surplus. As long ago as last October the Governor of the Bank of England, Mr. Cameron Cobbold, said at the Lord Mayor's annual "bankers' banquet" that it would be necessary to buttress the currency "not only by an increasing surplus on balance-of-payments account but also by an overall Budget surplus".

Such a surplus—implying a measure of forced saving to cover the Government's expenditure on capital account—could be achieved either by increasing revenue or by reducing expenditure. At present, however, revenue is showing a distinct tendency to diminish, because profits are diminishing. Raising taxes to increase revenue would further shift resources from the private to the public sector and apply restraint only to the former. To achieve a balanced economy and a healthy currency the Government must reduce its spending from the current level—not merely from the higher level previously planned. But it can certainly use fiscal policy to discriminate in favour of, or against, particular elements in the private sector. This power of discrimination is an important advantage of the Budget over Bank rate.

BUSINESS LOSING CONFIDENCE

THE current fall in world commodity prices and the consequently depressed outlook for India's exports during 1958, is posing a new threat to the curtailed second five year plan. If further adjustments are not made, a period of greater austerity and wider measure of compulsion in the economic field is to be expected. Business opinion in the country is keenly aware of this eventuality and feels concerned about the possible demands likely to be made on its already heavily taxed resources. A clear analysis of the situation is contained in the address of Mr. E. D. Sheppard, chairman, at the latest annual general meeting of the Killick Industries Ltd. (A fuller version of the speech appears on a later page). Mr. Sheppard is of the opinion that the pace of economic progress attempted in the plan is too fast to be practicable within the limited time allotted, especially when the possible availability of resources has been unrealistically assessed. Moreover, the goal of the "socialistic pattern of society" which underlies its targets, is scarcely compatible with a quick rate of economic growth, destructive as it has been proving to all dynamic elements in the economy. Says Mr. Sheppard: "Around us we see a growing deterioration of business confidence, and the onset of apathy among those whose function it is to promote and develop industry. If this sapping of morale and of faith in the future was confined only to large business houses, it would not be so dangerous, but unfortunately, it is reflected at every point of the industrial society. The producer, the consumer, and the investor, whether big or small, is today lacking the virile faith needed to face the challenge of the future."

A number of factors have contributed to this waning of business confidence—by far the most serious of which is heavy taxation. In spite of the balancing feat which the Finance Minister has performed in "welding together into one whole" many divergent and almost contradictory sets of taxes, and then in managing to introduce some economic incentives, however minor, in the over-extended economy, Mr. Sheppard says, there are the new taxes on wealth and expenditure which might well result in crippling incentive altogether. And referring to the wealth tax on companies, he adds: "It is the wealth tax on companies particularly which can have no justification, either moral or material. If ever there was a measure designed to grab money irrespective of justice or reason, this tax is surely it." Moreover, the combined rate of income tax and super tax and surcharge on companies, has been increased from 43.4 percent to 51.5 percent, and special taxes multiply. Such taxes have now been levied on dividends, on the issue of bonus shares, on the non-distribution of profits, on capital gains and on the net assets of companies. As if this were not enough, says Mr. Sheppard, they are then required to deposit a part of their reserves under the compulsory deposit scheme. "The sum effect of such taxation is virtually to eliminate the possibility of raising equity capital in the investment market for new ventures because of the levels to which even the soundest shares have declined." It has been estimated that since August 1956, shareholders are poorer by Rs. 200 crores. "All these facts combined have deprived us of the entry, in any significant measure, of foreign capital, and of the technical skill and advice which goes with it, and which in the past have often been of great assistance to Indian industrialists."

* * * *

The establishment of a welfare State is among the basic objectives of the second plan. It is a legitimate goal of all modern Governments. But there is a limit beyond which it is unwise to go. Mr Sheppard has given the example of the United Kingdom where the welfare State has come to stay. A sample survey conducted among leading university there has shown a remarkable and disturbing state of affairs. Of the students questioned, 38 percent said that either they were seriously thinking of emigrating as soon as they completed their courses, or else had already firmly decided to do so. "These young people are among the most intelligent, most highly educated and the most enterprising in England," whom the U.K. cannot afford to lose. This, apparently, has no strict relevance in a discussion of Indian problems, but Mr. Sheppard says that the lesson is one "which can be learnt with advantage in other parts of the world." In any case, it stresses the desirability of not penalising the most enterprising and economically progressive section of the population to buttress the mediocrity and the unenterprising.

Mr. Sheppard refers briefly to the affairs of his own concern, and explains that Rs. 2 lakhs has had to be withdrawn from the Equalisation of Dividends Reserve in order to maintain the usual dividend. This was principally because of the extra provision of Rs. 3.23 lakhs for taxes due largely to the Finance Act of 1957. The company's activities have continued to expand, but a stage has now been reached when fresh capital is required. The directors are currently seized of the matter and "it is possible that an application may be made to the Controller of Capital Issues for permission to make a new issue of ordinary shares" this year. The company is also "well poised for prosperous development" in the future, but the political policies of the Government threaten to "impede fruitful progress."

Good Prospects for Bicycles.—The bicycle industry has been thriving. Demand has grown so fast that it is estimated that by the end of the current plan period, the country may be requiring 2 million bicycles. Production by established manufacturers totalled 700,000 during the year ended 30th June, 1957, and this was a good deal less than the estimated demand during that period. The industry, consequently, has a big expansion programme. One of the large-scale units, T.I. Cycles of India Ltd., has just obtained permission from the Government to increase its capacity for both bicycles and components. The directors, says Sir A. Ramaswami Mudaliar, chairman, in the course of his address at the latest annual general meeting of the company, (a fuller version appears elsewhere in this issue) "are now thinking of ways

In Industry **PHILIPS** do a good job!

INDIA'S industries have the heavy responsibility of ensuring the country's economic freedom; and to ensure top efficiency, they need the most modern aids available.

For these aids, our industries can rely on organisations like Philips who offer their world-famous products and experience to every industrial undertaking.

Whether it's a range of products for industrial application, a light bulb for an office, or planned lighting for a factory...or whether it's a sound system for staff entertainment in canteen and factory, it's certain to be a good job well done through Philips.

PHILIPS INDIA LIMITED

PHILIPS Contributing Today to India's Future

...s means by which the necessary plant and equipment for the increased production of bicycles can be obtained from abroad." The target of production for the company relating to the year ended 30th June, 1957 was 200,000 bicycles and 100,000 sets of components. With its existing installed capacity, the company was able to reach the target for bicycles, but the output of components fell a little short. Sir Ramaswami has no doubt that during the current accounting year, it will be able to reach the target in both. Referring to the increasing demand, he says that the bicycle is the main means of transport for the middle and poorer classes, and "it is not surprising that the demand for bicycles has gone up and the estimate of the Tariff Commission has had to be revised." The Commission estimated that it would be about 1.5 million units by 1960-61, but the Development Council for the industry, which is keeping itself closely in touch with the market through the manufacturers who are well represented on that body, has estimated that 2 million bicycles will have to be produced to meet the requirements. Sir Ramaswami emphasises that the quality aspect should not be forgotten in this period of prosperity. His company, he says, has taken utmost care to maintain the standard of its product.

* * * *

Coal Prices Too Low.—Speaking at the annual general meeting of the Assam Railways and Trading Co. Ltd., Sir Frederick C. Bourne, chairman, has said that the results of the company's operations would have been satisfactory but for the heavy losses incurred by its collieries. (A fuller version of the speech appears on a later page.) The cost of production was enhanced by the wage award of the All-India Industrial Tribunal and the increased cost of stores of all kinds. Since 1948, the inadequacy of the price fixed by the Government has been impressed upon it time and again. As a result of representations made by the coal industry as a whole, a Coal Prices Revision Committee has been appointed by the Government. The latter was asked to authorise an interim increase, pending the final decision of the Committee. Although an increase in the price was sanctioned, it was designed only to cover the increased payments made to employees under the wage award. "I would add that the Coal Prices Revision Committee has not yet submitted its final report to the Government, and that when this is done, which is expected to be early in the new year, it is hoped that a further increase in the coal price will be granted." Sir Frederick has shown that while the production of the company's collieries has increased by an average of 40 percent, the cost of mining labour has increased by 200 percent and that of mining materials by 300 percent. On the other hand, the selling price has been increased by 60 percent only. The Government has stated that it is to allow a fair return on capital employed in industry and reasonable reserves for the maintenance and expansion of undertakings. If price control were operated in accordance with this objective, there could be no ground for complaint. "In our case, coal continues to be sold at a price well below the cost of production, affording no sort of return on investment made, let alone the possibility of provision for replacements or expansion. Given a fair price, there is no question but that production could be very materially increased by capital expenditure on necessary machinery and power, while present conditions can only result in the running down of the collieries." Throughout the history of the company's collieries no such position has ever been experienced. During the five months April to August 1957, the collieries have incurred a loss of Rs. 7 lakhs. Sir Frederick says that the position is an impossible one unless the Government is prepared to sanction a substantial increase in the selling price.

* * * *

Accumulation of Textile Stocks.—The burden of accumulated stocks is adversely affecting the textile industry. A few mills have closed down and certain others have reduced the number of shifts they work. The steady growth of production during the last few years is not, therefore, likely to be maintained. Speaking at the annual general meeting of the Delhi Cloth and General Mills Co. Ltd., Sir Shri Ram, chairman, has welcomed the relief in excise duty on medium cloth recently announced by the Central Finance Minister, but added that the duty on fine and superfine cloth is still very heavy. (A fuller version of the speech is published on a later page.) Since the Government has to raise resources for the second plan, it may not be in a position to view the situation merely from the angle of the textile producer. The remedy, therefore, has to be found elsewhere. It might lie in taking steps to export 300 to 400 million yards of cloth in the near future, even at "sacrifice prices." The burden of the sacrifice should be equitably shared by the industry as a whole. This will not only help producers to reduce stocks but will also enable the industry to earn foreign exchange. "In a sense, the textile crisis is a dealer crisis, and the dealer will not be in a position to get free of the feeling of crisis so long as the once-accumulated stocks oppress the market by the sheer fact of their presence." Sir Shri Ram has referred to the suggestions made by the Export Promotion Committee, which has pointed to the stagnation in India's exports during a period when the rate of growth in world trade has been significant. Referring to the expansion programme of the chemical section of the company, he says that a new sulphuric acid contact plant, designed by the company's engineers and fabricated in its workshops, has gone into operation. "This plant is the biggest of its kind to be manufactured inside the country, and it has been put up at a cost comparatively lower than comparable imported plants." In order to meet the growing requirements for active earth, the company is planning to increase its daily production capacity to five tons from the present level of three tons a day.

* * * *

Textile Crisis in U.P.—The many reasons which have precipitated the textile crisis, and caused the closure of 15 mills in different parts of the country during the past year, are now well-known. What is not so well-known is the assertion of the U.P. Government that these mills have had to be closed because of competition from rayon and silk. Mills in Kanpur have stocks in hand worth nearly Rs. 5½ crores. While the State Government accepts the figure as valid, it thinks that the disposal of the stocks can be expedited only by Central action. The Centre, on its part, has washed its hands of at least one company, the Kanpur Cotton Mills, which promises to suffer because of the expenditure of its resources on investments of "a doubtful nature," to quote Mr. N. Kanungo, Union Minister for Commerce, in the Lok Sabha. B.I.C. has already informed the Government that it is no longer interested in the loan which it had applied for from the National Industrial Development Corporation and that it prefers to dispose of the mill by sale. Meanwhile, B.I.C., together with all the concerns it owns, has been placed under a receiver by orders of the court on an application by the State Bank for the recovery of a sum of Rs. 3,46,445. The large number of people affected by the closure of the two mills in Kanpur has been swelled by the failure of the Vikram Cotton Mills of Lucknow. Reports of clashes and strife from Modinagar show that all is not well with the textile situation there too. Although U.P. has disadvantages in textile manufacture as compared with Bombay and Ahmedabad, there are some factors in its favour such as the lower wage costs (commented upon by the Rationalisation Enquiry Committee of 1955-56), lower land rents, lower municipal taxes and less foreign competition. Some find it difficult to understand why the machinery in mills should date back to 1890 and why nothing was done to renovate it when the industry was more prosperous. The Labour Minister has referred to the abortive experiment of inviting voluntary resignations in some mills, but as a method of getting rid of surplus labour it was foredoomed to failure. U.P.'s textile problem, it is claimed, is part of the larger problem facing the industry elsewhere in the country only as far as the excise duty on cloth is concerned. Otherwise, it is peculiar to the State and calls for special treatment.

* * * *

The Yarn Surplus.—At a meeting of the Yarn Merchants Association in Madras, Mr. R. Venkaswami Naidu, president of the South Indian Millowners Association, has referred to the increase in yarn output in 1957 and the accumulation of stocks. In his view, the real solution lies not so much in exporting the commodity as in creating a larger number of composite textile units and in producing cloth on automatic looms so that it becomes easier to sell abroad. The views of the old Tariff Boards which advocated the setting up of weaving departments in spinning mills are echoed in the suggestion that mills equipped with extra spindles cannot depend entirely on the handloom industry. The relative prosperity of composite units like Buckingham and Mettur supports the argument. To make all yarn up to a standard, south Indian mills' production is to be certified as from August 1958 at the textile laboratory in Coimbatore. This will perhaps reduce the variations in prices. But a more important need, in the yarn trade's view, is the elimination of direct sales of yarn by mills at cut prices. This depends largely on the restoration of normal credit facilities for the mills. The year-end slump in yarn prices has also induced the trade to reiterate its pleas for tax reliefs and forward trading.

