Floating Cranes: "It has been represented to us that there is need for one additional 30-ton and one 50-ton floating crane. We agree with this suggestion and would recommend that they should be self-propelled.

Piecework System

"We are glad to hear that a piecework system of payment will shortly be instituted and we hope that this will be done as soon as possible. There seems to us to be a need to check up on the supervision of labour especially on board ship.

Special Bulk Cargo

"We are convinced that the arrangements for loading both ore and coal could be reorganised so as to increase the speed very considerably. We recognise that this may involve the question of the numbers of manual labourers employed and we, therefore, do not deal with it in detail in this report. We are, however, disturbed to be informed that the arrivals of coal and iron ore are barely sufficient to keep ships working (we have seen them held up awaiting supplies) and enable ships to carry on with loading during temporary delays in the arrival of trains. We have not had time to investigate this matter fully, but we think that it should be examined closely by the railways and Port Commissioners jointly, as the absence of stockpiles for these commodities will inevitably slow down the turnround of ships. In our opinion, there should be ample and constant reserves on the Commissioners' estate and we suggest that the provision of 20-ton road dumpers would be the most speedy and efficient means of transfer from these reserves to the loading quays.

Lay-out of New Berths

"We were very disturbed to find that the lay-out of the new berth at King George's Dock follows closely on the design of berths laid out 30 years or so ago. No proper appreciation appears to have been shown of changes in the pattern of traffic and about this particular shed it seems that only minor changes can now be made as it is actually under construction. We have had the advantage of long discussions with the Director of Operations and the Chief Civil Engineer on this subject and would like to set down for future reference our views as to the most efficient lay-out for a modern berth.

"a. A level quay about 50 feet wide equipped with electric quay cranes and at least two lines of rail tracks flush with the quay with ample scissors and other crossings.

"b. A shed of at least 120 feet wide (wider if possible) and 450 feet long; on the level i.e., not rising to platform level at the rear; doors in the centre of the gable ends which will allow road vehicles to enter the shed if required.

"c. A minimum number of columns to enable work to be done as freely as possible. In the case of double storey sheds the permissible load on the upper floor should be limited to 3 cwts. a square feet, so as to reduce the number of columns as much as possible.

"d. Hatchways suitably placed in the upper floor for lowering (or raising) cargo.

"e Railway lines laid flush at the back of the shed with ample crossings.

"f. A roadway 100 feet wide at the rear of the shed.

"g Hard standage for heavy lifts and other suitable cargo at the ends of the shed.

"In general terms the Director of Operations is in full agreement with such a lay-out. He is, however, inclined to disagree with our proposal to have a level rather than a rising floor of the shed. His reason for so doing is the fear that labour might object to the provision of light cranes or fork lift trucks for lifting the cargo up to the wagon-bottom level. We would point out that the provision of mechanical appliances for this purpose would not decrease the number of men employed as no lifting is done manually under the raised platform system; and the men trucking cargo in the shed will have the very much easier job of trucking on the level instead of on an incline. Above all, the movement of cargo—and vehicles—on one level only, provides much greater flexibility in operation and will, therefore, increase the potential speed of work."

Auxiliary Port

Reference was recently made in these columns to a proposal for an auxiliary port in India which has been made by the World Bank mission. It was pointed out that the coal-iron ore belt in Orissa, West Bengal and Bihar was fast developing into the Ruhr of India. It is time to develop transport facilities in step with the industrialisation of the belt. A deep water port is urgently needed, particularly for the bigger ships. Geokhali, 40 miles south of Calcutta, is regarded as a possibility. One snag however is that there is a sand bar of the worst type between Geokhali and the Bay of Bengal. Further investigations are in progress. Side by side the river training programme for the Hooghly has been accorded a very high priority. It is intended to undertake dredging operations for the river. Similar dredging operations are also planned for the Bombay harbour. The main problem there however is where to deposit the silt from the harbour bed when it is dredged out.

French Shipping Consultants

The Government of India has given six months' notice to its French shipbuilding consultants of not renewing the present contract which expires on 15th July, it is learned. A similar notice has also been served on the Government of India by the consultants. Both the parties have been unhappy over the working of the agreement. Defects in the new ships built at the Hindusthan shipbuilding yard have, however, been finally responsible for this. Other foreign shipbuilding interests have been approached by the Government to apply for selection as successor to the French firm.

Inter-State Road Commissions

Inter-State road commissions are being set up almost immediately, it is learnt, to facilitate a greater flow of inter-State road traffic.

Unemployment in Textile Industry

The Ministry of Labour of the Government of India has set up a "working group" consisting of officials to watch the trends of unemployment in the cotton textile industry and take all steps to reduce its incidence. This group will consist of the representatives of the Planning Commission, Central Ministries of Labour, Finance, Commerce and Industry and the Textile Commissioner. Meanwhile, reports indicate a slight improvement in the unemployment position, resulting in the withdrawal of recently issued closure notices. Special mention should be made of the Sholapur Mills, which had closed down because of uneconomic working. It has now resumed working following an agreement with labour, which has agreed to accept only a part of its wages until economic working of the mill is restored. Enquiries show that 26 units employing 29,000 workers have closed down during the last three years, including 17 in 1957, affecting 21,000 workers. In addition, there were 22 cases of partial closures in 1957, resulting in unemployment of 8,550 persons. On 11th January, 1958, 410,349 spindles and 5,834 looms were found idle resulting in the loss of 6,161 bales of cloth and 6,156 bales of yarn.

Representations against Mines Act

A large number of representations have been received here on the Regulation of Mines Act, recently enacted by Parliament. They are now under examination by the Government.

Commonwealth Economic and Trade Conference

The Indian delegation to the preparatory meeting for the Commonwealth Trade and Economic Conference has been announced. Mr. B. K. Nehru, Secretary, Central Ministry of Finance, Department of Economic Affairs, will lead the delegation. The other members are Mr. T. S. Swaminathan Economic Minister to the Indian High Commissior in the U.K., and Dr. I. G. Patel, Deputy Economic Adviser, Ministry of Finance. The preparatory talks will open in London on 11th February.

Higher Import Quota for Woollen Industry

The Government of India has revised the ceiling on the import of raw materials for the woollen industry to Rs. 9 crores for the current 12-month period. The manufacturers who have joined the export promotion scheme become entitled to an additional quota of foreign exchange. This compares with a rough estimate of Rs. 11-crores worth of raw wool and tops imported during the previous 12 months, during which the price level was slightly higher than it stands today. The decision was reached after meetings between Mr. Manubhai Shah, Central Minister for Industries, senior Government officials and the representatives of the Federation of Woollen Manufacturers. The Federation first registered its protest last November, when the Government announced the import quota for the wool industry at Rs. 4 crores. Whether this was for a 12-month or a six-month period was also not clear. The revised quota of Rs. 9 crores will be allocated on a past consumption basis, and the part which has been released already on a spindleage basis will be adjusted appropriately. In all, Rs. 5 crores will be available for the first six months and Rs. 4 crores for the second half of the year.

Incentive for Woollen Exports

Woollen manufacturers who undertake to export a specific quantity of finished products within a certain time, may claim in advance an additional quota of foreign exchange of up to 75 percent of the value of the goods they propose to export. In the past, wool hosiery has been the principal item of export by the industry, although Russia has bought worsted cloth in recent years. The incentive scheme, it is expected, will lead to higher exports.

Raw Wool Exports

According to *Wool Intelligence*, exports of raw wool from India totalled 20.7 million lbs in the period January-June 1957, compared with 18.7 million lbs and 12.4 million lbs in the first six months of 1956 and 1955, respectively.

London

THE CITY VIEW OF U.K. ECONOMIC OUTLOOK

EXPECTATIONS OF BANK RATE REDUCTION

(FROM OUR LONDON CORRESPONDENT)

SO far as the markets are concerned the economic outlook continues fair, with gilt-edged on the upgrade, the pound maintaining its strength against all foreign currencies, and, as this despatch is being written, a moderate improvement even in equities—which have been in the doldrums for quite a while—in the belief, widely held, that Bank rate will be reduced from the 7 percent level *in the not-too-distant future. A slight cut of about* a half percent was anticipated last Thursday, but when it failed to materialise the City was in no way disturbed. Meantime, the Government broker must be finding the situation most favourable for his "tap" sales and a large measure of funding is being undertaken in a quiet way. The only fly in the ointment at the moment is the somewhat anomalous position in which industrial relations are now placed. The London bus men's wage dispute has been deadlocked by the Minister of Labour's decision against a committee of enquiry, unless that was to consider not merely this particular issue but the level of wages throughout the road transport industry. The men will decide on the action they will now be taking, and there might well be trouble, even though Mr. Macleod justified his action to his Opposition critics in the Commons. The claims of the railway men for pay rises and a shorter working week are being referred to arbitration, the National Coal Board has promised a reply to the miners' claims on 19th February, and Health Service office workers have deferred their wage claim until 12th February pending further discussion of a new salary structure which the Whitley Council is to consider a couple of days earlier.

The Government's attitude to wage increases unrelated to greater productivity has been made abundantly clear in the past few months. Trade union leaders have been no less emphatic that unless prices can be held stable, wage increases, or at least claims for them, are inevitable. Both sides are to be furnished with an opportunity to put their cases afresh to the public as a result of the Opposition's request for a debate on industrial relations this week or the next, with particular reference to the question of arbitration and conciliation and the position of the Ministry of Labour in the industrial field. It is to be hoped that advantage will be taken of the opportunity to make some constructive contributions to a better understanding of a vexed question, for unless the wage-price spiral can be halted, the prospects of winding the battle against inflation are far from bright.

Industrial Output

All the talk about the possibility of a trade recession is certainly not borne out by industrial production figures just released by the Central Statistical Office. The index of industrial production, adjusted for seasonal variations, was well maintained in December. The figure was 140 for September, dropped to 137 for October on account of the influenza epidemic, rose again to 140 for November, and is provisionally estimated at 140-141 for December. This is still about 3 percent higher than the year before. For 1957 as a whole, the average index works out at 138 to set up a new record, compared with 136 for 1956, and 137 (the previous record) in 1955, with the base of 1948 equalling 100. So far as individual industries were concerned, the percentage changes between December 1956, and December 1957, showed rises for sulphuric acid 2½, steel 4, passenger motor-cars 64, commercial vehicles 36, man-made fibre 2, and electricity 12; and falls for coal 2, bricks 2, cement 18, and cotton spinning 1. The general volume of industrial output has remained at more or less the same level since the middle of last year. The separate index for manufacturing output alone has also been running at about the same level for most of last year and is still about 2 percent up on the year, although it is likely that capacity has risen even more on account of the high rate of capital investment. The latest figures of capital expenditure by manufacturing industry cover the third quarter of 1957, and although this showed a further slowing down in the rate of increase the total was still 5 percent higher than for the corresponding quarter of 1956, compared with increases of 13 percent and 9 percent in the first and second quarters, respectively. In the first nine months of last year, total capital expenditure was 9 percent up on the corresponding period of 1956, which compares with an overall increase of 20 percent in 1956 over 1955, and with manufacturers' estimates of an increase of 7 percent in the total for the full year.

Other Economic Trends

The January issue of *Economic Trends*, a Central Statistical Office publication, gives an interesting overall picture of developments during the first nine months of 1957 in a series of estimates supported with apposite comment. At £702 million the gross domestic product was 5 percent higher than in the first nine months of 1956, or about 1½ percent in real terms after allowing for the change in the value of money. Personal income before tax, is estimated at £632 million higher, or 5 percent up on 1956, and the after tax rise at £515 million, or 4½ percent up. Consumers' expenditure is estimated to have risen by £400 million, so it would appear that savings increased by about £100 million. Final expenditure, measured in real terms, increased by about 2 percent, about one-third of the increase due to increased investment in stocks. Expenditure by public authorities on goods and services was £83 million or 3 percent higher, whereas Central Government expenditure was unchanged. Final output prices (the prices of goods and services available for private and public consumption, investmment and export) were about 3 percent higher, and it is estimated that higher domestic costs accounted for over four-fifths of this increase and higher import costs for less than one-tenth. Some costs a unit of output were about 3½ percent higher and labour costs about 4½ percent higher. Gross profit incomes (gross profits, income from self-employment and rent, before providing for depreciation, but after providing for stock appreciations) a unit of output were about 2½ percent higher.

More or less as a footnote to the above statistics, the Ministry of Labour Gazette gives a further series of figures which help to bring the picture even further up to date. It reports in the latest issue that average weekly wage rates in 1957 were 5½ percent higher than in 1956 and the average retail price index was nearly 4 percent higher. Just over 12¼ million workpeople received increases amounting at the end of the year to about £5.3 million a week. The total increase brought the wage index to 112 at the end of December, compared with 100 a year before (January 1956=100). The rise in the average level of retail prices compared with a rise of about 3 percent in 1956. Stoppages of work through industrial disputes caused the loss of over 8,400,000 working days—6,300,000 more than in 1956, and the highest number since 1926, the year of the general strike.

Credit Squeeze Still at Work

The end-December and normal monthly statements of the London clearing banks, the latter made up to 15th January, appeared almost simultaneously the other day, and whereas the former are somewhat misleading, an examination of the latter goes to show that the credit squeeze is still very much at work in the private sector. Advances are down by a further £20 million and now stand at £1,860 million, which is well below the ceiling figure of £1,942 million which was set for them by Mr. Thorneycroft when he was Chancellor of the Exchequer. Some of this fall may be due to repayments by the nationalised industries, but even allowing for this it is apparent that the private sector is making its full contribution to the credit squeeze. It is less encouraging, however, to find that bill holdings are shown as having increased by £24 million, indicating that Government expenditure is not yet making the contribution expected from it. Another interesting feature of the returns is the rise in investments by £34 million to £2,082 million, a possible indication of the response to the Government issue on 14th January of 5½ percent Exchequer stock.

The latest hire-purchase statistics, released by the Board of Trade for November, record a total debt at the end of the month of £413 million, a rise of 2 percent over October, which showed a similar increase over Septemper. These increases, however, are explained by normal seasonal fluctuations. New business in November was actually 7 percent lower than in October.

Against Steel Re-nationalisation

Although all the steel company chairmen in their annual statements to shareholders have come out forcibly against Labour's plan to re-nationalise the industry, not all of them are prepared to go as far as Stewarts and Lloyds and Durham, whose directors have pledged themselves to fight nationalisation in any way possible and have been accorded overwhelming support from the majority of their shareholders. The proceedings at the Glasgow meeting of Stewarts and Lloyds were typical, when by 12,008.757 votes to 8,456, the shareholders gave the board a blank cheque to take "whatever steps they think necessary or desirable" to prevent State control of steel, which would be "bad for the firm, for our 42,000 workers, and for our customers". Mr. Andrew Stewart indicated the company had the support of other industries. "We intend," he said, "to see that the public is fully informed so that they can make up their minds. It is not our intention to attack the Labour Party. All we are fighting is the policy of nationalisation, and we hope by provoking discussion and argument to convince, not only the supporters of Socialism, but those who form its policy, that nationalisation is both unnecessary and bad."

Brevities

In spite of the fact that stocks of tea in the U.K. are now estimated at 138 million lbs. against 115 million lbs at this time last year, demand at the London auctions is still well maintained, but at prices generally some 9d to 1s a lb lower than last year.

Unfavourable weather and selling prices are the reasons given for the passing of interim dividends by a number of tea companies. Bagracote, Chulsa and Dangua Jhar, three companies in the Walter Duncan and Goodricke group, are passing their interims for 1957 as also are Borelli and Kacharigaon, two Assam companies in the Geo. Williamson group. Seven other Assam companies belonging to the latter group are deferring payment and will review the position when more of the crop has been sold. They are Attaree Khat, Bargang, Borjan, Majuli, Moabund, Rupajuli and Tingri.

Bombay

IMPORTANCE OF STATE PLANNING

RUPEE DEVALUATION OPPOSED

(FROM A BOMBAY CORRESPONDENT)

THE bridging of the gaps between the rich and the poor and between the developed and underdeveloped regions in India is the primary task confronting the country today, Prime Minister Jawaharlal Nehru told business men, industrialists and capitalists when inaugurating the golden jubilee celebrations of the Indian Merchants Chamber in Bombay. He appealed to his listeners to adjust their thinking, which tends to be that of the nineteenth century, to the present-day needs of the atomic and hydrogen bomb age. He makes out a case for State planning when he says that if the country's progress is left entirely to the free play of market forces, the only consequence will be that the rich will get richer and the poor poorer. Mr. Nehru thanked the United States, Russia and West Germany for the generous aid they had given but warned that the mentality of *dependence on such* outside assistance might prove both dangerous and damaging. Referring to the criticism that the second five year plan is over-ambitious, he said: "We want to be over-ambitious each time and that is the mentality we want to produce and not the mentality of creeping slowly."

The Indian Merchants Chamber, the oldest and largest Indian organisation of its kind with over 2,000 members and 125 associations affiliated to it, has decided to institute a scheme for practical training in business management for persons holding specialised degrees to mark the occasion of its jubilee. It also plans to set up a research department which will undertake work on current economic problems.

Cotton Import Policy

The discussion in cotton trade circles here centres round the question as to what will be India's future cotton import policy. The purchase authorisation for 100,000 bales of U.S. cotton under P.L. 665 was fully utilised last week while the bulk of the remainder of 12,000 bales under the P.L. 480 programme for C.C.C. cotton was also absorbed. India needs about 500,000 bales of foreign cotton every year. It appears that the authorities have already issued import licences for some 225,000 bales and arrangements for the balance will be made soon. The carry-over of foreign cotton is 265,000 bales this season, and the industry has been switching over from imported to indigenous varieties. Since the indications are that New Delhi will import foodgrains instead of cotton from the United States this season, it is generally felt that the future requirements of the textile industry will be met mostly from such sterling area countries as Egypt, the Sudan and East Africa. Under the Indo-U.S. trade agreement, some $70 million was earmarked for American cotton to be bought within three years. It is realiably learnt that about $36.5 million have so far been used for that purpose while the balance will be utilised for importing foodgrains from the United States.

Devaluation of the Rupee

The suggestion that the rupee be devalued with a view to overcoming the country's problems of balance of payments crisis and rising prices has recently been discussed by Dr. V. K. R. V. Rao, the well-known economist and vice-chancellor of Delhi University. Speaking on "Economics of Devaluation", with special reference to India, at a meeting organised by the Commerce Graduates Association here, Dr. Rao said that it was wrong to suggest devaluation as a remedy in view of the nature of India's exports and imports and the peculiar character of her economy. Dr. Rao says that the export pattern has undergone a radical change in recent years. Even assuming that India's exports are elastic, he does not think that devaluation will have significant effect on the volume of exports. *This country's imports also are* not elastic. The pattern of imports has undergone a considerable change in recent years. A number of consumer goods have now been replaced by domestic substitutes with a very large import content. India is now a "semi-industrialised" country. The indications of a semi-industrialised country are that it builds up industries with a large import content and it develops exports which also have a large import content. Devaluation, Dr. Rao thinks will not serve the desired purpose.

Bonus Share Offer by New India Assurance

The New India Assurance Co. Ltd., will not distribute the money which it received for its nationalised life business from the Life Insurance Corporation. This has been revealed by the chairman, Mr. A. D. Shroff, at an extraordinary general meeting of the company. He has assured shareholders, however, that the board is actively considering ways and means to benefit them out of the sum received from the L.I.C. He has told them that Rs. 48.72 lakhs were received under the original offer of the L.I.C. and a sum of Rs. 2.12 lakhs was paid later under the Tribunal's decision on matters which were under dispute. Resolutions urging an increase in the authorised capital and the issue of bonus shares by capitalising Rs. 35.60 lakhs out of the premium amount in the proportion of one new share of Rs. 15 (fully paid-up) for every three

shares held have been passed unanimously. As a result, 237,369 new "A" shares will be issued.

Quality of Steel Files

Mr. K. R. Damle, presiding over the Tariff Commission's public enquiry into the result of protection granted to the engineers steel files industry, has emphasised the importance of the quality of products and the responsibility of domestic manufacturers in producing files of excellent quality at the lowest possible cost. Tracing the development of the industry, Mr. Damle has said that the granting of protection has provided a stimulus for expansion. This is evident from the fact that there are at present five manufacturing units against only two in 1955. The total rated capacity of the industry on single shift has increased from 55,000 dozens in 1955 to 455,000 dozens a year. Questions relating to domestic demand, capacity and production and the supply position of raw materials have also been examined.

Oilseeds Steady

With the exception of groundnuts, all seeds, notably castorseed and linseed, displayed a remarkable steadiness on the Bombay oilseeds market during the past week. Though activity remained restricted, castorseed, on the whole, remained steady. Continued hopes of a reduction in the export duty on oil, weakness in edible oils, and increasing overseas enquiries led to short-covering. The main factor which helped sentiment was the reduction of $10 freight charges for bulk oil to the United States from $45 to $35. It was expected that the big freight cut would help India to compete with Brazil in the U.S. market, and this aided sentiment. Linseed ruled firm on reports that Russia had bought 30,000 tons of Argentine linseed oil. This induced local shippers to believe the United Kingdom and the Continent will have to tap the Indian market for their requirements. The decline in linseed oil prices in London was arrested on the news of this deal, while shipment offers from the Argentine were mostly withdrawn. Rates for ex-bank U.K. supply was lifted to £113 from £109 and this aided business in Indian oil in bulk at £111 10s, c.i.f. January-February shipment.

Rise in Forward Cotton

The forward cotton market recorded a smart rise during the past week, with the previous week-end's recovery extending further in spite of intermittent reversals mainly on sustained speculative bull support. Vijay prices scaled new heights with February-March delivery touching Rs. 915, the highest level recorded recently. Informed quarters placed this season's Vijay crop estimate at around 350,000 bales, against the original estimate of about 550,000 bales. Apart from this season's reduced size of the crop, steady cloth offtake, coupled with good demand for quality cotton, tended to harden values of futures. Speculators rigged up the market to Rs. 699 with the aim to secure a higher clearing. Teji option business was also reported on a wide scale which aided sentiment.

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for supply of the following materials :—Tender No. CON/COS/1/F2/202/58 for supply of 50 Transmitter Key as per Drag. No. 23626/SE. Tender will be opened at 12 noon on 6-3-58.

Tender forms (not transferable) are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 at Rs. 2/- per copy of form.

Tender forms should accompany the receipt for earnest money of Rs. 300/- from this Railway's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1,000/- with the undermentioned are exempted.

CONTROLLER OF STORES

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for tender No. PB/1/58/GM/WS/456A/EAT (57) for supply of 6,000 Nos. of Brake Blocks (for engine) as per Rly Drg No. BG-138 and to specn. IS-210 Grade 10C. Tender will be accepted upto 12 noon on 28.2.58.

Tender forms (not transferable) are obtainable from the office of the Controller of Stores, Garden Reach, Calcutta-23 at Rs. 5/- (not refundable) per copy of form.

Firms not on the Railway's approved list of contractors must submit tender form together with a receipt for earnest money of Rs. 1,000/- from this Railway's Chief Cashier and a valid Income Tax Clearance Certificate without which the tender is liable to be rejected.

GENERAL MANAGER

Engineering and Transport

A.-I.I. RECRUITING PILOTS TO OPERATE JET AIRCRAFT

AIR MISSION FOR MOSCOW

(FROM OUR NEW DELHI CORRESPONDENT)

AIR-INDIA International is now engaged in recruiting pilots, with among other objectives, to train them in the United States to operate the *Boeing* jet planes, for which negotiations are in progress. As already reported, the airline has sold three *Constellations* to purchase two *Super-Constellations*. A five-member mission led by Mr. B. R. Patel, general manager of Air-India International, will leave Bombay on 9th February, for Prague on its way to Moscow to discuss with the Russian Government the proposed New Delhi-Moscow air links and also examine various major aerodromes, including Moscow, and the facilities available for Air-India International. The Russian Government has asked the permission of the Government of India to run a regular Moscow-New Delhi air service using its latest jet planes. Mr. Patel's report is likely to form the basis of an Indo-Russian air agreement by which the Indian and the Russian capitals will be linked both by Air-India International and Russian airlines. Prague and Zürich airports are at present functioning as the two transit air stations for passengers travelling between India and Russia.

I.A.C. to Sell Vikings

The Indian Airlines Corporation proposes to sell a dozen *Viking* aircraft withdrawn recently from service. Some of these were withdrawn because of the introduction of *Viscounts*. The Corporation is stated to be unable to operate the *Vikings* in other routes because of the scarcity of trained pilots. The pilots who operated them hitherto have now been trained or are undergoing training for operating the *Viscounts*. The Indian Air Force is likely to purchase some of the *Vikings*.

Details of New Viscount

Full details of a new *Viscount*—the special short-haul "local service" *Viscount*—will shortly be announced. Briefly this aeroplane has been designed to offer to local service carriers a well-proven four-engined, modern transport which has high competitive attraction, and which is tailored for low-level flying on short sectors.

The local service *Viscount* (Vickers Type *V.790*) uses a V.700 fuselage (with an extra window) and can seat 56 in standard four abreast form, or up to 61, maximum. It has V.810 type wings which are specially strengthened for the V.840's speeds, and are therefore very well suited to the low-level flight and frequent landing stresses of "whistle-stop" operation. The engines are Dart 506's, fitted in preference to later engines because, in combination with a Rotel propeller of 140 activity factor, this power plant gives excellent take-off performance and minimises the consumption of water methanol. It has, of course, an unequalled background of experience and the average achieved life in north America already exceeds 1,400 hours. The local service *Viscount* will have a cruise speed of 320 miles an hour, a take-off weight of 61.500 lbs, a maximum landing weight of 58,500 lbs and a payload of 11,660 lbs.

Extension of Operations of B.E.A.

The extension of operations by British European Airways into the Persian Gulf is foreshadowed in an agreement with the British Overseas Airways Corporation on common routes, it has been announced in the *B.E.A. Magazine*. The announcement takes the form of a joint statement headed "Partnership in Europe," by Mr. Basil Smallpeice, managing director of B.O.A.C. and Mr. A. H. Milward, chief executive of B.E.A. They recall that at the inception of the Corporations it was never intended that they should compete with each other and with this in mind their spheres of influence were defined. The arrangements, however, were bound to create a conflict of interest between them. Inevitably, B.O.A.C. flew in a parallel with B.E.A. between London and several points in Europe and this deprived B.E.A. of traffic in which they had a primary interest. Arrangements have been in force from the start whereby revenue over common sectors was pooled, but the fact remained that B.O.A.C. was depriving B.E.A. of business.

Accordingly, it has been agreed that B.O.A.C. is now free, after consultation with B.E.A., to operate through any point in Europe it may desire, and B.E.A. is permitted to extend its services to Beirut. Tel Aviv, and Cairo and will also operate services to the Persian Gulf on behalf of Cyprus Airways. The services are dependent, however, on the rights granted by foreign Governments in the various bilateral agrements. B.E.A. is already operating a regular service to Tel Aviv, an official has pointed out; otherwise, its easternmost limit is Istanbul. The services to Beirut and the Persian Gulf would be a long-term operation under the charter from Cyprus Airways. As for Cairo, B.E.A. had been flying there until the Suez outbreak; the service had not been resumed "purely as a matter of commerce." As soon as the situation changes—assuming the Egyptian Government is agreeable—it might be resumed.

Licence to Produce F-27 Aircraft

Fokker may sell to India a licence to produce the *F-27 Friendship*. The Indian Air Force is interested in the turboprop as a *DC-3* replacement but can make no firm purchase commitments because of India's foreign exchange shortage. Fokker plans to bring the *F-27* to India next month to give the Indian Air Force an opportunity to test it.

Kalinga Airlines Tests Noratlas

Kalinga Airlines is testing the *Noratlas 2508* for operations on a planned route between Calcutta and Lhasa. An agreement approving such a route has been worked out between the Indian and the Red China Governments. The route will have to be flown at altitudes of 21,000 to 23,000 feet. If tests prove satisfactory, Kalinga will probably buy from four to six *Noratlases*.

Passenger Traffic of T.-C.A.

Trans-Canadian Airways carried more than 2 million passengers in 1957 for the second year in succession. A year-end review notes that T.C.A. plans to have an all turbine, all four-engined fleet by the end of 1961. Three basic types will be the *Viscount* for short to medium routes, the *Vanguard* for the longer north American and southern routes, and the *DC-8* for non-stop trans-Continental and trans-atlantic routes. All will be powered by Rolls-Royce turbine engines, the *Viscount* having the Dart, the *Vanguard* the Tyne, and the *DC-8* the Conway. T.C.A. took delivery of 14 *Viscounts* in 1957, and at year's end its fleet included as well 11 *Super-Constellations*, 21 *North Stars*, and 18 *DC-3s*. The installation of wing tip fuel tanks on the *Super-Constellations* was begun during the year.

Amalgamation of U.K. Independent Airlines

While the British Air Ministry is calling for amalgamations of British independent airlines, which now number 25, the Air League of the British Empire is deploring the Government's failure to deal with the basic problems confronting the British independent airlines. Their difficulties stem, the Air League contends, from the absence of long-term guarantees for existing routes and the denial of new routes. Their operations are closely restricted by the 1946 Civil Aviation Act which established a monopoly of scheduled services, both domestic and international, in favour of B.O.A.C. and B.E.A. In spite of 1952 modifications allowing private companies a limited participation, the independent airlines may not, except as associates of B.O.A.C. or B.E.A. operate scheduled services.

Until recently with few exceptions licences have been granted only for relatively unimportant routes and for the lowest class of traffic. An Air League spokesman has said that the independent airlines need more business so that they can buy more aircraft. Meanwhile, there are reports of pending mergers, notably Britavia and Skyways to form one group, and Airwork and Air Charter to form another. British independent airlines do about one-third of the British air transport industry's total business. The 15 members of the British Independent Air Transport Association operate, all told, a fleet of 70 four-engined aircraft and 125 twin-engined aircraft. Planes on order include two *Viscounts* for Eagle Aviation, two *Britannias* and two *DC-6As* for Hunting-Clan, three *Twin Pioneer* for Scottish Air Lines.

Increased Passenger Traffic of World Airlines

The world's airlines carried a record 87 million passengers in 1957, an increase of 13 percent from last year's 77 million. Each passenger was carried an average distance of 585 miles. I.C.A.O. Secretary-General, Mr. Carl L. Jungberg, has predicted that if the continuing growth experienced since 1945 is maintained in 1958, the airlines next year will carry close to about 100 million passengers. The total figures for 1957, he says, are the equivalent of flying 2 million people all around the world. Total passenger miles in 1957 came to 51,000 million, an increase of 16 percent over the 44,000 million recorded in 1956.

I.A.T.A. is forecasting a 1958 traffic increase of more than 15 percent on international routes. Air traffic to be handled by European carriers will increase by more than 11 percent each year up to 1970, according to a forecast prepared by Convair's airline analysis group in San Diego. Revenue passenger miles in 1957 totalled 8,330 million. The estimated total for 1970 is 21,100 million. Of the 1957 total, inter-continental traffic accounted for 52.8 percent including 18.8 percent for the north Atlantic alone, domestic traffic for 19.3 percent and intra-European for 27.9 percent.

Jet Aircraft for P.A.A.

Pan American Airway's plans for jet operations are taking practical shape, *Aviation Week* reports. Although final decisions have not yet been made, the airline now plans to assign its first jets to its trans-atlantic division. These will be six *Boeing 707-121s* to be delivered over a period of one year. Jet flights will start late in 1958 from New York international airport, initially from the old terminal building. When the airline's new individual terminal is completed in March 1959, all jet operations will be handled there. Hydrant refuelling will be provided at P.A.A.'s terminal but until its completion, trucks will have to be used. Runways at all mainline terminals served in the first phase of P.A.A.'s jet operations will be adequate, the airline says. The New York Port Authority has assured P.A.A. that it will do whatever is necessary to provide an adequate runway for the small *Boeing*, which the airline estimates will need 9,500 feet for take-off at a gross weight of 238,000 lbs.

A typical flight will carry a payload of 32,700 lbs including 121 passengers, their baggage and 4,700 lbs of cargo. Landing weight is 164,500 lbs with 16,000 lbs of reserve fuel. The *Boeing* jet is of course barred at present from New York international airport and will have to satisfy the Port Authority's noise level requirements. Non-stop transatlantic flights may not be attempted at first.

Jute

SACKING PRICES SLUMP IN NEAR-PANIC SELLING

SPECULATIVE ACTIVITY DOMINATES GOODS MARKETS

ONCE again Calcutta goods markets have been governed entirely by speculative activity, with prices in all sacking fabrics at a wide variance. Overseas manufacturers have again been conspicuous by their absence. Indeed, the general state of the market prevented buyers from formulating any definite policy and was probably a major point in their reluctance to undertake new commitments. The reaction of the market this week was the antithesis of that of the previous week. Prices slumped following the failure of a prominent bazaar operator to take up his delivery orders on the end-of-the-month settling day. This caused a panic and weak holders flooded the market with goods. Sacking prices fell Rs. 2.50 overnight. In all, heavy goods prices, as represented by B Twills, lost about Rs. 4.50 a 100 bags, recording new low levels. Eventually it was reported that settlement had been effected satisfactorily, and prices gradually improved. But there was no confidence in the market, and the undertone remained extremely weak. In contrast to sacking, hessian remained surprisingly steady and the wide fluctuations of the heavy goods section were not repeated in 9 and 11 porter fabrics. In fact, apart from minor variations when sacking was at its lowest ebb, hessian quotations towards the close were unchanged from those ruling at the opening. This was in spite of sacking quotations showing a loss of nearly Rs. 4 at that stage. The indication, therefore, appears to be that there is still a certain amount of confidence in hessians, possibly prompted by the fact that burlap consumption figures showed a welcome increase for the last month of the year, and the final average monthly consumption for 1957 of 69.2 million yards was the second highest for the last five years. At this average consumption, American burlap stocks are adequate for only 3¼ months, with 1½ months of that stock still afloat.

Several Calcutta mills are still offering large quantities of ready cuttings for sale, and it is significant that the mills that have these to spare are all concerned in the manufacture of cotton bagging, in which cuttings play a major part. The largest buyer of cotton bagging is America, and it has recently been ascertained that stocks there are sufficient to last for about two years. Consequently, there is no demand at present for the purchase of cotton bagging and most mills have stopped manufacture. Little interest has been shown, however, in the large quantities of cuttings which are now surplus to requirements, and which are being offered for sale at premiums, because local manufacturers are still confident that licences for the import of Pakistani cuttings will be issued in the near future.

Raw Jute Weak

Much of the current weakness in the fibre markets springs from this belief, although the greatest influence once again emanated from the goods market. With mills unable to sell their manufactured goods in the depressed state of the gunny market, they left raw jute completely alone. It was not until towards the close of the current session that any real interest was shown in the raw material, and even then purchases were strictly limited. The majority of sellers are not keen at these prices, and the general state of the upcountry markets curtails sellers' activities. Prices in the mofussil are still well above the parity of Calcutta rates, and it is only on the cheaper fibres of the mesta and jungli variety that sellers can show any profit, and that only the bare minimum. Imports upcountry are ridiculously small for the time of year, and this is also reflected in the arrivals in Cossipore where wagons averaged only about 30 a day, against 75 to 100 a day during the corresponding period last year. Consequently, local Cossipore markets are steady in spite of the slump in Calcutta quotations to mills, and sellers are inclined to be reserved. Mills agents and representatives, both in the local markets and the agencies, continue to be very active, and as premium prices are still being paid, it is difficult for ordinary operators to compete and procure jute at current market rates.

THE JUTE MARKETS

Manufactured Goods: There was heavy speculative activity in the goods market immediately prior to its opening last week in anticipation of settling day, and the general tendency was one of confidence. This confidence was shattered when settling day arrived, however, due to the failure of one large operator to take up his delivery orders. This caused a crisis which sent the market into a rapid decline. Prices tumbled and weak holders aggravated the position by panic selling, which eventually brought B Twill prices down to new low levels. The market was slow to recover from this setback and only very small business was reported. Overseas buyers displayed no interest until late in the session when it was reported that Russia had called for tenders for hessian and hessian bags. This caused little comment, however, and there was very little reaction to the news.

Quotations fell overnight at the opening and B Twills lost Rs. 2.65 to be quoted at Rs. 103.45 for January shipment and Rs. 104.50 for April-June shipment. Under continuous selling pressure from holders, and due to the lack of genuine buyers, rates fell a further 50 nP on Friday and Re 1 on Saturday. Over the weekend conditions improved, and a slow recovery was instituted due to several enquiries for both sacking and hessians. B Twill quotations rose to Rs. 102.90 by Tuesday morning, but the undertone of the market continued to be weak. During this time hessian prices were stable, and after opening at Rs. 39.45 for January 40in. 10oz., which was a fall of 35 nP, rates gradually improved and did not follow the slump of heavy goods. Hessian consumption and stock figures had a lot to do with the confidence in this section, and by Tuesday morning most of the initial loss had been made up. Forward shipment goods continued to rule at a premium of about 50 nP.

At the close the market was again easier, and quotations on Wednesday morning were based on the following :

	Ready Rs.	Feb. Rs.	March Rs.	Apr.-June Rs.
40in. 8oz.	32.25	32.30	32.30	32.30
40in. 10oz.	39.70	39.90	40	40.20
B Twills	102.30	103.50	103.50	104
Heavy Cees (Plain)	102.75	103.50	103.50	104
A Twills	124.25	125	125.25	125.50
Liverpools	118	118	118	118.25
Cornsacks	104.40	105	105.25	105.50

Raw Jute: There was very little business in raw jute last week, and prices declined in sympathy with the weaker goods market. Quotations at the opening were based on Rs. 26.75 for Assam jute, but these fell 50 nP following the slump in the gunny market, and eventually reached Rs. 25.50. In the absence of business, however, these could be regarded as nominal. After the week-end, prices staged a slow recovery but the general undertone was weak. Small business was done before the close, but interest was mainly centred on the lower grades of jute, there being very few sellers of the better class fibres at current rates due to the steady upcountry markets. Imports are less than half of what they were a year ago, and the majority of arrivals goes to mill agents who are willing to pay higher prices. Sellers are not keen for business at the present rates due to the continued negligible imports and they are finding it increasingly difficult to cover any sales made.

During the week, business was reported in Dhubri-Assam-Northern jute at Rs. 25.25 to Rs. 25.87 a maund basis Bottoms for February-March shipment. Tossa from the same areas was done at Rs. 28.75 to Rs. 29, while selected Murshidabad Tossa fetched Rs. 28.50. Once again the bulk of the business was done in Mesta varieties, and prices paid were in the region of Rs. 22.75 for Northern and Assam Mesta, Rs. 22.50 for Daissee Mesta and Rs. 20.50 for Jungli Mesta. Business in Middles only of Desal and Northern Mesta passed at Rs. 25.75 to Rs. 26. Small lots of Daissee was also done at Rs. 28.75 to Rs. 29.25. Total quantity of business was reported at about 150,000 maunds.

In Cossipore, wagon arrivals were very small, amounting to only about 200, as against 350 the previous week and 500 during the corresponding week last year. Stocks are small and over 50 percent of the jute lying in Cossipore is Mesta or jungli jute. Good jute is at a premium and the only people willing to pay the prices are mill representatives. At the close, quotations in Cossipore were based on Kishanganj jute at Rs. 25 a maund for garsat quality.

At the close the market was quiet, and quotations on Wednesday morning were as follows :

Indian Jute :	Landed at mills Rs. a md basis Bottoms	Shipment
Assam	25.75	Feb.-March 1958
Northern	25.50	"
Purnea Desal	24	"
Daissee	29	"
Assam Tossa	28.75	"
Northern ex Calcutta	24.75	"
Mesta :		
Assam-Northern	23	"
Desal	23	"
Daissee	22.75	"
Jungli	20.50	"
Bimli F.A.Q.	19.75	"
Pakistani Cuttings	70 a bale	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th January, 1958	1,226.8	11,929.3	13,156.1
1st to 25th December, 1957	933.6	17,666.0	18,599.6
1st to 25th November, 1957	1,955.6	25,092.0	27,047.6
Sacking			
1st to 25th January, 1958	17,455.9	126.0	17,581.9
1st to 25th December, 1957	23,174.8	561.2	23,736.0
1st to 25th November, 1957	32,803.8	583.9	33,387.7

THE PAKISTANI JUTE MARKETS

CONDITIONS FOR ISSUING LICENCES

(FROM A NARAYANGANJ CORRESPONDENT)

SO little trading has been reported during the past week that more attention has been focussed on the ambiguous *Dacca Gazette* than its contents would normally warrant so far from the beginning of the new season. It appears that the intention is that this *Gazette* should read simply that in order to obtain a shipper's licence, one must fulfil any one of the following conditions : (i) Be a hundred percent Pakistani company. (ii) Possess a pucca press. (iii) Give a guarantee of Rs. 2 lakhs. (iv) Have 25 percent Pakistani directors and shareholders and offer immovable assets as a guarantee. If this really is the intended interpretation and if the *Gazette* is modified accordingly, it will mean that the conditions for issuing licences are very similar to those of last year and no important obstacle has been placed before traders. It should, however, mean that those companies, which have no assets in Pakistan but are operating as Pakistani companies by having a few nominal local shareholders or directors will have to increase their Pakistani holding and such companies will have to possess not only passports but also citizenship papers, which are not easy to obtain.

The market continues weak with all balers taking extreme steps to cut out X Bottoms from their purchases of loose jute. Those who succeed are of necessity having to buy wet jute. It is a matter of opinion which is the better of the two evils. In pucca bales, local prices have not receded very much and, in fact, there has been some trading in cuttings in the expectation that India will be granting fresh licences for them. The current rumour is that India has agreed to license all sales registered with the mills for cuttings. The figure indicated is about 100,000 bales. In view of the glut of cuttings, it is quite possible that such import licences will merely stop the decline in prices and slightly increase trading. But it is unlikely that prices will improve appreciably. Overseas buyers continue to depress the market and business has been reported at £95 for Export Firsts, £85 for Export Lightnings and £72 10s for Export Hearts.

THE FOREIGN JUTE MARKETS

FIBRE EASIER: LITTLE BUSINESS IN GOODS

(FROM OUR DUNDEE CORRESPONDENT)

WHILE raw jute has continued to display an easier tendency throughout the past week, buyers of all varieties of products have been reserved. Weakness in the Calcutta goods market has not helped matters. It looks as if shippers would be willing to reduce their prices for raw jute, but some are afraid that in that case they may not be able to get their E.P.C.'s passed by the Pakistan's State Bank. At least, that is the shippers' excuse for maintaining their terms at such an unduly high level. There is no doubt about it that the values of raw jute are too high and it is believed that if buyers are prepared to hold off for a week or two, they will compel sellers to reduce their prices. Mill Firsts are quoted at from £113, Mill Lightnings from £96 10s and Mill Hearts from £86, with quite good marks at £86 5s, and grade Hearts from £73, while good marks of Daissee-¾ are available from £96 10s and grade £89, grade Tossa-¾ from £104 and grade Tossa-4 at £96 10s, all c.i.f., U.K., February-March. One or two shippers are willing to accept 10s to 20s a ton less for shipment in March-April. Tossa-¾ was down to £103 10s, but the lowest has been raised to £104. Spinners here have shown very little interest and only a few small sales have been recorded. Tossa-4's have been sold at £97 and £97 10s for good marks, February-March. Spinners have entered very little fresh business during the past week, but there is no change in prices. Sellers are still adhering to 15.14d a lb, lowest for 8 lbs C.H.W. cops, and 15.72d for 8 lbs warp, and twist is unchanged at 17.56d a lb for 3 ply 8 lbs. Rove is dull at £101 10s for 48 lbs, and £80 for 200 lbs, and the small yarns are more or less neglected. Most of the business being done, in the meantime, is in small lots for immediate delivery and manufacturers are receiving little opportunity to build up an order book. Prices remain unchanged at 12.88d a yard for 40in. 10oz. and 11.01d for 8oz. The Calcutta goods market had been buoyant over the previous week-end because of American buying of hessians and the Indian Government's purchases of B Twills, but there was a decided fall last week. Hessians came back from 61s 3d to 60s 3d for 40in. 10oz. and 46s 6d to 45s 9d for 7½oz., February, with March at 60s 6d and 45s 9d and April-June 60s 9d and 45s 9d, B Twills ruling at 157s 3d, 157s 6d and 158s, respectively, f.o.b., Calcutta, after being at 162s 9d, 153s and 163s 6d, respectively.

Plantation Topics

KERALA LAND CEILINGS ON COCONUT GARDENS

PLEA FOR EXEMPTION

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Indian Central Coconut Committee at its recent meeting adopted a resolution requesting the Planning Commission and the Kerala and Central Governments to exempt coconut gardens from the ceiling on holdings contemplated in the Land Reforms Bill of the Communist Government of Kerala. In the Committee's opinion, coconut gardens deserve to be treated for this purpose like tea, coffee and rubber plantations which are exempted from the scope of the proposed legislation. Through another resolution, the Committee requested the Kerala Government to extend the Commercial Crops Act, now applicable only in the Malabar area to the whole of Kerala, so that regulated markets for coconut and arecanut could be set up in the Travancore-Cochin area also.

Excise on Coconut Oil Mills

The Committee also decided to request the Government of India to levy excise duty on all mills producing coconut oil subject to the condition that the duty should be Rs. 56 a ton in the case of mills producing 125 tons and less a year and Rs. 112 a ton from mills producing more than 125 tons a year. The Committee felt that because of the present law, which exempts mills producing 125 tons and less of coconut oil from paying excise duty, bigger mills split themselves into smaller units and that this was leading to considerable evasion of the cess on copra, which is the Committee's only source of revenue.

The Committee reiterated its earlier request to the Central Government to abolish the cess on copra, but give the Committee a large enough grant from the excise duty on coconut oil to finance its activities. The Marketing and Economics Sub-Committee has made certain suggestions for checking any unreasonable rise in the price of coconut oil and for the classification of husked coconuts containing water as perishables when carried by railways. It has also discussed the schemes for ascertaining the cost of production of coconuts.

Mr. K. P. Madhavan Nair, who was until recently one of the secretaries of the Indian National Congress, has been re-elected as the vice-president of the Indian Central Coconut Committee for another term, and Mr. P. B. Kurup as its representative on the Indian Council of Agricultural Research for the next three years.

Rubber Factory Project

An Indian rubber manufacturing concern of Calcutta has placed before the Government of Kerala a proposal to start a Rs. 1½-crore rubber factory near Kottayam. Mr. A. V. George, one of the directors of the sponsoring concern, said that they have already approached the Government of India for loan assistance at a reasonable rate of interest for the proposed factory. As Kerala produces 95 percent of India's raw rubber, there is a great scope for a tyre factory in the State. The State Government, it is understood, has assured all possible assistance to the sponsors.

Russia Buys Lemongrass Oil

For the first time Russia has made a bulk purchase of lemongrass oil amounting to 80 to 100 tons from India. This substantial deal has gone rather unnoticed, and lemongrass oil prices have remained steady. India produced very nearly 1,400 tons of lemongrass oil during 1957 and exported practically the whole of it, the principal destinations being the United States, the U.K., the Continent and Russia. Production as well as exports were the highest on record. At the present rate of prices (Rs. 65 a dozen bottles of 16 oz. each), the growers are not expected to produce this year as large a quantity of lemongrass oil.

Slump in Pepper Market

Russia lifted from Cochin a few days ago nearly 1,200 tons of pepper. But the market does not show any sign of recovery from the slump that is being experienced from the beginning of the new season. According to trade circles in Cochin, there is very little chance for any appreciable rise in pepper values unless Americans enter the market. Small dealers, commission agents and the growers have yet to regain confidence and they sell stocks at distress prices.

Market for Coir Products

It has been announced by the Coir Board that on its request, the Central Ministry of Commerce and Industry has issued instructions to all offices under that Ministry that 50 percent of their requirements of floor coverings should be met by coir products in future. The Ministry has also recommended that 25 percent of the requirements of floor coverings in the offices under the control of other Ministries should be met by coir goods. The Coir Board is completing arrangements to open a show-room and sales depôt in Madras as part of its programme to develop the internal market.

COCHIN TEA SALES

At Sale No. 4, 1,500,000 lbs of tea were on offer. There was a good but irregular demand, with prices dearer for better quality teas. There was a poor demand for best liquorings and high-grown fannings.

Commodity Markets

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base: year ended March 1953=100) during the week ended 18th January, 1958, remained stationary at the previous week's revised level of 106.0. The index was, however, lower by 0.7 percent and 1.6 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The index for Food Articles stood at 102.5 compared with 102.6 (revised) for the previous week. Items which showed appreciable variations during the week were: rice (new crop) in Raipur (−14%), urad in Bombay (−9%), black pepper in Calcutta (−8%), mustard oil in Calcutta and chillies (−7% each), maize in Chandausi, gram in Delhi and turmeric in Calcutta (−6% each), fish (−5%), jowar and vanaspati (dalda) (−4% each), bajra and cashewnuts (−3% each), masur (−2%), oranges (+11%), meat in Calcutta (+10%), milk in Bombay (−8%), arhar in Patna and ghee in Kaithal (+7% each), rice in matihat (+6%), maize in Ludhiana and potatoes in Farrukhabad (+5% each) and groundnut oil and tea (+2% each). The index for Tobacco remained at the previous week's revised level of 95 in spite of a fall in the prices of raw tobacco (−1%). The index for the Fuel, Power, Light and Lubricants group also remained stationary at the previous week's revised level of 114.4. The prices of castor oil (−2%) and kerosene oil (1%), however, showed variations. Lower prices of skins (goat average quality) in Calcutta (−19%), gingellyseed (new crop) in Bombay (−16%), rapeseed (−6%), copra (−4%) and linseed (−2%) brought down the index for Industrial Raw Materials by 0.5 percent to 113.7 although the prices of raw hides (buffalo wet salted) in Calcutta (+8%), lac (+6%), raw cotton (+2%) and raw silk and cottonseed (+1% each) witnessed a rise. The prices of zinc (−3%) and rayon yarn and lead (−1% each) moved down while those of brass and tin (+2% each) and linseed oil and coir yarn (+1% each) showed advances and in the result the index for Intermediate Products rose by 0.2 percent to 106.8 compared with 106.6 (revised) for the previous week. The index for Finished Products also advanced by 0.3 percent to 107.8 due to a rise in the prices of silk and rayon manufactures (6%) and general chemicals (+1%). The price of oilcakes (−2%), however, showed a decline.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2.99 a lb against Rs. 3.02 a lb in force from 1st January, 1958. There is no change in the existing rate of duty of 38nP a lb.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN DUSTS

AT Sale No. 31, held on 3rd and 4th February, offerings at the Export auction consisted of 62,709 packages. There was a good general demand and any bright liquoring teas on offer met with keen competition at dearer rates. Low medium O. Fgs. were a strong feature and frequently sold well above valuations but plain medium teas were slightly easier. B.P.'s and the Fannings grades selling at 2 to 4nP below last rates. There was good support for C.T.C. teas and the very best sold at or slightly above valuations. The remainder, however, were about 10nP below last week's rates. Nonwither Legg-cut Fannings were about steady except when they had bright liquors when they were keenly sought after. Whole leaf grades met with less competition and declined by 5 to 10nP while the B.P.'s were comparatively neglected, some lots being withdrawn. There was less demand for Darjeelings and prices tended easier except for those with stylish appearance or autumnal flavour which sold well.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.25 to 2.30	2 4 0
Plain B. P.	1.52 to 1.56	1 15 0 to 1 15 6
Plain Fannings	1.60 to 1.64	
Medium B. P.	1.58 to 1.62	2 1 0 •
Medium Fannings	1.66 to 1.70	
Best Assam C.T.C. B.P.	2.40 to 2.60	2 9 0 (nom.)
Best Assam C.T.C. Fgs	2.30 to 2.40	

At the Internal Sale, a total of 20,302 chests of Dust was on offer. There was only a fair demand and prices were again easier. Orthodox descriptions from all districts were up to 6nP lower, the better liquoring kinds usually showing the least decline. C.T.C. Assams were an irregular feature, the best liquoring descriptions were frequently up to 20nP easier, but the brighter mediums were sometimes only up to 10nP lower. The more fibrous plainer kinds were irregular and generally easier. Darjeelings were in less demand and generally easier.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.54	1 13 6
Medium Assam Grainy Dust	1.56 to 1.58	1 14 0
Medium Assam C.T.C. Dust	1.70 to 1.90	2 2 0
Best Assam C.T.C. Dust	2.60 to 2.90	(nom.) 2 10 0

There was a good general demand for the 3,390 chests of Leaf on offer, and prices were occasionally dearer. The invoices of green tea sold at about valuations.

MIXED TREND IN FREIGHT MARKETS

IN the freight markets during the past week, western markets have been quieter. Eastern trades have been more active, but as is often the case when rates are very weak, a number of fixtures have been made but not reported. Coal from Hampton Roads to Rotterdam was fixed at 22s, thus maintaining the depressed rates of late. Fixtures of local interest were U.S.A.-Gulf to East Pakistan for rice in bags at $(U.S.)13.50 and a full cargo of ilmenite from Koilthottam to Sayreville or New Orleans at $(U.S.)8.75. There were several ore fixtures made among which may be mentioned Bombay-U.S.N.H. $(U.S.)8.75, Madras to West Italy 41s 6d f.i.o.t., Mormugao-Japan 42s 6d and Mormugao-Rijeka at 39s. Two ships were also fixed for coal from Calcutta-Chittagong at 24s 6d for February-March shipment. The time charter market was quiet, but included a 1,300 deadweight vessel for a trip Visakhapatnam to U.S.N.H. at $(U.S.)1.75. A motor ship of 13 to 13½ knots was taken for six to eight months' trading with delivery Montreal at lump-sum $(U.S.)24,000 a month.

LINSEED EASIER

Quiet conditions continued last week. Prices declined further, while trading was fair. The demand from crushers appeared to have improved slightly and there was a moderate daily turnover, with buyers lowering their limits from day to day. Dull conditions prevailed in the oil market and enquiries were limited. Shippers were out of the market, as there was still no support from overseas buyers. Latest quotations were as follows: February-March Rs. 21-10 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 28th January and 3rd February, 1958)

Cowhides: Wet salted (Ord.) 16,600 pcs. on the basis of Rs. 9.75 to Rs. 11.87; Wet salted (Slaughtered) 18,500 pcs. on the basis of Rs. 12.50 to Rs. 21.

Goatskins: Wet salted (Patna, Daissee and Kustia) 83,400 pcs. on the basis of Rs. 300 to Rs. 315, Rs. 345 to Rs. 360 and Rs. 370 to Rs. 380; Wet salted (she-killed) on the basis of Rs. 3.50 and (he-killed) on the basis of Rs. 4 a piece; Assam-Dinajpur 47,500 pcs. on the basis of Rs. 285 to Rs. 360; Pakur-Patna-Purulia 10,500 pcs. on the basis of Rs. 325 to Rs. 350.

COMPANY AND PUBLIC NOTICES

THE BOMBAY BURMAH TRADING CORPORATION LIMITED.

NOTICE is hereby given that the Ninety-fourth Annual General Meeting of the Shareholders of the Corporation will be held at the Indian Merchants' Chamber Hall, Lalji Naranji Memorial Building, 76, Veer Nariman Road, Bombay 1 on Monday, 24th February 1958 at 3-30 p.m. S.T. for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and audited accounts for the year ended 31st May 1957.
2. To sanction the declaration of a dividend.
3. To elect a Director in the place of Mr. Pratapsinh Mathuradas who retires by rotation and is eligible for re-election.
4. To elect a Director in the place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Mr. K. G. Milne, who retires under Section 260 of the Companies Act, 1956, and is eligible for re-election.
6. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
WALLACE & CO.,
Secretaries & Treasurers.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Corporation.

Warrants for the dividend, if declared, will be posted to shareholders on 3rd March 1958 and will be payable on and from that date.

The Transfer Books of the Corporation will be closed from 7th February 1958 to 28th February 1958 both days inclusive.

Bombay, 8th January 1958.

As the lift to the Hall is of limited capacity shareholders should come in good time to avoid congestion.

THE BOMBAY BURMAH TRADING CORPORATION LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Corporation will be held at the Indian Merchants' Chamber Hall, Lalji Naranji Memorial Building, 76, Veer Nariman Road, Bombay 1, on Monday, the twenty-fourth day of February 1958 at half past four o'clock p.m. (Standard Time) or so soon thereafter as the Annual General Meeting of the Corporation to be held on the same day at half past three o'clock p.m. (Standard Time) shall have concluded, for the purpose of considering and if thought fit passing, with or without modifications, the following Special Resolutions and the following Ordinary Resolution, that is to say:—

As Special Resolutions—

(I) That pursuant to Section 360 of the Companies Act 1956, approval be and is hereby accorded to the following contracts being entered into with The Bombay Company (Private) Limited, an Associate of Wallace & Company, the Secretaries and Treasurers of the Corporation, namely:

(*a*) The clearing and forwarding by The Bombay Company (Private) Limited of the Corporation's Tea from Cochin on such terms and conditions as may be prescribed from time to time by the Cochin Tea and Rubber Shippers' Association, for a period of five years from the date of this Resolution.

(*b*) Leave and license for the Corporation to occupy two portions of the premises at No. 9, Wallace Street, Fort, Bombay, for an office and depot at a total compensation of Rs. 900 per mensem for a period of five years from the date of this Resolution, subject to earlier termination by either party giving six months notice in writing to the other party.

(*c*) Leave and license for the Corporation to occupy the ground floor and connected offices at the premises at No. 11, Nepean Road, Bombay, at a compensation of Rs. 400 per mensem for a period of five years from the date of this Resolution, subject to earlier termination by either party giving six months notice in writing to the other party.

(II) That pursuant to Section 360 of the Companies Act 1956, approval be and is hereby accorded to contracts being entered into with The Bombay Company (Private) Limited, an Associate of Wallace & Company, the Secretaries and Treasurers of the Corporation, for the purchase from The Bombay Company (Private) Limited, and where necessary the installation by them, of electric cables and accessories, steel, insulating material, insecticides, tar and tar products, and engineering sundries, equipment and machines such as are dealt with in the regular course of The Bombay Company (Private) Limited's business and such as may be required from time to time for the Corporation's business, and provided that:

(i) the prices or amounts charged to the Corporation are at rates which are not less favourable to the Corporation than the market rates or which are otherwise reasonable, and

(ii) the aggregate value of all such supplies and services shall not exceed Rupees one lakh in any one calendar year.

(III) That pursuant to Section 359 of the Companies Act 1956, Messrs. Wallace & Company, the Secretaries and Treasurers of the Corporation, be and they are hereby authorised to retain any commission earned or to be earned by them as Agents of the Commercial Union Assurance Company Limited in respect of Accident and Miscellaneous insurance effected with the Corporation.

(IV) That pursuant to Section 359 of the Companies Act 1956, The Bombay Company (Private) Limited, an Associate of Messrs. Wallace & Company, the Secretaries and Treasurers of the Corporation, be and they are hereby authorised to retain any commission or other remuneration earned or to be earned by them in respect of goods or services supplied by them to the Corporation as Agents of the under-noted firms and Companies, provided that the prices or amounts charged to the Corporation are at rates which are not less favourable to the Corporation than the market rates or which are otherwise reasonable:

Name of Company	*Nature of Goods or Services*
British Paints (India) Limited	Paints, stoving enamels, and varnishes.
Shalimar Tar Products (1935) Ltd.	Tar products.
Mysore Iron & Steel Works	Coal Tar.
Swaika Oil Mills	Linseed Oil.
Himalaya Rosin & Turpentine Mfg. Co.	Rosin and Turpentine.
Alsales Limited	Maxweld Fabric.
Hindustan Wire Netting Co. (Private) Ltd.	Wire Netting.
Martin Black & Co. (Wire Ropes) Limited	Wire Rope.

(V) That pursuant to Section 314 of the Companies Act 1956, Mr. Edward Stanley Vernon-Jones, a Managing Director of The Bombay Company (Private) Limited who are Associates of Wallace & Company, the Secretaries and Treasurers of the Corporation, be and he is hereby elected a Director of the Corporation.

(VI) That the following alteration be made in the Articles of Association namely:

The following Article shall be inserted after Article 106:

"106A. (1) Any general meeting may resolve that any amounts standing to the credit of the share premium account or the Capital Redemption Reserve Fund or any monies, investments or other assets forming part of the undivided profits (including profits or surplus monies arising from the realisation and (where permitted by law) from the appreciation in value of any capital assets of the Company) standing to the credit of the General Reserve, Reserve or any Reserve Fund or any other Fund of the Company or in the hands of the Company and available for dividend be capitalised

(*a*) by the issue and distribution as fully paid up of shares, debentures, debenture stock, bonds or other obligations of the Company, or

(*b*) by crediting shares of the Company which may have been issued and are not fully paid up, with the whole or any part of the sum remaining unpaid thereon.

Provided that any amounts standing to the credit of the share premium account or the Capital Redemption Reserve Fund shall be applied only in crediting the payment of capital on shares of the Company to be issued to members (as herein provided) as fully paid bonus shares.

(2) Such issue and distribution under (1)(*a*) above and such payment to credit of unpaid share capital under (1)(*b*) above shall be made to, among and in favour of the members or any class of them or any of them entitled thereto and in accordance with their respective rights and interests and in proportion to the amount of capital paid up on the shares held by them respectively in respect of which such distribution under (1)(*a*) or payment under (1)(*b*) above shall be made on the footing that such members become entitled thereto as capital.

(3) The Directors shall give effect to any such resolution and apply such portion of the profits or Reserve Fund or any other Fund or account as aforesaid as may be required for the purpose of making payment in full for the shares, debentures or debenture stock, bonds or other obligations of the Company so distributed under (1)(*a*) above or (as the case may be) for the purpose of paying, in whole or in part, the amount remaining unpaid on the shares which may have been issued and are not fully paid up under (1)(*b*) above provided that no such distribution or payment shall be made unless recommended by the Directors and if so recommended such distribution and payment shall be accepted by such members as aforesaid in full satisfaction of their interest in the said capitalised sum.

(4) For the purpose of giving effect to any such resolution the Directors may settle any difficulty which may arise in regard to the distribution or payment as aforesaid as they think expedient and in particular they may issue fractional certificates and may fix the value for distribution of any specific assets and may determine that cash payments be made to any members on the footing of the value so fixed and may vest any such cash, shares, debentures, debenture stock, bonds or other obligations in trustees upon such trusts for the persons entitled thereto as may seem expedient to the Directors and generally may make such arrangements for the acceptance, allotment and sale of such shares, debentures, debenture stock, bonds or other obligations and fractional certificates or otherwise as they may think fit.

(5) Subject to the provisions of the Act and these Articles in cases where some of the shares of the Company are fully paid and others are partly paid only such capitalisation may be effected by the distribution of further shares in respect of the fully paid shares, and by crediting the partly paid shares with the whole or part of the unpaid liability thereon but so that as between the holders of the fully paid shares, and the partly paid shares the sums so applied in the payment of such further shares and in the extinguishment or diminution of the liability on the partly paid shares shall be so applied *pro rata* in proportion to the amount then already paid or credited as paid on the existing fully paid and partly paid shares respectively.

(6) When deemed requisite a proper contract shall be entered into in accordance with the Act and the Board may appoint any person to sign such contract on behalf of the members entitled as aforesaid and such appointment shall be effective."

As an Ordinary Resolution—

(VII) That the commission payable to Jardine Matheson & Company Limited, the sole selling agents of the Corporation for timber in Hongkong, be and is hereby increased to a percentage not exceeding 5 per cent on the *c.i.f.* value of sales in so far as such sales relate to timber shipped from the Corporation's Wallace Bay branch.

By Order of the Board,
WALLACE & COMPANY,
Secretaries and Treasurers.

9, Wallace Street,
Fort, Bombay.
Dated 22nd January 1958.

Explanatory Notes under Section 173(2) of the Companies Act, 1956

Special Resolution I—

(*a*) The Corporation requires Agents for the clearing and forwarding of its Tea in Cochin. The Bombay Company (Private) Limited maintain an office and storage depot in Cochin, and for some years past have carried out the clearing and forwarding of the Corporation's teas there. It would serve the best interests of the Corporation to appoint The Bombay Company (Private) Limited Agents for this purpose at the usual rates fixed by the Tea and Rubber Shippers Association of which The Bombay Company (Private) Limited are a member. A draft of the proposed contract, and a schedule of current rates, have been sent to shareholders.

(*b*) and (*c*) For many years the Corporation have been in occupation, by leave and license of The Bombay Company (Private) Limited, of a portion of the premises at 9, Wallace Street, Bombay, for use as an Office and Store Depot, and of part of premises at 11, Nepean Road, Bombay, for the residential use of Corporation Officers. The compensation paid for such use and occupation is reasonable. It is desirable that the Corporation continue in occupation of these premises, and Section 360 of the Act requires the approval of this by Special Resolution.

Special Resolution II—

The Corporation periodically requires, for use on its Estates and in its other business, electric cables and accessories, steel, insulating material, insecticides, tar and tar products, and engineering sundries, equipment and machines which need to be purchased from time to time at the prevailing market rates. The Bombay Company (Private) Limited are regular importers of certain well-known brands of these articles. In so far as such articles may be purchased by the Corporation from The Bombay Company (Private) Limited, who are associates of Messrs. Wallace & Company, the Secretaries and Treasurers of the Corporation, approval of the Members of the Corporation is required by Special Resolution, under Section 360 of the Act, for such contracts.

Special Resolution III—

Messrs. Wallace & Company are Agents of the Commercial Union Assurance Company Limited,

and the Corporation effects Accident and Miscellaneous insurance with them. The commission paid is in accord with the standard practice for this type of business.

Special Resolution IV—

Messrs. The Bombay Company (Private) Limited, Associates of Wallace & Company, the Secretaries and Treasurers of the Corporation, are Agents for :—

British Paints (India) Limited
Shalimar Tar Products (1935) Ltd.
Mysore Iron & Steel Works
Swaika Oil Mills
Himalaya Rosin & Turpentine Mfg. Co.
Alsales Limited
Hindustan Wire Netting Co. (Private) Ltd.
Martin Black & Co. (Wire Ropes) Limited

and supply equipment and stores to the Corporation. The rates charged are not less favourable than normal market rates. Section 359 of the Companies Act, 1956 requires the Corporation's sanction by Special Resolution for The Bombay Company (Private) Limited to retain commission and remuneration earned by them.

Special Resolution (V)—

Mr. E. S. Vernon-Jones has previously been a Member of the Board. It is considered desirable that the Board should receive the benefit of his knowledge and experience. He is a Managing Director and a shareholder of The Bombay Company (Private) Limited, the resident partners of Wallace & Company, the Secretaries and Treasurers of the Corporation.

Special Resolution (VI)—

It is considered desirable to amend the Articles of Association so as to include an Article empowering the Corporation, should your Board so recommend, to capitalise part of the Corporation Reserve and other funds, to be used for the issue of Corporation Shares and other securities or for the part or whole extinguishment of the liability on partly-paid shares. Article 106A has been framed accordingly, having due regard to the rights of the partly paid shareholders as set out in the Special Resolution passed on the 27th February 1918 and confirmed on the 15th March 1918. The proposed alteration requires the approval by Special Resolution of the Members of the Corporation.

Ordinary Resolution (VII)

At an Extraordinary General Meeting of the Corporation held on the 12th November 1956 the Corporation *inter alia* approved the appointment of Jardine Matheson & Company Limited as sole selling agents of the Corporation's timber in Hongkong for a period of five years commencing from the 1st October 1956. The commission sanctioned by the Members of the Corporation at the aforesaid Meeting was 4 per cent. Owing to changes, since that date, in timber market conditions it is considered necessary to agree to an increase in the rate of commission from 4 per cent to a percentage not exceeding 5 per cent on the *c.i.f.* value of sales in Hongkong; and the Board recommend that this be approved by Members under Ordinary Resolution.

NOTE

(1) None of the present Directors is interested in any of these Resolutions.

(2) The Secretaries and Treasurers are interested in certain of the above resolutions as follows :

(a) In Special Resolutions Nos. I, II and IV in that the contracting parties, The Bombay Company (Private) Limited, who are partners in the firm of Wallace & Company, are therefore Associates of the Secretaries and Treasurers.

A partner of Wallace & Company, the Secretaries and Treasurers, is also a substantial shareholder in The Bombay Company (Private) Limited and to that extent therefore the Secretaries and Treasurers are interested in the commission or remuneration earned by their Associates.

(b) In Special Resolution No. III as Agents of the Insurance Company therein mentioned, and

(c) In Special Resolution No. V inasmuch as Mr. E. S. Vernon-Jones is a Managing Director and shareholder of their Associates, The Bombay Company (Private) Limited.

(3) Documents or drafts thereof relating to these Resolutions may be inspected at the office of the Corporation on any working day during business hours.

(4) Any Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and such proxy need not be a member of the Corporation.

By Order of the Board,
WALLACE & COMPANY,
Secretaries and Treasurers.

9, Wallace Street,
Fort, Bombay.
Dated 22nd January 1958.

NEW INDIA SUGAR MILLS LIMITED

NOTICE is hereby given that the Twenty-third Annual General Meeting of the New India Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta on Tuesday, the 25th February, 1958 at 3 P.M. for the following purposes :—

1. To receive and consider the Report of Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1957.
2. To declare Dividends.
3. (a) To elect a Director in place of Shri P. D. Himatsingka who retires by rotation as well as under Section 280 of the Companies Act, 1956.

   In this connection the Company has received a special notice pursuant to section 281, read with section 190 of the Companies Act, 1956 from a shareholder of the company and special notice is hereby given that the following resolution will be moved at the meeting :—

   "Resolved that Shri P. D. Himatsingka who retires by rotation and who has attained the age of 68 years be and is hereby re-appointed as a Director of the Company and that the age limit prescribed under section 280 of the Companies Act, 1956 shall not apply to him."

   Shri P. D. Himatsingka has been on the Board of Directors of the company since the inception of the company and has rendered valuable services to the company as a Director. It is, therefore, in the interest of the Company that he should continue as a Director of the Company.

   (b) To approve of the appointment of Shri N. C. Mehta. as a Director of the Company, who retires under section 280 of the Companies Act, 1956.

   In this connection the company has received a special notice pursuant to section 281 read with section 190 of the Companies Act, 1956 from a shareholder of the company and special notice is hereby given that the following resolution will be moved at the meeting.

   "Resolved that Shri N. C. Mehta who has attained the age of 65 years be and is hereby re-appointed as a Director of the company and that the age limit prescribed under section 280 of the Companies Act, 1956 shall not apply to him."

   Shri N. C. Mehta is a man of wide experience and has been associated with the sugar industry since long. During the period of his Directorship he has rendered valuable guidance to the company. It is, therefore, in the interest of the company that he should continue as a Director of the Company.
4. To appoint auditors and fix their remuneration.

As Special Business :

5. To consider and, if thought fit, to pass, with or without modification, the following Resolutions as Special Resolutions.

(a) "WHEREAS the East Indian Produce Company Ltd., an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said company carry on business of acting as agents in the United Kingdom for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large scale and whereas their expenses of maintaining their office, as assessed, amount approximately to £40,000/- per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the company, would depend on the value of purchases effected and services rendered through the said company in relation to its total turnover in each year and whereas the said East Indian Produce Company Ltd. are acting as Purchasing Agents of the company for purchases of plant, machinery, chemicals and stores, etc., and rendering of services such as recruitment of technical personnel, etc., and are paid commission at various rates. NOW it is hereby resolved that the appointment of the East Indian Produce Company Ltd. as Agents for the company to purchase, for and on behalf of the company, plant, machinery, chemicals and stores, etc., and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the company, be continued for a further period of three years with effect from 1st March, 1958 and that commission (1) for purchase of plant, machinery and stores etc., up to 2½% of the invoice price of plant and machinery and up to 5% of the invoice price of stores, etc. subject to a maximum of £5,000/- in respect of a single order irrespective of the amounts calculated on the percentage basis, (2) for recruitment of technical personnel, up to 20% of the gross salary payable to the technical personnel during the first year of service under company and (3) for execution of various matters referred and entrusted to them, the actual expenses incurred, the remuneration of the staff of the East Indian Produce Company Ltd. apportionable to such work plus 50% commission of such remuneration, be paid by the Company to the Agents, viz., The East Indian Produce Company Ltd in the manner sanctioned by the Directors of the Company."

(b) "RESOLVED that the Directors be and they are hereby authorised to enter into an agreement on behalf of the Company with the National Bearing Company Ltd., an associate of the Managing Agents of the Company, providing for the lending of the services of Shri K. D. Churiwala, General Secretary of the Company, by the company to the said associate company on the terms and conditions set forth in the draft agreement produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

EXPLANATORY STATEMENTS

Item 5(a): The East Indian Produce Company Ltd. are an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company. They have been acting as buying agents of the Company since a long time and it is proposed that they continue as buying agents for a further period of three years in the manner and on the terms and conditions stated in the resolution. Shri K. K. Birla, a Director of the Company, is a shareholder in the East Indian Produce Co. Ltd.

Item 5(b): The National Bearing Company Ltd. approached the Company for lending the services of Shri K. D. Churiwala, General Secretary of the Company. As the National Bearing Co. Ltd. is an associate of the Managing Agents of the Company, approval of the shareholders is necessary to enter into the required agreement with them. The above resolution has, therefore, been circulated for obtaining the requisite sanction to enter into an agreement with the said associate company. The draft agreement to be entered into with the said company can be inspected at the registered office of the company any time during business hours.

By Order of the Board.
Per Pro THE COTTON AGENTS PRIVATE LIMITED,
B. N. SABOO,
Managing Agents.

'India Exchange',
Calcutta-1, the 20th January, 1958.

Notes :—(1) A member entitled to attend and vote is entitled to appoint a proxy and the proxy need not be a member.

(2) Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

(3) The dividends, when declared, will be payable to registered shareholders as on the 25th February, 1958 on or after the 10th March, 1958.

(4) The Register of Members of the Company will remain closed from the 15th February, 1958 to the 25th February, 1958 both days inclusive.

EASTERN INVESTMENTS LIMITED

NOTICE is hereby given that an Annual General Meeting of EASTERN INVESTMENTS LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3-00 P.M. on Friday, the 28th day of February, 1958, for the following purposes :—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in the places of retiring Directors.
4. To appoint Auditors and fix their remuneration.

MARTIN BURN LIMITED.

NOTICE.

THE Annual General Meeting (being the Twelfth Ordinary General Meeting) of the Shareholders of Martin Burn Ltd. will be held on Thursday, 27th February, 1958, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business :

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1957, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend and Cash Bonus.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a special notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of the Companies Act, 1956, to move the following resolution at the meeting :—

   "That Mr. T. Leslie Martin be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from 20th to 27th February, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Calcutta,
1st February, 1958.

NOTE—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 1st April, 1958, to those Shareholders so entitled whose names appear in the Company's books on the 27th February, 1958, or to their mandatees. No application for dividend warrants will be necessary.

UPPER GANGES SUGAR MILLS LIMITED.

NOTICE is hereby given that the Twenty-fifth Annual General Meeting of the Upper Ganges Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta on Tuesday, the 25th February, 1958 at 2 P.M. for the following purposes :—

1. To receive and consider the Report of Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1957.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

As Special Business :

5. To consider and, if thought fit, to pass, with or without modification, the following resolutions as Special Resolutions.

(a) "WHEREAS the East Indian Produce Co. Ltd., an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said company carry on business of acting as agents in the United Kingdom for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large-scale and whereas their expenses of maintaining their office, as assessed, amount approximately to £40,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the company, would depend on the value of purchases effected and services rendered through the said company in relation to its total turnover in each year and whereas the said East Indian Produce Co. Ltd. are acting as Purchasing Agents of the Company for purchases of plant, machinery, chemicals and stores, etc., and rendering of services such as recruitment of technical personnel, etc., and are paid commission at various rates. NOW it is hereby resolved that the appointment of the East Indian Produce Co. Ltd. as Agents for the company to purchase, for and on behalf of the company, plant, machinery, chemicals and stores, etc., and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the company, be continued for a further period of three years with effect from 1st March, 1958 and that commission (1) for purchase of plant, machinery and stores etc., up to 2½% of the invoice price of plant and machinery and up to 5% of the invoice price of stores, etc., subject to a maximum of £5,000/- in respect of a single order irrespective of the amounts calculated on the percentage basis, (2) for recruitment of technical personnel, up to 20% of the gross salary payable to the technical personnel during the first year of service under company and (3) for execution of various matters referred and entrusted to them, the actual expenses incurred, the remuneration of the staff of the East Indian Produce Co. Ltd. apportionable to such work plus 50% commission of such remuneration, be paid by the company to the Agents, viz., The East Indian Produce Co. Ltd. in the manner sanctioned by the Directors of the Company."

(b) "RESOLVED that the Directors be and they are hereby authorised to enter into a contract on behalf of the company with Orient Paper Mills Ltd., an associate of the Managing Agents of the company, providing for the sale of bagasse by the company to the said associate company on the terms and conditions set forth in the draft agreement produced at the meeting and initialled, for identification, by the Chairman and which is hereby approved."

EXPLANATORY STATEMENT

Item 5(a): The East Indian Produce Co. Ltd. are an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company. They have been acting as buying agents of the Company since a long time and it is proposed that they continue as buying agents for a further period of three years in the manner and on the terms and conditions stated in the resolution. Shri K. K. Birla, a Director of the Company, is a shareholder in the East Indian Produce Co. Ltd.

(b) The Orient Paper Mills Ltd. approached the company for purchase of bagasse which they intend to use as raw material in the manufacture of paper and the Company has sufficient quantities of bagasse available for sale. As the Orient Paper Mills Ltd. is an associate of the Managing Agents of the Company, approval of the shareholders is necessary to enter into the required contract with them. The above resolution has, therefore, been circulated for obtaining the requisite sanction to enter into a contract with the said associate company. The draft agreement to be entered into with the said associate company can be inspected at the registered office of the company any time during business hours.

By Order of the Board,
Per Pro. THE COTTON AGENTS PRIVATE LTD.,
B. N. SABOO,
Managing Agents.

Calcutta-1, the 20th January, 1958.

Notes :—(1) A member entitled to attend and vote is entitled to appoint a proxy and the proxy need not be a member.

(2) Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the company.

(3) The dividends when declared will be payable to registered shareholders as on the 25th February, 1958 on or after 10th March, 1958.

(4) The Register of Members of the Company will remain closed from the 15th February, 1958 to the 25th February, 1958 both days inclusive.

BHARAT SUGAR MILLS LIMITED.

NOTICE is hereby given that the Twenty-sixth Annual General Meeting of the Bharat Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta on Tuesday, the 25th February, 1958 at 2-30 P.M. for the following purposes :—

1. To receive and consider the Report of Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1957.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

As Special Business :

5. To consider and, if thought fit, to pass, with or without modification, the following Special Resolution :

WHEREAS the East Indian Produce Co. Ltd., an associate of The Cotton Agents Private Ltd., the Managing Agents of the company, maintain an office at London in the United Kingdom and whereas the said company carry on business of acting as agents in the United Kingdom for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom and the Continent and their operations are on a very large-scale and whereas their expenses of maintaining their office, as assessed, amount approximately to £40,000/- per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the company, would depend on the value of purchases effected and services rendered through the said company in relation to its total turnover in each year and whereas the said East Indian Produce Co. Ltd. are acting as Purchasing Agents of the company for purchases of plant, machinery, chemicals and stores, etc., and rendering of services such as recruitment of technical personnel, etc., and are paid commission at various rates. Now it is hereby resolved that the appointment of the East Indian Produce Company Ltd. as Agents for the company to purchase, for and on behalf of the company, plant, machinery, chemicals and stores, etc., and to render services such as recruitment of technical personnel and execution of various commissions entrusted to them from time to time by the company, be continued for a further period of three years with effect from 1st March, 1958 and that commission (1) for purchase of plant, machinery and stores, etc. up to 2½% of the invoice price of plant and machinery and up to 5% of the invoice price of stores, etc. subject to a maximum of £5,000/- in respect of a single order irrespective of the amounts calculated on the percentage basis, (2) for recruitment of technical personnel, up to 20% of the gross salary payable to the technical personnel during the first year of service under company and (3) for execution of various matters referred and entrusted to them, the actual expenses incurred, the remuneration of the staff of the East Indian Produce Co. Ltd. apportionable to such work plus 50% commission of such remuneration, be paid by the company to the Agents, viz., The East Indian Produce Co. Ltd. in the manner sanctioned by the Directors of the Company.

EXPLANATORY STATEMENT

Item 5. The East Indian Produce Company Ltd. are an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company. They have been acting as buying agents of the Company since a long time and it is proposed that they continue as buying agents for a further period of three years in the manner and on the terms and conditions stated in the resolution. BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

NOVEL IDEAS FOR INCREASING EXPORTS

FURTHER EXPLANATION NEEDED

SCARCELY a week goes by these days without some group of business men or industrialists being told by a Government spokesman that it must "reorientate" its ideas about something or other. Now, it appears, Mr. Morarji Desai, Union Minister of Commerce and Industry, has joined the movement. For those who did not know better, all this would suggest that the private sector in India is more than ordinarily behind the times with its thinking, instead of the simple fact that the Government is becoming increasingly exasperated with the realities of economic life—for many of which it is itself directly responsible. A better solution of current difficulties than this constant lecturing of business men might be for Ministers to concentrate their attention on fitting the policies to the limitations of human nature, rather than the other way round. One doubts, for instance, whether Mr. Desai has considered seriously his own suggestion, made to last week-end's meeting of the Export Advisory Council, that exporters should revise their outlook on making profits. Apart from confusion as to what the Minister really means, this is to put altogether too great a strain on the normal instincts of traders, whether private or public. It is also difficult to see exactly what Mr. Desai has in mind when he says that every industry should export a portion of its production to earn enough foreign exchange to import its own requirements of raw material. Perhaps both these suggestions mean something entirely different from the sense in which they have been reported. If that is so, and the Minister does seriously believe that either is workable enough to be recommended to industrialists, then the next step is to explain precisely what is involved and what it is intended should be achieved.

It is not clear whether Mr. Desai proposes that every industry's foreign exchange earnings should be related directly to its own need for raw material imports, or whether, by some method, the "multilateral" character of earning is to be preserved. If the former is the case, then how would the present considerable advantages of division of labour in earning power be maintained? What would be the position of industries serving urgent home needs? If the relationship between earning and spending is to be rigid, what would happen to the foreign exchange brought in by the jute and tea industries? If it is not, then how would the system differ from conditions as they exist at the present time? Finally, in what way is Mr. Desai's idea different from the suggestions so often put forward in the past, and even recommended in a limited form by the Export Promotion Committee, that exporters be allowed to keep a proportion of their foreign exchange earnings for their own needs, subject of course to the limitations of import control? The Minister's scheme obviously requires considerable clarification. So does the suggestion that industries should earn the foreign exchange they need by exporting without profit if necessary. This is in effect, of course, advocating a selective devaluation of the rupee. The question arises whether the idea is to increase exports by value, or simply by volume. If value is to be the criterion, then it becomes a question of the elasticity of demand for the products of the industry in question, whether earnings are increased or actually diminished. If that were to happen, the situation might become worse than it is now. A fall in earnings brought about deliberately would be justified only if new markets could be gained and held; in which case forward-looking exporters would probably make the sacrifice anyway without prompting from the Government. Mr. Desai might note that the tea and jute industries—which together account for a large portion of India's export earnings—are already in the habit of selling at cost or even below when market conditions make profits impracticable. To insist they did so in response to some rigid formula would probably put them out of business in a remarkably short time. There is also the danger that a Government-sponsored policy of this kind would sail dangerously near to "dumping", which would automatically attract international retaliation. No doubt Mr. Desai has satisfactory answers to all these points, but if so he did not reveal them in anything he said last week-end.

At the meeting of the Import Advisory Council the day before, the Minister was able to give some reassuring news about the success of the measures taken to halt the drain on the foreign exchange reserves. This, he pointed out, had been slowed down by the "import squeeze" which, apparently, is to be tightened further. While there is no doubt that unnecessary imports should be avoided, nor that the policy of putting raw materials before capital equipment is the right one, it is a pity that some modified programme of consumer good imports is not to be permitted. There is no doubt that in some items indigenous production has been encouraged and is now, or soon will be, adequate to meet requirements. It is also true that there are instances where this restrictive policy has helped turn the scales when a foreign manufacturer was considering whether or not to start production in this country. On the other hand, there are many goods of which indigenous production is still inadequate and where prices have risen, while there are many more in which all conceptions of quality have been thrown to the winds now that foreign competition has been completely eliminated. Such examples are not numerous, nor, in the context of the individual's total requirements, are they supremely important. But that in itself is a reason why the foreign exchange required would be small, whereas the advantages in helping to keep prices down and quality up would certainly outweigh the sacrifice involved. One item of much greater importance which does seem to have suffered unnecessarily from the restrictions is the import of motor-vehicle components. To cut down on these is false saving indeed. The rate at which India is emerging from the bullock cart economy is already far too slow. The Minister would not entertain the word "liberalisation" when used in connection with his policy, but total prohibition of imports has little to recommend it and the principle should be abandoned as quickly as possible. One item with which some relaxation might profitably begin is the invisible one of travel abroad. It is no doubt, at the moment, both economically and politically convenient that Indians should see no country other than their own. But in the long run it is damaging for the country's economy and, worse still, a danger to its democratic future.

The Minister did well to emphasise the importance of foreign investment as a means of overcoming foreign exchange difficulties in any particular project, but it is difficult to reconcile this recommendation with his point that, from now on, the import of capital goods on deferred payment will be allowed only on a low priority basis because "we do not intend to mortgage our future by indiscriminate borrowing". The key word here may be "indiscriminate"; otherwise it is difficult to see exactly what the Minister has in mind because the difference between foreign capital investment and long-term credit provisions is not immediately apparent.

Perhaps the most discouraging feature of Mr. Desai's address to the Export Advisory Council was the hint it appeared to give that the report of the Export Promotion Committee has been shelved. It has been obvious all along that the recommendations would not be altogether to the Government's liking; and it may be that their acceptance has only been delayed. But what appears most likely is that the Government has decided that the wholly sensible incentives suggested somehow conflict with present socialistic policy, and that the remainder of the recommendations are mainly a question of administration anyway and not worth causing a fuss about. If this is the case, then it is to be regretted. It has been suggested in numerous *Capital* leading articles that India is fast placing herself at a severe disadvantage so far as traditional exports are concerned, and has little chance of seriously challenging her long-established competitors in the new ones. The Committee's recommendations gave some indication of how the position could be transformed. If they are to be merely disregarded, things are likely to get worse rather than better.

The key to the export situation is simply profit, in one form or another. This, of course, brings us back to Mr. Desai's call for a reorientation of the outlook of exporters, and it leads inevitably to the conclusion that it is the Government rather than the trade which needs to do the reorientating. For many years to come the main source of foreign exchange is going to be the tea and jute industries, both of which, as pointed out by the Assocham representative, Mr. W. H. S. Michelmore, at the meeting, could be substantially benefited by a more realistic attitude towards the question of financial incentive, at present ruled out by high taxation. Large export earnings are incompatible with a heavily taxed economy. They are also impossible for a high-cost one. If this dilemma is ever to be resolved, the recommendations of the Export Promotion Committee will have to receive far more careful study in New Delhi than it appears they have been getting.

POLICY FOR MINERALS

STEADILY increasing interference in producers' affairs has been the main feature of the Government's mineral policies in recent years. The coal industry has probably suffered most as a result, although other producers too, of iron and manganese ores for instance, have had little to be cheerful about. The mineral industry recognises generally that a certain amount of direction and regulation may be inevitable in the political and social climate in which it has to work. What it has reason to regret is that the controls imposed by the Government, and the powers it holds in reserve, are contributing to a widespread feeling of insecurity. This insecurity is especially damaging for enterprises in which heavy capital outlays have to be made initially while the prospect of future returns is still uncertain. In practice, the rules and regulations, even those which seem unexceptionable on paper, have created a mesh of bureaucratic red-tape, with the result that expansion has been impeded. If the rise in coal production, especially of the higher grades, has been slow in relation to the potentialities which have existed, the reasons are to be found in official measures that have been hasty, ill-conceived and based on flimsy evidence. The same is true of other mineral industries. The basic point has been ignored that economic working is essential for the exploitation of minerals on a healthy, long-term basis. If costs are allowed to rise too high, or production is restricted at too low a level, or the normal exploration of mineral belts is impeded, profitability suffers; new investment cannot then be undertaken on the scale required, and the industry is no longer in a position to cater for the much larger needs of the future.

In an interesting speech at the annual dinner of the Mining, Geological and Metallurgical Institute

of India last Saturday, Mr. D. Hogg, chairman of the Indian Mining Association, has drawn welcome attention to certain aspects of official policy which might seriously affect the coal and other mineral industries. He points out that the economy of companies formed to carry on mining operations is based on the terms of the leases they hold; a change in the terms can affect adversely not only the companies themselves but also industry as a whole, by raising the prices of raw materials and manufactured goods. Many share Mr. Hogg's hope that the existing rates of royalty paid on coal will not be raised by the Mines and Minerals (Regulation and Development) Act, 1957. It is reported that a move to exclude coal royalties from such an increase is already afoot, and its successful culmination would be only proper recognition of the fact that the conditions governing coal leases are different from those governing other mineral leases. There is insufficient appreciation of the fact that there is a fundamental difference between royalties and taxes, which makes any rise in the former inequitable considering the economic condition of the coal industry today. As Mr. Hogg points out, "royalty is a fixed charge for the privilege of exploiting natural resources and is an item in the cost of production. If the rate of royalty is increased by statute, without any increase in the value or the quantity of the natural resources available to the lessee, it amounts to an arbitrary imposition on what might be a practically fixed gross income.....Tax, on the other hand, is based on earned income and varies according to profits. In other words, the basis of tax is the actual earning capacity, whereas the basis of royalty is circumstantial." Thus, if the financial condition of an enterprise worsens, its ability to withstand the new strains decreases when fixed charges such as royalty are inflated. Taxes, which vary according to profits, allow an element of flexibility in the cost structure which royalties do not.

* * * *

There is genuine concern in the mineral trade and industry over the activities of the State Trading Corporation—a concern which is understandable in view of that body's readiness to exploit the advantages of Government ownership in order to intrude into, and then usurp, the functions of the established trade. Referring to ore exports, Mr. Hogg points out that the rational procedure would have been to help co-ordinate the activities of mine-owners and shippers; instead, the Government seems intent on departmental trading. Ore export business has suffered because of the Corporation's intrusion. Although foreign demand for manganese ore is depressed because steel production, especially in the United States, is running at a low level, there is evidence that buyers are seeking other sources of supply because India's export duties are too high and because they are hesitant to trade with a monopolistic State-owned body. Doubts are widespread whether India will be able to recapture the markets she has lost when the demand for manganese ore recovers. Mr. Hogg is justified in pleading that the scope and activities of the State Trading Corporation be carefully re-examined; if it is to continue in existence, it should be made to restrict itself to the purposes for which it was originally created. Its record so far suggests that its success in selling new goods and exploring new markets has been meagre; most of its profits have come from trading in old commodities and with old buyers. The rapacity shown by the Corporation in its handling of the cement trade, to which Mr. D. C. Driver drew attention at the Institute's annual dinner, is an extraordinary reflection on its business practices.

One of the major handicaps of the State Trading Corporation is that its personnel are by training and tradition suited to bureaucratic rather than business procedures. In fact, the handicaps implicit in the lack of business instinct and experience are showing in other State-owned organisations also. The recent achievements of the Life Insurance Corporation in investing its funds have spotlighted some of the dilemmas facing industries in the public sector. Since the Government is planning an ambitious expansion of its activities in the field of mineral exploitation, it would be wise to devote some thought to the question where the managerial and technical expertise is to come from, and under what conditions it can be expected to work efficiently. There is sound reasoning behind the plea that the private sector be associated with the management of State projects concerning mineral development. It would also be wise if there were less rigidity in reserving industries for the public sector, as has been done under the Industrial Policy Resolution. The rapid development of many of these industries, which general economic expansion has necessitated, is too important to be sacrificed to socialist ideology. The limitations of State management, and the Government's shortage of trained personnel, make it important that there be a certain flexibility in policy and that the resources of the private sector be more fully utilised.

a ceiling to-day could be a shower tomorrow !

Don't let a situation like this develop. Act now before the monsoon, and ensure leak-proof roofs by specifying Shalimar Tarfelt. Shalimar Tarfelt is made in India from Indian materials to suit Indian conditions. You can't buy better roof protection.

Over 12,000,000 sq. ft. of Shalimar Waterproofing Tarfelt were supplied in one year to protect the roofs of India.

THE RIGHT FRIENDS FOR AN "OLD LADY"?

ONE OUTCOME OF THE U.K. BANK RATE TRIBUNAL

THE report of the tribunal that investigated whether confidential information had been improperly used before Britain's Bank rate was raised last September vindicated all persons who might have been suspect, so closing the unpleasant aspect of the affair. It did not, however, conclude discussion of the broader subject that had arisen in the course of the enquiry, whether the Bank of England in particular and the City in general are most suitably organised for their functions. The long investigation revealed to many experienced financial men in Britain, as well as abroad, some of the "inner workings" of the City that had not previously been clear. The tribunal itself explicitly refrained from judging whether it was in the national interest that directors of the Bank of England should be engaged in other business activities where their confidential knowledge could be valuable and, therefore, embarrassing. This is one subject that is now in dispute. But some people who have been vaguely uneasy about London's traditions are concerned with much wider problems and are already proposing various important changes, according with their various opinions.

The investigation showed that a few leading financiers associated with both the Bank of England and the merchant banks had a powerful influence in the City and the nation and were continuing to exert that influence as their predecessors had done for generations past. Can it be unquestioningly assumed that these men—steeped in the traditions, and, mainly, using the procedures, of a bygone age—are qualified to understand the profound economic and social changes in the world? The investigation directed public attention to the mysteries of finance, but it did not—nor was it intended to—solve those mysteries. Ordinary people experience, and recognise, the effects of financial policy in their daily lives, and they are naturally suspicious of this mysterious world which seems to them to be outside the range of any democratic control. The Bank of England itself, like most other central banks in the modern world, is nationalised, but it is not a servant of the Treasury, and it can play an active independent part in the nation's affairs. Some people believe that a body not wholly identified with the Government can exercise a necessary restraining influence. Others assert that policy can never be streamlined in action while authority is divided. This is not a particularly British problem: indeed, it has been, in practice, much less apparent in Britain than in some other countries, where there have been open disagreements between central bank and Government. The system works smoothly in Britain because it fits into that long tradition of consultation between the Treasury and the central bank and between the central bank and the commercial banks and other financial institutions.

* * * *

In conventional financial operations this tradition continues as strongly as ever. But "the City" is not a closed institution into which no unconventional operations intrude. There are, indeed, many new institutions in "the City" (using the term in the loose financial sense, with no regard to geographical location), and they are not subject to the code of behaviour that applies to the institutions of long standing. There are also some new practices among old-type institutions on the fringe of the conventions; such as stockbroking firms, which become deeply (and profitably) involved in the financial affairs of small companies. The most significant new development is the emergence of hire-purchase finance companies—not a few but hundreds of them. The total of Britain's hire-purchase debt is not remarkable, but it showed a persistent rising trend last year and increased some £50 million, compared with 1956, to well over £400 million. In Britain hire-purchase on an extensive scale is a phenomenon of only recent years, and it is capable of great expansion. This expansion can proceed even when (as last year) it is against the national interest, because the finance companies are not susceptible to the credit squeeze, as they are not subject to the informal regulations of "the City."

In the earlier phase of development these finance houses received much of their finance from the banks. Bank credit is restricted, and finance from this source is restricted. Proposals for public issues of shares (the larger of these institutions are substantial public companies) would not be well received by the Capital Issues Committee. But there is nothing to prevent the finance houses from appealing directly to the public for deposits. Offering high rates they have, indeed, diverted considerable sums of money from the Government and from the banks, so aggravating the problem of the Government's financing in the one case and releasing money from the operation of the credit squeeze in the other. This is the most obvious example of the inadequacy of the conventional controls, and it is no disparagement of the finance houses to suggest that some more formal regulation should be applied to them while the banks are subject to effective control. Some people feel that it would be better to reorganise the whole machinery of control, rather than introduce new regulations for specific cases. These critics would begin with the Court of the Bank of England, loosening its links with the ordinary commercial world of finance and trade, tightening its links with the Government.

Such matters can be properly considered by the Radcliffe Committee that is now investigating the working of monetary policy, whereas they were clearly outside the scope of the Bank Rate Tribunal. Meanwhile, "the City" itself supports the opinion of the Governor of the Bank, Mr. Cameron Cobbold, as stated to the tribunal, that the Bank must always be directly in contact with the everyday work of the business community, and that the traditional system, whereby various interests are represented in it, is the best means of maintaining such contact. Opinion abroad is even more important, and it is hoped that the recent enquiry has done no permanent damage to London's prestige. But the more general discussion of the functioning of "the City" can do much good if it makes the financial machinery more modern and efficient.

FEATHER-BEDDING HANDLOOMS

THE "handloom week" has become a regular annual event. Perhaps it has to be. Judging from the present state of things, it is difficult to visualise a time when the handloom industry will be able to stand on its own feet. With generous State aid and subsidies and protection against mill cloth, the record of the handloom sector has been disappointing. The first plan target of 1,700 million yards a year could not be reached, and the output rate during the first two years of the second plan has also fallen short of the target of 2,000 million yards a year. The co-operatives have claimed the ability to produce double the second plan target. This they have yet to prove. But even if they do, how will they dispose of a much bigger production when they find it difficult to sell their smaller output now? Too much had been made in the past of the rôle of the middle man when it came to explaining the unusually high price of handloom cloth. Over a large sector of production and trade, he no longer exists. Yet the position is not vastly different. In south India, where co-operatives now handle the entire business, right from the buying of the yarn from spinning mills to the final stage of selling the goods to the consumer, it is reported that sales have for some time been falling steadily. This is difficult to understand when circumstances have been wholly favourable. The depression in the mill cloth trade due to the Government's unwise policy of levying a stiff excise duty should actually have helped handloom producers to increase their sales. But this has not happened, so the only valid conclusion is that the prices are still high for the average consumer in this country, perhaps too high.

* * * *

For the duration of the current "handloom week" the authorities have allowed a further special rebate of 6nP in the rupee, in addition to the existing one. It will be interesting to see how that will help sales, although even if they increase as a result, it can still be said that this higher rebate is nothing but what the consumer will himself be paying as a taxpayer. The situation becomes all the more illogical when it is found that the handloom co-operatives have actually been opposing the installation of power-looms on the usual plea of loss of employment to their weaver members. Why can the Government not persuade the weavers' co-operatives, which have really become a vested interest, to adopt what is obviously vital to their ultimate economic well-being, in fact their very survival? Feather-bedding will work for some time, but it cannot go on for ever. The taxpayer, as such, may not protest because there is little that he can do to save himself from being mulcted, but as consumer he most certainly can, and is doing so already. The other innocent victims of this mistaken social policy, the textile mills, will also be unable to go on paying the penalty for being the more efficient of the two. As it is, the economic position of the industry as a whole is unhappy. Many units have drawn their shutters, and unemployment is increasing. It is ironical that a Government which is doing so much to maintain the handloom weaver's precarious employment is by that very policy helping spread distress among another class of workers

There is little prospect that unemployment in the organised sector will be arrested soon. Textile exports during the past year have fallen below the annual plan target of 1,000 million yards, and Indian textiles have been meeting with increasing competition even in their established markets overseas. But production during the year in the organised sector has increased above 5,000 million yards. In the circumstances, the prospects are that there will be a greater accumulation of stocks. Latest reports show that in spite of the brief period of relief following the reduction in the excise duty on medium varieties of cloth, and the conversion of State sales tax into an additional excise duty, stocks have not fallen appreciably. In fact, they are rising again. How long the Government can go on closing its eyes to the problems of the organised sector, while indulgently patronising what is patently a wasteful and inefficient means of production, without injuring the larger economic interests of the country, remains to be seen.

CURRENT COIN

Cane Price-Quality Link.—Linking the price of cane to its sucrose content has been considered for some time by the Government and the sugar industry. The Central Minister for Agriculture, Mr. A. P. Jain, has just told a meeting of sugar industrialists in Bareilly that although no final decision has been taken, the Government is committed to the proposal in principle. The joint committee of the Development Council for the Sugar Industry as well as the Indian Central Sugarcane Committee are strongly in favour of linking the price of cane to its quality. But no satisfactory solution has yet been devised and many practical difficulties have come to light during the experimental working of a scheme in nine factories situated in different regions. The scheme was tried out between September 1956 and May 1957, and the difficulties are referred to in the interim report of the Director of the National Sugar Institute. Under the proposals devised by the Development Council for the Sugar Industry, growers or groups of growers who supplied cane with a bigger sugar content were to get a premium, while others got proportionately lower prices. The scheme, it was made clear, was not compulsory in the sense that it was open to growers who were not confident of the quality of their cane to pool their cane in the "remainder supply." The actual price was to be determined not on the basis of recovery by the mills but on the sugar content of the cane. Individual testing of the quality of cane for large growers and in groups for small growers was also provided for. Because of the difficulties mentioned by the Director of the National Sugar Institute, cane supplies for testing are henceforth to be obtained on a zonal or village basis. Although Mr. Jain hopes that it will not be difficult to come to definite conclusions before long, it seems clear from the Development Council's proposal to continue the experimental scheme

for another three or four years that speedy solutions are not to be expected. To that extent, the economics of the sugar industry will continue to be affected by the poor quality of cane and its relatively high price.

* * * *

Adjudication of Labour Disputes.—The Governor of U.P., Mr. V. V. Giri, has pleaded for the abolition of compulsory adjudication of labour disputes, while speaking at a symposium organised in New Delhi by the Indian Institute of Personnel Management. He considers that at present, when the Government is thinking seriously in terms of workers' participation in management, it is necessary to have strong unions. "But my feeling is that, so long as there is adjudication and compulsion in the statute book, strong unions will not come into existence." Adjudication is a positive handicap for settling disputes at the level of industry and for maintaining good labour relations. The Central Labour Minister, Mr. Gulzarilal Nanda, has disputed the suggestion and said that the course advised by Mr. Giri will lead to a "state of anarchy." But he has agreed to place the proposal before the next labour conference and see whether it approves of the Government not using these powers for six months or a year. "A Labour Minister cannot take the risk which one who is not a Labour Minister at the moment can take. Other persons have been Labour Ministers but they did not take that risk then." Mr. Nanda says that a strong and united trade union movement has to come into being before the Government can take the risk of abolishing its power to refer disputes to compulsory adjudication. Trade unionism has not yet reached a stage of maturity. It is still in the process of growth. In spite of adjudication, the movement is gaining strength. Until workers' education reaches a point when they can understand their problems, it will be difficult for the State to remain aloof from industrial disputes. Another aspect of compulsory adjudication is that in 99 percent of the cases, the reference to adjudication is made at the instance of workers. If, therefore, the power of the Government is taken away, the workers will say that it is being done to help employers. "I think that a Labour Minister, as long as he wants to keep his job, cannot afford to do that," Mr. Nanda says. Mr. Nanda perhaps over-estimates the need for Labour Ministers to keep their jobs, and in the process betrays some unfortunate misconceptions about their proper obligations to employers and workers. The true function of a Labour Minister, one would have thought, is to avoid open partiality and promote industrial harmony, within the dictates of economic sense and social justice. It is a remarkable commentary on the mental climate in the Labour Ministry that proposals can be rejected merely on the ground that their acceptance might seem to imply helping employers.

Decline in U.S. Production.—The post-Christmas decline in production and trade has been greater than usual this year, says the First National City Bank of New York in its latest monthly letter on U.S. business conditions. The downturn which started last autumn has continued in January, and recent business reports feature rising unemployment, production cuts, slackness in new orders and reduced fourth-quarter profits. On the favourable side, little new has appeared, other than increased defence orders, although a good many lines such as construction and the general merchandise trades are holding well against the recessionary influences. It would not be surprising if business and investment sentiment were poor, but on the whole that does not seem to be the case. Accepting the facts as they are, business men for the most part express no great pessimism. There is little expectation that the recession will turn into severe depression, and little weakening of faith in the resumption of growth in due course. Business news seems unlikely to turn better in the early future, but it would be a mistake to put the whole blame on economic recession. Business is usually in the doldrums between Christmas and the start of the spring season. Unemployment ordinarily increases nearly one-fourth between December and February because of post-holiday lay-offs, inventory taking and other seasonal factors. Retail sales drop somewhat more than one-fourth in the same period. Construction, agriculture and other activities dependent on the weather are at a low ebb. When such seasonal forces combine with the effects of a business adjustment, the resulting trends necessarily over-emphasise the extent of the decline. Even with these qualifications, the drop in some lines has been substantial. Steel mill output for January is down 10 percent from December and is averaging about 56 percent of capacity. Passenger car production in January has run about 8 percent less than in December and 24 percent below a year ago. The Federal Reserve index of industrial production seems due for another cut in January after dropping to 136 in December, 7 percent below the peak a year earlier. Confronted with these signs of recession, the Federal Reserve authorities in January reduced margins on stock market credit, cut the discount rate again, and permitted a moderate seasonal easing in member banks' positions. The Administration acted to stimulate home-building, placed an increased volume of defence orders, and asserted its willingness to "needle" the economy through deficit spending if necessary. Moreover, the budget and legislative programme set forth the official view that the downtrend is likely to end soon and will be followed by a recovery in the second half.

* * * *

Industrial Development in Madras.—At the latest quarterly meeting of the Southern India Chamber of Commerce, it was urged that all power development schemes should be ready by 1960 so that industries could make plans for expansion. But the Madras Minister of Industries, who was present, pointed out that power apart, the lack of mineral resources in the State also stood in the way of industrial progress, and those who had applied for licences to start new industries were no longer eager to proceed. He referred to the failure of local interests to start a steel plant, an aluminium factory, paper mills and rayon pulp plant in Salem, because of the great distance of their raw materials. The Minister, however, conveniently omitted to refer to the magnesite project. The mining lease was transferred from one concern to another, and eventually the matter was dropped because it was thought that the development of minerals should be the exclusive responsibility of the State. In the meantime, the company concerned has decided to put up a refractory plant in Madhya Pradesh, so it is clear that it will not develop the magnesite industry in Salem, as was the original intention of that concern. The view that licences are taken only to lapse and capital remains shy, even though a site like Mettur offers advantages for new industries, ignores the fact that until power from Neyveli supplements hydro-electricity, no assurance of cheap energy is available. Further, the Government's preference for small industry in new trading estates has made organised industry reluctant. However, industrial schemes are being launched by foreign interests. The British collaborators in the steel tube-making venture have made good their promise and the company has been able to find most of the capital needed without a formal share offer. The tyre plant of Dunlops also is backed by foreign capital. The production of sugar in the State has been expanded by established concerns, and efforts to develop the chemical industry have met with some success. The South Indian Millowners Association already has a scheme for a rayon mill to be started with foreign aid. But if capital for large new Indian enterprises has been scarce, the Minister should know that the investor's experience last year was far from encouraging.

* * * *

Progress in Housing.—The demand for houses in India has increased with the rapid growth of population, which rose from 318 million in 1941 to 356 million in 1951. The rise in demand has been felt more acutely in the urban areas to which large slabs of population have migrated in search of employment and trade. This is confirmed by statistics which indicate that while the overall increase in population during the decade was 13.4 percent, the increase in the urban areas alone was 54 percent. Furthermore, about 4.7 million persons from West Pakistan and another 3.4 million from East Pakistan have migrated to India, and their entry has inevitably increased the demand for houses. Most of them preferred to settle down in urban areas. But the problem would not have been so difficult had not the construction of new houses been interrupted by the war, scarcity of materials and high cost. The latter two problems continued even in the post-war period, since priority was given to Government constructions. In an article entitled "Housing in India" in the *Indian Economic Journal*, Mr. V. T. Mathews says: "The high construction costs coupled with the Government policy of fixing maximum rents and requisitioning vacant buildings took away much of the incentive from private builders. Improvements and even the routine repairs were held up, thus reducing the available supply of houses." The deficiency in the supply during the decade preceding 1951 has been estimated by the Central Ministry of Works, Housing and Supply at 2.5 million houses for urban areas and 6.5 million for rural areas. The official attempts to increase the supply in the urban areas and the expenditure incurred thereon fall under three broad categories, namely, housing for industrial workers, housing for low-income groups and slum clearance. Among the various schemes for the urban areas, top priority has been assigned to industrial housing. This is because during the last 15 years the number of factories increased from 10,466 to 30,184 and the number of workers from 1.75 million to 2.44 million. Following the resolution on industrial truce adopted in December 1947 and the Industrial Policy Statement of April 1948, the Government announced its decision to construct one million houses in ten years, the cost of which was to be shared between the Central and State Governments, municipalities and employers. This was opposed by the State Governments. The Central Government introduced another scheme in 1949 by which interest-free loans were granted to State Governments and employers to the extent of two-thirds of the total cost of construction provided the rents charged to workers did not exceed 10 percent of their wages. This scheme was later modified on the lines suggested by the Planning Commission. The modified programme, which was introduced in September 1952, provided for the granting of subsidies to State Governments, employers and housing co-operatives for the construction of single-roomed tenements at a maximum cost of Rs. 4,500 in Bombay and Calcutta and Rs. 2,700 in other towns. As for housing for low-income groups, the Government introduced a scheme in 1954 for families with incomes below Rs. 6,000 a year. Long-term loans were granted to individuals and co-operative societies and State

Governments at 5 percent or 5½ percent rates of interest. The total allocation made since the introduction of the scheme amounts to Rs. 20.5 crores for 40,000 houses. The progress in slum clearance, on the other hand, has been insignificant during the first plan, although the second plan has made a provision of Rs. 20 crores to assist State Governments.

* * * *

Expanding Madras Port.—The visit paid by Mr. Knapp of the World Bank to Madras has raised expectations of a dollar loan for improving the port there. It is hoped that the money needed for buying machinery abroad will be given. The chairman of the Port Trust, along with the chief engineer, is to visit the United States. It is proposed to secure additional equipment for handling ore and coal, and to build 17 more berths, including a dry dock and a wet dock. The Port Trust's last annual report showed that Rs. 3 crores, held as reserves, could be used, and the Centre is likely to lend Rs. 3.6 crores. For the extension scheme, about Rs. 5.5 crores will have to be obtained from abroad. The figures suggest that the increase in debt will raise the annual provision for debt servicing and compel the Port Trust to retain its surcharges. Shipping companies will thus have to bear part of the cost of financing improvements to the port. From the development programme, it is evident that the harbour area will be enlarged, so increases in police and medical charges seem likely. Although no assurance about freedom from labour trouble has been secured, some think that the World Bank representatives might discuss the point before a loan is given to either Calcutta or Madras.

* * * *

Scope for Electricity Boards.—It seems rather late in the day for uncertainty to prevail about the powers or the utility of electricity boards. But, curiously enough, this appears to be the case in Uttar Pradesh, where the Electricity Board is scheduled to come into existence on 1st April. The Central Act which was passed nearly ten years ago proposed setting up electricity boards in every State. These boards were to promote the co-ordinated development of the generation, supply and distribution of electricity in the most efficient manner, with particular reference to development in areas not for the time being served or not adequately served by a licensee. It was also understood that electricity undertakings in the States would be transferred to the boards when they were set up. The departmental experts of the U.P. Government, however, are said to be taking a different view of the matter. They claim that it is entirely within the power of the State Government whether or not it transfers any particular electricity undertaking to the Board. According to present indications, the department is inclined to transfer only thermal and diesel plant to the Board, while retaining for itself the hydro-electric stations and the Rihand Dam (for which a separate board has been set up). But if only thermal and diesel stations are to be transferred to the Board, the latter will find itself badly handicapped from the very start. In the first place, thermal and diesel stations are interlinked in the grid system and it is difficult to separate them for administrative purposes. Secondly, they are not as economic as hydro-electric stations; this might eventually affect the overall economy and further expansion of the Board.

* * * *

Raw Materials for Pipes.—The major problem before the pipe industry is to utilise its production capacity more fully. During the war, small-scale units were producing 10,000 tons a year, but since then hardly 10 percent of the capacity has been used due to the shortage of raw materials. This is evident from the fact that, as against a capacity of 20,000 tons, production has never exceeded 1,500 tons. Speaking at the annual general meeting of the Indian Pipe Manufacturers Association, Mr. L. C. Raisurana, president, said that a considerable quantity of pipes has to be imported to meet domestic requirements. Imports during 1955 and 1956 amounted to 91,000 tons and 60,800 tons, respectively. The decline in imports in the latter year is attributed to the increase in indigenous production. With the big units working multiple shifts, imports could be reduced to a considerable extent. "During the second plan period, an additional area of 21 million acres is proposed to be brought under irrigation, besides installing a number of tube-wells. That would further increase the demand for pipes. The small-scale sector of the industry, given sufficient encouragement, will be in a position to contribute to an appreciable extent towards meeting the present demand and any increase in the future and in displacing imports, thereby saving valuable foreign exchange for the country." The utilisation of production capacity by small-scale units depends entirely on the availability of raw materials. To conserve foreign exchange, the Government has taken steps to mobilise all sources of supply of steel and bring them under stricter control. The *ad hoc* allotments which small-scale units were obtaining from T.C.A. stocks have been entirely stopped. The other source of supply for the industry was Tatas, who have been supplying certain quantities of steel strips which could not be used by large units. But recently the Government of West Bengal has taken over their distribution. "I would strongly urge that the State Government should come forward and help the small units by distributing the entire quantity of these steel strips of Tatas to them. Such a step will not affect any other industry as the State Government will be distributing these strips for the first time and, further, this material will pre-eminently suit the small-scale units for the manufacture of pipes." Referring to the production of G.I. and black pipes, Mr. Raisurana says that in spite of many representations, the Government has done little to improve the supply of raw materials.

* * * *

Industry in Pakistan.—The presidential address at the latest annual general meeting of the Associated Chambers of Commerce of Pakistan provides a critical review of the economic problems which Pakistan has faced during the past year, and the measures which the Government has taken to solve them. Inflation has been the chief worry, and in spite of the steps taken to curb it, such as selective control of bank credit, prices remain high. Incidentally, the president points out that the Ministry of Economic Affairs' estimates of Pakistan's national product for 1956-57, which show a rise over those of the previous year, are to be ascribed to price increases rather than to higher production. There has been a serious shortage of food because of a fall in farm output, and industrial production has been lower than the rated capacities would warrant due to an inadequate supply of raw materials and, in some cases, the lack of up-to-date machinery. The foreign currency shortage was responsible for the latter bottlenecks and in spite of the generous U.S. offer of $10 million specifically for industrial machinery imports, Pakistan is still short of foreign exchange. The president refers to the first five year plan, which proposes an overall expenditure target of Rs. 1,800 crores, and suggests that agriculture, which is the mainstay of the economy, has not been given the importance it deserves. "It is to agriculture that we must look for an immediate augmentation of our resources, and I would here make a plea for a revision in our basic attitude towards agriculture," he declares. Large-scale cultivation through public or private limited liability companies, especially in the lands which will be available for farming after the new barrages have been completed, is one way of stepping up production. The increased cultivation of cash crops is also a great necessity. The output of cotton needs to be raised to 2.5 million bales from the present 1.6 million bales, most of the additional production being in the longer staple varieties required to weave finer counts of yarn. The target for raw jute production, as the recent International Jute Conference has unanimously recommended, should be fixed at 7 million bales. Mineral output will also have to be raised, and at present mineral oils and natural gas offer the best prospects for "contributing a substantial increase to the national product". Oil is yet to be tapped in commercial quantities, but gas output has steadily expanded. So has the consumption of the latter, to 31 million cubic feet from 25 million cubic feet a day; almost all heavy industries in the Karachi, Hyderabad and Sukkur areas are now using it. The gas find in Sylhet in East Pakistan is most promising and will be of immense help to the economy since it suffers from a shortage of fuel. Referring to the problems of industrial production, the president explains that as long as raw materials and facilities for importing plant and machinery are not adequately available it will be impossible to raise output. Rising costs present a serious problem, and most units in the jute industry are likely to show a loss.

* * * *

Calcutta Management Association.—The Calcutta Management Association was formally established a few days ago, Sir Jehangir Ghandy being elected its first president. Broadly, its function is to promote the development of sound management practices in the area. It will provide facilities for the exchange of information and opinions on management practices; co-operate and collaborate with educational, research and other institutions having similar objectives; establish and maintain an up-to-date management library; and promote studies calculated to develop and improve management practices. The West Bengal Chief Minister, Dr. B. C. Roy, has expressed the hope that the Association will be able to give a good lead to the management movement in the country. It may be recalled that the All India Council for Technical Education, at a meeting held on 23rd November, 1953, appointed a Planning Committee with the Central Commerce Minister as chairman for the setting up of a National Institute of Management. The main recommendation of the Committee was that the Indian Management Association should be brought into existence with regional branches in important industrial and commercial centres like Calcutta, Bombay, Bangalore, Madras and Kanpur. The members of the committee of the Association are: Messrs D. N. Bhattacharyya, S. L. Dass, B. F. Goodchild, E. S. Greenwood, M. L. Khaitan, H. K. S. Lindsay, G. B. Madden, J. N. Mookerjee, Sukumar Roy, K. K. Roy, Lakshmipat Singhania, K. J. Cleetus, S. B Dutt and D. K. Sanyal. The headquarters of the Association is at the All India Institute of Social Welfare and Business Management, College Square West, Calcutta 7.

A SHARE TRANSFER CASE

CAWNPORE has been attracting a little attention of late in respect to company law, and the courts there have had one or two curious cases before them. We now learn that a case has been brought against one of the companies there, under Section 68 of the Companies Act, to ask the court for an order that the company may be compelled to register a gentleman as a shareholder. It appears from the proceedings which have reached us that in April last a shareholder in the company transferred three shares to a gentleman who was not a shareholder, and upon the latter presenting the transfer for registration the company declined to register his name as a shareholder. Upon the would-be shareholder pressing to know the grounds for their refusal, it was stated that it was not considered in the interests of the company to admit him to the benefits of partnership; and in a subsequent letter the seller of the shares was told that the reasons why the directors declined to register the transfer was that the transferee was in their opinion likely to prove ill-disposed towards management, and was of a litigious and cantankerous disposition. If this really be so, we must confess to a feeling of sympathy with the directors of the company. The admission of a small shareholder of such a disposition is certainly not a desirable thing, and it has been held in the case of Regina *vs* the Liverpool-Manchester Railway (21 L.J.Q.B. 284) that a mandamus will not be granted in favour of a person who seeks to become a registered shareholder for the purpose of being troublesome. The question whether the company have the power to decline to register the would-be shareholder will depend upon the Articles of Association. If the articles do not restrict the right, we much fear that the company will not be successful.

ACTION FOR DAMAGES IN TORT

CASE CONCERNING PROFESSIONAL NEGLIGENCE

(FROM OUR LEGAL CORRESPONDENT)

RECENTLY, at a social gathering consisting mainly of lawyers, the question arose as to what type of action for damages in tort is the most difficult to win from the plaintiff's point of view. One of the small company suggested a suit for damages for malicious prosecution; and the idea was substantially supported. Such a claim is indeed full of legal snags and pitfalls; but not so full, in the writer's respectful submission, as a suit for damages against a medical man or the hospital which employs him for the doctor's professional negligence.

To begin with, the freemasonry in the profession is such that the injured plaintiff will find it almost impossible to find a single specialist witness willing to give evidence against his colleague, howsoever negligent the latter may have been and however dire the consequences. Moreover, even if the willing witness is found, he will be nervous and hedging when he contemplates in court the solid phalanx of eminent specialists, all ready and willing to go into the witness box after him to testify that the treatment or operation was correct and properly conducted by the defendant physician or surgeon and that he exercised ordinary reasonable skill. Nor will it be anything like enough, unless the practitioner is a specialist in the particular complaint which he treated or for which he operated, for the plaintiff to prove that the physician or surgeon erred. An ordinary general practitioner is entitled to make mistakes. What the plaintiff has to prove is that the damage to him was caused by the physician or surgeon doing something which an ordinarily competent practitioner, liable to human error, would not have done, or not doing something which the like average practitioner would have done. And that necessity loads the dice pretty heavily against the suing ex-patient.

If the practitioner is a specialist in the particular complaint, a higher degree of skill is, of course, required. But if in relation to his alleged negligent treatment he is able to show that, although the bulk of medical opinion is that his treatment was wrong, a respectable minority opinion is that it was right, a suit for damages against him for negligent treatment would be unlikely to succeed. If you are from the west of England, you may remember the name of Dr. W. R. Hadwen, and your parents may have known the aggressive gentleman himself. He was the leading physician in Gloucester and was called in from all over the county. He was also a bitter opponent of vaccination and organised nation-wide protests against its being made compulsory. Dr. Hadwen was said to be proved wrong. An epidemic of smallpox broke out in the city of Gloucester; after outbreak, statistics were taken from which it was established that people who had been vaccinated either escaped the disease altogether or contracted it in a far milder and less severe form than those who had listened to the doctor and had declined vaccination. In later years, the doctor (who to this day has thousands of adherents to his views, particularly in the west country, who rather than submit to the now statutory obligation to be vaccinated take the trouble to go before magistrates and, on oath, secure exemption from it) was the defendant in a civil suit for damages for negligence in not vaccinating a child patient during an outbreak of smallpox who later contracted the disease and suffered disfigurement therefrom.

The suit failed; and that brings us to the main purpose of this note on alleged negligence by doctors. It failed because, although the great majority of medical and public opinion believed in the efficacy and necessity of vaccination, a substantial minority not only did not do so, but held that diseases like syphilis, tubercle in its various forms, eczema and even leprosy may be conveyed by it. This startling belief is held to this day by a small but competent minority, and the writer, who has taken the trouble to consult the *Encyclopaedia Britannica* on the possibility of its being true, was surprised to find that the belief is by no means rejected out of hand as being without any foundation. On the other hand, we are told: "A few authenticated cases have been recorded in which there was reason to believe that syphilis was conveyed 'by vaccination and the other complications just mentioned are referred to as listed' though without any sufficient proof."

* * * *

All the foregoing observations are introductory to the latest English decision on the subject of professional negligence and are intended to emphasise what the writer believes to be a fact, in actual practice if not in law, that a plaintiff, whether he is suing his solicitor for giving him wrong advice, a chartered accountant for certifying as correct a false balance-sheet, his physician or surgeon for faulty treatment or any other professional man for damages for negligence, will have precious little hope of success unless he can prove that the general body of opinion in the profession concerned is virtually unanimous that the solicitor, accountant or doctor (being in every case an ordinary general practitioner and not a specialist) was not merely mistaken and wrong but negligent and inefficient in doing what he did or not doing what he omitted to do.

I: the solicitor can produce two or three unimpeachable members of his profession to say: "X may have been mistaken but I would have given the same advice having regard to all the facts and circumstances of that particular case"; the chartered accountant a number of leading colleagues to say: "Though I would have worded my certificate differently I would have certified that balance-sheet"; and the surgeon a couple of Fellows of the Royal Society of Surgeons to say: "I would not perhaps have done the operation myself but Sir Robert Sawyer, Bart, F.R.C.S., and others have frequently advised it", the plaintiff will be well and truly sunk. And there will be no scarcity of such eminent witnesses, professional *esprit de corps* being a fine thing. "We must hang together or we shall hang separately," is the theory behind it.

* * *

The facts in the English case were these. The plaintiff, a voluntary patient in a mental hospital, had suffered grave injury by fractures of the pelvis while undergoing electro-convulsive therapy. Let us make it clear at once that the foregoing remarks about professional negligence and about professional expert witnesses are not intended to be applicable in any way to the alleged negligence in this case nor to the professional gentlemen who gave evidence in it. The plaintiff brought a suit for damages against the hospital for his fractured pelvis alleging negligence on three grounds: (1) failure to administer to him relaxant drugs prior to the electro-convulsive treatment, the shock attendant upon which may produce a violent physical reaction; (2) failure to provide some form of manual control while the ordeal was being undergone; and (3) failure to warn him of the risks involved. There was a conflict of medical evidence as to the best technique for use in the treatment, but all the witnesses agreed that there was a substantial body of medical opinion against the use of relaxants as a routine, and that one school of medical thought was against the use of manual control as increasing the risk of fracture. The specialists called by the defendant hospital did not give warnings of the risks of the treatment, unless the patient asked questions about it, since they considered the risks to be minimal and the patients were persons who were mentally sick.

You may be, without having any pretension of being an "expert", a bit dubious about this line of reasoning. The writer once had a friend and client who was in an asylum suffering from persecution mania, and another acquaintance, similarly confined, who like poor William Cowper, lived and died under the depressive mania delusion that he was eternally damned. Both were "persons who were mentally sick". But each one of them, if warned of the risks of the treatment, was as capable as you and the writer of deciding for himself whether to adopt the minority "school of medical thought" and elect to have relaxant drugs or manual control during the treatment and, indeed, whether to submit to electro-convulsive therapy at all. Moreover, the wife or guardian of the patient could have been consulted.

In the English case, McNair J. directed the jury: (1) that a doctor who followed a practice accepted, at the time, as proper by a responsible body of medical opinion would not be negligent merely because other competent professional men took a different view; and (2) as for the failure to give warning of the risk of fracture, that they should consider whether the defendants had fallen below a proper standard of professional opinion on this question, and whether, if a warning had been given, the plaintiff would have refused to undergo the treatment, the onus being on the plaintiff to show that he would have refused. The jury found for the defendant hospital.

