests scattering plenty over a smiling if rather thickly populated country, it is clear that prosperity is staring us in the face, so to speak. It is decorous, may be, to try to tone down our astonishment; but still, while the Financial Member, first with a glance into the future, and then with a long lingering look at the past, reads his statement for the official year, a decent dissemination of the emotions becomes a difficult matter. The patriotic Britisher, who is firmly convinced that in this blundering world there never was, and probably never will be, anything finer than the glorious constitution of his own country, loves to hear of progress; and as he is convinced that on the whole his progress is fairly steady, he naturally waxes a little impatient when he is compelled to listen to the balderdash of some people. Yet, though the level-headed Briton abhors the scurrility which comes as easy to some natures as shelling peas, there has been a doubt in the patriotic bosom that all was not going well with India; and, lo! just at this juncture, up comes the Financial Member, whips out a statement of twenty years' revenue and expenditure, and exclaims: "The record of twenty years of finance which I have displayed in the above figures is a better one than can be shown by almost any country in the world but the United Kingdom." Now this is highly satisfactory. After reading such a declaration the ordinary Britisher feels inclined to survey mankind from China to Peru, and smile pityingly on the nations who know not how to do it. Twenty years of surpluses! Are such records "made in Germany?" Of course not. In the United States? Of course not. And, if not there, may we not feel industrially and commercially mollified?

SERVICE TO THE INDUSTRIES OF THE WORLD
that has been the aim of SKF from the very beginning. An all-embracing service like this demands a comprehensive range of bearing types to meet each particular need. Of these different bearing types SKF has designed:
- the self-aligning ball bearing, which can accommodate slight misalignment of shafts or bearing housings.
- the spherical roller bearing, also self-aligning, and with a higher radial carrying capacity, size for size, than any other type of bearing, as well as a high thrust carrying capacity.
- the cylindrical roller bearing, which is able to carry heavy radial loads at high speeds.
- the spherical roller thrust bearing, which is able to carry heavy thrust loads at relatively high speeds.
In addition, SKF manufactures single row, deep groove ball bearings, angular contact ball bearings — many of them incorporating improvements introduced by SKF over the original design. SKF manufactures bearings in sizes ranging from 10 mm in outside diameter to over 1400 mm; bearings which can operate at speeds of over 100,000 r.p.m. and bearings with a carrying capacity of over 2000 tons at low speeds. Now and in the future, you will find that the 8,000 types and sizes manufactured by SKF ensure the use of the right bearing in the right place.

Without Prejudice

THE LAW OF NUISANCE

NEW NEIGHBOURS COMPLAIN ABOUT AN OLD FACTORY

(FROM OUR LEGAL CORRESPONDENT)

THE following case on the law of nuisance is of importance to owners of certain types of factories. It raises at least two points of importance. The first is this: Assume that a business organisation wishing to erect and operate a factory knows that the nature of the work to be carried on in it will materially interfere with the ordinary comfort of human existence of persons dwelling in the near-neighbourhood of the factory. Assume further that with this knowledge in mind and with a view to preventing the possibility of the factory becoming a nuisance, the organisation buys a plot of land remote from human habitation and there erects its factory: but that years later, members of the public, being fully aware of the existence and the nature of the work of the factory, buy or lease plots of land adjacent to it and live in houses they have erected on their plots. Can these people lawfully complain of the noise, vibration, smoke, smell or whatever other substantial inconvenience that may accrue to them from the factory of which, as has been said, they were cognisant when they deliberately elected to live in its immediate proximity? Or does knowledge imply consent? The second point is this: Assume that the so-called nuisance has been existing over a very long period, say, 25 years, without a single word of protest from adjoining owners or occupants; would the lapse of time be a bar to relief?

Both these questions arose in the latest case on the subject. Some 25 years ago, an enterprising business man of Rewari set up a factory in the outskirts of that town at a considerable distance from the houses of people. The factory continued as a flour mill for many years, but a short time before 1953 it was converted into a metal factory and was used almost exclusively for the manufacture of brass utensils. In the year 1953, some of the owners and occupiers of residential buildings, which had by then sprung up in the vicinity of the factory, complained that the noise caused by the factory interfered unreasonably with the comfort and enjoyment of private property, that the vibrations caused by the heavy machinery were shattering the foundations of their buildings and that the smoke emitted by the chimneys was contaminating the general atmosphere. These residents did not elect to seek any remedy by civil proceedings for an injunction or damages as for a private nuisance. Treating the matter as a public nuisance, they adopted the more drastic remedy of invoking the criminal law, and Mr. Kirori Mal was prosecuted under Section 290 of the Penal Code; and, having been convicted and sentenced to a fine by the trial court, he appealed therefrom to the Punjab High Court.

* * * *

At the hearing of the appeal, the learned Chief Justice (Bhandari, C.J.) said the first point for decision was "whether the existence and working of the flour mill is or is not a nuisance." "My attention," said his lordship, "has been invited to *Punjabi Bapuji Bagul v Emperor, A.I.R. 1935*, Bombay, 164, in which it was held that a person is at liberty to install an oil engine on his own property and to work it in any way he chooses and that as damage, if any, cannot be said to be caused by unlawful means, he cannot be convicted of mischief." But his lordship added that "this authority does not lay down the proposition that the owner of an oil engine cannot be convicted under Section 290, if the working of the engine is a source of injury or annoyance to the members of the public. It seems to me, therefore, that the existence of the factory is a nuisance, for the expression 'nuisance' includes every act or illegal omission which causes danger or annoyance to the public or to the people in general who dwell or occupy property in the vicinity. Although a person is at liberty to carry on any trade or business on the property belonging to him, he has no right to do so if the trade or business deprives another of the reasonable and comfortable use of his property. Even a lawful trade would become a nuisance if it interferes with the comfort and enjoyment of the neighbours, gives offence to their senses or obstructs the reasonable use of property." (Wise and timely words these last, but even as he reads them the writer has been given offence to his senses and interference with his comfort and obstruction in the reasonable use of property by the incessant blaring of several loud-speakers across the road and it seems nothing can be done about it.)

It was contended by the appellant factory owner that as this particular factory had been working for a period of some 25 years without any objection having been raised by the neighbours, it was on that account too late in the day for the neighbours to come to Court and to complain that the factory was a nuisance. To this criticism the answer of the prosecution was, in the first place, that there was no occasion for anyone to complain as the factory was set up in an open space at a considerable distance from human habitation. But "with the passage of time a number of houses and other buildings 'sprang up' in the vicinity of the factory", and it was the owners and occupiers of these houses and buildings who were then being put to trouble and inconvenience.

A manufacturing plant situate at a considerable distance from human habitation may not be a nuisance, while a similar plant situate in the heart of a town where a large number of people reside or carry on business may be a nuisance. You will note the colloquial expression used by the Court that the houses "sprang up" in the vicinity as if they spontaneously appeared like plants nurtured by the gentle dew of Heaven. But houses do not spring up. They are methodically erected on sites deliberately selected for the purpose by people who, in this case, knew that by so doing and living in them they were of set purpose bringing themselves within the radius of noise, vibration and smoke inseparable from a factory which had not "sprung up" in their midst but which had existed for years in an open space, adjacent to which they were now building their houses. And, having built their houses and a township having developed, the new townsmen then complained of the old nuisance. Moreover, there appears little doubt that the law is that they were well within their rights in doing so.

* * * *

The judgment proceeded to say that "a particular trade or business may be lawful to start with but may become a nuisance, as in the present case, by reason of changed circumstances, such as the growth of population. Secondly, it is alleged by one of the witnesses that although this factory has always been a nuisance, the neighbours did not bring a regular complaint in a court of law because of disunity among the complainants themselves. Thirdly, it is stated that the neighbours did not experience any real difficulty when the factory was being worked only as a flour mill but that the discomfort and inconvenience were considerably accentuated when the flour mill was converted into a utensil factory. The question whether a particular trade or business is or is not a nuisance can be determined only after taking into consideration a number of circumstances such as the place where it is located or carried on, the number of people whose rights are prejudicially affected thereby and the extent of the injury, discomfort and annoyance caused to normal human beings. The mere fact that the factory was allowed to operate for several years, without any objection having been raised by the neighbours, would not render the petitioner immune from punishment if it is found, as has been found in the present case, that its existence constitutes a nuisance to the people of the neighbourhood. It has been held repeatedly that no prescriptive right can be acquired to maintain and no length of time can legalise a public nuisance."

The conviction was upheld. Well there it is. A person may voluntarily come to a nuisance, knowing it is there and then complain of it successfully in the courts. But remember those words: "Extent of the injury, discomfort and annoyance caused to normal human beings." And remembering, how would you answer this little conundrum? The writer, in his youth, was the victim of an unsuccessful attempt to teach him the elements of music. The tutor was an expert, a catherdral organist. He had bought his own house which was not detached but in a row of houses. Across the narrow road were other houses, all residential. The adjoining owners and tenants were mainly elderly retired people. Dr. X was in a position to pick and choose his pupils, and in order that they should do him credit he insisted that all of them should sit for the annual examinations of Trinity College. This body prescribed the playing by the candidates, among other things, of two set pieces. Thus all the year and all day long a succession of boys and girls followed one another into the learned man's studio and strummed out on the piano with varying degrees of competence and incompetence their efforts at these two solitary works, and the neighbours had to undergo the livelong day the blaring strains of Wagner's *Tannhauser* and Mendelssohn's *War March of the Priests*. The nearly maddened neighbours protested, remonstrated, expostulated, prayed. In vain. And at last some of them went to court seeking an injunction for what they termed a nuisance and an intolerable one at that. Did they succeed? They did not. The judge held that the carrying on by a professional man of a lawful profession such as music, not being a noxious or legally offensive occupation, did not constitute a legal injury to normal human beings.

[*Kirori Mal v The State*. 45. *A.I.R. (1958)*. Punjab. 11.]

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

SISTA'S-SB-9

BEING a British bank manager in the East has never, so far as I know, been accepted as a particularly reliable recipe for longevity. But that does not seem to be a fair reason why three such men should have died in office in little more than as many years: and all belonging to the same group of banks too. First there was David MacGregor, of the Chartered, who collapsed on the golf course in November 1954; then George Macfarlane, of the same bank, whose death from polio came as such a shock in July last year. Now, it is Alexander Izat, of the Allahabad, and only three days before he was due to retire from India for good. Nothing but coincidence, of course, but a strange one all the same: and especially so for a columnist who, having contemplated writing a few lines of appreciation on Mr. Izat's retirement, now finds himself composing an epitaph. As a reason for an early death, thirty-two years in Calcutta is as good as any; and this is what Alexander Izat had served. He was well known in business and social circles in this city. A former member of the Calcutta Light Horse, he was an Elder of St. Andrew's, chairman of the Calcutta Y.M.C.A., a member of the committee of the Burns Club and of the Caledonian Society. He was also one of the oldest members of the Swimming Club. He would have been missed equally whether he had died or, as planned, simply retired. But in these tragic circumstances his absence is bound to be all the more keenly felt. I know I express the feelings of all my readers when I convey to his family my sincere condolences.

* * * *

Belonging as I do to a nation of born grumblers, I too have often complained about the British Civil Service, although seldom without acknowledging that it is the best in the world. Mr Nehru is, of course, entitled to a contrary view, and I might not have referred to the question at all if the reported extracts from his speech were not in some other ways disquieting. I daresay some of the civil servants in Britain have nineteenth or even eighteenth century minds. But dating them thus, in my opinion, serves no particularly useful purpose. The two centuries named have some very great achievements to their credit, and as far as values are concerned, I am not at all sure that I would not have many of them back in exchange of double their number from among those of this century. Some of the ideals the civil service of today needs are precisely those of earlier times. Then that point about asking intending bureaucrats whether they believe in "the socialistic pattern of society." That quite a few Congress Ministers could not honestly return an unqualified affirmative to that one is perhaps a small point, but the first postulate of democratic government—changeability—is not helped by an access of ideological fervour in the bureaucracy. Application of this principle in Kerala, for instance, could keep that State communist for all time to come. I understand Mr. Nehru's point; the inertia and apathy of the people regarding the plan fills him with despair. But the best generators of popular enthusiasm are party workers, and it is to the Congress he should look for this—not to the officials. If Mr. Nehru should say in reply that what is all right for a stable and developed society such as Britain's is not enough for a situation like India's, I would concede his point to some extent, but would add that in the present-day world India cannot afford to play with such stability as she has. That too is a condition of progress, and the bureaucracy can be the basis of that stability.

* * * *

The ups and downs of Sir Winston Churchill's health this past month have sent a dozen representatives of the British Press scurrying back and forth between London and Nice, and I hear that the inhabitants of the *Côte d'Azur* now judge the old gentleman's condition by the number of journalists taking taxis out to Roquebrune. My colleagues are of course simply doing their duty and it is not their fault if at moments like these the exercise of our profession calls to mind that mournful sight familiar throughout the Gangetic plains, the gathering of the vultures over the head of a failing Linlithgow bull. But anything the British can do, the Americans do ten times bigger. A colleague tells me that during the recent N.A.T.O. conference in Paris everybody was astonished at the size of the American Press contingent: literally hundreds of journalists and photographers had crossed the Atlantic, and yet, once in Paris, took absolutely no interest in the proceedings of the conference. Admittedly, from the cohorts of Americans at the N.A.T.O. functions had to be deducted those who, when asked what paper they represented, would reply loudly, "Heck, we ain't noospapermen, we're the secret services". But still, there was a great number of journalists. When asked why they had come in such force to a conference that visibly bored them, they explained that President Eisenhower had already had two heart attacks and "well, you just gotta be there when he drops". And indeed it appears that today in the United States the President never stirs forth but that he is at once within range of a camera lens, a cold glassy eye that is waiting, waiting, waiting for the "historic moment" when a U.S President dies in office. These are chilling thoughts which I only permit myself to publish because I am pretty sure that neither Sir Winston nor Mr. Eisenhower are among my regular readers. Less chilling is the authentic story of the days when the whole world was waiting for the news that Lenin had died. The foreign journalists in Moscow feared, quite rightly as events showed, that the Communist leaders would hold up the news for a few days until Stalin and Trotsky had agreed on the succession. *The Times* correspondent was confident that he would get the news at once, but less confident that he would be allowed by the censorship to cable it to London. So he arranged with London that the moment he learned Lenin was dead he would cable "Please send me £100", and his paper would have another scoop among its many laurels. Lenin died and the cable went off. On receiving the next day's *Times* he was horrified to see not a mention of Lenin's demise, but in the course of the morning he had a wire from Printing House Square, "Your account already overdrawn".

* * * *

Having, as I mentioned a fortnight ago, missed seeing Marius Goring and his English Comedians, I am glad to have the opportunity this week of watching an English comedy performed on the stage. I have received an invitation to attend the Dramatic Club of Calcutta's production, *The Lady's Not for Burning*, by Christopher Fry, which is being presented on Wednesday, Friday and Saturday of this week at the New Empire Theatre, in aid of Dr. Graham's Homes, Kalimpong. Those of my readers who are familiar with Christopher Fry's work may remember that he describes this as his "spring play", and I believe it has all the qualities which—in Britain, at any rate—one associates with this season of the year. Those who do not know their Fry would do well to take this opportunity of making his acquaintance, because the name of the Dramatic Club of Calcutta is a reasonable guarantee of a polished and thoroughly rehearsed production. I have it on reliable authority, moreover, that no pains have been spared to make this a really first-rate show; and that means three months of hard work by all those concerned with its preparation. If in these hard times we find five rupees rather more than we care to pay for a theatre seat, we at least have the consolation that our money is aiding a worthy cause, in addition to buying a bright evening's entertainment.

* * * *

It is often a pleasure to read the well-read Mr. Asoka Mehta's refreshing views from an opposition angle. But on Monday last it was mildly irritating. I do not know whether Mr. Mehta wrote his piece from Murmansk, but there I was in Calcutta, literally dripping, finding it hard to hold the *Statesman* without making the paper sweat too, and this is what I was reading: "the Glacier Age . . . frozen . . . (glacier and frozen again) . . . A cold wind . . . (the crackling fire seems nearer the mark) . . . provided we start breaking the icicles around us . . . the glacier . . . freeze . . . the blizzard . . . beat back the snowball . . " It is not, after all this, wholly my fault that more than once I lost the drift of Mr. Mehta's economic argument. For one thing, Roosevelt's "revolution" has in recent years been re-appraised more than once, and this distant worshipper may do well to check up whether his own view of the great man accords with the facts now available. Much of our political and economic thinking is vitiated by an excessive fondness for precedents, and I would like a closer analysis of the Indian situation in American terms of the 'thirties before I begin to consider the relevance of Rooseveltian methods for this country. How often have we seen allegedly Keynesian policies adopted, only to end in disaster; and Roosevelt's medicines, less original than his admirers imagine, should also be taken, if at all, only under prescription from the most qualified doctors. Much as I admire Mr. Mehta's academically disciplined outlook on current problems, it may be true still that certain patterns of solutions hold him in too firm a grip to allow for a more empirical approach. The "motivations"—to use Mr. Mehta's jargon—of the Indian economy today are vastly different from those of the American economy even in the 'thirties, and failure to recognise this will lead us nowhere. Nor should recognition be unduly difficult for the differences are largely in terms of dynamism—a quality virtually set at naught by the opiate of socialism, to which I take it Mr. Mehta is as badly addicted as most Indian political and economic thinkers are these days.

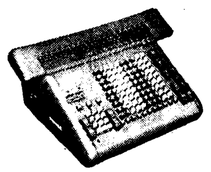
* * * *

Mother had read somewhere that when children ask the inescapable question: "Mummy, where do I come from?" there must be no shilly-shallying or beating about the bush.

So, when her small daughter came right out with it one day, mother was all prepared. In fact, she had the answer by heart and, determined to go through with it to the bitter end, she nobly progressed from flowers to bees, to birds, to animals and so on.

After about a quarter of an hour of this, the child chipped in: "But this will take much too long to explain to Dulcie".

"Who's Dulcie?" mother asked.



"She sits next to me at school", replied her offspring, "and she says she came from Birmingham".

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance Sheet gives the information required by the United Kingdom Companies Act 1948 in the manner prescribed for a Banking Company and, on that basis, in our opinion, is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1957, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

Hong Kong, 26th February, 1958.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

CHAIRMAN THE HON. C. BLAKER'S REVIEW

The Ordinary Yearly General Meeting of the Shareholders of The Hongkong and Shanghai Banking Corporation was held on 14th March, 1958, at the Head Office of the Corporation, No. 1, Queen's Road Central, Hongkong.

The following is the statement by the Chairman, The Hon. C. Blaker, M.C., E.D.:—

Ladies and Gentlemen,

During the past year there was very little improvement in international relations throughout the world. The outstanding problems in the Middle East seemed no nearer solution and in spite of discussions on disarmament and proposals for high level talks the main issues between the two sides still remained unresolved. In the scientific field, on the other hand, there were two remarkable developments which seem likely to have a major influence on the future progress of the human race—the launching of the Russian earth satellites and the first steps in the control of thermonuclear reactions. Although the latter may prove, in the long run, to be the more important, the immediate impact of the former was very much greater, showing as it did the lead that Russia has now gained in intercontinental missiles. There is no disguising the fact that the west, and the United States in particular have suffered a severe political reverse due to the strategic consequences of the Russian advances in technology. It would seem doubtful whether the present policies will meet this changed situation and the demand for a more positive approach to break the deadlock seems likely to gain in intensity.

The economic picture has been somewhat mixed and it is not clear whether in 1958 the danger most to be guarded against is rising costs or falling production, whether in fact the inflationary tendencies that have been so much a feature of the postwar era are still growing or whether a period of deflation is about to set in. Whatever the future may hold the present situation, with the increasing cost of manufactured goods and a considerable drop in commodity prices, has pressed heavily on the balance of payments of the eastern countries in which we operate and this must inevitably slow up their progress. The heavy cost of modern industrial development has intensified the world capital shortage and this, coupled with an overall fall in the dollar reserves has resulted in a growing use being made of the drawing facilities member countries enjoy with the International Monetary Fund. During the year many currencies suffered a period of considerable strain and in Europe the problem was aggravated by the strength of the Deutsche Mark, the weakness of the French Franc and the rise in wages and prices in the United Kingdom. Sterling once again had to bear the brunt of the speculative pressure and in September the bank rate was raised to 7%, the highest since 1921, with restrictions on both bank advances and expenditure by local authorities. These measures halted the drain on the sterling area reserves and as a result the short-term position has greatly improved, but judgement must be deferred as to whether or not the over-riding problem of keeping British costs in line with those of her competitors has been solved.

These recurring currency crises have evoked serious consideration as to whether it is advantageous to the United Kingdom to maintain sterling as an international currency. Those who argue against have drawn support from the fact that the drain last year took place at a time when the country was paying its way, and various estimates have been made to show that the foreign exchange earnings of the City are much less than has been generally supposed. While this is not the place to enter into this interesting discussion, I should like to say this, that from the point of view of a bank such as ours, mainly concerned with the financing of international trade, any suggestion that sterling should abrogate the role it has held for so long, can only be viewed with apprehension. Notwithstanding periods of distrust from time to time in recent years, no currency has yet been found able to take the place of sterling and it is difficult to see how the multitude of transactions which make up the settlement of trade in our particular area alone could be cleared without the facilities sterling and the City of London provide. This applies also to other parts of the world and a return to bilateralism, with all the frustrations this would involve, would seem to be the inevitable result of any serious limitation in the use of these facilities.

The common market, composed of France, Western Germany, Italy and the Benelux countries, officially came into being on 1st January, 1958 but the wider free trade area, which is to be established around these countries and which is intended to comprise most of Europe as well, has still many bridges to cross. Progress seems likely to be slow, as, although there is a growing agreement on the general advantages of such an area, when negotiation turns to particular problems the extent of the difficulties is revealed.

Asia

The political situation in the Far East shows little outward change. Many outstanding problems still remain unsolved but while it would be unwise to be complacent at a state of affairs with so many explosive possibilities, the fact that local disturbances have not spread gives ground for satisfaction. Deterioration in the terms of trade, which has resulted in a general fall in the foreign exchange reserves of most countries in the area, is the most disturbing economic feature. Admittedly these difficulties were aggravated by the increasing pace of development but administrative weaknesses in several cases have quickened the trend and have delayed the taking of appropriate action to

D. B. SOUL, *Acting Manager, Calcutta Branch.*

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG AND SHANGHAI BANKING CORPORATION UNDER SECTION 30 OF THE BANKING COMPANIES ACT 1949.

We have audited the above Balance Sheet and the annexed Profit and Loss Account of the Indian Branches of The Hongkong and Shanghai Banking Corporation with the books and accounts of Calcutta Branch and with certified returns from Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Section 211(1) (2) and (3) and 227(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956, but are in conformity with Forms A and B of the third schedule of the Banking Companies Act 1949.

We report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit.

(b) In our opinion proper books of account as required by law have been kept by Calcutta Branch so far as appears from our examination of those books and proper returns adequate for our audit have been received from Bombay Branch which was not visited by us.

(c) The above mentioned Balance Sheet and Profit and Loss Account are in agreement with the books of account and certified returns.

(d) No provision has been made in these accounts for certain doubtful debts included under Particulars of Advances (ii), but full provision has been made by Head Office to our satisfaction.

(e) In our opinion and to the best of our information and according to the explanations given to us and subject to our remarks under (d) above such Balance Sheet and Profit and Loss Account give the information required by the Companies Act 1956 in the manner required for Banking Companies and on such basis and subject to the same remarks, give respectively a true and fair view of the state of the affairs of the Indian Branches as at 31st December 1957 and their profit for the year ended on that date.

Calcutta, 19th March, 1958.

D. B. SOUL, *Acting Manager, Calcutta Branch.*

reverse it. It would be unfair to criticise the various countries concerned unduly, as very few other countries have been free from balance of payment difficulties at one time or another in recent years. Nevertheless it is unfortunate that this state of affairs should have occurred at a time when most of the various development programmes require outside capital, the demand for which throughout the world is so active. Actually considerable amounts of capital have been granted to the area during the past year through such media as the International Bank, various United States agencies and the Colombo Plan, but there are signs that these supplies are not unlimited. It would therefore seem to be necessary to attract to a greater extent the flow of private capital but Asian countries should not forget that there is already considerable competition from other areas for what is available. In their annual report the Consultative Committee of the Colombo Plan point out "the advantage of the region in this competition is that it offers potentially large and growing markets" but go on to warn that "the attractions of the region, however, can be counterbalanced by such factors as apprehensions as to the security of investment, difficulties with administrative and financial procedures and restrictions, and uncertainties about the incidence and weight of taxation." I hope that this advice, coming as it does from a gathering of representatives of the governments concerned, will be given careful consideration. Foreign capital has in the past done much to assist the industrialisation of many countries and continues today to increase the productivity of those that are most advanced. It is now being more generally realised that foreign investment is not necessarily tarred with the colonial brush but recent events in Indonesia have shown the disrupting effects that extreme nationalism can have on a nation's economy.

Hong Kong

On the last day of the year, to the traditional sound of Chinese firecrackers, Sir Alexander and Lady Grantham left Hong Kong after a governorship of over ten years. By 1947 the Colony had repaired the worst of the damage and neglect left over from the occupation and had resumed its pre-war role as an entrepôt for South China but the development of the local industries, which were to provide employment for the growing number of refugees, still lay ahead. These were not easy years but, amidst the numerous trials and tribulations which afflicted this part of the world, Sir Alexander stood firm and by his leadership guided the energetic people of Hong Kong along the path to the thriving metropolis we now see today. Greatly assisted by his lady, he instilled members of the community with a feeling of social responsibility, which was not always to be found in earlier days, and the numerous charitable organisations in the Colony today owe much to their interest and encouragement.

The pressure of population continues to be the most serious problem facing the Colony and the concentration of such large numbers of people, in the urban areas of Kowloon, places a heavy burden on all the public services and in particular on the police force. The recent remarks of the Governor and the Financial Secretary on the water situation give some idea of the difficulties that have to be overcome in the provision of this basic requirement. It seems clear that even if the Shek Pik scheme on Lantao Island should prove workable, this will not be sufficient to meet the growing demand of industrial development and improved standards of housing. The government announced at the end of the year that they had appointed a firm of consulting engineers to survey certain areas in the New Territories with a view to exploring the possibility of building self-contained new towns. This proposed development will naturally take time but the necessity of housing and finding work for the large number of Chinese refugees is still a major problem. The General Assembly of the United Nations recently considered this question and appealed to member countries to give all possible assistance to alleviate distress. It would, I think, be optimistic to expect any large response to this appeal but it is naturally a matter for regret that Hong Kong seems likely in the future, as in the past, to be required to tackle this problem from her own resources. I hope, however, that the needs of the refugees will not be forgotten and that there will be some relief from abroad.

All the indications are that the population will continue to grow which will necessitate considerable future industrial development and I sometimes wonder whether this will be forthcoming. We have been fortunate in recent years in the inflow of capital, much of which has built up new industries, but it would be unwise to rely on this continuing indefinitely. In spite of the progress of local industries the adverse balance of trade continues to grow; granted in an entrepôt this is not too reliable a guide, but the fact remains that the time may come when the invisibles will not be sufficient to make up the difference. If this should happen, private enterprise might not be tempted to invest to the extent that it has done in the past and a more positive approach by the government might be necessary to fill the gap. The economic position in the Colony has been so favourable in recent years, and so much praise has been expressed abroad at the progress that has been made, that it is easy to become complacent. The dangers I have hinted at may not be so far away as people like to think and it would therefore be wise to consider some preliminary planning to avoid being taken unawares.

Business activity remained at a high level throughout the year and although there are signs of a slight contraction there seems no end to the number of new buildings that spring up all over the Colony and in fact the amount spent on private building last year was the highest since the war. Visitors continue to be amazed at the speed with which these are constructed and even residents, after a short absence, comment on the changes that can be seen. The supply of flats for the more well-to-do members of the community has probably now reached saturation point but there is an ever-growing demand for smaller flats for the lower income groups. The recently completed North Point Estate, one of the largest state-aided housing projects in Asia, containing nearly 2,000 flats, will help to supply part of this need. A great deal more, however, will require to be done and it is good to know that plans for further housing estates are already under way.

It was announced in November that the Royal Naval Dockyard would be closed down progressively over a period of two years. This decision has been taken as part of the British Government's recent defence policy which includes the reorganisation of naval forces and their shore support throughout the world. Other dockyards are being closed in the United Kingdom and we must accept this decision. It is nevertheless a matter for regret, as not only has this raised the problem of re-employment of the workers but it must inevitably weaken to a certain extent the close connection which has existed for so long between Hong Kong and the Senior Service.

On the recommendation of Sir Alexander Grantham a committee has been formed, composed of ten members representing trade and industry, to consider the advisability of setting up a Federation of Hong Kong industries. This organisation, it is hoped, will assist with industry's problems of management, training and overseas trade relations. Technical training is a most important adjunct to modern industrial development and Hong Kong's new technical college was opened at the end of the year. It is hoped that in a few years this will be one of the finest technical colleges in this part of the world.

Hong Kong's Trade

Hong Kong's trade in 1957 was higher in total than that of the previous year but this was due to a rise in imports as exports showed a slight decrease. Total trade was around HK$9,000 millions with imports at HK$5,600 millions and exports at HK$3,400 millions. China remained the principal source of the Colony's imports followed by Japan and the United Kingdom. Exports to Indonesia, Thailand, Japan and South Korea were much reduced and increases to other areas, including the United Kingdom and the United States, were not sufficient to offset this loss.

Exports of Hong Kong products at nearly HK$794 millions represented a small increase over the figure for 1956. The United Kingdom continued to be the largest customer but purchases of local products by the United States increased by almost 100%, a large part of which was due to the efforts of the garment industry. Although the registration of new factories showed a fall, local industry is becoming more diverse and new lines continue to be actively developed.

Business on the Stock Exchange showed a similar trend to last year and decreased by about 30% over the year. Considering the sharp fall in security values that have taken place throughout the world, the market on the whole stood up very well. Land values remained fairly steady although prices in certain parts of Kowloon continued to rise. There are no longer so many first class sites available in the central district and this has caused buyers to turn to smaller properties, many of which are old and are long overdue for rebuilding.

The bank clearing figures for the year increased by about 11% and reached a total of nearly HK$17,000 millions, to come close to the record figure of 1951. Increasing velocity of circulation has been much in the news recently in the United Kingdom. It is interesting to note that in the last two years, here in Hong Kong, a similar trend has been evident.

Finances of Hong Kong

The financial position of the Colony continues to be very satisfactory and a surplus of just over HK$1 million for the current year is now estimated as opposed to the original deficit of HK$54 millions. Even this revision seems to be an under-estimate and the Financial Secretary considers it likely that the final result will show a much larger surplus.

For the financial year 1958-59 revenue is expected to remain at about the previous year's level but expenditure shows a considerable increase and a deficit of HK$87 millions is estimated. The provision for public works non-recurrent at HK$183 millions is the main reason for this rise, including as it does expenditure on new schools, hospitals, reservoirs and the air port. It is notoriously difficult to estimate accurately expenditure under this heading but, even if all this money is in fact spent, the Financial Secretary considered it perfectly sound to finance this capital expenditure out of reserves and no increase was made in taxation.

At the meeting of the Legislative Council at which the Budget was presented, the Governor announced that the Secretary of State for the Colonies had further relaxed the financial control which he exercised over Honk Kong and that the annual estimates and supplementary provisions would no longer require his approval. "This is a very important and considerable extension of our financial independence" as the Governor pointed out but I think that when one considers the conservative way in which our finances have been managed over the last few years there should be no cause for anxiety.

China

On looking back over the events in China during the past year it is clear that a number of stresses have developed, both political and economic. Evidence of this is not difficult to obtain and a study confined to official pronouncements could only lead to the same conclusion. Indeed it would be surprising if all had gone smoothly, when one considers the profound changes that have taken place in the whole Chinese way of life in such a short time, with the collectivisation of the farms and the great strides that have been made in industrial development. A policy of such rapid growth must rely on a considerable degree of austerity in the present for the sake of the future, and is bound to raise doubts amongst certain sections of the population; the extent of these doubts became evident when the much publicised speech of Chairman Mao Tse-Tung, indicating that a greater degree of freedom of expression was to be allowed, touched off a wave of critical comment. This period did not last very long and soon press reports from Peking were once again full of confessions by counter-revolutionaries while it became clear that a campaign against "rightists" was actively under way. The extent of the criticism was no doubt embarrassing to the government but there is no evidence to suggest that it was more than just that or that it has in any way changed the declared policy of pushing ahead at as rapid a pace as possible with the industrialisation of the country. This remains the aim which will, I am convinced, be carried out resolutely and will be limited much more by the results of the harvest than by the opinions of disaffected groups. It may be that agriculture will not be able to play the part alloted to it as nature will continue, as in the past, to be a dominant influence. If this should prove to be the case the part of the national cake that is devoted to capital development may require to be smaller but there seems no doubt that it will still continue to be a sizeable slice.

The higher targets which were decided upon after the bumper harvest of 1955 proved too great a strain on the country's economy when last year's crops did not come up to expectation. The reduction in the allocation for economic construction in the budget was one of the signs that the authorities appreciated that the pace was too swift, while a number of official pronouncements show that it is now realised that many of the targets were too ambitious. The shortage of food has been the subject of much comment in the Chinese press and in December pork joined grain, vegetable oils and cotton cloth as a rationed commodity. Speculators, laxity of officials and errors of judgement are all blamed for the present state of affairs but the problem of a balanced distribution of food in a country the size of China, particularly subject to the vagaries of the weather, would seem to be almost insoluble. Mistakes in the running of collective farms are now being freely admitted and agricultural development seems likely to be concentrated on improving on the existing model without as yet the introduction of mechanical aids. In an endeavour to raise the standards of rural conditions the movement of government employees from the towns to the countryside is being vigorously directed.

It is against this background that the decision of the United Kingdom and other governments to bring the list of goods which may be exported to China into line with the Russian list must be viewed. In association with British merchants interested in the China trade, we have been urging this relaxation for some time and we are happy to see that action has now been taken. It would, however, be unwise to expect any great immediate benefit but the visits of both the Parliamentary Secretary to the Board of Trade to China and the Chinese Economic and Technical Mission to the United Kingdom have, I hope, laid the foundations on which a growing exchange of goods may be based. The present volume of British trade with China is not very large and there would seem to be no reason why this should not be materially increased, even if a slowing down of development in China should be found necessary.

The period of the first five-year plan has now ended and it is claimed that industrial output greatly exceeds the original estimate. This is, I think, most likely as considerable strides have been made in the production of steel, coal, electric power and cement, to take a few examples, while the bridge at Wuhan, the first to span the Yangtse, is not only a considerable engineering achievement but will greatly assist communications between north and south. There are, however, signs that the pace has been uneven—too fast in some directions and too slow in others—which has resulted in overall production being slowed down. Action aimed at the elimination of these bottlenecks would seem to deserve high priority in the next five-year plan.