* * * *

Attracting Foreign Capital.—The drastic curtailment of imports has created a shortage of industrial raw materials. In spite of the deferred payment scheme for importing capital goods, industrialisation will suffer. The problem has been made more difficult by the condition that the first payment under the scheme should not be earlier than April 1961. Speaking at the quarterly general meeting of the Indian Chamber of Commerce, Sir Bijoy Prasad Singh Roy, president, has said that the position will be at its most difficult during the financial year 1958-59. Thereafter, it is expected to improve as a result of the measures which have already been taken. It is necessary to secure substantial assistance from abroad, and with some adjustments in the Government's economic policy it might be possible to do this. "Our country enjoys the advantage of a stable political system and security, which should be welcome to foreign investors. The market for foreign capital, however, is now highly competitive, as many other countries besides India are trying to industrialise at a fast pace." Investment will be diverted to those countries where the climate is better, where the return is more attractive, and where risks, apart from normal trading risks, are fewer. The facilities which India offers to foreign investors should be such as compare favourably with those offered by other countries. Sir Bijoy has referred to the services rendered by the Indian industrial delegation led by Mr. G. D. Birla and the "great efforts" made by the Central Finance Minister during their recent visits to the United States, Canada and Europe. There is no reluctance on the part of foreign capital to participate in private enterprise here. "The main problem is to find internal capital. For, unless sufficient internal finance is available, foreign credits will be difficult to obtain. The position in our country today is that as a result of high level of taxation, the investing classes are unable to save, and this has accentuated the problem of internal resources. Heavy taxation tends to be self-defeating, for a stage is bound to be reached where consumer resistance develops, sales decline, and with it also tax receipts." Considering the revolutionary changes which are taking place in science and technology, no country can afford to slow down its tempo of industrial development. For increased production and consumption, adequate transport facilities are necessary. Referring to the recommendations of the Railway Freight Structure Enquiry Committee, Sir Bijoy says that although its new scheme might simplify the calculation of freight charges and make them more flexible, the cumulative effect of an upward revision of the rates will be to think there should be increase in industrial costs. More emphasis, he ciency than freight rates.

Synthetic Gem Manufacture.—The establishment of a synthetic gem factory in Mettupalayam, near the N[illegible]s, provides a notable example of the usefulness of foreign aid. In this case, the aid has come from a Swiss firm. The factory's production, it is estimated, will be worth Rs. 25 lakhs, and a market is assured. Mr. M. M. Shah, Central Minister for Heavy Industries, declaring the Rs. 22-lakh factory open, reiterated that there is no opposition to foreign capital or interests in India. Imports of synthetic stones will end when the factory is able to produce 40 kilogrammes a day. Mr. Shah has expressed the hope that Swiss interests might also be interested in starting the manufacture of watches in this country. Mr. N. Mahalingam, chairman of the new synthetic gem company, feels that the prospective saving in imports entitles the enterprise to State aid in the form of tax reliefs and a ban on imports, especially as local materials are to be used and employment is to be provided for cutters, polishers and others who have worked on a cottage industry basis in nearly 2,000 small establishments. The main centre of the so-called Rangoon diamond industry is Trichinopoly, where a thriving business in jewellery set with synthetic stones has developed. Electric power and the high price of gems have helped the industry there to grow rapidly. There is also a flourishing trade in Trichur, Kerala. The promoters of the undertaking expect that synthetic gems will be used for the manufacture of bearings for fine tools and precision instruments. It is stated that there are only eight synthetic gem factories in the world —five in Switzerland, one in France, one in Germany and one in the U.S.A.—producing 400 tons of synthetic stones in all. Fifty-one percent of the capital in the latest venture is held by Indian shareholders.

* * * *

Entertainment Tax.—To those who have watched the lengthening queues in front of cinema houses, it must seem that it is always boom time for the film industry. But the Film Federation of India, which held its annual session in Lucknow a few days ago, has been at pains to show that film exhibitors at least are having a hard time. On an average, 250 foreign films were being imported in the past, but now their number has been cut to 30. Already three cinema houses in Bombay exhibiting foreign films have closed down. The increase in the import duty on foreign films from 25nP to 50nP a foot has made such films costlier for distributors and exhibitors. They are unable to pass the burden on to the consumer because the restricted imports of even raw films have started adversely affecting the indigenous industry, in which a total sum of Rs. 40 crores is invested and which gives employment, directly or indirectly, to over 100,000 persons. As far as exhibitors are concerned, their main grievance is that the entertainment tax does not allow the higher-priced seats to be filled. The annual gross receipts of exhibitors according to the President of the Federation, Mr. M. B. Billimoria, amount to Rs. 25 crores, of which Rs. 8 crores goes to the Government as entertainment tax. After the recent increase of 50 percent in entertainment tax in U.P., its incidence on exhibitors ranges from 60 percent to 70 percent of gross box-office receipts. Of the 3,500 cinema houses in the country, 325 are located in U.P. Figures relating to some of the leading cinema houses in the State indicate that gross receipts have been falling at an alarming rate and that the point of diminishing returns has been reached even for the entertainment tax. The Federation mentions the recommendation of the Film Enquiry Committee of 1951 to support its demand that entertainment tax should on no account exceed 20 percent of the gross takings; but the Government, on the other hand, is able to refer to the Committee's report for the view that the figures produced by exhibitors are not reliable. The Committee, for example, received complaints from distributors that their share of box-office returns was based on figures prepared for taxation purposes, and evasion of tax was causing loss of revenue to distributors and producers as well. The Entertainment Tax Commissioner in U.P. told the Committee that there was a sudden increase in revenues when he made some additions to his inspecting staff.

* * * *

Japan Surveys World Trade.—Japan's anxiety to return to her former position as a major exporter to world markets is evidenced by the attention trade organisations in that country are devoting to market research. One of these, the Japan Export Trade Recovery Organisation, has recently prepared a comprehensive survey of world trade as a guide for its members concerning the recent sharp increase in competition for overseas business. It finds that most of the world's important markets are dominated by the United States, the United Kingdom, West Germany and Japan, followed on a lesser scale by France, Canada, Belgium, the Netherlands and Sweden. As far as Japan is concerned, the report says, it is maintaining its lead in south-east Asia, but in the last few months it has encountered more competition there from the United States, West Germany and Communist China. In America, there is more competition against Japanese goods, though Japan has established its trade in cameras on a firm footing. In the Near and Middle East, Japanese goods are gaining a satisfactory reputation for their cheapness and quality. Japanese residents in central and south America are helping to increase sales to those markets of vehicles and miscellaneous goods from Japan. West Germany is importing some of Japan's special products, but the opinion there is that if goods are cheap they must be of poor quality. The report says that since Britain and France withdrew from the Middle East after the Suez dispute, the United States, West Germany and the Communist countries have made great efforts to extend their trade there. The United States is taking advantage of the assistance it is giving under the Eisenhower Doctrine, and the Communist countries are also giving aid and buying surplus agricultural products. Middle Eastern customers generally consider Japanese goods as cheap but not inferior, and Japanese cotton textiles are in considerable demand. Japan and India, the report says, are steadily increasing their shares of the market for textiles in various African territories, but in south-east Asia there is keen competition from the Continent, Hongkong and Communist China. Cheap Chinese cotton goods, it appears, are causing Japan some difficulty in the Indonesian market, and it may well be that they will affect Japanese trade increasingly in other markets as well.

SCHEME FOR GOLD STANDARD

A STORY, told by Professor Edgeworth a few months ago, hits off admirably the manner in which India has been foiled so far in her attempts at establishing a gold standard. An eminent electrician in a French town took a prominent part in a public agitation for lighting the place with electricity; and undertook, at the expense of the community, a series of experiments which, however, never succeeded. The project became unpopular and was about to be given up, when fortunately it was discovered that the experimenter was in the pay of the Gas Companies. In the French town it was a question of gas or electricity: in India, it is a question of bimetallism or a gold standard. Sir David Barbour was not in the pay of the bimetallists but he is himself an arch-bimetallist; and for the mere reason that his heart could not be in the work he was one of the last men to entrust with the task of devising a gold standard scheme. As might have been expected, the arrangements framed have been found defective: in fact their defects are so patent that any school boy who has studied an exchange primer could spot their unsoundness. The first hint we had of Sir David Barbour's doubts of the scheme was his intimation, at the inauguration ceremony at Simla, that years might elapse before the scheme was successful: and no sooner was the plan started than he left his working in other hands and went to England, where he seizes every opportunity of disparaging his own scheme and depraising bimetallism. In quite a recent letter to Sir W. H. Houldsworth, he says the scheme is still in the experimental stage, and he holds that, when famine demands cease, and the heavy borrowing which has gone on for some years past ends, we shall see another disastrous collapse in the rupee exchange. There must be a fall before many years, he says, and he thinks it quite possible that we may see exchange at 1s. 1d. again. The position taken up by *Capital* ever since August 1893 is that there is only one reliable remedy for a fall in sterling exchange, viz., an arrangement under which the local currency will be interchangeable with sterling money at a fixed rate for foreign payment purposes; and we have denounced the "Barbour" scheme as unsafe and unsound, because it did not include a provision of this nature.

A KNOTTY BANKING PROBLEM

SOME RECENT ENGLISH CASES

(FROM OUR LEGAL CORRESPONDENT)

"SPRITELY" is certainly not the usual adjective to apply to legal periodicals. Humour, levity and above all fun, are sternly discouraged editorially as they are in the law courts whose proceedings the journals austerely report. The one exception of which the writer is aware, and has been during the many years he has subscribed to it, is the English monthly *Law Notes;* and in this annual review of English cases and matters legal, in which the law quoted is also applicable to India, one will, with due acknowledgment, occasionally reproduce a new feature from *Law Notes.* It is entitled "What is wrong here?" and portrays a legal situation which might happen to anyone, discussed by two friends, neither of them lawyers but ordinary level-headed citizens, and the answer, sensible but generally wrong, at which they arrive. The correct solution follows and we will adapt it where necessary to the law in India. Now, will the reader, especially the reader engaged in banking, think out this one and not look at the answer, which appears at the end of this article, until he has decided it for himself?

* * * *

WHAT IS WRONG HERE?

The local scandalmonger was agog. "Not only has she run off with the organist. Her cuckold of a husband finds that she has emptied their joint trust account at the bank of every penny and taken all the money with her. Cheques needed the signature of both. but she forged his signature so well that the bank was diddled." The reply was terse: "As to the wife, the husband is, perhaps, better off without her. As to the money, the bank will certainly have to replace it." But the scandalmonger disagreed about the money. "One of the risks of a joint account requiring the two signatures, is that the bank gets away with it if one joint customer forges the signature of the other." Who was wrong on this point?

* * * *

To the writer the following is an out-of-the-way point, though perhaps it should not be and the fact that it is may be due to his own negligence. Anyway, the writer has never come across it before either in England or India. Say X is fined Rs. 40 for being drunk and disorderly, and a couple of hundred for beating up his wife. In addition, X is sentenced to a term in jail plus a further term if the fine is not paid. The unrepentant X decides not to pay the fine and to serve the full term. But he neither serves the term nor pays the fine. Reason:—X dies in jail. Can the State sue his estate for the amount of the fine? Of course, in actual practice the State might do nothing. Too much trouble. But these are days of very heavy fines, running into thousands, even lakhs for statutory offences like smuggling currency across the border, income tax and estate duty offences and so on. Does death in jail wash out the fine?

In the English case *Treasury* v *Harris and Another,* an accused had been sentenced to two years' imprisonment under sect. 13 Criminal Justice Act, 1948, and ordered to pay four fines of £250 on or before the expiration of his term of imprisonment, or, in default, to serve a further sentence of four months' imprisonment consecutive in respect of each fine. He died in jail while serving the two years. Had the Treasury a right to recover the amount of the fines from the administrators of the deceased's estate?

"Yes" said Lord Goddard, C.J. "When a man is sentenced to pay a fine there at once arises a debt of record to the Crown and it did not appear in this case that the payment of the fines was to be postponed until the man came out of prison. Neither had the man's death caused the fines to lapse. A man should not benefit by keeping the results of his crime and it is equally important, if a man is dead, that his estate should not benefit by the proceeds of that crime." 76. *Law Notes* (1957). 163.

* * * *

Readers in India of certain foreign magazines and newspapers will, no doubt, have been struck by the amazing candour in which some of them comment on the merits of cases, especially criminal ones, which are still *sub judice* in a manner which no editor in India or Britain would dare to allow. The law of contempt of court and of libel in the United States for example, though one believes it to be virtually the same as our own here in theory, seems in practice to be remarkably lax. An accused person in a case of public interest has often to face two trials, the first of which—trial by newspaper—may destroy his chance of obtaining justice at the second,—trial by judge and jury. An interesting reminder from that stalwart veteran the Lord Chief Justice of England, that sort of thing will not be tolerated there, was forthcoming in *R* v *Griffiths and Others. Ex Parte Attorney-General.* (1957. 2. AU E.R. 379).

A popular and respected medical practitioner was being tried for the alleged murder of an elderly lady, one of his patients. He was eventually found not guilty and acquitted, after a trial which, on reading the report of it, made at least one reader of the latter proud of British justice and still more of stolid British juries. For before any proceedings of any sort had even been begun against him, the doctor had been the victim of so much lying local gossip and printed innuendo that, as it was impossible for him to be certain of a fair trial in his own neighbourhood, the trial had to be transferred to London to be heard by a judge there, and what is possibly the fairest and most unemotional of all British institutions, a special jury of the City of London. All the same, it was inevitable that the doctor was heavily prejudiced from the word go. To add to his troubles, not only while the case was *sub judice,* but actually during his trial at the Central Criminal Court, a magazine was sold in England containing an article referring to the case in terms most prejudicial to the accused doctor, the publication of which constituted a contempt of court. The magazine was owned by a company registered in America. The company had a London office under the charge of the first defendant, the magazine's chief European correspondent, but he did not write the article nor (apparently) did he supply the information for it. The European edition of the magazine was printed in Amsterdam and flown to London where it was distributed throughout England by other companies, also defendants. Once distributors knew of the offending article they took every step in their power to avoid circulation. Was the defence of innocent dissemination available to the defendants?