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA 5-58-18

ONE important outcome of the Chagla enquiry—although not I imagine the most sensational—is likely to be a thorough review of the problem of running nationalised financial institutions. Mr. Chagla has already said enough about "square pegs" to make it fairly clear what his views are about placing complete control in the hands of men whose experience, although extensive, has generally been in other fields. The same kind of questions are being asked in the U.K., I see, as a sequel to the report of the Bank Rate Tribunal. But the difference there is that it is the other side of the problem which is being stressed—that of having outsiders too closely associated with, in this case, the running of the Bank of England. The dilemma in which part-time directors—chosen for their wide knowledge of financial and economic affairs—can be placed by their divided loyalties was brought out during the investigation. Many must have felt surprise when all were exonerated so completely; the temptation to reveal what they knew to safeguard, if not to further, their own interests must have been strong indeed when there was obviously so much to lose. The British Government appears to have decided that such restraint is more than can reasonably be expected of normal human beings because, I see, the problem has been referred to the Radcliffe Committee, which is at present examining the working of the monetary and credit system in the U.K. It would be a pity if it were decided to dispense with outside representation altogether. The nationalised Bank of England has worked remarkably well with the City of London, and this is certainly due, among other things, to the fact that it has been in close touch with the City's problems through its part-time directors. I suspect that some of the mistakes made here over the Mundhra deal are directly due to the absence of outside opinion on the wisdom of making such purchases in the first place. Where it was available, of course, it was sidetracked, which is one of the reasons the enquiry became necessary. It is my guess that the management of India's national-owned financial institutions will have to be more broad-based in future, whereas I shall be surprised if the Radcliffe Committee recommends radical changes in the constitution of the Bank of England's board. The ideal probably lies somewhere between the two extremes with, I suspect, a strong bias towards the British method.

* * * *

These days, I believe, there are more fatal casualties in rail accidents than there are in air crashes. The trouble is that the latter usually hit the world's headlines, whereas the former do not. It is also a fact that flying is still relatively novel for most people and has not yet been completely accepted as a safe mode of travel by the cautious minded. What is more, it looks unsafe. An airlines' man once told me that spectacular crashes, such as those involving the ill-fated *Comets*, could put civil aviation back quite a few years and had noticeable repercussions on the earnings of air companies throughout the world. I was reminded of what he said last week when I read about the accident which virtually wiped out Britain's best football team, Manchester United, and a fair section of the sporting Press along with it. The loss of twenty or so lives in any air crash is enough to catch the public imagination, at least momentarily. But when this number includes some of the most popular and publicised young men in Great Britain, the impact is likely to be severe enough to affect many people's attitude towards air travel for a considerable time to come. There is now talk of re-imposing the Football Association's ban on teams travelling by air. If this were all that were to happen it would, within the space of a few years, cost airlines considerably more than the half-million pounds at which the Manchester United team are supposed to have been valued, plus the cost of the aircraft, plus much else besides. But as it is, the adverse publicity—in which all airlines will share—is going to cost them a very large sum indeed, and no amount of protesting that air travel is the safest of all is likely to help. That is a pity because there is no comparison these days between the care the air companies take to see to the comfort and safety of their passengers and that taken by the railways; and I for one like occasionally to see effort rewarded.

* * * *

I do not know that I would ever care to describe myself as a disciple of this or that master—as much for my self-esteem as for the avoidance of embarrassment to the great man or men concerned. It is impossible to know the Mahatma's possible reaction to Dr. Ho Chi-Minh's claim that he is no more and no less than a disciple of the apostle of non-violence, the Doctor's adherence to which doctrine has hitherto been among the many unknown things about the Vietnamese leader. And Mr. Nehru is unlikely to satisfy our curiosity as to just how he felt when reading Mr. Haridas Mundhra's statement in Bombay that he had modelled himself on the life of the Prime Minister. There is the possibility that both really tried to emulate their respective ideals but only failed to make the grade. Few are the ambitions fulfilled a hundred percent, but the proportion achieved in the two aforementioned instances might suggest to some that the effort put in may have been incommensurate with, if not unrelated to, the declared intention. Dr. Ho was probably being diplomatically polite in saying what he said, and a little hypocrisy is permissible in diplomacy. As for Mr. Mundhra, I shall say nothing. I would rather go back to the question of embarrassment which, it will be conceded, the parties concerned did nothing to deserve. Masters are often judged by their disciples, which will not worry the Mahatma or Mr. Nehru, if only because both are too well known to be misjudged through misguided claims of discipleship by one person or another. It may, however, sometimes be necessary to dissociate oneself from pretenders, on which I have a story I will relate in a moment. Before that another. A dramatic critic is said to have reviewed a Shakespearian play in some such terms: It should now be possible to establish who wrote the play, Shakespeare or Bacon; whoever turned in his grave last night is the author. In the other story, one of the Housman brothers was once credited with the work of the other, on which the former said words to this effect: I would rather that my writings are credited to you than that I should be praised (or otherwise) for your efforts.

* * * *

As one who is down to his last imported razor blade, I must confess myself disappointed with what Mr. Morarji Desai said about these essential implements of personal hygiene when he addressed the Import Advisory Council in New Delhi last weekend. He is reported to have cut short a reference to the hardship caused by the disappearance of imported blades with the claim that the Indian variety is not only good, but also inexpensive. I would not like to join issue with him on the first point; I consider myself fortunate recently to have had the opportunity of replenishing my supply of foreign blades and up to now I have not needed to trust my chin to the home-produced ones. As to their price, that I would say is a function of their efficiency for the job and I regret to admit that with most products of this kind, I have always found the imported article cheap at treble the cost. But surely Mr. Desai has missed the point. I seem to recall that Mr. W. H. S. Michelmore, the President of Assocham, made a humorous reference to this subject in his address to the annual general meeting of that body last December. There, he quoted Government statistics to show that the present production of blades in this country is "hardly more than one blade per head of the population per annum". Leaving out women, children and Sikhs, that still left only three or four blades a year each. The key to the razor blade problem is, therefore, quantity as well as quality and price. Mr. Michelmore said he hoped indigenous producers would bend "their efforts earnestly to making a blade that will last for four months". I doubt myself if they have been able to do this. But if they have, and if this is what Mr. Desai meant when he referred to how good Indian razor blades now are, then the case for imports is even stronger. I say this because no other country has yet perfected such a blade and it would certainly sell at a high price abroad. And recommendation number thirty-one of the Export Promotion Committee's report distinctly says that "against exports of better-priced Indian commodities for which there is a good demand abroad, imports of cheaper substitutes may be made".

SWISS INDUSTRIES FAIR, BASLE

12th—22nd April, 1958

The Swiss Industries Fair which is held in Basle every year, attracts visitors from all over the world. This year, 2,300 exhibitors will present a comprehensive and most varied display of industrial and consumer goods covering electric clocks, leather goods, ceramics, photographic equipment, building machinery, air-conditioning plant, wood-working machinery etc., etc. To those who would like to combine business with pleasure, Switzerland offers countless attractions. Let KLM speed you there in top-comfort.

THE LAW ON ENDORSING BANK CHEQUES

SOME AMBIGUITIES OF NEW BRITISH ACT

By R. M. Mitra

THE Cheques Act, 1957, of the U.K., which is an important development in the long history of bank money, came into force in that country on 7th October, 1957. It is reported that the authorities in India are examining the desirability of enacting a similar law here. Easy negotiability and safety of bank money will help the expansion of banking and the process of monetary control considerably. The question of free negotiability acquires particular importance in a country where prospective bank customers are mostly illiterate and business transactions are largely conducted through the unsophisticated method of unwritten contracts.

Bank money would be fully negotiable if the "value" represented by a cheque could be transferred by mere delivery on the same basis and to the same extent, as the title to legal tender currency passes by delivery. Although cheques are technically regarded as a class of negotiable instrument, their negotiability is, in fact, severely restricted by a body of rituals, partly enjoined by the law and partly enforced by judicial decisions. The law relating to these so-called negotiable instruments has evolved in the process of the growth of commercial usage. But usages are often born of almost superstitious faith in the habitual performance of certain practices which may have outlived their original purpose.

Legal Status

Although cheques were an innovation designed to meet the gap created by the withdrawal of the banker's right to issue notes, their legal status is that of an account-holder's mandate to the banker to make a specified payment to a specified person or to the bearer of the mandate. Except when a cheque is made payable to the "bearer", the mandate entails dual obligations. If payment is made to a person falsely representing himself as the specified person or falsely claiming the title for it, the banker will have to reimburse the payment. On the other hand, in case the banker happens to refuse to make payment to a person having valid and lawful claim to the cheque, the banker will be liable to damages provided the drawer has sufficient funds in his account. The use of "order" cheques had assumed sufficient proportions as far back as 1853, to render it impossible for the banker to verify the title of the person claiming the payment of a cheque.

The bankers who found themselves on the horns of a dilemma sought protection against liability arising from payment against unauthorised or forged endorsements. Section 19 of the Stamp Act, 1853, provided a measure of protection to the bankers. The relative provision was reproduced in Section 60 of the Bills of Exchange Act of 1882 (U.K.) and adapted in section 85 of the Negotiable Instruments Act, 1881 (India). The British law provides that when a banker cashes a cheque "in good faith and in the ordinary course of business, it is not incumbent on the banker to show that the endorsement of the payee or any subsequent endorsement was made by or under the authority of the person whose endorsement it purports to be", and the banker is deemed to "have made the payment in due course, although such endorsement has been forged or made without authority". The Indian law says: "Where a cheque payable to order purports to be endorsed by or on behalf of the payee, the drawee is discharged by payment in due course".

Cockburn, C. J. in *Charles* v *Blackwell*, (1877) 2 C.P.D. 151, observed that the purpose of Section 19 of the Stamp Act, 1853, was "to make the banker free of all responsibility in respect of either the genuineness or the validity of the endorsement purporting to be that of the payee on the one hand or his authorised agent on the other, for, to hold otherwise would be a most serious hindrance to the despatch so essential in banking business, and would create serious impediment to the negotiability of cheques drawn to order on a bank".

Inadequacy of Measures

The importance of the negotiability of cheques and the quick and smooth operation of banking business, was thus recognised more than a hundred years ago. But, the measures taken to serve the purpose appear to have been inadequate. The drawee-banker is protected against the consequences of payment to a person without rightful claim, only if he acts in good faith and without negligence, makes payment in due course and if the cheque paid purports to be duly endorsed. (The condition relating to "negligence" did not apply in England.)

Section 10 of the Negotiable Instruments Act stipulates that "payment in due course" means payment "in accordance with the apparent tenor of the instrument in good faith and without negligence to any person in possession thereof under circumstances which do not afford a reasonable ground for believing that he is not entitled to receive payment of the amount therein mentioned". According to Section 59(1) of the Bills of Exchange Act, on the other hand, "payment in due course" means "payment made at or after the maturity of the bill to the holder thereof in good faith and without notice that his title to the bill is defective". Section 90 of the English Act further says that "a thing is deemed to be done in good faith within the meaning of this Act, where it is in fact done honestly, whether it is done negligently or not".

It will appear, therefore, that the Indian law requires the paying banker not only to act in good faith but also (unlike the English law) to act without negligence. Judicial decisions on questions relating to negligence, have tended to fix on the paying banker the duty of making suitable enquiries about the title of the holder whenever there is any unusual circumstance concerning the manner of presentation, or the status of the holder, or his relationship with the drawer and/or the payee, or otherwise. Many complex decisions have also been made as to what constitutes suitable enquiry. It should be evident that the alertness and thoroughness which these legal provisions require of the paying banker, may be "a serious hindrance to the despatch", which Cockburn C. J. held is essential in banking business.

Obligations of Banks

These restrictive conditions were obviously introduced in order to protect the interest of other parties to the cheque, *viz*, the drawer, the payee and the endorser. It is possible to raise the question whether in order to achieve negotiability for cheques comparable with that of legal tender notes, the obligation of the paying banker to make enquiry as to the title of the holder of a cheque, or to regard any circumstances as sufficient to cause suspicion about his title, should not be placed on a par with that of the Issue Department of the Reserve Bank in relation to legal tender notes. It is not the purpose of the present discussion, however, to deal with this aspect of the question of negotiability. But even if it is conceded that the paying banker should exercise proper care and vigilance to see that an innocent party to a cheque does not suffer as a result of payment being made to a person without just or valid title, the question remains whether the conditions imposed by the above law are well calculated to prevent wrong to rightful and innocent parties.

The provisions relating to endorsement cause complete bewilderment. The formalities of endorsement evolving out of judicial decisions and based on Section 85 of the Negotiable Instruments Act and Section 60 of the Bills of Exchange Act, do not make for the protection of interest of any party to a cheque. All that is required is to conform to judicially approved forms of endorsement in order to comply with the legal requirement that the cheque "purports to be endorsed by or on behalf of the payee". A person coming into the possession of a cheque and desiring to deal with it fraudulently, requires only to familiarise himself with the "regular" form of endorsement. The paying banker maintains an elaborate department for careful examination of endorsements on cheques, in order that he may not be deprived of the protection against mistaken payment. But the entire operation is a mechanical performance (perhaps, regarded as a price for the protection) but bringing no positive benefit to any party to a cheque.

In this connection, the debate held in the House of Lords on the Cheques Act, 1957, affords an interesting and illuminating study. It was argued by Lord Clorley that a criminal who may have happened to have stolen a cheque would be deterred from encashing it, if he is required to forge a signature by way of endorsement; and so, the requirement of endorsement serves a useful purpose. But Viscount Hailsham countered this argument by retorting that a person who has "committed larceny by stealing the cheque", will hardly be "appalled at the thought of writing somebody else's name on the back of the cheque and thereby committing forgery. My own view is that having swallowed the camel, he (the criminal) would hardly be inclined to strain at the gnat", the Viscount added. It may, of course, be contended that even if the thought of forgery may not act as a deterrent to the criminal, the requirement of endorsement will enable a criminal to be traced through the writing on the cheque. This purpose will be served even if only the cheques presented over the counter require endorsement, but the process of verification should be more intelligible, and not necessarily according to some rigid rules. Because of these rules an unnecessary amount of care and attention becomes obligatory on the paying banker while the uninitiated holder is all too often perplexed.

Changes in the British Law

The British Cheques Act of 1957 represents a bold departure from the traditional practice. The Act goes much further than the objective set by Mr. Graham Page when he was carrying on a lone fight for an amendment of the law relating to endorsements, and beyond the recommendations of the Mocatta Committee, appointed in 1955, to consider and report on the relevant law. The Committee recommended that the banker need not concern himself with the existence of, or regularity of, any endorsement on a cheque paid into the payee's account. But this concession was not recommended to be extended to third-party cheques or to cheques paid over the counter. But the Cheques Act, as finally passed, makes the concession applicable in all cases, irrespective of negotiation by the payee, or of presentation over the counter. A note of caution may be usefully entered here. Lord Balfour of Burleigh has expressed the view that it is unlikely "that the banks will pay 'order' cheques over the counter without getting an endorsement". He considers that the bankers "would be foolish if they did so". It seems that following this expression of opinion, the belief has gained ground that the Cheques Act itself requires that the paying banker should be satisfied about correct endorsement in the case of cheques not paid into the payee's account.

Lesson for India

An amendment of the Indian law, if and when that is done, should not be a mere reproduction of this British legislation, and legislators' intention concerning endorsements on cheques presented over the counter should be made clear beyond possibilities of ambiguous construction.

The question of endorsement also requires to be examined from the point of view of the collecting banker. Section 131 of the Indian Act and Section 82 of the British Act state that a banker collecting a crossed cheque will not be accountable to any person even if the title of the party on whose behalf the cheque is collected has no rightful claim, provided that the banker acts in good faith and without negligence. It has been judicially held that the failure to observe the regularity of endorsement amounts to "negligence" on the part of the collecting banker. The Cheques Act of the U.K. provides that the protection of the collecting banker will be available in the matter of both crossed and uncrossed cheques. Section 4(3) of this new Act also says that a banker will not be regarded as having acted negligently "by reason only of his failure to concern himself with the absence of, or irregularity in, endorsement" of a cheque. But, according to Viscount Hailsham, the Government has been advised that it would not be safe for a collecting banker to overlook endorsements on a cheque collected for a party other than the payee. It is necessary here, also, that the proposed Indian law should be both comprehensive and lucid about third-party cheques collected by a banker. Another question relating to endorsement, it seems, has been overlooked in the Cheques Act. Cheques crossed "account payee" have no statutory recognition in either India or the U.K. But usage and judicial decisions have imposed on the collecting banker the duty of satisfying himself that such cheques are collected on behalf of the payee; consequently, the failure of a collecting banker to do this amounts to "negligence" within the meaning of the Section 131 of the Indian Act and Section 82 of the British law. It seems appropriate that when the position of endorsement is being regularised, "account payee" cheques should be declared to have no effect; and that if the drawer of a cheque desires to restrict the negotiation of the cheque, he may make it expressly payable to the payee "only".

Need for Simplification

While the technicalities of endorsement impose a purposeless burden on the banker, they unnecessarily confuse people who receive or make payments in cheques. A holder of a cheque often experiences delay and difficulty in encashing a cheque because of his failure to comprehend the niceties of formal and rigid rules governing endorsement; and yet, these rules make little contribution to the protection of his interests. In the present state of literacy in India, a simplification of the law of endorsement becomes, therefore, of great importance as part of a move to promote the expansion of banking. Official thought in the financial and technical spheres in India, is apt to be provoked more by developments abroad than by the needs felt or expressed at home. The necessity for rationalising the law of endorsement was pointed out in the columns of this journal once in 1954 and again in 1956. Those discussions evoked little response from the authorities. But the Cheques Act of the U.K has been promptly followed by energetic enquiries by them. It remains to be seen when and how the larger question of ensuring the safety of bank money, also discussed in this journal on more than one occasion, will be tackled by the authorities.

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for supply of the following materials:—

Tender No CON/GM/3/F2/440/58 for supply of (a) 8 Nos. lifting barrier for level crossing interlocked for 18 ft. gate as per Drg. No. CSO/C 1433A-36B; (b) 2 Nos. lifting barrier for level crossing non-interlocked for 18 ft. gate as per Drg. No. CSO/C 1433A-36B.

Tenders will be opened at 12 noon on 12.3.58. Tender forms (not transferable) are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 at Rs. 5/- (not refundable) per set of form.

Firms not on the Railway's approved list of contractors must obtain a Cash Receipt for earnest money of Rs. 1,000/- from the Railway's Chief Cashier and enclose a valid Income Tax Clearance Certificate without which the tender is liable to be rejected.

GENERAL MANAGER

Money

THE CALCUTTA MONEY MARKET

ADVANCES RISE SLOWLY

Wednesday, 12th February.

LENDING continued to increase during the past week, although the rate of expansion appears to be rather lower than in past years. Outstandings on account of cotton are up, and the demand for accommodation from the sugar mills has improved. Advances to the jute industry are about the same and those on account of grain and seeds storage in upcountry areas are also unchanged. There has been a slight fall in the credit requirements of the iron and steel industry. The interbank market is tighter and there are reported to be borrowers over at the unchanged call rate of 3 percent.

There have been fewer bills in the exchange market during the past week. Those that did come to hand were chiefly on account of gunnies. The general shortage of bills at the moment is attributed to the possibility of a fall in the U.K. Bank rate in the near future. Remittance has been poor. Sterling has continued its improvement in terms of the U.S. dollar and is now standing at its highest level since the Bank rate was increased in September. The pound is also stronger in terms of most Continental currencies except the D-mark.

* * * *

Silver was steady on good demand in the face of limited arrivals. The price advanced from the previous week's level of Rs. 187.25 to Rs. 188.25, quoted today for ready delivery. The rate for forward delivery was Rs. 185.75. In London, the price was 75⅞d and the New York quotation stood at 88⅝ cents.

Gold was firm because of keen offtake and the price rose from Rs. 114 to Rs. 115.50. The sovereign, at Rs. 73, gained a rupee.

* * * *

During the week ended 7th February, Government of India Treasury bills for Rs. 48,64,00,000 were sold in favour of the Reserve Bank.

* * * *

Increases of Rs. 27.43 crores to Rs. 1,538.63 crores in active notes, and of Rs. 17.72 crores to Rs. 1,569.64 crores in the total note issue, were the notable features of the return of the Reserve Bank of India for the week ended 7th February, 1958. The currency expansion was covered by increasing rupee securities by Rs. 20 crores to Rs. 1,076.82 crores. Deposits of the Government of India declined by Rs. 61 lakhs to Rs. 57.52 crores and other Government accounts were Rs. 14.22 crores lower at Rs. 13.12 crores. Balances of commercial banks fell by Rs. 3.81 crores to Rs. 71.92 crores. Balances held abroad at Rs. 35.42 crores showed a decline of Rs. 2.33 crores. Investments dropped from Rs. 254.72 crores to Rs. 233.12 crores. Other loans and advances increased from Rs. 65.27 crores to Rs. 71.76 crores, of which advances to scheduled banks against usance bills amounted to Rs. 26.05 crores (Rs. 24.21 crores). Ways and means advances stood at Rs. 40.62 crores (Rs. 36.04 crores).

* * * *

The statement of the position of scheduled banks for the week ended 31st January, 1958, shows Demand and Time liabilities at Rs. 737.48 crores (Rs. 17.89 crores on account of borrowings from banks) and Rs. 701.21 crores (Rs. 16.38 crores), compared with Rs. 736.01 crores (Rs. 18.03 crores) and Rs. 696.47 crores (Rs. 17.33 crores), respectively, in the previous week. Cash has increased by Rs. 19 lakhs to Rs. 37.60 crores, while balances with the Reserve Bank have decreased by Rs. 42 lakhs to Rs. 73.54 crores. There is a drop of Rs. 1.44 crores to Rs. 432.55 crores in investments. Advances and bills discounted at Rs. 907.38 crores show a rise of Rs. 5.52 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.7 percent and 63.1 percent, against 7.8 percent and 63.0 percent.

* * * *

Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during October 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise:* excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: Exports Rs 5,253 lakhs, re-exports Rs. 111 lakhs, imports Rs. 7,308 lakhs; total trade Rs. 12,672 lakhs. *Treasure:* exports (including re-exports) of currency notes Rs. 41 lakhs, current coins (excluding gold coins) Rs. 1 lakh, others nil; imports of gold Rs. 9 lakhs, currency notes Rs. 460 lakhs and current coins (excluding gold coins) Rs. 1 lakh. *Balance of Trade:* the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 1,953 lakhs.

* * * *

The profit of the INDIAN BANK (Madras) has amounted to Rs. 40,14,675 for the year ended last December, including the amount brought in. An interim dividend of 6¼ percent, including a bonus of 1¼ percent was paid. Transferring Rs. 28.25 lakhs to taxation provision, reserves and other funds, the directors have recommended a final dividend of 6¼ percent, including a bonus of 1¼ percent. This makes a total distribution of 13 percent for the year. In addition, they have proposed to pay a golden jubilee dividend of 2 percent.

STOCK MARKETS REACT AFTER INITIAL RISE

GILT-EDGED STEADY BUT INDUSTRIALS LOWER

London, 12th February.

THE stock markets recorded a further widespread advance prior to the past week-end under the lead of gilt-edged securities, but the trend was reversed later and on balance prices in most sections were lower. Gilt-edged were the only section to record net gains. Rising hopes of a reduction in the British Bank rate, following the declines in interest rates elsewhere, provided the main reason for the earlier advance. Other favourable factors were the end-January gold reserve figures, the U.S. satellite launching and the strength of sterling in foreign exchange markets. The firmness of Wall Street contributed to the improvement. But these favourable factors were offset by subsequent developments. Hopes of an early reduction in Bank rate were dashed by the Chancellor of the Exchequer's speech, in which he said that the credit squeeze must continue. Wall Street turned lower on renewed nervousness about the U.S. business outlook. The probability of lower industrial profits being declared later in the year because of shrinking profit margins had a depressing effect on industrials. Oil shares reflected the recent steady fall in world oil prices. Gilt-edged held their earlier gains fairly well but the appearance of the £20 million London County Council 6 percent stock issue dampened sentiment as it was thought that there were many more new issues to come. The L.C.C. stock enjoyed an enormous turnover in first-day dealings and established a substantial premium. Dollar stocks were lower on balance in sympathy with Wall Street. Industrials, which rose at one time, reacted sharply afterwards to record widespread losses on balance. Steel shares were particularly depressed by the threat of re-nationalisation. South African gold shares ruled quiet and showed very little change, while base metals were erratic. Appreciable losses were suffered by oils. The new Shell Transport shares established a premium in early dealings. Rubbers ruled quiet but prices were selectively firm although movements were usually small Tea shares were dull and many were a few pence lower.

The Money Market

Credit conditions in world money markets may have been relaxed, but in London they were still tightly controlled under the U.K. Government's policy of continuing the credit squeeze until domestic economic conditions were fully stabilised. There was a shortage of credit because of the continuing heavy outflow of funds to the Revenue Department during the main tax-gathering season. The market was forced twice into the Bank of England to borrow a large amount at the penal rate of 7 percent for the week. Where non-regular money was obtained, borrowers mostly had to pay 5½ percent to 6 percent. A factor which accentuated the difficulties last Friday was the diversion of substantial funds for application to the new £20 million London County Council 6 percent loan. Credit conditions remained stringent and on Monday the market was again forced to borrow a fairly large amount from the Bank of England. In spite of the tight conditions prevailing, the money market, in an effort to outbid outside competitors at the weekly offer of Treasury bills, once again tendered at a higher rate, paying 4d more, and secured a quota of 65 percent as compared with 44 percent in the previous week. The average rate for the bills was reduced to £6 1s 3.29d percent.

Vegetable Oils Dull but Steady

Trading in most vegetable oils and seeds got off to a slow start during the past week, although basically prices showed little change. Most of the buoyancy stemmed from origin sellers. Eastern rates for coconut oil ruled firm and were well above the European trading level, while first-hand selling ideas for Philippines copra were up at the $192-1/2 c.i.f. mark, compared with tentative buying ideas in north Europe of around $188, with re-sellers prepared to take $189 for small quantities. After selling for £106, ex-tank Hull, B. S. S. grade linseed oil made £106-1/2, but buyers rarely bid more than £106. More enquiries were handled for groundnut oil but usually at a shade under the recently traded levels. Sellers showed more willingness to consider lower bids by the close. Belgian Congo palm oil afloat to Hamburg was traded at 11.375 Belgian francs a metric ton, c.i.f., and rates for forward shipments weakened. Cottonseed and soyabean oils remained steady, with Casablanca due to take a further 3,000 tons of these along with 1,000 tons of groundnut oil. Indian castorseed oil ruled barely steady, with commercial grade in bulk traded at £109 c.i.f. for March-April shipment, after week-end business involving February shipment at £101-1/4 c.i.f. The squeeze on shorts continued in East African oil and rates for British East African castorseed were lifted another £1 a ton to £56-1/2 ex-ship U. K. Re-sellers of Nigerian groundnuts were more numerous and ready to discuss lower rates against firm bids.

Sugar Futures Steady

World sugar futures rates ruled steady during the past week. Raw sugar was unchanged at 3.65 cents f.o.b. Cuba. Dealers believed that Japan might have bought some Cuban sugar around the 3.65 cents level. They also said that Japan was negotiating for 60,000 tons of Brazilian raw sugar for May-June shipment. Uruguay is believed to be negotiating for a similar quantity from Brazil.

Stocks and Shares

MARKET AWAITS DECISIONS ON CHAGLA REPORT

ACCEPTANCE OF FINANCE MINISTER'S RESIGNATION INDICATED

Wednesday Evening.

THE stock market is suffering from an attack of pre-Budget jitters. Last month's recovery phase has turned into one of sagging prices and declining business. There is little investment interest and even speculators are finding it difficult to take a view. Earlier hopes that the Budget would reveal a change of heart on the part of the Government towards private investment, received a jolt from Mr. Nehru's recent speech at the Indian Merchants Chamber meeting in which he referred to the tax measures of the 1957-58 Budget in glowing terms. The Chagla Commission's report is eagerly awaited. Its probable findings, their implications and repercussions, seem to provide endless matter for market gossip. The over-subscription,—by approximately three times—of the Indian Oxygen issue, at a time which would normally be considered unpropitious for an equity flotation, shows once again that there is plenty of money available for the right type of issue. The lists closed at 10 a.m. last Friday. The opening at Kulti of the second spun pipe plant of the Indian Iron and Steel Company, within a week of the inauguration of the blast furnace at Burnpur and prospects of the second blast furnace going into operation in July this year, failed to evoke enthusiasm and the shares lost ground during the week. Uncertainty over the general investment outlook and reports of impending labour trouble at Burnpur as well as Jamshedpur made operators cautious. The jute section was subdued in response to low jute goods prices and the sharp increase of 21,400 tons in mills' stocks in January. Recession talk in the U.S.A. and reports of damage to grain crops in Australia caused anxiety about export prospects. The cotton textile section was weak, on renewed anxiety over the accumulation of cloth stocks with the mills. Earlier hopes that the reduction in excise duty on medium cloth and the conversion of sales tax into excise duty, would solve the problem, do not appear to have been realised.

The report of Mr. Krishnamachari's resignation, which has since been confirmed, was followed by a rise in Indian Irons from Rs. 19.50 to Rs. 19.74.

Details of the week's trading follow.

* * * *

With the money market showing some signs of stringency there was somewhat less enquiry this week for Government securities and the volume of business thinned down. The quotations, however, showed little change. U.P. Zemindari Abolition Compensation Bonds were the outstanding feature with the price improving from Rs. 46 to Rs. 48.50.

In the preference share section, there was a good enquiry for selected issues like Indian Iron & Steel, Indo-Burma Petroleum, Burn & Company 7 percent and 6 percent, Alkali & Chemical and Martin Burn.

Reports (still unconfirmed) that the United Commercial Bank had taken over the Bank of Bikaner, caused a rise in the price of the latter shares from Rs. 22 to Rs. 25.50. United Commercial Bank shares, however, were unchanged at Rs. 60. Punjab National recovered slightly to Rs. 51.

The only share which changed hands in the railway section was Dehri-Rohtas at around Rs. 10.

Cotton textile shares continued to be depressed with Kesoram being marked down further to Rs. 9.87.

Coal shares were dull and featureless. Prices of most issues were marked down including Bengal from Rs. 235 to Rs. 231, Equitable from Rs. 35 to Rs. 34.75 and South Karanpura from Rs. 9 to Rs. 8.92. Contrary to the general trend, New Beerbhoom were steady at Rs. 14.37 and Raneegunge were taken at the higher rate of Rs. 11.12.

For the reason given earlier, jute shares continued their downward trend as will be seen from the following table of prices:

	Opening 6-2-58 Rs.	Closing 12-2-58 Rs.
Anglo-India	132	128
Birla	14.37	13.81
Kamarhatty	81	78
Megna	80	79
Nuddea	32.50	31.50
Orient	80	75

Electric shares were in good demand with buyers of Agra at Rs. 135, U.P. at Rs. 128 and Calcutta at Rs. 13.31, but sellers were scarce.

In the sugar section, Dyer Meakin went from strength to strength and the price improved to Rs. 9.37. Ramnugger recovered from Rs. 20.50 to Rs. 22.50 and Balrampore from Rs. 5.75 to Rs. 6. Darbhanga were better at Rs. 18.75.

In the engineering section, Indian Iron & Steel shares were sluggish around Rs. 19.50 but closed higher at Rs. 19.74. Bhartia Electric Steel eased to Rs. 14.87 but Burn & Co. were wanted at Rs. 323. Guest, Keen, Williams had buyers at Rs. 28.50 as did Braithwaite at Rs. 26.87. Jessops were steady at Rs. 22.87 and Textile Machinery fluctuated narrowly around Rs. 17.15.

In paper, Orient were marked at around Rs. 24.50 and there was some investment enquiry for Titaghur at Rs. 33.50.

In cement, Sone Valley were unchanged at Rs. 5.12 while Jaipur Udyog were slightly easier at Rs. 11.69. Dalmia changed hands at Rs. 10.19.

In insurance, Indian Trade & General were reported at Rs. 22.75 and Ruby General were crossed at Rs. 6.

In shipping, there was a steady demand for India Steamship at Rs. 11.81 while India General Navigation reacted from Rs. 59-50 to Rs. 57.

Among miscellaneous industrials, Angelo Bros. were steady at around Rs. 18.50 while British India Corporation were neglected at Rs. 3.80. There was some enquiry for Clive Row Investment at Rs. 9. Gillanders were offered at Rs. 12.56 and Hindustan Motors at the lower rate of Rs. 5.94. Imperial Tobacco declined further to Rs. 11.25 as did Indian Aluminium to Rs. 12.50. There was a good enquiry for Dunlop Rubber at Rs. 21.87 and Indian Cables at the higher rate of Rs. 29. Martin Burn were steady at Rs. 25.25 as were Duncan Bros. at Rs. 115. National Insulated Cables were taken at Rs. 23.75 and Rallis were unchanged at Rs. 27.25. Metal Box were steady at Rs. 25. Indian Oxygen were added to the list this week and there were buyers at Rs. 16.19 against the issue price of Rs. 13.50.

In the mining section, Indian Copper fluctuated narrowly around Rs. 2.85 and there was some enquiry for Orissa Minerals at the higher rate of Rs. 21.50.

Tea shares were devoid of interest and prices, in the absence of support, were marked down further.

* * * *

The NEW INDIA SUGAR MILLS LTD. has made a profit of Rs. 10.25 lakhs for the year ended last June, against Rs. 5.01 lakhs. Bringing in Rs. 3,730, there is an amount of Rs. 10,28,849. Taxation provision gets Rs. 7.10 lakhs. The ordinary dividend has been maintained at 25 percent, leaving a carry-

forward of Rs. 79,525. The cane crushed fell from 5,153,581 maunds to 4,574,333 maunds and the recovery declined from 9.47 percent to 9.17 percent.

* * * *

The profit of the UPPER GANGES SUGAR MILLS LTD has amounted to Rs. 28.88 lakhs for the year ended last June, against Rs. 12.95 lakhs. Bringing in Rs 32,829 there is a balance of Rs. 29,21,038. Taxation provision absorbs Rs. 18½ lakhs (Rs. 7.90 lakhs). Reserves are allocated Rs. 5½ lakhs against Rs. 2 lakhs. The ordinary dividend has been increased from 30 percent to 50 percent, leaving a carry-forward of Rs 9,663. The cane crushed fell from 12,154,737 maunds to 10,832,726 maunds and the recovery rose from 10.01 percent to 10.38 percent.

* * * *

There is a profit of Rs. 4.08 lakhs for the BHARAT SUGAR MILLS, LTD. for the year ended last June. Bringing in Rs 2,329, there is Rs. 4,09,978. The ordinary dividend has been maintained at 15 percent. The taxation provision amounts to Rs. 1.60 lakhs (Rs. 12,000). Depreciation is allocated Rs. 94,400 (Rs. 70,300). The carry-forward is Rs. 7,653 The cane crushed fell from 2,498,153 maunds to 2,256,545 maunds and the recovery rose from 9.48 percent to 9.63 percent.

The profit of EASTERN INVESTMENTS LTD. has amounted to Rs. 10.15 lakhs for the year ended last December, against Rs. 11.20 lakhs. The ordinary dividend has been maintained at 9 percent. The taxation provision absorbs Rs. 6.53 lakhs (Rs. 5.45 lakhs). General reserve is allocated Rs. 70,824 leaving a carry-forward of Rs. 2,42,272, compared with Rs. 3,27,916 brought in. The directors state that the total market value of investments for which quotations are available, together with unquoted investments as valued by them, exceeds the book value by Rs. 31,75,971 on 31st December, 1957.

* * * *

The profit of MCLEOD AND COMPANY has declined by Rs. 13.56 lakhs to Rs. 18.34 lakhs for the year ended December 1956. Bringing in Rs. 2,64,152 and making other adjustments, there is Rs. 20,98,198. The taxation provision is Rs. 10 lakhs (same). Convertible notes redemption reserve is allocated Rs. 2 lakhs. The ordinary dividend has been reduced from 22 percent to 8 percent to absorb Rs. 3.20 lakhs. The carry-forward is Rs. 2,57,153. The directors mention that the profit has shown a substantial decline because of a large reduction in dividend income and lower earnings from jute mills under the company's management. Commissions received from tea companies increased and agency department results showed an improvement.

Bombay Market

OPERATORS BECOME CAUTIOUS AS BUDGET DAY APPROACHES

MINOR RALLY LATER ON INDIAN IRON BONUS ISSUE RUMOURS

Wednesday Evening.

THE Bombay stock market became quiet during the past week and business was mainly of a squaring up nature. Operators were cautious because of the approach of Budget day. The prospect of changes in the Finance Ministry added to the uncertainties. The decline in the output of the Tata Iron and Steel Company during January was bearishly interpreted. Towards the close, there was a minor rally on short-covering induced by a rumour that the Indian Iron and Steel Company might issue bonus shares by capitalising share premium reserves.

Tata Iron closed at Rs. 172 and Indian Iron were quoted at Rs. 19.76. Alcock Ashdown were freely offered at Rs. 216.25 without attracting interest and Premier Construction were bought at Rs. 159.25 by knowledgeable quarters. Tata Locomotive were idle at Rs. 142. There was little interest in automobile shares, and Premier Automobile came to hand at Rs. 85.50. Hindustan Motor slipped back to Rs. 6.08 on selling pressure.

The disappointing results of the Brady group of cotton mills during the past year depressed sentiment in the textile section. Bombay Dyeing were transacted at Rs. 50.60, but Century recovered to Rs. 388.50 on speculative buying. Simplex were done at Rs. 158.50 and Kohinoor were taken at Rs. 266.50. Svadeshi realised Rs. 167, while Central India slumped to Rs. 81 because of the poor results in 1957. India United Ordinary were offered at Rs 9.28 and Apollo at Rs. 1.98 attracted little interest.

Miscellaneous shares were quietly steady. Associated Cement were steady at Rs. 154.50 on prospects of an increase in the price of the commodity. Digvijay Cement changed hands at Rs. 135.50 Sugar shares were steady, and Belapur made Rs. 236. Phaltan were quoted higher at Rs. 148. Steamship company shares maintained their previous gains on influential support. Scindia Steam were transacted at Rs 17.36 and India Steamship were steady at Rs. 11.76. Mining shares were subdued because of the uncertain outlook for metal prices. Shivrajpur Syndicate were shaded at Rs 91.50 and Indian Copper were idle at Rs 2.84. Bombay-Burmah reacted to Rs. 539 on profit-taking, and expectations of a bonus issue by the company, it appeared had been discounted. National Ravon improved to Rs. 218 on short-covering, but Tata Chemical were depressed at Rs 12.72.

Banking shares were steady, and Bank of India came to hand at Rs 136. Punjab National were taken at Rs. 51.80. Insurance shares were neglected and fluctuations were narrow. New India Assurance were done at Rs. 40.50.

Selective interest was taken in electricity supply shares, and Tata Power changed hands at Rs. 1,135. Ahmedabad Electric were maintained at Rs. 95.30.

The Story of Oil—6

A major operation

Geological and geophysical surveys provide clues to the whereabouts of underground traps which *might* contain mineral oil. But there is only one way of proving whether or not oil is actually present. And that is by drilling a test well.

With all the skill and knowledge of modern science, the odds are still 20 to 1 against striking an oil-trap which justifies the heavy costs of exploration. For example, it may cost over a crore of rupees and take years of research before success is achieved. Yet only by taking these risks will new oilfields be discovered.

Drilling a test well is a tremendous undertaking in itself, involving great quantities of machinery, equipment and supplies. A typical well (10,000 or more feet deep) would probably need: a complete drilling rig, weighing about 200 tons, 15,000 to 17,000 feet of drill pipe, 14,000 to 16,000 feet of steel casing, 60 to 100 drilling bits, 500 to 1,000 tons of drilling-mud chemicals, 2,000 to 5,000 sacks of cement, 48,000 barrels of water, and 3,000 barrels of fuel oil. In addition, at least 125 skilled personnel comprising drillers, drilling crews, geologists, engineers, cementers, electricians and other technicians would be required for drilling the well.

It can take as long as a year to drill a deep test, and the result may be that the well strikes water, not oil; or it finds only a little oil, or even turns out to be dry. Then the mass of machinery and equipment is moved to another location and drilling begins all over again.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

a pilfer-proof package

for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

ADVISORY COUNCIL REVIEWS PROGRESS OF AUTOMOBILE MANUFACTURE

REPRESENTATION AGAINST PROPOSED CHANGES IN COAL ROYALTY RATES

(FROM OUR NEW DELHI CORRESPONDENT)

THE progress of the automobile industry was reviewed by the standing committee of the Central Advisory Council of Industries at its meeting, held last week. The following are the figures of production and sales in recent years:

Year	Motor-cars		Trucks, Buses and Jeeps		Total	Total
	Production	Sales	Production	Sales	Production	Sales
1953	4,936	5,000	8,990	4,400	13,926	9,400
1954	5,435	5,800	9,027	8,007	14,462	13,813
1955	10,266	10,166	12,818	12,899	23,084	23,065
1956	13,666	13,793	18,471	17,692	32,137	31,485
1957	12,171	12,193	18,433	19,350	30,604	31,543

Since the beginning of 1957, no licences for the import of the big motor-cars (Dodge and Studebaker, etcetera,) have been issued. An excise duty of Rs. 3,000 a unit on big motor-cars has been levied. Some progress has been made by the indigenous manufacturing firms. The table below sets out the latest amount of the indigenous content of the vehicles produced:

Cars:		
1.	Fiat 1100	31 percent
2.	Hindustan Ambassador	60 percent
3.	Standard Vanguard	33 percent
4.	Standard 10	30 percent
Jeeps:		
	Willy's jeeps	52 percent
Trucks:		
1.	Leyland Comet	36 percent
2.	Dodge (light petrol)	37 percent
3.	Dodge Power Wagon Light	33 percent
4.	Dodge (medium diesel)	50 percent
5.	Tata-Mercedes Benz	47 percent

The authorised capital of the six automobile manufacturers is Rs. 41.5 crores, and the paid-up capital is Rs. 18.5 crores. Their investment in plant and machinery and buildings as on 31st December, 1956, was Rs. 13 crores.

Progress of State Concerns

The meeting of the standing committee of the Central Advisory Council of Industries also reviewed the progress made by some undertakings in the public sector. The following is the summary of their progress reports:

Hindustan Antibiotics: The penicillin factory in Pimpri was planned to produce 3.6 million mega units, gradually rising to 9 million mega units a year. Production in 1956-57 amounted to 16.2 million mega units of first crystals. In terms of the finished product, the output was 10.05 million mega units. After a year of regular production, which started in August 1955, the factory has more or less stabilised itself. This has been achieved by the development of high-yielding strains and improvements in manufacturing techniques. The production of penicillin for the years 1955, 1956 and 1957 were as follows:

	1955	1956	1957
	mega units	mega units	mega units
First crystals	3,981,000	14,114,000	23,599,000
Finished product for clinical use	263,000	5,179,000	17,883,000

To meet the increased requirements, the Government has decided to expand the installed capacity of the present plant by about 60 percent. It is expected that this expansion will be completed by the middle of 1958, when the annual production of the finished product, it is expected, will go up to 26 to 28 million mega units. Negotiations are under way with some leading U.S. firms for technical collaboration in the manufacture of streptomycin at this factory. The scheme proposes the manufacture of 15,000 to 20,000 kilogrammes of streptomycin a year. The capital cost of the streptomycin plant, it is estimated, is Rs. 1.12 crores, of which the foreign exchange element would be about Rs. 44 lakhs.

D.D.T. Factory: A scheme for doubling the capacity of this factory is now under way. U.N.I.C.E.F. has agreed to allocate $275,000 for the supply of additional plant and equipment including a formulating plant. The lay-out and design of the expansion project was taken up during 1956-57 and has been completed. The expansion scheme, it is estimated, will cost Rs. 21.24 lakhs, out of which U.N.I.C.E.F. aid will amount to Rs. 13.41 lakhs. The construction of the factory building is nearing completion. It is expected that the scheme will be completed in the near future. After expansion, the factory, it is scheduled, will attain a daily production of four tons of technical D.D.T.

PRODUCTION OF D.D.T. FACTORY, DELHI

Year	Quantity
1955-56	283.67 tons
1956-57	517.53 tons
1957-58 (up to December 1957)	486.24 tons

D.D.T. Factory, Alwaye: Another D.D.T. factory with an annual capacity of 1,400 tons of technical D.D.T. is being established in Alwaye in Kerala State. This project is estimated to cost Rs. 79 lakhs. The factory has gone into trial production, and, it is expected, will be completed by the middle of 1958.

Sindri Fertilisers

Sindri Fertilisers and Chemicals: The Sindri factory produced 331,833 tons of ammonium sulphate in 1957 against 331,725 tons in 1956. The distribution of ammonium sulphate continues to be made by the central fertiliser pool administered by the Ministry of Food and Agriculture. The selling price has been fixed at Rs. 280 a ton, which is substantially lower than the cost of imported fertilisers. The Sindri expansion scheme is based on the utilisation of the entire quantity of 10 million cubic feet of coke oven gas from the existing coke oven plant in Sindri, and will, on completion, result in the production of 70 tons of urea and 400 tons of double salt a day. Expressed in terms of the nitrogen content of the fertilisers, this will mean an increase in Sindri's present capacity by over 60 percent. The contract for the supply, erection and commissioning of the main plant and equipment for the production of these two new fertilisers in Sindri was awarded to Messrs Montecatini of Milano (Italy) in January 1955 at a total contract price of slightly over Rs. 7 crores. In addition to the work entrusted to this foreign firm, the Sindri Fertilisers has also undertaken certain ancillary items of work for dovetailing the new plant with the existing plants in Sindri. The other new plants which it is proposed to erect will be initially commissioned by June-July 1958. Work on the scheme is proceeding satisfactorily. Most of the equipment has now arrived at the factory site and erection is in progress.

Nangal Fertilisers and Chemicals: On the basis of the interim recommendations of the Fertiliser Production Committee, it was decided in February 1955 to set up a fertiliser factory in Nangal with an annual capacity of 70,000 tons of nitrogen in conjunction with the production of heavy water for the Atomic Energy Department. For the implementation of the project, a nucleus organisation was set up under a general manager in August 1955. Later, a private limited company under the name of Nangal Fertilisers and Chemicals Private Limited was registered in February 1956 under the Indian Companies Act, to which the assets and liabilities of the Government of India in the project were transferred on 20th April, 1956. The company, which has an authorised capital of Rs. 30 crores, has taken over the work of the project. When in full production, the Nangal factory will produce 200,000 tons of fertiliser a year, the equivalent of 70,000 tons of nitrogen. The end-product, which will have a nitrogen content of 20.5 percent, will be ammonium nitrate mixed with suitable inert materials such as chalk, clay, gypsum, etcetera, to reduce its explosive hazards before supplying it to the cultivator.

Technical Consultants

The Vitro Engineering Division of New York has, with effect from 16th November, 1956, been appointed technical consultants for the project. Orders were placed, on deferred payment terms, for the supply, erection and commissioning of (a) the electrolysis plant on 31st March, 1957 with De-Nora of Milano, Italy; (total f.o.b. price £2,706,142). (b) the fertiliser group of plant on 10th October, 1957 with Saint Gobain of Paris; (total price $15,636,788). The contract relating to the supply of electrical equipment on deferred payment terms has been awarded to the English Electric Company Limited of the U.K. at a total f.o.b. price of Rs. 1,98,73,182. A committee of technical experts has been constituted to scrutinise the tenders received for the hydrogen distillation plant for the manufacture of heavy water. According to the Fertiliser Production Committee's estimates, the cost of the project, including the township, was to be of the order of Rs. 22 crores, involving Rs. 12 crores of expenditure in foreign currency. According to the present indications, however, the total cost of the project is likely to be of the order of Rs. 26 to Rs. 27 crores. The foreign exchange expenditure, it is now expected, will be around Rs. 15 crores, the increase being mainly due to deferred payment terms.

Bombay Fertiliser Project: As recommended by the Fertiliser Production Committee, it has been decided to explore the possibility of establishing a fertiliser unit in Bombay, based on refinery gases. A site has been selected, and the Bombay Government has been requested to notify the acquisition of land. A negotiating committee has been set up to settle the price of refinery gas and other conditions for the refinery gases and other products required for the manufacture of fertilisers, to be supplied by Burmah-Shell and Stanvac. The report of the committee is awaited.

Heavy Electrical Equipment

Heavy Electricals: In accordance with the recommendations of the Heavy Electrical Equipment Project Enquiry Committee set up by the Government in 1954, it was decided to build a factory to manufacture heavy electrical equipment, such as electrical generators, transformers, switchgears, turbines for river valley projects, traction equipment for railways, insulating materials, etcetera. An agreement was signed with Associated Electrical Industries Limited of the U.K. in November 1955 for technical advice. For hydraulic turbines, the Government has approved a subsidiary agreement between Associated Electrical Industries and the English Electric Company of London. For the manufacture of static capacitors also, a draft subsidiary agreement between A.E.I. and British Insulated Callendars Cables Limited, London, is under the consideration of the Government. According to the terms of the agreement, the consultants submitted their detailed project report in November 1956. The report was accepted by the Government in March 1957. To examine and execute the project, a private limited company known as Heavy Electricals Limited, wholly owned by the Central Government, was incorporated in August 1956. A provision of Rs. 20 crores has been made for this project in the second five year plan. In view of the deterioration in the foreign exchange position and the overall financial stringency, it has been decided to rephase the manufacturing programme in order to obtain the maximum possible output with the minimum possible foreign currency expenditure during the next two to three years and yet enable the Government to proceed with the programme without radically altering the overall time schedule of the project.

National Industrial Development Corporation (P) Ltd. The National Industrial Development Corporation is a private company set up by the Government in 1954 with an authorised capital of Rs. 1 crore, of which Rs. 10 lakhs has been issued and subscribed wholly by the Central Government. Its main task is to formulate, and with the approval of Government to execute, projects to fill gaps in the industrial structure. In addition, the Government has decided to use the Corporation as an agency for the grant of special loans to the jute and cotton textile industries for their rehabilitation and modernisation. During 1956-57, the Corporation completed its technical and economic examination of a large number of industrial projects. These were selected with the approval of the Government for developing new lines of production and reducing the dependence on imports. Among the industrial projects which are under the consideration of the Corporation are aluminium, organic intermediates, newsprint, synthetic rubber and cinematographic and X-ray films. In all these cases, the implementation of the projects depends on the availability of financial resources and satisfactory terms of foreign collaboration. This is being examined. Certain offers from overseas parties for these schemes have been received. In addition, studies have been undertaken of the bauxite deposits in the Shevarey Hills for the Mettur aluminium project. In the case of newsprint, the State Government concerned has agreed that the sugar factory in Shakarnagar will invest in the capital of the new project. There are also a few other schemes which are still in a preliminary stage of investigation by the Corporation. These relate to the production of sulphur and phosphorus and to the indigenous manufacture of tungsten carbide-tipped tools.

Consent to Capital Issues

The Controller of Capital Issues sanctioned a total of 16 new company issues for an aggregate sum of Rs. 915.89 lakhs, which involved foreign participation in capital to the extent of Rs. 302.76 lakhs. The country-wise distribution of the latter amount is as follows:

Name of the Country	Amount consented for participation by foreigners. (In lakhs of rupees)
U.S.A.	116.70
West Germany	38.30
U.K.	12.06
Japan	7.50
France	4.00
Sweden	3.00
Italy	2.45
Indian non-residents in Malaya and British East Africa	118.75
	302.76

Policy on Imports

Addressing the Import Advisory Council, Mr. Morarji Desai, Central Commerce and Industry Minister, indicated that there was no possibility of liberalising the import either of raw materials for industry or of consumer goods in the coming April-September licensing period. While assuring industry that the Government would provide raw materials "as adequately as possible", Mr. Desai made it clear that the present "very tight" limits for monetary allocations would continue to be observed. About consumer goods, the Minister said that there were a large number of items the import of which the Government "simply will not be able to afford in the immediate future." Another indication of the policy to be pursued in the coming half-year, given by Mr. Desai, was that the import of capital goods would have to be given a lower priority than the import of raw materials.

MR. T. T. KRISHNAMACHARI RESIGNS

Latest reports from New Delhi state that Mr. T. T. Krishnamachari's resignation as Finance Minister has been accepted. Mr. Nehru is taking over the Finance portfolio for the time being.

He said it was undesirable to aim at expanding capacity if the utmost was not got out of the existing installed capacity. The Minister's speech was also significant for its greater stress on foreign participation as a method of financing new projects and his emphasis that the deferred payment system had only "limited scope." In the case of long-term overseas investments in the form of equity capital, the Government would not have any anxieties on account of foreign exchange. The Government did "not intend to mortgage the future by indiscriminate borrowing". Only projects which either earned or saved foreign exchange to pay for them, when instalments fell due, could be cleared for deferred payment arrangements. Reviewing the export position, Mr. Desai said that from the statistics available so far it would appear that the total value of the exports in 1957 would not exceed the figure of Rs. 619 crores earned in 1956. While there was an increase in the exports of cotton piecegoods, manganese ore, tobacco and hides and skins, those of cashew kernels, pepper, tea, lac, linseed oil and cotton waste lagged behind the 1956 figures.

Business for Parliament

In addition to the Finance and Appropriation Bills, there are as many as 18 new Bills provisionally planned for the current session of Parliament, which commenced on 10th February. An amending Bill to the Mines and Minerals (Regulation and Development) Act is one of the important items on the agenda. This provides for the exemption of coal from the enhanced rate of royalty, etcetera, provided in the Act passed in the last November session of Parliament. The other Bills are: (1) the Merchant Shipping Bill seeks to consolidate the laws relating to merchant shipping; (2) the Control of Shipping (Continuance) Bills extends the life of the existing Act up to 21st March, 1960; (3) the State Bank of India (Subsidiary Banks) Bill enables the State Bank to take over the business of certain banks in certain States; (4) the Banking Companies (Amendment) Bill seeks to clarify certain provisions in the Banking Companies Act and to provide for improved administration; (5) the Trade and Merchandise Marks Bill seeks to amend and consolidate the laws relating to trade marks and merchandise marks; (6) the Employees' Provident Funds (Amendment) Bill aims at the deletion of Section 16(1) (a) of the Act, which provides for automatic exemption of undertakings belonging to the Government or a local authority; (7) the Manganese Mines Labour Welfare Cess Bill provides welfare facilities to workers employed in manganese mines on the lines of the Mica Mines Labour Welfare Fund Act of 1946; (8) the Coal Mines Labour Welfare Fund (Amendment) Bill provides for the maintenance and audit of the accounts of the Housing Board in consultation with the Comptroller and Auditor-General and for certain other purposes; (9) the Indian Statistical Institute Bill seeks to declare the Indian Statistical Institute, Calcutta, as an institution of national importance; (10) the Rice Milling Industry (Regulation) Bill gives effect to the decisions reached on certain recommendations of the Rice Milling Committee; (11) the Coffee (Amendment) Bill amends Section 32(A and B) of the Coffee Act; (12) The Indian Stamp (Amendment) Bill seeks to convert the existing rates of duty into decimal coinage; (13) the Salaries and Allowances of Members of Parliament (Amendment) Bill provides for the drawing of railway fares in cash in lieu of identity-cum-rail-pass by newly elected or nominated members and certain other matters; (14) the Arms Bill seeks to amend and consolidate the laws relating to arms, ammunition and military stores; (15) the Manipur and Tripura (Repeal of Laws) Bill; (16) The Public Premises (Ejection) Amendment Bill vests certain powers in the Government for the ejection of unauthorised occupants of public premises and recovery of arrears of rent; (17) the Delhi Land Reforms (Amendment) Bill.

There are, in addition, six pending Bills in the Lok Sabha, including two at the Select Committee stage, and one passed by the Rajya Sabha. The Life Insurance Corporation (Second Amendment) Bill is among them. There are also two pending Bills in the Rajya Sabha. The Lok Sabha session is expected to last until the middle of May.

Representation against Mines Act

A representation has been made by the interests concerned against the Mines and Minerals (Regulation and Development) Act, passed by Parliament in its November 1957 session. The position of the coal industry in relation to mining leases is regarded as fundamentally different from that relating to other minerals. In the representation, the period of leases and royalty are the main points. It has been explained that the period of a lease should be such as to allow for the proper scientific extraction of the maximum amount of workable coal without giving the lessee any desire to resort to premature depillaring which results in the loss of a substantial quantity of coal. Of course, the Coal Mines Conservation and Safety Act, 1952, and the rules enforced by the Coal Board prevent such a loss. But the restriction of the duration of a lease to 30 years' periods tends to limit initiative, which is required when launching any mining project.

It is well known that it may take as many as ten years to sink and equip a mine at a depth of 2,000 feet and the development of such a mine will take not less than a further 60 to 70 years. The initial period of a lease should, therefore, be not less than 80 years, with an option of renewal for such further periods as may be agreed upon by the lessee and the Coal Board, as being required to complete the scientific extraction of the remaining workable coal in large areas at greater depths.

In the case of coal, the rate of royalty payable, had the Existing Coal Mining Leases (Modification of Terms) Rules been promulgated, would have been 5 percent f.o.r. The selling prices of coal have been statutorily fixed on the basis of the raising costs obtaining in 1947 and, although these costs were already substantially higher in 1955 than they were in 1947, there has been no corresponding increase in selling prices. It has been, therefore, urged that any increase in the rate of royalties will have to be compensated for by a corresponding increase in the selling prices of coal, since it is not possible for the industry to carry such an increased burden within the existing price structure. The Government, at that time, appeared to recognise the cogency of these points and the proposal to promulgate the Rules under Section 7 of the 1948 Act concerning existing coal mining leases was dropped. Such a proposal was, however, revived by the Government of West Bengal prior to the fifth meeting of the Mineral Advisory Board held in Simla on 26th and 27th June, 1957. In reply to this proposal, the Central Government pointed out to the State that the position of coal is fundamentally different from that relating to other minerals. The clause relating to royalty in the Act provides for the rates to be fixed as a percentage of the pit-mouth sale values up to a maximum of 20 percent. Such a basis, it is urged, is completely unscientific so far as coal is concerned and the increase of royalties which would result from the application of such a principle would create a situation where all existing collieries would immediately run at a loss unless a compensatory price increase were granted. And as coal is a basic commodity it would affect almost all other industries also.

Coal Price Structure

The price structure of coal was last examined by the Government in 1947 for the purpose of determining an economic selling price, after taking into account the effect of the Conciliation Board Award and all other relevant factors, including the royalties payable by lessees. The selling prices so fixed allowed for the minimum margin of profit considered by the Government to be consistent with the economic running of the industry. This margin of Rs. 1-8 a ton was reduced by 9 annas, as a result of the price reduction agreed to by the industry in 1949 at the request of the Government, which had promised that, if the industry agreed to such a reduction as an anti-inflationary measure, the Government would take steps to relieve it of the burden of supplying foodgrains to labour. In spite of this promise, on the strength of which the industry agreed to a reduction of 9 annas a ton in the selling price, nothing was done about the supply of foodgrains to labour, and the industry has thus been deprived of a substantial proportion of the profit margin which had been fixed by the Government in 1947, a loss which has never been made good, because every price increase since allowed has been for the purpose of compensating for some specific increase in costs resulting from labour tribunal awards, etcetera.

The question of coal prices is before the Coal Prices Revision Committee which, it is expected, will take into account all the implications of the Mines and Minerals (Regulation and Development) Act, 1957, as enacted in its present form. It would, therefore, be inequitable, says the representation, to fix royalties as a percentage of the present selling price, since the increased royalties laid down in the Second Schedule of the Mines and Minerals (Regulation and Development) Bill, 1957, cannot be met out of the already reduced profit margin, and the situation can only be met by a very substantial increase in the selling price. In the latter case, by increasing the selling price, the royalties will again be automatically enhanced, and a vicious circle will be created—of royalties chasing selling prices. If, on the other hand, it is the intention that such increased royalties are to be met out of existing profits, the already uneconomic margin of profit cannot absorb such royalty rate increases, particularly in certain areas of West Bengal, Bihar and Orissa. The rate of royalty in these areas is very low. In some cases, a fixed rent is paid which works out to a purely nominal amount a ton of less than one anna. But 20 percent of the present selling price would amount to approximately Rs. 4 a ton, which would be disastrous not only for the industry itself but for the whole programme of development envisaged in the second five year plan. The clause 9(I) of the Act provides for payment of royalties at a standard rate and ignores the fact that most mining lessees in the former permanently settled areas of West Bengal and Bihar, have sub-leased portions of their leasehold areas to others on terms which provide for the payment to them of a profit margin on royalties. This profit margin on royalties will be eliminated if a standard rate of royalty is to be paid by all grades of lessees and sub-lessees.

Labour-Management Co-operation

The two-day seminar on labour-management co-operation held here last week, laid down general principles relating to the constitution and functions of joint councils which will form the core of the programme of workers' participation in management. The seminar unanimously agreed that in order to make them effective and manageable, joint councils should consist of an equal number of representatives of management and employees, not exceeding 12 in all. In the case of smaller undertakings, the membership should be not less than six. It was also agreed that decisions should be taken unanimously. As one of the essential criteria for setting up joint councils is that the undertakings should have well-established and strong trade unions functioning; the seminar discussed at length the question of representation on the councils. It was agreed that the employees' representatives should be workers themselves, but where the trade union felt that a non-employee should also be included, the representation of such non-employee members should be restricted to one or, by mutual agreement, to two. The seminar also considered the model agreement prepared by the sub-committee on workers' participation in management, appointed by the Indian Labour Conference. The agreement provides that the joint councils will have the right to receive information from the management on, among other things, the general economic situation of the concern, production and sales programmes, the annual balance-sheet and profit and loss statement and connected documents and long-term plans for expansion and employment. After some discussion, it was agreed that the joint councils should not only be entitled to receive such information, but should also discuss them and make suggestions. It was further agreed that apart from making necessary arrangements for the documentation and dissemination of the information to members of the joint council, it should be given as early as practicable. On certain specific matters, information should be furnished every quarter.

U. K. Repayment of Sterling Pension Funds

The Government of the U.K. has offered to pay on 1st April, 1958, in addition to the annual instalment of £4 million payable by the latter under the sterling pension arrangements of 1955, three more instalments in advance. This offer, which is greatly appreciated in view of India's present foreign exchange position, has been accepted by the Government of India. Letters setting out the arrangement are being exchanged between the Finance Minister and the High Commissioner for the United Kingdom in India. India will thus receive £16 million; £12 million more as an advance payment of the sums otherwise due.

Aid for Small Industries

The Government has received a grant of $2,163,000 from the Ford Foundation of the United States for the development of small-scale and village industries. The money will be used mainly to build up a countrywide network of small industries service institutes and industrial extension centres, a programme which is being executed by the Central Ministry of Commerce and Industry. An evaluation organisation to study the impact of the development programme for small industries will also be established with the help of this grant. Part of the grant will be used for the services of foreign technicians and consultants for these small industries programmes, and for conducting experiments with certain new products for manufacture by small industries.

Food Prices Falling

A feature of the food situation in the past few weeks which gives cause for satisfaction is that the price level is showing a definite downward tendency. Prices are appreciably lower at present than they were last year. This is particularly noticeable in the case of wheat. January and February are lean months—just before the wheat harvest—and during this period prices normally tend to rise. This year, however, prices are not only down, but continue to show a steady decline. In the case of rice, although prices are not as low as they were last year, there is a downward tendency, whereas at this time in 1957 it was in the opposite direction. For instance, price indices ranged from 91 in January 1957 to 96 in February and 97 in March of the year. This year, the trend is indicated by the fact that in December 1957, the index stood at 102; in the first three weeks of January 1958 it came down to 101 and in the last week of the month to 100. A study of the index of wholesale prices (1952-53 : 100), shows that the Food Articles index was 102.5 in the middle of last month compared with 103.8 on 19th January, 1957 and 113.5 on 3rd August, 1957—the peak figure for last year. In cereals alone, the index fell from 98 to 96 between the second and fourth weeks of last month, whereas in the corresponding period of 1957 it went up from 95 to 97. Thus, whereas the cereals index in early January of this year was higher than in the corresponding period of 1957, the month of January closed with a lower index, showing that the trend has been reversed. In fact, with the exception of rice, all cereals and pulses show a decline, compared with the figures for January 1957. The index for wheat was 86 on 18th January of this year. It was 94 a year ago, and, at its peak, 97, on 9th February, 1957. The jowar index was 102 on 18th January of this year against 117 on 19th January, 1957; that for bajra 112 against 134; for maize 104 against 112; barley 90 against 114; gram 63 against 79; and pulses 80 against 86. Only in the case of rice was the index higher than a year ago—101 on 18th January of this year compared with 91 on 19th January, 1957. But even this represents a substantial fall from last year's peak of 112 on 24th August.

DEBATE ON PARKER TRIBUNAL REPORT

BIG RISE IN DOLLAR RESERVES

(FROM OUR LONDON CORRESPONDENT)

SUBJECTS with an important bearing on the economic situation occupied much of the time of both Houses of Parliament last week, and it is unfortunate that so little of the discussion, especially that in the Commons dealing with the Bank Rate Tribunal's report and industrial relations, should have been given up to scoring party political points as opposed to furnishing an objective and constructive survey of their impact on the economic outlook. It is all very well to claim that the unexpectedly large Government majorities of 64 and 69 at the conclusion of the Parker Tribunal debate represented a "vote of censure" on the Opposition for its "smear technique," but the fact remains that the only useful outcome of two days' discussions was the decision to extend the Radcliffe Committee's terms of reference to enquire whether change is desirable in the present constitution and working of the Bank of England. The industrial relations debate certainly furnished the Government with an opportunity to restate its determination not to finance inflation by finding the money for wage increases unrelated to productivity, but it did little else. The trouble seems to lie in the fact that the anticipated crisis to which the Government appeared to be moving has not so far materialised and the Labour Opposition is hard put to it to find justification for its attacks. It must be discomfiting, if no more, to find them misfiring as they have been doing lately.

That the Government still has its problems is apparent from the latest supplementary estimates, which show over-spending during 1957-58 of £128 million, with a further jump of £30-odd million or so yet to be disclosed on defence, carrying total actual expenditure for the year to within a few million of £5,000 million. It was because he could not agree that the estimates for 1958-59 should exceed this total by one percent that Mr. Thorneycroft resigned, and to try and prevent it from doing so that the Cabinet has continued to examine and re-examine departmental needs ever since. Nevertheless, the Treasury's *Bulletin for Industry*, in surveying economic prospects, says that the country has this year an excellent opportunity to achieve a decisive victory over inflation with the fall in world commodity prices, the increase in the scope for more efficient production as a result of the extra capacity installed in the past three years, and the hope of limiting increases in home costs by last September's measures which are at last beginning to show some results. Once again the emphasis is on restraint in seeking higher incomes. That the London bus men have agreed that their wage claim should go to arbitration is at least encouraging.

Reserves Up Again

That sterling is consolidating its improvement may be inferred from the January increase of $131 million in the gold and dollar reserves, which thus rose to $2,404 million at the end of the month. It was the largest rise since October, and if one excludes the big autumn borrowings of dollars, it was the best month for nearly three years. It was achieved without the aid of any special factors, and after meeting the December E.P.U. deficit of $13 million and $3 million to E.P.U. creditors in bilateral settlements. An even more welcome feature of the return is that the U.K. had a surplus of £10½ million with E.P.U. in January, against the deficits in the preceding two months, three-quarters of which will be made available in gold or dollars to help the reserves in February to get off to a good start. The new Chancellor must have received a further fillip from the revenue surplus of £136.5 million in the week before last to lift the Budget out of the red to the extent of £98 million. At the same time last year, the Budget was still £14 million in deficit. Heavy tax payments in following weeks yielded a final surplus for the Budget year of £290 million. A similar performance this year would give a surplus of £402 million, or £60 million less than that budgeted for last April by Mr. Thorneycroft. Capital expenditures "below the line" are still running ahead of last year. To date the deficit here is £530 million, against £450 million a year ago. The overall deficit—current and capital—standing at £432 million is thus £32 million less than at this time last year. It is a moot point whether that position is justification for the National Union of Manufacturers repeating to Mr. Heathcoat Amory all its regular requests for tax concessions to aid industry, including the raising of the surtax starting limit to £5,000, complete revision of death duties, restoration of the 40 percent investment allowance, and a flat rate of profits tax.

Burmah Oil Finance

With the queue of borrowers in the London market lengthening from day to day, it is regarded as unlikely in well-informed circles that the Burmah Oil Company will need to raise money to finance the taking up of its "rights" to Shell's new ordinary share issue, especially as the outlay will be only about £1,670,000. Anyhow, it has been impossible to get confirmation of the rumours to this effect which have been current lately. What is sure, however, is that Burmah Oil will take up the new Shell shares as a company and will not pass on the "rights" to its own ordinary shareholders, as it did with the recent B.P. issue. That does not mean, however, that Burmah Oil will not need to go to the market at some time in the future. The development of its interest in the east Assam oilfield, in partnership with the Indian Government, will undoubtedly call for considerable capital expenditure in due course. The financing of that venture, however, hardly calls for consideration at this stage of the proceedings.

Assam Railways and Trading

At present the Assam Railways and Trading Company functions partly as a trading company and partly as an investment company, but the directors feel that it would be an advantage if the present structure was replaced by that of a holding company. To achieve this, it is proposed to reolace the A or B stock in the Assam Railways and Trading Company by a corresponding amount of A or B shares in a new holding company, to be called Assam Trading (Holdings). The present company would continue as a trading concern. Assam Railways has coal mines, timber works and brickworks, all in Assam, and, as an investment company, has shareholdings in two tea companies and the Rivers Steam Navigation Company. Issued capital is £315.000 in A stock and £600.000 in B stock units of £1 each. Negotiations for the formation of a new timber company in conjunction with the Indian Government are in hand. The object is to work a new forest area to ensure supplies for the veneer mills.

Suez Canal Company Developments

Three negotiators, including the chairman and managing director, M. Georges-Picot, and the British and American legal advisers of the company, have been elected by the shareholders of the Suez Canal Company at the Paris meeting to represent them at talks with the Egyptian Government on compensation for the seizure of the Canal in July 1956, later this month in Rome. These will be preceded by preliminary contacts in Cairo and Paris to prepare the ground for negotiations. Reporting to the meeting, the company's board described Egypt's offer of compensation as laid down in the decree of 26th July, 1956, as vague, impracticable and inadequate. The directors want an agreement which would recognise the company's rights over its non-Egyptian assets and take account of the loss of 12 years' rights under its Canal concession. Total claims against Egypt have been put at £204 million. It will be remembered that the Egyptian decree laid down that compensation would be based on the price of Suez Canal shares on the Paris bourse on the previous day, but M. Georges-Picot said no real offer had been made by Egypt, who had demanded that the company should hand over all its non-Egyptian assets, whereas the company's aim was equitable compensation, which meant restoring to shareholders the financial benefits they enjoyed before nationalisation.

New Chairman of P.L.A.

The chairmanship of the Port of London Authority appears to be almost the preserve of administrators with experience of the east, for within a month of his relinquishment of the post of president of the Chamber of Shipping of the United Kingdom, the vacancy created by the sudden death of Viscount Waverley (who as Sir John Anderson was Governor of Bengal for some years) has been filled by the election of Viscount Simon, deputy chairman and managing director of the P. and O. and of British India Steam Navigation Company. It is understood that Lord Simon will be giving up his active interests in shipping companies as soon as may be practicable. Incidentally, Mr R. D. Ropner, of Ropner and Co. (Management), has been nominated to succeed Lord Simon as president of the Chamber of Shipping of the United Kingdom for the current year, and Sir Nicholas Cayzer, of Clan Line, as vice-president.

Brevities

Mr. W. E. Catto has been appointed a director of Yule, Catto and Company.

Mr. J. W. Laurie has been appointed a director of Dimbula Valley (Ceylon) Tea in place of Mr. W. H. Cooke, who has retired.

Mr. L. E. Gray has been elected chairman and Mr. C. S. Pryor vice-chairman of the Tea Trade Committee. Mr. Gray is a director of Brooke Bond and Company and Mr. Pryor a director of Pryor and Tindall and also represents the Ceylon producers on the Committee.

Sir John Barlow, M.P. for Middleton and Prestwich, has been elected chairman of the Lancashire Conservative M.P.s' textile sub-committee and Mr. J. A. Leavey, M.P. for Heywood and Royton as secretary.

In view of the state of the market, the U.K. Board of Trade announces that no further zinc from the Government's stockpile will be offered for sale for the time being.

On 1st January, there were 80 British ships of 375,026 gross tons laid up in home ports, against only 16 ships of 32,160 tons 12 months before, and also 28 foreign ships of 162,788 gross tons idle in British ports against none a year ago.

From figures issued by the British Man-Made Fibres Federation it appears that the total production was 495.6 million lbs in 1957, compared with 482.6 million lbs in 1956, and with 471.8 million lbs in 1955. Filament yarns accounted for 232.4 million lbs and staple fibres for 263.2 million lbs of the 1957 total.

Bombay

NEW TYRE FACTORY TO BE BUILT WITH ITALIAN AID

I. C. I. PROPOSAL FOR THREE MORE CHEMICAL PLANT

(FROM A BOMBAY CORRESPONDENT)

A NEW rubber tyre manufacturing concern to be called the Ceat Tyres of India Limited—floated by Tatas in collaboration with the Italian industrial firm Ceat S.P.A.—is to be established in Bombay, Tatas have announced. The new company will have an authorised capital of Rs. 4 crores and a paid-up capital of Rs. 1.15 crores, of which 60 percent is to be subscribed by the Italian company and its associates and 40 percent by the public in India. To meet the shortage of foreign exchange, the capital subscribed by Ceat and its associates will be in the form of plant, machinery and other equipment for the factory. Ceat S.P.A. manufactures cables and wires in Italy, France and Venezuela Ceat Gomma, one of the companies belonging to the Ceat group, will provide the technical know-how for the new Indian company. The latter has a technical agreement with the U.S. company, the General Tyre and Rubber Company of Akron (Ohio), to exchange technical know-how. Ceat Tyres of India will derive benefit from this arrangement. The production schedule provides for the factory being commissioned some time in the middle of next year, with a monthly output of 325 tons. It will be gradually stepped up until it reaches 1,000 tons a month in 1961. By this time, in addition to motor-car and truck tyres, the factory will turn out tyres for heavier vehicles.

I.C.I. Projects

Imperial Chemical Industries, in partnership with local capital, has plans to set up three new chemical plant in India, it is reported here. It has already substantial investments in the country. The new plant, when completed in a year or 15 months, it is learned, will add £9 million (Rs. 12 crores) to I.C.I.'s total investment in the Indian chemical industry. Additional schemes now being discussed may raise this to £12 million, (Rs. 16 crores). The new investments proposed will go to two chemical companies, namely, the Alkali and Chemical Corporation of India in Rishra (West Bengal) and the Atic Industries in Bulsar (Bombay), besides Indian Explosives, the I.C.I.-Government venture in Gomia, Bihar, where industrial blasting explosives are manufactured. The manufacturing range and capacity of these plant are to be greatly increased. The Rishra unit already is producing caustic soda, chlorine, hydrochloric acid, zinc chloride, insecticides, enamels, etcetera, and a Rs. 4-crore plant is under construction there to manufacture the Alkathene brand of Polythene. Atic in Bulsar is manufacturing a wide range of vat dyes for the textile industry, in association with Atul Products. I.C.I.'s plant in Sewri is already producing dyestuffs for the Indian market, as also a wide range of auxiliary chemicals suitable for dyeing, printing and finishing textile fibres.

Belgian Credit

Belgium is ready to supply India with capital goods on a deferred payment basis and at 8 percent interest, according to an eight-man Belgian fact-finding mission, headed by Mr. Robert Desprechins, chairman of the Belgo-Indian Chamber of Commerce and Industry, now here. The mission, which is investigating the potentialities of trade between the two countries, has been holding talks with Bombay industrialists and business men. Mr. Desprechins said that Belgium could export cement and steel plants, machine tools, and textile machinery. Belgium also could train technicians and would be in a position to send her technicians to India, if the need arose. He stated that Indian traders had not made an attempt to sell their goods in Belgium, which could import handloom cloth and other commodities, in addition to her present imports of tea, coffee, manganese, jute goods, textiles, hides and bones.

Cloth Stocks Still High

Stocks of sold and unsold cloth with mills, it is reported, are still heavy, although the total on 25th January was 616,000 bales, compared with the peak figure of 664,000 bales on 11th January. Stocks in the same period last year totalled 514,000 bales. The share market is uneasy about the position, and textile shares continue to be depressed. The stocks with mills on 14th December were 618,000 bales, when the State sales tax was converted into a Central excise duty, and the excise duty on medium cloth was cut by 6 pies a square yard up to 31st March, 1958. It was thought these measures would enable the industry to clear its accumulation of stocks. The actual conversion, however, adversely affected floating stocks which had left the mills, but on which neither the sales tax nor its substitute, the additional excise duty, had been paid. While the problem was solved in some States by compounding the levy on floating stocks, several others took time in settling this issue. The resultant confusion in trade circles brought no relief to the industry.

Deterrent Taxation

The retiring chairman of the Indian Merchants Chamber, Mr. Naval H. Tata, presiding over the annual general meeting here, urged a re-orientation of taxation policies in order to encourage and assist the process of savings and capital formation. Describing the capital gains tax, the compulsory deposit scheme, tax on bonus shares, wealth tax and excess dividends tax as measures that had acted as serious deterrents scaring away prospective foreign investors. Mr. Tata said these forms of taxation did not exist in other developed or under-developed countries. He urged the Government to consider the question of concluding double taxation avoidance agreements as early as possible. He thought that in the matter of personal taxation, the concessions already in existence for foreign technical personnel should be made more favourable. The tax on bonus shares was imposed in contravention of the recommendation of the Taxation Enquiry Commission. The distribution of accumulated reserves in the form of bonus shares, which had already borne tax, could not be held to be income in the hands of recipients. He asserted that the wealth tax on companies could not be justified on any accepted principle of taxation.

Textile Research Institute

Dr. Arthur James Turner, a leading British textile technologist, is now here at the invitation of the Bombay Millowners Association, to help this body set up a research institute in bleaching, dyeing and finishing, including engineering. Dr. Turner was last in India in 1923 as the first director of the Indian Central Cotton Committee's Technological Laboratory in Matunga. He was professor of textile technology in Manchester University and the Manchester College of Technology in 1919. He vacated this post to join the Indian Technological Laboratory in 1923, and returned to Manchester to become director of the Linen Industry Research Association. He retired in 1956. Of India's cotton goods products, he says: "The finished products are certainly competitive with those of other manufacturing countries and reach a high standard in a number of special lines."

Importing Egyptian Cotton

The news that an Egyptian trade delegation will visit New Delhi on the eve of the announcement of the cotton import programme for the coming six months, has caused much interest in cotton circles here. It is reported that the delegation is coming here to sell cotton and to offer small discounts with a view to bringing the price of Egyptian cotton on par with equivalent Sudanese varieties. Egyptian cotton is today about 8 percent dearer than Sudanese. Egypt owes india large outstandings and is reported to be eager to pay off these liabilities by way of cotton sales. Since India has to pay for Egyptian cotton in rupees, it is believed here that New Delhi would prefer to buy Egyptian cotton, provided the terms are suitable. Indian mills still require about 250,000 bales of foreign cottons.

Mundhra Move to Create Trust

Mr. Haridas Mundhra, the Calcutta financier, announced in Bombay that he was creating an "irrevocable trust" of all his assets and properties including the shares he held in the Mundhra group of industries, "for the benefit and betterment of the country." Making this announcement in a Press statement, Mr. Mundhra said the trust, which would be called "S. B. Mundhra Industrial Public Trust." would have as trustees persons of "outstanding achievement and service to the country and of unimpeachable character, who enjoy public confidence." The list of trustees, the statement said, would be published when completed. According to the statement, the objects of the trust include "assistance to persons, institutions, industries and undertakings by means calculated to promote industrial progress, furthering the well-being of the working people, and giving help for educational, scientific and charitable purposes."

Cotton Futures Drop

The forward cotton market witnessed a sudden, though not wholly unexpected, drop in values last week due to liquidation orders from all quarters. The change in sentiment was caused by many factors. With the expiry of the February delivery contract of Vijay, tenders to the tune of about 3,000 bales more than what had been expected, were issued. Also, most of the tendered cotton was passed in survey, while appeal decisions were bearish. This tended to depress the price of Vijays, and the delivery contract quotation for February fell by about 15 points. Reports from the textile front indicated again a gradual fall in the demand for cloth. They also stated that some mills were in financial difficulties as most traders who had picked up the goods were not making payments Continued heavy arrivals of the new crop in Berar and Madhya Bharat also caused concern in the ready market, resulting in price declines in the leading varieties. Business was meagre in the foreign section. The fact that the purchase authorisation for 12,000 bales of U.S. cotton under P.L.480 for C.C.C. cotton has been allocated on a *pro rata* basis caused concern in the market.

Mixed Trend in Vegetable Oils

Groundnut staged a modest recovery while castorseed was steady throughout the past week in the oilseeds market. Lower levels attracted short-covering. A broadening demand in groundnut oil due to low levels, the absence of any tenders against the maturing February contract, replacement buying by Akola interests, short-covering and better confidence in groundnut futures, brought about a steady recovery. Improvement in upcountry centres not only staved off selling pressure but evoked buying. Castorseed futures opened easy on increased speculative selling induced by lack of foreign enquiries. Increased application in castor oil of the teji option, the absence of selling pressure from Gujerat, and hopes that Russia will take large quantities of oil kept sentiment steady. Linseed futures continued depressed while cottonseed, nigerseed and kardiseed were quietly easy. About 200 tenders were issued against the maturing February contract in cottonseed.

Jute

POOR FOREIGN DEMAND DEPRESSES GUNNY PRICES

BETTER CLOSING UNDERTONE ON TALK OF BUSINESS WITH RUSSIA

THE jute goods markets have been depressed during the past week, and rates have touched new low levels for the season. There has been very little demand from American buyers, to whom operators here have looked for relief. Trading conditions in that country are poor, and there appears to be little hope of an improvement in the immediate future. Similar reports are coming from Australia, although the cautious attitude adopted by buyers there is prompted by the failure of the grain crop in bad weather. It is thought that enquiries for sacking from that country will be restricted for some time to come. The orders placed by the Government of India for internal consumption have been so small that they have had little effect on prices. The only bullish factor in a week of depression has been the interest shown by, and reports of business with, Russia in near delivery sacking. This has caused a slight recovery towards the close, but the Calcutta mills in general are not interested in ready goods, having sold much of their production for the January-March period several months ago at favourable prices. Their main interest now lies in forward shipment of sacking and hessian, both of which continue to show a premium, and the majority of manufacturers are reported to be keen sellers in spite of the depressed state of the market. There are few buyers, however, and even local bazaar operators have shown caution, bringing speculative activity down to a minimum.

That mill sales have been restricted over the past few months is reflected in the gunny stock figures for January published by the I.J.M.A. Total stocks showed an increase of 21,400 tons to 96,400 tons, which is the highest level since July 1957. In January 1957, mill stocks were 103,200 tons. This is the second consecutive month that stocks have risen, and the rise more or less offset the reduction in the preceding four months. Most of the increase has been in sacking which has risen by 15,100 tons to 53,500 tons, this being 55.5 percent of the total and the highest percentage since July last year. Hessian, on the other hand, although showing an increase in tonnage of 4,500 tons to 29,700 tons, has dropped to 30.8 percent of the total, the lowest percentage for 11 months. The current steadiness of the hessian market is no doubt due to this factor, while the marked increase in sacking has had a considerable influence on heavy goods. The effect of the mills' changeover of looms from hessian to sacking, which began in August last year, is now being felt. But unfortunately the hopes of demand which prompted the initial change have not materialised, and the profit on these fabrics, which was very favourable early in the season, is now small. It was said that the reduction in hessian production might eventually cause a squeeze in 9 and 11 porter fabrics, but due to a recession in world demand, reflected by the drop in American burlap consumption over the past few months, this has turned out to be wishful thinking. However, the hessian section remains confident and a revival of interest could raise prices.

Rise in Production

Mill stocks now fall just short of the monthly production, which in January has totalled 98,300 tons, an increase of 5,500 tons, mainly due to an increase in working hours from 209 to 217.5. Hessian production has risen by 2,300 tons to 34,400 tons (34.9 percent). Sacking has shown an increase of 2,600 tons to 57,300 tons (58.3 percent), which is the highest figure since June 1956. Other goods have increased by 600 tons to 6,600 tons (6.8 percent). In January 1957, production totalled 88,800 tons with 212-hour working, and the percentage ratio of hessian to sacking was 44 to 49, the balance of 7 percent being other goods.

Raw jute consumption last month was 573,000 bales, making a total for July 1957 to January 1958 of 3,615,300 bales. In January 1957, the consumption was 517,700 bales and for the 1956-57 season up to that month it was 3,534,000 bales.

The fibre markets remain weak, with prices tending to decline. Sentiment appears to be governed by the controversial prospect for cuttings. Mills have still not been issued licences, and have delayed purchases of ordinary jute due to the general belief that when licences are issued, raw jute rates will fall further. The lack of interest displayed by mills, combined with the depressed goods market, has affected confidence in fibre. Any business done has been mainly for low quality jute. Good quality fibre is priced out of the market at its current rate because it is scarce. Sellers are reserved due to the disparity between mofussil rates and those offered by mills. It is stated that heavy covering business has been going on against higher-priced contracts for 15th February and February shipment. Since these contracts were made, raw jute prices have fallen by Rs. 3 or Rs. 4 a maund, and sellers' profits have enabled them to pay a little above the current upcountry prices to ensure that their contracts are fulfilled.

THE JUTE MARKETS

Manufactured Goods: Heavy speculative activity marked the opening of the jute goods market during the past week, and selling pressure from several prominent operators forced prices down. In the absence of foreign interest, the sentiment was weak, and sellers, both genuine and speculative, predominated. As the week progressed, selling pressure increased and prices continued to fall, until B Twills were down to below the three-figure level for the first time since 7th September, 1955, when forward B Twills were quoted at Rs. 98-8. The last time ready B Twills dropped below Rs. 100 was 4th November, 1953, when they were quoted at Rs. 98-12. On that date, 40in. 10oz. hessian stood at Rs. 46-4 and raw jute at Rs. 27 a maund. Today hessian is Rs. 6.50 lower (Rs. 232.7 a ton) and jute is Rs. 1.75 lower (Rs. 47.25 a ton). After the week-end, prices improved slightly on reports of business with Russia. Towards the close, the steadier jute markets boosted gunny prices.

Opening quotations for B Twills last Thursday showed a drop of about Rs. 2 to be quoted at Rs. 100.40, with April-June shipment at a premium of Rs. 1.75. In hessian, 40in. 10oz. dropped to Rs. 39.25 with forward shipment 50nP higher. Depressed conditions prevailed because of selling pressure from both mills and speculators. By the week-end, B Twills recorded a new low level of Rs. 99.30, and hessians were at Rs. 38.95. From Monday onwards, there was a steady improvement, and sacking climbed back again to the three-figure level.

At the close, the jute goods market was slightly steadier in sympathy with raw jute and opening quotations on Wednesday morning were as follows:

	Feb.	March	Apl.-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32.05	32.05	32.05	32.10
40in. 10oz	39.45	39.55	39.80	39.90
B Twills	101.25	101.50	102.25	102.75
Heavy Cees (Plain)	100.75	101.50	102.25	102.75
A Twills	123	123.50	124.50	125.25
Liverpools	115.75	116	116.50	116.75
Cornsacks	103	103.25	103.50	104

Raw Jute: There was very little interest in raw jute at the beginning of the past week, and the feeling in general was one of depression. Small business in low quality fibre was reported almost daily, but it was not enough to prevent prices from falling. After opening at Rs. 25 for Assam jute, rates dropped by 50nP over the next two days, with sellers not keen for business. The week-end brought an improvement and mills began to show interest. On Monday and Tuesday, about 150,000 maunds were purchased against previous sales, buyers paying full market prices.

The total business amounted to about 250,000 maunds. Prices paid for Dhubri, Northern and Assam jute varied from Rs. 24.25 to Rs. 24.75 for assortment fibre, and Rs. 27 to Rs. 27.25 for Middles only. Cuttack Tossa was done at Rs 28 and selected Murshidabad Tossa at Rs. 27.75. Large quantities of mesta were purchased at Rs. 21.50 to Rs. 22 for Assam-Northern and Desal mesta and Rs. 21.25 to Rs. 21.75 for Daissee mesta. Jungli mesta was taken at Rs. 19.25 to Rs. 19.75.

In Cossipore, wagon arrivals last week improved to 560 wagons, as against 200 in the previous week and 705 during the corresponding week of last year. All arrivals were of low quality jute which was in good demand for covering against February contracts. At the close, Kishanganj jute was quoted at Rs. 25.50 a maund for garsat quality.

Opening quotations on Wednesday morning were slightly better and were based on the following:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	25.25	Feb.-March
Northern	25	"
Purnea Desal	23.25	"
Daissee	23.50	"
Assam Tossa	28	"
Northern ex Calcutta	24.25	"
Mesta:		
Assam-Northern	22.25	"
Desal	22.25	"
Daissee	22	"
Jungli	20.25	"
Bimli F.A.Q.	18.50	"
Pakistan Cuttings	70 a bale	"

THE PAKISTANI JUTE MARKETS

FALL IN FIBRE PRICES CONTINUES

(FROM A NARAYANGANJ CORRESPONDENT)

THE growers continue to be reserved and the *beparis* continue to insist that they cannot afford to bring in jute at heavy losses. They maintain that they have not got the funds to purchase jute from the interior. Balers, meantime, complain about the lack of sales. Nevertheless, the market continues to recede daily, particularly in lower grades. Arrivals are increasing, and undoubtedly it is in every sense a buyer's market. An interesting development is that western jute, which produces the better qualities, is now arriving in a much drier condition. The fall in the price of cuttings has to some extent been arrested or slowed down by the expectation of purchases by India. X Bottoms appear to be wanted by nobody and the Narayanganj quotation is Rs. 15 a maund and Rs. 1-8 less in the northern areas. It appears that most balers have reasonable sales of Export Firsts on their books and are probably showing a profit on these. There are fairly heavy stocks of Export Lightnings and stocks of Hearts and cuttings are undoubtedly too high It is difficult to see any strength in this market. Even the recent rumour that the Jute Marketing Corporation had sold 40.000 bales to be shipped on a chartered steamer at 110s freight had no effect on the market at all. On the contrary, the conclusions drawn are that this would merely weaken overseas prices.

Reports indicate that the *Dacca Gazette*, which has caused so much worry, particularly among British firms, is to be amended. A notification to this effect has been issued by the Government to the Pakistan Jute Association. In the meantime, several small Pakistani concerns are entering the jute trade hoping to profit by their nationality. Something can be done to give the Pakistanis a greater share of the trade, which is the life-blood of their country. But at the same time, this must be done intelligently, as changes which are too drastic can in the long run only destrov the trade instead of turning it into Pakistani hands.

The Karachi jute goods market has strengthened in sacking, which now stands at a Calcutta equivalent of about Rs. 106-8 a 100 bags. The main reason for this rise is the reported Government purchase of 17,000 bales for delivery February to May. Pakistani mills are also rather well sold for South Africa where the Controller has been buying Liverpool Twills in large quantities. Hessians remain unchanged.

THE FOREIGN JUTE MARKETS

QUIET CONDITIONS PREVAIL

(FROM OUR DUNDEE CORRESPONDENT)

QUIET trading conditions during the past week have brought about a decline in fibre prices. Mill Firsts are down to £111 a ton, Mill Lightnings to £94, Mill Hearts to £83 and grade Hearts to £71, with good marks of Daissee-2/3 offered at from £95 and grade £86 10s. and grade Tossa-2/3 from £102 10s and grade Tossa-4 from £95, all c.i.f., U.K., February-March shipment. Good marks of Daissee-2/3 have been sold at £95 and £96, and Tossa-4 at from £95 to £96 10s spinners being more inclined to buy the dark jute at these rates, in preference to the high-priced white jute. They still complain about their inability to make ends meet at the rates they are allowed to charge for yarns. Mr. W. G. N. Walker has issued a warning to his shareholders through the Press that the profit prospects for Jute Industries Ltd. are not good. In his preliminary statement as chairman on the accounts for the year ended 30th September, 1957, he has said that the profits of the group for the period were £342,923, compared with £477 333 in the previous year, so he has felt bound to give stockholders some interim information on which the current prospects of the company could be judged. Some sections of the company's business have been operating at a lower level of activity and at a much lower level of profitability than at this time last year. Other sections have been busy and the new Douglasfield works is operating on a full double-shift basis. The reduction in the protection received from the Board of Trade last year had so far had little effect on the numbers employed by the company, but it had an adverse effect on the profitability of the weaving business. The full impact had yet to be felt. Taking everything into consideration and barring unforeseen circumstances, it appears to Mr. Walker that the profits for the current year might show a further decline.

Calcutta goods prices fell last week to 59s 6d for 40in. 10oz. hessians and 45s 6d for 7½oz., February and March and 60s and 45s 6d April-June, with B Twills down to 153s 6d, 154s and 155s for the res-

I.J.M.A. STOCK FIGURES FOR JANUARY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of January as follows:

Description	31st January, 1958 Lakh Yds.	000 Tons	31st December, 1957 Lakh Yds.	000 Tons	Increase over (+) or decrease from (−) last month Lakh Yds.	000 Tons	31st January, 1957 Lakh Yds.	000 Tons
Hessian cloth and bag	10,96	29·7	9,36	25·2	+1,50	+4.5	9,83	23.8
Sacking cloth and bag	12,71	53.5	9,16	38·4	+3,55	+15·1	16,09	67.7
Others		13.2		11.4		+ 1.8		11.7
Grand Total (000 Tons only)		96.4		75.0		+21.4		103.2

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

pective positions of shipment, all f.o.b., Calcutta. Jute yarns and cloth are very quiet and there is every likelihood of short-time and general curtailment of production if conditions do not improve in the near future.

I.J.M.A. PRODUCTION FIGURES FOR JANUARY

The Indian Jute Mills Association reports the total production of jute goods for the month of January as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	1,943 tons
	65.8 lakh yds.
	50.9 lakh Nos.
(b) Sacking	56,556 tons
	13,772 lakh yds.
	5,911.7 lakh Nos.
2. Gunny Cloth	
(a) Hessian	32,505 tons
	12,58.0 lakh yds.
(b) Sacking	756 tons
	16.0 lakh yds.
3. Other Manufactures	6,590 tons
4. Total production (above figures combined)	
(a) All kinds	98,350 tons
(b) Hessian (both bags and cloth)	13,23.8 lakh yds
(c) Sacking Do	13,93.2 lakh yds.

Summary

	(00,000 Yds.)			(000 Tons)		
	Jan. 1958	Dec. 1957	Jan. 1957	Jan. 1958	Dec. 1957	Jan. 1957
Hessian	13.24	12.32	14.98	34.4	32.1	38.8
Sacking	13.93	13.09	10,14	57.3	54.7	43.5
Others				6.6	6.0	6.5
Grand Total:				98.3	92.8	88.8
Hours worked:				217.5	209.0	212.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-members mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th February, 1958	324.6	10,968.1	11,292.7
1st to 5th January, 1958	415.0	5,129.1	5,544.1
1st to 5th December, 1957	283.5	10,612.8	10,896.3
	Sacking		
1st to 5th February, 1958	4,710.2	113.6	4,823.8
1st to 5th January, 1958	2,687.6	8.3	2,695.9
1st to 5th December, 1957	8,336.2	95.4	8,431.6

GUNNY SHIPMENTS DURING DECEMBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during December 1957 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	1,252.9	27,007.6	28,260.5
Short Shipped	105.8	726.4	832.2
December 1957 (Net)	1,147.1	26,281.2	27,428.3
November 1957 (Net)	3,003.7	31,198.8	34,202.5
October 1957 (Net)	2,549.2	19,697.5	22,246.7
	Sacking		
Gross	33,475.4	755.8	34,231.2
Short Shipped	850.9	16.9	867.8
December 1957 (Net)	32,624.5	738.9	33,363.4
November 1957 (Net)	39,451.3	806.2	40,257.5
October 1957 (Net)	33,256.1	1,446.3	34,702.4

Commodity Markets

BRITISH TEXTILE REVIEW

WOOL STOCKS REDUCED DUE TO MONETARY STRINGENCY

THE British textile industries are hoping that Bank rate will be reduced before 1958 is far advanced. Industries which use borrowed money on a substantial scale suffer a rise in costs when interest rates are raised. On the other hand, an increase in the cost of holding stock enforces economy in holding it, and tends thereby to reduce the prices of raw and intermediate materials. Last year's monetary changes have had, therefore, conflicting effects on total costs. But the net effect of the changes has certainly been adverse. Wool is the textile material most affected by British monetary manoeuvres, if only because Britain absorbs so much of the wool offered. The restrictive monetary policies of the United Kingdom and the United States (relaxed in the latter but not yet in the former) are partly responsible for the weaker tendency of trade, and for a reduction of values which has introduced again the problem of depreciating stocks. In the U.K. wool industry particularly, the increase in the cost of carrying stocks after the rise in Bank rate to 7 percent last September accentuated a tendency which had been in progress for many years previously, to reduce the level of stocks in relation to turnover. More than ever now, buying of raw wool is related to new orders for intermediate products, buying of the latter being related to new orders for finished goods.

But processers and manufacturers cannot "live on stocks" for long when, over the years, stocks have already been reduced. Trade in the commodity cannot, therefore, decline much while business in finished goods remains active. The effect of monetary stringency on final demand should therefore be closely watched. Already demand in some branches of the finished trade has contracted, and some final prices have been reduced. The wool industry's activity is still at a generally high level, and the burden of financing it is heavy. After the rise in Bank rate and the imposition of a new limit on their total advances, the banks' advances to the wool industry were reduced: the quarterly analysis of banks shows a decline in this item from £46.6 million in August to £43.3 million in November 1957. But in November 1956, the figure was much lower at £30.7 million. As ordinary industrial customers have to pay 8 percent or 9 percent on overdrafts while Bank rate is at 7 percent, current overdrafts are a substantial element in costs. The cost of first class trade bills is rather less but, at discounts of 7½ percent and upwards, still abnormally high. It is feared that high interest rates will have more pronounced effects this year if they persist for long.

Trade Outlook

The relative stability of prices of American-type cotton was an important factor in the big recovery in the profits of the huge spinning combine, Lancashire Cotton Corporation, in its financial year ended October last. Its trading profit had previously been depressed by the drastic writing down of values, but last year it regained most of the ground lost since 1953-54, advancing in the year from £2.9 million to £4.0 million. The increase in yarn prices last July was another factor in the improvement. The group had at that time heavy orders for yarn on its books, and the financial year ended with a larger volume of orders on hand than at the end of any of the preceding four years. Lancashire Cotton's profits and report were better than the trade expected and had a tonic effect on confidence. But it was, of course, known that the trade in cotton goods was stronger than that in artificial fibre goods last year. The home market is the basis of the trade, and it was comparatively buoyant last year. But there are already some signs of a change for the worse.

The industry's order books have been diminishing again, mainly because the rise in Bank rate has had its inevitable effect on dealers' stocks. The growth of imports of cotton cloth is also affecting the spinners' customers. The impact of this development has been moderated by a reduction of imports of yarn (particularly in counts up to 26s) last year. It is difficult to be sure whether less yarn has been imported because more has been produced at home, but to the extent that such suppliers as India, Hongkong and Pakistan have reduced their pressure to sell yarn abroad, because more has been consumed at home in cloth destined for export, the British industry cannot permanently benefit from the change.

Increased Exports from China

Of the suppliers of grey cloth and made-up goods to Britain, Lancashire's attention has shifted from India to China, as a supplier either directly or through Hongkong. Direct Japanese exports to the United Kingdom are a familiar problem, and direct Chinese exports, while not yet large, were increasing rapidly in the later months of last year. But it is the trade through Hongkong, whereby the protective tariff can be avoided, which is causing concern at present. As Mr. Charles Schofield, general secretary of the Operative Spinners Amalgamation (one of the big unions in the cotton textile industry), said in Manchester last month: "Chinese and Japanese yarn and cloth can be imported into Hongkong, made up into garments, and exported to the United Kingdom. If these articles have an Empire content of 25 percent, they will be admitted free of duty and also without limitation as to quantity."

Mr. Roger Lee, chairman of the Lancashire Cotton Corporation, has also raised this question of origin in relation to the proposed free trade area in Europe. If Britain is to participate in the scheme, he says, it is of the utmost importance that there should be safeguards against any unfair practices and that definition of origin should be so devised as to prevent the European market from being flooded with textiles made from Asian yarn or grey cloth. This is a general problem, closely concerned with the U.K.'s system of preferential tariffs. China is a particular problem, since her emergence as a major producer of textiles. Mr. F. J. Erroll, Parliamentary Secretary to the Board of Trade, who recently visited China in his official capacity, has warned British manufacturers that that country will develop her export potential as rapidly as possible.

Import Restrictions in New Zealand

The United Kingdom's textile organisations are still hopeful of increasing trade in some markets abroad, even if the general tendency of this country's exports of textiles, at least of cotton goods, must continue downwards. Early this year the Cotton Board announced the imminent departure of one of its members, Mr. H. Haygarth Jackson, to Rhodesia and Nyasaland to prepare the ground for a promotion campaign to be conducted there later in the year.

While the African continent, generally, still seems promising, the import restrictions imposed by New Zealand have shocked textile traders here, the more so as the dominion was still an expanding market last year. On last year's figures cotton yarn and fabrics are, by a moderate margin, the principal category of textiles shipped from Britain to New Zealand, but it seems that woollen and worsted yarns and fabrics, in which trade has also been substantial, will suffer most from the restrictions.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded by 0.3 percent to 105.6 during the week ended 25th January, 1958, compared with 105.9 (revised) for the previous week. The index was lower by 0.7 percent and 2.0 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The monthly average for January 1958 worked out to 105.9 against 107.0 for the previous month and 107.3 for January 1957. Lower prices of onions in Calcutta (−25%), potatoes in Kanpur (−14%), oranges in Calcutta (−8%), rice in Jagdalpur and Marcara (−7% each) and in Trivandrum (−5%), meat in Bombay (−7%), bajra in Agra, mustard oil and black pepper (−5% each), jowar and chillies (−4% each), maize and turmeric (−3% each), barley, masur and groundnut oil (−2% each) and wheat, arhar, coconut oil, tea for internal consumption and salt (−1% each) brought down the index for Food Articles by 0.3 percent to 102.2 although the prices of potatoes in Delhi (+17%) and in Farrukhabad (+5%), rice in Shimoga (+8%), oranges in Nagpur (+8%) and in Madras (+7%), fish (+6%), milk (+5%) and eggs (+1%) witnessed a rise. The index for Tobacco fell by 1 percent to 94 due to a decline in the prices of cigarettes, Scissors (−4%). A decline in the prices of castor oil (−2%) and kerosene oil (−1%) was responsible for bringing down the index for the Fuel, Power, Light and Lubricants group by 0.2 percent to 114.2. The index for Industrial Raw Materials declined further by 0.6 percent to 112.7 compared with 113.4 (revised) for the previous week due to a fall in the prices of linseed in Kanpur and gingellyseed in Jhansi (−5% each), rapeseed (−4%), cottonseed (−2%) and raw cotton (−1%). The prices of linseed oil (−2%) witnessed a decline while those of copper (+2%), zinc and coir yarn (+1% each) showed advances and in the result the index for Intermediate Products fell by 0.2 percent to 106.6. The index for Finished Products also reached by 0.2 percent to 107.6 due to a fall in the prices of handloom cloth (lunghies) in Madras (−5%) and oil cakes and paper and newsprint (−1% each).

EXPORT DUTIES ON MANGANESE ORE

The Government of India has reviewed the export duties on manganese ore and has decided to abolish, with immediate effect, the export duty on manganese ore in which the manganese content, expressed as metal, calculated as a percentage of the moisture-free ore, is below 42 percent. The Government has also decided to reduce the existing duty on such manganese ore in which the manganese content is 42 percent and above, but does not exceed 44 percent, to Rs. 10 a ton.

CAT
MOTOR GRADERS

All over India on the big construction projects with municipalities; state farms; and with the leading contractors, you can see Caterpillar Motor Graders hard at work.

Building or maintaining existing roads, ditches, shaping banks, there is no tool like the profit making Caterpillar Motor Grader.

All over India, and throughout the world successful contractors and project engineers give Caterpillar their first choice. The main reasons for this preference are the proved low cost, high production and long-lived performance of these famous machines.

Ensure the job gets done to time by using a Caterpillar Motor Grader. There are three models the No. 12, 112 and 212. One of these, or more, is the answer to your problem.

CATERPILLAR*

BIGGER SOUTH INDIAN TEA OUTPUT

SLUMP IN GINGER MARKET

(FROM A SOUTH INDIAN CORRESPONDENT)

THE Cochin tea market, in sympathy with other markets, has been showing a tendency to fall. But quality grades still command a premium, and the south Indian producers have contributed some very fine teas to the world market during this past cold weather. For a few weeks more, the market will continue to receive the quality output of the winter season. The year-end figures relating to tea production in south India are now available. They place the 1957 crop at 144.5 million lbs, compared with 126 9 million lbs in 1956. The tea market in Cochin is now more popular. Almost all important tea buying countries of the world are represented here, the latest being Russia. She has been operating for some time now through a local private trading concern. But this market is experiencing some difficulty on account of the 5 percent single-point sales tax which is being collected by the State Government. Growers are tempted to ship their teas directly in order to escape the payment of this levy. Consequently, Cochin's importance as a tea market is likely to diminish, unless the State Government withdraws the tax.

Cashew Factory Staff Demonstrate

The 2,000-strong cashew factory I.N.T.U.C.-led staff union of Quilon staged a big demonstration in Trivandrum on 2nd February, demanding the quick implementation of the Industrial Tribunal's award. The Tribunal has recommended enhanced pay scales and other emoluments for different categories of the staff in cashew factories with effect from 1st October, 1957 The most important feature of the award is that it has fixed a uniform monthly rate for them. The factory owners refuse to implement it on the plea that it is beyond the capacity of the industry to pay.

Ginger Prices Dip

The 150,000 ginger growers of Kerala are now in a sad plight because of a steep fall in the price of their produce. It is stated that in the past 15 years, they have never had faced such a situation. Three years ago, ginger was fetching the handsome price of Rs. 1,400 a candy of 6 cwts. Last season, on an average, the price ruled between Rs. 700 and Rs. 800 a candy. But now it is difficult to get buyers for even Rs. 200 a candy. Prices have dipped to this level in spite of the fact that the current season's production is considerably lower than last season's. According to the growers' estimate, the cost of production for a candy of ginger amounts to Rs. 600. Even if it is a little exaggerated, the present price of Rs. 200 a candy is much below the production cost. The Ginger Marketing Co-operative Society in Monippally (north Travancore), which is the only one of its kind in Kerala, has recently made three suggestions to end the slump in the market. Briefly, they are: (1) a committee should be appointed by the Government to enquire into the present slump in the ginger market and to suggest remedies for the situation; (2) the Government should purchase the floating stocks in the market and those with the growers, at an average of the prices of the past five years. Prices can thus be pushed up and the stocks with the Government can be sold in an improved market. The margin that the Government gets from the sale should be distributed among the growers after taking a reasonable rate of interest for the money it advances for the purpose; and (3) a statutory board for ginger should be constituted and the marketing of the commodity should be entrusted to it, as in the case of the Coffee Board. Last season's production of ginger in Kerala was estimated at the record figure of over 15,000 tons. Exports totalled a little over 9,500 tons. Ginger being an annual crop, its production varies widely according to the price incentive the grower is offered.

Standards for Tapioca Products

The Indian Standards Institution has agreed to take urgent steps to formulate standards for tapioca products, at the instance of the Government of Kerala. A State Government notification states that action is being taken to get standards fixed for the use of tapioca in the textile industry and for using it as animal fodder. It is estimated that Kerala has about 534,000 acres under tapioca cultivation and the annual output is estimated at 1,494.000 tons. Tapioca is a major agricultural product of the State, and the largest share is consumed locally as a subsidiary food material. The industrial use of the commodity is very limited at present, although it has been found from research that it can be profitably put to several uses.

CALCUTTA TEA AUCTIONS IN JANUARY

STEADY DEMAND FOR QUALITY GRADES

FOUR sales were held during January, and a total of about 239,000 packages was catalogued. The month opened with a strong demand and a general advance in rates, except for the more ordinary medium B.O.P.'s which continued a weak feature. Any bright liquoring B.O.P.'s, however, were fully firm to dearer, while medium O.F.'s were strong and frequently dearer, especially where quality showed improvement, when prices well above valuations were often realised, say Messrs. Carritt Moran and Company Private Ltd. in their monthly tea market review. Common and medium brokens advanced by 6 to 10nP and clean black Fannings grades, the strongest feature of the Sale, were 10 to 14nP dearer. There was a better enquiry for C.T.C. teas, especially Fannings grades which were often dearer, and non-wither Legg-cut teas appreciated by about 10nP for the more ordinary kinds, while the brighter liquoring teas in this category were often up to 20nP dearer. Well made O.P.'s and Pekoes were sought after at slightly higher rates and stylish B.P.S.'s were in demand, while the comparatively small quantity of Darjeeling tea on offer sold well. In the second Sale of the month, demand was still strong, and plain and medium B.P.'s and Fannings advanced by 2 to 4nP. Medium B.O.P.'s and O.F.'s with improved quality were keenly competed for and generally sold above valuations, but ordinary medium B.O.P.'s were again a weak feature. C.T.C. teas were about steady, and the brighter liquoring non-wither Dooars were 4 to 6nP dearer. Whole leaf grades and B.P.S.'s were about steady, but any Darjeelings with flavour generally sold above valuations. There was a less healthy tone in the market during the last two Sales, and the demand was mainly for the brighter liquoring teas of all types, which were firm to dearer. Medium O.F.'s in this category continued strong, and some useful prices were realised for a few attractive autumnal Darjeelings. Most other kinds registered declines which practically eliminated the gains of the previous two weeks, the poorer medium C.T.C. grades and ordinary medium B.O.P.'s being particularly weak features in the last Sale.

Darjeeling Leaf appearance continued very satisfactory, although towards the end of the month, a number of teas naturally were somewhat browner. Cup quality showed an improving tendency, and in the last two Sales, several invoices with quite attractive autumnal flavour were on offer. A seasonal improvement was noticeable in many of the teas from Assam, and a number of bright liquoring invoices were catalogued. Practically no true autumnal teas were seen however. Leaf appearance remained fully up to the expected standard, although rather more stalk and fibre was noticeable at times in the lower grades. There was very little change to note in the appearance or cup quality of the Dooars offerings. An occasional brighter liquoring invoice of orthodox manufacture was seen, and some of the non-wither Legg-cut teas also showed some improvement. Both leaf appearance and cup quality of Cachar teas were about average for the time of year. Stalk became a little more noticeable in many cases, but in the better estates, it was kept to the minimum expected.

Internal Market

Altogether, a total of 8,757 chests of Leaf was catalogued for Sale. Demand during the earlier two Sales was good and prices were firm or dearer, but thereafter, demand weakened and prices were irregularly easier. The few invoices of green tea on offer sold at about December's rates. Dusts offered for sale were 77,938 chests. There was a good general demand during Sale No. 27 and Sale No. 28, but the tone was decidedly easier in the following two Sales. Orthodox Assams, Dooars and Commons were firm or dearer in the earlier Sales, but prices declined in the later Sales. The better liquoring medium, and best liquoring C.T.C. Assams were well supported, and were appreciably dearer in the first three Sales, but demand weakened in the final Sale and prices fell by as much as 20nP and sometimes more for C.T.C. grades.

	1957-58 Rs. nP	1956-57 Rs. nP
Sale No. 27 Clean Common Dust	1.62	2.03
Sale No. 28 " " "	1.63	2.07
Sale No. 29 " " "	1.62	1.90
Sale No. 30 " " "	1.57	1.82

Export sales up to and including No. 30 were 1,434,532 chests at an average price of Rs. 2.23 against 1,537,974 chests (Rs. 2.52) during the same period of last year. Internal sales were of 53,464 chests of Leaf and 487,473 chests of Dust at an average price of Rs. 1.50 and Rs. 1.91, respectively, compared with 42,036 chests and 510,699 chests (Rs. 1.67 and Rs. 2.22), during the corresponding period of the 1956-67 season.

The estimated North Indian crop to the end of December 1957 was 521,365,843 lbs, compared with 540,054,236 lbs to the same date last year. The average figure at this date for the three years 1954-1956 was 530,888,808 lbs.

January saw a slight overall decline in the price of export quota. From 16¼nP a lb, the price rose to 18nP a lb within the first week and declined gradually from then on to 14nP a lb at the end of the month, at which price business was done at the close.

Arrivals of tea in chests in Calcutta warehouses between 2nd December, 1957, and 23rd January, 1958, with the corresponding figures of the previous season in parentheses, were by steamer (426,224), 156,337 by rail (136,345), 11,847 by air (17,155), making a total of 510,870 (579,724) chests. From the beginning of the season, 1st April, 1957, to 23rd January, 1958, arrivals have been: 2,929,270 by steamer (3,010,100), 1,020,524 by rail (1,001,842), and 167,694 by air (149,446), making a total of 4,117,488 (4,161,388) chests.

COCHIN TEA SALES

At Dust Sale D, 775,000 lbs of tea were on offer. There was a good general demand, but prices were irregularly lower by 10nP or 15nP all round.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for January 1958:

Upper Assam: Weather generally seasonable, with useful light rain; hail storms have been reported from Naharkatiya, but damage is slight.

Central Assam: Weather generally seasonable, but rain is deficient in Golaghat and Nazira.

Lower Assam: Weather dry in Nowgong; good rain has fallen in Bisnauth; prospects fair.

North Cachar: Weather seasonable, but rain wanted in Lakhipur.

South Cachar: Weather seasonable; good rain has fallen generally and prospects are now brighter.

Eastern Dooars: Weather seasonable with useful light showers in Kalchini; immediate prospects fair.

Central Dooars: Weather dry and rain badly wanted.

Western Dooars: Weather seasonable though rain is deficient in Oodlabari where blister blight is also prevalent.

Darjeeling: Weather seasonable.

Terai: The season has closed.

Engineering and Transport

EXPORTS OF THE U.K. AVIATION INDUSTRY INCREASE

LARGER SALES OF CIVIL AIRCRAFT

THE British aircraft industry's export total of £116,471,110 during 1957—an increase of 11½ percent over the previous record annual figure in 1956—contained a greater amount of civil aircraft and engines than ever before. During 1956, some 36 percent of the export total was accounted for by civil aircraft and engines. In 1957, this figure was 46 percent. While the importance of military sales—which will continue to be large for several years yet—has never been under-estimated by the industry, it has been well appreciated for some time that civil sales must form the major part of the future export trade.

The U.K. aircraft industry's export total in December 1957 at £17,516,043 was the biggest ever recorded in a single month. It brought the year's total to £116,471,110, an increase of 11.5 percent over the previous record annual figure of £104½ million achieved in 1956—itself a 58 percent increase over the 1955 total. So, for the third year in succession, the industry has sold more of its products abroad than ever before and, since 1954 when exports amounted to £56 million, the total has been more than doubled. Since the end of the war, the aircraft industry's exports have amounted to more than £650 million of which some £167 million has been accounted for by the sale of aero-engines.

India headed the list of overseas buyers with almost £11 million worth of aircraft and parts: the Netherlands was second with just under £6 million, then Sweden £5.6 million, the United States £5.1 million, Canada £3.9 million, France £3.1 million, and Israel £3 million. It will be noticed that dollar orders featured prominently, although their full extent cannot be assessed accurately as engine and component totals cannot be broken down into separate countries. The monthly averages over the first and last six-month periods of 1957 augur well for 1958. Between January and June, the average was £8.8 million and from July to December £10.6 million. Discussing orders obtained during 1957 for military aircraft, the *Manchester Guardian* said recently: "This was the year in which the doom of the manned fighter and bomber was loudly proclaimed on all sides. The answer of the British aircraft industry was to sell £90 million of military aircraft abroad. Orders were placed during the year for about 450 military aircraft, largely fighters and bombers, at a total value believed to be a record." These orders, and many others for civil aeroplanes, aero-engines, parts and components, are expected to raise the export totals of 1958 and 1959. Last year, when announcing the record 1956 export total, the Society stated that "the industry, while proud of its 1956 record, is determined to consolidate and expand established and recently won overseas markets." During 1957, it did just that—and the process continues.

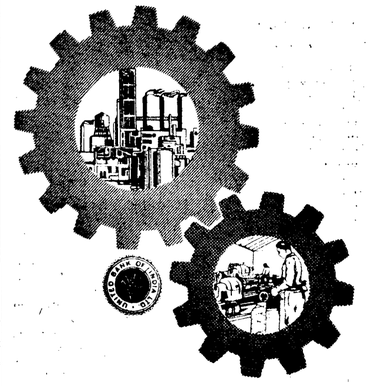
Increased World Air Traffic

World scheduled air traffic is increasing, according to various estimates, at between 10 percent and 16 percent each year. This represents a 100 percent increase every six years. Air traffic in 1957 amounted to 87 million passengers, an increase of 13 percent over the 1956 total. Passenger miles were 51,000 million (16 percent up), and cargo ton miles 1,150 million (11 percent up).

Need for New Equipment

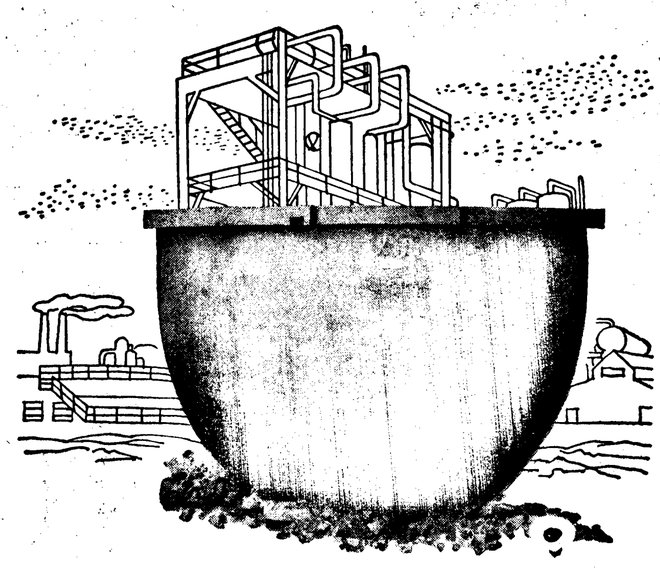
Last year, Peter Masefield estimated that, by 1965, there would be a capacity shortage of aircraft representing 18,500 million ton miles—assuming that no more airliners were ordered. Lord Douglas, in his Brancker Memorial lecture a year ago, estimated that between 1957 and 1970 world airline requirements for new equipment (in addition to aircraft already ordered at that time) would be:

	Turbojet Aircraft	Turboprop Aircraft
Short range	800	2,500
Medium range	700	800
Long range	600	500
	2,100	3,800



The value of these aircraft would be approximately £3,500 million and £3,000 million, respectively. Other estimates have placed these requirements even higher. *The Aeroplane* has said that, for a number of years to come, two-thirds of the forecast increase in air traffic will be on short and medium range routes. The question is what share of this large, widely forecast increase can British manufacturers expect to obtain.

Jets and Turboprops



Of all world air traffic, some 66 percent is "United States domestic". This proportion is expected to decline between 1958 and 1970 to a conservative estimate of 50 percent of the world figure. Therefore, the total market outside the United States in this period is expected to be, on the basis of Lord Douglas's figures, about 3,000 jet and turboprop airliners worth more than £3,000 million. Of these, long-range aircraft total 1,100, leaving 1,900 designed for short and medium-range routes.

Calcutta Markets

STRONG DEMAND AT TEA EXPORT SALE

SUPPORT FOR GOOD DUSTS

AT Sale No. 32, held on 10th and 11th February, offerings at the Export auction amounted to 60,322 packages. There was a strong demand with buyers closely following quality which showed an improvement. Orthodox B.P.'s were generally 2 to 4nP dearer, while Fannings were 4 to 6nP dearer and sometimes more, and clean black Dooars B.O.P.'s were also higher by 4 to 6nP. The more ordinary medium B.O.P.'s met with a better demand, and these were about steady while the brighter liquoring ones were dearer by 5 to 10nP, the better medium O.Fgs. often selling well above valuations. There was better competition for C.T.C. grades particularly for Fannings and while the poorer types were often difficult of sale at 10nP below last rates, the better mediums and the best were frequently dearer and the very best ones were steady. Legg-cut teas were a little irregular, but the brighter liquoring ones in this category were again dearer. Whole leaf grades were well competed for, especially the more stylish ones which sold at dearer rates. There was good support for Darjeelings and those with useful leaf appearance and flavour realised prices above valuations.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.25 to 2.30	2 4 0
Plain B.P.	1.54 to 1.58	1 15 0
Plain Fannings	1.64 to 1.68	
Medium B.P.	1.60 to 1.64	2 0 0
Medium Fannings	1.72 to 1.76	
Best Assam C.T.C. B.P.	2.50 to 2.60	2 8 0
Best Assam C.T.C. Fgs.	2.50 to 2.70	

At the Internal Sale a total of 18,786 chests of Dusts was on offer Occasional invoices showed improvement in quality. There was a good general demand, and the plainer liquoring orthodox descriptions were frequently easier, but those with improving quality were dearer. Non-wither Dooars continued to be well supported at about valuations. A few Darjeeling invoices with flavour met with keen competition, but the more ordinary kinds from this district were generally neglected. There was good demand for the best liquoring and brighter liquoring medium C.T.C.'s, particularly the powdery grades which were often dearer, but the remainder were again easier.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.54	1 12 6 to 1 13 0
Medium Assam Grainy Dust	1.56 to 1.58	1 13 6
Medium Assam C.T.C. Dust	1.70 to 1.60	2 2 0
Best Assam C.T.C. Dust	2.90 to 3.10	2 10 0

There was a good general demand for the 2,552 chests of Leaf on offer. Prices were a little irregular, and sometimes in buyers' favour.

FREIGHT MARKETS MORE ACTIVE

THE freight markets were considerably more active during the past week, but the grain fixtures reported steady rates. The transatlantic coal trading remained quiet and paid 23s with 3,000 tons discharge free U.S. Pacific to east coast India grain shippers paid 62s 6d two ports discharge 2s 6d extra with 1,000 tons discharge free. North Pacific to Japan 13,000 tons 5 percent barley was fixed at $(U.S.)5.75 free discharge. Two ports Burma to two ports Antwerp-Hamburg range 6,000 tons rice in bags reported at 89s 9d liner terms. Murmugao ore charterers paid 45s on gross terms for a voyage to the Continent. Pakistani coal charterers have accepted a few more vessels Calcutta-Chittagong or Chalna at the last reported rate of 24s 6d f.o.b. owners, trimming and discharge at the current rate. Quite a number of trampers are free and looking for employment from India. Vessels which are free in Calcutta are handicapped due to the drastic cut in the river Hooghly draft over the already low draft presently forecast.

LINSEED FALLS

Linseed prices declined sharply towards the middle of the past week. When the levels of Rs. 21 for seeds and Rs. 49-8 for oil were reached, there was a slight improvement. At the close, prices were still lower than those prevailing a week ago. Poor local demand and the lack of crushing parity were responsible for the stagnant state of the market. Exporters who were offering linseed oil to the United Kingdom at £106 earlier in the week later refused buyers' bids at £107. Latest quotations were based on February-March at Rs. 21-6 a maund.

HIDES AND SKINS

The market in skins ruled dull, while that in hides was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 4th February and 10th February, 1958)

Cowhides: Wet salted (Ord) 15,800 pcs on the basis of Rs. 10.87 to Rs. 12; Wet salted (slaughtered) 14,600 pcs. on the basis of Rs. 12.50 to Rs. 22.

Goatskins: Wet salted (Patna, Daissee and Kustia) 56,300 pcs. on the basis of Rs. 285 to Rs. 310, Rs. 350 to Rs. 360 and Rs. 380 to Rs. 390; Wet salted (she-killed) on the basis of Rs. 3.50 and (he-killed) on the basis of Rs. 4 a piece; Assam-Dinajpur 900 pcs. on the basis of Rs. 350 to Rs. 360; Muzafferpore (heavy) 1,100 pcs. on the basis of Rs. 375.

Bazaar Stocks

(10th February, 1958)

Cowhides: Wet salted 70,500 pcs.

Goatskins: Wet salted (Daissee, Patna, Kustia and Killed) 19,000 pcs.; Assam-Dinajpur-Jalpaiguri 142,000 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 518,000 pcs.

WHEN the wind blew southerly Hamlet could tell a hawk from a handsaw. Pluto, the airport pet, can do better. As a trained plane-spotter, he can tell a Viking from a Dakota, a Skymaster from a Heron. But now he is puzzled. He has never heard before the whistle of the Viscount.

The whistle of the Viscount is a pleasant change from the roar and hum of piston engines so familiar to us. It represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets. To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.

Very shortly Viscount services will be extended to all the other I A C trunk routes.

INDIAN AIRLINES CORPORATION

COMPANY AND PUBLIC NOTICES

BHARAT COLLIERIES LIMITED

NOTICE is hereby given that the 13th Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Saturday, the 8th March, 1958 at 12 Noon to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June, 1957.

(2) To declare dividends on Preference and Ordinary Shares.

(3) To elect a Director in place of the retiring Director Shri K. Khaitan, who retires by rotation under Article 106 of the Articles of Association. The retiring Director being eligible offers himself for re-election.

(4) To elect a Director in place of the retiring Director Shri Balabux Poddar, who retires by rotation under Article 106 of the Articles of Association. The retiring Director being eligible offers himself for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors Messrs. K. N. Gutgutia & Co. being eligible offer themselves for re-appointment.

As Special Business:

(To be proposed as an Ordinary Resolution):

"Resolved that with effect from the commencement of the Companies Act, 1956, consent of the Company be and is hereby given to the Board to contribute and/or subscribe to any national, political, charitable, benevolent, public or general and other object, Fund or Trust (not directly relating to the business of the Company or welfare of its employees) from time to time, such amounts as may be considered proper by them in excess of the limits laid down in Section 293(1)(e) of the Companies Act, 1956.

Further Resolved that the donations already made in excess of the limits prescribed under the Companies Act in Charity and Donation during the year ending 30th June, 1957, be and are hereby approved and confirmed."