Japan

In our review last year I was able to report that Japan had a satisfactory year of economic expansion despite considerable political difficulties. This year the reverse seems to be true, as, although the inherent weaknesses in Japan's political structure remain unaltered and factional differences are still as strong as ever, it is economic problems rather than political that have given most cause for concern. The industrial expansion, which had been such a noteworthy feature of 1956, continued during the first half of 1957 with no slackening in investment demand, but although exports increased they were unable to keep pace with the growing volume of imports and this caused a steady deterioration in the balance of payments. The raising of the rediscount rate by the Bank of Japan, an increase in import margins and a reduction of public and private investment programmes were some of the measures taken to reverse this trend and in October the drain on the foreign exchange reserves was halted after having reached the somewhat alarming total of U.S.$600 millions for the first nine months of the year. Fortunately, with such heavy pressure on the balance of payments for the import of industrial materials, the rice crop turned out to be the second highest in Japan's history. Taking the year as a whole the net deficit was U.S.$53 millions as compared with a surplus of U.S.$293 millions in 1956, with exports higher by 14% and imports by 32%.

It would seem that the tide has been turned and that the deflationary policy has succeeded in slowing down the too rapid expansion which threatened to exhaust the reserves if allowed to continue. Falls in the index of production, increasing stocks of goods in the hands of importers and lower wholesale prices are evidence of this; on the other hand advances by the Bank of Japan to the banking system at the end of December were four times what they were a year previously and it is doubtful whether consumer demand has been seriously reduced. When one looks back at conditions in Japan over the last few years, with the rapid swings of the pendulum from one extreme to the other, it is tempting to speculate whether a way can be found to prevent such quick changes in the economic climate. This poses a difficult problem, faced as Japan is with a steadily rising population which necessitates a growing increase in her exports to keep her industry running and avoid the dangers of severe unemployment. No wonder there is pressure to increase industrial production particularly as there has been a change in the pattern of the export trade with less demand for consumer goods. This has resulted in activity in markets where there is already strong competition from other suppliers, many with old established connections, which makes the economy particularly vulnerable to any recession abroad. The shipbuilding industry is a case in point. Last year Japan reached the highest peacetime output of any nation but with the fall in world demand for shipping, particularly tankers, it seems unlikely that this level can continue. Other industries will undoubtedly suffer also but raw materials are continuing to come forward and it is not so easy to turn off the tap. It may be that action was not taken in time but, with the danger of unemployment always present, it is not surprising that the monetary authorities are sparing in the use of the deflationary weapon lest the cure be worse than the disease. Taking everything into account it seems likely that Japan's economy will continue for some time to be subject to considerable variations unless there is renewed and sustained world-economic expansion.

The political situation remained uneventful during the year and very little positive action was taken in internal affairs apart from the financial measures already mentioned. Mr Kishi retained the cabinet he inherited from his predecessor until July but, when the new cabinet was formed, it bore signs of the usual compromise between the different factions, with their varying personal loyalties. The Prime Minister

was absent from Japan for a large part of the year making two tours of Asia and visiting the United States and Australasia. During these tours he propounded his plan for a South-East Asian Development Fund, which was given a mixed reception. This plan was somewhat vague in outline but the original intention was to set up a fund in U.S. currency available for the supply of industrial equipment from Japan to South-East Asia; when it became clear that U.S. currency was unlikely to be forthcoming a yen fund was proposed. Time alone will tell how valuable these tours were but the signing of the peace treaty with Indonesia and the settlement of the reparations issue gave a successful outcome to the last of these. Japan continues to maintain the most cordial relations with the United States but economic necessity alone would prevent neglect of her large neighbours. A trade pact was successfully concluded with Russia in December but although the Japanese have followed the United Kingdom in their relaxation of the embargo on trade with China, progress in the negotiations with that country was slow and trade in fact fell off. Arrangements have recently been announced for the sale by Japan of steel products to China in exchange for coal and iron ore and the resumption of this traditional trade must be in the interests of both countries.

Rearmament still remains far from popular and although the Constitution Research Council has been formed the opposition of the Socialists makes it unlikely that the controversial article in the Constitution relating to rearmament will be revised in the near future. Japan's election to the Security Council will, however, enable her to press more vigorously her objections to the holding of nuclear tests in the Pacific.

Now that she is once again a member of international organisations, Japan has been feeling her way searching for a policy which will suit her particular geographical position and satisfy her needs for export markets. For this reason I do not think that the last has been heard of the South-East Asian Development Fund.

Philippines

The sudden death of President Magsaysay in the early part of the year was a severe blow to the people of the Philippines where he was greatly loved and respected. This tragedy, coming as it did in election year, made the contest more open but the Nacionalista Party were once again successful in the presidency although they lost the vice-presidency to the Liberal Party. President Carlos P Garcia and Vice-President Diosdado Macapagal were duly inaugurated on 30th December and they have assumed office at a critical time in the affairs of the young republic.

This is mainly due to the deteriorating economic situation and the new administration are faced with a number of very grave problems. To quote from the President's recent State of the Nation Address these comprise "food insufficiency, unemployment, rising prices, dwindling international reserves, decreasing revenue collections and increasing budgetary requirements." This is indeed a formidable list and a reduction in consumption would seem to be an essential ingredient for any medicine that is prescribed. Certain steps to this end have already been taken. The rediscount rate was raised in September from 2% to 4½% and in December importers were required to deposit cash margins—in some cases up to 200%—before letters of credit could be opened and these were restricted to essential commodities. Without the repeal of the "No-Dollar Import Law", which permits barter trade, the monetary authorities are somewhat handicapped in their efforts to impose austerity on the import programme and it is to be hoped that Congress will follow the President's recommendation and re-examine this legislation at an early date. The measures adopted so far will no doubt result in a slowing down of the immediate drain on the foreign exchange reserves but they are in no way a lasting cure. For this reason it is not surprising that the suggestion for a devaluation of the peso is finding a growing number of adherents and it is true that by many standards the currency is overvalued. Nevertheless it does not seem to me that devaluation of itself is the answer to the problem and in fact there is the danger that once tried there will be the temptation to repeat the experiment. The immediate necessity is the implementation of a strict fiscal and monetary policy to drain the inflation out of the economy and curb unnecessary expenditure. Once the inflationary tendencies begin to weaken then the time might come to reconsider whether the present value of the peso was advantageous to the country as a whole but this should be decided upon as a matter of deliberate policy and not as a rescue operation.

Vietnam

The Republic of Vietnam has now achieved a considerable degree of political stability and what might be described as the first stage in the task of resettlement is almost completed. Great credit for rescuing the country from the disturbed conditions which previously existed is due to the President, Ngo Dinh Diem, and his administration, in which far from easy task American advice and assistance has greatly contributed. Consolidation will be the next step and this may prove more difficult, requiring as it will the stabilisation of the present political structure and the building up of a viable and independent economy.

Imports during the year have continued at a high level and the market is heavily overstocked. There is no doubt that the import licences were granted on too lavish a scale but the tight money conditions caused by the delay in utilising counterpart funds has greatly hampered sales. These counterpart funds are obtained by the government from the importers of goods under the American Aid programme and can only be utilised on approved projects. Unfortunately delay in formulating such projects has resulted in a large amount of money still being immobilised with the Banque Nationale du Viet-Nam at a time when its use would not only improve the country's future productive capacity but by putting purchasing power back into circulation would have the immediate effect of speeding up the disposal of stocks.

More decisive action can be found in the rural areas where the improvements in farming equipment and techniques have produced higher yields, while work is proceeding on clearing highland areas and bringing more land under cultivation. Rice exports were resumed and totalled about 200,000 tons for the year but it is hoped to improve on this figure during 1958. Negotiations on reparations continue with Japan and the gap between the two sides is being narrowed. It seems likely that the building of a hydro-electric system on the Danhim river will be included in the final settlement.

Cambodia

The National Assembly has been dissolved and pending the result of the new elections a provisional cabinet has been formed. On the whole the political situation remains little changed and Cambodia continues to adopt a foreign policy of strict neutrality. Trade increased over last year with imports and exports more in balance due to a substantial rise in exports of rice. Various light industrial projects are under consideration and efforts are being made to develop a deep-sea fishing industry in the Gulf of Siam. Clearing of the jungle to make a road from the capital to the port of Kompong Som proved more difficult than had been expected but it is hoped that this road will be completed sometime during 1959. The opening of this deep water port will lessen Cambodian dependence on communications by the river through Viet Nam.

Thailand

The general elections which were held at the beginning of last year touched off a series of events which have somewhat changed the characters on the political scene. Although the Seri Manangasila party won a comfortable majority, the way in which the elections were run left a feeling of public dissatisfaction which grew more vocal as time went on. In September a bloodless coup d'etat, led by Field Marshal Sarit Thanarat, resulted in a caretaker government being established and the withdrawal from the country of Field-Marshal Pibul Songgram and General Phao Sriyanond. Fresh elections were held in December and a government was formed from members of the new National Socialist Party. It remains to be seen how this new party, which is in fact a coalition of three other parties, will fare in internal politics especially as, with Field-Marshal Sarit Thanarat's departure for medical treatment to the U.S.A., the three personalities who have dominated Thailand's politics for so long are for the present at least absent from the stage.

Although the import market has been somewhat overstocked, which has resulted in difficult trading conditions with some business failures, the year on the whole has not been unsatisfactory. In spite of the necessity to impose restrictions on the exports of rice during the second half of the year the volume exported during 1957 at one and a half million tons was the highest since the war. This is unlikely to be repeated this year, as the new crop is below average, and the exportable surplus is not expected to exceed one million tons. Teak exports were considerably reduced due to competition from Burma. The budget, which was delayed pending the formation of the new government, is expected to be presented shortly.

A survey mission from the International Bank is at present in Thailand to plan a long term development programme and a loan has been granted by this bank for the first stage of the Yarnhee Hydro-electric project.

Federation of Malaya

Malayan independence was proclaimed on 31st August at a colourful ceremony in the new Merdeka Stadium in Kuala Lumpur in the presence of representatives from many nations. The Duke of Gloucester, representing the Queen, handed over a specially bound volume containing the constitutional instrument providing for the withdrawal of British protection over the Malay States and of the Crown's sovereignty over the settlements of Malacca and Penang. The Federation of Malaya thus became the tenth nation in the Commonwealth and subsequently was elected the eighty-second member of the United Nations. The final arrangements for the transfer were completed swiftly in a spirit of goodwill on both sides; while the constitution followed to a great extent the recommendations of the Reid Report and seems to be a workable compromise which provides an opportunity for the development of democratic government. The ruler of Negri Sembilan State was elected by his fellow rulers as the first Constitutional Sovereign of the Federation and at the state opening of the Legislative Assembly outlined the policy of the government. Their first duty would be to safeguard the independence of the Federation and to protect the constitution, the initial threat to which came from the communist terrorists. The government would not dissipate the resources of the country in large armed forces or an elaborate foreign service but would concentrate on home affairs and aim "to maintain confidence in the financial standing of the Federation as a field for investors at home and overseas." The Anglo-Malayan Defence and Mutual Assistant Treaty, which was signed in October, permitted the United Kingdom forces to be stationed in the Federation to assist in external defence and to provide "for the fulfilment of Commonwealth and international obligations."

The Prime Minister made no alterations in his Cabinet and the Alliance Government which, under his leadership, had done so much to enable the change-over to be completed smoothly, continued to guide the destinies of the country. This was in accordance with the wishes of the majority of the population, as, although ripples of discontent can be deduced from the result of some recent elections, the country as a whole is still strongly behind the present administration. The only disturbing feature has been found in some Chinese schools where the dislike of certain members of that community for some aspects of the government's education policy resulted in outbreaks of indiscipline which in some cases led to violence. It would be unreasonable to expect this honeymoon period in the political arena to last indefinitely and some more vigorous form of opposition is bound to emerge, perhaps before long. Following historical precedents, this would seem likely to come from the left, but there is hope that this may be multi-racial in character and thus avoid issues being decided on a purely racial basis.

In an effort to bring an end to the emergency the government, in September, made a final offer of an amnesty to the terrorists with the option of either remaining in the Federation or returning to China with their families. Over one hundred terrorists took advantage of this offer by the end of the year when it was due to expire and the period was extended to 30th April. There are signs of definite cracks in the terrorists' organisation and there is now more ground for hoping that the ten-year old emergency may be ending.

A White Paper was issued in the early part of the year setting out the general plan of capital and development expenditure for the period 1956-60. This envisaged the utilisation of part of the reserves which "will require strict control over the ordinary budget to ensure that revenue is maintained at levels sufficient to protect the reserves so that they can be used to finance part of the capital budget and are not unduly depleted by deficits on the ordinary budget." With revenue dependent to such a large extent on the price of so volatile a commodity as rubber and with future calls of the Emergency so difficult to forecast, it is unlikely to prove easy to maintain a continuing surplus of revenue. For the current year a deficit of M$.119 millions is forecast and although estimated deficits have tended not to materialise in recent years, the low price of rubber will make this more difficult this year. A separate capital budget is expected to be introduced shortly and it may be that some of the projects will be slowed down as present high interest rates make either the flotation of a loan or the selling of investments particularly unattractive.

Discussions on the formation of a central bank for the Federation have continued during the year and Mr. W. H. Wilcock, of the Commonwealth Bank of Australia, has been appointed banking adviser and is now in Kuala Lumpur. I do not think it would be appropriate to make any comment on this subject until some definite proposals are announced.

Tin and Rubber

The test of the effectiveness of the International Tin Agreement came earlier than was expected and judgement must be reserved as to whether this experiment will prove successful. At the meeting of the International Tin Council in March, the price range was raised and due to the decline in the market price, in sympathy with other commodities, the floor price of £730 per ton was reached in October. Both the second and third contributions were subsequently called for from subscribers and restrictions on exports were imposed in December and the period extended in January. The price at which the manager of the buffer stock could sell was lowered and the producing countries recommended the creation of a special fund to be put at the disposal of the buffer stock. These measures will in time reduce the supply but meanwhile the pipeline has to be cleared and the increased exports from Malaya in January show that this may take longer than was originally expected.

Both production and exports decreased slightly compared with 1956.

The price of rubber declined slowly during the year and the average for 1957 was 88¾ cents as compared with 97¼ cents in 1956. In spite of the downward tendency doubts about the arrival of stocks from Indonesia caused a sharp temporary rise in December and this factor continues to make its influence felt. Exports were higher than the previous year and exceeded one million tons. The most notable feature was the considerable rise in exports to Japan.

Singapore

The talks in London last year were successfully concluded and the way is now clear for the granting of the new constitution to the State of Singapore and the holding of elections for the fifty-one member Legislative Assembly. Any doubts which existed concerning the attitude of the government of the United Kingdom in this connection should have been allayed by the assurance given by Mr. Macmillan on his recent visit. Registration of citizenship under the recently enacted ordinance which provides automatic citizenship for those born in Singapore, with residential qualification for others, has recently been completed and the new electoral rolls are being prepared. The new constitution will provide for full internal self-government with the sole responsibility for maintaining law and order and preventing subversion but the United Kingdom will have after external relations and defence and will have the right to the use of bases in the island. A consultative body, the Singapore Internal Security Council, will be established with certain advisory powers, composed of three members each from Singapore and the United Kingdom and one from the Federation. It is hoped that this body will iron out any difficulties that may arise due to the inter-relation of internal security and external defence.

In view of this impending change in the form of the administration, it is not surprising that disturbances in Chinese schools and strikes in the docks and among the telephone workers have attracted considerable attention abroad. Many shareholders are no doubt wondering what the future course of events will be but although I do not propose to attempt to give any forecast, there are a few significant pointers which I will mention. In August a White Paper was issued showing the extent of Communist activity and penetration in unions and political parties which was becoming a serious threat to the maintenance of law and order. At the same time, a series of arrests of active subversionists was made which was followed a few weeks later by the detention of a number of students. These strong measures had their effect, and conditions in the schools and relations with labour have greatly improved. The City Council elections were held in December, at which only a third of those eligible recorded their vote, and resulted in a sharp swing to the left. The behaviour of the supporters of some of the delegates in the early sessions certainly hardly augured well for the smooth working of democratic government, but recent meetings have been quieter and there are signs that the Council are now getting down to business. It is not difficult to find cause for misgiving from some of these recent events, but it would, I think, be premature to look only on the dark side, and dangerous to exaggerate the fears for the future. The responsibility of office has usually made politicians in other parts of the world view things in a different light, and there is no reason to suppose that this will not happen in Singapore. Nevertheless, it is not surprising that there is a feeling of uneasiness as the economy of an entrepot is so vulnerable to outside influences that any lack of confidence abroad would have disastrous consequences.

In what seems likely to be his last budget address, the Financial Secretary, Mr. T. M. Hart, looked back on what has been achieved in Singapore since the war. During this period M$.600 millions have been expended on development by the government and the City Council and recurrent expenditure is now more than four times what it was in 1947. A large part of this increase is due to the ever growing demands of education, public health and social welfare but the organisation of the police force to its present high state of efficiency has not been achieved without cost. In spite of all that has been done, development must still go on and it will not be as easy in the future as in the past to obtain the required capital from either surplus revenue or institutional investors. Already the government are relying

to a large extent on loans from the Central Provident Fund Board, which are naturally limited in amount, and for this reason the pace of future development is likely to be increasingly governed by financial considerations. This will necessitate a degree of co-ordination and the government have set up a Planning Committee to integrate development plans of the various authorities to the extent of the funds available. The current position is not unsatisfactory and increases in taxation this year were confined to the raising of the petrol duty to the same level as that of the Federation and a few minor adjustments but a rise in taxation must be looked for in the future. In fact, it seems likely that some new forms of taxation may be introduced shortly and although this is no doubt inevitable, I hope that these will not include any measures which will damage the free port status.

Malayan total external trade showed a rise of 2.7% over 1956 but there was an adverse balance of M$.209 millions compared with a surplus of M$.13 millions in 1956. This was caused by an increase in imports of over 5% with exports at about the same level as the previous year. It must of course be remembered that there are a number of invisible items such as British military expenditure not included in these figures which make the position not as bad as it looks.

North Borneo

The racial problem across the sea is not without its influence on North Borneo, where the administration are moving slowly in the admission of the Chinese labour which could be so beneficial to future development. The Governor, in his annual report to the Legislative Council, made it clear that "there is no intention of sacrificing the future to our present needs." Under existing conditions I should hesitate to criticise such a decision but it will inevitably result in progress being slow, which is naturally disappointing to all interested in trading conditions in this area. In Jesselton the building programme has gathered momentum and projects completed during the year include the new market, new government offices and an up-to-date hospital. In Tawau, development of the Quoin Hill area should in time decrease the dependence of the port on the barter trade while in Sandakan the construction of new buildings and roads is being pushed ahead. In Labuan there is little sign, as yet, of expansion but the new Shell installation has been completed which will be the main distribution depot for North Borneo. Trade continued at about the same level as in 1956, and for the first time timber and copra exports combined exceeded rubber in value.

Both the Governor of North Borneo and the Governor of Sarawak have recently broadcast a suggestion that their two territories together with Brunei should consider some form of closer association. No concrete proposals have been put forward and for the present all that is being attempted is to ascertain whether there exist "bodies of opinion in favour of federation sufficiently substantial to make it workable." It will be interesting to see how the people of these territories react to the proposed federation.

Brunei

Draft constitutional proposals were announced by the Sultan providing for the replacement of the State Council by the Privy Council, Executive Council and Legislative Council. Unofficial members of the Legislative Council will be nominated, but the majority of these will be elected by the District Councils. This proposed constitution seems to have received general support but it is strongly opposed by the Peoples Party.

The State continues to be in a very happy financial position. The surplus for 1958 is expected to be M$.68 millions and investments total M$.450 millions.

A considerable amount of building is in progress and the trunk road connecting the capital with the oilfields is expected to be completed by September of this year.

Indonesia

Indonesia has passed through troubled times since my last report and, whatever the outcome, it is difficult to see much hope of improved trading conditions in the immediate future. The lack of agreement between influential political figures in the capital steadily weakened the control of the central government over the outer islands where many of the local commanders to a large extent acted independently, merchanting local produce to pay and supply their troops. This not only made the chances of any political settlement more difficult but deprived the central government of the revenue and the foreign exchange which would normally have accrued to them. As a result the economic situation deteriorated rapidly with an increase in the note issue, steadily rising government borrowing from the Bank Indonesia and a dwindling of the foreign exchange reserves. These tendencies, which had been evident to a greater or lesser degree during the year, gathered momentum in December when it was decided to expel the Dutch in whose hands so much of the country's trade still remained. The disruption of coastal shipping which followed this move was a particularly serious matter. Many leading personalities in Indonesia expressed doubts about the wisdom of this action, which was in fact less strictly enforced in the outer islands, and relations between Java and the rest of Indonesia continued to deteriorate. Although political differences played a large part in the growing dissension, the main cause has been economic. Java with its large population has always required more of the country's resources than she has been able to contribute and although this is to a certain extent inevitable, the outer islands have felt that they were not getting their fair share. Whatever the outcome of recent events may be it seems clear that the previous method by which foreign exchange resources were allocated is unlikely to be resumed. Meanwhile barter trade of various types enables necessary supplies to be obtained but the terms of a great deal of this trade are far from favourable and do not benefit the economy of the islands as a whole.

India

In August, India completed the first decade as an independent country during which period she has developed a considerable degree of political maturity and now exercises a profound influence on neighbouring Asian countries. The elections resulted in the expected victory of the Congress Party, although they suffered a number of setbacks, particularly in Kerala where a Communist administration took office. This has necessitated certain problems of adjustment at the centre but the Congress supremacy over the country as a whole has not been seriously challenged. Relations with Pakistan unfortunately show no signs of improvement, with the Kashmir problem still outstanding and the dispute over the irrigation rights in the Indus valley no nearer solution. Trouble still continues on the border of Goa but a settlement has been reached in respect of the Naga areas. On the whole, the political scene shows little change.

The most conspicuous feature of the economic scene has been the steady deterioration in the foreign exchange reserves. When the Second Five-year Plan was drawn up it was anticipated that there would be a foreign exchange gap which would develop towards the middle of the period and it was hoped to meet this by borrowing abroad. Due to a large extent to the rise in world industrial prices the drawing down of the sterling balances occurred earlier than was expected and in fact the rapid decrease during the summer was one of the strains which resulted in the weakness of sterling. In spite of a loan in U.S. currency from the International Monetary Fund of the equivalent of £45 millions, the sterling balances dropped from £400 millions at the end of 1956 to £220 millions at the end of 1957, which by any standards is a sizeable fall. In October it was in fact found necessary to reduce the foreign assets which were required by statute to be held by the Reserve Bank of India. It was India's misfortune that this deterioration in the balance of payments should occur at a time when capital was in short supply and it soon became obvious that assistance would be difficult to obtain. The amount required seems likely to be considerable as, even after paring down the plan to its bare essentials and discarding all the frills, it is still expected that there will be a shortfall on external account of over £500 millions. Recently the U.S. Government has announced a loan of approximately £80 millions and has promised to provide surplus agricultural products, while other countries will grant credit on a smaller scale. As a result, the immediate outlook is more promising but the problem of providing sufficient food for internal consumption still gives cause for concern. It had been hoped that food imports were a thing of the past but the harvests have not come up to expectation nor has production increased fast enough to meet the increased demand and it has been found necessary at times to use valuable foreign exchange for the import of food. Imports of other commodities have been cut to the bone and all types of expenditure requiring the use of foreign exchange are being rigorously curtailed.

It will be seen that active steps have been taken to reduce the foreign exchange drain but this has resulted in the index of industrial production starting to decline, having moved steadily upwards since 1951. This is probably due to a certain extent to a shortage of industrial raw materials and I am glad to see that it has recently been announced that the import of capital goods will not be made at the expense of raw materials. I hope that this policy will be strictly adhered to as, necessary though new industrial investment is, there will be no overall benefit to the economy if existing industries are forced to curtail production.

Last year I pointed out how important it was for the future of parliamentary institutions in Asia that India should succeed in her efforts towards increased industrialisation and this is as important now as it was then. In spite of the difficulties I mentioned above a great deal has already been done and the available capital has on the whole been wisely spent. Progress is being made in the construction of the three new government steel plants and the expansion of the two that are privately owned, while many other projects are completed or nearly so. The industrial delegation, led by Mr G. D. Birla, which recently visited North America and Europe found genuine sympathy for India's aspirations and willingness to help as far as possible. The delegation, however, was impressed by the serious misgivings which were felt about some of the country's fiscal and economic policies and these criticisms are similar to many that have been made from time to time by industrialists both in India and elsewhere. In particular, the slow growth of domestic savings, which has resulted in a shortage of local capital, could have an unfortunate influence abroad. High taxation is blamed for this shortage and the recent widening of the taxation net by the inclusion of the wealth and the expenditure tax is unlikely to make the position any easier. "Without profits there can be no savings, without savings there can be no investment and without domestic investment no seeking of capital abroad," the delegation declare in their report and these are words which could with advantage be seriously considered not only by India but by many other countries in the world today.

In conclusion, it is clear that the country faces a difficult time in the immediate future with the probability that things will get worse before they get better. The outlook is, however, not entirely black and if it is possible to surmount the troubles of the next few years the increasing industrial investment should begin to make its influence felt.

Burma

Burma also recently celebrated the tenth anniversary of the attainment of independence and this coincided with a growing improvement in the internal situation. It had been clear for some time that the restoration of law and order must take precedence over economic development and in June the Prime Minister, U Nu, promised that in future this would be his government's policy. The increased expenditure in the budget on the police and defence was practical action along these lines while the surrender of several regional commanders of the terrorists with their followers was evidence that the more vigorous measures adopted were having their effect. Little progress, however, was made in the border dispute with China over territories in the Kachin State.

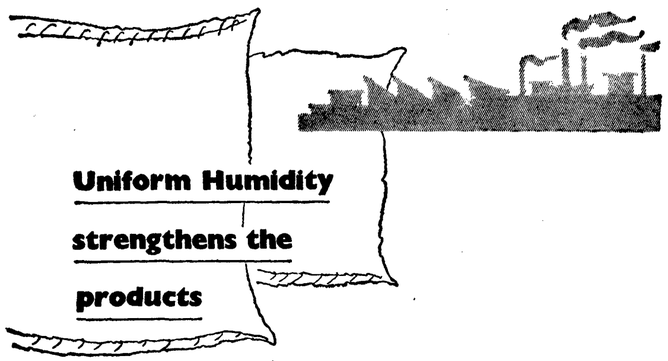
The general financial outlook is far from promising. The foreign exchange reserves fell from £40 millions to £30 millions notwithstanding a loan from India; while the failure of the rice crop in certain areas will result in the exportable surplus being only a little over half of the two million tons shipped last year—admittedly a post-war record. Teak output which was running at about 50% over the previous year's figures is expected to continue to improve and exports increased by about one fifth. The fall in the world price of non-ferrous metals will, however, result in lower earnings from this source. In view of the deteriorating state of the foreign exchange reserves it is not surprising that action has been taken by the exchange control and import licencing authorities to bring about a reduction in imports.

The semi-government organisations which I mentioned last year now handle a large part of the import trade and were set up with the intention of reducing the cost of living. In this they have had a limited success as although some prices have fallen they have run into difficulties over distribution and have not always arranged their orders to meet the market demand. In fact faulty procurement has resulted in the arrival of imports being uneven and this has at times caused delays at the port of Rangoon. Reconstruction of the port is continuing but a great deal still remains to be done.

Although it has not been found possible to push ahead with industrialisation with as rapid a speed as was once hoped, quite a large number of projects have been completed and the joint venture arrangements between foreign concerns and the government are working well. Until it is clear that the terrorists' organisation has been broken the pace of future development may be slow but a favourable rice crop this year would alter the economic outlook very rapidly.

Ceylon

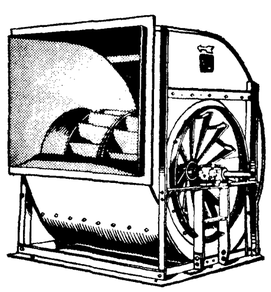
During the year the government were able to implement a number of their election promises. The British bases were handed back, a compromise was reached on the language issue and a select committee was set up to examine the question of revising the constitution. Nationalisation on the other hand is not being rushed although the bus transport system came under public ownership on 1st January, 1958, and it seems likely that the port of Colombo will follow suit. The tenth anniversary of the attainment of independence, however, finds the political situation uneasy with considerably rivalry between the various groups which make up the People's United Front. This has mitigated against resolute action being taken to deal with some of the outstanding problems, the most important of which is the continuing labour unrest, particularly in the port of Colombo. The movement of exports has naturally been hampered and the delays in the port have caused a number of ships to bypass Colombo.



Ceylon is fortunate in having a comfortable cushion of external assets but the terms of trade moved against her in 1957 and the reserves fell by Rs. 236 millions, the first year in which they have declined since 1953. The tea crop was a record and in spite of the delays in the port of Colombo, exports of tea for the first eleven months increased both in value and volume, as did exports of rubber. Trade as a whole was greater but as imports showed a larger increase there was an adverse balance of Rs. 85 millions. A number of measures have already been taken to restrict withdrawal of capital and import duties on luxury goods have increased but it remains to be seen whether or not stricter control of imports will be necessary. The recent floods, although not quite so devastating as had been reported in the press, are bound to increase government expenditure for relief work and repairs; a deficit had already been estimated in this year's budget which seems likely to be increased.

The future economic outlook is somewhat uncertain as is always the case with this country when the price of her export commodities is low. While external events dictate the level of these prices, the other unsatisfactory feature of the economy, namely, the disturbed labour relations, is a problem which must be tackled internally. I hope that action will not be too long delayed.

Conclusion



Once again I come to the end of my survey of the eastern scene and I am afraid this year it has not been possible to paint quite such a rosy picture. It may be that the post-war boom is ending and that a period of recession is setting in. On the other hand this may be merely a pause before the advent of a further upward surge of world economic expansion. Time alone will tell but meanwhile I think it would be wise not to count on any rapid improvement in the conditions of the countries which I have been discussing. Commodity prices are still very weak and the resulting adverse reactions has been accentuated by the large development plans most of them have undertaken. Their problems are on the whole similar; growing populations, a large part of which have a comparatively low standard of living, with their economies dependent to a large extent on agricultural commodities subject to severe fluctuations in price. It is not surprising that there is the urge to expand local industry in order not only to raise the standard of living but also to make the economy less susceptible to the vagaries of world demand. But rapid industrialisation has its own problems, the most difficult of which is to keep inflation under control. As the projects get under way employment rises and with it demand, particularly for food and basic clothing. Prices go up and it is found that the available foreign exchange is earmarked for the imports of machinery and industrial raw materials. Imports of consumer goods which would restore the level of prices have to be limited due to payment difficulties but the internal demand still grows. It can be seen that striking the proper balance among the conflicting claims on the resources available is by no means easy and to point out what is wrong is easier than to show the way of putting things right. No doubt development can be slowed down but this takes time as it is obviously uneconomic to stop enterprises already half completed. Raw materials must continue to be imported to keep existing industries running and the failure of a harvest or a rise in prices abroad may completely upset even the most conservative of calculations. I am not suggesting that errors have not been made nor that administration has not at times fallen down due to inexperience or even more blameworthy causes. Nevertheless any criticisms of the failings of these countries should be tempered with the realisation of the immense difficulties they have to face and if at times they may have aimed too high, surely this is an accusation that could be levelled at many of the most successful examples of human endeavour.

HINDUSTAN LEVER LIMITED

MARKETING RESEARCH ACTIVITIES

CHAIRMAN MR. S. H. TURNER'S REVIEW

The Annual General Meeting of Hindustan Lever Limited was held in Bombay on April 7, 1958. The following is the text of the speech made at the meeting by the Chairman, Mr. S. H. Turner.

I have great pleasure in welcoming you to this Annual General Meeting of the Company.

The Annual Report and Accounts have been with you for some time and I shall take them as read. As I have also circulated to you my review of their salient features, I do not wish to dwell on them further in my speech today.

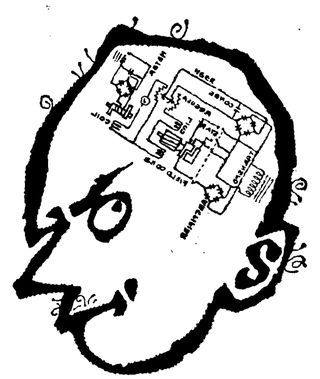
I would like to tell you about a particular activity of our Company which has an important influence on the development of our business—that is, Marketing Research. Marketing research involves a study of consumer preferences, habits and attitudes. Thus it helps us to decide how our immediate market operations should be directed. It also involves an examination of trends, so that its findings indicate the future pattern of the market and assist us in shaping our forward policies. All our decisions on the improvement of existing products or the development of new ones, the adoption of new selling methods and the application of new advertising techniques are the more effective for being taken in the full and intimate knowledge of our markets, which continuous research into these markets is designed to provide.

To large manufacturers of consumer goods—and we must rank among the largest in India—economies come largely from mass production and mass selling of standardised lines. This standardisation is only successful if the resultant products appeal in properties and performance to the greatest number of people. We have many millions of customers. They vary widely in their tastes. They are conditioned by different social, cultural and religious background. We must have products which are acceptable alike to the rich and the poor, to the educated and the uneducated, to the Punjabi and the Tamil.

Representative Sample

To discover what preferences are most general in this variegated pattern of consumers we choose a representative sample of them and find out what their opinions are by questioning them. The result is intended to reflect the opinion of our universe of potential customers. The size of this sample is determined mathematically once we have postulated the number of categories of people it shall contain to fulfil the particular purpose in view. The combined opinions and attitudes of the individuals composing this sample will be representative of our universe within a calculable margin of error, provided the questions we put to them are so phrased as to evoke the respondent's true opinion and not an opinion adapted to please the questioner or to express what the respondent thinks it is respectable to say rather than what he really thinks.

The framing of our questions to ensure that the respondent is not tempted to disguise his true feelings calls for great skill. For example, people who believe that good form requires them to have a bath every day sometimes sincerely think they have a bath every day, whereas in fact they only have a bath four times a week when the weather is cold. In a foreign country it was once found that if everyone cleaned his teeth as frequently as was claimed, the toothpaste manufacturers would be unable to supply the total demand. Similarly we find that in Kerala people are inclined to say they take a bath four times a week, and some may even claim to do so twice a day, whereas in Saurashtra nobody minds confessing to washing himself and his clothes only once a week or even much less frequently. The mental attitude to washing in Kerala is conditioned by an abundant supply of water. The habits in Saurashtra have been formed by a geography in which water is scarce and precious. In Northern India there are still women to be found who will not admit to eating vanaspati because it is socially more estimable to eat ghee. And in most U.P. households both the wife and the husband will treat the choosing of anything, whether cooking fat or soap, as the prerogative of the male, despite the fact that the investigator may often have an uncomfortable suspicion that when it comes to the point the wife makes the husband's choice for him.