"No", said Divisional Court (Lord Goddard, C.J., Hilbery and Donovan JJ.) because this defence was not available to those who in the way of their trade, were responsible for putting the offending matter into circulation. The distributing companies were accordingly fined. The Court also held that the offence lay in the publication of the article, not in its preparation and responsibility, and could not be imposed on the first defendant (the European correspondent in charge of the company's London office). Pretty bad luck you may think on the distributors. These magazine and newspaper distributors work on a very large scale. Apparently their duty is to scrutinise every single article in every single publication they distribute throughout the country or else.....!

* * * *

Answer to "What is wrong here?" The point must be considered an open one as the two most recent English decisions are conflicting. They are both worth noting down by the banking reader who, sooner or later, may have to consider the identical problem. In the earlier of the two decisions *Brewer* v *Westminster Bank Ltd.* (1952, 2 All E.R. 630) *McNair, J.* dismissed a claim against the bank by the innocent joint customer when there had been forgery by one joint customer of the other customer's signature. However, some three years later, Harman J. refused to follow it in *Welch* v *Bank of England* (1955. 1 All E.R. 811) saying "I confess I do not follow that decision." Both are decisions of first instance only. What is required is a decision of an Appellate Court at high level.

The writer's own view for what it is worth is, —to quote Jack Point,—that when "your wife ran away; with your best friend that day; taking with them your trifle of money" the bank would be liable in such circumstances as the above. "If a joint account requires the signature of both customers the banker is *prima facie* liable if he pays on the order of one only, and it is clear that a forgery is no mandate for payment." (See *The Institute of Bankers' Questions on Banking Practice,* 9th edition). 76. L.N. (1957), pp. 175-179).

SOUTH EASTERN RAILWAY

TENDER.

Sealed tenders are invited for tender No. PA/CS/9/MED/WS/1088-B/GB10 of 57 for supply of 43 cwt. D.D.T. powder technical 75% para Isomer. The closing date of tender is on 22-1-58 at 12 noon.

Tender form is available from the office of the undermentioned at Rs. 2/- (not refundable) per copy to be paid by Money Order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms.

Tender form should accompany the receipt for earnest money of Rs. 300/- from the Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted.

A DITCHER'S DIARY

MAY I take this opportunity of wishing all my readers a Happy New Year. It is a little late now to extend the same good wishes for Christmas, but this season does at least appear to have been no better and no worse than any other in Calcutta—even if the weather persists in being unseasonally warm. Perhaps there has been a little less this year of the kind of thing which makes Christmas worth while. But that has not been too noticeable; and as for liquor, I was surprised to find how much must have been kept under the counter throughout the past few months. In fact, there seems to have been such a large quantity put aside that prices, or at least those I was quoted, were sometimes below those ruling a few weeks ago. Such, I would like to remind shopkeepers, can be the penalty of hoarding. One thing which does not seem to diminish, taxes and import cuts notwithstanding, is the number of people demanding *baksheesh.* I say demanding, because who is going to refuse, say, a postman the odd rupee when everybody knows how easy it is for letters to go astray in this city? I see the P and T authorities have issued instructions to their employees, and advice to their clients, to try and stop the practice. I admire their spirit, but I fear they are wasting their time. It might not be so bad if it involved only one postman at a time. But there were three of them waiting to greet me on Christmas morning, and if the P and T people think I am going to divulge their names—assuming I know them, which I do not—they are due for a disappointment; just occasionally I like to receive a letter. And I will say the same for the three policemen who followed on their heels. I wonder what significance there is in this number three; is it the minimum required to sustain such colossal cheek? What, I should like to ask, is likely to happen to people who refuse *baksheesh* to policemen when it is demanded; and can the police authorities guarantee them against it? Judging from what the ordinary citizen of Calcutta can expect if he is unfortunate enough to be involved in a motor-car accident, or has some of his property stolen, the answer would definitely seem to be no. This is the protection racket with a vengeance. As for the rest of the legion with the wide smile and the upturned palm—so plentiful on Christmas Day and so scarce throughout the rest of the year—they are, I suppose, inseparable from Christmas as an institution. A pity, it would be so much better without them.

* * * *

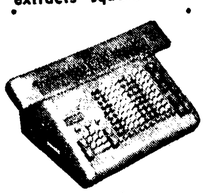
Whether one likes Mr. Khrushchev or not, it is difficult not to admire his nerve. Appealing to a people over the heads of its Government is a familiar enough trick of the Russians, but to do the same trick with intellectuals, and through the pages of a weekly newspaper like the *New Statesman,* is one of those novel diplomatic twists which make international politics such an interesting and dangerous game. I have never had much faith in the kind of general appeal for peace which Lord Russell made in his open letter to the Russian and American leaders; the normal channels of diplomacy may be irritating and undramatic, but they achieve more in the long run. What I did like about it was the way he expressed the helplessness which all thinking men must feel at having to watch the clouds of nuclear warfare gathering about their ears, and being able to do so little about it. But Mr. Khrushchev's answer has turned Lord Russell's initiative, most cleverly I feel, into an indictment of the western stand in the cold war and a disarming justification of Russia's own. It will be hard work for anybody anxious for the future of world peace to resist such an appeal to reason and goodwill. Nowhere does it suggest that Russia is as much to blame for the present state of affairs as the western powers, has for the past ten years maintained considerably larger armed forces, is the possessor of the world's most extensive empire and seems determined to go on expanding it, or even that Mr. Khrushchev—a totalitarian leader—is addressing himself to citizens of countries with representative governments. It is, in other words, a masterpiece of public relations and ought to be compulsory reading for all politicians, advertising executives, sales managers, and anybody else whose profession it is to bamboozle the general public. Not that Mr. Khrushchev does not genuinely want peace—so did Hitler, it was always one of his more intriguing features—but he knows as well as I do that the way to get it is to seek agreement between governments (that is what they are for) not to circulate this kind of general appeal to the sentiments. But perhaps, after all, it is not primarily aimed at western intellectuals, who are probably by now regretfully aware that to be disarming on paper is simply not enough. Where it is directed, I suspect, is at the thinkers of the uncommitted world, whose tendency in cold war matters to call a plague on both houses makes them extraordinarily susceptible to approaches of this kind. Indeed, as somebody has already said, Mr. Khrushchev never misses a trick.

* * * *

Not many institutions of its kind in India, I imagine, can still afford such a cheering aura of prosperity as the Calcutta Club, which celebrated its golden jubilee a few days before Christmas. To a business mind, prosperity is usually a measure of success, and although the value of social relations cannot always be measured by the number of liquor vouchers signed, the popularity of this particular institution seems a fair indication of the adequacy with which it fulfils its purposes and of the way it has adapted itself to changing needs. Much of its present attraction lies in the fact that both membership and facilities are varied, large and growing; in addition, of course, it is among the few social institutions in this city where the serving of alcoholic refreshments is not looked upon merely as an opportunity for racketeering. Not unnaturally, in many ways the changes in what one might call the upper crust of Calcutta society during the past fifty years, have been reflected in its composition and activities. For instance, the dilution of the business and land-owning aristocracy, which once seemed to dominate it heavily, may be a sign of decreasing stuffiness in Calcutta's social life generally. Until a few years ago, the Club was almost exceptional for its conservatism; its upper floor even today is a citadel of anti-femininism, with its doors barred against the social suffragettes who spend their time downstairs prancing between morning coffee and evening cocktail parties. That a few such elements of the traditional should be retained is entirely appropriate, especially when living costs are rising faster than personal incomes —with the result that the masculine need for haunts immune from spouses is even more acute. But it is a tribute to the adaptability of the Club that in other ways it has been bowing to more modern ideas and requirements; apart from the feminine invasion on the ground floor and the influx of younger members, its newest facility—an attractive swimming pool—is worth a boast, even if faulty designing has made it too noisy for those seeking relaxation on a hot afternoon. The Club's golden jubilee seems an appropriate occasion for wishing it many long years of popularity and success.

* * * *

Shaw's scheme for a new English alphabet seems to have received Androcles' share of his estate, not the lion's. At a cost of about £8,300, there will now be some research into the deficiencies of the present alphabet of twenty-six letters, and then we are to have an edition of *Androcles and the Lion* in the new alphabet of forty, when it has been devised. Mr. I. J. Pitman's assurance that "it would take any educated person only twenty-four hours" to learn the new alphabet made me, first, wonder how educated a person I might be. Then I decided this was merely a piece of salesmanship. Habits die harder than reformers think and, as India knows only too well, even rational changes in speech and writing are extremely difficult to give effect to because of the emotions they inevitably arouse. The fact that Shaw's will has been contested, and that there has been a *compromise on partial rejection of the* author's wishes, is evidence that most people do not rate too highly the prospects of a new alphabet being widely accepted. Perhaps someone, with enough time to waste, could work out the number of man-hours that would be saved by the adoption of the forty-letter alphabet. Perhaps some other, with as much enthusiasm could persuade a few people that the new alphabet is a distinct improvement on the old. It is likely still that we would all go on writing as we now do, with no more than twenty-six letters. By the way, I seem to remember that Shaw once found it a reason for profound regret that his name could be written in Russian with only two letters, against the four in English. A Bengali friend tells me that in his language Shaw is written with only one letter. Which does not seem to me to prove anything, for the same friend admits that an English sentence usually becomes two in Bengali translation. It is probably an illusion that man wants logical perfection in everything he does.



* * * *

Exhibitions at this time of year are about two a naya paisa. But the one held recently in Artistry House by Orient Longmans, to celebrate the tenth birthday of the Indian successor to Longmans Green, rightly attracted more than usual attention. The exhibition was rather unusual in as much as it displayed only text books and atlases, things we normally read or study at school. Despite the drab economy standards of book production imposed during the war, the art is coming back into its own, and in India, West Bengal in particular, standards have improved considerably, thanks largely to the pioneering work done by Signet Press. There is colour today in every bookstall. On the Grand Hotel arcade some might say, there is a little too much colour, especially on those American paperbacks. The main part of Orient Longmans' business, I understand, is text-books, which they publish in sixteen different languages. They are, in addition, sole agents in this country for various foreign publishers, and one part of the exhibition is devoted exclusively to United Nations publications which they distribute in India. With secondary education boards superseded by the dozen, and education departments of State Governments coming into the publishing business, private enterprise in text-book publication is not having the chance it should have. The import of books from abroad is also fraught with many formalities. But, when all speakers at every university convocation tell us how much they value education, there is hope that the contribution publishing houses with foreign connections can make will receive the recognition due to them. Orient Longmans are among the first in the field, and, I need not add, do not have the kind of massive political backing which is at present flooding the bookstalls with Soviet-sponsored publications. This may limit their activities, but it certainly increases their objectivity and usefulness to the readers they serve.

THE ASSAM RAILWAYS AND TRADING COMPANY LIMITED

COLLIERY LOSSES MAR AN OTHERWISE SATISFACTORY YEAR

UNFAIR TREATMENT CRITICIZED

SIR FREDERICK C. BOURNE'S VIEWS

The Seventy-Seventh Annual General Meeting of The Assam Railways and Trading Company Limited was held on December 20 at Winchester House, Old Broad Street, London, E.C.

Sir Frederick C. Bourne, K.C.S.I., C.I.E., the chairman, presided.

Mr. R. Petgrave-Johnson, acting secretary, read the notice convening the meeting and the report of the auditors.

The following is the Chairman's statement on the report and accounts for the year ended March 31, 1957 :—

The results of the Company's operations this year would have been satisfactory but for the heavy losses incurred by our collieries, to which I shall refer later on. Sales and profits of the timber department were a record and the brickworks, in spite of a poor market for bricks owing to the shortage of cement in Assam, still made a small profit. The investment income was appreciably higher than last year, our associated tea companies having continued to do exceptionally well. Although some tea companies have experienced low prices during the year, the Makum and Namdang teas maintain their high reputation.

Profit and Taxation

The trading profit is shown as £4,309, but this figure was obtained after crediting a sum of £14,000 provided in earlier years. The net profit for the Company as a whole, after taxation, amounts to £47,601, as compared with £79,337 for 1955-56.

We continue to be well up to date with payments on account of taxation. Indian tax is payable in advance, and the amount so paid has been included as such under current assets. On the other hand, there were current liabilities of £17,117 on account of United Kingdom taxation and an amount of £1,500 has been set aside for United Kingdom income tax 1957-58. Taxation has been charged in respect of the year's profit on the basis of the Company being an Overseas Trade Corporation under the provisions of the Finance Act, 1957. This has not occasioned much relief, owing to the relatively poor trading results and to the high rate of Indian tax.

The directors regret that they are unable to recommend the payment of a dividend on the "B" stock for the year.

Coal Prices

It will be recalled that at the last Annual Meeting the chairman added some comments to his printed statement, relating to coal prices. Since then the situation has deteriorated further.

The Tipong Colliery explosion, mentioned last year, led this year to a decrease in output of some 40,000 tons, and the cost of production, increased thereby, was further increased by the Wage Award of the All India Industrial Tribunal and the increased cost of stores of all kinds. The workings at Tipong Colliery had been partly reopened and production was beginning to show improvement, when the appearance of inflammable gas again caused this colliery to be closed temporarily by the order of the Inspector of Mines. This closure only in fact lasted a few weeks, but, even so, material loss of coal resulted.