EXPLANATORY NOTE:

According to the provisions of Section 293(1)(e) of the Companies Act, 1956, the Board of Directors of a company can make contributions to charitable and other funds not directly relating to the business of the Company or the welfare of its employees within the limit of Rs. 25,000/- or 5% of its average net profits, whichever is greater. In some exceptional cases the donations may exceed the limit prescribed. In order that there may not be any contravention of the Act at any time, consent of the shareholders is sought to empower the Board of Directors to make donations as mentioned in the resolution.

During the year ended 30th June, 1957, the Company paid Rs. 37,490/56 nP towards Charity and Donation including Rs. 25,000/- to Indian National Congress. Out of this amount Rs. 12,490/56 nP exceeds the limit of contribution as laid down u/s 293(1)(e) of the Companies Act, 1956, and the consent of the shareholders is, therefore, sought for approval and confirmation of the excess amount paid.

The Share Transfer Books of the Company will remain closed from 1st March, 1958 to 8th March, 1958, both days inclusive.

By Order of the Board of Directors,

MAZAGON DOCK
helps to expand
INDIA'S PORT FACILITIES!

A ROCK-BREAKER DIPPER DREDGER

The shipbuilding and engineering experience of Mazagon Dock, famous for many years, is playing a vital part in the expansion plans of Indian ports. Several new vessels including dredgers, tugs and fire floats, now under construction at Mazagon Dock, will help further increase the facilities at Indian ports.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE ECONOMIC CONSEQUENCES OF MR. MUNDHRA

LESSONS FOR NATIONALISATION POLICY AND PRACTICE

OPINION about the merits of the Chagla report appears already to be divided. That is not surprising when its likely consequences are studied. A good deal of official mud was stirred up; some smugly entrenched interests were badly shaken; a few cherished ideals are being questioned; and even, it appears, regional pride has been outraged by the resignation of Mr. Krishnamachari. And what is perhaps more important is that the findings have, according to Mr. Nehru, been based on inadequate evidence, although, of course, through no fault of Mr. Chagla. But none of these points constitutes the slightest excuse for not welcoming the labours of Chief Justice Chagla for what they are—the finest contribution to India's democratic future which has been made since Independence, and a message to the world that at least one Asian Government is capable of dealing in an objective and constitutional manner with mistakes and improprieties committed by its members and their civil servants. Whatever the sequel to the Chagla enquiry, it would be the height of folly to attempt to sully the admirable picture of legality which has been given. Its inconveniences for Mr. Nehru's Government must be many, at least in the short run, and the temptation to avoid some of them is bound to be strong. But the long-term benefits for the future of the Congress Party will certainly compensate for the irritations, and if more investigations are to follow, the impression that they are in any way designed to supplant and not supplement the Chagla findings should be studiously avoided. The public appears satisfied with Mr. Chagla's work, and in a democracy this must be the deciding factor. If anything is to save the Congress from the fate of the Muslim League, or worse still the Kuomintang in pre-communist China, it is enquiries of this kind, conducted in this manner, that will do it.

It is probably inevitable that the evidence has given the impression of being incomplete. This does not mean that the principles substantiated are in any way invalid. That of "ministerial responsibility," for instance, is one without which no civil service can operate satisfactorily in a democracy. The fact that it has been upheld by Mr. Krishnamachari's resignation seems to have given some people a good deal of heartache, not least the ex-Finance Minister himself. But its effect on the confidence and efficiency of senior civil servants must be wholly beneficial in the long run. Similarly, the points made by Mr. Chagla in his summing up are not going to be liked by those whose views about the running of nationalised institutions are based on wishful thinking rather than cold logic—or for that matter on the individual desire for power—but again, their enunciation will provide a reference for the future which will be worth many times its weight in gold. In fact, the lessons of this report, if trouble is taken to learn them, should make a substantial contribution towards realising the kind of socialism the Government has in mind. If they are ignored, however, then it is not difficult to appreciate what can happen to the socialistic goal, and visualise the muddle of inefficiency and possible corruption in which it could eventually go down.

The Government cannot complain if its economic policies appear to be questioned by Mr. Chagla's findings. The nationalisation of the life insurance companies was recommended to the country as a remedy for the use of public funds for the benefit of individuals. Yet the report has established that the purpose of buying Mr. Mundhra's shares was to assist that gentleman himself. It was said against the private companies that they tried on occasions to manipulate the stock markets. But this was precisely the excuse the Finance Ministry attempted to give for its actions. It is impossible, therefore, to appreciate what value the nationalisation of insurance has been to the country. Unless something drastic is done to correct this slovenly method of working, it is equally difficult to see what benefit it is going to have in future. It emerges that the real motive for nationalisation was chiefly that of political convenience and had little to do with the interests of policy-holders. Nationalisation was, therefore, simply a matter of transferring the misuse of insurance funds from private to public hands and the Government cannot expect the country to accept this fact with enthusiasm when it is pointed out. A true earnest of its intentions might have been to accept from the beginning the limitations of Section 27A, or even its modified version.

To vindicate the policy of nationalisation it will certainly be necessary in future for the Corporation to restrict itself to what has been dubbed the "blue-chip" policy. Even then, given the present state of investor confidence, it is likely before long to find itself the owner of an embarrassingly large proportion of the respectable equity shares in the country. It is inevitable, therefore, that the Corporation will become the share markets' largest speculator in the process. Whether this is in conformity with public policy is questionable; the fact is that it cannot be avoided. That is unless the policy of buying equities is to be abandoned altogether, and if this is done then the consequences for private investment are likely to be extremely serious. The dilemma is quite clearly the result of the Government's economic—and especially taxation—policy having damaged the confidence of the private investor, who would otherwise provide the support the market needs. Official policy, therefore, stands condemned in both its nationalisation and its taxation aspects. The Government cannot, in all honesty, deny that, although it is not an aspect which seems to have occurred to any but the most critical members of the general public. In fact, one of the startling features of the enquiry was the way in which it was submitted and accepted that a Government is justified in using public money to rectify some of the more unpleasant consequences of its own budgetary mistakes. It is left for the imagination to ponder how low the stock markets—the barometers of economic confidence in the private sector—must sink before the Government changes its policy instead of turning for assistance to public funds. Under such circumstances, to maintain in the face of all contradictions and evidence that there will be no change is merely to promise that such circumstances as have given rise to this sorry business are going to occur again.

No matter what attempts are made to avoid facing unpleasant truths, this report stands as a complete indictment of nationalisation. The Corporation was intended to be independent. Yet no adequate principles were laid down designed to guarantee that status. Orders received from above were accepted without question in spite of being issued in an irregular fashion. The attitude of those in charge was one of complete subjugation to authority. The impression cannot be avoided that however the Corporation was represented to the public, it was never accepted by the Finance Ministry as anything more than just another department. There is, in fact, no indication whatever that those in charge of the Corporation's affairs would have disregarded a Government order to buy shares even if they had been able to evoke the principles laid down in Section 27A, such was the supine attitude with which they approached their responsibilities. The whole picture is a most discouraging one. It shows clearly the opportunities which exist in a system of this kind for inefficiency, corruption and the pursuit of personal gain.

There is clearly a pressing need for the whole idea of managing nationalised industries to be reviewed. For the Life Insurance Corporation, the first necessity is a decision on priority—that of the safety of policy-holders' money over the dictates of Government convenience. The report has proposed the commonsense principle that there should be no official interference with the working of autonomous statutory corporations; or if there has to be, it must be through orders in writing. It also mentions the equally important point that executive officers, if they are to be civil servants, should owe their allegiance to their corporations and not permit themselves to be influenced by their seniors. This may be asking too much of the men concerned. It might be better from the outset to appoint officers whose background is conditioned less by the discipline of the civil service and more by the exercise of the kind of independent judgment required in business life. If that is not possible in India today, then it simply confirms what was realised when nationalisation was first suggested as a standard panacea, and is perhaps the most important reason why there should be no more of it. Whatever damage the enquiry has caused in the relations between civil servants and their Ministers is due to the fact that too great a strain is being placed on this exclusive reserve of administrative talent. It is no part of a civil servant's job to master the complications of running a large business concern which must essentially be part of the market mechanism. This is the task of business men; and if they cannot be recruited for Government service then the remedy is simply not to nationalise.

It is vitally important that the right lessons are drawn from the Chagla enquiry. There has been a good deal in this business to rouse the emotions and cloud the real issues. It would be a pity if this were allowed to happen. If only a portion of the truth has come to light, then the rest should certainly be probed for. But whatever facts are ultimately revealed are not going to change the picture of muddle, inefficiency, and infinite opportunity for abuse which the report presents. The first necessity is obviously to regularise the status of the Life Insurance Corporation. Talk about returning it to private ownership can be dismissed as wishful thinking; the crying need is for making a success of its nationalisation. The second is to reconsider the problems involved in fitting a centralised financial institution of this kind into the economy in a way which will serve the interests of both. And the third is to decide whether it is possible to pursue a policy of progressive nationalisation in a country like India, taking into account the shortage of administrative talent, the often indifferent standards of integrity in all but the highest ranks of the public services and the political dangers of evoking enquiries of the kind Mr. Chagla has just completed. Lastly, but probably the most important in order of priority, there is the need to put some life back into the economy.

The changes at the Finance Ministry do not appear to have made this more likely, and that is probably the most disturbing feature of the whole affair. There is a stubborn refusal in New Delhi to appreciate the fact that whatever Mr. Krishnamachari's virtues, his taxation measures have been disastrous for business confidence in this country and among interested observers abroad. There may be scope for sentimentality in the remote unreal atmosphere of New Delhi. But in those centres where the industrial progress has to be made there is nothing but hope that some of the measures which Mr.

Krishnamachari so rashly introduced will be discarded now he is no longer there to defend them. The fact must be faced that getting financial systems out of ruts is rarely a virtue. The proof of the Krishnamachari pudding is in the eating; and his claim to have sanctioned the use of public funds to prevent a collapse of the stock markets following the 1957 Budget is surely condemnation from his own mouth. The ex-Finance Minister was a forceful and energetic administrator, a man of imagination and courage such as is seldom found in Indian political life today; and his recent efforts in the United States and western Europe deserve the country's unqualified gratitude. He is also to be congratulated on being one of the first "socialist" statesmen to appreciate the economic value of incentives. But it should not be forgotten that during his term of office, the level of internal and international confidence in the future of the private sector of the Indian economy probably sank lower than at any time since Independence, while individual investment has been battered into a state of almost complete paralysis. It will be the task of the future to rectify these conditions—that is unless the Government wishes to see successive Finance Ministers placed in positions of embarrassment similar to that in which Mr. Krishnamachari found himself.

A DAMP SQUIB FROM THE RAILWAYS

THE chief point of interest in the Railway Budget for 1958-59 was expected to be a far-reaching revision of freights on the lines recommended by the Railway Freight Structure Enquiry Committee headed by Sir A. Ramaswami Mudaliar. The Budget which has actually been presented this week has turned out to be a damp, if not altogether a wet, squib. It proposes no changes in freights and fares. The Mudaliar Committee's report has been in the Government's hands for a little over nine months. At the time he presented the last Railway Budget, in May 1957, the Railway Minister said that the Government's study of the report, and its final decisions, would be completed before the end of last year. Now, with more than half of February 1958 gone, he announces that in relation to "the revision of the rates structure, the examination is now in the final stages, and decisions thereon are expected to be taken and implemented in the near future." The information is conveyed in the twenty-ninth paragraph of a forty-paragraph Budget speech. It is to be hoped that the Mudaliar Committee's report occupies a higher position than the twenty-ninth in the Railway Ministry's list of forty leading priorities.

The reason why it should do so is a simple one. It is that the Railway Budget is not a Budget until the country is told what exactly is being done with the report—which recommendations are being accepted and which rejected. If decisions on various recommendations are "expected to be taken and implemented in the near future", it means that the estimates of freight earnings for 1958-59 given in the latest Railway Budget are largely hypothetical, and might later have little relation to reality. The value of such a Budget, in that case, deserves no comment. All this is not to deny that the problem of revising the railway freight structure is extremely complex, and must take time. But it is not easy to understand why it should take so much more time than the Minister initially indicated—after having presumably made a preliminary study of the report. Can it be that the other preoccupations mentioned in the Railway Budget speech have been given rather more attention than they deserve? Among these other preoccupations are reservations on Janata trains, departmental catering, pulling of alarm chains, housing and medical facilities for railwaymen, schools for railwaymen's progeny, and the award of scholarships of Rs. 15 to Rs. 50 a month for technical (yes, technical) education. Large portions of Mr. Jagjivan Ram's address give the impression that the railways are not so much the State's biggest commercial enterprise, playing a vital rôle in economic development, as a social service institution which runs trains and collects freights and fares merely in order to establish high schools and maternity hospitals for railwaymen's families.

In fact, however, the real problems of the railways arise not from the shortage of *crêches*, but from a lack of facilities for carrying goods and people from one part of the country to another. Mr. Jagjivan Ram's speech shows that, whatever progress may have been achieved in the former sphere, in the latter it has been modest and inadequate in relation to requirements. During 1956-57, the total tonnage lifted was 124 million tons, as against 114 million tons in 1955-56. During the current year, it is apparently expected that the total will rise to 133 million tons, and in 1958-59, to 145 million tons. Translated into percentages, these increases look impressive. But the true test of their adequacy lies in how they measure up to the likely demand for goods carrying facilities, a demand which even at present cannot be satisfied. Mr. Jagjivan Ram states categorically that "most of the additional 12 million tons (of traffic) likely to materialise in 1958-59 will be on account of the expansion in the steel industry and the additional coal raisings." This means only one thing: that during the coming year, other users of the railways can expect their additional demands to stay in the deep freeze, and have little relief to hope for.

As for the later prospects, there is reason to believe that if the recent rate of expansion in goods carrying capacity is maintained, the target total of 162 million tons a year by the end of the second five year plan will be achieved, and perhaps, with luck, even slightly exceeded. But that target is the product of little more than the Planning Commission's arbitrariness, and its achievement would hardly be a matter for congratulation. The more reliable target, which the Railway Ministry arrived at while working out its estimates of expansion costs two years ago and which the Planning Commission has found no logical justification to deny, is that the railways will need to carry an aggregate of 181 million tons of traffic by 1960-61. In the present circumstances, there is no hope of achieving this target, except perhaps unless the railway expansion plan is immediately and drastically revised. In judging the adequacy of progress, it is worth bearing in mind the view that even the original target of 181 million tons looks conservative in the light of the recent growth in traffic and of the questionable assumptions on which it was based.

The essence of the railways' problem thus is that capacity has to be expanded at a much quicker pace, so much more money is needed. No definite conclusion has yet been reached on the controversy which developed a few months ago, when the Railway Ministry coolly inspired reports in the Press that the plan allocation for it was being increased, while the Planning Commission equally coolly replied that it knew of nothing of the sort. It is time, however, that a final decision on the subject was taken. The plan has not much more than three years to run, and meanwhile the demand for railway capacity is growing so fast that further delay would have serious consequences for the economy. Such a decision, if it is to be realistic, will need to take account of the fact that the railways themselves cannot raise all the money they require if the original target of 181 million tons capacity is to be reached; to depend on a rise in freights alone will push up the costs of trade and industry to such an extent that the country's broader economic interests will be jeopardised.

Clearly, then, the money will have to come from a reallocation of priorities and resources under the second plan generally. Less essential projects will have to be cut, as some already have been, in order to ensure that resources are released for railway expansion and more essential projects can be completed in time. If and when such a reallocation is made, there will devolve on the railways a stronger obligation to ensure that the resources are not frittered away on vague social benefits that delight the hearts of Congress parliamentarians, as they have been in recent years. The duty will be to ensure that they are devoted exclusively to expansion and to the improvement of efficiency. A preliminary step to a larger allocation from the general revenues might be to cut sharply the extortionate dividend which the railways are at present obliged to pay to the Government Exchequer under the Railway Convention. If any such move has to be supplemented by an effort on the part of the railways themselves to increase their earnings, the solution lies in achieving greater efficiency. The general surcharges on most kinds of freight traffic which have been imposed during the last two years are the least rational way of boosting revenue; they ignore one of the fundamental principles of freight rating—charging what the traffic can bear. The Mudaliar Committee's report might indicate a way out of this complex problem. It is unfortunate that users of the railways—especially private industry—have had to pay for expansion, even though in the early years at least that expansion has been benefiting mainly the public sector. Since the demands upon consumers cannot be increased indefinitely, a readjustment of the second five year plan in favour of the railways needs to be treated as a matter of extreme urgency.

THE RAILWAY BUDGET

(Rupees in crores)

	Actuals 1956-57	Revised Estimate 1957-58	Budget Estimate 1958-59
Gross Traffic Receipts	347.57	348.40	407.48
Ordinary Working Expenses	233.94	259.16	268.35
Net Miscellaneous Expenditure	9.92	14.01	16.99
Appropriation to Depreciation Reserve Fund	45.00	45.00	45.00
Payment to Worked Lines	.33	.33	.33
Total	289.19	318.50	330.56
Net Railway Revenues	58.38	65.90	76.92
Dividend to General Revenues	38.16	44.24	49.58
Net Surplus	20.22	21.66	27.34

WORKING CONDITIONS FOR WORLD LABOUR

THREAT OF UNEMPLOYMENT AND INFLATION

THE I.L.O. report for 1957 shows that it was another good year for the world's working force. There were slight increases in employment and the purchasing power of wages. Social security measures were extended and consolidated in almost all cases. Yet in some important sectors of the world economy, developing stresses confronted labour with increasing dangers of unemployment and inflation. It is likely that these stresses will remain a major source of anxiety during the current year as well. The recessionary threat in the United States was not serious, but unemployment in that country increased by 24 percent to 3,400,000 in December compared with the previous month. U.S. steel mills operated at only a little more than half of their capacity at the year-end, while the automobile industry, reacting to the disappointing sales of new models, laid off several thousand workers. Canada experienced almost similar conditions, unemployment there rising to 313,000 in December compared with only 147,000 in the same month a year previously. Among the European countries, unemployment increased in the U.K., Finland, Sweden, Belgium, Norway, Switzerland and West Germany. In the last of these, unemployment rose steeply to 1,200,000, largely because of a serious decline in building construction activity. The U.S. business recession affected many industries in other European countries, leading to the retrenchment or laying off of workers. In Asia and South America, where the problem is of under-employment, some countries, especially Israel, the Philippines and Japan reported useful increases in employment, but in others no appreciable progress was made. India, particularly, had an increase of 17 percent in the people seeking jobs. Australia and New Zealand reported more unemployment, although the level was still low.

Inflation continues to threaten workers' standards of living and undermine the protection given them by social security measures. The I.L.O. report says that actual or potential inflation was a major source of concern for most nations during 1957, and prompted the application of numerous economic controls, particularly financial measures. Even at the end of the year, when unemployment was rising and other signs of recession were in evidence, inflation was regarded by many as the greater and more imminent danger. By far the bigger majority of the member-countries reported consumer price increases—of an average of 3.7 percent, against 3 percent in 1956. The worst increases occurred in some South American countries. Argentine prices rose by 31 percent, Chilean prices were 20 percent higher and Uruguay reported the same percentage of increase. Most Asian countries struggled to keep inflation under check, but Indonesian prices rose by 31 percent. In the United States, there was a 3.1 percent increase and in Canada prices were higher by 2 percent. Of the European countries, some of the notable rises (of between 3 percent and 10 percent) occurred in Spain, the Netherlands, Finland, the U.K. and France. The U.K. took stern measures against inflation by raising its Bank rate to 7 percent, and consequently, the price increase there was smaller than in other European countries. However, higher money wages offset increased prices, especially in France, West Germany, the Netherlands, Sweden, the U.K. and Yugoslavia. But where increased wages were followed by shorter working weeks, the workers' earnings in real terms fell.

An extension of social security measures in almost all countries was a feature of the year. "Almost every country introduced some modifications of its social security institutions, but in most countries the changes were limited to minor adjustments or to the progressive implementation of a phased programme," says the report. Canada brought her fishermen under the unemployment insurance programme and railwaymen were given protection under a scheme providing sickness and medical care benefits. Compulsory sickness insurance was extended to certain craftsmen in some countries. India, Brazil, Nicaragua and Belgium were among the countries which introduced "beneficial" changes. All countries took steps to prevent the erosion in value of the social security benefits to their workers. Consequently, productivity of labour continued to increase, particularly in manufacturing industry. Industrial disputes were fewer, and as a result, man-days lost came down to 55 million in 1957 from 94 million in 1949 and 73 million the year before—in other words, to the lowest level for all postwar years.

THE OUTLOOK FOR BRITISH EXPORTS

THE January 1958 issue of the *G.E.C. Export Guide* indicates a continuing high volume of international trade, with opportunities for British manufacturers to expand further into existing markets and to enter new ones remaining promising. Based on the most up-to-date information available to the company's Economic and Marketing Research Unit on the export prospects for 36 major groups of British manufactured goods in Britain's 34 major export markets and on economic conditions in those countries, the *Guide* finds current export prospects are "good" in 16 countries (Canada, Hongkong, Iraq, Italy, Malaya and Singapore, Nigeria, Norway, Pakistan, Portugal, Switzerland, Trinidad, Union of South Africa, the U.S.S.R., the U.S.A., Venezuela and Western Germany), "improving" in five (Argentina, Burma, Finland, Irish Republic and Sweden), "deteriorating" in eight (Australia, Belgium, Ceylon, Denmark, Ghana, the Netherlands and Spain), and "bad" in five (Egypt, Federation of Rhodesia and Nyasaland, France, India and New Zealand). Compared with its previous assessment, published last October, trading opportunities for British exporters appear to have improved in Argentina, Burma, Finland, the Irish Republic, Pakistan and the U.S.A., while deteriorating in Australia, Belgium, the Federation of Rhodesia and Nyasaland, Ghana, New Zealand and Spain.

Having completed its main task, the *Guide* goes on to discuss two subjects of topical interest which are giving rise to much speculation in the minds of British exporters, namely, changing trends in Commonwealth trade, and the prospects of developing contacts with Communist China. Many believe that the extension of Imperial preferences in the Ottawa agreement was mainly responsible for the recovery of British trade in the post-depression days, but overlook that the *raison d'être* of preferences was not so much to provide British exporters with easy access to Commonwealth markets as to offer Commonwealth producers improved trading opportunities in Britain. The importance of preferences in Commonwealth trade has diminished over the years. In 1937, British Commonwealth trade benefited from preferences to the value of trade in either direction of 11 percent; by 1948 the value declined to 9 percent, and current estimates put it at 5 percent of trade. Inflation since 1939 is mainly responsible for the decline in its value. Preference on Commonwealth produce is "specific". On butter, it is 15s. a cwt. When butter sold for £100 a ton, preference amounted to 15 percent, but today at £300 a ton the margin falls to 5 percent. On British goods to the Commonwealth, preference is based on percentage value. But to think that in periods of rising prices this would redound to the United Kingdom manufacturers' advantage is more apparent than real. Commonwealth countries are fast industrialising, and protection of infant industries means protection against all such imports, including British. In addition, some Commonwealth countries have two other urgent problems on their hands: first, disposal of agricultural products in larger volumes and, second, raising funds for accelerating their own economic development. How can Britain help their endeavours? Because of a slowly rising population, Britain is not in a position to absorb much more of the Commonwealth's primary produce. Nor is Britain likely to be in a position to offer substantially more capital for Commonwealth development than she is currently providing. Hence, the Commonwealth will have to try to sell more to other countries, particularly to Europeans, but the Common Market now in force puts Commonwealth produce in Europe at a disadvantage which can be mitigated by the Free Trade Area. One way out, suggests the *G.E.C. Export Guide*, is to reduce agricultural protection in Britain to provide a bigger outlet for Commonwealth produce. This would reduce pressure on the Commonwealth bi-lateral arrangements with other countries. The current Anglo-Canadian negotiations towards freer trade in the Commonwealth must imply a lowering of protectionist obstacles in both directions. Barriers to trade between producers of agricultural and industrial goods, which in fact implies between members of the Commonwealth, require the closest examination.

The relaxation of the restrictions on China trade provoked a lot of activity and forecasts about prospects. The *G.E.C. Export Guide* attempts an assessment of the prizes to be won and the difficulties involved in trading with China. The vast size of the potential market in China, coupled with the rapid industrial development that the Chinese Government is now pursuing, inevitably makes China a very attractive prospect to British exporters. The most obvious and the most important obstacle to Western trade is China's close link with the Communist bloc: these countries now absorb nearly 78 percent of China's trade. In the first nine months of 1957, China had a deficit of £19.5 million with the Western countries, against a £5.8 million surplus in the same period in 1956. Even so, there are many reasons why this market should be tackled vigorously by British exporters. First, Britain's share of China's trade has been declining; Sweden and France have both expanded their exports much more than Britain; and West German sales are running nearly twice as high as the British. Second, Britain can also supply the goods which China wants: capital goods of all kinds, especially textile machinery, are needed. Sweden's great expansion of exports to China consisted primarily of non-electrical machinery, while West Germany's exports consisted of iron and steel, dyestuffs and scientific instruments. Although Western trade with China will not grow rapidly in the future, the long-term potential is the most important reason for its cultivation. The most successful means of establishing oneself in the Chinese market is first by way of technical assistance. Until now, Russia has monopolised its supply, but China is evidently very willing to receive Western assistance, and this can pave the way for orders. At present, Britain's exports to China are at the rate of about £11.4 million a year. Even in the immediate future this could probably be doubled. New sources of export earnings are particularly welcome to Britain today, when some of the traditional sources are showing signs of weakening.

CURRENT COIN

West Bengal Headaches.—The Governor's address at the opening of the West Bengal legislature's new session on Monday contained the usual recital of the Government's achievements. It also dealt with the problems which the Government has not been able to solve—the refugees and the educated unemployed; these are problems which it is not within the power of the State to overcome without generous Central aid. The migration of people from East Bengal has happily thinned a little, but, cumulatively, it makes a total which is too big either for the land area or for the resources of West Bengal to deal with adequately. As for unemployment among the educated, facilities for education have expanded far more rapidly than the scope for employment would justify. The State Government has been placing greater emphasis on technical education, and the capacity of engineering colleges has been raised. But it has done little to discourage the surplus going in for general education, especially at the higher levels,

which has been the main cause of the educated unemployment problem. There is perhaps little that the Government can do, except to find openings for a few thousand people here and there. Meanwhile, the arrears of the past accumulate, and those emerging from colleges and schools each year are thrown on to a frustrating employment market. The food problem also is not new. West Bengal is a deficit State, and the severe drought of the past year has made the outlook worse. Miss Naidu has given the assurance that people will be considerably better off if they take more wheat. It is to be hoped that she is right. The Government's approach to industrial relations, as indicated in her speech, is comforting in principle, but its overemphasis on ideological requirements has too often tended to ignore economic realities. On the question of rationalisation in jute mills, for instance, it recognises that "unless the mills modernise their machinery and technique, they will not be able to meet world competition"; but it says that rationalisation will be permitted "only to the extent that it does not throw workmen out of employment." This amounts to putting the cart before the horse. The jobless are a genuine source of worry for modern governments, but an export industry faced with fierce international competition is hardly the place where the employment of redundant labour should be insisted upon.

* * * *

An Enquiry on Co-operation.—Acting on the idea that the State has to be a major partner in the co-operative movement, the Government has built an elaborate structure of credit institutions to pump funds liberally into various fields of activity. But not enough attention has been paid to strengthening the foundation, which is the primary credit society, so a certain imbalance has resulted. Drawing frequent attention to this fact, the Reserve Bank has said that the state of these societies' affairs is generally unhealthy, that they have been living mostly on borrowed funds and that little saving is taking place within the societies themselves. The Colombo Plan consultant to the Planning Commission, Sir Malcolm Darling, who undertook a review of the current developments in the co-operative field with a view to suggesting ways to improve the organisation below the district level and to provide better training for the personnel, has said exactly the same thing. Yet highly ambitious targets have been fixed under the second plan, based largely on the recommendations in the Rural Credit Survey Committee's report, which looked at the problem too much from the angle of the country as a whole, ignoring the great regional disparities which exist. The pace of progress attempted, Sir Malcolm says, is too fast even for such States as Bombay, Andhra, Madras and Punjab where the movement is strongest, and "doubly so in other States." He, therefore, suggests that the targets be scaled down or the time fixed for them doubled to 10 years. Those for agricultural credit are not necessarily unwise, considering the poverty of the peasantry, but finding that the amount of overdues is already much too large, he recommends that the time has come when a target for the recovery of arrears should be fixed rather than one for more agricultural credit. The question as to what should be the size of societies to be encouraged by the State, has provoked much controversy. Sir Malcolm's preference is for the large type with a membership of between 300 and 500. But it will serve no useful purpose to provide State aid if accounts are not checked quarterly. His other prescriptions are: banking societies should not take part in trading; smaller societies should be encouraged to increase their membership or amalgamate into larger units, with, of course, the full consent of their members; no one should represent the Government unless he has an active interest in co-operation; and while participating in the share capital of the societies, the Government must make a proper scrutiny of the various aspects of their working, including loans given, recoveries, overdues, the time taken to get a loan, productive and non-productive borrowings, profits and losses. Old societies should not be neglected to encourage the new, and all steps should be taken to strengthen the innumerable thrift and credit societies "upon which must for many years depend the main strength of the movement." Credit and crop should be closely linked and short-term loans given for productive purposes on the basis of the crop raised, its requirements and its anticipated return. Sir Malcolm makes a number of suggestions for the improvement of co-operative training of various grades of personnel, a notable one being that State Registrars of Co-operative Societies should never be officials who have no training in co-operation. A good deal depends upon the drive and initiative of these officials for the success of the movement, as co-operation is a State subject, and the Governments should take proper care in their selection.

* * * *

Excise Duty on Cotton Textiles.—The excise duty has imposed a heavy burden on cotton textile mills. The question of converting the duty from a specific to an *ad valorem* basis has been raised by mills producing coarse and medium fabrics. They have pointed out that the structure of the excise duty, based on counts of warp yarn alone, is inequitable. In a memorandum on the classification of cotton fabrics for the purposes of Central excise, Mr. S. Jaipuria, director of the Swadeshi Cotton Mills Co. Ltd., says that the range of prices for different varieties of cloth technically falling within any one of the four recognised categories is very wide, and the incidence of the tax is proportionately much higher in the case of cheaper cloth than in the case of a dearer variety in the same category. For instance, tapestry selling at, say, Rs. 3-8 a yard, which is technically classified as coarse, would be subject to the same rate of excise duty a square yard as ordinary sheeting selling, say, at 6 annas or 8 annas a yard. Similar differences are found to exist in the case of other categories—medium, fine and superfine—as well. "If the replacement of the existing duties by *ad valorem* duties is ruled out on account of the alleged administrative difficulties, then the only rational thing would be to formulate tariff fixing rates of duties for different varieties of cloth in addition to the present tariff classes based on warp count alone. There is no doubt that experts must have tried to formulate a tariff of this nature and the fact that no concrete scheme has yet been drawn up need not deter us from pursuing the matter," Mr. Jaipuria says. The classification of the different varieties of cloth made by the Textile Commissioner appears to be workable. But any comprehensive classification should take into consideration the processes to which the different varieties of cloth have been subject. A poplin may be bleached; it may also be dyed. In fact, it is possible to produce four varieties of poplin, namely, bleached, dyed, mercerised and sanforised. The range of prices will differ according to the processing to which they have been subjected. It is, therefore, necessary to take these factors into consideration while fixing the specific rate of duty. If this is done, then its incidence will vary to a much narrower extent than at present.

* * * *

Pump Production and Demand.—The pump industry's production has increased. In 1956, it was about 33 percent higher than in the previous year. The production target of 86,000 pumps a year by the end of the second plan is, therefore, likely to be achieved without much difficulty. The current demand for centrifugal pumps is satisfactory. But the case is different with bore-hole turbine pumps, the demand for which has decreased considerably during the past few months. Speaking at the annual general meeting of the Indian Pump Manufacturers Association, Mr. C. N. Pradhan, president, has said that the demand for bore-hole turbine pumps is not likely to exceed 1,000 a year even on the most optimistic estimate. If this be so, the existing units will use hardly half their installed capacity. The total rated capacity of the industry is about 65,500 pumps a year. Of the registered firms, two are already producing bore-hole turbine pumps with a total installed capacity of about 2,500 pumps a year. Three other firms which have been given licences to manufacture them are reported to have begun production. When the new units utilise their installed capacity, the total capacity for these pumps may be about 3,000 a year. The Government estimated the demand at 3,000 a year during the first plan, but the actual requirements were much below this figure. Although there was no need for new units, the Government thought it advisable to license three more. "On account of lack of orders, the existing units are not able to work to their installed capacity. If this trend continues, these factories and also the new units will have to face serious difficulties. It will then be no wonder if the progress of this important line in the pump industry, developed after years of hard labour, is stifled." Since the requirements of bore-hole pumps during the second plan are not precisely known, the Government should assess its minimum expected needs each year and inform manufacturers accordingly so as to enable them to plan their production. The State Governments do not give any prior indication as to how many they want, but at the end of the financial year they come out with their demands in order to utilise their funds. Furthermore, some of them invite tenders for a large number of pumps when, in fact, their actual requirements are much below those specified in the tender. If the States' requirements of bore-hole pumps were mentioned to manufacturers well in advance, the latter could plan their production programmes properly.

* * * *

Specifications for Manufacturers.—There is a tendency in some Government departments to formulate schemes based on the specifications of foreign pumps. This compels the indigenous industry to make a larger variety of pumps, and hampers bulk production. Commenting on this, the Central Minister of Industry, Mr. Manubhai Shah, has said that it is neither good to follow too closely the specifications of foreign-made pumps nor is it good to cater for the existing varieties only. "The best way for us is to keep abreast of the world trends in this direction so that low-priced, high-quality and efficient pumps and engines are manufactured in the country. The Government departments, the major users and your industry should sit together and through the Development Council for Internal Combustion Engines and Power-driven Pumps, and the Indian Standards Institution, you should endeavour to draw out workable, efficient specifications for your different items." The progress of the pump industry is linked with the development of the electric motor or engine industry. A pump by itself is not enough; it needs complementary equipment to operate which may be either an internal combustion engine or an electric motor. Mr. Shah has said that he is glad the industry is taking advantage of the development of complementary machinery. Referring to exports, Mr. Pradhan says that manufacturers have already made a beginning in a number of neighbouring countries and the value of exports of centrifugal pumps from January to November last year was about Rs. 92,000. This is no mean achievement considering the acute shortage of pig iron and other essential raw materials, transport and shipping difficulties and the competition from highly industrialised countries.

* * * *

Cable Plant in Bombay.—Foreign collaboration is making a major contribution to the development of Indian industries, and a new Indo-German scheme to manufacture cables should form an important part of the ambitious electrical projects which have been launched. Two West German firms—Siemens Schuckertwerke A.G. and Felton Guilleaume Charlswerke A.G.—have formed the Cable Corporation of India with an issued capital of Rs. 1 crore in association with two Indian industrialists, Mr. D. M. Khatau and Mr. Krishnaraj M. D. Thackersey. The West German participants are providing Rs. 15.6 lakhs each towards the capital, the remaining part of which has already been subscribed. The company is a public one, but no share is being offered to the public at the moment. The factory, which will be set up in Bombay's industrial suburb, Borivli, is expected to start production in mid-1959 and attain full capacity working late in 1960. By that time, the output will be large enough to save foreign exchange to the tune of Rs. 1.25 crores—after allowing for the cost of imported raw materials like copper. The West German firms will provide the technical know-how and supply plant and machinery. The Indian firm will benefit from the rich experience of Siemens in the electrical field. The foreign participants' share in the capital will meet the foreign exchange cost of the project.

* * * *

Shortage of Electrical Goods.—The efficient supply of electrical energy from the point of generation to areas of distribution depends on two main factors. Firstly, installation equipment, cables and accessories should be available at sites in time. Secondly, electrical engineering and contracting firms should install them promptly and properly, so that no industry suffers from a shortage of power. It is necessary, therefore, that the equipment, accessories, fittings and cables required for the generation, transmission and distribution of power in the second plan should get high priority, even if supplies have to be imported. Speaking at the annual general meeting of the Electrical Contractors Association of West Bengal Ltd., Mr. P. Bose, president, has said that without electrical energy the successful implementation of the second plan is not possible, so a larger supply of electrical goods is essential. The acute shortage of electrical equipment and accessories is causing great anxiety to electrical engineering and contracting firms. "It is a fact that quality materials and accessories are absolutely essential for a trouble-free quality job, and it will be agreed and accepted in all sections that electrical works have now very much deteriorated, due to non-availability of quality finished accessories and due to inadequate fully skilled labour." This occasionally results in accidents. Mr. Bose urges the Government to enforce strictly the regulations under the Indian Electricity Rules, 1956. The shortage of cables and quality accessories has led to the growth of a black market. Mr. Bose suggests that it will be impossible to complete all the allied schemes under the second plan unless the Government relaxes the import restrictions on finished electrical cables and accessories, and insists on the production of quality goods. Electrical installation work is becoming more complicated, although most contractors are satisfied with handling small domestic installations. Mr. Bose suggests the importance of group tendering so that each member of the Association might benefit.

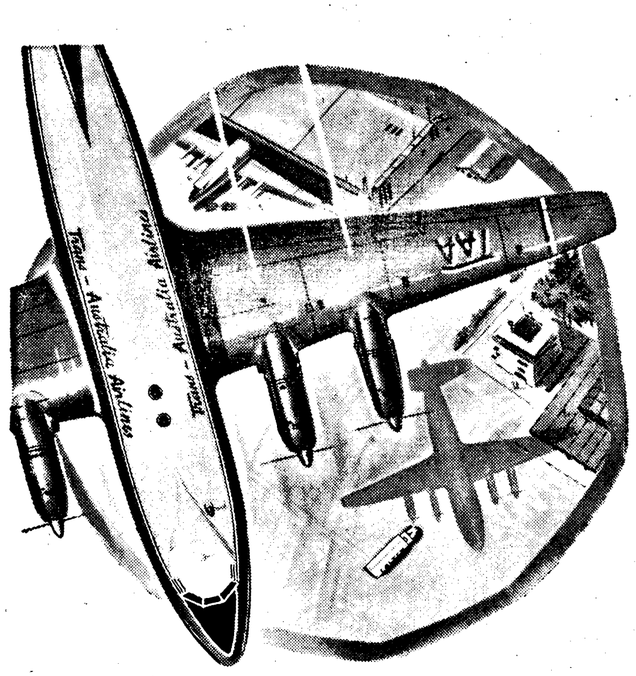
* * * *

Bank Mergers in Kerala.—The current trend towards the merger of banks in Kerala appears to be of some significance. The amalgamation of the Kottayam and Orient Central Banks last month is to be followed by the merger of the Cochin Commercial Bank with the Madras City Bank. Although the Travancore-Cochin Bank Enquiry Committee did not advocate large-scale mergers, it suggested that rationalisation might include the merger of small banks with limited resources. The enquiry showed that 92 small banks find it hard to pay minimum wages to their staff because competition is stiff and high rates have to be paid for deposits. The need for bigger, efficient units was evident even before the war, but the failure of the Travancore National and Quilon Bank in 1940 caused a big setback to orderly consolidation. The new trend is welcome, for only four banks in Kerala are now described as major units and the licensing of more scheduled banks from that area might promote an increase in deposits, especially time deposits. The proposed take-over of the Travancore Bank by the State Bank of India might even persuade some of the smaller banks to combine if their shareholders see the prospect of a fair return. The chances of facing competition from the branches of bigger banks could improve if the present D class banks attain a higher status by negotiated mergers. Moreover, their branches in big cities will benefit directly: as in the past, capital for Kerala will be drawn from Madras, which has for long financed trade and industry on the west coast. The mergers will have the effect of effacing religious and communal labels from the Kerala banks, and will alter the character of what is called family banking with its peculiar risks.

* * * *

Sales Tax Reforms.—The yield from sales tax in Madras (which was a pioneer in this field) has grown from Rs. 67 lakhs in 1940-41 to Rs. 10.53 crores in 1955-56. The steady rise is due in part to higher prices and in part to the low limit of Rs. 10,000 for the turnover subject to tax. Dr. P. S. Lokanathan, in his report on sales tax administration, points out that the tax usually falls on the consumer and is included in the price charged. The three main contributors to sales tax revenue are grains, groceries and mill cloth, which together provided over Rs. 4.5 crores in 1952. Criticisms against the multi-point sales tax have led to a plea for simplification, and the enquiry has also produced a plea that the turnover limit should be raised to Rs. 25,000, licensed dealers being given the option to compound the sales tax due at a slab rate. A major change which has been advocated concerns a levy of 6 percent on luxury items. It is also urged that rates in Madras should be in line with those in force in adjacent States. The exemption of essential commodities from sales tax is not favoured. However the total yield from sales tax in a year will not be less than Rs. 11.25 crores, especially if evasion is curbed. The consolidation of the law and rules is perhaps of less interest to the public than the proposal to lower the tax on cereals, milk and pulses to ½ percent. An important suggestion is to cancel the exemptions given to co-operatives and small industries; subventions and subsides are said to be better. The Government has been asked to instruct officers to be polite to assessees and to improve public relations; it is also urged to employ competent officials to deal with accounts in non-regional languages. Traders who find that the changes in the schedules are not going to lighten the burden will doubtless complain that the enquiry was meant only to increase revenue and not to replace the existing tax by a uniform single-point levy.

* * * *



Becoming More Inventive.—The annual report of the Patent Office for 1956 says that there has been a marked increase in the number of applications for patents and designs. The number of applications increased to 3,067, from 2,736 in the previous year. There was also an appreciable increase in applications for the registration of designs. In 1956, their number was 4,376, compared with 3,835 a year ago. About 99 percent of the applications for designs originated in India; a major portion of the balance came from the United Kingdom. Most of the applications from India were for textile designs. The applications for patents, which originated in India, also showed an increase from 446 in 1955 to 540 in 1956. Of these, 482 applications were made by Indians. Bombay and West Bengal together contributed 56 percent of them. The inventions for which the patents were sought related to varied fields of industry and technology. The chemical industry retained its predominant rôle in the sphere of inventions. The iron and steel industry continued to attract a large number of inventions from abroad. Many were for the refining technique for making steels. In the sphere of coking and gas products, inventions originating in India related to pre-treatment of non-coking coal to make it suitable for coking and carbonising vegetable matters. In civil engineering, inventions were in building blocks, reinforced concrete, bamboo structures and rail joints. In aeronautical engineering, inventions were in aircraft structures, and jet and turbo-jet engines, while in automobile engineering they were mostly concerned with engine components. Inventions in electrical engineering were many, mainly originating from abroad. Indian inventions in wireless signalling mostly affected receiver sets. A good number of applications in textile technology dealt with drafting, carding and spinning fibres and winding yarns and threads. This record of progress seems impressive. It is generally true that industrialists are now showing greater interest in patents and designs. But the progress would be more remarkable if the Government gave greater encouragement to inventors. The existing legislation on patents and designs could be modified so as to help them. Industrialists, for their part, could set aside larger sums for research activities, like their counterparts in the West.

* * * *

Oil Mills in West Bengal.—Oil mills in West Bengal are faced with more serious problems than those in other major oil producing States. Some of their difficulties arise from the high level of railway freight, the operation of the Central excise exemption scheme and the rise in wages. Speaking at the annual general meeting of the West Bengal Oil Millers Association (recently incorporated as East India Oil Millers Association), Mr. K. C. Bhagat, president, has urged the West Bengal Government not to implement the recommendations of the Minimum Wages Advisory Committee at such a crucial time. "The industry has continued to feel the scarcity of seeds and the solution seems to lie in growing more oilseeds within the State." The potentialities of areas which come under large irrigation schemes should be assessed by the State Government in a systematic manner and every possible effort should be made to encourage agriculturists to produce more oilseeds. Mr. Bhagat suggests the setting up of a research centre, the collective purchase of seeds and the export of linseed oil, even at some sacrifice in the long-term interests of the industry. It is necessary to grant import licences to oil mills for importing copra from the Philippines and milling it.

* * * *

Manufacturing Industrial Jewels.—The manufacture of industrial jewels and pressure gauges has hardly been attempted in India before. Particular interest attaches, therefore, to the maiden venture of the State-owned Precision Instruments Factory in Lucknow. The plant for the manufacture of industrial jewels has been shipped and is expected to arrive in a few weeks. Besides industrial jewels and pressure gauges, the factory also proposes to manufacture a large variety of surgical instruments. Under the present scheme, about 7,000 surgical instruments and 4,000 pressure gauges will be produced annually, achieving an estimated saving of Rs. 16 lakhs in foreign exchange. The factory, which has moved into a new building to cope with the expansion programme, also hopes to increase its production of water meters and microscopes from 15,000 and 100 to 36,000 and 300, respectively, by the end of the second plan. So far, the factory has produced 68,600 water meters and the foreign exchange saved is estimated at Rs. 41 lakhs. Complaints have been made in the past about the quality of the meters, but it appears that the factory has got over its teething troubles and is now well equipped to handle the ambitious jobs it proposes to undertake.

International Panorama of Progress

Oasis for modern skypower

CALTEX

PETROLEUM PRODUCTS

Centuries ago, plodding caravans formed the link that joined peoples, made nations great. Today a new dimension in transportation—the air—has shrunk distances, brought the citizens of the world closer. By touching down at modern oases for refueling, giant transports traverse the earth, bringing increased commerce and other advantages of the air age wherever they go. Progressive airlines know that quality petroleum products are indispensable for economical, dependable operation. Caltex aviation fuels and lubricants send perishable cargoes to market... machine parts to industry... passengers to far-off places—faster than ever before. Through the power of petroleum, Caltex is playing its part in establishing a new pattern of prosperity in over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

GROWTH OF B.I.S.N.

AN apt illustration of the parable of the grain of mustard seed is to be found in the rise and progress of this prosperous company. Started some time about 1855, with two small steamers, the *Baltic* and *Cape of Good Hope*, which ran between Rangoon and Calcutta, they have gradually extended their operations until, from Singapore, they circle the whole of India and thence strike downwards as far as Zanzibar, with lines to the United Kingdom and Australian and New Zealand colonies; so that in every sense of the word they are now the British India Steam Navigation Company and something beyond. At the making-up of the accounts about this time last year they had a fleet of 95 steamships, varying in size from 250 to 5,900 tons, and totalling nearly 240,000 tons register, while six steamers were under construction, each to carry about 8,000 tons dead weight. The block of the fleet, that is to say, the steamships, tugs, tenders, barges, etc., stood in the books at £1,859,410, while the freehold property in London and abroad was valued at £200,013 making a total of £2,059,433. The paid-up capital of the company was £694,800; Reserve, Boiler, Repair and Insurance Funds totalled £750,000, and there was a Good Service and Compassionate Fund to provide pensions for and assist widows and children of older incapacitated and deserving employees of the company, at the absolute discretion of the directors, amounting to £43,043.

Without Prejudice

THE SYSTEM OF TRIAL BY JURY

SOME STRANGE ANECDOTES

(FROM OUR LEGAL CORRESPONDENT)

THERE may be readers of these random reflections of a literary turn of mind, especially if they are interested in things mystical and eerie, who may agree with the writer's admittedly minority opinion that Mr. Walter de la Mare, who died a short while ago, was our greatest modern poet and short story writer, followed, though at a respectful distance, in second place by the Irish poet Lord Dunsany. That is as may be. But this column is not concerned with poesy; and one only introduces the name of Mr. de la Mare as the narrator of two incidents, for the truth of which he vouched, which may shake your faith in that pride of the British nation, the system of trial by jury.

The poet sat on a jury once, and once only. "It was", said he, "a slander case before Lord Reading—so good-looking. He spoke so well and was so polite. A butcher was suing the local medical officer of health. When the jury retired, there were at first ten and then 11 for the medical officer, but one stood out for the butcher. He said he knew what medical officers of health were. All the rest of the jury argued with him in vain. Finally Mr. de la Mare said: "We must get this settled: I've got to catch a train," whereupon the recalcitrant juryman said: "Oh well, if it's a question of a train, I am with you." So British, thought "W.J." (as he was called by his friends). There may be an element of wry humour about this incident. "So British". Yes, and so American and so Indian and so "jurylike" and so thoroughly dishonest. That juryman believed that the plaintiff should win his case. He had only to stand firm and the Lord Chief Justice would have had to order a new trial. But he broke his oath so that a fellow-juror could catch his train.

The other incident, if you think out its implications, is as macabre as any of W.J.'s own. A man was charged with murder. "The jury, as soon as they were retired, were unanimously for a verdict of guilty, but, said the foreman, it would be indecent to go back so quickly in a murder case, and they had better sit and wait for a quarter of an hour. During this time, two jurymen got into conversation and said they were puzzled about the lack of motive, but the judge had told them that motive was not relevant. Another juryman joined in, then another and finally they all agreed that the charge had not been proved, and returned a verdict of not guilty." This had been told W.J. by the Clerk of Arraigns. A curious story. If the foreman had not been such a stickler for punctilio and good manners the man, maybe innocent, would have been hanged; alternatively, by politely waiting a quarter of an hour the jury may have let loose a murderer to prey on society again.[1]

* * * *

WHAT IS WRONG HERE?

John was a worried man. "Last year," he told his friend Knowall, "we bought a dog as a present for my small daughter on her fifth birthday. It is devoted to her and quite safe with people it knows, but has always been very unreliable with strangers. One day, it tried to attack a tradesman but fortunately I was there and caught hold of it just in time. Ever since then I have insisted that it is kept shut in the back yard and only taken out on a lead, but the other day it slipped its lead, rushed into the road and bit a lady who was passing by. Now I have had a letter from a solicitor who says he is representing this lady, asking for compensation." "Had it ever actually bitten anyone before?" asked Knowall. "No," said John. "As I told you, I made sure it was securely locked in." "Then you needn't bother," said Knowall, "because every dog is allowed one free bite—so you are not liable for the first bite. And, even if you were, your little girl, and not you, owns the dog and would be liable—but nobody is going to sue her."

Is this advice correct? Think it out before you look at the answer at the end of this note.

* * * *

Last week we considered, perhaps in rather a cynical way, the difficulties which lie in the path of anyone who proposes to sue a professional adviser for damages for negligence in relation to professional work done for reward by such adviser; and we instanced, as an example, proceedings against a solicitor sued for damages arising from advice negligently incorrect. In the writer's respectful submission, it is perfectly just and proper that the plaintiff's path in such a case should be obstructed by obstacles and even made as difficult as possible, and for the simple reason that the law is not an exact science. What the average client consulting the average lawyer on an arguable point of law does not realise is that the latter, after consulting the best authorities, is about as likely to be wrong as right; and that if he advises rightly the judge may decide wrongly.

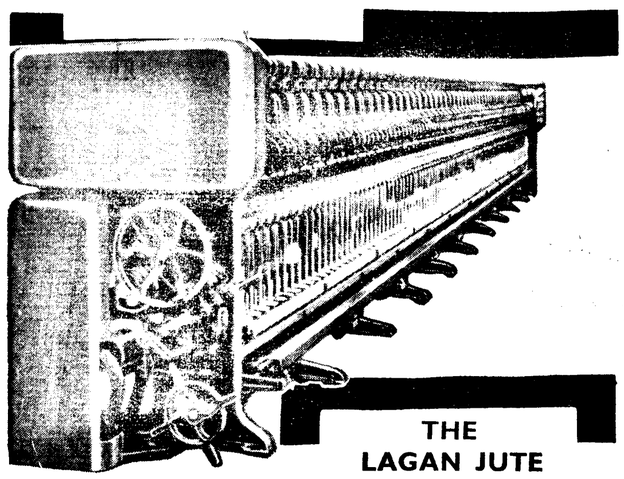
That is why we have courts of appeal to set right the judge of first instance and courts of further appeal to set right the courts of appeal. All as it should be, no doubt. No one down the centuries seems to complain about it. Did not the witty Disraeli, when suggesting to Queen Victoria the name of Sir William Grantham, Q.C., as a judge of the Queen's Bench Division, answer thus the sensible old lady's objection that the nominee had not the reputation of being a very sound lawyer: "Ma'am, Sir William has the three essential qualifications of a judge of first instance. He is invariably courteous, painstaking and wrong." Incidentally, Grantham J. turned out to be one of the most popular and trusted judges of the next 30 years.

Coming back to lawyers, the writer has just come across a case which in its way is a little gem as illustrating the danger of giving definite advice. First let the non-legal reader consider a precedent on which we commented last year. It was *Moynes* v *Cooper* (75, *Law Notes*, 1956, p. 86). Imagine yourself the employer in that case. One of your workmen has, with your consent, obtained a substantial advance on his pay. Later, your pay clerk, not knowing anything about the advance, hands over to the workman his full week's wages in an envelope. The servant, when he received the envelope, did not know that it contained more than was due to him and slips it in his pocket and walks off home with it. When he gets home he opens the envelope, discovers the mistake, decides to keep the whole amount for himself, and does so. You discover the facts. "Theft", you say, and off you go to your lawyer, who agrees with you, though he will substitute the more technical word for it—larceny. You report to the police and your workman is prosecuted. Will he be convicted of larceny? "No", said a divisional court, on the ground that "at common law the taker must have acted *animo furandi* (with a mind to steal) at the time of the taking", and in the present case the defendant did not know of the mistake when he took the money, so the taking was not *animo furandi*. Thus England's Chief Justice, Lord Goddard, and Hilbery J. (Stable J. dissenting) and your workman is acquitted.

You rub your eyes and so does your solicitor but you both think you have learned your lesson and will know better next time. About a year after *Moynes* v *Cooper* came *Russell* v *Smith* (1957. *Law Notes*. Vol. 76. p. 242).

Now assume yourself the friend and confidant of the employer in the latter case, on which he consults you before he takes any steps. Your fellow employer is the head of a firm of hauliers and the matter concerns one of the firm's lorry drivers. This man was instructed to collect a ton of feeding stuffs from a customer of the firm and deliver the same to another firm. By an error (probably in counting) on the part of the customer's servants, eight sacks too many were loaded on the lorry and arranged by the lorry driver who did not at that time know that any mistake had been made. But when the goods were unloaded, the driver realised the mistake and that he was left in possession of eight sacks of surplus. He decided to misappropriate them, did so, and afterwards sold the eight sacks for his own profit. Knowing that you have been through the mill yourself a few months before, your friend comes round to see you. "Is this larceny?" he asks you. "This is just up my street", you will say with considerable aplomb. "It is not larceny. The lorry driver did not know of the mistake when he accepted the load, so the taking was not *animo furandi*." And when he, unimpressed by your Latin tag, does not accept your opinion, you will ask, who is he to argue with the Lord Chief Justice of England, who so decided in your own case, *Moynes* v *Cooper*. But your friend the haulier prosecutes.

Now abandoning the fictional friendship, this is what actually happened. The magistrates relying on *Moynes* case acquitted the lorry driver on the ground that the "taking" occurred at the time of the loading at which time the accused had not the intent permanently to deprive the owner. The Crown appealed and the divisional court, differing from the magistrates, held that the lorry driver had committed larceny. The Lord Chief Justice presided in *Moynes* v *Cooper*. Who presided in *Russell* v *Smith*? The Lord Chief Justice. What is the distinction between the two cases? Well, there is an extremely learned article in *Law Notes* on the subject, and, having twice read the same, the writer has not the faintest idea.



Answer to "What is wrong here?" A dog is not entitled to his "first bite". Knowledge of a *propensity* to bite is sufficient to establish liability. This John clearly has and he is therefore liable to the lady. The fact that the dog belonged to his daughter will not help because liability is based on control of the dog which John had. (75. L.N. 307 and 309.)

THOSE who did not drive down to Strand Road last week to see *H. M. S. Gambia* would have been well advised to do so—it may have been their last opportunity of seeing a British naval ship of any size in these waters again, or at least for some years. *Gambia* looks like being the last flagship of the East Indies Station; those two great arbiters of naval power, politics and economics, have decreed it. Her flag officer, Vice-Admiral H. W. Biggs, told me he was the one-hundredth officer to hold this appointment, which dates back over one hundred and fifty years. There may be one more, but he doubted it, and in any case the days of the East Indies Station are numbered. With the Trincomalee base closing down and neutralist ideas growing among the countries bordering the Asian shores of the Indian Ocean, Commonwealth defence in this area may soon be the sole responsibility of the Indian Navy. Admiral Biggs appears to think highly of the efficiency of India's ships. But I would be surprised if he did not share my own opinion about the adequacy of their strength and numbers. Not that Britain herself has many ships in this area nowadays—Admiral Biggs's description of his own functions would seem to fit those of a public relations officer rather than the commander of a fighting fleet. His opinion about the necessity of bases in these modern days may well be correct; the American navy, for instance, seems to get on quite well without them. And no doubt Britain's Commonwealth defence commitments can be met adequately with a fleet based on Aden, unless, of course, the day of the surface warship is past altogether. Only the future can settle these questions—also the anxious one whether countries like Ceylon have acted wisely in dispensing with British naval protection before they are able to provide their own. Certainly the grounds on which they have done so seem doubtful enough; let us hope they never have reason to regret their haste.

* * * *

In these egalitarian times it is perhaps inevitable that anybody calling himself a Prince would be considered a doubtful appointee to any post for which demagogues fancy themselves better equipped. For myself, it would be easier to try to be funny at the expense of Prince Aly Khan, who is to be Pakistan's permanent delegate to the United Nations, if I knew just what the required qualifications are for this obviously high office. That Prince Aly Khan is a most charming man will be questioned by few, and charm is needed in diplomacy—if one is not dealing with Messrs Vyshinsky or Gromyko. With due respect to Miss Rita Hayworth, who must have married all five times at the irresistible dictate of her warm heart, winning her hand must be a highly competitive business and an international one. It is not for me to belittle success in this department, and I am unconvinced that the rather short duration of the marriage renders the Prince's triumph irrelevant to his diplomatic fitness. Marriages between nations have been known to be shorter in length of time and harsher on conclusion. Wild stallions are usually needed to take me to tea parties (such as some of Prince Aly Khan's prospective rivals will give in New York), and if diplomatists are at all like me in this respect the Prince is assured of considerable social success on the East River. The Prince's other specialisation is said to be horses, to judge which noble animals may in fact call for greater gifts than to judge men. And the horse-trading which is today's diplomacy, especially at the United Nations, should find Prince Aly Khan in his new assignment wholly in his element.

* * * *

The defeated Liberal candidate in the Rochdale by-election, Mr. Ludovic Kennedy, may be right when he says that the result signifies a "great revival" for his Party. He would have been on safer ground though had he reserved his comments to the defeat it constitutes for the Government. A fall of thirty-one percent in the Conservative candidate's share of the total poll—from the top to a very discouraging bottom place—can have only one meaning, even in a town with a grievance like Rochdale. But the real lesson lies in Mr. Kennedy's own performance. He may not have won, but he has certainly shown what a television personality, plus a film star wife, can do for a parliamentary candidate these days. I know nothing of his qualifications for the position he aspires to. I have never seen him on television, although I have read his newspaper articles which I consider neither better nor worse than most. But what secured Mr. Kennedy his thirty-five percent of the votes cast was his name—a household one among the large majority of Rochdale's voters, whether newspaper readers or not. He has been the first to prove what everybody has suspected for some time—that the key to British politics in the future is going to be television, just as we are told it already is in the United States. One may view this any way one pleases. Personally, it fills me with gloom. But it does reveal some interesting possibilities, and one of them is that the ranks of existing and intending Members of Parliament will soon contain a large proportion—perhaps the larger one—of people who have nothing to say but only a charming way of saying it. It is not difficult to foresee the day when Mr. Chris Chataway, for instance, will present himself at the hustings. Mr. Gilbert Harding might be next. And, perish the thought, we may even see that frothy egoist Mr. Malcolm Muggeridge seeking election, no doubt as a means of replacing the income he lost through his recent attack on the Queen.

* * * *

Most of those who braved the unusually thorough police check to attend Dr. Ho Chi-Minh's Press conference in Calcutta last Thursday, must have emerged wondering what purpose it was really intended to serve. It is a question journalists often ask themselves after attending such gatherings, and it would be patently unfair to suggest that aridity of thought and expression is an exclusive privilege of communist statesmen. The mild-mannered and soft-spoken doctor, whose following has ravaged the best part of northern Indo-China and turned it into the puppet of its ambitious and powerful northern neighbour, was certainly generous enough with the pleasantries demanded by modern cold-war diplomacy. It is difficult not to be impressed by the grasp of public relations technique which communist statesmen show with their flow of flattering adjectives, and, in Dr. Ho's case, by the perfect timing with which each was accompanied by a winning smile. But to know that Dr. Ho, in public at least, is prepared to describe India as a rather nice country and Indians as jolly nice people, did not, I consider, constitute a contribution to human knowledge justifying three-quarters of an hour's attention. Dr. Ho's preliminary statement took the best part of half-an-hour; not that it was long, but it required translating by an interpreter who seemed to be risking his job judging from the number of times Dr. Ho had to intervene to correct him. Many present must have wondered why the learned doctor did not say in English whatever little he had to say. The first question asked, inevitably, was about Kashmir, and the sum total of what he said in reply was that he had heard it was a rather beautiful place—a comment which rang a bell with the *durwan* at the door, who nodded his head in warm approval. The second question was about journalism and journalists, which brought from Dr Ho a plea that they should be sincere. It is in response to this that I am offering these impressions.

* * * *

Newspapers make a fair proportion of their living from advertisements. That is one of the reasons I am always pleased to hear an official spokesman say something good about them as an institution. Another, of course, is the rather more objective views I hold about the importance of advertising in promoting rapid economic growth. Up to now, I had not noticed any tendency for Government Ministers to agree with me. Everybody knows why the tyre companies cut their budgets and why so many others have hesitated to expand theirs, and the official tendency still appears to be to look upon advertising as either unnecessary, or worse still, immoral in a socialist economy. I am glad to see Dr. Keskar, Union Minister for Information and Broadcasting, refuting such nonsense, but I am none the less surprised for all that. To hear from a member of the Government that Indian industries should be more "advertisement-minded" and that advertising is as desirable as any other industry, is pleasant music indeed. But I wonder what support there is for these views among Dr. Keskar's colleagues—although I have never seen any of them avoiding personal publicity, which is of course advertising in another form. The nationalised industries, too, are not contemptuous of the benefit a little publicity can bring. In fact, only when it is done by private enterprise, with a sharp eye to sales and profits, does advertising appear to be unpopular at all. Perhaps Dr. Keskar's words are an indication that official opinion is changing on this subject too. I doubt that myself. It is more likely he is alone in his stated beliefs, and will continue to be for some time yet, although if he holds them strongly enough he could help the situation by impressing them on his colleagues more often. Or was the Minister, who was addressing the Delhi Advertising Circle at the time, merely indulging in that favourite pastime of Indian politicians—telling people what they like to hear?

* * * *

The French award of their *Croix de la Legion d'Honneur* to Lady Ranu Mookerjee (need I say that she is the wife of the steel magnate, Sir Biren) is indeed *bien méritée*. Apart from her consistent interest in Calcutta's cultural activities, in her capacity as president of the Alliance Francaise in this city she has done much to promote the understanding of French culture. I believe this is the first time an Indian citizen has been awarded this honour, and although the French have a reputation for being liberal in their distribution of the "cross", they have not given it to anybody in what were formerly their territories. So I join those who have offered their *felicitations* to Lady Ranu for being the first recipient in this country. Incidentally, the ceremony which was held last weekend for the French Ambassador in India, Count Stanislas Ostrorog, to confer the honour, was part of the many-sided programme of the "French Month" which is being currently celebrated under the auspices of the French Cultural Centre and the Alliance Francaise of Calcutta. Under this programme, two dramas were staged last Monday—one, the French version of *Dak-Ghar* by Tagore which André Gide has translated and the other, *Le Medecin malgré Lui* by Molière—which I attended and enjoyed very much. The Indian poet's drama was acted by a completely French cast, and the Molière comedy wholly by an Indian one, which I thought very appropriate to the occasion.

CALCUTTA VISAKHAPATNAM

70TH UTRECHT TRADE FAIR
18–27 March, 1958

Occupying an area about 660.000 square feet, this Fair will be fully representative of Industry in Holland, besides displaying extensive and important exhibits from other countries. A visit to this international fair is indispensable for those who would like to keep in touch with the world of industry. The easiest way to get there is of course by flying KLM to Amsterdam which is within a few miles of the Spring Fair at Utrecht.

WIDESPREAD LOSSES IN STOCK MARKETS

RISE IN U.S. UNEMPLOYMENT DEPRESSES SENTIMENT

London, 19th February.

FURTHER widespread losses were recorded in the stock markets during the past week. South African gold shares, however, moved against the general trend in response to a small amount of American buying and discussion of the possibility of a rise in the price of gold but prices later were below the best. A number of factors combined to depress the markets. The most important was the rise in unemployment in the United States which increased recent fears that the business decline there may go further and last longer than was expected earlier. The news affected Wall Street, which contributed to the depression in London. Other adverse influences included the diminishing prospects of an early reduction in Bank rate, the competition from the new issue market and the serious setback to the Government in the Rochdale by-election. Somewhat divergent trends developed in the gilt-edged market. Short and medium-dated stocks were in demand and were higher on balance, but long-dated and irredeemable stocks were barely maintained. The latter group reflected the appearance of a new £300 million funding 5½ percent long-dated issue, which started life at the issue price of £98¼. Greek bonds were dull but foreign bonds and rails were fairly well maintained. Dollar stocks recorded extensive losses, partly in sympathy with Wall Street and partly reflecting a sharp fall in the dollar premium. Widespread and often substantial losses were recorded in the industrial market. Base metals were dull. Oil shares continued to lose ground under the influence of falling world prices for petroleum products. The earlier firmness in rubber shares gave way to dull conditions. Strong features were Batu Tiga on the sale of an estate and Federated Malay States Planters on the offer for the remaining estate. Numerous small losses were recorded in the tea share market. Ceylon tea shares lost ground on the Minister of Agriculture's statement that nationalisation had only been postponed. Indian tea shares were dull.

The Money Market

The money market again experienced a difficult week in finding sufficient funds with which to pay for its take-up of Treasury bills. The seasonally heavy tax flow and new issues kept credit in stringent supply, and although the authorities provided a large amount of assistance to offset the shortage of funds, their help was insufficient to prevent the market borrowing heavily from the Bank of England. The rate for day-to-day loans seldom went much below 6 percent. Only on Saturday last was there any change in the situation, with an ample supply of funds forthcoming, and the improved conditions were carried into the current week as the result of Government disbursements. However, the situation was expected to be kept well under control by the authorities. There was a good demand for May and hot bills at 5 11/16 percent, but the turnover was restricted by the tight credit situation. In spite of the narrowness of profit margins now being obtained in bills, the money market again adjusted its bid upwards at Friday's tender, but with increased competition it secured a smaller number of bills. The average rate was reduced to £6 0s 10.56d percent.

Activity on Wall Street

Long-dated U. S. Government bonds extended their recent advance during the past week. Investment quality corporates were steady to a shade higher in quiet dealings. Rail issues generally displayed a mixed appearance, while convertibles followed the stock market trend and moved lower. In a slow moving foreign bond market, Greek issues were easy under light offerings. Australians, German Nationals and Italians showed mostly fractional changes either way, although the inactive Italy 7 percents of 1951 advanced 13 points to $129 on the sale of three bonds. Denmark 4½ percents eased fractionally. Among Japanese issues, Government 6½ percents of 1964 were firm, while Chile 3 percents added a small fraction.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 12th February shows that the gold stock was unchanged at $22,784 million. Foreign deposits rose by $13 million to $297 million, while foreign investments increased by $8 million to $3654 million. The Federal Reserve bought $61 million worth of securities under repurchase agreements but sold $7 million worth of bills and $1 million worth of certificates. Total discounts and advances rose by $84 million to $237 million, while the aggregate excess reserves of member banks fell by $56 million to $342 million. The daily average excess reserves of member banks rose by $66 million to $476 million, while their daily average borrowings increased by $97 million to $286 million. Business loans of the New York city banks declined by $57 million to $11,093 million, compared with a rise of $90 million to $11,089 million in the corresponding week of last year.

Hongkong Gold Shaded

Trading in the Hangkong gold market during the past week was confined mostly to squaring-up operations before the Chinese New Year holidays. Sentiment was dampened somewhat by the firmness of sterling. The market fluctuated irregularly and closed the week a trifle lower on balance.

Rise in Paris Gold

The Tunisian events had a hardening effect on the Paris gold market during the past week but in spite of the bullish impact of events, the reaction was small. The strength of the franc and the absence of buyers for the lack of available assets checked a larger upward movement. Although prices went up slightly, the undertone remained cautious and dealers appeared to be unwilling to enter into bullish commitments.

Upward Trend in Quicksilver

The London ex-warehouse price of quicksilver is now mentioned at £75 to £76 a flask compared with £75 previously. Not all sections of the trade readily obtain the metal at £75 and with physical supplies on the spot continuing tight, an upward price trend continues.

Company Cuts Antimony Price

The National Lead Company has reduced the price of antimony by 4 cents a lb with immediate effect. This is the first price change since August 1955, when quotations were raised by 4½ cents. The new price for the company's R.M.M. brand is 29 cents a lb in bulk, f.o.b. Laredo, Texas. A spokesman for the National Lead Company says that the cut is due to reduced demand. Antimony is used as hardening agent in lead plates for storage batteries. It is also used in type-metal plumbing and for fabricated lead products used by the lead industry.

NEW PLASTIC MATERIAL TO BE PRODUCED BY BOMBAY FIRM

A new development in the plastics industry has recently been announced by Messrs R. A. Cole Private Limited of Bombay, who manufacture a rigid, synthetic foam building and insulation material called "Thermocole," from a special grade of imported polystyrene. The company has now nearly completed the erection of a plant near Bombay for the manufacture of this special grade of polystyrene. by the block polymerisation process. An imported styrene monomer will provide the basic material. The new plant will go into production by the end of February with an estimated output of 30 tons a month.

Money

THE CALCUTTA MONEY MARKET

CALL MONEY TIGHTER

Wednesday, 19th February.

DEMAND for money continued to increase in the Calcutta money market last week, but the rate at which this took place was probably lower than in the previous week. The only substantial increase in the offtake of funds is reported by the sugar industry. Advances to cotton and jute mills, and against grain and seeds storage, are relatively unchanged. The interbank market has become firmer, probably on account of tax payment needs. The call rate has been marked up to 3½ percent.

Conditions continued quiet in the exchange market. Those bills that did come to hand were chiefly on account of gunny shipments. Tea bills are scarce. Remittance has been moderate. Sterling has continued strong against the U.S. dollar and the British Exchange Equalisation authorities are reported to have intervened to prevent a rise above the upper level of the official parity. The pound has moved irregularly against Continental currencies and is generally quiet in these markets.

* * * *

Silver was steady because arrivals were poor. The price rose from the previous week's level of Rs. 188.25 to Rs. 189.75, quoted today for ready delivery. The rate for forward delivery stood at Rs. 189.25. In London the price was 76d, and in New York it was 88⅛ cents.

Gold was firm in sympathy with silver and the price advanced from Rs. 115 to Rs. 115.25. The sovereign at Rs. 73 was 25nP higher.

* * * *

During the week ended 14th February, Government of India Treasury bills for Rs. 46,87,75,000 were sold in favour of the Reserve Bank.

* * * *

The decline of Rs. 98 lakhs to Rs. 1,557.65 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 14th February, 1958. The total note issue was Rs. 13 lakhs lower at Rs. 1,569.51 crores. Notes held in the Banking Department consequently rose by Rs. 85 lakhs to Rs. 11.86 crores. Deposits of the Government of India fell by Rs. 5.70 crores to Rs. 51.82 crores, while other Government accounts increased by Rs. 11.71 crores to Rs. 24.83 crores. Balances of commercial banks at Rs. 69.26 crores showed a decline of Rs. 2.66 crores. Balances held abroad declined further by Rs. 1.81 crores to Rs. 33.61 crores. Investments at Rs. 242.85 crores were Rs. 9.73 crores higher. Other loans and advances fell from Rs. 71.76 crores to Rs. 69.07 crores, of which advances to scheduled banks against usance bills amounted to Rs. 26.12 crores (Rs. 26.05 crores). Ways and means advances totalled Rs. 38.21 crores, compared with Rs. 40.62 crores.

* * * *

The return of the State Bank of India for the week ended 7th February, 1958, shows a drop of Rs. 1.21 crores to Rs. 393.44 crores in total deposits. Investments in Government securities are down by Rs. 2 lakhs to Rs. 173.33 crores, while other authorised investments remain unchanged at Rs. 10.13 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have risen by Rs. 3.40 crores to Rs. 195.77 crores. Cash and balances are, in consequence, shown at Rs. 29.15 crores or Rs. 3.16 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 7th February, 1958, shows Demand and Time liabilities at Rs. 709.52 crores (Rs. 13.23 crores on account of borrowings from banks) and Rs. 719.81 crores (Rs. 16.08 crores), compared with Rs. 737.48 crores (Rs. 17.89 crores) and Rs. 701.21 crores (Rs. 16.38 crores), respectively, in the previous week. Cash has increased by Rs. 60 lakhs to Rs. 38.20 crores, while balances with the Reserve Bank have decreased by Rs. 2.42 crores to Rs. 71.12 crores. There is a drop of Rs. 60 lakhs to Rs. 431.95 crores in investments. Advances and bills discounted at Rs. 918.65 crores show a rise of Rs. 11.27 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.6 percent and 64.3 percent, against 7.7 percent and 63.1 percent.

* * * *

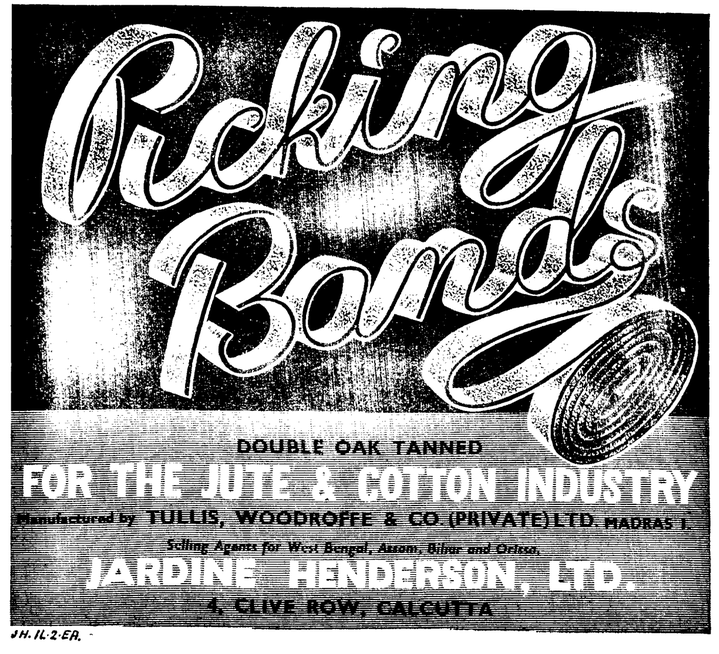
According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea, land and air Customs revenue collected in the Indian Union during October 1957 amounted to Rs. 14.92 crores, compared with Rs. 14.89 crores in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year, except in the case of air Customs for which the previous year's figures are not separately available. Of the total Customs revenue collections, import duties accounted for Rs. 12.04 crores against Rs. 11.70 crores, export duties for Rs. 2.23 crores against Rs. 2.80 crores, land Customs and miscellaneous for Rs. 54 lakhs against Rs. 39 lakhs and air Customs for Rs. 11 lakhs. The total gross collection of Union excise duties amounted to Rs. 21.26 crores compared with Rs. 16.15 crores. During the seven months, April to October 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 254.62 crores compared with Rs. 197.52 crores during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs 92.69 crores against Rs. 78.15 crores, export duties for Rs. 12.94 crores against Rs. 15.26 crores. land Customs and miscellaneous for Rs. 2.65 crores against Rs. 2.03 crores, air Customs for Rs. 1.52 crores and Union excise duties for Rs. 144.82 crores against Rs. 102.08 crores.

LONDON FINANCIAL LETTER

NO RELAXATION OF RESTRAINTS

By Air Mail.

WHEN Mr. William McChesney Martin, chairman of the U.S. Federal Reserve Board, was quoted as saying that the U.S. recession might be deeper and more protracted than had been generally anticipated, many people in London assumed that a new liberal phase of U.S. policy was imminent. More careful consideration of Mr. Martin's whole statement convinced them that this high authority had not altered his conviction that a new upsurge of inflation would be more damaging than a recession. When Mr. Derick Heathcoat Amory, Britain's new Chancellor of the Exchequer, spoke of taking off some of the brakes and moving ahead again a similar misapprehension arose. Mr. Amory meant that the Government's long-term policy was expansion and that it would be resumed as soon as the restraints had achieved internal stability. He felt it necessary to warn soon after that tight control must certainly continue for the present and that if Britain missed the opportunity provided by the fall in world prices, she would lose the chance to resume expansion soon; meaning many months hence. It is not impossible that such opinions will be set aside as the recession deepens in the United States and begins to exert its downward pressure in Britain. For the present, however, the "hard money" policy is triumphant in both countries. It is doing its work in both, having helped set in motion the recession in the United States (where it is consequently relaxed but not reversed—though "dear money" is abandoned) and the recovery of the reserve in Britain (where it cannot be safely relaxed until the recovery has gone much further).



Disparity of Rates

Before the end of January many people in the City believed that a reduction of Bank rate was imminent; but before February was far advanced that idea was modified. Nonetheless, the decline in the Treasury bill rate continued, to an extent that made ample provision in advance for a ½ point reduction in Bank rate. There is no need to read special significance in this movement: at this time of year, with revenue from taxes flowing in, the Treasury is not at all liberal with its issues of bills, and keen competition for the available supply brought down the rate of discount. The decline in London discount rates was not, of course, sufficient to counter-balance the decline in New York rates since the Federal Reserve rates moved downward. It is rather the premium on forward dollars—required to cover the exchange risk on short-term foreign investments here—that has limited the advantage of investment in London, compared with New York, to ¼ to ⅜ percent. There has been a steady movement of foreign funds back to London but no heavy inflow. The City and, presumably, the authorities regard this inward movement of foreign funds with mixed feelings. On the one hand, funds which flow in can flow out again: and it is natural when sterling is already weak that they flow out on a substantial scale. On the other hand, even in this period, when demand for sterling is seasonally strong, the reserve needs this capital inflow to swell it to a level which will impress opinion abroad. The idea which seems to have arisen in some quarters here that the nation's finances are so well stabilised that the "special measures" can be discarded does not stand up to analysis: further strengthening is the paramount necessity.

It is well known that the reserve has been inflated by short-term borrowings, but it is not as well understood as it should be that the reserve would be pitifully inadequate without such borrowings. If they are removed from the reckoning, the end-January figure stands at £569 million—£12 million below the level of a year earlier, when the whole sterling system was caught in the coils of the Suez troubles. And even that calculation excludes the "waiver" of the U.S. and Canadian instalments which were due but not paid at the end of last year. If they had been paid, the true figure at end-January 1958 would have been as much as £75 million below that of a year earlier. It has to be remembered, too, that these temporary supports become burdens later, when the amounts borrowed or deferred have to be repaid. It is understandable that the British authorities want at least a normal quantity of foreign money in London, and that they are resolved to establish such confidence as will prevent any run on the sterling balances for any reason other than genuine expenditure. They are not, therefore, in any hurry to reduce Bank rate. Yet the generosity of London rates which attracts foreign funds is itself an embarrassment, in that it imposes a heavy burden on the balance of payments when the interest (or equivalent) is paid on the overseas balances. And in the fiscal year beginning in April, the Budget will suffer the first real impact of abnormal interest rates. That experience may well persuade the Chancellor of the Exchequer to carry the reduction of interest rates a few stages further.

Gold Price Controversy

If the U.S. authorities are resolute in their fight against inflation, it is unlikely that they will listen sympathetically to the recent talk (albeit subdued) of revaluation of gold. On the other hand, a severe U.S. depression is—it has been argued for years past—the one development which can shake the U.S. administration out of its rigid policy on the price of gold. Ordinary commercial factors may be the main explanation of the recent rise in the price of gold in London very near to the highest level reached since the London market was reopened nearly four years ago. The seasonal sales of gold on Russian account seem to be virtually completed, and supplies on offer have also been reduced by the recovery of sterling, which obviates selling of some newly-mined South African gold to provide dollars to sell against sterling. On the demand side, there has evidently been some buying of gold on behalf of Continental operators who are apprehensive about economic prospects generally. At the same time, however, there is an undertone of rumour that the official price of gold will be raised from $35 an ounce. The official U.S. denial of reports that the price was to be put up to $40 did not deter the optimists, who reasoned that if any such move were contemplated the first action by the authorities would be a denial of the whole idea. Meanwhile, the bodies which have to allocate reserves between gold and dollars have to choose between gold which earns nothing and dollars which would depreciate if the price of gold were raised.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

THE SIGNIFICANCE OF RISING UNEMPLOYMENT FIGURES

(FROM A SPECIAL CORRESPONDENT)

THE industrialist finds it difficult at the moment to prepare his policy. It might be said, and with truth, that he must have been in a similar predicament for a considerable time. Theoretically, he is at one with the former Chancellor of the Exchequer, Mr. Thorneycroft, in declaring that Government expenditure should be kept down to the minimum. Nevertheless, he is not critical of the Government's placing contracts for jet planes, atomic development programmes, machinery for the nationalised industries and the like. These are justifiable exceptions. He is not sure where Government economy should begin and where it should end. And it would be dangerous to investigate the issue too closely. For might not a Government order come his own way one day? If the industrialist had any intention of being really restive, the Government has a sedative to hand, or, as the modern term goes, a "tranquilliser." Of course, members of the Cabinet say that they believe in economy as much as does Mr. Thorneycroft and that they must not be pedantic. So the Government adds another £150 million to the national expenditure for next year, while industrialists (and many others with them) drowsily agree that they must not be too rigid in their conceptions.

There should be sympathy for the Government, but up to a point. Unemployment figures are rising; they are now well over the 300,000 mark—a trifle in comparison with those of prewar days. But if there were not those periodical Government orders creating work, how much further would the figure go? Deflation must cause unemployment; and the Government proclaims that it is committed to deflation above everything else. Nothing will prevent it from carrying out this policy, and the price for it should gladly be paid. But if unemployment were to rise sharply, would the words then sound as brave, or their message be capable of fulfilment? Would not the trade unionists and their Parliamentary leaders be up in arms? It is better to try and keep down unemployment by spending, as discreetly as possible, a little more of the public money. Chairmen of local and county councils all over the country have said that expenditure must be reduced. Nevertheless, Britain must make sacrifices for education; for unless she does so, she cannot hope to remain in the front rank of nations.

Rise in Wages of Coal Miners

Britain is playing in the domestic sphere the old national game of compromises. Coal miners' wages have risen so much in the Yorkshire area that absenteeism is now regularly practised by one-fifth of the workers, which means, in effect, that a large number of colliery labour now work only four days a week. As one of the consequences, fuel prices have reached record heights. The remedy for this state of affairs can only be found in changing their nature, so that the amount of leisure taken by them is less. But since not even an archbishop can convert a miner on this matter, the Government turns to providing more equipment as a substitute.

Deflationary Policy

Does the Government know to what degree it wishes deflation to be carried out? The reply it has given so far is that deflation must be carried out to the extent that is necessary to save and maintain the value of sterling. On every improvement in sterling, it calls attention to the fact as evidence that deflation is taking place. But this has not prevented a host of new wage claims on the ground that the cost of living is still rising. The Government is at present showing a bold attitude towards these rewards; but that may not be the end of the story.

Meanwhile, some of the big chain stores have got to work and have cut a number of prices of goods they offer for sale. Reductions have been chiefly in goods manufactured to specifications which the stores themselves provide, and they are in some cases manufactured by factories. But unless one is able to analyse the respective specifications of goods offered by stores at half the prices of those in shops a few doors away, it is impossible to say to what extent true deflation has taken place. What Britain is faced with is that an adjustment of specification has taken place—perhaps a desirable move—but the fall in price may not necessarily represent an increase in the value of money. The consumer finds himself confronted with similar unsolved questions in all sorts of directions. Notable instances are various blends of foods and beverages, where prices may fall, but there is no accompanying guarantee that the mixture is exactly as it was before. It is a consolation that even the late Stephen Leacock, the famous economist and humourist, was unable to offer a satisfactory definition of deflation. Deflation and inflation, Mr. Leacock said, were largely inexplicable, not to say mystical phenomena. When the bank teller smiled on you and insisted on pushing wads of bank notes over the counter, then you could be sure that inflation had arrived. When he scowled at you and would not part with a cent, although he had known you for years as a kindly and honest fellow, then you could be sure that deflation had appeared.

Declining Prices for Base Metals

Signs of deflation are noticeable in prices of a number of commodities, but no one seems to be confident about the ultimate result. In two years, the price of copper has fallen by £260 a ton and prices of other base metals have also declined drastically. Growers of sisal and flax find themselves producing unprofitably. U.K. spinners of flax have entered into agreements with Russian producers in order to ensure a sufficiency of supplies. This all looks rather shaky from the aspect of sound economics. On the other hand, low prices of raw materials have benefited some British manufacturers by enabling them to make the prices of their finished goods more competitive. But the story does not end there. The losses now suffered by some primary producers must ultimately be the cause of their lower purchasing power.

Optimistic Beliefs

Against the obscurities in the present situation must be set the causes of spasmodic outbursts of optimism. The belief that a fall in interest rates will occur sooner than had been expected is one of them. Another is the success of the latest British motor-cars in the U.S. market. Furthermore, nuclear energy and the European common market still continue to gain importance. The first has provided an added stimulus through the disclosure that, at the end of 1956, the number of industrial factories receiving isotopes was 362, and that the number has further increased during 1957. There has also been the announcement that the first industrial conference on nuclear energy will be held in April next. Emphasis will be on business prospects and industrial applications of nuclear energy. The British Electrical Power Convention is to be held in June.

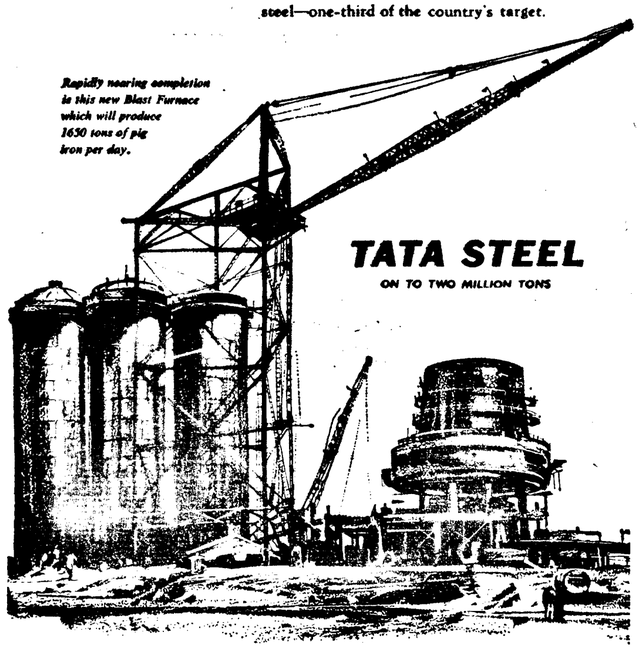
The European common market supporters have received encouragement from the fact that four-fifths of the British chemical industry favour the project, and also due to the release of a detailed study of the possible impact of the market on world trade, prepared by the secretariat of G.A.T.T.

Quota Restriction on Textile Imports

The U.K. Board of Trade has enforced quota restriction on imports of rayon and cotton yarn and goods from China. Imports intended for home consumption in Britain must not exceed £150,000 during the current year, while those for re-export, after having been processed, are limited to £1,500,000. These are not impressive figures, judged by the needs of China's vast population to find new means to improve their standards of living. But, of course, at this time in the world's history that factor hardly enters into consideration. The principle guiding the British Government is that China should be treated along the same lines as Japan. India, as with Pakistan and Hongkong, enjoys special privileges in this matter, as members of the Commonwealth. The British textile industry, as a whole, does not view this with good grace. Some British merchants rigidly adhere to the policy of not trading in cloth unless spun and woven in the United Kingdom.

Reducing Trade Barriers

The Confederation of Shipbuilding and Engineering Unions will endeavour to break down trade barriers, especially those against Russia and China. This, so it is claimed, is the first time that a British trade union has adopted the lessening of trade restrictions as part of its official policy. Its task may be less stubborn than at first appears, for the General Electric Company, in a bulletin on countries to which the United Kingdom may expect to increase exports, places Russia high on its list.



Tata Steel's two million ton expansion programme is now entering the final phase. Scheduled for completion by mid-1958, it is now a race against time.

The Final Spurt

Today all over Jamshedpur there is a new sense of urgency...work goes on round-the-clock to complete the expansion programme on time.

Embracing every phase of operation from the winning of ore and the mining of coal to the rolling of steel, Tata Steel's expansion programme will double the annual production to two million tons of ingot steel—one-third of the country's target.

Rapidly nearing completion is this new Blast Furnace which will produce 1650 tons of pig iron per day.

TATA STEEL
ON TO TWO MILLION TONS

THE TATA IRON AND STEEL COMPANY LIMITED TN 1760

Stocks and Shares

PRICES FALL IN DULL TRADING

INDIAN IRON STRIKE OFF: BUDGET FEARS

Wednesday Evening.

IT has been a dull and uneventful week in the stock market. Settlement considerations and pre-Budget caution added to the pervading listlessness. Business was small and price movements narrow and indecisive. The formal announcement of Mr. Krishnamachari's resignation was received calmly because the market was prepared for it well in advance. The possible implications of Mr. Nehru's taking over the Finance Ministry have created some difference of opinion. The more common view is that this is a mere stop-gap arrangement and, in any case, will make no difference to the coming Budget, which had been fully prepared by Mr. Krishnamachari before he resigned. But a small minority believes that it will be a Nehru Budget, which means that it will have a strong socialist flavour. Mr. Nehru's high praise of Mr. Krishnamachari's last Budget has killed all hope of any substantial tax concessions to private enterprise.

The Chagla Commission's report and subsequent developments have been closely studied in the search for clues to the future investment policy of the Life Insurance Corporation. Except for the reported purchase of Rs. 3 crores of Government securities on Monday, the Corporation has shown little interest in the market. Operators hope that the Mundhra affair will not lead to the stock exchange being deprived of support from the country's biggest institutional investor.

The news that the Government of India has granted permission for the issue of bonus shares by the Tata Iron and Steel Company caused a short-lived recovery, although it has been known for some time that such an issue was likely. Fears of impending labour trouble at Jamshedpur caused anxiety and the recovery could not be sustained. Reports persist that the Indian Iron and Steel Company might follow the T.I.S.C.O. example and distribute bonus shares from funds in the share-premium account. But so far there have been no indications that these reports are based on anything but wishful thinking. In this case also, the labour situation gave investors some bad moments on Tuesday, when news was received of a stay-in strike by 1,500 workers at Burnpur. A few hours later, it was known that the strike had been settled and work resumed. Thereupon Indian Irons, which had earlier reacted from Rs. 19.72 to Rs. 19.48, recovered to Rs. 19.75. Mr. Nehru's speech in Parliament today, however, was bearishly interpreted and the shares slumped at the close to Rs. 19.32.

The resolution moved in the Rajya Sabha on the nationalisation of banking, created some nervousness in bank shares, but confidence revived when it was realised that the Government would not support such a measure. The Railway Budget was greeted with relief because it proposes no increases in freights and fares. Mr. Cabot Lodge's reference, in his speech at the Indian Council of World Affairs, to Indo-U.S. economic co-operation was well received as it gives some hope that further American aid will be forthcoming for Indian economic development.

Here are details of the week's trading:

There was a good enquiry for short and medium-dated Government loans and prices were marked up fractionally. Long-dated loans, however, evoked little interest. Some enquiry was noticeable for State loans, particularly those of U.P., Bombay, and West Bengal.

Preference shares of managing agency companies, with the exception of Martin Burn and McLeod 2nd, as well as most jute company issues, were freely offered without attracting buyers. Preference shares which were on the wanted list included Alkali & Chemical, Indian Iron & Steel, Burn & Co., 7% and 6% and Kesoram 1st and 2nd.

Bank share prices were maintained, although there were more sellers than buyers following the revival of talk about nationalisation.

With the exception of Burrakur, which were steady at Rs. 22.50, other issues lost some ground, particularly Bengal which were lower at Rs. 229 and Bharat Collieries at Rs. 6.19. Raneegunge, however, were fairly steady at Rs. 11.25.

In the railway section a small lot of Burdwan-Cutwa changed hands at Rs. 45 and Dehri-Rohtas were reported around Rs. 10.

The cotton section experienced one of its dullest sessions, when only one transaction was reported in New Victoria at the lower rate of Rs. 1.20

Jute shares followed the pattern of the goods market, which was very quiet during the past week. Sellers appeared to be anxious to liquidate some of their holdings and were discounting prices. It is reliably reported that the Naihati Jute Mills Co. Ltd., (managing agents F. W. Heilgers & Co. (Private) Ltd.,) has changed hands.

Electric supply shares were well supported with buyers of Agra at Rs. 136, Calcutta at Rs. 13.50 and U.P. at the higher rate of Rs. 128.

Sugar shares were slightly better this week, the features being Ramnugger which rose from Rs. 23.25 to Rs. 24.75, Carew from Rs. 6.50 to Rs. 6.75, Champaran from Rs. 19 to Rs. 21 and S.K.G. from Rs. 8.81 to Rs. 9.12.

Engineering issues were fairly steady. Braithwaite were enquired for at Rs. 28.27 and Guest Keen Williams at Rs. 29. In contrast, Indian Standard Wagon receded from Rs. 101.50 to Rs. 96. Jessops were enquired for at the higher rate of Rs. 26.62. Textile Machinery fluctuated between Rs. 17.30 and Rs. 16.90. Indian Iron & Steel closed at Rs. 19.32.

In paper, Orient fluctuated narrowly around Rs. 24.30 and Titaghur were steady at Rs. 33.50.

In cement, Dalmia were unchanged at Rs. 10.19 as were Jaipur Udyog at Rs. 11.50 and Sone Valley at Rs. 5.25.

In shipping, India Steamship were well maintained at Rs. 11.87.

Among miscellaneous industrials Indian Oxygen were enquired for at around Rs. 16, while Philips were slightly easier at Rs. 13.75 and National Rubber Manufacturers at Rs. 9. The last-named company has made a second and final call to shareholders of Rs. 2.50 a share payable on 15th March, 1958. Dunlop Rubber were taken at Rs. 22 and Indian Aluminium at Rs. 12.75. Indian Cables were shaded at Rs. 28.50 as were National Carbon at Rs. 24.37. Rallis met with some enquiry at Rs. 28, as did National Insulated Cables at Rs. 24.

In the mining section, Indian Copper were subdued at Rs. 2.84, but Orissa Minerals advanced from Rs. 21.75 to Rs. 22.25.

Tea shares continued to suffer from neglect and prices were once again marked down on a broad front.

* * * *

The profit of the OODLABARI TEA COMPANY has amounted to Rs. 2.45 lakhs for the year ended December 1956. The dividend has been increased from 12½ percent to 15 percent, leaving a carry-forward of Rs. 37,210 against Rs. 9,992 brought in. The crop fell from 8,321 maunds to 8,106 maunds and

the average sale price rose from Rs. 1.70 to Rs. 1.84 a lb. Estimates for 1957 provide for a crop of 8,000 maunds at a cost of Rs. 9.77 lakhs. The directors say that on 16th January, 1957, the managing agency agreement with Octavius Steel and Co. Ltd. was terminated and the company's board of directors took over the management from that date. Octavius Steel and Co. Ltd. was appointed technical advisers of the company on 16th January this year.

* * * *

The CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING COMPANY has incurred a loss of Rs. 20.79 lakhs for the year ended last June. Bringing in Rs. 13,215, there is a net loss of Rs. 20,66,218, which is written off by the transfer of an equivalent amount from reserve. There is no dividend. The company has embarked on an ambitious replacement programme which is estimated to cost Rs. 2.03 crores. An amount of Rs. 85 lakhs has been spent out of the internal resources of the company and by resort to short-term borrowing, in anticipation of receiving a large loan from the National Industrial Development Corporation Private Ltd. It now appears that the actual amount of the loan to be granted will be substantially reduced. The directors are therefore exploring alternative sources of finance. They mention that the unsatisfactory result is due to the interruption of working as a result of the progress of the renovation scheme.

* * * *

Providing Rs. 68.87 lakhs (Rs. 48.40 lakhs) for taxation and Rs. 30.36 lakhs (Rs. 28.45 lakhs) for depreciation, the profit of the BOMBAY BURMAH TRADING CORPORATION has improved from Rs. 48.10 lakhs to Rs. 52.17 lakhs for the year ended last May. The dividend has been maintained at 32 percent, including an interim of 9 percent. Allocations include fixed property reserve Rs. 4.73 lakhs (Rs. 21,305), general reserve Rs. 8.26 lakhs (Rs. 5.87 lakhs) and investment reserve Rs. 3½ lakhs (Rs. 2½ lakhs). The carry-forward is Rs. 1,83,542 (Rs. 39,548). The directors state that the Joint Timber Co. Ltd. was formed in April 1957 by the Government-owned Forest Industry Organisation and the five former lessees, including Bombay-Burmah, to operate certain limited forest areas. Temporary permits were granted by the Government of Thailand. The company's share in this company is 26 percent of the equity. The proposed company for the manufacture of high-grade tapioca starch in conjunction with certain American interests was registered on 8th August, 1956, in the name of Thai Tapioca Ltd. The company's share in the equity is 50 percent and it is responsible for the management of the business in Thailand. The factory started work on 31st October, 1956.

Bombay Market

OPERATORS TAKE CAUTIOUS VIEW OF PROSPECTS

RAILWAY BUDGET HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market closed in a cautious mood last week and operators were unable to take a constructive view due to a number of uncertain factors. The absence of any increase in railway freights and fares was interpreted bullishly, but prospects of increased taxation by the Bombay Government tended to disturb sentiment. There was a great deal of speculation about the future investment policy of the Life Insurance Corporation. For the time being, the institution appears to be investing its money in Government securities, but market circles think that it cannot defer its purchases of equity shares for long, if the investment climate is to be improved.

Steel shares showed an uncertain trend because of fears of labour troubles at both Jamshedpur and Burnpur. The news of the end of the strike by a section of Indian Iron and Steel Company workers at Burnpur was welcomed. Tata Steel closed at Rs. 168 and Indian Iron recovered to Rs. 19.35 on support from Calcutta interests in the belief that the Government would permit the company to maintain an ordinary dividend of 10 percent on the increased capital. Premier Construction were bought at Rs. 157.50 by knowledgeable quarters on reports of capital reconstruction. Tata Locomotive were steady at Rs. 139.50. Automobile shares lacked interest but fluctuations were narrow. Premier Automobile came to hand at Rs. 84 and Hindustan Motor were maintained at Rs. 6.04.

Cotton shares met with selling pressure, as it is feared that the reports of companies for 1957 will be unsatisfactory. Bombay Dyeing were lowered to Rs. 50.10 and Svadeshi declined to Rs. 162.58. Century were sold at Rs. 384.50 and Kohinoor slipped back to Rs. 260 on the fear that there would be a reduction in dividend. Simplex were bought at Rs. 157.50 and India United Ordinary were freely offered at Rs. 9.12. Apollo were placed around Rs. 1.94.

Miscellaneous shares were quietly steady and turnover was restricted. Belapur Sugar were taken at Rs. 233 and Phalton were transacted at Rs. 147. Hopes of an increase in the price of cement helped maintain prices of cement shares. Associated Cement were bought at Rs. 143.25 and Digvijay Cement came to hand at Rs. 136. Mining shares were subdued, and Shivrajpur Syndicate were indicated around Rs. 91. Steamship company shares were steady; Scindia Steam were taken at Rs. 17.24 and India Steamship came to hand at Rs. 11.96 on interested support. National Rayon recovered to Rs. 215.75 on prospects of increased imports of yarn. Talk of capital reconstruction in the company also helped sentiment. Tata Chemical were idle at Rs. 12.40.

Banking shares were slightly easier on profit-taking. Bank of Baroda were done at Rs. 106.25 and Punjab National Bank were quoted at Rs. 51.80. Scattered interest was taken in insurance shares. Oriental changed hands at Rs. 3,970.

Electricity supply company shares were steady and routine turnover was recorded. Tata Hydro was taken at Rs. 115 and Ahmedabad Electric were transacted at Rs. 95.10.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last-named being shown in parentheses and will not be given where such a quotation is not available. Ian for Progress

Power and Plenty

Giant walls taming the rushing waters, irrigation channels bringing new life to barren soil, and heavy cables carrying a mighty surge of power throughout the country are today laying the foundations of India's economic self-sufficiency. During the Second Five Year Plan electrification will be extended to 10,600 additional towns and villages and irrigation to an extra 21 million acres. Textile Machinery Corporation Limited is proud to play its part in this nation-wide endeavour to bring power to industry, light to village homes, food to the hungry and prosperity and happiness to the people. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

COMMERCIAL TRENDS IN EUROPE

GROSS NATIONAL PRODUCT OF NORWAY INCREASES

(FROM A CORRESPONDENT)

PRODUCTIVITY in Norway showed a steady increase in 1957 in spite of obvious signs of contraction in the world market, according to a survey made by the Norwegian Statistical Bureau. The increase in the gross national product, based on preliminary figures, amounts to 3 percent over the previous year. This result was achieved in spite of a very bad year in fisheries and agriculture. The increase in industrial production is estimated at 5 percent. The past year was satisfactory for exports. For the first time since 1951, there will be a surplus in the foreign trade balance. The survey predicts, however, that the contracting tendencies noticeable in the world market and less favourable terms of trade will have a marked effect on the Norwegian economy this year. Although the restrictive monetary policy which was introduced in 1954 was tightened in 1957, the expanding forces generally prevailed throughout the year. Investments went up, especially in the building industry, in which there was a considerable relaxation of the restrictive monetary measures. As a result, both private and other construction activities established another record, after having been more or less constant over the last four years.

Demand from private consumers in 1957 went up along with the increase in the gross national product which at current prices was 1,100 million kroner (£55 million) higher than that of the previous year, although actual earnings for farmers and fishermen were lower. The probable explanation is that personal savings were less in 1957. On the other hand, the savings by the Government, municipalities and business firms increased. Thus the sum total of savings in 1957, as in 1956, amounted to 22 percent of the gross national product, according to the Bureau's survey.

Large Foreign Trade of Denmark

The foreign trade of Denmark was very large in October when imports as well as exports increased. Imports, which had remained at a moderate level for several months, rose by 132 million kroner to 823 million kroner. The increase consisted of the majority of commodity groups and is possibly related to the fact that stocks of a number of raw materials had been reduced in the preceding months. Simultaneously, exports increased by 89 million kroner to 717 million kroner, which marked a peak level for any single month last year. The result for October was therefore an import surplus amounting to 106 million kroner, against 63 million kroner in September and 14 million kroner in October 1956. During the period January-October, it will be observed that the import surplus amounted to 1,288 million kroner last year, or 142 million kroner more than in January-October 1956. As the import surplus alone for the first quarter of the year was larger by 486 million kroner than in the first quarter of 1956, a substantial improvement took place and, considering the very heavy imports during the last two months of 1956, it seems probable that the total import surplus for 1957 will be much the same as a year ago.

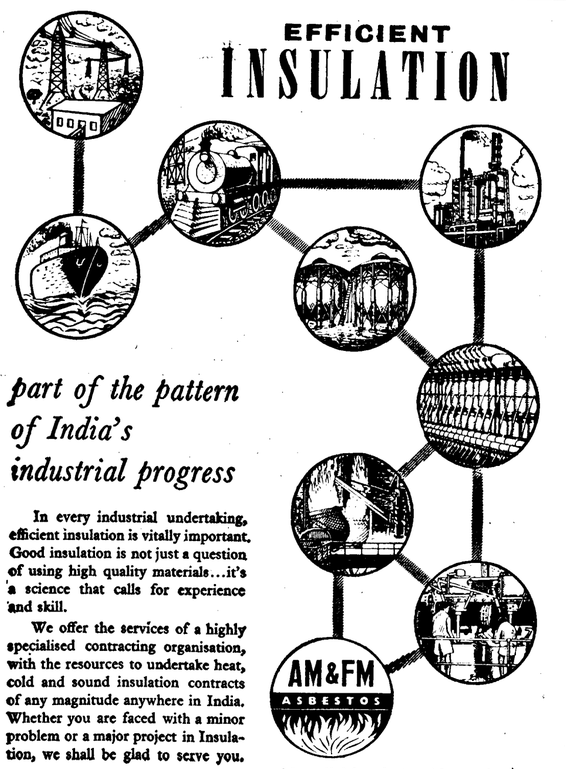
Total exports for January-October were higher by 311 million kroner than in the corresponding period in 1956. This is mainly due to the fact that exports of industrial products increased by 370 million kroner, whereas agricultural exports fell by 88 million kroner due, among other things, to lower prices. Accordingly, industrial exports now account for 45 percent of the total export value, against 41 percent in January-October 1956 and 38 percent in the corresponding period of 1955. Denmark's most important partners in trade during January-October were Britain, West Germany, the United States and Sweden. Her imports from these countries were 1,890, 1,508, 765 and 691 million kroner, respectively, or in all 62 percent of total imports while, on the other hand, exports to the same countries amounted to 1,870, 1,218, 542 and 559 million kroner, respectively, or 64 percent of total exports.

Economic Expansion in the Netherlands

During recent years, economic expansion in the Netherlands has, in the main, followed the same lines as in the neighbouring countries of Belgium, Britain, France and West Germany. Between 1953 and 1956, industrial production increased by 24 percent and the volume of commodities and services exported by nearly 30 percent. These percentages were about the same as those for Belgium and France; they were lower than the West German, but higher than the British, percentages. The increase in real income a head in these years (16 percent) was the same as in France, higher than in Belgium (7 percent) and Britain (9 percent), but lower than in West Germany (25 percent). In this period, the volume of gross investments in the Netherlands increased by nearly 50 percent, consumption by 24 percent and public expenditure by 12 percent. These percentages, especially those for investments, were generally higher than in the countries mentioned above. Thus, whereas the Netherlands did not lag behind these countries in the expansion of production, exports and real income, the increase in expenditure there was somewhat more rapid than elsewhere.

In 1957 various important foreign orders were received, including a number of complete fertiliser plants, various marine diesel engines and steam turbines, equipment for the sugar and the palm oil industry, some major boiler equipment for steam stations, and rolling stock, one buyer being the Netherlands Railways. According to *Lloyd's Register*, on 1st July, 1957, the Netherlands mercantile marine consisted of 4,335,000 gross registered tons. In comparison with the volume as at 1st July, 1956, this meant an increase of 329,000 g.r.t. (8 percent). The Netherlands' tonnage was 3.93 percent of the world mercantile marine on that date, so the country was sixth among the world's seafaring nations, not including Liberia. The Netherlands was also sixth, not including Liberia and Panama, in the volume of the tanker fleet, which amounted to 1,117,000 g.r.t. (34,000 tons more than on 1st July, 1956), or 3.89 percent of the world tanker fleet.

Prosperity in Austria



In 1957, on the whole, business in Austria was steadier and better balanced than during the preceding year. According to provisional data for 1957, gross production in the joint sector of agriculture and forestry increased at the same rate as industrial production—by 6 percent over the previous annual record of 1956. As for other branches of the economy, comparative figures are available for the first three quarters of last year. Results obtained in the building trade and the traffic sector were marked by rates of increases of about 2 and 5 percent, respectively, below the overall average increase of the social product, whereas the rate of increase in the trade sector was nearly 12 percent above the average. The expansion of the social product by an overall average of nearly 6 percent was attributable mainly to three factors: the employment of more man-power in the field of production, the increase of efficiency in the sphere of productivity, and the availability of additional production capacity. The average employment figures of sick-insured labour in the sectors of economy and administration reached a total of 2,185,000 in 1957, exceeding the record for 1956 by 48,500 or 2.3 percent. The official policy effected a continuous reduction of unemployment.

While in 1956 the rates of increase of production and employment increased by a practically equal rate, resulting in a virtually constant index of output a man-hour, the increase of productivity in 1957 was marked by vigorous new upward trends. In the first three quarters of the year, industrial production a man-hour increased by nearly 5 percent over the corresponding record of 1956. At the same time, industrial productive capacity was enlarged. The strong revival of investment activities was in part the effect of the public investment policy. During 1957, the nominal amount of funds made available by public bodies for investments, maintenance, and investment promotion exceeded the relevant figures recorded for 1956 by approximately 9 percent. Simultaneously, a noticeable rise of investments occurred in the private sector.

Increased Activity in W. German Shipyards

In 1957, the West German shipyards turned out 323 ships with a total tonnage of about 1.1 million tons, or 90,000 tons more than in 1956, while unfilled orders at present amount to 5.5 million tons, corresponding to a value of 8,000 million deutschemarks. These orders will suffice to keep the big shipyards in work well into the year 1963, while even the smaller shipyards turning out coastal vessels will be fully employed for the next two and a half years. Roughly two-thirds of the tonnage put out by the West German shipyards in 1957 were built for foreign account while the remainder, 370,000 g.r.t., went to enlarge the West German mercantile marine. The main emphasis lay no longer on super-tankers but on bulk-carriers with a carrying capacity of 15,000 tons to 25,000 tons. This type of vessel is being built by almost all of the big West German shipyards. The Deutsche Werft is building ten ore-carriers of 12,700 registered tons each for a U.S firm in Los Angeles. An important contribution towards the development of ship propulsion was made by the Rickmerswerft in Bremerhaven through its successful tests of a trawler powered with a gas turbine. As a result, a Hamburg-Harburg shipyard is building a freighter equipped with a similar gas turbine while the West German Defence Ministry has ordered for the Bundesmarine a number of so-called G-boats powered with gas turbines.

In 1957, the Deutsche Werft A.G. of Hamburg held the lead over all other West German shipyards for the construction of 15 ships totalling 163,030 g.r.t. The vessels delivered by this shipyard include two passenger ships built for the Zim Israel Navigation Company. As far as unfilled orders are concerned, the Federal Republic-owned Howaldtswerke A.G. of Kiel tops the list with 1.8 million d.w.t. Although this shipyard, in common with all other shipbuilding firms in Schleswig-Holstein, was put out of work for two and a half months because of a strike in the early part of the past year, it built ten ships aggregating 103,000 g.r.t. On 1st January, 1958, the treaties on the European Economic Community and the European Atomic Community came into force. This marks the beginning of the initial four-year phase of the period of transition scheduled to run for 12 to 15 years. During this phase, Customs duties among the six partner countries—Belgium, the Federal Republic of Germany, France, Luxemburg, Italy and the Netherlands—are to be gradually reduced by 30 percent. The first tariff cut by 10 percent will come into effect from 1st January, 1959. Import quotas applicable to any partners to the treaty must be converted, within 12 months from its coming into force, into global quotas accessible to all countries of the Community. It is proposed to raise these global quotas by 20 percent every year. Special arrangements will be made for agricultural produce.

part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

CHAGLA COMMISSION VERDICT ON L.I.C. PURCHASE OF MUNDHRA SHARES

CONSTITUTIONAL RESPONSIBILITY OF FINANCE MINISTER STRESSED

(FROM OUR NEW DELHI CORRESPONDENT)

THE report of the Chagla Enquiry Commission was published here last week. The commission was appointed by the Government to enquire into and report on the transactions of the Life Insurance Corporation relating to the purchase of shares in Angelo Brothers Ltd., Calcutta, the British India Corporation Ltd., Kanpur, Smith Stanistreet and Company Ltd., Calcutta, Jessop and Company Ltd., Calcutta, Richardson and Cruddas Ltd., Calcutta, and the Osler Electric Lamp Manufacturing Company Ltd., Calcutta. The terms of reference were:

(i) whether the purchases were in accordance with normal business principles or practice;

(ii) the propriety of the purchases;

(iii) the person or persons responsible for the purchases; and

(iv) any other circumstances which to the commission may appear to be relevant.

The commission has held that the purchases were not in accordance with normal business principles or practice. In his report, Mr. Justice Chagla says: "I have not been able frankly to understand why it was necessary to buy this large quantity of shares from Mundhra direct in order to raise the prices of his shares. The same purpose could have been achieved and more effectively achieved if the Corporation had given instructions to its brokers to buy these shares in the open market. A curious answer has been given to this suggestion that if the brokers had been instructed and if the people in the market had known that the Corporation was a buyer, the prices would have shot up. But that is exactly what the Corporation wanted to bring about. Therefore, the real reason for buying these shares does not seem to be to stabilise the market or to remove the drag or to raise the prices of these shares, but somehow or other to acquire this large block of shares at prices that were agreed upon. In other words, the object was to finance Mundhra to the extent of a crore and a quarter by the purchase of his shares. It is also interesting to note that although the Corporation was aware that there was the danger of spurious share certificates being given to them against the payment of price, the only safeguard that the Corporation took was the extraordinary one of a personal guarantee from Mundhra himself. It is clear that such a guarantee was entirely worthless. Situated as Mundhra was, he could never have made good any loss caused to the Corporation by defective share certificates being given to them. This action shows the almost pathetic confidence that the Corporation had in Mundhra personally.

Ethics of Transaction

"In considering the propriety, I should first like to consider the ethics of this transaction. We are not dealing here with a business man out to make profits without considering how and by what means those profits are made. We are dealing with a statutory corporation set up by the Government of India which in its business transactions must maintain certain standards. It would be clearly wrong for the Corporation to utilise its funds to help an individual or the concerns of an individual. It would be even more wrong for the Corporation to deal with an individual who was suspected to be a law-breaker and possessed a doubtful financial reputation and whose antecedents were of a most questionable character. Mundhra is a man who has a flamboyant personality and is a financial adventurer whose only ambition is to build up an industrial empire by dubious methods. He is not very particular about the means he employs so long as the end is achieved. Starting from scratch with no education and no means, he succeeded in acquiring control in several large concerns. He is not an industrialist in the real sense of the term. His interest does not lie in developing or enlarging the industrial output of the country, but his interest lies in being a financial wizard who can swallow up concern after concern.

"The other aspect of this transaction which raises serious doubts as to its propriety is the haste with which it was effected. I could not help feeling as I was listening to the evidence that there was a sense of urgency about this transaction. The transaction was negotiated and effected by hurried meetings held in the Reserve Bank, while Mr. Patel was busy with more important questions of public importance. It did not seem to have dawned upon any one of those concerned with this transaction that there was a statutory Investment Committee which might be consulted when so large an amount was being invested in concerns of doubtful financial stability.

Fixing Prices

"In considering the propriety of the transaction and as to whether it was effected according to business principles, I must now consider the amazing manner—that is the only expression I can use—in which the price which the Corporation had to pay for the shares was fixed. One should have thought that when one is entering into a transaction of this magnitude, the most important term in the contract would be the price, and yet everyone concerned with this transaction seemed to have attached the least importance to this aspect of the matter. Therefore, we have this extraordinary position here that not only a large bulk of shares is purchased at a price fixed on a basis which is unwarranted by any business principle, but even that basis is not adhered to and in some cases even more than that basis has been paid.

"The transaction is also open to challenge on the ground that it was not really a transaction effected by the Corporation in the exercise of its statutory duty and discretion. The evidence is clear beyond doubt that the transaction was brought about as a result of interference by the Government and the transaction may be characterised as a dictated transaction. I have already referred earlier in this report to the danger of an order from the Government masquerading as a mere advice, and the transaction I am considering brings out in full force how the Government can dictate to the Corporation although in form it may appear as a mere advice.

Investment Criteria

"I now come to consider the most important aspect of this transaction, and that is whether the investment was sound and prudent from a business point of view. The Bombay Shareholders Association submitted a memorandum to me and it laid down the following criteria for making investments in large blocks of shares of limited companies:

"(a) a close scrutiny of audited accounts, and directors' reports for the preceding few years, say, about five years, which would give a reasonabiy fair idea about the working and financial position of the company;

"(b) good and steady return on capital for the previous five to seven years;

"(c) sound financial position and policy as can be seen from the audited accounts and directors' report;

"(d) future prospects;

"(e) integrity, reputation and credit of the controlling management;

"(f) marketability of the scrip.

"If these be sound criteria, and I think they are, then it will be immediately noticed that all these investments suffer from having failed to conform to one important criterion, viz., integrity, reputation and credit of the controlling management.

"Turning to another and equally important aspect of the matter, I have to determine who should be held responsible for entering into the transaction of 24th June which is the main transaction with which I am concerned. Legally and technically, the responsibility was that of the Corporation and of the executive officers, Mr. Kamat and Mr. Vidyanathan, who formally put through this transaction. In law, in the absence of any direction in writing, it was the duty of the Corporation to make investments of its funds. If the funds have been utilised unsoundly and imprudently, the Corporation and its executive officers must be held responsible. In fact, both Mr. Vaidyanathan and Mr. Kamat failed to exercise the responsibility. Mr. Vaidyanathan completely surrendered his judgment to Mr. Patel. Mr. Kamat was overawed by his senior colleague in the service and failed to satisfy himself about the real nature of the transaction. He failed to consult the Investment Committee. He said he was not even aware of the regulation which made it incumbent that the Investment Committee should be consulted. Formally, the action was that of Mr. Kamat. Therefore, it may be said that although the hands were the hands of Mr. Kamat, the voice was Mr. Patel's voice. It was a grave error of judgment on the part of both Mr. Kamat and Mr. Vaidyanathan to have been overborne by Mr. Patel, but in extenuation of their conduct I must point out that they trusted the higher authority and better knowledge of Mr. Patel. Mr. Kamat, it may be added, did not know anything about Mundhra till 22nd June. He also did not have much experience of the Stock Exchange as he was in the United States from January 1954 to November 1956. As far as Mr. Vaidyanathan is concerned, his responsibility is greater. He had been dealing with day-to-day investments of the Corporation. He was familiar with the Stock Exchange. He had experience of the Oriental Insurance Company, one of the largest life insurance companies in India with an extremely conservative investment policy, and he allowed his judgment to be paralysed by Mr. Patel.

Ultimate Responsibility

"I now come to consider the more difficult and more serious question of the responsibility of Mr. Patel and the Finance Minister. There can be no doubt on the evidence that Mr. Patel was primarily concerned with this transaction. Negotiations concerning this transaction were carried on by Mr. Patel with Mundhra as is clear from the fact that letters were addressed by Mundhra to Mr. Patel and not to Mr. Kamat or Mr. Vaidyanathan. It is also clear from the evidence that he took a leading part in the discussion which took place between Mr. Patel, Mr. Kamat, Mr. Vaidyanathan and Mundhra. Mr. Patel's case is that he was advising the Corporation to adopt a particular course of action and that advice was based on the policy of the Government and was tendered with the knowledge and approval of the Minister of Finance. I have already come to the conclusion that what Mr. Patel gave was not advice but was an order or direction from the Government. But the question still remains to be considered whether he was acting on his own responsibility or whether he was giving effect to ministerial policy or ministerial directions.

"In my opinion, in any case, it is clear that constitutionally the Minister is responsible for the action taken by his Secretary concerning this transaction. It is clear that a Minister must take the responsibility for actions done by his subordinates. He cannot take shelter behind them, nor can he disown their actions. The doctrine of ministerial responsibility has two facets. The Minister has complete autonomy within his own sphere of authority. As a necessary corollary, he must take full responsibility for the actions of his servants. It is true that this may throw a very great burden on the Minister because it is impossible to expect that in a highly complicated system of administration which we have evolved the Minister could possibly know, leave alone give his consent to, every action taken by his subordinates. But it is assumed that once the policy is laid down by the Minister, his subordinates must reflect that policy and must loyally carry out that policy. If any subordinate fails to do so, he may be punished or dismissed, but, however vicariously, the responsibility of his action must be assumed by the Minister. It may be said that a Minister is merely part of the Government and his policy is the policy of the Government as a whole, and if the Minister should take the responsibility for his subordinate's actions, equally so must the Cabinet. But it is well established that the Cabinet only takes the responsibility for the Minister's action if the Minister reports the matter to the Cabinet and obtains the Cabinet's sanction before he puts into effect this policy. Then the policy becomes the Cabinet policy and not only the Minister but the whole Cabinet must take the responsibility for whatever might have been done by a subordinate. In this case, therefore, Mr. Patel, who admittedly was acting as the Principal Secretary of the Minister, cannot be fastened with the responsibility of having effected this transaction in his own secretarial capacity. The Minister must fully and squarely accept the responsibility for what Mr. Patel did and if the transaction is improper and unjustified, although Mr. Patel may be actually responsible for the transaction, constitutionally the responsibility is that of the Minister."

Views of the Prime Minister

The Prime Minister, in a letter to Mr. T. T. Krishnamachari while accepting the latter's resignation, has said that the Government was no party to the dispute. "But curiously enough, Government policies were referred to in the course of the enquiry without the Government having a chance to explain them. In effect, there was rather a one-sided presentation of facts. I have still a feeling that all the relevant facts connected with this unhappy matter have not been brought out. So far as you are concerned, I am myself convinced that your part in this matter was of the smallest and that you did not even know much that was done." Mr. Krishnamachari handed over the charge of his office to the Prime Minister on 14th February.

West German Credit

The Indo-German deferred payment agreement relating to the Rourkela steel plant is to be signed in Bonn, according to information received from there. It is for a sum of 600 million deutschemarks, 10 percent of which will be contributed by the German firms in charge of the commissioning of the plant, 200 million deutschemarks by the West German Government and the balance by a consortium of German banks. The credit will carry an interest of 6 percent a year. The deferred payment arrangement has already been in force, and under it various German firms supplying equipment to India will be paid three years after the payments fall due. For example, payments due on 1st January, 1958, will be made on 1st January 1961, and those on 1st June, 1958, will be made on 1st June, 1961, and so on. West Germany has declined either to increase the quantum of this credit to 800 million deutschemarks or to extend credit facilities for other projects.

Synthetic Oil Manufacture

The Government has examined schemes for the manufacture of synthetic oil which an expert committee has drawn up. These schemes comprise a long-term and a short-term plan. The former proposes the production of 50 million tons of domestic coke by low-temperature carbonisation, together with the production of by-product oils, phenols, road tar, etcetera, at a capital cost of Rs. 60 crores. In the short-term plan, the production of about 800,000 tons of domestic coke has been recommended with the consequential utilisation of the by-products. The cost of this is Rs 20 crores. While the Government considers the schemes feasible, it has not been possible to make any financial provision for them so far because of the foreign exchange problem and the difficulty of finding even the internal resources.

Indo-Japanese Trade

In the six months ended June 1957, India had an adverse balance of trade with Japan amounting to Rs. 9.75 crores; the value of imports from Japan

was Rs. 28.51 crores and that of exports to Japan Rs. 18.76 crores. Major items of exports from India to Japan during the January-June period were raw cotton, cotton waste, iron, manganese and other ores, hides and skins, mica, salt, coal and lac. Major items of imports in the same period from Japan were base metals, machinery of all kinds, cotton and silk yarn and fabrics, woollen yarn and manufactures, transport equipment, instruments, apparatus and appliances, chemicals, drugs and medicines, watches and clocks, paper, pasteboard, coal tar dyes, wood, lumber cork and explosives.

Decreasing Value of Imports

In an effort to reduce the high rate of withdrawals from the foreign exchange reserves, the governing objective of the import policy during January-June 1957, July-September 1957 and October 1957-March 1958, has been to restrict imports to the minimum consistent with the needs of a developing economy. Due to the restrictive import policy followed during 1957, the total value of licences issued during the January-June 1957, July-September 1957 and October 1957-March 1958 periods has considerably decreased, as will be seen from the following figures:

Period	Value of Licences Issued (In lakhs of rupees)
January-June 1956	6,90,06
July-December 1956	6,43,78
January-June 1957	4,25,44
July-September 1957	1,31,35
October 1957-March 1958	2,35,61

Expansion in Cement Capacity

Licences have been issued for setting up 28 new cement factories during the second plan period; and 37 expansion schemes have also been licensed. Five new factories, it is expected, will be set up during this year in Thiruvattiyur (Madras), Panyam (Andhra), Umtynagar (Assam), Satna (Madhya Pradesh) and Mancherial (Andhra Pradesh). Ten expansion schemes, it is expected, will be completed in 1958 in the works located in Kottayam (Kerala), Dalmiapuram (Madras), Vijaywada, Macherla, Mancherial (Andhra Pradesh), Bhadravati (Mysore), Sindri (Bihar), Chaibasa (Bihar), Sawai Madhopur (Rajasthan) and Dalmia Dadri (Punjab). All the new factories, with the exception of the Mysore Iron and Steel Works, Bhadravati, and the U.P. Government Cement Factory, Churk, will be set up in the private sector.

Transactions of S.T.C.

The following statement shows the transactions entered into by the State Trading Corporation during the six months ended 31st December, 1957:

EXPORTS

Country	Value (Rs.)	Commodity	Value (Rs.)
Russia	82,36,773	Shoes	33,76,250
G.D.R.	54,14,478	Coffee	52,68,500
Hungary	22,62,048	Opium	32,68,500
Viet-Nam	29,06,619	Sandalwood oil	15,73,211
Indonesia	7,33,125	Handloom fabrics	1,22,850
U.S.A.	39,85,825	Handicrafts	1,69,441
U.K.	14,41,194	Jute bags	22,23,750
France	4,39,45,995	Coir products	54,710
Holland	2,55,76,220	Sugar	6,82,869
Japan	81,90,169	Cotton waste	18,05,361
Belgium	1,71,750	Raw wool	64,686
East Germany	12,46,197	Grey drill	1,35,000
China	7,68,000	Cotton yarn	1,80,955
Switzerland	3,42,000	Salt	7,33,125
West Germany	1,05,333	Manganese ore	7,84,32,350
Czechoslovakia	2,56,46,857	Chrome ore	11,10,000
Italy	54,75,000	Iron ore	4,59,05,166
Poland	84,97,500		
Rumania	1,80,957		
	14,51,25,540		14,51,25,540

IMPORTS

Country	Value (Rs.)	Commodity	Value (Rs.)
Japan	21,59,350.50	Raw silk	22,96,013.25
U.S.A.	56,09,005.50	Skimmed milk powder	56,09,005.50

The day the airman's world becomes yours

No part of the world is strange to him. He has seen the majesty of sunsets no artist could capture. He has watched dawn come up softly over oceans and continents. He has the sureness of a man who has found himself. He's the master of a mighty Flying Clipper.*

When you're high over the Atlantic, it is your Clipper Captain's privilege and pleasure to share his world with you. His role as host is as much a part of him as his experienced handling of the controls. Up on the flight deck other qualified Clipper pilots (at least four are on every over-ocean flight) relieve him while he relaxes with you and your fellow passengers.