These shynesses reticenses, resistances, sub-conscious blocks or what you wish to call them, run through the whole of our work. Nowadays, therefore, in addition to the straightforward technique of so phrasing the questions that they are completely neutral, a great many techniques have been devised to set people's sub-conscious at ease, to get at the facts below their lapses of memory and to allow for their desire to conform to convention. We may, for instance, ask a group of housewives in for a cup of tea and get them sufficiently relaxed so that they will talk freely and even admit the prejudices which, in answer to formal questions, they might feel were too ridiculous to mention. These are obvious examples. Beyond them lie the more surprising discoveries that have been brought out by touching the deeper layers of the mind. Women are, for instance, quite often allergic to advertising that suggests that some new product will save them a lot of time in the kitchen because they feel that it is their capacity as homemakers that gives them their prestige in the family; if making a home is made too easy, what will happen to the respect their husband and children feel for them? Or, again, we have done some investigations which suggest very strongly that many of the prejudices people have about Dalda do not really have anything to do with Dalda at all but are only a way of venting their resentment against a world which, for many professional class people, is narrower and more difficult than it was before the war. Buying Dalda instead of ghee is a very good way of economising, so they transfer to Dalda the resentment they feel that the world has now become a place where they have to watch every rupee.

Another Technique

Another technique is to try simply to get the housewife to talk freely, with the investigator doing no more than listen sympathetically, prompting only when the flow stops. In that way we can sometimes discover what the associations are which really matter in people's minds. These are not always either predictable or logical; for instance, it is not necessarily the rich women who buy Sunlight; it may be the poor woman who values its lather and the ease with which she can do her washing with it; the rich woman whose washing is done for her by servants quite often feels that they are so wasteful of soap anyway that it is best to buy for them the cheapest brand on the market.

I have not attempted to describe marketing research techniques in detail, or with the accuracy of a text-book. I have only been trying to give you some

Parade of ideas for the plan ahead

See them at Hannover—bright practical ideas that have produced new materials, new processes and new applications in every industry.

idea of the principles on which a marketing research department works. I would now like to try and tell you something of how we use the results of marketing research in order to influence the decisions we have to make from day to day in the running of our business; and nowadays there are hardly any decisions on the marketing side which we can make without taking into account our research results.

We begin with a picture of our market. Who is it who buys our products? We know they are not bought equally over the country. Dalda, for instance, is bought far more in the hard fat areas of the North than in the oil areas of the South. Sunlight is specially strong in Eastern India. We have to find out exactly what the map is like for each product and whether the reason for its strength or weakness in particular areas is due to the habits of the local people or to something in the product. For instance, Dalda sells well both in Maharashtra and in the Punjab, but that in itself gives no guidance on how we should solit our advertising between the two. Marketing research shows that we have a much lower percentage of the total hard fat market in the Punjab and that therefore the Punjab is much more likely to reward a major advertising effort than Maharashtra. Again, Sunlight sells quite satisfactorily in the Punjab, but marketing research shows that whereas in Eastern India it is used largely as a general laundry soap, in the way we hope it will be used, in the Punjab it is used mainly for washing particularly good clothes. The Punjab therefore offers as immense opportunity for the expansion of Sunlight's use into general washing.

Until we know the shape of the market we do not know where to strengthen our distribution or how to solit up our advertising. We may even find sometimes that we have reached saturation point, that any further consumption of our products can be only attained by a quite disproportionate expenditure, and we might then even slacken our advertising or make our distribution less intensive. And of course if marketing research shows that our product is bought only by the professional class because it is suitable only for the educated, we would not spend a lot of money advertising it in publications read only by farmers or industrial workers.

We not only have to find out who buys our products and where. We have also to find out what they think of them. We have a very clear idea in our own minds of what our products can and cannot be expected to do, and the temptation is always to think that our image of them is so based upon technical fact that the public must think of them in exactly the same way. Sometimes this is not so. It is no consolation that we are right and the public are wrong. The public's beliefs are a fact. We do not expect mountain of public opinion to go to the Mohamed of our knowledge. On the contrary, I hope you have all noticed we are at pains to bring the Mohamed of our knowledge to the mountain of consumer opinion

Several Ways

With a product we have had on the market for a long time, Marketing Research is only one of several ways of knowledge. We can, for instance, cross-check a great deal of what Marketing Research tells us from our sales figures, which tell us quite as clearly as Marketing Research can whether we sell more in U.P. than in Mysore or in Malabar Hill than in Parel; and, though the figures themselves will not tell us why, sometimes we can find that out too from what our dealers and our shopkeepers and our salesmen tell us; or sometimes we can guess what is giving us our sales from the laboratory's reports on the performance and quality of the product. We know that the law does not permit Dalda to have the taste of ghee and are not surprised when we find that Dalda is not used for those purposes where it is the ghee taste which is essential.

Marketing Research is not a panacea. It does not provide an answer to every question. Sometimes people find it so difficult to define what they mean that we are driven back on our own personal judgement.

For instance it was discovered a long time ago that when people *buy* a toilet soap they look at almost *anything except its capacity to clean*—the luxury of its appearance, the purity of its colour and, above all, the pleasantness of its perfume. The reason is obvious. Every toilet soap will wash the dirt off one's face. Thus far Marketing Research gave a perfectly clear answer, but when we then tried to find out which colour or perfume or wrapper people like, we very rapidly got frustrated. One cannot get adequate explanations out of most people for why they like the perfume or colour they like; their *reasons are too* intangible, too indefinable, perhaps too deep in the subconscious. The standard way of praising a perfume is to say that it is nice, and since different people call perfumes of almost every note and composition *nice*, that is very little help. If one presses them they may say 'strong' or 'weak'. But since different people have different definitions of 'strong' and 'weak', *one tends to find that the same perfume is being* praised for both qualities. Equally, people will talk of the purity of a colour or of its whiteness. 'Pure' is a word of clear *meaning when applied to ghee or* to morals; but what is a pure as against an impure blue? And white is a colour or infinite shades. One has to use *one's judgement of which shade of colours* or perfumes the public would probably like, and then, within the narrow range thus selected, make a final choice by asking people their preferences as between, at the most, three or four blank tablets, the only difference between which is the perfume or colour or whatever the variable is one is testing. Moreover, as people's preferences are usually accurate only between two products at a time, even to test four is a pretty elaborate business. To test the whole possible range is simply impossible.

Product Testing

Thus a large part of our marketing research effort is Product Testing. Recently we were faced with a problem in marketing Rinso. We had to decide whether we should choose for the powder a soap base which would give a superlative lather provided warm water was used, or an alternative base which, though giving a less spectacular lather, would dissolve well in cold water. We prepared experimental powders with the alternative bases and gave trial packets of both to a selected sample of housewives. The majority preference was in favour of the cold water-soluble product and as a result of this we were able to formulate Rinso to be most suitable for a country where the water is rarely heated for washing.

In the spring of 1957 we introduced our Lather Shaving Cream—Erasmic. Before launching this product we carried out widespread product tests, and the results were measured by marketing research to ascertain that the product was of sufficiently high quality.

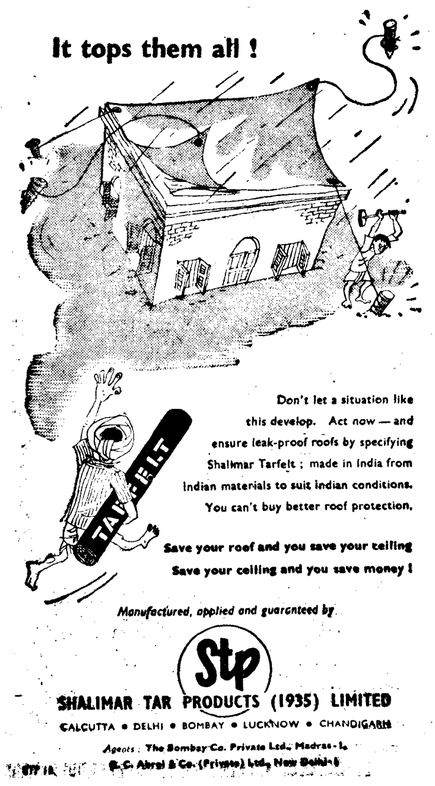
Social and economic changes have the most important bearing on our business. For example, the development of new industrial colonies like Chittaranjan and Sindri where the habits of the villagers living on a subsistence level change quickly when they become industrial workers with regular pay and modern amenities. Their standard of living rises suddenly and they begin to consume products which they could not afford before. A study of these new dynamic townships that are growing up shows that they are likely to create a strong demand not only for our main products but also for our special lines and toilet preparations.

Besides research into our current products and people's existing habits and preferences, a growing and important use of our research is looking into the future to study possible modifications and changes in products to make sure that we keep pace with shifts in consumer requirements and habits. It is as much our responsibility to investigate future demands of consumers as to satisfy their present demands. In a free economy consumers' wishes are never static, and it is for us to look ahead and find out what consumers are likely to want in the future. This is particularly important in a country like India where society is changing fast and will change perhaps even faster in the future.

In recent years we have applied marketing research techniques to estimating the size of the groundnut crop. The official figures do not come out until the end of February, and since the heaviest buying season of the year is in December, January and February, we must form our own assessment of the crop to guide our buying policy of groundnut oil and seed. We take a very rough sample of roadside farmers and confine ourselves to a few simple questions. The margin of error with such a technique is obviously considerable, but we have found that we get an answer which is reasonably near the final official answer, and also that we get an idea, which the official figures give only *months* later of where the crop has been good and where the crop has been bad, which has a very considerable influence on the relative prices our different factories will have to pay.

Value of Advertising

When we are satisfied that we are making the right product, a product which will both do a good technical job and will also satisfy the desires or prides which the public wants it to satisfy, there still remains the question of how to tell the public that this desirable product is there to be bought. The answer is advertising, and therefore all consumer goods manufacturers must spend a lot of money on advertising—particularly India, where advertising has not only the task of trying to sell a particular brand of product against its competitors, but may often be required to introduce the product-type as one which is a necessary part of a higher standard of living.



We should naturally like to find out whether our advertising money is being spent to the best effect. That is not easy. When people buy something they very rarely remember why they first bought it. Very few people ever say that they first bought Sunlight Soap because they read in a newspaper on the 15th January that it washes white and bright. Partly this is because they do not know that that is what happened. Advertising comes to them *from* many angles—shop displays, cinemas, press, posters—and it is hard to identify just what sparked the final decision to buy. Partly it is because people like to think they make their minds up for themselves and resent the idea that they were moved by the pretty girl in the advertisement.

Because of all this it is not easy to test how effective advertising is in making people buy. What we can test is whether people have seen our advertisements and whether they remember what the advertisements said. In these respects the results of the tests we have done on our own advertising are generally satisfying. Lifebuoy advertisements, for instance, have been seen and remembered by about half the people we have asked. Cinema-goers seem to be receptive to advertising films and ours have normally been well remembered. In a recent enquiry Rexona shop display material was recalled by a high proportion of respondents.

Though it may be difficult to assess how effective any particular advertising campaign or subject has been in creating a sale, nevertheless, we have constantly to develop our judgement in them. Motivation research attempts to supplement intuition with scientific enquiry. It involves investigation of consumer attitudes and behaviour and particularly of the reasons why people buy. We feel that if we can establish the reasons (whether they be conscious or unconscious) why people buy and what influences them in their choice, then we will be in a better position both to give them the products they want and also to present and advertise them in a convincing way.

Our function as a Company is to try and give the consumer products which he will like and which will do the job he wants them to do. Before we can do that we must find out what the consumer will like, what is the job he wants them to do, as distinct perhaps from the job we think he ought to want them to do whether the products we can make come near enough his ideal—one never achieves perfection—and whether our methods of telling him about them are adequate. For all these purposes there is no tool more valuable than marketing research.

Note :—This does not purport to be a record of the proceedings of the Annual General Meeting.

INDIAN SUGAR MILLS ASSOCIATION

INDUSTRY'S ACHIEVEMENTS UNDER THE PLAN

PRESIDENT MR. B. S. SAWHNEY'S REVIEW

In his presidential address at the 25th Annual General Meeting of the Indian Sugar Mills Association held at New Delhi on 3rd April last Mr. Balmokand Shah Sawhney reviewed the achievements of the sugar industry in the field of production and exports during the last year and also dealt with the various problems facing the industry such as growing competition from tax-free khandsari, high tax burden, low yield and quality of cane etc.

Following are extracts from Mr. Sawhney's speech :—

Sugar Industry's Impressive Performance

I am sure sugar industry's performance last year would be viewed with satisfaction. With sugar production at 20.26 lakh tons, we have for the third successive year surpassed the previous records as will be evident from the following figures :—

Year	Production (lakh tons)
1953-54	10.01
1954-55	15.90
1955-56	18.62
1956-57	20.26

It will be seen that over a short period of four years sugar production in the country has doubled itself. I doubt if any other established industry has such a promising record to show. The achievement of the industry will be further appreciated if we take into account the fact that almost the entire increase in production has been achieved by the existing units, the new units contributing only 40,000 tons.

Sugar Exports

A significant landmark in the history of the sugar industry's development is our emergence for the first time as an exporter of substantial quantities of sugar. The total quantity exported during the year has been about 153,000 tons, destination-wise details of which are :

Name of country	Quantity exported (Tons)
China	33,624
Malaya	20,837
Singapore	5,096
Burma	11,643
Ceylon	8,158
Aden	8,050
Iraq	13,085
Saudi Arabia	1,247
Other destinations in West Asia	5,045
Sudan	14,847
East Africa	29,454
U.K.	1,002
North Vietnam	823

Considering our precarious foreign exchange position, the export of sugar has been a welcome development and is expected to contribute materially towards the success of the Second Five-year Plan. This year, its earnings have been over Rs. 12 crores of foreign exchange which compares well with the earnings from the other commodities exported regularly, and perhaps would rank only after tea, jute and cotton manufactures.

Exports Handled by I.S.M.A.

When Government agreed in December, 1956 that sugar should be exported outside India they entrusted this work to our Association. It was a unique case of an Industrial Association taking up actual business and that too on a non-profit basis.

The Association had to start working almost from scratch in a sphere which was quite new to it. Indian sugar was an unknown commodity in the world markets and we had to contend against the natural hesitancy on the part of the foreign buyer. We lost no time in contacting the prospective markets through sending our representatives and otherwise, and gradually Indian sugar came to be accepted in competition with the world's finest sugars like British Refined and Formosan. It is noteworthy that though new in the export market, Indian sugar has so established itself that it is not grouped among the cheaper varieties like Brazilian or Argentine sugars which have been known to the markets for a long time.

As our business started taking shape, the competition from the well-established exporters became formidable. In fact, there have been instances of organised competition from world's established sugars to oust Indian sugar and we had to sell in competition with them, and it should be a matter of satisfaction to the members that we were able to secure in good many cases business from international tenders. Indian sugar is now well-known throughout the world export markets and even though sales for exports have been presently suspended, enquiries continue coming, not only from our neighbouring markets but from such far off countries as Germany, Finland, etc. Internationally reputed brokers have also begun to look forward towards the supply of Indian sugar to the various markets. In some cases they personally visited this country to gather first hand knowledge of our quality and packing and arrangements for storage and shipments at ports. These visits proved to be very helpful in their gaining the necessary confidence in the Association's ability to effect shipments according to their requirements which resulted in increased business with them.

Undeniably, the efforts of the Association have enabled Indian sugar to find a permanent market in the neighbouring countries in East and West Asia as well as in Africa. That Indian sugar has now come to stay as a strong rival to other well-known sugars in the world export markets is amply borne out by the remarks of the Chairman of Tate & Lyle, London, at the Annual General Meeting of the Company, when he described the Indian sugar industry's achievements as "a threat to wrest some of our business". This is fairly indicative of the Association's achievement and of the future possibility of the export of Indian sugar.

Exports in Future

The world sugar market has, however, now come down appreciably mainly because of better crops in Europe and Cuba and exports are now possible only at a loss. This is not a phenomenon peculiar to India alone. Most of the sugar exporting countries subsidize their exports in one form or another. We will also have to find some way of meeting the loss on exports to be able to export sugar on a permanent basis.

The country's growing needs for foreign exchange necessary for importing heavy machinery etc. for rapid industrialisation makes it incumbent on us to explore all avenues of furthering exports to earn more foreign exchange. In fact, as the Prime Minister said in course of his budget speech last February, "we must try to produce more, export more and save more to find the resources for implementing the Plan". Already, last year, we earned over Rs. 12 crores of foreign exchange by export of sugar.

Apart from the undoubtedly urgent need of foreign exchange, export of sugar is also necessary for continued health and development of the industry and welfare of the cane-growers. For, sugar industry, in common with all other industries based on agriculture and therefore on vagaries of nature, cannot plan its production within narrow limits. A plan for exports will alone be able to insure against periodical plenty and scarcity.

Fortunately, because of our geographical position, we have an easy access to a number of sugar importing countries which are in our neighbourhood. Of the total world exports of about 12 million tons, 1.2 million tons are consumed in the neighbouring markets.

That we have already sold substantial quantities to most of these markets can be seen from the figures given by me earlier. It is only reasonable to expect that with the experience gained, this year it will be possible to step up our exports to them. This matter, I know, is as much in the minds of Government authorities as it is in ours, and I hope some scheme will be devised without any further delay to start export of sugar on a permanent basis.

Disquieting Development of Khandsari

I have referred to the achievements of the industry in the field of production and exports. And while these developments were expected to gather further momentum a dark cloud has gathered on the horizon which may upset all our calculations and do incalculable harm to the sugar industry with serious repercussions on the national economy, growers' well-being and the Governmental revenues. I refer to the fast growing khandsari industry which is developing under, what may be called, entirely artificial conditions created by the growing tax burden on factory sugar as compared to complete immunity of khandsari units from such burden. The sugar factories have to pay Rs. 10/11/- per maund as excise duty, Rs 2/- as cane cess and about -/8/- as co-operative societies commisson, bringing the total tax burden to Rs. 13/3/- per maund, which forms 38% of the total cost of production. This high tax burden has placed the factory sugar industry at a disadvantageous position *vis-a-vis* the khandsari units. With its production at under one lakh tons, khandsari has so far played only a minor role as a sweetening agent when compared to the vacuum pan sugar. The position has, however, lately been undergoing a change and with indirect assistance resulting from Governmental measures khandsari units are fast expanding particularly in the U.P., the foremost sugar producing State in the country. Prior to March, 1955, khandsari had a relative advantage of Rs. 5/3/6 per maund (Rs 2/12/- excise duty, 2/- cane cess and -/7/6 co-operative societies commission). But with successive increases in the excise duty the relative tax advantage to khandsari has, as stated by me earlier, risen to Rs 13/3/- per Md.

Apart from this, khandsari units have also the advantage of being free from any regulations on the minimum cane price and quota releases. These exemptions from statutory regulations further add to the indirect protection that this industry gets.

The wide margin of the concessions, and other advantages have given a spurt to khandsari and its production is expected to reach 3 lakh tons this year; and there are reports of large scale diversion of cane from factories to khandsari which will adversely affect sugar production.

A Wasteful Process

I am conscious that cottage industries have a definite place in our industrial set-up. But they are meant to supplement and not supplant the work done by the large scale industries. Besides, I don't think, it is the Government's policy to encourage an industry whose manufacturing process is a wasteful one and involves a national loss. But that is what the khandsari industry is. Its sugar recovery is 6% to 7% against 10% of the sugar industry. This is equally true if we compare the yields between khandsari and gur. Therefore, any expansion in the khandsari industry whether at the cost of the sugar industry or the gur industry would not be in the larger national interest. The Karve Committee on Village and Small Scale Industries also testified to its being based on a wasteful process and observed that unless it is improved it should not be encouraged at the cost of the sugar industry.

The considerable waste involved in khandsari production will be appreciated when we realise that in the additional production of 2 lakh tons of khandsari we lose about 85 lakh tons of extra sugar which would be recovered if the cane were crushed by the

sugar factories. That is, against the expected production of 2.85 lakh tons in vacuum pan factories, the khandsari output is estimated at 2 lakh tons only for the same quantity of cane crushed. In terms of money value this would mean a loss of over 8 crores of rupees. On the basis of production of 2.85 lakh tons, the loss to the State Exchequer would work out to Rs. 8.6 crores by way of central excise duty and Rs. 1.5 crores by way of cane cess. Surely, this is a considerable loss resulting from the inherently wasteful process of khandsari manufacture.

There is another aspect of the matter also. The Second Five-year Plan envisaged a bold programme of expansion for the sugar industry and for this purpose provided Rs. 50 crores for the expansion of capacity and another two crores for the expansion of sugar machinery plants. All this expansion of capacity and the expenditure on the same was based on the assumption of an increased level of sugar consumption resulting, among others, from shift from gur and khandsari consumption to sugar. With the expansion of khandsari now occurring, entirely against the Plan premises, the rate of consumption of sugar will not be as expected and, in fact, a contrary trend of shift from sugar to khandsari is likely to develop. As a result, it may not be possible to effectively utilise the increased capacity of the industry which we hope to build up at a great cost. I am sure no one will view a situation like this with equanimity.

It should also be realised that with increasing production of khandsari the prospects of export of sugar would be considerably reduced. For, in any scheme of exports which the Government might adopt, the basic consideration would be that any loss on exports would be made up from the internal market. This in turn, presupposes a steady demand for sugar within the country even at higher prices resulting from the passing on of loss on exports to the internal market. But this cannot be the case with continuous supplies of cheaper khandsari flooding the markets. Any attempt to increase exports to meet the situation would not succeed and we shall find ourselves in a vicious circle of higher prices and shrinking demand. I firmly believe that successful implementation of an export programme would depend, on the one hand, on increased production of sugar in the country; and on the other, on its effective demand. Increased production of khandsari will, however, affect adversely both production and consumption of factory sugar and thus also exports.

Urgent Need for Remedial Measures

Keeping in view these various facts, I hope Government will appreciate the industry's anxiety. In fact, it had expected that Government would at the last budget time announce some steps in the form of suitable excise duty on khandsari sugar to curb the unplanned growth of this wasteful industry. But the absence of any such proposals in the budget has been a great disappointment.

I would urge with all the emphasis at my command for speedy and effective action in this behalf, in any case, well in advance of the next crushing season.

Difficulties of East U.P. and Bihar Factories

The sugar industry in the East U.P. and Bihar has not made any head-way despite the progress of the industry as a whole. It might interest the members to know that in Bihar which is the second important State in the matter of sugar production, sugar output last year amounted to 3.12 lakh tons which though about the highest for the last several years is lower than the production achieved during the year 1939-40. In the matter of sugar recovery also the position instead of showing any improvement has deteriorated over the last several years. Against a recovery as high as 10.9% in 1942-43, the last three years' figures at 10.22, 9.76 and 9.36, show a steady decline. The position in the East U.P. is even worse. From the point of view of market also, these mills are at a serious disadvantage in that there is no important market where they enjoy preference of any sort. Their production has to be sold in far off places in competition with others more favourably situated.

The important role that this industry plays in the economy of this region needs no emphasis. Here sugarcane is primarily grown for supply to sugar mills, and if they are allowed to stagnate, as has been the case, I venture to say that the development of the entire region will suffer. Perhaps there is no other part of the country where the dependence of agricultural economy on the sugar industry is so marked. I shall, therefore, urge upon the Government of India and the two State Governments concerned to pay special attention to the problems of the industry in this region.

Cane Development

Speaking of the difficulties of the East U.P. and Bihar factories in the matter of cane development, I am mindful of the fact that the position with regard to cane development in the country as a whole requires much more concentrated attention, than has perhaps been given so far. The poor yield and quality of our cane is a malaise from which the industry as a whole suffers. This is the main problem facing the industry. Though the authorities themselves are conscious of the leeway to be made and have also undertaken some positive steps in the last few years, the problem is so big that all the efforts done so far have not made much impression on the overall position.

It is a truism that sugar is grown in the fields and so long as we do not get from the fields what they are capable of yielding both in terms of yield and quality of cane, so long will our industry remain in an unenviable position.

Our Association had suggested that in order to give a stimulus to the working of the Research Institutes, it would be better to bring all the main institutes under an autonomous Sugar Research Board on which the industry and the growers would be represented. But somehow the Government have not seen their way to agree to this suggestion so far. It is true that the Indian Central Sugarcane Committee on which the industry and the growers are represented has as one of its functions the supervision of the sugarcane institutes. But in view of its multifarious activities it would be advisable if the research institutes are placed under an autonomous Board devoted exclusively to research work. This Board would also take over the National Sugar Institute, Kanpur, presently not under the Indian Central Sugarcane Committee, which would help better co-ordination between agricultural and technological research.

Land Ceilings

While the need for improvement with regard to cane development is realised on all hands, the policy of some of the State Governments in regard to land holdings, I am constrained to say, is not proving at all helpful in this behalf. It is well known that in the main cane producing countries, the efficiency of sugar industry is to a great extent determined by following what is known as plantation economy. In India, although this is not the rule, yet wherever sugar factories operate large scale cane farms, these farms render a signal service as models and extension services for the cane growers in the neighbouring areas. The Planning Commission acknowledged the utility of these farms and recommended their exemption from ceilings. But some of the State Governments seem to follow a different policy. The U.P. Government have, for instance, by passing the U.P. Large Land Holdings Act and making it applicable to the sugar factory farms also, imposed a very high rate of tax on larger farms. Such a measure will in all likelihood lead to disintegration of the farms and loss of their valuable service to the industry and growers. In Mysore also, a Committee appointed some time back, has recommended application of ceilings to factory farms. If this position continues, other States may follow suit.

Such a development will prove harmful not only to the sugar industry but to the economic development of the country as a whole. For, any diversity in approach or policy between the Planning Commission and the State Governments will stand in the way of speedy and integrated development for which the country has sought to make planned efforts.

Licensing Policy

The two Five-Year Plans envisaged an increase of 10 lakh tons in the capacity of the sugar industry to bring the total capacity by the end of 1960-61 to 25 lakh tons. Necessary licences have already been issued for establishment of 56 new factories and substantial expansions in the capacity of 66 existing units. These cover the entire additional capacity targetted for. Of the new units licensed, four went into production in 1955-56 and five in 1956-57. Another 12 units were expected to start this year, but only 9 have actually started working. 30 existing factories have also expanded their capacity and others are expected to complete their expansion in due course. The total additional capacity thus brought into effect is 4 lakh tons. There has, however, been a set back in the installation of new factories, due to delayed shipments of machinery and payment difficulties.

As members are aware, in the matter of licensing of additional capacity, we have been urging upon the Government to first meet the requirements of the existing units. For, it would cost much less both in terms of money and time if preference is given to the expansion of existing capacity wherever cane availability and other facilities permit the same. It may be pointed out that the expansion of existing units will largely be achieved with machinery manufactured within the country and will not require much foreign exchange. However, Government have not seen their way to agreeing to the same. The foreign exchange difficulty now further underlines the need of exploring avenues of expanding the capacity at as little cost as possible. I would therefore, again appeal to Government authorities that wherever the units already licenced have not come up according to programme the capacity thus released should be re-distributed among the existing factories depending on the scope of expansion of such units.

Sugar Prices

Earlier I have referred to the progressive increases in the sugar excise duty in recent years and their

Mazagon Dock Build Barges!

During the past few years, Mazagon Dock have built steel water barges, self-propelled water barges, steel cargo barges, ammunition barges and other barges. These and other types of vessels built by Mazagon Dock and other services rendered are playing a vital part in modern India's progress.

One of the Barges, Built by Mazagon Dock for Madras Port Trust

Bombay 10. Phone: 42011/4

MD/67B

serious repercussions on the industry. These increases in the excise duty have tended to push up the price of sugar to an unduly high level now ruling when consumers' resistance is apparent. This is, however, not related in any way to the working of the sugar mills but is a direct result of high taxes levied by the Government. It, therefore, comes to us as a surprise when the current prices are misconstrued to imply high profits. It is not uncommon to observe in the press or in the observations of persons occupying responsible position in the country's life, uninformed and unfounded criticism of the industry. I am not against criticism and would welcome it provided it is based on facts. Even a cursory glance at the cost structure of Indian sugar as adopted by the Government will at once convince anybody of the fact that neither is the sugar mill industry responsible for the present level of prices nor does it benefit from them.

Need for Tax Relief

In recent years the cost structure has undergone considerable variations. While the Government levies show a phenomenal increase of 344%, the cost of cane has also gone up by 14%. Similarly, other items of cost have also gone up reflecting the higher prices of raw materials and increased labour charges. In sharp contrast to the increases on all these items, the single item which has shown a decline and that too by a fair percentage of 17% is in respect of overheads and the gross profit margin allowed to the industry. It is, therefore, not understood how in the face of these facts allegations against the industry of high prices or high profits can be sustained.

Before I pass on to another matter, I would like to invite Government's particular attention to the sharp increase in the tax burden on the industry. Since 1946-47, the Central Excise Duty has been raised from Rs. 2/3/- to Rs. 10/11/- per Md. Of this increase Rs. 2/7/- accounts for replacement of sales tax by additional excise duty effected last December, which may normally not be taken as an additional burden. But the position with regard to Sales tax was that it was paid by the trade and in the final analysis, by the consumer. But the additional excise duty has to be shouldered initially by the industry with the prospects of its passing on to the consumer depending on market conditions. And with unfavourable market conditions such prospects look rather dim.

The State Governments of U.P. and Bihar have also raised the cane cess from -/1/- to -/3/- per Md. Along with this, the Co-operative Societies Commission in these States also went up from -/-/3 to -/-/9 per Md. of cane. All these together amount to a high figure of Rs. 13/3/- per Md. of sugar.

I would submit that such disproportionately high rate of taxation on this industry is bound to stifle its future development. Admittedly, if the industry has to fulfil the Plan targets and also maintain increased exports, it is necessary that a rising tempo of production and consumption of sugar within the country is maintained; these are like the two needles of a clock and should function in close harmony. But the present rate of taxation, as I have shown, is adversely affecting both production and consumption of factory sugar. There is thus an urgent need for granting an appropriate tax relief to this industry, and I appeal to the Government, to give due consideration to our request.

While on this subject, I would also invite Government's attention to the financial requirements of the industry for rehabilitation and modernisation of the existing plants which have a close bearing on their efficiency and production. The Planning Commission has assessed its cost during the second Plan period at Rs 50 crores. The profit margin now available to the sugar mills industry hardly permits of such heavy investments specially with the prices of machinery parts ruling 4 to 5 times of the pre-war level. The industry has already brought this fact to the notice of the Government and I hope that some solution will be found to enable the industry to proceed with rehabilitation and modernisation of the plants now overdue.

Cane Freight

I would also take this occasion to draw Government's attention to the recommendations of the Railway Freight Structure Enquiry Committee which envisage a general rise in railway freights, particularly for short distances. The sugar factories particularly in U.P. and Bihar depend to a large extent on cane supplies from distant centres. In the absence of good roads in the factory areas, this cane has to be transported by railways and any increase in the railway freight will further add to the industry's cost structure thus making it uneconomical to crush distant cane. This will adversely affect both sugar production and the interests of cane growers who may have to utilise their cane for less remunerative uses. I hope, while considering the Freight Committee's recommendations, the Railway Ministry will give due consideration to the peculiarities of this case and decide against any further increase in cane freight.

Incomparable power weight ratio and matchless drilling penetration speed, put the Wolf 'WD' range of electric drills miles ahead of others. Possessing unrivalled stamina, you can rely on them 100% to beat all production targets—with important all-round economies in labour and overhead costs.

Operators prefer Wolf tools because of their perfect balance and easier handling qualities, which banish strain and undue fatigue. It costs no more, often less, to install Wolf tools and enjoy all these unique advantages that increase output and lower costs.

TYPE WD4C
½" Heavy duty all ball-bearing electric drill (illustrated) Bench Stand Type ES23 converts any WD Drill to Sturdy Drill Press.

TYPE WD5C
5/8" Heavy duty all ball-bearing electric drill also Type WD5 (illustrated) fitted with ⅝" drill spindle bored No. 2 M.T

TYPE WD6C WD6

DIRECTORS' 111TH REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31ST DECEMBER, 1957.

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1957.

The transactions for the year under report have resulted in a profit of Rs. 1,17,26,903.52 (including Rs. 6,20,272.48 brought forward from the previous year's account) after contribution of Rs. 9,31,930.00 to Gratuity Fund Trust. The following amounts have been appropriated for the undermentioned purposes :—

	Rs.	nP.
1. Transferred to Income-tax Provision	50,00,000	00
2. Transferred to Reserve Fund	22,50,000	00
3. Transferred to Bonus to Staff Account	18,00,000	00
4. Transferred to Charity Account	1,00,000	00
5. Ad-Interim Dividend at Rs. 2.50 per share free of income tax paid	8,75,000	00
Total	1,00,25,000	00

The Directors recommend that the balance of Rs. 17,01,903.52 be disposed of as follows :—

	Rs.	nP.
(a) Dividend at Rs. 2.50 per share free of income-tax on the increased capital as on 31-12-1957	12,50,000	00
(b) Carry forward to the next year's account	4,51,903	52

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,

S. P. JAIN,
Chairman.

March 7, 1958.

BALANCE SHEET AS AT 31ST DECEMBER, 1957.

1956 Rs.	CAPITAL AND LIABILITIES	AMOUNT Rs nP	TOTAL Rs nP

AUDITOR'S REPORT

TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd., as at 31st December, 1957, and also the annexed Profit and Loss Account of the Bank for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the unaudited returns of the Bank's Branches in Indian Union, Pakistan and Burma none of which were visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from the Branches of the Bank ;

(d) the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our knowledge and information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance-Sheet of The United Commercial Bank Limited as at 31st December 1957 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Branch returns audited by the Statutory or other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act 1956 they are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(d) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956 in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1957 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

(ESTABLISHED 1907)

DIRECTORS' REPORT

ONE HUNDRED AND FIRST REPORT.

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1957. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 32,01,184-42 and together with the sum of Rs. 8,13,491-40 carried from the previous year's account, makes a total of Rs. 40,14,675-82.

3. Out of this sum, the Directors have made the following interim appropriations ;

	Rs.	nP.
An *ad interim* dividend at the rate of 5% and a Bonus of 1½% (both free of Income-tax) was paid which absorbed	4,22,500	00
The Directors now recommend that the following further appropriations may be made :		
To pay a final dividend of 5% and a Bonus of 1½% (both free of Income-Tax) thereby making the dividend and bonus for the year amount to 13% ...	4,30,000	00
To pay a Golden Jubilee dividend of 2% (free of Income-Tax)	1,72,000	00
To provision for Taxes	15,00,000	00
To transfer to Reserve Fund under Sec 17 of the Banking Companies Act 1949	10,50,000	00
To transfer to Sinking Fund	1,50,000	00
To transfer to Development Fund	50,000	00
To transfer to Gratuity Fund	50,000	00
To transfer to Bank's Buildings account	25,000	00
To carry forward	2,04,575	82
Total Rs.	40,14,675	82

4. The Bank rate which stood at 3½% at the beginning of this year was raised to 4% from 16-5-1957 and remains unchanged.

5. Offices of the Bank were opened during the year at Ayanavaram (Madras) Mint Street (Madras) Rajah Annamalaipuram (Madras), Saidapet (Madras), Thousand Lights (Madras) Brodipet (Guntur), Eluru Nagercoil, Srirangam, Tennur (Tiruchirapalli), Tiruchirapalli Cantonment Tallakulam (Madurai),

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank read with Sec 259 of the Companies Act 1956, four Directors Messrs. Kumararajah M. A. M. Muthiah Chettiar of Chettinad R K. Venkatachalam, R Sundram Iyer and Rao Bahadur T. S. Kachapikesa Mudaliar retire this year by rotation and they being eligible offer themselves for re-election.