Since the year 1948 the inadequacy of the price fixed by Government for our coal has been impressed upon them time and again. As the chairman forecast in his supplementary statement last year, I visited Delhi, accompanied by the general manager, in February, 1957, to emphasize to the authorities concerned the serious position in which the company was placed by their refusal to give us a fair selling price. Since then, as a result of representations by the coal industry as a whole, a Coal Prices Revision Committee has been appointed by the Government of India, and a strong claim on our behalf for a substantial price increase has been pressed before that Committee. Moreover, in view of the losses then being incurred, calculated at that time at about Rs. 1 lakh per month, the Government of India were asked to authorize an interim increase, pending the final decision of the Committee. During the year under review an increase in the coal price was sanctioned, which was designed only to cover the increased payments made to employees under the Wage Award. As a result of our claim an interim increase in the selling price of coal has been granted from the end of October, 1957, but the amount sanctioned is insufficient to prevent further losses. I would add that the Coal Prices Revision Committee has not yet submitted its final report to Government, and that when this is done, which is expected to be early in the New Year, it is hoped that a further increase in the coal price will be granted.

Members will be interested in the figures in the following table which, taking as a basis the two years ending March 31, 1939, and 1940, show the percentage increase in production from our collieries in the years ending March 31, 1954, 1955, 1956 and 1957, and the percentage increases in the cost of mining labour and materials, compared with the percentage increases in the selling price for the same years.

Years ending	Per cent. increase in production	Per cent. increase in cost of Mining labour	Mining materials	Per cent. increase in selling price
	Per cent.	Per cent.	Per cent.	Per cent.
31.3.54	42	185	285	59
31.3.55	34	205	285	59
31.3.56	36	219	314	60
31.3.57	19	330	392	75

From this it will be seen that during the period production had increased by an average of some 40 per cent., the cost of mining labour had increased by 200 per cent., that of mining materials by 300 per cent., while the selling price was increased by 60 per cent. only. The position during the year ending March 31, 1957, was adversely affected by the explosion at Tipong Colliery.

As regards leases, for many years we have been negotiating the issue of a lease for the Tipongpani—Lekhapani area, which should have been renewed in 1947. We seem to be within sight of the execution of a lease in the near future, though we are still hoping to avoid the insertion of one or two objectionable clauses.

The Government of India are on record as making it their object to "allow a fair return on capital employed in industry and reasonable reserves for the maintenance and expansion of the undertakings." If price control were regulated in accordance with this statement, there could be no grounds for complaint. In our case, coal continues to be sold at a price well below the cost of production, affording no sort of return on investment made, let alone the possibility of provision for replacements or expansion. Given a fair price there is no question but that production could be very materially increased by capital expenditure on necessary machinery and power, while present conditions can only result in the running down of the collieries. In the year under review, our loss on coal production has absorbed all the profits made in our other undertakings, which in effect are thus subsidizing the present selling price of coal, more than half the production of which is allocated by the Coal Controller to the State Railways. Such treatment of existing industries does not appear to be likely to attract investment of new foreign capital in industry.

Serious and Unfair Position

Shareholders will appreciate the serious and completely unfair position in which we are placed. Throughout the history of our collieries no such position has ever been experienced. It has always been necessary to spend substantial sums on development if output is to be maintained, which can only be provided by profits. As will be seen from the notes on the accounts, since the year 1945 no less than £600,000 has been invested in capital expenditure, more than half of which is in connexion with the collieries. The situation to-day is no different except that owing to inflation, the rate of essential expenditure will increase.

During the five months April to August, 1957, the collieries have incurred a loss of Rs. 7 lakhs, although output and sales have not been appreciably below those for the similar period of the previous year, our staff in Assam having spared no pains to maintain production at the best possible figure. It is all too apparent that the position is an impossible one unless Government are prepared to sanction a substantial increase in our selling price.

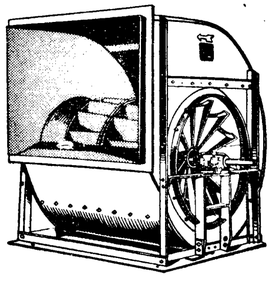
The veneer mills, as already mentioned, have had a successful year. The timber supply position is showing signs of falling short of our requirements, but we hope to obtain fresh sources of supply for which negotiations are in progress.

At the end of the year under review a decision was taken to introduce hot-pressing in the veneer mills, and it is hoped that this will increase the efficiency of our production of tea boxes.

Loyal and Efficient Staff

The relations between the Company and its employees continue to be satisfactory. Our staff in Assam have continued to work with the utmost loyalty and efficiency; the results reported from the veneer mills are in themselves a testimony to the competence and enthusiasm of Mr. Higgins and Dr. Iyer. Mr. G. E. D. Walker, our general manager, is untiring in his efforts to provide the Company with the highest possible standard of service. The staff of the London office should not be overlooked. Their competence has come to be accepted as a matter of course, which in some sense is a compliment to them; but they should get credit for much willing and efficient work.

The report and accounts were adopted.



The retiring directors, Sir Frederick C. Bourne, K.C.S.I., C.I.E., and Mr. F. J. Salberg, C.I.E., M.B.E., Messrs. Price, Waterhouse & Co., having been fixed, were re-elected and the remuneration of the auditors, the proceedings terminated.

THE DELHI CLOTH & GENERAL MILLS CO. LTD. DELHI

CHAIRMAN SIR SHRI RAM'S REVIEW

Speaking to the shareholders of The Delhi Cloth & General Mills Co., Ltd. at the 69th Annual General Meeting held on 20th December, 1957, Sir Shri Ram, Chairman of the Company, stated that profits from the Textile Mills in India were lower in the year under review than they were in the year preceding it. The Mill in Lyallpur, in common with the rest of the Cotton Industry in Pakistan, had also made lower profits.

For the Chemical Section of the Company, he said, this had been a year of growth and of better working. During the year under review, a new Sulphuric Acid Contact Plant designed by the Company's engineers and fabricated in the Company's Workshops went into operation. This plant is the biggest of its kind to be manufactured inside the country, and it has been put up at a cost comparatively lower than comparable imported plants. In order to meet the country's requirements for Active Earth, the Company was planning to reach a daily production capacity of 5 tons from the present level of 3 tons a day. The Sugar Mills in Daurala and Mawana and the Confectionery Factory and the Distillery have all worked well.

Continuing, Sir Shri Ram said:

"The overall results have been affected by the various taxation policies of the Government, such as the additional excise duties on textiles, the higher taxation on companies and the new wealth tax.

In a sense, our difficulties are a part of the economic problems facing the country at large.

The problem of food supplies remains with us, and its presence is casting a long and dark shadow across our economic horizons. The foreign exchange situation is still critical, and adequate solutions for it will probably need years of effort by all, and the exercise of discriminating skills in the future designing of our economic programmes, so that their import-content is within our exchange resources and their scale within the bounds of our internal resources.

At the moment there is a lull on the price-front, but it is a quietude at a level that is high, and being myself a firm believer in a low-price economy I feel somewhat uneasy.

Dearness of Credit

In this context, I might refer to an aspect of our internal resource situation bearing on the working of private enterprise. Paradoxical as it might seem, the position is that while the Money Market is easier this year than what it was last year, the credit-worthy borrower is still unable to secure finance except at an exhorbitant price, irrespective of the fact whether the money is required for industry or for operational finance. This has been very forcefully mentioned by the Industrial Delegation which went recently to the United States and Europe. The Small Savings Scheme of the Government itself is not giving satisfactory results either. The Government alone can remove this self-defeating situation.

Nearer home the textile industry is in crisis. In May 1956, the stocks of unsold cloth were 168 million yards; while at the end of October 1957 the unsold stocks have piled to a level never before touched—587 million yards. As a direct consequence, realisations have been lowered and the liquid solvency of the cotton textile industry is in a state of impairment. I can do no better than present the data on Bank Advances to the Cotton Mill Industry which have reached a very high level:

	In crores of rupees 1955	1956	1957
Scheduled Banks' Advances to the Cotton Industry at the end of June in Each Year	69	73	107

This burden of stocks carried unwillingly has been telling on all connected with the industry, and it is tragic that a few mills have closed down and some others have cut their shifts, and I am afraid that the steady growth of production, year after year, in the last few years is not likely to be maintained.

I welcome the relief in excise duty on Medium Cloth announced by the Finance Minister a week ago, although the burden of excise duties on Fine and Superfine Cloth still continues to be very heavy. At the same time I realise that since the Government are committed to raising the maximum of internal resources for the National Plan, they may not be in a position to view the situation merely from the angle of the textile producer. The remedy, therefore, has to be found elsewhere. A fair part of the crisis, in my humble opinion, can be resolved by taking steps to export 300 to 400 million yards of cloth in the near future, even at sacrifice prices. The burden of the sacrifice should be shared equitably by the industry as a whole, since the resultant benefits of a market not oppressed by huge and rising stocks which are declining in value will be generally shared. I make this plea to fellow-industrialists once again, and in all humility. Its advantages do not stop at lowering stocks within the country but in creating an appropriate psychology in the markets which have been fighting shy of their normal function of stock-holding since the successive unsettlements of the sharp rise in excise duties last year, of the Flu epidemic, and of the confusion consequent upon the introduction, earlier in this year, of the Inter-State Sales Tax. This will not only help the industry itself but also earn a fair amount of much-needed foreign exchange for the country. In a sense, the textile crisis is a dealer crisis, and the dealer will not be in a position to get free of the feeling of crisis so long as the once-accumulated stocks oppress the market by the sheer fact of their presence.

Export Promotion

In this context, as well as in the wider context of the nation's need for an expanded export-effort, I will commend the suggestions made by the Export Promotion Committee. They have pointed to the stagnant condition of India's exports in a period of a significant rate of growth in world trade as a whole. Rightly, the Committee have stressed the role of the manufacturer, the exporter and of their organisations in developing larger exports, and the equally significant role of appropriate Government policy, measures and export-oriented organisations and media of publicity and information.

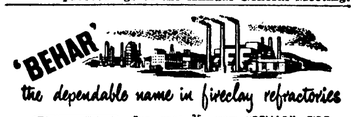
Gentlemen, there has been considerable talk in the course of this year about worker participation in Management. As early as 1938, we in this company decided to have an elected representative of the workers on the Board of Directors as also an elected representative of other employees. We have not had cause to regret our decision, but its value as an educative step for our workforce in general has been extremely limited. Even Works Committees and Production Committees, all over the industry, have yet not been a success in the sense of providing a real feeling of belonging, of participation to all the constituents of the working family. So often these Committees have become only "Demand" Committees or mere platforms for the ventilation of all sorts of grievances—real, unreal and imaginary.

Want of mutual confidence very unfortunately exists, and because it exists, it warps our understanding of the point of view of each other. And furthermore, it inhibits our willingness to talk, and to converse. And so disabled, we can hardly have the feeling of belonging, of being participants in a common cause. In my opinion, worker participation in Management should be built up not from the top but from the work-floor upwards. Towards this end every effort must be made, both by the employer and by the employees, to render the Works Committees and Production Committees a living success, the educative effects of which are reflected over the larger mass of workers.

More Production

I might even raise this to the larger national plane where we have to rely on our capacity to help ourselves. And the latter we cannot do if labour and capital, the two inevitable partners, do not pull together in the common national interest instead of following small-minded controversies and self-centred parochial interests, whether political or economic. In fact, it was good to hear Labour Leaders, even Communists, and others rising to defend the Second Five Year Plan and the democratic urges for progress which it embodies. Translated in the language of the workaday world it means more production. And more production, in turn, implies a new, rich and rewarding co-operation between labour and capital—co-operation that is oriented to consumer interest in the broadest sense, and inclusive of the imperatively needed export-orientation. And let us not forget that each one of us is a consumer as much as he is a worker.

There are exceptions—and I am happy that the exceptions are not very few in number—but there is an air of complacency whether inside our factories or inside other offices. Our notions of adequate personal performances are so puny, a mere fraction of our potential for performance. The urge to work hard is something which, we as a nation, have yet to acquire, although our traditions have always been informed by a sense of duty. The Unions have to respond to the country's need for harder and harder work, because on them rests the responsibility of leading our workers not merely to a fair day's wage but also to a fair day's work.



There are more holidays—other than the weekly rest day—in our country than in any other country in a similar stage of its development. I calculate that we can get upto 7% more industrial production from the same set of basic equipment by judiciously pruning the excess of holidays from which we suffer.

Some of these might appear drastic suggestions. Perhaps they are. But to me, who is advocating them only in the larger interest, it seems that chronic diseases call for drastic remedies.

Before I conclude, let me convey my thanks to all my colleagues, including the members of the staff and the workers.

With these words, ladies and gentlemen, I move that the Directors' Report and Accounts be adopted."

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

For over 35 years "BEHAR" FIREBRICKS and FIRECLAY REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the Country.

GOVERNMENT OF INDIA

I. 15-YEAR ANNUITY CERTIFICATES—SECOND SERIES

(FREE OF INDIAN INCOME-TAX)

Annuity Certificates securing a monthly payment of Rs. 25, Rs. 50, Rs. 100 and Rs. 200 respectively for a period of fifteen years will be available from the 2nd January 1958, until further notice at issue prices given below :—

For monthly payment of Rs. 25	issue price of	Annuity Certificate	Rs. 3,325
-do- Rs. 50		-do-	Rs. 6,650
-do- Rs. 100		-do-	Rs. 13,300
-do- Rs. 200		-do-	Rs. 26,600

These certificates will be available to INDIVIDUALS only and no applications will be entertained from or on behalf of institutions, firms or corporations.

The maximum amount that may be invested in the certificates will be

For an individual Rs. 26,600 (or Rs. 28,000 inclusive of holding of 1st series)

For two individuals Jointly Rs. 53,200 (or Rs. 56,000 inclusive of holding of 1st series)

Monthly payment will commence after expiry of one calendar month from the date of receipt of the purchase price. Such payment will be free of Indian income-tax and will not be taken into account in calculating the total income of the holder for the purpose of income-tax.

Annuity Certificates will be accepted for safe custody by Public Debt Offices and monthly payments remitted to the holders, if so desired.

Applications will be received at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi; branches of the State Bank of India, State Bank of Hyderabad and Bank of Mysore Ltd. conducting Government treasury business; and treasuries and sub-treasuries in India at places where there is no such office of the Reserve Bank of India or branch of the State Bank of India, State Bank of Hyderabad and the Bank of Mysore Ltd.