Over 1400 Pan American pilots have logged more than a million miles each . . . 150 pilots, well over the three million mark. Experience is their gift to you.

For immediate Clipper reservations, call your Travel Agent or Pan American . . . over 800 offices around the world at your service!

PAN AMERICAN
WORLD'S MOST EXPERIENCED AIRLINE

The following statement shows the business done by the State Trading Corporation, country by country, up to 31st December, 1957:

(Figures in rupees)

Name of the Country	Exports	Imports	Total
Russia	4,18,02,427	2,61,98,376	6,80,00,803
China	7,68,000	1,12,32,044	1,20,00,044
Poland	3,25,66,613	18,19,000	3,43,85,613
Rumania	—	83,28,000	83,28,000
Czechoslovakia	4,08,12,193	59,08,641	4,67,20,834
German Democratic Republic	99,97,175	2,66,03,689	3,66,00,864
North Viet-Nam	41,69,917	69,16,666	1,10,86,583
U.S.A.	6,13,11,924	1,87,40,305	8,00,52,229
U.K.	3,67,97,432	4,85,98,432	8,53,95,864
West Germany	13,51,530	——	13,51,530
France	99,58,929	——	99,58,929
Italy	1,61,99,727	——	1,61,99,727
Japan	11,04,17,869	1,16,47,049	12,20,64,918
Indonesia	32,72,760	——	32,72,760

Iron Ore Exports

The Corporation's sales of iron ore have been as follows:

Japan	1,529,886 tons
Czechoslovakia	461,855 tons
Italy	151,159 tons
Poland	110,774 tons
Hungary	22,000 tons
Yugoslavia	48,286 tons
East Germany	18,000 tons
West Germany	2,000 tons
Total	2,343,960 tons

The value of these exports have been calculated at approximately Rs. 12.29 crores.

Cotton Mill Production

The following was the overall production of various categories of mill cloth during 1957.

(Figures in million yards)

Coarse	Medium	Fine	Superfine	Total
1,161	3,507	381	266	5,315

Actual exports of mill-made cloth from January 1957 to August 1957 were 597 million yards, and the shipment figures for the remaining four months were 267 million yards, bringing the total to 864 million yards. Mill cloth delivered for home consumption during 1957 was 4,101 million yards. Unsold stocks with the mills at the end of December 1957 totalled 677 million yards. So far as mill cloth is concerned, the overall variation in prices during the year was insignificant. The prices of coarse and medium categories were steady. Fine varieties were higher by about 5 percent and superfines were lower by 1.8 percent in December 1957, compared with their January 1957 prices. The total of unsold stocks with the industry on 25th January was 616,000 bales comprising 395,500 bales unsold and 220,500 bales sold, but not taken delivery of. The break-up of the unsold stocks by varieties is (figures in bales): coarse 93,600, medium 256,200, fine 25,700 and superfine 20,000. At the current rate of production, this means that the industry carries a stock of just 2.1 months' output. It is not abnormal for it to carry stocks of this magnitude, it is stated.

Handloom Cloth

(Figures in million yards)

Production	Consumption	Exports	Unsold stocks at the end of December 1957.
1,665	149	24 (up to August 1957)	139

Of this production, *dhoties* were 33 percent, *sarees* 30 percent, shirtings 7 percent, coatings 1 percent, bedsheets 3 percent, furnishings 1 percent, towels 9 percent and other varieties 16 percent. An analysis of market prices for handloom cloth indicates an upward trend in the middle of 1957, but a downward tendency towards the close of the year.

Tea Consumption in India

The internal consumption of tea during the five years ended 1957-58 has been estimated as follows: 1953-54 182.2 million lbs, 1954-55 174.6 million lbs, 1955-56 220.9 million lbs, 1956-57 182.9 million lbs and 1957-58 210 million lbs.

U.S. Tea Imports

The volumes of tea imported into the U.S.A. from Ceylon, India, Indonesia, Formosa and other countries during the July-December periods of 1955, 1956 and 1957 were as follows:

(Figures in lbs)

	1955	1956	1957
Ceylon	20,712,066	19,366,899	21,631,452
India	13,653,611	12,160,505	11,109,492
Indonesia	6,458,199	6,402,392	7,465,343
Formosa	2,018,089	2,808,283	2,516,630
Other countries	6,154,398	6,030,279	5,652,164
	48,996,363	46,768,358	48,375,081

Depreciation in Government Paper

The extent of depreciation in the face value of the 3 percent 1986 Conversion Loan since its issue, on the basis of the current market quotations, is about 29 percent. The total amount of the loan is Rs. 248.91 crores approximately. It is explained that the prices of Government securities depend on the conditions in the money market and the structure of the interest rates prevailing from time to time. Fluctuations in the prices are, therefore, not unusual. So long as the securities are held until maturity, no loss is involved.

N.I.D.C. Loans to Jute Industry

Loans amounting to nearly Rs. 2 crores have so far been sanctioned by the National Industrial Development Corporation to the Indian jute industry for modernising its equipment. These loans have been given to nine jute mills. Seven of the latter, which have been sanctioned a total amount of Rs. 1.46 crores, have executed the mortgage deeds and have already drawn loans totalling Rs. 1.2 crores. The other two mills, which between them have been sanctioned about Rs. 45 lakhs, are shortly to execute the mortgage deeds when they will become entitled to draw the loan money. The N.I.D.C. loan programme is helping the industry in rehabilitating its worn-out equipment. This, it is expected, will play an important part in maintaining the position of Indian jute goods in the world market, both against jute manufactures from other countries and against substitutes. The process of modernisation, which has been going on for some years, has already led to the installation of modern spinning machinery by 44 of the 82 jute mill companies. It is estimated that already over 40 percent of the old spindles have been replaced, or are in the process of replacement. There are now three factories in India manufacturing modern high-speed spinning frames. The loans granted by the National Industrial Development Corporation carry an interest of 4½ percent a year, and are repayable in 15 annual instalments. Another important measure now being carried out by the jute industry is the diversification of its production to meet the changing conditions in consuming countries. The output of jute goods other than the ordinary varieties of hessian and sacking has been raised. Some of the specialities now manufactured are cotton bags, a loose fabric used for packing cotton in the United States, wide hessian used as carpet backing in the U.S.A., jute tarpaulins, paper-lined hessian, jute carpets, jute webbing, etcetera. These varieties fetch better prices than the ordinary ones. With Government assistance, the Indian Jute Mills Association has been carrying on a continuous and organised sales campaign in the U.S.A.

Profits of State Collieries

State collieries showed a profit of Rs. 29,94,002, Rs. 35,06,663 and Rs. 32,21,188 during the years ended 31st March, 1955, 1956 and 1957. Eight out of 11 units however showed a loss in 1954-55. But profits made by the remaining three collieries wiped out the losses incurred by the other eight, and even turned the overall deficit into a sizable surplus. Jarandih colliery showed a small profit of Rs. 40,324 in 1955-56, its combined loss for the other two years being Rs. 374,609. Argada colliery, which had shown losses of Rs. 3,54,958 and Rs. 2,22,703 in 1954-55 and 1955-56, respectively, showed a small surplus of Rs. 69,121 in 1956-57. Kurasa was the only colliery which has shown increasing surpluses of Rs. 9,07,927 in 1954-55, Rs. 10,04,726 in 1955-56 and Rs. 17,13,938 in 1956-57. The other two units had uneven surpluses, profits from Kargali going up from Rs. 6,56,427 in 1954-55 to Rs. 21,83,149 in 1955-56 and dropping to Rs. 499,696 in 1956-57. Those from the third unit stood at Rs. 81,83,182 in 1954-55. They came down to Rs. 65,41,530 in 1955-56, but improved to Rs. 74,68,729 in 1956-57.

Export Risk Policies

The value of policies sold up to 25th January, 1958 by the Export Risks Insurance Corporation since its inception amounted to Rs 2,02,60,000. The premium rates which the Corporation charges depend upon the following factors, and a change in any of these factors necessitates changes in the premium rates: (i) the types of risks and their causes; (ii) the markets to which the goods are exported: (iii) the types of goods; (iv) the period for which the risks are covered; (v) the past experience of the exporter and the spread of risks offered by him for insurance; and (vi) the expenses of management.

ORDERS FOR PORT EQUIPMENT

Orders for the following port equipment have been placed by the Government of India:

Description of equipment	Specifications	Number of equipment ordered	Name of consignee	Price	Name of firm to whom contract has been awarded.
Ransome rapier cranes	Diesel or diesel electric non-slewing mobile cranes capable of lifting ten tons at an outreach of 15 feet, and 6.5 tons at an outreach of 20 feet jib extension of approximately 50 feet to lift loads.	two with two sets of spares	Calcutta Port	£9,185 each and £316 10s 8d a set for spares. All firm prices.	Messrs Ransomes and Rapier Ltd. Water-side Works Ipswich.
Mobile (cole) cranes (six to ten tons)	Diesel electric full circle slewing cranes with a capacity of six tons when propped. Ten feet jib extension.	19 with 19 sets of spares	Calcutta Port. (12) Visakhapatnam Port. (3) Cochin Port (4) 19	Cranes £6,803 each. Spares £526 1s 7d a set. Firm prices.	Messrs Steel Engineering Products Ltd. 14, Berkeley Sq., London W. 1.
Truck mounted cole cranes (25 tons)	Truck mounted crane diesel or diesel electric full slewing 30 feet/70 feet jib and capable of lifting with 30 feet jib with outriggers 25 tons at 16 feet radius and 10 tons at 30 feet radius and without outriggers to have a capacity of 10 tons at 15 feet radius and four tons at 30 feet radius.	2 and 2 sets of spares	Calcutta Port (1) Visakhapatnam Port (1)	Cranes £14,858 each, spares £544 7s 11d a set. All firm prices.	do
Yale townce fork lift trucks (4,000 lbs)	Diesel fork lift trucks with pneumatic tyres and 48 inches long forks capable of lifting loads at 24 inches load centre up to a height of ten feet.	eight plus four sets of spares	Cochin (6) Visakhapatnam (2) (with hydraulic clamps)	Truck with clamp— £1,907 12d, truck without clamp £1,590 12d, spares £305 9s 3d a set. All firm prices.	Yale and Towne Manufacturing Co., Velbert, Rhineland, Germany.
Telefer travelling hoist (five-ton)	Five-ton telefers suitable for 440 volts A.C. 50 cycle four wire supply with a hoisting speed of seven and a half to ten feet and travel speed of five feet a minute, the maximum range of vertical lifting being 50 feet.		Calcutta Port	£1,027 each. Firm price.	Messrs Ardecar Ltd. Ardecar Works, York Way, Kings Cross, London N. 1.
Pendant and mooring chains	a. 3in. diameter Belco steel studlink chain cable in lengths of 40 feet 7 in. approx. (40 links in all) with intermediate and end links each and b. 15 fathom lengths 2¾ in. diameter steel stud link chain cable (99 links in all) with intermediate and end links each end.	a. 12 length b. 10 lengths	Port Administrative Officer, Visakhapatnam Port	a 145d a cwt. b. 142s 6d a cwt. Prices firm up to six months.	Messrs Brown and Co. Ltd., Ponty Pridd, Glamargan.
Muirhill shunting tractors.	Muirhill model 100 shunting tractors (diesel-engined) with deep buffer plate. 12 volt elec. starting equipment and spares.	eight tractors and two sets of spares.	Calcutta Port (4) Visakhapatnam Port (2) Chairman Madras Port Trust (2) Calcutta Port	Tractors £976 10d each (including electric lighting and drivers' weather protection) Spares £838 6s 10d a set plus 5 percent packing and delivery charges. All firm prices.	
"Iron" side lifting fork trucks.	a. Iron "Falcon" site operating fork lift carrier capacity 10,000 lbs with lifting height 13 feet 2in. (Model I. G. 5,040) and spares. b. Iron side-operating fork lift carrier capacity 6,600 lbs. Model I. G. 3,040 D and spares.	a. Six. 6,000 lbs. with three sets of prices. b. Six. 12,000 lbs. with three sets of spares.		a Fork lift carrier £3,575 each. Spares £293 10s 10d a set. b Fork lift carrier £5,030 each. spares £472 7s 3d a set All firm prices.	Messrs Boydell and Co. Ltd., Elsinore, Old Trafford, Manchester 16. Messrs Mechanical Handling Equipment (Great Britain) Ltd. 40A, Dover Street. Piccadilly, London W. 1.

London

MR. MACMILLAN RETURNS FROM COMMONWEALTH TOUR

SIGNIFICANCE OF THE ROCHDALE BY-ELECTION

(FROM OUR LONDON CORRESPONDENT)

MR. MACMILLAN returned home after his Commonwealth tour on Friday last, and from all accounts this has been an outstanding success well meriting the welcome-home gesture which has been made by nine Conservative back-benchers who have lately entered Parliament as a result of by-elections. They have tabled a motion referring to the "unique nature" of the Prime Minister's journey and suggesting that the House should record its appreciation of "the contribution he has made to unity and understanding among the peoples of the Commonwealth." It is unlikely that there will be any to dissent, but it is unfortunate that the reward for Mr. Macmillan's strenuous labours cannot be even a short period of rest and recuperation. In spite of Mr. Butler's able handling of affairs during the Prime Minister's absence, there are many developments which will need his careful attention, and not the least of these is the surprising result of the Rochdale by-election with the Conservatives at the bottom of the poll and the Socialist Opposition greatly heartened. Mr. Butler has emphasised the Government's intention to carry on with its task, and this fact will no doubt be confirmed by Mr. Macmillan in due course, but the need for more positive policies and practical results is becoming a matter of some urgency.

Trade Gap Widens

Another reminder that not everything in the economy is wonderful—the City has replaced its recent optimism with a policy of caution over the last few days—is provided by the provisional trade figures for January just released by the Board of Trade. Exports at £277.8 million were slightly lower and imports at £325 million a little higher than in both November and December, the variations on the latter month being £4.5 million and £11 million, respectively, though by comparison with the monthly rate in the fourth quarter of 1957 the changes were negligible, except in the case of re-exports at £1.6 million which were 9 percent up. The trade gap in January, however, at £34.7 million, was £16 million more than in December, though still £17 million less than the average for 1957 as a whole. These figures are both sobering and reassuring at the same time. It has been said that the rise in imports is not significant, while the drop in exports is still too small to suggest a definite downward trend, for it must be remembered that commodity prices have fallen steadily over the past six months and that competition in export markets is growing keener. What is a bit disturbing is the heavy drop in January exports to the dollar area, which cannot all be explained by seasonal changes. Shipments to the United States at £18.7 million were 8 percent less than the monthly rate in the fourth quarter of 1957, and at £10.8 million to Canada as much as 30 percent down.

The latest *Board of Trade Journal*, reviewing sterling area trade in the first three quarters of 1957, helps correct the widely-held view that as a result of declining commodity prices, the overseas sterling area was earning substantially less foreign exchange and thereby contributed to the September balance of payments crisis. In point of fact, exports from the rest of the sterling area to the non-sterling countries in the first nine months of 1957, at £1,488 million, showed an increase of 11 percent over the same period of 1956, whereas exports from the United Kingdom rose by only 8 percent. On the other hand, it is true that the imports of the rest of the sterling area from the non-sterling world increased by 13 percent against the U.K. increase of only 8 percent.

Commonwealth Economic Conference

This situation, however, is in a continual state of flux, so it is of the utmost importance that every effort should be made to keep at least the Commonwealth members of the sterling area in step so far as trade and economic matters are concerned. That is why the proposed conference to be held in Canada later this year has attracted so much attention and why careful preparations are being made to ensure its success. Senior officials from 11 countries (the ten sovereign nations of the Commonwealth and the Federation of Rhodesia and Nyasaland) have been at work under the chairmanship of Sir Roger Makins, joint permanent secretary to the Treasury, in London drawing up a list of subjects on which each of the Governments will be invited to consider its policy. Simultaneously, study groups drawn from the delegates will produce reports on a number of the more important matters on the list, which is virtually a sort of draft agenda. When the comments of the various Governments are received, probably in May or June, the officials for economic affairs will reassemble in London to prepare a definite agenda for the Ministerial conference, which will probably meet in the autumn.

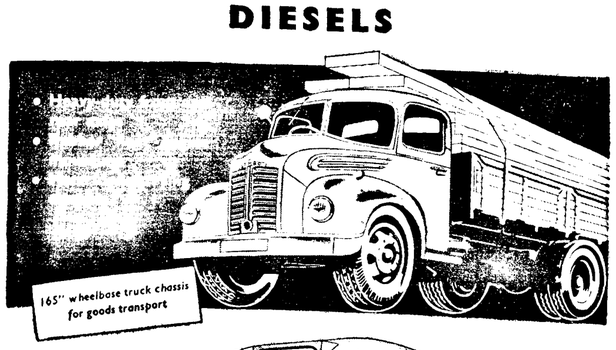
It is far too early as yet to forecast the outcome of this preliminary work, but it is expected that one of the main subjects will probably be the effect of the European free trade area negotiations on relationships within the Commonwealth. Another important question will be whether any further steps can be taken to strengthen sterling and at the same time promote sound economic development throughout the area.

Stabilising Prices

Mr. Heathcoat Amory, Chancellor of the Exchequer, made his first appearance at the National Production Advisory Council on Industry last week and made a reasoned appeal to the representatives of both sides of industry who comprise its membership to join him in combating inflation, for he accepted the fact that wage restraint was a matter of psychology as well as economics and that it could not be isolated from what happened to profits and prices. The first task of all—the Government, employers and trade unions—was to come to grips with this problem, to see how to get some harmony between the march of incomes and output. When costs of production were coming down, some of the benefit should go to the consumer in the form of lower prices rather than all of it to producers in the form of higher profits and to labour as higher wages. The Government was influencing total demand, particularly through its monetary policy, and this tight control would continue for the present. Analysing the cost problems of industry, Mr. Amory said that the root of the trouble was too much money for what was produced. Wages, profit margins and prices were all mixed up in this together. Wages and salaries were two-thirds of incomes, so what happened to them was decisive. He continued: "When it can be seen that wage settlements are not going to drive up prices further, we—and everyone else—will know that price stability in the United Kingdom and sound prospects for sterling are 'in the bag.' Some of the brakes can then begin to come off and we can start expanding again—the ultimate way to long-term improvement in all our living standards."

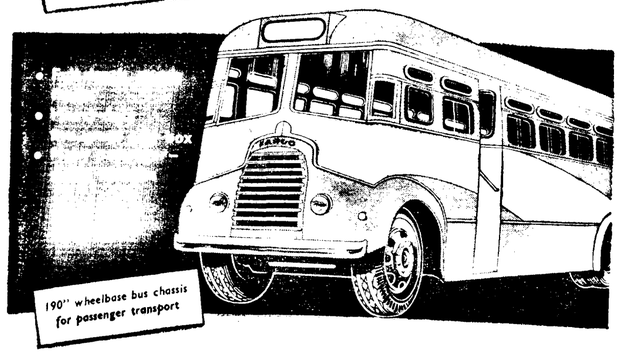
Industrial Relations

While the Chancellor of the Exchequer is concerned with price stability, his colleague at the Ministry of Labour, Mr. Macleod, is understood to be thinking seriously about the need for a thorough review of the collective bargaining system in industry to find answers to such questions as: Is the present arbitration set-up really suited to modern conditions? Should wage settlements be agreed over longer periods, instead of being subject to constant "come again" claims? How can the total national pay rise bill be more closely tied to the growth of productivity? Why is it that relations between men and managements are better in some industries than in others? To what extent should any Government use its influence in wage settlements to protect the national "kitty" and the pockets of other wage-earners? Initial guidance on this is apparently expected from the first report of the Cohen Council on Prices, Productivity and Incomes which is shortly expected to be available. It is likely to provide the first detailed survey of how the country has been handling its accounts at the height of inflation, and it may well have something of importance to say about how arbitration tribunals should take account of general economic circumstances in deciding their pay awards.



Whether or not the Cohen Council report will have any influence on the wage claims now being pressed, among others, by railway men, miners, engineers, shipbuilders, bus men, and dockers, to mention only the key workers, is a moot point, for it is believed that what Mr. Macleod has in mind is something in the nature of a follow-up to the Whitley Committee investigation. The success of such a venture will need the co-operation of both sides of industry, and that will be more easily gained when their minds are not occupied with claims now under discussion. As a preliminary talking-point, the Minister of Labour has sent out about 15,000 copies of a booklet, *Positive Employment Policies*, issued by his Ministry and giving examples of what the Minister thinks are good management practices.

Industrial Progress



Latest figures from the metal-working machine tool industry continue to present a reasonably encouraging picture. Home orders have improved and the total value of the order book is relatively stable, compared with the previous rate of fall. Home orders amounted to £4,722,000 in November 1957, compared with £4,603,000 in the preceding month and £4,477,000 a year before. Deliveries were down from £6,777,000 to £6,035,000 on the month, but roughly in line with the figure of £6,192,000 for November 1956. Orders from overseas fell from £1,801,000 in October to £1,385,000 in November 1957, but it is expected that the December figures will show a recovery. The total of export orders on hand at the end of November was £20,006,000, compared with £20,274,000 in October and £23,330,000 in November 1956.

RE-PHASING THE SECOND PLAN

MR. J. R. D. TATA URGES NEW ORDER OF PRIORITIES

(FROM A BOMBAY CORRESPONDENT)

THERE is no alternative to a considerable re-phasing or curtailment of the second five year plan, according to Mr. J. R. D. Tata. Expressing this opinion when addressing the Commerce Graduates Association here, he has said that the plan is not over-ambitious in relation to the needs of the people, but the question of the availability of resources cannot be set aside easily. If the Government goes ahead with the plan, there will be the grave risk, on the one hand, of the country failing to meet its foreign obligations and, on the other, there will be a degree of inflation resulting from excessive deficit financing which will wipe out the benefits which could accrue from the plan. Mr. Tata has referred to the continued shortage of foodgrains and the resulting drain on foreign exchange. Inflationary pressures, though temporarily held in check, continue to threaten the stability of the economy. "All the symptoms of the present malady are directly or indirectly related to the excessive size of the second five year plan in relation to resources."

Mr. Tata thinks that the core of the plan alone will cost Rs. 4,800 crores. The original plan envisaged an outlay of Rs. 4,800 crores in the public sector, of which the foreign exchange component was estimated at some Rs. 1,100 crores. This has proved to be a grievous under-estimate as foreign exchange requirements are now computed at over Rs. 1,600 crores. The cost of various other plan projects have also been under-estimated and the plan, if put through in its entirety, will now cost more than Rs. 5,500 crores. "On the other hand, the resources available seemed to have been substantially over-estimated. Even under the original plan, visible resources were only Rs. 2,400 crores or half the planned expenditure. Performance during the first two years of the plan indicated that approximately Rs. 1,000 crores less would, in fact, be available." Mr. Tata has emphasised that the size of the current plan or any other plan in the series is of much importance. He thinks that a smaller step at this stage could result in quicker progress towards the ultimate goal. He urges a more practical order of priorities than that embodied in the present plan. It is his opinion that there is a strong case for postponing the establishment of the third steel plant even now, and using the money thus saved for additional fertiliser plant on which the return will be far greater. Steel plant seem to exercise a "fatal fascination" over the minds of the Government and the planners although, of all the projects in the plan, steel plant need the largest amount of foreign exchange and yield the lowest return in foreign exchange.

Economy in Expenditure

Mr. Tata has touched on the need for curtailment of expenditure outside the plan, making special mention of the fact that the money spent on civil administration has increased from less than Rs. 50 crores in 1951 to Rs. 191 crores in 1957-58—an item of expenditure which is still growing. No one in the private sector wants unrestricted free enterprise, and business men and industrialists are both at one with the Government on the creation of a democratic society in which opportunities will be equal for all. He says that while he endorses the Government's policy of a mixed economy, in which the private sector is required to play a vital rôle, he thinks that the private sector should be encouraged and given every opportunity to function effectively within the framework of the plan. Mr. Tata has made a strong plea for a revision and simplification of the Government's taxation policy and relaxation of all non-essential controls. He thinks that, if given the opportunity, the private sector could make a valuable contribution to the success of the plan.

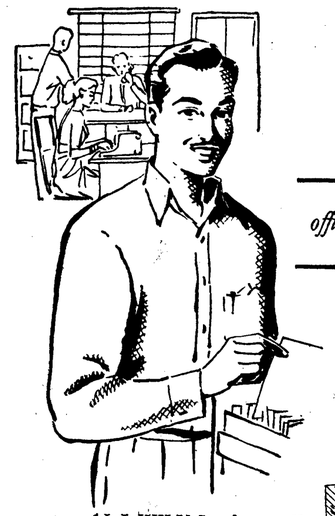
Large Loans from the World Bank

The vice-president of the International Bank for Reconstruction and Development, Mr. J. Burke Knapp, has told the committee of the Indian Merchants Chamber here that India can justifiably expect to secure larger loans from the Bank in the near future. Recalling that the Bank had granted loans to India of the order of $150 million last year, he has said that it distributed loans to various countries over the same period amounting to $400 million. India has an excellent record of economic activity and the projects she has submitted to the Bank for examination are extremely well conceived. She is the Bank's biggest borrower with loans to date totalling $360 million. The World Bank has a special interest in India. It has, therefore, decided to set up an office in this country for maintaining contacts with the Government and the industrial and business community.

Describing the Bank as one of the most promising ventures in international co-operation in postwar years, he has said that it comprises 65 member Governments who have subscribed capital in proportion to their economic wealth. The United States has contributed one-third of the total capital, with the remaining nations providing two-thirds, of which the United Kingdom's share is 12½ percent and India's share 4 percent (about $400 million). The Bank has given new loans of up to $400 million a year, and a new record of $700 million a year might soon be achieved. Touching on the complaint relating to the 1 percent commission charged on all Bank loans, the vice-president has explained that this goes towards the reserve against losses. In determining the present rate of interest at 5⅝ percent, it has to be remembered that the Bank is paying a higher rate for its borrowings. "We pay 4⅜ percent to our lenders. Add to this 1 percent for reserve and finally ¼ percent for administrative expenses," Mr. Knapp has said.

Japanese Imports of Iron and Manganese Ores

Japan has stopped all imports of manganese and iron ores from Goa and will meet all her future needs of these two minerals from India. The import of these ores from Goa has come in the way of the signing of a trade agreement with India. It will be recalled in this connection that a few years ago a Japanese financier entered into an agreement with industrialists in Goa for the exploitation of manganese and iron ore deposits. Large sums of money were invested by the Japanese in the development of these mines. Goa's export earnings from her iron and manganese ore shipments amounted to an estimated Rs. 8 crores annually, which provided her with the foreign exchange to import textile and other consumer goods. Japan was the biggest single purchaser of these ores from Goa.



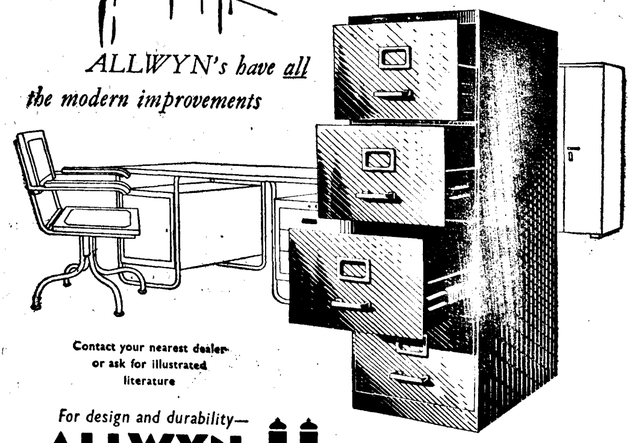
A 35-man Japanese technical mission, which recently visited India to assess the possibility of increasing iron and manganese ore imports from this country, is reported to have returned recently to Tokyo greatly impressed with the potentialities of iron ore deposits in the Rourkela area of Orissa. The team is said to have estimated the deposits in this region at around 1 million tons. Japanese sources are hopeful that India will undertake the development of these iron ore deposits with Japanese technical know-how in the near future. They say that a joint Indo-Japanese approach for financial aid from President Eisenhower's special fund for the development of underdeveloped countries has already been made. Japanese imports of iron ore from India total 1 million tons, and it is hoped this amount will be doubled when the joint venture in Orissa gets under way.

Bonus Share Issue of Tata Steel

The proposal of the directors of the Tata Iron and Steel Co. Ltd. to issue ordinary shares as fully paid bonus shares in the ratio of one new share for every five shares held, by utilising the premium received on new ordinary shares issued last year and a small amount out of the reserves, has been accorded sanction by the Government of India, it has been announced.

Larger Imports of Egyptian Cotton

Prospects of larger imports of Egyptian cotton during the current season appear good, trade circles say. It appears that Egypt wishes to retain India as a permanent customer for her cotton. It is believed that she will now offer India cotton at concessional rates. The Egyptian trade and goodwill delegation discussed the issue with textile mills and cotton importers here. A clear picture is expected to emerge after the delegation meets Government officials in New Delhi. Indian mills recently bought a sizeable quantity of cotton from the Sudan because of the comparative price advantage over that of Egypt. A large quantity was also bought from the United States under the aid programme. Imports are still needed to the extent of 250,000 bales. The barter trade agreement between India and Egypt and the recent payment arrangements under which Egypt accepts payments in Indian rupees will also come up for discussion in New Delhi.



Compact, smartly styled, your Allwyn filing cabinet is good to have around—it looks efficient and businesslike. The drawers *glide* open... without a sound.

office filing cabinets

The contents are secure from fire, burglars, insects. Before buying office furniture, be sure to see Allwyn first. They're the people who *know!*

Also a card index cabinet—in units of 1, 2, 4 and 6 drawers—for different card sizes. Transfer boxes—10½"x5"x15". For foolscap paper. With label-holders and firmly hinged lid.

a pilfer-proof package

for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution.

Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

Jute

BIG INCREASE SUGGESTED IN NEXT INDIAN JUTE CROP

EMPHASIS NECESSARY ON BETTER PLANTS

SOON after last month's estimate that the acreage under jute in the current season is likely to be about 8 percent smaller than in 1956-57, there has come an announcement from the central supervisory body for the promotion of jute production that next season the area under jute should be considerably larger than in previous years. It has been recommended that the area be fixed at 2,076,000 acres, an increase of about 18¼ percent over 1957-58. This is expected to yield 25 percent more jute than during 1957-58. Theoretically, the increase would make India almost self-sufficient as during the past season domestic production was only 7½ percent below the final consumption figure. Unfortunately, as often happens, the theory is liable to break down in practice, and it appears that once again the anxiety to achieve self-sufficiency in jute has clouded the main issue.

As has been pointed out often in these columns, the emphasis should be on obtaining more yield a plant an acre, rather than on indiscriminately increasing the area each year. By concentrating on quality instead of quantity, and producing a strain that would yield more green fibre a plant, the ultimate aim of self-sufficiency could be achieved with a smaller acreage, leaving valuable land free for other essential food crops. Admittedly, the supervisory body has emphasised the importance of treating both plants and land with chemicals to increase the yield, and has urged streamlining the procedure for allocating fertilisers to States with the minimum of delay, much of it at Government expense. But usually that is as far as the effort goes, and it is doubtful if 50 percent of the chemicals allocated for this scheme are ever devoted to the purpose for which they are intended. The increase from the larger acreage will undoubtedly consist of low-quality jute, of which India already has an abundance. She is very short of high-grade jute, and even after production is increased, she will have to rely on her neighbour to supply her with this type of fibre, unless the strains in India can be improved. This is the first essential of self-sufficiency.

The Economic Factor

A factor which has possibly been overlooked in the drive for more jute is the economic one. The possibility of more jute being available in the future has already weakened the market, and conditions in this section are depressed. Some growers have hinted that if the price of jute falls any further, they will not be putting their land under this crop as there is no profit in it. Already many of them are facing losses this season with the recent drop in prices; this in turn has brought an increase in malpractices to make up the losses. The proportion of moisture in jute has rapidly increased in the past month, since prices started to fall, and has reached alarming proportions at a time of year when the moisture content should be low. Some think that this is a direct result of the current small return to the cultivator, and the absence of any profit for the middleman.

The fibre markets are weak and very little business has been reported during the past week. In spite of the recent reduction in prices in Calcutta, upcountry rates have not fallen to the same extent and the mills themselves are partially to blame for this. There is a growing tendency among them to buy their jute direct, through their own agencies or agents; invariably, to obtain their requirements they have to pay higher prices. This has a snowballing effect, and in the agencies in which they operate it has been observed that prices are advanced whenever they show interest in a particular fibre. Imports upcountry continue to be small and all arrivals find ready buyers who are anxious to cover high-priced contracts.

The jute goods markets remain depressed in the absence of foreign enquiries. Overseas interests, especially America, continue to sit out and the sentiment is weak. Hessian has again shown more stability than sacking, although U.S. burlap consumption during January 1958 was unchanged at the December 1957 level of 71 million yards; this was 4 million yards less than in January 1957. Speculative activity has caused erratic fluctuations, but towards the close conditions are more settled. It is reported that mills are keen to sell for forward shipment, but there are few buyers.

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations during January 1958 amounted to 758,850 bales, against the revised figure of 790,600 bales for December 1957. Arrivals from Pakistan showed a drop of 45,300 bales to 61,900 bales, but arrivals from India increased by 13,550 bales to 696,950 bales, thus making a total drop of 31,750 bales from December. Compared with January 1957, arrivals last month showed an increase of 26,650 bales, due to an increase of 11,500 bales from Pakistan and 15,150 bales from India. Total arrivals from July 1957 to January 1958 now amount to 3,993,300 bales, made up of 477,650 bales from Pakistan, and 3,515,650 bales from India. During the same period of the 1956-57 season, arrivals were 4,040,300 bales, consisting of 421,700 bales from Pakistan and 3,618,600 bales from India. Thus, in the current season, total imports are down by 47,000 bales, due mainly to a fall of 103,050 bales in arrivals from India, which has been offset by an increase of 55,950 bales in arrivals from Pakistan. During the same period, the estimated consumption of raw jute has been 3,615,300 bales, so total arrivals are now 378,000 bales more than the consumption.

THE JUTE MARKETS

Manufactured Goods: There was very little genuine business in gunnies during the past week. Overseas buyers remained out of the market. Shippers were active and heavy covering business took place, but mill selling pressure was greater than the demand, with the result that prices fell. At the opening last Thursday, B Twills were reduced by Re. 1 and hessian by 20nP. The forward delivery in both sections continued to command a premium of about Rs. 17.50 a ton. Speculative activity in the opening sessions was fairly extensive but eased towards the week-end. On Monday and Tuesday, bear sellers were prominent. Prices were depressed in both sacking and hessian, and the undertone was weak.

Opening quotations last Thursday were based on B Twills at Rs. 100.25 for February shipment, and 40in 10oz. hessian at Rs. 39.25. Both sections showed premiums for forward shipment, sacking about Rs. 1.75 and hessian 50nP. Prices fluctuated rapidly over the next two days, but by Saturday they had reverted to near the opening rates and quiet conditions prevailed. Monday showed a slight improvement, with ready B Twills at Rs. 100.75 and hessian at Rs. 39.50, but there was little confidence in the market due to the lack of overseas interest. Minor fluctuations throughout the day due to speculative activity saw rates decline slightly on Tuesday, and the trend continued in the afternoon when bear selling in the fatka combined with selling pressure from mills brought heavy goods back to Rs. 99.50.

At the close, gunny quotations were based on the following:

	Feb.	March	Apr.-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	31.80	31.80	31.80	31.83
40in. 10oz.	38.95	39	39.10	39.35
B Twills	98.45	98.85	99.50	100.50
Heavy Cees (Plain)	98.45	98.85	99.50	100.50
A Twills	122	122.50	123	123.50
Liverpools	115.25	115.25	115.25	115.50
Cornsacks	101.50	101.75	102	102

Raw Jute: Only small business was reported during the past week and the market in general was depressed. The high prices ruling in upcountry areas prevented sellers from offering large quantities of jute at the Calcutta rates, so they were reserved. Some sellers, who were carrying large stocks of unsold jute, were prepared to release small lots at current prices in order to cut their losses, and, in other cases, to obtain working capital, as much of their money was blocked in stocks bought at higher rates. Jute received no support from gunnies and the nervous reactions in the latter section affected fibre. Imports upcountry were well below the average for the time of year, and due to heavy demand quotations in most cases were well above Calcutta rates. The disparity between jute and gunnies was still preventing mills from coming into the market. Any business reported was invariably for low quality jute which could be obtained fairly cheaply. Enquiries for cuttings were again prominent, but only small business was reported as those holding stocks were asking for high prices. There was still no news about the issue of licences to consumers for cuttings, but mills were confident that they would be granted. Raw jute quotations showed little movement; they varied between Rs. 24.50 and Rs. 25 a maund basis Bottoms for Assam-Northern jute for February-March shipment.

Business was reported in Dhubri-Assam white at Rs. 24.25 to Rs. 25 a maund for February-March shipment and in small lots of Cuttack Tossa at Rs. 27.75 for the same shipment. A fair quantity of mesta was purchased at Rs. 21.75 to Rs. 22 for Daissee and Northern mesta, and Rs. 18.50 to Rs. 18.75 for Ganjam mesta. Jungli mesta fetched Rs. 19.75 a maund, and bimli Rs. 18.50 a maund for F.A.Q. Cuttings were reported at Rs. 79 to Rs. 80 a bale.

Opening quotations on Wednesday morning were lower and were based on the following:

Indian Jute:	Landed at mills Rs. a md. basis Bottoms	Shipment
Assam	24.50	Feb.-March
Northern	24.25	"
Purnea Desal	23	"
Daissee	23	"
Assam Tossa	27.75	"
Northern ex Calcutta	24	"
Mesta:		
Assam-Northern	22	"
Desal	22.	"
Daissee	21.75	"
Jungli	20	"
Bimli F.A.Q.	18.50	"
Pakistan Cuttings	69 a bale	"

THE PAKISTANI JUTE MARKETS

SOWING OF NEW CROP BEGINS

(FROM A NARAYANGANJ CORRESPONDENT)

SOME business has been done in raw jute with overseas buyers, and there has recently been a certain amount of sellers' resistance. This is, however, purely nominal. The market sentiment can be described as hesitant though it could be only temporary. The chairman of the Jute Board has come back after his sick leave. It is expected that he will take action with a view to combating the daily fall in fibre prices. Meanwhile, buyers continue to show the minimum interest, buying only piecemeal and reducing their prices with every purchase. There are reports that the Government finds the present P.J.A. prices at which E.P.C.s may be passed rather low and that it intends to take some action to stop this. But it would be extremely difficult for shippers to do any business if the limit at which their E.P.C.s may be passed is fixed above the London market.

The weather continues to show promise of rain and it is reported that sowings have already commenced in some areas.

THE FOREIGN JUTE MARKETS

DULL TRADING IN YARNS AND CLOTH

(FROM OUR DUNDEE CORRESPONDENT)

IT is gratifying that raw jute prices are declining, though this is responsible for an idle market in yarns and cloth. No dealer wishes to carry a pound more of yarn or a yard more of cloth than is necessary, and orders for their production are naturally small. Producers have had no opportunity to build up an order book, since consumers are meeting their needs in small lots. Delivery is usually requested at once, and the state of the trade has so long been of a hand-to-mouth character. The curtailment of production is bound to be extended under the circumstances. Many mills, including one large concern, are suspending their night-shift working. The one mentioned has been running night and day shifts for many years, and this is the first time that there has had to be a change. If employers have to retrench workers, it may bring about in its wake a serious problem concerning the quantity of yarn and cloth to be produced. The workers could get employment elsewhere and the Dundee manufacturers may have to purchase from the Continent, or Calcutta, as has happened before.

Prices of raw jute have come back to £108 10s for Mill Firsts which is the lowest, £93 for Mill Lightnings, £82 for Mill Hearts and £69 for grade Hearts, c.i.f. U.K., February-March. These prices are still well above what used to be known as "minimum" rates, when they were fixed at £91 for Mill Firsts, £81 for Mill Lightnings, £71 for Mill Hearts and £62 for grade Hearts. Dark jute, however, has come down to £101 for grade Tossa ⅔ and £94 for grade Tossa-4, £94 for good marks of Daissee-⅔ and £85 10s for grade, same shipment. The minimum prices for these grades were formerly fixed at £100, £90, £91 and £81, respectively.

Calcutta goods have continued to sag in the case of B Twills, which have been offered at the new low of 151s 6d for February, 152s for March and 152s 6d April-June, with 40in. 10oz. at 59s 6d, 60s and 60s for the respective positions of shipment, and 7½oz. at 45s 3d all positions, f.o.b. Calcutta. Prices of jute yarns and cloth are unchanged so far, but a change is expected in the near future. It is believed that spinners and manufacturers may be granted an increase in their conversion costs, which have risen during the past 12 months.

B.O.A.C. TO INTRODUCE COMET IV

BRITANNIAS TO BE REPLACED ON AUSTRALIAN SERVICE NEXT YEAR

(FROM OUR NEW DELHI CORRESPONDENT)

THE jet age is fast creeping in. From 1st January, 1959, B.O.A.C. is scheduled to operate its *Comet IV* service to Australia. It will have four frequencies a week, replacing *Britannias*. Three of these services will go through Calcutta and one through Bombay. The de Havilland Aeroplane Company has stated that the inter-continental *Comet* will carry 60 first-class or 76 tourist-class passengers on stage-lengths of up to 3,000 miles. It will reach a cruising speed of 490 to 510 miles an hour and on long stages will climb to an altitude of 42,000 feet. The continental model will carry 84 first-class or 99 tourist-class passengers for stage-lengths of between 300 miles and 2,000 miles. It will reach a cruising speed of between 522 and 545 miles an hour at an altitude of 23,500 feet. The exact cruising speeds of both aircraft depend upon temperature and altitude. One feature of the *Comet* is that it does not need a special runway. It will be suited the existing runways at international airports.

Advance summer schedules of B.O.A.C. services are now available. The two new *Britannia* services to Australia will be of interest to India. One of these services will operate through Karachi and Calcutta and the other through Bombay and Colombo. Leaving London on Mondays at 10-30 a.m., it will reach Karachi at 8-05 a.m. and Calcutta at 1-20 p.m. on the following day. The other new service leaves London on Thursdays to reach Bombay at 9-20 a.m. on the following day. It will be a composite first and tourist service.

A.-I.I. to Operate Boeings on Atlantic Route

Air-India International is planning ahead. It has now decided to operate *Boeings* on the Atlantic route when they are delivered. These aircraft will also be used on the Europe-Asia route. The company has three *Boeings* on order and an option for the fourth. The question, however, is whether with its ambitious programme, this small fleet will prove adequate. Will it not be safer and wiser to have five *Boeings* in its fleet to operate the four Continental services?

Jet Operations Panel Report

The Jet Operations Requirements Panel report is described as a detailed blueprint of the needs of civil aviation's coming jet age. In its report, the Panel discusses what is necessary for the introduction of new air navigation aids and services, changes in aerodrome construction and air traffic *control* practices, improvements in meteorological forecasting and reporting, and in aeronautical communications because of the use of turbine-engined passenger planes next year on the world's air routes.

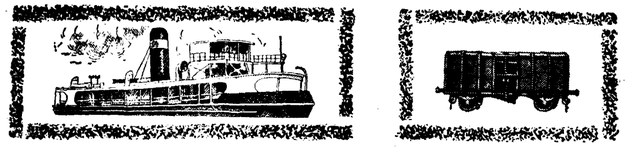
The Panel's observations on aerodromes will be of special interest to India. It says that the main characteristics of some jet aircraft which affect aerodrome requirements, compared with other types of aircraft, are their high gross weights, their increased runway length requirements for take-off and landing at or near maximum gross weight and the effects of such characteristics of jet engines as the higher temperature and higher velocity of jet effluxes compared with propeller slipstream and the greater amount of noise generated by this *type of engine*. Under conditions of standard temperature, heat and blast, damage to good quality pavements is unlikely to occur, but it may be necessary at civil aerodromes to provide pavements especially resistant to heat and blast effects at run-up areas and at the end of runways. Special attention should be given to joints and jointing materials *in concrete pavements*. At aprons and refuelling positions, a type of pavement resistant to the chemical effects of spilled jet fuel is needed. The noise caused by turbine-engined aircraft should be reduced and should be consistent with what is permissible in the vicinity of airports. As fuel consumption during taxi-ing is high, taxi-ways should be laid out to *make* taxi-ing time as short as possible, and to allow for turns at speeds of between 30 knots and 45 knots.

Runway Length Requirements

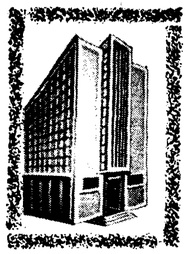
The report includes information on the runway length requirements of the various turbo-jet and turbo-propeller aircraft now being built, but it is pointed out that variations in operating techniques and other fundamental factors such as airworthiness codes and use of thrust reversers and noise suppressors may change present estimates considerably. Increased landing speeds necessitate an improvement in visual aids both on the approach and on the runway. According to the report, there is also a necessity for some means to assist the pilot to determine whether his take-off is developing safely; runway distance markers and devices in the aircraft to measure acceleration may meet this requirement.

On this subject, the Panel has agreed upon a statement along the following lines. Major factors associated with the operation of turbine aircraft which may have a significant effect on air traffic services are the effects of high speeds and limited visibility at high altitudes on avoidance of collision, the great increase in fuel consumption at uneconomic altitudes, the reduction in time available for the air traffic controller and others to perform their jobs because of the high speeds of the aircraft, the effect of these high speeds on the amount of airspace required for such manœuvres as holding over an airport, and the difficulty of using present vertical separation methods for turbine aircraft which will use cruise climb and stepped climb techniques rather than the level cruise methods currently employed by piston-engined aircraft. In those portions of the airspace where jet operations are carried out, there must be positive air traffic control at all times, regardless of weather conditions. Positive air traffic control means that the visual flight rule operation is not allowed and it needs integration with military traffic, a problem which will now extend from the lower altitudes to the higher levels of the airspace.

Need for Accurate Navigation System

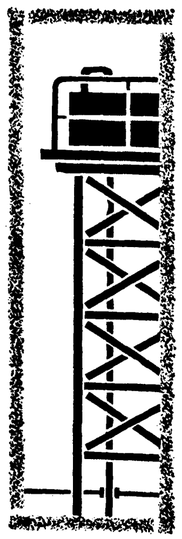


For efficient and economic operation of turbine-powered aircraft and for safe and efficient air traffic control, there must be a highly accurate navigation system. The system must provide for accurate flying along reasonably closely-spaced tracks in heavy traffic density, and must give accurate and continuous information in the cockpit. The system should preferably be automatic in operation, as this would be necessary for the rapid and reliable transmission of position data from air to ground and of control directions from ground to air. The air traffic control system for the jet age should need an absolute minimum of deviations from flight plans; changes, if necessary, should be confined to routing rather than to aircraft altitude because of the fuel penalty which jet aircraft face in making altitude changes.



Again, because of fuel penalties, no jet aircraft should encounter delay between the time it starts its engines and the time it climbs on to its course. This means procedures designed to facilitate uninterrupted taxi-ing, take-off and departure clearances will be necessary and it needs airport facilities allowing jets to bypass piston-engined aircraft which are running up their engines at the beginning of the runway. The turbine-engined aircraft should be permitted to make an uninterrupted climb to the initial cruising altitude and any changes necessitated by traffic, terrain or noise abatement procedures should be made by routing rather than changing the rate of ascent. This will necessitate the introduction of suitably sited precision navigation aids and the avoidance of climb restrictions in high-density areas. Because of their high altitude and speed, jet aircraft must begin their descent at considerable distances from the terminal airport. As a consequence, for economy reasons, the pilot must be notified early of any potential landing delay in order that he may make up the delay before he begins his descent.

Viscount Service between Rangoon and Calcutta



The Union of Burma Airways has now taken delivery of the first of its *Viscount* aircraft and this has been placed in service between Rangoon and Calcutta. Flights on this route are now operated three times a week with no intermediate landing by the *Viscounts*. One weekly service between Calcutta and Rangoon is still operated with DC-3's calling intermediately at Akyab. The *Viscount* service operates parallel with I.A.C. *Viscount* flights on this line; these offer a choice of ten weekly non-stop services by these aircraft.

UNCERTAIN PROSPECTS FOR COFFEE EXPORTS

WORLD SUPPLY EXCEEDING DEMAND

(FROM A SOUTH INDIAN CORRESPONDENT)

EXPORT prospects for Indian coffee in 1958 appear uncertain. World consumption is declining, while production is already exceeding demand. The U.S. Department of Agriculture in its latest estimate places the world production of green coffee in the 1957-58 marketing season at 50.4 million bags, which is 8.9 percent higher than the previous season's output. This will mean that the surplus which has already been hanging on the market will be bigger and will continue to be a damper, says the Department. According to one report, Brazil, Colombia and the central American States have come to an agreement by which nearly 5 million bags of coffee will be withheld from the market during the 1957-58 season to bring about a closer balance between exportable production and world demand.

According to present estimates, India's exportable surplus from the current season's crop is not likely to exceed 8,000 tons, compared with last season's 15,000 tons. This will in one way lighten the burden of marketing, but even so, with such weak foreign demand, the growers' return from their crop will be depleted considerably.

There is some anxiety among Indian coffee producers over the possible impact of the proposed European Common Market scheme on the coffee industry, in view of the fact that both as consumers and producers the Common Market countries in Europe and their associate African territories occupy a very important place. Coffee produced in the African territories will get duty-free entry into the Common Market countries, whereas that from other sources will eventually carry a uniform 16 percent *ad valorem* duty when this scheme is implemented. The African territories now produce 200,000 tons of coffee, which constitutes only 8 percent of the total world production, and is less than half of the Common Market countries' import requirements. Four-fifths of their production consist of Robusta coffee. This is the present position, but these territories being a fast developing coffee area, one cannot be sure that their production will remain at the present level for long.

Quality of Indian Coffee

The formation of the European Common Market thus poses a serious problem for India, over 70 percent of whose coffee exports are at present consumed in the Common Market countries. But there are a few reassuring factors. Indian coffee has no serious competitor either in African or other coffees where quality is concerned; the Arabica coffee which forms the bulk of India's exports, is superior to others in quality. It is being purchased by the Common Market countries for its cup quality and blending. Therefore, it is pointed out, Indian coffee will continue to hold its own in these countries, provided prices are competitive. The other factor is that African territories will not be able at present to meet fully the requirements of the Common Market countries and, therefore, those countries will continue to import coffee from other sources. The traditional liking for Indian coffee will keep the market for it open in Europe.

Plantations Labour Act

The recommendation of the Plantation Tripartite Conference held recently in Shillong under the chairmanship of the Union Minister for Labour, Mr. G. L. Nanda, to extend the application of the Plantations Labour Act to estates of even less than 25 acres is viewed with great concern by small growers of tea, coffee and rubber. Their fear is that if big estate owners with more resources find it difficult to implement the Plantations Labour Act, what would be the position of the small growers with comparatively limited resources? Although in tea, the number of small growers possessing less than 25 acres is very limited in south India, in coffee and rubber they form fairly a large proportion. A substantial share of the total rubber and coffee area in south India is owned by them. It would be a great injustice to treat them on par with large growers in the matter of implementing the legislation. According to a spokesman of the small estate owners in south India, they were not represented at the Shillong conference and, therefore, they should be given an opportunity to represent their case to the Government before it takes a final decision on those recommendations.

Helping the Coir Industry

It is understood that at the request of the Coir Board, the Central Ministry of Commerce and Industry has recommended to the Ministry of Transport and Communications that coir goods shipments be exempted from the levy of the 15 percent surcharge on coastal cargo freight, recommended by the Rail-Sea Co-ordination Committee, in view of the slump in the coir market and its importance as a foreign exchange earner. To help the co-operatives in the coir industry, the Kerala Government has decided to fix the share value at Rs. 10 and to advance as much as Rs. 9 for every shareholder provided he is a coir worker or a small producer.

Bigger Rubber Output and Consumption

India's natural rubber output as well as consumption touched new peaks in 1957, according to the Rubber Board. Production at 23,767 tons was 323 tons more than that in 1956, and consumption at 31,765 tons was 2,799 tons higher than the previous year's figure. Stocks, too, rose by 1,644 tons to 9,955 tons towards the end of 1957.

HEAVY WITHDRAWALS AT FIRST COFFEE EXPORT SALE

RELEASES TO INTERNAL MARKET INCREASE

THE receipts into the coffee pool up to 31st January this year totalled 14,566 tons, consisting of 12,749 tons of Plantation, 1,509 tons of Cherry and 308 tons of Robusta, says the latest newsletter issued by the Coffee Board of India. The receipts of Arabica coffee have touched the highest level this season compared with similar periods during the past six seasons. It is probable that the percentage of Cherry receipts will be more this year than in previous years because of delayed picking of the crop, and the more extensive strippings. Some 2,361 tons were released for the home market during January 1958 compared with 1,931 tons during January 1957. The carry-over of the previous crop as on 1st January this year will not be sufficient to cover the needs of Plantation in February, and Robusta in April, but the shortfall will be made up by the newly processed coffee as it becomes available. The first export sale for the season was held on 6th February, 1958. The prices were disappointing and nearly 75 percent of the stocks exposed for sale were withdrawn.

Fertiliser Supply

In view of the great difficulty in obtaining imports of potash and rock-phosphate, it has been decided to sell 2,000 tons of coffee this year to East Germany against supplies of these fertilisers for the coffee industry, to be paid in rupees. Discussions with the Ministries concerned were held by the Board's Chairman during his visit to Delhi in January, among other matters, on the supply position of fertilisers for the coffee industry. Supplies will be to the extent of 85 percent of the demand for ammonium sulphate, but other nitrogenous fertilisers will, it is hoped, be made available to make up the shortage. The position of these as well as of rock-phosphate and muriate of potash, it is hoped, will improve in the future months. It is proposed to make an additional pool payment to large growers at 20nP a point during February bringing the total to Rs. 2.50 for the 1956-57 crop.

COCHIN TEA SALES

At Sale No. 3, 1,300,000 lbs of tea were on offer. There was a good general demand. Low mediums and mediums declined irregularly by 5nP or 10nP. Good medium and best liquoring grades of improved quality sold well but below valuations. Whole leaf types were the strongest feature of the Sale.

EXPORT ALLOTMENT OF TEA ANNOUNCED

The Government of India has declared the export allotment of tea for 1957-58 at 460.96 million lbs. This represents 63.44 percent of the crop basis for the year, which is estimated at 726.56 million lbs.

RAPID GROWTH OF COFFEE AND TEA PLANTATIONS IN AFRICA

Kenya coffee, which already has an established reputation in the European market, is doing well this year, as reflected in figures released by the Coffee Board of Kenya. Six out of ten African coffee areas have, so far this season, produced more than half their crop in the first three classes of coffee. The estimated production from African estates this season is 2,154 tons—70 percent more than last year. The Kenya Ministry of Agriculture states that coffee planting in African areas is expanding at a "tremendous speed", and that if world demand continues, there is a very bright future for African growers. At present, about 57,000 Africans are cultivating some 15,000 acres of coffee, of which 5,000 acres were planted only in 1957. The aim of the Ministry is to have 70,000 acres in African hands by 1970. It is expected that coffee from African growers will be worth at least £450 a ton, or £969,300 for the entire African-grown crop. Three main factors account for the high quality of the African-grown crop—climatic conditions, expert crop supervision, and the benefits of research.

Following the Kenya Government's decision to introduce tea growing in the Kericho reserve, more than 100 *kipsigi* farmers in the Kimulot settlement scheme have planted tea. The first nurseries were started in 1955, and so far 64 farmers in Chebangang and 40 in Kanatabengwet have each planted a third of an acre. This planting was done early in the rainy season, and the tea bushes are now well established. These African nurseries are being rapidly expanded, and in the long rains of 1958 about 2,000 lbs of seed will be planted. African farmers pay 15 East African cents (approximately 1½d) for each seedling, which is the actual cost of production.

RECORD WORLD PRODUCTION OF COTTON TEXTILES

PIECEGOODS SHIPMENTS FROM JAPAN INCREASE

WORLD output of cotton textiles continued to run at or near a record level in the third quarter of 1957, according to the U.K. Cotton Board's *Quarterly Statistical Review* for December 1957. Cotton yarn production in those non-Communist countries for which regular figures are available, including all the principal cotton textile exporting nations was about 3 percent greater than in the third quarter of 1956, although seasonally less than in the immediately preceding quarter. The percentage increase compared with a year previously was perhaps fractionally less than in the two preceding quarters. Yarn production in the United States in the third quarter was still below the level of the corresponding period of 1956, but all the other main manufacturing countries, with the possible exception of Portugal, produced more cotton yarn than in the third quarter of 1956. The rate of expansion over the last 12 months has been particularly great in the case of France and Italy.

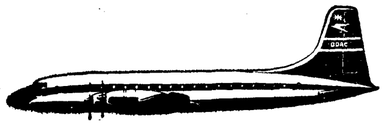
The long-term downward trend in international trade in cotton cloth was interrupted in 1957. Although exports of cotton piecegoods from the main non-Communist exporting countries declined seasonally in the third quarter, the volume of trade in the second and third quarters was approximately 18 percent greater than in the same period of 1956. Japan has been setting the pace and will almost certainly have a record post-war year for exports of cotton piecegoods; in the first nine months of 1957 she accounted for almost 30 percent of total cotton cloth exports from non-Communist countries. Exports from India, the United States, Hongkong, West Germany, Portugal and, probably, Belgium were running well above the previous year's level in the second and third quarters of 1957, and there has been a more modest expansion in Italian shipments. Exports from the United Kingdom and France were much the same as in the corresponding months of 1956, while Dutch exports fell off in 1957. Exports of fabrics of man-made fibres from non-Communist countries as a whole and from Japan in particular expanded very sharply in the third quarter and exceeded by a comfortable margin the previous all-time record set in the final quarter of 1956. In the first nine months of 1957, world trade in these cloths was about 12 percent greater than in the same period of 1956 and Japan accounted for between 50 and 60 percent of total shipments from non-Communist countries. Exports from all the principal Continental countries were running above the 1956 level, but shipments from the United Kingdom and the United States declined appreciably.

U.K. Exports Fall

Although Britain's domestic demand for fabrics of cotton and man-made fibres appears to have stopped expanding for the time being, it remained at a high level in the third quarter. On the other hand, exports, after a relatively stable period, are declining once more. On the supply side, imports are running at well above the 1956 rate and, although in recent months cloth production has been rather below the level reached in the corresponding period of 1956, there has been some tendency for stocks to increase. Up to the third quarter, merchants showed no tendency to reduce their commitments, but the raising of Bank rate to 7 percent may have subsequently induced some traders to reduce their stocks. On the other hand, prices of raw cotton are more likely to increase than to decrease, and this should discourage too severe a reduction in commitments. In the producing sections the tendency has been for order books to contract since the spate of buying in July, which was designed to forestall price increases. Spinners of Egyptian-type yarns are still rather more unfavourably placed than American-type spinners.

Output of yarn and fabrics was severely reduced by the influenza epidemic in September, and to a lesser extent in October, which makes comparisons with earlier periods difficult. However, by November spinning output had recovered almost but not quite to the level reached in May, the slight reduction being entirely in cotton and mixture yarns. In the weaving section, the rate of output in October, because of continued absenteeism, was, except for September, the lowest for any month since December 1956. Once again the proportion of cloth of man-made fibres in the total has declined; production of tyre fabrics and, above all, of fabrics of synthetic fibre has expanded in 1957, but output of rayon fabrics, both spun and continuous filament, has fallen very heavily.

Reduced Shipments of Piecegoods



Exports of cotton piecegoods amounted to 110 million square yards in the third quarter of 1957, compared with 117 million in the second quarter and 112 million in the third quarter of 1956. There was a further sharp decline in October, when exports totalled only 34 million square yards. Compared with a year ago, the principal reduction in the third quarter's trade was in shipments to Australia. Exports to the United States, India, Pakistan and Ceylon were also less than in the corresponding period of 1956, but in contrast there was some improvement in trade with South Africa, Canada, the Belgian Congo and British East Africa. The steady decline in exports of rayon and mixture piecegoods (including synthetic fibre fabrics) continued in the third quarter, when shipments to Australia, South Africa, British West and East Africa, the West Indies and Indonesia were all less than in the third quarter of 1956. One of the few bright spots is trade with Rhodesia and Nyasaland, which has expanded considerably in the last 12 months. Cotton yarn exports continue to show a modest improvement over the 1956 figures, thanks mainly to increased shipments to Australia, Burma, India, the Argentine and Belgium.

Imports of cotton piecegoods declined slightly from 115 million square yards in the second quarter to 94 million in the third quarter, but expanded sharply again to reach the record figure of 42 million square yards in October, exceeding the volume of exports by 8 million square yards. Imports of Indian cloth were sharply reduced in the third quarter, but imports of cloth from Hongkong continued to expand. China has also been supplying increasing quantities of cotton cloth; the rate of expansion of imports from this source was stepped up sharply in October when 6 million square yards entered the country. There was also a marked increase in imports of rayon piecegoods, mainly from Japan, in the third quarter.

U.S. Industry Depressed

The U.S. cotton textile industry still appears to be in a depressed condition. Stocks of cotton cloth touched record heights in August. In October, the average margin between the price of 17 grey cloth constructions and the price of the cotton required to manufacture them was 14 percent lower than a year ago. Many of the big cotton mills, especially print cloth producers, intended to take extended Christmas holidays. In the third quarter of 1957, spinning mills consumed 5 percent less cotton than in the same period of 1956, while the consumption of man-made staple was 11 percent higher, the increase in the consumption of synthetic staple being particularly marked. The latest figures of cloth production relate to the second quarter, when cotton cloth production was 7 percent lower than in the corresponding quarter of 1956. The output of rayon cloth was over 13 percent lower than in the same period of 1956, that of nylon cloth in contrast 26 percent higher, while cloth of other synthetic fibres registered an increase of 53 percent, mainly due to the increase in the production of dacron mixture fabrics.

Exports of cotton piecegoods from the United States in the third quarter of 1957 were below the second quarter's level but 12 percent higher than in the comparable period of 1956. The largest increases over the year have been in exports to Canada, South Africa and the Philippines. Exports of man-made fibre piecegoods in the third quarter suffered a decline from the levels of both the preceding quarter and the third quarter of 1956.

B·O·A·C QANTAS AROUND THE WORLD

BRITISH OVERSEAS AIRWAYS CORPORATION WITH QANTAS AND T.E.A.L.

Concern has been expressed in trade circles about recent imports from Hongkong of cotton cloth and made-up items. The piecegoods quota for Japanese exports to the United States is far from filled, but orders for apparel cannot be accepted because quotas are already filled.

Record Production in Japan

With the exception of continuous filament rayon fabrics, the production of cotton and spun man-made fibre yarns and of cotton and man-made fibre fabrics in Japan in the third quarter of 1957 exceeded the levels recorded in the corresponding quarter of 1956. The production of spun rayon yarns and fabrics exceeded the record levels attained in the preceding quarter. It would seem that this high level of output has surpassed the development of export and domestic requirements. In spite of the production cuts earlier in the year, by the end of November prices of textiles declined rapidly in what the Ministry of Trade calls the greatest crisis in the Japanese textile industry since the end of the war. In an effort to stabilise the market, the Cotton and Spun Rayon Fabrics Industry Adjustment Association has decided upon a 20 percent curtailment of production with effect from December. At the Government level, the Ministry of International Trade and Industry advised the staple fibre spinners to raise the rate of production cut to 20 percent from December. The Government is reported to be considering a more rigid curtailment of production in the rayon filament and cotton spinning sections.

Japanese exports of cotton piecegoods totalled 368 million square yards in the third quarter of 1957 compared with 361 million square yards in the preceding quarter and 258 million square yards in the corresponding quarter of 1956. Exports in the first ten months of 1957 were 19 percent above the total for the same period of 1956. Large advances over the preceding quarter's trade were registered in exports to the United Kingdom, British West Africa, Hongkong, Australia, West Germany, Indo-China and Venezuela. Substantial declines took place in exports to Burma and the Philippines. Exports of rayon piecegoods in the third quarter amounted to 366 million square yards compared with 303 and 281 million square yards in the second quarter of 1957 and the third quarter of 1956, respectively. Exports in October amounted to 125 million square yards, exceeding the exports of cotton piecegoods. Exports to the United Kingdom, British West Africa, South Africa, British East Africa, Singapore and West Germany increased over the second quarter's levels while exports to Aden, Iraq, Iran, Siam and the Philippines declined. The exports to West Germany consisted almost entirely of spun rayon piecegoods and increased to the large figure of 29 million square yards in the third quarter.

Accumulated Stocks in India

Production of cotton yarn in India during the third quarter was 3 percent above that recorded in the third quarter of 1956. In contrast, mill production of cotton cloth was 3 percent lower. It would appear, however, that the divergence between the performances of the two sectors is narrowing, due mainly to a slackening of demand for yarn from the handloom and independent powerloom weavers. In the first ten months of 1957, the output of cotton yarn and mill-made cloth was 7 percent and 1 percent higher, respectively, than in the same period of 1956. Stocks of mill-made cloth increased by 88 million yards during the third quarter while October saw an increase of over 50 million yards. Part of this latter increase was due to expectations that the Government intended reducing the excise duty on cloth. Domestic demand may be expected to increase gradually because of the temporary reduction of excise duty on medium cloth.

Detailed figures of exports of cotton piecegoods from India do not extend beyond the first quarter. It would appear, however, that exports in the third quarter were higher than in the corresponding quarter of 1956 but lower than the level of the preceding quarter. The Government has further relaxed the restrictions on the export of cotton yarn.

Western Europe Doing Well

The Continental cotton industries continue to enjoy better conditions than their British counterpart. Cotton yarn production in these countries taken as a whole in the third quarter was about 11 percent greater than in the corresponding quarter of 1956, the increase in British production being of the order of 6½ percent. Italy and France show the largest increases due principally to increased domestic demand. In the former country, sales of cotton cloth to the domestic market were, in the first eight months of the year, 11 percent above the 1956 level. In France, deliveries of all cloths to the home market by the cotton industry in the first ten months of the year were 14 percent above the comparable period of 1956. West German production remains buoyant but Dutch production is only slightly up compared with a year ago.

West European exports of cotton piecegoods declined compared with the previous quarter's level but were about 6 percent greater than in the third quarter of 1956. Dutch exports declined compared with the levels of the preceding quarter and of the same quarter of 1956, mainly because of a drastic decline in shipments to Indonesia. West German exports were higher than the 1956 level, the expansion being attributable partly to increased trade with French West Africa. Italian exports were sustained by means of increased shipments to the United States. Exports of man-made fibre piecegoods from Western Europe in the third quarter of 1957 were much the same as in the preceding quarter and about 15 percent higher than the level of the same quarter of the previous year.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) showed a further fall of 0.9 percent to 104.6 during the week ended 1st February, 1958, compared with 105.6 for the previous week. The index was lower by 1.6 percent and 2.8 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles fell by 1.5 percent to 100.7 due to a decline in the prices of fish (Prawn) in Tirur (−11%), potatoes (−10%), meat in Calcutta (−9%), rice in Jagdalpur (−8%) and in Ranchi (−5%), urad in Madras (−8%), masur, oranges in Nagpur, chillies in Calcutta and mustard oil (−7% each), onions and coconut oil (−6% each), jowar, maize in Bhilwara and Bahraich, gingelly oil in Bombay, black pepper in Madras and turmeric in Calcutta (−5% each), groundnut oil (−4%), bajra, gram, arhar and tea (−3% each), gur (−2%) and wheat, cashewnuts and eggs (−1% each). The prices of fish (Sole) in Tirur (+16%) and in Calcutta (Rohu) (+6%), rice in Nandgarh (+10%) and Marcara (+8%), oranges in Madras and black pepper in Cochin (+7% each), barley in Motihare and maize in Mandi (+6% each), mung in Patna (+5%) and ragi and cardamoms (+1% each), however, showed advances. The index for Tobacco advanced by 1 point to 95 as a result of an increase in the prices of raw tobacco (Motihar medium) in Calcutta (+2%). The index for the Fuel, Power, Light and Lubricants group worked out to 114.3 compared with 114.4 (revised) for the previous week. The prices of castor oil in Madras (−12%) and in Bombay (+9%) showed variations. Lower prices of rapeseed (−9%), copra (−3%), raw jute, groundnuts and lac (−2% each) and raw wool, linseed and gingellyseed (−1% each) brought down the Industrial Raw Materials index by 1.4 percent to 111.2 compared with 112.8 (revised) for the previous week although the prices of raw silk and tanning materials (+1% each) rose. The index for Intermediate Products also receded by 0.7 percent to 105.9. Items which showed noticeable variations were: tin (−5%), copper (−4%) and linseed oil (−2%). The index for Finished Products remained stationary at the previous week's level of 107.6 in spite of variations in the prices of alum (ferric) in Calcutta (+11%), handloom cloth and paper and newsprint (+1% each), oilcakes (−3%) and drugs and medicines (−1%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

SUGAR PRODUCTION AND STOCKS

The production of indigenous sugar amounted to 921,000 tons up to 31st January, 1958, in the current season, against 813,000 tons in the corresponding period of last year. The total offtake, including quantities despatched for exports, was 441,000 tons. The stocks with the factories on 31st January, 1958, stood at 911,000 tons.

Calcutta Markets

GOOD DEMAND AT TEA EXPORT SALE

BETTER SUPPORT FOR DUSTS

AT Sale No 33, held on 17th and 18th February, 59,179 packages were on offer at the Export auction for which there was a good demand. Plain teas were easier by 2nP for Brokens and 2 to 4nP for Fannings, while clean black B.O.P.'s and O.Fgs. met with a good demand at dearer rates. Medium B.P.'s were about 4nP easier, but Fannings were in strong demand and were dearer by 4nP. The brighter liquoring B.O.P.'s and O.Fgs. often sold well above valuations. Better C.T.C.'s, especially the Fannings grades, were keenly sought after and sold 20 to 30nP above last rates. Those which were bright or had autumnal character were particularly strong. The poorer C.T.C.'s, however, were again easier and were often difficult of sale. Non-wither Dooars were irregular and showed an easier tendency. Whole leaf grades were barely steady, any change being in buyers' favour. Darjeelings sold well, but generally below valuations although a few of the best realised attractive prices.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.2b	2 2 0
Plain B.P.	1.52 to 1.56	1 13 0 to 1 13 6
Medium B.P.	1.58 to 1.62	1 14 0
Best Assam C.T.C. B.P.	2.70 to 2.90	2 6 0 (nom.)
Plain Fannings	1.62 to 1.66	
Medium Fannings	1.72 to 1.76	
Best Assam C.T.C. Fannings	2.80 to 3.00	

At the Internal Sale, a total of 18,982 chests of Dusts was on offer, and there was a more general demand than last week. Black, clean Dusts from the Dooars as well as Assam met with competition from the Middle East buyers and these generally sold above valuations. The best liquoring C.T.C.'s and the colourey or brighter liquoring mediums were firm, but the plainer sorts, particularly those with fibre, were again easier. The few Darjeelings on offer met with less demand and there were some withdrawals.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.56 to 1.60	1 13 0
Medium Assam Grainy Dust	1.60 to 1.62	1 13 6
Medium Assam C.T.C. Dust	1.70 to 1.90	2 2 0
Best Assam C.T.C. Dust	2.80 to 3.10	2 10 0

Leaf on offer were 2,848 chests. There was a good general demand and with the exception of the C.T.C. Fannings, prices were often in buyers' favour.

FAR EAST SECTION DULL IN FREIGHT MARKETS

WHILE American and Pacific markets had some activity, the Far Eastern trade in the freight markets, was extremely dull during the past week. Transatlantic coal charterers paid 23s 6d for two consecutive voyages to the Continent. Wheat in bulk 5,000 tons part cargo north Pacific to Calcutta has been fixed at 62s 6d. British Columbia to Japan 9,500 heavy grain paid $ (U.S.) 5.50 with 1,000 discharge free. Gulf to Karachi paid $ (U.S.) 8.60, with 1,000 tons discharge free. In the Far East, bagged rice charterers have accepted four steamers 4,500 tons 5 percent Burma to Chittagong or Chalna at 265 f.i.o. and stowed, and have paid 25s for two steamers Burma to Colombo or Galle 8,000 tons, 10 percent. These charterers are still in the market for tonnage. Mormugao to Holland iron ore 7,000 tons 5 percent has been fixed at 41s 3d f.i.o. trimmed and another steamer 9,500 tons 10 percent iron ore to Continent at 52s with 1,000 load at 2s 6d, 2,000 discharge free. Two Japanese vessels have been fixed for March loading East Coast India-Japan, 9,200 to 9,800 tons iron ore at 40s f.i.o., trimmed. In the time charter section, a British oil burner was fixed for a West African round at 12s 9d.

HIDES AND SKINS QUIET

The market ruled quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 11th February and 17th February, 1958)

Cowhides: Wet salted (Ord.) 22,500 pcs. on the basis of Rs. 10.50 to Rs. 11.75; Wet salted (Slaughtered) 15,400 pcs. on the basis of Rs. 13 to Rs. 21.50.

Goatskins: Wet salted (Patna, Daissee and Kustia) 30,900 pcs. on the basis of Rs. 310, Rs. 345 to Rs. 360 and Rs. 390 to Rs 400; Wet salted (shekilled) on the basis of Rs. 3.50 and (he-killed) on the basis of Rs 4 a piece; Assam 13,000 pcs. on the basis of Rs 310 to Rs. 330; Patna-Pakur 5,150 pcs. on the basis of Rs 310.

Bazaar Stocks

(17th February, 1958)

Cowhides: Wet salted 1,09,500 pcs.

Goatskins: Wet salted (killed, Patna, Daissee and Kustia) 30,000 pcs.; Assam-Dinajpur 1,74,000 pcs.; Muzaffernore-Patna-Pakur-Purneah-Kissenganj 5,54,000 pcs.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MUDALIAR COMMITTEE REPORTS ON RAILWAY FREIGHTS

DISCOURAGING SHORT-DISTANCE TRAFFIC

THE report of the Railway Freight Structure Enquiry Committee headed by Sir A. Ramaswami Mudaliar, which was published a few days ago, covers a subject which, to laymen, is almost baffling in the complexity of its detail. Apparently, it is not much less baffling for the Railway Ministry itself, which after more than nine months of presumably close study still finds itself unable to indicate to what extent the recommendations should be accepted or rejected. The speech made by Mr. Jagjivan Ram, Railway Minister, while presenting the Railway Budget last week merely promised that decisions on the report would be announced "in the near future". No precise indication was given about what the broad trend of those decisions would be—for instance, whether the railways would make an heroic effort to finance expansion by mulcting consumers even more vigorously than they do now; whether the Committee's comments on the costs of expansion have made any impression on the Planning Commission; and whether the discouragement of short-distance traffic is to be elevated to an accepted principle of future railway freight policy. More charitable commentators may be tempted to condone the Ministry's delay in evolving a detailed freight structure on the basis of the Committee's recommendations. But those who believe that time is a crucial factor in planning will not be able to look so kindly upon the absence of any indications as to what the Ministry thinks of at least the general considerations on which the Mudaliar Committee's report is based.

THE RECOMMENDED SCALE

				Pies a maund a mile
Miles	1	—	25 ...	3.60
+	26	—	75 ...	1.40
+	76	—	150 ...	1.20
+	151	—	300 ...	1.05
+	301	—	500 ...	0.85
+	501	—	800 ...	0.70
+	801	—	1,200 ...	0.60
+ distances beyond			...	0.50

The wider background against which the Committee has framed its recommendations is important. It states categorically that the Rs. 1,125-crore expansion programme for the railways sanctioned by the Planning Commission is too small to cope with the expected increase in traffic requirements. Even the Railway Ministry's original programme, which estimated that the demand for goods carrying capacity would increase from 120 million tons to 181 million tons over the second plan period, and that an expenditure of Rs. 1,480 crores would be necessary to cope with the increase, is in the light of more recent indications seen to be "on the low side." Proper account has not been taken of the "increasing transport burden resulting from an increase in the lead of traffic, which generally characterises a period of rapid industrialisation." The demand for transport facilities is liable to rise much more rapidly than the increased production which has been planned for, because supplementary and ancillary activities are generated. The Committee stresses, finally, that in a mixed economy, spare transport capacity is necessary if production is to be promoted and production costs reduced. As things stand, there is a serious danger that transport shortages will hamper the implementation of projects, with the result that scarce resources will be left idle or wasted. "The danger," it declares, "is real and cannot be wished away." Of the Rs. 355-crore cut in the railways' original expansion plan which has been made by the Planning Commission, Rs. 129 crores relates to new lines. But most of the other cuts really affect the capacity to carry additional freight, and the Committee urges that this is a point which the Government should reconsider.

The financial picture of the railways during the second plan period strikes the Committee as hardly more reassuring. Certain qualifications are mentioned in relation to the Railway Board's revenue expectations, but the latter have nevertheless been accepted. Major amendments are suggested in the expenditure estimates: the allocation to the depreciation fund is considered too low, adjustments are necessary on account of the increases in coal prices, and there has been a rise in the cost of materials and equipment. After considering the changes in the estimates which are necessary, the Committee comes "to the conclusion that, on the basis of the existing (1955-56) level of rates and fares and after taking into account the additional traffic which the railways are expected to carry during the second plan period, there will be a total gap between revenue and expenditure of over Rs. 300 crores for the five years of the plan period." If, therefore, the railways are to increase their traffic-carrying capacity and at the same time ensure their financial stability, "it is essential that the existing (1955-56) scale of rates should be revised in an upward direction."

Two such revisions have already taken place. The Railway Budget for 1956-57 imposed a supplementary charge of 6¼ percent on freights for most commodities, and a further supplementary charge of 6¼ percent has been levied since July last year under the Railway Budget for 1957-58. But the Committee condemns the method of raising additional revenue by uniform supplementary charges in no uncertain terms. It points out that the method is unscientific, because it does not spread the burden equitably in accordance with the capacity of different kinds of traffic to bear it. A uniform and general increase in freight rates has a much greater impact on the cost of manufacture of certain finished or semi-finished goods, since the increase affects the freight cost for each of the raw materials needed; and also on the freight cost for the finished or semi-finished products which have to be distributed all over the country. More far-reaching adjustments are therefore necessary, both in the level of freights and in the taper of the scale, if the additional burdens are to be distributed equitably in the light of what different kinds of traffic, travelling over different distances, can afford. With this in view, it has recommended a new scale as satisfying best the criteria to which it thinks the adjustments should conform. These criteria are, firstly, that it should not bear too heavily on long-distance traffic as compared with short-lead traffic; secondly, that it should be all-inclusive, enabling the abolition of terminal and other charges; thirdly, that it should cater to "smalls" rates and wagon-load rates, with the existing disharmonies reduced; and, finally, that the financial results of adopting the new scale should be such as to bridge the gap of Rs. 300 crores between revenue and expenditure as far as possible.

With the second and the third criteria, there can be little disagreement, but it is the first and the fourth that are really important. The Committee's view that the railways should themselves try to bridge to a certain extent the gap in the financial resources necessary for their expansion programme seems reasonable in theory, as long as the Government seems adamant about not increasing the allocation given them under the second plan. But, circumstances being what they are, it seems doubtful whether this can be done without pushing up the costs of trade and industry to a damaging extent. The adjustments suggested are such that, in line with the first criterion, the additional burden will fall mainly, if not wholly, on traffic travelling over shorter distances. This again would be reasonable if alternative means of short-distance transport existed; but the fact is that even where they do exist, they are extremely inadequate. The Committee makes some welcome criticisms of the Government's half-heartedness in developing road transport—an omission which has to a large extent been responsible for the railways' present troubles. But whether those criticisms will have any effect is quite another matter. They have featured in almost every discussion of transport, especially road, problems in recent years, without yielding much tangible benefit so far. Many State Governments are hesitant to give clear assurances against the nationalisation of road transport; taxation remains high; highway construction is starved of funds: little has been done to remove the unnecessary restrictions imposed in many States on lorry operators; and last, but not least, the rapacity of motor-vehicle manufacturers in raising prices without regard to quality remains undiminished.

THE NEW SCALE APPLIED

Representative Distance (Miles)	Freight Rates in 1955-56 (Pies a maund, Class 9)	Now Proposed under New Scale (Pies a maund, Class 100)
50	72	125
100	115	190
200	214	303
300	313	408
400	397	493
600	565	648
800	697	788
1,000	829	908
1,200	961	1,028
1,500	1,159	1,178

In these circumstances, it is questionable whether the Mudaliar Committee's recommendations about diverting short-distance traffic will not merely provide a convenient excuse for the railways to shy away from the fulfilment of their obligations in this aspect. That is not necessarily a criticism of the Committee's labours; sound economic reasons have been adduced why many commodities travelling over short distances on the railways should pay more freight than they do now (for instance, wagon utilisation is lower, since loading and unloading take proportionately more time when leads are short, so wagon earnings decrease). Nevertheless, the danger is real that the official response to the Mudaliar Committee's report will take the shape of raising railway freights, particularly for short-distance traffic (long-distance rates are already so high that some reduction from the present levels may be necessary); while at the same time doing nothing to encourage road, coastal or inland water transport. The economic consequences of such action would be serious. For one thing, industrial costs would rise. For another, in the long run the regional dispersal of industry would be encouraged to a wholly unwarranted extent—a dispersal which the Committee clearly says should not be promoted by the manipulation of railway freight rates.

GROWING PAINS OF THE INDIAN "RUHR"

BENGAL CHAMBER PRESIDENT CALLS FOR REALISM

"THE Ruhr of India" is a phrase with a portentous ring about it. Yet this is precisely what the region surrounding Calcutta promises to become. All that is needed, to quote Mr. W. H. S. Michelmore, retiring President of the Bengal Chamber, is "careful and imaginative planning, coupled with vigorous and bold execution". From the rest of what Mr. Michelmore had to say at the Chamber's annual general meeting in Calcutta last Friday, it was difficult to avoid the impression that these pre-requisites, when forthcoming at all, are still inadequate and unnecessarily delayed. That is certainly true at the moment, and as a result the comparison between the growth potential of the region and the difficulties faced by its main industries, is not an encouraging one. In this area are concentrated most of India's export facilities; it possesses the largest port in the country; four important industries are centred here together with a large proportion of the economy's skilled labour, and many others are growing up around them. Yet the decay of Calcutta as a financial centre is still going on, apparently as a deliberate aim of Union Government policy; the stock exchange is moribund; West Bengal's refugee and unemployment problems are monumental and dangerous, while the State's financial claims rarely appear to receive from the Centre the consideration they deserve. In fact, the difficulties which have to be faced by workers, employers and administrators in this potentially prosperous region go a considerable way towards explaining its prevailing feelings of gloom and despair and its general atmosphere of chaos, indiscipline and neglect. A good deal can be done to alleviate this state of affairs on the lines suggested by Mr. Michelmore. It is to be hoped that the pressing need for development, and the foreign exchange to finance it, will eventually encourage that appreciation of reality which has always been lacking when pleas have been put forward before on behalf of the main industries.

There has been considerable progress in the official attitude towards the jute mills during the past three or four years. Apart from such outstanding lapses as the two-year-old wage award to labour and the more recent inclusion of the industry in the provisions of the Bengal Electricity Duty (Amendment) Bill, 1957, Government intransigence is at present chiefly confined to the problem of retrenchment. Mr. Michelmore presented a heartening picture of the result of rationalisation and modernisation in the industry. But it is difficult for the mills to gain any benefit from their efforts in this direction while they are forced to continue employing the labour displaced. There is no minimising the unemployment problem in this State, but there is no solution to be found in attempting to throw the burden on the shoulders of foreign buyers of jute goods. They will simply not accept it; and the industry will suffer accordingly, thus narrowing its employment potential even more. The reference to this problem in the Governor's speech at the opening of the West Bengal State Assembly a fortnight ago, stating as it did that rationalisation would not be permitted where retrenchment might be involved, showed little hope for the future. The present burden which this policy represents for the jute mills is something which is unlikely, in the short-run, to be offset even by the achievement of the goal of self-sufficiency in raw material, towards which the various State Governments are at last working with increased and commendable determination.

The plight of the tea industry is one which successive Presidents of the Chamber have emphasised. Mr. Michelmore's words should carry even greater weight this year now that the difficulties facing common tea producers are obviously fast approaching the point of crisis—if indeed they have not already reached that stage in some cases. The problems of the gardens are directly due to their having to meet more than their share of the expenses of India's socialist State, both in the form of taxes and welfare burdens. Unless the situation changes in the near future, a fair proportion of the tea industry is facing extinction. Foreign competition cannot be met adequately under present circumstances. A more realistic official attitude is needed towards taxation. And, a point which Mr. Michelmore refrained from mentioning, it should be possible to adopt a more progressive attitude towards the conclusion of an international tea agreement now that the original reason for India's failure in the previous negotiations has disappeared from the New Delhi scene.

No industry has suffered more from official interference than coal. In spite of that, the picture which Mr. Michelmore presented of the performance of the private collieries was a reassuring one. Nobody outside Government circles seriously believed that the publicly-owned pits would reach the targets set for them. How far they are falling behind is shown in the figures the Bengal Chamber President put forward. In the two years ended December 1957, the public-sector mines increased their production by about 600,000 tons, compared with a target for the five year plan of about 10 million tons—originally 12 million tons. The private pits, on the other hand, increased their output in the same period by 4.5 million tons, against a target of 12 million tons. The difference in these two performances is a remarkable comment on the Government's policy for coal, and is one which needs remembering at a time when the unfortunate Chinakuri colliery disaster has given rise to more loose talk about nationalisation—as if that would make the slightest difference to the hazards of coal raising. Moreover, it has been achieved under conditions weighted heavily in favour of the public enterprises. The plea Mr. Michelmore put forward for a more rational price policy for coal is one which has been heard many times before. Its eventual acceptance would seem to depend on two main factors: the sincerity of the Government's intentions in carrying out the second five year plan for coal, and its willingness to forget ideological rivalries in face of the obvious need to increase production.

Now that the wheel has turned full circle for Calcutta port, and the revival of a payment-by-result policy is being accepted as necessary for efficiency, it is possible to foresee a happier future for the docks. The main factor now is that it should be delayed as little as possible.

Of all the industries Mr. Michelmore mentioned, the one least beset with serious problems just now would seem to be engineering. This is probably due to its comparative newness, the fact that it serves an almost exclusively internal market, and its obvious importance to the success of the country's development plans. The supply of raw materials is its chief worry at the moment, and although no single example has yet been reported of an engineering concern having to stop production through shortage of steel and other requirements, the margin in some cases has now become uncomfortably narrow, and only a miracle of organisation is going to prevent instances arising in the near future.

It seems to be inevitable that the speeches of prominent industrialists in eastern India should often turn out to be a chronicle of difficulties, problems and complaints. Mr. Michelmore's was no exception, although it was certainly more hopeful than most. But the fault is the Government's and not that of the President of the Bengal Chamber, who is, after all, merely reflecting the collective view of his members. There is so much scope for expansion in this region—and so many reasons why it should be expedited. That is what makes it all the more surprising that it should be necessary at this stage in the country's development plans to make yet another plea to the Government for greater realism.

SIGNIFICANCE OF RUSSIAN GOLD

CHIEF FACTOR IN THE PRICE PROBLEM

THE annual review published this year by Samuel Montagu and Company, the London bullion house, provides an estimate of the Soviet Union's production of gold that is relevant to the question lately put around: will the price of gold soon be raised? This authority suggests that South Africa's production of gold. 17 million ounces last year, is now equalled by the Soviet Union. The London *Financial Times*, firmly advocating an adjustment in the price, stated recently: "It is the constant price of gold which more than anything else has reduced world reserves to the present dangerous level." But this newspaper does not foresee any change in the policy of the United States in this respect. "American thinking has for a long time been obsessed with the benefits (a rise in the price) would give to countries the United States has no wish to benefit, and particularly, of course, to the Soviet Union."

If the Soviet Union is in fact producing as much gold as the country that has been until recently regarded as indisputably the leading gold-producer of the world, and is thereby accumulating a huge stock of the metal, besides selling large quantities of it abroad, a rise in the price by any significant amount would indeed provide a great benefit to the Soviet Union. It is, moreover, arguable that if a second supplier as important as South Africa is now able to augment the world's monetary gold the problem of inadequate reserves will gradually diminish, even if the metal is held at the unrealistic price of $35 an ounce. The Soviet Union is not troubled by the problem of monetary reserves. It holds its huge stock of gold as a commodity that is available for export. It does not lose gold because its balance of payments is in deficit but exports gold, like any other commodity, to provide foreign currency wherewith to finance imports—for itself or for other members of the Soviet bloc.

Montagu estimates these exports last year at 7.5 million ounces (half of the U.S.S.R.'s production). This figure is much higher than the previous highest, 4.3 million ounces, reached in 1956. The current year's figure will perhaps be lower than last year's, which was affected by the special requirements that followed the Hungarian rising; but there is no reason to doubt that the Soviet Union, having thoroughly reorganised its gold mining, apparently with the idea of increasing supplies of a readily exportable commodity, will put increasing quantities of gold on to the world market over the years. Including the Soviet Union's 7.5 million ounces, the supply of new gold available to the world market last year was about 37 million ounces, worth about $1,285 million. The greater part of this amount was acquired by central banks as additions to monetary reserves, and in a year when international trade was no longer expanding as vigorously as before it could perceptibly improve the ratio of reserves to international transactions.

To provide adequate reserves by increasing the physical quantity of gold is, however, a very long task. Since the pre-war era both the volume of international trade and the prices of the goods traded have increased substantially, so that the value of international trade has increased approximately fourfold. But the latest complete figures available (for 1956) showed an increase in the gold reserves of the non-communist countries other than the U.S.A. by only one-twentieth in the same period. For these countries, the value of gold in relation to the value of international trade has been virtually divided by four. The world has, of course, economised its gold by using more currency as reserves. But both forms of reserve together aggregate, in the non-communist countries other than the U.S.A., little more than half of the pre-war ratio of reserves to international trade. And these countries' liquidity is deteriorating further, as the U.S.A. is gaining gold and dollars from the other countries. If the American recession accelerates this process the problem of liquidity in other countries (West Germany is at present a notable exception) may become critical. The other countries are therefore inclined to restrict their external payments, causing a cumulative contraction in international trade.

If this process can be reversed by raising the price of gold the non-communist world can quite possibly gain more than the Soviet Union by such a move. At the present price the value of the Soviet Union's sales of gold in 1957 was nearly $600 million. The same volume of gold sold at a higher price would increase the Soviet Union's purchasing-power by, at most, some hundreds of millions of dollars a year. Such an increase would be a substantial material advantage, but it would be insignificant compared with the political advantage to the Soviet Union of a severe recession of international trade—and therefore, almost certainly, of internal economic activity—in the capitalist world. The potential political consequences of such a recession are, indeed, so serious that it may even be beneficial to the capitalist countries to increase the communist countries' purchasing-power and sell more goods to them. Even if the communist countries could substantially increase their exports of ordinary goods, the capitalist countries could not easily absorb these goods if their own trade was diminished; but they would welcome the gold that Russia might sell in increased quantities if the price were more favourable.

It is doubtful if the American Administration will be impressed by such arguments even if the American recession grows much worse, but other countries may feel that the possibility of a rise in the price of gold is sufficient to justify converting some of their dollar balances into gold—although gold earns no interest. It is worth recalling a recent statement by Dr. Lewis Lloyd, an American economist, that foreign countries have claims on more than two-thirds of the American gold reserve and could, if they preferred gold to dollars, cause a catastrophic financial crisis in the U.S.A.

CHINAKURI COLLIERY DISASTER

THE disastrous explosion at the Chinakuri colliery last week has understandably stirred human emotions, and it has also shown, once again, how hazardous an enterprise coal mining can be. This particular colliery had the most modern equipment of any in India and all possible safety precautions were taken to protect the lives of those who worked in what are described as the deepest pits in the country. Its owners, the Bengal Coal Company, started sinking them in 1945 and took ten years to complete the entire operation. The capital cost, including the installation of equipment amounted to over Rs. 1.5 crores. The owners have had many years of experience in working the particularly gassy seam which was to be mined in Chinakuri, and this was drawn on freely in the task of designing and equipping the new mine. The chairman of the company, Mr. D. F. Macmillan, in a statement to shareholders (published on another page of this issue of *Capital*) says that "knowing that gas is always liable to be present in the workings in the Dishergarh seam, special safety precautions were employed;" all electrical equipment, including the electric mining lamps, were flame-proof under the certificates of the Department of Mines, and, in addition, the ventilation of the mine and dispersal of accumulations of gas were assisted by a surface exhaust fan with a capacity of 400,000 cubic feet of air a minute, "which is estimated to be ample for ventilation even when the underground workings are eventually fully developed".

Yet the disaster has occurred, and as invariably happens, there is a tendency in some quarters to blame the management for it. In the same statement, Mr. D. F. Macmillan has accepted the responsibility, but he makes an important distinction between responsibility and blame. "The responsibility in the matter of this disaster lies with the company through its management", he says, "but whether blame attaches in any quarter can only be decided after the cause of the explosion has been established. This distinction between blame and responsibility is mentioned because reference has been made in certain Press reports that the enquiry committee will be set up to find out who is to blame." The Union Minister for Labour, Mr. G. L. Nanda, has announced in Parliament that a committee will be set up soon to go into the causes of the explosion. The Bengal Coal Company has offered all assistance to the committee when it takes up this investigation. In the circumstances, it would be unwise to assume anything about the cause until the facts are ascertained through the proposed enquiry. Mr. Nanda himself has an open mind on the question and has said that the loss of life in mines in India is low compared with many other countries in the world. The figure in a whole year is less than the casualties occurring through automobile accidents in one large Indian city in a comparable period. This does not minimise the gravity of the accident. Mr. Nanda does not mean to, and his move to review the safety precautions in mines and to devise better methods of co-operation with the workers, management and the Government's own experts is to be welcomed.

Mr. Macmillan, who visited the scene and stayed there for three days, has given a graphic account of the event. The explosion was followed by a fire which made rescue operations impossible and only a few people out of about 200 working in that ill-fated shift have survived. These survivors may be able to give some account of what happened. In the meantime, the company has done well to make an *ex gratia* payment of Rs. 100 to the families of the victims whether resident near the colliery or living at a distance. It has deposited Rs. 3.5 lakhs with the Government, to be paid as compensation to the families of the dead through the Commissioner of Workmen's Compensation. The chairman makes it clear that the liability for compensation is that of the management alone and "does not fall upon the Government or public funds." The affected pits have been sealed, and the remaining workers have been given lay-off benefits. The company promises to absorb as many of them as possible in its other collieries.

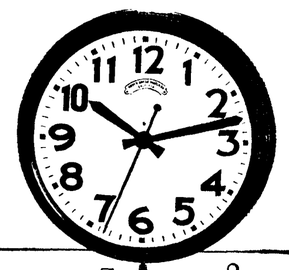
COAL POLICY IN INDIA
By
Andrew Farquhar
This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.
Copies available from
CAPITAL (PRIVATE) LTD.,
5, Mission Row,
Calcutta 1.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity shows a drop of 1.4 points during August 1957. Contributing to this were declines in sugar, jute, cloth, tyres, motor vehicles, electricity and railway ton-miles; there were increases in tea, cement, coal, pig iron, finished steel, paper and bicycles.

* * * *



Satisfactory Results for Scindia Steam.—In his address to shareholders of the Scindia Steam Navigation Company at the latest annual general meeting (a fuller version appears elsewhere in this issue), Mr. Dharamsey M. Khatau, chairman, reports satisfactory results for the year 1956-57. Gross freight earnings rose by about 20 percent, although the total volume of cargo lifted declined to 1,867,000 tons from 1,915,000 tons in the previous year. The drop in cargo was largely a result of the Suez Canal closure. New and faster ships were added, but liftings did not increase proportionately as voyages were longer. Port conditions in India were also responsible for the loss of a number of ship-days. Freight earnings were higher due to the freight increase during the year and to the Suez surcharge levied to cover increased costs. Mr. Khatau is optimistic about the results for the current year but less so for 1958-59. Rising operating expenses and the low level of rates offered by competing tramp services in the overseas trade are two adverse factors. The latter has affected liner rates on bulk cargoes, such as ores, fertilisers, oilcake, bulk oil and scrap, and the effects of "this downward trend in rates will have some impact on the working results for 1958-59," Mr. Khatau says. Import restrictions and delayed announcements of export quotas have also affected prospects adversely. An improvement in port conditions, he expects, will lead to more voyages, and newer and faster ships have now been put into service. The company proposes to provide regular coastal berthings for the carriage of general cargoes from west and east coast ports; earnings from

A MODERN CLOCK FOR MODERN PEOPLE
A modern office or home needs a smart, attractively designed "Electric Clock". The Anglo-Swiss "Electric" Clock is just what you need. It needs no winding.
Dial 6" Overall diameter 7½" Model No. CL-19. Rs. 80/-
Dial 9" Overall diameter 11" Model No. CL-20. Rs. 100/-
Dial 12" Overall diameter 14" Model No. CL-21. Rs. 110/-
Dial 16" Overall diameter 18" Model No. CL-22. Rs. 125/-
Dial 24" Overall diameter 28" Model No. CL-23. Rs. 210/-
This clock runs smoothly and accurately on A/C mains, 220-230 volts. These clocks are available in 3 colours, Brown, Black and Cream.
Interchangeability of parts guaranteed. The beauty of the metal highly polished case is enhanced by the use of bold figures and hands. Fitted with red centre second hand. Current consumption 1¼ units per month.
ALL MODELS HAVE AUTOMATIC STARTING DEVICE AND BEAUTIFUL ARABIC FIGURES

the carriage of coastal cargoes are thereby likely to be improved. Mr. Khatau appreciates the steps the Government has taken to develop Indian shipping. The exemption of these companies from the wealth tax is welcomed, and he explains how the case for exempting them from the capital gains tax is equally good. "A ship is sold only to be replaced and such replacement costs the company at least five to six times the original cost of the vessel disposed of. We are, therefore, making every effort to impress upon the Government that the sale of such vessels is not with a view to encashing capital gains arising out of the transaction, but only to replace and improve the general tonnage position of Indian shipping." He welcomes Mr. Lal Bahadur Shastri's assurance that the Government will help Indian shipowners in expanding their tonnage. The proposal to constitute a shipping development fund and to reduce the rate of interest on loans to shipping companies for acquiring coastal ships, and the hope which the Minister has held out concerning an increase in the development rebate allowance, are reassuring, Mr. Khatau adds. The constitution of the Shipping Co-ordination Committee is another helpful measure. Mr. Khatau thinks it unlikely that the modest second plan target of 900,000 g.r.t. of shipping will be achieved. The existing registered tonnage is 734,269 g.r.t. and by 1960-61, about 90,000 g.r.t. will be due for scrapping or sale. It will, therefore, be necessary to acquire a total of 255,000 g.r.t. to reach the target, which the present foreign exchange position is making almost impossible to fulfil.

* * * *

Savings and Investment.—A high rate of investment has to be backed by a correspondingly high rate of savings. Otherwise the inflation and economic instability which follow defeat the purposes of development. This is a point which Mr. Babubhai M. Chinai, president, has stressed in his address at the Conference on Savings and Investment organised this week in Bombay by the Federation of Indian Chambers of Commerce and Industry. Referring to the projected savings and investment schedules of the first, second, third, fourth and fifth five year plans, Mr. Chinai says that the proportion of investment to national income in these plans is to rise from 7.3 percent in the first, to 10.7 percent in the second, 13.7 percent in the third, 16 percent in the fourth and 17 percent in the fifth. But the economic climate created in the country by high rates of taxation hinders saving. Moreover, in a large sector of the economy, which is non-monetised, savings are locked up in hoards of precious metals. The need to extend the mechanism of monetary savings to this sector is great. The Government has launched a small savings campaign, but in the absence of adequate facilities, very little of rural savings is being tapped. Mr. Chinai emphasises the need to keep inflation under check, otherwise the value of savings to individuals diminishes. He refers to the social legislation concerning property which is breeding a sense of insecurity among the traditional class of savers. The opportunities for profitable investment have considerably decreased. Investor confidence has been shaken by the imposition of taxes on capital gains, on individual and corporate wealth, on personal expenditure, on bonus issues, not to speak of the enhancement in the rates of income tax and super-tax. Consequently, capital formation in the private sector has declined, as represented by the overall addition to the paid-up capital of joint-stock companies and investments in new companies. The Government now has no scope for further direct taxation; at the same time, it cannot allow the *status quo* to continue. It must think in terms of providing incentives to the saver and the investor. Mr. Chinai points out that the scheme for the compulsory deposit of company profits and reserves is serving no useful purpose, and the amount deposited under it so far is small. But its harmful effect on investor psychology in India and abroad has been great. It would do much good to withdraw it soon.

* * * *

U.P. Avoids New Taxes.—The U.P. Government's Budget for 1958-59 shows a revenue deficit of a little over Rs. 4½ crores but contains no fresh taxation proposals. There has been some argument lately as to why the land revenue there should not be raised as the present rates are less than in other States. But considering that even the modest betterment levy which was imposed a couple of years ago had to be withdrawn because of strong Leftist-sponsored agitation in the countryside, it is not surprising that the State Government should have considered it impolitic to raise land revenue just at this time, especially when cultivators in many districts have been hit hard by drought or floods. Capital expenditure budgeted for the coming year is only Rs. 32.85 crores, compared with the original Budget estimate of Rs. 38.68 crores in the current year, and even this expenditure is based on a market loan of Rs. 7 crores being raised. Revenue receipts are estimated at Rs. 108.23 crores, as against an expected expenditure of Rs. 112.77 crores. The estimate of the 1958-59 income exceeds that of the current year by Rs. 8 crores, the additional income being explained by the increased share of allocation from the Central pool of income tax, excise duties and tax on railway fares, besides better collections from sugarcane cess and entertainment tax. Of the total revenue receipts, Central subventions for the plan and other projects account for Rs. 13.43 crores and the State's share in Central taxes accounts for another Rs. 26.56 crores. The projects to be covered under capital expenditure include the expansion of the Government cement factory in Churk, several power projects, irrigation projects and investment in the U.P. Financial Corporation. Presenting the Budget in the State Legislature, the Finance Minister, Hafiz Muhammad Ibrahim, has said that although the priority in allocations still goes to agriculture, the increasingly industrial bias is evidenced in the soda ash-cum-ammonium chloride factory being set up in Banaras, the heavy electrical goods factory at Naini in Allahabad and the four factories to be set up for the manufacture of railway wagons. His mention of the disparity between the salaries of Central Government employees and State Government employees is, however, considered in Opposition circles as an attempt to deflect attention from the meagre benefits which have accrued to the people directly from development expenditure. Although the deficit for 1958-59 will be the smallest for the last three years, it is not the result of any economy but due entirely to the Finance Commission's recommendations.

* * * *

Inflation in Pakistan.—For Pakistan, the past year has been a period of rising prices, falling production, declining foreign exchange earnings, a worsening balance of payments and changing Governments. The economy has not escaped the ravages of inflation. Speaking at the annual general meeting of the Chittagong Chamber of Commerce, the president, Mr. Shabbir Ahmad, has said that it is only by the concerned efforts of the Government and private enterprise that the danger to economic stability can be averted. Agricultural production has not shown any increase. "The result is that huge quantities of foodgrains have to be annually imported out of our own resources and also out of aid that friendly countries are giving us. This drain on the foreign exchange resources does not leave much for anything else and, depending as we do for most of our industries on imported raw materials, the existing industries cannot work to their maximum limits as they do not get adequate supplies of their raw materials." Unless food production goes up, the loss of foreign exchange will continue, with the result that industries will be unable to import raw materials in order to increase output. Prices will, therefore, continue to rise. While the population is growing rapidly, paper plans to increase output have not yet yielded any results. The cultivator has not awakened to the imperative need to produce more, nor has he been made to feel that the land he tills is his own and that he should take more pride in what he grows. Mr. Ahmad refers to the tendency of provincial and Central Governments to rush through important legislative measures without sounding public opinion. The East Pakistan Control of Industries Bill was published on 10th March, 1957, and even before the *Gazette* reached the people concerned, was passed on 14th March, 1957. "This is a vital piece of legislation and affects the growth and development of industry in the province. Surely some time should have been given to those who have made and may be prepared to make further large investments to consider it before it was placed on the statute book. The Act, as it stands now, in the opinion of this Chamber, is bound to retard the industrial progress of this province." Referring to the demand to raise jute prices to improve the lot of the cultivators, the president has said that higher prices do not necessarily mean better living conditions. The cultivation of the fibre is being increased in countries like India and China; the latter raised her output from 300,000 bales to 1.5 million bales last year. Russia has shown that it can produce and sell flax at prices far lower than any other country. If all these dangers are to be met, jute prices will have to be kept within reasonable limits.

* * * *

Prices and Production.—The index of wholesale prices of almost all commodities started to decline from August-September 1957, and in certain cases it was lower towards the end of last year than at the end of 1956. The industrial sector has played a significant part in holding the price line. In spite of a substantial increase in the prices of foodgrains and raw materials, those of manufactured goods have been kept low. Speaking at the quarterly general meeting of the Indian Chamber of Commerce, Sir Bijoy Prosad Singh Roy, president, has said that the major item which pushed up prices in the earlier part of 1957 was foodgrains. A rise in the cost of living due to a shortage of food affects the purchasing power of the people, whose expenditure on other requirements is necessarily limited. This reacts adversely on the economy by restricting the general level of consumption. Stress should, therefore, be laid on agricultural production, on which the economy as a whole, including the industrial sector, greatly depends. "In this context, I welcome the decision reported to have been taken by the West Bengal Government to

lift the ban on inter-district movement of foodgrains which, I am sure, would help stabilise the price level. With adequate assistance from the Centre, it would also be possible to build sufficient stocks of rice in the State for meeting any future crisis. I would like to take this opportunity to appeal to dealers in foodgrains as also the millers to take note of the country's difficulty arising out of shortage of food supplies and extend their co-operation by holding the price line." It is likely that the production of many essential items will be adequate by the end of the second plan, for the emphasis in the current as well as the first plan has been on raising output. But not much attention has been paid to demand or consumption, which should grow at a faster rate than production in order to absorb the increasing output. A stage may gradually be reached in some industries where the demand may fall short of the supply. In fact, this problem has actually arisen in the case of the cotton textile industry. There are indications that essential commodities such as cement, iron and steel will be available in sufficient quantities in the near future. But it is not certain that the offtake of these basic products will increase at the same rate. Referring to the increase in expenditure as shown in the recent Railway Budget, Sir Bijoy has emphasised the need for economy in administration.

* * * *

More Machine Tools.—The production of machine tools has increased remarkably. The total value of the output of graded machine tools during 1956 was Rs. 1.08 crores, compared with Rs. 68 lakhs in the previous year. Production is expected to increase by almost 100 percent during 1957, to a record level of over Rs. 2 crores. The industry's performance would have been better but for the shortage of essential raw materials, such as steel, graded pig iron, coal and miscellaneous engineering materials. Speaking at the annual general meeting of the Indian Machine Tool Manufacturers Association, Mr. S. L. Kirloskar, president, has said that if the supply of raw materials becomes easier during the next two or three years, the industry will achieve the production target of Rs. 10 crores a year before the end of the second plan. "It is gratifying to note that not only has progress been made in the output of machine tools, but also new and modern types of machine tools have gone into production and many more new types are under development." Although the programme of rapid industrialisation has created a big demand for the industry's products, indigenous manufacturers have not been able to meet it to any large extent. The value of imports of machine tools during 1951-52 amounted to Rs. 3 crores only, whereas in 1955-56, it went up to Rs. 6.4 crores, largely as a result of the first five year plan. The Government recently carried out a census of installed machine tools, and it showed that there were altogether 80,000 of them at the end of December 1956, when the consumption of steel was around 2 million tons a year. When the consumption of the latter increases to 4 million tons by the end of the second plan, it will be necessary to have approximately 160,000 machine tools; this means that between now and the end of the second plan an additional 80,000 of them will have to be procured through either imports or indigenous production. Referring to the difficulties experienced by manufacturers in securing foreign collaboration and know-how, Mr. Kirloskar says that foreign producers are keen to help India expand her machine tool industry provided the Government gives them sufficient inducement by way of relief in the tax on royalties. The present maximum permissible royalty rate of 5 percent allowed by the Government leaves the foreign manufacturer just about 1.8 percent after paying the Indian tax and the tax to his own Government. "This meagre margin of income to a foreign manufacturer is not at all conducive to the entry of foreign collaboration and technical know-how. I, therefore, strongly recommend that the Government should change its policy in this matter by allowing a liberal amount of royalty tax-free to foreign firms, and a higher percentage of royalty in certain cases. The case of royalty for know-how in the machine tool industry requires special treatment."

* * * *

Manufacture of Electrical Goods.—The output of the principal products of the electrical engineering industry has increased remarkably. The increase has taken place in response to the large demand created by schemes of power generation and distribution undertaken by the Central and State Governments. The production of transformers and electric motors during 1957 was estimated at 1,195,000 kVA and 450,000 horse-power, respectively. It is likely that the targets fixed for them will be achieved much earlier than was expected under the second plan. In his presidential address at the annual general meeting of the Indian Electrical Manufacturers Association, Mr. N. R. Banerjee says that the transformer industry complained about imports last year but is faced with a rather different problem now. "On the basis of the second five year plan almost all the manufacturers carried out extensions in their manufacturing capacity at a great cost, but they are unable now to keep themselves busy with work. Although a number of tenders were called for by various States, they have not been finalised for a very long time." In spite of the remarkable advance made in recent years, in the per capita generation of electricity India is still far behind many industrially advanced countries. The generation and distribution of electrical energy should, therefore, continue to be the core of the second plan. The industry's greatest difficulty at present is the shortage of pig iron and mild steel materials. The production of the former will increase considerably during the current year, and Mr. Banerjee hopes that a portion of the new output will be allocated for the electrical industry. The indigenous production of dynamo grade electrical steel sheets which are used in the manufacture of motors and fans will rise. This will save foreign exchange and help the development of the industry. Referring to reports that the heavy electrical project is to be rephased because of the foreign exchange crisis, Mr. Banerjee says that the industry is keenly interested in the Government factory. "So far we have been told about broad classifications of the equipment to be manufactured. We want to know the details of the range and quantities of the equipment planned to be manufactured and also whether it is indeed going to be rephased and to what extent." This clarification is necessary in order to help the industry in the private sector plan its development programme.

* * * *

Old-Age Pensions.—The U.P. Old-Age Pensions Advisory Committee, it is reported, has decided that since the pension amount of Rs. 15 is small, the money order commission should not be deducted while transmitting the sum to beneficiaries. Although these are times when one has to be thankful for small mercies, the proceedings of the Committee, which met last week to review the working of the scheme, suggest that the Government is having second thoughts on the liberalisation of rules and the definition of "destitute". The original definition was so stringent that of the 7,753 persons who applied, only 2,735 could be recommended. The Chief Minister, Dr. Sampurnanand, was in favour of relaxing the age limit of 70 years for qualifying for a pension in the case of widows, but he turned down a suggestion for lowering the age to 65 in all cases. There are approximately 50 countries in the world today where provision is made on a national scale, through Governmental action, for the payment of old-age pensions. No uniform pattern is followed in these countries and the financial burden also varies from one to another, since the average man of 65, say, in Holland expects a further lease of 14 years' life, as against 12 years in Britain and eight or nine years in India. It is worth recalling that, according to Professor Chandrasekhar, the growth of population in India has been due not so much to the increasing birth rate as to the decreasing death rate. This suggests that a State Government which embarks on old-age pensions as a matter of policy in a socialist pattern of society does not really know what it is bargaining for.

STRINGENCY IN MONEY MARKET

WE have for months past been preparing our readers for a return of stringency in the Indian money market. We have even ventured to predict that the stringency would be greater than twelve months ago. Yet we did not look for so dramatically sudden a change, and we may add that the course of the money market since the end of October has been so abnormal that it has puzzled most observers. Throughout November and early December there was much greater ease than anyone anticipated, while during the past three or four weeks the suddenness with which the market has become stringent has been contrary to general expectation. It will probably be in the recollection of our readers that not very many weeks ago the Banks of Bengal and Bombay put down their rates of discount to 5 percent. Careful observers did not hesitate to condemn the change. Yet, though we shared in the condemnation, we are bound to assume that the directors did not act without some reason, and that they believed they were justified in the step they took. At the same time it was all the more surprising that a change of the kind was deemed advisable since, when it was made, the sales of drafts by the India Council were suspended. The general anticipation was that during the fourteen weeks' suspension the markets would be tight, inasmuch as silver could not be sent to the mints for coinage and money could not go out of the Treasuries by means of buying Council drafts. Yet the market remained easy and the exchange declined. When the India Council again began selling, and announced that it would offer as much as 40 lakhs for tender, the general impression was that the exchange would decline further, and that the ease for a little while, at all events, would become more pronounced. To the surprise of everyone, the very contrary happened.

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for supply of the following materials :—

Tender No. CON/COS/2/H/C/49/58 for supply of 500 yds cable L.T. underground Pilcdsta 3½ × 0.1 sq. inch 660 volt : Grade : suitable for earthed neutral system.

Tenders will be opened at 12 noon on 25.3.58. Tender forms (not transferable) are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 at Rs. 2/- (not refundable) per set of form by Money Order to him direct in the case of outside firms or on production of cash receipt from this Rly.'s Chief Cashier by local firms.

Firms not on the Railway's approved list of contractors must obtain a cash receipt for earnest money of Rs. 270/- from the Rly's Chief Cashier and enclose a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Approved contractors who have already made a deposit of Rs. 1000/- need not pay the earnest money.

CONTROLLER OF STORES

Without Prejudice

SUICIDE OF A SANE PERSON

RIGHTS OF THE REFEREE

(FROM OUR LEGAL CORRESPONDENT)

CONTINUING this series of comments on English decisions and matters of a legal character relevant also to the law in India, we present a case the like of which as to its facts will hardly come within the purview of the practitioner in his whole professional lifetime Nevertheless, it is of practical importance as throwing light on the law relating to remoteness of damage and the meaning of the word "accident".

A gentleman of the name of Pigney was injured by the actionable negligence of a company, Pointess Transport Services Limited. As a result of the injuries, he suffered from anxiety-neurosis and depression. He was not insane. As a result of the anxiety-neurosis and depression, he committed suicide some 18 months after the accident. His widow sued the company under the Fatal Accidents Act for damages arising from his death. Can the claim succeed? Now, let the non-legal reader, inclined to criticise lawyers for not giving definite advice, try to put himself in the position of the lawyers advising this lady and expected by her to answer the above question. Remember suicide committed by a sane person is a crime, a felony. So is attempted suicide. If Mr. Pigney, after suffering severe injuries as a result of his attempt at suicide, had eventually recovered, it is submitted that he could not himself have recovered damages from the company for those injuries which were not accidental but deliberately self-inflicted. By public policy a man cannot sue for damages resulting from his own felonious act. Can his widow stand in any better position?

Again, consider the word "damages". What are damages? They are the sum of money adjudged to be paid in compensation for loss or injury inflicted by a wrongdoer. Who was the wrongdoer here? Personally one could quite understand if Mr. Pigney had been rendered insane by the pain and suffering caused by the accident and had committed suicide; the latter would have been due to the original accident. But he was sane, could reason for himself, and therefore was himself the wrongdoer. And, lastly, the damages must not be too remote. The guiding principle is that they are "compensation for the loss which naturally and in the ordinary course of human affairs flows from the injury complained of." Is the suicide of a sane man a happening which naturally and in the ordinary course of human affairs flows from an accident, however serious? Hardly one man in a hundred would have taken the extreme step, surely.

Suicide by a sane person—*felo de se*, self-murder the law calls it—is abnormal, unnatural and outside "the ordinary course of human affairs" and cannot be a subject for a claim for damages. It is altogether too remote a consequence of the original accident which predisposed the unhappy man to commit the crime of self-murder. That is what you may think. It is what the writer would have thought too. But we would be wrong. Pilcher J., at Norwich Assizes, held that the widow could sustain her claim for damages because (1) the damage due to the death was not too remote in that the husband's death was directly traceable to his injuries in the accident for which the defendants were responsible: and (2) she was not debarred by public policy in that although the death was due to the husband's felonious act, her claim under the Fatal Accidents Act was a separate cause of action and as the damages thereunder would not fall into the husband's estate, there was no question of the husband, or his estate, benefiting from his felony. But one imagines that this case may go further by way of appeal as the principle involved is one of considerable importance, especially to insurance companies covering accident insurance.[1]

* * * *

While the writer was consulting authorities on the above problem, he came across another case which may interest those engaged in personal accident and employers' liability insurance and for which he is indebted to the late Mr. Noel Barwell's irrepressible flair for digging out curious and unusual cases. As a start, we must bear in mind that a professional football player is a servant as also a workman within the meaning of the Workmen's Compensation Act. His so-called club for which he plays is not in the correct sense of the word a "club" at all. It is a public limited company formed for the purpose of earning profits for its shareholders by organising football contests. The professional football player is not a member of the so-called club. He is merely its paid servant and from the point of view of accidental injuries and —a fact of which we have just had a tragic reminder —death, the designation is important.

And as these lines are penned, the idea strikes the writer: what about the amateur player? Suppose an amateur international had been included in that ill-fated Manchester United team and had been killed or injured in the fatal crash. Well, an amateur is certainly not a servant of the so-called club, as the professional players are. You might correctly describe him, perhaps, as at the most, an independent honorary contractor. He can walk off the field if he likes in the middle of the game without legal let or hindrance by the club. There is no relationship of master and servant, so he or his dependants, as the case might be, would be entitled to no statutory compensation under the Workmen's Compensation Act or Employers' Liability Act in the event of his injury or death in the course of a game or while he was going to or returning from one.

* * * *

But the curious case in which we are interested in this note is not about the legal position of the players, amateur or professional, but that of the referee. Referee baiting by the spectators and less frequently by the players on one side or the other is now a regular custom; almost a recognised part of the game in India you might say. What, if any, are the rights of a referee or his widow if he is beaten up or killed?

How would you define a referee in Association Football? The writer's definition would be: "Referee. A reckless and temerarious citizen who voluntarily and habitually submits himself to risk of life and limb at the hands of infuriated mobs by supervising and nominally controlling games of (Association) Football for a paltry reward." And remember the maxim *volenti non fit injuria*, that is, a man who voluntarily runs a known risk has no legal action. Remember also that a referee is not the servant of the club so-called on whose ground the match at which he officiates is played. True it is that the club is responsible for his fee. But there is no relationship of master and servant between the club and him and he takes no orders from the club. He is employed or rather engaged by the football association or one of its area associations; nor even here does any relationship of master and servant arise. He is an independent contractor.

Here is the case which Mr. Barwell rescued from oblivion. It is *Williams* v *S. Wales and Monmouthshire Football Association*. (1913) 57. *Solicitors' Journal*, 228, and is worth noting because the same situation, as for injuries if not death, and spectators if not players, are bound sooner or later to come before the courts in India. The teams were Welsh ones and, if one may say so (and that from personal experience) in football matters the Welsh (especially in south Wales) temperament is remarkably akin to that of West Bengal. The referee was a firm one and dealt in a disciplinary manner with some of the players (so-called). After the match, while the referee was in the dressing room changing his clothes and incommoded from adequately defending himself by that circumstance, one of the players followed him into the room and so savagely and brutally assaulted him that he died from his injuries. The player was convicted and sentenced for manslaughter and we may think was lucky not to be hanged for murder.

The referee's widow sued for compensation under the Workmen's Compensation Act. She sued the association, not the club, as her husband's employers. The lady lost her case as there was no relationship of master and servant between the parties. But Mr. Barwell was of opinion that she would have won it, if she had sued for damages under the Fatal Accidents Act.[2]

THE death of Maulana Abul Kalam Azad, so soon after the exit of another important Minister, must leave the Central Cabinet considerably weakened, while Mr. Nehru has lost a trusted adviser and a valued colleague. The people also are the poorer for a great leader. Maulana Azad was president of the Indian National Congress at a very critical period in its history and that office he held with conspicuous distinction. He personified communal unity to the last day of his life and stood uncompromisingly against Mr. Jinnah's unfortunate two-nation theory. Outstanding scholarship, a rare degree of courage, independence of character and an acute sense of right and wrong were among the virtues which marked him out from the ordinary run of politicians. He translated the Koran into Urdu with illuminating commentaries and was the author of an impressive list of publications. With the coming of Independence, the late Central Minister for Education practically retired from active political life, although he continued to be associated with the High Command and other important bodies of the Congress until he died. But his retirement was more apparent than real, because he remained the Government's "grey eminence", advising and influencing the Prime Minister in the conduct of many important matters. It is even said that he had a big hand in the evolution of this country's policy towards the Arab world. Although I personally disagree with some of the inconsistencies of this policy—especially the illogical attitude towards Israel, which in spite of persistent Arab threats of annihilation has firmly come to stay—it has, from India's point of view, paid good dividends. Maulana Azad has left the impress of his personality on the life of India's secular democracy and as a leader of the freedom movement he will continue to have a permanent place in the hearts of the millions who now mourn his loss. But, if I may venture an opinion, this is just as much an occasion for reflection. With the death of Maulana Azad, one is unpleasantly reminded about the rest of that thinning Congress "old guard" which now rules the country. What is the Congress doing to build up a second line of leadership, good enough to run the Government properly after its present leaders have gone? That is a question which is becoming more urgent with time.

* * * *

If the truth be told—and it had better be now and then—in the kind of society in which we live, wages are determined at least as much by the extent of the political pressure behind a demand as by the normal laws of economics. Journalists and coal miners, to name only two categories, may have profited more from this than, say, secondary-school teachers, whose hunger-strike in Calcutta was called off only after the Left parties had exploited it and the Government yielded in instalments. If the State Congress has been faced with something like the "Suez rebels" in the Conservative Party, I am rather glad that the Right wing is not so faint-hearted after all. All this talk about Right and Left would be irrelevant if it were not for this fact that frustrations of various kinds are leading the Bengali intelligentsia increasingly Leftward, as was obvious from the results of the recent elections to the West Bengal Legislative Council. If I am right in thinking that throughout the free world the intellectual appeal of communism has steadily decreased in the last decade, it should be somebody's business to enquire why the reverse is true in West Bengal. The emotional content of Bengali intellectualism has probably always been rather on the high side, but that may not be the only, or even the chief, explanation. I am inclined to think that the hardship caused by inflation to the class which school teachers come from has been greater than is generally realised and that the Government looks more unsympathetic than it really is. The Left always makes very deft political use of teachers and students, as can be seen in both Kerala and West Bengal, but this is not the only reason why the Congress Party should do a little more for teachers. It is education of the right sort that can remove the wholly erroneous but very popular illusion that communism treats its school teachers better. I am sure that the relationship between the students who demonstrated recently in support of the teachers who had gone on fast will never again be what we consider ideal. It cannot be that there is no way of dealing with teachers' demands before the whole atmosphere has been rendered unacademic.

* * * *

The Mundhra affair—or the life insurance investment scandal, it all depends on how you look at it—has so far been good for at least one fresh surprise every day. But the biggest so far, in my opinion, is the Prime Minister's statement in the Lok Sabha last Thursday that it might be a "good idea" for the Corporation to gain control of companies whose shares it held "without the expense of nationalisation". This, of course, is a complete contradiction of the promises originally made, and apart from being a remarkable comment on the Government's respect for the dictates of good faith, it seems well deserving of the cynical comment: "I told you so". But more important, it is going to commit the Corporation to a degree of stock-market speculation which should make operators' mouths water, and which can scarcely be Mr. Nehru's intention. Having already bungled the policy of manipulating the market to offset the Government's budgetary errors, the Corporation is now, apparently, to be encouraged to move into the take-over field as well. A word of warning is appropriate before this is accepted as too good an idea. To buy up the controlling interest in a company from the open market is usually a very expensive business indeed, and one which can only be justified if its management has been in the habit of following cautious and sound business practice—just the kind of company, note, which should be the last to be nationalised. If the take-over bidder then wishes to avoid losing the money he has laid out he must proceed to mulct the company in some way—usually by absorbing its reserves in attractive dividends so as to inflate the share values and unload a proportion of his holding; or by reorganising the affairs of the company on a less conservative and therefore less secure footing. All these operations are highly speculative, rarely in the best interests of the company concerned, and even in business circles are regarded as slightly disreputable. What is more, I was under the impression that a fair proportion of the voluminous provisions of the 1956 Companies Act were designed to prevent just this kind of behaviour. To commit the Life Insurance Corporation to such a policy, when it has already shown in such startling fashion its monumental ignorance and incompetence in business matters, is obviously to condemn it to further loss of policy-holders' money in highly dubious speculation, or to a system of business management which is distinctly less than respectable. As for the take-over not being as "expensive" as nationalisation—well, the answer is, just try it. And the cost will not only be in money either; a policy of this kind should ensure an inexhaustible supply of enquiries similar to the Mundhra one.