7. The Directors regret to report the sad demise of Mr G Krishnamoorthy Mudaliar Director of the Bank on 21st December, 1957. Mr. C. Ramanatha Mudaliar, who was co-opted in his place died on 14th February, 1958. The Directors desire to record their great appreciation of their valuable services to the Bank.

AUDITORS' REPORT

We have audited the above Balance Sheet of the Indian Bank Limited as at 31st December 1957 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches other than those in Malaya, and with certified returns from Malayan Branches and reports that—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit ;
(b) Such information and explanations have been found to be satisfactory ;
(c) The returns received from the branches have been found adequate for the purpose of our audit ;
(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank ;
(e) In our opinion, and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956 in the manner so required :
(f) In our opinion, (i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1957
(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit ; and
(iii) proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ; and
(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and Returns.

Madras, Dated 13th March 1958

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

SIGNIFICANCE OF BANK RATE CUT

(FROM A SPECIAL CORRESPONDENT)

AS part of its campaign to regain confidence, the British Government is issuing more statistics than usual, in an endeavour to prove that no economic or financial ground is being lost. This claim need not be contested, even although it has been officially forecast that the coal industry will lose £30 million during 1958 in the absence of less uneconomical methods of production—which include long spells of absenteeism among miners. Nor need it be urged against the claim that unemployment figures for industry as a whole have shown no reduction. Clearly, however, the figure of the index of industrial output which is being maintained at what it was a year ago, has to be related to the fact that a few industries have contributed very largely to this result. Undoubtedly, one of the reasons for the reduction in Bank rate was the Government's recognition that it was advisable to provide a stimulus to some types of industry, notably building, as a help against the possible development of a trade setback into a recession. Although the Government announced, soon after the rate was reduced, that it still adhered to the policy of dear money and the credit "squeeze", its declaration was received with scepticism. There are plenty of business men who believe that a further reduction in Bank rate would be made if unemployment figures were to rise by another 100,000 or so. That they believe this is not surprising; for it has been proved that few resorts are more efficacious at the onset of a moderate business depression (not a downright slump), than expansion of credit, plus the placing of a few Government contracts.

U.K.-Russian Trade

A number of British firms have formed a "consortium" for the purpose of fostering commercial relationship with Russia. Business men can sometimes afford to ignore the dangers of ideologies, and content themselves with ensuring that too long credit terms are not manœuvred. Nevertheless, it can still be conceded that the saying that business has no politics lays claim to a constructive practicality in human affairs, against which the politician can seldom offer anything of equal value. It is essential to put on record what so many British business men feel, and some express, if a complete view is to be had of the possibilities of Anglo-Russian trade, granted an unfreezing of the political atmosphere. Meanwhile, it may be noted that Mr. L. E. Mather, chairman of Mather and Platt Ltd., the well-known Manchester engineering firm, which is a member of the consortium mentioned above, has stated that his company, together with others, is to complete a tyre-making plant for Russia. It is believed that this plant, when completed, will be technically the most advanced in the world.

Campaign against Textile Imports

An attempt has been made to widen the implications of the imports of cotton goods into the U.K. from Pakistan, India and Hongkong. It has taken the form of alleging that these imports are only part of the threat offered to various European countries, by the Asian countries as a whole. These European countries, so it is said, will have to protect themselves, presumably by concerted action against the "unfair" competition made possible by lower standards of living and sometimes the added advantage of subsidies. This is not an unfamiliar assertion, and it really just as much emphasises Asia's needs as it does the so-called emergency of Lancashire and now, it would seem, that of other European areas also. Something fresh is provided by the remark of Mr. Hirst, chairman of the Federation of Master Cotton Spinners Associations, namely, that it is a common fallacy to think that the cost of production in Lancashire can be greatly lowered by shift working. "The premium paid for the shorter hours worked on shifts," he continued, "largely negatives the advantage of more intensive use of machinery." One wonders, in the light of this, why there has been so much advocacy of shift systems by textile executives, and why, latterly, there has been so much satisfaction on their part, that the opposition of trade unionists to shift systems is decreasing. If the position is as Mr. Hirst says, and shift systems cannot reduce costs to any considerable extent, there would seem to be nothing left but to arrange textile trading between East and West on a quota system, with the maximum generosity shown towards countries where standards of living are low. Sir Raymond Streat, the former chairman of the Cotton Board, has recalled that during his lengthy term of office, no progress was made towards solving what should be the respective textile trading shares of Britain and India. He made only a slight allusion to the future, but it did not seem to be a hopeful one. Perhaps a mistake is in trying to make this question wholly a texitle issue. It might be that one ought to think in wider terms of trade, and give more heed to the fact that the imports which the Asian countries need (and which do not consist of textiles alone) have to be paid for by some means or another.

Raising Animal Products

The modern passion for experiments on animals (outside as well as inside the medical world) shows no diminution and special diets, injections, etcetera, continue on the grand scale. The objects are chiefly to increase the rate of breeding and the amount of flesh. or milking capacity of animal. There are also other technical rather than economic excellences among the aims; examples of these can be seen in the farm yards or at cattle shows. All this is said to play a most important part in rendering Britain less dependent upon foodstuffs from overseas—a process further helped by the ever more intensive use of fertilisers. That there may be unexpected as well as expected results from this biological exploiting of natural resources is frequently stressed in strictly medical and scientific journals. One of the most recent of these warnings points out that a certain amount of what is put into animals, in one way or another, passes out of their systems and often comes to be used as manure. What may happen to persons whose fairly regular diet of salads is brought to particular lusciousness by this means is too fearful to relate. Suffice it to say, that the sequel has some resemblance to what happened to several hundred human beings after too liberal courses of cortisone in the U.S.A. It is doubtful whether animal treatments and food accessories involving risks of this kind will be modified; the financial gains are too tangible—whatever may be written as a cautionary note by some auditor who had been troubled by a prophetic dream. No doubt, after the now orthodox custom relating to radioactivity, experts of the right hue have already written convincing reports to show that the unwitting intake by human beings of biological substances of an apparently alarming nature cannot be on a sufficient scale to do them the slightest harm—at least not for ten or 20 years, by which time it is confidently expected an antidote will have been discovered.

Other forms of animal exploitation which have passed into common practice include the subjecting of the animals to doses of artificial light throughout the night. This has the effect of prolonging the working day of the physical organism. There is no more going to sleep at dusk and waking at dawn. This method of stimulation started with the unfortunate battery hens (which are kept in cages) and it is said to have brought a great increase in their egg laying rate. Moreover, the hen which is not laying up to the maximum rate demanded is soon detected and meets an untimely fate. This dosing is also now used for "deep-litter" hens (which are allowed some measure of freedom) and is even practised on hens confined in backyards.

Light-Darkness Rhythm

The principle underlying these innovations has now been elucidated, and, as a result, some of the crudities and cruelties which have become associated with poultry raising may lessen. "Artificial light-darkness rhythm" is the term used to describe the principle, the application of which is being extended to new directions. Thus, it is claimed by the Wool Industries Research Association that the wool production of wethers and rams subjected to this rhythm has increased by as much as 50 percent in excess of that of the control group. It is important to note, however, that this rate of increase was shown after four months of normal outdoor grazing (battery hens are permanent prisoners). The full explanation of the phenomenon of this increased growth of wool waits upon further experiments. Before a final judgment can be made, it will have to be ascertained whether the increase could be maintained over a number of years, and, if so, without any deterioration in the quality of the wool.

Pre-fabricated Railway Stations

The decision of British Railways to erect prefabricated railway stations in which the use of plastics plays a prominent part is another indication of the extending range of plastics as a raw material. A recent exhibition showed an all-plastic kettle having, so the manufacturers said, great advantages over kettles of tin and aluminium. The plastic ball-cock for tanks, after a rather uncertain start, is now rapidly displacing the copper ball-cock. As the plastic ball-cock does not corrode, and the copper kind does (for some unexplained reason more quickly than it used to do), plastics are likely to go on from strength to strength in this field, even although the price of copper were to fall further. Plastic developments in paper manufacturing are planned. There is already the plastic carbon sheet for duplicating purposes. A trial showed that while the sheets last longer than ordinary ones, the plastic variety, being stouter, does not give as well defined an impression.

Ship, Marine, General Engineering and Foundry work of all descriptions is undertaken at competitive rates at the RAJABAGAN DOCKYARD of INDIA GENERAL NAVIGATION & RAILWAY CO., LTD.

Money

THE CALCUTTA MONEY MARKET

BIG DEMAND FOR REMITTANCE

Wednesday, 9th April.

ONCE again, the total of advances outstanding in the Calcutta money market has remained more or less stationary, with a slight tendency to decline. The requirements of the cotton mills showed a slight increase on the week as did those on account of grain and seeds storage. There was a slight fall in the requirements of the sugar mills. The most outstanding feature of an otherwise dull week was a fair jump in the demand for advances from the jute industry; this follows last week's sharp decline. Conditions have been easier in the interbank market, although the call rate is unchanged at 3½ percent.

Moderate business was done in the exchange market, with tea bills in prominence. There has been a sharp increase in remittance during the past week, largely on account of the annual demand for remittance facilities from the tea industry. Sterling ruled firm after the announcement of the sterling area's gold and dollar position at the end of March. Subsequently, the pound became easier, but the undertone remains distinctly steady.

* * * *

Bullion was steady on good demand in the face of restricted supply. The price of silver advanced from the previous week's level of Rs. 194.50 to Rs. 197, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 196. The London price was the same at 76d and the New York quotation stood at 88⅛ cents.

Gold has, in sympathy with silver, improved from Rs. 112 to Rs. 113. The sovereign at Rs. 72.75 showed a gain of 25nP.

* * * *

During the week ended 4th April, Government of India Treasury bills for Rs. 142,95,00,000 were sold in favour of the Reserve Bank.

* * * *

Increases of Rs. 40.56 crores to Rs. 1,619.69 crores in active notes and of Rs. 32.28 crores to Rs. 1,627.63 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 4th April, 1958. The currency expansion was adjusted by raising foreign securities by Rs. 44.88 crores to Rs. 216.07 crores and reducing rupee securities by Rs. 4.87 crores to Rs. 1,166.23 crores. Presumably as a result of a transfer of securities to the Issue Department from the Banking Department, balances held abroad declined by Rs. 27.47 crores to Rs. 68.34 crores. Deposits of the Government of India were Rs. 6.94 crores higher at Rs. 55.27 crores because of good tax collections while other Government accounts fell by Rs. 47.62 crores to Rs. 7.23 crores. Balances of commercial banks increased by Rs. 14.23 crores to Rs. 81.06 crores. Investments were Rs. 20.33 crores lower at Rs. 218.11 crores. Other loans and advances declined from Rs. 78.40 crores to Rs. 73.92 crores, of which advances to scheduled banks against usance bills amounted to Rs. 24.19 crores (Rs. 26.58 crores). Ways and means advances stood at Rs. 37.63 crores against Rs. 21.23 crores.

* * * *

The statement of the position of scheduled banks for the week ended 28th March, 1958, shows Demand and Time liabilities at Rs. 745.25 crores (Rs. 15.26 crores on account of borrowings from banks) and Rs 734.50 crores (Rs. 14.86 crores), compared with Rs. 740.88 crores (Rs 12.14 crores) and Rs. 724.51 crores (Rs. 16.06 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 31 lakhs and Rs. 3.92 crores to Rs. 37.21 crores and Rs. 67.78 crores, respectively. There is a rise of Rs. 10 lakhs to Rs. 440.36 crores in investments. Advances and bills discounted at Rs. 962.33 crores show an increase of Rs. 10.43 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.1 percent and 65.0 percent, against 6.9 percent and 65.0 percent.

* * * *

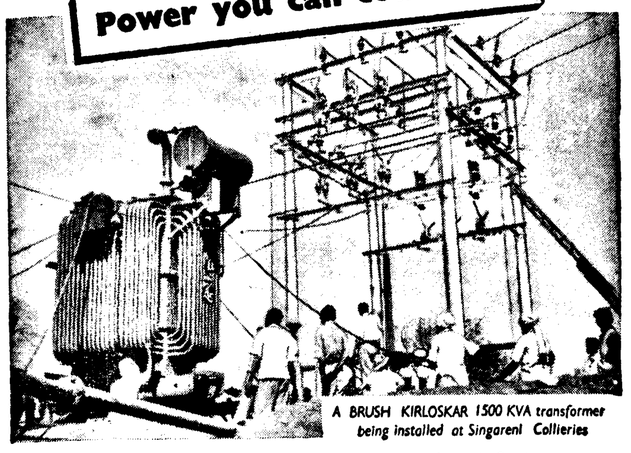
Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during December 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*: excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 5.426 lakhs, re-exports Rs. 37 lakhs, imports Rs. 6,693 lakhs; total trade Rs. 12,156 lakhs. *Treasure:* exports (including re-exports) of currency notes Rs. 97 lakhs, current coins (excluding gold coins) Rs. 10 lakhs, others nil; imports of gold Rs. 2 lakhs, currency notes Rs. 159 lakhs and current coins (excluding gold coins) Rs. 1 lakh. *Balance of Trade:* the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 1,232 lakhs.

* * * *

There is a net profit of Rs. 59.99 lakhs for the UNITED COMMERCIAL BANK for the year ended last December, including Rs. 29,419 brought in. A dividend of Rs. 3.75 a share has been declared to absorb Rs. 15 lakhs. Reserve fund is allocated Rs. 19 lakhs. The taxation provision amounts to Rs. 18½ lakhs, leaving a carry-forward of Rs. 49,432. Deposits improved by Rs. 8.92 crores to Rs. 61.07 crores. Cash was higher at Rs. 8.28 crores against Rs. 7.51 crores. Investments rose from Rs. 19.43 crores to Rs. 19.94 crores. Advances declined from Rs. 38.45 crores to Rs. 37.69 crores.

* * * *

The PUNJAB NATIONAL BANK has made a profit of Rs. 1.17 crores, including Rs. 6,20,272 brought in, for the year ended last December. An interim dividend of Rs. 2.50 a share was paid and the final dividend has been declared at Rs. 2.50 a share on the increased capital. Allocations include Rs. 50 lakhs for taxation provision and Rs. 22½ lakhs for reserve fund, leaving a carry-forward of Rs. 4,51,904. Cash was shown at Rs. 24.49 crores. Investments declined from Rs. 48.30 crores to Rs. 38.83 crores. Advances increased from Rs. 54.86 crores to Rs. 67.96 crores.



* * * *

The profit of the INDIAN BANK LTD. has amounted to Rs. 32.01 lakhs for the year ended last December. Bringing in Rs. 8,12,491, there is a balance of Rs. 40,14,675. The dividend declared is 13 percent, including an interim dividend of 5 percent and a bonus of 1½ percent. A golden jubilee dividend of 2 percent has also been declared. Taxation provision gets Rs. 15 lakhs, reserve fund Rs. 10½ lakhs and sinking fund Rs. 1½ lakhs. The carry-forward is Rs. 2.04.375. Deposits were Rs. 2.65 crores higher at Rs. 35.21 crores. Cash was shown at Rs. 8.18 crores. Investments amounted to Rs. 10.04 crores against Rs. 9.99 crores. Advances declined from Rs. 23.69 crores to Rs. 19.98 crores.

* * * *

The Indian branches of the HONGKONG AND SHANGHAI BANKING CORPORATION have made a loss of Rs. 4.79 lakhs for the year ended last December. Deposits amounted to Rs. 11.30 crores. Cash totalled Rs. 1.28 crores. Investments stood at Rs. 1.65 crores and advances amounted to Rs. 9.77 crores.

STOCK MARKET MAINTAINS FIRM TREND

OPTIMISM ABOUT BUDGET

London, 9th April.

THE stock market during the past week maintained the firm trend which had developed earlier. It recorded an all-round advance under the lead of gilt-edged securities, which established widespread and substantial gains. A number of factors combined to account for the rise which took place in spite of a continuous fall on Wall Street under the influence of further adverse U.S. business news and the strike threat by London Transport busmen. The spate of Government White Papers over the past few days strengthened recent Budget hopes, while the trend towards lower interest rates encouraged expectations of a further reduction in the British Bank rate in the not-too-distant future. In addition, the news that the Government had anti-recession measures ready if required by the economic situation, and some good company news, were helpful factors, although business was restrained by the Easter holiday. Demand broadened in gilt-edged and industrials. The advance was assisted by an acute shortage of stock at the prevailing price levels. Gilt-edged showed widespread gains extending to over a point. Foreign bonds and rails were subdued while dollar stocks were somewhat irregular. U.S. dollar stocks receded in sympathy with Wall Street, but Canadian issues advanced following the result of the Canadian general election, although demand was rather selective. Industrials rose on a broad front to record extensive gains. South African gold shares improved on selective demand, but diamonds eased on the lower sales figures. Copper shares lost ground in sympathy with New York and other base metals were dull. Rubbers were quietly firm on dividend news. Tea shares maintained their recent firm trend and both Ceylon and Indian issues showed further useful improvements.

The Money Market

A heavy bill take-up in a shorter working week created difficult conditions in the money market during the past week. Credit was in short supply throughout due to end-month and end-fiscal-year influences, coupled with a large outflow of notes for holiday requirements. The rate for non-regular money ranged between 5 percent and 5⅜ percent. In spite of a large amount of assistance from the authorities, the market had to go on two occasions to the Bank of England and borrow a small amount for the week at the penal Bank rate term of 6 percent. There was a good turnover in June and hot bills at 5⅛ percent and 5⅛ percent, most of the business being done at the latter rate. In spite of the tightness of money, discount houses, in order to secure a good supply of new bills, raised their main bid at last Thursday's tender by 6d to £98 12s 11d, with the result that there was a fall of approximately ⅜ percent in the Treasury bill rate to £5 8s 6.30d percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "Gilt-edged securities reached their best level for seven months. A new upward movement from a sound base is probable. Industrials are approaching the February high where resistance to a further advance might be met in the absence of fresh impetus. Gold shares show a favourable pattern. Coppers have declined after being buoyed up by the strength of the metal because of the Chilean strike news. Oils are resisting at lower levels. The penetration of the recent resistance points in Wall Street indicates that the recent sideways movement has been resolved in favour of the bears for the time being. The London stock market, which has been remarkably firm, will be pre-occupied with such domestic matters as the Budget and labour problems."

Hongkong Gold Quiet

The Hongkong gold market was very quiet and trading was featureless during the past week because of the Easter holidays. Reports of heavy arrivals at Macao were the main reason for the easy undertone, according to bullion traders. After opening at $(H)254¼, prices dropped to $(H)252 before rallying slightly towards the close.

Oils and Oilseeds Firm

A reported rise of around £8 a ton in the shipment rate of Brazilian castor oil to the United States stirred up the oil and oilseeds market during the past week and an active trade developed on ex-tank U.K. terms including No. 1 grade at £127 and No. 3 grade around £123 a ton for June delivery in Liverpool. At the same time, Indian oil remained out of the trading orbit, with an overnight reduction in the forward selling prices of Hull millers bringing English oil on to a fully competitive basis with Indian oil. English commercial is now available for June delivery at £123, ex-tank Hull. European consumers bought moderate quantities of Straits bulk coconut oil on April and early May boats on the basis of £99½ c.i.f. Rotterdam. Italy was a buyer of Straits oil but only wanted prompt shipments for which the market was assessed at £101 buyers and at £102 sellers. Afloat parcels of Nigerian groundnut oil were sold to the United Kingdom at £104 c.i.f. but interest in forward shipments remained negligible. Re-sellers of Argentine crude oil handled a limited business to the Continent at several dollars under shippers' prices with May-June parcels quoted around $280 a metric ton, c.i.f. The Nigerian Board reportedly accepted £60⅞ c.i.f. full terms for Nigerian groundnuts although some traders doubted whether this business was shipment as far ahead as their quoted July-September position. In spite of firm advices from origin, European levels for Philippines copra slightly gave ground with April-May shipments on stamped document terms trading at $191 c.i.f. and further buyers were in evidence but mostly at a shade less. Palm kernels weakened in an indifferent market with Nigerian re-sellers offering June-July shipments down to £50⅜ c.i.f. net terms. Continental buyers were said to be bidding £92½ c.i.f. for Japanese crude soyabean oil but most sellers were inclined to hold for £93.

U.S. Cotton Imports

The U.S Tariff Commission has cancelled a hearing on requests for an increase in the import quota for extra long staple cotton. Importers and textile mills, who sought the increase, have dropped their request for the time being.

U.K. Imports of Raw Cotton

Imports of raw cotton into Liverpool during the past week were 18,266 bales, including 12,721 bales from the Sudan and 3,296 bales from the United States. Cotton at present afloat to the United Kingdom is 63,862 bales, including 30,680 bales from the United States, 6,651 bales from Mexico and 6,626 bales from Iran. Forwardings to mills totalled 15,016 bales, consisting of supplies from the United States, Sudan, Nigeria and Mexico.

SETTLEMENT CONSIDERATIONS HALT RECOVERY MOVEMENT

TECHNICAL POSITION SOUND

Wednesday Evening.

THE speculative fervour that has pushed Indian Irons up more than Rs. 2 in a little over a month, appears to have been halted; the market no doubt needed a breathing space for consolidating the gains achieved earlier. The approach of the settlement, and the Good Friday holiday, kept the volume of business down. Most bears appear to have covered their positions and there are no indications of any revision of the optimistic expectations that started the present rise. The bouts of profit-taking around the higher levels have served to eliminate weak holders. Technically the position is sound and the undertone is healthy. The revival of investment enquiry continues and brokers resuming work after the Easter holidays found an exceptionally large volume of business awaiting disposal. Several top-class investment counters have recorded advances, including Metal Box, Indian Aluminium, Dunlop Rubber, Textile Machinery, Chitavalsah Jute, Guest, Keen, Williams and Raneegunge Coal.

The jute section was reasonably steady but there has been a slight trimming of values. Investment enquiry was not large and such business as was put through was mainly in the nature of local speculative deals. Investors will need a lot of convincing before they look on jute shares with favour again.

The earlier revival of interest in tea shares has slackened reflecting disappointment at the delay in announcing any relief in the export duty. Uncertainty has again revived about whether the relief, when it comes, will be an overall reduction in the duty or apply only to common teas.

Coal shares were steady, but with no great activity. The delay in the decision about an increase in selling prices has resulted in a tendency to hold off until something definite is known about this matter.

The Birla group of shares on the forward list, Orient Paper and Textile Machinery, were steady. But the Mundhra shares were neglected. Jessops dropped to Rs. 19.87 due to the Government probe into the company's working, but there was a slight recovery at the close to Rs. 20.12.

The smart rise in Indian Aluminium from Rs. 12.75 to Rs. 13.50, despite the cut in dividend by 4% to 6%, is a striking tribute to investors' confidence in the growth prospects of the company.

Reports from Bombay and Calcutta indicate that the response to the Greaves Cotton equity issue is satisfactory. The issue will open officially on 14th April.

The gilt-edged market moved from strength to strength with enquiry concentrated mainly on short and medium-dated issues. The outstanding feature was 3% Conversion Loan 1946-86, which advanced from Rs. 71.05 to Rs. 71.20 on bear covering. The Reserve Bank withdrew from the market on Monday as sellers of 3½% 1964 and the quotation immediately improved from Rs. 98.10 to Rs. 98.18. Brokers found it difficult to execute buying orders owing to the acute shortage of scrip.

Preference shares continued to attract investment support owing to the satisfactory yields offered, in some cases, as high as 7½% tax-free.

Here is a chart showing the more important price movements during the week under review:

	Opening 3rd April, 1958 Rs.	Closing 9th April, 1958 Rs.
Bengal Coal	220	218
Raneegunge Coal	11.06	11.37
Kesoram Cotton	11.37	11.50
Calcutta Electric	13.75	13.69
Burn & Company	333	327
Guest, Keen, Williams	30.37	30.75
Indian Iron & Steel	21.53	21.25
Jessops	20.75	20.12
Textile Machinery	18.10	18
Alliance Jute	61	67
Howrah Jute	14.62	14.31
Indian Copper	3.24	3.18
Orissa Minerals	23.81	25.12
Angelo Brothers	18.44	18
Dunlop Rubber	24.75	24.75
Indian Aluminium	12.75	13.50
Metal Box	27.25	27.62
National Carbon	24.37	25.15
Titaghur Paper	35.25	35.37
Orient Paper	28.10	28.30
Cawnpore Sugar	10.75	10.62
Brooke Bond Tea	16.50	17.25
Hasimara Tea	21.25	21.62
Tezpore Tea	16	16.12

* * * *

The profit of the BURRAKUR COAL COMPANY has amounted to Rs. 7.24 lakhs for the half-year ended last June, after allocating Rs. 8.51 lakhs (Rs. 5.78 lakhs) for taxation provision, Rs. 2.80 lakhs (nil) for wealth tax and Rs. 5.31 lakhs (Rs. 5.77 lakhs) for depreciation. The previous half-year's profit amounted to Rs. 1.99 lakhs. Bringing in Rs. 92.891, there is a balance of Rs. 8,17,048. Amounts of Rs. 75,000 and Rs. 70,000 have been transferred from general reserve and aerial ropeway reserve, respectively. The ordinary dividend has been maintained at 3¾ percent. Important allocations include tax contingency reserve Rs. 77,000 (Rs. 45,200), debenture redemption reserve Rs. 25,000 (same) and development rebate reserve Rs. 65,000 (Rs. 18,000). The carry-forward is Rs. 95,339. The directors state that a directive was received from the Government sanctioning the company's plans for expansion on a modified basis. "Pegging targets for coking coal were increased by 10 percent overall". The transport position improved and stocks were reduced to 15,643 tons from 25,385 tons. Raisings increased from 466,393 tons to 483,682 tons and despatches from 472,023 tons to 493,324 tons.

* * * *

The profit of the NATIONAL CARBON COMPANY (INDIA) LTD., has declined from Rs. 90.43 lakhs to Rs. 81.32 lakhs for the year ended 25th December, 1957. The dividend has been reduced from 15 percent to 14 percent, including an interim of 7½ percent. Allocations include depreciation Rs. 12.03 lakhs (Rs. 9.12 lakhs), development rebate reserve Rs. 5.40 lakhs (nil), income tax provision Rs. 37.40 lakhs (Rs. 4.45 lakhs) and wealth tax Rs. 1½ lakhs. The carry-forward is Rs. 28,42,424 against Rs. 21,19,752 brought in. The directors state that during 1957 the Eveready Flashlight Company, a division of the National Carbon Company (India) Ltd, completed its factory buildings in Lucknow. At the close of the year under report, the major portion of the production equipment had been received and installed. It is expected that this unit will reach the rated output during 1958. As flashlight cases from the plant become available for sale, it is expected that demand for the company's battery products will rise. The construction of the chemical plant involving a capital investment of over Rs. 3.5 crores was delayed by the restriction placed on imports of capital goods, other than on a deferred payment basis, in the early part of 1957. It is reported that satisfactory arrangements have now been made for foreign credits to the full extent required to construct and equip this unit.

Meanwhile, negotiations for the supply of raw materials have reached an advanced stage. It is planned to commence construction during 1958 and the plant will be completed in two years' time. The plant is designed to produce a wide range of organic solvents, esters and polyethylene resins, all of which are required in increasing quantities as raw materials by many of the country's major industries. The Government has approved the manufacturing programme for this unit and all necessary licences have been issued in favour of the company for the import of capital goods and services required for its completion. During 1957, agreements were concluded for dollar and sterling credits equivalent to Rs. 1.25 crores against the foreign exchange requirements of the chemical plant to be constructed at Trombay (Bombay). The company has completed negotiations for the issue of Rs. 1 crore of debenture stock in connection with the financing of this major undertaking. To meet the country's essential requirements until the chemical plant comes into production, the company has made arrangements to obtain under a loan a wide range of chemical products and polyethylene resins. "Funds developed from the sale of these materials will be used by your company to finance partially internal expenditure for the construction of the chemical plant."

* * * *

The profit of the BUCKINGHAM AND CARNATIC COMPANY has declined by Rs. 3.89 lakhs to Rs. 59.60 lakhs for the year ended last December. Bringing in Rs. 2,28,220 and other miscellaneous receipts, there is a balance of Rs. 50,07,016. The ordinary dividend has been maintained at 10 percent, including an interim of 4 percent. Debenture redemption fund is allocated Rs. 5 lakhs (same). Development rebate amounts to Rs. 8.10 lakhs and deferred taxation reserve receives Rs. 12.10 lakhs. The taxation provision is Rs. 3½ lakhs higher at Rs. 18½ lakhs, leaving a carry-forward of Rs. 1,92,474. The directors mention that "the recent reduction in excise duties coupled with the replacement of sales tax by additional excise duty has brought new hope to the industry, but it is too early to assess whether these concessions will prove adequate and enable the industry to return to normal trading conditions."

* * * *

BURMA MINES LTD. has declared a dividend of 1½d a share, free of income tax, for the year ended last December. The profit has declined from £240,725 to £129,459. Providing for taxation and making other adjustments, a balance of £25,697 is carried forward, increasing revenue reserve to £137,475.

* * * *

Tata Industries Private Limited, managing agents for the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works in Jamshedpur during March 1958 was: pig iron 94,800 tons: steel ingots 100,200 tons; semis for sale 16,100 tons and finished steel 55,200 tons.

* * * *

The output of the INDIAN IRON AND STEEL COMPANY during the quarter ended last March, compared with the previous quarter, was as follows: pig iron 199,839 tons against 190,484 tons; steel ingots 133,563 tons against 125,194 tons; and semi-finished steel for sale 26,287 tons against 19,210 tons. Finished steel production decreased from 82,936 tons to 80,214 tons.

Bombay Market

OPERATORS STILL IN BUOYANT MOOD

TATA STEEL REMAIN FIRM

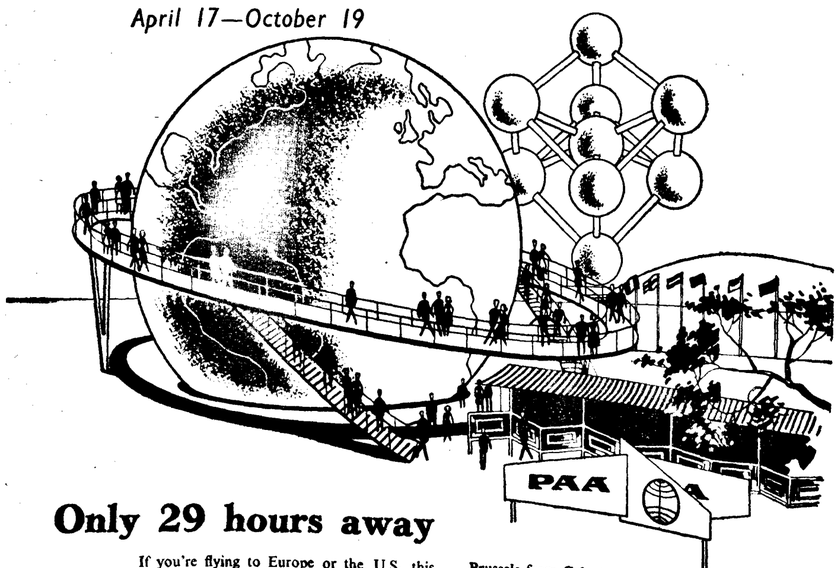
Wednesday Evening.

THE Bombay stock market was firm last week on sustained bull support. Equity share prices forged further ahead, in spite of occasional profit-taking, because of excellent corporate news. Operators were encouraged by the belief that the stringent proposal relating to development rebate might be toned down to relieve hardship on industry. The market was officially open on Wednesday, but, due to the death of a member, no business was done.

Tata Steel ended higher at Rs. 182.25 in spite of a decline in output for the year ended last March. The fall was due to interruption in normal working because of the progress of the expansion schemes. The current year's output is expected to improve substantially as a major portion of the expansion programme is likely to be completed soon. Indian Iron were idle around Rs. 21.28 on technical considerations. Premier Construction improved to Rs. 180.50 on buying from knowledgeable quarters, and Tata Locomotive soared to Rs. 161.50 on sustained investment support. Alcock Ashdown were bought at Rs. 280. Automobile shares reacted fractionally on profit-taking and Premier Automobile changed hands at Rs. 84. Hindustan Motor declined to Rs. 7.22.

Cotton textile shares disclosed all round gains on prospects of improved offtake. Bombay Dyeing closed at Rs. 56.20 and Kohinoor were bought at Rs. 283.50. Century declined to Rs. 434 on selling pressure because of the company's decision not to issue bonus shares for the time being. The directors think that it is not worth capitalising reserves by paying the heavy bonus shares tax. Svadeshi were taken at Rs. 181.75 and India United Ordinary were transacted at Rs. 9.72. Apollo gained fractionally at Rs. 1.84.

Miscellaneous shares were steady, and Associated Cement improved to Rs. 152.50. Digvijay Cement were done at Rs. 142.50. Steamship company shares were firm in the belief that substantial financial assistance will be available from the Government for the purchase of new tonnage. Scindia Steam improved to Rs. 17.56 and Great Eastern Shipping came to hand at Rs. 20.16. Sugar shares were steady, and Belapur were bought at Rs. 246. Phalton were transacted at Rs. 141.50. Mining shares were subdued on reports of a strike in the mines of the Indian Copper Corporation Ltd. Indian Copper reacted to Rs. 3.18 and Shivrajpur Syndicate were placed at Rs. 97. Tata Chemical attracted investment interest at Rs. 14.24 and National Rayon increased to Rs. 224.75 on prospects of expansion in activity. Bombay-Burmah reacted to Rs. 554.50, as it was rumoured that the company will not after all issue bonus shares, by capitalising reserves, in the near future.



Banking shares were steady, but business was restricted. United Commercial Bank changed hands at Rs. 63.50 and Bank of India were transacted at Rs. 130.50. Selective buying in insurance shares took place, and New India Assurance were indicated at Rs. 48.

Business in electricity supply company shares was restricted, with sellers reserved. Tata Power were taken at Rs. 1,212.50 and Ahmedabad Electric were quoted around Rs. 98.30.

Make sure you see THE EVENT OF OUR CENTURY—

Brussels World Fair

April 17—October 19

Only 29 hours away

If you're flying to Europe or the U.S. this summer, why not stop over at Brussels and see the World Fair? Symbolized by the Atomium, the Brussels World Fair will afford the nations and people of the world the opportunity to take stock of their resources and the world's probable future in a great universal exhibition. Pan American invites you to visit its exhibit at the Fair to see the future of Air Transportation.

Make your reservations now! Only Pan American offers you direct service to Brussels from Calcutta. You can fly there in less than 29 hours aboard Pan American's giant Flying Clippers®. Take your choice of tourist-fare *Rainbow* or first-class *President* service—each the most popular in its class.

For reservations, call your Travel Agent or Pan Am—over 800 offices throughout the world.