II. 4 PER CENT TEN-YEAR TREASURY SAVINGS DEPOSIT CERTIFICATES

(FREE OF INDIAN INCOME-TAX)

From 2nd January 1958 and until further notice deposits for Treasury Savings Deposit Certificates will be received in multiples of Rs. 50/- instead of in multiples of Rs. 100/-.

Deposits will be refundable at any time after the expiry of one year from the date of deposit at certain discount.

The other terms and conditions of issue etc. will be the same as at present.

FOR FULL PARTICULARS APPLY TO ANY OF THE OFFICES, BRANCHES OR TREASURIES MENTIONED ABOVE.

KILLICK INDUSTRIES LIMITED

CHAIRMAN MR. E. D. SHEPPARD'S REVIEW

Speech delivered by Mr. E. D. Sheppard, Chairman of Killick Industries Ltd., at the Company's Tenth Ordinary General Meeting held on 17th December, 1957.

Gentlemen,

This year 1957 is of very special significance to the House of Killick, for it was a hundred years ago that Messrs. Killick and Nixon arrived in Bombay and started the business that so proudly carried their names. Though the firm of Killick, Nixon & Co. was discontinued in 1948, the two new Companies Killick Industries Ltd., and Killick Nixon & Co. Private Ltd., between them undertook the work started by the founders and fostered through the years by succeeding generations, and it is fitting that in this memorial year, Killick Industries Ltd. having acquired ownership of Killick Nixon, the family is united again. Thus although the corpus is changed, we may say that the spirit of Killicks has been preserved for a century past. May this spirit of unity in our family, of service to the nation, and of courage to face the future, continue to pervade our thoughts and actions in the years that lie ahead.

In my speech last year I tried to examine the implications of the impact which the pursuit of a "Socialistic Pattern of Society" would have on industrial development, and hence on the affairs of your Company. I had then forecast that, if the pursuit of this goal was continued along a path of increasing State control and diminishing individual responsibility, the results would not be happy. It is with a sense of sorrow and concern for the future, and not in any spirit of pride in the vindication of one's forecast that one sees these fears being realised as the Second Plan runs its course. Around us we see a growing deterioration of business confidence, and the onset of apathy amongst those whose function it is to promote and develop industry. If this sapping of morale and of faith in the future was confined only to large business houses, it would not be so dangerous, but unfortunately it is reflected at every point of the Industrial Society. The producer, the consumer, and the investor, whether big or small, is today lacking the virile faith needed to face the challenge of the future.

Lack of Confidence

What are the reasons for this lack of confidence? Let us examine them.

Firstly there is the numbing frustration which an endless series of tax measures each following closely on the heels of the other, have produced among industrialists and shareholders, though one cannot but have a profound respect for the imaginative brain which has welded into one whole such a divergent and almost contradictory set of taxes. The Finance Minister has succeeded in performing a balancing feat on the tight rope of national finance which would be the envy of the most nimble witted. In an economy as over-extended as ours is, there is little scope for the introduction of incentives, yet this is what the last budget has succeeded, albeit in a minor way, in doing. The total of Income Tax and Super Tax at the highest salary level has been reduced from 92% to 77%, thus making possible the retention of some measure of enthusiasm in the managerial class for harder work and greater endeavour, but a price has been paid for this concession, a price which might well result in crippling incentive altogether. The price, of course, is the introduction of the Expenditure and the Wealth Taxes. But it is the Wealth Tax on companies particularly which can have no possible justification, either moral or material. If ever there was a measure designed to grab money irrespective of justice or reason, this tax is surely it.

The combined rate of Income Tax and Super Tax and Surcharge on Companies has been increased from 43.4 to 51.5 per cent. In addition, companies have to pay special taxes on dividends, on the issue of bonus shares, on the non-distribution of profits, on capital gains, on their net assets, and as if that were not enough are then required to deposit a part of their reserves under the Compulsory Deposit Scheme. It is just not possible for companies to bear this fantastic burden of taxation for very long, particularly at a time when they are required to carry out an expansion of their productive capacities in terms of targets set by the Second Plan, far in excess of those which normal commercial practice would dictate. The sum effect of such taxation is virtually to eliminate the possibility of raising equity capital in the investment market for new ventures because of the levels to which even the soundest shares have declined. It has been estimated that since August 1956 shareholders are poorer by 200 crores of rupees.

Almost as disturbing as the taxes themselves have been the inordinately long periods which have elapsed between the framing of taxation proposals and their ultimately becoming law. During the many months out of the last twelve when the country has been virtually without a definite tax structure it has been impossible for any would-be entrepreneurs to finalise their plans.

Foreign Capital

Further, all these facts combined have deprived us of the entry, in any significant measure, of foreign capital, and of the technical skill and advice which goes with it, and which in the past have often been of great assistance to Indian Industrialists.

Secondly, there is the ever-widening scope of the activities of the State Trading Corporation. The avowed objectives for which the S.T.C. was founded —namely to trade with Communist Nations and to augment exports where the existing trade channels were inadequate—were wholly laudable, but they have far exceeded this charter. Their entry particularly into the cement and manganese ore businesses was quite unjustifiable as these were being efficiently run by private enterprise. The specious reasons given for the S.T.C's intrusion do not bear examination and the objectives sought to be achieved could well have been reached without the S.T.C's intervention.

Further, in these commodities the S.T.C. incurs no risk, makes no organisational effort in promoting trade and yet takes unto itself an altogether disproportionately large share of the profits.

It is of more than passing interest that at the Meeting of all the Commonwealth Chambers of Commerce held in London earlier this year, the policy of State Trading was roundly condemned without one single dissentient voice.

I would like, however, to make it clear that we have no quarrel with those entrusted with the management of the S.T.C. Our objection is fundamental and concerns only the policy which requires them to carry out such duties.

Thirdly, there is the sad deterioration of Law and Order in many parts of the country with which unfortunately is bound up the question of Labour Relations.

In a recent pronouncement the Hon'ble Shri Morarji Desai, the Union Minister for Commerce and Industry, stated that "If industrialists expect to get so many things from the State, then they must be prepared to provide the money for these through taxation". No one can take exception to the underlying premise of the argument of the Hon'ble Minister which is that no State can provide services for the community which are beyond its capacity to finance. But the first service any taxpayer in any country expects, and rightly so, is the protection of life and property and the preservation of law and order. Here in India all industrialists are in fact paying to the State a very high rate of taxation, as I have already pointed out and in return are not, in some cases, being provided with even the elementary degree of security that is a prerequisite to the conduct of business and industrial growth.

Labour Indiscipline

Serious labour indiscipline at the Hingir-Rampur Colliery for some time past culminated in a violent riot in June this year when our Colliery Manager was murdered by the workers. This dreadful incident took place several months ago, and we are still waiting for effective action to be taken to punish the murderers and to be assured of the protection that is necessary to prevent a repetition of the tragedy.

In the Free World today it is inevitable that trade unions acquire great strength—sometimes a dangerous strength—which is frequently misused. No one will deny the value of strong and healthy trade unions effectively organised to champion the cause of their members. But trade unions subject to little or no control, and those under bad influences are an increasing menace to the community. Whereas again no one will deny the right of a man to withhold his labour in order to voice a genuine grievance, yet there can be no excuse for violence and hooliganism being employed as the means of doing so.

The plain fact of the matter is that the time is long overdue for a showdown with this type of labour organised and led in this manner and towards these ends, and yet it continues to be protected and mollycoddled by those in authority. Without reference to even elementary economics, Unions of this type put forth demands based on what labour wants without any consideration as to what it is entitled to receive. They continue to make these claims, whether justified or not, and by strong arm methods ensure that they are granted. And who is to blame them? Why should they not continue to use these methods of getting what they want when the methods themselves have been continuously successful? The formality of conciliation having taken place, it is so much simpler to refer demands to adjudication rather than for the Governments concerned to incur the odium of telling labour that it has gone too far and must withdraw. What then does it matter to labour if their demands and the methods of approaching them are basically immoral so long as they get results?

I will not examine further the question of labour indiscipline as here, like in other countries, this has a political slant and I have no desire to bring politics into my speech. But the other two measures to which I have referred—increased taxation and expanded S.T.C. activities with their damaging effect on the People's Sector—have been introduced solely and wholly to provide money for "The Plan" or rather for that part of the plan which falls in the State Sector.

Stretching the Plan

Before we proceed to examine the Plan and the results that are expected to flow from it, let it be quite clear that it is a composite plan and if either Sector fails then the Plan fails.

The doctrine that the Plan is inviolate has been thrust down one's throat, although it has been plain for months past that a process of stretching it out has become inevitable. The main constituents of the Plan may not be significantly changed, but they will certainly take longer to complete. This is a heavy industry plan for within the total set aside for industrial development rather more than half is to be spent on the production of steel, and the greater part of the remainder on Industry to manufacture capital goods.

We are told that—come what may—the "hard core" of the Plan will be carried through. What is the "hard core"? In one word it is steel. Steel, and coal and power with which to make it and railways to transport it, in effect just steel. Of what avail will this steel be if the People's Sector is to be prevented from erecting the secondary and tertiary Industries to use it? We shall be told that it can be exported, but it is axiomatic that an essential prerequisite to a profitable export trade is a flourishing home market. Therefore, if only the "hard core" is carried through, the Plan, as such, will still not succeed.

The question, therefore, that faces the country today is how far can this concentration on Heavy Industry be pushed? Undoubtedly among our planners and Economic thinkers there is a school, and a very powerful one, who would push the heavy industry concept to its utmost limits. This is of course an enormously expensive business as has been shown by the rate at which the nation's foreign exchange reserves have run down and moreover, throws the Plan out of balance. We are still waiting to see how the planners and those in authority are going to react now that difficulties have occurred and the Plan is getting bogged down in a succession of crises. The Finance Minister has returned from his tour of the U.S.A., Canada, the U.K. and Germany, during which no man could have made more valiant efforts to procure the exchange we require. In the light of the information he has gleaned a decision will need to be taken very soon as to whether the Plan is to be adjusted to manageable proportions or whether a forlorn attempt is to be made to fulfil it even at the cost of imposing methods of austerity and compulsion.

Having said this, let us also look at the other side of the picture. If we had been content to increase the national product only in relation to the available resources of the country, or those which could be readily obtained, it is doubtful whether the total volume of planned investment activity would have been more than half of what has actually been embarked upon. It is clear that the Second Plan is deliberately aimed at achieving far more than the available resources of the country will admit of, and that this is sought to be justified by the pressure of social obligations and the need to do sufficient for the people, quickly enough, to prevent them from turning to other than democratic methods to quench their frustration.

Fundamental Paradox

Another fundamental paradox in the Plan is the pre-occupation with heavy industry on the one hand and cottage industry on the other. In the result it seeks to achieve a compromise between the intensive use of capital to make steel, to dam rivers, to raise coal and develop Railways, and the pressure to put to productive and gainful employment the hoardes of willing but unemployed workers who populate our countryside and do not find work for more than three or four months in the year. No one can have anything but the deepest sympathy with people who are faced with the resolution of such fundamental dilemmas, and the responsibility for evolving Economic policies which are to succeed in spite of them. At the same time we of the People's Sector of the Nation's Economy, cannot help but be perturbed at the way things are going, for, in a planned Economy, the whole future of our own businesses is inextricably mixed up with government decisions.

There is no doubt that in the course of time India is going to be a great industrial power. The principal resources are available, iron ore, coal, mineral wealth, hydro-electric power, and a large mass of people prepared to work for comparatively low wages, and here let me say, that the unschooled peasant of India has already in the Indian Army given abundant proof of his capacity to acquire mechanical skill and technical competence with good equipment and training. The mistake that we are making is a mistake of timing. There is too much made of this business of competitive co-existence with countries of other ideologies. A great deal of the haste and the rashness which has been applied to our planning has been due to this. As a result, through this planning and through much of the legislation and taxation which goes with it, conditions have been created in which a proper generation of the vigour and power of Free Enterprise is no longer possible.

In the modern world, some form of social organisations are of course inevitable if man is not to go back to the disorder of unbridled individualism, but all organisations must be for the benefit of the individual and not the individual for the benefit of the organisation. By the same token let us be very clear that the Plan is for the people and not the people for the Plan. If the needs of the two come into conflict with one another then it must be the Plan and not the people to give way.

No one wants the Plan to fail. If the economic choices that now confront us seem difficult, it must be remembered that they are infinitely simpler than would be the political and social consequences of a Plan that failed because it got out of hand. Today the pressures of the Plan are being demonstrated very clearly in a rise in domestic prices and the constant threat of inflation. It is now—though somewhat belatedly—well understood that, if the food front is not firmly held, and gets out of control, all the benefits of heavy industrialisation would vanish in a trice, and all talk of increasing real incomes be rendered meaningless. To say that an endeavour to double the per capita income over a period of 17 years of a people as poor as ours is not ambitious, is a statement that no one would deny, but to go on and say that unless the impossible pace set for these five years is maintained, that revolution would follow is most certainly not justified. The people of India, and particularly its peasants are sturdy beings of good sense. Their devotion to the soil they till and the values they cherish, have wrought an iron frame which is not going to be bent or twisted by a lengthening of adversity. This is not the link in the chain that will break. If the chain snaps, it will be the weakest link that will give way first; and that will not be the common people of India, but its educated leaders. If these great sons of our soil have the leadership which they merit, then it is certain that they will be prepared to accept whatever length of time may be necessary to bring about the economic betterment that they undoubtedly deserve, but in a manner that does not in the meantime endanger their own traditional democratic free Indian way of life. Anyway, who is to say that it will take 17 years to double the per capita income, and that we must therefore get off to a start with a false burst of speed which will leave us spent and trembling before half the race is run? It would be more prudent to start at a pace which will allow us to go steadily on and complete the course. The pace of scientific advancement is such that today weapons for economic betterment are being placed in the hands of underdeveloped countries which were never available to the countries of the West during their struggle for industrialisation. It may well be that these breathtaking advances of science will enable us to achieve the increased standard of living even more quickly than the 17 years at present envisaged. What however is certain is that neither these techniques nor any other measures will help us if we push the country to calamity by whipping it up to a speed which it is not capable of sustaining.