* * * *

The Indian communists. I see from the newspapers, have decided to convert themselves into a mass democratic party—a fact which should occasion no surprise at all. They have so far gained more through the ballot box than by the traditional method of "blood and terror". So it is all purely a matter of tactics. The "revolution" in Telengana was disastrous, whereas the Party has been able to form a democratic Government in Kerala by winning the elections there, and so present itself to the people of this country as the only practicable alternative to the Congress. Moreover, by capturing some seats in the Lok Sabha, the communists have had better opportunities for propaganda in that august institution than they would otherwise have been able to get at the hustings. In the circumstances, it pays them to be "democratic", and it is quite on the cards that they have the approval of the higher gods of international communism for their ideological somersault. Perhaps Dr. Ho's recent statement that he is a disciple of Mahatma Gandhi was no coincidence at all. The question has often been asked, and quite rightly I think, whether the communists are not out to make use of the parliamentary system to destroy it altogether when they are able to seize power. There should be no doubt about that. Mr. Asoka Mehta has reminded the country about Hitler's methods, and the communists are hardly likely to be more scrupulous when they have to maintain themselves in power. It has been suggested that the tradition and genius of this country, which is that of tolerance, love of liberty and peace, go against the whole creed of communism. But this could be a reason why the communists are professing their faith in democracy now. Incidentally, I find that the socialists feel uncomfortable because of this decision by their rivals. I can see why. With the Congress already turned "socialistic", and the communists becoming "democratic", the last gust of wind seems to have been taken from their precarious sails.

* * * *

In spite of Calcutta's "little monsoon" last week, there are definite signs that the hot weather will soon be with us again. One of them, of course, is the arrival of the retiring season. Who has not heard at a cocktail party in the last few weeks, for instance, those familiar words, usually spoken from behind a self-satisfied smile: "Well, I am off for good on March or April the something or other"? This usually means another casualty in the ranks of Calcutta's leading business personalities, and the loss of a well-known face from the social circle Some years see a larger clearance in particular fields than others, and this time I find it is going to be the turn of the insurance community for thinning out. A quite unprecedented number of senior insurance people are going, among them, Mr. Alan Wolfe of the "Royal Exchange": Mr. V. E. Pennell, of the "Royal Insurance Company"; Mr. S. T. Haynes, of the "Phoenix"; and Mr F. L. Middleton, of the "North British & Mercantile". All these are retiring. Two others, Mr. E. J. A. Plumbe, of the "Scottish Union & National", and Mr. I. E. Gillanders of the "New Zealand", are going on transfer. This exodus will leave a large hole in the pre-war insurance experience available in this city. Their colleagues are going to miss them. So will the rest of us; and they take with them our best wishes for the future.

CHAIRMAN MR. DHARAMSEY M. KHATAU'S REVIEW

The following is an extract from the speech delivered by the Chairman, Mr. Dharamsey M. Khatau, at the 38th Ordinary General Meeting of the Company held on Wednesday the 19th February, 1958, at 4 P.M. at Scindia House, Ballard Estate, Bombay.

Gentlemen,

In my speech I had informed you last year that the working results for the year 1956-57 would be satisfactory compared with the previous year and I am happy to be able to report that our expectations have been fully realised as can be judged from the Accounts already before you. I would invite your attention to the allocations proposed in the Directors' report with you and would clarify that the amount of Rs. 72 la provided as Special Depreciation represents the amount by which our tax liability has been reduced on account of the Development Rebate allowed under the Income Tax Act in respect of new ships commissioned during the year under review. This together with the amounts previously provided in this behalf, brings the total of Special Depreciation to Rs. 150 lacs. Our gross earnings of freight have shown an increase of about 20% even though during the year under review the cargo lifted by your vessels was only 18.67 lac tons as against 19.15 lac tons last year.

In spite of enhanced and rising costs of operation the improved results have enabled your Company to pay a dividend of Rs. 1.25 per share. You will also observe that we have added substantially to various reserve funds and these additions have strengthened the finances, which will be necessary for the modernisation and expansion of our fleet, to which I shall refer later this afternoon.

Coastal and Adjacent Trades

With the lesser number of ships available for these trades as compared to the previous year, due to sale of old units employed here, we carried less cargo during the year. The freight earnings, however, show an increase due to larger imports of rice from Burma and due to the freight increase of 15% on general cargoes and coal as recommended by the Rail-Sea Co-ordination Committee to which I had referred last year. The freight earnings would have been better had the increase recommended by the Rail-Sea Co-ordination Committee been made effective by Government on salt cargoes carried by your vessels. The sanctioned increases in freight rates, referred to above, have helped us in meeting to some extent, the rising operating costs, but they still fall short of the request of 28% increase made by the Coastal shipowners. Under these circumstances it is not going to be easy not only for your Company but also for other shipowners engaged in these trades to meet with the rising spiral of operating costs and to provide even for a modest programme for replacement of old and uneconomic units presently employed. It is apparent therefore that it would be extremely difficult if not impossible for shipowners in these trades to provide for additional tonnage, which would be necessary to meet with the trade requirements as envisaged not only by the Rail-Sea Co-ordination Committee but also by the authors of the Second Five Year Plan.

As regards the West Coast (B.S.N. Line) trade catered for by the smaller vessels of your Company, I have nothing very hopeful to report for even though there is some improvement on the Bombay-Saurashtra Sector, it is apparent that we have lost a good portion of our passenger and cargo traffic between Bombay and Karachi due to passport and export-import restrictions between the two countries. Similarly, the passenger traffic between Bombay and Mormugao is not available owing to our having to discontinue the services to and from Mormugao.

Overseas Trades

With the addition of new and faster ships in the trade, it was expected that our liftings would increase proportionately. Unfortunately, however, owing to the closure of the Suez Canal, our voyages were longer with the result that our liftings increased only by about 5%. The freight earnings have been higher than last year due to freight increase during the year and to the Suez surcharge levied to cover increased costs due to deviation in the routing of ships.

The India/U.S.S.R. Service which we started last year is still meeting with some operational difficulties which I would call "teething" troubles. To meet the increased operating costs, we have requested the Government to increase the freight rates suitably and hope that an early decision will be taken.

The India/West Africa service to which I referred last year has found favour with the exporters from the West Coast as it provides regular direct sailings at lower rates. This new service has enabled us to cater not only for cargoes to West African ports but also to the cross trades between West Africa and Continental Mediterranean ports thereby making an additional contribution to the foreign exchange resources of the Country.

Operating Expenses

In view of the greater number of 8 and 12 yearly surveys in 1956-57 as compared to the preceding year, repairs, surveys and dry-docking charges show a considerable rise over the preceding year. Our fuel bill shows a rise due to the deviation of some of the voyages via the Cape and the increased cost of fuel oil consequent upon the Suez crisis, apart from the two extra voyages performed in the year under review. There is a small set off against these increases due to saving in the Canal dues. The implementation of the piece-rate scheme at Bombay has brought an increase in the stevedoring charges which, to some extent, could be set off against the improved despatch obtained.

In view of the demand made by the National Union of Seamen of India for a rise in wages and for certain other benefits a ten per cent increase in wages and certain benefits were agreed to be given to the seafarers as from 1st October, 1957, i.e. in the current year, and this will cost us about Rs. 5 lacs per annum.

Port Conditions

Shipowners had to put up with considerable delays at some of the Indian ports, thereby losing a number of ship-days in a voyage, due not only to monsoon conditions but also to unphased imports of fertilisers, foodgrains, iron and steel and other Plan cargoes, which severely strained the resources of the ports like Bombay and Calcutta and nullified the advantage gained by the introduction of the piece-rate system in Bombay. The port congestion was further aggravated by the clearance and reopening of the Suez Canal which brought about a simultaneous arrival of ships via the Cape and via the Canal. The port congestion in India caused great concern to the members of the various Conferences abroad trading with India. These Conferences were seriously considering the question of levying a surcharge on freight to compensate themselves for losses due to such delays and it required most strenuous efforts on the part of Indian Lines to persuade the Conferences to stay action in regard to the imposition of surcharge. These efforts were very necessary in view of the active steps taken by the port authorities and Government to reduce the congestion and minimise delays to ships in ports. It is hoped that the good record recently established in the working at different ports will be continuously maintained. Early steps should be taken by Government to introduce the piece-rate system, so effectively working in Bombay, at other important ports. Side by side, no doubt efforts will be made by the authorities to augment and improve the handling equipment at various major ports. The Government, I am sure, will not spare any effort in expanding the capacity of major and important minor ports so that they can in future cope with the increased export-import trades and conveniently handle larger and deep-drafted ships.

Tonnage Programme

With the delivery of the six 17-knot ships from the Lubeck shipyard we have now with us 44 ships aggregating 2,36,532 GRT in all operating in the overseas, coastal and adjacent trades including also the seven smaller ships employed in the West Coast trade. Delivery of two ships ex the Vizag Shipyard has been considerably delayed and we now expect one of these to be handed over to us next month and the other in June this year. Two faster ships on order with the Lubeck Yard are expected to be delivered to us in 1959 and 1960. With the delivery of these new ships we hope to be able to cater to the requirements of the coastal, adjacent and the overseas trades by suitable adjustments. Such additional demand for space as we have to cope with particularly from the U.K.-Continent, we arrange to cover by chartering ships on a suitable basis.

The question of providing the necessary tonnage to meet our requirements has been receiving our constant attention. As from May, 1955 to date we have acquired 14 ships in all and expect two more to be delivered to us in the next few months and a further two during the next two years. Even so, we shall have to replace the eight liberty ships and five ships presently employed in the coastal and adjacent trades apart from any expansion of our fleet to enable us to cater increasingly to the overseas trades of the country in which the Indian lines have so far had a very meagre share. Looking to the depressed state of the freight market and the easier position in regard to placing of orders for new tonnage, the present seems to be an appropriate time to acquire tonnage to provide for replacements and expansion. We have been planning to provide at least for our replacement programme. We have the necessary resources but we are faced with the very tight position in regard to foreign exchange. We trust that as a result of the efforts being made by our Transport Minister, it will be possible for Government to release some foreign exchange for acquisition of tonnage.

Prospects for the Current Year

You would perhaps like me to say a few words about the current year which is coming to a close shortly. With the improvement in working at ports our turn-round has improved and we expect more voyages to be completed due to our placing newer and faster ships in service. Our operating results as up to the six months ending 31st December, 1957 have been satisfactory. We propose to provide regular coastal berthings for the carriage of general cargoes both from the West and East coast ports, and we expect improved earnings in the carriage of coastal cargoes. In regard to the carriage of rice from Burma to India aggregating four lac tons in the current year, the rate of freight as agreed by the Government of India is far from economic. While the low rate awarded is no doubt the result of lower prevailing tramp freight, it particularly hits essentially Liner Companies like ours who have not hesitated in the past to carry rice cargoes at comparatively lower rates even when the tramp freights were at a high level.

The persistent low level of tramp rates in the overseas trades has, however, affected the Liner rates on bulk cargoes like ores, fertilizers, oil-cake, bulk oil, scrap, etc., and the effect of this downward trend in rates will have some impact on the working results for 1958-59. The import restrictions and the delayed announcements in regard to export quotas also affect the availabilities of cargoes in the Liner trades. In view, however, of the positive foreign exchange earning possibilities manifest in the expansion of the export markets of these commodities, I am sure the question of the release of sizeable quotas of these commodities is engaging the constant attention of the Government of India. With these steps and with the expansion of the trade in general as a whole, I would expect our Liner services to get reasonable support in years to come.

We had the usual periodical Conference of our Agents and Branch Managers early in December at Bombay when our various departments at the Head Office and the Management of the Company had full and frank discussions about the important developments affecting our various services. Particular advantage was taken during these discussions to place before our representatives our plans for further improvement in our services and as a result of these joint deliberations we have drawn up improved schedules of different services which are being given effect to during the current year. I have every hope that our joint deliberations will result in a better and more efficient working of our services as we progress from year to year.

Government and Shipping

The year under review has seen a number of taxation and allied proposals being given effect to with a view to augment the finances for the implementation of the Second Five Year Plan. The Indian shipowners were considerably agitated over the introduction of the Wealth Tax and the effect of this tax on the competitive ability of Indian shipping in the international trade. A delegation of Indian shipowners presented the case of the shipping industry before the Select Committee of the Parliament and ultimately we were able to obtain the necessary exemption from the application of the provisions of this Act to the shipping industry. I am sure, you will join with me in expressing our due debt of gratitude to Shrimati Sumati Morarjee who led the delegation and particularly to Mr. M. A. Master for his able advocacy in the cause of Indian Shipping before the Select Committee.

The systematic disposal of our older and uneconomic ships is a natural outcome of planned modernisation of our fleet. The sale of such ships, however, brings us within the ambit of the Capital Gains Tax. Your Directors are alive to the fact that a ship is sold only to be replaced and that such replacement costs the Company at least 5 to 6 times the original cost of the vessel disposed of. We are therefore making every effort to impress upon the Government that the sale of such vessels is not with a view to encash the 'Capital Gains' arising out of the transaction but only to replace and improve the general tonnage position of Indian shipping and that therefore shipping should be exempted from the imposition of the Capital Gains Tax.

As on 1st January, 1957, India had 124 ships of 5,17,300 GRT.; ten ships aggregating 69,017 GRT. were added during 1957. On 1st January, 1958, there were under construction or on order twenty-three ships of 1,38,100 GRT in Indian and foreign shipyards.

Two second-hand ships of 9,879 GRT were purchased for delivery in 1958. With these acquisitions the Indian Registered tonnage would reach a total of 159 ships of 7,34,296 GRT. By 1960-61 about 90,000 GRT will be due to be scrapped or sold and India would, therefore, still need about 2,55,000 GRT to reach the modest target of nine lac GRT as fixed by the Planning Commission. Viewed in the context of available finance and the foreign exchange resources of the country, the fulfilment of this objective would appear to be a stupendous task. It was, therefore very heartening to hear the encouraging and appreciative remarks from our Transport Minister, Mr. Lal Bahadur Shastri, about the efforts made by the Indian Shipowners in acquiring additional tonnage, when he addressed the General Meeting of the Indian National Steamship Owners' Association in December last. He was not only fully appreciative of the difficulties that the Indian shipowners had to face as regards acquisition of tonnage but was further prepared to extend assistance to the Indian shipowners in this connection. I particularly value his very encouraging observations about the shipping development fund, reduction in the rate of interest on loans granted to Shipping Companies for the acquisition of Coastal ships and the hopes that he has held out for an increase in the development rebate allowance. He was sympathetic also in regard to the question of foreign exchange. The Transport Minister further made certain proposals in regard to the availability of cargoes to be moved in Indian ships and we are happy to note that—thanks to his efforts and the co-operation of the other Ministries in the Government of India—a Shipping Co-ordination Committee has been constituted which would attend to this question and suggest steps that could be taken to enable the Indian shipowners to acquire additional tonnage. Indian shipowners are indeed very grateful for the sympathetic understanding of our difficulties and the steps taken to resolve the same. We are sure, with the presentation of the next budget we may see further implementation of some of the proposals made.

Managing Agency Agreement

As mentioned in the Report the question of future Managing Agency of the Company is now in the final stage of discussion and the same will be placed before you for approval at an early date.

Bonus Shares

I may inform you that, consequent on the receipt of the sanction of Controller of Capital issues, allotment letters in respect of Bonus Shares are being got ready and will be sent to Shareholders shortly.

Money

THE CALCUTTA MONEY MARKET

STERLING WEAKENS

Wednesday, 26th February.

THE seasonal growth in the demand for funds has been on the low side this week. The chief increase in advances was to the sugar industry. Requirements of the cotton mills also showed a rise. A sharp fall was recorded in the offtake of the jute mills, while advances to the iron and steel industry were relatively unchanged. Accommodation against grains and seed storage improved slightly. Conditions remain firm in the interbank market and the call rate is unchanged at 3½ percent.

It has been a quiet week in the exchange market. Few tea or gunny documents were in evidence. Remittance was much reduced. The impact in the U.K. of the publication of the findings of the Cohen Council on prices, productivity and incomes appears to have been interpreted bearishly on the world's exchange markets. The pound has been marked down against both American and Continental currencies, but signs are accumulating that the fall will only be temporary.

* * * *

Silver was firm due to the lack of arrivals. The price advanced from the previous week's level of Rs. 189.75 to Rs. 190, quoted today for ready delivery. The rate for forward delivery was Rs. 189.50. The London price was the same at 76½d and the New York quotation showed no change at 88⅜ cents.

Gold was easier because of the small offtake and the price declined to Rs. 113.25. The sovereign was quoted lower at Rs. 73.

* * * *

During the week ended 21st February, Government of India Treasury bills for Rs. 44,00,00,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 11.64 crores to Rs. 1,546.01 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 21st February, 1958. The total note issue was Rs. 61 lakhs lower at Rs. 1,569.51 crores. Notes held in the Banking Department consequently rose by Rs. 12.25 crores to Rs 24.11 crores. Deposits of the Government of India declined by Rs. 81 lakhs to Rs. 51.01 crores and other Government accounts were Rs. 8.10 crores lower at Rs. 16.73 crores. Balances of commercial banks improved by Rs. 8.08 crores to Rs. 77.34 crores. Balances held abroad declined further by Rs. 1.86 crores to Rs. 31.75 crores. Investments at Rs. 240.58 crores showed a fall of Rs. 2.27 crores. Other loans and advances dropped from Rs. 69.07 crores to Rs. 64.68 crores, of which advances to scheduled banks against usance bills amounted to Rs. 24.10 crores against Rs. 26.12 crores. Ways and means advances stood at Rs. 39.72 crores (Rs. 38.21 crores).

* * * *

The return of the State Bank of India for the week ended 14th February, 1958, shows a rise of Rs. 7.23 crores to Rs. 400.67 crores in total deposits. Investments in Government securities are up by Rs. 1 lakh to Rs. 173.34 crores but other authorised investments are unchanged at Rs. 10.13 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have risen by Rs. 3.94 crores to Rs. 199.71 crores. Cash and balances are, in consequence, shown at Rs. 26.76 crores or Rs. 2.41 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 14th February, 1958, shows Demand and Time liabilities at Rs. 717.25 crores (Rs. 12.78 crores on account of borrowings from banks) and Rs. 721.37 crores (Rs. 15.25 crores), compared with Rs. 709.52 crores (Rs. 13.23 crores) and Rs. 719.81 crores (Rs. 16.08 crores), respectively, in the previous week. Cash has increased by Rs. 73 lakhs to Rs. 38.93 crores, while balances with the Reserve Bank have decreased by Rs. 4.46 crores to Rs. 66.66 crores. There is a rise of Rs. 86 lakhs to Rs. 432.81 crores in investments. Advances and bills discounted at Rs. 923.22 crores show an increase of Rs. 4.57 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.3 percent and 64.2 percent, against 7.6 percent and 64.3 percent.

* * * *

The Government of India has recently issued a notification intimating that the whole of the 4½ percent loan of 1958-68, issued as counterpart of the 4½ percent sterling loan of 1958-68, will be repaid at par on 1st June, 1958, with all interest due up to date. Interest will not accrue on the loan from and after 1st June, 1958. A similar notification has been issued in London in relation to the outstanding balance of the sterling loan.

* * * *

Including Rs. 15,54,924 brought in, the profit of the BANK OF INDIA has amounted to Rs. 1.09 crores for the year ended last December. An interim dividend of 6 percent was paid. The final dividend has been declared at 10 percent, making 16 percent for the year (same). The taxation provision amounts to Rs. 30 lakhs against Rs. 28 lakhs. There is a carry-forward of Rs. 16,02,381. Deposits rose by Rs. 13.05 crores to Rs. 82.60 crores. Cash at Rs 11.95 crores shows an increase of Rs. 3.95 crores. Investments increased by Rs. 1.13 crores to Rs 19.66 crores and advances were Rs. 2.17 crores higher at

STOCK MARKETS UNCERTAIN

INDUSTRIALS AND GILT-EDGED DECLINE

London, 26th February.

QUIET and uncertain conditions prevailed in the stock markets during the past week, and with the exception of South African gold shares all sections recorded losses. Business was at a very low level, but small selling in a market lacking support had a depressing effect on prices. In gilt-edged, short-dated stocks resisted the downward trend and held small gains, but other stocks lost ground on persistent small selling which, it was believed, was on behalf of recent buyers who had purchased in anticipation of a reduction in Bank rate. The obscure American business outlook was still the major adverse influence, while further adverse business news from the U.S.A. during the week induced renewed uncertainty concerning the extent and duration of the current recession in that country. The firmness of German bonds, and to a lesser extent, an improvement in Japanese issues provided the only noteworthy features of the foreign bond market. Rails were generally quiet. The fall in New York brought widespread losses in dollar stocks. Interest in the industrial market remained very limited and small selling, coupled with an absence of buyers, was responsible for widespread falls in prices. Base metal shares were uncertain. The decline in oil shares continued under the leadership of Shell Transport new shares, which slumped, partly in view of the heavy call which is due shortly. Ceylon tea shares lost further ground on nationalisation fears, and Indian issues were also lower. Rubbers generally were irregular. Interest in South African golds faded immediately prior to the week-end, but revived later and prices were mainly higher on balance.

The Money Market

Credit conditions in the money market over the past week were comfortable, particularly on the first few days when Government disbursements eased the supply situation and borrowers were able to secure their requirements on a much cheaper basis than in the previous two weeks. The rate for non-regular money ranged from 5⅞ percent down to 4¼ percent. The improved supply position invoked a good demand for bills and "hots" changed hands at 5⅜ percent. Money, however, tightened up towards the end of the week due to the weekly tax transfers and there was a return to more stringent conditions. Competition for the weekly offer of Treasury bills remained keen and at last Friday's tender, there was a further drop in the bill rate of just over ¼ percent to £5 19s 5.52d percent.

Vegetable Oils Weak

In spite of numerous attempts to arrest the falling trend in prices, few buyers of either vegetable oils or seeds could be hurried into forward commitments last week, and for the most part, business was only possible at reduced rates. Copra and palm kernels were softer. Sellers predominated in the castorseed section, while groundnut prices appeared unstable. Linseed oil drifted lower with forward arrivals of Indian oil settling down around £106 c.i.f. Coconut oil was quiet, while groundnut oil prices showed some signs of rallying towards the week-end. Spot and near supplies of Indian castor oil were less plentiful and commanded steady to firmer rates. On the other hand, interest in forward shipments remained dull and European rates were well under those asked in Bombay.

Hongkong Gold Falls

In a trading week of only two days, the Hongkong gold market weakened on the continued strength of sterling. Business was extremely quiet with the majority of traders still celebrating the Chinese New Year. The official turnover amounted to the 300 ounces, and the unofficial to 3,000 ounces. Forward contracts were done at $(U.S.)37.38. Arrivals at Macao were 30,000 ounces. Carry-over charges totalled 60 cents a 10 taels in sellers' favour.

Quicksilver Steady

The London ex-warehouse quicksilver price seems to have levelled off at £76 a flask from a range of £75 to £76 a flask previously. Although the overall weight of demand is not great, supplies of physical metal on the spot are reported to be still by no means plentiful. Both Spain and Italy continue to hold for £80 f.o.b., with only very limited sales being effected to certain destinations.

Britain and the European Common Market

The Chancellor of the Exchequer, Mr. D. Heathcoat Amory, denied that the new arrangements of the European common market and free trade area would be particularly favourable to Britain and that with her existing access to Commonwealth trade she should be getting the best of both worlds. "The truth is that both worlds will be gainers from our situation," he said. "It brings us some advantages but we pay a heavy price for the place we occupy and the dual function we perform." Mr. Amory was opening the European Industrial Conference in London attended by about 150 delegates from 15 countries. The delegates were industrialists and trade union representatives.

GONE are the spacious days of the palki, the horse, the camel and the elephant. Today, for speed and comfort, the way to travel is by air—and wherever possible—by Viscount.

The Viscount represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets.

he Viscount way

To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between **Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi** and **Bombay—Madras—Colombo.**

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

Stocks and Shares

BUDGET SPECULATION DOMINATES SHARE MARKET

STEADY UNDERTONE PREVAILS

Wednesday Evening.

STOCK market sentiment during the past week has been poised uneasily between hope and apprehension. Operators seemed unable to make their minds up whether the forthcoming Budget will be another strong dose of socialism or whether it will include some incentives for the private sector. The signs are conflicting. Mr. Krishnamachari's outburst against "maneaters" has been accepted by some with considerable consternation. Others, however, hold that this particular speech need not be taken as indicating his state of mind at the time when the Budget proposals were framed. The new Finance Minister's utterances have not been helpful either. Such comfort as the market derived from his reference in the Rajya Sabha to the need to encourage the private sector was offset by anxiety over his statement in the Lok Sabha the day before that it might be a good idea to use the funds of the Life Insurance Corporation for nationalising "on the cheap."

The news that the L.I.C. had re-entered the equity market, for the first time since the Chagla Enquiry, had a tonic effect. Purchases amounting to about Rs. 30 lakhs are believed to include a wide range of engineering, banking and other shares. The Corporation entered the market in a big way, shortly after the May 1957 Budget when prices had touched bottoms. The question is being asked whether the present purchases imply that prices now prevailing are regarded as the lowest likely to be reached. The Investment Committee, which approved the operation, apparently does not believe that the Budget will be followed by another collapse in share prices. Whatever the reason, there has been an improvement in sentiment and rumours are circulating about impending tax relief, such as abolition of the capital gains tax, some modification of the wealth tax on companies, reduction, if not abolition, of the tax on bonus issues and readjustment of the excess dividends tax. The compulsory deposits scheme, it is said, will be watered down further, if not abolished.

The Chinakuri mine disaster cast gloom over the market. Regret was felt that such a misfortune should befall what is probably the best-run colliery in the country. The ill-fated pit accounted for about 10 percent of the output of the Bengal Coal Co. (Managing Agents, Andrew Yule & Co.). It had been equipped throughout with up-to-date machinery. The shares slumped from Rs. 232 to Rs. 205.

The market remained closed on Monday as a mark of respect to the late Maulana Azad.

Here are details of the week's trading:

The Government securities market was firm with a good all-round enquiry for most issues, with the exception of 3% Conversion Loan 1986 and the National Plan loans. The demand was particularly noticeable for medium-dated issues and prices were marked up. Three percent loan 1970-75, which had been neglected for months, met with good support following the news that this was one of the loans which the L.I.C. purchased last week, and the quotation advanced from Rs. 85.75 to Rs. 85.85. Provincial loans were steady, particularly 4% 1967 and 1968 issues, due to the approach of the interest demand date (1st March). Offerings, however, were small.

Selected miscellaneous and engineering preference shares continued to be enquired for while jute issues were once again freely offered.

Very little business was written in bank shares and quotations were unchanged.

The only share which came to business in the railway section was Dehri-Rohtas at about Rs. 10.

The accumulation of cloth stocks coupled with the difficulties being experienced by cotton mills in West Bengal because of an acute coal shortage, had a depressing effect on cotton shares. Bowreah dropped from Rs. 112 to Rs. 105 and Dunbar to Rs. 118 from Rs. 120. There were sellers of Kesoram at Rs. 9.75. Contrary to the general trend, there was some enquiry for Elgin Mills at the slightly higher rate of Rs. 13.12.

Coal shares suffered from neglect due to the revival of nationalisation talk following the Chinakuri mine disaster. Burrakur were quoted at the close at Rs. 22.75 but Standard dropped from Rs. 15 to Rs. 13.75 as did Pench Valley from Rs. 18.50 to Rs. 18.

The steady decline in the jute goods market led to some nervous liquidation of jute shares and prices, where changed, were lower.

In electrics, Calcutta continued to be enquired for at around Rs. 13.56 and Jubbulpore changed hands at the previous rate of Rs. 11.50.

In sugar, Dyer Meakin Breweries met with profit-taking at the higher rate and receded at the close to Rs. 9.12, as did Ramnugger which reacted from Rs. 24.25 to Rs. 23.25. Samastipur were lower at Rs. 11.50 and United Provinces at Rs. 13.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 19.26 and Rs. 19.55 to close at Rs. 19.52. Guest, Keen, Williams continued in demand and rose further to Rs. 29.31. Jessops had steady buyers at Rs. 22.25. Textile Machinery improved from Rs. 16.95 to Rs. 17.15. Other issues were more or less unchanged.

In paper, Orient were better at Rs. 24.40 as were Titaghur at Rs. 23.50.

In cement, Sone Valley were offered at Rs. 5.25 while Dalmia were unchanged at Rs. 10.19 and Jaipur Udyog at Rs. 11.56.

In shipping, India Steamship were a steady feature and improved further to Rs. 12.

In the miscellaneous group, Alkali & Chemical old shares changed hands at around Rs. 13.31 cum-dividend of 8 percent (same as last year) which has just been declared. Angelo Brothers were unchanged at Rs. 18.25 while Balmer Lawrie rose from Rs. 145 to Rs. 148. Birds Investments were marked at Rs. 11.50x.d. and British India Corporation were depressed at Rs. 3.65. Concord Insurance were better at Rs. 12.25 as were Dunlop Rubber at Rs. 22. Hindustan Motors were weak at Rs. 5.85 while Imperial Tobacco recovered slightly to Rs. 11.25. Indo-Burma Petroleum were sold at the lower rate of Rs. 23 while Indian Cables were steady at Rs. 28.69. Jardine Henderson were marked down to Rs. 55 and Metal Box to Rs. 25. National Insulated Cables met with slight profit-taking and closed easier at Rs. 23.87. National Carbon however were steady at Rs. 24.69. Philips India were shaded at Rs. 13.69 and National Rubber (Rs. 7.50 paid-up) were unchanged at Rs. 9.

In the mining group, Western Stockholders were offered at 75nP and Indian Copper were neglected at Rs. 2.82.

Although prices of a few tea shares showed a slight improvement during the past week, business was of a retail nature.

* * * *

The profit of the SCINDIA STEAM NAVIGATION COMPANY has increased by Rs. 1.12 crores to Rs. 3.70 crores for the year ended last June. Important allocations include normal depreciation Rs. 1.15 crores

(Rs. 94.16 lakhs), special depreciation Rs. 72 lakhs (Rs. 78 lakhs), sinking fund Rs. 10 lakhs (same), deferred taxation Rs. 24 lakhs, current taxation Rs. 31 lakhs, annual and special survey reserve Rs. 10 lakhs (Rs. 20 lakhs) and dividend equalisation reserve Rs. 24 lakhs (Rs. 13 lakhs). The dividend has been increased by 25nP to Rs. 1.25 a share, leaving a carry-forward of Rs. 5,84,102 (Rs. 5,62,020). Cargo carried declined from 1,914.693 tons to 1,866,932 tons, but freight earned rose from Rs. 9.81 crores to Rs. 11.94 crores, mainly because of an increase in freight rates.

* * * *

The gross profit of the BHARAT COLLIERIES, LTD. is slightly higher at Rs. 11.81 lakhs for the year ended last June. The ordinary dividend has been reduced by ½ percent to 6 percent. Depreciation is Rs. 4,000 lower at Rs. 3.70 lakhs. Wealth tax is allocated Rs. 41,000. A balance of Rs. 2,120 is carried forward, against Rs. 8,535 brought in, and a sum of Rs 2.75 lakhs has been transferred from general reserve. The directors state that working results for the first half of the current year are satisfactory and "it can reasonably be expected that the same will be maintained. The industry's prospects generally appear to be sound and satisfactory." The sinking of pits Nos. 4 and 5 at the Chapui Khas colliery was completed during the year under report. Raisings on commercial scale from these pits will begin by the end of 1958. The mechanisation of the colliery is receiving the consideration of the management. The directors are considering sand-stowing at the Ekra Khas colliery. Negotiations are going on with the Coal Board for financial assistance to install a ropeway for sand transport.

* * * *

HINDUSTAN LEVER LTD. has declared a dividend of Rs. 1.40 a share for the year ended last December. The net profit has amounted to Rs. 1 crore, after providing Rs. 1.23 crores for taxation. In 1956 the profit totalled Rs. 61 lakhs, after transferring Rs. 1.62 crores to taxation provision.

Bombay Market

STEADY UNDERTONE AT CLOSE

FAVOURABLE REACTION TO STATE BUDGET

Wednesday Evening.

THE Bombay stock market closed on a steady note during the past week. Sentiment improved because there was no increase in agricultural income tax in the Bombay State Budget, as was feared some time ago. Trading, however, was restricted and operators were not expected to increase commitments either way until the Central Budget proposals were presented on 28th February.

Steel shares were steady as good support was given to Indian Iron from Calcutta interests on the expectation that the company might issue bonus shares by capitalising share premium reserves, just as the Tata Iron and Steel Company has done. Tata Steel closed at Rs. 169.25 and Indian Iron were indicated around Rs. 19.48. Alcock Ashdown met with selling pressure and declined to Rs. 215. Premier Construction were bought at Rs. 156.50 on the prospect that the company might issue bonus shares by capitalising reserves in the near future; the chairman's reference to this matter was considered encouraging. Tata Locomotive came to hand at Rs. 139.25. Routine business was done in automobile shares, and Premier Automobile were transacted at Rs. 83. Hindustan Motor were shaded at Rs. 5.88 on profit-taking.

There was a minor recovery in cotton mill shares towards the close on the belief that the excise duty on cloth might be reduced in order to improve the offtake of piecegoods. Bombay Dyeing were done at Rs. 50.60 and Simplex came to hand at Rs. 155.75. Kohinoor were bought at Rs. 263.25 and Swadeshi realised Rs. 167. Century recovered to Rs. 383.50 on short-covering and Central were quoted at Rs. 81. India United Ordinary were placed at Rs. 8.96 and Apollo were freely offered at Rs. 1.72.

In the miscellaneous group, sugar shares suffered a setback as it was feared that the excise duty on sugar would be increased in order to cover losses on exports of the commodity. Belapur declined to Rs. 235 and Phalton were lowered to Rs. 150. Steady support was seen in cement shares on the view that there would be an increase in the price of cement in the future. Associated Cement were taken at Rs. 144 and Digvijay Cement changed hands at Rs. 138. Mining shares were subdued but fluctuations were narrow. Shivrajpur Syndicate were done at Rs. 90. Steamship company shares were steady, and Scindia Steam improved to Rs. 17.44 on an encouraging speech from the chairman of the company about its working during the current year. India Steamship were bought at Rs. 11.96 by knowledgeable quarters. National Rayon were steady at Rs. 216 and Tata Chemical recovered to Rs. 12.64 on the report that the company's rights issue had been substantially over-subscribed. Bombay-Burmah reacted to Rs. 521.50 on selling pressure induced by the discouraging references made by its chairman to the company's future working.

Banking shares were fractionally shaded on profit-taking. Punjab National came to hand at Rs. 52 and Central Bank were taken at Rs. 52. Little interest was taken in insurance shares and Jupiter General came to hand at Rs. 8-12.

Quiet investment support was given to electricity supply company shares. Ahmedabad Electric changed hands at Rs. 95.20 and Tata Power were bought at Rs. 1,116.25.

THE WEEK'S TRANSACTIONS

GOVERNMENT OF INDIA

Ministry of Railways

(Railway Board)

TENDER NOTICE

1. Tenders are invited from established foundries in India only for the supply of Cast Iron C.S.T. 9 Sleeper Plates, Broad and Metre Gauge, to be supplied by 31st December, 1958.

2. No raw materials will be arranged by the Railways.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Ministry of Railways, State Entry Road, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10/- per set and will be available for sale from 28th February, 1958 onwards on any working day during office hours.

4. Tenders will be received upto 13.00 hours on 25th March, 1958 and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

SECRETARY, RAILWAY BOARD.

New Delhi,
Dated 18-2-1958.

THE CHINAKURI COLLIERY DISASTER

MANAGEMENT EXPLAINS FACTS AND CIRCUMSTANCES

IN a statement on the Chinakuri colliery explosion which occurred last week, Mr. D. F. Macmillan, chairman, Bengal Coal Company, says: "Shareholders will have read in the newspapers of the disaster which has fallen upon this company's Chinakuri colliery and will have received this news with a deep sense of shock and sorrow. The purpose of this letter is to give shareholders an accurate statement of the facts and circumstances of this tragedy. In the first place, in view of the confusion in the first reports of this accident and another which occurred on the same day, it is necessary to make clear that there is no connection whatever between the explosion at Chinakuri colliery and the death of 23 men by drowning at Central Bhowra colliery which lies 40 miles distant and is under different management.

"Chinakuri colliery is the most modern colliery which has been sunk and equipped to mine the Dishergarh seam, which is considered to be the best coal in India for steam raising and gas producing purposes. Three shafts were sunk, Nos. 1 and 2 (being adjacent to each other) to a depth of just over 2,000 feet and No. 3, about one mile distant, to 1,300 feet. It is the deepest coal mine in India. Sinking was started in 1945 and took 10 years to complete and the capital cost of the fully equipped mine was over Rs. 1½ crores. The company has many years of experience of working this gassy Dishergarh seam in other collieries and all this experience was employed in designing and equipping this important new colliery with first regard to the maximum safety in operation which that experience together with human ingenuity and science could devise. The raising of coal in Nos. 1 and 2 pits started only three years ago and the development of the mine underground is not yet extensive. Raisings were just approaching 30,000 tons a month against a designed output of over 50,000 tons a month eventually. It may be explained that gas is always liable to be present in the workings in the Dishergarh seam, that special safety precautions are consequently employed, that all electrical equipment employed, including the electric mining lamps, are flame-proof under the certificate of the Department of Mines, and that in addition, ventilation of the mine and dispersal of accumulations of gas are assisted by a surface exhaust fan with a capacity of 400,000 cubic feet of air a minute which is estimated to be ample for ventilation even when the underground workings are eventually fully developed.

The Explosion

"On the afternoon of 19th February, the second shift went underground as usual at 4 p.m. These numbered 188 miners and ancillary workers in the charge of an assistant manager and five supervisors—a total of 194 persons. The supervisory personnel which went down with this shift was considered by the management to be sufficient for the area to be worked by this shift and was also more than required to comply with the requirements of the Mines Rules. Over the previous few days, routine reports about the detection of gas had been made and usual steps taken for its dispersal. Everything was reported in normal condition by the responsible staff. At 9-15 p.m. during this shift, a violent explosion occurred underground in the workings served by Nos. 1 and 2 pits. The colliery manager, who was on the surface, immediately informed the colliery agent and the headquarters of the company's chief mining engineer and also the company's hospital. Simultaneously, the Chief Inspector of Mines was informed, as also the mines rescue station. Consultations were quickly held at the colliery and the medical officers of the company arranged an emergency clearing station in one of the colliery buildings. The mines rescue teams arrived at 10-45 p.m. and later a team accompanied by the company's assistant chief mining engineer, Mr. Hughes, and the colliery manager, Mr. Taneja, went underground. Between that time and 4 a.m. the following morning, rescue teams went down in relays and gave reports on the condition underground to the effect that the explosion, which had done considerable physical damage, had been followed by fire, the smoke and gases from which made progress extremely difficult and hazardous. Finding some survivors in an area removed from the seat of the explosion Mr. Hughes called for volunteers among the colliery workers to come down with stretchers. The response was in greater numbers than required and 12 men were selected to go down as stretcher bearers. As a result 17 men were brought to the surface, of whom three died a few hours later and three are lying in hospital seriously injured. Meanwhile, four men were brought out of the sandstowing drift, of whom one was dead.

"By 4 a.m. on 20th February, conditions underground were such that no further exploration could be made and the danger of continuing underground became too great. The rescue teams were accordingly withdrawn. It was evident beyond all doubt that the rest of the workers nearer the source of explosion could not have survived and arrangements were, therefore, then made to restrict further damage to the mine itself. In consultation with the Inspector of Mines, orders were given to seal the pit tops. A second explosion occurred later that morning at 11-50 a.m. and this carried away the seals Thereafter, steps were forthwith taken to subdue the fire by flooding the workings and filling No. 1 pit bottom with sand discharged from the surface. The rate of pumping water into the mine was built up during the rest of that day and the day following to a quantity of over 200,000 gallons an hour and by midnight about 1,200 tons of sand had been put down. The result of these measures was that, while great volumes of black smoke had issued from No. 2 pit throughout the next 36 hours, by the evening of 21st February, there was an admixture of steam, indicating that water and exclusion of air were having their effect on the fire. By 4 a.m. next morning (22nd February) up-casting from No. 2 pit head completely ceased and the fire was pronounced under control.

"Of the 194 persons who were underground at the time of the explosion 17 were brought to the surface out of the pits and four out of the sandstowing drift. Of these, one was dead and three men died within a few hours; 173 men must be presumed dead underground. Ten of the 17 survivors have already been discharged from the company's hospital, and four others are in good condition. The condition of the remaining three men is still serious.

Compensation Payments

"On the day following the explosion each bereaved family living at or in the neighbourhood of the colliery was given *ex gratia* Rs. 100 by the company and similar payments have since been made to families living at a distance. The company at the same time made funds available for payment of statutory compensation through the Commissioner of Workmen's Compensation. The sum deposited was Rs. 3,50,000, being a first estimate of the liability. In view of certain editorial comments appearing in the Press, the company wishes to make it clear that the liability is its and does not fall on the Government or public funds. Meantime, the rest of the labour force will be paid 'lay-off' wages for the statutory period, while as many as possible will be absorbed in the company's neighbouring mines.

"Until the water is pumped out of the mine and an inspection of the underground can be made, it is not possible to ascertain the cause of the explosion. The Union Labour Minister has announced in the Lok Sabha that a committee of enquiry will be appointed as early as possible. This is welcomed by the management, which is anxious to assist, and receive all assistance, in establishing the cause of the explosion. It should be clearly understood that the responsibility in the matter of this disaster lies with the company through its management. Whether blame attaches in any quarter can only be decided after the cause of the explosion has been established. This distinction between responsibility and blame is mentioned because reference has been made in certain Press reports that the enquiry committee will be set up to find out who is to blame.

"All speed will be given to recovery of the mine, but this must be regulated by considerations of safety and it is not possible at the present time to indicate when the mine may again go into production." Accompanied by the managing agents' coal department executive, Mr. Macmillan arrived at the colliery from Calcutta on the day following the explosion and remained at the site until the morning of 22nd February by which time the chief mining engineer was able to pronounce the fire under control. During this period, the Union Labour Minister, Mr. G. L. Nanda, visited the scene of the disaster twice. "The company owes a debt of gratitude to him for the personal interest and sympathy shown, to the Chief Inspector of Mines and his staff for their untiring help and advice, the men of the mines rescue service for their devotion to duty in most hazardous circumstances, and to the company's own mining staff, its medical officers and volunteer labourers for the self-sacrificing efforts they have made to save life and safeguard the company's property," Mr. Macmillan concludes.

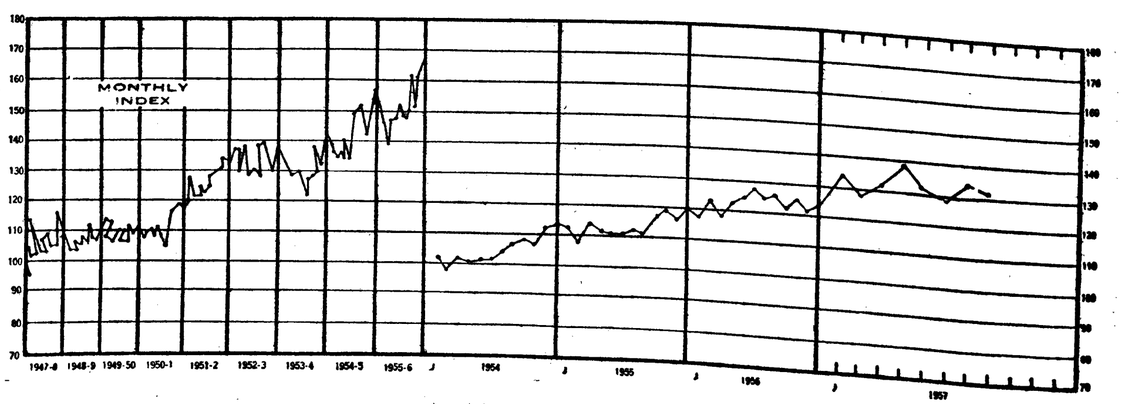
"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**



The *Capital* Index of Indian Industrial Activity (base : 1953) has now been brought up to August 1957. Compared with the preceding month, there were decreases in sugar 2.14 points, jute 5.53 points, yarn 4.87 points, cloth 9.45 points, tyres 2.03 points, automobiles 52.50 points, electricity 0.96 points and railway ton-miles 2.74 points, while increases occurred in tea 22.49 points, coal 1.51 points, cement 7.78 points, pig iron 2.84 points, finished steel 3.16 points, paper 4.33 points and bicycles 8.64 points.

Combining all the factors, the *Capital* Index of Indian Industrial Activity declined by 1.4 points during August 1957.

PARLIAMENT DEBATES CHAGLA COMMISSION REPORT

INVESTIGATION OF OFFICIALS ORDERED

(FROM OUR NEW DELHI CORRESPONDENT)

PARLIAMENT had a full-dress debate last week on the Chagla Commission's report about the Life Insurance Corporation affair. The Prime Minister, initiating the debate in the Lok Sabha, announced that the Government had accepted the commission's findings to the effect that the transactions, resulting in the purchase of shares in the six Mundhra group companies, were not in accordance with sound business principles and were opposed to propriety on several grounds. It will be evident that both the Prime Minister and Mr. Krishnamachari (the latter in the statement he made in the Lok Sabha) have differed in material points from the Chagla Commission, which has fixed both factual and constitutional responsibility on the former Finance Minister.

Mr. Justice Chagla regards it as a grave error of judgment on the part of both Mr. Kamat and Mr. Vaidyanathan to have been overborne by Mr. Patel, "but in extenuation of their conduct," he points out "that they trusted the higher authority and better knowledge of Mr. Patel." Although the commission holds that "Mr. Patel cannot be fastened with the responsibility of having effected the transaction in his own secretarial responsibility," the Government has decided to initiate appropriate proceedings against certain officials on the basis of the findings of the commission. Messrs Patel and Kamat belong to the Indian Civil Service and the enquiry concerning them will have to be conducted in accordance with the appropriate rules. The Corporation may be directed to institute an enquiry concerning Mr. Vaidyanathan.

The Prime Minister, it may be added, has drawn a distinction between Mr. Mundhra and the units in which investments were made by the Life Insurance Corporation as two different entities. This is what he has said: "Now, take these companies like Jessops, Richardson and Cruddas, and the B.I.C. They are very well-known manufacturing concerns, some of the biggest in India. Mr. S. A. Dange suggested that we should take over Jessops and that the State should control it. A very good suggestion. Whether we take it over now or later or what we do is another matter. I am not committing myself to taking it over: but it is a suggestion worthy of examination. Now, I put it to you that it may occur to people that because Jessops and Richardson and Cruddas are very important manufacturing concerns in India, important in themselves, big and important because they are doing work for the five year plan, for our iron and steel factories and all that, therefore, it is a good thing, first, negatively to see that they do not go to pieces, and secondly, positively, to get progressively more control over them. 'Nationalise them', you say. True, one can nationalise them. According to our policy, if we nationalise the whole thing, we have to pay compensation for it, and the compensation for these companies will be pretty heavy. Another way of gradually getting that done is to acquire a majority control over the shares, and in this way achieve what you are aiming at. Therefore, the idea of buying shares in companies like Jessops is obviously attractive. Forget the stock exchange and the market operations and all that. It is a solid thing doing good work. It is something which is an asset to the country. Therefore, to get shares in such companies is obviously an attractive proposition, provided the price paid is right, and other things are examined. Therefore, I should like this House not to mix up two things, the badness or whatever may be considered about Mr. Mundhra" and the soundness of investments.

Incidentally, a similar defence was put up before the Chagla Commission by Mr. H. M. Patel. The issue in dispute, therefore, is the price that was paid for the shares and the manner of purchase, including the haste in closing the deal. The Prime Minister is emphatic that the findings of the enquiry have no bearing on the Government's policy of expanding the public sector by all possible means. But the enquiry has stressed the need to overhaul the machinery of public corporations. This, along with the other recommendations made by the commission, is under examination.

Many conventions and traditions of the British Parliament were cited in the debate. The Prime Minister also quoted from *The Times*. Mr. Feroz Gandhi quoted Sir Winston Churchill, who on taking office as Prime Minister of the U.K. addressed Sir Edward Bridges in the following words: "Let it be very clearly understood that all directions emanating from me are made in writing, or should be immediately afterwards confirmed in writing, and that I do not accept any responsibility for matters relating to national defence on which I am alleged to have given decisions unless they are recorded in writing."

Rumania Offers Credit

Rumania, it is reported, has offered a deferred payment credit for setting up a 750,000-ton oil refinery in Assam. This offer will be finalised during the forthcoming visit of the Rumanian Prime Minister to New Delhi next month.

River Valley Project Equipment

The report of the committee appointed to investigate the possibility of manufacturing earth-moving equipment, and other types of plant and machinery required for river valley projects during the second five year plan period, is now available. Its terms of reference were:

(1) To what extent the different items of equipment could be manufactured by (a) the units already producing similar equipment; and (b) the units which have general workshop facilities.

(2) The need for setting up a separate unit for manufacturing items of equipment which could not be taken up by the industrial units mentioned in (1).

The committee was also to explore the possibility of enlisting the co-operation of suitable firms abroad according to whose designs and specifications manufacture could be undertaken in the country. The following are the principal recommendations of the committee:

"The main types of heavy earth-moving equipment required for the river valley projects under the second five year plan, together with the corresponding minimum quantities required over a period of five years, may be taken as under:

	Quantity
"1. Crawler tractors 110 D.B.H.P.	150 (C.T.O.) 200 (others)
"2. Crawler tractors 150 D.B.H.P.	500 (Irrigation projects) 30 (C.T.O.) 125 (others)
"3. Motorised scrapers 9 cubic metres	300 (only integral type motorised wheel scrapers are required)
"4. Towed scrapers motorised	200
"5. Dumpers 7.5 cubic metres, (side and rear)	100
"6. Bottom dumpers 7.5 cubic metres	100
"7. Excavator shovels 2 cubic metres Dragline Crane Clamshell	120

"It is preferable to establish indigenous production in collaboration with those foreign manufacturers whose equipment has been or is deemed suitable for use under Indian conditions. Since the requirements of crawler tractors constitute the major portion of the overall requirements both in quantity and in value, it would be preferable to concentrate in the first instance on the manufacture of such tractors. Side by side with this, partial manufacture of such other equipment as has appreciable commonalty of parts with the tractors as well as attachments to be used in conjunction with the tractors like bull-dozers, towed scrapers, sheepfoot rollers, etcetera, could also be taken up with advantage.

Manufacture of Tractors

"It should be the aim to develop, if possible, both the medium and big tractors, of the same make. If, however, no approved manufacturer comes forward with his co-operation in this matter, preference should be given to the development of the medium tractor. The limited requirements of tractors in sizes smaller or bigger than the ones accepted for indigenous development, should also be preferably restricted to the makes accepted for indigenous development, provided there is inter-changeability of parts to a good extent and also if at least some percentage of the components required for these tractors are manufactured in the works of the party where collaboration is accepted for the development of this industry.

"Since the volume of production of tractors in this country would be limited, it would be preferable to allow the tractor manufacturer himself to undertake the manufacture of bull-dozers and scrapers also, so as to make both the schemes more economical. While scrutinising and approving phased manufacturing programmes submitted by possible foreign collaborators, care should be taken to see that the programme is compressed as much as possible and no more assembling programme should be permitted. It should be a real indigenous manufacturing programme. Besides getting some of the components required manufactured by other workshops in the country, it seems necessary for the earth-moving equipment factories also to set up facilities to manufacture at least a reasonable percentage of components in their own premises. A mere assembly of imported and indigenous components to be secured from several possible sources according to a phased programme may not contribute to adequate saving in foreign exchange.

"As the manufacture of components of earth-moving equipment requires facilities normally available in heavy engineering shops and as the Government is undertaking the development of heavy machinery and heavy engineering items, the question of close dovetailing of the manufacture of earth-moving equipment with other schemes in the public sector deserves careful consideration by the Government. Since the indigenous manufacture of earth-moving equipment has necessarily to be done in collaboration with foreign firms, the committee is of opinion that the first and second terms of reference can be examined only after the views of the foreign firms interested in the indigenous development on the mode of development acceptable to them are known."

Expenditure on Steel Plant

The following comparison of payments made to consultants shows how favourable to India are the British terms for commissioning the steel plant in Durgapur. For the Rourkela steel plant, the detailed estimates were prepared by the German consultants—Indian-Gemeinschaft Krupp-Demag as part of the detailed project report, which they submitted as consultants, in which capacity they have to perform other services also. Their fee is Rs. 2.853 crores, plus the expenses of the resident engineer and his assistants, not exceeding Rs. 70 lakhs. For the Bhilai steel plant, consultancy services are provided by Russian organisations. For the preparation of the detailed project report, of which estimates form part, and for the supply of detailed working drawings of all plant and shops, including connected services, the Russian organisations are to be paid Rs. 2.5 crores. In the case of the Durgapur steel plant, the preliminary investigations and estimates were made by the British steel mission led by Sir Eric Coates and sponsored under the Colombo Plan technical assistance scheme. After its report, the Indian Steelworks Construction Company, a British consortium of firms, which has been entrusted with the execution of the steel works, submitted quotations on the basis of which the contract was ultimately awarded. The company is the consultant for the Durgapur steel works and its fee is Rs. 1.87 crores. This is in addition to the actual expenditure on office and travelling expenses of five technical representatives to be stationed in India. Besides this, local engineering and clerical staff are to be provided by the Indian Government. The International Steelworks Construction Company is not required to prepare detailed estimates. It is now consultant to Hindustan Steel Ltd., which owns all the three steel plant.

The latest estimates of the foreign exchange content of the total cost of the three steel plant are as follows:

Rourkela	...	...	Rs. 122 crores
Bhilai	...	...	Rs. 78 crores
Durgapur	...	...	Rs. 92 crores

The requirements of foreign exchange have been estimated after taking into account the foreign credit of Rs. 63.1 crores for Bhilai, the loan of £11.5 million offered by a syndicate of British banks and £15 million by the U.K. Government for the Durgapur plant, and the postponement of payment, for a period of about three years, of about 600 million deutschemarks from West Germany for the Rourkela plant.

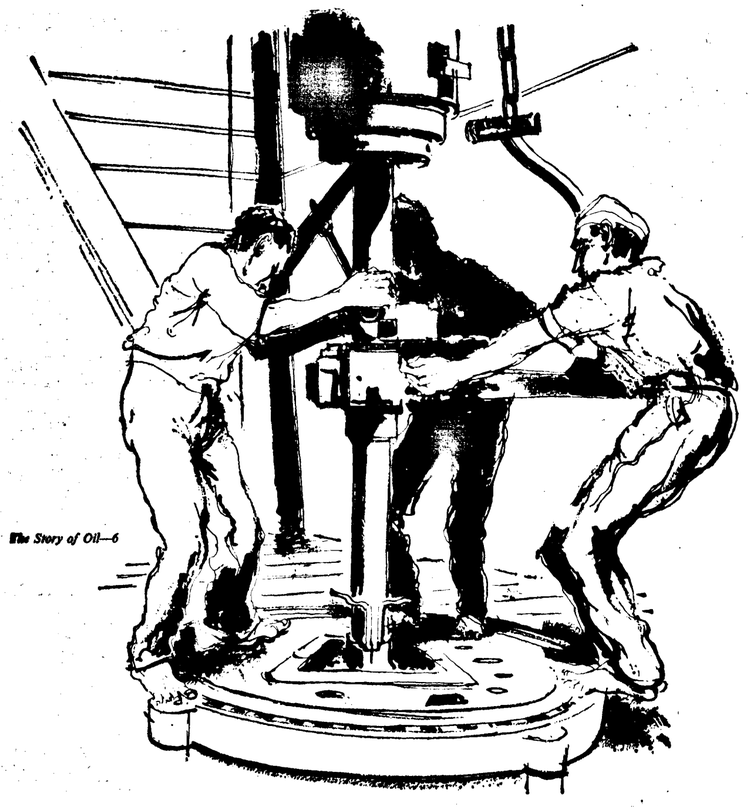
Service Terms for Insurance Field Staff

The Central Deputy Minister for Finance, Mr. B. R. Bhagat, made a statement in the Lok Sabha on "the non-co-operation movement by the employees of the Life Insurance Corporation of India" in the course of which he said: "The Life Insurance Corporation was set up in September 1956, and soon after that it devoted attention to the integration into a common establishment, with uniform terms and conditions of service, of the salaried field workers in the service of the 200 and odd erstwhile insurers. Very early in the examination of this question, it became clear that it was a complex problem, not susceptible of an easy solution satisfactory to all, in view of the haphazard conditions prevailing concerning the field workers with most of the insurers, namely:

"(a) there was no security of service in the sense one understands the expression and the staff were kept on only while they were in top form in securing business;

"(b) there were no regular scales of pay or increments, or any standard rules or regulations for grant of various allowances like dearness allowance:

"(c) the total remuneration paid to any officer depended on the business produced by him: if the business was poor, his salary was withheld or his services were even terminated: and



"(d) the conditions of working varied greatly from company to company. Briefly, the field staff were regarded only as sales personnel serving and being remunerated at the pleasure of the insurers. The Corporation, therefore, decided to provide uniform facilities and conditions of work to the field officers working for it, for a year, and then take up the question of fitting them into a common establishment in the light of the results of working over this period. In the meantime, the salaries of the staff were continued at levels admissible to them on 31st August, 1956, with the exception of a few allowances in cases where there was no need to continue them, namely, a contact allowance or entertainment allowance.

"The Corporation put forth its first set of proposals for the integration of the field staff, called the categorisation scheme, in September 1957. While these were broadly acceptable to the staff,

attention was drawn to certain aspects and directions in which there was scope for improvement in the proposals. Thereupon the chairman of the Corporation held a series of discussions with representatives of the field staff in almost all the zones, and improvements were made in the scheme. The scheme, as revised, liberalised the conditions of service to a considerable extent. Broad principles were enunciated on the basis of which the staff were to be fitted into a running scale of Rs. 125-500. The uncertainty concerning their service was removed and in matters of leave, gratuity, etcetera, the field staff were to be treated on par with the administrative staff. Where the application of the principles enunciated would lead to hardship, either by way of reduction in remuneration or of liability to termination of service, the cases were to be reviewed by a special committee with a view to see how many may be saved. A copy of the categorisation scheme together with a copy of the principles to be adopted for fitting in were placed on the Table of this House on 4th December, 1957, by the late Finance Minister, who also referred to the salient features of the scheme during the debate in the House on that day when the interim report of the Life Insurance Corporation was taken into consideration. The Central Government has issued an order under Section 11(2) of the Life Insurance Corporation Act, 1956, to give effect to the scheme and regulations are under promulgation to give effect to the provisions of the order. The Corporation is now giving detailed shape to the scheme, and working out its precise effect on all the field staff. It is expected that the wage bill of the Corporation for the field staff will go up by Rs. 2 lakhs a month (from Rs. 13 lakhs to Rs 15 lakhs a month) as a result of the scheme announced.

"The National Federation of Insurance Field Workers of India was one of the organisations with which the chairman of the Corporation discussed the categorisation proposals. While the Federation was impressed by the improvements made in the scheme, it declined to associate itself wholeheartedly with the scheme as the Corporation could not concede two of its demands, namely, (i) that under no circumstances should there be any reduction in the emoluments drawn by a field worker prior to the setting up of the Corporation, and (ii) that under no circumstances should anyone's services be terminated. There was no guarantee or certainty attaching to the remuneration admitted to field workers by the companies, or of their service under them. These demands have, therefore, no relation to the affairs as they existed in the pre-nationalisation days, and hence have no relevance while considering the problem of bringing the field staff in service of the former insurers on 31st August, 1956, into a common establishment under the Corporation. The chairman of the Corporation, however, promised the Federation that after the data became available, he would discuss with the Federation cases of field officers in whose cases the application of the categorisation scheme had resulted in hardship. The Federation has also placed certain demands before the Corporation: a substantial number of them have been conceded and some are still under consideration. I place on the table a statement indicating these.

"Shortly after the categorisation scheme was finally announced, the Central Zone branch of the Federation called on the field officers in that zone to 'non-co-operate' with the Corporation in the production of new business, and to protest against what it called an unfair imposition of the categorisation scheme and the non-fulfilment of its basic demands concerning reduction in remuneration and termination of service. The movement was started on 19th January, 1958, the second anniversary of nationalisation. It has become an all-India affair since 10th February, 1958, under.

The Story of Oil—6

A major operation

Geological and geophysical surveys provide clues to the whereabouts of underground traps which *might* contain mineral oil. But there is only one way of proving whether or not oil is actually present. And that is by drilling a test well.

With all the skill and knowledge of modern science, the odds are still 20 to 1 against striking an oil-trap which justifies the heavy costs of exploration. For example, it may cost over a crore of rupees and take years of research before success is achieved. Yet only by taking these risks will new oilfields be discovered.

Drilling a test well is a tremendous undertaking in itself, involving great quantities of machinery, equipment and supplies. A typical well (10,000 or more feet deep) would probably need: a complete drilling rig, weighing about 200 tons, 15,000 to 17,000 feet of drill pipe, 14,000 to 16,000 feet of steel casing, 60 to 100 drilling bits, 500 to 1,000 tons of drilling-mud chemicals, 2,000 to 5,000 sacks of cement, 48,000 barrels of water, and 3,000 barrels of fuel oil. In addition, at least 125 skilled personnel comprising drillers, drilling crews, geologists, engineers, cementers, electricians and other technicians would be required for drilling the well.

It can take as long as a year to drill a deep test, and the result may be that the well strikes water, not oil; or it finds only a little oil, or even turns out to be dry. Then the mass of machinery and equipment is moved to another location and drilling begins all over again.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

BOC

the direction of the central body of the Federation. The Government has sympathy with the legitimate aspirations and demands of employees in State undertakings. It is well to realise, however, that here we are breaking new ground and trying to evolve order out of the chaos that existed under the private insurers in the conditions of service of the field staff. No prior commitment can thus be possible on the part of the Corporation to concede any of the demands of any section of the staff without ascertaining the data in this behalf. The Corporation has primarily to be run on business principles and obviously in the engagement of staff and their remuneration it will have to be guided by business considerations. In a matter like the categorisation of the field staff, it is necessary and desirable that the points of difference between the Corporation and its employees should be resolved by negotiation and not by direct action. The Corporation has shown its willingness to discuss cases of hardship with representatives of its employees. I hope the staff, in their turn, will reciprocate and try to co-operate with the Corporation in an atmosphere of goodwill. They will, I am sure, realise that therein lies their prosperity, as well as, of course, the Corporation's."

Salary Scales of Port Employees

The recommendations made by Mr. P. C. Chaudhuri, Central Officer on Special Duty, appointed to examine the question of pay scales and allowances of port employees, cover the class III and class IV grades, it was explained last week in the Lok Sabha. For class IV posts, the recommendation is to make the Bombay Port Trust scale applicable to such posts in all ports. This matter, however, will be kept pending until the 1957 Pay Commission has reported on the pay scale for corresponding Central Government employees in other services. In the case of posts above the lowest scale, the categories are so numerous that Mr. Chaudhuri did not find it possible to suggest scales of pay for each category. He has selected certain "test" jobs in each department and suggested certain pay scales for them. He has recommended that for other posts pay scales should be evolved by the port authorities after a careful study of the workload and other considerations, and fitted into the pattern of the scales recommended for the "test" jobs. The manner of consideration of the report was discussed by the Central Minister of Transport and Communications with the representatives of port and dock workers' bodies last November. It was then agreed that the unions should enter into local discussions with the port administrations in Calcutta, Bombay and Madras.

The chairman of the Bombay Port Trust has had discussions with three labour unions. Discussions with others are proceeding. The Port Trust has also appointed an officer on special duty to make recommendations on the rationalisation of the pay structure of class III and class IV employees in the light of the report of the Central Officer on Special Duty.

The Madras Port Trust has appointed a committee consisting of six members, including the chairman and two trustees representing labour, to make detailed recommendations. The committee has had four sittings and is expected to complete its work by the end of this month. The chairman, Calcutta Port Commissioners, invited the views of the heads of departments as well as of two recognised unions on the recommendations of the Central Officer on Special Duty, and in agreement with the union representatives, appointed a departmental committee consisting of the secretary and the chief accountant for examining the recommendations on the rationalisation of pay scales. The heads of departments have also been asked to evaluate the jobs attached to the various posts in class III and class IV cadres under them and submit tentative proposals on the revision or otherwise of the pay scales attached to these posts. The departmental committee held ten meetings with the unions and heads of departments by 15th February, 1958, and it is expected to complete its work by the end of March. In the ports of Cochin, Visakhapatnam and Kandla, the existing pay scales are based on the scales recommended by the 1947 Pay Commission. The port administrations are, however, examining the recommendations in detail and will submit proposals for rationalisation wherever necessary.

Four Coal Washeries

An amount of Rs. 10 crores has been provided in the second plan for establishing coal washeries in Kargali, Dugda, Patherdih and Bhojudih. The Kargali and Dugda washeries will supply washed coal to steel plant in the public sector and those in Patherdih and Bhojudih will supply washed coal mainly to steel plant in the private sector. All washeries will be in the public sector.

Public Sector Coal Target

According to the latest appraisal, two new coal producing units in the public sector will go into production only in the third plan period. This will reduce the second plan's production target of 10.5 million tons by 1961, by 2.5 million tons including 2 million tons from Bisrampur. The railway line, it is learned, will not be completed before 1961-62 or a year later than the completion of the second plan. Production of coal from the Korba field was originally placed at 4 million tons. It is now expected to produce not more than 1.6 million tons, as the Russian part of the balance is not likely to be available in full. To cover the gap, the Government is examining proposals either to increase the targets of production from other collieries or to select alternative projects, such as Chordhara and Sohanpur. Possibilities in southern Korba and in Pinderkom in Bihar are also being examined.

London

SAVING IN DEPARTMENTAL EXPENDITURE

F. B. I. URGES TAX CUTS

(FROM OUR LONDON CORRESPONDENT)

THE Prime Minister's Commonwealth tour, far from imposing on him a strain which called for rest and recuperation on his return, appears to have given him a renewed enthusiasm for his task. Having brought himself up to date on developments with a succession of consultations with his Cabinet colleagues, Mr. Macmillan has faced up to the Opposition in the House of Commons, in spite of the back-bench taunts of "Rochdale" which greeted his first appearance. This new authority and assurance culminated in a particularly impressive performance by him in the foreign affairs debate, and later when he addressed the Conservative 1922 Committee he was in a fighting mood which he hoped the Party's back-benchers and supporters in the constituencies would match. There are certainly no thoughts of an early general election, and meantime, the get-tough policy against inflation is to be pursued. The Cabinet's consideration of departmental expenditure has produced a further small saving, so that the £50 million excess in 1958-59 over the actual total expenditure in 1957-58, which led to Mr. Thorneycroft's resignation, has been cut to around £45 million. Debt service charges have still to be added, and to achieve even this figure substantial cuts have had to be made in the Navy and Army estimates while Health Service contributions both from individuals and employers are being raised from next July. It is evident that if Mr Heathcoat Amory intends to balance his Budget overall, he will have little or nothing to give away in tax reliefs. Furthermore, he has disclosed that the National Insurance scheme will be in deficit for the first time in 1958-59 at the cost of the Exchequer, but as it will increase steadily thereafter to reach as much as £235 million six years hence, it would have to be put on a sounder financial footing.

Undeterred by these implications, the Federation of British Industries has suggested to the Chancellor a general reduction of taxes by about 5 percent, or between £200 million and £250 million a year. Three cuts, in particular, are proposed, namely, a flat rate profits tax of about 7½ percent as a first step towards further reductions, at a cost of about £60 million a year; the reduction of the standard rate of income tax from 8s 6d to 8s, with accompanying cuts in the other rates from 6s 9d to 6s, 4s 9d to 4s and 2s 3d to 2s at a cost of £133 million a year; and the reduction of the tax on petrol and other oils from 2s 6d to 2s a gallon, costing £60 million a year, but benefiting freight and public passenger transport and so contributing to widespread reductions in prices.

Mr. Cobbold Answers the Critics

The Governor of the Bank of England, Mr. Cameron Cobbold—departing from the almost traditional silence which prevails in those august circles—has taken advantage of the opportunity of the recent annual dinner of the Overseas Bankers Club at Guildhall to deliver some outspoken comments on both the Government's financial policy and the position of the Bank of England in view of criticisms following the Parker Tribunal's enquiry. As to the former, the Bank's present view is that the battle against inflation is "only half won. The general lines of policy laid down last September must be maintained until that half is converted into a whole." The economic outlook throughout the world has changed and one does not know whether the "patches of recession" will fade away or go deeper. Britain's immediate task is the same—to keep her own house in order, to maintain the value of the currency, and to keep costs and prices stable.

Turning to the position of the Bank itself, Mr. Cobbold has emphatically rejected any accusation that it is influenced solely by City and banking interests or that it is hide-bound by tradition, while a charge that it is bereft of professional economic thinking does not bear examination. The Bank of England must be a bank and not a study group. The prime requirement must be operational efficiency. As to whether it should be more forthright in the expression of its views, even if they are not in accord with the Government of the day, the Governor has said that its policy has been to move gradually in the direction of saying more about what it is doing and giving more background. But he has taken the view that there are advantages in resolving differences with the Government privately rather than in building a separate and perhaps rival empire. He has stoutly defended the present constitution and the employment of part-time directors.

Cost of Living

Less academic and more practical indicators of economic trends last week include the Ministry of Labour's official index of the cost of living which, for the first time since September, shows a fractional fall of one-tenth of a point, at 108.1 on 14th January. As the decimal points are ignored, there was officially "no change" at 108 compared with December (17th January, 1956 equals 100), but a year ago it stood at 104. On the other hand, for the ninth successive month, the wholesale prices of basic materials used by British industry showed a further fall in January, when the Board of Trade index number (30th June, 1949 equals 100) stood at 142.0, against 144.1 in December. By comparison with the index number of 161.3 in January last year, there is a fall of no less than 12 percent, bringing the index down to the lowest level it has touched since March 1954. A wide range of commodities contributed to last month's decline, including copper, rubber, cotton, wool, molasses, sulphur, tungsten ore and wood pulp. Among the few commodities which recorded increases in January were hard fibres.

Some anxiety is being displayed in labour circles at the employment situation. According to Ministry of Labour statistics, there were 395,527 people registered as unemployed in Britain on 13th January—60,058 more than on 9th December. The wholly unemployed numbered 374,057 (55,000 more) and temporarily stopped 21,470 (5,000 more). Expressed as a proportion of the estimated number of employees, unemployment in January was 1.8 percent, compared with 1.5 percent in December 1957, and also 1.8 percent in January 1957. It is hoped that purely seasonal factors are responsible for this development, and that is certainly true of the sections where the largest declines are recorded, but it is significant that the National Union of Mineworkers, having had its wage claim refused and submitting it to arbitration along with its other claims for a sick pay scheme and a 40-hour week, is to call special executive and coalfields delegates meetings in March to consider the National Coal Board's decisions to stop fresh recruitment temporarily, the closure of uneconomic pits and the decline in coal production.

Expanding Markets in the Middle East

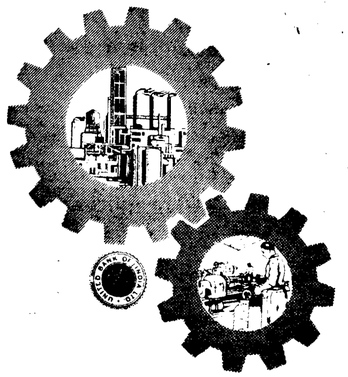
The success which has been achieved by the Dollar Exports Board in increasing Britain's trade with north America has led the Government to think along similar lines concerning the steadily expanding markets offered by countries in the Middle East with their vast oil resources and revenue therefrom. Sir David Eccles, President of the Board of Trade, recently informed the Commons in a written reply to a question that it has been decided to appoint an advisory council on Middle East trade drawn from leading business men who have had practical experience of selling in that area together with representatives of the Treasury, the Foreign Office, the Board of Trade and the Export Credit Guarantee Department, whose principal task will be to keep the Government in touch with the views of business. The Minister of State to the Board of Trade, Mr. J. K. Vaughan-Morgan, will be the chairman, with Mr. W. H McFadzean, of British Insulated Callender's Cables Ltd., as vice-chairman and industrial leader. Other key figures from industry and commerce who have agreed to serve include: Messrs R. A. P. Bevan of S. H. Benson Ltd., W. R. Beswick of Power Gas Corporation Ltd., M. R. Bridgeman of British Petroleum Co. Ltd., G. C. R. Fley of British Bank of the Middle East, Sir Norman Kipping of the Federation of British Industries, H. G. Nelson of English Electric Co. Ltd., T. A. L. Paton of Sir Alexander Gibb and Partners, Sir Henry Spurrier of Leyland Motors Ltd., and F. Taylor of Taylor, Woodrow Ltd. Additional members may be appointed from time to time.

Non-sterling Debts

So much is heard of the necessity for Britain to make investments in the Commonwealth and so little is realised about the commitments which she carries and the extent to which she already meets her obligations in this aspect, that all information as to her general indebtedness is of more than local interest. In written parliamentary answers to questions by Mr. David Price, the Chancellor of the Exchequer, Mr. Heathcoat Amory, announced the other day that the principal outstanding on loans to the British Government which must be repaid in currencies other than sterling amounted to £2,434 million on 31st December 1957. On loans from the United States and Canada, the principal outstanding was £2,069 million and it was estimated that future payment of interest on these loans would amount to about £1,150 million. The principal outstanding on other loans which would involve repayment in currencies other than sterling was £365 million. The amount of interest involved in future payments in relation to these debts depended upon arrangements made for their discharge, but it was estimated that it would amount at least to £20 million.

Brevities

Three tea companies have just announced cuts in their interim dividends. Majuli Tea and Moabund Tea, both with estates in Assam, are to pay 2½ percent against 5 percent, and Telbedde Ceylon Estates is to reduce its second interim from 10 percent to 5 percent.



The Board of Calcutta Tramways is deferring the question of an interim ordinary dividend pending the decision of the West Bengal Government on the Commission report on fares. For 1956, an interim of 3½ percent tax free was followed by a final of 5 percent tax free.

A written reply to a question in Parliament says that the proposed Commonwealth Trade and Economic Conference will open in Montreal on 15th September and that all members of the Commonwealth will be represented.

Because of the growing demand for its services, the Tropical Products Institute at Gray's Inn Road, Holborn, London, W.C.1, is to increase its scientific staff during the next two years to 75, or about double the present total. The Institute conducts research into plant and animal products for a large number of Commonwealth members.

Bombay

USE OF COTTONSEED OIL IN VANASPATI MANUFACTURE

ENOUGH HYDROGENATION CAPACITY AVAILABLE

(FROM A BOMBAY CORRESPONDENT)

THE chairman of the Vanaspati Manufacturers Association of India, Mr. S. H. Turner, has said here that the industry is ready to co-operate with the Government in promoting cottonseed crushing. He says that the industry has no prejudice against the use of cottonseed oil in vanaspati manufacture. If cottonseed oil of good bleachable quality is obtainable at a fair price, it could be used by vanaspati factories which have enough hydrogenation capacity to process it. The production of vanaspati is now more than 300,000 tons —an increase of over 56 percent in four years. Mr. Turner says that all the members of the Association have voluntarily agreed to use cottonseed oil to the extent of 2½ percent of their oil requirements during the current year. This will provide a market for approximately 7,500 tons of cottonseed oil. If the economic problems confronting cottonseed crushing are resolved satisfactorily, there will be more demand for it.

Bombay Port Handles Record Cargo

The Bombay Port Trust handled cargo amounting to 11,979,352 dead weight tons in 1956-57—the highest total ever achieved by it. The total was 1,673,553 dead weight tons higher than that for 1955-56. The figures have been published in the port trust's administration report for 1956-57. The total number of passengers, excluding those using country-craft and harbour ferries, showed a decrease at 914,449 against 933,710 in the previous year. On the revenue and expenditure side, the general account for the year closed with a surplus of Rs. 233.10 lakhs against a surplus of Rs. 141.33 lakhs envisaged in the revised estimates.

The pilotage account showed a surplus of Rs. 6.78 lakhs compared with the estimated surplus of Rs. 4.11 lakhs. The aggregate revenue on the general account, including surcharge, amounted to Rs. 1,107.61 lakhs compared with Rs. 961.92 lakhs in the preceding year, while the total expenditure amounted to Rs. 874.51 lakhs against Rs. 676.01 lakhs. The total revenue on general and pilotage accounts, excluding special receipts for the year, was Rs. 1,127.21 lakhs against Rs. 980.99 lakhs, and the total expenditure Rs 887.33 lakhs against Rs. 688.76 lakhs.

Increased Imports

The report says that imports increased from 2.36 million tons in 1955-56 to 3.53 million tons. There was a fall of 277,000 tons in exports. The total traffic was 5.39 million tons compared with 4.5 million tons in the previous year. The volume of imports handled at the bunders increased from 4.35 million tons in 1955-56 to 4.71 million tons while that of exports rose from 1.46 million tons to 1.88 million tons. The total traffic was 6.5% million tons during the year against 5.81 million tons. Referring to the various developments, the report says that the tenders received for the civil engineering work connected with the modernisation of Prince's and Victoria Docks showed that the scheme would cost some Rs. 14 crores, against the original estimate of Rs. 4¼ crores, and the subsequent rise in the prices of building materials would raise the figure to about Rs. 17 crores. The trustees have approached the Government for financial assistance. Dealing with the docks department, the report says that the cargo handled during 1956-57 amounted to 5,390,451 tons compared with 4,497,678 tons in the preceding year. The working of the Bombay Port Trust railway has resulted in a deficit of about Rs. 7.95 lakhs during the year against the surplus of Rs. 11,000 in 1955-56.

Gold Prices Decline

During the closing days on the Bombay bullion market last week, signs were evident that the boom in gold prices was tapering off. The Fagun contract in gold reflected the change in sentiment, with rates dropping from the record level of Rs. 113 established a week previously to Rs. 111-3, before finishing on the last day around Rs. 111-5. The easy turn of the market is said to have been due mainly to the changed outlook for the metal. After a spell of brisk demand, spot offtake tended to decline with the result that the ready metal shed the bulk of its premium over the current contract. The premium in the case of Mysore gold dropped from Rs 1-12 to 8 annas, and Fagun contract compared with the premium of Rs. 1-8. Unrefined gold, on the other hand, was offered at a discount of 2 annas against the premium of Re. 1.

Easier Trend in Cotton

Cotton futures were further depressed during the past week as buying support was restricted, due to the uncertainty about spot rates and tendering differentials. Switching-over operations dominated the market resulting in the spread between the two deliveries narrowing to Rs. 1-8 at a time.

Spot rates were easy. Lower quality cotton and staple varieties, namely Berar, Moglai and Central India, declined by about 10 points to 15 points. Mill activity was chiefly confined to a limited number of good lots of quality cotton. Vijay prices declined by about 10 points as the survey results were not encouraging. Out of 600 lots which were surveyed last week, only 50 were passed by the authorities while the rest were rejected.

Jute

NEAR-SLUMP CONDITIONS IN FIBRE AND GUNNIES

JUTE SELLERS ANXIOUS TO REDUCE HOLDINGS

CONDITIONS in the Calcutta fibre and gunny markets during the past week have been akin to those of a slump. Raw jute is depressed and weak, and the nervousness displayed there has spread its influence to gunnies, where the lack of fresh overseas business has caused prices to fluctuate erratically, mostly in a downward direction. Fibre prices over the week have fallen by about Rs. 54 a ton: sacking has lost Rs. 45 a ton, and hessian, after a long period of stability, has shown its first sign of weakness with a drop of about Rs. 43.75 a ton. Most Calcutta raw jute sellers are holding large stocks of fibre, much of it bought at higher prices than are current now; seeing their profit vanishing, they are anxious to liquidate holdings and cut losses. Prices in the interior and in the upcountry areas, however, although showing a decline, have not come down nearly as much as in Calcutta because the many sellers who sold short at much higher rates are now covering for February shipment, taking advantage of the lower prices ruling. Invariably they have been willing to pay slightly more than the current indications to ensure a good tender against what are now high-priced contracts. Thus, there are two markets at variance with each other, and local sellers are in the unenviable position of being unable to cover at a profit any fresh sales they make.

The Calcutta mills have been faced with one of the most difficult trading sessions in many years. Lack of overseas buyers has caused a further fall in prices, which has been aggravated by the weakness of the fibre markets. Heavy speculation in fatka and renewed selling pressure, both in fatka and in genuine goods, has resulted in nervous conditions in all sections. Some mills carrying stocks of unsold goods are even reported to be offering discounts to encourage buyers, but such is the condition of the market that this has given no incentive. Confidence in hessian has suffered and it has not been able to resist the bearish trend in the speculative B Twills. The reluctance of overseas buyers to do business indicates the unpromising state of affairs throughout the world, especially in America, where the economic situation is featured by rising unemployment. The failure of the cotton crop has come as a sad blow to manufacturers of cotton bagging as well as to stockists, and the repercussions from this section of the trade have been far-reaching. The shrinking this season of the Australian market for grain bags, although temporary, has caused widespread depression. The news from Uruguay is disconcerting; she has decided to reduce her dependence on Indian jute goods and has commenced the internal manufacture of packaging material to bag her wheat, cotton and oilseed crops. A new plant was opened there last November and is expected to help reduce imports by half. So far, Uruguay has been entirely dependent on India for packaging materials for these crops.

I.J.M.A. ANNOUNCES MINIMUM PRICES FOR GUNNIES

It is reported that the committee of the Indian Jute Mills Association, at a meeting yesterday afternoon, decided to advise its members not to sell gunnies below certain specified minimum prices. These prices are based on Rs 100 a 100 bags for B Twills, Rs. 39.50 a 100 yards for 40in. 10oz. hessian and Rs. 29.75 a 100 yards for 40in. 7½oz. hessian. The measure is presumably intended to counter the recent sharp fall in gunny prices The latter rose yesterday in response to the report.

Pakistani Worries

Calcutta is not the only place where the recession in jute prices is causing considerable anxiety. In Pakistan, a spokesman of the preparatory committee of the National Jute Conference has discribed the position there as "very precarious." He goes so far as to say that if the decline persists, almost all the small firms and many of the larger ones engaged in the trade will have to close down. It is believed that many growers on both sides of the border are not getting a profitable return on their jute, and as such it is unlikely that they will continue to produce it if the present uneconomic levels persist. The National Jute Conference committee is inclined to blame the Pakistani Government for this state of affairs because it has condoned the sale of Pakistani jute through Calcutta in contravention of the ban placed on such transactions in February 1954. As if in defence of this allegation, the Pakistan Jute Board, a Government body, has, it is reported, taken action against four London and four Pakistani jute firms for allegedly entering into contracts booked through Calcutta and thus depressing local Pakistani markets through collusive sales at prices below the prevailing market. The four London firms have been blacklisted and dealings with them by Pakistani exporters have been prohibited. It is reported that the Pakistani concerns' export licences have been cancelled, but the Government will allow them to fulfil any obligations entered into before 24th February. The London Jute Association has protested against the action on behalf of the four London firms and, it is reported, has approached the Pakistani Government in the matter.

One of the measures suggested by the committee of the National Jute Conference to ease the present crisis is to curtail next year's Pakistani jute acreage, and to limit the yield to a maximum of 3 million bales. But, more recently, the East Pakistani Government has announced that its jute production target for the 1958-59 season has been officially fixed at 5¼ million bales, which is nearly 45 percent higher than that recommended by the committee. The Government also estimates that world demand for Pakistani jute during the next season will be 5.7 million bales. The announcement has had the effect of weakening prices.

THE JUTE MARKETS

Manufactured Goods: Because of heavy selling pressure in the fatka, the gunny markets were weak at the opening last Thursday and B Twills dropped to Rs. 97.85, with forward shipment at a premium of Rs. 2.15. Hessians continued to rule steady at this stage and after small shipper covering for quick shipment, ready 40in. 10oz. actually showed a small increase at Rs. 39. Other deliveries, however, recorded minor losses, and the premium for forward shipment dropped to 25nP. Over the next two days, prices slumped as a result of nervous selling pressure in the fatka, and by Saturday they were Rs. 1.50 below the opening rates. Hessian also showed signs of weakness and prices in this section began to fall. After the week-end, selling pressure from mills in heavy goods, often at cut prices, combined with the weakness of the fibre markets, caused rates in both sections to sag, and sacking lost nearly Re. 1. The slide continued under speculative influences and sacking dropped by a further Rs 1.50, while hessian recorded its largest movement for a considerable time with a reduction of 80nP. There was no holding power in the market and no business to consolidate rates. Mills were unable to formulate any policies due to the rapid changes which took place, and, in general, slump conditions prevailed.

Towards the close, there was a slight improvement. Opening quotations on Wednesday morning were as follows:

	Ready Rs	March Rs.	Apl. June Rs.	July-Sept. Rs.
40in. 8oz.	30.75	30.80	30.80	30.80
40in. 10oz.	38.15	38.20	38.20	38.25
B Twills	94.60	95	96	97.25
Heavy Cees (Plain)	94.75	95.50	96.25	97.50
A Twills	118.50	118.75	119	119.50
Liverpools	111.25	110.25	110.50	111.50
Cornsack	99.50	99.75	99.75	99.75

Raw Jute: In spite of the depressed conditions ruling in the fibre markets, Calcutta mills were reported to be buying almost every day. The quantities taken up by each were small, but the ultimate total was appreciable, being estimated at not less than 300,000 maunds. Invariably the business was done at discount rates, and as there were always weak holders of jute to meet the reduced prices, the market was given no chance to recover. The disparity between local and upcountry prices continued, but most of the business did not involve fresh purchases from the mofussil. It was mainly in stock jute in sellers' hands, which they were anxious to liquidate in order to cut their losses. Opening quotations a week ago were based on Assam jute at Rs 24 a maund, but in spite of steady business prices dropped by about 50nP a day. By the week-end, rates were down to Rs 23, but over the week-end and the next two days they fell to Rs. 22.50. There was a slight improvement before the close but this did not affect indications to any great extent. The mills' interest was mainly in low quality jute and most of the business was in mesta.

Small business was reported in Assam and Northern white at Rs. 23.75 down to Rs. 22.75, with Middles alone fetching Rs. 26.25. Assam Tossa passed at Rs. 26.75 and selected Murshidabad Tossa at Rs 27. Good business was done at Rs 20.25 to Rs. 21.50 for Daissee mesta and Rs. 20.50 to Rs. 21.75 for Northern and Desal mesta.

In Cossipore, wagon arrivals last week totalled 455, which was slightly better than during the corresponding week of last year. There was an improvement in the quality of arrivals due to the premiums offered for good jute, but the majority of imports continued to be mesta, for which there was a heavy demand. At the close quotations in Cossipore were based on Kishanganj jute at Rs 20.50 a maund for average quality with a very low yield.

On Wednesday morning, the market showed signs of steadiness, and opening quotations were based on the following:

Indian Jute:	Landed at Mills Rs. a md basis Bottoms	Shipment
Assam	23.50	March-April
Northern	23.25	"
Purnea Desal	21.50	"
Daissee	27.25	"
Assam Tossa	26.50	"
Northern ex Calcutta	21.75	"
Mesta:		
Assam-Northern	21	"
Desal	21	"
Daissee	27.25	"
Jungli	19	"
Bimli F.A.Q.	18	"
Pakistani Cuttings	66 a bale	"

THE FOREIGN JUTE MARKETS

POLICY ON IMPORTED HESSIAN CRITICISED

(FROM OUR DUNDEE CORRESPONDENT)

THERE is still no improvement in the jute trade and there is bound to be an increase in the number of unemployed workers unless an improvement occurs in the near future. No one can suggest how this can come about, since it is clear that the present depression in trade is worldwide. It is well known that the great bulk of Dundee's production of jute goods and yarns is consumed internally. In fact, the production of jute cloth locally is totally inadequate to meet the requirements of consumers, and this is the reason for the large imports from India and to a lesser extent from Pakistan. In this connection, the M.P. for Belfast in northern Ireland's Parliament, Mr. Neville Martin, who has bag factories in Manchester, Belfast and several other places, complained about the British Government's control of imported hessian at the recent annual dinner in London, where he was the guest of honour of the National Association of Sack Merchants and Reclaimers. He said that the policy for inflating the price of hessian made competition with paper bags and other substitutes impossible. The reason the Government gave in support of this policy was to protect the Dundee industry and to check unemployment. But he questioned the right of any Government to jeopardise the existence of one healthy section of the trade so that another section of it might prosper.

Dealers are agitated by the news that four large jute merchants in London have been suspended by the Pakistanis from dealing in raw jute. They are Duffus, Hindley, Izaacs and Malcolm. It is believed that other Pakistani shippers are also involved, something in connection with E.P.C.'s. The result is that few offers are now being received. Values are now at £107 10s for Mill Firsts, £92 for Mill Lightnings, £81 10s for Mill Hearts and £68 for grade Hearts, while good marks of Daissee-¾ are from £94, and grade £85, grade Tossa-¾ £101 and grade Tossa-4 £94, all c.i.f. U.K., February-March shipment. These are the lowest rates and most sellers are asking up to £3 to £4 a ton more. Calcutta goods are quiet, with the big drop last week in B Twills to 149s February, 149s 6d March and 150s April-June, while 40in. 10oz. hessians are down to 59s, 59s and 59s 3d, and 40in. 7½oz. to 44s 9d, 45s and 45s for the respective positions of shipment, all f.o.b., Calcutta.

EXPANSION OF THE CEMENT INDUSTRY

LARGE INCREASE IN DEMAND LIKELY

By Manubhai Shah*

THE cement industry of India had a humble beginning and the first organised attempt to manufacture Portland cement was made early in this century when in 1904 a small factory was established in Madras, using sea shells as a source of lime. The venture was short-lived but a decade or so later the industry revived and three factories were set up, one each in Porbandar in Saurashtra in 1913, Katni in Madhya Pradesh in 1915, and Lakheri in Rajasthan in 1916. The outbreak of war and the resultant restriction on imports created favourable environments for the growth of the industry and by 1918 the three factories were producing 85,000 tons of cement a year.

During the years of postwar boom, the Indian cement industry developed rapidly and between 1919 and 1924 seven more factories came into existence. In 1920, the production was 91,253 tons and imports were of the order of 150,000 tons. By 1930, the output had increased to 564,000 tons and so rapidly did the production outstrip demand that the industry was faced with the problem of selling its product. The Government of India referred the matter to the Tariff Board in 1925 to enquire into the working of the industry. The findings of the Board emphasised among other things, the need for co-operation among the manufacturing units. Accordingly, the Indian Cement Manufacturers Association was formed to regulate prices and to ensure proper delivery of quality cement to consumers.

Important Events

The important events in the history of the Indian Portland cement industry are: the imposition of duty on imported cement by the Government of India in 1926; the establishment of the Concrete Association of India in 1927 for purposes of giving free advice and assistance to consumers; and in 1930 the Cement Marketing Company of India Ltd. came into being in order to supervise the distribution and sale of the output of member companies.

The year 1936 was perhaps the most outstanding in the history of the industry, when Mr. F. E. Dinshaw brought under the control of a single organisation all the ten existing factories, and the Associated Cement Companies was formed. In the same year, the Dalmia managing agency, which controlled another group of factories in different parts of the country, was instituted. Mr. Dinshaw's efforts and confidence in the industry were amply rewarded and nine new factories started production between 1936 and 1939. The production in the period 1936-40 was of the order of 1.7 million tons a year. By 1945 the production had increased to 2.15 million tons but in 1947 the production fell to 1.44 million tons as a result of the partition of the country. In the period 1940-47 only two more factories came into production: one in Banjari in 1946 and the other in Chaibassa in 1947. The development of the industry in subsequent years, that is, 1948-57 was rather phenomenal and ten more factories came into production one each in Sevalia, Kottayam, Tirunelveli, Raigangpur, Sawai Madhopur, Sika, Sindri Churk, Dalmianagar and Bagalkot.

Progress in the production of cement during the last ten years since independence has been as follows:

Year	No. of Factories	Production in Tons	Percentage Utilisation of Installed Capacity
1947	18	1,447,660	70
1951	22	3,195,442	90
1955	27	4,495,920	95
1957	28	5,598,000	85

Rated capacity now is 6.6 million tons and production in 1957 has been 5.6 million tons, giving 86 percent utilisation of the capacity.

Installed Capacity

There are at present 29 cement factories having an installed capacity of over 6.6 million tons a year working with both the dry and wet processes. Of these, 13 belong to the A.C.C. group, six to the Dalmia-Jain group and ten to other industrialists. It is estimated that a capital of Rs. 35 crores to Rs. 40 crores is invested in the industry, which gives employment to more than 30,000 people. The annual consumption of the main raw materials based on production in 1957 is as follows:

Raw Material	Quantity Consumed in 1957
Limestone and clay	96 million tons
Gypsum	300,000 tons
Coal	2.4 million tons
Water	18 to 24 million gallons
Power	720 million kWH
Gunny Bags	96 million nos.

Apart from limestone which is mainly used as a source of lime, sea shells, marl and chemical sludge are also used in large quantities as a source of lime in the manufacture of cement.

Estimated Demand

The Planning Commission in its *Programmes of Industrial Development* estimated the demand for cement at about 3.3 million tons by 1952-53 and 3.8 million tons by 1955-56, exclusive of the requirements for multi-purpose schemes and road construction. The total demand was estimated at 4.5 million tons by 1955-56. But subsequent developments have shown that these estimates were on the conservative side and the demand for cement was substantially higher as would be evident from actual production as well as estimates of demand. The present annual estimated demand for cement is about 9 to 10 million tons. The Indian Institute of Public Opinion in its quarterly *Economic Report* (July 1954) has estimated the following trends in construction activity during the next seven years, that is, 1954-61:

Classification of Construction	Current expenditure: Rs. crores at current prices).	Rates of historical growth percent a year	Current rates percent	Estimated rate of growth 1954-61 percent	Estimated annual expenditure 1960-61 at current (1954) prices Rs. crores
1.	2.	3.	4.	5.	6.
Urban housing (private)	100	1.05	2	2.5	118
Rural housing (private)	36	0.66	0.75	1	39
Public sector (corporate)	14	2	3	3.5	18
Private sector (corporate)	140	10	20	20	336
Total	290				511

The average rate of growth a year over the period 1954-61 comes to 10.9 percent. This rate of construction activity is likely to boost up the demand for cement to a very much higher order. The demand by 1960-61 is estimated at 14 million tons, for which a capacity of 16 million tons is considered necessary. In the third five year plan, 1961-66, the demand for cement is expected to increase further to 20 to 25 million tons a year and may even go up to 30 million tons a year if the economy develops an integrated dynamism.

The industrial or social progress of a country is greatly reflected through the consumption of Portland cement. The *per capita* consumption of cement in India is only 33 lbs against 594 lbs in the United States, 649 lbs in West Germany and 847 lbs in Switzerland. The *per capita* consumption of cement in some countries is shown below:

Countries	Population in million	Consumption of cement in lbs a head
Switzerland	4.925	847
Sweden	7.212	660
W. Germany	18.516	649
Norway	3.362	613
U.S.A.	172.000	594
Denmark	4.406	486
Ireland	2.933	453
France	43.046	451
U.K.	51.025	444
Netherlands	10.609	440
Italy	47.586	420
India	400.00	33

Expansion Programme

The capacity target for the industry under the second five year plan is 16 million tons a year. Its present installed capacity is over 6.6 million tons a year and new schemes and schemes for expansion with an additional annual capacity of 8.7 million tons have so far been approved. Of the total of 55 new schemes, 29 are by way of substantial expansion of the existing factories with an additional capacity of nearly 4 million tons a year and 26 new factories with a total installed capacity of 4.7 million tons a year. When these schemes are implemented, the capacity of the industry would have increased to over 15 million tons a year. In addition, three more schemes (one new and two expansions) involving a capacity of 740,000 tons a year have since been considered by the Government. These would also be licensed shortly pending the completion of certain formalities. This would bring the total licensed capacity to about 16 million tons in the industry by 1960-61. Some of the new expansion schemes sanctioned have not been able to make satisfactory progress, mainly on account of the non-availability of limestone of suitable grade in close proximity of the site chosen and may, therefore, be revoked in the near future. The total capacity of such projects likely to be revoked is 2.1 million tons a year. The Government has under consideration several substitute proposals for meeting the deficit in the capacity target.

The progress of the various schemes is reviewed from time to time and, according to the licences issued so far, the cement industry is expected to attain the following capacity in the next two or three years:

Existing Capacity · 6.634,000 tons

Year	Additional capacity likely to come into being	Progressive Total
Jan-June 1958 ...	797.200 tons	7,331.700
July-Dec. 1958 ...	1,990.000 tons	9,321,700
1959	3,117,000 tons	12,438.700
1960	1,693,000 tons	14.131.700
1960-61	1,176,000 tons	15,307,000

Foreign Exchange Requirements

The requirements of foreign exchange for meeting the targets for cement production set out in the second plan are estimated at Rs. 56 crores by way of capital equipment. Of this, import licences of a total value of Rs. 23 crores have been already granted. In addition, some parties have made arrangements for importing machinery on deferred payment terms for some of the capital goods. The foreign exchange requirements for some of the schemes which are in an advanced stage of implementation, have been satisfactorily covered. Assistance of foreign exchange under T.C.M. aid programme to the extent of Rs. 3.6 crores has been arranged. All these steps will cover *additional* capacity of 3.27 million tons a year. It is now, therefore, necessary to arrange for import licences for capital goods and machinery for the balance capacity of 5.4 million tons a year which is still left uncovered through import licences.

As already indicated, it is proposed to license shortly three more units covering an additional capacity of 740,000 tons over and above that of 15.3 million tons capacity approved under the Industries Act, making a total of 16 million tons. Besides, there are about 14 proposals pending. A close watch is being kept on the progress of each scheme and in the light of periodic assessment of the actual implementation, it will be possible to approve proposals out of these pending schemes in order to cover the target of 16 million tons by 1960-61. It is hoped that a major portion of the balance capacity will be covered through import licences during 1958.

Conservation Schemes

The Government has under consideration various suggestions made to it for conserving cement and supplementing its availability by admixing with it certain materials of pozzuolanic variety. It is felt that considerable savings could be effected by inter-grinding Portland cement with siliceous admixtures either at the site of construction or in the cement mill itself. In several cases the sand cements comprising as much as 45 percent sandstone and 55 percent Portland cement have yielded satisfactory results. Such materials as could lend themselves to partial replacement for cement are reported to be available at many places in the country and some of these are in the proximity of the factories. Already a factory for producing pozzolan from local shale has come into production near the Bhakra-Nangal dam site. This has been functioning since May 1957. The shale available at the dam site is burned and the material is ground to the fineness required. The cost of the plant is estimated at Rs. 25 to 30 lakhs, most of the items having been fabricated here. At present 10 percent of the cement is being replaced by pozzolan, with the likelihood of increasing it to 20 percent shortly. The Government has appointed a technical committee to investigate fully the problems posed by such admixtures or replacements in Portland cement.

There is yet another type of cement, the production of which would make available a larger quantity of it within the existing clinker capacity, that is, Portland blast furnace slag cement. It is an intimately inter-ground mixture of Portland cement clinker and granulated blast furnace slag. Normally the slag constituent is between 20 percent to 50 percent of the Portland blast furnace slag cement. The following six schemes have, in this connection, been licensed for the manufacture of Portland blast furnace cements, for a total capacity of 1.2 million tons a year:

Location	Capacity tons a year	Source of obtaining slag
Bhadravati	18,000	Mysore Iron and Steel Works
Chaibassa	170,000	Tata Iron and Steel Co., Jamshedpur
Drug	85,000	Bhilai steel works
Rajgungpur	365,000	Rourkela steel works
Durgapur	240,000	Durgapur steel works
Durgapur	330,000	Durgapur steel works

A capacity of 46,500 tons a year is also being set up for white and coloured Portland cements through the following schemes:

Location	Capacity tons a year
Kottayam	5,000
Thiruvattiyur (Madras) ...	16,500
Porbunder	25,000

Sludge Cement

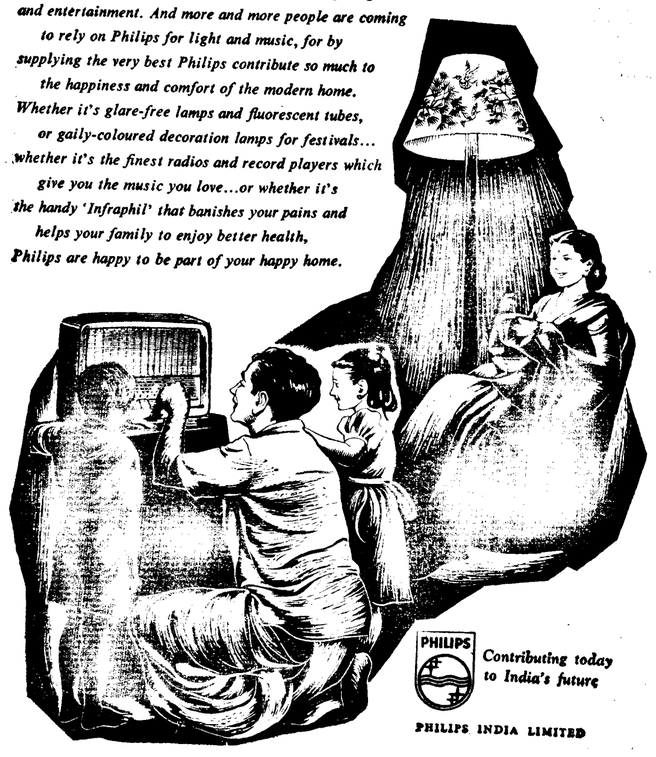
The development of sludge cement offers great potentialities. This utilises the calcium carbonate sludge obtained as a by-product as in the manufacture of ammonium sulphate fertiliser at Sindri. Already one cement factory with an annual capacity of 200,000 tons is working at Sindri utilising the sludge from the Sindri fertiliser plant. The establishment of such new fertiliser plant opens, therefore, an avenue for setting up further capacity for sludge cement.

There has been a noticeable shift in favour of larger cement kilns and a number of rotary kilns of a daily production capacity of 700 tons have been installed in preference to smaller kilns of 250 to 300 tons daily capacity. The production of cement in such kilns is found to be more economical and consumption of fuel is also lower. There are, however, many areas in the country where availability of limestone is limited, which would not lend to the setting up of large factories. Many such areas are deficit in cement and several schemes are afoot for installing smaller cement factories with a production capacity ranging from 60 tons to 175 tons a day. The recent advances in the shaft kilns have made it possible to manufacture cement by the shaft-kiln process at a price comparable to the one produced in the larger rotary kilns without impairing the quality of cement produced. While the shaft kiln factories may not become very common in India, there might be at least half a dozen to one dozen such small factories set up during the second plan period. The natural advantages of the shaft kiln process are that limestone of lower grade and fuel of lower calorific value can be utilised. The capital cost of the project is substantially lower and so is its maintenance and running cost. A suggestion has also been made to some State Governments, notably Himachal Pradesh and Assam, to examine the prospects of setting up small cement factories based on vertical shaft kilns. A small cement factory is also being established in Kashmir with a view to meeting the local demand.

Capital Cost

The capital cost for setting up a cement factory in India is estimated at Rs. 120 to 125 a ton annual capacity for new factories and between 75 and 80 a ton of annual capacity for expansion of existing factories. Of these nearly 60 to 65 percent is by way of machinery and capital equipment.

The production cost of cement itself is not high compared with foreign countries, but the incidence of freight and packing charges is relatively higher with the result that cement is sold here at a price somewhat higher than obtaining in some other countries. But this may not be a major handicap in exporting cement especially from the port town factories.



Manufacture of Cement Machinery

There has also been considerable development in the field of manufacture of cement machinery. Two firms are already making certain items, such as kilns, clinker coolers and clinker breakers, etcetera, for their own use. Besides, one engineering firm in collaboration with Messrs. M.I.A.G. of West Germany has already been licensed for the manufacture of complete cement plant of 300 to 500 tons daily capacity with an installed capacity of two such plant a year. There is also a scheme prepared by one of the biggest group of cement manufacturers in collaboration with two well-known British firms for the production of heavy items of cement machinery like grinding mills, tube mills, air separators and dust collectors, rotary kilns, conveying and transport equipment, slurry mixer basins and slurry pumps, wash mills, fans and blowers. This scheme is in the last stage of finalisation. The scheme also visualises the production of large, medium and high-pressure boilers and some items of mining machinery like winders, cages, skips and haulers.

At present, there are 29 factories, located practically in all the States of India except Assam, West Bengal and Kashmir but these States would also start manufacturing cement during the second plan through the schemes already approved. These schemes have already been covered in the estimates given earlier.

In Everyday Life **PHILIPS** help to make happier homes

INDIA'S homes are becoming much brighter and happier places to live in, thanks to modern home lighting and entertainment. And more and more people are coming to rely on Philips for light and music, for by supplying the very best Philips contribute so much to the happiness and comfort of the modern home. Whether it's glare-free lamps and fluorescent tubes, or gaily-coloured decoration lamps for festivals... whether it's the finest radios and record players which give you the music you love...or whether it's the handy 'Infraphil' that banishes your pains and helps your family to enjoy better health, Philips are happy to be part of your happy home.

ECONOMIC DIFFICULTIES OF COMMUNIST CHINA

INTELLECTUALS TO WORK ON FARMS

(FROM A CORRESPONDENT)

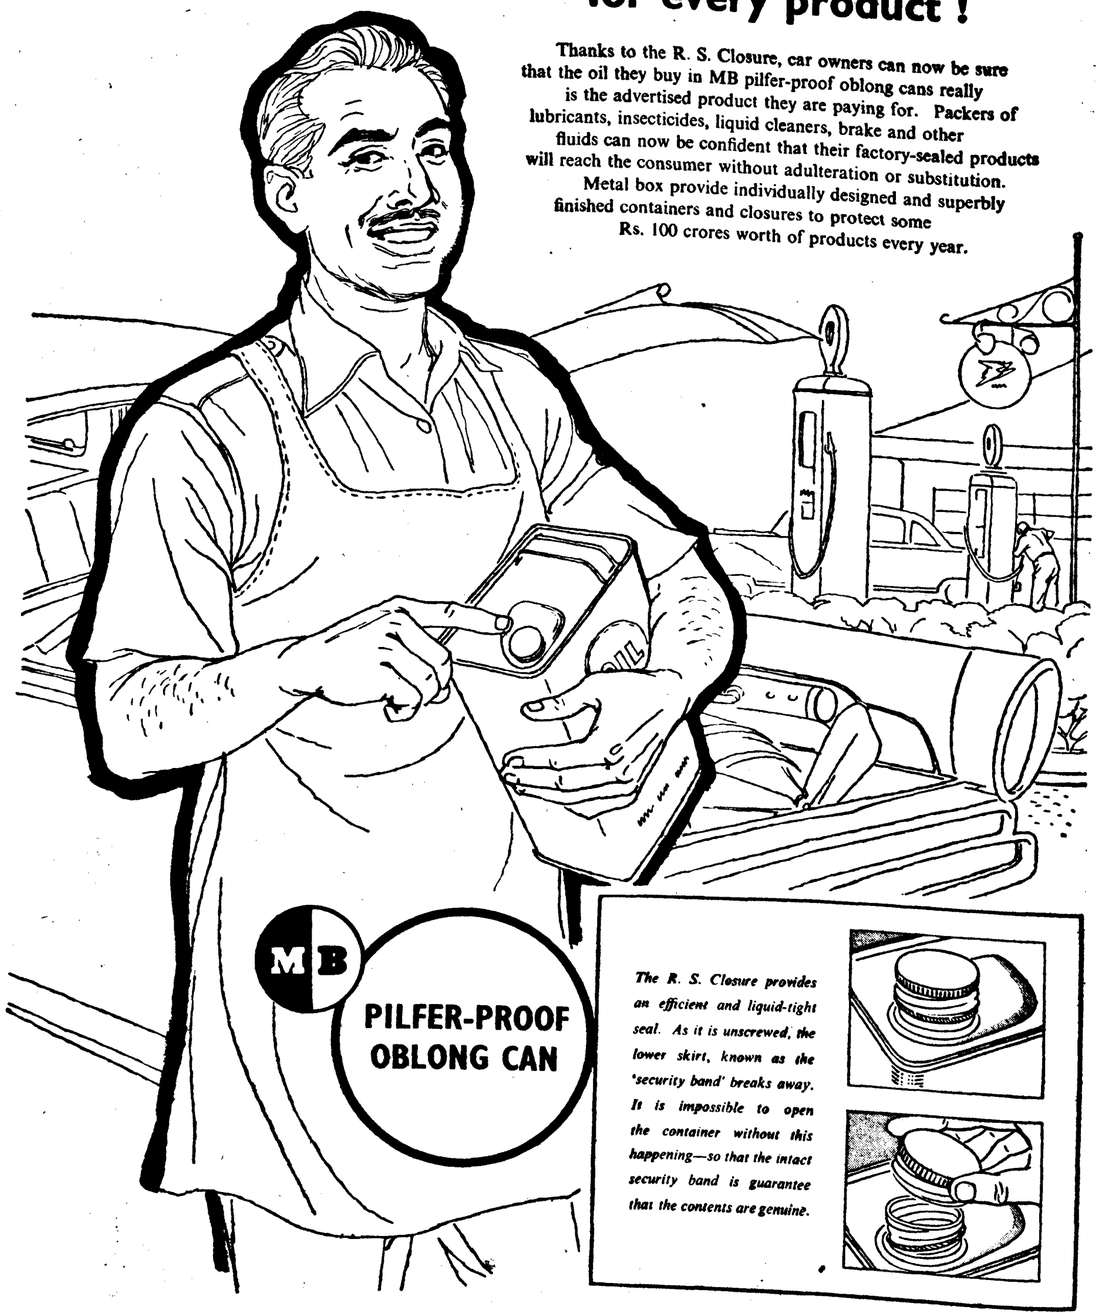
COMMUNIST China's economic troubles have led the authorities to take strong action against one source of foreign exchange leakage—smuggling between south China and the outside world through Hongkong and Macao. For a long time, Peking made no serious effort to check this smuggling for a number of reasons. Firstly, Kwangtung, which is easily accessible from Hongkong and Macao, is a difficult coast to police effectively. Secondly, smuggled items are often simple requirements going to the large overseas Chinese population, whom the authorities are eager to please. Thirdly, border restrictions, if too tightly imposed, might create a bad impression outside, it was thought.

The policing difficulties remain; but the authorities, because of their "rectification campaign" and the urgent need to increase foreign exchange earnings have now moved decisively. The Hongkong edition of *Ta Kung Pao* of 5th January reported that since November 1957, 6,671 cases of smuggling have been detected, 3,354 smugglers have been arrested, and goods valued at more than 2.3 million yuan have been seized. The penalties have been extreme; a number of offenders, according to this paper, have been sentenced to death. But pure and simple smugglers—and there are few junk owners in Hongkong waters who would not qualify as such—are getting 10 to 15 years of imprisonment. The items smuggled into China are mostly saccharin, medicines and wrist watches.

Agricultural Loans

The Chinese Government is finding it difficult to recover all agricultural loans made to collectives and individual peasants. Agricultural loans are issued for varying periods, depending on the purpose for which they are granted. A loan to allow a collective to purchase new equipment, for example, may become payable at the next harvest; whereas loans for poor peasants to buy a stake in a co-operative may be granted for a period of three to four years. As usual, the authorities are blaming the Party cadres (many of whom, apparently, have not paid back their own loans) for the failure to collect the money now overdue. An intensive drive has been launched to realise it.

For some months now, a mass movement of great political significance has been going on in communist China—the transfer of hundreds of thousands of cadres to farms to do manual labour, under the slogan: "Down to the countryside and up to the mountain". By the end of November 1957, some 810,000 cadres had been sent into the country. The State Council has issued regulations to guard against their return, and also to check the flow of peasants to urban areas. This mass transfer is by no means limited to ordinary cadres, or to those of a peasant or worker background who might be expected to take more easily to life on farms: indeed, there is considerable emphasis on sending intellectuals out to work with their hands. The Communists have been unhappily aware that their administrative machinery is heavily over-burdened with Party members. In the municipality of Shanghai alone, no less than 470,000 cadres are employed in administrative, industrial and commercial units. In the latter half of 1955, Peking began a movement to send superfluous Party members to farms and factories. This campaign has now been greatly intensified. Apart from the objective of administrative efficiency, the movement will result in a much tighter Party supervision of the peasantry, and will also further weaken whatever authority may have been left with the intellectuals as a class. In any case, this realignment is certainly a sweeping one; nearly 20,000 cadres will be packed off to the countryside from the Anshan steel works alone.



The authorities have not yet given any indication of when this process will end. They have stated, however, that some of the cadres sent to the countryside will work for only two or three years, while for others it will be a permanent assignment. This mass transfer is hardly popular. Manual work has always been looked down upon in China, and Party members who in recent years have held office in positions of authority can hardly relish the idea of carting manure or working in the midst of mud and water. Apart from the economic aspect, the mass movement, it is said, is part of the Party "rectification campaign", designed to break down the "arrogance, subjectivism, and bureaucratism of the cadres".

Destroying Political Opposition

The widespread extent of opposition to communism on the Chinese mainland is shown in a Peking report that more than 165,000 "counter-revolutionaries" have been arrested during the past two years. According to Peking radio, the Minister of Public Security has reported that the "intense struggle" against the opponents of the *régime*, between June 1955 and October 1957, showed that dissident elements had "infiltrated" into most "fronts and branches" of the Government itself. Thousands more were found in the Communist Party and the Young Communist League, the Minister has said. Many cases of "political sabotage and destruction" also were uncovered. It is claimed that "3,000 reactionary cliques" have been exposed, and that 20,000 persons have voluntarily surrendered. The movement to eliminate "counter-revolutionary" elements was strengthened early last year, after Chairman Mao Tse-Tung's short-lived policy of permitting some criticism of the Party and the *régime*. The policy was halted abruptly when criticism grew severe.

a pilfer-proof package for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

Engineering and Transport

INDO-RUSSIAN AIR AGREEMENT EXPECTED SOON

NEW DELHI-MOSCOW SERVICE TO START IN AUGUST

AN air agreement between India and Russia, it is expected, will be signed at an early date for starting a New Delhi-Moscow service *via* Tashkent. The service is likely to be inaugurated on 15th August. This follows a favourable report by the Indian technical mission which has now returned from Moscow. Air-India International will operate its *Super-Constellations* on this route, and the Russians their *Tu-104* jet planes. Landing, fuelling and repair facilities will be provided by both sides, for which purpose the parties will exchange technicians to learn the know-how of their respective aircraft. Earnings from the traffic will be pooled and divided equally between the two countries. India hopes to reach an agreement with British European Airways to enable her passengers to fly direct to London *via* Moscow, for which purpose Russian visas are likely to be freely available. As India is a member of the International Air Transport Association, the New Delhi-London air fare will have to be on the I.A.T.A. scale. For this purpose, the Delhi-Moscow air fare is expected to be raised by 20 percent. The frequency of the service is still a matter of negotiation.

SURPLUS IN CALCUTTA PORT BUDGET

MORE CARGO HANDLED

THE budget estimates for 1958-59 together with the revised estimates for 1957-58 of the Calcutta Port were discussed at the special meeting of the Commissioners on 24th February. The original estimate of income for the current financial year at Rs. 10,14,61,238 was based on the assumption that the imports of salt would amount to 450,000 tons, of foodgrains and flour to 700,000 tons, of petroleum, including lubricating oil, to 1,100,000 tons, of other cargo to 1,800,000 tons, and that exports of coal (cargo and bunker) would amount to 1,920,000 tons, of gunnies to 950,000 tons, of ores to 800,000 tons, of tea to 180,000 tons and of other cargo to 500,000 tons The total of both would be 8,400,000 tons. In the light however of the actual tonnage figures available and the forecasts received about the probable trend of trade, it is estimated that there will be a net increase of 1,735,000 tons in the volume of traffic likely to pass through this Port consisting of foodgrains and flour 300,000 tons, petroleum including lubricating oil 150,000 tons, other cargo (mostly under iron and steel and machinery) 800,000 tons, coal 200,000 tons, and ores 300,000 tons, making a total of 1,750,000 tons. Minus a decrease of 15,000 tons in tea, the net increase amounts to 1,735,000 tons. On the above basis, the total seaborne traffic likely to be handled during the current financial year is estimated at 10,135,000 tons, against the original estimate of 8,400,000 tons, and the total income at Rs. 12,19,64,170 against Rs 10,14,61,238.

The revised estimate of total expenditure is Rs. 10,81,87,605 or Rs. 29,28,905 more than the amount originally estimated, that is, Rs. 10,52,58,700. According to the revised estimate, the financial year 1957-58 is expected to close with a surplus of Rs. 1,37,76,563, against a deficit of Rs. 37,97,462 foreshadowed by the original estimates which were prepared on a conservative basis keeping in view the possible fall in imports because of the difficult foreign exchange position. The improved revenue position is mainly due to the additional traffic of 1,735,000 tons likely to be handled during the year which consists predominantly of iron and steel, heavy machinery and project material and the saving in expenditure from the non-implementation of the piece-rate scheme for which a provision of Rs. 70 lakhs was made in the original budget estimates partly offset by increased payments to labour for handling the additional traffic. It is proposed to appropriate Rs. 1 crore of the surplus and the balance carried from the last financial year to capital for financing certain second five year plan and ordinary capital works, Rs. 20 lakhs to vessels replacement fund whose resources are still below the net risk figures in view of the recent additions to the Commissioners' fleet and Rs. 18 lakhs to revenue reserve fund.

Budget Estimates

In view of the difficult foreign exchange position and the severe restrictions imposed on the import of goods of all categories, it is difficult to forecast with any degree of accuracy the probable trend of trade during the coming year. The income figures are based on the assumption that imports of salt will be the same as last year's 450,000 tons, of foodgrains and flour will be 250,000 tons more than last year or 1,250 000 tons, of petroleum including lubricating oil will be 50,000 tons more than last year or 1,300,000 tons, of other cargo, the bulk of which represents iron and steel, machinery and project material will be 500,000 tons less than last year or 2,100,000 tons, and that exports of coal (cargo and bunker) will be 380,000 tons more than last year or 2,500.000 tons, of gunnies will be the same as last year or 950,000 tons. of ores will be 400,000 tons more than last year or 1,500,000 tons, of tea will be the same as last year or 165,000 tons, and of other cargo will be the same as last year or 500,000 tons. On the basis of the above assumptions, it is expected that the traffic passing through the Port during 1958-59 will amount to 10,715,000 tons and the income to Rs. 11,97,32,950.

The total expenditure for the year is estimated at Rs. 11,16.42.574 and the financial year 1958-59 is expected to close with a surplus of Rs. 80,90,376. No provision has been made in the budget estimates for the interest charges on loans to be borrowed from the Government for financing the second five year plan projects and the additional expenditure involved on the introduction of the piece-rate scheme and implementation of the Choudhury Committee's recommendations. The last two proposals will involve the Commissioners in heavy additional expenditure and this can be met only by increasing port charges if the erstwhile policy of making contributions out of revenue to capital for financing second five year plan and ordinary capital works is to be continued.

Capital Expenditure

The expenditure on works in progress and on firm contractual commitments is estimated at Rs. 3,27,51.180, of which Rs. 2,96,04.031 relates to second plan projects falling under the Commissioners' and the Government's sphere of assistance. A sum of Rs. 1,39,98,955 being the balance brought forward from last year is available for meeting a portion of this expenditure and the balance will be found by borrowing Rs. 1 crore from the Government on the usual terms and Rs. 1 crore by contributions from revenue out of the year's surplus. In addition, the Commissioners have floated during the year a 30-year 4½ percent loan of Rs. 1.24 crores for repaying the uncancelled debt of Rs. 1,24,29,500, against the 5 percent 1927-57-87 loan of Rs. 1.5 crores. The budget estimates for 1958-59 have been prepared as in the last four years on an austerity basis keeping in view the need for large sums of money for financing the projects covered by the second five year plan. The year opens with a credit balance of Rs. 21,91.475. The expenditure on works in progress and on firm contractual commitments is estimated at Rs. 5,43,27,921. The expenditure on unsanctioned capital works which predominantly consist of second five year plan projects is estimated at Rs. 1,47.00,000. On this basis, it will be necessary for the Commissioners to borrow from the Government to the extent of Rs. 6 crores on the usual terms. Provision has also been made in the capital account to raise a loan of Rs. 1.3 crores during the year for repaying the uncancelled debt of Rs. 1.3 crores, against the 5 percent 1928-58-88 loan of Rs. 1 5 crores. The capital account is expected to close with a credit balance of Rs. 20,88,694.

NEW POLAR SERVICE OF AIR FRANCE

FASTEST ROUTE TO JAPAN FROM EUROPE

A major addition to Air France's worldwide route network will take place on 10th April, when a Lockheed *Super Starliner* will inaugurate the polar route—Paris-Anchorage-Tokyo. This new flight is designed to give western Europe—including the U.K.—the fastest link available to Japan. The route, which cuts travel time compared with the traditional service *via* India from 48 to 30 hours, lies almost exactly along longitudes 0° and 180°, and the *Super-Starliner* passes between the Magnetic and True North Poles before touching down at the only technical stop on the way, in Anchorage, a major city of Alaska. Special navigation techniques for the polar flight have been worked out, and proving services are now taking place. The Lockheed *L-1649A Super-Starliner* chosen for the new service has a non-stop range of about 6,000 miles, guaranteeing a non-stop crossing of the polar regions. Cruising at 20,000 feet at 350 miles an hour, the *Super-Starliner* will invariably meet calm weather over these northerly regions, as it has been found that at this height, there is a constant area of calm high pressure over the icecap, and in fact, the prevailing air temperature at that altitude is higher than that over the Equator. Fares applicable from the U.K. to Tokyo are the same either *via* the Pole or by the eastern Epicurean, and passengers may go out by one service and return by the other, thereby making what amounts to a round-the-world flight, circumnavigating the northern hemisphere.

FLYING TIME OF BOEING 720 BETWEEN BOMBAY AND CALCUTTA

An intermediate-range, 600-miles-an-hour jet-propelled airliner, designed specially for Continental routes. is being produced by Boeing Airplane Company's transport division. Designated as *Boeing 720*, the new airliner will be capable of flying from Bombay to Calcutta, a distance of 1,035 miles, in only 2 hours 6 minutes, including a 15-minute allowance for taxiing and manoeuvring. Eleven *Boeing 720*'s have already been ordered by the United Air Lines, a leading U.S. domestic airline, for delivery beginning in April 1960; and the airline's president has stated that plans have been made to purchase an additional 40 *720*'s by 1965. The *Boeing 720* will be able to take off and land at airports served by present-day intermediate-range airliners. The new *Boeing* will offer high-altitude flight at jet speeds and will have the same type of interior accommodations to be offered on the luxurious long-range *Boeing 707* inter-Continentals ordered by Air-India International.

IMPORTS OF COTTON TEXTILES INTO U.K.

RESULTS OF NEGOTIATIONS WITH EASTERN COUNTRIES

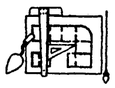
SOME months have elapsed since the Cotton Board issued its last statement on the problem of cotton goods imports into the United Kingdom from Eastern countries. During that time the Board has not been idle. Those representatives of the industry's main trade organisations who constitute the Board's Standing Consultative Committee have been constantly at work to find a solution to the problem, but the nature of their discussions and negotiations up to the present has, in the industry's own interests, made inadvisable any general publication of information. The recent imposition of restrictions upon imports from China can reasonably be claimed in part as one of the results of their work In case the restraint which the industry has exercised might be interpreted as a sign of resignation or of acquiescence in a situation which has been steadily and alarmingly deteriorating all the time, the Board has recently given an account of developments which have taken place since Sir Cuthbert Clegg and the members of the delegation which he led visited India, Hongkong and Pakistan during the earlier part of 1957.

Those talks, it will be remembered, led to an understanding with India and to a hopeful prospect of agreement with Pakistan provided only that agreement was similarly reached with Hongkong. After the first exploratory meetings in the latter place in January last year, the representatives of the industry there declined in May to continue the conversations. The U.K. Government subsequently expressed its willingness, if asked to do so by the Governments of India and Pakistan, to implement any agreement reached between the industries of the United Kingdom, India and Pakistan by means of a system of import control, designed to limit the volume retained for consumption in the home market. It declared its inability to take similar action on a colonial industry such as that in Hongkong. Instead, the Government's suggestion was that negotiations with the industries in India and Pakistan would still be practicable on the basis of the inclusion in agreements of a figure for imports from Hongkong which, if exceeded, would release the Indian and Pakistani industries from any obligations into which they had entered. Acting upon this suggestion, which clearly fell short of its original hopes, the Cotton Board sent invitations in November to representatives of the Indian and the Pakistani industries to visit England and resume discussions on the basis indicated. The replies which have so far been received from the representatives of the Indian and the Pakistani industries are not without their difficulties, but it is hoped that these can soon be solved.

Voluntary Agreements

The Cotton Board regards this long delay as regrettable; it is determined to find an equitable and practical solution. It adds that the attempts which have been made by the representatives of the cotton industry to reach voluntary agreements should not be taken to imply any weakening of their real conviction that the Government itself should have been prepared to review its policy on the unlimited duty-free imports of cotton goods from the Commonwealth, including colonial territories such as Hongkong. That policy was formulated under conditions existing in the early 1930's, conditions which today clearly no longer obtain. Just how strongly Lancashire cotton interests feel on this matter has been indicated in the result of the recent Rochdale by-election. It is a warning which the Government can hardly ignore completely. So far as the cotton industry is concerned, however, something more positive is needed—so far as it is possible to ascertain plans in this aspect. India and Pakistan are to be invited to accept maximum figures for their trade on the understanding that they will be free to exceed these maxima if Hongkong sent quantities in excess of a specified figure. This figure will be agreed between the British, Indian and Pakistani industries, but Hongkong will apparently play no part, directly at any rate, in the negotiations for determining it.

In such an arrangement India and Pakistan will probably want Hongkong's figure to be as low as possible so as to ensure their release from the obligations they had undertaken. Lancashire will want it to be high in so far as this will reduce the likelihood that India and Pakistan will be freed from their restrictions, but it will not want it so high that total duty-free imports into this country will be maintained at or near their recent level. Negotiations on these lines will clearly be very difficult but Lancashire is prepared to undertake them It remains to be seen whether the Indian and Pakistani industries will overcome their reluctance to discuss a scheme on this basis.