South Karanpura—Rs. 10/00—10/12—9/81—9/87—(8/25).
Talcher—Rs. 1/62—1/81—1/62—1/81—(1/75).

CANADIAN NEWSPRINT OUTPUT DECLINES

RAPID INCREASE IN PRODUCTION CAPACITY

(FROM A CORRESPONDENT)

THE Newsprint Association of Canada has issued *Newsprint Data: 1958*, which provides details about the distinctive features of the industry in 1957 and 1958. It summarises its position as: "Sustained demand, adequate supply and a standby reserve of productive capacity. After 12 years of rapid expansion of capacity, and of equally rapid increases in consumption, capacity has sharply risen and has established a commanding lead". Canadian newsprint output declined sharply during November and December due to the strike in four west coast mills. Production a day showed a significant decrease in the last two months of 1957 compared with the corresponding period of the previous year. There are indications that this trend will continue during this year as part of the overall pattern of business activity. It is at present following the 1953-54 pattern of a decline in consumption followed by a compensating spurt and a rapid rise. If this trend continues the mills will be in a position to meet any unexpected demand as there are indications that the industry may operate as low as 88 percent of the production capacity during 1958.

The latest information from the Association and elsewhere suggests that the estimated capacity for 1958 might rise to 7.15 million tons compared with 7.76 million tons in 1956, while the estimated output might decline to 6.2 million tons in 1958 compared with 6.5 million tons in 1957. Judged by figures for first ten months of 1956, the production of fine paper in Canada during 1957 was comparable with that for 1956. Exports, however, declined and it looks as though the year-end figures might be reduced to the 1956 or to a still lower level. This is likely to be the pattern for the coming year also with little change in overall production and export prospects.

Canadian Trade with the Middle East

Commenting on Canada's trade with the Middle East, Mr. W. D. Wallace, Area Trade Officer for Asia, says that the significant feature during 1957 was the fact that, in spite of the Suez crisis, exports would be equivalent to the 1955 and 1956 values. On the other hand, imports, particularly oil, showed a substantial decline compared with the two previous years. Exports to Israel, Saudi Arabia, Iran, Iraq, and the Lebanon account for nearly 70 percent of Canada's sales to the Middle East. During the past year, there was a substantial increase in the value of shipments to Iran, Iraq and Israel. On the other hand, exports to Egypt, Saudi Arabia, Syria and Turkey were below the 1956 figures. The principal products exported to countries in this area include wheat, asbestos, milled fibres, aluminium, lumber, agricultural equipment, drugs and chemicals, automobile tyres, oil stoves and lamps, washing machines, and motor-vehicles and parts.

Canadian imports from the Middle East come primarily from Saudi Arabia, the Lebanon, Israel, Syria and Iran. All the countries, except Egypt and the Sudan, made smaller shipments to Canada in 1957, and there was a large decline in shipments of crude petroleum from the Lebanon, Syria and Saudi Arabia. Canadian imports of dates, nuts and oriental carpets from the Middle East also declined, but not as much proportionately. The country has not a large share of the Middle East market, and in view of political conditions, the outlook for much greater exports is not promising. But good opportunities exist in the Lebanon, Iraq, Iran and the Persian Gulf centres of Kuwait and Bahrain. These markets are almost free of trade controls although they are very competitive. But they can be developed further by aggressive export promotion measures.

Credit Terms for Wheat Sales Abroad

The financing of several Canadian wheat export sales on credit has been backed by the Toronto-Dominion Bank, implementing arrangements for a line of credit for wheat sales abroad, the Canadian Dow-Jones group reports. Other banks there have indicated their willingness to help finance wheat sales. The promise-to-pay notes issued and guaranteed by the importing countries are discounted by the Bank at 5½ percent. A year and a half ago, Canadian chartered banks, in accordance with the wishes of the Bank of Canada, ceased issuing long-term credit. About a year ago, the latter permitted the former to issue long-term credit in relation to wheat sales. The Bank of Montreal conferred with other chartered banks in December 1957 for reopening the facilities for financing Canadian wheat sales abroad, and subsequently advised the grain trade that it would undertake the financing of these sales.

Australia Bans Import of Printed Textiles

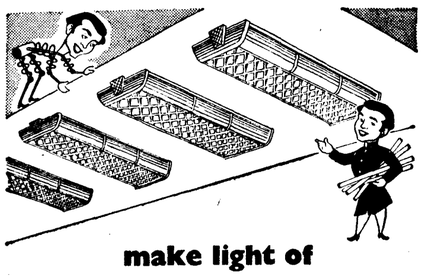
Special measures by the Australian Government to safeguard the printed cotton textile manufacturing industry pending a Tariff Board report on it have been announced by the Minister for Trade, Mr McEwen. He says that no further licences will be issued to import printed cotton textiles from any source until the Government receives the report. The Government's decision has followed a comprehensive review of the overall supply and demand position. As a direct result of recent measures to liberalise import licensing, the overall level of imports of these textiles from all sources has increased substantially. It has been argued that in the absence of appropriate action, the local industry will be threatened with serious damage.

The existing licences taken out for these textiles show that imports might amount to 70 million square yards during 1957-58 against 38.5 million square yards in 1956-57. This sudden increase in imports has caused concern to an industry which does not enjoy tariff protection and at a time when it is awaiting the outcome of representations it has made to the Tariff Board for protection. It is only after a careful consideration of these developments that the Government has announced its decision. Mr. McEwen says that while G.A.T.T. does not authorise the use of import restrictions for the purpose of affording protection on a continuing basis, it does provide that emergency action may be taken to deal with a situation where a product is being imported in such increased quantities as to cause or threaten a serious injury to local producers.

The Australian Government, in the next licensing period, beginning from 1st April, will partially lift the total ban on the issue of further import licences for printed cotton textiles. This decision is contained in an instruction of the Customs Department. It says that for the April-July period licences will be issued equal to the square yards imported by a "holder in the corresponding period of last year." But to conserve foreign exchange for the remainder of the current financial year not more than half of this quota can be imported before 1st July. In cases where printed cotton textiles were in transit from overseas when the ban was imposed but for which valid licences are not held, importers can obtain licences from Customs agents. These licences will be debited against their April-July quota.

Coal Exports

An export group of five New South Wales collieries, formed in mid-October last year, has already exported 25,000 tons of coal; a further 10,000 tons will be shipped shortly. Shipments so far have comprised spot cargoes consigned to Korea and Hongkong, but enquiries have come from places as far away as Ceylon, Saigon and the Argentine. Australia's coal exports have been rising, particularly in the nine months ended last September, when they totalled 590,551 tons, the highest ever recorded for the period. During the same period, increased tonnages were shipped to Japan, New Caledonia and Korea. The formation of an export group by a number of companies, each operating the same high grade Greta seam, is unique. The collieries have grouped together to avoid separate shipments of smaller volumes, which would have been uneconomic. Accordingly, they pooled their surplus coal output for orderly supplies to export markets.



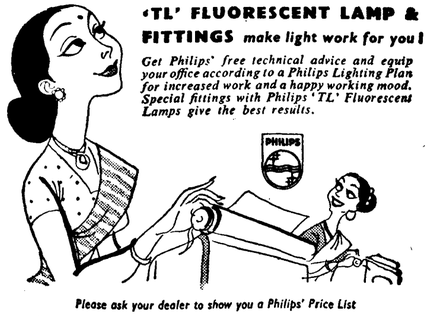
Recession in New Zealand

New Zealand is in the grip of a recession, the Finance Minister, Mr. Nordmeyer, has said in Wellington. But he adds that the country's position is sound, the economy is stable and it has a bright future. "We must anticipate a low price for dairy products for some time," the Minister says. There have been temporary seasonal falls before, but there is no evidence to justify an increase in prices in the near future. It was thought that the price for wool might average 48d a lb, but it now seems that it will be 42d—a difference of £15 million.

Similarly, one of the most alarming trends in recent weeks is the fall in lamb prices. The country's income from this source this year might decline by £8 million. "As far as I can see—and I hope I am wrong—there is no immediate prospect of an improvement which could justify our opening the door to a freer flow of imports. It is unwise to imagine New Zealand could improve overseas funds within the current year." Although prices for butter and cheese have declined and those for wool and meat have followed suit, they are good, though not as high as producers would like. The fall in export prices has made import controls inevitable. New Zealand must curb her propensity to spend since she can no longer afford to pay for goods at previous levels of prices.

"Dumping" of foreign butter on the British market was responsible for New Zealand's loss of £13 million on dairy sales during last season. This is why New Zealand is asking the British Government to impose anti-dumping duties. The industry claims that "tremendous quantities" of butter were dumped in Britain by countries such as Finland, Sweden, Eire and the Argentine in flagrant violation of both the letter and spirit of G.A.T.T. These countries charged very high prices from their own people and dumped the surplus in Britain. In Finland last year, local consumers were charged over 6s a lb, while the same butter was sold at 2s 5d a lb in Britain. The difference between the two prices was later reduced by exchange manipulations, but it was still nearly 2s a lb.

Sweden, Eire and Argentina are accused of dumping butter at prices between 1s and 2s a lb below what they charged their own consumers. Subsidies paid by their Governments to foreign producers had been increased each time the price of butter declined in Britain. Market evidence suggests that if the dumping of butter in Britain ceases immediately, any loss incurred on sales of New Zealand butter will be reduced to manageable proportions.



make light of your work...

See her fingers twinkle over the keys, her eyes sparkle, a happy self-reliant smile on her face. Naturally! She works in an office where the lighting has been planned by Philips. Her work is clean, tidy, faultless—and always up-to-date. You can bring your office up-to-date too—banish strain and fatigue and the dreariness of working under ill-planned, ineffective lighting—by calling in Philips and letting them plan your office lighting.

PHILIPS

'TL' FLUORESCENT LAMP & FITTINGS *make light work for you!*

Get Philips' free technical advice and equip your office according to a Philips Lighting Plan for increased work and a happy working mood. Special fittings with Philips 'TL' Fluorescent Lamps give the best results.

SCHEME FOR SUGAR EXPORTS EXPECTED SOON

RISE IN COST ESTIMATES OF STATE STEEL WORKS EXPLAINED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Indian Sugar Mills Association held its annual meeting here last week, inaugurating which the Food and Agriculture Minister, Mr. Ajit Prasad Jain, said: "It was for the first time last year that we were able to export a large quantity of sugar totalling 153,000 tons. It is a matter of great satisfaction to all concerned. Besides other things, it has given us very valuable experience in as much as we now know better about the sugar requirements of our neighbouring countries, and also about our shortcomings and difficulties. While it is true that the Association has been able to sell Indian sugar in competition with the well-known British Refined and Formosan sugars, these sales have generally been made at prices £4 to £6 a ton lower than the then prevailing prices of British Refined and Formosan sugars. I see no reason why our sugar should sell at such a heavy discount when Formosan sugar which is also a direct consumption sugar like ours, can fetch more or less the same price as British Refined. Last year, it was possible to export sugar without loss because of the sharp rise in world prices from the level of about £40 to £70 a ton due to the Suez crisis and the failure of the crop on the European continent and in Cuba. The prices of world sugars have now returned to the normal levels. On the basis of prevailing prices, sugar can be exported from this country only at a loss of about £20 a ton. The two schemes submitted by your Association for exporting sugar at a loss have been carefully considered by the Government. It is not possible to allot quotas for export under the existing laws. The question of enacting suitable legislation for the purpose is receiving the Government's consideration I expect that the scheme for export will soon be finalised and it should then be possible to resume exports."

During the first plan period, the emphasis was on employment. Every Indian industrialist pleaded his case on the grounds of its employment potential. Since then, the emphasis has been shifted to foreign exchange. It is thus not surprising that the outgoing president of the Indian Sugar Mills Association has stressed the case for sugar exports in terms of their foreign exchange earning capacity. He has said: "In fact, as the Prime Minister said in the course of his Budget speech last February, 'We must try to produce more, export more and save more to find the resources for implementing the plan.' Already, last year, we earned over Rs. 12 crores of foreign exchange by export of sugar." The other important points of the outgoing president's speech were as follows:

(1) Sugar production has gone up from 1,000,100 tons in 1953-54 to 1,862,000 tons in 1955-56 and 2,026,000 tons in 1956-57. It should be presumed that this increase is largely due to the increase in the installed capacity of the sugar industry, which in its turn, is due to the imports of sugar-making machinery from abroad, costing foreign exchange.

(2) The sugar factories have to pay Rs. 10-11 a maund as excise duty, Rs. 2 as cane cess and about 8 annas as the co-operative society's commission, making a total tax burden of Rs. 13-3 a maund.

(3) The fast-growing *khandsari* industry is developing under artificial conditions created by the growing tax burden on factory sugar, compared with the complete immunity of *khandsari* units. This has given a spurt to *khandsari* and its production is expected to reach 300,000 tons this year. The cottage industries have a definite place in the industrial set-up. But they are meant to supplement and not supplant the work done by large-scale industries.

Czech Special Account with State Bank

Under the letters exchanged between the State Trading Corporation of India and Czechoslovak Foreign Trade Corporation, the State Bank of Czechoslovakia will open a special account with the State Bank of India or any other commercial bank in India into which payments in Indian rupees for imports from Czechoslovakia will be credited and will be utilised by the Czechoslovak Foreign Trade Corporation for the purchase of specific Indian goods mutually agreed upon. Similar agreements have been made with the Governments of East Germany, Hungary, Yugoslavia, Rumania and Poland. The "special account" is on a reciprocal basis and will be credited and debited with the rupee payments concerning (1) contracts for goods including commission for scheduled goods, and (2) travel and staying expenses of commercial, industrial and technical experts, and expenditure on exhibitions and fairs, provided the total expenditure of these items in a year does not exceed 7½ percent of the imports and exports financed through the "special account" in that year, or Rs. 5 lakhs. The "special account" will not affect the operation of other accounts established or to be established in terms of the trade agreement between India and Czechoslovakia. All contracts concluded between the two Governments or between Indian importers and exporters will be registered with the State Trading Corporation of India. Such registration will be effective only for record and statistical purposes and will be without any agency or commercial obligation to the Czechoslovak Foreign Trade Corporation except in the case of contracts made directly with or through the State Trading Corporation of India.

Import of Canadian Metals

The Canadian Government has agreed to give India 10,000 tons of aluminium, 7,500 tons of copper and 500 tons of nickel to be financed through the Colombo Plan. The allocation of funds for these metals will be based on their current prices. If the prices go up, the quantities to be supplied may have to be modified to keep within the total allocation, namely, Rs. 5.75 crores. The actual consumers of these metals, who will be allowed to import them, are given the option of indicating the prices on the basis of the average in the London Metal Exchange for the month of shipment or the London Metal Exchange prices prevailing on the date of shipments. However, the Canadian Government will satisfy itself that the prices of the Canadian suppliers for the material are reasonable and competitive, before approving the orders for supply. The actual users who will be importing these metals will have to deposit in the Canadian Government's account, to be opened with the State Bank of India, New Delhi, the rupee equivalent of the f.a.s. cost of the materials disbursed by the Colombo Plan Administration, Ottawa, to Canadian suppliers. The rate of exchange will be the selling rate of the Canadian dollar on date of shipment as quoted by the Reserve Bank of India. Imports of these metals are to be completed as early as possible.

Officials Given Charge-sheets in L.I.C. Enquiry

The Principal Secretary, Central Ministry of Finance, Mr. H. M. Patel, the Chairman of the Life Insurance Corporation, Mr. G. R. Kamat, and the Managing Director, Mr. Vaidyanathan, have been given their charge-sheets in connection with the Life Insurance Corporation's dealings in the Mundhra group of shares. They have been directed to submit their explanations within 15 days, after which the Vivian Bose Commission will commence its enquiry. According to the lobbies, the Prime Minister has directed that all relevant papers and files in connection with this enquiry should be made available through the Secretariat of the Union Cabinet. As the enquiry is to be held in camera and it has never been the practice to publish charge-sheets, their exact wordings will not be available. But this enquiry is in the nature of a follow-up to the Chagla Commission's findings. The Chagla report has said that "legally and technically, the responsibility for the transactions was that of the Corporation and of its executive officers, Messrs Kamat and Vaidyanathan. In law and in the absence of any direction in writing, it was the duty of the Corporation to make investments of its funds. In fact, both Mr. Vaidyanathan and Mr. Kamat failed to exercise their responsibility. Mr. Vaidyanathan completely surrendered his judgment to Mr. Patel. Mr. Kamat was overawed by his senior colleague in service and failed to satisfy himself about the real nature of the transaction. He failed to consult the Investment Committee. He said that he was not even aware of the regulation which made it incumbent that the Investment Committee should be consulted. Formally, the action was that of Mr. Kamat. It may be said, therefore, that although the hands were the hands of Mr. Kamat, the voice was that of Mr. Patel. It was a grave error of judgment on the part of both Mr. Kamat and Mr. Vaidyanathan to have been overborne by Mr. Patel. There can be no doubt on the evidence that Mr. Patel was primarily concerned with this transaction. Negotiations over the transaction were carried on by Mr. Patel. It is also clear from evidence that he took leading part in the discussion which took place between Mr. Patel, Mr. Kamat, Mr. Vaidyanathan and Mr. Mundhra".

The Chagla Commission has fixed the final responsibility on the Finance Minister, Mr. T. T. Krishnamachari, who has since resigned. It has, however, posed certain questions such as why Mr. Patel should act on his own responsibility in so unusual and doubtful a transaction. Why should he have overawed Mr. Kamat and Mr. Vaidyanathan? In other words, was there any abuse of power? In the nature of things the onus falls on these officers, now charge-sheeted, to prove whether the Chagla Commission's findings concerning Mr. T. T. Krishnamachari are correct.

Indian Technicians Abroad

The Government of India has recently issued an appeal to Indian scientists and technicians in foreign countries to give particulars about themselves on registration forms available with Indian missions abroad. This information is being collected and compiled by the Government of India with a view to obtaining their services for India's development plans. The bulk of the Indian students are in the United Kingdom, where the Government of India maintains a very expensive organisation. In fact, no Indian student can get admission to a university or a training centre without the previous approval of the Education Department at the Indian High Commission. In many cases, this consent is a mere formality; the admission is secured by the parties concerned. But having secured admission for the student, the Education Department loses interest and makes no attempt to follow his progress. Instead of inviting students to register themselves, the Government of India should have asked its education departments functioning in Europe and America to furnish details of the students whose training they have arranged. This is one aspect of the question. Remuneration is the other aspect. Indian students, particularly in the United States, are not interested in returning to India for the simple reason that they are able to get much better conditions of service outside. Apart from financial considerations, they have to be convinced that merit is the main yardstick in measuring a candidate's worth for a post. Many of them have experience to the contrary.

Indian Textile Exports to U.K.

Sir Frank Lee, Permanent Secretary to the U.K. Board of Trade, has arrived here from Hongkong. He has been discussing the question of textile exports to Britain from India. An Indian textile mission consisting of Mr. Kasturbhai Lalbhai, chairman, Indian Cotton Mills Federation, and Mr. Neville Wadia, chairman, Textile Export Promotion Council, will shortly visit England to discuss measures to solve the Lancashire cotton industry's crisis. Indian textile exports have been from 20 million yards in 1953 and 125 million yards in 1954 to 131 million yards in 1957. Most of the Indian cloth exported is of the grey variety. While the Government of India has not committed itself on the question of controlling exports to the U.K., it is unlikely to object to any reasonable agreement being unofficially reached between Lancashire and the Indian textile industry.

Cost Estimates of Steel Plant

Initiating the debate on demands for grants of his Ministry in Lok Sabha last week, Sardar Swaran Singh gave the following estimates of the three steel plant:

Rourkela steel plant	Rs. 170 crores
Bhilai steel plant	Rs. 131 crores
Durgapur steel plant	Rs. 138 crores

These are, of course, estimates for the plant proper only. They do not include townships, ore mines and other services. "Some people seem to have the impression", the Minister has said, "that we are constantly revising the estimates. This is not so. The original estimates were merely project estimates. They differed in scope and significance. Thus the Russian project estimate was virtually a supplier's firm quotation for the plant and equipment proposed to be supplied from Russia. But the estimate of Indian cost was based on certain assumptions and was in no sense a quotation. In Durgapur, the initial estimate for plant and machinery to be imported from the United Kingdom was to be subject to an increase of not more than 5 percent in certain sections, in the final quotation. The figure for erection, civil engineering, shipping and transportation given in the original estimates were the contractor's preliminary estimates and I.S.C.O.N. had said that it was not possible to estimate these costs in detail in the time available. In case of Rourkela, the estimate of expenditure both on plant and equipment and on civil engineering and erection was merely the consultants' opinion of the likely costs and did not represent the offer of any suppliers. After the main contracts for plant were concluded and we had a fair idea of the quantities of civil engineering work involved, the estimates were revised as I mentioned earlier. This has been the only occasion for such revision. These estimates consist broadly of four components: (1) cost of plant and equipment; (ii) cost of civil engineering; (iii) erection charges; and (iv) incidental charges like ocean freight, railway freight and handling charges.

"In the contracts concluded for plant and equipment for the Rourkela and Durgapur steel works, the prices have been settled and they are subject only to escalation on account of changes in the costs of certain basic materials and wages. No allowance has been made for such escalation in the estimates. Civil engineering is generally on rates which are again subject to escalation on an agreed basis. Such escalation has not been taken into account in the estimates. As in all other projects of this nature, the estimates of civil engineering costs are on assumed quantities of work and the actual quantities may differ from those assumed. For the other two components, the best estimates had been made on the experience of the contractors and the consulting engineers. But payment is mostly on actual costs. Thus at present, except for variations on account of escalation and on account of actual quantities of civil engineering and erection work, there are no known factors which call for any further revision of the estimates.

"I am sometimes asked why when all the three steel plant are of a million tons capacity each, the costs should be different. Although the capacity expressed in terms of crude steel is about the same in all the three steel plant, the nature of the plant differs considerably otherwise. Differences in technique and practice are also reflected in the weight of the machines used, the sizes of the motors provided, etcetera. For instance, there will be sintering of ore and use of high top pressure in the blast furnaces in Bhilai. In Durgapur, provision is made for the introduction of high top pressure at a later stage. While the Bhilai plant will have six open hearth furnaces of 250

tons each, the Durgapur plant will have seven of 200 tons and one of 100 tons. The Rourkela plant will have four small open hearth furnaces and three L.D. vessels. The rolling mills in the Russian plant which resemble somewhat the rolling mills in the British plant are, in a sense, more elaborate; but there are more mills in the British plant. The rolling mills of Rourkela are very different and the modern strip mill alone accounts for a considerable part of the difference in costs between the Rourkela rolling mills and the other two rolling mills. In Durgapur, there is a wheel and axle plant which is a costly unit. There is also a coal washery. There are also differences in the sizes of common items like the power plant, the blast furnaces and coke ovens.

"The lay-out of the plant, the reserve capacities—it is the largest in the rolling mills of Rourkela—and the nature of ground conditions also account for differences in the cost of corresponding sections of the three plant. The reasons why the plant differ are, of course, obvious. Steel development in the country has to follow an integrated plan which must take into account the products of the expanded steel works in the private sector. This is the primary reason for the difference. Rourkela with a modern strip mill will produce only flat products like plates, sheets and tinplate. Bhilai will produce rails and the heavier range of sections. Durgapur will produce relatively lighter sections besides the speciality of wheels, tyres and axles. In planning the details of the blast furnaces, the melting shops and the mills, the different experiences of the countries which are providing the technical skill have been incorporated. Rourkela, in particular, will adopt the L-D process for making most of its steel. As I said earlier, it will be equipped with a very modern continuous strip mill. The Rourkela plant will, no doubt, cost more but it has to be remembered that the value of its products will also be comparatively higher."

Second Canadian Wheat Gift

India is likely to receive a second gift of wheat from Canada under the Colombo Plan. This will amount to approximately 130,000 tons valued at $(C)8 million. It was in November 1957 that Canada made a gift of about 115,000 tons of the value of $(C)7 million. This quantity has already been received. In addition, India is purchasing on a deferred payment basis from Canada 400,000 tons of wheat. Repayment will be made in seven instalments. A quantity of about 100,000 tons, out of the 400,000 tons, has been received. It is expected that by about the end of July, India will have received all the 3.3 million tons of wheat to be supplied by the U.S.A. under the existing P.L. 48 agreement. In addition, there is an agreement with the U.S.A. that unused allocations totalling about $28 million formerly representing the value of cotton, dairy products and tobacco will be diverted to foodgrains under the same agreement. This provides an additional import of about 400,000 tons of wheat.

Proposed Amendment to Companies Act

The Government of India proposes to amend clause (b) of sub-section (1) of Section 530 of the Companies Act, 1956, so as to include any compensation that may be due to any workman under the provisions of Chapter V-A of the Industrial Disputes Act, 1947, within the scope of the term "wages" used in that clause.

Cost of Coal Mining Machinery Plant

The coal mining machinery plant will be located in Durgapur in West Bengal. The preliminary cost estimate of the Russian experts given in their 1957 report was about Rs. 15 crores in early stages. The detailed project report which is due to be received in the middle of 1959 will give closer and detailed estimates.

Increased D.A. for Some L.I.C. Employees

The Life Insurance Corporation has granted with effect from 1st January, 1958, an increase in dearness allowance to its employees on the administrative side, whose salary is not less than Rs. 50 p.m. or more than Rs. 250 p.m. It is expected that about 10,500 employees will benefit.

Great Eastern Shipping Acquires a Vessel

The Great Eastern Shipping Company Ltd., Bombay, has recently acquired a second-hand vessel, *Durham Trader*, at a cost of £200,000. The price has been paid in full to the sellers by taking a foreign exchange loan from a London bank. The vessel will be employed on the coast and the foreign exchange loan will be repaid out of the net foreign exchange earnings of one of the company's existing vessels which has been diverted from coastal to overseas trade.

Proposal for Customs Reforms

To ensure improvements in more pressing directions as early as possible, the Customs Reorganisation Committee has made some *ad hoc* proposals to the Central Board of Revenue for the immediate introduction of certain high priority reforms through departmental instructions. Those improvements cover Customs procedures affecting many items of topical interest including tourist traffic, international and diplomatic missions, prompt clearance from the major ports of consignments even in cases where there are some disputes between the Customs houses and importers, constant and closer liaison between Trade Control and Customs authorities at major ports, the provision of a central forum for the specific consideration of pressing Customs problems, the creation of independent panels of experts to advise Customs houses on the technical aspects of classification and valuation, and clearer co-relation of trade cassifications with the Customs tariff to minimise as far as possible, the number of items where disputes concerning the assessment of duties can arise. The Committee hopes that a few more urgently needed reforms can be introduced, through the same procedure, before its formal report is submitted to the Government in October.

Coal Output in Public Sector

Parliament approved of demands for grants concerning the Ministries of Steel, Mines and Fuel and Food and Agriculture last week. Giving an account of the coal sector of his Ministry, Sardar Swaran Singh said that compared with the 14 percent overall increase in coal production during the year, the increase in the private sector was only 12.2 percent over the production of 1956, compared with 21 percent in the State-owned collieries and 28 percent in the case of Singareni. He added: "In existing State collieries which are under control, production at the end of the year 1955 was 2.8 million tons a year. At the end of 1957, this was 3.38 million tons a year. That gives an increase of 21 percent over the production figure of the year 1955. Again, in the Singareni colliery which again is in the public sector, although it is being managed by the State Government of Andhra Pradesh, production in 1955 was 1.5 million tons and in 1957 it rose up to 1.92 million tons. There is an increase of about 28 percent. Now, adding up this figure, compared with the year 1955, there is an overall increase of 14 percent in the production if we take the country as a whole. Compared with this 14 percent increase in the overall sector—both public and private combined—the increase in the private sector is 12.2 percent over their production of 1955.

"I would now like to tell the House something about the new coalfields that are attempted to be developed. These are: Korba, Kathara, Gidi (Karanpura), Korea and Bachra-Saunda. According to the present estimates which we have made and the assessment that has been carried out, we have come to the conclusion that on the basis of the arrangements already made and the commitments which can be fairly said to have been entered into, the expected production from these areas will be of the order of 7 million tons a year. Besides these, additional possibilities will be explored to reach the full targets. To this we have to add the additional production of Singareni. We have also to add the additional production from existing State collieries. We are at the end of the second year of the second five year plan and we have got still three years to go. Therefore, there is no cause to take an unduly pessimistic view of the performance of the National Coal Development Corporation.

"I would say a few words about the Neyveli lignite project. I would reiterate that the cost of this integrated project is something of this order: mining scheme Rs. 16.9 crores, thermal power station about Rs. 21 crores. The House is aware that we have already entered into an agreement with the Russian Government for the supply of thermal power station equipment based on lignite. The fertiliser scheme is estimated to cost about Rs. 21 crores and the briquetting and carbonising plant is estimated to cost about Rs. 11 crores. There are also some subsidiary schemes of clay-washing and the like. Added up, this comes to a total of about Rs. 75 crores in all."

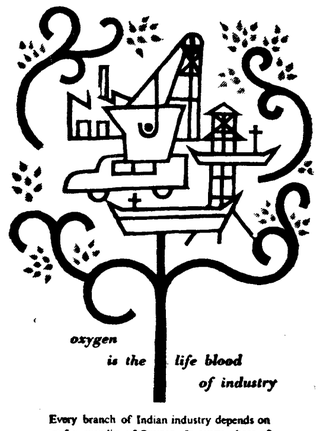
Petroleum Prices

Pandit K. D. Malaviya's main theme was the price of petroleum products. He expressed a "feeling of frustration and disappointment" that the Government was not able to get any conclusive decision from the oil companies on a reduction in the price structure of petroleum products. This was in spite of the fact that the prices of petroleum products had gone down, say, by 15 percent. "The patent fact is that there is a depression in the price of petroleum products. Even before that there was a very strong case for the reduction in prices because of certain other circumstances roundabout Pakistan and Ceylon and other countries. There is no reason why our prices should soar higher than what they ought to. Besides that, I would not like to commit myself. To link ourselves with the Mexico price or of any other place may not serve the purpose."

Referring to the future pattern of consumption, the Minister has said: "Our consumption of petroleum products is going to be increased at a very rapid rate. We are consuming about 40 million tons of coal and about 120 to 130 million tons of cowdung and wood and a very little quantity of electricity. If we switch over even gradually from this 120 million tons of cowdung and wood, our consumption will come up to 50 or 60 million gallons in about 15 years' time. It is bound to happen as our economy improves and we are bound to shift from the cowdung age to the petroleum age or the atomic age. Therefore, in the next 15 or 20 years I will not be surprised if our petroleum consumption goes up to 50 or 60 million tons."

Programme for Food Imports

The Food Minister, Mr. Ajit Prasad Jain, placed the shortfall in rice production at 3.5 million tons. Imports from Burma were placed at 2.5 million tons, against 5 million tons expected under the Indo-Burma Agreement. The Government has, therefore, decided to buy rice from outside Burma and use for the purpose the unutilised funds which were allocated for the purchase of Burmese rice. The Government's opening stock of rice on 1st January, 1958 stood at 240,000 tons, against 85,000 tons in 1957.



"So far as wheat is concerned, the Government has got a fairly ambitious programme of import, and there is not much difficulty. During the first eight or nine months of this year, India has a firm programme of importing 1.7 million tons of wheat. A fresh agreement for the import of wheat under P.L. 480 from the United States is envisaged. The wheat under the new agreement will begin to arrive from the month of September or October. I think that there is no likelihood of any difficulty arising in the supply of wheat. The present stock position of wheat in Uttar Pradesh and Bihar is of the order of 50,000 tons and 200,000 tons, respectively, and I hope that with these fairly large supplies, the State Governments will be able to tide over the lean period that is ahead. If they require more, we shall, of course, supply them; we are in a position to supply them quite liberally. It will be interesting to know that in 1956, we supplied 370,000 tons of wheat to West Bengal. In 1957, we supplied them 570,000 tons of wheat. So our supply of wheat is practically going to be of the order of what we did in 1957. We hope to give, on the basis of present availability of stocks, about 150,000 tons of rice to West Bengal. If the rice position improves, I shall give them more. West Bengal is procuring round about 150,000 tons of rice for sale during the lean period, and it is hoped that by pooling the supplies made by the Central Government and quantities internally procured, the West Bengal Government, as Dr. Roy said the other day, will be in a position to control the situation."

Business Men Heading State Corporations

Thanks to the Estimates Committee and the Chagla Commission, the "non-officialisation" of public corporations has begun. The State Trading Corporation now has a non-official, Mr. Chandulal Parekh, as chairman of its board of directors, replacing Mr. K. B. Lall, Joint Secretary, Central Ministry of Commerce. Dr. P. S. Lokanathan and Mr. D. P. Goenka are its other non-official directors. Mr. Bakhle, a former chairman of the Railway Board, is joining as chairman of Heavy Electricals Ltd., Bhopal. Mr. A. R. Bhatt, president of the Maharashtra Chamber of Commerce, is becoming chairman of Hindustan Antibiotics, Pimpri. Mr. K. K. Birla is being appointed chairman of the Hindustan Cables Ltd. Mr. Mehar Chand Mahajan, a former judge, is being appointed chairman of Nangal Fertilisers and Chemicals Ltd. An official is however retained to head the Life Insurance Corporation. Mr. P. A. Gopalkrishnan, Joint Secretary, Central Cabinet Secretariat, has been appointed as chairman of Life Insurance Corporation, relieving Mr. G. R. Kamat.

Plea to Develop Tuticorin Port

A deputation of the members of the Tuticorin Harbour Development Council waited upon the Central Minister for Transport and urged that Tuticorin be developed into a major port. It submitted that "the port of Tuticorin is in the almost landlocked Gulf of Mannar, rarely visited by storms. With its unique geographical position and the island of Ceylon lying only 100 miles off, the port is the natural outlet for goods from the southern districts of Madras State and provides regular shipping services to all parts of the world. It stands first among the minor ports of Madras State and between the major ports of Madras and Cochin, it has a hinterland of over 30,000 square miles with a population of 17.5 million to tap. The port is the southern gateway of India and we are convinced that in the interests of prosperity and balanced development of southern districts, it is imperative for the port to shed the present antiquated methods of handling traffic and be developed into a major port."

Every branch of Indian industry depends on us for supplies of Oxygen. In every phase of India's industrial development, our products and prompt technical service ensure the most modern means and methods of metal fabrication.

Whether in mining or metallurgy, transport or shipping, power or irrigation, mills or factories, we serve every industry, big or small, and contribute today to the prosperous India of tomorrow as envisaged under the Second Five Year Plan.

LONDON BUSMEN DECIDE TO STRIKE

DEMAND FOR HIGHER WAGES

(FROM OUR LONDON CORRESPONDENT)

BEFORE attempting a brief *résumé* of the spate of pre-Budget literature which represents essential reading for the economic scribe, it might be useful to cover current developments. On the whole, these have been encouraging, if one allows for one important exception—the London busmen's decision to call a strike at midnight on 4th May failing a satisfactory outcome to their request to the London Transport Executive for a 10s 6d a week increase in wages for some 50,000 employees, involving additional expenditure of £1.5 million a year, and the possibility that the stoppage might extend to the country as a whole since provincial busmen have promised support besides making a claim on their own behalf. The L.T.E. chairman has indicated his intention to be "tough" so unless the Minister of Labour intervenes, it is difficult to see a way out of the dilemma. This, it must be remembered, is only the first of many claims, for railwaymen are next on the list, and although miners have accepted the need for certain N.C.B. economy suggestions in the interests of maintaining employment, they have done so with reservations and are also in the wage queue.