It would not be sensible nor would it be patriotic for any one in the country to gloat over the miscalculations of our planners and the consequential difficulties of the Finance Minister. The probability that something would go pretty wrong with the Second Plan might be said to have been built into it from the very start. What one can and should legitimately criticise is the attitude that is adopted towards those honest, able and patriotic Economists and Industrialists who have from the very beginning had the courage to say that the Plan was incapable of fulfilment within the country's resources in the time set for it, and consistent with the maintenance of the democratic principles enshrined in our Constitution. It is tragic that those in power are prepared to label these good men as anti-national defeatists, while those who blindly shout their approval of every official measure from the house tops, are lauded as patriotic pillars of the Private Sector.

Welfare State

One of the objectives to be sought from the completion of the Plan is the creation of the Welfare State, the absolute desirability of which has always so far been taken for granted and without question.

Let us however pause for a moment and examine the progress of the Welfare State in the U.K. where it has been established for some years and the effect it has had on an important section of the citizens.

A sample survey recently conducted in a leading University revealed a remarkable and disturbing state of affairs. Of the students questioned, 38% said either that they were seriously thinking of emigrating as soon as they have completed their course, or else had already firmly decided to do so. These young people are among the most intelligent, most highly educated and the most enterprising in England. They are people who are willing to make their own arrangements and to take their own risks. And they are under no illusions about life in a strange land. Many of them have worked overseas during their long vacations and are familiar with the disadvantages and possible hardships that emigration might entail.

This is a serious position. Britain is doing everything to provide the best education for the best brains, and the service of the best brains is urgently and increasingly needed in England. How then does it come that nearly half of those so trained immediately take themselves somewhere else and add to the progress and prosperity of another country? The reason is that they are fleeing from the Welfare State. They have strong practical objections to it. They realise that it is financed out of crushing taxation and they know from the experience of their fathers that the weight of taxation comes most heavily on people like themselves. The whole system of taxation, rebates and subsidies, works against the educated and enterprising middle class. Worse still it is precisely meant to work that way. Whereas fifty years ago the man who forged ahead and made a great name and a great fortune for himself was admired and respected, today he is regarded with envy and resentment. More than the monetary penalties of the British fiscal system is this envy, and the assertion of the superiority of the mediocre which is driving young people of talent and vigour abroad. They want to go to a country where they can forge ahead without provoking sulky hostility. They want to feel that a life's work of exceptional quality and usefulness will not be held against them. They want to escape from a socially stifling atmosphere and to get away from a country where no exceptional talent is gladly recognised. If this draining away of Britain's best brains continues to increase, then the mass of British people will be brought in the end to recognise that while they cannot do without the direction and services of the élite, the élite can very well do without them.

This is a lesson which can be learnt with advantage in other parts of the world.

Dividend Payment

Turning now to the affairs of your own Company, you will have seen that it has been necessary to withdraw Rs. 2 lakhs from the Equalisation of Dividends Reserve in order to maintain the usual dividend. The principal cause of this is extra provision for taxation of Rs. 3.28 lakhs—of which Rs. 1.77 lakhs is in respect of the previous year—due to the 1957 Finance Act. You will recall that I foresaw this possibility when addressing you last year. Another reason is that due to the change in the accounting years of two of the Electricity Companies, no Agents' Commission was received from the Surat Electricity Co. Ltd., during the period covered by the Accounts. This would have amounted to about Rs. 1.1 lakhs. Consequent upon the necessity of closing the accounts of all the Electricity Companies on 31st March each year, your Directors are considering altering the Financial Year of your Company so that it will close on 30th November in future instead of 30th June as at present.

Otherwise, the Accounts are self-explanatory and have appended to them the Accounts of your Subsidiary Company, Killick Nixon & Co. Private Ltd.

The progress of our plans for Industrial Development has been detailed in the Directors' Report and other projects are under consideration.

The continued expansion of your Company's activities has of course necessitated capital investment and a point has now been reached when further finance is needed. This matter has been receiving the attention of your Directors and although no decision has yet been reached it is possible that an application may be made to the Controller of Capital Issues for permission to make a new issue of Ordinary Shares next year.

As regards the future, I would only say that your Company is well poised for prosperous development. It is only political policies which threaten to impede fruitful progress.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to Shareholders.

T. I. CYCLES OF INDIA LIMITED

YEAR OF CONTINUED PROGRESS

CHAIRMAN SIR A. RAMASWAMI MUDALIAR'S REVIEW

The following is the address by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, T. I. Cycles of India Limited, at the Eighth Annual Meeting at Madras on 12th December, 1957.

Gentlemen: I am very happy to welcome you to this the eighth annual meeting of the T. I. Cycles of India Ltd. The Directors' Report and Audited Accounts and Balance Sheet for the year ended 30th June, 1957, have been before you for some time and with your permission I shall take them as read.

The year under report has been one of continued progress and development. In my speech last year I referred to the fact that your Company was permitted by the Government to manufacture 200,000 bicycles and 100,000 set of bicycle components. I am glad to inform you that with the present installed capacity we have been able to reach the target for the manufacture of cycles during the year but the manufacture of cycle components have fallen a little short of expectation. I have no doubt that during the current year the target with respect to both cycles and cycle components will be reached. We have sought permission of the Government of India to further increase the manufacturing capacity of bicycles and bicycle components and we have just received the necessary authorization of the Government.

The demand for Hercules Cycles has increased along with the increase in our manufacturing capacity. The trade and the consumer has shown a preference to quality production on which I have emphasized on more than one occasion.

Fast Growing Demand

The bicycle being the main means of transport for the middle and poorer classes it is not surprising that the demand for bicycles has gone up and the estimate of the Tariff Commission has had to be revised. The Tariff Commission estimated that by the end of the second Five Year Plan, i.e. 1960-61 about 1.5 million cycles will be required. In view of the fast growing demand the Development Council for Bicycles which is in close touch with the market through the manufacturers who are members of the Council and through Government officials directly connected with the promotion of this industry, has estimated that this target will have to be revised to 2 million by 1960-61. It is in the light of these facts that your Directors have approached the Government for a further increase in their manufacturing capacity both for bicycles and bicycle components. I am glad to inform you that the permission sought for has been granted. Your Directors are now thinking of ways and means by which the necessary plant and equipment for the increased production of cycles can be obtained from abroad.

It must be gratifying to anyone who has followed the fortunes of this industry that it is one of the few industries which have fulfilled the expectations of the first Five Year Plan period and hopes to attain the targets proposed for the second Five Year Plan. In 1947 the bicycles produced in the country numbered 49,000. In the year under review the established manufacturers' output is estimated to be over 700,000.

The Company has kept in view the quality production for which Hercules Cycles are noted. It is a matter of concern, therefore, that there have been some cases where inferior goods produced by some small units have been palmed off as Hercules parts, i.e. as components manufactured by your Company, with the name of Hercules on such components. We have taken legal action under the Patents Act in a couple of cases but I trust this unfair and illegal practice will be eliminated.

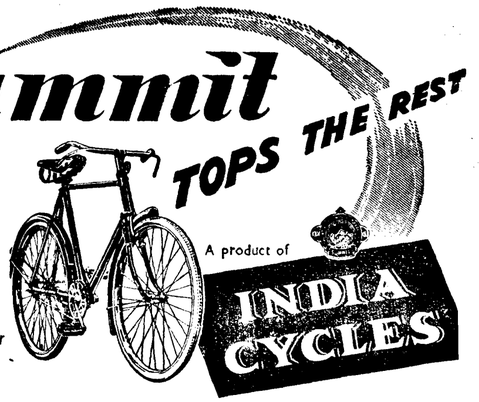
The progress that has been made in the manufacture of bicycle components for our factory has been quite satisfactory. We have also wherever possible used such components as are not manufactured by us but are locally produced. While we were only a short time ago getting an allowance of Rs. 80/- per cycle for importing parts worth that amount, we are now getting only Rs. 7-8 for import of such bicycle components as are not manufactured in this country—a sure indication of the progressive development of indigenous production.

I referred last year to the progress that has been made in the construction of the administrative building. I am glad to inform you that the building has been completed and from January 1957 the administrative offices are located in this building.

Development Council

The Development Council consisting of manufacturers and Government representatives continued to function during the year. This Council has been doing quite useful work and there is a free exchange of views between the representatives of manufacturers and Government and the problems of the manufacturers are brought to the notice of the Government across the table and are better understood than they would be by correspondence.

One of the Managing Directors—Mr. A. M. M. Arunachalam and the Works Director—Mr. B. A. Forsyth, are members of this Development Council representing your Company.



Mr. A. M. M. Murugappa Chettiar is the President this year of the Association of Cycle Manufacturers and his advice will no doubt be greatly appreciated by the members of the Association.

You will be glad to note that quite happy relations exist between the labour employed in the factory and the Management.

I referred last year to the piece work system that was introduced after some difficulty. It is gratifying to note that this system is greatly appreciated now and the workers find that they can earn more while working during the same period.

We have received assistance and advice regarding our manufacturing programme from our British Collaborators, Tube Investments Limited, and Hercules Cycle Company, the value of which can not be exaggerated. The Company is deeply grateful to both these companies and to the technical experts of the companies who have visited the factory and helped us in our plans of expansion.

I would like to conclude by again expressing our deep thanks to the Government of Madras and to the Government of India for the help, assistance and encouragement that we have continuously received from both the Governments during the years. The Minister for Heavy Industries and other Ministers, both State and Central, have assisted us with their wise advice and counsel. We, for our part, have tried to play the game and I trust that both the State Government and the Central Government have noted with satisfaction not merely the progress that the Company has made on the manufacturing side but the amenities that we have provided for the workers and staff. I should also like to thank sincerely the supervisory staff and the factory workers as well as the office staff for the enthusiastic co-operation that we have received from them.

LITTLE BUSINESS IN STOCK MARKETS

HEAVY DEMAND FOR BRITISH PETROLEUM DEBENTURES

London, 31st December.

BUSINESS in the stock markets during the past fortnight was generally at a very low level. The exceptions were provided by the new British Petroleum convertible debentures and the new Newcastle 6 percent stock. Business in the British Petroleum debentures was enormous, and although below the best level it still commanded a premium of around 5¾ percent. Activity in the much smaller £5 million Newcastle issue was also fairly substantial, and the premium advanced from 1¼ percent to 1½ percent. Outside these two stocks, business was generally small and prices declined in most sections on nervousness due to the economic outlook in the United States. There was not a great deal of selling pressure but with the markets lacking support, prices tended to decline before steadying prior to Christmas. Gilt-edged securities lost ground with the rest of the market prior to the week-end but steadied later and then rallied on small investment buying to record very little change.

The Money Market

The seasonal tightness of credit was maintained in the money market up to the last day prior to the Christmas holiday. The cash position was stretched by the heavy call for currency for Christmas, while postal delays and the recent British Petroleum issue continued to complicate matters. On the two days prior to Christmas Day, the market had to contend with a very heavy offtake of bills. The money market closed the period before the holiday on an easy note. Under the keenness of demand the money rate throughout the period ruled at high levels, with a high of 6¼ percent being paid and the minimum rate generally being 5¾ percent. But on the last day prior to Christmas the rate fell to 5½ percent for clearing bank balances and 5 percent for balances offered by outside banks. There was a fair offtake of March and hot bills at 6⅜ percent and 6⅛ percent, the latter rate being offered during the most difficult phases. At the weekly tender, the average rate for 91-day Treasury bills fell to £6 7s 5.91d percent. There was no average rate for 63-day bills during the past week but the average rate for the week before last was £6 9s 10.48d percent.

Activity on Wall Street

Long-term U. S. Government obligations on Wall Street continued to move ahead during the past week under the leadership of the two new high coupon issues which established new highs. Dealings, however, were at a much slower pace than those witnessed in recent weeks. High grade corporate issues tended to drift lower earlier in the period, but eventually firmed with the Treasury list. Speculative rails generally displayed a mixed appearance in dull dealings. Convertibles continued to follow the pattern of the stock market and moved higher in moderately active trading. In a slow moving market for foreign dollar bonds, Australian issues were a firm spot with a few scoring gains of 1 to 2 points. German nationals were unchanged with Italian and Serb issues lower. Greeks and Norwegians showed little change either way. Denmark 4½ percents were neglected. Japanese Government 6½ percents of 1964 gave up a little ground while among the utilities Taiwan 5½ percents improved by one point. Union of South Africa 4½ percents rose higher while Chile 3 percents held steady or slightly above the $36½ level.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 25th December, shows that the gold stock was unchanged at $22.770 million. Foreign investments rose by $15 million to $3,776 million while foreign deposits increased by $42 million to $386 million. The Federal Reserve bought $36 million worth of bills, $1 million worth of certificates and $120 million worth of Government securities under repurchase agreements. Total discounts and advances rose by $63 million to $794 million while the aggregate excess reserves of member banks fell by $45 million to $532 million. The daily average excess reserves of member banks rose by $73 million to $709 million while their daily average borrowings rose by $36 million to $781 million. Business loans of New York city banks fell by $70 million to $11.805 million compared with a fall of $5 million to $11,805 million in the corresponding week of a year ago.

Firmer Hongkong Gold

The Hongkong gold market was firmer last week. The firmness was attributed to tight supplies, together with the easier undertone of sterling. Early in the week, the market reacted lightly from the opening levels, but hardened after mid-week and in spite of a reversal before the week-end, the close was a shade higher than on the opening day. Carry-over charges were 110 cents in sellers' favour. The official offtake totalled 2,070 taels and the unofficial 9,000 taels. Arrivals amounted to 35,000 ounces. Forward contracts were done at $(US) 37.87.