Quantitative Control

Meantime, the Board of Trade and Customs authorities are negotiating with various interests the most suitable procedure for the quantitative control of duty-free cloth entering the home market in the event of an agreement being reached, and so far it has been postulated that there should be no interference with the re-export of imported grey cloth processed in the United Kingdom. It is not very clear, however, whether the restriction which the authorities contemplate will apply to the total imports from each of the three countries concerned or only to such of those imports as are sold in the British home market.

In the report of the export section's activities in the bulletin of the Cotton and Rayon Merchants Association, it is pointed out that the contraction of the British cotton industry and the direct competition of cheap producers overseas, particularly in the Far East, have led to an increased use of imported cloth by British converters in an endeavour to maintain the maximum volume of textile exports. The situation, it is suggested, will create difficult problems for exporters from time to time. One such problem concerns the use of Japanese grey cloth for re-export. Under arrangements which have been in operation for many years, British exporters are only permitted to use this cloth, which is restricted in volume by the Government, for a limited number of markets. No such restriction applies to exporters in Continental countries, who consequently enjoy a favoured position compared with British traders.

Plan for Progress

Industry in India

Steel biting  into the earth, metal and concrete taking shape as buildings, and giant machines roaring into action are today changing the pattern of India's economy through dynamic industrialisation.  Over Rs. 1,000 crores will be spent on the expansion of industries during the Second  Five Year Plan. This intensive development programme will increase the national income,  create more employment and bring the benefits of modern living to India's millions. 

Proud to play a part in this mighty adventure of building a new India, Textile Machinery Corporation Limited, pioneer in many fields of engineering, supplies industry, railways and river valley projects with a wide range of equipment.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded by 0.6 percent to 104.0 during the week ended 8th February, 1958, compared with 104.6 for the previous week. The index was lower by 2.0 percent and 2.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. Lower prices of masur in Bombay (−22%), betelnuts in Mangalore (new crop) (−21%), potatoes in Shillong (−15%), meat in Ludhiana (−14%), eggs (−18%), ragi in Bangalore (−9%), urad in Bombay (−8%), mung in Patna (−7%), barley in Jaipur and groundnut oil in Calcutta (−6% each), bajra in Agra, onions in Delhi, cashewnuts in Mangalore, ghee in Bombay, coconut oil in Cochin and cardamoms in Calcutta (−5% each), jowar (−4%) maize, arhar, tea and salt (−3% each), gram (−2%) and fish, coffee and chillies (−1% each) brought down the index for Food Articles by 0.7 percent to 99.9 compared with 100.6 (revised) for the previous week. The prices of meat in Delhi (+19%) and in Patna (+7%), rice in Balurghat (+12%), in Mercara (+7%) and in Badati and in Sador (Cooch Behar) (+5% each), potatoes in Farrukhabad and in Mettupalayam and oranges (+10% each), wheat in Dhandukha and gur in Muzaffarnagar (+6% each) and mustard oil (+1%), however, witnessed a rise. The index for Tobacco remained stationary at the previous week's level of 95. The index for the Fuel, Power, Light and Lubricants group also remained unchanged at the previous week's revised level of 114.5 in spite of a fall in the price of castor oil (−1%). Industrial Raw Materials recorded a fall of 0.7 percent to 110.4 compared with 111.2 for the previous week. Items which showed noticeable changes were: copra (−8%), raw jute, castorseed and gingellyseed (−4% each), cottonseed (−2%), rapeseed (+8%) and raw silk (+3%). The index for Intermediate Products declined by 0.4 percent to 105.5 due to a fall in the prices of linseed oil (−3%) and rayon yarn and coir varn (−1% each). The price of copper in Bombay (+7%), however, showed a rise. The prices of oilcakes (−2%) and jute manufactures (−1%) moved down while those of bicycles (+2%) showed an advance and in the result the index for Finished Products receded by 0.3 percent to 107.4 compared with 107.7 (revised) for the previous week.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to January 1958. As compared with December, the January Index for Food shows a drop of 7 points, while that for Clothing, Miscellaneous and Fuel and Lighting remain unchanged at 544, 285 and 281 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 4 points during January 1958.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100.

Compiled and constructed by the Statistical Department of "Capital"

Resident Field Engineer

The unique
HOLLERITH SERVICE

The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend

The Technical Service Man sees your installation on. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

RUBBER PRODUCTION FALLS

NEED FOR CHANGE IN COFFEE EXPORT POLICY

(FROM A SCUTH INDIAN CORRESPONDENT)

THE chairman of the Indian Rubber Board has said that there was an unexpected fall in the Indian production of natural rubber during 1957. As against the Board's estimate of about 27,000 tons, the actual crop amounted to only about 23,800 tons. He attributed this fall mainly to loss of tapping days on account of rain and labour troubles. The total consumption of both natural and synthetic rubber by the manufacturing industry in 1957 amounted to about 34,800 tons.

As for the replanting subsidy scheme of the Rubber Board, the chairman has said that the annual instalment of subsidy for 1957 was paid partly or wholly for replanting about 2,000 acres. It is expected that about 300 acres more will have been replanted during the year. In order to bridge the gap between production and consumption, he has emphasised the need for expanding rubber cultivation, besides replanting the entire area now under low-yielding trees.

The Kerala Land Reform Bill, in his opinion, has hindered the proper expansion of the rubber planting industry. Kerala accounts for about 93 percent of the total acreage under rubber and, therefore, the country should look to it for increasing rubber production, the chairman says. "Unfortunately, the Kerala Agrarian Relations Bill has come as a real threat to the industry in the State. In short, the industry would be crippled if the Bill was passed into law without proper saving provisions." The Board has appointed a nine-man sub-committee to meet the Kerala Ministry and explain to it the views of the Rubber Board on the provisions of the Agrarian Relations Bill as they affect the rubber plantation industry in Kerala.

Kerala Sales Tax on Tea

The chairman of the Tea Trade Association, Mr. D. K. Mukerji, in his address to the eighth annual conference held in Cochin a few days ago has said that the 5 percent sales tax on tea now being collected in Kerala is a very serious threat to the Cochin tea market. He has added that although there has been a steady increase in auction offerings during the period January-October 1957—both for Leaf and Dust sales—compared with the same period in 1956, a considerable weight of tea has been lost following the levy of this enhanced rate of sales tax in October. However, the diversion away from the Cochin market was not immediately reflected in the relevant figures, in view of the 14 percent increase in last year's crop. He has said that unless immediate relief comes forth, diversions from Cochin auctions will continue. The producer members of the Association will be taking up with the State and Central Governments the whole subject of the tax on plantations in south India.

Record Tea Crop

The south Indian tea crop in 1957 was a record one at 144.5 million lbs. This resulted in a greater weight of tea being offered at the Cochin auctions than in the previous year. Referring to the rapid growth of the Cochin tea market, Mr. Mukerji says that the quantity offered for sale has gone up from 8.5 million lbs in 1950 to approximately 42 million lbs in 1956 and to 53.5 million lbs in 1957. These figures, however, do not include private sales or sales through forward contracts.

Pepper Market Slightly Better

Russia is expected to lift 1,500 tons of pepper from Cochin towards the end of this month. She took 1,200 tons in January. It is understood that she has concluded a deal for March shipment also. New York, too, has been showing some interest for the past few days, and consequently, the pepper market has advanced slightly to Rs. 98.75 a cwt. for ready delivery. Market conditions are still considered unsatisfactory

Coffee Export Prices

On account of the disappointing prices quoted by export buyers, the Coffee Board was compelled to withdraw 360 tons out of the 443 tons offered for sale in the second auction of the new season held on 18th February. This was the experience in the first sale also which was held earlier this month. A declining export demand for Indian coffee and the new policy of improving the export trade will necessitate some changes in the export policy which is being followed for the past six years. Since 1952, the Board has been giving first consideration to the internal market at the instance of the Central Government. So long as the internal market dominated the Board's attention, the best grades went to meet inernal demand. But with the change of emphasis in favour of exports, the policy will have to be altered. The export market will have to be provided with the best of grades, and larger allocations will have to be made. The Board has now earmarked 5,294 tons of Arabica Plantation and 2,609 tons of Arabica Cherry for export out of the current season's estimated crop of 37,000 tons. It is pointed out that this is in conformity with the old policy of the Coffee Board. A disproportionate weight of inferior coffee is thus allocated for export market which is already faced with over-supply. The wisest thing the Board can do in this situation, it is pointed out, is to create demand abroad for the best quality coffee India produces. Plantation coffee is very popular in foreign markets. In export auctions, it realised approximately Rs. 100 a cwt. more than Arabica Cherry. On the other hand, the difference between Plantation and Cherry in the internal market is in the region of Rs. 30 a cwt. If larger earnings of foreign exchange is the aim, the Board should immediately reconsider the matter and replace the inferior grades allotted for export by Plantation coffee.

TEA CONSUMPTION IN CANADA INCREASES

COMPETITION FROM OTHER BEVERAGES

TEA sales in Canada, based on the contributions of packer members, were up almost 2 percent over the previous year, and were about 3 percent higher than in 1954-55, the first year of the Council's operations, says the third annual report of the Tea Council of Canada relating to the year ended June 1957. This is an encouraging state of affairs, it says, which, if maintained, would result in an average annual increase of approximately 1.25 million lbs in tea imports. Further analysis is necessary, however, before the full picture emerges. During the period in which the sales of tea have risen by 3 percent, the population has grown by 5.1 percent. There has, consequently, been a loss in *per capita* consumption in spite of the overall gains made. Canada is in the process of social and economic changes of major proportions, and various of these rapid changes tend to affect the consumption of tea adversely. For example, of the 1.5 million immigrants who have entered Canada since the end of the second world war, two-thirds are from non-tea drinking countries. The high birth-rate since 1946 has resulted in children forming a proportionately larger part of the population—and in Canada children do not drink tea. Again, the industrialisation and urbanisation of Canada has produced a marked shift away from old social (and dietary) habits which works to the disadvantage of tea, a beverage too often associated in Canadian minds with the past. Clearly, the solution lies not only in reminding the consumer of the merits of tea—he is already likely to be a confirmed tea drinker—but also in modifying his attitude to tea. For example, that although a majority of Canadian families drink tea in the home at both the noon and evening meals, in restaurants coffee outsells tea by at least five to one, and when guests call on the family it is the coffee pot and not the tea pot which is usually brought out.

These attitudes to tea were explored by a motivation study undertaken in the spring of 1956; following its lead, the council's advertising campaigns during the year under review were designed primarily to give tea "a new personality." If tea can be disassociated from the past and be thought of by the consuming public as youthful and modern, then a substantial increase in consumption should result. More tea is drunk in Canada than any other hot beverage. The market is established, but it needs to be expanded.

The Beverage Market

What is tea's place in the Canadian beverage market? To be able to compare tea with milk, beer and soft drinks it is necessary to convert the weight of leaf into the liquid measure of tea drunk. To do this, the figures of cups a lb consumed in homes were obtained by the Council's 1956 survey and a separte estimate was taken for tea used outside the home. A similar conversion was made for coffee. It will be appreciated that the methods adopted to convert tea and coffee tonnage into gallons of the beverages consumed are necessarily inexact. The figures, are, however, sufficiently exact only to illustrate broad categories and trends. The analysis revealed that tea occupies second place and not the first place among the beverages (milk, beer, coffee, tea and other drinks) as has been supposed for many years. During the five-year period 1952-56, coffee consumption increased by 45 percent, milk 15 percent, other beverages 17 percent and tea only 7 percent, while the population rose by 11 percent over the period. There is an interesting and illuminating discrepancy between the estimate of the increase in liquid tea consumption, 7 percent, and the percentage increase in poundage sold over the same period which is a little over 3 percent. This difference is accounted for by the increasing use of teabags. In 1952, for example, packaged tea accounted for 69 percent of total sales but by 1956 only 45 percent of tea sold was packaged. The 1956 survey showed that the average yield from a pound of teabags was 47 cups higher than the yield from the same quantity of packaged tea. It will be seen that, under these circumstances, a gain made in the number of cups consumed will not result in as large an increase in the tonnage consumed. If, using the above example, the percentage of tea going into bags had remained at the 1952 level, by 1956, the consumption of actual tea would have been over 1.5 million lbs a year higher. As long as the trend to teabags continues this situation will persist. When the ratio of teabags to packaged tea becomes constant, then any increase in cuppage will be reflected directly by poundage consumed. But, until that time it will require the greatest effort on the part of all sections of the industry if the increase in teabag consumption is to offset the loss of actual tea used.

Propaganda Through Television

Television has remained the basic medium for Tea Council messages. With careful selection of stations and times, it is possible to obtain a remarkably complete coverage of homes even in a country as vast as Canada. Television enters those homes with an immediacy and impact possessed by no other advertising medium. But costs are rising with the growth of the T.V. audience and the competition among advertisers for good times. Already it is apparent that during the current year, from July 1957 to June 1958, the frequency of flashes will have to be reduced and that a number of smaller stations will have to be removed from the schedule.

Tea Weeks

The three "Tea for Canada Weeks" and 1955, 1956 and 1957 have firmly established this event as a major annual grocery merchandising campaign. In addition, the "Tea Week" provides an unequalled opportunity of gaining a great deal of free editorial support for tea in the form of articles and pictures in magazines and newspapers and features on and mentions of tea over T.V. and radio.

Iced Tea

In June 1957 Tea Council's second major iced tea campaign was launched. This was the biggest Canadian iced tea drive ever. In addition to heavy consumer advertising in week-end papers, magazines, newspapers and on T.V., a concentrated attempt was made, for the first time, to interest the grocery trade in the possibilities iced tea offers them for increased summer sales of tea and related items such as lemons, sugar and summer salads and meats. Direct contacts with the grocery trade, as well as through the bulletins of the Retail Merchants Association and grocery trade papers, aroused considerable interest, and support was good both at point of sale and in retail advertising. Although there is no direct means of measuring the effects of the campaign upon iced tea consumption, these are two good reasons why it is well worthwhile. The principal aim is to revitalise the public's idea of tea, and iced tea, a modern looking, glamorous beverage is one way of helping achieve this. A second reason is that an aroused coffee trade supported by the Pan-American Coffee Bureau, is making increasing efforts to expand the iced coffee market—which at the moment, like the market for iced tea, is not large—and it is believed that the first of these beverages to become established will find a permanent place in the Canadian diet.

Market Research

The rôle which research plays in the Council's advertising programme is of prime importance. A major motivation study undertaken a year ago fundamentally changed the advertising approach and, as a result, some modifications in the use of advertising media were found not only advisable but necessary. During the year under review, there were marked increases in media costs and it is expected that there will be further increases during 1957-58. This creates a situation in which the schedule or type of coverage upon which the Tea Council's original advertising programme was based, may no longer be feasible. As a result of this situation, the Council's advertising agency has been requested, to prepare a market-by-market analysis showing the past and present advertising coverage in relation to population and tea sales. This will estimate for each section of the country, the effectiveness of T.V., radio, outdoor, newspaper, week-end paper and magazine advertising and relate this to the cost of coverage by each medium. This analysis will help determine future strategy and will assist judgement of the board of directors.

COCHIN TEA SALES

At Dust Sale E, 700,000 lbs of tea were on offer. There was a good but irregular demand. Milled dusts were slightly easier while other grades were about steady.

NO EXTENSION OF INDUSTRIES ACT TO PLANTATIONS

In a written reply to a question in the Lok Sabha, Mr. Nityanand Kanungo, Central Minister for Commerce, has said that the Government has been advised that the Industries (Development and Regulation) Act, 1951, cannot be extended to the plantation industries. The question of obtaining powers similar to those in the Industries Act, for regulating the plantation industries is under the Government's consideration, Mr. Kanungo says.

NEW COMMITTEE OF BENGAL CHAMBER

The following have been elected to the committee of the Bengal Chamber of Commerce and Industry for the year 1958-59. President, Mr. D. F. Macmillan of Andrew Yule and Co. Ltd.; vice-president, Mr. J. D. K. Brown of Jardine Henderson Ltd: members, Mr. G. H. J. Clarks of Imperial Tobacco Co. of India Ltd., Mr. H. J. M. Cook of the Chartered Bank, Mr. J. M. Lall of Imperial Chemical Industries (Private) Ltd., Mr. H. Mackay Tallack of Macneill and Barry Ltd., Mr. W. H. S. Michelmore of Bird and Co. (Private) Ltd., Mr. P. N. Miller of Burmah-Shell Oil Storage and Distributing Co. of India Ltd., Mr. A. T. Montgomery of Balmer Lawrie and Co. Ltd., Mr. P. F. G. W. Parish of Gillanders Arbuthnot and Co Ltd. and Mr. H. M. L. Williams of Guest, Keen, Williams Ltd.

Calcutta Markets

FAIR DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 34, held on 24th and 25th February, offerings at the Export auction, amounted to 59,919 packages, for which there was a fair demand. Common and low medium Brokens and Fannings declined by 4 to 6nP, while clean black ones, especially the Fannings as well as the leafy B.P.'s were frequently dearer. Low medium B.O.P.'s and O.Fgs. were about steady, but the brighter liquoring ones were strong and tended dearer, especially the O.Fgs. Good C.T.C.'s were readily taken up by the buyers at or about 10nP below valuations, while the best in this category were strong and sometimes dearer. The poorer types were irregular and there were some withdrawals. Plain Legg-cut teas were about 4 to 8nP easier, but the brighter liquoring types sold well and were often dearer. Whole leaf grade were about steady, while Darjeelings met with fair demand, especially those with flavour or attractive leaf appearance and they generally sold above valuations.

QUOTATIONS

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.25	2 2 0 to 2 3 0
Plain B P.	1.48 to 1.52	1 14 0
Medium B. P.	1.56 to 1.60	1 15 0 to 1 15 6
Best Assam C.T.C B. P.	2.70 to 2.80	2 6 0 (nom.)
Plain Fannings	1.56 to 1.60	
Medium Fannings	1.74 to 1.78	
Best Assam C.T. Fannings	2.80 to 3.00	

At the Internal Sale, a total of 19,663 chests of Dust was on offer, for which there was a better general demand than last week, and prices for all descriptions except the plainer C.T.C.'s and Darjeelings without flavour were dearer. There was improved enquiry from the Middle East buyers this week, and Dooars and Assams of orthodox manufacture, when they had clean black leaf appearance were generally dearer, while the remainder were firm. Good liquoring C.T.C.'s were about firm, while the best were occasionally dearer, but the plainer liquoring kinds were easier.

QUOTATIONS

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.60	1 12 0
Medium Assam Grainy Dust	1.63	1 12 0 to 1 13 0
Medium Assam C.T.C. Dust	1.75 to 1.95	2 1 0 to 2 3 0
Best Assam C.T.C. Dust	2.80 to 3.10	2 10 0 to 2 12 0

FREIGHT MARKETS DEPRESSED

THE chartering market shows no change, and a depressed state is still maintained in all transactions in the freight markets. Neither the transatlantic coal nor the Pacific grain market were active during the past week. Shipowners are having disappointment in every market. Transatlantic coal did not pay more than 22s. Foodgrains U.S. Gulf-Chittagong or Chalna 9,500 tons 10 percent rice paid $(U.S.) 13 with 650 tons discharge free, whereas north Pacific-Japan 13,000 tons wheat was fixed at $(U.S.) 5.50 with 1,000 tons discharge free. In the Indian ore market, 10,000 tons 5 percent ilmenite ore in bulk from Koilthottam to the U.S.A. has been fixed at $(U.S.) 8.40. There are enquiries for iron ore 9,500 tons, 10 percent East Coast-Japan ideas 37s 6d. Calcutta-Chalna coal 5,000 tons 5 percent has been fixed at a lower rate of 22s and tonnage is sought for Calcutta-Chittagong coal March shipment at 18s f.i.o. In the time charter section, an oil burner 10,850 tons d.w. voyage out, delivery Alexandria 25th February-3rd March redelivery Indonesia has been fixed at 18s 9d.

SUGAR EASIER

During the week ended 26th February, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 6,000 bags and stocks totalled 70,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 36-4 for ordinary grain and 38-6 for big grain. The market was easier.

LINSEED QUIETER

There was little change in the linseed market during the past week but a generally quieter tone prevailed and trading was dull. A slight advance in seeds to Rs. 21-7 at mid-week was followed by a reaction due to lack of interest from buyers. Crushers were inactive and the demand for oilcake was poor. The oil market was supported earlier in the week by enquiries from shippers, and business was reported at Rs. 50-8, but sellers were later quoting Rs. 50 with buyers keeping out of the market. There was no fresh business for export, with buyers' ideas around £105 10s and sellers indicating £107. Latest quotations were based on February-March at Rs 21-2 a maund.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 18th February and 24th February, 1958)

Cowhides: Wet salted (Ord.) 12,600 pcs. on the basis of Rs. 10.50 to Rs. 11.87; **Wet salted** (Slaughtered) 17,500 pcs. on the basis of Rs. 13.50 to Rs 21.

Goatskins, Wet salted (Patna, Daissee and Kustia) 33,600 pcs. on the basis of Rs. 315 to Rs. 320, Rs 340 to Rs. 350 and Rs. 380 to Rs. 400; Wet salted (she-killed) on the basis of Rs 350 and (he-killed) on the basis of Rs. 4 a piece: Dinajpur-Maldah 17,100 pcs on the basis of Rs 350 to Rs. 360: Purulia-Pakur 6,000 pcs on the basis of Rs 285 to Rs 300: Muzafferpore 3,400 pcs on the basis of Rs 325 to Rs 340: Muzafferpore (Heavy) 3,000 pcs. on the basis of Rs 370 to Rs. 375.

Bazaar Stocks

(24th February, 1958)

Cowhides: Wet salted 103,500 pcs.

Goatskins: Wet salted (Killed, Patna, Daissee, and Kustia) 31,700 pcs: Assam-Dinajpur 153,200 pcs: Muzafferpore - Patna - Pakur - Purneah 4,88,000 pcs.

Books

PARADISE FOR LAWYERS

Principles of the Law of Transfer. By S. M. Shah. (Published by N. M. Tripathi Private Ltd., Princess Street, Bombay. Price Rs. 10.50; 377 pages.)

Prior to the year 1882, the law of transfer of immoveable property in India was based on the general principles of "justice, equity and good conscience" as prevailed in England. The phrase has an ominous sound to those acquainted with its application to industrial legislation in this country; and in England, before the Conveyancing Act of 1881 recorded the first legislative attempt at brevity and simplicity in documents of sale of land, the threefold expression "justice, equity and good conscience" might reasonably have been reduced to one word; and that word was "humbug". "Justice, equity and good conscience" simply cloaked an attempt, and a successful one at that, during hundreds of years by lawyers to make the preparation of all documents concerned with the transfer of immoveable property a closed preserve by the use at interminable length of words and phrases centuries-old, the meaning of which the present-day lawyer, to say nothing of the average educated man, has not the least comprehension.

Nor in India is the subject an easy one even today. Matters like the rule against perpetuity, the doctrine of election, the intricacies of vested and contingent estates and the like make that impossible. But a work like the author's makes the task surmountable and even interesting. Mr. Shah has wisely discarded the more usual method of considering the complicated Act of 1882 as amended up-to-date section by section; instead he has grouped them in a simple and natural order with practical illustrations and in the form of 11 lectures. This is the second edition of the work which will be equally valuable to the student and the practitioner. The cardboard binding is not up to the standard required for a volume which will often be pulled down from bar library shelves.

* * * *

Indian Labour Code. (Third edition). By S. N. Bose. [Published by the Eastern Law House (Private) Ltd., Calcutta. Price Rs. 25; 1,585 pages.]

This is about the most monumental one-volume work which we have had occasion to review; and the only criticism the reviewer has to make is that it should have been comprised in at least two volumes. It is bound to be in constant use, and though the binding is stout, over 1,500 pages between two covers are too much for durability. The author has undertaken a laborious task, no less than the codification of the complete text of every single labour law enacted by the Government of this country. Mr. Bose has added to this survey of the whole field of legislation relating to labour, the rules framed under the various Acts. He has been at pains to secure from persons and organisations, such as Sir Walter Monckton, the World Federation of Trade Unions and others, forms of model constitutions of joint industrial councils, collective agreements and other precedents. The author has also added his own notes and views on the objects, reasons and operation of all the principal Acts, and as he is himself the law superintendent of a vast industrial undertaking, his practical experience lends value to his notes and comments.

* * * *

Labour Legislation in India. [Issued by the International Labour Office (India Branch), New Delhi. Price Rs. 1.50; 122 pages.]

This compact little volume might well be kept side by side with the massive compilation reviewed above and used as an introduction to, and explanation of, the statutes and rules set out therein. It has brought within the compass of a single short work not only an economic history of the whole of the labour enactments from the middle of the last century to the present time in this country, but also a descriptive account of all the objects and gradual development of the various aspects of labour legislation. It gives a staggering list of enactments passed into law within the past 30 years. Staggering, confusing and not yet digested; all with the object of securing industrial peace throughout the country by comprehensive welfare measures in every branch of industry. The extent of the industrial peace, if any, so secured is not within the scope of the survey.

SOME NOTABLE ANNUALS

Commerce, 1957 Annual Number. Edited by S. V. Rayan. (Published by Commerce (1935) Ltd. Price Rs. 7.50, pages 216).

One merit of this publication is its practical approach to the problems faced by industry and trade. It does not indulge in theoretical dissertations far removed from reality, but with facts and figures reviews industrial and agricultural problems, and commodity and stock market trends. It will prove to be a valuable work of reference for industrialists and business men. Of the many interesting articles, Cassandra discusses why the second plan has gone wrong, Mr. V. L. Mehta has taken as his theme the current controversy on co-operative farming and Mr. Jossleyn Hennessy writes on the availability of foreign capital in modern conditions. There are articles on transport, banking, labour, foreign trade and insurance. As the subjects discussed are topical and interesting, the publication deserves attention.

* * * *

The Eastern Economist Annual Number. Edited by E. P. W da Costa. (Published by the Hindustan Times Press. Price Rs. 7.50; pages 176.)

The *Eastern Economist* has chosen the rather bold theme of "India and China: 1947-56 and India in 1957" for its latest annual number. Statistical information on the Chinese economy being what it is, the work probably involved considerable journalistic daring, which the editor admits. The number is not merely a comparative study of economic progress in India and China, but also of the political and cultural *milieu* in which the two different economic systems are working. India's adoption of parliamentary democracy as her form of Government, the editor rightly says, has the backing of her tradition of tolerance, non-violence and love of liberty: the totalitarian Government of China is the product of a civilisation of which regimentation has been an essential part. China's quicker rate of economic progress is explained by the over-centralised form of her Government, and the publication brings out this fact well. In such important lines of production as iron and steel, cement, coal and electricity, China has gone very far ahead of India. Her rate of capital formation was 22.8 percent in 1956, compared with India's probable 8 to 9 percent in the same year. The picture finally emerges that the two Asian countries working under the spells of two different revolutions are engaged in a gigantic effort of economic development. Yet there is no need for a race in this matter, because the technique chosen by each is so different from the other's. In spite of some inadequacies, the publication is intellectually stimulating, and will be of great value to students of current affairs. There is a useful review of Indian economic activity in 1957.

* * * *

Indian Finance Annual and Year Book 1957 Edited by C. Swaminatha Rangaswami, Jr. (Published by Indian Financial Journals Private Ltd. Price Rs. 10; pages 148.)

The *Indian Finance* Annual contains several articles of topical interest covering a wide variety of Indian economic problems. The leading article surveys the progress of the second five year plan and the many difficulties it has run into; then explains the background in which it has come to face them, and stresses that there is as much need for courage and self-reliance as there is for economic realism and prudence. The foreign trade outlook, the labour situation, the task before the railways, inflation and a host of other problems has been reviewed. Mr. G. L. Bansal deals with the private sector's achievements, which are impressive. The "Industrial Profiles" section includes a number of companies, and the statistical supplement on economic indicators is a useful addition.

* * * *

The Economic Weekly Annual Number, January 1958. Edited by Sachin Chaudhuri. (Published by Asian New Age Publishers Private Ltd., 104 Apollo Street, Fort, Bombay 1. Price Rs. 2.50, pages 145).

The latest annual number of the *Economic Weekly* maintains its usual good standard. In a mixed bag are varied features of topical interest which will prove useful to lay readers and experts alike. An article on the foreign exchange crisis views the problem in its broad perspective and analyses it competently. Well-known writers have written theoretical essays which have an important bearing on India's economic development. Professor K. N. Raj discusses the income elasticity of demand which has relevance to the estimates made by the Foodgrains Enquiry Committee. Dr. A. K. Das Gupta makes a lucid analysis of the concept of "unlimited supply of labour" and suggests the necessity of a departure from Keynesian prescriptions for an under-developed economy. To the cynical, some of these discussions, weighted with theoretical niceties, may appear to be slightly unrealistic; but the treatment of popular themes such as inter-caste marriage in Maharashtra, the Congress misthe types of villages in West Bengal, on the whole, alliance with the Catholic church in Kerala and gives the publication special interest.

COMPANY AND PUBLIC NOTICES

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that an Annual General Meeting of SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 2-30 P.M., on Monday, the 31st day of March, 1958, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the period of 15 months ended 31st March, 1957 and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividend recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors, including Mr. S. B. Bose, who retires by rotation, and being 69 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

AND in this connection to consider, and, if thought fit, to pass the following resolution, of which special notice as required by Section 281 (2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION.

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation".

4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 20th to 31st March, 1958 both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 24th February, 1958.

NOTES:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 10th April, 1958 to those shareholders so entitled whose names appear in the Company's books on the 31st March, 1958 or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE KELVIN JUTE COMPANY, LIMITED.

NOTICE is hereby given that the Ninety-ninth Annual General Meeting of the Members of THE KELVIN JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 31st day of March, 1958, at 3 O'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the eleven months ended 31st May, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Mr. R. S. Kanoria and Mr. B. L. Bajoria, the retiring Directors.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

"That Mr. B. L. Bajoria be and is hereby appointed a Director of the Company liable to retirement by rotation."

Special notice dated 19th February, 1958 of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 17th to 31st March, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary.
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 27th February, 1958.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 15th April, 1958, only to those members whose names are registered in the Books of the Company on 31st March, 1958, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

T=Dividends Taxable.

BANKS

H indicates that Share capital is half paid. O. C. and Dd. indicate Ordinary Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A PEDESTRIAN BUDGET FOR 1958-59

OPPORTUNITIES LOST: THE NEED FOR MORE TAX INCENTIVES

THE Union Budget for 1958-59 is neither impressive nor inspiring. According to the Finance Minister, it was not intended it should be. The single important new proposal—that of a gifts tax—is designed to plug a loophole in the existing Estate Duty rather than to break any fresh fiscal ground. A Budget of this kind was probably to be expected now that the tax framework for the second plan is already largely established, and given, of course, the peevishness and jealousy towards the so-called rich which it is proudly admitted motivates a large proportion of India's taxation measures in this era of socialism. It is not completely without its advantages for the private sector, even if they do boil down to the purely negative consolation that taxes now appear to have reached their limit for the time being. This feature is, of course, only a virtue if it is accepted that nothing can be done within the existing framework to encourage and stimulate economic activity, and only a few moments' thought is required to confirm that this is definitely not so. In fact, a great deal could have been done, at remarkably little initial cost; and there has not been a time since the war when it was more urgently required than it is now. That is why this year's Budget is disappointing as well as dull. When so much needs to be done to encourage the private sector, a "pedestrian" Budget has little to recommend it. And if it was the intention to ignore this matter of incentives, then the decision must stand as a remarkable commentary on the level of economic awareness which exists nowadays in Central governing circles.

There is no reason why the Finance Minister should derive satisfaction from the way in which his Budget has been received—if indeed he is inclined to do so. After the heavy tax blows of the past few years, it would be surprising if private industry did not feel relief when the opportunity to supplement them is resisted. But the real test of an Indian Budget today is surely not simply whether it avoids adding to the already crushing burdens imposed on the private sector and its investors during the past few years, but whether it is designed to help the economy towards its goal of rapid development. It is only reasonable that all other criteria should take second place to this one, whether in fact they do or not. The points on which a modern Indian Budget must be judged are roughly five in number. The first is the probable impact on industrial expansion. The second is the effect likely on saving and investment. The third is the encouragement offered to exports. The fourth is whether the measures proposed are adequate to deal with whatever inflation is hampering the economy. And the fifth is the possible consequences for the confidence of foreign investors. When assessed on these five main points, it is easy to see how inadequate this year's Budget is to the needs of the day. This is, of course, not the present Finance Minister's fault; and it was hardly to be expected that there would be a general retreat so soon from the disastrous tax proposals made last year, in spite of the obvious need for it. But it is still true that much could have been done to encourage economic advance without radical departure from the present tax structure, however unsatisfactory that might be.

On the first point—the need to encourage industrial expansion—this Budget clearly misses many important opportunities. Apart from the fact that one of the main excuses for a high general level of taxation is the need to ensure resources for public enterprises, there is little here to put new heart into industry. The main exception is the much-needed reduction in the rates of excess dividend supertax paid by Section 23A companies. This meets a grievance of some standing and should help these concerns substantially at little appreciable cost to the revenue. But the timely relaxation of the tax straitjacket into which Section 23A companies have been forced, does not meet the need for a general reduction of the overall burden of taxation which is at present stifling all but the most resolute private enterprise. If it is accepted that revenue requirements rule out any major adjustment of this kind—and that is by no means a logical submission because yields would increase with the acceleration of activity that followed tax concessions—there is still no case against, say, removing the irritating provisions for the deposit of company reserves. Other measures would involve scarcely any loss—exempting companies from the wealth tax, for instance. At the same time, the bonus in terms of encouragement to private business would be considerable. The share markets had expected some reduction in the excise duty on cotton textiles. This is another concession which could have had good results, and would probably have paid for itself in the long run. Yet here again, there seems to have been inadequate appreciation of the problems which industry is facing today, let alone the opportunity which has been lost for increasing consumption and helping to mop up inflation. The increased development rebate for new ships is a proposal which will certainly help the industry concerned, but which has little significance for the economy generally. It would be a welcome move if the principle of higher development rebates were to be given a wider application altogether. On the contrary, the Budget has imposed certain restrictions on the use of these concessions throughout industry as a whole which may well affect the ability of individual concerns to pay a reasonable dividend on their share capital.

It is no doubt possible at the present time to construct a case for controlling the expansion of private industry on the grounds that foreign exchange resources are inadequate for anything more ambitious. This would be a sound enough argument if it did not appear to stand contradicted by the fact that the Budget is devoid of any measure designed to encourage the exports which would earn more of the foreign exchange required. The most obvious omission here concerns the export duty on tea. This particular imposition has become as burdensome and out-dated, taking in account present market conditions, as was the similar duty on jute goods exports just before it was withdrawn. There is no doubt that a concession of this kind would prove relatively costly. But it would ensure a useful dividend in the form of foreign exchange, and anyway it is probably better to make it now when markets can be held or regained than when they have been permanently lost to competitors.

Perhaps the most serious charge against a Budget of this kind, at a time like the present, is the effect it has on saving and investment. There is no doubting the need for encouragement in this field—it was admitted nine months ago when the Life Insurance Corporation was persuaded to buy the Mundhra shares on a large scale. That action led to one first-class scandal, but practically no improvement whatever in the stock markets. It might have been expected that this Budget would be used as an opportunity to attempt what the Life Insurance Corporation failed to do. But this has been true only in the negative sense that the investor may take some heart from the fact that it has not been as bad as its predecessors. There is nothing which will entice new capital into industry, or even encourage that which is already there to stay. If proof were needed of this, it is not necessary to go any further than the gold markets, which, unlike those for shares, continue to enjoy immoderate prosperity. A number of measures might, with benefit, have been included in this Budget. The first is the complete repeal of the wealth tax. If it is feared that this will prove too expensive, consolation can be taken from the fact that it is unlikely to yield much anyway and that the expenses of collection have always promised to be disproportionately high. In fact, this imposition has no economic justification at all; and even its originator did not go out of his way to claim it had. Another step which would have helped business confidence is the removal of the bonus share tax. Once again, this is a levy which will yield little, and the economic justification for which is highly doubtful. But instead of encouraging measures of this kind, the economy has been given a gifts tax and a lowering of the level at which Estate Duty becomes payable. Both these new provisions are likely to eat further into resources which might otherwise have found their way into productive investment. Such a loss is poor economic consolation for the contribution these impositions are supposed to be making to the "comprehensive" character of the tax system.

The other great need of the day to which this Budget makes little concession is that for foreign capital. Apart from the exemption of certain foreign nationals normally resident in India from the provisions of the wealth tax, the significance of which is difficult to judge, and the abandoning of the irritating procedure required to ensure tax-free leave passages, there is little in this Budget to entice foreigners and their capital to come to India, or to remain if already here. The wise recommendations set out in the recent survey of the National Council of Applied Economic Research, made under Government auspices and published about the time when most of the main Budget decisions were being made, have been largely ignored. This is unfortunate considering the stress that has been laid recently both here and in the United States on the importance of attracting private American resources to this country. What notice has been taken of foreign capital and nationals in this Budget would seem, on the face of things, to be designed to discourage their activities. The stricter definition of "technician", for instance, is difficult to understand even admitting the need to counter abuses. This was at least one way by which senior technical staff could be recruited—for an unnecessarily limited period it must be admitted—to the task of starting new industrial concerns, some of which were probably outside the present rigid classification. The need for fresh rules to calculate the value of perquisites, when rules, or at least conventions, already exist, is also confusing. This could lead to relaxations on certain items. On the other hand, it might mean further increases and renewed harassment. This is a matter of fundamental importance to foreign residents in India and its progress will no doubt be watched with extreme interest.

The most realistic feature of this year's Budget is probably the indication it has given that the figures for plan spending are now being made to conform more closely with what is possible, and not simply what is desired. An aspect not so promising is the continued increase in defence spending, which may be necessary, but seems oddly out of keeping in a country which has deliberately set out to become Asia's prototype of neutralism. Perhaps the best news Mr. Nehru was able to give was represented by the imposing list of foreign donations to India's economic development. These offers of assistance have transformed the foreign exchange situation in the past six months or so, but energetic measures will have to be taken if they are to continue to be made in future. It is still doubtful whether sufficient notice is being taken of excise duties as a means of raising

revenue as distinct from reducing consumption. This year s Budget has made little or no contribution towards spreading the tax burden more equitably, just as it has ignored the need for making the agricultural sector of the economy shoulder a larger share of the burden of development from which it benefits so widely.

There is enough evidence in the foregoing arguments to support the point that the Budget for 1958-59 is a disappointing document which passes over many admirable chances for improving the tax structure. It also introduces one remarkable injustice: that of granting Government employees a tax-free expense allowance up to one-fifth of their salaries. If this is a first contribution towards making this type of person into a privileged class, or if it is in any way a compensation for the blow which civil service morale has sustained lately, then it is wholly bad. Only its extension to cover those business executives at present disqualified under the 1955 Budget provisions is likely to prevent this point from becoming one of serious grievance between Government and private employees. Quibbles apart, India's structure of taxation requires radical overhaul in the light of the obvious need for more incentives for industry and the individual. This Budget has not met that need, and for that reason is not to be recommended as a significant contribution to this country's future progress and prosperity.

LITTLE BUTTER FOR PAKISTAN

THE Pakistani Budget for 1958-59, presented by the Finance Minister, Mr. Amjad Ali, last Thursday, proposes a more drastic increase in taxation than any of its ten predecessors. The somewhat unusual feature is that, even without any increase in taxes at all, the revenue budget would have shown a small surplus—of Rs. 22 lakhs (with revenue receipts at Rs 143.76 crores and revenue expenditure at Rs. 143.54 crores); yet the Finance Minister has thought fit to introduce no fewer than 28 fresh taxation proposals, in order to rope in an extra Rs. 11 40 crores. Business men in this country may or may not be consoled to notice that the whirlwinds of fiscal ambition, which Mr. T. T. Krishnamachari tried so vigorously to establish as an Indian monopoly a mere ten months ago, have already begun treacherously to cross her frontiers. Mr. Amjad Ali has claimed, as one of the primary justifications for his taxation proposals, that they are anti-inflationary. It is, again, an echo which will have a familiar ring in Indian ears.

Imitation of her otherwise not wholly admired neighbour is not, however, the sole inspiration underlying the latest Pakistani Budget. Mr. Amjad Ali's difficulties have been real, but familiar enough in under-developed countries where Governments spend their time wanting to be larger than life-size. Some of these difficulties were outlined succinctly by a leading Pakistani business man only last week: rising prices, falling production, declining foreign exchange earnings, worsening balance of payments and changing Governments. He might well have added: a sluggish bureaucracy, and the langour born of excessive dependence on foreign doles. To Mr Amjad Ali's credit it must be said that he has realistically pinpointed the major sources of these difficulties by declaring that "the country cannot have a large development programme, a heavy defence budget, substantial food imports and increasing administrative expenditure all at the same time. for any length of time, if the safety and stability of the economy is not to be seriously jeopardised." It is a sentence which might have borne inclusion in the Indian Finance Minister's Budget speech also, in preference to dissertations on the glories of the atomic age.

As a true politician, Mr. Amjad Ali claims that his new taxes are aimed primarily at soaking the rich. It happens to be an unfortunate and inconvenient fact that most of the rich in Pakistan are to be found among the landed aristocracy. The latter constitute a powerful political force, so, once again like a true politician, Mr. Amjad Ali has chosen to impose taxes which in fact affect them little. Among the more important levies are those relating to commercial and industrial enterprise: there is a new tax on bonus shares at the rate of two annas in the rupee, the supertax rebate of two annas in the rupee for private limited companies is to be reduced by one anna; the exemption limit for supertax on registered partnerships is being lowered from Rs. 25,000 to Rs. 5,000 a partner, subject to a maximum of Rs. 15,000 for each partnership, and the rates of the levy are being raised. Other changes are concerned with the computation of the business profits tax and the estate duty. In sum, the effect of these levies is likely to be an undermining of precisely those incentives, the lack of which is responsible for the slowness of Pakistani industrial development. Capital for industry is short in the country, and so is entrepreneurship, Mr. Amjad Ali responds by penalising both further, and describing his Budget as anti-inflationary.

An important aspect of his supposedly anti-inflationary measures is a widespread increase in Customs, excise and other duties. Heavier levies are proposed on imports of machinery and component parts (excluding agricultural machinery and parts); ply belting for machinery; copper wires and cables; motor-cars and spare parts; and a host of other industrial and consumer goods. Excise duties on various commodities, ranging from cigarettes to paints and varnishes, are to be raised. Development surcharges are proposed on all classes of railway passenger fares, and on telephone rent and trunk call fees. Karachi cinema-goers will pay more for the indifferent fare served them on their silver screens. In this category of taxation increases, too, the first reaction to Mr. Amjad Ali's anti-inflationary Budget in Pakistani markets has been a very substantial rise in prices.

The conclusion is inescapable that the Pakistani Finance Minister's approach to an unenviable task has been lop-sided. He has shown commendable realism in openly abjuring further resort to deficit financing as far as possible, and frankly cutting down on the development ambitions expressed by imaginative economists in recent years. Inflation in Pakistan is already serious, and if allowed to continue would do lasting harm to the economy. Mr. Amjad Ali proposes, therefore, a slower pace of economic development, with the primary emphasis on agriculture; this development, he feels, should be financed to a very large extent from revenue, since deficit financing would be unwise and the market for Government (as for private) borrowing is limited. With these broad aims, few will quarrel; but the manner in which it has been chosen to fulfil them raises serious doubts whether they will ever be achieved.

There is evidence to suggest that the Pakistani Government's emphasis on the importance of increasing agricultural production is recognisable only in its verbosity; actual achievement is poor. Those in the country who have vested interests in land are admittedly powerful; but unless the Government is prepared to grasp firmly the nettle of agrarian reform and agricultural taxation, food and cash crop production is unlikely to increase appreciably. Unless it does, development in other spheres too will suffer. It will suffer especially in industry, because a faster pace of industrial investment has necessarily to be supported by a larger supply of consumer goods, mainly food and cloth. As things stand, Pakistan's trouble briefly is that productive resources are being allowed to lie idle in the hands of vested agrarian interests, while already overburdened industries and long-harassed consumers are being mulcted. Mr. Amjad Ali's Budget signifies no change in policy aimed at removing this fundamental weakness. The other weakness, no less fundamental, arises from Pakistan's military ambitions, or sense of insecurity—depending on how you look at it. In the revenue budget alone, defence expenditure claims no less than Rs. 80.85 crores out of the total receipts of roughly Rs. 155 crores (after considering the new taxes). To the former figure may be added a provision of Rs. 6.89 crores in the capital budget for defence. The choice between guns and butter is, it seems, an inescapable one, and the suspicion remains that Pakistan may have made it wrongly. It is no consolation to know that some of her neighbours are sharing in the error.

Serving the Plan

The monies deposited with The Punjab National Bank Ltd. go to finance nation-building activities.

FIFTY GLORIOUS YEARS

THE STORY OF TATA STEEL

TISCO last week celebrated its Golden Jubilee with, among other things, a visit to Jamshedpur by the Prime Minister, and the publication of a book called *The Story of Tata Steel* by Verrier Elwin. The former is a measure of the importance the Government attaches to the contribution by the House of Tata in general and the Tata Iron and Steel Company in particular to the Indian economy, and the latter has one of the most dramatic industrial stories to tell. It is well told, although the subject is vaster than the treatment it receives from a writer-anthropologist; there is much to be done still by an economic historian.

The background against which a Parsee business man named Jamsetji Nusserwanji Tata thought of setting up India's first steel works is difficult adequately to recall today with all its historical, political, economic and emotional associations. All four played their part. It was a sense of history which inspired Jamsetji Tata's vision of an industrialised India. The Indian National Congress had been founded in 1885. In 1904 Gandhi, then 35, was engaged in his first experiment with non-violent resistance on the Phoenix Farm in South Africa. Quite early in the rise of Indian nationalism it was seen by the far-sighted that political freedom would mean but little unless accompanied by economic progress. To the nationalist movement the Tatas gave money. But their best energies were reserved for the constructive work of a corresponding economic renaissance. The *Swadeshi* movement had roused the country emotionally, and without this T.I.S.C.O. could hardly have raised the money it did inside the country.

Those who are detached enough to recognise imperialism and colonialism as historical phenomena, almost as part of a vigorous people's method of self-expression, and not merely as good or bad things, will be neither indignant nor surprised to be told that there were forces of resistance to the idea of a steel plant in a semi-colonial economy. Dr. Elwin quotes the characteristic comment of a bureaucrat of those days, Sir Frederick Upcott, who said: "Do you mean to say that the Tatas propose to make steel rails up to British specifications? Why, I will undertake to eat every pound of rail they succeed in making." When Dorabji Tata heard this he remarked dryly: "If he had carried out his undertaking, he would have had some slight indigestion." This said, it should be remembered that Sir Frederick's casual remark is not to be judged by today's climate of opinion. And, after everything has been said against what a colonial economy is supposed to be, it should not be forgotten that even before 1947 India was the eighth industrialised country in the world. Without T.I.S.C.O. the place would have been much lower down.

Although economic nationalism, no more reprehensible a thing than imperialism, lay behind the creation of the Tata Iron and Steel Company, it was never interpreted narrowly either by the founder or by his worthy successors. The goal of Indianisation was always there, still is, but not at the expense of efficiency. It needed not a little imagination and foresight to see that to man the industries India was going to have, it would be necessary to produce scientists and engineers of a high standard, and the Bangalore Institute was thought of, and brought into existence, fairly early in the proceedings. The foreign geologists and technicians who came in trained their Indian colleagues, and, when the time came for further expansion under the second plan, Tatas did not hesitate to turn to the United States for technical and other assistance. It is this cosmopolitan liberalism which has made Tatas what they are—the biggest and most progressive industrial unit in Asia.

It is fascinating to recall that chance played at least as big a part in the creation of T.I.S.C.O. as the determination of its founder. In some obscure archive lay sleeping a report by P. N. Bose on iron ore deposits, and except for the delay caused by an official's absence from his desk, nobody would probably have noticed it. The pioneering work done by men like Jamsetji, and at his instance by others such as Perin, Dorabji and Padshah set the foundations of a modern industry when thinking on such matters was primitive in countries besides India, and to this day Tatas retain the lead.

Be it modernisation of equipment, be it amenities for labour or a profit-sharing scheme, Tatas seem to do everything before everyone else in India. The labours of the Planning Commission have done the country credit. But, in a climate adversely different, it was the Tata-Birla plan which emboldened the country to hope for a better future. To aviation in India Mr. J. R. D. Tata's personal contribution was recently recalled with pride. As in steel, so in chemicals Tatas have made a big contribution. In hydro-electric generation, in cotton textiles and a host of other enterprises the name of Tatas is a household word and a respected label on any product. In its dealings with the consumer, the shareholder, the country, the Government and labour, Tatas enjoy a reputation which is truly international, and that is why they always get money wherever they go.

This blend of conservative business practice and creative planning for the future is to be seen in the two-million-ton programme, which is now going ahead according to schedule. In its fifty years, Tata Steel has made over 22 million tons of steel, paid Rs. 175 crores in wages and bonuses, Rs. 45 crores in dividends, well over Rs 70 crores in taxes and over Rs. 40 crores into the Government Price Equalisation Fund. When the two-million-ton programme is completed, the nation's saving in foreign exchange will be of the order of Rs. 90 crores.

Bhilai, Rourkela, Durgapur—they will all come, but nothing will diminish the glory that is Tatas'. The erstwhile foreign rulers of India acknowledged the contribution made by T.I.S.C.O. during the two world wars, and in these times of rapid industrial development of the country at peace its rôle is as important. A country's private enterprise is entitled to be judged by its best, and not by its worst, and if every business venture in India modelled itself on Tatas—in the fulfilment of contracts, in the payment of taxes and wages, in the delivery of goods as promised and billed for, in the financing of fundamental research—we would perhaps hear much less about socialism and the criticism of the private sector that goes with it. When others talked (and this is a form of legitimate political action) Jamsetji Tata worked, and the tradition continues—to the material advancement of India and to the preservation of freedom and democracy in Asia.

May the good work go on.

INDO-BRITISH TRADE EXPANDS

THE value of Indo-British trade, contrary to the expectations of some, expanded during 1957. According to the latest statistics available from U.K. sources, it amounted to nearly £334 million, compared with £309 million in 1956 and £289 million the year before. The 1957 figure is a record. It is remarkable that it should have been so in spite of the difficulties which both countries faced during the year. India had to impose drastic import restrictions following her sudden discovery of a balance of payments crisis; and the U.K. had to hold down her imports in order to improve her external accounts. Yet both countries were able to increase their mutual exchanges appreciably. India took 5.2 percent of total U.K. exports to all countries, against 4.4 percent in 1956, whereas the U.K. imported 3.8 percent of India's total exports, a gain of 0.2 percent over the previous year. India stood fourth as a market for U.K. exports, and India occupied fifth place as the supplier of U.K.'s imports (compared with her sixth place in 1956).

India is a major market for U.K. machinery, which is the largest single item in British exports to this country. In 1957, this pattern was maintained. In other words, the structure of trade remained broadly similar. India bought £67 million worth of machinery, which was £1 million more than in 1956, and she took the first place among importers of U.K. electrical machinery. In relative terms, 8.2 percent of all U.K. machinery, excluding electrical, went to India. In the case of electrical machinery, the percentage was 9.6. The largest individual machinery export items were textile, converting machinery, generating sets, machine tools, and industrial and works trucks. It was the same in the previous year. Some notable decreases occurred in U.K. exports of office equipment, pumps, mining and well drilling machinery and textile machinery. Increases which helped offset these falls were in sales of boilers and boiler-house plant, internal combustion engines, agricultural and track-laying tractors, machine tools excluding portable power tools, industrial and works trucks, tractor and mechanical handling equipment and converting machinery, transformers, switchgear and switchboards. Of the non-machinery exports, wool and other animal hair tops, and metal manufactures rose in volume. Road vehicles and aircraft exports increased sharply from about £12 million to £22 million. But declines occurred in petroleum and petroleum products, iron and steel, non-ferrous metals, and railway vehicles. Exports from India showed little structural change, with tea occupying the foremost position. Its exports jumped to £84 million in value from £68 million in 1956 (301 million lbs to 349 million lbs in volume), accounting for 53 percent of total U.K. imports from India. The U.K. imported £2 million more of leather and its manufactures, and the same amount of increase took place in its imports of cotton yarns and woven fabrics. Declines were marked in tobacco and its manufactures, raw cotton and animal and vegetable oils.

The outlook for the current year is uncertain. While no major fall is foreseen in the U.K.'s principal imports from India, this country may not be able to maintain her offtake of U.K. exports, especially machinery, because her foreign exchange position remains precarious. The U.K.'s own domestic and external difficulties will perhaps make it difficult for it to offer extensive credit facilities to India, but there is no denying the fact that in its own self-interest, Britain has to nurse this major market, which will almost certainly grow more important with the progress of India's economic plans.

CURRENT COIN

Trade Reorientation for Spencers.—In his address to shareholders of Spencer and Co. Ltd. at the latest annual general meeting (a fuller version appears elsewhere in this issue), Mr. Z. R. Irani, chairman, reports on the satisfactory working of the company. Those activities which have not involved imports have shown progress. Even so, the relaxation of import policy, when it comes, will be of considerable help, as in the case of machinery for the manufacture of aerated waters and certain specialised provisions and foods. The company has maintained its turnover in the consumer goods trade in spite of the Government's import policy. While Mr. Irani appreciates that imports have been cut because of the shortage of foreign exchange, he believes that in the development of an economy the production of heavy industries and consumer goods "must march hand in hand and that the balance must not be untowardly disturbed." Furthermore, in a country based on a free social order, consumer goods production and trade play a vital part. Referring to the company s expanding business, Mr. Irani says that the board is always on the look-out to employ working capital in as beneficial a way as possible. The schemes at present being examined are all connected with consumer goods, whether by way of manufacture, acquisition of interests or the expansion of trade. The company has finalised a comprehensive project for the manufacture of drugs and pharmaceuticals with one of the biggest American concerns, and in this it has secured a sizeable interest as the largest Indian investor. At present, the company has trading interests as a wholesaler and retailer of consumer goods; it owns three hotels and has a catering business; it manufactures and trades in drugs and pharmaceuticals, house furnishing and

Take your time.... from this moderately Priced Wall Clock....

Specially made in England for Anglo-Swiss Watch Co., and best time-keeper for Homes, Offices, Schools, Factories, Railways, etc. Well designed and fitted in solidly built teak wood cases, these clocks have solid steel pinions and brass plates highly polished throughout. Equipped with precision made 8-day movement. White enamel dial and bold arabic numerals.

Particular care taken to secure close and dust-tight fittings. Sent to any part of India securely packed. Our clocks last as many as 20 to 30 years. Easy to operate.

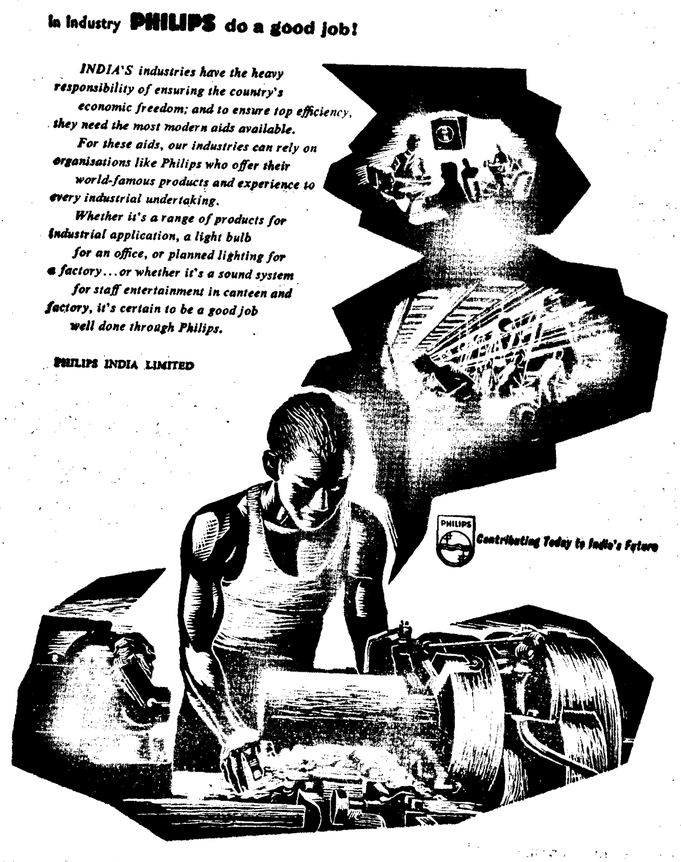
NO MAINTENANCE REQUIRED.

Overall Diameter 14" Depth 6" — Dial 12" Pendulum Movement.

Model No. CL-3 Non-Striking Clock. Rs. 104/- each.

Model No. CL-4 Striking Hour & Half-Hour. Rs. 135/- each.

GUARANTEED FOR 12 MONTHS



anglo-swiss CHALLENGE ROUND WALL CLOCKS

OFFICIAL TIME-KEEPERS ON AIRWAYS, RAILWAYS, ETC., AND IN MOST OFFICES OF CENTRAL AND PROVINCIAL GOVERNMENTS OF INDIA.

Expanding Indo-U.S. Trade.—A joint statement on Indo-U.S. economic relations has recently been signed in Washington by Mr. K. B. Lall, Joint Secretary to the Indian Ministry of Commerce and Industry, and Mr. Henry Kearns, Assistant Secretary in the U.S. Department of Commerce. It says that closer commercial relations between the two countries will prove mutually beneficial; for this purpose, the representatives express their desire to help develop private trade by appropriate means. Mr. Lall discusses the specific commodities which might be exported to the United States in larger quantities. He has given Mr. Kearns a list, the principal items of which are jute goods, tea, manganese ore, mica, cashewnuts, pepper and spices, frozen and preserved foods, hides and skins. In turn, Mr. Kearns observes that the United States is a principal supplier of commodities such as food-grains, industrial machinery, iron and steel products, non-ferrous metals, fertilisers and chemicals. It is, therefore, agreed that every possible measure should be taken to encourage greater contact between the business men of both countries. U.S. private investment in India is increasing, but it is still relatively small. The two representatives consider it desirable to encourage an increasing flow of U.S. private capital here in appropriate fields. They indicate their awareness of the need to conclude an Indo-U.S. convention for the avoidance of double taxation, and have agreed that it is desirable to explore the possibilities. Although the joint statement does not purport to be a trade pact, it has enumerated many of the principles which are normally embodied in bilateral trade agreements. It may pave the way for a broad Indo-U.S. trade treaty, talks on which are already in progress. The statement emphasises the importance of private trade, and it is hoped that there will be a larger flow of U.S. private capital to India. But the statement should be followed by positive fiscal concessions from the Government of India, without which the flow of U.S. investment to this country cannot be increased. Business men in both countries will be pleased that these problems are recognised at official level—in theory, if not yet in practice.

* * * *

Surplus Budget for Andhra Pradesh.—For the first time since the formation of Andhra Pradesh, a surplus Budget has been presented to the State Assembly by Dr. Gopal Reddy, Finance Minister. The Budget for 1958-59 shows a revenue surplus of Rs. 79 lakhs, receipts and expenditure being estimated at Rs. 63.66 crores and Rs. 62.87 crores, respectively. The current year, 1957-58, is expected to close with a revenue surplus of Rs. 3.12 crores as against the previously estimated deficit of Rs. 5.48 crores. The Finance Minister points out that the surplus is chiefly ascribable to the increased devolution of revenue and grants-in-aid from the Central Government under the award of the Second Finance Commission. The net addition to the revenues of the State under the award has been estimated at Rs. 6.27 crores in the current year and Rs. 7.05 crores in 1958-59. The latest Budget treats separately the Andhra and the Telengana regions of the State. Revenue from the Andhra region is estimated at Rs. 38.33 crores and from Telengana at Rs. 25.33 crores. Expenditure is placed at Rs. 40.05 crores and Rs. 22.82 crores, respectively. About Rs. 13.33 crores is provided for capital expenditure in Andhra and Rs. 7.95 crores in Telengana. Under the second five year plan, Rs. 30.02 crores have been allotted for various schemes. Central assistance for these schemes is estimated at Rs. 18 crores, so the State has to get the remainder from its own revenue sources and small savings schemes. The break-up of expenditure on plan schemes comprises Rs. 9.31 crores under revenue account, Rs. 18.42 crores under capital account and Rs. 2.29 crores under loans and advances. Dr. Gopal Reddy declares that the ways and means position remains bad. "If only we can raise substantial amounts through loans or small savings, we will be free from all anxieties. The last two years of our plan period may offer us some more difficulties. Therefore, I caution the hon'ble members not to be complacent about our temporary surplus, but to continue to be vigilant to provide for the requirements of the near future." Collections from small savings have not been as good as was expected originally, and the State might have to raise an open market loan during the Budget year. Land revenue, excise and *taccavi* arrears, in both the Andhra and the Telengana regions, exceed Rs. 10 crores and the Government proposes to launch a drive to collect at least Rs. 2 crores in 1958-59. The public debt of the State stood at Rs. 129 crores at the end of March 1957. Dr. Reddy says that it is expected to rise to Rs. 144.46 crores at the end of March 1958, and to Rs. 162.07 crores at the end of March 1959. The interest liability is expected to increase from Rs. 5.45 crores in 1957-58 to Rs. 6.66 crores in 1958-59.

* * * *

Shipping Service to U.S.A.—The Indian Overseas Shipping Company, which has just been formed in Bombay to operate a regular monthly dry cargo service between Indian and U.S. ports *via* the Pacific, expects to start operating in about four months' time. Mr. S. N. Haji, who is sponsoring the enterprise, has said that he hopes to buy second-hand vessels in good condition from abroad at a reasonable price (around Rs. 1 crore for each 10,000 d.w.t. ship capable of 17 knots speed), perhaps with deferred payment facilities. The company is to get the usual concessions given to domestic shipping enterprises, such as loans carrying 3 percent interest up to 85 percent of the cost of the vessel. Only Rs. 1.5 crores of the authorised capital of Rs. 6 crores is being issued at present; this amount is being subscribed by the promotors and their friends, so there is to be no public offer yet. With repeated assurances from New Delhi that Indian ships will have preference in carrying Government cargo from abroad, it should not be difficult for the new enterprise to get enough traffic. Large imports, of foodgrains and machinery especially, are likely from the United States. The value of Indo-U.S. trade is around Rs. 240 crores a year; assuming that 50 percent of this trade might be carried by U.S. vessels, Indian vessels should be able to obtain a fair portion of the remainder. Mr. Haji's plan to put four vessels on the route, if it works successfully, should enable the service to earn a fair sum each year in foreign exchange. As such, it might not be difficult to get enough foreign exchange in a few years to meet the deferred payment instalments for the ships which the company buys.

* * * *

Prospects of U.S. Aid.—The vice-president of the Irving Trust Company, who is a consultant to the U.S. Government on foreign aid and investment programmes, has reminded listeners at a reception arranged by the Canara Bank in Madras that the recent loan which the U.S. Export-Import Bank has promised India is the first instalment of aid for her second five year plan. Differences over foreign

or economic policy do not stand in the way of the United States extending help to India. Mr. August Maffry's declaration that Americans would be particularly interested in schemes for industrial development in south India—because "we understand that industrial development there has not been on par with industrial development in north India"—seems calculated to soothe the south and to raise hopes of outside capital coming for the paper mill and other projects that have not so far been put through because of the lack of capital. The view that the U.S. business recession has run its course also seems designed to encourage optimism about the future. It is, however, appreciated that incentives for foreign capital coming in volume are required in the form of exemptions and guarantees, and also that the import policy on capital goods for the private sector requires to be changed. The potential for industrial expansion in the south may have to be set out in detail and State Governments have to revise their views on mineral policy, if only because U.S. capital for the extractive industries might consider the scope for joint Indo-American enterprises limited in view of the Kolar gold mines take-over and the growing share of the State Trading Corporation in India's mineral exports.

* * * *

Falling Yield from State Undertakings.—The investment policy of the U.P. Government, as well as the dwindling yield from State-owned concerns, have been heavily criticised in the State Legislature. Several Opposition members have urged that autonomous corporations be set up to run these undertakings. The State Government purchased shares worth Rs. 61.76 lakhs in 27 companies, but most of them have either gone bankrupt or been closed. The State canals, which yielded a profit of Rs. 1.23 crores in 1951, have suffered a loss of Rs. 17.31 lakhs in the current year. The mechanised State farms show a loss of Rs. 32.63 lakhs and the grain supply schemes a loss of Rs. 1.41 crores. In spite of the expansion of Government road transport, profits from this source have been dwindling. In 1956-57, the investments in bus services amounted to Rs. 5.46 crores and the net gain was Rs. 65.76 lakhs, or a return of 12.05 percent. In the current year, the investment has risen to Rs. 6.24 crores but the percentage of gain is expected to be only 2.1. A similar trend is noticed in the working of the Kanpur Electric Supply Administration. The profit was 5.25 percent in 1956-57, but it is only 2.31 percent in the current year, the budgeted estimates for the coming year being slightly higher at 3.16 percent. The indebtedness of the State, which was Rs. 40.87 crores in 1947, has risen to Rs. 328.38 crores, and the interest charges alone account for Rs. 9 crores annually. The Chief Minister, Dr. Sampurnanand, has said that sinking funds have been created for all these debts, except those owed to the Government of India, and that too on the express instructions of the Planning Commission. But the Opposition contends—not without justification—that although expenditure on the services has been rising steadily, Uttar Pradesh has the lowest *per capita* expenditure on social services, namely, Rs. 3.2, as compared with Rs. 4.2 in Andhra, Rs. 7.3 in West Bengal, Rs. 4.6 in Rajasthan and Rs. 3.4 in Orissa. The *per capita* expenditure on administration has risen from Rs. 2.3 in 1952 to Rs. 2.7 in 1957. The number of Government employees has increased from 275,000 in 1954 to 343,250 in 1956. The targets for small savings have not only not been achieved, but collections have been accompanied by heavy withdrawals.

* * * *

Goods Distribution by Road.—Significant changes have taken place in the transport and distribution of goods in recent years. They are described in a lecture delivered to the business management school of Madras University by Mr. D. A. Hughes of Glaxo. He points out that sales and distribution methods vary from industry to industry. Light goods such as medicines are despatched in small consignments to retailers, to meet the requirements of the limited consumer (the medical profession) and to prevent the possible substitution of the doctor's requirements. Road transport has come to the aid of the sales manager; the present demand is for early delivery, and pharmaceutical products are sent in no more than six days to a town of reasonable size. This means a saving to the consumer, because despatch by passenger train is much costlier. Retailers are able to work on a smaller margin of profit and their capital is not locked up because quicker turnover is matched by prompt replacement. Mr. Hughes says that 80 to 90 percent of small parcel traffic is now handled by road transport companies. Over 300 towns in south India are served by such companies having godowns or agents. In spite of the many curbs on road transport, competition is keen and the service efficient. While railway charges are going up, road transport is becoming cheaper. The avoidance of demurrage, and the collection of consignments without the help of a forwarding agent, are advantages for the consignor, who is able to send goods consignment notes or lorry receipts by registered post on the day the goods are despatched. The satisfied customer's view of road transport is a reassuring indication of what the latter has achieved. If full loads are carried and efficient trailers used, lorry charges may be expected to become even more competitive. Garages have been able to start local services and the success of direct delivery by lorry is obvious. The growth of fleets and the operation of workshops to take care of vehicles are results following directly from the preference for long-distance transport by road. Whether a State monopoly can do equally well is debatable. Mr. Hughes mentions that payment is still in the form of cash at the bank in return for the document or the parcel. The long distances between distributor and retailer necessitate cash transactions, until banks develop their advisory bureaux to provide references over an extensive area. But payments against documents like rail receipts require a collecting depôt reasonably near the customer. This is one reason why road transport is preferred, especially since passenger trains have become too expensive for sending parcels.

* * * *

Industrial Tripartite Committees.—The experiment of standing tripartite committees, which has just been launched in Kanpur by U.P.'s Labour Minister, Acharya Jugul Kishore, will be watched with interest even outside the State. Four such committees have been set up—for the textile industry in Kanpur, for the textile industry outside Kanpur, for the sugar industry and for electrical undertakings in the whole of U.P. The psychological approach featuring the experiment, said to be the first of its kind in the whole country, is that both labour and capital are tired of going to court for the redress of grievances, and that compromises reached across the table are the best way of running industry. This, of course, was also the inspiration for the joint councils recommended at the recent seminar organised by the Central Labour Ministry; to give a fair trial to the idea, 30 industrial undertakings, according to Mr. Nanda, have voluntarily come forward. Representatives of both employers and labour have agreed in Kanpur that the experience of small tripartite committees which have been set up hitherto for specific purposes like the settlement of the bonus question has been encouraging. It is also said that the new tripartite committees will have no accumulation of problems and will thus have a clean slate to begin with. This is not quite true, because the textile industry in the State has to deal with a backlog of problems for which the U.P. Government blames the Centre. At the same time, as Mr. Kashinath Pande, president of the U.P. branch of the I.N.T.U.C. has admitted, "Kanpur textile history is devoid of compromises, though Bombay and Ahmedabad have shown remarkable harmony." As far as the sugar industry is concerned, the payment of bonus totalling Rs. 71 lakhs has been agreed to in spite of differences, while the recently appointed Wage Board for the Sugar Industry is expected to take up other matters in dispute. The bonus question in electricity undertakings has also been temporarily settled.

* * * *

Importers in Trouble.—The drastic cuts in imports, including the complete ban on many foreign consumer goods, have created acute shortages. As a result, there has been a considerable increase in prices. Although the indigenous production of many commodities has gone up substantially, self-sufficiency has not been achieved in most cases, partly because, under the impact of development spending, demand has increased. Speaking at the annual general meeting of the All India Importers Association, Mr. Shantilal M. Shah, president, has said that the acute scarcity of goods is causing hardship to consumers, and there is a limit to the austerity and sacrifice which can be demanded of the people. The continuance of drastic cuts in imports is not in the larger interests of the country, since it will affect the rate of development. Meeting the foreign exchange crisis by intensified import restrictions might prove to be harmful, since it will curtail the supply of raw materials and capital goods, and therefore impinge upon production, employment and national income. In spite of the adoption of a number of measures to promote exports, the latter have not increased; on the contrary, there has been a slight decline. "Foreign trade is a two-way traffic and any policy designed to shut out completely or even partially for long the import of foreign goods, is bound to react on our export trade, in as much as the countries whose exportable goods are affected by our import restrictions will not be encouraged to buy our goods, and this will aggravate our balance of payments difficulties." Cuts in import quotas have led to the closure of trading concerns which depended on foreign goods; this has worsened the employment position. The problem has been aggravated by indigenous manufacturers not distributing their products through established trade channels. An appeal made to the former by the Central Minister for Commerce and Industry some time ago, to use the established trade, has fallen on deaf ears, with the result that a "grim prospect of unemployment is in store" for importers in general and the small ones in particular. Referring to the activities of the State Trading Corporation, Mr. Shah says that its increasing encroachment into the import and export trade has tended to increase unemployment among a large number of people engaged in such trade. While it has done a praiseworthy job in negotiating agreements with a number of countries, its ever-widening activities have gone far beyond the avowed objectives for which it was founded—to trade with communist countries and to increase exports where the existing trade channels were inadequate.

* * * *

Co-operative Credit.—Co-operative credit societies in Uttar Pradesh are facing a crisis because of heavy withdrawals, competition from joint-stock banks and the inability of the co-operative agencies to get adequate advances from the Reserve Bank for agricultural credit requirements. The condition of these societies, incidentally, does not seem to differ much from what Sir Malcolm Darling recently commented upon in his report on co-operatives in India as a whole. Today there are nearly half a dozen agencies which advance loans to cultivators in U.P. This adds to the overhead costs of each agency, and results in influential persons getting loans from several agencies while others do not get anything from any source. The State's total credit requirements for short-term loans are estimated at Rs. 100 crores, but the figure was worked out by a banking enquiry committee in 1931 and has long since become outdated. There is also a widespread complaint that in giving loans to cultivators, the societies do not always follow the recommendation of the Rural Credit Survey Committee—that loans should not exceed one-third of the total value of the produce. Instead, it is said, the societies give loans on the basis of the "status" of the borrower, status being computed on the basis of 40 times the rental value of *bhumidhari* lands, ten times the value of *sirdari* lands and so on. Drought and flood have already caused extensive damage in the countryside. The continuing fall in the total rural income of the State, calculated at current prices, which has come down from Rs. 986.6 crores in 1951-52 to Rs. 870.1 crores in 1955-56, is, in a way, an index of the credit shortage.

* * * *

Industries in Andhra.—In a resolution adopted at its annual meeting, the Hyderabad (Deccan) Chamber of Commerce has urged that the heavy and uneconomic expenditure on community projects and social services should be reduced, and the amounts thus saved should be earmarked for the industrial expansion of Andhra Pradesh. The resolution points out that the State's second five year plan, which involves an outlay of Rs. 175.35 crores, proposes using 22 percent of the total outlay for agricultural production and community centres, 45 percent for irrigation and power, and 20 percent for social services. Hardly 5 percent is provided for large-scale industrial development, and no industrial plan has been included for the Telengana region. The Chamber asks the Government to help private enterprise in establishing a fertiliser plant in Kithagudium, cement mills in Ramgundam and Alampur and one or two sugar factories. It also urges the Government to liberalise the operations of the State Bank of India and the State Bank of Hyderabad so as to provide medium-term credit for the development of industry and trade; to assist in setting up an autonomous industrial development corporation; and to associate representatives of the Chamber with the State Planning Board.

WORLD GOLD OUTPUT

AS we prognosticated some months ago, it has now been made apparent by the enhanced output of the three leading mining countries that the world's production for 1897 will show a very considerable increase on the figures for 1896. The Rand reports 3,034,474 ozs; Australasia about 3,000,000 ozs; and the United States 2,700,000 ozs. If we put Russia down for 1,600,000 ozs. and all other gold-producing countries, including India, for 1,500,000 ozs. we have a grand total of more than 11,800,000 ozs. worth about £44,250,000. This is a considerable advance on the 10,250,000 ozs. of 1896 and is more than double the output of 1890. The sustained progressive productiveness of the old fields, and the rapid development of the new, foreshadow for 1898 a still more rapid rate of increase. Colorado has now come actively to the front; California keeps up her production by the employment of modern appliances; South Africa progresses at a rate as steady as it is remarkable; there are satisfactory increases in Victoria and Queensland, and a big upward jump in Western Australia, while it is now beyond question that the Klondike district is destined to become a factor of great importance in the gold production of the world. More deposits are daily discovered in the surrounding country; and the vastness of the regions of auriferous gravels from the Klondike to Cassiar makes it pretty certain that, in spite of climatic disadvantages, the gold production of Canada will attain very startling proportions.

Without Prejudice

EMPLOYEE DISOBEYS UNION ORDER TO STOP WORK

COURT UPHOLDS RIGHT TO DO SO

(FROM OUR LEGAL CORRESPONDENT)

THIS is the sort of case, the essential facts in which may be duplicated in India at any time, so we will go into the principles involved at some length. The question is this. A workman is a member of a trade union. He is ordered by the union to stop work. He refuses to do so. Thereupon the union, by a threat to withdraw all work, secures his dismissal. Not only that, but the district committee successfully prevents his securing any job anywhere in the district. Has the workman any remedy in law against the union or its officials and, if so, what? Various causes of action suggest themselves in a case of this kind; conspiracy, libel, slander, for example. But the general principle is that to bring about a breach of contract is an actionable wrong; and a single person or a body of persons commit an actionable wrong if he or they inflict damage on another by the intentional employment of unlawful means, such as threats of coercive action to injure that person in his business or means of livelihood.

Curiously enough, the most instructive case the writer has been able to discover in his search for authority concerns "workmen" of a very different kind. Medical practitioners. Not so very curious though, perhaps, when we remember that they are members of what is probably the most powerful trade union in the world, the British Medical Association. In the year 1919, there were practising, in the city of Coventry, a Dr. Pratt and two other medical men. These gentlemen had fallen foul of a number of other practitioners in the city and district, and also of the Association, by being engaged in what was known as "contract practice". What that practice is or was, the writer does not know, and it is of no importance. The point is that many other doctors objected to it. The Association upheld the objection and ordered the three practitioners to desist from engaging in contract practice. They declined to do so, being of opinion that they were within their rights; whereupon the Association and its members, other than the "offenders", got to work and, in the words of McCardie J., later "subjected them to a prolonged, deliberate and pitiless boycott." They were professional and social outcasts. They stuck it out for a long time but eventually sued the powerful and wealthy Association and some of their colleagues for damages. The Association was unperturbed and fought the case out to a finish, calmly claiming that it and its members had a legal right to employ the boycott to the utmost extent against the plaintiffs; and the Association accepted responsibility for the acts of the various divisions and branches concerned in the boycott, as also for the acts of the officials and agents of those divisions and branches who had organised the boycott and kept it going. A nasty and ugly story, you may think; the whole official body of a great and learned profession combining to crush three of its members who were exercising their legitimate legal rights. And then ignominiously failing.

The court held—and this is the principle for which we have been seeking—that in a suit for molesting a person in the exercise of his calling, a corporation may, by its servants acting within the scope of their authority, be guilty of malice. The court held also that the three doctors who had claimed damages for conspiracy, slander and libel had a good cause of action against every one of the defendants. And further that those rules of the Association, by means of which the boycott had been enforced, were in restraint of trade and void, as being against public policy. Damages were awarded to every one of the three plaintiffs.

We may be pretty certain that the British Medical Association in 1919 did not realise, and would have been more than a little shocked if the fact had been pointed out to it, that it and its members were to all intents and purposes a trade union, and that its tyrannical boycott of three of its individual members was thirty-odd years later to be as a beacon light to a labouring man in Hartlepool, boycotted in the same arbitrary way by officials of his own trade union. But *Pratt and others* v *British Medical Association and others*[1] cleared the way for the successful plaintiff in *Huntley* v *Thornton*[2]. Before we come to the facts in the latter case, we must bear in mind that, both in the United Kingdom and in India, registered trade unions are by statute immune from civil suits in certain cases and this immunity extends not only to the trade unions as such but also to their officers and individual members. But the immunity applies only to acts "done in contemplation or furtherance of *a trade dispute*" (Indian Trade Unions Act, Section 18.)

And that brings us to the English case. P, the plaintiff, who was employed at Hartlepool and was a member of a registered trade union, disobeyed an order of the executive council of his union ordering him to stop work for 24 hours. The district committee of the union passed a resolution that the executive council of the union be recommended to expel him, but the latter declined to act upon it. P left Hartlepool but returned, seeking employment there, whereupon the secretary of the Hartlepool district committee circulated to all the shop stewards of the district a resolution of the district committee to the effect that efforts should be made to ensure that P was not allowed to obtain work under any consideration, and that the labour office be informed that if the plaintiff was given a job it was their intention to withdraw all labour in protest. Note the resemblance of the Hartlepool district committee to the British Medical Association in "the prolonged, deliberate and pitiless boycott" and in "molesting a person in the exercise of his calling". The secretary of the district committee also, by letter, informed T, the secretary of the Tees-side district committee, of the resolution and of the fact that he believed P was attempting to obtain work in that district.

P did obtain work at a power station there and T brought the Hartlepool letter before his committee, which directed him to inform the shop stewards that P was not desirable in the district till he had made peace with the Hartlepool district committee. T then directed L, a shop steward of the power station, to oppose P's employment there and T and L pressed for his dismissal. Through this pressure P was dismissed; and then tried to make peace with the Hartlepool committee. His overtures were rejected and he was informed that he had been expelled from the union, though his expulsion was unauthorised and was not known to the executive council. P filed a suit, claiming damages for conspiracy against T and L and the secretary and members of the Hartlepool committee, saying (1) that he had been unlawfully ordered to strike, and (2) that since then the defendants had conspired to injure him for failing to obey that order. Alternatively, P alleged that the acts of the defendants, apart from any element of conspiracy, were in themselves wrongful and tortious. The defendants denied P's allegations and pleaded Section 3 of the Trade Disputes Act, 1906 (equivalent in India to the statutory defence above-named).

* * * *

The writer may be forgiven if he digresses a little here. Being shocked by what appeared to him a piece of monstrous persecution, he consulted an authority to find out whether there is any possible justification for it. There is indeed. It was not the union which persecuted P but P who persecuted the union. The late Professor Harold Laski was not only Head of the Faculty of Political Science in London University but also chairman of the Labour Party, and what he says goes. He has a good deal to say on the principle involved in *A Grammar of Politics*. It boils down to this: "(The compulsory recognition of trade unionism) means the disappearance of that unassociated worker who has been supposed by an unamiable fiction, free to sell his labour in the dearest market. The worker who does not stand by his fellows is in fact destroying their access to proper standards of life." P was rightly made to "disappear". He was trying to destroy the proper standards of life of the union and not the other way round.

The High Court, however, held different views from those of the unpredictable Professor Laski. The Hartlepool workman was successful. It was held by Harman J. that (1) a suit for conspiracy was maintainable against all the defendants, except T and L, as amounting to a combination to injure the plaintiff in his trade and not to further the legitimate trade interests of the defendants; (2) that T (the secretary of the Tees-side committee) and L (the Tees-side shop steward) were not guilty of conspiracy since there was no evidence that their predominant motive was to injure P; and (3) that the statutory protection was of no avail to the defendants guilty of conspiracy for there was no "trade dispute" within the meaning of the Act. They were not asserting a trade right nor were their actions in pursuance of a trade dispute, but merely of a grudge they harboured against the plaintiff.

A case well worth noting in India.

WHAT a dull Budget it has been this time. I am not implying there was anything unusually gloomy about the new tax proposals—not compared with those of the past two years that is. It was simply the absence of any particular anticipations, together with the feeling that things could not possibly get much worse, while, taking everything into consideration, it is unlikely there will be any improvement for some time yet. The result was apathy, and it seems this was just about as true of Dalal Street and even political circles in New Delhi, as it was of Lyons Range. The new Finance Minister showed rare wisdom in making one of the shortest Budget speeches on record—it would have been a pity to have overplayed such an unspectacular hand. Brevity is not usually Mr. Nehru's strong suit, therefore the crispness of his first Budget performance is a subject for congratulation, considering the short notice on which it was given. Apart from their impact on my modest pocket, I find all Indian Budgets these days uniformly depressing. This was certainly no exception. And what makes them so is the monotonous habit which each successive Finance Minister has of presenting a high general level of taxation as something necessarily novel and up-to-date. I notice even Mr. Nehru referred to "old grooves" when speaking of the budgetary habits of the past. High taxes may be inseparable from socialism, and may have economic justifications as well, but there is certainly nothing new or modern about them. In fact, the nearest parallel to the stifling tax burden India has shouldered, is probably to be found in the rapacious revenue-raising habits of feudal days. The modern conception of taxation is surely, among other things, that it should stimulate economic activity—an aspect which did not concern medieval tyrants, but should certainly interest modern democratic governments. And that I submit was what made Mr. Nehru's Budget a depressing one—there was so little about it which really suggested that rapid industrial progress is all that stands between this country and disaster. Instead, we heard once again about the "goal of a socialist pattern of society" and nothing in India today has got into a more rigid groove than that. I often wonder if the Indian people are going to find their socialism sufficient consolation for the poverty with which its present pursuit threatens to leave them permanently encumbered.

* * * *

An Indian friend mentioned to me the other day, rather ruefully, that he hoped the next Indian statesman to criticise a foreign Government for denying its nationals passports, would take a closer look at the attitude of his own. My friend tells me it has just taken him roughly five weeks to get a passport, which is perhaps not an unconscionably long time by the standards of India's bureaucracy these days, although it can be unnecessarily irritating when one has urgent business abroad. But it was what went on during those five weeks which was most remarkable. In parenthesis, I might mention that the person concerned has nothing against him on political or any other grounds, which would prevent his getting a passport—in fact, he held one until it expired in the normal way two years ago. With the new application was sent the usual bank certificate concerning his financial standing. Two days later the External Affairs Ministry asked his employers to certify that he was getting the salary mentioned in the application. The certificate was duly produced. A few more days passed, and my friend was visited by two gentlemen from the security police. These asked various questions, the answer to every single one of which had already been given on the application form. This presumably constituted the "police investigation" and seems to have been as rewarding an exercise as lodging a complaint with the Posts and Telegraphs people. A few more days, and then the passport office asked my friend for a certificate from his employers saying he would continue to get his salary while he was abroad. The intrinsic silliness of this seems to have escaped the officials concerned: if my friend resigns his job next week and proceeds to Alaska in August, his present employer will not be paying him any salary and will be under no obligation to do so. Anyway, the passport has at last arrived, but it is for two years instead of the normal five. Presumably all this rigmarole will have to be gone through again, at great expense to the Indian taxpayer, when renewal time comes round. The reluctance to grant a five-year passport cannot be political. It has been hinted that it may be financial; but that seems extraordinary considering my friend is rather better off than the more honest of the Government's Deputy Secretaries. Can it be that the External Affairs Ministry simply does not like Indians to go abroad, unless, of course, they happen to be in the Government's employ?

A DITCHER'S DIARY

* * * *

"The Gandhi of the Western World". Yes, Europe now has its Gandhi. I suspect that this title might be the invention of the publishing houses that have had a great success with the half-dozen books by and about Danilo Dolci, and yet there is undoubtedly something in the personality and the work of this young Italian that entitles him to be compared, without disrespect, to the Mahatma. Dolci is at this moment on a Vinoba-style tour that is taking him through Switzerland, France, England and Scandinavia. So in a few weeks his fame will have spread far beyond Italy and this is, therefore, a suitable time to introduce him to the compatriots of the saint he acknowledges as his master. In the decade since his death, the Mahatma has not wanted for would-be imitators, most of them crackpots; Vinoba Bhave and Dolci are probably the only two who have had Gandhi's gift of awakening the respect even of those who reject their teachings. Dolci—tall, blond, blue-eyed, bespectacled—is the thirty-three-year-old son of a Trieste stationmaster, who since 1952 has chosen to share the life of the poorest, most violent and most ignorant people of all Europe, the peasants of Sicily. There, to a community that still considers murder an honourable exploit, where cold-blooded violence is kept alive by ancient traditions of feud, vendetta and vengeance, where mass unemployment is relieved by banditry and prostitution, and where every spark of humanity has been quenched by the poverty of the people and the corruption of the police and the priesthood, Dolci has gone to preach non-violence, self-help and spiritual regeneration. He has organised collective hunger-strikes—fasting, himself, for eight days together—and founded "villages of God", which are a sort of combined *ashram* and community development project. Needless to say, established authority has opposed him. A priesthood that in this region is in the hands of the land-owning class has forced him to break with Catholicism, while the police arrested him for "disturbing public order" when he led peasants to restore a neglected road. Dolci differs from Gandhi on two important points. He believes in the machine and says economic improvement must accompany spiritual revival in Sicily; his present tour of north Europe is to collect not money or land but technicians. And of non-violence he says something that I would draw to the attention of some Indian followers of the same faith: "I don't make non-violence a universal doctrine. It seems to me to be the faith required in Sicilian conditions. Perhaps it would be absurd applied to other cases".

* * * *

Soccer lovers in Calcutta who have, not for the first time, been promised a composite sports stadium are to be forgiven if they remain mildly sceptical until they actually see the Rs. 1-crore structure with their own eyes. Only men with as much love for sport as capacity for physical endurance, I understand, now venture to go to the Maidan to see important engagements, and stories of rackets in tickets are legion. Then there is the law-and-order problem; whether a match accompanied by a variety of tensions (not all of them connected with sport) can be played at all on a certain day depends very largely on the Calcutta Police. It is almost impossible to unravel all the mysteries attaching to sports in Calcutta, football in particular, and there is the Calcutta Sports Control Act of 1955 awaiting implementation. All this suggests that a stadium will be a wholly good thing. It will, but the economic and other considerations should be taken into account before a disillusioned public begins to complain that the price has been too heavy. If the construction is undertaken on what I may call a prestige basis—somewhat like the Moscow Metro stations—the people should know it. On the other hand, if the stadium is expected to pay its way, which seems a sounder method of looking at things, it should be someboqy's business—it could be the sponsoring Government's—to find out how much money sports fans spend in Calcutta every year and on what game, so that the tax-payer knows in advance what this brave new amenity is going to cost *him*. There is also the question whether a composite stadium in Eden Gardens will not do something to the cricket pitch which, I seem to remember, a Bengali Member of the Lok Sabha once described as one of the best in the world. Finally, are we not likely to have somebody in Parliament ask whether in this difficult year of the plan the best use of scarce cement and steel is for making a stadium?

* * * *

A former editor of *Capital*, Mr. Geoffrey Tyson, delivered the 1958 Henry Morley Lecture of the Royal Society of Arts in London on Thursday, 27th February. The subject was the Indian second five year plan and Mr. Tyson said that in view of the plan's heavy reliance upon such assumptions as deficit finance and an uncovered gap, the Indian authorities had been remarkably successful in avoiding a bad dose of inflation. This, he pointed out, was very largely due to the remarkable strides that had been achieved in production. On the other hand, while the need for large drafts of foreign aid and investment was stressed from the beginning, this vital part of the scheme had been neglected, and little or nothing was done in advance to anticipate the present balance of payments difficulties. These coincided with (but were not directly related to) a general hardening of interest rates, some contraction of world trade and a shortage of international liquidity. India could have backed her credit as an international borrower, with every prospect of success, two or three years ago. But the result of leaving the foreign exchange front to look after itself was that she must now pursue a policy of what Mr. Tyson called "opportunism", which neither suited her temperament nor her political principles. Nonetheless, he foresaw that, after a pause, the second plan would move forward to success. The lecture is to be published.

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-Second Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Wednesday, the 12th day of March, 1958, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1957.

The Directors submit to the Shareholders the Balance-Sheet and Profit and Loss Account for the year ended 31st December, 1957. The Auditors' Report is also annexed.

	Rs.	nP.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 15,54,924.45, have resulted in a profit of	1,09,02,381	34
An interim dividend was paid for the half-year ended 30th June 1957, at the rate of 6 per cent. free of Income-tax on the Paid-up Capital of Rs. 3,00,00,000, which absorbed	18,00,000	00
Provision made for Income-tax and Super-tax for the year	30,00,000	00
Bonus to Staff	15,00,000	00
The Directors now propose :—		
To pay a final dividend for the half-year ended 31st December, 1957, at the rate of 10 per cent. free of Income-tax, making 16 per cent. for the year, on the Paid-up Capital of Rs. 3,00,00,000, which will absorb	30,00,000	00
To carry forward to the next account	16,02,381	34
Total Rs	1,09,02,381	34

The Bank's business continued to function satisfactorily.

The official Bank Rate was raised from 3½% to 4% on 16th May, 1957. The Rate of 4% continued to the end of the year.

Mr. Dinsha K. Daji who had been a Director of the Company for nearly 23 years, died on 8th July, 1957. Mr. Daji rendered great service to the Company. His mature counsel was greatly esteemed by the other members of the Board. The Directors deeply regret the loss of a valued colleague.

Under the provisions of Section 256 of the Companies Act, 1956 the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Sir Joseph Kay, K.B.E.,
Mr. Ramniwas Ramnarain.
Mr Krishnaraj M. D. Thackersey.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance-Sheet of The Bank of India Limited, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956, they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(d) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

Bombay, 6th February, 1958.

Statement pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1957, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Limited (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government being satisfied that it is necessary so to do, have directed that in relation to The Bank of India (U.K.) Nominees Limited, a subsidiary of the Bank, the provisions of the said Act shall apply only to the extent that The Bank of India Limited, shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Limited, is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

BALANCE-SHEET 31ST DECEMBER, 1957

Capital Authorised and Fully Paid-up :					Cash at Bankers	£ 100
100 Ordinary Shares of £1 each	£ 100					£ 100
	£ 100					

Signed on behalf of the Board,
J. DONALDSON,
S. H. BRADFORD. } *Directors.*

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit in our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true correct and fair view of the state of the Company's affairs at 31st December, 1957 according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

SPENCER & COMPANY, LIMITED

CHAIRMAN MR. Z. R. IRANI'S REVIEW

Addressing the Shareholders of Spencer & Co., Ltd., at their Sixtieth Annual General Meeting which was held on 28th February 1958, at the registered Office of the Company at Madras, Mr. Z. R. Irani, Chairman of the Company said :—

Gentlemen,

Our meeting today is the Sixtieth Annual General Meeting of the Company, a landmark in its history. Perhaps I should on this occasion give you a synopsis of the main happenings during the last sixty years but even a brief report will take up time which will be more profitably spent in dealing with the present and, so far as I can reasonably prognosticate, the future.

Eleven months ago Mr. Edwards resigned his seat from the Board and your Directors elected me to the exalted office of Chairman. We have hard times before us and I trust I shall be worthy of the confidence reposed in me. Our thanks are due to Mr. Edwards who was Chairman of the Company for seven years for his able guidance of its affairs over that period.

You will have had ample opportunity to examine the accounts for the year ended 30th June 1957 and, with the help of the comparative figures of the previous year, to gauge the progress of the Company. I feel that you should be made aware of the activities of the Company and the extent of contribution each has effected towards the whole. In the main we trade as wholesalers and retailers of consumer goods throughout our various branches; we own three hotels and cater now in a very resiricted manner on the Southern Railway; we manufacture and trade in drugs and pharmaceuticals, house furnishing and steel furniture, aerated waters and cigars; we grow and trade in tea; we trade in refrigeration and air-conditioning machinery both domestic and commercial and finally we have sundry smaller activities arising from or inter-connected with the foregoing main ones. The wholesale and retail trade has contributed 55% towards the trading profit of the Company, hotels and catering 15%, drugs and pharmaceuticals 8%, house furnishing 5%, aerated waters 3%, cigars 1%, tea 6%, refrigeration and air-conditioning 4% and sundries 3%. We have always been known as the "Suppliers of India's daily needs and you will be able to appreciate how we stand in the context of current economic conditions.

Import Policy

Within its present field, the Company has, if I may say so, done as well as can be expected in the year under review. Such activities as have not involved imports have shown and will no doubt with assiduous development continue to show progress. Even so, the relaxation of import policy in certain directions will be of considerable assistance as for instance in the case of machinery for the manufacture of aerated waters and certain specialised provisions and foods which would conduce towards tourist satisfaction.

Though we have managed to maintain turnover in the consumer goods trade, it is here that Government's import control policy has a vital impact on the company's business particularly as we have been and are predominantly a merchant house. From the commencement of 1957, the import of consumer goods has been severely cut. This of course is part of the larger plan policy and the paucity of foreign exchange resources needed for it dictate the practical stoppage of licensing of consumer goods import. How serious the foreign exchange resources position is will be apparent from these basic facts. At the beginning of the Second Plan in April 1956, the Sterling Balances were of the value of Rs. 746 crores: nine months later they had shrunk to Rs. 534 crores and at the end of last year they amounted only to about Rs. 300 crores. With a steadily expanding gap in trade balance of payments, the value of imports in recent years having been always much in excess of the value of exports, Government finds itself driven to such expedients as rephasing the annual outlay on the Plan and the commitments position, arranging credit in the form of deferred payments for capital goods import, and of course the imposition of the most rigid control on consumer goods import. It is however gratifying to note that larger foreign aid will now be available. Against an estimated foreign aid requirement of about Rs. 700 crores for the Second Plan, a substantial part, in addition to the credits arranged earlier, seems to have been negotiated such as the American Loan of 225 million dollars, Japanese Yen credit equivalent to Rs. 25 crores, West German Deferred Payments arrangement for 120 million marks and the Russian Loan equal to Rs. 60 crores. It is to be hoped that an improvement in the position coupled with an export drive resulting in larger earnings of foreign exchange will make it possible to relax to some degree the present extreme rigidity of the import control policy so far as consumer goods are concerned.

Consumer Goods

In a country based on a free social order, the production and trade of consumer goods play a vital part. Professor Erhard in his book "Prosperity through Competition" which analyses the great economic achievement in West Gemany since the war, says:—

> "First consideration must be given to the freedom of every citizen to live his life according to his financial circumstances, personal desires and values. This basic principle of freedom for the consumer must logically be counter balanced by freedom for the producer to make and sell what he believes to be marketable. Freedom for the consumer and freedom to work must be explicitly recognised as inviolable basic rights by every citizen. Democracy and a free economy are as logically linked as are dictatorship and state controls".

and again,

> "To maintain a competitive economy is, therefore, in every sense a social obligation. We can learn from our own past, but also in looking at countries beyond the Iron Curtain we can see that in the planned economy, and even more in the State-controlled economy, the proportion of wages in the national income is and has always been smaller than in the market economy. It would be remarkable if it were otherwise, for not only does the bulky bureaucratic machinery in the nature of things consume a large part of the national income, but the composition of the national income also shows that it is not meant to satisfy human needs."

It is my sincere belief that in furthering the economy of a country, the production of the heavy industries and consumer goods must march hand in hand and that the balance must not be untowardly disturbed. You will recall that, speaking last year on the Second Plan, I ventured to express my doubt whether outlay on the Plan on the scale contemplated was not somewhat too ambitious in relation to available and potential resources. Events have shown that that fear was not entirely groundless. In the assessment that I made, I was in good company for Mr. Neogy, closely associated for long with the Planning Commission, also felt that "the Second Plan is unrealistic and over-ambitious and its massive superstructure is raised on precarious foundations". I must mention also that in this view I do not have the support of that expert academic body, the Panel of Economists, who consider that "on the whole, a plan of Rs. 4,800 crores at present prices should be feasible, provided the effort to mobilise domestic resources in all forms is considerably increased and external assistance of Rs. 700 crores as envisaged is forthcoming". As against this assessment, evidence is now available that this view of inadequacy of resources was not far wrong because it has been admitted in official circles that while some check on plan tempo must be put, the hard core of the Plan will be adhered to. This realistic appraisal is all to the good and national economy will be spared any violent strains which a whole-hog programme, based on a mis-judgement of capacity, may impose or precipitate. Making haste slowly is a wise dictum which can apply equally to revolutionary economic policies.

Severe Regimentation

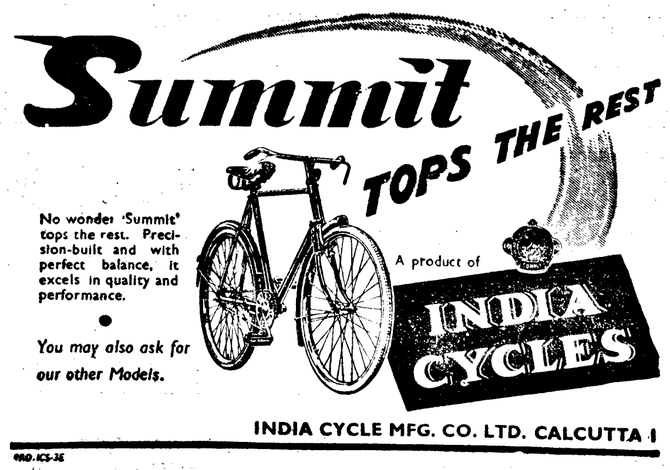
I repeat what I said last year that an enforced economy to be effective must have severe regimentation. The objective of such an economy is to raise the per capita income with a view to bettering the living standard of the people. This objective, however, is frustrated if contemporaneous with an increase in per capita income there is a corresponding increase in the cost of living. The status quo then remains unchanged, but there is the cheapening of money and an ever-mounting inflationary spiral to be contended with. This is the position today. Economists assert that such a stage is intermediary and is to be expected, but will undoubtedly lead to prosperity and contentment. However much this is emphasised, invariably an enforced economy, however utopian its objectives, has ended in tribulation. Progressive stability can only be achieved by the will and the work of a people. An increase in tempo towards that end is undoubtedly advisable, but it must be judicious and not overstrained and it must not make the amenities of an advanced world inaccessible, amenities which distinguish civilization from primitiveness

Speaking on Budget day but before we have heard what the new tax proposals are, I am at a slight disadvantage, but it requires no prophet to forecast that the gift tax will be one of them. In the integrated pattern of our new tax system, this is the one hole yet to be plugged and with the Gift Tax along with the Wealth and Expenditure Taxes and with a further streamlined income-tax system, the Revenue armoury is claimed to be now practically evasion-proof. Our tax policy is being brought into alignment more and more with the avowed objective of evolving a socialistic pattern of society which incidentally has the immediate effect of augmenting revenue so necessary to finance the plan. Our Prime Minister has even quite lately made it unmistakably clear that last year's new taxes were an approach to the solution of the problem of accumulation of wealth. The Finance Minister too has made it plain that there will be no retreat from the basic tax structure and that it will have to remain. These declarations must completely dispel any fond hopes that on the completion of the Plans a lightening of the tax load may be looked for. While this is the broad position in the centre, the state pictures are equally bleak. To give effect to the plan programmes for the year 1958-59 so far as the States' sector is concerned, States have to find additional resources of the order of Rs 200 crores from further taxes, small savings, public loans etc. The centre will be in no position to dispense more aid in view of the new arrangements for distribution of revenues recommended by the Finance Commission. The State tax field has been fully exploited and taxes having reached a state of inelasticity, it is a matter of some concern to us what new devices will be adopted for raising more State revenues.

The foregoing opinions have not been expressed with any intention of opposing Planning. On the contrary, it is for Government to legislate and for us as educated and responsible citizens to adhere to such legislation, with the right, as always, of free constructive criticism. My intention is to show you how Governmental policies are affecting and are likely to affect the business and accordingly the future earnings of your Company.

Working Capital

Apart from our endeavours to find suitable lines to supplement our consumer goods trade and we are doing this with fair success, your Board is ever on the look out to employ the Company's working capital in as beneficial a way as is possible. The schemes being examined are naturally all connected with consumer goods, whether by way of manufacture, acquisition of like interests or expansion of trade. All this takes time for, whilst business risks must surely be taken, the new schemes must show reasonable prospects of fair returns on capital invested. I would mention also that when a modicum of foreign exchange is involved, a consumer goods project does not rank in Governmental policies and there lies the rub. What is even more there must necessarily be a time lag before the benefits of new operations can come into the till.



Last year I informed you that I hoped to be able today to tell you about our progress in new fields. Much has been investigated, but little achieved for the foregoing reasons, but we press on and it is wise that I do not disclose what is afoot until negotiations are complete. However, I am at liberty to tell you that there has been finalised a comprehensive project for the manufacture of drugs and pharmaceuticals by one of the biggest and most reputed American concerns and in this we have secured a sizeable interest as the largest Indian investor.

I do not propose to dwell on labour relations save again to quote Professor Erhard who says:—"Trade Unions should ask themselves whether their pursuit of higher wages, if it leads to higher prices, does not put them on a par with irresponsible speculators". In the dwindling consumer goods trade, I wonder if Labour Unions realise that retrenchment is unavoidable and that demands for increased benefits cannot but extend retrenchment. I emphatically state that no conscientious employer wishes to create unemployment unless forced so to do.

Finally, in the light of the various trading difficulties confronting us, our staff has rendered yeoman service for which we are grateful.

The Balance Sheet as at 30th June 1957, was unanimously approved and adopted. A further and final dividend of 10 per cent free of income-tax on the Ordinary Shares as recommended by the Directors was declared making in all a total dividend of 15 per cent free of income-tax for the year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to Shareholders.

Money

THE FINAL BUDGET ESTIMATES

NEW TAX PROPOSALS EXPECTED TO YIELD OVER Rs. 5.8 CRORES

WE publish below a summary of the Budget and revised estimates for 1957-58, together with the Budget estimates for 1958-59.

REVENUE

* Effect of Budget proposals.

NEW TAX PROPOSALS IN BUDGET

THE new taxes which have been announced in the Lok Sabha by the Prime Minister are designed to "make such improvements as are necessary to make the present pattern of taxation an integrated one and to plug any loopholes in taxation".

The Gift Tax: This, the Government claims, will fill a gap in the scheme of direct taxation and will not only make evasion or avoidance difficult but will also spread the tax burdens more equitably. The tax will be levied on the donor on the value of all gifts made by him during a year but for the purpose of determining a rate of duty, the gifts made during the four years preceding the year will be aggregated. Such aggregation will be made only in relation to gifts made after the date this tax comes into force. Gifts up to a total value of Rs. 10,000 in any one year will be exempt. If the value of gifts made during any year exceeds this sum, only the excess will be subjected to tax. The basic exemption will be reduced to Rs. 5,000 if gifts to any one individual during a year exceed Rs. 3,000. Some other important exemptions are: (a) gifts to the Central and State Governments, local authorities and charitable institutions; (b) gifts to female dependants on the occasion of marriage up to Rs. 10,000 in each case; (c) gifts to one's wife up to a total limit of Rs. 1 lakh; (d) gifts to dependants of policies of insurance up to Rs. 10,000 for each.

Rates of the tax are the same as for estate duty except that the first slab of Rs. 50,000 will not be exempt from the tax. The rates range from 4 percent on the first slab to 40 percent on gifts of over Rs. 50 lakhs. The yield from the gifts tax is estimated at Rs. 3 crores.

Amendments to Estate Duty Act: Some of the important changes proposed are: (a) the exemption limit will be reduced from Rs. 1 lakh to Rs. 50,000; (b) only one-half of the probate duty or court fees paid on succession certificates will be allowed as a deduction from estate duty instead of the full amount as at present; (c) gifts other than those for charitable purposes made within a period of two years prior to death are now subjected to estate duty; it is proposed to increase this period to five years, as recommended by the Taxation Enquiry Commission; gifts on which gift tax has been paid will not be taken into account; (d) the value of coparcenery interest in Hindu undivided families will be taxed at the rate applicable to the value of the estate of the branch of the family concerned. These changes will increase the revenue by Rs. 50 lakhs, which will accrue wholly to the States.

Excess Dividend Supertax: This is payable by Section 23-A companies. At present, there are three slabs. It is now proposed to fix the tax rates only in two slabs, 10 percent on the slab of dividends over 6 percent of capital and 20 percent on the slab over 10 percent of capital. It is not possible to estimate the loss of revenue in this proposal but it is likely to be very small.

Development Rebate: While the present rate of 25 percent is adequate for new plant and machinery in general, some further concession is necessary for the shipping industry. The rate of development rebate for ships will be increased to 40 percent. Simultaneously, the conditions for the grant of the development rebate will be tightened.

Income Tax Exemption: Exemption from income tax of payments made to employees for leave passages is now granted only if the payments are made under certain rules framed by the Government. These rules are proposed to be withdrawn for administrative reasons.

Wealth Tax: A foreign citizen will be exempt from payment of wealth tax on his foreign wealth even though he may be resident or ordinarily resident in India.

Excise Duties: The rate of duty on cement is to be increased from Rs. 20 a ton to Rs. 24 a ton. Simultaneously, the surcharge at present levied by the State Trading Corporation will be withdrawn. The additional revenue from this is expected to amount to Rs. 2.24 crores. This sum will be uitilised for road development.

For powerlooms producing cotton textiles, it is proposed that the concession of paying duty at compounded rates should no longer be available to establishments having more than 100 looms. Simultaneously, the compounded rates applicable to units having 25 to 100 powerlooms are being suitably enhanced in two stages. This will bring in an additional revenue of Rs. 33 lakhs.

The rate of duty on vegetable products is being lowered for the first 3,000 tons cleared by each factory. This will give substantial relief to small producers. This reduction in duty will involve a loss of Rs. 24 lakhs.

Customs Duties: The only change of any significance is the introduction of the alternative *ad valorem* rate of duty on expensive varieties of artificial silk yarn like nylon, parlon, etcetera. So far as the other yarns, such as viscose are concerned, the rate of duty remains unchanged. The financial effect of these changes will be negligible.

The new taxation proposals will yield a total sum of Rs. 6.57 crores, of which Rs. 50 lakhs will accrue to the States. The reduction in the excise duty on vegetable products will leave the net additional revenue at Rs. 5.83 crores. This will leave a final budget deficit of Rs. 27.02 crores, which is left uncovered.

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS EASIER

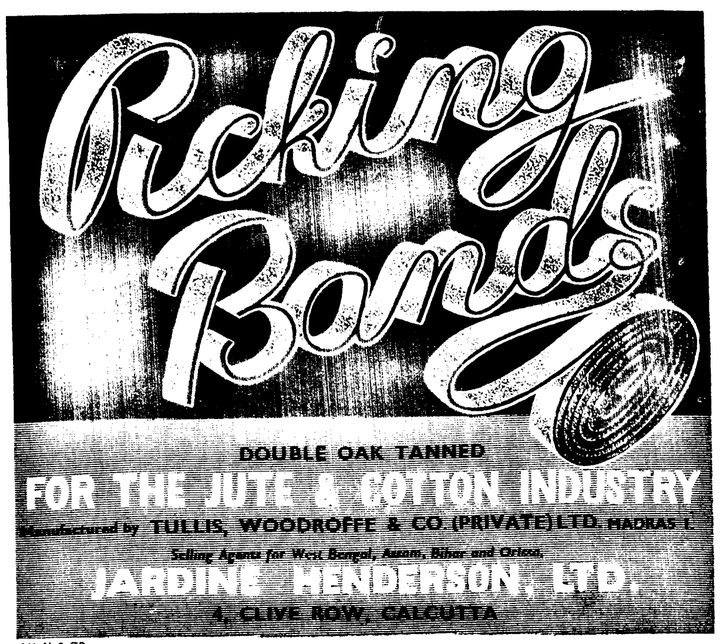
Tuesday, 4th March.

THE total of advances outstanding in the Calcutta money market continued its seasonal rise during the past week. Most of the chief sources of demand have increased their offtake, but the requirements of the jute mills have tended to be lower. Conditions in the interbank market have become considerably easier, although the call rate remains unchanged at 3½ percent.

Quiet conditions have persisted in the exchange market with only a few bills, mostly on account of gunny shipments, coming to hand. Remittance has been about average. The pound is very strong after a short and unaccountable dip about the middle of last week.

* * * *

Bullion was quiet on profit-taking. Trading was restricted. The price of silver declined from the previous week's level of Rs. 190 to Rs. 188.25, quoted today for ready delivery. Forward delivery stood at Rs. 186.25. The price was 76⅝d. in London and 88⅝ cents in New York.



Gold was quiet in sympathy with silver and

the price fell from Rs. 113.25 to Rs. 112.75. The sovereign at Rs. 72.50 showed a loss of 50nP.

* * * *

The return of the State Bank of India for the week ended 21st February, 1958, shows a rise of Rs. 6.84 crores to Rs. 407.51 crores in total deposits. Investments in Government securities remain unchanged at Rs. 173.34 crores, while other authorised investments are up by Rs. 10 lakhs at Rs. 10.23 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 1.86 crores to Rs. 201.57 crores. Cash and balances are, in consequence, shown at Rs. 33.85 crores or Rs. 7.09 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 21st February, 1958, snows Demand and Time liabilities at Rs. 729.62 crores (Rs. 14.01 crores on account of borrowings from banks) and Rs. 724.97 crores (Rs. 15.85 crores), compared with Rs. 717.25 crores (Rs. 12.78 crores) and Rs. 721.37 crores (Rs. 15.25 crores), respectively, in the previous week. Cash has declined by Rs. 1.44 crores to Rs. 37.49 crores, while balances with the Reserve Bank have increased by Rs. 2.62 crores to Rs. 69.28 crores. There is a rise of Rs. 56 lakhs to Rs. 433.37 crores in investments. Advances and bills discounted at Rs. 927.08 crores show an increase of Rs. 3.86 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.3 percent and 63.7 percent, against 7.3 percent and 64.2 percent.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of December 1957 :

	Rs.
(1) At the Reserve Bank of India in India	59,59,99,000
(2) At treasuries in India ...	17,84,000
(3) In England (Sterling converted at 18d the rupee) ...	1,16,28,000
Total ...	60,94,11,000

* * * *

The total amount deposited by companies under the scheme of deposits enacted by sections 10 (2B) and 10 (2C) of Indian Income-tax Act during the year ended 31st December, 1957, was Rs. 3.48 crores, the Deputy Minister of Finance, Mr. B. R. Bhagat, has stated in the Rajya Sabha.

* * * *

Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during November 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise:* excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 5,873 lakhs, re-exports Rs. 28 lakhs, imports Rs. 7,817 lakhs; total trade Rs. 13,718 lakhs. *Treasure:* exports (including re-exports) of currency notes Rs. 38 lakhs, others negligible; imports of gold Rs. 48 lakhs, currency notes Rs. 236 lakhs, others nil. *Balance of Trade:* the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 1,964 lakhs.

* * * *

The profit of the BANK OF INDIA has increased by Rs. 1.44 lakhs to Rs. 93.47 lakhs for the year ended last December. Bringing in Rs. 15,54,924, there is a balance of Rs. 1,09,02,381. A dividend of 16 percent has been declared, including an interim of 6 pereent. The taxation provision amounts to Rs. 30 lakhs, leaving a carry-forward of Rs. 16,02,381. Deposits are Rs 13.05 crores higher at Rs. 82.60 crores Cash has improved by Rs. 3.95 crores to Rs. 9.33 crores. Advances at Rs. 59.38 crores show a rise of Rs. 2.17 crores. Investments are Rs. 1.13 crores higher at Rs. 19.66 crores.

* * * *

The profit of the TRAVANCORE BANK LTD. has amounted to Rs. 15,27,628, including Rs. 45,060 brought in, for the year ended last December. A dividend of 5 percent has been declared to absorb Rs. 5 lakhs.

* * * *

The directors of the NATIONAL OVERSEAS AND GRINDLAYS BANK LTD. have declared a second interim dividend, for the year ended last December, of 7½ percent, less income tax, payable on and after 3rd April. This interim dividend has been declared in place of the final dividend which would normally be recommended for approval at the annual general meeting, the date of which will be notified to shareholders later.

part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

PEDESTRIAN BUDGET IMPROVES MARKET SENTIMENT

PRICES STAGE RECOVERY

Tuesday Evening.

ALTHOUGH the 1958-59 Budget contained no surprises and—except for the expected gifts tax—no important additional measures, operators were hesitant at the special Budget session on Friday evening. Indians Irons opened at Rs. 19.60; spurted momentarily to Rs. 20.20 when Mr. Nehru announced there would be no major tax changes; slithered down to Rs. 19.20 on news of the gifts tax and the reduction in the exemption limit for the Estate Duty; then recovered to close at Rs. 19.68. Among other counters, the only important change was in India Steamship, which rose from Rs. 12 to Rs. 12.50 on the strength of the increase in the development rebate on new ships from 25 percent to 40 percent. In the short session on Saturday, a distinctly better sentiment was noticeable, with Indian Irons remaining steady at around Rs. 19.50. Over the week-end, opinion appears to have come round to the view that with Budget uncertainty out of the way, the outlook is now considerably better. Monday saw Indian Irons climbing to Rs. 20.36 and Tuesday brought a further improvement to Rs. 20.60. There were widespread gains in engineering, paper and selected miscellaneous shares. On the Budget proposals themselves, market opinion was a mixture of relief and disappointment. There was relief that Mr. Krishnamachari, who drew it up, had kept to his assurance that with the major structural changes in the tax system now complete, there would be only minor adjustments of the loophole plugging variety up to the end of the second plan.

The special Budget sessions of the Stock Exchange, for the next two years at least, are likely to be devoid of the thrill and excitement of the past years. But apart from being good for operators' blood pressure, the fiscal stability that is in sight will be welcomed by investors, whose judgements are now less likely to be upset by Budget earthquakes like that of last May. There are no illusions about the fact that socialism is still the objective. The reduction of the Estate Duty exemption limit and the tightening of its provisions, the gifts tax and the absence of any of the rumoured reliefs, together with the retention of the system of compulsory deposits, are interpreted as proof that there is to be no let-up in the drive towards the socialist goal. The Government has not been impressed by the need to improve the domestic investment climate and the Birla Industrial Delegation report has apparently been pigeon-holed. The small relief in the excess dividends supertax payable by Section 23A companies is of hardly any significance, because few such concerns are able to distribute dividends over 18 percent. The tightening of the conditions relating to the development rebate may reduce the benefits of this measure to some extent. The plight of the cotton textile industry has failed to earn a relief in excise duty beyond the reduction on medium cloth announced in December. The tea industry has secured no reduction in the duty on common teas, nor have the sugar mills been given the satisfaction of seeing *khandsari* producers subjected to excise duty.

With all this, the market seems to take the view that there is much to be thankful for in the *status quo* and a "pedestrian" Budget. The main consideration appears to be, that with the tax outlook for the next three years fairly clear (provided future Finance Ministers agree to honour Mr. Krishnamachari's assurance on this matter), investment prospects are likely to improve under the stimulus of the expanding economy. Even the present heavy load of taxation may become progressively easier to bear as economic development proceeds. It is noted that the general economic outlook is better than it was some months ago. Foreign aid is coming in, inflation has been halted and the drain on foreign exchange reserves is slowing down. Money is easier and the food situation appears to be under control.

The Government securities market ruled firm throughout, and in fact, the Reserve Bank has raised its selling prices for four loans by 5nP in each case. Even long-dated issues have hardened.

There was slightly more enquiry for selected miscellaneous and engineering preference issues, and buyers found it difficult to obtain their requirements at the quoted rates.

The following table of representative price movements indicates the improvement which has taken place since the announcement of the Central Budget proposals:

	Opening 27th February, 1958. Rs.	Closing 4th March, 1958. Rs.
Coal		
Bengal	200.00	210.00
Burrakur	22.00	22.75
Raneegunge	10.62	10.87
Electric		
Calcutta	13.56	13.81
Engineering		
Braithwaite	26.75	27.00
Guest. Keen. Williams	29.37	29.50
Indian Iron	19.52	20.48
Jessop	22.50	24.00
Textile Machinery	17.08	17.75
Jute		
Budge Budge	60.00	64.00
Chitavalsah	10.50	11.12
Anglo India	125.00	129.00
Miscellaneous		
Dunlop Rubber	22.00	22.37
Indian Aluminium	12.75	12.87
India Steamship	12.00	12.25
Metal Box	25 12	25.50
National Carbon	25.00	25.25
Paper		
Orient	24.50	25.95
Titaghur	33.50	34.00
Tea		
Banarhat	297.00	299.00
Brooke Bond	15.75	16.25
New Dooars	258.00	268.00
Mining		
Indian Copper	2.83	2.88

Contrary to the general trend, cotton and sugar shares were neglected, as these industries had reason to feel disappointed over the absence of any relief in the Budget proposals.

* * * *

The results of the ALKALI AND CHEMICAL CORPORATION OF INDIA for the year ended last September are considered satisfactory. The profit has improved from Rs. 29.85 lakhs to Rs. 36.28 lakhs because of increased output and sales. Allocations include taxation provision Rs. 18.30 lakhs, general reserve Rs. 2 lakhs and deferred taxation liability reserve Rs. 5.64 lakhs. The carry-forward is Rs. 1,20,250, against Rs. 92,495 brought in. The allocation of Rs. 6,20,000 to dividend equalisation

have pleasure in announcing that their recent up-to-date Cold Rolling Plant for the manufacture of Brass & Copper Industrial Sheets, Strips and Coils in gauges upto 42 S.W.G. has now gone into production. Strict compliance with Indentors' specifications, particularly the required degree of temper and flatness, is guaranteed.

reserve, increasing it to Rs. 24,83,000, which represents an eight percent ordinary dividend for one year on the issued ordinary and "A" ordinary shares, suggests that the ordinary dividend is likely to be maintained at 8 percent during the current year. For the year ended last September, an ordinary dividend of 8 percent has been declared, which is the same as that of the previous year. The "A" ordinary shares will not participate in the dividend for the year ended last September. In spite of the prospect that the company might maintain the ordinary dividend at 8 percent during the current year, there is some disappointment in market circles that a large proportion of shareholders were financially unable to take up their full quota of rights shares which were offered to them last year. The company offered 2,480,000 "A" ordinary shares of Rs. 10 each at par to shareholders for subscription. Since Imperial Chemical Industries (India) Private Ltd. is itself the major shareholder, it appears that it was also offered rights shares in proportion to its total holding. The directors' statement that 6.5 percent of the total offer was unsubscribed suggests, therefore, that a large proportion of shareholders, other than Imperial Chemical Industries (India) Private Ltd., must have failed to subscribe for their full quota of rights shares. As a result, Imperial Chemical Industries (India) Private Ltd. took up the unsubscribed portion of the rights offer. The company's expansion programme is making good progress. Contractors have been working on the site of the polythene project. Site development has been substantially completed. The delivery of plant and equipment from the United Kingdom has started and is reasonably in step with the programme.

* * * *

The profit of VOLTAS LTD. has increased by Rs. 35.67 lakhs to Rs. 75.51 lakhs during the year ended last August. Bringing in Rs. 1,09,632 and providing Rs. 50 lakhs (Rs. 20.10 lakhs) for taxation, there is a balance of Rs. 26,60,920. General reserve is allocated Rs. 3.25 lakhs (same) and development reserve receives Rs. 17.000 (Rs. 7,000). The dividend has been maintained at 9 percent, leaving a carry-forward of Rs. 1,38,920. The directors say that the working results show an increase over last year's figures. Higher taxation, however, absorbs a substantial portion of the increased net earnings, "leaving a balance sufficient for the payment of the same dividend as last year." The total turnover is over Rs. 6 crores higher. The achievement reflects the company's continued expansion in spite of the adverse factors which prevailed during the year under report, such as import restrictions due to the shortage of foreign exchange and long delivery periods. Apart from the Crystal air-conditioner, the Tushar water cooler is manufactured in the company's own workshops. Arrangements have been made with foreign principals for the domestic production of diesel engines, water meters and tool holder bits, tipped tools, etcetera. The production of air-compressors, pharmaceutical products and vitamin A will start shortly.

* * * *

Transferring Rs. 21.96 lakhs from contingencies reserve to meet partly the loss of Rs. 25.64 lakhs resulting from the relinquishment of the managing agency of the Air Conditioning Corporation Private Ltd., the credit balance of GILLANDERS ARBUTHNOT AND COMPANY has amounted to Rs. 24.05 lakhs for the year ended March 1957, against Rs. 30.04 lakhs. Bringing in Rs. 89,541, there is Rs. 24,95,024. The taxation provision amounts to Rs. 12.52 lakhs. The ordinary dividend has been reduced from 16 percent to 10 percent. General reserve is allocated Rs. 2 lakhs, leaving a balance of Rs. 1,68,398 to be carried forward. The directors mention that trading activities, both in Calcutta and at the branches in India and Burma, have recorded a substantial improvement, resulting in a satisfactory increase in the gross trading profit. The results have been achieved largely by an expansion in business transacted on account of those agencies held by the company for indigenous products. On the other hand, import business has suffered to some extent as a result of import restrictions, and "the additional and more drastic restrictions imposed in the months following the period under review will inevitably further curtail this aspect of the company's activities." Commissions and allowances earned declined as a result of the Companies Act, 1956, and the cessation of income from those managing agencies for jute, tea and coal which were relinquished during the year under report and in the preceding year. The accounts cover only the first year of working under the Companies Act, 1956, and cannot, therefore, indicate the full effect of the restrictions imposed on managing agents; it appears inevitable that there will be further contractions in earnings from such sources in future. "Your directors are fully conscious of this situation and while action has been taken to consolidate the company's position in relation to its managed companies, active steps have also been taken to expand the company's interests in other directions."

* * * *

RALLIS INDIA LTD. has made a profit of Rs. 1.91 lakhs for the year ended last August, before depreciation, against Rs. 13.16 lakhs, after providing Rs. 7.65 lakhs for depreciation. Transferring Rs. 14.04 lakhs from property reserve, providing Rs. 19.95 lakhs for depreciation and making other adjustments, a debit balance of Rs. 44,12,938 is carried forward. The dividends have again been passed o...

Bombay Market

SECOND THOUGHTS ON BUDGET HELP PRICES

OPERATORS WELCOME CONCESSIONS

Tuesday Evening.

THE Bombay stock market closed in a cheerful mood last week and prices of leading scrip improved substantially on fresh support combined with short-covering. On second thoughts, operators took the view that the Central Budget was not as bad as was feared a few days ago. Nobody had expected any major relief in taxation considering the Government's financial commitments. Although the absence of relief in certain directions, such as the compulsory deposit scheme for companies, dividend super-tax and bonus share tax, was regretted, the minor concession which has been proposed for Section 23A companies relating to dividend super-tax is welcome. The increase of 15 percent to 40 percent in the development rebate on new ships is considered helpful, especially for the development of the shipping industry.

There is, nevertheless, a certain amount of anxiety in a section of the stock market about the tightening of the provision relating to the application of the development rebate. The new proposal that an amount equivalent to the development rebate will have to be debited to the profit and loss account and credited to a reserve account might, it is feared, affect dividend policies, as companies would be left with less liquid resources than before.

An encouraging feature is that the Finance Minister, Mr. Nehru, thinks there has been an improvement in the economic situation. The food position has been brought under control and the balance of payments is showing signs of steady improvement. Meanwhile, good corporate news has assisted sentiment. The rumour that the Indian Iron and Steel Company might issue bonus shares by capitalising share premium reserves in line with the Tata Iron and Steel Company generated fresh support in the former scrip.

Tata Steel improved to Rs. 174.75 and Indian Iron were quoted higher at Rs. 20.48. Tata Locomotive were wanted at Rs. 145. Premier Construction met with support at Rs. 159, on the prospect of a bonus issue in the near future. Alcock Ashdown were idle at Rs. 215 on selling pressure. Automobile shares recovered in sympathy. Premier Automobiles were bought up to Rs. 79 and Hindustan Motor rallied to Rs. 6.12 on short-covering. The latter company was reported to be taking interest in a number of engineering activities.

Initial disappointment in cotton mill circles about the absence of any relief in the cloth excise duty abated considerably towards the close. Mill shares closed with net gains on balance. Bombay Dyeing were higher at Rs. 51.40 and Kohinoor were bought at Rs. 264.50. Simplex came to hand at Rs. 159 and Svadeshi were transacted at Rs. 168. Century recovered to Rs. 387 on bear-covering and India United Ordinary were quoted at Rs. 9.04. Apollo realised Rs. 172.