Restoring the Reserves

Expectations that the March gold and dollar reserves would show a further increase were more than realised. They showed a rise of $201 million to raise the total to $2,770 million, which represents the best gain in any single month, ignoring special borrowings, since October 1950. A Treasury spokesman described the figures as "distinctly encouraging." They are mainly the reflection of the satisfactory position of the current balance of payments of the sterling area. Another contributory factor has been the further gradual closing of speculative "bear" positions. These were built up against the pound during the sterling crisis last summer. If allowance is made for the $94 million received from the European Payments Union for February, and for special payments aggregating $11 million on the outgoing side, the March residual surplus amounted to $148 million. This compares with a surplus of $116 million in February and carries on the improving trend which has been discernible since last autumn. The fall from £45 million to £5 million in the E.P.U. surplus need not be interpreted pessimistically. It was well recognised that the abnormally large surplus in February was affected by special buying of sterling associated with the Royal Dutch issue, while the comparatively small surplus for March is believed to have been affected in the opposite direction by special transactions on West German account.

Industrial Output Steady

On the industrial front, the position is being well held. The index of production prepared by the Central Statistical Office, adjusted for seasonal factors, was 136—137 for February, compared with 136 for January and 137 for December. This is much the same level as that of a year earlier, though it is slightly higher in the middle of 1957. The earlier estimates for November, December and January have now been scaled down—November from 140 to 139, December from 138 to 137, and January from 137—138 to 136. Between different industries there have been big changes, of course. Everybody knows by now that the motor-car industry and its circle of suppliers have greatly increased production, while many activities connected with building and construction and civil engineering have fallen off. The continued steadiness of the total index is a warning not to be misled by the difficulties of particular industries so as to think that production as a whole is declining.

There has been a welcome development as far as prices are concerned. Reductions in most prices of steel sold on the home market were recently announced by the U.K. Iron and Steel Board and prices went down by between 1 and 3 percent. These price reductions, the first for 20 years, will save consumers £10 million a year. They have been made possible by the fall in prices of imported materials, such as iron ore, and because less imported ore and scrap are being used. Subsequently aluminium prices were reduced, and still later the Metal Box Company announced lower prices for tin boxes following the reduction in prices for tinplate.

Revenue Surplus

At the close of the financial year, the Exchequer had an ordinary revenue surplus of £423 million. Revenue was £5,342.6 million and expenditure £4,919.6 million. In his Budget last year, Mr. Thorneycroft, Chancellor of the Exchequer, estimated a surplus of £462 million. This figure was subsequently reduced to £316.2 million by increases in expenditure. The current surplus is offset by a £634.6 million deficit "below the line" where outlays are mainly of a capital nature, and compares with a Budget estimate of £587 million. The overall deficit is thus £211.6 million. This has been met by borrowing.

Income tax receipts at £2,208.3 million exceeded the estimate by £32 million, and excise, including purchase tax at £942.4 million, was £30 million more than budgeted for. Death duties brought in £170.6 million, and profits tax £255.2 million, both almost as forecast. Interest on and management of the national debt took £663 million—£23 million more than estimated—reflecting last September's Bank rate rise. Miscellaneous revenue at £165.7 million was nearly £20 million below estimate. Loans to local authorities at £92.1 million were below the £100 million estimated. Advances to the National Coal Board for capital expenditure, less repayments, took £81.4 million, nearly double the £45 million allowed in the Budget.

Economic Forecasts

Against this background, it is hardly surprising that the Treasury's economic forecasts for 1958, as outlined in the pre-Budget papers, should be fairly reassuring. The views have been preceded, however, by a speech from the Prime Minister in Halifax. He has made two special points. First, the time for relaxation in the fight against inflation has not yet come. "It would be folly to have got through the rough going, and then shy at the last fence." This must mean a Budget with few reliefs. Secondly, though inflation is not quite dead, Britain must still be guarding against the greater injustice of deflation and unemployment. Not only is the Government vigilant about this, but its plans are already laid. Though not disclosing what these are, the Prime Minister has made clear that, in view of Britain's slender reserves, she could not put them into operation by herself. The Organisation for European Economic Co-operation, the International Monetary Fund and the World Bank "must be used.... We must not fail in any of our policies because we have not acted boldly and in time."

The Treasury experts think that the activity in the United Kingdom may slow down further and that the struggle for export markets will grow more intense, but they do not foresee any drastic change this year. The White Paper on National Income shows that in two aspects Britain has kept or improved the gains of the last two years. For the whole of 1957, the balance of payments surplus was nearly £240 million. This was almost as good as in 1956 and was partly the result of an encouraging increase in invisible income during the second part of the year. At the same time, at home, there was another considerable rise in personal savings, bringing the total to the record level of between 10 percent and 11 percent of incomes after tax. These savings, now equal in importance to those arising in industry itself, provide the best possible springboard for a further expansion of Britain's productive capacity without inflation. The *Economic Survey* looks forward to a large external surplus in 1958, and hints that there is not much reason to fear another sterling crisis in the autumn. The White Paper on the Balance of Payments brings out the reassuring fact that the gold reserve rose last year by more than the special borrowings and capital inflow from abroad, although sterling balances were heavily reduced, so that the country's monetary position has improved.

Sterling Area Balances

The White Paper on the Balance of Payments which gives new figures for the second half of 1957, shows that the current account surplus for that half-year was £122 million compared with a revised figure of £98 million in the second half of 1956. Together with the surplus of £115 million in the first half of 1957, the total surplus for last year is given at £237 million. The improvement in the second half-year of 1957 was entirely in the current surplus with the overseas sterling countries, which rose to £228 million. In current transactions with the non-sterling world, there was a deficit of £106 million in the second half-year against an even balance in the first half-year. This is a reminder of the sharp change between the first and the second half-year which is normal in the dollar earnings of the sterling area.

But there is another point. Surplus exports of goods and services to the sterling area were almost exactly equal to the withdrawal of sterling balances by sterling countries. This stands out as the biggest single financial event of 1957. The overseas sterling area spent no less than £226 million of its London sterling balances, while non-sterling countries reduced their sterling holdings on balance by only £1 million, although this was after the special debt pre-payment of £67.5 million by the West German Government.

Hongkong Textile Exports

Latest reports received from Hongkong, where Sir Frank Lee, Permanent Secretary of the U.K. Board of Trade, had discussions with a committee of 12 representatives of the local textile industry concerning the voluntary restriction of the colony's exports of cotton cloth to Britain, suggest that opposition to his suggestions may be easing. It is understood that Sir Frank suggested an agreement could be reached which involved only Hongkong's exports of piecegoods. In addition, piecegoods processed in Britain and re-exported will not be affected. He thought that British millowners would like an agreed limitations on retained exports of about 65 million square yards—about last year's level—but he thought they would negotiate on a basis of 70 million to 75 million square yards.

If an agreement on the lines indicated was accepted, Hongkong would be free to continue the expansion of its exports of garments and other made-up textiles to Britain, but it appears that the traders there are not prepared to accept restrictions even on piecegoods unless assurances are given on several points. Among these are that Hongkong will be dealt with separately in any restrictive measures which also involve India and Pakistan, and that the British Government will not use an agreement on cotton cloth as a precedent for giving protection against other Hongkong goods, and will take action to counter any steps by Canada, the United States and South Africa to restrict imports of Hongkong goods. The traders also want a promise from the Hongkong Government to take full responsibility for any unemployment caused by curtailed production and a quota on the number of mills allowed to operate in Hongkong.

Brevities

A contract valued at over £1.5 million to supply 1,365 four-wheeled covered wagons for the Pakistan Government Railways has been received by Metropolitan-Cammell Carriage and Wagon Company, Limited.

The first major warship to be built for the Indian Navy was recently commissioned on the Clyde. She is the anti-aircraft frigate *Brahmaputra*, and has controllable-pitch propellers.

Sir John Morison, chairman of the Iron and Steel Holding and Realisation Agency since 1953, has died at his home in Bromley, Kent.

Until further notice, tax reserve certificates of the seventh series issued under the terms of the prospectus dated 8th July, 1955, will bear interest at 3½ percent tax-free. The rate of interest on certificates of the seventh series subscribed before 29th March, 1958, will remain unchanged.

Lord Douglas of Kirtleside, chairman of British European Airways, has signed a contract with de Havillands for six *Comet 4B* jet airliners. The contract, with spare parts, is valued at about £7 million, and deliveries are due to begin early in 1960.

F. W. Woolworth (Overseas) has been formed to act as a holding company for the group's overseas interests. Nominal capital is £100,000 in £1 shares.

INSTALLATION OF AUTOMATIC LOOMS IN TEXTILE MILLS

NEW SCHEME MAY BE ANNOUNCED SOON

(FROM OUR BOMBAY CORRESPONDENT)

AHMEDABAD textile circles believe that the Government of India is likely to announce a modified scheme for the installation of automatic looms. The urgent necessity for the rationalisation of the textile industry has again been stressed by the Ahmedabad Millowners Association. This has followed a similar plea made by the All-India Federation of Textile Millowners Associations. The renewed demand for the permission to install automatic looms has come from those mills who specialise in export products and who have been hard hit by the severe competition from Japan, Pakistan and other cheap cloth-producing countries. It is believed that certain conditions imposed by the Government in relation to rationalisation might be removed. While these restrictions are not discussed in detail, it is presumed that they refer to the condition that the mills installing automatic looms must maintain their production quota prior to rationalisation and the cloth produced by the new equipment must be sold in foreign markets only. Whatever the circumstances, the most important point is that foreign exchange should be made available for the purchase of automatic looms and other equipment. If efforts are made to obtain machinery on deferred payment terms, the whole scheme might be held up indefinitely. Clearly, a situation has been created when the sacrifice involved in spending foreign exchange on the purchase of new equipment must be equated with the recurring loss of foreign currency earnings because of dwindling textile exports.

Meanwhile, Hongkong reports indicate that manufacturers there are not prepared to accept a voluntary cut in their cloth exports to the United Kingdom unless India and Pakistan follow suit. On an earlier occasion, the latter two countries stipulated a similar condition. But if the United Kingdom arrives at an agreement with India and Pakistan, Hongkong will not persist in its views. Much will depend on the outcome of the Indian textile delegation's forthcoming visit to Britain.

Curiously, Britain herself is accused by a Commonwealth country of exporting cheap textiles to the detriment of the latter's economy. The Canadian Tariff Board has undertaken a study to determine whether increased protection is needed by the cotton textile industry. In a 200-page statement prepared by the Canadian industry, manufacturers contend that their share of the domestic market is being seriously hit by increasing imports. Britain finds herself linked with India, Hongkong and Japan as the "offending parties." Canadian manufacturers say that unless some action is taken to reduce imports, a large number of their operatives might be thrown out of work. In the demand for changes in the 30-year-old tariff schedule, two proposals are included. One is that the import duty on foreign textiles should be increased and the other is that a quantitative limit should be imposed on foreign cotton goods entering Canada. The main complaint is against Hongkong. It has been contended that imports of manufactured cotton textiles, such as shirts, gloves and other ready-made goods, have increased out of all proportions during the last two years. Similar charges have been made against the Japanese who are accused of resorting to dumping tactics on the Canadian market. If changes are made in Canada's import policy in relation to textiles, some repercussions are likely to be felt in India. First of all, India will either have to face a cut in her exports to that market or else contend with higher import duties which will reduce her competitive capacity. Secondly, Japanese and Hongkong manufacturers who are unable to sell their products in the Canadian market will undoubtedly attempt to dump them in other markets in which India is keenly interested.

Revival in Piecegoods

Trade in piecegoods has revived after a long period of comparative inactivity. Consuming centres in south India, Delhi and Kanpur have purchased sizeable quantities of medium, fine and superfine cloth. Enquiries have also been received from Calcutta merchants for these qualities. There is no demand for coarse cloth. Some mills have booked their output, other than coarse cloth, on a forward delivery basis up to the end of June. Prices, however, remain unchanged since the adjustment in the excise duty was announced. Some business has been done in export markets. East Africa has bought grey leopard cloth and grey sheetings of heavy and medium weights. West Africa is interested in coarse and medium dyed drills and bleached long cloth. Australia has booked bed tickings and grey sheetings, while some business has also been done with Singapore. The United Kingdom has showed some interest in medium grey sheetings. Burmese merchants have been quiet because the Burma Government has not yet issued fresh import licences.

Improvement in Rayon Yarn

The rayon yarn market improved considerably during the past week on the expectation that viscose yarns would be in short supply within the next few months. The price for Japanese 120 denier yarn rose from Rs. 5.87 a lb to Rs. 6.75 a lb. Yarn of 150 denier gained a rupee. Italian and home manufactured yarn increased in sympathy with the Japanese product. There was good activity in staple fibre yarn with the April delivery contract appreciating by Rs. 30 while the June contract gained Rs. 32. Reports that many south Indian manufacturers are thinking of reducing their output of cotton yarn had an adverse effect, and the local market continued listless.

Selling Pressure in Cotton

Selling pressure developed in the cotton market during the past week. With much of the short position already covered and in the absence of fresh buying support, values gradually declined. Reports that certain mills in Vidarbha have decided to close down had a depressing influence. Another damper was the report that the Pakistan Central Cotton Committee has recommended a reduction in the export duty on Deshi cotton in view of the Government of India's decision along similar lines. Fresh reports of an upward revision of the crop estimate of inferior cotton in Gujerat and other parts of the country and the heavy accumulation of stocks of inferior grade cotton were additional factors which influenced the market. But there was short-covering at lower levels which caused a partial recovery. There was mixed activity in the spot market. While staple variety cotton continued to attract mill attention, lower quality cotton remained neglected. The prices of inferior grades like Kalyan and Wagad declined by about 10 points.

Oilseeds Firm

The oilseeds market ruled firm during the past week. Sentiment was largely governed by reports on the abolition of the export duty on castor oil. Groundnuts and oilcakes showed a firm tendency. Earlier in the week, traders were somewhat disappointed at the delay in the announcement of the abolition of the export duty on castor oil. The spot section remained subdued with mills and vegetable oil producers offering lower prices. There was fair selling in upcountry centres. There was, however, some resistance at lower levels. It was reported that Russia has shown interest in Indian castor oil while enquiries were received from the United Kingdom for B.S.S. and commercial castor oil packed in drums. It is believed that foreign purchasers are awaiting a clarification on the export duty before making firm commitments, but it is known that Brazil is not in a position to offer quick deliveries to the United Kingdom and the Continent. Groundnuts were firm on excellent spot performance. Vanaspati manufacturers and crushers bought sizeable quantities of groundnuts and oil for spot delivery. Arrivals from upcountry remained small which were well absorbed.

Our new Analytical Laboratory offers its services to the trade for the competent analysis of

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 105.6 during the week ended 22nd March, 1958, compared with 105.5 for the previous week. The index was higher by 0.6 percent and 0.1 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The index for Food Articles remained unchanged at last week's level of 102.4 in spite of variations in the prices of oranges (+16%), turmeric in Calcutta (+12%), mung in Hissar (+9%), wheat in Saugar (+9%) and in Kanpur and Bahraich (+6% each), potatoes in Kanpur (+9%), in Delhi (+7%) and in Farrukhabad (+6%), gur in Ahmednagar (+8%), rice in Dimka (+7%), in Shimoga and Nawagarh (+6% each) and in Badali and Jaynagar (+5% each), urad in Madras, black pepper in Cochin and chillies (+5% each), arhar (+3%), ragi and betelnuts (+2% each), bajra, maize, cashewnuts and meat (+1% each), milk in Calcutta (−17%), potatoes in Mettupalayam (−14%), fish in Calcutta (−13%), onions in Calcutta (−10%), ghee in Bombay (−9%), rice in Trivandrum (−6%), wheat in Abohar (−5%), gram and eggs (−2% each) and barley, gingelly oil, coconut oil, tea, coffee and salt (−1% each). A fall of 1 percent in the prices of raw tobacco was responsible for bringing down the index for Tobacco from 94 to 93. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's level of 114.8. The price of castor oil (+1%), however, showed an advance. Higher prices of rapeseed (+4%), raw jute (+3%) and raw wool and linseed (+1% each) were responsible for a rise in the index for the Industrial Raw Materials group by 0.5 percent to 111.9 compared with 111.3 (revised) for the previous week. Cotton yarn (20s) in Madras (—11%) and brass and German silver (−1% each) moved down while linseed oil, rayon yarn, copper and lead (+1% each) showed a rise, and in the result the index for Intermediate Products receded by 0.5 percent to 106.9. The index for Finished Products also declined by 0.2 percent to 107.6 compared with 107.8 (revised) for the earlier week. The prices of castor cake in Bombay and coconut cake in Kozhikode (−5% each), cloth (mill) and glass (−1% each), castor cake in Kanpur (+7%), linseed cake in Kanpur and coconut cake in Bombay (+5% each) and jute manufactures (+1%) showed variations.

PLANNING BODY DENIES STATEMENT OF MINING FEDERATION CHAIRMAN

The Planning Commission's attention has been drawn to the speech of the chairman of the Indian Mining Federation at the recent annual general meeting in which he stated that private sector collieries have been discriminated against in the allocation of supplies of steel and that this is the result of a recent directive from the Planning Commission to the Iron and Steel Controller to the effect that priority should be given to State collieries over private collieries. The Planning Commission says that this is incorrect and it has issued no such directive. Coal, in the public and private sectors, is included in the core of the second plan and the Commission has always taken the view that both sectors should be given equal priority in the allocation of supplies of steel, cement, etcetera.

DRY WEATHER HELPS RAW JUTE REMAIN FIRM

GUNNIES WELL MAINTAINED IN SYMPATHY

THE Calcutta raw jute market has been firm recently, so business has been much smaller than in recent weeks. The attitude of local sellers has been dictated to a large extent by events in upcountry areas and several factors have exerted their influence. Weather conditions have played a large part. The fact that rain has been very scanty in most of the jute-growing areas has prompted sellers to adopt a reserved attitude. It is still too early in the season, however, for any definite views to be formulated, and in fact the position is much better than it was last year when the rains were extremely late. Frequent thundershowers have improved the situation and sowings are about normal for the time of year. In some places, the young plants are 10 or 12 inches high, but in general much more rain is required to promote germination.

One of the main factors responsible for the bullishness of sellers is the operation of mill representatives in the agencies. During a recent survey in the jute districts, sellers have made no secret of the fact that they prefer to sell to mill representatives who are paying up to Rs. 2 a maund more than others. The average premium is about Re. 1 or Rs. 1.25. Buying is not selective and the agents are prepared to purchase from any seller who has jute to offer. Consequently, sellers are not willing to offer jute for sale in Calcutta under contract to the mills—often the same mills for whom the agents are acting—at a much lower rate than can be obtained upcountry. This curious position affects the smooth running of the Calcutta market, and the lack of offers against recent indications at current levels, or just below them, is causing concern.

The steadiness of the jute markets has helped gunnies, and during the past week, in spite of a general decline in interest, prices have been well maintained. Rates have been held at or around the I.J.M.A.'s minimum levels, but the Easter holidays, when the markets not only in Calcutta but in most overseas countries were closed, made it difficult for transactions to be put through. Overseas interest has been small, except that early in the session the Argentine continued to take up fair quantities. Since the holidays, interest from this source has ceased and genuine buyers have been scarce. Mills are anxious to sell forward shipment goods to take advantage of the higher prices, but have had very little success as the market is false, and is being maintained by jute. Local shippers are interested in covering small lots for near delivery but mills are not interested in this shipping period. The scale of speculative activity has been reduced considerably since the East India Jute and Hessian Exchange began operations, and the general undertone of the market has improved.

Jute from Burma

A reference was made recently at a meeting in Dundee to the restrictions on and high prices of raw jute prevailing in Pakistan. It was stated that these were hampering world trade in jute and jute goods. It was hoped that some method would be found to bring this point home to Pakistan and persuade her that her own economy would also suffer if she persisted in this attitude. The opportunity to do so may now be near at hand, as it is reported that an alternative source of the raw material may be available soon in Burma. The Burmese Government has received a recommendation that the top qualities of jute grown internally should be released for export, that is, the grades of jute that she cannot consume in her own mills, which are in their infancy. Although the amount available is very small, if the project is successful there is much room for expansion, and may eventually become a threat to Pakistan. Samples of these grades of fibre have already been tested in Dundee and the results have been encouraging.

THE JUTE MARKETS

Manufactured Goods: There was a general lack of interest in the jute goods market at the opening last Thursday due to the approach of the Easter holidays. Overseas interest from the Argentine in hessians was the only noteworthy item at this stage; her requirements were soon satisfied but not before prices rose. Friday and Saturday being holidays, the market was closed. Even after the holiday, business was virtually at a standstill because markets in Britain, America and elsewhere were closed on Easter Monday. It was late on Tuesday before any overseas advices were received. Interest in jute goods throughout was thus very small. Shipping instructions to date were poor but it was understood that several steamers would be placed about the middle of the month. In anticipation of this, local shippers attempted some covering but met with little success as mills were not sellers for near shipment. Opening quotations last Thursday were featured by hessians being under the influence of the Argentine enquiries, and 40in. 10oz. opened at Rs. 39.60. In heavy goods, B Twills were down by 50nP to Rs. 99, but this was more than made up during the day when they reacted to the steadier hessian section. After the holidays, the market opened on a firm note in sympathy with raw jute and B Twills were quoted at Rs. 99.85, with hessians unchanged. There was very little interest at this stage and minor fluctuations were recorded, the tendency being in a downward direction. On Tuesday, there was very little change and the market was quietly steady at the lower levels.

On Wednesday morning, opening quotations were as follows:

	April Rs.	May Rs.	June Rs.	July-Sept. Rs.
40in. 8oz.	31.90	31.95	32	32
40in. 10oz	39.75	39.90	39.95	40
B Twills	99.25	99.75	100	100.50
Heavy Cees (Plain)	99.25	99.50	99.75	100.75
A Twills	119.75	120.25	120.75	121.75
Liverpools	113	113.25	113.50	113.75
Cornsacks	99.75	100.25	100.50	101.75

Raw Jute: The fibre markets were steady throughout the past week, but because of the Easter holidays business was on a small scale. Sellers were very reserved and were showing no interest in prices quoted by mills, as these were well below the parity of rates prevailing in most upcountry agencies. Imports were small and the high prices being offered in the mofussil for all categories of jute made it impossible for operators to work at a profit. Due to the shortage of jute upcountry, many sellers said that they had finished for the season and would not operate again until the new crop arrived. Mill interest in the new crop was negligible and offers were few and far between. Quotations showed very little movement and Assam-Northern Bottoms varied between Rs. 25 and Rs. 25.25 a maund. Indications below this level met with little response from sellers and most of the business recorded was at full market rates.

Mills paid from Rs. 24.75 to Rs. 25.50 a maund for Northern-Assam jute in assortment, and Rs. 27.75 to Rs. 28.50 a maund for Middles only from the same agencies. Most of the business was in these categories. Small lots of Tossa were done at Rs. 28.50 to Rs. 28.75 basis Bottoms. Cuttings fetched Rs. 80 a bale for ready delivery, and Rs. 67 to Rs. 70 a bale for shipment under buyers' licence.

Arrivals in Cossipore dropped to 300 wagons last week as against 345 wagons in the previous week. In the corresponding week of last year, they amounted to 500 wagons. The market was very steady, with sellers reserved and not interested at the current rates. Mill representatives were keen buyers of good quality jute and high

I.J.M.A. STOCK FIGURES FOR MARCH

The Indian Jute Mills Association reports the total stocks of jute goods at the end of March as follows:

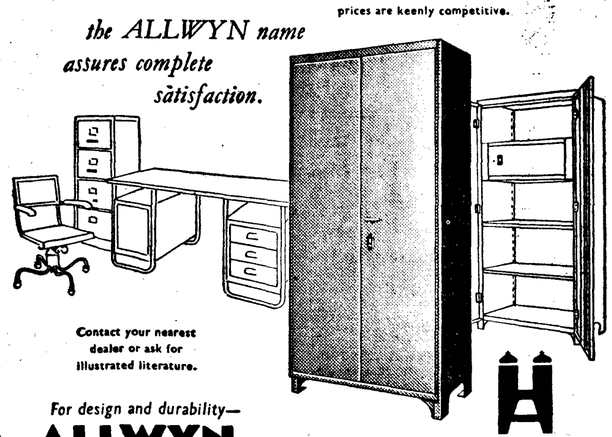
Description	31st March, 1958 Lakh Yds.	000 Tons	28th February, 1958 Lakh Yds.	000 Tons	Increase over (+) or decrease from (−) last month Lakh Yds.	000 Tons	31st March, 1957 Lakh Yds.	000 Tons
Hessian cloth and bag	8.91	24.5	10.10	27.2	−1.19	−2.7	10.86	29.8
Sacking cloth and bag	13.10	54.9	12.69	53.3	+41	+1.6	13.74	56.5
Others		15.0		14.4		+0.6		11.4
Grand Total (000 Tons only)		94.4		94.9		−0.5		97.7

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non member mills.

Allwyn leadership in furniture design and manufacture is the best safeguard and recommendation. In the case of UTILITY CABINETS it means

• GREATER CAPACITY AND VERSATILITY: More can be stored. Adjustments are easy with Allwyn shelves, pigeonholes, lockers.

utility cabinets...



Whether for home or office use, Allwyn TESTED modern designs and styling are hard to beat.

• GREATER SAFETY: The closures are perfect. Allwyn assures 100% protection from dust, vermin—and burglars (due to the unique 3-way locking device).

• GREATER DURABILITY: The choicest, specially treated steel sheets are used. No rust. No cracks. No warping.

• REASONABLE PRICE: Compare the cost. Because of nation-wide demand Allwyn prices are keenly competitive.

the ALLWYN name assures complete satisfaction.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 31st March, 1958	2.014.9	31,128.1	33,143.0
1st to 28th February, 1958	1,510.3	29,409.1	30,919.4
1st to 31st January, 1958	1.541.2	22,098.3	23,639.5
	Sacking		
1st to 31st March, 1958	27,133.4	679.4	27,812.8
1st to 28th February, 1958	32,287.3	322.7	32.610.0
1st to 31st January, 1958	23,344.6	436.1	23,750.7

THE FOREIGN JUTE MARKETS

FIBRE PRICES FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THE market for raw jute has been somewhat irregular, but the prices have been quite firmly maintained for all grades of the fibre during the past week. Occasionally, a seller has come out at £1 to £2 a ton less than the rates quoted by others, but soon he has been in the high-price range again. This maintenance of prices for fibre is not helping the industry in any way, and many people in the trade look upon the policy as detrimental to its ultimate interests. There are very few places where the production of jute cloth and yarns is yielding any profit. Only a very small percentage of the Indian jute mills are making enough to pay dividends, while reports from the Continental jute mills are anything but bright. Dundee spinners and manufacturers are making a little money from their highly organised and efficient spinning and weaving establishments. They still have faith in their industry and hope to recoup their expenditure on new machinery and modernisation schemes in due course.

The big grouse of the whole industry is the attitude of the Pakistani authorities in their endeavour to extract as much as they possibly can from their monopoly exports. Substitutes for jute goods and yarns are obtainable at lower rates, so consumers naturally turn their attention to these. Prices for raw jute show little change at £112 lowest for Mill Firsts, £99 for Mill Lightnings, £88 for Mill Hearts and £73 for grade Hearts, while good marks of Daissee-2/3 were quoted at from £102 and grade from £94, and grade Tossa-2/3 from £108 10s and fours from £101, all April-May, c.i.f., U.K. Dundee spinners have bought quietly but steadily.

Calcutta goods have fluctuated slightly, closing very irregularly at around 60s for 40in. 10oz. hessians and 45s 3d for 7½oz., April and May and 60s 3d and 45s 6d June to September, with B Twills at 150s 6d, 151s 3d and 151s 9d for the respective positions of shipment, all f.o.b., Calcutta. Jute yarns and cloth are dull and buyers appear to be awaiting a reduction in prices. They are not inclined to pay the advanced terms that took effect from 20th March.

BURMA MIGHT START EXPORTING JUTE

There is a possibility of Burma starting jute exports in the near future to provide an alternative source of raw material to the industry outside India, reports the *Jute Bulletin* of the Indian Central Jute Committee. The Government of Burma has been advised by the Director-General, Agricultural and Rural Development Corporation, that all top grades of jute which are grown internally should be released for export. The recommendation is based on satisfactory grading results of Burmese jute samples sent to Dundee for tests. Even though jute cultivation in Burma has not yet been undertaken on a commercial scale, the last crop of 1,500 tons gave, on grading, an average of 25 percent Mill Firsts and Mill Lightnings, with the balance made up of Export Firsts and Export Lightnings. The next crop is likely to produce over 5,000 tons.

Plantation Topics

BIG RISE EXPECTED IN NEXT COFFEE CROP

PROBLEM OF EXPANDING EXPORTS

(FROM A SOUTH INDIAN CORRESPONDENT)

THE next coffee crop is expected to be a bumper one which might well exceed the record of over 42.000 tons harvested last season. This will add to the credit of the coffee planter who has been able to raise the country's coffee output by 151 percent over the past ten years. Coffee is now high in the list of the 16 crops selected by the Government of India for preparing its agricultural production index. With the increase in output, the marketing problems have also grown. The internal market is capable of absorbing something like 25,000 tons a year. The balance has to be marketed abroad. With the revived emphasis on exports, sales promotional activities in the internal market have been almost stopped. The coffee houses which were playing a vital rôle in this connection have been closed by the Coffee Board. The official attitude, it seems, is that the internal market need not be expanded for some time to come. Unlike other agricultural products, the marketing side of coffee is completely under the control of the Central Government. Since it assumed control, rapid changes have been witnessed in the marketing policy.

From 1948 to 1952, the Government was eager to export as much as possible and it was prepared to insist on exports even if that led to a possible shortage in the home market. In 1953 there was a reversal of this policy. After about five years of concentration on the effort to feed the internal market, suddenly the policy has been changed, and the industry is now asked to export all it can.

Coconut Oil Prices

The ban on the import of copra for the next quarter has not produced any appreciable result in the coconut oil market. Prices are not likely to go up because of the adequate copra import licence which has been assured to actual users, and the improvement in local supplies with the change of season. The general provision to import coconut oil to the extent of 20 percent of the copra licence will enable soap manufacturers to get coconut oil also for part of their copra licence and as these quotas have been given on the basis of their 1957 consumption, this would be sufficient to meet their demand except in cases where consumption requirements have increased.

Labour Trouble in Cashew Industry

Kerala's Industries Minister, Mr. K. P. Gopalan, is convening a conference of cashew interests in the State to find out ways and means for solving the crisis now brewing in the cashew-processing industry. The impending crisis has its origin in the employees' demand for better emoluments.

Shipments from Cochin

There have been fairly large shipments of tea, pepper and cashew kernels from Cochin port during the past two weeks. While the U.K. was, as usual, the principal destination for tea exports, the United States and Russia took most of the pepper and cashew kernels shipped during this period. A fairly large volume of tea also has been lifted by Russia.

Tea and Pepper Markets Active

The Cochin market has been active for some time now in the pepper and tea trade. Following better enquiries from the United States and Russia, the pepper market recently witnessed brisk trading, in both the ready and the forward sections. Price fluctuations have been erratic. Ready has moved from Rs. 101 to Rs. 115, while May has gone up from Rs. 107 to Rs. 124 and June from Rs. 108 to Rs. 125 a cwt. Speculators have been very active, so much so that a rise or a fall of Rs. 5 to Rs. 7 has become normal. The Alleppey, Calicut and Bombay market have been behaving likewise. Offerings in the tea market have been showing a steady improvement in quality, which has been attracting more buyers. Foreign buyers, including the newcomer, Russia, have been active and exports have been showing an improvement.

Manufacture of Vitamin A

Lemongrass oil producers and dealers in south India have welcomed the news that Voltas and the Swiss firm of Hoffmann La-Rouche are together to form a company for the manufacture of vitamin A, and other pharmaceutical specialities in India. Lemongrass oil is extensively used in the synthesis of vitamin A. If the manufacture of vitamin A can be started in India making use of this oil, which now finds a market only in foreign countries such as the United States and Switzerland, it will be a good thing. India is the largest producer of lemongrass oil, and her oil is the best. The production last season was something like 1,400 tons.

COCHIN TEA SALES

At Dust Sale H, 650,000 lbs of tea were on offer. There was a fair demand. The market irregularly eased by 10nP or 15nP while better grades declined by 5nP or 10nP.

Calcutta Markets

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 40, held on 7th and 8th April, offerings at the Export auction amounted to 58,325 packages, for which there was a strong and general demand. The strongest feature of the Sale were the "teas for price" which were from 6 to 10nP dearer, while common and medium B.P.'s and Fannings were from 4 to 6nP dearer. There was keen competition for medium O. Fgs. and these were generally considerably dearer, while the B.O.P.'s with good cup quality were sought after, but the low medium descriptions with indifferent liquors were often easier. The C.T.C. teas on offer, especially the poorer kinds, met with good competition and were as much as 20nP dearer. Legg-cut teas, except for the best, tended to be easier and sold at 5 to 10nP below valuations. Whole leaf grades were again well supported and those with good leaf appearance sold about 10nP above last rates. There was comparatively little demand for the few lines of tippy teas on offer and these sold at a discount.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.30 to 2.35	
Plain B.P	1.50 to 1.54	
Medium B.P.	1.62 to 1.66	
Best Assam C.T.C. B.P	2.60 to 2.80	
Plain Fannings	1.64 to 1.68	Not available
Medium Fannings	1.78 to 1.82	
Best Assam C.T.C. Fgs.	2.80 to 3.00	

At the Internal Sale, the 18,464 chests of Dust were on offer, which met with a good general demand. Orthodox descriptions with clean leaf appearance were firm and sometimes up to 6nP dearer and even more at the close, especially the powdery kinds and where quality showed some improvement. C.T.C. Assams were in good demand, especially the smaller powdery types, and those with improving liquors generally sold at dearer rates. Darjeelings were a weak feature and there were occasional withdrawals.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.56 to 1.60	1.50 to 1.60
Medium Assam Grainy Dust	1.60 to 1.64	1.65 to 1.70
Medium Assam C.T.C. Dust	1.85 to 2.05	1.80 to 1.90
Best Assam C.T.C. Dust	2.75 to 3.05	2.60 to 2.70

There was a strong general demand for the 6,029 chests of Leaf on offer, and prices were often considerably dearer.