Dull Trading in Vegetable Oils

In the oilseeds market last week, prices changed little due to the lack of a serious trading test. Linseed oil ruled steady with occasional deals involving small quantities on ex-tank U.K. terms at £114½, for January, and £115 for March-April delivery. General sellers asked up to £99 c.i.f. for Argentine crude oil, but a limited quantity was traded to Hull at £98 c.i.f. Re-sellers of Straits' bulk coconut oil dropped £1 to £104 c.i.f. for January-February parcels without result. Ceylonese held steady, mainly because of the lack of pressure from the origin. Indian castorseed oil was offered freely from prompt to March-April shipments following the official extension of export licensing without restriction until September 1958. Sellers in London quoted lower rates, but apart from a small quantity of the British Standard Specification grade in drums asked at £130 c.i.f., few buyers were located. Edible oils lacked features, with buyers rarely responding to requests for lower bids. Philippine copra turned firmer on origin advices, but London buyers made little attempt to follow. Palm kernels ruled steady, although buyers on commission terms rarely bid over £53 c.i.f. for March-April Nigerian. Re-sellers of Nigerian groundnuts were willing to accept £65 c.i.f., net terms for December-January and January-March parcels and £64 net for February-March, but in spite of the discount under the Board price, no business was done. In an attempt to compete with American and Canadian offers, Nigerian soyabeans were reduced £1 a ton to £56½ c.i.f., but buyers were slow to respond.

Tea Prices Improve

There were no Mincing Lane tea auctions during the past week because of the Christmas break. Auctions were resumed on 30th December with 62,021 packages on offer. The pre-holiday demand showed some improvement as buyers normally like to take up that little extra amount in view of the break in auctions and, therefore, prices were generally dearer. Plain sorts quoted 2s 11d a lb and some quarters feel that no significant change will occur when offerings are resumed. Statistical considerations seem to point to the fact that prices are unlikely to stage any substantial recovery for the time being, since there are indications that in 1957 the major producing countries harvested some 20 million lbs more than in 1956. The excess of supply over demand has been responsible for depressing prices.

THE CALCUTTA MONEY MARKET

INTERBANK MARKET TIGHTER

Tuesday, 31st December.

CONDITIONS have been quiet in the Calcutta money market during the past fortnight due to the incidence of holidays. The general level of advances is slightly higher, with the seasonal increase in evidence. The interbank market shows considerably more signs of life, probably due to the annual closing of books in banks and business houses. The interbank call rate is unchanged at 2¾ percent, although there are reported to be borrowers over.

The exchange market has been quiet throughout the period, with few bills coming to hand. Those that have been in evidence have been chiefly on account of tea. Remittance has been poor. Sterling continues steady both against the dollar and Continental currencies.

* * * *

Silver was steady on good buying in spite of the payment of increased duty on Tibetan coins. The price advanced from the previous week's level of Rs. 180.50 to Rs. 184, quoted on Monday for ready delivery. The rate for forward delivery was Rs. 183.75. The London price was 77½d. and the New York price 89⅞ cents.

Gold increased in sympathy with silver from Rs. 110 to Rs. 110.25. The sovereign at Rs. 71.25 showed a gain of 25nP.

* * * *

A decline of Rs. 8.02 crores to Rs. 1,504.60 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 20th December, 1957, while the total note issue was Rs. 54 lakhs higher at Rs. 1,523.18 crores. Notes held in the Banking Department consequently rose by Rs. 8.56 crores to Rs. 18.58 crores. Deposits of the Central Government increased by Rs. 11.34 crores to Rs. 64.87 crores because of good tax collections and other Government accounts were Rs 3.19 crores higher at Rs. 8.16 crores. Balances of commercial banks at Rs. 74.44 crores showed a decline of Rs. 1.94 crores. Balances held abroad fell further by Rs. 2 crores to Rs. 22.38 crores and investments declined by Rs. 1.68 crores to Rs. 246.34 crores. Other loans and advances increased from Rs. 51.92 crores to Rs. 58.76 crores, of which advances to scheduled banks against usance bills amounted to Rs. 19.82 crores, compared with Rs. 14.35 crores. Ways and means advances stood at Rs. 36.40 crores (Rs. 37.61 crores).

* * * *

The return of the State Bank of India for the week ended 20th December, 1957, shows a drop of Rs. 82 lakhs to Rs. 364.76 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 12 lakhs and Rs. 10 lakhs to Rs. 173.62 crores and Rs. 10.03 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 3.34 crores to Rs. 165.95 crores. Cash and balances are, in consequence, shown at Rs. 29.98 crores or Rs. 66 lakhs less.

* * * *

The statement of the position of scheduled banks for the week ended 20th December, 1957, shows Demand and Time liabilities at Rs. 714.47 crores (Rs. 17.48 crores on account of borrowings from banks) and Rs. 684.06 crores (Rs. 22.19 crores), compared with Rs. 720.24 crores (Rs. 17.54 crores) and Rs. 682.65 crores (Rs. 23.93 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.43 crores and Rs. 2.95 crores to Rs. 37.87 crores and Rs. 70.51 crores, respectively. There is a rise of Rs. 64 lakhs to Rs. 432.65 crores in investments. Advances and bills discounted at Rs. 847.67 crores show a rise of Rs. 6.20 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.7 percent and 60.6 percent, against 8.0 percent and 60.0 percent.

* * * *

The Government of India has decided to postpone further the date of enforcement of Section 15 of the Central Sales Tax Act to 1st April, 1958. The Section seeks to restrict the powers of the State Governments to levy tax under State laws on declared goods of special importance to inter-State trade or commerce. The declared goods are cotton, cotton yarn, coal, hides, skins, iron, steel, jute and oilseeds.

GIANT BRITISH CRANE ON WAY TO INDIA

A giant crane capable of lifting 275 tons is on its way from Britain to India for installation in the Tata steel works in Jamshedpur. The crane, made by the Horsehay Company Ltd. of Wellington, Shropshire, is completely electrically driven by motors of over 1,000 horse-power. It is a massive structure having a span of 68ft. 9in. and an overall width of more than 50 feet. It is operated by one man seated in a cabin attached to its underside, and in Jamshedpur will be used for transferring molten metal from the furnace into rows of ingot moulds. The Horsehay Company recently supplied four cranes to the Indian Iron and Steel Company and since 1948 has built over 200 giant steel works cranes, the biggest having a lifting capacity of 410 tons.

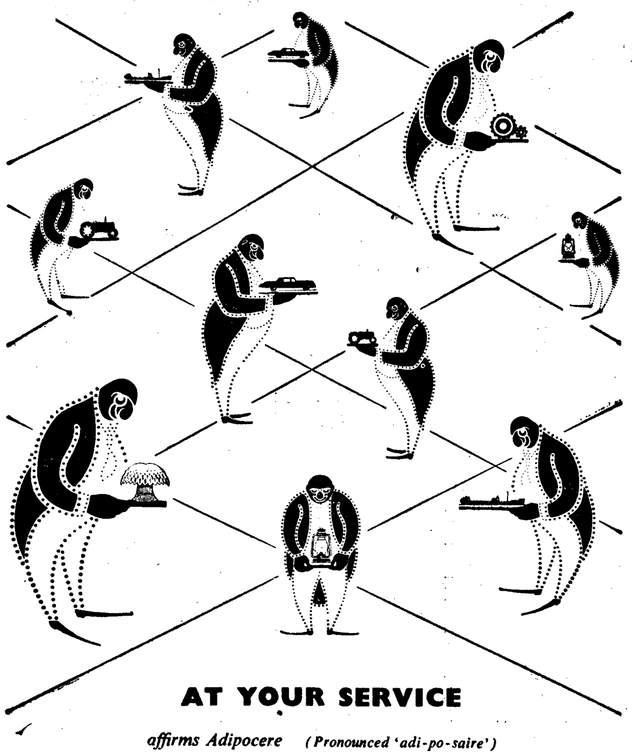
LONDON FINANCIAL LETTER

PROSPECTS FOR STERLING

By Air Mail.

CONFIDENCE in the foreign exchange markets, and therefore in the stock markets, has fluctuated in recent weeks. The gold and dollar figures for November were rather disappointing after the much bigger improvement in the preceding month, and much of the City's time has been devoted to explaining a performance that must, it is felt, have been conditioned by special circumstances. Being wise after the event, the City perceived that in the crisis of last August the Bank of England had been selling dollars forward for settlement in November and that the maturing of these transactions had reduced the flow into the reserves in that month. It recognised, too, that the strength of sterling quotations during most of November implied that the authorities were not taking every opportunity to replenish the reserves by selling sterling against dollars. (In this sense, the strength of sterling misled international opinion.) The authorities were probably hoping that the visible improvement in quotations would finally persuade speculators to close their maturing bear positions and draw some short-term money into London, but the movements were not, apparently, on a very large scale. The weakening of quotations after the figures were published was generally attributed to disappointment: but it might have occurred even if the figures had been better, for it is mostly (because of the accident of timing) in the latter part of each month that bear positions mature and that bear covering involves additional demand for sterling.

London is still inclined to a more confident view of the currency than is generally observable abroad. The existence of large bear positions still outstanding implies that in appropriate circumstances a substantial demand for sterling can result from covering of these positions. As to the appropriate circumstances, it is pointed out that, while the period of seasonal weakness has ended, the period of seasonal strength has not yet begun. If it is possible to show continuing improvement in the internal financial position, and if the financial weakening of some other sterling countries can be checked, demand for sterling in the early months of 1958 should be sufficient to enable the authorities to acquire substantial quantities of dollars "through the exchanges", and so to build up the reserve against the seasonal strain later in the year.



A Difficult Choice

The Chancellor of the Exchequer, Mr. Peter Thorneycroft, has said again that the recovery of sterling must take precedence before any actions to stimulate business, such as many business men demand, a majority of economists suggest, and even some members of the Cabinet, it is believed, privately desire. Although recent events in the United States suggest that the resolve to enforce "hard money" is not always as strong as it seems, there is little doubt that Mr. Thorneycroft is really resolved that the policy adopted last September shall be pressed to its conclusion. Already, however, in the few months since September, the circumstances have significantly changed. At that time it was possible to believe that the trend of American business might be turning upward; that idea has since been abandoned. At that time it was possible to argue that demand in Britain could be cut back without an actual reduction of investment; it must now be recognised that investment in the private sector will be appreciably reduced in 1958 when existing orders for capital equipment are worked off, and that the "freezing" of the public sector's capital expenditure at this year's level represents a reduction in the volume of actual work to be done next year.

Soon after the new measures were introduced, the Ministers concerned explained that their intention was to stop the inflationary growth of the economy, not to enforce an actual reduction of spending. That policy is not working out—whether because the restraints are more effective than the authorities envisaged or because the trend of business was already more decidedly downward than was realised in September. Certainly, the drastic reduction of bank advances, at a time of year when they are usually expanding, suggests a very strong squeeze on credit. On the other hand, the fact that the banks have reduced their lending below the level that the Chancellor specified—the average of the 12 months to September—may be seen as evidence that over a wide range of business, confidence was already weakening by September, so that the increase in lending rates was sufficient to reduce advances, regardless of the availability of money. That a good deal of money is still being loaned at very high rates in the "secondary" market does not necessarily disprove this idea, for there are always intending borrowers who could profitably employ money but whose priority is low. The fact remains that a recession of activity is in prospect (this country, unlike the U.S.A., has not experienced it yet), and that strong arguments are being advanced for loosening the restrictive policy before it does serious harm. The chief of these arguments is that restricting expansion of capital assets at this time, when the capital industries are developed to provide for expansion, will not only leave some capacity wastefully idle, but also allow troubles to accumulate in the future, when the industrial basis of the country's trade will not have been strengthened. Against this argument, it is pointed out that expansion of assets strengthens the economy only if the character of those assets is appropriate, and that a good deal of the expenditure undertaken in the period of inflation has done more current harm than future good.

Local Money Markets

Some people look for a general reduction of interest rates in this country about the time of the Budget next April. Meanwhile, with no encouragement from the authorities (who still keep the money market very short of funds), rates that are moderately flexible have in recent weeks been tending downward. A change in the Treasury bill rate, though not wide, has been perceptible; mortgage rates applicable to local authorities' borrowing have come down more sharply. But there is no suggestion yet that Bank rate will either lead or follow the market downward. London's high rates are still, it seems, sufficiently magnetic to cause some embarrassment in other sterling countries whose authorities wish to retain funds at home. But the emergence of money markets in these countries—naturally, a gradual process anyway—does not seem to be seriously impeded. London is at present most interested in the Johannesburg market: now that it has a functioning discount house it can operate as an orthodox money market—although it is suggested here that a developed system of Treasury bill tendering is needed to allow discount houses to function smoothly; and in Canada, it is recalled, the banks' reluctance to lend prevented the money market from getting quickly into its stride.

AT YOUR SERVICE

affirms Adipocere (Pronounced 'adi-po-saire')

From deep down below the earth, where I have remained for millions of years, I am located, pumped out, refined and distributed in several forms. Each one of these forms has a significant influence on your life.

The purr of an automobile and the throb of an aeroplane are like the beat of my pulse for I power them both and lubricate their mechanism. I propel them with my life-blood and carry you on your way.

The light of your lamp is my brilliance—the working of the machines that give you your clothes, the tractors that harvest your food, the factories that feed you with life's necessities—are all my contribution to your welfare and happiness.

I am omnipresent—limitless in performance and possibility. I am the Prime Mover.

Stocks and Shares

STEADY PRICES BUT RESTRICTED TRADING IN HOLIDAY SESSION

CONTINUED ANXIETY ABOUT MUNDHRA CONCERNS

Tuesday Evening.