Miscellaneous shares were steady. Belapur Sugar improved to Rs. 239 and Phalton were quoted higher at Rs. 153 in the absence of an increase in the sugar excise duty. Cement shares were steady, and Associated Cement were taken at Rs. 145. Digvijay Cement were done at Rs. 138.50. Mining shares were subdued because of uncertainties about the price of metals in the longer run. Shivrajpur Syndicate were available at Rs. 94. The increase in the development rebate for ships induced strong buying support in steamship company shares and Scindia Steam rose to Rs. 17.16. National Rayon were higher at Rs. 221.25 and Tata Chemical increased to Rs. 12.96. Bombay-Burmah were indicated at Rs. 502.50.

Banking shares were in demand and prices improved. United Commercial came to hand at Rs. 59 and Punjab National were quoted higher at Rs. 52.50. Bank of India were transacted at Rs. 136. Insurance shares were better, and New India improved to Rs. 40.50. Indian Mercantile were taken higher at Rs. 43.

Electricity supply company shares reacted on profit-taking. Ahmedabad Electric were shaded at Rs. 95 and Amalgamated Electric were available at Rs. 30.16. Tata Power lost at Rs. 1,112.50.

BETTER TENDENCY IN STOCK MARKETS

GILT-EDGED AND SOUTH AFRICAN GOLD SHARES RISE

London, 4th March.

A BETTER tendency developed with the opening of the new account in the stock markets during the past week. Although business remained small and selective, prices were often firmer under the lead of gilt-edged securities and South African gold shares, which attracted most of the attention. The improvement reflected the better trend in Wall Street which followed President Eisenhower's latest remarks on the American economy, and several good items of company news, particularly the unexpected higher dividend announced by Peninsular and Oriental Steam Navigation. There was, however, a short period of hesitation following the news of Unilever's lower profits. Gilt-edged and South African golds attracted buyers, but the better trend elsewhere was due mainly to a cessation of the recent selling to meet the calls for the Shell Transport and Royal Dutch new shares, rather than to a return of buyers to the market. Generally, sentiment was dominated by nervousness about the depth and extent of the current business recession in America. Gilt-edged securities met with small but persistent investment buying and improved steadily. The unchanged Bank rate announcement and the small rise in the Treasury bill rate had no effect. The dullness of German bonds after their recent improvement was the only feature in foreign bonds. Industrials developed a distinctly better tendency with the opening of the new account, and although there was very little improvement in the level of business, prices generally were slightly firmer on balance. South African gold shares responded to a broadening demand which reflected a more favourable view of their prospects and renewed talk of a possible increase in the price of gold. Base metals moved within narrow limits and recorded very little change on balance. Oil shares recovered part of their recent losses. Quiet and irregular conditions prevailed in the rubber share market. Tea shares were steadier after early dullness but a number of losses were recorded on the week.

The Money Market

After the previous week's relative ease, less favourable conditions developed in the money market during the past week. Supplies of credit were less plentiful and were barely adequate to meet the demand. On Thursday especially, with tax transfers continuing to run on a substantial scale, the market was devoid of funds and the authorities had to provide a very large amount of assistance. The market could not escape borrowing from the Bank of England although the amount obtained was small. The rate for non-regular money ruled at a high level, usually 5⅞ percent and 6 percent. There was a fair offtake of bills by the banks, with May and hots changing hands at 5⅞ percent. In spite of the keen competition for Treasury bills, the money market revised its weekly bid by 4d, making the Government pay more for its borrowing. The average Treasury bill rate came to just under 10d higher at £6 0s 3.28d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 26th February shows that gold stocks fell by $100 million to $22,685 million. Foreign deposits decreased by $17 million to $274 million, while foreign investments fell by $113 million to $3,619 million. Total discounts and advances rose by $49 million to $184 million, while aggregate excess reserves of member banks fell by $216 million to $358 million. The daily average excess reserves of member banks declined by $217 million to $408 million while their average borrowings fell by $208 million to $153 million. Business loans of New York city banks rose by $42 million to $11,287 million, compared with a fall of $35 million to $11,121 million in the corresponding week a year ago.

Paris Gold Dull

The Paris gold market did not react to the north African events and fluctuations were very narrow, without yielding a definite trend. Business was lifeless and mostly on professional account, while investors remained outside the market. The absence of available assets and lack of confidence in gold were the main reasons for the apathy.

Vegetable Oils Quiet

In the absence of any major change in buying sentiment, trading in vegetable oils and oilseeds lacked anything approaching the spectacular during the past week. Origin sellers frequently refused the lower rates talked of in European markets, but in most cases buyers were content to bide their time and all too frequently the margin between buyers and sellers was too wide to bridge. On the other hand, Argentine sellers made little secret of their desire to sell edible oil and, as pressure mounted, prices fell away, weakening the price structure of the whole section in the process. The Indian Budget sparked off a good deal of speculation on the possibility of export duty changes, primarily for castorseed oil, which did little to promote buying confidence. Most buyers left linseed oil to simmer and prices were again cut back as sellers became more impatient.

COMMONWEALTH ECONOMIC AND TRADE TALKS

PROVISIONAL AGENDA DISCUSSED

(FROM A CORRESPONDENT)

THE Commonwealth Trade and Economic Conference will be held in Montreal, beginning from 15th September, it has been officially announced. Mr. Donald Fleming, Canada's Finance Minister. has said that a programme of detailed preparatory work for the ministerial meeting is now "well in hand." Senior officials from all Commonwealth countries met in London from 11th to 13th February to discuss a provisional agenda and to co-ordinate the work under way in the various Commonwealth capitals. "A further meeting of Commonwealth officials will be held in London early in June to carry forward this task," Mr. Fleming says.

Australian Wool Clip Estimate

The National Council of Wool Selling Brokers of Australia and the Australian Wool Growers Council have issued their customary end-of-season estimate of the Australian wool clip. It is now expected that the quantity of wool received into brokers' stores from the 1957-58 clip will be approximately 4,498,000 bales, or some 442,000 bales less than the original estimate made in July. After consulting the Bureau of Agricultural Economics, it is further estimated that the total production for 1957-58 (expressed as a greasy equivalent) would be 1,463 million lbs—140 million lbs less than the July estimate, and 102 million lbs lower than the output of last season (a fall of approximately 6¼ percent).

Wheat Production

Recent estimates suggest that the total production of wheat this season will be about 89 million bushels, which will make this crop the smallest since the drought production of 63 million bushels in 1944-45. This follows last season's experience, when extremely wet conditions were responsible for a 25 percent drop in plantings—from an average of 10.4 million acres in the five years ended 1955-56 to 7.8 million acres in 1956-57—which brought production down to 135 million bushels. In the five years ended 1955-56, the average production was 183 million bushels. The total Australian demand for wheat for human consumption, that is, for flour and breakfast foods, was 42 million bushels in 1956-57. A further 10 million bushels are normally required for seed, 4 million bushels are retained on farms for feed and other uses, while sales of wheat for stockfeed have been steady at around 16 million bushels over the last three seasons. The normal annual Australian domestic requirements are, therefore, about 72 million bushels.

If the estimated production of 89 million bushels, together with a carry-over of 40 million bushels from the 1956-57 season, is realised, total supplies at the start of the 1957-58 season (1st December, 1957) must have been about 129 million bushels. After meeting normal local needs, there will be a surplus of some 57 million bushels for export and to meet carry-over requirements and any extra demand for stockfeed wheat which may arise. Australia needs approximately 30 million bushels to meet quota commitments under the International Wheat Agreement, 28 million bushels to take advantage of the U.K.-Australia trade agreement and 7 million bushels under the trade agreement with Japan. These together account for 65 million bushels, a quantity well in excess of any possible surplus available this season from the total Australian supplies.

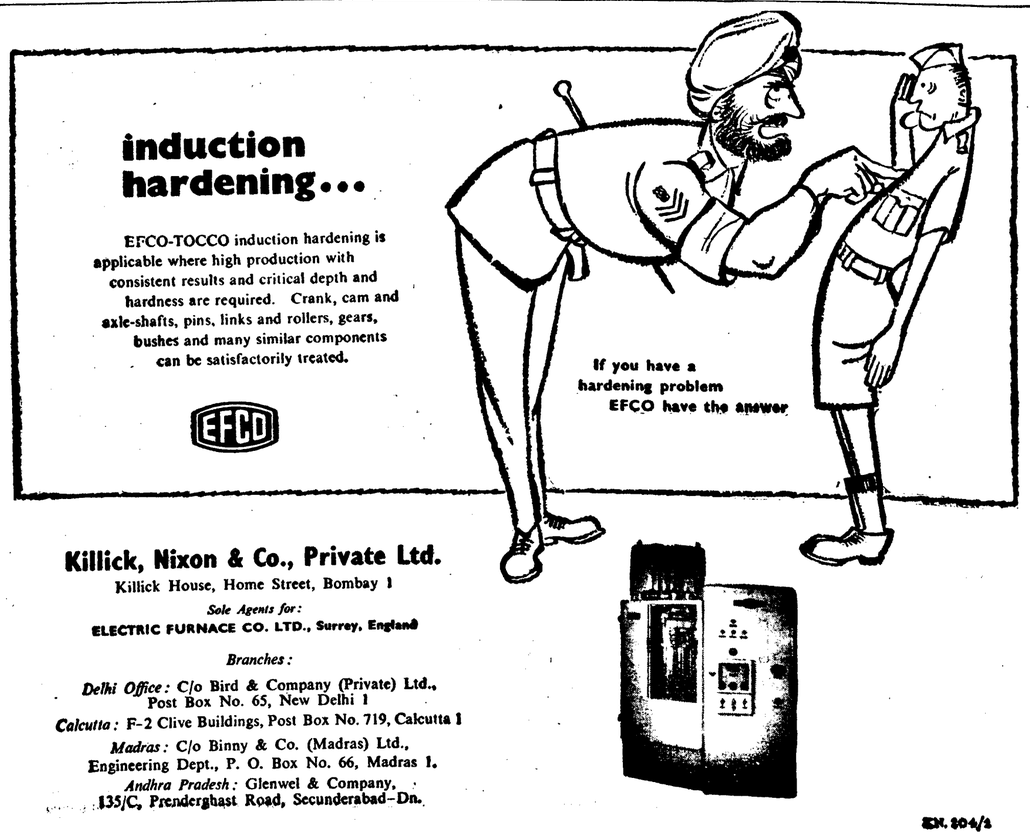
Export Commitments

Australia will only be able to meet very limited export commitments in 1957-58, necessitating a careful assessment of the potential importance of various markets. One important factor, of course, is that the surplus available for export overseas is mainly in Western Australia, which is not as economically located for supplying some markets as are the eastern States. Freight costs could, therefore, be an important factor in the selection of markets as abnormal freights would react against returns in Australia. While this could not affect returns to growers, which are already at guaranteed minimum levels, it could mean a heavier call on stabilisation funds.

Australia's wheat and flour exports from the 1957-58 crop are expected to be less than half the total exported from the 1956-57 crop. Figures released by the chairman of the Australian Wheat Board, Sir John Teasdale, show the estimated exports at 48,097,000 bushels. More than 100 million bushels were exported from the 1956-57 crop. The decline in exports is due to this season's severe drought.

Development Fund for S. Rhodesian Industries

The Southern Rhodesian Industrial Development Fund, which has been established to promote the opening, development or expansion of industries by means of financial assistance, has been launched, and applications for assistance can now be made to the Treasury in Salisbury. In a statement, Mr. A. E. Abrahamson, Minister of the Treasury, has recalled that his predecessor, Mr. C. H Hatty, announced in his Budget statement in July last year a proposal to establish a new industrial development fund. The Government hopes that in line with practices in other countries, the Federal Government will ultimately form an industrial development corporation, or a similar institution, with substantial revolving funds to aid the establishment and expansion of industries, and that at that stage the small fund now to be established by the territorial Government will be absorbed into the larger Federal fund. The Northern Rhodesian Government, Mr. Abrahamson says, already has a fund to assist that territory's industries. "Because of the acute shortage of loan funds for capital development, the Government was only able to allocate £40,000 this year to establish this fund. This will be augmented by further annual grants of at least £20,000 to bring the fund up to at least £100,000 within the present four-year development period. I say 'at least' in the hope that our estimated loan recoveries may be a little on the conservative side. It is clear that the assistance to industry at present can only be of a limited nature, but nevertheless it will represent a token of the Government's continuing sympathetic attitude towards industry. Organised industry has been informed of these proposals and welcomes the action taken."



Proposed Foundry for Ghana

A company incorporated in Ghana proposes to establish a foundry and rolling mill in Abosso, near Tarkwa, where it has acquired the residual assets of the Tarkwa and Abosso mines. As far as possible, local scrap which the firm at present buys for export will be used. Scrap will only be imported if local supplies prove inadequate. The foundry, the first to be established in Ghana, will employ 100 Ghanaians. The local production of foundry products will make a valuable contribution to that country's industry and will help stimulate secondary industries using ferrous products. The building and certain metal industries which use light sections in light steel, reinforcing wires and bars and steel strips will buy their supplies from the proposed foundry. The Ghana Government is giving encouragement to the firm by declaring the foundry to be a pioneer industry for purposes of income tax, which means that the company will not pay the latter on its foundry products for a certain number of years.

Increased Rice Output

The production of rice in Ghana has steadily increased since 1926 when the first rice mill was erected by the Government in Esiama in the western region. By 1940, the acreage under rice was estimated at 27,000 with a total production of 13,000 tons. Ten years later, the estimated acreage increased to 49,000 and the yield to 22,000 tons. Many varieties of rice are grown, nearly every large district having at least one or two local types. The most widely cultivated local varieties are Bawku White, Biribra, Jansusua and Mendi while the imported varieties, such as Guiana 79, Bagulam, Lal 22 and Padi Undus, are being more widely grown. About 75 varieties have been tested. Most of this work has been done in the northern region, where a plant breeder has been stationed since 1948. The other main centres have been in northern Ashanti and in Aiyiaasi, southern Ghana, a traditionally flourishing rice area.

In both northern Ashanti and the northern region, swamp rice cultivation in flat wet valleys has been successfully introduced. Marking out of contour bunds, tractor cultivation, and in some cases sowing, are done by departmental extension teams. These rice extension schemes are gaining popularity with the farmer since each year shows an increase in the acreage. The average yield, varying from 2,000 lbs to 3,000 lbs of paddy an acre, is encouraging and much higher than those obtained by local practice. Similar work on a smaller scale has been started in Togoland.

New Delhi

BUDGET GIVES PLAN EXPENDITURE FIRST PRIORITY

LARGE WELFARE PROVISIONS: TOO MUCH TRUST IN SMALL SAVINGS

(FROM OUR NEW DELHI CORRESPONDENT)

THIS year's Budget, presented by India's new Finance Minister, gives the impression that the second five year plan is regarded as more vital than the economic stability of the country. A careful examination of the Budget speech will show that the proposals are unrelated to the present realities of the Indian situation. It would seem that the Finance Minister, being the chairman of the Planning Commission, is determined to put the plan through whatever the cost. Summarising the overall budgetary position for 1958-59, the Minister said that "at the existing level of taxation and expenditure, there will be a revenue deficit of Rs. 33 crores. Capital outlay will amount to Rs. 412 crores, loans to State Governments and others to Rs. 362 crores and debt repayments to Rs. 28 crores, making a total of Rs. 835 crores." This he proposed to meet as follows:

	Rs. (crores)
Repayments of loans from the States and others	75
Market borrowings in India	145
Small savings	100
Foreign assistance in the form of loans	285
Miscellaneous receipts	25
Total	630
Deficit financing	205
Total	835

On the subject of market loans, the Finance Minister said that the net market borrowings for 1957-58 amounted to Rs. 68 crores. The Government had floated two loans. Subscriptions amounted to Rs. 106 crores, of which Rs. 45 crores were from conversions. There are no outstanding loans due to mature in 1958-59. So far as small savings are concerned, the Minister said: "For some months, the net receipts have been much smaller than in the past, particularly under Post Office Savings Banks. In the first 10 months of the current year, the net receipts amounted to Rs. 37.8 crores, against a sum of Rs. 44.8 crores in the corresponding period of last year." How the Finance Minister expects to mobilise Rs. 245 crores from these two sources needs some explanation. If the current year is any guide, such anticipations will miss the mark by, say, Rs. 150 crores. Referring to foreign assistance, the Minister said that the total made available to India up to the end of March 1957 amounted to Rs. 463 crores, of which Rs. 219 crores had been used by that date. The balance of about Rs. 244 crores "has mostly been committed."

Unproductive Expenditure

The Budget has also shown that the additional taxation of Rs. 40 crores raised to finance the plan outlay has already been consumed by non-development expenditure, which is mounting and will probably rise further after the Central Pay Commission has made its report. The Budget has shown that there is little scope for additional taxation. The only alternative left will be the use of the printing press. The Finance Minister has proposed deficit financing to the extent of Rs. 205 crores during 1958-59, adding that its total on 31st March, 1959, should be Rs. 1,400 crores. Any shortfall in the anticipated revenues may also add to deficit financing, the only exception being foreign exchange. It was the foreign exchange crisis which brought reality to the second five year plan. It may be this element in the 1958-59 Budget will again regulate the pace of development. It may be presumed that in a socialistic pattern of society the consumer can always legitimately be called upon to make his contribution to the uplift of a mythical identity called the "masses". This seems to be evident from the lavish provisions for cultural activities in the Budget, on a scale which even a country like the United Kingdom cannot afford.

India's Constitution is a federal one, the cornerstone of which is a division of functions between the federal centre and federated States. Education, Health and Agriculture were among the subjects transferred to the States in 1921. The following comparisons show how India's Constitution is being respected:

	1947-48 Rs. lakhs	1958-59 Rs. lakhs
Education	96	29.63
Medical	29	6.15
Public health	30	9.88
Agriculture	56	13.87
Rural development	Nil	85
Veterinary	13	1.53
Co-operation	1	1.39
	225	63.30

The Budget for general administration, on the civil side, has also increased from Rs. 3.39 lakhs in 1947-48 to Rs. 16.34 lakhs in 1958-59.

U.K. Assistance

The British High Commission in New Delhi has forwarded to the U.K. Government India's request to have detailed reports prepared under the Colombo Plan for heavy structural and vessel plate projects. These were recommended by Sir Eric Coates's mission which visited India in 1956 also under the Colombo Plan. An early acceptance of India's request is expected. The report of the British mission on the second shipbuilding yard is expected here by the end of this month. The mission visited India during the last cold weather under the Colombo Plan.

Canadian Help

Canada has offered to supply non-ferrous metals to the value of $(C)10 million as assistance to India under the Colombo Plan. The arrangement, broadly, would be that consumers in India would place orders with firms in India which have normally been acting as agents of Canadian manufacturers and suppliers of these metals. The Government will then approach the Canadian Government for the necessary allocations to cover the orders.

Japanese Project

The Japanese technical survey mission, in its report submitted to the Government of India last month, has favoured the exploitation of the Bailadila mines in Madhya Pradesh, in the first instance, rather than the ore deposits in the Rourkela region of Orissa. Of the three major ports on the east coast, from which 2 million tons of iron ore can be shipped annually to Japan under the ore programme, Madras is considered too far to the south. Calcutta, on the other hand, is handicapped by the tides on the Hooghly, which limit the size of the ore carriers to 10,000 d.w.t and 30 feet draught. Calcutta's docks are also crowded with other shipping and cannot be expected to handle more cargo without considerably adding to the present congestion. That leaves only Visakhapatnam, situated midway along the coast. The Japanese mission has suggested that it would be more economical to transport the ore from the Bailadila mines to Vizag, rather than the longer distance from Kiriburu in the Rourkela region.

Agreement with W. Germany

An Indo-West German agreement was signed in Bonn last week. It enables the Government, with the co-operation of the German firms and banks concerned, to postpone payments for the Rourkela steel plant by three years, up to a total amount of 660 million deutschemarks, or approximately Rs. 75 crores. The credit will carry 6 percent interest. This credit, it is anticipated, will make it easier for the Government to take up certain projects in the public sector, such as heavy machine tools, dyestuff intermediates and fertiliser plant, the priorities of which were recently stepped down due to the foreign exchange crisis.

Steel Targets

It has been decided to undertake preliminary planning on the basis of the target for steel production in the third plan period. This is likely to be of the order of 15 million tons, namely, an increase of 9 million tons in the target for the second plan. To achieve the additional target of 9 million tons, expansion of established units will take first priority. The capacity of the plants at Rourkela, Bhilai and Durgapur together can be expanded by 4 million tons approximately. Further expansion of the works in Jamshedpur and Burnpur would yield, at best, an additional one million tons. There will, therefore, have to be a new steel plant with a total capacity of 4 million tons. For the location of the third steel plant, the Bokaro area in Bihar was considered suitable. But Durgapur in West Bengal was selected in preference to Bokaro, mainly due to the lack of communications to the site at Bokaro. This site has, however, many other advantages. The consulting engineers to the Department of Iron and Steel, who carried out certain preliminary investigations, have recommended that the planning be based on the assumption that it would be economical to have a plant of 2.5 to 3 million tons capacity at Bokaro. A weir across the Damodar river near Bokaro will be constructed at an estimated cost of between Rs. 50 lakhs and Rs. 60 lakhs.

All preparatory work at the site, such as drilling test holes, general levelling, the planning of a township, the construction of main roads and accommodation for construction staff, and the building of offices, will be undertaken soon. It is estimated that such work will involve an expenditure of Rs 50 lakhs, for which provision has been made in the Budget for 1958-59.

The following schemes of the Mysore Iron and Steel Works are included in the second five year plan:

	Rs. (lakhs
1. Spun pipe plant	15
2. Sintering plant	30
3. Ferro-silicon plant	130
4. Expansion of steel melting capacity	500
5. Extension of rolling mill capacity	
6. Extension and modernisation of ancillary works to cater to the requirements of the production section of the works	100
Total	775

The spun pipe plant and the sintering plant are carried over from the first five year plan. Of the six schemes included in the plan, the spun pipe plant is very near completion and is expected to go into operation shortly. Equipment and machinery for the sintering plant is ready to be shipped from Germany. For the ferro-silicon plant, the Mysore Iron and Steel Works has placed orders with Messrs Elektrokemisk, a Norwegian firm, on a deferred payment basis. For the expansion of steel melting capacity and the extension of rolling-mill capacity, negotiations are still under way between the Mysore Government and Messrs G.H.H. Voest for deferred payment terms. For the extension of rolling-mill capacity, details of the credit terms and of the agreement are being finalised. The extension and modernisation of ancillary works consists largely of civil engineering work.

The Government of Mysore has accepted in principle that either a corporation or a private limited company should be formed, and is working out the details. The expansion scheme of the Mysore Iron and Steel Works, when completed, will raise the production of steel from the present 30,000 tons to 85,000 tons per annum. The Government of India will assist the new corporation by investing equity capital for financing the expansion schemes detailed above, but the extent of such investment is still not definite. A small provision of Rs. 1 lakh has been made in the Budget for 1958-59.

Trombay Plant

A plant has been set up in Trombay to process the residual cake left over from monazite after its rare earths and phosphate content have been extracted in the monazite processing plant at Alwaye. The cake contains thorium in the form of hydroxide and a small amount of uranium. The capacity of the plant has since been increased nearly five-fold in order to fulfil commitments for the supply of thorium nitrate, and also to feed the proposed uranium processing plant. The entire production of the plant, after meeting the needs of the gas mantle industry, is at present being used to fulfil international commitments. The estimated cost is Rs. 60.73 lakhs, inclusive of 5 percent supervision charges payable to Indian Rare Earths (Private) Ltd. for operating the plant. With the increase in the production capacity of the plant, it has become necessary to provide certain additional facilities, such as additional store buildings and extension of sub-stations. The provision of Rs. 2.30 lakhs included in the Budget estimates for 1958-59 is for meeting expenditure on this account.

Uranium Extraction

A pilot plant for the extraction of uranium from copper tailings supplied by the Indian Copper Corporation has been set up at Ghatsila at a cost of about Rs. 4.32 lakhs. The work of setting up the plant is almost complete. Trial runs have already begun. As a result of the detailed investigations carried out, it is now proposed to use the plant for experimental work also on other uranium prospects on which pilot plant work for beneficiation is required. It is, therefore, necessary to supplement the existing facilities for which a provision of Rs. 2.20 lakhs has been made in the Budget estimate for 1958-59. The plant is at present operated under an agreement by the Indian Copper Corporation. It has since been decided to operate it departmentally.

Uranium Processing

It has been decided to set up a uranium metal processing plant at an estimated cost of Rs. 27 lakhs. The designs of the plant are ready and work on the construction of the building is under way. Orders for most of the equipment and stores required for setting up the plant have been placed. Expenditure to the extent of Rs. 11 lakhs is expected to be incurred up to the end of March 1958 and the balance of Rs. 16 lakhs during 1958-59; provision has been made accordingly. The plant is expected to be in operation by the middle of 1958. It will give enough uranium for experimental purposes and for use in the reactors that are under construction at present. It will also give the scientific and technical staff the necessary experience for the design and construction of the large uranium plant which will be required by a full atomic power programme.

Project Provision

A provision of Rs. 50 lakhs is included in the Budget for 1958-59 for meeting expenditure on the various new projects, such as (i) a fuel fabrication plant, (ii) a plant for the production of automatically pure graphite, (iii) a plant for processing beryllium oxide and (iv) a beneficiation plant for raising the content of low-grade uranium ore. All these projects are essentially ancillary ones for implementing the atomic energy development programme. The estimate for the fuel fabrication plant, which should be completed by September

1958, is ready and is expected to be sanctioned shortly. The fuel element required for the operation of the Canada-India reactor will be fabricated in this plant. The estimates for the other projects are under various stages of preparation.

Railway Electrification

The work pertaining to the electrification of the Howrah-Bandel-Burdwan and Sheoraphuli-Tarakeshwar branch on a 3,000-volt D.C. system is in hand. The Howrah-Bandel section has already been brought into commission. Electrification of Howrah-Burdwan (*viq* chord)-Moghalsarai is also being progressed on a 25 kV single-phase 50-cycle system but no commitments except for the purchase of 110 locomotives have been made so far. However, tenders for the supply and erection of structures and overhead equipment for these sections have been invited and were due to be opened on 4th March. A contract for the supply and erection of about 6,000 tons of steel structures for the main line section between Howrah-Bandel and Burdwan has been given to Messrs. S. A. E. (India) Ltd. A contract for 568 pre-stressed concrete structures for the Sheoraphuli-Tarakeshwar section has been given to Chanda Engineering Ltd. A contract for the supply and erection of overhead equipment consisting of contact wire, catenary, insulators and associated fittings for the entire section Howrah-Bandel-Burdwan and Tarakeshwar branch on 277 route miles has been given to S. A. E. The rate for the erection of steel structures by S. A. E. (India) Private Ltd. is Rs. 250 a ton. The cost of erection of pre-stressed concrete structures by Chanda Engineering Private Ltd. is included in the cost of the structures, which varies from Rs. 1,000 to Rs. 2,558 for portal structures. The rate for the supply and erection of a cantilever structure is Rs. 380 each. The cost of installation of the entire overhead equipment varies from Rs. 3,000 to Rs. 3,800 a single track mile.

Heavy Electrical Project

In November 1955, the Government of India entered into a technical consultancy agreement with Associated Electrical Industries of the United Kingdom. Under this, the consultants were required first of all to submit their report concerning the location of the heavy electrical equipment factory. In the light of their recommendations and other relevant considerations, it was decided to locate the factory in Bhopal, which is now the capital of Madhya Pradesh. In November 1956, the consultants submitted a comprehensive report on the project. The Indian engineers nominated by the Government were, as required by the agreement, associated in the preparation of this report. After detailed examination by an expert committee and on its recommendation, the Government of India accepted the report in March 1957. The factory will manufacture the following principal items of equipment when it is completed: (1) Power transformers of all sizes and voltages, mainly from 33,000 volts upwards. (2) Voltage and current transformers. (3) Switchgear of all voltages, ranging mainly from 6,600 volts upwards to 220 kV for power systems. (4) Switchgear for railway electrification. (5) Control board and control desks. (6) Traction and industrial control gear. (7) Surge divertors of all voltages up to 220 kV. (8) Static capacitors for power factor improvements. (9) D.C. traction motors. (10) A.C. industrial motors of sizes above 200 horsepower. (11) Crane motors. (12) A.C. generators of sizes up to 50,000 kW for hydro-electric power generation. (13) Hydraulic turbines for coupling with A.C. generators. (14) Rectifiers for industrial uses and railway electrification.

The time-table for the production of the items and the stages in which they should be developed has been the subject of detailed discussion with the consultants. Both from the point of view of reducing to the minimum the net outlay of foreign exchange on the project and to enable it to start profitable working at the earliest possible date, it has been decided by the Government, with the full concurrence of the consultants, that in the first phase of manufacture only the first eight items of equipment should be taken, the remaining items to be taken up at a later stage. The ordering of plant and equipment for them should accordingly be postponed for the present.

The production of the first eight items is expected to begin in 1960-61 and reach the full amount in about two years. In the first year, it is proposed to limit the manufacture of power transformers to a capacity of 10,000 kVA and voltages up to 66 kV. The manufacture of bigger transformers and for higher voltages up to 220 kV is proposed to be taken up from the second year of manufacture onwards. Similarly, the manufacture of switchgear is also proposed to be limited to a voltage of 66 kV in the first year; the manufacture of switchgear for higher voltages will be from the second year of manufacture onwards. The factory, as a whole, is planned for an annual output worth approximately Rs. 12.5 crores, but adequate provision exists for the extension of the machine tool equipment section to increase the output to approximately Rs. 22 crores a year. Space has been provided for further extensions to the factory later, if necessary.

Railway Equipment

Australia is supplying 2,000 railway wagons and 24 diesel rail-cars for the railways. Equipment of the value of Rs. 259.85 lakhs and Rs. 123.38 lakhs is expected during the current and the next financial years, respectively.

Budget Provision for All India Radio

A sum of Rs. 215.59 lakhs has been provided in the Central Budget for All India Radio for 1958-59. The major projects for which provision has been made include six 100 kW short-wave transmitters, four in Delhi and one each in Bombay and Madras; six 50 kW medium-wave transmitters, one each in Jullundur, Bombay, Calcutta, Ahmedabad, Bangalore and Tiruchirapalli; two 20 kW short-wave transmitters in Delhi; ten 20 kW medium-wave transmitters, one each in Ajmer, Delhi, Indore, Calcutta, Patna, Cuttack, Vijayawada, Madras, Bombay and Tiruchi; seven 10 kW short-wave transmitters, one each in Ajmer, Bhopal, Lucknow, Simla, Gauhati (two) and Hyderabad; one 7.5 kW short-wave transmitter in Srinagar: two 2/1 kW short-wave transmitters in Dharwar and Ranchi; one 1 kW short-wave transmitter, studio and receiving centres in Poona; broadcasting house studios extension—multi-storeyed building in Delhi; a research department in Delhi; mobile broadcasting and recording vans for stations under the three project circles in Bombay, Calcutta and Delhi; soil conductivity and field strength measurement: permanent studios in Jullundur, Lucknow, Bhopal, Srinagar, Calcutta, Ranchi, Gauhati, Madras, Bombay, Tiruchirapalli, Nagpur, Ahmedabad and Bangalore; additional studio facilities in Hyderabad and Patna; receiving centres in Jammu, Srinagar, Lucknow, Bhopal, Vijayawada, Calcutta, Gauhati, Patna, Cuttack, Ahmedabad, Jullundur, Bangalore, Hyderabad, Trivandrum, Tiruchirapalli and Nagpur.

New Company for Durgapur Project

For the supply of iron ore to the Durgapur steel plant, a new company, Bolani Ores (Private) Ltd., has been formed in collaboration with the Orissa Minerals Development Co. The Government of India retains 50.5 percent of the total share capital in the company. Bird and Co. (Private) Ltd. has been appointed secretary and treasurer of the new company. At the initial stage, the company is to supply ore to the Rourkela steel plant also. A provision of Rs. 10.10 lakhs has been made in the revised estimates for 1957-58 for the purchase of shares and Rs. 40.40 lakhs in the Budget for 1958-59.

Production Programme of State Collieries

In September 1956, a corporation called the National Coal Development Corporation (Private) Ltd. was formed for the purpose of administering the existing State collieries, which numbered 11 in all, and those to be established in future in the public sector and to give the coal projects the autonomy and organisation necessary for their expeditious execution. The production programme in the public sector was reviewed by the Co-ordination Committee at a meeting held on 8th June, 1957, and a firm programme for the production of an additional 8.01 million tons was approved. Field-wise estimates of capital cost, foreign exchange and production are as follows:

	Capital cost (In lakhs of rupees)	Foreign exchange included in capital	Production (in million tons)
1. Korba (open-cast)	261.88	223	1.00
2. Korba inclines	210.00		0.60
3. Kathara	259.00	143	1.00
4. Gidi (Karanpura)	334.00	160	1.50
5. Saunda and Bachra	262.04	73	0.60
6. Korea	349.00	140	1.00
7. Existing collieries	431.00	343	2.31
Total	2106.92	1082	8.01
1 percent increase in price and 9 percent increase due to interest on foreign exchange	308.57		
	2415.49		

In addition to the above programme, the development of Bishrampur coalfield at a capital cost of Rs. 6.87 crores (Rs. 3 crores in foreign exchange), from which a production of 2 million tons a year is expected by 1960-61, has been approved. An additional production of 2.5 million tons is contemplated from the Korba coalfields at a total estimated cost of Rs. 12.92 crores, with the assistance of the Russian offer of 500 million roubles. The foreign exchange component is Rs. 8 crores. Funds to the extent of Rs. 12 lakhs are also required for boring and prospecting.

Indian Delegation to E.C.A.F.E. Meeting

An eight-man delegation led by the Central Minister for Industry, Mr. Manubhai Shah, will represent India at the 14th session of the U.N. Economic Commission for Asia and the Far East which is to be held in Kuala Lampur, from 5th to 15th March. The economic situation in the Asian region will be review at the session. The Commission will also discuss the reports of its committees on trade, industry and natural resources and inland transport.

Proposed Transport Development Council

The question of setting up a Transport Development Council and some other committees in place of the Transport Advisory Council and the Central Board of Transport and its Standing Committee, is under consideration. Mr. Raj Bahadur has said that the proposed Transport Development Council will be a purely official body at ministerial level. Representatives of non-official organisations are, however, proposed to be taken on another committee which will be known as the Road and Inland Water Transport Advisory Committee. The composition and other details of these bodies have not yet been finalised.

Sales of Motor Tyres

The consumption of motor-car tyres during 1957, based on sales, is estimated as follows: (i) Dunlops—324,500 and (ii) Goodyears—80,300. Imports during January to August 1957 amounted to 46,157. Production during the year 1957 was 990,150. The Government is aware that there is a shortage of certain sizes and that prices are somewhat higher than the list prices of the manufacturing companies. In addition to licensing the industrial undertakings to expand their present capacity and to establish new undertakings, *ad hoc* licences worth Rs. 50 lakhs to import particular sizes in which there is a shortage have been granted.

Regulating Plantation Industries

The Government has been advised that the Industries (Development and Regulation) Act, 1951, cannot be extended to the plantation industries. The question of taking powers similar to those in the Industries (Development and Regulation) Act, 1951, for regulating plantation industries is under consideration.

Production of Razor Blades

The estimated production of razor blades in 1957 was about 336 million. The total installed capacity of Indian factories was about 615 million. Permission has been granted to open new factories. The retail price of indigenous blades is about four annas to eight annas a packet of ten blades. It has not been possible to make an assessment of the actual requirements of razor blades, it is stated here. Yet imports of razor blades have been banned.

Foreign Exchange for Studies Abroad

Foreign exchange is released to persons proceeding abroad for graduate or post-graduate courses in foreign universities. No foreign exchange is released to school-going children or to persons wishing to take up the following 11 courses: (1) General Certificate of Education Examination; (2) Bar examination; (3) accountancy; (4) secretarial courses; (5) study of languages; (6) domestic science; (7) music; (8) tailoring; (9) drawing; (10) painting; and (11) fashion designing.

Expansion of Bombay Telephones

A project for the long-term expansion of the Bombay telephone system to meet the increasing demand for its services was sanctioned in July 1956 at a net estimated cost of about Rs. 1,250 lakhs. The project provides for the expansion of the capacity of the system to 79,700 lines, and also for the replacement of worn-out equipment. No less than 51,000 lines of new equipment will be installed and 13,460 lines of old equipment will be recovered. The project, after completion, is expected to yield an annual revenue of Rs. 206 laks. The recurring expenditure on this project will be of the order of Rs. 183 lakhs. A sum of Rs. 23 lakhs has been spent on the project up to March 1957. An amount of Rs. 41.36 lakhs has been provided for expenditure during the current year and Rs. 63.19 lakhs during 1958-59. Sites for those for other exchanges are in various stages of acquisition.

Project for Underground Trunk Cable

A project for laying an underground trunk cable linking Bombay, New Delhi and Calcutta was sanctioned in August 1956 at an estimated cost of Rs. 795 lakhs. The project aims at a quicker and more reliable telephone service among the principal towns of India by means of a carrier system working on underground cables. No appreciable expenditure was incurred on the project up to March 1957. The work on its first phase has started. A quota of 63 miles of cables has already been received and another quota of 73 miles is expected to be shipped very shortly. A sum of Rs. 50 lakhs is expected to be spent during 1957-58 and a provision of Rs. 81 lakhs has been made in the Budget for 1958-59.

UNITED INDUSTRIAL BANK LIMITED

A SCHEDULED & CLEARING BANK
(Established 1940)

Head office:
7, Wellesley Place, Calcutta.

RECOMMENDATIONS OF THE COHEN COUNCIL

T.U.C. CRITICISES REPORT AS PARTISAN

(FROM OUR LONDON CORRESPONDENT)

ANY hopes the Government may have had of the work of the Cohen Council on prices, productivity and incomes educating public opinion so that it has a better appreciation of the economic difficulties which afflict Britain, have not been realised so far as the trade unions are concerned. The General Council of the T.U.C. has rejected the Council's initial report without even giving it the careful study which it deserves, and has withdrawn its future co-operation. Although the T.U.C. condemns the report as being "partisan, one-sided and unimaginative" because it happens to support the measures introduced by the Government last September and opposes ("in present circumstances") the alternatives of price controls, subsidies, dividend limitation and the repeal of the Rent Act favoured by Labour or union opinion, the significant feature is that in its factual content the report is an admirable review of what has really happened to wages and prices, profits and dividends, and productivity. The Labour and trade union critics of the report have yet to produce an economic analysis as carefully documented and as well argued in support of their contentions, and especially to prove that they are not influenced by political considerations. It is surprising to find, however, that in spite of the curt dismissal of the report by the T.U.C. and the Labour Opposition leaders, trade union M.P.s have invited Lord Cohen to meet them and answer questions concerning it. He is understood to have accepted this invitation with "alacrity," no doubt as a useful prelude to the next stage of its work in providing a disinterested view of current economic problems against which the conflicting and interested opinions of particular sections may be judged.

As for the Cohen report itself, this is not easy to summarise in a brief paragraph. But generally speaking it approves the main lines of recent Government policy, though it feels that this ought to have been put into effect some two years earlier. It rejects the suggested alternatives favoured by the Opposition and the trade unions, and in particular the idea that a small amount of regular inflation might be tolerated so as to maintain full employment. It lays down categorically that inflation must be stopped and not merely moderated; it would like to see the general level of prices declining gradually as productivity increases; and it suggests that stability will be in sight if restraint is used in pressing for higher wages and other incomes. For the current year, the report thinks, inflation might be halted if any increase in wage rates could be kept "substantially below" the average of about 5½ percent by which they have risen in the last few years. As the main cause of the rise in prices and incomes has been high demand, it argues that a slackening in the latter is one way of keeping prices down. It does not, therefore, advise any relaxation in the credit squeeze even if unemployment goes "somewhat higher" than the current level, for it is felt that a further small rise will not prove catastrophic. It suggests means for making labour more mobile, shortening the period of unemployment and meeting any special hardships. It cannot be said that this first report is in any way a solution to all the problems with which Britain is faced, but it certainly deals with the more immediate of them objectively, leaving others to be considered at a later date.

Rise in Unemployment

There can be little doubt that the recent steady rise in unemployment, by 60,000 in January and a further 28,000 in February, has influenced Labour thinking on all economic matters. Indeed, some anxiety at the situation in particular areas is even felt in Government circles, for although the countrywide figures represent just under 2 percent of the employable population being out of work, this masks much higher percentages in certain industries and the worst affected areas. It was all to the good, therefore, that the debate on this subject in the House of Commons last week was kept on a serious plane, with the result that it was ascertained that both the Labour Ministry and the U.K. Board of Trade were aware of the difficulties being experienced and were engaged in drawing up measures to combat any distress. Nevertheless, the labour situation today is causing anxiety in many directions, and although Britain can be reasonably satisfied with the balance of payments position and the maintenance of her export trade, with consequent benefit to her gold and dollar reserves, the bouts of weakness to which sterling has recently been subjected on the exchange markets is a reminder, if any were still needed, that the country is still a long way from being out of the woods and that overseas confidence is still a rather unstable factor.

Basic Materials and End-products

The latest *Board of Trade Journal* is of interest for it contains a detailed analysis of basic materials prices and the cost of the end-products made from them, and explains why the latter has not yet been reduced in line with the former. Apart from the time-lag between the purchase and use of these materials, it is shown that up to January 1958, only a few groups of products had cheapened. Among them were textiles, cardboard containers, sulphuric acid, joinery, and rubber goods. All these imported raw materials account for a high proportion of the costs. The more highly fabricated goods have not yet gained from the full impact of the lower materials prices. Moreover, products in which steel is important have had the rise in the prices of their main raw material only a few months ago and their sale prices are still moving upward. In consequence, the price index of all manufactured products was, in fact, still rising steadily until the autumn, but since October it has not risen further and the U.K. Board of Trade thinks that the steady upward trend of product prices, noticeable since early 1954, may have been halted.

In January the terms of trade continued to be favourable. Import prices fell further, but export prices fell, too, so that the ratic of the first to the second was left unchanged at 91 (1954 equals 100). The fall in import prices was spread among food, beverages and tobacco, basic materials, and manufactured goods. The fall in export prices was confined to engineering products and to the category known as "other".

Cheaper Local Loans

Though it is emphasised that no easing of the credit squeeze is involved and that the changes are intended to keep the lending rates of the Public Works Loan Board in line with those prevailing in the open market, the Treasury's decision to reduce interest rates on loans advanced to local authorities is welcomed as a pointer to some relaxation in the not-too-distant future. On loans for not more than five years, the interest charge is reduced from 7¼ percent to 6¼ percent. On loans for more than five but not more than 15 years, the rate falls from 6¾ percent to 6¼ percent. The interest charge on loans for more than 15 years is cut from 6¾ percent to 6¼ percent. Rates on existing loans are not affected.

Problems of Jute Industry

Supplementing his preliminary statement issued with the accounts of Jute Industries Ltd., Mr. W. G. N. Walker has delivered a speech at the recent annual meeting of shareholders in the course of which he has dealt with the impact on the industry of international politics. He has pointed out that India does not export any raw jute, and being almost self-sufficient in this raw material is naturally anxious to increase the sale of her jute goods in world markets. Pakistan, on the other hand, with a jute manufacturing industry of a much smaller size which is still experiencing teething troubles, must export raw jute to the maximum possible extent and, therefore, is anxious that jute manufacturers throughout the world outside India should continue to use it in large quantities. Pakistan's interests are, therefore, closely allied to those of the jute manufacturers outside India, but she is not helping them at the moment as her raw jute prices to export markets are higher than equivalent qualities available to manufacturers in India.

The jute manufacturing industries of Europe depend on Pakistan for the fibre supply, and their survival depends primarily on Pakistan's ability to offer raw material at a price which will enable manufacturers to compete not only with goods exported from India but also with alternative materials and methods. This point was made quite clear to Pakistan by the delegates from countries throughout the world at the International Jute Conference held in Dacca last November, and it is hoped that Pakistan now appreciates, in spite of the internal difficulties, that her long-term interests lie in supplying raw material at a price economic to her customers, particularly as almost half her foreign exchange earnings is derived from this source.

Profits of Ralli Brothers Fall

Trading difficulties mentioned in the annual report last March have dealt a heavy blow to the profits of Ralli Brothers, the general merchants and merchant bankers. Group net earnings for the year to 31st August last have fallen to £93,693 from £373,989 the year before. After deducting outside interests, the net balance available amounts to £764, against £343,131. A total of £224,000, compared with nil, is brought in from contingencies and tax reserves and from provisions no longer required, and the dividend on the £1,520,000 ordinary stock is maintained at 5 percent as for the two previous years. In his statement with the last accounts, Mr. Jack Vlasto, chairman, said that a poor start to the year had been worsened by the effects of the Suez crisis. The decline in commodity prices had also had an adverse effect. A feature of the preliminary statement now released is an increase from £127,962 to £193,275 in profits retained by the subsidiary companies. This leaves the parent company with a net loss of £192,511.

Brevities

Mr. Frank S. Winterbottom, managing director of A. and S. Henry and Co., has been appointed a director of the Samnuggur Jute Factory Co., the Titaghur Jute Factory Co., and the Victoria Jute Co.

The Queen has approved the re-appointment to the Court of the Bank of England of Mr. Geoffrey Cecil Ryves Eley, Lord Bicester, Sir Frank Cyril Hawker and Sir Alfred Roberts. The appointments are for four years from 1st March.

Messrs Samuel Montagu and Co., the London merchant bankers, have founded a bank in Zürich under the name of Zurmont Bank A. G. Zurmont will have a paid-up capital of 6 million Swiss francs and will be closely associated with the London parent company.

Bombay

PROMOTION OF CAPITAL FORMATION

NEED TO MODIFY TAX STRUCTURE

(FROM A BOMBAY CORRESPONDENT)

THE Bombay Shareholders Association has made a strong plea for the liberalisation of Government policies affecting investment and capital formation. A paper read by its representative before a conference on capital formation, held here under the auspices of the Federation of Indian Chambers of Commerce and Industry, traces the fall in equity prices over a period of time and points to the tremendous loss sustained by investors due to capital erosion. The paper shows that industrial profits, after tax, as a percentage of net worth, come to 7.5 percent, which is by no means excessive. Gross profits during 1950-54 were 8.9 percent of the total capital employed. The total dividend as a percentage of the paid-up capital averaged 7.8 percent. On the basis of these figures, the paper maintains that industrial profits in India are by no means excessive, and the dividend distributed to shareholders, when taken as a percentage of the paid-up capital, is moderate. The Association says that there is scope for the Government to modify tax measures in order to restore confidence among investors without causing any material loss to the Exchequer.

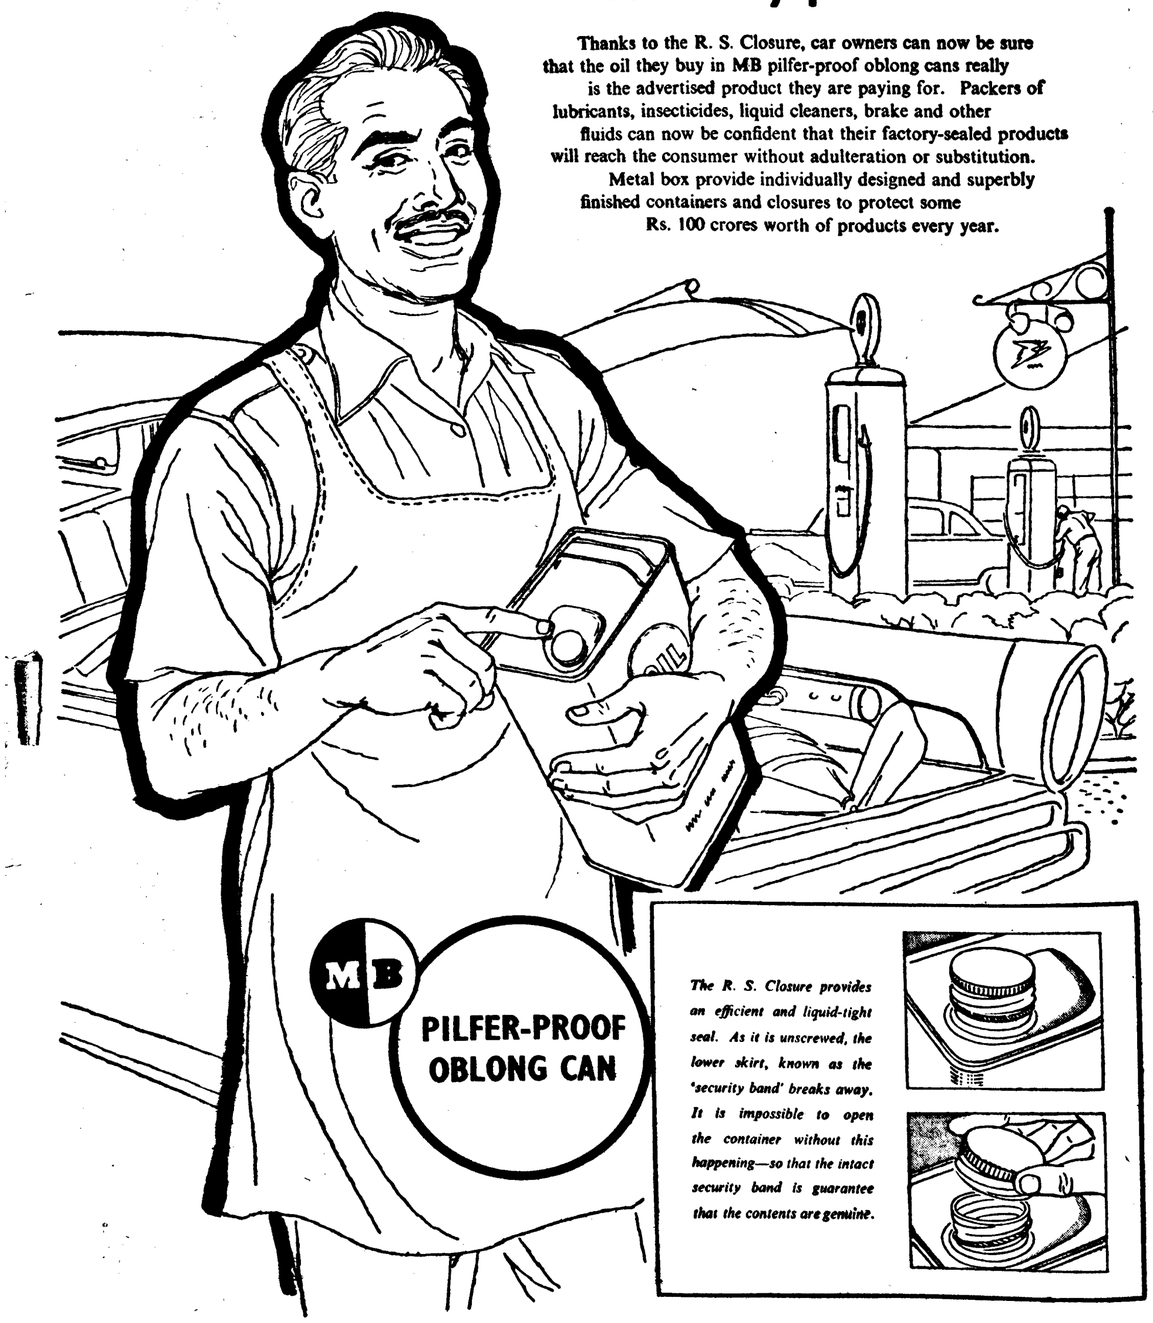
U.S. Economic Assistance

Inaugurating the Indo-Pan-American Association at the Indian Merchants Chamber Hall in Bombay, the U.S. Ambassador to India, Mr. Ellsworth Bunker, has categorically stated that "no strings" are attached to U.S. economic aid programmes to newly-developing countries. He denies the charge that the United States is attempting to subject the independent countries of Asia and Africa to a "new form of imperialism." She has provided nearly $45,000 million or more than Rs 21,000 crores in purely economic assistance throughout the world during the post-war period.

Referring to the economic aspects of U.S. foreign policy, Mr Bunker says: "But in our view the second aim of our foreign policy, and by far the most important, is that which embraces joint and mutual agreements for economic development, technical assistance and such things as the exchange of cultural and scientific knowledge. There are those who charge that by its economic aid to newly-developing countries, the United States is waging a new form of imperialism and is trying to control the policies and aspirations of these nations. Nothing could be farther from the truth. No strings are attached to our aid. In India, we have had the privilege of providing assistance, supplementary in character, to the tremendous effort you are putting into your five year plans, governmental and private. This assistance now comes to about $1,275 million (Rs. 606 crores)."

Incidence of Direct Taxes on Companies

Companies in India are among the world's most heavily taxed, according to the Association of Indian Trade and Industry in Bombay. In a brochure on *The Case for Relief in Direct Taxation*, it says that the incidence of various direct taxes on companies was increased last year by about one-fourth—from 43.4 percent to about 50 percent. It considers this to be an excessive increase for a single year, at a time when companies are required to find resources for their expansion programmes under the second five year plan. The number of direct taxes levied by the Central Government exceeds that in any other democratic country. Out of 19 categories of direct tax levies prevailing in 13 countries, 15 were levied in India, against four to ten in other countries. The Indian system of taxation is the most cumbrous of all.



While other countries make a choice between alternative taxes, India favours a simultaneous levy of almost all taxes prevailing elsewhere. She also levies the expenditure tax and enforces a scheme of deposit of corporate reserves, which are without precedent in any part of the world. The Association says that in reshaping the system of direct taxation so as to encourage initiative, enterprise and investment, measures relatively unproductive of revenue which act as deterrents should be eliminated first. The next group of measures to be considered should be those reliefs having incentive effects on productive activity which can be introduced without losing much revenue. The last to be considered should be the measures which are relatively productive of revenue, but have disproportionately adverse effects on incentives.

Development Rebate for Shipping

Commenting on the increase in the development rebate for new ships from 25 percent to 40 percent recently announced in the Central Budget, shipping quarters in Bombay hail it as a beneficial measure. Companies undertaking expansion will stand to benefit most, it is stated. Scindia Steam, for example, proposed to spend some Rs. 5.69 crores on additions to the fleet during last year with the taxation provision totalling Rs. 31 lakhs. In view of an increase of 15 percent in the development rebate, the company will benefit to the extent of this provision with a small surplus left over.

a pilfer-proof package for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

MB PILFER-PROOF OBLONG CAN

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

MINIMUM PRICES STEADY GOODS MARKET

RAW JUTE IMPROVES IN SYMPATHY

THE minimum prices for jute goods, recommended last week by the I.J.M.A., appear to have had the desired effect. Almost immediately quotations began to rise and within the week these had reached the intended level. The reaction of overseas consumers has yet to be fully gauged, because the business completed since the announcement has been of little significance. There is no denying that bold action was required to save the market from the slump towards which it was obviously heading. But how long the revival will last is a matter for conjecture. If the improvement in prices is backed by genuine business, then the policy was sound. But in the long run, it would appear that the decision will only tend to delay the ultimate issue unless more business is forthcoming. Are overseas buyers, who took little interest at former prices, liable to show any greater interest at higher levels? The prevailing attitude of consumers towards jute goods is that prices have been too high in recent months. This was pinpointed by the change in the buying habits of the majority of buyers, especially the Americans, who, after many years of bulk buying, have now turned to a hand-to-mouth policy in an endeavour to keep prices down. In spite of reports to the contrary, the U.S.A. has been a regular buyer in the Calcutta markets but her purchases have been small, and so placed as to have the least possible effect on rates. So far there has been no significant rise in overseas enquiry and most of the business reported was by local shipper interests who were anxious to cover their bear accounts before prices got too high.

Mills Buy Fibre

The fibre markets enjoyed a fillip as a result of the I.J.M.A.'s decision, and during the week raw jute rates appreciated by about Rs. 1.50. Mills followed the rise, or indeed were partially responsible for it, as immediately the decision was known several groups rushed into the market for varying quantities. As a result of this, sellers became reserved and asked higher prices. It is estimated that during the week business done was the largest for some months, and amounted to about 500,000 maunds at rising prices.

In many of the upcountry jute growing districts and in some parts of Pakistan, good rainfall has been reported. The preparation of land for planting is well ahead and ploughing is general. Except in a few of the lowland areas of Pakistan, however, no sowing has yet been done. Many farmers have indicated that they may delay sowings this season until they see what the price trend appears to be. Thus, one good outcome of the present rise may be to convince growers that jute can still show a profitable return.

THE JUTE MARKETS

Manufactured Goods: The introduction of minimum prices by the I.J.M.A. had an immediate effect on the Calcutta goods market, and rates shot up by nearly Rs. 2.50 overnight in heavy goods, and 85nP in hessians. The news was well received in business circles, and the general attitude changed from one of despondency to one of confidence. Speculators became very active with the change, and sustained buying in the *fatka* market was the principal cause of the continued rise throughout the week rather than any genuine business. The reaction of overseas interests was slow in coming, and very little foreign business was reported. In general, most overseas customers consider this to be a temporary phase and are prepared to wait for prices to revert to former levels. If present prices are not supported, this may well be the case, but the undertone of the current market is very steady due to local shipper covering and speculative buying.

Opening quotations last Thursday jumped to Rs. 97 for ready B Twills, with forward shipment at a premium of Rs. 2.75. Hessians also advanced rapidly for 40in. 10oz. to open at Rs. 39, but in this section the premium for forward shipment was only 15nP. Heavy bear covering in *fatka* throughout the day forced prices even higher, and by Friday B Twills showed another rise of Rs. 1.75, with the forward section going above the minimum price to Rs. 100.75. Hessians were slower to react and 40in. 10oz. rose to Rs. 39.40, with forward shipment just below the minimum at Rs. 39.45. The tempo of the market slowed after this initial reaction. Hessians recorded small losses while sacking was virtually unchanged. After the week-end, the required minimum prices were reached in both sacking and hessians in all deliveries except ready shipment, but the only business reported was of a speculative nature. Local shippers appeared to have lost interest at this stage and there was no fresh business from overseas. Price fluctuations were small and mills were reported to be reserved at these levels.

At the close, the market was steady and opening quotations on Tuesday morning were as follows:

	Ready Rs	March Rs.	Apl.-June Rs.	July-Sept. Rs.
40in. 8oz.	31.90	31.90	31.90	31.90
40in. 10oz.	39.40	39.45	39.50	39.55
B Twills	99.20	99.50	100.30	101.20
Heavy Cees (Plain)	99.25	99.75	100.50	101.50
A Twills	122.50	123	123.50	124
Liverpools	115.50	114.75	114.75	115.25
Cornsacks	101.50	101.50	103	102.50

Raw Jute: Immediately after the I.J.M.A.'s decision to adopt minimum prices, several mill groups came into the market and a fair amount of business was transacted. Prices advanced rapidly and sellers adopted a reserved attitude. The main interest was still in low quality jute, or occasionally middles only, but as the week progressed mills found it more difficult to procure their requirements. All mills showed an interest and during the week total business amounted to about 500,000 maunds. Upcountry markets ruled firm and continued to operate at a premium over Calcutta prices. Consequently, sellers were inclined to sell only small lots as it was virtually impossible to cover any fresh business at a profit. A large portion of the sales made was ex-stock, and even with the rise in price most of the jute sold in this way showed a loss. Many sellers have been unable to unload their holdings as, in the absence of business, they despatched jute to Cossipore in the hope of selling it as ready jute. Unfortunately, mills are chary of buying jute ex-Cossipore and have insisted in most cases on delivery ex-agency.

Opening quotations last week were Re. 1 up and Assam jute stood at Rs. 24.25. By the week-end, this was Rs. 24.50, with sellers looking for higher rates. Business was done in Dhubri-Northern and Assam jute at Rs. 24 to Rs. 24.50 for assortment, and Rs. 26.50 to Rs. 27.25 for middles only. Large quantities of mesta were purchased at Rs. 21.25 to Rs. 22.25 for Daissee mesta: Rs. 21.50 to Rs. 22.50 for Northern and Desal mesta; and Rs. 20.50 for jungli mesta. Small lots of bimli were done at Rs. 19 for F.A.Q. Cuttings were also reported at Rs. 67 to Rs. 69 a bale.

Wagon arrivals in Cossipore last week dropped to 375, which was 80 less than in the previous week and 85 less than in the corresponding week of last year. Mill agents were busy and there was a keen demand for all arrivals. Prices advanced during the week, and at the close quotations were based on Kishanganj jute at Rs. 21.75 a maund for average quality.

This report was closed on Tuesday morning, and opening quotations on that day were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	24.75	March-April
Northern	24.50	"
Purnea Desal	23	"
Daissee	28	"

Northern ex-Calcutta	23.50	"
Mesta.		
Assam-Northern	23	"
Desal	23	"
Daissee	22.50	"
Jungli	21	"
Bimli F.A.Q.	19	"
Pakistan Cuttings	70 a bale	"

THE FOREIGN JUTE MARKETS

NO IMPROVEMENT IN DEMAND FOR CLOTH AND BAGS

(FROM OUR DUNDEE CORRESPONDENT)

THE news from Calcutta that the I.J.M.A. has announced fixed minimum prices for gunnies has been of great interest to the Dundee jute industry. The low and uneconomical prices quoted for Indian cloth and bags have been responsible to a great extent for the depression in the Dundee and Continental productions. Quotations during the past week were 4s 9d up for B Twills, 1s 9d for 40in. 10oz. hessian and 9d for 7½oz. For March shipment B Twills are at 149s 3d, April 149s 9d, and May-June 150s 6d, while 40in. 10oz. hessian are at 59s 9d and 7½oz. at 44s 9d, all positions, March to June, all f.o.b., Calcutta. It is a mystery to the jute trade here how the Indian mills have been able to quote prices which obviously show a loss on both hessian and sackings.

Raw jute has tended to be dearer during the past few days and most shippers are now quoting the E.P.C. prices. Since four London merchants were suspended, and shippers in Pakistan were warned that they must not trade with them, other shippers have been nervous about quoting anything less than the E.P.C. terms. These are £109 for Mill Firsts, £94 for Mill Lightnings, £83 for Mill Hearts and £70 for grade Hearts, while good marks of Daissee-¾ are from £95 and grade from £87, with grade Tossa-¾ from £102 and grade Tossa-4 from £95, all c.i.f. U.K., March-April. There are one or two cases where the rates mentioned might be shaded by 10s a ton.

There is still no improvement in the demand for jute cloth and bags in the Dundee market, but there are hopes that some good may come out of the latest developments in India. Prices are very steady and manufacturers will not accept less than their fixed rates of 12.88d a yard for 40in. 10oz. hessian and 11.01d for 8oz., less of course the usual 3 percent discount for prompt cash. Yarns are also firm at 15.14d a lb for 8 lbs common hessian weft and 15.72d for medium 8 lbs spools. Imports of jute cloth into the United Kingdom in January were 7,937,000 square yards (£257,241), compared with 23,935,000 square yards (£766,500) during the corresponding period of last year, while imports of jute sacks and bags were 37,182 cwts. (£199,759) and 32,611 cwts. (£164,264), respectively.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th February, 1958	1,395.7	21,778.0	23,173.7
1st to 25th January, 1958	1,226.8	11,929.3	13,156.1
1st to 25th December, 1957	933.6	17,666.0	18,599.6
	Sacking		
1st to 25th February, 1958	22,745.1	234.5	22,979.6
1st to 25th January, 1958	17,455.9	126.0	17,581.9
1st to 25th December, 1957	23,174.8	561.2	23,736.0

THE PAKISTANI JUTE MARKETS

UNCERTAINTY ABOUT FUTURE OF FOREIGN FIRMS

(FROM A NARAYANGANJ CORRESPONDENT)

LAST week, there were many rumours and counter-rumours about the future of the trade being based on the return of the Chairman of the Jute Board. The position has now been clarified and one wonders what the future of foreign firms in the jute trade in Pakistan will be. The authorities have black-listed four London agents. They are all old-established, reputable firms, who have been in the trade for many years. The accusations against them are not specific but are based on reports that they have been depressing the market and conniving with balers through their Calcutta agents to under-invoice. Similarly, in Pakistan, two British and two Marwari jute firms have had their registrations as exporters cancelled.

For the latter, it is particularly unfortunate that their registrations have been cancelled rather than their shipper's licences, because in the event of their bringing a case against the Government and winning it, it will take them a long time to obtain their exporter's registration certificates again. If it was only a shipper's licence, it would not take so long. It is well known that one can lose more money by enforced inactivity than by taking the wrong market view. It is also rather disturbing to note that at least three of the shippers involved have considerable fixed assets in the country in the form of jute presses and godowns. Such action cannot possibly attract foreign capital to this country. The accusations against these four—that they have depressed the market and dealt through Calcutta houses presumably to under-invoice—are rather difficult to refute since they are not specific.

The question which arises over the London houses is rather more complex, as it implies action being taken against firms in a foreign country because they decided to take a view of the market. Without doing the latter, it is practically impossible to trade in a speculative and fluctuating market like jute. As for the Government's accusations of under-invoicing, there is no doubt that it has every right to take steps to stop this drain on its very limited foreign exchange resources. It has been suggested that the answer to this would be rather the encouragement of reputable firms and the rejection of undesirable elements when definite proof has been found. Furthermore, it is obvious that there may be undesirable elements among Pakistani shippers, just as there may be among British and Indian shippers. Under the present circumstances, a Pakistani shipper can shelter behind his nationality and can do no wrong as far as the authorities are concerned. Surely this can only encourage malpractices.

Accusations about depressing the market are unfair, since in every market, be it jute or cotton, there are bears and bulls and every season one of the parties must win the battle. To take a bearish view does not imply anti-Pakistani action, as has been suggested, since that very baler may in a different season take a bullish view. Another point which seems to have been overlooked by the local authorities is that jute, compared with other world commodities, is extremely expensive in today's rather depressed trading conditions.

In the meantime, the market, which has been extremely weak, with little or no inter-baler business, is now showing the usual temporary rise, which represents yet another attempt by sellers to resist the fall. Imports have fallen off everywhere and what little is available, particularly that required for end-month shipments, is going at slightly better prices. But world conditions are such that it is not likely that buyers will be

prepared to pay higher prices than are prevailing today. In this case, there may be yet another drop in the market, particularly as reports indicate a crop larger than world requirements and as weather conditions have been ideal for sowings.

In the gunny market, there has been little or no change but the I.J.M.A. move to raise the prices of B Twills and hessian might well help Pakistani mills to sell profitably. Unfortunately, most Pakistani mills are very well sold for sacking: their hessian output, after selling to South Africa and Karachi, is fairly small.

U. S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in January was the same as for December but was 4 million yards below that for January last year. In view of general business conditions, consumption in January was probably as good as could be expected. Undoubtedly, it would have been lower except for the prevailing comparatively low prices for burlap. One bright spot is the increasing demand for 36in. 10oz. bags for high-fat content (8 percent to 10 percent) commercial feeds. This product needs a fairly small column or narrow bag. Burlap is especially adapted for this purpose because it allows aerating of the feed; and as this type of feed is pelletised, bulk deliveries are not feasible due to the tendency for pellets to granulate under weight. U.S. burlap stocks increased 15 million yards from December. At 240 million yards, 117 million yards were spots and 123 million yards were afloats. Appearing below are two tables which include the January figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

DIVERSION OF LAND TO FOOD CROPS OPPOSED

IMPORTANCE OF KERALA PLANTATION PRODUCTS

(FROM A SOUTH INDIAN CORRESPONDENT)

THE leader of the Opposition, Mr. Chacko, has made a strong appeal in the Kerala legislature that the Government and the people should not overlook the importance of cash crops such as rubber, tea, pepper and coconuts to the economy of the State and of the country as a whole. They should not curtail the production of these crops in their enthusiasm to produce more foodgrains. Kerala's cash crops occupy an important place in the export trade and the country cannot afford to reduce the supply of exportable commodities at a time when it is facing a heavy strain on its foreign exchange resources. Mr. Chacko was speaking on the Governor's address to the Assembly, which stated that the Government recognised the need to give more importance to the production of rice, which is the main food.

Mr. Chacko says that the change of emphasis to rice production should not be at the expense of cash crops. Climatic and soil conditions in Kerala are best suited for the cultivation of the latter. Some cash crops are valuable foreign exchange earners, while in others, like rubber and coconuts, India is not self-sufficient and has to set aside a share of her foreign exchange earnings for their import. The purchasing power of a large section of the population of the State depends on these cash crops. If the Government overlooks their importance and utilises land which is now being utilised for the cultivation of cash crops for the cultivation of paddy, the effects will be disastrous. If the purchasing power of the people is exhausted, there is little use in raising the production of rice. If their purchasing power can be increased, it does not matter that Kerala is deficit in food; food can be bought from elsewhere and the deficit can be covered. Economic sense demands that the State should concentrate on what it can produce more profitably. The Government and the people of Kerala should see Kerala as part of the Indian union and shape their policies in such a way that the national interest does not suffer.

According to official figures, Kerala produces 700,000 tons of rice, against her annual requirement of about 1.5 million tons. Besides, she produces 140,000 tons of tapioca, which is mainly a substitute food material. Her production of cash crops is as follows: tea 29,000 tons, coffee 3,000 tons, rubber 21,000 tons, pepper 22,000 tons, ginger 12,000 tons, turmeric 14,000 tons, lemongrass oil 1,400 tons, cashewnuts 48,000 tons, coconuts 271,000 tons, arecanuts 635,000 tons and cardamom 1,600 tons.

Rubber Production

Those who are looking forward to self-sufficiency in rubber will be disappointed by the performance of the planting industry during 1957. Production recorded a nominal increase of 323 tons to 23,767 tons over 1956, and was the highest on record, but fell far short of expectations. Early in 1957, the Rubber Board estimated the year's output at 27,000 tons. The Board chairman has given two reasons for the shortfall: a heavy monsoon and labour troubles. While these factors did hamper production, it is felt that the Board was unduly optimistic about the yield. Its estimates of both production and consumption for 1957 were on the high side. The total requirements of rubber, for instance, were estimated by the Board at 53,444 tons (both natural and synthetic) for actual consumption and carry-over, whereas the real requirements amounted to only 44,755 tons. This supports the contention that the Board's estimates were exaggerated.

To raise output, a subsidised replanting scheme which proposes replanting 70,000 acres of the present low-yielding strands with quality seedlings was finalised two years ago. The Board has been implementing it. During the first year, the target of 7,000 acres was almost reached. But in the second year, the Board could disburse the subsidy for replanting only 2,000 acres out of the target area of 7,000 acres. There are complaints from small growers, who are to get the maximum benefit from this scheme, that the terms and conditions imposed by the Board are too stiff; in many cases, therefore, they find it difficult to get the subsidy. The subsidy offered in India is small compared with that given in Ceylon and Malaya. If that too is made difficult for the growers to get, the response from them is naturally poor. Unless the position improves soon, even this small plan for improving production will fail. It is now generally admitted that along with replanting, new planting has also to be taken in hand if self-sufficiency is to be attained. As the chairman of the Rubber Board has pointed out, with the proposed land reforms in Kerala, where 97 percent of the rubber is produced, the expansion of rubber cultivation has become increasingly difficult. The availability of land will be reduced if the Agrarian Relations Bill of the Kerala Government, which is now in circulation, is passed in its present form.

Official Planting Plans

Under these circumstances, the Kerala Governor's announcement that his Government proposes to utilise part of the available land for planting rubber is welcome. In the absence of further details, the merits of the plan cannot be fully assessed. It is not known whether the Government intends to undertake cultivation itself or through some agency. Considering the poor performance of State-owned industries, the Government's direct entry into rubber planting will not be welcomed. However, it remains to be seen whether it will ultimately shelve this proposal too, as it did an earlier one for setting up a State Trading Corporation in Kerala.

It is understood that the Central Government has decided to permit the import of 12,000 tons of natural and synthetic rubber in the first half of 1958. The total deficit for the year is estimated at 13,000 to 20,000 tons. The question of a further revision of the natural rubber price, it is expected, will be taken up by the Tariff Commission later this year.

Abolishing Cashew Board

The immediate abolition of the Cashew Board and the winding up of its office has been recommended by the Estimates Committee of the Kerala Legislature. The Cashew Board was established by the Administrator's régime in the former Travancore-Cochin State following the closure of cashew factories in and around Quilon towards the end of 1956. The aim was to organise workers' co-operatives to take over the factories and run them, to put the industry on a sound footing, and to provide round-the-year employment for workers. Subsequent developments have helped end the stalemate in the industry and factory owners have opened their factories and commenced work again. The main purpose for which the Cashew Board was constituted thus no longer exists. The Committee records that during the one year of its existence, the Board did not serve any useful purpose to justify its continuance.

Cashew processing is a major industry in Kerala, giving direct employment to about 45,000 workers and indirectly supporting many ancillary industries. The 155 factories are concentrated in and around Quilon. Their roasting capacity is estimated by the Committee at 200,000 tons of raw nuts.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2.87 a lb, against Rs. 2.99 a lb in force from 1st February, 1958. There is no change in the existing rate of duty of 38nP a lb.

ACREAGE UNDER TOBACCO INCREASES

According to the Directorate of Economics and Statistics, Central Ministry of Food and Agriculture, the all-India first estimate of tobacco for 1957-58, puts the current year's area at 828,000 acres against the corresponding adjusted estimate of 816,000 acres for 1956-57. The current year's estimate, therefore, shows an increase of 12,000 acres or 1.5 percent in area over last year. The increase in acreage has been shared by Andhra Pradesh, Bihar, Bombay and Uttar Pradesh, and is attributed generally to favourable climatic conditions at the time of sowing. This increase has, however, been offset to some extent by a decrease in Rajasthan. The information given in this estimate relates generally to the period up to the end of December 1957. Till then, the conditions of the crop was reported to be generally satisfactory. This estimate does not cover the entire area sown to tobacco crop during the current year. Past experience has shown that the area at the first estimate stage forms roughly 85 percent of that finally reported.

Commodity Markets

BRITISH TEXTILE REVIEW

RESULTS OF COMPETITIVE PRICING

MARKS and Spencer, with nearly 240 retail branches, is the principal distributor of finished textiles in Britain. Its predominant position has been attained by competitive pricing. In January, it announced further substantial reductions in its prices for hosiery, men's wear, and children's knitwear—nearly 20 percent in some items of the latter. Such a policy, on the part of an organisation of this size, can perceptibly affect the total demand for textiles. It can also effect further changes in the channels of distribution and, because most of the goods are made specially for Marks and Spencer, in the organisation of the textile industries. Lower prices for raw materials are only a small factor in these price reductions. The main factor is administrative economy and simplification of working, resulting from a thorough review of the whole system. "Paper work" has been so drastically reduced that the saving of paper alone is estimated at some 80 tons a year, and more reliance on the individual employee has so simplified his (rather, her) routine that the number of employees in each establishment can be considerably reduced.

The costs of distribution—mainly, the addition of wholesale and retail margins to the prices of manufactured goods—have troubled thoughtful textile manufacturers who have successfully reduced their own costs but cannot make much impression on prices in the shops. Any move to reduce final prices by genuine economies in distribution—a voluntary reduction from a position of strength, not a forced reduction from a position of weakness—must be wholeheartedly welcomed. Marks and Spencer concerns itself also with the costs of actual manufacture. The manufacturers who work for the company, receiving large and repetitive orders, can afford to operate on narrow margins of profit. And the company can, and does, help these manufacturers modernise their plant and organisation. It provides an advisory team of experts whose services are available to the manufacturers whenever required. There are so many small firms making garments that some such co-ordinating system seems essential to economic functioning of the trade as a whole. It has played its part, along with economies of distribution, in the latest reduction in prices.

Outlook for Wool Trade

The effect on final prices of substantial changes in raw material prices is not under-rated, and the wool industry did not conceal its anxiety when prices were rising rapidly early last year. However, the subsequent fall was too severe to be comfortable, and in the first half of the current season Bradford's trade was suffering from the loss of confidence in the basis of values. The recent recovery (the January series of London wool sales closed with prices mostly about 5 percent above opening rates) has done much to restore confidence, and it is thought that spinners and manufacturers may have to cover rapidly if the movement proceeds, for buying of tops and yarns has been only enough to satisfy immediate needs. Dreyfus and Company, the London wool-trading firm, concluded a mid-season survey in January with the remark that "satisfactory trading should be possible, if confidence can be restored". It is recognised that the wool industry, as a whole, has not fully maintained the peak of activity reached in the first half of last year, but its activity is still high, and there is not as much gloomy talk of recession as has been heard recently. However, only a minority of combing firms in the Bradford area are still working night-shifts —a sign that there is no longer any abnormal animation in the trade.

Further negotiations to promote the European free trade plan have stimulated discussion of its potential benefits to the British wool industry. The confidence of outside investigators is not shared without qualification by everyone inside the industry, but most agree that much increased business can be done on the Continent, with its rising living standards and its climate which favours wool, if tariff barriers are reduced. The qualifications refer mainly to cheap Italian goods, which are already very competitive in Britain in spite of the tariff, and to cheap Uruguayan tops and Japanese cloth, which might flow freely into this market through loopholes in the definition of origin. The British proposal to the Organisation for European Economic Co-operation that goods should qualify as originating in the free trade area if they contained not less than 50 percent of the area materials and/or workmanship was quite unacceptable to the British manufacturers, whose proposal is that all the combing, carding, spinning, weaving, and finishing should be done in the area if the product is to qualify as originating there.

Low-cost Textiles

This question of origin has another aspect, which the South African Parliament has been discussing, with reference particularly to cotton piece-goods. The South African Customs Act defines a country of origin as one whose materials or labour represent 25 percent or more of the cost of a product. Within the liberal limits of this definition, many low-cost Asian goods, processed in Europe, have been entering South Africa at low rates of duty. The purpose of the amending legislation is to empower the Minister for Customs to increase the percentage requirement in the case of goods originating in countries where wages are low. The finishing side of the industry in Britain (including even some firms which until recently were adamantly opposed to imports of cheap grey cloth) is now compelled to rely increasingly on material of low-cost origin to maintain the volume of exports, and restrictions on the import of hybrid goods into other countries are likely to do more harm than good to the British industry, even though they assist sales of all-British goods. But the sections of the industry with whose products these imported pre-processed goods directly compete are still insistent that some scheme to limit these imports into Britain must be evolved.

WORLD COPPER PRODUCTION AND CONSUMPTION

Free world smelter production of new blister copper rose by 28,000 long tons last year and totalled 2,960,000 long tons, according to the British Bureau of Non-Ferrous Metal Statistics. Production of refined copper declined by 14,000 tons to approximately 3,441,000 tons; in addition some 22,000 tons of unrefined blister by-passed the refineries and went direct into consumption channels, making a total supply from new production of 3,463,000 tons. Consumption is estimated to have fallen by 13,000 tons to approximately 3,263,000 tons. Production, therefore, exceeded consumption by some 200,000 tons during the year (200,000 tons during 1956), of which a net 60,000 tons is believed to have gone into Government stockpiles. Visible world stocks of blister and refined copper rose by 149,000 tons (206,000 tons increase in 1956) and totalled 995,000 tons at the end of 1957, excluding stocks held by all Governmental agencies and by consumers in many European and South American countries. The development of world production and consumption of refined copper during the year was as follows:

(In thousands of long tons)

	Production	Consumption	Excess
1st Quarter	885	838	47
2nd	883	839	44
3rd	807	754	53
4th	888	832	56
Year 1957	3,463	3,263	200

The seasonal decline in the third quarter consumption was no more pronounced in 1957 than in previous years.

Smelter production fell by 44,000 tons in the United States and by 9,000 tons in Chile and 7,000 tons in the Belgian Congo, but there were increases of 32,000 tons in northern Rhodesia, 3,000 tons in Canada and 13,000 tons in Japan. These six countries accounted for 87 percent of free world smelter production during the year (86 percent in 1956). Production in other countries rose by 40,000 tons. Production of refined copper included some 500,000 tons recovered from secondary material; the overall decline in total output compared with the increase in smelter production was due mainly to an increase in stocks of blister awaiting refining. Production fell slightly in most producing countries except northern Rhodesia and Japan where there were increases of 21,000 tons and 14,000 tons, respectively. Full details for all countries are shown each month in *World Non-Ferrous Metal Statistics* published by the Bureau from 132, Hagley Road, Birmingham. The decline in world consumption was due mainly to the United States and Canada where consumption fell by 153,000 tons and 25,000 tons, respectively. Consumption rose 6,000 tons in the United Kingdom and there were increases in most other European countries with the result that consumption in western Europe reached a new high of 1,549,000 tons. There were some signs of falling off towards the end of the year, however. Japanese consumption was 29,000 tons higher than in 1956; this was mainly due to high rates in the early part of the year, consumption in the last quarter being well below the 1956 rate.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.6 percent to 104.7 during the week ended 15th February, 1958, compared with 104.1 (revised) for the previous week. The index was lower by 1.1 percent and 1.9 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles advanced by 0.6 percent to 100.6 compared with 100.0 (revised) for the previous week due to a rise in the prices of potatoes in Delhi (+39%) groundnut oil in Calcutta and mustard oil (+13% each), gur in Muzaffarnagar, cashewnuts (Indian) in Quilon and eggs (+7% each), bajra in Agra (+6%) and in Hissar (+5%), barley in Hapur (+6%), betelnuts in Mangalore (+5%) onions (+4%), gram and coconut oil (+3% each), jowar, maize and meat (+2% each) and ragi, ghee and tea (+1% each). The prices of fish in Quilandy (−12%), turmeric in Calcutta and potatoes in Patna (−10% each), urad in Patna and oranges (−9% each), arhar in Delhi (−8%), bajra in Anakapalli (−7%), barley in Jaipur and black pepper (−5% each), chillies (−4%), milk (−2%) and rice and gingelly oil (−1% each), however, moved down. The index for Tobacco remained unchanged at the previous week's level of 95. The index for the Fuel, Power, Light and Lubricants group also stood at the last week's level of 114.5 in spite of variations in the prices of castor oil in Bombay (−7%) and in Kanpur (+5%). Higher prices of castorseed in Bhagalpur (+14%), rapeseed (+10%), copra (+6%), groundnuts (+3%), raw silk (+2%) and raw cotton, gingellyseed and raw hides (+1% each) raised the index for the Industrial Raw Materials group by 1.4 percent to 112.1 compared with 110.5 (revised) for the previous week although linseed in Nagpur (—13%), cottonseed (−4%), lac (−3%) and raw wool (−1%) showed declines. Prices of coir yarn, brass and tin (—1% each) moved down while those of linseed oil (+2%) and rayon yarn and copper (+1% each) showed advances and in the result the index for Intermediate Products advanced by 0.3 percent to 105.8 compared with 105.5 for the previous week. The index for Finished Products rose by 0.4 percent to 107.8 due to an advance in the prices of castor cake in Kanpur (+16%), cotton cloth (mill) (+2%) and bicycles (+1%). The prices of coconut cake in Bombay (−6%), and in Kozhikode (−5%), glass (−2%) and jute manufactures (−1%), however, moved down.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

Groups and Sub-Groups	Week Ended 15-2-58	8-2-58	18-1-58	16-2-57

Architects of India's steel industry (from L to R) Jamsetji Tata, R. D. Tata, Ratan Tata and Dorabji Tata

The Spirit of Adventure

"Tatas represent the spirit of adventure."

—Mahatma Gandhi

"Jamshedji Tata laid the foundations of heavy industry in India by starting Steel and Iron Works in, what came to be known as, Jamshedpur... It had a precarious childhood but the war of 1914-18 came to its help. Again it languished and was in danger ... but nationalist pressure saved it."

—Jawaharlal Nehru from The Discovery of India

"Be sure to lay wide streets planted with shady trees, every other of a quick growing variety. Be sure that there is plenty of space for lawns and gardens. Reserve large areas for football, hockey and parks. Earmark areas for Hindu temples, Mohammedan mosques and Christian churches."

—Jamsetji Tata to his son Dorabji, in 1902, six years before work started at Jamshedpur

"We are constantly accused by people... of wasting money on the Town at Jamshedpur. We are asked why it should be necessary to spend so much on housing, on sanitation and water-works, on roads... on hospitals and on welfare. People who ask these questions are sadly lacking in imagination. We are not putting up a row of workmen's huts at Jamshedpur; we are building a city..."

—R. D. Tata addressing Tata Steel shareholders on October 25, 1923

"So far we have but scratched the surface of this great land. Vast resources still remain unexploited and unused in the service of man. To think that hundreds of thousands of people should ever fall at the touch of famine, or die from disease aggravated by insufficient nourishment, while there is so much latent food and wealth in the country!... Is it not time to stir ourselves, to wake up to the great opportunity and the stern duty before us, the task of India's industrial regeneration?"

—Dorabji Tata addressing Tata Steel shareholders in 1918

"We are like men building a wall against the sea. It would be the height of folly on our part to give away any part of the cement that is required to make the wall secure for all time. That is why we and you have to use this money... to build up this great industry... And we should not think of dividends until we have done that...

"...Make no mistake about this point. We hold this money in trust for you. But you yourselves hold it in trust for the Indian Nation..."

—R. D. Tata addressing Tata Steel shareholders on June 4, 1925

The Indian Steel Industry celebrates its 50th Anniversary

Calcutta Markets

BETTER DEMAND AT TEA EXPORT SALE

PLAIN LIQUORING DUSTS EASIER

AT Sale No. 35, held on 3rd and 4th March, offerings at the Export auction amounted to 59,287 packages. There was a better general demand than last week, especially for bright liquoring sorts (except for clean black leaf grades), which were fully firm to dearer. Plain B.P.'s and Fannings declined by 4nP to 6nP while medium B.P.'s were also easier to the same extent, except when they had a leafy appearance. Fannings in this category declined by 2nP to 4nP. Bright liquoring teas were again strong to dearer. The best C.T.C.'s were about steady and there was better enquiry for poorer types although these generally sold below valuations. Brown Dooars were disposed of at a discount of 4nP to 8nP although some of the better sorts have been sold above Rs. 2 a lb. Whole leaf grades were about steady with any change in buyers' favour, although some stylish sorts were frequently dearer. There was a fair demand for Darjeelings, which, however, tended easier.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.20 to 2.25	2 2 0 to 2 3 0
Plain B.P.	1.44 to 1.48	1 15 0
Medium B.P.	1.52 to 1.56	2 0 0
Best Assam C.T.C. B.P.	2.70 to 2.90	2 4 0 (nom.)
Plain Fannings	1.52 to 1.56	
Medium Fannings	1.72 to 1.76	
Best Assam C.T.C. Fgs.	2.80 to 3	

At the Internal Sale, a total of 18,942 chests of Dusts were on offer. There was a good general demand but prices were again easier for most descriptions. Middle East buyers showed very little interest and orthodox descriptions from all districts were up to 10nP easier. Plain liquoring and medium C.T.C. Assams were easier and sold at a discount of 10nP and sometimes more. The best liquoring C.T.C.'s were irregular and although a few grades sold above valuations, they were generally up to 20nP easier towards the close. Demand for Darjeeling invoices was restricted to a few flavoury invoices on offer which sold well.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.54	1 11 0
Medium Assam Grainy Dust	1.56	1 12 0 to 1 12 6
Medium Assam C.T.C. Dust	1.75 to 1.95	2 1 0 to 2 3 0
Best Assam C.T.C. Dust	2.80 to 3.10	2 12 0

A total of 3,753 chests of Leaf was on offer. There was a good general demand, especially for C.T.C. Assams but the orthodox descriptions were irregular and were occasionally easier.

FREIGHT MARKETS QUIET

CHARTERING in the freight markets remained quiet during the past week. The feature of the fixtures was the sugar trade from Cuba. Cuba-London-Liverpool 6,000 tons 5 percent sugar in bags was fixed at 67s 6d and Cuba-Japan 9,000 tons 10 percent sugar paid 62s 6d. Some fixtures of foodgrains from the U.S.A. to India and Pakistan were also reported—U.S.N.H.-Karachi 9,500 tons 10 percent wheat at $22; U.S. Pacific-East Coast 12,000 tons 5 percent wheat at 62s 6d, option West Coast 65s; and U.S. Gulf-Chittagong or Chalna part cargo 3,500 tons 5 percent wheat paid $10.20. About 10,000 tons of fertilisers in bags from Rijeka to Karachi were fixed at 40s f.i.o. Transatlantic coal repeated the old rate of 22s and a 8,000-ton motor vessel with coal from Hampton Roads to Japan was accepted by the charterers at $7.30. Ore charterers took a vessel for March loading Marmugao to Antwerp-Emden range, 9,500 tons 10 percent iron ore at 40s f.i.o. In the Calcutta coal trade, the Ceylon Government Railways were given cover by Japanese shipowners for about 60,000 tons of coal at the unconfirmed rate of 37s 6d f.o.b. owners' trimming.

HIDES AND SKINS STEADY

The market continued steady. Stocks were less than in the previous week.

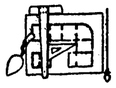
Bazaar Sales

(Between 25th February and 3rd March, 1958)

Cowhides: Wet salted (Ord.) 14,000 pcs on the basis of Rs. 11.50 to Rs. 12.25. Wet salted (slaughtered) 15,600 pcs. on the basis of Rs. 13.50 to Rs. 21.00.

Goatskins: Wet Salted (Patna, Daissee and Kustia) 54,635 pcs on the basis of Rs. 290 to Rs. 310, Rs. 330 to Rs. 345 and Rs. 380 to Rs. 390; Wet Salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur 14,200 pcs. on the basis of Rs. 335 to Rs. 340; Purneah-Kissenganj 9,500 pcs. on the basis of Rs. 350 to Rs. 375; Patna-Pakur 34,700 pcs. on the basis of Rs. 280 to Rs. 315; Muzafferpore 14,400 pcs. on the basis of Rs. 335 to Rs. 340.

Bazaar Stocks



(3rd March, 1958)

Cowhides: Wet Salted 100,000 pcs.

Goatskins: Wet Salted (Patna, Daissee, Kustia and Killed) 31,000 pcs.; Assam-Dinajpur 128,000 pcs.; Muzafferpore - Patna-Pakur - Purneah - Kissenganj 441,000 pcs.

Plan for Progress

Transport and Travel

A network of steel rails  girdling the country, ribbons of  tarmac stretching over the land, and invisible paths traced across the skies are today breaking  the barriers of vast distances in India to meet the needs of her developing economy.  Thousands of millions of passengers  and millions of tons of freight are carried every year by rail, road and air. During  the Second Five Year Plan will be built 18,000 miles of surfaced roads and eight aerodromes and gliderdromes, and 2,258 locomotives and 1,18,611 coaches  and wagons will be put into commission. Textile Machinery Corporation Limited, is proud to play its part in this mighty effort to strengthen the economic life lines of the nation. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

geared to our better tomorrows

COMPANY AND PUBLIC NOTICES

THE CALCUTTA STEAM NAVIGATION CO., LTD.

NOTICE is hereby given that the 150th Annual General Meeting of the Members of the above-named Company will be held at the Registered Office. No. 5, Fairlie Place, Calcutta. on Friday, the 28th March, 1958, at 11-30 A.M. to transact the following business :—

1. To consider and adopt the Profit and Loss Account for the half-year ended 30th June, 1957, together with the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors.
2. To declare a dividend. (The Directors recommend the payment of dividend @ 65 Naye Paise per share or 6½%).
3. By a SPECIAL RESOLUTION to re-elect as a Director of the Company Mr. C. C. Pyne, who is a Director and as such an associate of the Managing Agents. Mr. C. C. Pyne retires by rotation, but being otherwise eligible offers himself for re-election.
4. To appoint Auditors and to fix their remuneration.

NOTICE is further given that the Share Transfer Books of the Company will be closed from the 15th March to 28th March, 1958, both days inclusive.

By Order of the Board,
HOARE MILLER & CO., LTD.,
Managing Agents.

5, Fairlie Place,
Calcutta.
Dated 1st March, 1958.

Note :—A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

THE COMMISSIONERS FOR THE PORT OF CALCUTTA.

NOTICE

Repayment on the 15th September 1958 of 5% Calcutta Port Trust Debenture Loan 1928-58-88 issued on the 15th September, 1928.

The Commissioners for the Port of Calcutta, in pursuance of the right reserved by them at the time of issue to repay the 5% Calcutta Port Trust Debenture Loan 1928-58-88 for Rs. 1,50,00,000/- issued on the 15th September, 1928 at any time after the expiration of thirty years from the date of issue, on six months previous notice, hereby give notice of their intention to repay the said loan on the 15th September, 1958.

The holders of debentures of this loan should tender their debentures at the Local Authorities Loan Section, State Bank of India, Calcutta, at least three weeks before the due date of repayment with the following endorsement on the back of each debenture :—

"Received payment in full of all demand for Principal and interest thereon".

(Signature of holder)

Interest on the Loan will cease from the 15th September, 1958.

P. C. MITTER,
Secretary.

15, Strand Road,
Calcutta-1.
The 3rd March, 1958.

THE GOKAK MILLS LIMITED

NOTICE

NOTICE is hereby given that the Transfer Books of the Company will be closed from the 22nd March, 1958 to the 11th April, 1958, both days inclusive.

The Dividend, if sanctioned, will be paid to those Shareholders whose names stand on the Register of the Company on the 11th April, 1958.

For THE GOKAK MILLS LIMITED,
For FORBES FORBES CAMPBELL & CO. PRIVATE LTD.,
F. H. KEMPLE,
Director,
Managing Agents.

Bombay, 27th February, 1958.

THE GOKAK MILLS LIMITED

NOTICE

NOTICE is hereby given that the Debenture Transfer Books of the Company will be closed from the 22nd March, 1958 to the 31st March, 1958, both days inclusive.

The interest will be paid to those Debenture holders whose names stand on the Register of the Company on the 31st March, 1958.

For THE GOKAK MILLS LIMITED,
For FORBES FORBES CAMPBELL & CO. PRIVATE LTD.,
F. H. KEMPLE,
Director,
Managing Agents.

Bombay, 27th February, 1958.

BRAITHWAITE & CO. (INDIA) LIMITED

NOTICE is hereby given that the twenty-eighth Ordinary General Meeting of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Saturday, the twenty-ninth day of March, 1958 at 10-00 a.m. to transact the following business :—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1957.
2. To declare a Dividend.
3. To elect Directors.
4. To re-appoint Auditors and fix their remuneration.

The Transfer Books of the Company will be closed from the 17th March, 1958 to the 29th March, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of Dividend as may be declared will be made to those members whose names are on the Company's Register on the 29th March, 1958.

By Order of the Board,
Y. S. TAYAL,
Secretary.

THE BORREA COAL COMPANY LIMITED

NOTICE OF INTERIM DIVIDEND

THE Board of Directors of the above Company has sanctioned payment of the following Interim Dividend in respect of the year ending 31st December, 1957, without any deduction for Income Tax payable by the Company.

On Preference Shares for half-year at the rate of 6½% per annum payable on or after 26th March, 1958, to those Preference shareholders (or their mandatees) whose names appear in the Company's books on 19th March, 1958, as the registered holders of the above shares.

The Preference Share Transfer Register of the Company will be closed from 12th to 19th March, 1958 both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 27th February, 1958.

THE GENERAL INVESTMENT & TRUST CO. LIMITED

Notice of Interim Dividends

THE Board of Directors of the above Company has sanctioned payment of the following Interim Dividends in respect of the year ended 28th February 1958—

On the 1st Cumulative Preference Shares @ 2½% without any deduction for tax payable by the Company.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COSTS IN THE INDIAN TEA INDUSTRY

COMPETITORS EXPANDING

ALTHOUGH sentiment in the Indian tea markets has improved a little in recent weeks, prices for most grades remain at disappointing levels. The 1957-58 marketing season, as a whole, has been a poor one for producers, being clouded by the likelihood of excess supply. Mr. C. D. Wilson, chairman, told the latest annual general meeting of the Indian Tea Association in Calcutta last Friday that "the first great problem by which we are confronted is the fact that the world at the moment is producing too much tea." During the past year, Ceylon has harvested a record crop. Output has increased in south India and Indonesia. These increases have more than offset the big decline in north Indian production and a smaller one in the Pakistani crop. Meanwhile, output in east Africa has maintained its steady expansion. Since the increase in production has not been matched by a rise in demand, prices have been stagnating at low levels, except in the case of the quality grades. Such limited prosperity as the tea industry has occasionally enjoyed in recent years has been due, more often than not, to fortuitous circumstances, such as bad weather, floods, dock strikes and transport interruptions of the sort which followed the nationalisation of the Suez Canal. This is a far from happy state of affairs, and in the circumstances it is appropriate that the more important part of Mr. Wilson's speech is devoted to discussing how tea production might be restored to a healthy, profitable basis.

As far as producers in India are concerned, the essence of the problem lies in the steady rise in costs in recent years. Labour wages and amenities have increased to the point where Indian tea is badly handicapped in international competition. In addition, the fiscal policies of Central and State Governments have been framed so as to extract the largest possible amount of revenue, without regard to whether or not the industry is in a position to pay it. Many of the measures affecting tea which have been framed by the Government have seemed to assume some sort of a permanency about the 1954 boom; the fact that the industry is prone to sharp and unpredictable fluctuations in fortune has been ignored, with the result that the three relatively lean years which have followed have brought about a steady depletion in the plantations' resources. The most serious depletion has been in the case of estates producing a large proportion of common teas; these types are liable to be affected worst whenever the overall supply of the commodity becomes plentiful, partly because it is they that constitute the bulk of the production of India's most formidable competitors—competitors which operate with far less rigid cost structures. Mr. Wilson makes a telling point about the state of common tea producers when he says that "we have now reached a stage when much of India's common teas cannot be sold at a profit unless there is, first, general disregard of legislative and welfare requirements, and, secondly, neglect of maintenance, a neglect which itself leads to further decline." These are words which socialists might do well to ponder; for many estates, evasion could one day become the only alternative to decline and extinction.

If gluts cause tea to be sold at a loss, plantations cannot be maintained in proper condition for any length of time; if shareholders do not get a fair return on their investment, they tend to shift their capital to other industries or other countries. A recent Reserve Bank survey has shown that a considerable amount of foreign investment in the Indian tea industry has been withdrawn in recent years. This has had relatively little to do with the fact that during the 1954 boom many estates could be sold at attractive prices; Mr. Wilson pinpoints the reason far more closely when he says that "heavy costs of far more production may not oblige a concern to close down, but they may well oblige conservative proprietors, who feel unable to maintain their standards, to sell their concern to others." The apparently uncertain outlook for the Indian tea industry brought about by rising fiscal and labour burdens has been primarily responsible for the disinvestment which has taken place—and which may still be taking place. It has, in addition, helped the growth of competitive producers elsewhere; apart from east Africa, which offers the most serious threat to India's common teas in the near term, Mr. Wilson mentions a number of other countries where the area devoted to the crop is rising. Among them are China, the Argentine, Brazil, Iran, Turkey, Russia and Formosa. As he says, "the hazards of establishing new plantations are great and the costs enormous. That such new plantations should have been established, and should now be in full bearing, is a measure of the opportunity which taxation in India has given to our competitors. Now 70 million lbs goes from the African territories, of a type which competes directly with our common teas, and though the first offerings of tea from the Argentine on the London auctions may only be a few hundred pounds, our own beginnings in 1838 were every bit as humble." His plea for tax reliefs in order to "make India the place where new tea is worth planting, and where new capital can most profitably be employed," deserves the unqualified support of those who realise its importance to the economy, especially as a foreign exchange earner.

Because fiscal and labour burdens have been increasing, the need to regulate production in accordance with demand has become more urgent. Until a few years ago, the International Tea Agreement made a modest, but valuable, contribution to the fulfilment of this need, by placing restrictions on planting and exports. Discussions about renewing the Agreement have been going on, but Mr. Wilson does not appear to offer much hope that they will reach a fruitful conclusion soon. He does, however, seem to believe that a basis for compromise exists, taking into account the diverse interests of those who might participate. Suggestions, he feels, might be framed "which would do justice to Pakistan, which now consumes most of her crop but which would like to retain her export rights under the old Agreement; to Indonesia, which must always remember that 20 years ago her production was twice what it is today; to Ceylon, which depends entirely on her foreign trade; and to the African territories, newcomers to the business but claiming their right to develop." Perhaps if producers in the major exporting countries took the initiative in arranging informal discussions to begin with, a better appreciation of their individual problems and individual points of view would result. In theory at least, it is easy to appreciate that they have a common interest in planning their production and exports so that prices settle at a fair level where estates can be maintained in proper condition, consumers are assured of good, cheap and plentiful tea, labour gets the benefits to which it is entitled, and shareholders secure adequate returns on their investment. In practice, however, complications are likely to arise because of the wide differences in production costs, and because of the widely varying dependence of producing territories on exports. But none of these complications look serious enough to prevent fruitful discussions; they certainly do not look serious enough in relation to the possibility that one day a slump might overtake all producers if output and exports continue to increase indiscriminately.

Whether or not the International Tea Agreement is renewed soon, the most important step India could take to promote the stability of her tea industry is to encourage tea-drinking at home. Mr. Wilson lays welcome emphasis on this point, and compliments the Government on its decision to set up a promotion committee, "the members of which are experienced in the problems of administration and of selling tea to the public, and from which we expect to receive vigorous and effective assistance." Although domestic consumption has been expanding, the promotion bodies which have hitherto been charged with the task deserve precious little of the credit; the expansion has come as a natural sequel to the general rise in standards of living. Efforts, however, now need to be made more vigorously. As against her cost disadvantages in international competition, India has a major advantage in that she has a large home market. To build this up would greatly improve her bargaining position in relation to other major exporters; they would realise, for instance, that if gluts develop, India would suffer least because she could rely on domestic sales, whereas they would be left almost naked to face the chilly winds of intensified world competition.

MR. NEHRU, THE HARBINGER OF HOPE

ONE of the drawbacks of having a Finance Minister who is also a Prime Minister is the difficulty of deciding in which capacity he is speaking. For the commentator, this dilemma presents itself in the form of not knowing exactly whether statements made can be accepted as policy or simply as pious generalisations. The problem is liable to become acute in cases such as Mr. Nehru's address to the Federation of Indian Chambers of Commerce and Industry in New Delhi last Monday. That is because his speech there was probably the most conciliatory made at any time during the past two years, by an incumbent of the Finance Ministership, to representatives of private industry. If Mr. Nehru was speaking in his new capacity, and his words had been weighed beforehand as carefully as they ought to have been, then they could represent a long-overdue change in the conduct of India's financial and economic affairs towards greater sympathy with an overburdened and much maligned private sector. This is probably too optimistic a conclusion to draw from a single instance of this kind. But whether it does herald a change in policy or not, the speech certainly revealed a difference in attitude—along with the fact that Mr. Nehru has learned a great deal in his short tenure of office as Finance Minister. If the particular statements made differed little from those we have heard before on innumerable similar occasions, the tone in which they were delivered certainly did. Indeed, Mr. Nehru's speech might be said to contain two surprising features: one was its almost friendly approach, the other was the evidence it gave of a serious and significant misunderstanding of fact.

The completely reasonable way in which the Finance Minister answered the address of the Federation's President, Mr. Babubhai M. Chinai, was all the more remarkable after the prior publication of a statement by the executive committee of the Federation vigorously attacking the present tax structure in general and the recent Budget in particular. Judging from Mr. Nehru's mood in the past two months, he might have been expected to defend the present position tooth and nail. Instead, in a speech which suggested he might have begun to realise this position is untenable if the country is to advance rapidly, he contented himself with describing the "broad approach" to taxation as "inevitable". On that point it would be difficult to contradict him. When, as he points out, this approach is that greater resources are to be obtained from those who can afford to pay, he is merely reiterating a policy which has already been accepted in most civilised countries in the

world. But the arguments put forward by the private sector do not attack this policy, only the way it is being carried out. There is no case against high taxes, only against those which go beyond the limits of reason. The private sector has all along based its case on the grounds that taxation should combine the maximum yield with the minimum damage to industrial expansion. It is possible to accept Mr. Nehru's policy and at the same time point out that the present methods of achieving it are unnecessarily burdensome, harassing, damaging to progress and wholly unrealistic. The Finance Minister could well abandon most of the tax measures with which the economy has been encumbered in the past two years—most of them will raise precious little revenue anyway and cost the earth to implement—and still maintain his policy and his total revenue yield relatively intact. In fact, he would stand a good chance of increasing his takings, because, as the Federation pointed out in its statement, the point of diminishing returns has probably already been passed.

Mr. Nehru's conciliatory attitude suggests that it might now be profitable for the private sector to direct its efforts towards convincing him on this point. Both parties stand to gain. The sooner the stifling, unscientific hodge-podge of tax measures introduced last year is cleared away, the easier it will be to raise the yield of taxes as a whole. The Finance Minister has indicated that he might be receptive to new ideas; speaking of the tax system he is reported to have said ".....one should examine always carefully if it can be improved". Private industry is unlikely to receive any better invitation than that, not in the present socialistic pattern of society anyway.

The serious misunderstanding under which the Finance Minister appears to be labouring is difficult to credit even in one new to the office. Pointing out the help private industry has received from the Government, Mr. Nehru is reported to have said: "Indeed, to some extent new private industry has started almost entirely on Government funds" and "Where does private enterprise come in if the Government provided the money?" This is rather like clubbing a man on the head and then denouncing him for being unconscious. Surely Mr. Nehru must know why it has been necessary for the Government to help private industry to such an extent. Is he not aware that this trend is causing far more anxiety among industrialists than it is in the Government? If the answer to both these questions is in the negative, then there is something wrong with the private sector's public relations. Official help is necessary because equity shareholding in socialist India has become a game reserved for fools and speculators. Nobody in his right mind would consider putting his wealth into ordinary shares on which the dividend is uncertain and the security of the capital doubtful, and which will attract wealth tax, capital-gains tax, income tax, supertax—and if he has the good fortune to be given a bonus share—bonus tax as well. Not, at least, when he can put it into bullion and snap his fingers at the revenue authorities. It is no use blaming private enterprise for what is in fact the direct result of the Government's own policy, just as it is no use regretting the fact that India's socialistic progress now depends on foreign aid, given for purely political reasons, when that same policy has made it difficult or impossible for the country to earn its requirements in foreign exchange or to attract it in the form of investment capital.

There is a deep misconception in this portion of the Finance Minister's speech about the true nature of the country's economic difficulties. It is not reasonable to expect private enterprise to finance its own expansion when it is deliberately prevented from doing so. Besides, in what developing country in the world has it not been necessary for a Government actively to assist industrial enterprise in its early stages? On this matter, the Indian private sector has a record of which it can well be proud. It need have no conscience about pointing out to the Finance Minister that it is the socialistic policy of his own Government, whether manifest in taxes or simply the often slanderous statements of popularity-seeking Ministers, which has made the holding of ordinary shares such a thankless business, and is consequently turning the private sector into a collection of high-cost, low-efficiency, monopolistic concentrations of economic power. From the tone of Mr. Nehru's speech, there seems a good chance that an Indian Finance Minister might at last be prepared to listen to these truths, if they are put to him properly.

A NEW PROBLEM FOR THE BRITISH ECONOMY

TOO MUCH FUEL

EVEN when the decline in commodity prices had been in progress many months and it was evident that the demand for materials had been over-estimated, few people in Britain expected a surplus of fuels. Yet early in 1958, the year when the nuclear-fusion apparatus, "Zeta", has been demonstrated to the world as the forerunner of power-plants that will produce unlimited energy from sea-water, supplies of coal and oil are substantially in excess of requirements. In the early post-war years it was said wistfully that if Britain had tens of millions of tons of coal a year available for export, the financial problems of Britain, and of the sterling area, would be easily solved. This year Britain is exporting coal at an annual rate of a few million tons—at approximately half of last year's rate. The difficulty is not that supplies are not available but that the traditional markets are no longer receptive—although a few, notably Argentina, are reviving.

Unfortunately for Britain, the export markets for coal have diminished at the same time as her production has somewhat increased and her consumption has somewhat diminished. The west European countries, as a whole, are still net importers of coal on a substantial scale, and they are reluctant to spend dollars, but they are not free to transfer all of their import demands from dollar to sterling sources, as they are committed to long-term contracts with American suppliers. They have, indeed, their own problems of surplus, for they have themselves experienced a decline in consumption. Coal is not a uniform commodity. Britain is not producing a substantial surplus of coal as such. She is producing too much small coal but not yet enough large coal. She is no longer (as in recent years) importing large coal (mainly from the United States), and she is urgently trying to increase the proportion of large coal in her total output. The moderate increase in total production has been achieved by mechanising operations in the more productive seams; but mechanisation (especially the use of cutter-loaders associated with shot-firing) causes more "degradation" and has thus decreased the output of large coal while increasing the total output.

The fact remains that there is now an abundance of coal in general in Britain; and the significance of grading is tending to diminish as new techniques are evolved for employing the lower grades. At the same time, oil products in general (not only petrol, as in the recent phase when fuels were scarce) have become abundant. At the same time, too, nuclear power-stations are being built to satisfy the recently-calculated deficiency of power in general; and, probably, the nuclear-fusion system based on the principles of "Zeta" will be making its contribution to total resources of energy before many years have elapsed. History shows that economic development is closely related to the quantity of power available to a community. Relaxation of efforts to increase supplies of power would imply a pessimistic assessment of the world's capacity to absorb more goods. It is, however, recognised that estimates of power required in, say, the next decade or two have been pitched rather high. It is recognised also that large-scale investment in traditional modes of power may depreciate rapidly when nuclear fusion becomes a practical commercial proposition—as the experts believe it will.

The present is, therefore, a peculiarly difficult time for the planners of power. How much coal, how much oil, will be needed in the coming years? Should electric power-stations be fired with coal or with oil? If there is abundance of small coal (which power-stations can use), is it wise to build nuclear power-stations while their capital cost is still high? It nuclear fusion is destined to replace nuclear fission, is it wise to build "conventional" nuclear power-stations at all The answers to such questions vary according to the circumstances of individual countries. For instance, those that have to import much of their fuel anyway will tend to favour nuclear energy, because much less uranium than coal or oil is needed to provide a specified amount of energy. On the other hand, every inhabited area of the world has some water, and if the energy of hydrogen can be made available not many years hence, at economic cost, the developing countries may prefer to develop their own resources (such as hydro-electric power) until the fusion process is ready for use.

We must view the development of this process in perspective. The "zero-energy thermonuclear assembly" ("Zeta") that was demonstrated in January this year was at that time producing in its fusion reaction only a million-millionth of the energy required to achieve the reaction ("zero-energy" seems an under-statement!), at a temperature about a third as high as that of the centre of the sun, held for a few thousandths of a second. The efficiency of "Zeta" is being improved by raising the temperature; and, meantime, another apparatus is being designed to produce as much energy as it consumes. Next will come (according to plan) a prototype thermonuclear power-station that will give a net output of energy; and the final stage will be commercial application.

Experience with nuclear fission suggests that the task may be completed sooner than seems at first sight likely. But it is obvious that the world, requiring, perhaps, 3 percent more energy each year, cannot wait, perhaps, 10 years until the technique has been developed and then begin the slow task of building thermonuclear power-stations in large numbers. The present surplus of ordinary fuels does, indeed, imply that development of power can proceed with more forethought than in the earlier post-war phase, but it must certainly continue; and it seems safe to forecast that for a few decades yet oil and uranium will increase their share of the total supply of energy. What thermonuclear power (if we can take its achievement for granted) does ensure is that the exhaustion of prime sources of power which some people have feared will never occur, not even countless millions of years hence. It may also make boilers and turbines redundant, by giving us electricity direct.

BARRICADES BEFORE ROAD TRANSPORT

IT is being appreciated, rather belatedly, that road transport is vital for economic development. The impact of the first plan on transport capacity was not generally felt until about its fourth year. The only form of transport developed on a large scale was the railways. Their demand for a bigger allocation under the second plan was naturally ambitious, claiming about Rs. 1,500 crores against Rs. 424 crores spent during the first. The Planning Commission reduced the allocation to Rs. 1,125 crores of which about Rs. 425 crores were in foreign exchange. It has been estimated, taking account of these figures, that railway transport facilities for 30 million tons of goods traffic may be lacking by 1960-61. On the other hand, if the capacity of water transport is raised by reserving for Indian ships 100 percent of coastal and 15 percent of overseas trade, they will be able to handle only about 5 million tons of additional goods. The bulk of the increased traffic must, therefore, be met by the roads, and the case for the expansion of this mode of transport is exhaustively discussed by Mr. B. V. Vagh in a pamphlet entitled *Roads and Road Transport in India.*

The transport committee of the Indian Roads Congress has estimated that about 225,000 lorries will be required by 1960-61. In addition, about 125,000 might be needed to replace old and worn-out vehicles. The total number required by the end of the second plan should, therefore, be placed around 350,000. The motor-car industry has a production capacity of about 50,000 vehicles a year on the basis of a single shift. This can be increased to 65,000 a year, but a mere rise in the output of lorries will be of no avail unless operators are able to buy them. For example, against an average pre-war price of Rs. 4,000 a lorry, the minimum today is over Rs. 20,000, that is, five times as much. This suggests that only those people with large capital resources can go into the business. But the number of these is small. It is necessary, therefore, to provide finance, at a cheap rate of interest, to those willing to enter the business. Mr. Vagh suggests that the Government should grant loans to operators through the various finance corporations. It should also encourage the formation of co-operatives. At about Rs. 20,000 a lorry, the amount required to buy 200,000 units would be about Rs. 400 crores. Since such a large figure cannot be expected from private sources, it is clear that the Government must help if road transport is to be expanded.

The present slow growth has been mainly due to the restrictions placed on road transport. The policy of nationalising passenger traffic followed by many State Governments since 1948, has left operators reluctant to open new routes. Furthermore, motor transport is taxed by the Central and State Governments and the local authorities. The incidence of this is already high and is going up progressively. The Motor Vehicles Taxation Enquiry Committee recommended certain remissions, and the Study Group of the Government of India suggested an all-round reduction by 20 per-cent. That the existing imposts are high is also shown by the total receipts, which amounted to Rs. 79 crores during 1956-57. Furthermore, operating costs in road transport are much too high, and unless they are reduced, it cannot be expected to expand rapidly.

The scope for such expansion has been created by the new Motor Vehicles Act which has liberalised the provisions of the old Act of 1939. It has laid down that there will be no distance limit on motor haulage and that an inter-State transport commission will be formed. The Central Government has just appointed the commission under the chairmanship of Mr. Nagendra Singh, Director-General of Shipping. Transport is a current subject under the Constitution, and the lack of uniformity of standards in the operation of road vehicles in different States has been the source of many problems. The commission's main endeavour should, therefore, be to provide a solution to these.

CURRENT COIN

Resources for I.C.I.C.I.—The Industrial Credit and Investment Corporation of India seems to be getting into its stride, and has produced a sound and promising record of activity for the year ended December 1957. For some years, the criticism has been heard that its lending policies have been too strict and conservative. The criticism has not always been valid; a pioneering financial institution of its kind has to tread warily, remembering that no obligations are stronger than those it owes to its shareholders. But even this criticism may be expected to wane, as almost the whole of the resources it has available at present become committed under various programmes. (The financial results and loan operations during 1957 are outlined in our "Stocks and Shares" section.) The new problem which the Corporation is likely to face now is, in fact, the rather different one of resources being inadequate for deserving clients' needs. That this problem is arising is in one sense an encouraging compliment to the Corporation: its usefulness is being recognised. In another sense, it provides a discouraging reminder that the ordinary capital market continues to languish, with the result that enterprises are compelled increasingly to resort to special financing institutions. The main interest of the statement circulated by the chairman, Sir Ramaswami Mudaliar, along with the report and accounts for 1957, lies in its indication that high taxation is driving the Corporation into much the same boat as the rest of the capital market as far as the mobilisation of financial resources is concerned. (A fuller version of the statement appears on a later page.) Sir Ramaswami points out that because income tax and corporation tax have been raised, and a capital gains tax levied, I.C.I.C.I.'s earnings after tax are "so reduced that the sums remaining are insufficient to permit adequate allocation to reserves as well as a reasonable return to shareholders." For instance, out of the operating profit of Rs. 48 lakhs for 1957, taxation takes Rs. 25 lakhs, leaving only Rs. 23 lakhs for allocations to reserves and for dividends. There is a special need for institutions like I.C.I.C.I to build substantial reserves, when one considers the risks inherent in its operations, particularly in the financing of new ventures. But it seems obvious that reserves cannot be built properly unless the tax-gatherers' demands are reduced. Sir Ramaswami makes out a well-reasoned case why they should be reduced. He points out that the Corporation may have to wait several years before it gets any dividends on its investments in new ventures. When it gets those dividends, it has to pay corporation tax on them as well as on any other dividends it receives, in spite of the fact that these earnings have already suffered corporation tax in the hands of the companies concerned. Futhermore, investors in new projects expect that the value of their investment will appreciate, and that this will compensate them for not having got dividends in the earlier years: but now they find that tax has to be paid on such capital gains. The I.C.I.C.I. is affected particularly because, on the one hand, it is expected to revolve its investments in order to promote industrial financing while, on the other, it is taxed on its capital gains when it realises existing investments with a view to taking on new commitments. The plea seems reasonable that tax concessions should be given to institutions such as these, which are engaged in industrial financing but do not get the benefits given to industrial enterprises in the form of development rebate, additional depreciation allowances, etcetera. Sir Ramaswami remarks significantly that I.C.I.C.I.'s "present resources are likely to be fully utilised in the near future. How best additional funds can be raised is engaging our attention, and my plea for tax relief has considerable bearing on our ability to do so."

* * * *

Progress of Life Insurance.—Rising from the mire of the Chagla enquiry, the Life Insurance Corporation announces that during 1957 more new life business has been written than ever before. The total of such business, based on figures available until 28th February, 1958, comes to Rs. 281 crores, of which Rs. 276 crores has been written in India and the remainder outside. This business is represented by 793,168 policies, of which 788,133 have been issued in this country. A Press note issued by the Corporation asserts that the 1957 total for both foreign and Indian business is Rs. 23 crores higher than the peak achieved by the private companies before they were nationalised. If business within India is considered alone, the increase is Rs. 38 crores over the 1955 figure; or, for those who care to put it differently, life business written abroad, which has been declining steadily since nationalisation, has slumped sharply during the past year. The following statistics indicate the sums assured (in crores of rupees):

Year	In India	Outside India	Total
1957	275.98	5.40	281.38
1956	187.69	12.59	200.28
1955	238.30	20.33	258.63
1954	236.34	17.65	253.99
1953	155.20	14.66	169.86

If the Corporation has actually achieved the increase in business which it claims, its effort deserves to be commended. The commendation, however, has to be qualified by the thought that some increase was only to be expected with the general growth of the country's economy. Private companies, furthermore, were not so fortunate as the nationalised Corporation, in so far as when people insured a few years ago, they did not get as many tax benefits from life insurance as are available today; in other words, the incentive to insure provided by the tax system has been deliberately and tangibly increased now that the State has a monopoly of the business, although any move in this direction was only casually considered while insurance was in private hands. Finally, the real test of what the new life business written by the Corporation is worth will come when information is released in later months on the ratio of lapses. Wry hints are heard from insurance agents these days about the means that were used to compel them to secure new business towards the end of last year, while Mr. Feroz Gandhi was still conducting his researches into the Corporation's selectively beneficent activities; how much of that business will survive to maturity remains a moot point. The prospects for survival could improve if the Corporation became a little more wakeful to its ancillary responsibilities after issuing a policy. These responsibilities include sending reminders about premia due; prompt acknowledgement of premia received; and less dilatory handling of loan applications from the insured. Last, but not least, there is the responsibility to ensure that insurance funds are used for policy-holders' benefit—as befits the purposes of an autonomous corporation—rather than in accordance with the tantrums of industrialist punters or socialist politicians.

says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Large-scale lay-offs persist in many heavy industries, although scattered rehirings at some steel mills indicate that the decline in that line may be bottoming out. Business men recognise that considerable adjustments, in the form of production curtailment and inventory reduction, have already been made, but they are not basing plans on hopes of a quick upturn; instead they are watchful and cautious. Ordering is very much on a hand-to-mouth basis, and production has been geared down to work off stocks. Retail trade reports, which offered some encouragement in December and January, were clearly disappointing in February. Department stores reported that sales in the first three weeks of the month were 11 percent below the corresponding period of 1957, while sales of new passenger cars slipped lower. Unusually bad weather in February accentuated the declines in trade, construction and output in many parts of the country. Meanwhile, Government authorities have been closely watching developments and taking steps to bolster confidence, ease credit, and stimulate public works and home-building The dimensions of the decline became clearer as business reports for January appeared. Industrial production, as measured by the Federal Reserve index (seasonally adjusted, 1947-49 equals 100) dropped another three points in January to 133. Compared with the record of 147 in December 1956, the decline in output is now nearly 10 percent, approximately the same as the overall drop in both the 1948-49 and the 1953-54 recessions. Unemployment rose 1,120,000 from mid-December to mid-January, and reached a total of 4,494,000 persons, equivalent to 6.7 percent of the civilian labour force. This level of unemployment exceeds anything experienced in the 1953-54 decline but was exceeded in the first two months of 1950. Weekly reports on insured unemployment indicate a further moderate rise in the number out of work through mid-February, as would be expected for seasonal reasons. These reports make it clear that business is still soft, but throw little light on future prospects. Hope of improvement in the early future rests largely on two possibilities. One is that the usual spring pick-up will check the downtrend. The other is that in many lines at least the decline in industrial operations has brought production so far below consumption, and is cutting inventories so satisfactorily, that a larger output will soon be called for. A seasonal improvement can have important psychological effects, but it would be a mistake to confuse a purely seasonal rise with real recovery. Ordinarily, total employment might be expected to rise about 3½ percent between February and May, while unemployment usually drops off. Industrial production normally advances 3½ percent during the first quarter, but loses about half that gain in the second quarter. Retailers expect a pick-up in sales soon because of the relatively early Easter this year. Construction, agriculture and other outdoor pursuits will step up activity and employment when the weather improves. These usual seasonal advances must be allowed for in appraising the reports. The test is whether the pick-up falls short of or exceeds normal expectations.

* * * *

Economic Survey of Kanpur.—An economic survey of Kanpur, carried out by the Programme Research Committee of the Planning Commission, indicates that a quarter of the city's inhabitants live in localities recognised as slums. Dr. D. N. Majumdar, Professor of Anthropology at Lucknow University, who has conducted the survey, observes: "It is an indication of the standard of life obtaining in the city that 30.04 percent of the families pay less than Rs. 5 a month as house rent." The congestion is so great that 61.91 percent of the households have only one living room each. Only 30 percent have buildings with *pucca* walls and *pucca* roofs. Families with electric lighting constitute 32.16 percent of the total, while 35.12 percent have no water taps either in their own flats or in common with the co-tenants of a block. Nearly 65 percent of the residential units have no regular drains. There are 273 factories in the city, employing 68,832 workers. The textile industry is the largest employer, followed by the foodstuffs industry, leather and metals. Over 62 percent of the total earners in the city are employees and only 7.33 percent come under the category of employers. The unemployed constitute 6.32 percent of those who are aged above 15 years and who are actively seeking jobs. Among the unemployed, 53.93 percent are below 25 years and another large chunk of 19.88 percent are above 40 years; 16.32 percent of the unemployed are illiterate, 34 percent have had primary education, 32 percent have had secondary education and 12 percent have had college and technical education. About 35.31 percent of the unemployed are seeking white-collar jobs in the lower grades, as typists, clerks, sales assistants, etcetera; 17.61 percent are seeking skilled manual work; 11.2 percent want to establish their own business; 4.5 percent are seeking work in the mills; 2.45 percent are seeking manual work; and 0.7 percent are seeking managerial and executive posts. "A large section, constituting 31.25 percent," says the report, "have stated their object as any suitable job, but since they consisted of some educated people also, their response cannot be interpreted as meaning that they are all prepared to take up any non-manual work."

* * * *

Technical Education.—Private enterprise could do more than it has done to set up technical institutions in the eastern zone, considering the heavy concentration of industries in the area. Sir Jehangir Ghandy, in his presidential address at the meeting of the eastern regional committee of the All India Council for Technical Education, has pointed out that although 40 percent of the organised industrial units are located there, the eastern zone has only 23 percent of the all-India total of institutions for degree courses and 25 percent of those for diploma courses. He feels that industrialists and philanthropists could make an important contribution towards correcting this disparity. Reviewing the progress of technical education programmes in the area, Sir Jehangir says that five polytechnics, three for basic engineering and two for mining courses, have been established in 1957. Sanction has been granted for setting up three more mining institutes, one each in Bihar, Orissa and West Bengal. Disappointment is expressed at the fact that of the eight polytechnics for basic engineering recommended for the region, only three have been set up. Taking the country as a whole, the number of seats for engineering graduates has been raised by 50 percent, from 6,296 in 1956 to 9,370 in 1957. The number of seats at the diploma level has increased by 70 percent during the same period. The shortage of staff is acute. In some technical institutions, the strength is as low as 40 percent of requirements. Sir Jehangir supports the recommendations made by the Association of Principals of Technical Institutions, at the recent symposium held in Sindri, that more scholarships, research facilities and suitable grades be given to induce good students to opt for the teaching profession. Although many States have agreed to better grades for teaching staff, progress has not been uniform. It would be useful if representatives of all States in the region get together to

evolve a common policy so that the revised scales can be implemented for the June 1958 session. Stressing the importance of part-time sandwich courses for training supervisors and foremen, Sir Jehangir asks State Governments to take urgent steps to initiate such courses. The committee has approved a scheme for starting such courses at five places—the Polytechnic in Jadavpur, and four new centres in Howrah, Barrackpur, Sindri and Rourkela. A scheme for setting up an engineering college in Jorhat has also been approved.