NO IMPROVEMENT IN FREIGHT MARKETS

THERE has been no change in the general outlook for the freight markets during the past week. In the American grain trade, there were better enquiries, but without any increase in rates. In the South Africa maize market, charterers, it is believed, have agreed to 47s 6d for shipments to Antwerp-Hamburg range. Two Japanese vessels have been fixed to load 9,000 tons 10 percent, each, fertilisers from Red Sea ports to two ports East Coast India at 40s f.i.o. Manganese ore charterers paid 40s f.o.b. c.q.d. for 5,000 tons 5 percent from two ports of Calcutta, Madras to Fushiki (Japan). Coal shippers in Calcutta are still open for three handy-sized vessels Calcutta-Chittagong, Chalna, ideas 19s f.i.o. owners trimming, but shipowners are showing little interest at such poor rates. The time charter market has also continued to be depressed.

SUGAR RISES

During the week ended 9th April, sugar sales in the Calcutta market averaged 5,500 bags daily. Arrivals were 3,000 bags a day and stocks totalled 65,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 37-8 for ordinary grain and Rs. 39 for big grain. The market rose.

HIDES AND SKINS FIRM

The market was firm, and prices showed an upward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 1st April and 7th April, 1958)

Cowhides: Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 13.50 to Rs. 24.

Goatskins: Wet salted (Patna, Daissee, Kustia) 38,600 pcs. on the basis of Rs. 320, Rs. 335 to Rs. 355 and Rs. 380 to Rs. 400; Wet salted (he-killed) on the basis of Rs. 4.12 and (she-killed) on the basis of Rs. 3.62 a piece; Assam-Dinajpur-Maldah 47,300 pcs. on the basis of Rs. 315 to Rs. 370; Pakur-Patna (Ord.) 16,650 pcs. on the basis of Rs. 300 to Rs. 320; Purneah 10,300 pcs on the basis of Rs. 335 to Rs. 367.50; Muzafferpore-Patna 20,500 pcs. on the basis of Rs. 320 to Rs. 340; Muzafferpore-Patna (Heavy) 2,700 pcs. on the basis of Rs. 360 to to Rs. 370.

Bazaar Stocks

(7th April, 1958)

Cowhides: Wet salted 78,400 pcs.

Goatskins: Wet salted (Killed) Kustia and Daissee 11,000 pcs.; Assam-Dinajpur-Maldah 36,000 pcs.: Muzafferpore - Patna - Pakur - Purneah - Kissenganj 101,000 pcs.

COMPANY AND PUBLIC NOTICES

THE GANESH FLOUR MILLS CO. LTD. DELHI.

NOTICE.

NOTICE is hereby given that the 66th Annual General Meeting of the Shareholders of the Ganesh Flour Mills Co. Ltd., Delhi, will be held at the Registered Office of the Company at Subzimandi, Delhi, on Wednesday the 30th of April, 1958, at 10-30 A.M. to transact the following business:—

1. To receive, consider and adopt the Directors' report and the Audited Balance Sheet and Profit & Loss Account of the Company for the year ending 30th September, 1957.
2. To declare Dividends.
3. (a) To elect a Director in place of Shri Satya Narain Gupta who retires by rotation and being eligible for re-election offers himself for re-election:

   (b) To elect a Director in place of Shri Om Parkash who retires by rotation and being eligible for re-election offers himself for re-election:
4. To appoint Auditors for the year 1957-58 and fix their remuneration.

   N.B. Special notice, as required under Section 225 of the Companies Act, 1956, has been received from a Shareholder that in the next Annual General Meeting of the Company he shall propose the following resolution:—

   (a) That Messrs S. P. Gupta & Co., Chartered Accountants, Chandni Chowk, Delhi, be appointed as Auditors of the Company for the next year on such terms and remuneration as may be fixed by the Company in the General Meeting in place of the retiring Auditors, Messrs A. F Ferguson & Co., Chartered Accountants, New Delhi.

   (b) In case it is decided not to appoint the said firm as independent Auditors of the Company their name may be considered for acting as joint Auditors along with Messrs A F Ferguson & Co., on such conditions as may be decided by the Shareholders in the Annual General Meeting.
5. To consider and if thought fit to pass the following as Special Resolution:—

   "Resolved that in Article 128 of the Articles of Association of the Company para 19 of the existing Articles be deleted and in place thereof the following be inserted":—

   19 At any time and from time to time by Power of Attorney under the Seal of the Company to appoint Manager, Officers of the Company and any person or persons to be the attorney or attornies of the Company and delegate or confirm upon them such powers including the power to sub-delegate, authorities and discretions (not exceeding those vested in or exercisable by the Board under these presents and excluding the power to make calls and excluding also except in their limits authorised by the Board, the power to make loans and borrow moneys) and for such period and subject to such conditions as the Board may from time to time think fit.

By Order of the Board of Directors,
For THE GANESH FLOUR MILLS CO. LTD.,
DELHI.
Sd/- KIRPA NARAIN,
Secretary & General Manager.

Delhi,
Dated 27th March, 1958.

N.B. (a) The Share transfer books of the Company will remain closed from 16th April to 30th April, 1958 (both days inclusive).

(b) Members unable to attend are requested to send their Proxy Forms (sent herewith) duly stamped, signed and witnessed in favour of a person attending the meeting. Forms not properly witnessed or stamped or received less than 48 hours before the meeting will be treated as invalid.

(c) A member entitled to Vote is entitled to appoint a Proxy to attend and vote instead of himself and that a Proxy need not be a member of the Company.

Explanatory statement in regard to the special business under item No. 5 of the agenda set out above as required under Section 173(2) of the Companies Act:—

In the present Articles of Association of the Company, the Directors are authorised to delegate any of their powers to a Manager or any other person or Officer, holding power of attorney for and on behalf of the Company. Such a Manager, person or Officer of the Company is not, however, authorised to sub-delegate his power to any other person. This is likely to create difficulties in the ordinary course of business and day to day working of the Company's affair and as such it is considered necessary and desirable that sub-delegation of powers be authorised under the Articles of Association, hence this amendment.

MAHINDRA & MAHINDRA LIMITED

NOTICE

THE 12th Annual General Meeting of the Shareholders of MAHINDRA & MAHINDRA LIMITED will be held at the Taj Mahal Hotel, Apollo Bunder, Bombay 1. on Monday the 12th May, 1958, at 4 p.m. to transact the following business:—

(1) To receive and adopt the Directors' Report, the audited Balance-sheet and Profit and Loss Account for the year ended 31st October, 1957.

(2) To declare dividend on Preference and Ordinary Shares.

(3) To appoint a Director in place of Sir Dhiren Mitra who retires by rotation under Article 110 of the Articles of Association and who, being eligible, offers himself for re-election.

(4) To appoint a Director in place of Mr H. C. Mahindra who retires by rotation under Article 110 of the Articles of Association and who, being eligible, offers himself for re-election.

(5) To appoint a Director in place of Sardar H. S. Malik who ceases to hold office by virtue of Article 116 of the Articles of Association and who, being eligible, offers himself for re-election.

(6) To appoint a Director in place of Mr. Stephen A Girard who ceases to hold office by virtue of Article 116 of the Articles of Association and who, being eligible, offers himself for re-election.

(7) To appoint Auditors for the current year and to fix their remuneration.

(8) To consider and if thought fit to pass the following resolution with such modification, if any, as may be agreed upon at the Meeting—the relative explanatory note as required by Section 173 of the Companies Act, 1956, is annexed hereto:—

"RESOLVED that the Company's Authorised Share Capital be increased by Rs. 3,50,00,000 and that Clause 5 of the Memorandum of Association be altered so as to change "Rs. 1,50,00,000 (Rupees One crore and fifty lacs) divided into 12,50,000 shares of Rs. 10/- each and 25,000 shares of Rs. 100/- each" into "Rs. 5,00,00,000 (Rupees Five crores) divided into 40,00,000 shares of Rs. 10/- each and 1,00,000 shares of Rs. 100/- each."

(9) To consider and if thought fit to pass the following as a special resolution with such modification, if any, as may be agreed upon at the Meeting:—

"RESOLVED that Article 3 of the Articles of Association of the Company be deleted and the following substituted therefor.

"ARTICLE 3: The Capital of the Company is Rs. 5,00,00,000 (Rupees five crores) divided into 40,00,000 Ordinary Shares of Rs. 10/- each, 75,000 Preference Shares of Rs. 100/- each and 25,000 Redeemable Cumulative Preference Shares of Rs. 100/- each.

The said 75,000 Preference Shares of Rs 100/- each shall have such preferential rights privileges and other conditions attached thereto as may be determined by the Board at the time of the issue of this capital.

The said 25,000 Redeemable Cumulative Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 6% per *annum without deduction* of Income-Tax on the capital for the time being paid up thereon, and the right in a winding-up to payment off of capital and arrears of such fixed dividend, whether declared or earned or not, accrued up to the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any right to participate in profits or assets The Company shall be entitled on or at any time after the 1st day of November 1965 to redeem the whole or any part of the said Redeemable Cumulative Preference Shares for the time being issued and outstanding out of any moneys which may lawfully be applied for the purpose at par plus a premium of Rs. 5/- per share upon giving to the holder of the shares to be redeemed not less than three months' previous notice in writing. In the event of the Company *determining to redeem* a part only of the said Redeemable Cumulative Preference Shares for the time being outstanding, the particular shares to be redeemed shall be selected by a drawing which the Company shall cause to be made by one of its officers at its registered office in the presence of a representative of the auditors of the Company for the time being.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains eight cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research

P. O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India.

Every such drawing shall be made in such a manner as the Company shall (subject to the approval of the auditors) determine as convenient for selecting the number of shares required to be drawn.

The said Redeemable Cumulative Preference Shares shall confer the right to attend and speak at General Meetings of the Company but shall not confer any right to vote except when—

(i) the cumulative preference dividend is passed over in any year or has remained in arrears for more than six months from the date it is declared; or

(ii) any resolution affecting the rights, privileges or interests of the holders of the said Redeemable Cumulative Preference Shares is proposed; or

(iii) any resolution for the winding up of the Company is proposed.

None of the funds of the Company shall directly or indirectly be employed in the purchase of, or lent on the security of shares of the Company."

otes :—(a) The relative explanatory statement pursuant to Section 173(2) of the Companies Act. 1956. in respect of the special business under items 8 and 9 set out above is annexed hereto.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND THE PROXY NEED NOT BE A MEMBER.

(c) The Transfer books of the Company will be closed from 28th April, 1958 to 12th May, 1958, both days inclusive.

(d) Dividends, if sanctioned at the Meeting, will be made payable to those Shareholders whose names are on the Company's Register on the 12th May, 1958, and the dividend warrants will be despatched to them on and after the 19th May, 1958.

By Order of the Board,
KESHUB MAHINDRA,
Director.

19th March, 1958.
Gateway Building,
Apollo Bunder,
Bombay 1.

ANNEXURE TO THE NOTICE

Explanatory Statements as required by Section 173 of the Companies Act, 1956.

Items No. 8 and No. 9 : The Company's original programme for manufacture of Jeeps was limited to a volume of 2,500 units a year. The Tariff Commission reporting in 1956 forecasted a progressively increasing demand for Jeeps reaching to 5,000 units by 1960-61. Government in accepting the recommendations of the Tariff Commission called upon the manufacturers to elaborate and adjust their respective programme in accordance with the conclusions indicated by the Tariff Commission. The Company accordingly presented an application for the doubling of its programme of production and preliminary approval of Government has been received. This will necessitate a considerable expansion of Company's manufacturing operations, and of the assembly facilities.

The Trailer Division of the Company is also being expanded, and it is hoped that the Tractor manufacturing proposals will receive Government approval shortly.

It is anticipated that substantial additional capital will be required for these various expansion schemes. As a first step, it is proposed to increase the authorised capital of the Company from Rs. 1,50,00,000 to Rs. 5,00,00,000 as set forth in the Resolution. The alterations of clause 5 of the Memorandum of Association and of Article 3 of the Articles of Association are therefore proposed for Shareholders' approval as required by Section 31 and 94 of the Companies Act. 1956, and Article 50 of the Company's Articles of Association.

By Order of the Board,
KESHUB MAHINDRA,
Director.

Bombay,
19th March, 1958.

To All Shareholders of the Company and in particular, Mr. B. B. Auty, Ethiopia: Mr Mangalbhai Nathabhai Patel, Tanganyika; and Mr. M. V. Shirodkar, Baltimore, U.S.A.

THE BELSUND SUGAR COMPANY LTD.

T=Dividend Taxable.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE COMMONWEALTH AND EUROPE'S COMMON MARKET

IMPERIAL PREFERENCE AS THE PRICE OF BRITISH-CONTINENTAL TRADE

THE prospect that the European Common Market would really come into operation at the end of this year, without any agreement having been reached between Britain and the Continent on a "free-trade zone" only began to be taken seriously in Britain about the beginning of this year. And then it was taken very seriously indeed. In fact, in a large section of the popular Press not normally distinguished for its concern with or understanding of the economic mysteries, it was taken rather hysterically. Fleet Street has echoed with comminatory declamations, directed mainly at the French, and there have been open threats of tariff war and "retaliatory" common markets grouping Britain with Canada or with the Scandinavian countries. This agitation reflected in part the considerable anxiety of the Conservative Government, already shaken by a series of moral and material defeats, that Britain was about to suffer a resounding affront in seeing her free-trade zone project flatly turned down not only in Paris, whose ill will in the matter is notorious, but even in the liberal capitals of Holland, Belgium and West Germany. That such an eventuality would represent a grave political reverse for the Government is evident. Whether it would entail grave economic consequences for Britain and the sterling area, is a separate question that needs to be considered seriously but not dramatically.

That a more measured tone has just been introduced into the dispute by the *Manchester Guardian* and the *Economist* is not surprising, but what might surprise people in this country is the sense of those interventions, especially the important editorial devoted to the question by the Manchester paper recently. In a word, their new point is that in so far as Britain is faced today with a choice between the Commonwealth and the Continent, there exist weighty reasons for choosing the latter—or at least for making much more serious sacrifices of Commonwealth principle than have so far been contemplated, in order to safeguard the connection with the Continent. Put so baldly, their view is no doubt denatured—in particular, it is part of the new way of looking at this issue that Britain is not in reality faced with a dramatic choice between Continent and Commonwealth. But there can be no doubt that the wind has changed in some quarters in Britain, where it is felt that London's approach to the Continental common market has been unco-operative, exclusive and unreasonable, and that the Commonwealth ideology invoked to excuse this is often more sentimental than realistic.

If this opinion continues to make progress (and it is apparently backed by influential forces in British industry), it will be of close interest to India along with all other members of the Commonwealth-sterling area-imperial preferences network. Hitherto the attitude in India has been that this long drawn out and immensely intricate dispute about the common market and the free-trade zone was too far off, and, above all, too abstruse to matter to us here. In truth, the issue is important and quite simple. Reduced, somewhat brutally, to its bare bones, the problem is this. Britain and West Germany, two of the biggest industrial agglomerations on earth and certainly the two that rely most on exports of their manufactures, are today and have been for half a century, deadly serious competitors. They have at their doorstep a market of almost 100 million people comprising the Benelux and Latin countries (*i.e.*, France and Italy), nations less industrialised than themselves and offering a magnificent market. At present, Britain and West Germany sell in that market on absolutely equal terms. But if Germany is merged with the nations that constitute that market into one customs union, then Britain is excluded. And this would be a matter of vital concern to Britain, to the sterling area she heads and to all world trade.

The British reply to that danger, formulated with the support of all the Commonwealth capitals including Delhi, is a complicated plan to avoid being shut out of the Continent. It supposes that British manufactures would continue to be imported into the Latin-Benelux market on the same terms as German manufactures, although Britain would not join the common market but would retain her own special customs arrangements with the Commonwealth and the rest of the world.

Now, simply to state the British proposal is to show why it has failed. It amounts to asking the constituents of a new club to admit as a full member a party who declares he has no intention of paying his dues. Naturally, the Continentals have stonewalled. The opposition has been led, very effectively, by France. It should be clear why, although the crux of the matter is competition between Germany and Britain, the public dispute is between France and Britain. France is the next most industrialised nation in Europe after Germany and Britain. she has already accepted an obvious risk in consenting to join a customs union with Germany, and her labour and industry consider that it would be over the odds to admit Britain too. Thus the Germans, who are already in the common market whatever happens, can afford to efface themselves quietly and leave the acrimonius wrangling to France. There are numerous complicating factors, such as the co-option of France's colonies to the common market and several disgraceful reversals of the French position due to ministerial instability in Paris. And these have led some people to imagine that the bone of contention was something separating France and Britain in particular. But in fact the main point remains Anglo-German competition in southern Europe.

Since it is now plain that London's free-trade zone has no chance of being accepted by the Continentals, can Britain admit defeat at the hands of Germany on the Continent, but in revenge, organise another closed system with the Commonwealth countries?. If she could, there is no doubt that the Continental countries that are now asserting that they can get along without Britain would be very hard hit, because in fact they depend on the large British and Commonwealth market very heavily. And if Britain could include in this retaliatory system Scandinavia and Switzerland, the blow would be very severe. It is along these lines that some London newspapers have been arguing. But we in this country who know the history of imperial preferences can see at once the impossibility of such retaliation. Countries such as India, Canada or Australia who are developing their own industries, very often in competition with British exports, and who have spent the past two decades whittling down imperial preferences to their present modest proportions, cannot at this stage reverse the trend and contemplate closer economic union with Britain. In any case, they have not the incentive to do so, for there is no evidence that even if the European common market took a protectionist turn they would be as seriously affected as would Britain herself.

An *Economist* publication, *Britain and Europe*, went to the heart of the problem lately when it pointed to the simple fact that intra-European trade is growing more quickly than trade between Britain and the Commonwealth. So, in so far as it is a matter of rational choice, to choose the Commonwealth rather than the Continent would be a bad calculation. But, as the same study showed, the element of choice is more apparent than real. In fact Britain is being drawn increasingly into the European trade network, and away from the Commonwealth, whether she wishes it or no. The *Manchester Guardian* last week translated this into political terms when it emphasised that there is a larger body of opinion in favour of co-operation with the Continent than the "Empire" newspapers would suggest. British public opinion, it said, has undergone "an astonishing evolution" in that direction. It drew the logical conclusion that, given the present stalemate between Britain and the common market powers, it is Britain that must make the next move, to avoid a breach at whatever cost.

Precisely: at what cost? To date, London has argued that agriculture must be excluded from the free-trade zone. In other words, British manufactures would be allowed entrance to the common market area but French, Italian and Dutch foodstuffs would not be admitted more freely into Britain—lest they damage the position of generously subsidised British farmers and of those Commonwealth countries that have privileged access to Britain in return for privileged access of British manufactures into Commonwealth countries. This is the first position that the *Manchester Guardian* thinks must be surrendered. Clearly, those Continental countries that have an extensive agriculture are not going to admit British goods without the *quid pro quo* of wider openings for their rural produce. The common market powers have agreed to this among themselves and they could make no exception for Britain. At first glance this is a problem that seems to concern only New Zealand, Australia, South Africa and a few other regions that supply Britain with food and wines that could as well be obtained on the Continent. But then, France has secured the inclusion of her tropical colonies and if their agricultural output is to be admitted more freely to Britain, then India and all her neighbours are at once concerned. The repercussions of this first concession would be felt throughout the economic structure of the Commonwealth.

But this is not the full extent of the price the Continentals would ask. They would demand equal access for their goods in all the Commonwealth markets where Britain now has some advantage because of imperial preference. The *Manchester Guardian* recently said (for the first time to our knowledge in the British press) that there was no call to react to this with a display of outraged Empire patriotism: the changes required would be gradual over twelve to fifteen years and Britain could well afford to offer such concessions as are needed to keep the door with Europe open. Here again apparently minor concessions would have extensive repercussions which will need to be considered afresh in all the Commonwealth countries, now that leading British opinion has taken a new tack. Hitherto, London has fobbed off Continental objections about imperial preferences by replying, quite truthfully, that they are so small as hardly to matter. To which the Continentals answer, equally truthfully, that in that case the discrimination Britain would suffer in Germany's favour on the Continent is also quite small and that, in fact, an equalisation of tariffs within the common market would permit easier access for some British goods into France and Italy.

These truths are enough to show that Britain is not faced with a tragic life-and-death choice between Commonwealth and Continent, so the agitation of some London organs and the uncompromising stubbornness of the Conservative Government are equally unwarranted. It is time for the more supple approach that moderate opinion is now suggesting. But the point of principle stands—that Britain from here forward can only keep the door to Europe open by surrendering some of the advantages (be they real or illusory) that she enjoys within the Commonwealth. That influential voices have been raised in Britain urging that such revision of the Commonwealth economic structure is necessary is a fact that will need to be reckoned with in all Commonwealth capitals.

THE "GREYING" MARKET FOR MOTOR-CARS

TOO LITTLE EMPHASIS ON QUALITY

THE Government's policy for the manufacture of motor-vehicles in India seems gradually to be approaching its anticipated peak of absurdity. For years, it has been argued that the biggest handicap in organising local production is that demand is too small. But, in recent months, even the narrow demand which exists has been presented with what is virtually a black market. Delivery dates for almost all kinds of motor-cars have been lengthening. Bribery and influence (especially bureaucratic influence) are important determinants of how soon customers' orders are fulfilled. Many "second-hand" motor-cars, the prices of which are uncontrolled, are selling for more than dealers quote for new models. Even vehicles which were hard to sell a mere six months ago because their quality was shoddy are now commanding substantial premia in what is somewhat inexactly termed the "second-hand" market. (Dealers' prices are virtually controlled, but the growth of a grey "second-hand" market in almost new motor-cars raises doubts about the extent to which the control is really effective.) Perplexed users recall that a few years ago the import of foreign motor-cars was totally banned in order to provide the domestic industry with a larger and guaranteed home market. Now the Government's import policy has been brought to the curious stage of refinement where the import of capital goods, parts and raw materials necessary for motor-vehicle manufacture has been severely restricted, so that the industry cannot satisfy even the tiny market which exists. The shortage of motor-cars which has developed would be less worrying if it had resulted from an increase in demand, but this is not the case. It is due primarily to a decrease in production brought about by the foreign exchange shortage.

As Mr. Lalchand Hirachand has pointed out in his presidential address at the latest annual general meeting of the Automotive Manufacturers Association, a more realistic import policy is necessary. The Government wants more and more components to be produced in India, but this is possible only if the industry can import the capital goods and raw materials it needs. The shortage of special steels has for some years handicapped the production of components; with the recent import restrictions, this shortage has become more acute. The fall in production is only one aspect of the damage it causes; another aspect is the fall in quality that results when raw materials of the right specifications cannot be had. It is not suggested that if suitable raw materials were available, India could produce motor-cars as good as those manufactured abroad. She could not, for some manufacturers here, like their Government, are simply not interested in quality (except the quality of the tariff umbrella which protects them). But the fact nevertheless remains that if the Government insists on more and more components being produced in India, liberal facilities for their manufacture have to be granted. Part of the loan from the United States which has recently been negotiated is intended for the motor-vehicle industry; perhaps it will help relieve the foreign exchange shortage. If it is intended to cover motor-car production at all, as distinct from that of lorries, its general usefulness might, however, be limited to some extent by the fact that most cars in India are built to European (including British) specifications, while that part of the loan which comes from the U.S. Export-Import Bank has to be used exclusively for the purchase of American goods.

A small market, even if it is a black one, can never be conducive to motor-vehicle manufacture. Assuming that the present shortage of motor-cars will ease in future years, the main problem before the Indian industry will once again be to find ways of expanding demand. The Planning Commission has cheerfully asserted that requirements by the end of the second plan period will total 57,000 vehicles a year, as against 1957's total sales of 31,543 vehicles. The Tariff Commission, not to be outdone in cheerfulness, has coolly added 8,000 to the Planning Commission's figure. But neither has perhaps made adequate allowance for the fact that motor-vehicle sales will be impeded not only by the Indian economy but also by so much of Indian economic thinking being of the bullock-cart variety. Many of the worthy gentlemen who flew by *Viscounts* on their way to the Congress session at Pragjyotishpur three months ago, where the nation's economic ideals were subjected to searching scrutiny, are confirmed opponents of the ostentation attaching to lesser mortals travelling in motor-cars. This is an attitude the influence of which is not to be under-estimated. A few months ago, a member of Parliament considered the supposed ostentation of sufficient importance to enquire of a senior Minister why, in a socialist pattern of society, he travelled in a big motor-car and not in a smaller one. By this means, the Government's policies are influenced. Bullock-cart idealism, which to the uncharitable looks like undiluted hypocrisy, plays a large part in preventing the growth of the motor-car market.

Other handicaps to growth are outlined by Mr. Hirachand. While big motor-cars are alleged to denote ostentation, and an excise duty of Rs. 3,000 has been imposed on them, even without this duty the incidence of motor-vehicle taxation in India is among the heaviest in the world. Successive bodies, official as well as non-official, have suggested reducing these taxes but their reports lie gathering dust in Secretariat pigeon-holes. The Centre has recently virtuously started urging State Governments not to mulct road transport as heavily as they do, but the latter are reluctant to part with so handy a milch cow while the other sources of revenue they have remain limited. In any case, many of them feel that the Centre's plea is merely a case of the pot calling the kettle black, considering the huge amount of revenue the Centre itself gets from road transport in the form of import and excise duties on vehicles, components and fuels. Perhaps it is time the two-way traffic in exhortations between the Centre and the States was ended and a comprehensive programme of tax reduction evolved in which both sides would sacrifice some revenue. A useful beginning might be made by State Governments bringing their sales taxes on motor-vehicles to a lower and uniform level, and by the Centre cutting the petrol duty.

Although the effort to reduce taxes on road transport has hitherto been notable more for verbosity than for achievement, in certain other directions greater realism has prevailed. As Mr. Hirachand points out, road transport has not been able to develop because the Motor Vehicles Act has imposed too many restrictions, while local taxes have hampered the free movement of goods and made it uneconomic. State Governments have been threatening to nationalise various undertakings, with the result that there has been no incentive for the latter to invest in expansion. The decision to amend the Motor Vehicles Act is welcome, and the Government's new intentions on such matters as the free issue of permits, an increase in the number of public carriers, liberalised movement on inter-State routes and higher laden weights should be helpful. It remains to be seen, however, how State Governments respond to Central exhortations about facilitating inter-State transport; their reaction to such exhortations so far has been one of blind intransigence. It is also to be hoped that the so-called moratorium on road transport nationalisation until 1965, which the Centre has recently announced, will not be undermined by the private reservations which some State Governments are reported to have on this question.

Among the important factors in the growth of the motor-vehicle market and industry which Mr. Hirachand, unfortunately but understandably, neglects to emphasise are prices and quality. The sluggish rise in the demand for motor-cars can be directly related to the fact that they are too expensive. They are too expensive first to buy and then to run—the latter being so partly because a deterioration in manufacturing standards has sharply inflated expenditure on repairs and replacements. The Government claims to maintain a stern check on quality, and has invited customers to inform it whenever their new motor-cars do not function properly. But the agency which is supposed to receive complaints and act on them seems to be a lavish consumer of barbiturates, so nothing ever gets done. Perhaps some manufacturers get away with the excuse that they cannot obtain suitable raw materials, but it is reassuring that there are at least one or two lorry units to whom quality is of the primary importance. Their attitude to this question could usefully be encouraged among the other motor-car factories. One way of encouraging it might be to allow a quality producer like Mercedes-Benz to make motor-cars in India, as was suggested some time ago, in addition to the lorries which are already being made in collaboration with the Tata Locomotive and Engineering Co. Ltd. in Jamshedpur. The argument that six manufacturers are enough to cater for a market which last year amounted to less than 32,000 vehicles is to some extent specious. No sanctity attaches to the number six, and what is more important than numbers is efficiency. If it is insisted that manufacture be restricted to a few units, there is still scope for inviting efficient newcomers to weed out vested interests of proven inefficiency. The Indian industry has yet to realise that what it needs to build are motor-cars for the millions rather than for the millionaires.

SOME SECOND THOUGHTS ON CO-OPERATION

THE opposition to the "officialisation" of the co-operative movement, voiced at the New Delhi meeting of the All-India Co-operative Congress, and Mr. Nehru's strong criticism of the Government and himself for having accepted some of the recommendations of the All-India Rural Survey Committee, leave one to wonder whether the Government always takes its decisions after proper thought. When the Committee's recommendations were submitted, Mr. Nehru and his colleagues must have been aware of the unhealthy implications of "State partnership" in a movement, the basic principles of which are self-reliance and self-help. Yet they acted on them with cheerful haste, nationalising one of the country's biggest and most efficient joint-stock banks for no better reason than to provide credit for agricultural operations. The principle of State partnership may look attractive in theory. But in terms of practical politics it might mean nothing short of complete control over management, especially when large Government funds are involved.

The President of the Co-operative Congress, Mr. K. D. Malaviya, who has spoken so indignantly about officials "bossing" the movement, does not appear to mind if the co-operatives continue to receive public money on the present very liberal scale—he probably wants more—but his resentment of official interference with "the day-to-day management of the affairs of co-operatives," seems to have been acquired without any clear idea as to why it has come to be so. Yet assuming that this is what is happening, there are sound reasons why there should be a close official check on the activities of the co-operatives. Most of them are living on borrowed funds, with little capital of their own. Mr. Malaviya is no doubt aware that the bulk of their working capital now consists of loans from the apex banks and the Reserve Bank, and arrears in the recovery of these loans are quite heavy. Yet very little was heard at the Congress of any practicable scheme for promoting thrift and saving within the societies themselves, so that the recovery of loans can be stepped up, or the available funds supplemented. Surely, the State cannot entrust large sums of public money to the care of people who clearly have no dependable record in the matter of repayment? The history of the co-operative movement in this country is indeed discouraging. Its success in both the spiritual and economic sense depends upon enlightened rural leadership, which by all accounts is still scarce; the complaint that the institutions are run by local busybodies and political touts is not uncommon. It will be interesting to know what exactly the Co-operative Congress has been doing to promote that leadership, and how it has been educating the peasantry in the ways of co-operation.

Professor N. G. Ranga's suggestion that Government officials ought to act as "guides and philosophers" rather than as "directors and mentors" is sound; that should be the ideal rôle for them to play. But the professor knows his peasantry well and is conversant with the vagaries of village politics from which the co-operatives are not immune. Moreover, co-operation is a State subject, and it is this administrative arrangement which is, to some extent, at the root of all the difficulties. State Government officials dealing with co-operation are usually ill-equipped to conduct a self-help movement such as this; they have also shown little initiative and enthusiasm for the task. But the correct solution for minimising official domination or control over the movement at the moment does not seem to be to withdraw Government supervision to the extent that Mr. Malaviya and his colleagues of the Co-operative Congress would like. The officials will have to be there, but they must be given intensive training for a job with which they are unfamiliar. Side by side, co-operative officials and members will have to be educated. The success of the co-operative movement in, say, Denmark and the U.K. is entirely due to the training which is given to the workers. And if the Governments there do not have much to do with its affairs it is because the institutions in those countries are truly self-sufficient financially and otherwise. In India co-operation has been chiefly a method of finding credit for the poor agriculturist, and the enormous needs of agricultural finance can only be met by the State. Official control will be necessary as long as public funds are involved, and one sees nothing wrong about the Rural Credit Survey Committee's insistence that proper control must be kept over the use of these funds. If the co-operatives have come under the control of the Government, it is because they depend so heavily upon public money. Mr. Nehru's allegation that the Committee wanted to push the movement in the wrong direction is not clearly understood, as he has not cared to explain the facts on which he bases his opinion. The Report is apparently to be re-examined. When that is done, it will be instructive to know on what other "democratic" lines the Government will be a "partner" in the movement.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd. which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Current News and Comment

Repayment of Foreign Loans

As India receives new foreign loans, thoughts are turning more and more to the question of how they will be repaid. There will be a sizeable burden on the economy after 1960-61 when the repayments commence and interest charges also have to be remitted. It is estimated that roughly Rs. 90 crores will have to be returned every year for the best part of the third five year plan. The United States is the biggest potential lender to this country and is likely to remain so; the problem of repayment is, therefore, a difficult one. In his annual address to shareholders of the United Commercial Bank, Mr. G. D. Birla, chairman, emphasises that "our foreign exchange needs will, for years to come, exceed our earnings. But I am averse to the idea of continued borrowing from abroad because, ultimately, the problem of repayment would become acute." (A fuller version of the speech appears on a later page.) In his view, it is better to create a favourable atmosphere so that foreign capital is encouraged to invest in Indian enterprises. Foreign participation in equity capital, Mr. Birla points out, contributes to the creation of new wealth and the question of repatriation of capital does not normally arise as long as private enterprise is allowed to function with a reasonable degree of freedom. The obstacles to foreign investment are well known. The U.S. Department of Commerce gave the Indian industrial delegation which Mr. Birla led last year a note listing the "deterrents" to U.S. investment. The Government of India is aware of the deterrents and should remove them.

Referring to the rôle of private enterprise in economic planning, Mr. Birla asserts that its performance has been much better than that of the public sector. The physical targets are well on the way to fulfilment, but the shortage of internal capital and of foreign exchange threatens to check progress. The tempo of industrial production is slowing down and the goal of eight million new jobs is receding. Mr. Birla pleads for a realistic readjustment of the plan, giving agriculture the importance it deserves. Reviewing monetary conditions during the past year, he says that the severity of the stringency in the earlier half of the year was due to the additional demand on the banking system for funds which came from such unseasonal factors as the heavy imports of steel. Thanks to the liberal line of credit which the Reserve Bank extended to the banks, the demands were fully met. Since the second half of the year, the Reserve Bank has been pursuing a policy of selective monetary control which is responsible for the decline in the proportion of the scheduled banks' advances to deposits. As for the rise of Rs. 145 crores in the deposits of scheduled banks during 1957 excluding the State Bank, Mr. Birla attributes this to disbursements in connection with the second plan. In his view, the banks now do not need to compete with one another by offering higher interest rates to attract new deposits.

Cash and Caste in Kanpur

A survey of social mobility conducted in the city of Kanpur by the J. K. Institute of Sociology, Lucknow University, on behalf of the Central Education Ministry has yielded some interesting results. "Urban middle-class climbers," the report says, "are the front-rank men of their class—its gentle folk who are comparatively better off than others." High-caste Hindus predominate in the class. Higher education, it appears, is not directly related to higher incomes. Indeed, many of those in the highest income bracket are the least educated. The average income of those with less than ten years of school education is Rs. 535 a month, while it is only Rs. 333 a month in the case of those with university degrees. In order to reduce social rigidity, the report advocates reorganisation of the pay structure, with overlapping grades, or better still only two or three grades for the entire range of occupations for the educated. The scales recommended are Rs. 150 to Rs. 500 for clerical and ordinary secretarial jobs, Rs. 300 to Rs. 800 for the juniors in the major professions and administrative services, and Rs. 800 to Rs. 1,200 for the seniors. Since Uttar Pradesh is commonly identified with Hindi fanaticism, the findings of the survey about the middle-class preference for English are interesting. It says: "Education is increasing among their children (urban middle-class) and there is a peculiar emphasis on English so that speaking in English even in the closest family circle and replacement of kinship terms by 'Papa' or 'Daddy', 'Mamma' or 'Mummy' is taken as an index of culture and social advancement." Equally revealing are the observations on "dignity of labour", which is preached from a hundred platforms and which Mr. K. M. Munshi once even tried to dramatise in the "gospel of the dirty hand." "There is little dignity of labour," says the report, "and, irrespective of income, those who work with the hand have the lowest status. In fact, those who work have a lower status than those who do not." In the scale of social esteem, power or authority stands at the top, but neither power nor authority is, of course, directly related to education and income. Free education up to the highest stage is recommended as the surest way of promoting social equality. But this is a counsel of perfection, in as much as universal free education, even in primary classes, is a thing for the distant future.