* * * *

Inadequate Demand for Textiles.—In recent years, industry has been expanding rapidly but the expansion in agricultural output has been inadequate, so an imbalance has developed in the economy. One symptom of this imbalance is the rise in food prices, which has serious inflationary implications; dearer food encourages bigger wage demands, which in turn tend to push up the general price level even further. The dependence on imported food also widens the gap in the balance of payments and increases the pressure on foreign exchange reserves. In his presidential address at the annual general meeting of the Upper India Chamber of Commerce, Mr. J. K. Srivastava has said that the deficiency of demand for consumer goods in the midst of inflation can only be explained by a reference to the food situation, for high food prices absorb the bulk of the income of a large section of the population, leaving little for other commodities. The textile industry, for example, has had to carry an enormous accumulation of stocks resulting from consumer resistance. The credit squeeze has accentuated the difficulties of mills, so there is an urgent need to increase their resources. Assistance from financial institutions such as the Industrial Finance Corporation, the National Industrial Development Corporation, and the Industrial Credit and Investment Corporation of India has not been up to expectations because of their conservative lending policy. "It is to be hoped that the objective for which these institutions were set up, namely, to put the needy mills on their feet, will not be lost sight of by an over-cautious and rigid approach to the problem. It would also be a very desirable thing to associate more closely representatives from this area with the boards of these financial institutions, so that its claims would be viewed in their true perspective." One remedy for the textile crisis is to reduce output, but mills are unable to do this since the lay-off compensation is too heavy. There is no case for restraining consumption; on the contrary, it should be stimulated to a minimum of 18.5 yards a head a year—an official target. The high rate of excise duty on medium cloth has encouraged consumer resistance and has compelled mills to switch over to the manufacture of coarse counts. Although there has been a small reduction of six pies in the duty on the former from 14th December, 1957, a strong case exists for a further reduction if output is to be maintained. In addition, the Government should seriously consider important factors such as sales tax and other imposts, the inflated cost structure and the credit squeeze in order to relieve the industry from depression.

* * * *

Food for East Pakistan.—The most effective method of combating inflation in East Pakistan is to increase the production of foodgrains. The expenditure on food imports last year amounted to Rs. 80 crores, so a lot of foreign exchange could be saved if production increased. In his presidential address at the annual general meeting of the Dacca-Narayanganj Chamber of Commerce and Industry, Mr. A. A. Kahlon has said that economic progress will be seriously retarded unless agriculture is put on a sound footing. Unlike West Pakistan, where virgin areas are being used for cultivation, output in the eastern wing can be increased only by intensive methods of production. The Government has established experimental model farms run by Japanese cultivators. "By care in selection of proper seed, transplanting seedlings oftener, generous use of manure, with better agricultural implements, attention to sanitation and pest control and greater care in the weeding process, against our average of 11 maunds an acre, if the Japanese can produce 44 maunds an acre, there is no reason why we should not make the greatest efforts to increase our yield an acre to even half that figure." Although fertilisers have been offered to peasants at concessional prices, the results expected from their widespread application are not obvious. Farmers should, therefore, be instructed how to apply them so that the best results are obtained. The Government's efforts to check food smuggling have brought about a welcome decline in rice prices. Referring to jute, Mr. Kahlon says that during 1956-57, exports declined from 4.4 million bales to just over 3.9 million bales. In the current season, E.P.C. registrations to date are about 300,000 bales lower than they were at this time last year. If this trend is maintained until the end of June, exports will not exceed 3.6 million bales. The decline in demand suggests the need to develop new uses for jute, "and I hope the Government will keep this matter well before it and not think only of high prices for a fibre which it appears to consider a monopoly." It is, in fact, becoming less of a monopoly since many countries such as Brazil, China, Russia, Burma and the Philippines are growing substitute fibres. The jute mill industry in East Pakistan continues to grow although it faces competition in world markets from other countries where labour efficiency is higher. At the beginning of the current year, 6,175 looms were in operation, compared with 5,155 a year previously. It is expected that within the next year or two approximately 2,000 more looms will be brought into use, bringing the total loomage to about 8,000.

* * * *

Investment in Burma.—The joint-venture trading corporations in Burma enjoy a monopoly over the import and distribution of important consumer goods such as textiles, hardware, building materials and foodstuffs. Their main aim, supposedly, is to bring down prices, since the Government feels that they should be competing among themselves. Although, due to the increase in imports, prices of textiles have come down from their inflated level, those of other consumer goods are still high, and there is little evidence that the corporations are actually competing. Speaking at the recent annual general meeting of the Burma Chamber of Commerce, Mr. J. S. Pringle, chairman, has said that import licences were generously granted to the corporations last year; had the same value of licences been given to the private sector, competitive conditions would have emerged, so that prices and the cost of living would have been brought down to a level which would have given relief to the public. The corporations have been entrusted with import and distribution tasks on a scale which will require years of experience. They have faced difficulties over storage accommodation, distribution and finance, many of which could have been foreseen. The introduction of the competitive factor is urgently necessary in order to bring to an end the undesirable monopoly conditions they enjoy. The Prime Minister says that he would like to see less direct Government participation in many fields. He has also declared that the Government will concentrate only on key economic projects and that private enterprise will be encouraged to play its part. Official policy attaches importance to encouraging foreign investment in industrial and mineral development projects, and the terms of an Investment Bill offering certain incentives to investors are stated to be under consideration. "To have this measure with its incentives on the statute book will mean much to those contemplating investment in Burma, but, in the long-term, I feel that something will have to be done to lighten the very heavy burden of taxation if foreign investors are really to be encouraged." The rate of corporate taxation there is one of the highest in the world. Income tax and supertax rates have remained at 50 percent since the 1949 Finance Act, but income hitherto wholly or partially exempted has since been subjected to tax. It is the normal manner of development for existing companies to expand their interests by creating subsidiary companies either with their own capital or in participation with Burmese capital. But such expansion is discouraged by existing taxation. Mr. Pringle asks the Government to review its legislation so as to establish a stable and reasonable tax structure which will be consistent with the policy of encouraging foreign investment. Referring to the law-and-order situation, he says that the mines and rubber estates of Tenasserim do not yet fully share in the general improvement in security. In view of the important contribution which these industries could make to foreign exchange earnings, he urges the Government to give the problem greater attention.

* * * *

Grain-Cash Co-operatives.—The proceedings of the seventh meeting of the Standing Advisory Committee on Agricultural Credit, which have just been published by the Reserve Bank in booklet form, review the Orissa Government's proposal for reorganising grain *golas* as cash-*cum*-credit societies. In 1953, "the grain *gola* scheme" was introduced in Bolangir district; it proposed the organisation of large co-operative societies for groups of five or ten villages. The share capital was held in the form of grain as well as cash, the minimum holding of a member being one maund of paddy and one rupee in cash. Loans, both in grain and in cash, were issued, with the emphasis on the former. The *gram panchayat* was required to participate in the share capital and to deposit its surplus funds with the society. The scheme proved popular and demands were made for its extension to other districts. Later, the report of the All-India Rural Credit Survey Committee emphasised the importance of certain features, such as the need for a large society at the primary level, limited liability and State participation in the share capital. Mr. J. C. Ryan, member-secretary of the Standing Advisory Committee, says that the main point to be considered in combining grain and cash credits in one institution is security—the safety and the effective recovery of the money lent. It is difficult to enforce the administrative safeguards. For example, it would not be easy to enforce a proper system for checking stocks of grains. Another speaker has suggested that if there is a big procurement scheme, the State Government might be tempted to use the machinery of the grain *gola* for this purpose. The experience of other States in implementing the scheme has not been satisfactory. In Madras, a limited experiment was launched with combined grain and cash credits, but it was soon given up. In Bombay and Madras, the grain banks now deal only with grain. The experience of these States should indicate the dangers inherent in a scheme for combining grain and cash credits in one and the same institution.

* * * *

Jewellery and the Customs.—The jewellery business is not what it was, but the Madras Jewellers and Diamond Merchants Association hopes that when prosperity comes, there will be a possibility of India importing diamonds and bullion. In its latest report, the Association notes that clrbs on smuggling have led to a rise in the price of both gold and silver, while the take-over of the Kolar gold mines by the Mysore Government has brought about a fall in output. The Association is perturbed over the seizure of gold and diamond parcels by the Customs authorities. It urges that investigation in case of suspicion must be speedy and parcels must be handed over to consignees promptly. Echoing the protests of trade associations in Bombay, it argues that the Customs authorities have no right to seize stones set in old jewels, especially when the quota for import is only 25 percent. The heavier sales tax is a major source of harassment, especially in Andhra, as jewellers have to send their books for scrutiny. The introduction of the metric system for weighing bullion will change the units used by the trade. The old familiar weights will be replaced by new ones, but it is likely that the gold sovereign rather than the tola will remain the common standard for calculating the weight of gold in Madras.

* * * *

Engineering Goods for Saudi Arabia.—The 15-member Saudi Arabian trade delegation which has been in Calcutta this week has told the Engineering Export Promotion Council that there is very good scope in its country for many of the engineering goods produced in India, particularly building materials, agricultural implements and electrical goods. There is also scope for collaboration with Saudi Arabian merchants in setting up new industries. The Government is prepared to grant reasonable facilities for the investment of Indian capital. Indian manufacturers and exporters should exhibit their products in the permanent show-room opened by the Government of India at Jeddah and should try to overcome the prejudice which buyers have in favour of European goods. There should be a joint organisation of Arab and Indian merchants to promote trade and good relations. In the past, India sent foodstuffs, but now the export has been stopped, presumably due to scarcity in the country itself. To maintain regular contacts with importers, India should make token exports even at some sacrifice. Referring to the fall in exports of engineering goods to Saudi Arabia in 1957, the delegation says that it has been due mainly to exchange difficulties, but things are improving and it is hoped that there will be a normal exchange of commodities between the two countries henceforth.

FREIGHT RATES FOR TEA

THE reports of the various tea companies that are coming out daily are evidence of the pinch which a high rate of exchange and freight have brought on the industry; and the pruning knife must be applied somewhere if gardens are to go on and prosper. It has become an established fact that local expenditure cannot be reduced much more without impairing outturn. Leaf, if plucked, must be paid for, and land must be cultivated and kept clean if an outturn is expected from it. Under these circumstances, the eye must be turned towards Calcutta and London charges, if a profit is to be made, and the industry carried on for the benefit of shareholders, and not merely to keep a number of Europeans in work—which was the excuse made by a company some years ago for its bad balance sheet. In addition to the high rate of exchange, which has ruled during the past season to the detriment of gardens to the extent of about 20 percent, the freight market has been very high, we should think nearly 10 shillings per ton over the two former years. This result we predicted when some of the London bigwigs allowed the India Mutual Line to go to the wall. Taking roughly 12 chests of tea to the ton, and say they contain 1,000 lbs of tea, the rise of a few shillings per ton in freight makes often the difference between a profit and a loss on Calcutta-bought teas; and the fact of Colombo being a free port and not in the hands of a "ring" the excess freight is practically a bounty to Ceylon teas, in fact the difference in freight is about equal to ¼d per lb in favour of Ceylon.

Without Prejudice

PIG-SMITTEN EMPLOYEE CLAIMS DAMAGES

CASE CONCERNING LIABILITY OF EMPLOYER

(FROM OUR LEGAL CORRESPONDENT)

IT is not a frequent occurrence for a live pig to fall from aloft upon a man, but that is what happened a short while ago to Mr. Gledhill of Liverpool, and it gave rise to a leading case on the law of negligence, with particular reference to Sections 23 and 24 of the British Factories Act, 1937, incorporated in Section 29 of the Indian Factories Act, 1948, as brought up to date by Section 8 of the amending Act of 1954. So the statutory provisions are the same in both countries, providing for such an event.

Mr. Gledhill was standing on the ground, engaged on his lawful occasions, that is, his work, when, out of the blue, this pig fell upon him, knocking him out and causing him severe injuries. The facts were that the Corporation of the City of Liverpool was the owner of an *abattoir*, and at this public slaughter-house, by arrangement with the Corporation, Mr. Gledhill's employers slaughtered pigs. Incidentally, one may wonder whether the method of transit of the pigs from the ground to the place of slaughter may or may not have attracted the notice of the R.S.P.C.A. The method was this. The pigs were first electrically stunned and then attached by chains to an elevator which hoisted them to the first floor. At the employers' request, the Corporation had supplied new chains which had been in use for about a year. These chains were, as both the employers and the slaughtermen knew, too heavy, with the result that it was difficult to form a slip knot which would grip the leg of a pig tightly and, on several occasions, pigs had, for this reason, fallen from the elevator. The employers had not made any direct complaint to the Corporation about the chains. The leg of this particular pig not being securely tied, the animal slipped from its chain and crashed down on Mr. Gledhill with the result stated.

The point will at once occur to you as to which, if either, of the two parties was liable to the pig-smitten Mr. Gledhill for his injuries—the Corporation for letting loose on him the animal negligently packed, or his employers for exposing him negligently to the risk of which they were fully aware. Mr. Gledhill was advised to sue both parties and he did. The trial judge found both the employers and the Corporation liable for his injuries and ordered each to contribute one-half of the damages. Fair enough, you may say, as would the writer. But not so the Corporation, which appealed. And here we must stop and consider the important point of principle involved, which may make this a leading case in Britain and an instructive one in India.

The law concerning lifting machines, chains, ropes and lifting tackles is set out in Section 29 and the Indian Factories Act, 1948, as amended by the 1954 Act, Section 8. It is a long section and space precludes its quotation in full. The part material to such a case as this is that "every lifting machine..... and every chain..... for the purpose of raising or lowering persons, goods or materials shall be of good construction..... and adequate strength..... (and) properly maintained." (Sections 23 and 24 of the British Act are to the same effect.)

The Court of Appeal (Lord Merriman P., Hodson and Morris L.JJ.) allowed the Corporation's appeal. (1) There had been no breach by the Corporation of Section 23 of the Factories Act since the expression "good construction" did not denote suitability for any particular purpose. (2) Nor was there a breach of Section 24 (even if it applied) because the chains had remained of "good construction and adequate strength" and were therefore "adequately maintained". (3) No duty of care was owed by the Corporation to the plaintiff under the principle of *Donoghue* v *Stevenson* [1932]. A.C. 562, because there was adequate opportunity for intermediate examination of the chains both by the employers and the plaintiff. (4) The duty owed by the Corporation to the plaintiff as an invitee had been performed since he had full knowledge of the nature and extent of the risk. The claim was very like an attempt to saddle the Corporation with the responsibilities of an employer and must fail. But we shall probably hear more of this case as leave to appeal to the House of Lords was granted.

[*Gledhill* v *Liverpool Abattoir Utility Co. Ltd. and Another*. 1957. 76 *Law Notes*. 238.]

* * * *

With the doubtful exception of members of the bench of Bishops, it would be difficult to imagine a body of men less likely to perpetrate a suggestive *double entendre* then that austere body, the Law Society of England. But this is what the learned editors of *Law Notes* have to say about one of the questions set for the intermediate examination for law students, both young men and maidens: "Space is limited but mention must be made of question No. 29. Twin brothers who had married twin sisters, and who lived in twin adjoining houses with twin furniture, returned from the pub at night in a dense fog to the wrong houses and each believed the woman in the bedroom to be his wife. What do you think happened?" We will stop there to assure the reader that if he thinks what happened is what the writer would have thought happened, he would be wrong. The note goes on: "Each cleared the woman's handbag and returned to the pub. Do you think they were guilty of larceny? (Editorial note: No correspondence, please, on any other point)."

Being led astray by the above, the writer is reminded of and may venture to recount a story of the late Lord Phillimore, a great judge, a man of renowned piety, a pillar of the Church and author of a standard work on ecclesiastical law; but of a rather smug and even Pecksniffian manner. In his early days as a puisne judge, his Lordship was trying a case in which a young Mr. Edward Carson (afterwards Sir Edward and later Lord Carson) was prosecuting. It was for some not very serious offence and the defence was that the prisoner had done whatever it was he had done just after awakening from heavy slumber and while still virtually not knowing what he was doing. Mr. Carson urged that the defence was ridiculous.

"I am not so sure about that, Mr. Carson," said the judge. "Why, only this morning, I myself, awakening from a very heavy sleep, was for some appreciable moment of time not altogether conscious as to whether the lady by my side was Lady Phillimore or not."

"And was she, my lord?" asked young Mr. Carson blandly.

* * * *

Returning to things practical, here is an informative case on an employer's duty to provide proper tools for his workmen. The workman, who was employed by N and Co. Ltd. as a maintenance fitter, was in the course of his employment using a drift provided by it to knock out a metal key. At the second blow with a hammer on the head of the drift, a piece of metal flew off it and entered his eye. N and Co. Ltd. had purchased the drift from a reputed supplier, who had bought it from the manufacturers G and Son. Ltd. The chip flew off the drift, because, due to want of care in its manufacture, the head was much too hard, having regard to the fact that it was intended to be struck with a hammer. The workman elected to sue for damages against his employers *and* the manufacturers rather than to confine his remedy to proceedings under the Workmen's Compensation Act.

Ashworth J., held both N and Co. Ltd. and G and Son Ltd. liable for the plaintiff's injury. (1) N and Co. Ltd. (the employers) could not escape liability by proving that it had purchased a drift with no apparent defect from a reputable supplier and paid a reasonable price for it. The employer's duty to use care in providing proper tools and plant is personal to him and he cannot escape liability by delegating it. (*Mason* v *Williams Ltd. and Another* [1955] 1. W.L.R. not followed). (2) G and Son. Ltd. was also liable, although at the time of the accident the drift was not being used in conjunction with the sleeve or socket for which it was designed or supplied, because its use by the plaintiff was not so foreign to the use intended or contemplated as to absolve it from liability.

[*Davie* v *New Merton Board Mills Ltd.* (1957) 76. *Law Notes*, 139.]

NOTHING very new was said at the All-India Language Conference in Calcutta last week-end. But then, not much has been left unsaid on this subject. What New Delhi will be wise to note is the venue of the conference and the list of its participants. Both Mr. Rajagopalachari and Master Tara Singh are old men, and it is a measure of the feelings stirred by what is considered the threat of Hindi that they journeyed so long to voice their protests. It is not altogether a fanciful exercise to discern in the pattern of protest the beginnings of a line-up. I have been told that in the days of terrorism there was a sort of Bengal-Punjab-Maharashtra axis; all three areas were represented at this conference. I have also been told there were close cultural links between Bengal and south India in the days when Hinduism began to reform itself in a big way—and Punjab was involved too. Mr. Rajagopalachari asked Bengal again to lead the movement, and all concerned with the unity of India will be disturbed by the possible implications of these renewed affiliations. A majority in the Congress Parliamentary Party seems inadequate for a final decision on so serious a question affecting sentiments and political and economic opportunities. I would not know what pressures Mr. Nehru may have to face in the party, but his attitude to the question of Hindi has appeared to many as rather ambiguous. Less charitable was the non-Hindi interpretation of the Pragjyotishpur resolution; it has been openly construed as nothing more than a strategic retreat by the Hindi enthusiasts. Plainly there is suspicion in the south, the east and the west on the very intentions of the north, and it is for the north to remove it. The urgency acquired by the question of an official language is the result of the impatience of the north in the imposition of Hindi, and that is a pity because this is by no means the most urgent question facing the country. Why this waste of the nation's energies when they are required more for—for economic effort, for instance?

* * * *

What struck me about the case of Djamila Bourhired is her title of "The Algerian Joan of Arc". I simply cannot see the slightest justification for it. She was convicted of supplying bombs for other people to plant in cafés; even the rebel authorities claim nothing more heroic for her than that. How then is she to be compared with a woman who emerged from peasant obscurity to lead an army, fight at its head and win battles which no seasoned soldier would have dreamed possible, with no aid other than personality, a faith in her own invincibility and an unshakeable if irritating conviction of divine inspiration? Only the completely disreputable state into which France's Algerian policy has fallen can explain the sympathy shown for a girl who is in fact nothing but a dangerous hooligan. There is as much excuse for comparing Joan of Arc and Djamila Bourhired as there would be for mentioning in the same breath, say, the Rani of Jhansi and the "hero" of Graham Greene's novel *The Quiet American*. I can understand why President Voroshilov pleaded for the girl's life—the Russians could not miss an opportunity like this even so soon after despatching a few thousand Hungarians for daring to challenge Red Army tanks with tommy guns. Even the United States has had to fall in line for obvious political reasons, and some sections of the British public, I see, have once again lived up to their reputation of being sentimental enough for anything. But it is difficult to see what business this is of Mr. Hammarskjoeld, and if M. Lacoste has indeed recommended a reprieve it can, only be either because his conscience about his conduct of Algerian affairs is killing him, or he covets the cheap political advantages he knows will ensue.

A DITCHER'S DIARY

As for the rest of the world, that can no doubt be relied upon to go on confusing the girl's case with the merits of the nationalistic cause. Why, I fail to understand, because the inmates of those cafés could not all have been Frenchmen. No, although I think I can claim to be no less humane than most, and am certainly no advocate of capital punishment as an institution, yet the only two reasons I can see for not letting the law take its course with Djamila Bourhired are the reputation of French chivalry and the advantages to France's north African policy.

* * * *

It was only to be expected that on the morrow of Independence there would be a widespread, almost national, desire to change pretty nearly everything. This, after all, is what freedom is for. It may be a pity still that so much of the enthusiasm for innovation has been spilt on the streets—literally; and Mr. Nehru's caution against too frequent changes in street names should be heeded here in Calcutta. First, by making these names as transitory as they have been in this city in the past decade or so this method of doing honour has been cheapened, devalued. Nor is the consequent inconvenience to the public something to be dismissed lightly. If I am not mistaken, there are several streets or roads named after Netaji Subhas Chandra Bose within and around the municipal limits of Calcutta. While the lack of uniformity in taking the whole or parts of the name may have reduced confusion, it remains bewildering still. I am not exactly looking forward to the time when we will have to speak of Calcutta streets as the Americans refer to their cities, always with a necessary indication of the State—Boston, Mass., or Portland, Maine. The possibility of Netaji Subhas. Calcutta 1 or 37, is by no means remote. Complaints on the score of length—Justice Chandramadhab Road or Rafi Ahmed Kidwai Road—are also natural, although the answer to that one probably is that Bose Road or Mukerjee Street would not mean much because there are so many people who have borne that name. And all this bother seems so unnecessary. Finally, I have often wondered how the great men after whom streets are called would feel if they knew just what was happening in them. It seems to me more than likely that there are in Calcutta streets and areas corresponding to Oxford Road in Manchester, Sauchiehall Street in Glasgow and Coventry Street in London after dusk, and I am rather glad the former are unlikely to be named by the Calcutta Corporation after me.

* * * *

Whether India goes out of her way to attract private foreign capital with tax incentives and measures of that kind is largely her own business. I say this not because I think the Indian Government has done all it can—quite the contrary—but because its attitude and actions at least conform, at the moment, with the minimum accepted standards of international behaviour in the matter. And that is more than can be said of, for instance, Egypt and Indonesia; the damage these two countries have done the rest of the undeveloped world is tremendous, and incidentally, has varied directly as the amount of sympathy shown for their actions. What has prompted these reflections is a newspaper report of a suggestion made by Malaya's Prime Minister, Tengku Abdul Rahman, for an "international charter" under which the under-developed nations of Asia, would agree to "regulate their treatment of foreign private capital." This seems to me the sort of step which might help undo some of the damage sustained by innocent countries on behalf of their more impetuous neighbours. It would also help dispose of the present "guilt by association" problem. This is not just an idea let fall at a Press conference; the Tengku was giving the opening address to the fourteenth meeting of E.C.A.F.E. in Kuala Lumpur. Coming from a Prime Minister whose own country's fate may soon be decided by the amount of foreign capital it can attract, there seems a reasonable chance of its reaching sympathetic ears. With so much talk these days of private American capital just dying to come to south-east Asia and particularly India, this country would seem to have a greater incentive for pioneering such a charter than most. Certainly it is needed. To a potential American investor in, say, New York, India and Indonesia not only sound alike, but appear significantly close together on the map.

* * * *

In one way it is fortunate that the Cohen Committee should present its report just when the world may be facing its first real slump since the thirties. It means that very little notice is going to be taken of it, and therefore the consequences which might have ensued will not come to pass. To avoid misunderstanding, let me hasten to say that I do not necessarily disagree with the Committee's findings. Not, that is to say, on any except one point. The trouble is that point is fundamental: I cannot accept that it is politically possible to regulate any economy in these post-Keynesian days, much less the British, for an indefinite length of time by the balance of payments. Any attempt to do so, in my opinion, is bound to end in political disaster. So why try it? And why, one might ask the Committee, produce findings which recommend such a step? Theoretical excellence is all very well, but this is a practical world we live in and no good can come of ignoring the fact. I can well understand the reactions of the trade unions and, of course, the Labour Party, although I suspect a narrower political motive here, other than the future good of the country. Thanks to the fact that a trade unionist was not included in the Committee, it now stands a good chance of being disbanded when Labour returns to power; then the whole idea of an impartial enquiry, which certainly has its points, will be lost. A year ago, when inflation was at its height, some slight notice might have been taken of these findings. But even then it was unlikely and now there is just not a chance. And that I consider is probably no bad thing because it should still be possible to point to particular conclusions without eventually having to explain why the acceptance of all the recommendations was bringing the country to the edge of disaster. I see Mr. Asoka Mehta has proposed a similar committee for India. I agree that it would be a good idea. But let not Britain's mistake be made here. As Keynes himself once pointed out, the only effective economic policy emerges from reconciling opposing interests, not from the impartial deliberations of theoreticians, however wise.

THE CHARTERED BANK

CHAIRMAN MR. V. A. GRANTHAM'S REPORT

Extracts from the statement by the Chairman Mr. Vincent Alpe Grantham, on the Report and Accounts for the year ended 31st December, 1957.

The continued prosperity of the Bank reflects the highest credit upon the General Management at Head Office, the branch managers and the staff at home and abroad. We are indebted to Mr. Morford for his help and leadership. In August last I visited Malaya, accompanied by the Chief General Manager, to attend the Merdeka celebrations, and I took the opportunity of making the acquaintance of a large number of members of the staff at all levels working in the Malayan circle of branches. It was a heartening experience and I was sorry that time did not permit my visiting other equally important spheres of activity.

I take this opportunity of acknowledging with gratitude not only the professional skill displayed by the staff in preserving and extending the prosperity of the Bank but those personal qualities of toleration, forbearance and helpfulness which contribute so much to the survival of the historic links, forged under conditions very different from those which now exist, between Asia and the West. Three months ago Mr. W. G. Pullen undertook with Mr. Barden, General Manager of The Eastern Bank Ltd., a tour of the Middle East. At the same time Mr. David Beath visited the branches of the two banks in India, Pakistan, Burma and Ceylon.

The C.B.I. Development Corporation

Credit restrictions imposed by the Capital Issues Committee of Her Majesty's Treasury have retarded the progress expected of The C.B.I. Development Corporation but it has been possible during the past twelve months to grant loans of relatively small amounts to finance promising development projects in India, Malaya and Borneo. The Corporation returned a satisfactory profit in 1957 and when conditions more favourable to the undertaking of medium-term credit operations obtain, our new organisation should rapidly expand.

Mr. David Stewart, a former General Manager of the Bank who was elected a Director of the Corporation a year ago, has been appointed its Managing Director.

The Bank's Balance Sheet

During the year we acquired by an exchange of shares the entire share capital of The Eastern Bank Ltd., and for cash, the business which the Ionian Bank Ltd. conducted in Cyprus and there are consequential changes both in our Balance Sheet and in the Consolidated Balance Sheet.

Our own Balance Sheet indicates the continued expansion of the Bank's business and reveals a high degree of liquidity. The total at £231,622,655 is the highest we have ever recorded, being some £8,600,000 up on last year's figure.

Current and Other accounts and Fixed Deposits show increases of £2,958,494 and £4,499,423 respectively. Our Acceptances are again in excess of £10 millions.

On the assets side Cash in Hand at Call and at Bankers shows the substantial increase of £10,501,948 the ratio to our demand and time liabilities, excluding the notes in circulation against which security has been lodged, being 22.9% against 18.5% last year. Our investments in Government and Other Securities are slightly lower and, you will note, have again been brought in at market value. Advances and Other accounts show a contraction of £6,165,632 which is partially offset by our increased holdings of Bills of Exchange amounting to £4,496,736. Our programme of expansion and modernisation of offices and houses in the East has given rise to an increase in the net figure for Bank Premises and Furniture.

The Consolidated Balance Sheet includes the figures of all our wholly owned subsidiaries and the inclusion of The Eastern Bank Ltd.'s figures brings the total to £271,898,015.

For the information of stockholders a copy of The Eastern Bank Ltd.'s Balance Sheet is appended to my statement.

Consolidated Profit and Loss Account

I am glad to say that our earnings have improved. The results of The Eastern Bank Ltd., and of our new acquisitions in Cyprus and Pakistan, are included for the first time in our figures.

The Bank paid an interim dividend in September last of 7½% less Income Tax, absorbing £189,750, and it is now proposed that out of the balance available a final dividend of 7½% be paid, costing £189,750, making a total distribution of 15%.

The dividends cost more because of the new issue of capital we made last year but are more than compensated for by the increase in profits.

We have allocated £250,000 to Bank Premises and Furniture and £125,000 and £20,000 respectively to the Pension Fund and Widows' and Orphans' Fund. We have transferred £220,000 to Reserves for Contingencies and the balance carried forward is £438,458.

Transfers to Bank Premises and Contingencies include this year those made in connection with The Eastern Bank Ltd.

For us, this year is one of consolidation and in view of the unsettled condition of the world in general I am sure you will agree that it is wise that we should continue to build up the strength of the Bank.

India

Last year, when discussing India's second five-year plan, I suggested that it was possible that the planners had set their sights too high. Vital and urgent as it undoubtedly was, to provide for a steadily increasing population and to achieve an all-round rise in the standard of living, it seemed that the plan was being allowed to dominate the Indian economy almost to the extent of threatening it. The plan's excessive dependence on deficit financing and foreign aid, gave rise to the assumption that it had been drawn up rather in the light of India's needs than on the basis of a realistic assessment of the country's available financial resources.

Unfortunately the ensuing months have shewn that there were grounds for these misgivings for the Indian exchange reserves fell from Rs. 529 crores at the end of 1956 to Rs. 297 crores a year later. The latter figure includes a drawing during the year of U.S. $200 million (Rs. 95 crores) from the International Monetary Fund, to be repaid within three to five years. When it is remembered that India initiated the second five-year plan in April 1956, with exchange reserves equivalent to some Rs. 750 crores and that under the plan it was intended to run these balances down by some Rs. 200 crores over a period of five years, it is possible to gauge the extent to which the position has got out of hand.

The Prime Minister has continued to stress the need for the complete plan and the government's intention to complete it but there is now an awareness of the immediate dangers of the situation. A series of measures designed to arrest the progressive reduction of the exchange reserves have consequently been introduced. The official import list for the first half of 1957 was drastically pruned and these restrictions were intensified in July. At present there are no open general licences and imports of capital equipment are permitted only when they can be shewn eventually to effect savings of foreign exchange or when the importer can persuade his oversea supplier to defer payment, a proceeding which, if agreed to, will conserve foreign exchange in the immediate future, but must substantially increase the ultimate cost of the goods supplied.

In his supplementary budget after the elections the Finance Minister sought to lessen dependence on deficit financing by increasing taxation. The proposed fiscal measures included the lowering of the income levels at which liability to tax arises, the introduction of new taxes on wealth and expenditure and the rising of a wide range of excise duties. To some degree these new taxes are a deterrent to potential foreign investors of capital in India and they may well affect the competitiveness of India's exports. It is the intention of the supplementary budget to reduce the deficit during the current fiscal year to Rs. 275 crores. There has been a general rise in the cost of living recently and this rise has been aggravated by food scarcities in several areas. The contemplated deficit in the budget may accentuate this.

In an endeavour to check the inflationary rise in prices the Reserve Bank followed up the raising of bank rate to 4% last May with a request to the scheduled banks at the end of June to effect a considerable reduction in their advances within the following three months but without diminishing the assistance given to essential industries. Advances had expanded to the point where by nomal commercial banking standards the banks had become heavily overlent but were able to keep the wheels turning by using the discount facilities made available by the Reserve Bank. The banks will no longer be able to rely on an automatic and regular renewal of these facilities and it must be assumed that for an indefinite period credit stringency is in prospect. This stringency may be alleviated by the government-sponsored Refinance Corporation, which is being set up to extend through the banks medium-term finance to smaller borrowers in the private sector. Part of the Corporation's capital has been subscribed by the commercial banks and its resources will be supplemented by American counterpart funds. It is of course desirable that medium-term credit should be afforded by special institutions of this type, rather than by the commercial banks.

These matters, important as they are to us in our own business, are subsidiary to the country's main problem, the shortage of foreign exchange. Following the Finance Minister's autumn visit to North America and Europe, it has evidently been decided to concentrate on completing what are considered the essential features of the second five-year plan—the expansion of the steel and coal industries, railway and port development, certain power projects and in the agricultural sector, irrigation—and to modify or postpone other schemes. Nevertheless, after reducing the plan to more manageable proportions and allowing for the country's normal export earnings of foreign exchange and for promised foreign aid and World Bank loans, the official estimate is that additional external assistance amounting to some Rs. 700 crores will be required before 1961 and mostly in 1958-59.

Part of the extra foreign exchange required is to be found by running down the exchange reserves and the Reserve Bank Act has been amended for this purpose. Apart from its exchange reserves the country has a gold reserve, which is to be left intact, but even if it is conceded that the essentials of the five-year plan should be preserved there is a limit to the extent to which the reserves can safely be reduced, for shortage of exchange might well prove calamitous if a monsoon failure were to necessitate large scale imports of food. Certainly the completion of the most essential part of the plan will in time effect a saving in the import bill, but despite the assistance which in response to the Indian request for help has been promised by the American and West German governments, India clearly has a difficult road to travel.

REPORT OF THE AUDITORS

TO THE STOCKHOLDERS OF THE CHARTERED BANK.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from the branches which have not been visited by us. We have examined the annexed balance sheet of The Chartered Bank, which is in agreement with the books of account and have been received from the branches, opinion and to the best of our information and according to the explanations given to us the said balance sheet gives the information required by the Companies Act, 1948, in the manner so required for banking companies, and, on the basis indicated in Note (4) on the balance sheet, gives a true and fair view of the state of the Bank's affairs as at 31st December, 1957.

We have also examined the annexed Group Accounts comprising the consolidated balance sheet and consolidated profit and loss account of the Bank and its wholly-owned subsidiaries and the accounts of its other subsidiary Allahabad Bank, Limited, with the audited accounts of those companies certain of which have not been audited by us. Subject thereto in our opinion such group accounts have been properly prepared in accordance with the provisions of the Companies Act, 1948, to give on the basis indicated in Note (4) on the consolidated balance sheet a true and fair view of the state of affairs as at 31st December, 1957, and of the profit for the year ended on that date ascertained as indicated in the profit and loss accounts of the Bank and its subsidiaries so far as concerns stockholders of The Chartered Bank.

London, 5th March, 1958.

Chartered Accountants.

NATIONAL OVERSEAS & GRINDLAYS BANK LIMITED

FUSION SMOOTHLY ACCOMPLISHED

MR. J. K. MICHIE'S STATEMENT

The annual general meeting of the National Overseas and Grindlays Bank Limited will be held on 1st April, 1958 in London.

The following are extracts from the circulated statement of the Chairman, Mr. J. K. Michie :—

The physical amalgamation of the National Bank of India Ltd. and Grindlays Bank Ltd. into the National Overseas & Grindlays Bank Ltd. took effect from the 1st January 1958 ; so, while this is the first report to the shareholders under the new name, the accounts for 1957 perforce are presented in the previous form.

Despite the enormous amount of detailed work involved, thanks to the organising ability of those specially seconded to the task and to the co-operation of the staffs of both Banks, the fusion was accomplished wonderfully smoothly and I hope without inconvenience to our customers. In a complex operation of this kind to foresee and anticipate every difficulty would be superhuman but I am satisfied that any outstanding problems will be disposed of with the sympathy and understanding which were the keynotes of the whole operation.

We have established a 54 Parliament Street Committee of five members, all of whom were on the Board of Grindlays Bank Ltd. This Committee will assist the Management to deal expeditiously with the large number of accounts which they hold and so maintain the very high standard of service associated with the name Grindlays.

The Directorate

I have to report a change in your Board since our last meeting. Sir Robert Reid who had been a member since 1943 retired on 31st December last. Sir Robert had a distinguished career in the Indian Civil Service finally as Governor of Assam and his intimate knowledge of the sub-Continent was of great value to us. Incidentally his father was a member of the Board for thirty-one years from 1878 until 1909.

To fill the vacancy we invited Mr. E. H. Owen to join us which he did early in January. Mr. Owen had been a member of the Board of Grindlays Bank Ltd. since October 1955 so already had knowledge of our business. He also has wide interests in the City and I recommend him to you with every confidence.

I also have an impending loss to report. Mr. Miles, who has very special knowledge of Ceylon and who has been on the Board since April 1946, has intimated that he wishes to reduce his business commitments and his resignation will take effect after the Annual General Meeting.

We accept his decision with much regret and shall miss his wise advice not only on matters concerning Ceylon but on the wider aspects of our business.

Before leaving the subject of the Board I am sure you would wish to join in congratulating Sir Toby Low, K.C.M.G., C.B.E., D.S.O., M.P., on the honour of Knighthood conferred on him by Her Majesty the Queen in the 1957 Birthday Honours List for his distinguished services as a Minister of the Crown over a period of six years.

Balance Sheet Figures

Turning to figures the total of our Consolidated Balance Sheet at £162,105,220 shews a small reduction and our net profit is £5,345 lower at £427,490. As usual this figure is arrived at after full provisions for taxation, for bad and doubtful debts and other necessary reservations. Two interim dividends each of 7½% have been declared making a total unchanged distribution of 15%.

During 1957 Government securities again fell considerably in value—a process which fortunately has recently been reversed—but I am glad to be able to report that these temporary losses as in the past have been provided against internally.

India

1957 was a difficult year and at the moment prospects for 1958 promise little if any alleviation of her financial problems ; in fact due to a poor monsoon the food situation is less favourable than in recent years and that means more imports and a greater drain on monetary reserves.

When a country is in process of an industrial expansion at a rate far in excess of its own savings this combined with a fall in the values of its basic exports, i.e. Jute products, Tea and Cotton Goods, is doubly hurtful. The new investments absorb sterling balances which previously yielded interest ; alternatively they are being built with the help of borrowed money on which in some form or another and at some time or other interest will have to be paid. Therefore temporarily there is a large element of inflation in the phase through which India is passing.

Reduction of Lendings

Internally money is tight and too cheap and Government have asked Banks to reduce their lendings. This process would be easier if Government itself paid its dues more promptly and recognised that money too is a commodity which should only be cheap if it is plentiful.

Another major aggravation of India's difficulties has been the lack of public confidence as evidenced by a continued fall in Stock Exchange values accentuated of course by the Mundhra incident. In view of the wide publicity being given to this affair you will be glad to know that our Bank is involved only to a limited extent and full provision has been made in these accounts for any possible loss. It is most regrettable that the involvment of the Life Insurance Corporation in the Mundhra affair has led to the resignation of India's able Finance Minister, Mr. T. T. Krishnamachari.

At this stage it is impossible to avoid comment on India's immediate economic difficulties but on the other side of the picture there is no question of the energy and realism with which she is now facing them. Imports are being cut, long credit is to some extent being arranged and a certain success is being achieved in raising further loans and "aid". Equally there is no doubt of the goodwill towards India of the countries and organisations from which funds and other assistance may be secured and I am certain they will strain themselves to help India over her difficulties.

Pakistan

The economy of Pakistan is also under strain and her trade deficit for 1957 is estimated at over £35,000,000 which compares with surpluses of £1,000,000 and £24,000,000 respectively for the two previous years.

There have been falls in both prices and production of tea and jute, the cotton crop yield was about the same as the previous one but exports are running at a much lower level. The food situation in East Pakistan has recently improved considerably and prices have fallen to reasonable levels. In October Mr. Suhrawardy resigned the Premiership and after a short period under Mr. Chundrigar was replaced by Malik Firoz Khan Noon who has previously held office in a variety of capacities.

Internally money is in fair supply in Pakistan but as it now much more generally realised it is trade balances and external reserves that really matter and Pakistan has a stern fight ahead of her. Nevertheless prospects for 1958 are more favourable but much depends on food production and the slowing down of purchases of capital goods from overseas. The Sui Gas Scheme is also increasingly helpful by saving imports of fuel.

Ceylon

Last year I was able to report a buoyant economy; good prices for tea and an increased balance of trade, the only clouds being labour relations particularly in the port of Colombo and the continued talk of nationalisation of tea estates.

Since then tea prices have been volatile and generally lower and rubber prices also are lower, while recently conditions in the port of Colombo have been chaotic and have caused a severe and crippling hold up of exports.

It has been stated officially that tea estates in Ceylon would be nationalised only when it became necessary in the interests of the country's economy and that time has not yet arrived.

To add to the troubles there was a disastrous flood upcountry in December which has disrupted communications and slowed down exports even further. The country's most immediate problems is port labour and how it is to be handled. At the moment it seems to be largely out of hand. Other labour is also restless and widespread strikes are threatened. Whatever the causes of this unrest the results are certainly embarrassing and extremely damaging to the economy of the country.

Burma

Last year rice exports reached a post-war record of over 2 million tons, timber exports were maintained and with the coming into operation of the new oil refinery imports of oil were reduced. There was too an encouraging improvement in what is called "law and order". In fact portents were distinctly encouraging.

Unfortunately 1957 brought the poorest monsoon since 1920 and Burma's rice crop will thrash out 30% short of the previous year which means the exportable surplus of around 1 million tons only and a loss of foreign exchange of nearly £30 millions. Foreign exchange reserves are already falling and economies will have to be the order of the year. There is a regrettable movement afoot to restrict and even ban internal overdraft facilities to foreign or foreign-controlled Companies and firms and this will affect many of our constituents. It is also very doubtful if it will benefit Burma's trade. The difficulties over remittances both personal and of accumulated profits I regret continue.

Grindlays Bank Ltd.

The last year of the Bank as a separate unit was a successful one and the volume of deposits again shewed an increase.

Finance and Development Corporation

The year's operations again shewed a profit which is being retained in the business.

Bank of England Rate

The reduction of the Bank of England rate to 5% in February 1957 proved to be an over-optimistic step and on 19th September last circumstances demanded that it be again raised, this time drastically to 7%. This unpalatable medicine seems to be working although the Governor of the Bank of England has just warned us against being too complacent about our progress. There is indeed no panacea in monetary policies by themselves. If they have the desired effects of making us as a country not only tighten our belts but also gird up our loins then all will be well—otherwise no.

I have commented in each of my last two statements on the disparity between money rates in countries where it is certainly as scarce as it is here and those prevailing in London.

One result of this disparity is a very natural one —for industries and businesses to endeavour to borrow as largely as possible where money is "cheap" and as little as possible when it is not only considerably more expensive but much harder to come by. This fact is not making our role as overseas bankers any easier particularly as competition for deposits is growing in every sphere of our activities. It is therefore with interested sincerity that I hope for an easier money market in this country and its reopening on a larger scale to overseas borrowers.

It is impossible to foresee other than a difficult year for commerce, industry and their handmaiden banking but that is no justification for pessimism and I look forward albeit not immediately to a resumption of progress.

Staff

As always we are beholden to our Staff and I wish to thank an enthusiastic and able body of men and women for their loyal service.

THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LIMITED

CHAIRMAN SIR RAMASWAMI MUDALIAR'S REVIEW

The Annual General Meeting of the Shareholders of the Company will be held in the Board Room of the Associated Cement Companies, at Cement House, Queen's Road, Bombay 1, on 7th April 1958 at 4 P.M. The following is the Statement by the Chairman Sir Ramaswami Mudaliar circulated to the Shareholders with the Directors' Report and Accounts for the year ended 31st December, 1957.

It will be seen from the Directors' Report that by the end of 1957 your Company had agreed to give financial assistance in Rupees for a total of Rs. 944 lacs in respect of 31 projects. In addition 5 loans in various foreign currencies had been sanctioned for a total of the equivalent of Rs. 221 lacs.

With the Directors' Report and Annual Accounts for 1957 your Company completes the third year of operation and I take this opportunity to review the activities of this Company and to make a few observations of a general character. After allowance is made for the slow rate of progress inevitable in the initial stages of a new enterprise it may be stated that from the figures given above your Company's operations will not be regarded as unimpressive. In my previous remarks at General Meetings I have referred to a number of measures in the field of taxation and elsewhere which have operated during the three years since this Corporation commenced business; collectively these measures have produced what is conveniently described as an unfavourable investment climate in which investors have been reluctant to take on new commitments and in which their ability to do so has been curtailed by high taxation. It is against the background of these conditions that the operations of this Corporation must be viewed.

From the information given in the Directors' Report for 1957 it will be apparent that total assistance sanctioned by your Company can be divided more or less equally between loan operations in Rupees and Foreign Exchange on the one hand and underwriting operations in respect of shares or debentures on the other. In the provision of loans while your Company is not the only source of Rupee finance in India it has come to occupy a special position by reason of its ability to grant loans in foreign currencies of moderate amounts in present times when the shortage of foreign exchange is holding up the development of many enterprises. Out of a line of credit of the equivalent in various currencies of U.S. $10 million available to your Company from the International Bank for Reconstruction and Development, loans have so far been sanctioned of an equivalent of $4.63 millions for five projects, and it may not be long before the entire amount is used up. It was hoped at the time when this Company was floated that further foreign exchange resources would be made available when the first line of credit became exhausted and I trust that your Company may be enabled to continue to render assistance in the form of foreign exchange loans in suitable cases and for suitable amounts through the grant of additional credit from the World Bank when this becomes necessary.

Industrial Development

As a financing institution which also takes care of providing permanent share capital for industrial development your Company is the only one of its kind in this country and it is a matter of no small significance that within the short period of its existence it has been able to carry through substantial underwriting operations in spite of the unfavourable investment climate. Out of 16 underwriting operations sanctioned involving a total commitment of Rs. 535 lacs, 9 operations had been completed by the end of 1957 and two more have been completed so far in this year. Of equal importance with the actual underwriting operations effected is the laying of the sound foundation for our future activities in this field. I am hopeful that with the traditions that are being established it should be possible in the future to organise underwriting activities on a larger scale. It has been our endeavour to interest institutions and firms of good standing to join us as underwriters or sub-underwriters so as to be able to organise underwriting operations which are too large for your Company to carry through alone. I have emphasised before that success in this field depends upon a suitable investment climate and I trust that Government will give due regard to the necessity for doing their share to bring about the right sentiment among potential investors without whose support we cannot do fully what we set out to achieve.

Generally our approach is based on the idea of interesting other parties or agencies in our operations so as to broaden their base. In this way we hope, as experience of our operations becomes more widely known, potential investors will learn to rely on the detailed examination of every project which we insist upon before providing financial assistance of any kind. It is to be noted that the World Bank in its operations is always looking for, and has achieved a substantial measure of success in obtaining, the support of other financial institutions and investors.

I should like to mention one significant feature of the assistance so far sanctioned. Out of the 36 projects which we have agreed to help 16 are new enterprises. It may also be noted that both in the matter of industries covered and their distribution over the country the assistance is broadbased. Special attention has been given to the needs of underdeveloped areas.

Risk Capital

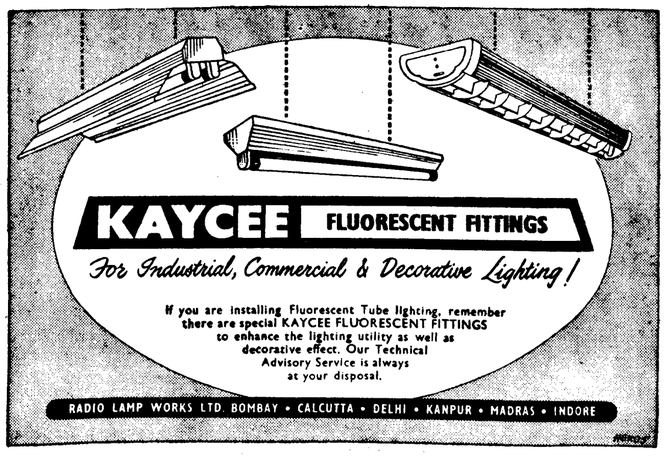
It has become a matter of concern that while your Company has been trying to fulfil the role for which it was set up by providing risk capital to new as well as existing enterprises, the discharge of that function has been rendered more difficult as a result of new factors which have come into operation during the last 3 years. On account of a considerable increase in income tax and corporation tax rates and the levy of capital gains tax the earnings of your Company after tax are so reduced that the sums remaining are insufficient to permit adequate allocation to reserves as well as a reasonable return to the shareholders. I need not repeat all the arguments which show the need for building up substantial reserves against the risks inherent in our operations—particularly in the financing of new ventures. In the case of new ventures your Company may have to wait several years before it can receive any Dividends on its investment and, when received, such Dividends in common with all Dividends received on investments in shares by your Company, will suffer Corporation tax in the hands of your Company despite the fact that the same earnings will already have suffered Corporation tax in the hands of the Company concerned. Investors in new projects who look to an appreciation in the value of their investments as some compensation for foregoing Dividends in the earlier years now find that the capital gains will be taxed, admittedly at a lower rate than normal income tax. This means that your Company will be taxed on capital gains when it realises investments with the view to taking on new commitments. It will be recalled that it is the policy of this Company to revolve its investments in order to make its funds available for further industrial financing. Your Directors have represented to Government that consideration be given to the grant of tax concessions to Companies such as yours which are engaged in industrial financing and do not have the benefits available to industrial enterprises in the way of development rebate, additional depreciation allowances and the like. Without some such concession your Directors feel that it will be difficult for them to recommend the setting aside of adequate amounts to Reserve for possible capital losses on their operations and at the same time give a reasonable Dividend to the Shareholders.

It will be evident from the results of 1957 that against operating profits of Rs. 48 lacs taxation takes Rs. 25 lacs leaving only Rs. 23 lacs for allocation to Reserves and for Dividends to the Shareholders.

You will see from the accounts that the meeting of the additional tax imposed in respect of 1956 and the allocation of Rs. 5 lacs to Reserve this year together with the payment of a modest Dividend of 4% tax free on the paid-up Capital have involved a substantial reduction in the balance which stood to the credit of the Revenue Account after payment of the Dividend last year. Unless we are able to step up our income during the current year and obtain some tax concessions the payment of a Dividend to Shareholders at a reasonable rate commensurate with the risks which this business involves will be no easy matter. Your Company's present resources are likely to be fully utilised in the near future. How best additional funds can be raised is engaging our attention and my plea for tax relief has considerable bearing on our ability to do so.

Turning now to the state of India's economy during 1957 I should like to refer to certain aspects of major importance. Early in the Second Plan both the Private and the Public Sectors have met a severe shortage of internal and external capital for fulfilment of the production targets laid down. While I am far from happy at the apparent slowing down of the rate of progress as a result of such shortage it looks to me that the country is now entering a more realistic phase of planning. I see in the country welcome signs of awareness of difficulties which lie in our path and a determination to grapple with those difficulties in a serious fashion.

Increasing Exports



While special attention appears to have been given recently to the need for increasing exports it does not appear to me very probable that substantial and early relief to our balance of overseas payments can come from this source. The unsatisfactory feature of our overseas payment situation is the dependence on imports of foodgrains. It appears that favourable harvests during the First Plan Period have resulted in insufficient effort being directed towards the expansion of food production during the Second Plan Period with the result that the partial failure of crops in some parts of the country have increased the dependence on imports at a time when this can ill be afforded. I am glad to note that this problem is now engaging the attention of Government. However, I believe it should be given a central place in all our planning both present and future because, with the population growing at a faster rate than ever before as the result of improved standards of living and health, our efforts in the direction of industrial or other development will remain at risk until we have built up a continuing overall surplus of foodgrains for domestic consumption.

I referred briefly to the need and the efforts which are being made to encourage exports and said that this was not likely to be an easy task. I feel bound to observe that in my opinion the channelling of exports through State Trading is not the only or the best way in which the most satisfactory results are likely to be achieved. The efforts of Government could, I believe, be even more profitably directed towards the support of export promotion groups comprising those in the exporting industries to whom in any event Government must look for the major efforts.

New Investments

Any survey such as I have attempted of the problems confronting our country at this important stage of the Second Five Year Plan would be incomplete if I do not pay a tribute to all those overseas Governments, International Agencies and other friends of India who have during this period of exchange shortage come forward with help in various forms. We must also remember the many overseas Companies who have made new investments or increased existing ones in India thereby showing their confidence in our country. On the other hand we must ourselves recognise that help from such sources can, at best, be only marginal in meeting our large-scale requirements. It is to our own efforts that we must look in the main for finding the resources to carry through our ambitious plan of social and industrial development whether they require finance in the form of Rupees or foreign currencies. To this end it is necessary to recognise that it is the actions of individual persons which will determine whether we are able to find the resources we need or not and the task falling on Government is primarily to bring about the conditions under which individuals will be able and willing to do their share.

In the present and the immediate future I believe that the utmost attention should be given to the completion of those projects included within the Second Five Year Plan which are already substantially advanced. This applies particularly to those which when in operation will achieve early savings of foreign exchange. Concentration in this direction at this moment even at the cost of deferring the commencement of other attractive projects which may also eventually achieve exchange savings by avoidance of imports is the only way in which quick results can be counted upon. Coupled with a review designed to take advantage of progress already made there should be, in my opinion, an early objective examination and rephasing of the remainder of the Second Five Year Plan with due regard to the resources now available to us. The time for proceeding on the assumption that windfalls will come from some direction or another so as to enable us to avoid a crisis is, in my opinion, passed. At all costs we must endeavour to avoid a reduction in economic activity as the result of a shortage of imported raw materials or semi-finished goods necessary to sustain the industries already started or far advanced in construction.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 12th March.

THE total of advances outstanding in the Calcutta money market during the past week has remained remarkably stable. Apart from the slight variations, the offtake of the various industries has stayed round about the level of the previous week. The interbank market, too, has finished the period relatively unchanged and the call rate is still 3½ percent.

The exchange market has been more than usually dull during the past week. Few gunny bills were seen and the showing of tea bills has been particularly poor. Remittance was scarce. The pound has hardened considerably since the middle of last week when the Bank of England announced that no change was contemplated in Bank rate for the time being.

* * * *

Silver was firm on small arrivals. The decline in imports of Tibetan coins contributed to the rise. The price advanced from the previous week's level of Rs. 188.25 to Rs. 192.50, quoted today for ready delivery. Forward delivery was quoted at Rs. 190.50. The price in London was unchanged at 76½d. and the New York quotation stood at 88⅝ cents.

Gold improved in sympathy with silver from Rs. 112.50 to Rs. 113. The sovereign at Rs. 72.50 showed a gain of 25nP.

* * * *

During the week ended 7th March, Government of India Treasury bills for Rs. 59,57,00,000 were sold in favour of the Reserve Bank.

* * * *

Rises of Rs. 33.41 crores to Rs. 1,578.67 crores in active notes and of Rs. 17.33 crores to Rs. 1,587.65 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 7th March, 1958. The currency expansion was covered by increasing rupee securities by Rs. 19.94 crores to Rs. 1,096.76 crores. Deposits of the Government of India declined by Rs. 3.14 crores to Rs. 53.46 crores and other Government accounts were Rs. 5.82 crores lower at Rs. 9.85 crores. Balances of commercial banks at Rs. 77.40 crores showed a gain of Rs. 1.94 crores. Balances held abroad declined by Rs. 77 lakhs to Rs. 33.48 crores and investments were Rs. 10.37 crores lower at Rs. 229.38 crores. Other loans and advances rose from Rs 66.60 crores to Rs. 74.30 crores, of which advances to scheduled banks against usance bills amounted to Rs. 22.52 crores (Rs. 22.17 crores). Ways and means advances stood at Rs. 43.91 crores against Rs. 38.26 crores.

* * * *

The return of the State Bank of India for the week ended 28th February, 1958, shows a rise of Rs. 36 lakhs to Rs. 407.87 crores in total deposits. Investments in Government securities are up by Rs. 11 lakhs to Rs. 173.45 crores, while other authorised investments remain unchanged at Rs. 10.23 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 3.64 crores to Rs. 205.21 crores. Cash and balances are, in consequence, shown at Rs. 32.34 crores or Rs. 1..51 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 28th February, 1958, shows Demand and Time liabilities at Rs. 727.79 crores (Rs. 13.16 crores on account of borrowings from banks) and Rs. 724.62 crores (Rs. 16.65 crores), compared with Rs. 729.62 crores (Rs. 14.01 crores) and Rs. 724.97 crores (Rs. 15.85 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 99 lakhs and Rs. 3.85 crores to Rs. 38.48 crores and Rs. 73.13 crores, respectively. There is an increase of Rs. 8 lakhs to Rs. 433.45 crores in total investments. Advances and bills discounted at Rs. 931.56 crores show a rise of Rs. 4.48 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.7 percent and 64.1 percent, against 7.3 percent and 63.7 percent.

* * * *

The directors of the CHARTERED BANK have recommended a final dividend of 7½ percent, subject to income tax, making 15 percent for the year 1957. The profit has improved from £804,641 to £1,000,890. Notable appropriations in the consolidated accounts of the Chartered Bank and its subsidiaries are pension fund £125,000, widows and orphans fund £20,000, written off bank premises £250,000 and contingencies £220,000. The carry-forward is £438,458.

* * * *

The MERCANTILE BANK LTD. has declared a final dividend of 6½ percent, less income tax, on the increased capital.

* * * *

The NATIONAL BANK OF INDIA LTD. has declared a second interim dividend of 7½ percent, less income tax, for the year 31st December, 1957.

STOCK MARKET QUIETER AFTER EARLY BUOYANCY

U.S. BUSINESS NEWS REMAINS MAJOR INFLUENCE

London, 12th March.

THE stock market just had its best week for many months and virtually all sections apart from gold shares recorded widespread and appreciable gains under the lead of industrial equities and oils. The buoyant conditions were not maintained after the week-end, when the trend became irregular and rather dull. The advance was due to a number of factors. Rather better business news from the United States and a consequent improvement in Wall Street provided the main influences, but other favourable factors included rising hopes that U.K. economic policy will be relaxed in the not too distant future, the excellent end-February gold reserve figures and the news that various provincial corporations have decided to invest part of their superannuation funds in industrial equities. The dullness after the week-end reflected less optimism about the U.S. business outlook following the latest American economic news and a certain amount of profit-taking in anticipation of the end-of-the-account on Tuesday. There was some expansion in business prior to the week-end but the market was by no means active, the advance reflecting a shortage of stock rather than a material increase in buying. Gilt-edged securities moved steadily higher before easing slightly after the week-end. Useful gains were recorded, with the main features provided by short-dated issues, which went strongly ahead on an acute shortage of stock. German and Japanese bonds moved higher in the foreign bond market but rails were featureless. Dollar stocks recorded an all-round advance in response to Wall Street although prices were below the best in sympathy with the irregularity which developed in New York after the week-end. Gains in industrials extended to 2s or more, although prices were often below their best levels. With indications of some switching to other sections of the house, South African gold shares ruled quiet and widespread losses were recorded due to an absence of interest. Base metals advanced, although some reaction was recorded after the week-end. Substantial gains extending to over 10s were established in oil shares. Rubbers held generally steady but there were a number of firm spots. Indian tea shares improved with the better trend at the auctions. Ceylon teas were uncertain and mainly easier. The news of the export cess had very little effect on share prices.

The Money Market

The money market encountered varying conditions during the past week. There was a plentiful supply of money in the early days and borrowers obtained their requirements on more favourable terms than hitherto with the rate for day-to-day loans ranging from 5¾ percent usually paid in the mornings down to 5½ percent by the close. Stringent conditions returned to the market last Thursday, following the main weekly tax transfers, and continued thereafter. The rate for money advanced to 6 percent while the market was forced into the Bank of England to borrow a fair amount at 7 percent for the week. There was a fairly good offtake of bills with Mays and "hots" sold at 5⅝ percent and 5⅝ percent, the latter being the effective rate when the money position deteriorated. This week's Treasury bill rate was about 2d higher at £6 0s 5.10d percent.

Activity in Wall Street

High-grade corporate issues were the feature in Wall Street during the past week. They moved over a fairly wide range, with prices falling a point or more early in the period, partly because of the heavy volume of new offerings. The top-grade corporates, however, eventually registered sizeable gains on an active buying movement prompted by the good reception given to new issues reaching the market. Foreign dollar bonds were mixed in small turnover. German Nationals were mostly lower by fractions to a point, with a few Italians showing both plus and minus signs of around one point. Denmark 4½ percents and Norway 4½ percents were ahead by fractions, while Belgians were easy, with losses ranging over a point. Japanese Governments were firm, with 6½ percent 1964 one point higher. Chile 3 percents finished the week with a small gain.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 5th March shows that gold stocks rose by $1 million to $22,686 million. Foreign deposits increased by $12 million to $286 million, while foreign investments fell by $87 million to $3,532 million. The Federal Reserve sold $94 million worth of bills but bought $15 million worth of securities under repurchase agreements. Total discounts and advances fell by $77 million to $107 million, while the aggregate reserves of member banks rose by $236 million to $594 million. The daily average excess reserves of member banks rose by $143 million to $551 million, while their daily average borrowings fell by $35 million to $118 million. Business loans of the New York city banks fell by $147 million to $11,140 million, compared with a rise of $96 million to $11,217 million in the corresponding week of a year ago.

U.S. Interest Rates

A cut in the ¼ percent prime interest rate on bank loans is widely forecast in the wake of the ½ percent reduction to 2¼ percent in the discount rate by the Federal Reserve Board at New York, Philadelphia and Chicago. The only point in question is when, the *Journal of Commerce* says. While there is no official explanation of the Federal Reserve Board's action, there are two unofficial ones. First, the 2¼ percent discount rate was out of the line with the much lower open market rates. Second, the economy has not improved, and easier bank credit might help it. One effect of the rate cut is that it will now be easier for foreign central banks to take similar action to stimulate their own national economies. More important from a dollars-and-cents angle than the rate cut is the disclosure in the weekly banking statistics that the central banks left in the money stream $400 million of the $500 million released last week-end through a reduction of half a percentage point in reserve requirements. Because of this rare situation, bank reserves throughout the country have risen to a new high for recent years, the *Journal* adds.

Hongkong Gold Steadier

The Hongkong gold market showed a steadier trend during the past week, reflecting a slight easing in sterling rates and improved demand for the U.S. dollar. Speculators also showed more interest as buyers attributed to some the belief that the recent advance in sterling had halted. Values went ahead at first but later reacted on profit-taking. The official offtake amounted to 2,830 taels and the unofficial to 10,7000 taels. Carryover charges were 90 cents in sellers favour. Arrivals from Macao totalled 48,000 ounces. Forward contracts were done at $38 an ounce, c.i.f. Macao.

Quicksilver Firm

The London ex-warehouse quicksilver price remains confused. Trade quarters say that supplies of physical metal are short and spot business is meagre. A nominal range of £77 to £78 is indicated, compared with the recent £77. Some observers believe that although the price might move higher still, the upward pressure which was evident is less marked. The present price is much nearer the level at which Spanish and Italian producers might sell, and although the Spanish and Italian price is equivalent to about £81 5s spot in London, traders say that there is a possibility that either country might re-enter the market before the spot price reaches that level. It is believed that some Spanish and Italian metal held in the United States has been sold to the United Kingdom recently.

Stocks and Shares

HEAVY SELLING FOLLOWS BURNPUR STRIKE CALL

INVESTMENT COUNTERS STEADIER

Wednesday Evening.

THE steadiness of share prices since the Budget suggests that investment opinion is gradually reconciling itself to the present taxation and economic policies, although the lot of the private investor, in what is now the heaviest taxed country in the world, is not easy to accept with resignation. The annual session of the F.I.C.C.I. was notable for Mr. Nehru's flat rejection of demands for a revision of the tax structure. The restrictions imposed on the grant of development rebate have created fears of lower dividends. But hope still persists that there will be concessions on this matter. What the new integrated tax system means for corporate profits, is only now becoming apparent. Reports of companies' working are being received, covering the period following last year's tax changes. In many cases, higher gross profits have been transformed into lower net profits on account of increased tax. National Carbon's final dividend was 65nP against 75nP last year, reducing the total distribution from 15 percent to 14 percent. Indian Aluminium has cut its dividend from 10 percent to 6 percent. Both are outstanding "blue chips".

Mr. Nehru's remarks on the investment policy of the L.I.C. were received with mixed feelings. Operators welcomed the assurance that the Corporation could not ignore the effects of its actions on share prices. But anxiety was felt about the proposal to use L.I.C. funds to get control of companies which the Government considered important for the success of the second five year plan. The general opinion was that if this was not "backstairs nationalisation," it was something very like it. Firmness in Indian Irons was, in part, the result of dealings by a powerful bull operator but late yesterday and today (settlement day) heavy selling pressure developed on fresh reports of serious labour trouble at the company's Burnpur works; the price dropped steadily from Rs. 20.76 to close tonight at Rs. 20.36.

Here are details of the week's trading.

For the second week in succession the Reserve Bank raised its selling prices for some of the short-dated securities. For example, 3½ percent Loan 1964 was put up by 5nP from Rs. 97.80 to Rs. 97.85 on Monday and the selling rate of 3½ percent 1962 was raised from Rs. 97.85 to Rs. 97.90. This would appear to confirm the view that the authorities have started rigging the market for a new Central loan.

With interest rates showing signs of stabilising, there has been a little more enquiry for selected miscellaneous and engineering preference shares and prices have improved to some extent.

Bank shares were steady with Punjab National improving to Rs. 52.50 and United Commercial to Rs. 60.

Cotton shares were once again devoid of interest and prices, where changed, were lower.

Electric supply shares continued steady.

In the coal section, there was a small recovery in Bengal which closed at Rs. 212 against an opening quotation of Rs. 210. Dhemo Main were better at Rs. 7.50 and Katras Jharia were marked at the higher rate of Rs. 54 ex-dividend. Equitable recovered to Rs. 25.37 and East Indian were better at Rs. 20.12.

Jute shares displayed a mixed trend during the week, as will be seen from the following chart. Standard Jute was the outstanding feature, spurting from Rs. 60 to Rs. 70.

	Opening 7th March, 1958	Closing 12th March, 1958
	Rs.	Rs.
Barnagore	80	78
Birla	14.25	13.75
Champdany	94	96
Fort Gloster	285	280
Howrah	13.50	13.50
Kinnison	107	110
National	22	22.25
Reliance	5.87	6

In the engineering section, Indian Iron & Steel fluctuated during the week between Rs. 20.87 and Rs. 20.36 to close at the latter rate. Braithwaite were steady at Rs. 27 as were Guest, Keen, Williams at Rs. 29.62. Jessops dropped from Rs. 23.87 to Rs. 22.87 and Textile Machinery from Rs. 17.85 to Rs. 17.35.

In sugar, Carew & Co., slumped from Rs. 6.50 to Rs. 5.50 when the balance-sheet was published and it was known that not only the ordinary but also the preference dividend was being passed over. Other shares in this section showed little change except Belsund which improved from Rs. 9.87 to Rs. 10.37.

In paper, Sirpur improved from Rs. 8.44 to Rs. 8.81 following the publication of a satisfactory report. Orient, after being done up to Rs. 26.60, eased at the close to Rs. 26.35 on profit-taking. Titaghur were steady at Rs. 34.25.

In cement, Ashoka were lower at Rs. 8.25 while Sone Valley were unchanged at Rs. 5.19 and Dalmia at Rs. 10.19.

Among miscellaneous industrials, Angelo Brothers were enquired for at Rs. 16.56 and Alkali & Chemical improved to Rs. 14. There was a good enquiry for Indian Oxygen at Rs. 16.25, but sellers were scarce. Dunlop Rubber advanced to Rs. 22.69, and Balmer Lawrie to Rs. 146, while Imperial Tobacco were steady at Rs. 11.44. The reduction in the Indian Aluminium dividend from 10 percent to 6 percent brought a small reaction in the shares and the quotation was lowered from Rs. 13 to Rs. 12.75. Similarly, National Carbon dropped from Rs. 25.25 to Rs. 24.87 sellers. India Steamship were subdued at Rs. 12 and there were sellers of National Rubber at the lower rate of Rs. 8. Metal Box were steady at Rs. 25.87 and Indian Cables had buyers at Rs. 28.75. Rallis, on the publication of a disappointing report, dropped from Rs 28 to Rs. 27.

In mining, Indian Copper, after being done up to Rs. 2.90, were offered at the close at Rs. 2.85. Orissa Minerals were enquired for at the higher rate of Rs. 22.37.

Tea shares were quietly steady as will be seen from the following table of prices:

	Opening 7th March, 1958	Closing 12th March, 1958
	Rs.	Rs.
Basmatia	21.56	21.62
Bishnauth	20.25	20.50
Dhelakhat	20.75	21
Grob 'A'	22.12	22.37
Hantapara	102	104
Tezpore	16	16.50

Increasing the taxation provision by Rs. 9.85 lakhs to Rs. 25.10 lakhs, the profit of the Industrial Credit and Investment Corporation of India has improved from Rs. 21.65 lakhs to Rs. 23.07 lakhs for the year ended last December. The dividend has been increased from 3½ percent to 4 percent. General reserve is allocated the same amount of Rs. 5 lakhs, leaving a carry-forward of Rs. 1,55,097, against Rs. 6,31,149 brought in. The directors state that by the end of 1957 they agreed to give financial assistance for Rs. 10.17

6 & 7, DALHOUSIE SQUARE EAST, CALCUTTA-1.

crores, compared with Rs. 6.01 crores at the end of 1956. A new and important feature of business during 1957 was the receipt of applications for assistance in the form of foreign currency loans. It was found that several of these were for very large amounts, which the directors did not feel able to sanction considering the amount of foreign currency at the disposal of the company in the form of a loan from the World Bank. By the end of the year, they sanctioned five loans in various foreign currencies for Rs. 2.21 crores. These operations, if approved by the World Bank, will result in the utilisation of nearly half the foreign currency resources at present available to the company from that source. It is intended to approach the World Bank in due course for an additional line of credit for use when the present one is exhausted. Operations in the form of underwriting of public issues of capital became more difficult during the year under report due to the fall in stock exchange prices and the reluctance of investors to go in for new commitments, particularly investments in newly-established companies. In the case of some issues underwritten by the company during the year, the public response was negligible. Out of five underwriting operations completed, amounting to Rs. 93 lakhs, the company was called upon to take up Rs. 58 lakhs, the balance having been taken up by other investors.

* * * *

The profit of the MADURA MILLS COMPANY has declined by Rs. 52.81 lakhs to Rs. 42.89 lakhs. Bringing in Rs. 32,44,130, there is a balance of Rs. 33,17,740. The dividend has been reduced from 17½ percent to 15 percent. The taxation provision amounts to Rs. 42.15 lakhs against Rs. 51½ lakhs, leaving a carry-forward of Rs. 6,92,368. The directors state that on the implementation of an award by a Special Industrial Tribunal, revised workloads and wages were introduced in June 1957. This was followed by a strike at the company's mills. After prolonged negotiations, the labour position has returned to normal. They add that the spinning industry has shared in the general recession in the textile industry. Consumption of cloth, particularly of the handloom variety, has not reached the anticipated targets and this, coupled with the considerable expansion which has taken place in the spinning sector, has resulted in the company carrying larger stocks of yarn at the end of the year than is normal.

* * * *

CAREW AND COMPANY has incurred a loss of Rs. 19,928 for the year ended last June. The dividends have been passed over. Making all adjustments, a debit balance of Rs. 2,23,014 is carried forward. The Rosa factory crushed 3,541,181 maunds of cane, while the crush of the Darsana factory amounted to 3,291,738 maunds. The Darsana pharmaceuticals department showed a loss, while the distillery division in India produced satisfactory results.

* * * *

Providing Rs. 2.40 lakhs (Rs. 90,000) for taxation, the profit of the KELVIN JUTE COMPANY has increased from Rs. 1.10 lakhs to Rs. 2.49 lakhs for the 11 months ended last May. An ordinary dividend of Rs. 9 a share has been declared, including an interim of Rs. 4 a share. The carry-forward is Rs. 86,701, against Rs. 91,333 brought in.

* * * *

The profit of the CALCUTTA STEAM NAVIGATION COMPANY has increased from 3.27 lakhs to Rs. 3.99 lakhs for the half-year ended last June. Bringing in Rs. 1,10,339, there is a balance of Rs. 5,09,190. The dividend has been maintained at 6½ percent. Depreciation absorbs Rs. 1.33 lakhs. The taxation provision amounts to Rs. 1.78 lakhs, leaving a carry-forward of Rs. 73,358.

* * * *

Tata Industries Private Limited, managing agents for the TATA IRON AND STEEL CO., LTD. report that the total approximate production of iron and steel at the steel works at Jamshedpur during February, 1958 was: pig iron 87,100 tons: steel ingots 89,200 tons; semi-finished steel for sale 14,600 tons; and finished steel 49,900 tons.

Bombay Market

PRICES STEADIER DESPITE BAD NEWS

LOWER PRODUCTION FIGURES FOR T.I.S.C.O.

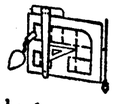
Wednesday Evening.

THE Bombay stock market closed on a steady tone last week, although share prices were shaded towards the close on selling pressure. The report of a strike in the smelting shop of the Indian Iron and Steel Company Ltd. at Burnpur induced selling pressure. Lower production figures from the Tata Iron and Steel Company during February were interpreted bearishly. Recent observations about the Central Budget, made by Mr. Nehru, were received with mixed feelings. In spite of an urgency for giving reliefs in taxation, it was realised that the Government was unable to reduce taxation because of its own high expenditure.

During the early part of the week under review, cheerfulness sprang from the fact that India's balance of payments position should improve in the near future as prospects of obtaining substantial foreign assistance have brightened.

Tata Steel were shaded at Rs. 174 towards the close, and Indian Iron slumped to Rs. 20.30 on selling pressure from Calcutta interests. The closing undertone was weak and operators were taking an anxious view of the strike situation. Tata Locomotive were steady at Rs. 145.50 and Premier Construction came to hand at Rs. 163. Alcock Ashdown were offered at Rs. 217.50 with few declared buyers in evidence. Automobile shares improved on balance, and Premier Automobile were taken higher to Rs. 79. Hindustan Motor gained at Rs. 6.32 on short-covering.

Textile shares were fractionally better, but closing levels were below the best touched during the week. Bombay Dyeing closed at Rs. 51.80 and Century were taken at Rs. 394.50. Kohinoor were bought at Rs. 272 on investment account and Simplex were transacted at Rs. 160. Svadeshi came to hand at Rs. 170 and Central were done at Rs. 81.50. India United Ordinary were offered freely at Rs. 9.40 and Apollo were placed at Rs. 1.80.



Miscellaneous shares were steady and interest was taken in cement shares. Associated Cement gained to Rs. 143 and Digvijay Cement were taken at Rs. 138. Sugar shares were higher on balance, and Belapur realised Rs. 239. Phalton were available for Rs. 151. Steamship company shares were steady, but Scindia Steamship closed at Rs. 16.8½ on profit-taking. India Steamship increased to Rs. 12.12. Mining scrip were subdued as metal prices showed no improvement. Shivrajpur Syndicate were idle at Rs. 94.50. National Rayon reacted to Rs. 222 on uncertain prospects about the import of raw materials. Bombay-Burmah declined to Rs. 508 on profit-taking because earnings from the tea department, it was feared, might fall.

Banking shares were steady, but turnover was restricted. United Commercial Bank were taken up to Rs. 60.30 and Punjab National were transacted at Rs. 53. Bank of India came to hand at Rs. 135.50. Insurance shares gained on a broad front. Oriental improved to Rs. 3 980 on talks of amalgamation and New India Assurance were quoted at Rs. 42.

A fair turnover took place in electricity supply company shares and fluctuations were narrow. Tata Power changed hands at Rs. 1,121.25 and Ahmedabad Electric were transacted at Rs. 95.

Plan for Progress

People's Prosperity

Fields swaying  with golden corn, tall chimneys  spouting smoke, flowing waters generating power, and a network of roads, railways and airways linking  remote distances are today creating new opportunities for a richer and fuller life for the Indian people. By the end of the Second Five Year Plan  the total national income will have risen by 25% and the per capita income, by 18%.  Textile Machinery Corporation Limited is proud to play its part in this mighty adventure of bringing plenty, prosperity and happiness  to the people. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

a pilfer-proof package

for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

MB

PILFER-PROOF OBLONG CAN

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

FINANCE MINISTER DEFENDS THE TAX STRUCTURE

MORE AID EXPECTED FROM UNITED STATES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Prime Minister, Mr. Nehru, inaugurating the annual session of the Federation of Indian Chambers of Commerce and Industry, has ruled out the possibility either of life insurance being denationalised or of relief being given in taxation. To implement the second five year plan, the mobilisation of internal resources, particularly through taxation, will continue. He has promised to consider suggestions to decentralise the monolithic administrative set-up of the Life Insurance Corporation, but has defended its investment policy to prevent undertakings of national importance from falling into undesirable hands. Mr. Nehru has said this in reply to criticisms of his earlier speech in Parliament in which he spoke of acquiring control over undertakings of national interest by getting a majority of the shares. The Prime Minister assures the private sector that it will be encouraged, but within the framework of the objectives laid down in the second five year plan. "Where is the need for a private sector if the Government is asked to do everything, including providing finance for it " he asks. Mr. Nehru says that he will examine the current import policy in light of the foreign aid which has now been received.

The outgoing president of the F.I.C.C.I., Mr. Babubhai Chinai, has said in his address that industry and trade earning profits is essential for the growth of Government revenues. He urges the Prime Minister to review the taxation policy. There is need for re-thinking on the socialist pattern of society, and in particular on the view that its objectives could only be achieved through progressive enlargement of the nationalised sector.

The Federation has adopted five resolutions, the most important of which relates to "savings, investment and taxation". Through this resolution, it has expressed regret that "the taxation policies that are being adopted by the Government are not conducive to creating propitious conditions for savings and investment. In fact, there are many competent observers who feel that the taxation rates are so high in this country that a diminishing return has already set in and that they defeat the primary purpose which the Government has in view, namely, of collecting the maximum amount possible by way of tax yields. Further, the various forms of imposts on income and capital have actually set in a process of erosion of capital in many undertakings." The Federation, therefore, urges the Government to reorientate its fiscal policy in the following directions:

"(1) While the Federation notes the reduction in the rates of personal tax made in the last Budget, it will have to be admitted that the reduction has not been significant by any standards, considering the fact that rates of personal taxation in this country, after a certain level, are perhaps the highest in the world. The proposals of Mr. Kaldor for the levy of wealth tax and the expenditure tax in the scheme of integrated taxation having been accepted, his other suggestions for the reduction of rates of income tax and surtax on individuals to 45 percent should also be accepted. Ultimately, it is only personal savings which matter.

"(2) Income from dividends should be treated as earned income.

"(3) Investments in new issues should be given favourable tax treatment.

"(4) The tax on bonus issues should be abolished.

"(5) The tax on dividends above 6 percent should be withdrawn.

"(6) Expenditure tax should be withdrawn.

"(7) Wealth tax on companies should be abolished.

"(8) A limit should be set providing that an individual should not be required to pay more than a reasonable percentage of his income in the aggregate on account of income tax, supertax and wealth tax.

"(9) The compulsory deposit scheme should be withdrawn."

The Federation believes that if the aforesaid suggestions are implemented, it will go a long way not only in activising savings but also in stimulating tax yields to the Exchequer.

Resolution on Foreign Exchange

In another resolution on foreign exchange, the Federation recognises the need for a watch on the foreign exchange resources and their husbanding in the most efficient manner, but feels that "an excessively cautious policy may prove to be as harmful as a policy without caution. The requisite balance requires to be struck and it is towards this end that the Federation has to urge upon the Government to make a factual and correct appraisal of India's foreign exchange situation."

The promotion of exports was the subject of the third resolution, through which the Federation has asked "the Government to give necessary aids and incentives in the vital task of promoting exports, as also to pay particular attention to the organisational aspect of promoting and diversifying the pattern of the export trade. For example, exports of engineering goods abroad can be augmented by the supply of steel to manufacturers of engineering goods for export at retention prices, refund of excise duty on billets used in the manufacture of engineering goods which are exported, etcetera. The Federation would urge upon the Government to implement the several recommendations of the Export Promotion Committee which are intended to assist and strengthen our export industries and trade."

Sales Tax Policy

The last resolution, on sales tax policy, suggests:

"(a) The scheme of collection of sales tax, along with other levies implemented in relation to three articles, namely, mill-made textiles, sugar and tobacco, be extended to as many articles as possible, particularly to those on which at present the Central excise duty or the Customs duty is levied, except on those which are mainly used as raw materials.

"(b) The Centre should enact a model Sales Tax Act for the guidance of the States. Varying definitions given to basic concepts such as 'dealer' and 'sale' in State enactments cause a lot of difficulties. The framing of the model Sales Tax Act by the Centre giving the basic structure such as definitions, turnover limits, registration procedure, returns and forms, procedure for revision and appeals, will be of great help in imparting a certain degree of uniformity. Within the broad features given in the model Sales Tax Act, the States will be free to adjust the rates to the needs and conditions of each State.

"(c) Inter-State sales tax should be levied only once, although the goods may pass through dealers in two or three States.

"(d) In the context of the present acute foreign exchange situation and the need to step up exports, the Central Sales Tax Act should be so modified as to make export transactions cover not only transactions which themselves occasion export but to cover goods meant for export. It should not be difficult to give refund of sales tax collected on goods exported on irrefutable proof of such export.

"(e) The Inter-State Taxation Council recommended by the Taxation Enquiry Commission should be set up as early as possible, to undertake the task of introducing as much uniformity as possible in the administration."

U.S. Aid to India

The news from Washington that there is a likelihood of accord between the Republican and Democratic Parties on the question of economic aid to India is welcomed here. According to earlier reports, some Republican Senators, including Senator Cooper, were sponsoring a resolution favouring substantial outright aid to India. One Democratic Senator has now announced a similar intention. Reference is made to the Prime Minister's speech at the meeting of the Federation of Indian Chambers of Commerce and Industry, in which he has welcomed foreign aid and said that some has come, and more is coming. New Delhi will closely watch the progress of the resolutions which, it is expected, will be moved in the U.S. Congress.

Mission from Washington

To study the details of administrative arrangements in India for import licensing and for foreign exchange payments, and to acquaint itself with various aspects of the Indian economy, a five-man mission from Washington arrived here last Friday. It consists of Mr. Hawthorne Arey, Director of the Export-Import Bank (leader); Mr. Raymond L. Jones, Chief of the Loans Division; Mr. Charles E. Houston, economist; Mr. Robert L. Moorman, engineer; and Mr. Edward Lynch, Acting Chief, Loans Division, Development Loan Fund. The mission is expected to be in India for three weeks. It will hold discussions with officials in New Delhi and will later tour the country.

Details of U.S. Credit Offer

Details are now available of the $225 million U.S. credit offer announced on 16th January. The credit of $150 million from the Export-Import Bank will be utilised for the procurement in the United States of capital equipment, machinery and services needed by India in the next 12 months for the following programmes: irrigation and reclamation, power, transport and communications, mining and certain selected industries like textiles, chemicals, the fabrication of heavy structurals, electrical equipment and machine tools. Payments made in the United States after 28th February for goods under these programmes will be eligible for this credit. The credit will bear interest at 5¼ percent and the term will be 15 years; repayment of principal will, however, start on 15th January, 1964.

Development Loan Fund

The credit of $75 million from the Development Loan Fund will be utilised for the purchase of components to manufacture trucks, buses and jeeps; for the purchase of structural steel and other steel products required by the railways; and for the purchase of machinery for the jute and cement industries. Repayments will start on 15th March, 1959, and can be in rupees. The credit for railway purchases will bear interest at 3½ percent and will be repaid in 40 semi-annual instalments. The other credits will bear interest at 5¼ percent and will be discharged in 30 semi-annual instalments.

Both the credits will come from the institutions concerned to the Government of India; hence purchasers in India, in the public and in the private sectors, will have to follow the normal procedure for negotiation of purchases, etcetera. It is intended that the Government should later reimburse itself from these two institutions for the foreign exchange expenditure involved in such purchases. The Indian Government submitted to the U.S. Government a list of projects, in the hard core of the plan, for which foreign exchange was needed. The total outlay on these projects was placed at Rs. 1,745.6 crores, including Rs. 981.4 crores as the foreign exchange element. Of this, commitments for Rs. 264.9 crores of foreign exchange had already been made, leaving a balance of Rs. 716.5 crores worth of foreign exchange to be financed from external sources. Of this, Rs. 163.4 crores worth of foreign exchange was required in 1958, Rs. 254.7 crores in 1959, Rs. 191.1 crores in 1960 and the balance of Rs. 90.3 crores in 1961. The following is the Ministry-wise break-up of foreign exchange requirements (in crores of rupees):

Ministry of	Total cost	Foreign exchange component	Foreign exchange commitments already made	Balance required
Irrigation and Power	349.6	131.5	18.9	112.6
Railways	917.2	463.4	212.6	250.8
Commerce and Industry	252.2	252.2	Nil	252.2

Total	1,745.6	981.4	264.9	716.5

Provisions for Private Industry

The provision made by the Ministry of Commerce and Industry is mostly for the modernisation, development and expansion of certain industries in the private sector. They are (in crores of rupees):

	Total cost	Foreign exchange component, all of which is required.
Textiles	20	20
Jute	6.5	6.5
Cement	11.9	11.9
Engineering	68.5	68.5
Refractories	2.4	2.4
Caustic soda, soda ash and chlorine products	9.5	9.5
Paper and pulp	6	6
Tea	4.6	4.6
Aluminium, zinc and copper	23.9	23.9
Small-scale industries	6.1	6.1
Others	2.8	2.8
	162.2	162.2

About Rs. 90 crores worth of foreign exchange is required for the development of road transport and Rs. 41.7 crores for port development and the acquisition of additional shipping. The provision for additional shipping is placed at Rs. 30 crores, all in foreign exchange, of which commitments for Rs. 20 crores have already been entered into. The total cost of coal development in the private sector is placed at Rs. 15 crores and in the public sector at Rs. 13.3 crores, the foreign exchange components being Rs. 10 crores and Rs. 13 crores respectively. The private sector's commitment of foreign exchange is Rs. 3.3 crores, and it requires the balance of Rs. 6.7 crores to reach its target of production. The total cost of the Neyveli project is placed at Rs. 32 crores, including Rs. 19.2 crores as the foreign exchange component, all of which is needed.

U.K. Aid to India

An appraisement of British aid to India is relevant in this context. The U.K. is the biggest investor in India. Eighty-two percent of the total foreign investments here are British. For the Durgapur steel plant, Rs. 35 crores have been contributed by the U.K.—Rs. 20 crores from the U.K. Government and Rs. 15 crores from other sources, including the Indian Steelworks Construction Company. Of the £60 million which the U.K. has made available to the World Bank, £18 million or over Rs. 23 crores has so far come to India. Recently, an advance payment of sterling pensions, amounting to £8 million, was made to India. Although the sterling balances are India's and she can use them as she pleases, their unplanned withdrawal has strained the British economy. On 30th December, 1949, they stood at Rs. 826.28 crores, and on 30th December, 1955, at Rs. 735.18 crores, the withdrawals thus amounting to Rs. 91.10 crores in six years. India's withdrawals in 1956 amounted to Rs. 205.27 crores and in 1957 to Rs. 232.26 crores. By 27th

Training Bhilai Technicians

For the Bhilai steel plant, the Russian Government has agreed that the cost of training engineers and technicians in Russia may also be included in the credit under the principal agreement. In other words, the cost of training will be repayable in 12 equal annual instalments, the interest being 2½ percent.

Communist Aid Offers for Oil Refinery

Speaking at a Press conference, the leader of the Russian parliamentary delegation, Mr. Pabel Labanov, has said that his Government has offered credit facilities to establish a refinery in India, in addition to those for the establishment of a pharmaceutical industry. The Rumanian Prime Minister, Mr. Chivu Stoica, arrived here last week. As already reported, Rumania has also offered credit facilities for setting up a refinery in the public sector. Negotiations on this subject have been in progress for some time. It is expected that the deal will be finalised during the stay of the Rumanian Prime Minister. Two refineries are to be set up in the public sector to refine the crude oil produced in Assam. One will be at Barauni in Bihar and the other in Assam. Russia and Rumania, it seems, will supply the equipment for these refineries on a credit basis, in addition to the technical aid required for setting them up.

Indo-Russian Payments Gap

According to preliminary estimates, there was a current account deficit of Rs. 10.9 crores in India's balance of payments with Russia during April to September 1957, the latest period for which information is available. The current restrictions on imports from, together with an increase in exports to, Russia are expected to reduce the gap. Most of the imports on Government account were for the Bhilai steel project and were financed by the Russian credit for this purpose. For other transactions, the trade agreement with Russia provided for payment in rupees by both parties.

Projects in Hard Core of Plan

A statement covering projects included in the hard core of the second five year plan was laid on the table of Lok Sabha last week. The public sector schemes it mentions are as follows. In steel, there are the Rourkela steel plant, the Bhilai steel plant, the Durgapur steel plant and the Mysore Iron and Steel Works (ferro-silicon expansion plan only). In coal are included (a) the National Coal Development Corporation schemes for Kathara, Korba (open-cast), Korba (inclines), Gidi, Saunda, Korea, and the existing State collieries; and (b) the Singareni collieries. Coal washeries are mentioned, and there is the Neyveli lignite project (mining part only); and the railway development programme (including the requirements of the Posts and Telegraphs Department in connection with the railway electrification programme).

The port development programme covers the following ports only: Bombay, Calcutta, Madras and Visakhapatnam. The power projects include only the following: Korba thermal station (Madhya Pradesh); Khaper Kheda Akola thermal station extensions (Bombay); Hirakud project (second stage) (Orissa); Lakkavalli (Bhadra) project (Mysore); power transmission, distribution and extension schemes (sub-station equipment, conductors, switchgears, underground cables, steel for supports, ground water meters, etcetera); Bhakra-Nangal hydro-electric project (Punjab and Rajasthan); Chambal project (first stage) (Madhya Pradesh and Rajasthan); Rihand project (Uttar Pradesh); Tungabhadra hydro-electric scheme (Mysore); Nariamangalam hydro-electric scheme (Kerala); thermal stations in the Saurashtra region (Bombay); and Ganderbal and Mohara power stations (Jammu and Kashmir).

The private sector projects cover steel and coal, including the Tata Iron and Steel Works and the Indian Iron and Steel Works.

Development Expenditure in States

Another statement indicates the progress of development expenditure in the States, together with the estimates of total resources to be raised by them in 1958-59. The following is the statement (in crores of rupees):

States	1956-57 Actuals	1957-58 Revised estimates	1958-59 Budget estimates	1958-59 estimates of total States' resources for financing the plan
Andhra	24.96	34.61	30.02	12.0
Assam	9.17	11.60	10.71	6.2
Bihar	23.42	26.99	30.33	14.0
Bombay	44.45	65.00	71.55	43.0
Kerala	10.01	17.05	15.51	8.0
Madhya Pradesh	17.98	31.77	29.68	11.2
Madras	28.03	32.24	28.01	10.0
Mysore	13.12	24.61	23.22	9.9
Orissa	16.76	19.41	16.00	3.5
Punjab	24.06	34.00	33.79	17.8
Rajasthan	13.44	18.30	20.72	8.3
Uttar Pradesh	40.69	47.76	46.00	22.3
West Bengal	26.31	31.00	29.39	13.1
Jammu and Kashmir	4.11	4.93	5.50	2.0
	296.51	399.27	390.43	181.3

Modification of Deferred Payment Terms

The Government, it is learned, has modified the conditions for deferred payments under which reasonable amounts of foreign exchange will be released for initial payment, provided the project is capable of earning foreign exchange to pay for itself. Arrangements have been made with the Czech Government to supply cement-making machinery to the Uttar Pradesh and Madras Governments on deferred payment terms, 30 percent to be paid in rupees and the balance in sterling after 1961. The cost of plant and machinery to be imported for the Uttar Pradesh cement factory will be Rs. 1 crore and that for the Madras factory Rs. 55 lakhs. The rupee element will be used for buying specified Indian goods. Negotiations are also in progress to import switchgear and transformers from Czechoslovakia on similar terms for the Rihand project in Uttar Pradesh.

No Central Loan to State Transport Undertakings

The Government of India has issued a letter to all State Governments informing them that, with effect from April 1958, assistance from the Centre, whether through loans or by grants, will not be available to transport undertakings owned or managed by State Governments unless they are incorporated under one or other of the special enactments or as a company under the Indian Companies Act. No assistance will be available to undertakings managed departmentally.

Lall Mission Returns

The Joint Secretary to the Central Ministry of Commerce and Industry, Mr. K. B. Lall, has returned to New Delhi from his mission to Hongkong, Japan, Honolulu, the United States, Canada and Britain. He has brought back some useful impressions from his visit to the United States, which, according to him, has a big market for Indian goods, in spite of its high tariffs. There is a growing realisation there that the United States will not be able to make its contribution to the world's progress, unless it imports goods in an increasing volume from outside, and particularly from the under-developed countries. Trade is preferred to aid. American salesmanship makes the consumer tired of his belongings. Fashions, therefore, change every six months. As a *sine qua non* to any export promotion plan, India's production pattern will have to be reorientated to fit with that of the United States. The lack of contact between Indian and U.S. commercial organisations is another handicap to India's export promotion in that country. Mr. Lall will shortly submit a comprehensive report to the Government of India, it is learned.

Progress of Iron Ore Development

The progress report on iron ore development required for the three steel plant is now available. An expenditure of Rs. 83.11 lakhs has so far been incurred on the development of the mines which are to supply iron ore to the Rourkela and Bhilai steel plant. Iron ore for the Durgapur steel plant will be supplied by the Bolani Ores (Private) Ltd., in which the Government has a majority share. So far, Rs. 10.10 lakhs has been invested by the Government in this company. The scheme for the development of ore mines in Barsua for the Rourkela steel plant has been examined and approved. A contract for the supply and erection of blasting, mining, hauling and ore processing equipment has been awarded to a U.S. firm. Access roads leading to the mine site have mostly been completed. Further, about 27 miles of hill roads have been laid. The work is expected to be completed by the end of 1959. It is proposed to obtain ore from market sources in the Gua region for the operation of the blast furnaces in Rourkela, pending its availability from the Barsua mines.

The main plant and equipment for the development of the mines in Rajhara, for the Bhilai steel plant, will come from Russia and contracts have been concluded. The preparatory work is in progress at the site. Detailed drawings for construction are now being prepared by the organisations in Russia. A new railway line is under construction connecting the mine to the steel works. This is likely to be ready by the middle of the current year. Until the mines are mechanised and are fully in operation, it is proposed to obtain "float ore" by manual working, which will be adequate for the initial operation of the steel works.

The survey for a railway siding, to connect the Bolani mines with the railhead in Barabil, has been completed and tenders have been received for the construction of the siding. Preliminary geological exploration at the site has also been completed, and a project report has been received from a firm of consulting engineers. It is hoped that the Bolani mines will be ready in time to supply the first blast furnace of Durgapur which is due to be commissioned by the end of October 1959.

BENGER LABORATORIES CONTEMPLATE MANUFACTURING IN INDIA

Mr. B. O Thornley the Chairman of Benger Laboratories Ltd., of Holmes Chapel, Cheshire, England, is on a brief visit to India to investigate and discuss the possibilities of setting up a manufacturing plant in this country. Benger Laboratories are particularly known for their products "Dextraven" and "Imferon". The latter was the first intramuscular injectable iron preparation developed by Benger research chemists and remains unrivalled in cases where the rapid absorption of iron is indicated. Mr. Thornley has come to India to discuss with the Government the possibility of manufacturing "Dextraven", "Imferon" and allied products here. Benger products have an extensive market in India and the Far East, and the setting up of a plant in this part of the world will not only contribute to India's second and third five year plans but will also make these products available to hospitals and the medical profession, for whom they are vitally necessary, at progressively reduced prices.

London

EMPLOYERS ACCEPT REPORT OF COHEN COUNCIL

ECONOMIC BULLETIN WARNS AGAINST RECESSION

(FROM OUR LONDON CORRESPONDENT)

It is becoming commonplace to find new assessments of the economic outlook appearing each week, and whether one agrees or disagrees with their findings is probably less important than that they do keep the issue in front of the public, and it is an issue which no one can afford to neglect. The Cohen Council's report, which incidentally has received acceptance by employers, as represented by the British Employers Confederation, has been supplemented by an interesting review in the *London and Cambridge Economic Bulletin*. This warns against blind acceptance of the stability of prices, wages, imports, exports and capital formation over the past six months, which might have served to cloak the possibility of an impending recession. Generally speaking, however, it feels that any such movement will be slight, in whichever sector of the economy it might appear. The need to fortify Britain's reserves and to limit wage increases, it feels, may justify the maintenance (but not the intensification) of an austere policy "until the middle of the year."

Another contribution to this topic has been made by Professor Meade in his inaugural lecture as the new Professor of Political Economy at Cambridge. He suggests that the Government should commit itself to holding the price level at a given point and then aim at keeping employment as high as possible without breaking through that barrier. To achieve this, there must be some quick means of varying incomes, some sort of a "widespread levy," to be wielded by a stabilisation commission working with the Treasury and the Bank of England to pursue a single policy through a common technical staff. The Cohen Council could be given the work of ascertaining regularly what increases in wages the country could afford without endangering full employment or price stability.

Importance of Wages

The importance of wage levels is obvious in both the above references, and has been a major talking point at the Employers Confederation meeting. Its report, for instance, warns individual employers that unless they show restraint in giving pay increases, it cannot be expected that their organisations and the trade unions will arrive at "reasonable bargains." The retiring president, Sir Colin Anderson, has called the T.U.C. rejection of the Cohen Council report on the grounds of it being partisan "a serious disservice to our public life" and has accused it of having "a closed mind, with the determination not to understand" for its complaint is "positively untrue." The Government's measures and those suggested by the Cohen report might hurt many employers and it is "plainly wrong to pretend that to stop inflation is a one-sided punitive measure against the workers." On arbitration, Sir Colin says there is a growing tendency in some quarters to resort to it apparently without any serious intention of accepting the award. Arbitration will cease to be useful if the idea spreads that an award "merely provides a new floor from which the trade union could press its claim on the employers."

In spite of the gloomy outlook so far as arbitration is concerned, the first award of 1958 has been awaited with much interest. This has now been announced, and in the case of 11,000 B.B.C. staff who had made a claim for a wage increase of 7½ percent, or 1s 6d in the pound. The tribunal, which considered the claim, has awarded a 7d-in-the-pound increase, or one of 3 percent, and in doing so has stated that it does not think such an increase will be inflationary and that it will not conflict with the national economic interest. The really significant feature of the decision, however, is that it is the first important arbitration on wages outside the Civil Service (Whitley Council awards are subject to ministerial sanction and in some cases hitherto have been turned down) since the Government's edict that pay rises must be kept down; and it is practically certain that this award, made to what is in effect a State-run service, will set the pattern for other wage awards in nationalised industry and in relation to the current claims of London busmen, the railwaymen and the miners.

Rise in Gold and Dollar Reserves

The February increase of $135 million in the sterling area gold and dollar reserves lifts the total to $2,539 million—the best figure since the middle of 1956 and more than they were last summer before the speculative attack on sterling gave rise to the September crisis. If allowance is made for the $22 million received from the European Payments Union in January and for $3 million paid to its creditors in bilateral settlements, the February residual surplus amounted to $116 million. This compares with a surplus of $147 million in January and of $109 million in December. Even more impressive, however, is the fact that Britain's February surplus with E.P.U. was $45 million, the best since 1950, and although this was partly attributable to special factors, it does mean that the reserves get off to a good start for March. If they maintain this progress for a few more months and the balance of payments position is sound, they should be reasonably well placed to meet the seasonal strains when they develop again next autumn. An additional safeguard is available in the announcement that the Export-Import Bank of Washington, which in February 1957 arranged with the British Government a line of credit of $500 million, has agreed to an extension of the facility for drawing for a further 12 months.

Industrial Production Sags

Industrial production continued to decline slightly in January, according to the index prepared by the Central Statistical Office. The figure for December is estimated at 135, compared with 148 for November, and the provisional estimate for January is 138-139, compared with 138 for January 1957. These month-to-month figures are confusing because of the influence of holidays and other seasonal factors. After adjustment for these, however, the index is seen to have moved as follows: September 140; October 137 (affected by influenza epidemic); November 140; December 138; January 137-138. For the year 1957, the average index figure is 138, compared with 136 in 1956. A factor in the recent decline has been the drop in coal and steel production. Manufacturing output, as a whole, is still running slightly above the figures of a year ago. This reflects the recent rise in the activities of the motor-car industry and its suppliers, which must have been partly offset by substantial declines in other manufacturing industries.

Hire-purchase Debt

Britain's hire-purchase and other instalment debt for durable goods rose by about £80 million in 1957, compared with a fall of £90 million in 1956. According to Board of Trade estimates, the total debt at the year-end was £484 million. Most of last year's increase was due to the higher level of hire-purchase business in motor-vehicles. New credit extended to hirers by all finance houses known to the Board of Trade was about £340 million, or 65 percent more than in 1956. Total value of household goods sold on credit terms in 1957 is estimated at £275 million, or about 15 percent more than in the previous year. Of this, £150 million was for furniture and furnishings. Durable goods sold on credit last year had an estimated total value of £750 million. Since October a rise in credit for radio and T.V. sets, and for furniture, has been outweighed by a fall in new credit for motor-vehicles, but these are probably seasonal movements.

Finance for Export

In answer to a question in the House of Commons the other day, the Chancellor of the Exchequer elucidated the position of the Capital Issues Committee in relation to export trade finance. Asked what guidance had been given to the C.I.C. on the treatment of proposals to finance the export of capital goods by bank credits guaranteed by the Export Credits Guarantee Department, the Chancellor made it plain that, in general, the C.I.C. would continue to require applicants for leave to borrow for capital purposes to raise the finance, where possible, from non-banking sources. He went on to explain, however, that the committee had been informed that, where the purpose of the proposed bank loan was to finance exports and the Export Credits Guarantee Department had already indicated its willingness to issue a guarantee to the bank, refusal of consent would be inconsistent with the general policy of giving such guarantees direct to banks. This, he emphasised, was introduced specifically to facilitate loans for the export of major capital goods. The C.I.C. has, therefore, been asked to bear this in mind in considering applications for consent to such bank loans. It will be recalled that when the ceiling on bank advances was fixed as part of the Chancellor's credit squeeze last September, bank loans for export were specifically exempted.

Trade with China

The Sino-British Trade Council says in a report published last week that there can be no doubt that the recent visit of the Chinese economic and technical trade mission to the United Kingdom "not only enhanced Sino-British goodwill but also laid the foundation for a useful increase in Sino-British trade." It was a matter of gratification, says the report, that before the textile machinery advance party left, it was reported that it had concluded contracts worth more than £700,000 for the supply of textile machinery to China by a number of British firms. Most firms said, however, that a serious impediment to their prospects of expanding trade with China was the continuance of the strategic embargo. The Council is now collecting evidence in support of a case for further relaxation in trade controls and will be putting this before Sir David Eccles, president of the Board of Trade, in the near future.

Brevities

Mr. P. E. S. Warren has been appointed to the board of the British Match Corporation.

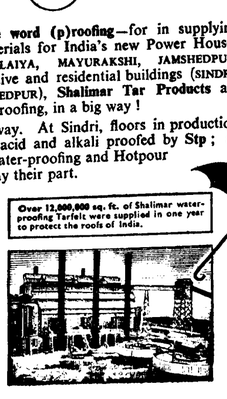
A party of four trade union leaders from India, who are visiting this country as the guests of the Commonwealth Relations Office, started a five-day tour of the North Midlands by visiting the British Railways' locomotive works in Derby.

Captain John Cavendish William Last has been appointed Commodore of the P. and O. fleet on the retirement of Commodore C. E. Pollitt. Captain Last will continue to serve in command of the passenger line *Chusan*.

Mr. F. H. Lawder, chief labour superintendent of the United Steel Companies, has been elected president of the Iron and Steel Trade Employers Association in succession to Mr. W. F. Gilbertson, of Richard Thomas and Baldwins.

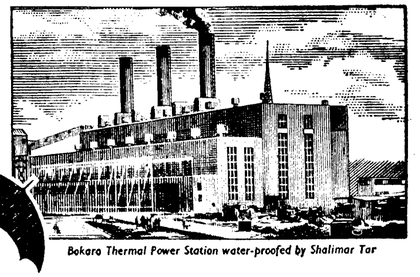
Sir James Swinburne, one of the pioneers of the plastics industry, celebrated his hundredth birthday last week at his home in Bournemouth. Sir James, who was born in Inverness, founded Bakelite, Limited, and it was not until 1953, when he was 95, that he resigned from the chairmanship and became honorary president.

Mr. G. E. Ingram has been appointed a director of Jokai (Assam) Tea.



The Chartered Bank, which absorbed Eastern Bank last August, shows a sharp increase in profits for 1957. The net figure was £1,000,890 against £804,641. A final dividend of 7½ percent on the enlarged £4,400,000 capital again brings the year's total to 15 percent, the rate established in 1954.

Proof of Stp project proofing . . .



. . . The play is on the word (p)roofing—for in supplying protective roofing materials for India's new Power Houses (SINDRI, BOKARO, TILAIYA, MAYURAKSHI, JAMSHEDPUR, HIRAKUD), administrative and residential buildings (SINDRI, CHITTARANJAN, JAMSHEDPUR), **Shalimar Tar Products** are project proofing, with roofing, in a big way!

Nor is it the only way. At Sindri, floors in production bays and stores are acid and alkali proofed by Stp; at Bhakra-Nangal, Stp water-proofing and Hotpour Expansion Jointing play their part.

This is on the project side. On an ever increasing scale **Shalimar Tar Products** also protect the homes and industries of India.

Sindri where Shalimar Tar did many proofing jobs

Bokaro Thermal Power Station water-proofed by Shalimar Tar

Engineering and Transport

AGREEMENT BETWEEN B.E.A. AND AEROFLOT CONCLUDED

DELHI-MOSCOW SERVICE MAY START IN AUGUST

(FROM OUR NEW DELHI CORRESPONDENT)

AN agreement has been concluded between British European Airways and Aeroflot for an air service between London and Moscow *via* Copenhagen. When the service begins, B.E.A. will use the *Viscount* but hopes to switch to the *Comet IV* when the latter becomes available. The Russians will use the *Tu-104*. B.E.A. and Aeroflot will start with two flights a week each, increasing to three when traffic develops. As already reported, an Indo-Russian air agreement is in the offing, and India hopes to inaugurate the Delhi-Moscow service by the middle of August. There is already talk of reaching arrangements with B.E.A. to continue this service to London *via* Copenhagen.

Review of Indo-Dutch Air Agreement

A review of the Indo-Dutch air agreement is due now. A K.L.M. team is expected here shortly for this purpose. A Belgian trade mission, which is at present in New Delhi, is exploring the possibilities of an air agreement.

Delhi-Budapest Service of A.-I.I.

Air-India International plans to open a direct Delhi-Budapest service by the end of this year and an all-cargo service to western Europe soon.

New Air Routes for Lebanon

Under an air agreement between Afghanistan and the Lebanon, the latter has been awarded the following routes: (1) Beirut-Teheran-Kandahar, twice weekly; (2) Beirut-Kuwait-Bahrein-Dhahran-Kandahar twice weekly, but no fifth freedom rights between Kandahar and Bahrein. Afghanistan is authorised to operate the following services: (1) Kandahar-Teheran-Beirut, twice weekly (Aryana already serves Beirut); (2) Kandahar-Teheran-Bahrein - Beirut - Istanbul - Prague-Munich, twice weekly, but no fifth freedom rights between Beirut, Teheran, Bahrein and Munich.

DC-7C Aircraft on Transpacific Route

The introduction of *DC-7Cs* on the Japan Airlines transpacific route on 1st April will increase the present five weekly flights to seven and reduce flying time across the Pacific by five hours. Japan Airlines will operate four *DC-7C* and three *DC-6B* flights each week from Tokyo to San Francisco.

Aircraft for Japan Airlines

Japan Airlines plans to increase its long-range jet fleet and acquire short and medium-range turbine aircraft after 1960. In the next three years, the airline will use *DC-4s, DC-6Bs* and *DC-7Cs*. In 1961, the four *DC-8s* now on order will enter service and 11 short-range turbine aircraft will then be needed. Between 1962 and 1966, Japan Airlines estimates that it will need a total of eight *DC-8s* and seven more short-range turbines. Medium-range turbines will also be needed, the requirement increasing from two in 1963 to ten in 1966.

Round-the-World Service of B.O.A.C.

B.O.A.C. will inaugurate a round-the-world service in March 1959, Mr. Basil Smallpiece, managing director, has announced recently in San Francisco. The plan is to open a San Francisco-Tokyo route *via* Honolulu, linking up with B.O.A.C.'s east-bound flights from Europe to the Far East.

Air Route between Britain and Venezuela

Negotiations are continuing between Britain and Venezuela for the establishment of an air route by B.O.A.C. between the two countries, the *Aeroplane* reports. B.O.A.C. has applied for permission to operate a *Britannia* service to Caracas and Bogota *via* the Iberian peninsula and the British West Indies on a temporary basis until an air agreement is concluded.

B.O.A.C. Transatlantic Flight

B.O.A.C. will operate most of its transatlantic flights with *DC-7Cs*. There will be two daily *DC-7C* flights from New York to London, one of which will be non-stop. In addition, it will operate a daily *de luxe Stratocruiser* flight non-stop to London, and a twice-weekly San Francisco-New York-London *Britannia* service. The Corporation will operate seven weekly *Britannia* flights from Chicago, Detroit and Montreal to the United Kingdom this summer, three *via* Glasgow and four non-stop from Montreal to London. There will also be a daily *DC-7C* service from Montreal to Britain. Since February, B.O.A.C. has been operating two services daily between New York and Nassau in each direction. The first-class service is operated with *DC-7Cs* and the tourist service with *Viscounts*. According to reports reaching *Inter Avia*, the Corporation plans to inaugurate direct "short route" services between Los Angeles and London *via* either Winnipeg or Montreal in March 1959. *Britannias* will be used at first, to be replaced with *Boeing 707s* in 1960. Los Angeles is not now in B.O.A.C.'s network. During the first year of B.O.A.C.'s operations with *Britannias*, the aircraft carried nearly 77,500 passengers and flew about 8 million miles during 28,000 hours on revenue-earning services. All but 100 of the total hours were recorded by the carrier's fleet of 15 medium-range *Britannia 102s*, the long-range *312s* having only recently been introduced in service on the north Atlantic.

Frankfurt-Rome Service of Lufthansa

Lufthansa's Frankfurt-Rome service, to open on 1st April, will be flown four times a week. The extension of Frankfurt's main runway to 9,850 feet, with an additional 985 feet of overshoot, was completed in late October 1957. Frankfurt has become the first airport in West Germany to meet I.C.A.O. Category A requirements. Plans for a further runway extension of 2,000 feet are well advanced and could be completed in three or four months. The new control tower, expanded apron capable of accommodating 28 aircraft, and the hydrant refuelling system under construction will enable the airport to handle any substantial increase in traffic within the next few years. At the end of the current fiscal year, Frankfurt was served by 27 airlines and handled more than a million passengers.

Air France to Open Polar Service

Air France will open its polar service from Paris to Tokyo using *1649A Super Starliners* on 1st April, M. Max Hymans, chairman has announced. There will be one stop for refuelling at Anchorage (Air France has no traffic rights in Alaska).

T.A.I. Plans Extension

T.A.I. plans to extend its Paris-Saigon-Djakarta route to Noumea this year, operating the 3,730 mile Djakarta-Noumea lap non-stop with *DC-7Cs*. The planned extension will provide a second Paris-Noumea link each week. T.A.I. now flies to Noumea from Darwin and is still negotiating with the Australian authorities for traffic rights for a Saigon-Darwin-Sydney-Noumea route. It hopes ultimately to include Colombo and Singapore in its Far East network.

New Airline for France

According to reports appearing in *Inter Avia*, the airline Air Inter has been formed to operate domestic services in France, and will begin flying if and when the Government abolishes the present tax on aviation fuel. The latest information of Air Inter was that the Government had decided against its establishment on the ground that it could not operate at a profit. Current reports are that the airline will take over most of Air France's metropolitan services on 15th March if the Government decides that aviation fuel is to be tax-free. It was announced that Air France was prepared to hand over to Air Inter its entire metropolitan network with the exception of mail services and the Paris-Nice route shared with U.A.T., which it said was necessary to provide connections with international flights. M. Bernard Gagney, former general representative for Air France in French Equatorial Africa, has been appointed general manager of Air Inter. Its president is M. Rene Lemaire. The first three services planned are Nice-Marseilles-Toulouse-Bordeaux, seven times weekly with *DC-3s*; Marseilles-Paris, seven times weekly with *DC-4s*; and Paris-Strasbourg, seven times weekly with *DC-3s*. Initially Air Inter will use aircraft leased from Air France or private lines.

T.W.A. Economy-class Transatlantic Services

Due to "unprecedented demand," T.W.A. is increasing its economy-class transatlantic services from 44 to 74 a week during the peak summer travel season. In addition to *Super Constellations* providing an all-economy service, new low fares will be offered on *1649A Jetstreams*, which will also provide first-class accommodation. There will be 16 all-economy *Super Connie* flights weekly in both directions starting from 1st April, 18 starting from 27th April and 36 from 1st June. There will be 26 *1649A* flights from 1st April, increasing to 38 in both directions on 1st August. On 1st June, T.W.A. will schedule a total of 124 flights weekly on its inter-Continental routes, including eight polar services.

P.A.A. Not to Serve Seattle and Portland

President Eisenhower has ratified the Civil Aeronautical Board's decision denying Pan American the right to serve Seattle and Portland on its great circle route to Tokyo. In announcing the action, the C.A.B. said that the Pan American service from these points would have duplicated Northwest's service to Tokyo from Portland and Seattle *via* Anchorage. The C.A.B. recommended the decision against Pan American last August but President Eisenhower deferred action until the Board provided more recent information on transpacific traffic flow. This was duly provided, together with additional recommendations, and the President arrived at a decision. Pan American Airways now flies a great circle route to Tokyo from San Francisco and Los Angeles, and flies from Portland-Seattle to Tokyo *via* Hawaii.

International Panorama of Progress

Modern methods for ancient acres

Over centuries-old fields of rice and sugar cane a new sound is being heard. Shouts of encouragement to plodding buffaloes and oxen are being supplanted by the hum of modern farm machinery. Efficient equipment is bringing in bigger crops with less effort—aiding economies, easing the farmer's life. In many of the countries where agriculture plays a vital role, Caltex quality petroleum products help maintain and expand farm prosperity. Through the power of petroleum, Caltex fuels and lubricants run the machinery that lightens the work load, increases the standard of living for the peoples of over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

GUNNY PRICES EASE IN QUIETER TRADING

I.J.M.A. STOCK FIGURES CONSIDERED DISAPPOINTING

THE jute goods markets have shown a quieter tendency during the past week, and in the absence of fresh enquiries from overseas, prices have gradually declined. The initial confidence following the fixing of minimum prices has faded away, and been replaced by a dull phase, with operators hesitant. One of the depressing factors has been the publication of the I.J.M.A. jute goods stock figures for February. Shipping instructions to mills last month were reported to be good and the market expected a heavy reduction in stocks. When the figures showed a drop of only about 1.500 tons, the reaction was immediate. Operators had expected sacking stocks alone to fall by about 5,000 tons. It appears, however, that the reduction of stocks is only delayed as many of the steamers for which shipping instructions were issued were not placed until after the end of February, and most of the sacking steamers did not start loading until 10th March. That the benefit of this will be felt at the end of March is not a factor which speculators appreciate.

Overseas interests have stayed out of the market and shown no inclination to support the higher prices introduced by the I.J.M.A. Mills are keen sellers, especially for the forward positions, which at the beginning were above the agreed minima. But even local shippers have shown very little interest and by the end of the period all sections of the market, in both sacking and hessian, are well below the I.J.M.A.'s idea of minimum prices. Speculators are also quiet and very little activity has been reported. Towards the close, mills have lost interest and are not keen to do business at current levels.

Less Business in Fibre

After the recent spate of buying, mill interest in raw jute has slackened during the past week and the business reported has been only about 100,000 or 150,000 maunds. Low quality jute remains the chief attraction, but purchases of it have been interspersed with Middles only of the better varieties and districts. A fair amount of inter-seller covering has taken place and up-country markets continue to rule above the parity of Calcutta rates. Stockists are in a happier frame of mind now, having reduced their holdings considerably during the early part of the month, when mills bought large quantities. Imports into Cossipore continue to be small for the time of year and good quality jute is scarce. Purchases of new crop jute have been reported during the past week, but these are speculative transactions and are no pointer to the market in general. Preparation of the land for new crop sowings is well in hand in many districts following good rainfall. Actual sowings, however, have only been reported from some of the lowland areas of Pakistan and Assam, and even these are on a very small scale.

Pakistani Jute Markets

Further developments in the black-listing of four U.K firms for dealing in Pakistan jute *via* Calcutta are reported. The matter has been discussed at length by members of the London Jute Association and the Dundee Jute Association with the Pakistani Commerce Ministry. It has been agreed to take steps to terminate any arrangements for purchasing Pakistani jute through Calcutta in contravention of the directions issued by the Jute Board in 1953. A Press note issued by the Pakistani Commerce Ministry gives hope that the ban placed on the firms concerned may soon be lifted. It states that as soon as evidence is produced that all members of the two above-mentioned Associations have terminated arrangements for purchasing jute through Calcutta and will deal exclusively with shippers in Pakistan through their offices in London, the disqualification placed on the four London firms will be withdrawn. The news has been welcomed in the U.K.

THE JUTE MARKETS

Manufactured Goods: The jute goods markets were quiet during the past week, only small transactions being reported. Calcutta mills showed keen selling pressure early in the session but found very few buyers either locally or overseas. As prices declined, they lost interest at the lower rates. Foreign business was practically non-existent, and towards the close the only buyers were local shippers covering against steamers loading in port. Mills, however, were not interested in near shipment goods, as these were well below the minimum prices recommended by the I.J.M.A. Towards the close, all deliveries fell below the minima and even heavy speculative activity late on Tuesday improved the position only partially. The I.J.M.A. stock figures for February had a depressing influence but were not wholly unexpected in the trade due to the late placing of steamers—a fact which was not taken into consideration by speculators.

Opening quotations last Thursday indicated a quieter tendency and ready B Twills dropped by 30nP to Rs. 98.90. In the absence of any interest at the minimum prices from overseas, the forward section slumped by 70nP. and July-September quotations of the fabric dropped to Rs. 100.50. There was a slight improvement on Friday, mainly due to speculative interest; but Saturday morning brought a further reduction to Rs. 98.50. with forward shipment down to the bare minimum of Rs. 100. After this, quiet conditions prevailed and over the week-end rates gradually declined. On Monday, the recession continued and opening rates on Tuesday stood at Rs. 98. Hessian followed a similar pattern but at the beginning of the week the losses were not so pronounced; 40in. 10oz. opened on Thursday at Rs. 39.55 for ready and Rs. 39.50 for forward shipment. Over the next few days, rates fluctuated narrowly, with a generally downward tendency. After the week-end, losses increased as interest slackened and by Tuesday morning 40in. 10oz. dropped to Rs. 39.

At the close, the market was steadier due to speculative activity. Opening quotations on Wednesday morning were as follows:

	March Rs.	April Rs.	Apl.-June Rs.	July-Sept. Rs.
40in. 8oz.	31.35	31.35	31.40	31.40
40in. 10oz.	38.85	38.90	38.95	39
B Twills	98.60	98.85	99.35	99.85
Heavy Cees (Plain)	98.25	98.50	99.25	100
A Twills	120.75	121.25	121.50	122.50
Liverpools	112 50	112.75	113	113.25
Cornsacks	99.50	99.75	100.25	100.75

Raw Jute: The fibre markets were very quiet during the past week. Prices were easier, and although actual quotations only showed a small change, they could be considered nominal in the absence of business. The disparity between mofussil prices and Calcutta indications continued, so most sellers were not keen to offer. Interest was still centred on low quality jute, mainly good Daissee mesta, but fibre of this category was very difficult to procure due to the enormous quantity already under contract. Opening quotations last Thursday were based on Assam jute at Rs. 24.50 but by Saturday were down to Rs. 24.25. Over the week-end, a further 25nP was lost, and until the close prices fluctuated narrowly around this level.

Business amounted to nearly 150,000 maunds and consisted mainly of Daissee mesta at Rs. 22 to Rs. 22.25 and Northern mesta at Rs. 22.25 to Rs. 22.50. Small lots of jungli white were done at Rs. 20 a maund. Some interest was shown in white Middles only, Rs. 27 and Rs. 27.25 being paid for jute in this category from good Northern agencies. Northern and Assam assortment jute passed at Rs. 23.50.

Wagon arrivals in Cossipore showed an improvement last week, and 400 were logged, as against 375 in the previous week. This was well below the corresponding week of the previous year, when a total of 640 wagons arrived. Business was slow and prices tended to fall, but recovered before the close.

Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	23 75	March-April
Northern	24	"
Purnea Desal	22.25	"
Daissee	21.75	"
Assam Tossa	27	"
Northern ex Calcutta	22.75	"
Mesta:

GUNNY SHIPMENTS DURING JANUARY

The following are the total net figures of manufactured jute goods shipped from Calcutta during January 1958 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	1,541.4	22,098.3	23,639.7
Short Shipped	78.6	2,821.4	2,900.0
January 1958 (Net)	1,462.8	19,276.9	20,739.7
December 1957 (Net)	1,147.1	26,281.2	27,428.3
November 1957 (Net)	3.003.7	31,198.8	34,202.5
	Sacking		
Gross	23,344.6	436.3	23,780.9
Short Shipped	1,339.6	22.3	1,361.9
January 1958 (Net)	22,005.0	414.0	22,419.0
December 1957 (Net)	32,624.5	738.9	33.363.4
November 1957 (Net)	39,451.3	806.2	40,257.5

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th March, 1958	637.2	7,279.6	7,916.8
1st to 5th February, 1958	324.6	10,968.1	11,292.7
1st to 5th January, 1958	415.0	5,129.1	5,544.1
	Sacking		
1st to 5th March, 1958	2,893.7	70.5	2,964.2
1st to 5th February, 1958	4,710.2	113.6	4,823.8
1st to 5th January, 1958	2,687.6	8.3	2,695.9

THE PAKISTANI JUTE MARKETS

MOVE TO STOP DEALINGS THROUGH CALCUTTA

(FROM A NARAYANGANJ CORRESPONDENT)

A LONDON Jute Association delegation consisting of the chairman and representatives of the blacklisted firms has recently gone to Karachi to discuss with the Pakistan Commerce Minister the future of dealings with Pakistan *vis-à-vis* the recent Jute Board action in blacklisting four London firms and cancelling the licences of four exporters. It is understood that other interested parties also attended. The result of the discussions has been that the Association has assured the Pakistani authorities that it will sever all connections with Calcutta, and that offers will be sent in future only from Pakistani offices. The idea is to avoid the danger of under-invoicing or registration of E.P.C's below the actual sale price and also to avoid speculative selling for more than three months forward. It is understood that as soon as evidence is produced which will satisfy the Pakistani Government that all members of the L.J.A and the Dundee Jute Importers Association have stopped dealing through Calcutta, it will withdraw the disqualification placed upon the four London firms.

This is encouraging news as it shows that there is some attempt on the part of the Pakistani authorities to understand the difficulties of the London merchants. If in fact all jute transactions are confined to London and Narayanganj to the exclusion of Calcutta, there will be no legitimate reason for any baler, Indian or European, wishing to offer from Calcutta since there will be no market for Pakistani fibre there, and the Narayanganj houses will be better placed and better informed than their Calcutta agents or counterparts. On the other hand, it is highly probable that this will discourage several of the Indian balers from

I.J.M.A. STOCK FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of February as follows:

Description	28th February, 1958 Lakh Yds.	000 Tons	31st January, 1958 Lakh Yds.	000 Tons	Increase over (+) or decrease from (−) last month Lakh Yds.	000 Tons	28th February, 1957 Lakh Yds.	000 Tons
Hessian cloth and bag	10.10	27.5	11.08	13.2		+1.2	9.29	25.2
Sacking cloth and bag	12,70	53.4	12,77	53.7	−7	−0.3	14,79	61.6
(000 Tons only)		14.4		29.7	−98	−2.4		10.6
Grand Total		95.1		96.6		−1.5		97.4
Others								

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non member mills.

continuing to work in Pakistan. It is already reported that three of the largest Indian houses are seriously considering closing down their organisations in East Pakistan. This will have a detrimental effect on Pakistani cultivators in certain areas, particularly in north Bengal, since in these remote places the jute is bought almost exclusively by Indian companies. It is understood that the Pakistani authorities are making arrangements to erect three jute mills in these areas so as to absorb the jute. But this scheme will not come to fruition before three or four years.

The Narayanganj market has steadied somewhat, almost entirely due to the shortage of imports and also because E.P.C.'s have been recently registered at higher prices. It is probable that this will encourage growers to increase imports, which will once again bring down prices since overseas buyers have no urgent requirements.

The weather has been ideal for the sowing of the jute crop, and in certain churland areas the plants are already 6 in. to 8 in. high. Present indications are that there will be an early crop and probably a larger one, since now is the time when the largest part of the output, namely, the lowland crop is to be sown. The present relatively high prices will encourage growers to sow extensively.

THE FOREIGN JUTE MARKETS

FIBRE PRICES RISE

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute offers were much curtailed last week. Since the trouble arose about the irregular transactions of certain shippers who had been selling through Calcutta firms at prices alleged to be under E.P.C. levels, many shippers are afraid to offer in case they contravene the rules of the Pakistani authorities. Mr R E. B. Wilcox, chairman of the London Jute Association, is at present in Pakistan and is discussing the problem with the Jute Board. It is believed that the results will be more favourable than at first appeared likely. The Pakistanis certainly have grounds for complaint, but the discussion will probably settle the misgivings between spinners and shippers of raw jute.

The action of the Indian Jute Mills Association in agreeing to have minimum prices for jute goods is commended by most people in the industry. Indeed, it is wondered why it did not do this before; there is no point in producing jute goods at a loss all the time.