Textile Exports and Costs

India's cotton textile exports during 1957, at 854 million yards, were 8 percent higher than in the previous year, but fell far short of the 1,000-million-yard target. The increase over the 1956 figure, according to Mr. Arvind Narottam, president of the Ahmedabad Millowners Association, is "particularly due to distress sales by mills". The trend in the world textile trade is towards stiffer competition, so Mr. Narottam feels that unless the rigid conditions which the Government imposes for the installation of automatic textile looms are relaxed, it will not be possible to maintain the existing level of exports, let alone raise it. He refers to the report of the Export Promotion Committee, which has recommended that the scheme relating to the installation of automatic looms should be reviewed in order to make its implementation easier for the industry; Mr. Narottam suggests that the Committee's recommendations should be accepted soon by the Government, otherwise it will not be possible to raise exports and the plan will suffer. Textile mills in Ahmedabad have launched a new move to raise productivity at the shop-level. A search for better techniques, and for means by which men, machines and materials can be used more efficiently, is in progress. The Association has exchanged productivity teams with the South Indian Textile Research Association, to study "the methods and techniques adopted by each centre for increasing productivity". This is the first experiment of its kind, and has proved quite useful. Mr. Narottam suggests that if productivity teams could be sent to industrially advanced countries such as the United States, the Indian mills would benefit immensely.

Cost problems have been seriously worrying the industry. As the Central additional excise duty has replaced State sales taxes, the Bombay Government has decided to withdraw its concessions relating to the sales tax leviable on raw materials, machinery and packing materials, purchased for use "in the manufacture or processing or packing". It will hereafter charge general sales tax on such materials, and that will impose a heavy burden. In its report to the Government, the Railway Freight Structure Enquiry Committee has recommended some increases in railway freight, which will adversely affect industries situated in inland centres such as Ahmedabad, particularly by making the transportation costs for their raw materials dearer. The Central Wage Board for the Cotton Textile Industry has been visiting Ahmedabad. It has to "evolve" a wage structure which will be based "on the principles of fair wages as set forth in the report of the Committee on Fair Wages". Mr. Narottam emphasises that in such matters the productivity of labour and the industry's capacity to pay are the main points to consider, and he hopes the Board will recognise their importance. The reduction by the Government in March of the excise duty on all varieties of cloth has been "most opportune." It is to be hoped that the Government will adopt appropriate measures to avoid a recurrence of the crisis through which the industry has passed. Mr. Narottam fears that the "working results of textile mills for 1957 would make discouraging reading." Internal demand for cloth was depressed last year by the heavy excise duties: because of this 25 textile mills had to be closed and about 25,000 workers lost their jobs.

Taxes Exceed Profits

The tax structure has become almost baffling in its complexity since the new levies on wealth and expenditure were imposed in last year's Budget: in its application to companies, serious injustices have arisen. A remarkable example is mentioned by Mr. E. D. Sheppard, chairman, who tells shareholders that the Kohinoor Mills Company is now "called upon to pay taxes equal to 114 percent of its assessable profit for the year." The wealth tax is causing "an insidious erosion of capital resources", while the dividend super-tax is "the most inhibiting and regressive" of the new levies. As the latter is based on paid-up capital only, it penalises unfairly those companies which have ploughed back their profits in past years. By directly hitting the investor, it dries up the main source of capital for the private sector. Referring to the inadequate internal demand for cloth, Mr. Sheppard says that many must be wondering why, with an increasing population and greater earning capacity, total consumption is not rising. The explanation is to be found in the bad monsoon of last year. Food prices have gone up, adversely affecting the demand for cloth. The fortunes of the textile industry depend directly on higher agricultural production and cheaper food. The heavy excise duties have also done considerable damage. Dealing with the over-supply of yarn, Mr. Sheppard says that this is due to the vacillating export policy of the Government. Many overseas buyers have not felt sure of being able to get supplies from India, so they have switched to alternative sources. The handlooms have failed to take up the additional quantities of yarn produced for export.

Bigger Rebate for Handlooms

The restoration of the rebate on handloom cloth sold through co-operative depôts to 12nP in the rupee from 11th April represents a victory for the Madras Government. It has steadily been telling New Delhi that only a subsidy on sales can help dispose of stocks. The yarn trade is likely to benefit indirectly from the bigger rebate and the power cut leading to a fall in the output of spinning mills in south India might, in somewhat unwelcome fashion, help restore a better balance between production and offtake. Although the rebate applies for two months at present, it is thought that the co-operatives will continue to get it for a longer period. The reduction in the excise duty on mill cloth has been cited as a reason for helping the handlooms in this way. The handloom industry is looking for foreign markets and its efforts to follow U.S. fashions convince some that its dollar sales may grow. Still the technical advance required of the industry remains negligible so far and experts have pointed out that looms must be made better if wages are to rise. The old rebate which has just been restored makes handloom goods distinctly cheaper, and the offtake from co-operatives is expected to rise rapidly. Private shops too are likely to offer the same inducements to customers as the co-operatives.

Depression in the Presses

Mr. M. S. Chunder's speech from the chair at the annual general meeting of the Calcutta Hydraulic Press Association last Friday repeated an hoary complaint: that the Government of India does not, but should, allow the export of raw jute. It is a complaint which is so old and so untenable

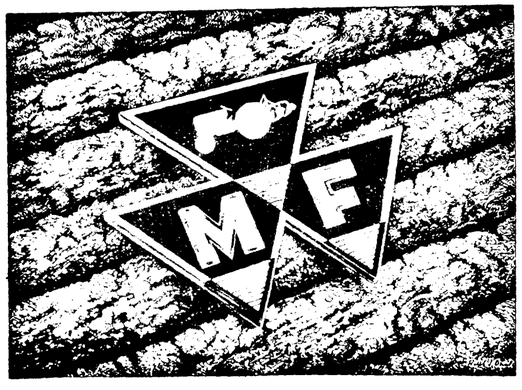
that the hydraulic press owners might now, with advantage, consider forgetting it altogether. Admittedly, their industry has suffered much since partition. The Indo-Pakistani sub-continent in happier times had a surplus of raw jute, which was baled by the Calcutta hydraulic presses and then largely exported. Since partition, India has become deficit in the fibre and her jute industry's demand for pucca bales is extremely small, so there is little work left for the presses. The basic misfortune of the press owners thus is that they have found themselves on the wrong side of the border. The misfortune might have been less serious if Pakistan had been sensible and let her raw jute be exported freely to India, where the press houses could have baled it and then sent it overseas. Instead, because of political hostility and economic nationalism, Pakistan has on the one hand not been letting her jute come to India freely, and on the other has been setting up presses for baling jute herself. This is the first basic fact to which the Indian hydraulic press owners have to reconcile themselves.

The second basic fact is that India still has a considerable way to go before she achieves self-sufficiency in raw jute. That is a situation which neither special pleading nor prejudicially compiled statistics can change. Mr. Chunder says that India started the current jute season with a carry-over of 1.7 million bales; to this, she will be adding her own jute and mesta crop of 5.83 million bales, plus imports from Pakistan amounting to roughly 700,000 bales. There will thus be a total supply of 8.23 million bales, out of which the mills will be needing only 6.2 million bales. The season should, therefore, close with a carry-over of 2 million bales. Describing this position as "extremely satisfactory", Mr. Chunder goes on to assert that "the present time is opportune" for allowing token exports of, say, 500,000 bales. But the argument is dubious. For one thing, statistics about jute production are often notoriously inaccurate. For another, price trends in the raw jute markets do not by any means suggest that an exportable surplus of fibre exists. Prices rather than supply-demand statistics are the more important factor to consider, because the country cannot afford to let its jute goods, which are major foreign exchange earners, be rendered uncompetitive in overseas markets merely in order to keep the hydraulic presses going. Token exports of 500,000 bales of fibre might look marginal on paper, but there can be little doubt that if they were allowed, raw jute would become expensive enough to threaten the prospects for jute goods exports. The Government is to be complimented on having steadily rejected suggestions that India start exporting raw jute.

Perhaps a change in the structure and purpose of the press-house industry is necessary. It is encouraging to note that this is a matter to which the Calcutta Hydraulic Press Association has given some attention. Mr. Chunder says it has come to the conclusion that a scheme for setting up a pressure die casting industry would be best suited to its purpose. The Government apparently agrees: foreign exchange is being given for the purchase of machinery and plant, local agents have agreed to import requirements under their licences, and the Government's formal sanction for using the Association's funds for the project should be forthcoming soon. Mr. Chunder emphasises that intensive market research will be necessary if the scheme is to succeed. The approach looks constructive, and is a welcome deviation from the tear-shedding of the past decade.



Lorries on Hire-Purchase

Offering motor-vehicles for sale on a hire-purchase basis is the best method of developing road transport rapidly, according to the managing director of Sundaram Motors. The high rates of interest charged at present will, he feels, have to be reduced by inviting banks to participate in instalment credit activities. Interest amounting to as much as 12 percent or 15 percent is collected, in spite of the security available, by individuals who are providing credit at present. The road transport industry is expanding and competition has not prevented many small entrepreneurs from entering it. As it helps motor-vehicle manufacture, some think that it is entitled to special consideration, although it looks as if the States are unlikely to reduce taxes either on fuel or on vehicles. The growth of the industry has led to an increase in the number of trained technicians who are able to find jobs easily. Employment opportunities have been created even for unskilled workers. The sale of Indian-made spare parts and components has been helped, and the market for tyres has expanded. The motor-vehicle industry, in spite of limited sales, has contributed to the growth of engineering skill. The longer periods for which vehicles are used and the introduction of heavy lorries, it is stated, point to the growing demand for transport between towns.

Idle Capacity in Glass

The drastic cut in imports has rendered production capacity idle in a large number of industries. The glass industry is among the major sufferers. Its rated capacity approximates 400,000 tons but it is able to work only half of it. The second plan target for the industry is fixed at the low figure of 200,000 tons for all categories of goods. Speaking at the latest annual general meeting of the Bengal Glass Manufacturers Association, Mr. O. M. Somany, president, points out that the large amount of unutilised capacity in the industry has an unhealthy effect on production costs and on trade. There has been a tendency for the economically stronger units to expand their capacity and use more automatic equipment. In the process, many small and less mechanised units have closed down. According to Mr Somany, about 40 such units have already drawn their shutters. This is an inevitable result of current developments in the industry, such as the introduction of mechanical handling, washing and sterilisation of bottles and the use of high-speed filling, sealing and labelling machinery. Mechanisation in the larger units has also helped the production of goods of better quality, greater strength and chemical durability, with uniformity in shapes and sizes. Mr. Somany nevertheless feels that the smaller units should be saved from extinction so that the thousands of workers employed in them do not lose their jobs. There are many lines of specialised production requiring individual skill and workmanship which the larger units are not suited economically to handle, and it is in those lines that the smaller units should be made to concentrate. Mr. Somany, therefore, suggests a fresh assessment of capacity in different branches of the industry with a view to securing a planned and more rational use of productive equipment.

Referring to the cost problem, he says that due to indiscriminate import restrictions and the inflationary pressure at home, all the raw materials of the industry now cost more. For instance, indigenous chemicals cost as much as the imported varieties, so he suggests a relaxation of import control in suitable cases in order that the industry may be able to obtain its raw material require-

The sign of a new prosperity..

Soon, all our products will be sold under the name Massey-Ferguson and this new symbol—signifying the most highly unified and complete service to farming ever known.

It is a symbol forged from the greatest pioneering effort in the history of agricultural mechanisation and the genius which revolutionised the whole technique of farming with the Ferguson System tractor and the Self-Propelled Combine.

It is on this rich inheritance that we build for even greater days, and a prosperous new chapter in the history of farm mechanisation.

For the farmer it means superb engineering and manufacturing resources streamlined to produce a complete range of farm machinery—it means a standardisation of implements, Service and Spares, centred on the Massey-Ferguson Distributor organisation—the finest of its kind throughout the world—it means more food at less cost.

MASSEY-FERGUSON

MASSEY-HARRIS-FERGUSON (INDIA) LIMITED, BANGALORE

ments without difficulty. Glass goods are used in a variety of industries as packing material and as such their high price adds to costs of production; the export drive is being hampered because of this. The Government has been allowing a refund of the import duty on raw materials for export purposes, which is welcome, but Mr. Somany suggests that the same concession be extended to goods carried by inland waterways going chiefly to East Pakistan. Shortage of transport contributes to the high production cost. The difficulty is particularly serious in transporting sand to the factories. As a way out, he suggests the establishment of a quartz crushing factory in the West Bengal-Bihar border area, which will ensure a more regular supply of this essential raw material.

State Employees: Socialist Equality

To the already numerous advantages enjoyed by the employees of State-owned industrial undertakings, the Government of Uttar Pradesh has added one more—free electricity. It has decided to allow free electricity to the employees of the Kanpur Electric Supply Administration for domestic purposes at the rate of one unit for every Rs. 5 of basic pay. The categories entitled to the concession include, besides the workers, supervisory or managerial staff drawing salaries of up to Rs. 500 a month. The principle involved in the decision, if extended to other State-owned undertakings, might well result in some curious demands. The employees of the Government cement factory at Churk would, for example, be entitled to a bag or two of cement for services rendered. And the employees of the Government precision instruments factory in Lucknow would similarly be in a position to claim a couple of water meters or microscopes which are manufactured there. It may be mentioned that the recent announcement of Dr. K. L. Shrimali, Central Minister of Education, that the Government is considering the supply of free meals to school-children of employees in State industrial undertakings, has created a growing feeling that an invidious distinction is being made between those who are and those who are not fortunate enough to be in Government employment. Another matter in which employees in private undertakings have been unfairly treated is that their entertainment allowances are liable to tax, while such allowances received by Government officers not exceeding one-fifth of their salary or Rs. 5,000, whichever is less, are exempt. Also, the gratuities paid by local authorities or statutory corporations to their employees have been exempted from tax, while no such concession has been extended to private enterprise. Gratuity is not part of one's regular income. As the term implies, it is an *ex gratia* payment given to a man when he has become too old to work. There is no reason why if the amounts payable to employees of State industrial undertakings are exempt from taxation, similar payments to workers in other industries should not also be exempt.

Developing Tuticorin Port

Although Tuticorin has long had a port trust with the revenue divisional officer as chairman, the port is classed as minor. Its conversion into a major port within a few years is being urged by trade interests, who say that the rise in traffic and the growth of the local salt industry warrant rapid development. A memorandum presented recently to the Prime Minister in New Delhi calls attention to a report submitted by Sir John Wolfe Barry's firm on the possibilities of making Tuticorin a deep-water port. At present, ships have to anchor six miles away, so cargo has to be removed and loaded with the help of lighters. This leads to delays and losses. It is urged that the growth of industry in Tirunelveli and other nearby districts makes it imperative to develop Tuticorin, which is an all-weather port. The pearl-diving industry will benefit. The growth of trade with south-east Asian countries supports the plea that this minor port, which handles over 500,000 tons a year of cargo already, should be made a major one. Regional development is expected to increase the flow of trade through the port, although passenger traffic with Ceylon may decline. Tuticorin should continue to attract country craft. While the gulf of Mannar affords a sheltered anchorage, experts have pointed out that a major advantage is that the port lies well away from the town, which is a railway terminal, and enjoys the benefit of road services to many cities. When a coastal railway links Tuticorin with Kerala, the south Travancore area will also be served. The investment of Rs. 4.5 crores suggested for the port may prove well worth while if coastal trade increases as expected, with the diversion of traffic from the railways. The strain on the railways could be eased if more shipments to Malaya and Burma are made through Tuticorin. A preliminary report has stressed that relatively light reclamation work will need to be carried out for making roads and railway yards. Those who are urging the development of the port point to the rise of the chemical and cement industry, the importance of the fishing industry, and the flourishing trade contacts with Ceylon.

BANKS FOR AGRICULTURE

AT a meeting of the East India Association held at the Westminster Town Hall on Friday afternoon, March 18th, a paper on "Agricultural Banks for India—Practical Experiments Wanted" was read by Sir W Wedderburn, M.P. Sir Raymond West presided, and there was a large attendance of members. Sir W. Wedderburn welcomed Lord George Hamilton's recent declaration that the Government hoped to be able to set up some system of local banks for the assistance of the rural people of India, as bringing the question of agricultural banks once more within the sphere of practical politics. The idea of agricultural banks was first mooted at Bombay as early as 1860, when Lord Elphinstone's Government passed a resolution in favour of loan banks which should advance money to the ryots on fair terms. It was not, however, until 1882 that the project took practical shape at Poona. In 1884, public opinion, official and unofficial, had declared itself sufficiently in favour of a practical experiment, and he claimed that even then there was no excuse for any further delay. Nothing was done, however, and nothing had been done during the fourteen years that had since elapsed. Then, as now, the mass of the Indian peasantry were in great destitution and in chronic danger of famine. They possessed less than nothing, for they were deeply in debt to the money-lenders. He maintained that this scheme, carefully worked out, approved by the local people, and accepted by the Government of India, was entitled to a fair trial. A discussion followed, in the course of which Sir Lepel Griffin expressed his strong appreciation of the scheme, which he declared was vital to the future prosperity of India. The proceedings concluded with a vote of thanks to Sir W Wedderburn, proposed by Mr. Samuel Smith, M.P.

Without Prejudice

PUNISHING TWICE FOR THE SAME OFFENCE

DISTINCTION BETWEEN CRIME AND CONSPIRACY

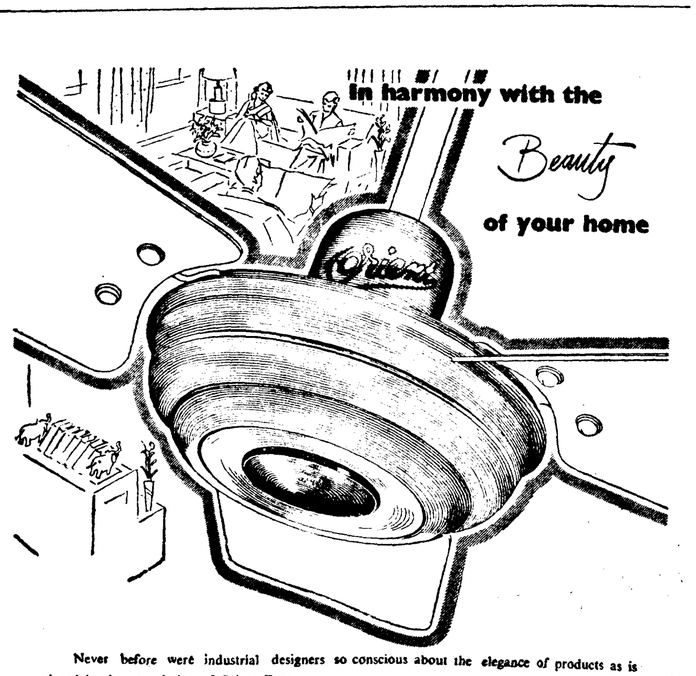
(FROM OUR LEGAL CORRESPONDENT)

IT is a fundamental principle of the English common law that a man may not be punished twice for the same offence. This principle dates back to time immemorial or—to use the impressive phrase of the middle ages—"to time whereof the memory of man runneth not to the contrary". In fact, the principle in England has in modern times been extended, and whatever the law may be technically, it is not the practice nowadays for a man who has once been tried and acquitted of a charge based on certain alleged facts for him to be placed in jeopardy again by being charged with a similar offence based on the same allegations. The law may not actually prohibit such a second charge; but it discourages it.

We have had an illustration of the modern English practice in the recent sensational trial of the former Chief Constable of Brighton, Mr. Charles Ridge, and others on charges involving allegations of conspiracy, bribery and corruption. Two senior police officers and another man were convicted and sentenced to substantial terms of imprisonment. The Chief Constable and a licensee named Lyons were acquitted. But there were further separate charges pending against the two of them, based on the same evidence, of bribery and incitement thereto. The judge, on the application of the prosecution, informed the jury that if these separate charges were proceeded with, "it would mean that the same evidence would be produced and the accused would, in effect, be tried again for the same matter." His lordship then directed the jury to return a verdict of "Not Guilty" against Mr. Ridge and Mr. A. J. Lyons, which the jury accordingly did, and the two accused were acquitted But it will be noted that the judge took the above course on the application of the prosecution that he should do so. The charges, though of the same character and in effect the same as those in which the accused had been acquitted, were not technically the same and the prosecution could have insisted on the trial proceeding. It was a decision based, no doubt, on the commonsense view that the jury would have brought in a verdict of "Not Guilty" without a minute's hesitation.

In India the law against what we may term double jeopardy is the same. Protection against such a risk is provided expressly by Article 20(2) of the Constitution, which secures a person from being "prosecuted and punished for the same offence more than once." And in considering the melodramatic adventures of Mr Leo Roy Frey and Mr. Thomas Dana in their appeal, recently reported, to the Supreme Court, the reader is invited to bear in mind one solitary word which solves the whole legal problem. That word is the adjective "same" as qualifying the noun "offence", in Article 20(2), just quoted.

The facts in this remarkable case were as follows. The petitioner, Leo Roy Frey, purchased a car from an officer of the American Embassy in Paris. This car was sold by Frey to the second petitioner, Thomas Dana, in May 1957. On the transfer, the car was registered in the name of Dana on 18th May, 1957. Both these gentlemen thereafter booked their passages through the American Express Company from Geneva to Bombay by s.s. *Asia* The car was also shipped by the same vessel. Frey and Dana disembarked at Karachi on 11th June, 1957, and after a brief halt at Karachi, they left together by plane for Bombay and reached Bombay on the same day. They stayed together at the Ambassador Hotel at Bombay from 11th June, 1957, to the afternoon of 19th June, 1957. On the latter date, both of them left Bombay by plane and reached Delhi the same evening. They occupied room No. 1 at Jannath Hotel and stayed there from 19th June, 1957. After the car, which had been booked by rail from Bombay to Delhi, had arrived in Delhi, they left Delhi and travelled together in the car from Delhi to Amritsar on 22nd June, 1957: and, after staying the night there, they arrived at Attari Road Customs Station on their way out to Pakistan on 23rd June, 1957. It was at this stage that their troubles began. The Customs officer there required them both to declare, in baggage declaration forms supplied to them, the articles which they had in their possession, including any goods which were subject to export trade control and/or foreign exchange restrictions and/or were dutiable. Each of them completed his baggage declaration form and handed it over to the Customs authorities duly signed by him.



On the same day, the persons of each of them were searched and certain currency and movable property which had not been included in the baggage declaration were recorded. Among other things, a pocket radio and a time-piece were recovered from Dana and a pistol of .22 bore with 48 live cartridges of the same bore was recovered from Frey. Both men were put under arrest the same day, namely, 23rd June, 1957. On 30th June, 1957, the petitioners were interrogated and the car was thoroughly searched and minutely examined. The result of the search was astonishing. A secret chamber above the petrol tank was discovered. On opening this chamber, Indian currency to the tune of Rs. 8,50,000 and U.S. dollars to the tune of 10,000 were discovered in the concealed recess and seized by the police. Proceedings followed without delay. On 7th July, 1957, notice was issued to Dana under Section 167(8) of the Sea Customs Act to show cause before the Collector why, under the Section, penalty should not be imposed upon him and why the seized articles should not be confiscated. Two days later, a similar notice was served on Frey Both men made representations in writing and were also heard in person. On 24th July, 1957, the Collector of Central Excise and Land Customs made an order for the confiscation of the currency and also of the motor-car with an option to Dana to redeem the car on payment of Rs. 50,000, and also ordered confiscation of articles other than the currency recovered from the car subject to redemption on payment of Rs. 100. The Collector was also satisfied that each of the two men was equally guilty of an offence under Section 167(8) of the Sea Customs Act and imposed a personal penalty of Rs. 25 lakhs on each of them, to be paid within two months from the date of the order or such extended period as the adjudicating officer might allow

That was the end of Act I. And it was the contention of Messrs Dana and Frey later, in the Supreme Court, that it should have been the end of the melodrama also, which could be only a one-act piece. In other words, they claimed that the award of any penalty, confiscation or increased rate or duty under Section 186 of the Sea Customs Act being in itself a "punishment" was a bar to the infliction of any further punishment to which they might be liable under any other law: and that to hold otherwise would mean that they would be in jeopardy of being "prosecuted and punished for the same offence more than once."

The Customs and Central Excise authorities had other ideas, and on 12th August, 1957, they caused a complaint to be lodged against Frey and Dana, as also one Moshe Baruk of Bombay, before a magistrate at Amritsar, under Sections of the Foreign Exchange Regulation Act, 1947, and the Sea Customs Act This complaint was followed by a fresh one against the same persons under the same Acts, but this time linked with a charge of criminal conspiracy under Section 120-B of the Indian Penal Code. A case under the Indian Arms Act was also launched against Frey for the possession of the pistol and cartridges. Frey and Dana were granted bail in the sum of Rs. 2 lakhs and Rs. 5 lakhs, respectively, and neither of them being able to furnish the requisite security, they were, therefore, in judicial custody at the time they made their application to the Supreme Court. This application was for their production before the Supreme Court under *habeas corpus* and for the quashing of the proceedings before the magistrate at Amritsar

It was contended on their behalf that in making the order of confiscation and penalty under Section 167(8) of the Sea Customs Act, the Collector was acting judicially—and there is no doubt he was so acting—and, therefore, the two men had already been proceeded with and punished for the offence of importation and attempted exportation of goods, and consequently they could not again be prosecuted and punished for the same offence: and that, therefore, the pending proceedings before the magistrate offended against the protection given to them by Article 20(2) of the Constitution. That Article, as before stated, protects a person from being "prosecuted and punished for the same offence more than once." The question, therefore, was whether Frey and Dana had previously been prosecuted and punished for the same offence for which they were then being prosecuted before the magistrate. "No," said the Supreme Court. "The offences with which the petitioners are now charged include an offence under Section 120-B of the Indian Penal Code Criminal conspiracy is an offence created and made punishable by the Indian Penal Code. It is not an offence under the Sea Customs Act. The offence of a conspiracy to commit a crime is a different offence from the crime that is the object of the conspiracy because the conspiracy precedes the commission of the crime and is complete before the crime is attempted; equally the crime attempted or completed does not require the element of conspiracy as one of its ingredients These are, therefore, quite separate offences." The Supreme Court declined to quash the proceedings.

(Leo Roy Frey and Thomas Dana v Superintendent, District Jail, Amritsar. 45. *A.I.R.* Supreme Court. 1958. 119)

Never before were industrial designers so conscious about the elegance of products as is evinced in the new design of Orient Fans.

Orient's designers bring home the kind of beautiful fan you would want to harmonise with the decor of your room. Graceful lines, sleek contours of the casing and beautiful everlasting pearly stove enamelled finish. All this makes Orient Fan a piece of sculptured beauty for every home. A thing of joy. A technical masterpiece!

Orient FANS

Years ahead in look and performance

A Ditcher's Diary

WE CANNOT BE FAR NOW FROM THE END OF THIS season's list of retirements. One of the latest to go, I see, is Robert Hogarth of Finlays. Mr. Hogarth has a lifetime's history with this particular company. He first entered its Glasgow office in 1919; now that his service in the East is finished, he is to join its London branch. Most of the thirty-four years Mr. Hogarth has been out here have been spent in Calcutta, although twice he has served in Pakistan, on one occasion undertaking the duties of President of the Chittagong Chamber of Commerce. Here in Calcutta, he has served on the Committee of the Bengal Chamber; he was also Honorary Consul for Finland. Mr. Hogarth is a Scot, and many of his out-of-office interests were centred round the activities of the Scottish community; he was an Elder of St. Andrew's and has been President of both the Caledonian Society and the Burns Club. He was also a well-known figure on the golf course, and, last year, became captain of the "Royal". Robert Hogarth will be missed by a wide circle of friends in both his business and social worlds. He deserves our best wishes in a well-earned retirement from India.

ONE OF THESE DAYS, OR SO I HAVE PROMISED MYself, I am going to take some time off to construct a dictionary of Calcutta's "telephone types"; I have already done some modest research. You know the sort of thing I mean: The man who rings you up and asks who you are, tells you to hold on, keeps you waiting a couple of minutes in eager expectation, then says "wrong number" and rings off without explanation or apology. Or the operator who repeats the number you have just given her, does it wrongly, and has rung off to get you her version before you have had time to put her right. Everybody must have one or two such characters which it is his ambition to meet face to face. There is the switchboard operator who nails you down in the middle of an important conference, asks you to hold on for somebody or other, then, apparently has to phone round her own establishment to find him. And the man who lets you tell him the whole story, then says it has nothing to do with him and leaves you to tell it all over again to somebody else who quite likely does the same thing. My record is five stories told: I have no doubt some of my readers will be able to improve on that. Then there is the man who shouts, and his counterpart the one who whispers. A favourite of mine is the man who knows nothing about anything and lets you tell your story through from beginning to end before he says so. I also have something very special for the operator who listens to your request, complaint, or what have you, says "one moment please", leaves you for ten, then comes back and asks you to repeat the whole thing over again. She also has a superior—the supervisor who listens to your complaint, argues, then cuts you off in a huff. I always enjoy the character who rings you up, asks to speak to somebody you have never even heard of, and when you have told him so, goes on to ask why the person he wants is not there, when you are expecting him back, when you last saw him, what relation you are of his, where he is, and whether you will be kind enough to give him a certain number when he returns. As a preface for my dictionary. I think I can relate a little anecdote about an incident that happened to me the other evening. I dialled 94 for the time. A female voice answered: "The time is 10-20". I waited for the next announcement just to make sure. After a longish silence, a male voice said: "The time is 8-45". Unable to believe my ears I waited again. After an even longer pause, the same voice came through once again: "It is time you were in bed you know". Then it rang off. I tried to get 94 again, but the operators must have decided to take their own advice.

THE ONLY FAULT I HAVE SO FAR BEEN ABLE TO FIND with the report of the Bus and Tram Fares Structure Inquiry Commission is the unconscionable length of its name. Otherwise, it is such an eminently reasonable document that its chances of ever being accepted are obviously negligible. My only comment on its proposal for raising the tram fares, urgent though the move may be, is: just try it. Not only do Calcutta's tram travellers get the cheapest service in India, but they apparently intend to go on doing so. Or more correctly, the left-wing political parties have decided they shall—whatever the inevitable cost in curtailed services. How fortunate for all concerned that the tramways are not yet a public enterprise: no State-owned concern would be expected to stand for this sort of thing. I must confess, however, that the estimate of the police—quoted by the Commission—that about a hundred more buses could be added on existing routes, has given me a rare fright. There is simply not the room for those already operating, especially when the drivers insist on behaving as if there are no other vehicles on the road. One can only conclude that the police do not know what is happening to Calcutta's traffic—a conclusion which is well supported by the way the average constable carries out his control duties. I can see no good reason why the present *jungli* conditions should deliberately be made worse when, as the Commission points out, the addition of one hundred more buses will not, even then, solve the overcrowding problem. It is time the Commission's proposal for an underground railway was given the attention it deserved. Calcutta is now the fourth city in the world, and is still growing. It is already the largest one to be without an underground. Then why not a measure of foresight to anticipate the arrival of conditions even worse than those existing now? Already, the roads are taking more than they can carry, especially at rush hours. The accident rate is bound to rise, and quite likely in geometrical proportion to the increase in the number of vehicles. The big drawback is no doubt finance—as usual. I admit it is not a simple problem. To make a project of this kind pay for itself, the fare structure would have to be a good deal more flexible than it is at the moment.

WHERE GEORGE ORWELL WENT WRONG, I THINK, was in devising his ingenious but unnecessary "Newspeak" for intercourse among the citizens of Oceania. Why bother? It is so much simpler to use all the words of "Oldspeak" while investing them with new or no meanings. It is much more effective too in confounding the unwary. With not a little boredom in the process, I have just read the statements recently issued by the Communist Party of India, which has concluded an extraordinary congress (the same word) at Amritsar and, so far as their words are concerned, there is very little I can object to in them. They too speak of democratic rights, of socialism (the words Mr. Nehru uses)—and yet what worlds away they are from the other political parties in India. I just do not see how any intelligent person is going to be deceived by the communist support of, for instance, the second plan. Here is the country desperately looking for foreign capital, and here we have the self-declared supporters of the plan doing everything possible to prevent the coming of that very thing. Then the communist intention to become a mass party. Mr. P. C. Joshi, I find, was among those present, as was Mr. Ranadive. Am I wholly wrong in remembering that it was the former who once confessed, to the accompaniment of copious tears, that his gravest mistake as General Secretary had been to dismantle the secret apparatus of the party? Do I imagine things when I remember that it was Mr. Ranadive who extorted that "confession" and then proceeded to take the party nowhere through a series of very ill-conceived actions of violence in Andhra and West Bengal? That Comrades Joshi and Ranadive now co-exist in the spacious bosom of the party I do not much mind. What the country is entitled to ask is how the two mutually exclusive philosophies of political action in a democracy have been reconciled, if in fact they have. Far likelier, it seems to me, that the party is now in a bit of a quandary and neither faction thinks it advisable to insist on a clear definition of its objectives and methods. Which is, of course, no reason why the people shouldn't.

WITNESSES OF DAILY STREET DEMONSTRATIONS BY thousands upon thousands of people, we in Calcutta may well refuse to be impressed by the march to Aldermaston in support of a demand for the unilateral renunciation of the hydrogen bomb by Britain. Nor is size the only reason. In spite of the agitation being blessed by such eminent personalities as Bertrand Russell and Commander King-Hall, I still cannot see the point of it. That Russia has, conditionally, stopped her tests for a time is simply a *non-sequitur* so far as the other hydrogen Powers are concerned. First, the announcement follows a long series of tests by the Soviet Union. Second, it precedes the beginning of British and American tests. Third, it is only tests the Russians have temporarily abandoned—not the production of nuclear bombs and weapons. I would not expect the marchers to Aldermaston fully to understand the intricacies of international diplomacy, and I am wholly appreciative of their very genuine desire for peace, which I certainly share. But is it not naive that the Governments of Europe and the United States should be expected to depend for the defence of their peoples on an unenforceable declaration by a changeable politician in a totalitarian country? Over the years a myth has been created that it is only wicked governments which waste money on arms while the people want nothing but peace. I question it. I think that governments, especially democratic ones, are as anxious to preserve peace as the peoples they represent. Having read my history, I cannot forget either that wars have been known to be forced on unwilling governments—and by that mystical entity, the people. Acharya Kripalani recently accused Mr. Nehru of spending money on armaments and found this inconsistent with the teachings of the Mahatma. I would not go into the consistency, or otherwise, of India's defence policy. But I am sure that it would be undemocratic—and no less—for the Government of India to act otherwise than as it has done, for the Indian people understandably prefer to defend themselves rather than depend on some other party's help or mercy—or transient restraint.