THE share market has been even quieter than usual during the past fortnight, chiefly on account of the holiday interruptions. Speculatives have ruled fairly steady in sympathy with Indian Irons, which have moved narrowly in the range Rs. 18 to Rs. 19. Sentiment has been subdued by the threat of the introduction of a gifts tax to supplement the existing estate duty and by the continued uncertainty concerning the Mundhra group of companies. Following the appointment of receivers for Richardson and Cruddas and the Brahmapootra Tea Company, has come the news of a receiver being appointed for the British India Corporation. Among the companies which have been linked with Mr. Mundhra's name is Turner Morrison and Company Ltd., but the public is advised by the management that Mr. Mundhra owns only a minority holding in the company, and that he does not enjoy control over Turner Morrison or any of its managed concerns. The undertone of the market is quiet.

Details of the limited trading are as follows:

* * * *

Government securities were steady and good demand was seen in short and medium-dated stocks, but business was difficult to negotiate in the absence of offers. Three percent Conversion Loan was transacted at Rs. 71.03 and 3% Non-terminable Paper was done at Rs. 71.15. Among short-dated securities, 2½% 1961 was transacted at Rs. 94.45 and 2¾% 1960 were done at Rs. 97.20. Among medium-dated securities, 3% 1963-65 came to hand at Rs. 93.65 and 3% 1964 were done at Rs. 93.75; 3½% 1964 were transacted at Rs. 97 75 and 3¼% 1965 were taken at Rs. 97.73. In the long-dated group, 3½% 1974 came to hand at Rs. 98.25 and 4% 1960-70 were done at Rs. 100.60; 3% 1970-75 were taken at Rs. 85.75.

State loans were steady, although business was restricted because of a shortage of scrip. Four percent 1967 West Bengal loan were done at Rs. 98.90 and 4% 1964 Bombay were transacted at Rs. 99.25. Four percent 1963 Madras were done at Rs. 98.25 and 3% 1960 Madras were taken at Rs. 96.

Business in banking shares was restricted. Hindusthan Mercantile Bank changed hands at Rs. 8.12 and United Bank of India were transacted at Rs. 4.90.

Replacement buying lifted cotton textile shares. Kesoram improved to Rs. 10.25 and Bowreah were done at Rs. 110. Sugar shares were neglected and Carew were done at Rs. 5.87. S.K.G. were transacted at Rs. 9.25.

Selective support was seen in the coal section, but fluctuations were narrow. Bengal Coal came to hand at Rs. 2.29 and Central India were transacted at Rs. 5.95. South Karanpura were sold at Rs. 8.94 and Burrakur at Rs. 22 showed no change. Limited business was transacted in jute shares. National improved further to Rs. 22.10 on interested support and New Central were taken at Rs. 11.50. Ganges rose fractionally to Rs. 49.50 and Delta were transacted at Rs. 89.

In the engineering group, Indian Iron were steady and the price improved to Rs. 18.70. Braithwaite were done at Rs. 25.87. Texmaco recovered to Rs. 15.60 on short-covering. Richardson and Cruddas were fractionally higher at Rs. 7.94 on replacement buying, but Jessop were offered at Rs. 22.12.

Miscellaneous shares showed a mixed movement. In the mining group, Indian Copper were steady at Rs. 2.82 and Orissa Minerals were transacted at Rs. 19.87. Among cement shares, Asoka changed hands at Rs. 8 and Rohtas were done at Rs. 16. In chemicals, Alkali and Chemical (old) came to hand at Rs. 13.37. British India Corporation declined to Rs. 3.97 on pressure and Dunlop Rubber were shaded at Rs. 20. Hindustan Motors fell further to Rs. 5.69, while Britannia Biscuits were steady at Rs. 12.58. Imperial Tobacco were lowered to Rs. 11.75, but Indian Rubber Manufacturers were wanted at Rs. 17.50. Martin Burn were steady at Rs. 23.69 and interested buying lifted National Insulated Cable to Rs. 24.75. Indian Cable were firm at Rs. 26.50 and Philips India were taken at Rs. 14.25. Calcutta Tramways came to hand at Rs. 15.62 and Aluminium Corporation were transacted at Rs. 9.75.

Electricity supply companies were steady and Calcutta Electric were wanted at Rs. 13.25. Muzafferpore Electric were transacted at Rs. 9.12 Paper shares were steady and Orient improved to Rs. 24.25 on bear-covering.

Business in tea shares was limited. Brooke Bond came to hand at Rs. 14.75 and Grob "A" were done at Rs. 21. Brahmapootra were offered freely at Rs. 3.06 and Jutlibari were lowered to Rs. 13.50 ex-dividend.

* * * *

The INDIA GENERAL NAVIGATION AND RAILWAY COMPANY LTD. has made a loss of £215.360 for the year ended last December (after providing £127,970 for depreciation) compared with a profit of £77.394 in the previous year. Bringing in £32.063 and making other adjustments, there is a debit balance of £106,393 which is carried forward. The dividends have been passed over. The directors mention that the results for the year "are most disappointing due, apart from labour and shoaling troubles, to ever-rising costs and the difficulty of raising rates to an economic level. It is essential that the Governments of India and Pakistan should recognise that this company must be put in a position to operate on a sound basis without further delay if inland water transport, which is so vital to the interests of both countries, is to continue, and this matter is receiving the close and immediate attention of your board." Additions to fixed assets amounted to £164,000, of which £70.000 was for the Rajabagan dockyard, mainly for equipment for the development of outside work, and £82,000 for the cost of the conversion of and improvements to various units of the fleet.

* * * *

The MANABARRIE TEA COMPANY has made a profit of Rs. 1.10 lakhs for the year ended last December. Bringing in Rs. 2.733 and making other adjustments there is a balance of Rs. 93.915. The dividend has been doubled to 20 percent, leaving a carry-forward of Rs. 27.751. The crop rose from 503.014 lbs to 549,803 lbs. The current year's crop is expected to be the same as that of 1956.

* * * *

The HOOGHLY AND GANGES HYDRAULIC PRESS COMPANY has earned a profit of Rs. 7,452 for the year ended last June, against Rs. 1.01 lakhs. The ordinary dividend has been passed over and the usual preference dividends have been paid. There is a carry-forward of Rs. 9,044 against Rs. 19,592 brought in.

* * * *

There is a gross profit of Rs. 16.47 lakhs for the AMALGAMATED ELECTRICITY COMPANY for the year ended last March. An interim ordinary dividend of 6 annas a share was paid, and the final dividend has been declared at 42.5nP a share, making a total distribution of 8 percent for the year. The carry-forward is Rs. 15,48,223 against Rs. 15,13,265 brought in.

* * * *

The profit of the BORMAH JAN TEA COMPANY (1936) LTD., has declined from Rs. 4.46 lakhs to

Incorporated in the United Kingdom with limited liability

Rs. 2.54 lakhs for the year ended last December. Providing Rs. 69,000 for taxation, bringing in Rs. 15,455 and making other adjustments, there is a balance of Rs. 1,54,128. The ordinary dividend is cut by 5 percent to 15 percent, leaving a carry-forward of Rs. 35,628. The crop declined from 7,703 maunds to 6,480 maunds while the average rate price rose from 35.89 annas to 38.84 annas a lb. The directors say that due to the stoppage of plucking for one month, and the time required to bring the bushes back into the plucking round, a heavy shortfall in crop has resulted. The total outturn this year is not expected to exceed 4,500 maunds. Work at the estate has been proceeding normally since it was reopened.

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for supply of the following materials :—

Tender No. CON/GM/43/F2/-H/57 for supply of 159 items mechanical signalling materials and 50 items electrical signalling materials (quantity will be furnished in the schedule of the tender form). Tender will be opened at 12 noon on 24-1-58. Offers which are not subject to recommendation for import license will be preferred.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 on remittance of Rs. 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23 by local firms.

Tender forms should accompany the receipt for earnest money of Rs. 1000/- from the Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1000/- with the Controller of Stores are exempted.

Bombay Market

QUIET TRADING IN SHORT SESSION

TEXTILE DIFFICULTIES CAUSE ANXIETY

Tuesday Evening.

THIS week's trading on the Bombay stock market was interspersed with holidays, and operators were unwilling to extend commitments because of the year-end closing. The market is closed from 25th December to 1st January. Prices were maintained towards the close, although difficulties of the cotton textile industry appeared to have worried operators.

Tata Steels closed at Rs. 160.50 and Indian Irons were higher at Rs. 18.56 because of support from Calcutta interests. Alcock Ashdown recovered to Rs. 221.25 on replacement buying, and Premier Construction were bought at Rs. 154 by knowledgeable quarters. Tata Locomotive were transacted at Rs. 137.25. Among automobile shares, Premier Automobile came to hand at Rs. 87.50, but Hindustan Motors were freely offered at Rs. 5.80.

Textile shares showed little change. Bombay Dyeing came to hand at Rs. 49.80 and Svadeshi were taken at Rs. 165. Kohinoor were bought at Rs. 259.50 on investment account, while Simplex were freely offered at Rs. 154. Century recovered to Rs. 382 on short-covering and Apollo were done at Rs. 2.04. India United Ordinary were freely available at Rs. 9.24.

In the miscellaneous group, cement shares were steady and Associated Cement came to hand at Rs. 151. Digvijay Cement were wanted at Rs. 133.25. Among sugar shares, Belapur were steady at Rs. 252 and Phalton were bought at Rs. 146.50. Mining shares were subdued due to the uncertain outlook for metals, while Shivrajpur Syndicate were taken at Rs. 83. Steamship shares were steady on prospects of expansion in activity. Scindia Steam were fractionally higher at Rs. 17.06 and Great Eastern Shipping were taken at Rs. 19.24. Tata Chemicals were done at Rs. 12.80 and National Rayon realised Rs. 211.25.

Banking shares were steady, and Bank of Baroda improved to Rs. 106.25. Punjab National changed hands at Rs. 49 and Central Bank were taken at Rs. 52.30. Insurance shares were idle, and New India Assurance were done at Rs. 48.

Scattered interest was taken in electricity supply companies, and Ahmedabad Electric were transacted at Rs. 94.20. Tata Power came to hand at Rs. 1,155.

THE WEEK'S TRANSACTIONS

New Delhi

NEW GOVERNMENT COMMITTEE TO CO-ORDINATE SHIPPING DEVELOPMENT

MORATORIUM ON CURRENT PAYMENTS FOR ROURKELA STEEL PLANT

(FROM OUR NEW DELHI CORRESPONDENT)

A SHIPPING Co-ordination Committee has been set up in the Ministry of Transport. Its first meeting is to take place on 2nd January, 1958. The Committee will consist of representatives of almost all the Central Ministries, particularly those of Commerce and Industry, Works, Housing and Supply, Railways, and Steel, Mines and Fuel. Its main aim is to develop Indian shipping. The Committee will appraise the shipping needs of the country in general and of the Central Government in particular. This should help give a better idea of the foreign exchange position. It is proposed to utilise part of the foreign exchange to purchase new ships, preferably on a deferred payment basis. The ships so acquired will be used for foreign trade.

India pays 75 shillings a ton on the average for the import of foodgrains. On this basis, the import of one million tons of foodgrains costs £3,750,000 in shipping charges. Fifty percent of this amount could be utilised in acquiring additional tonnage for bringing the imports. The Committee will "marry" imports to exports, and thus largely use Indian tonnage for the export trade as well. It is proposed to appoint liaison officers in the private and public sectors. They will look after the work of co-ordination among importing and exporting departments. The Ministry of Transport will thereby be kept in the picture, particularly when negotiations concerning the shipping aspect of large contracts are conducted.

Speaking at the annual meeting of the Indian National Steamship Owners Association, the Central Minister for Transport, Mr. Lal Bahadur Shastri, has announced the creation of a non-lapsable shipping development fund. The immediate effect of this decision is the availability of an additional sum of Rs. 7 crores, which raises the total allotment for shipping to Rs. 44 crores. The Government will make an annual contribution to this fund, the amount being determined from time to time. All repayments of loans so far advanced to the shipping companies, as also all payments of interest on such loans, will be credited to the fund, instead of being merged with the Consolidated Fund of India. The Minister has also announced that loans which will be advanced hereafter by the Shipping Development Fund will bear a uniform effective rate of interest of 3 percent a year for coastal and overseas vessels. The present rate is 4.5 percent on loans for coastal shipping and 2.5 percent on loans for overseas shipping.

Foreign Missions on Port Development

In recent months, two missions, one from the World Bank and the other from the U.K. came to India to advise on port development, but none had the specific purpose of advising the Government on the selection of new sites for ports. The World Bank mission came to appraise the development projects relating to the ports of Calcutta, Bombay, Madras and Visakhapatnam in connection with the application made to the Bank for a loan to cover the foreign exchange component of the expenditure. It has, however, stressed the need for developing a new deep water port in the Calcutta region. The U.K. mission came under the Colombo Plan for advising the Government on methods of cargo-handling, removal of congestion and other operational problems.

Japanese Team to Visit Iron Ore Mines

Japanese steel interests have sent to India a survey team to visit the various iron ore mines and the rail and port facilities already available for export or those which may have to be provided. It is expected that the team will visit Calcutta, Visakhapatnam and some other ports on the east coast of India.

Purchasing Ships from Japan

India will request Japan for a line of credit from the proposed Rs. 24-crore loan to buy ships on a deferred payment basis, it is learnt. The Indian delegation, led by Mr. K. B. Lall, Joint Secretary to the Central Commerce Ministry, will shortly be holding talks with Japanese officials about this. Last November, it may be recalled, some Japanese shipyards offered India ships on deferred payment terms. If the Japanese agree to allow a part of the yen loan to be used for a 20 percent cash-down payment, with the remainder spread over a period of four or five years, they may get the first bulk order for cargo ships from India.

Czech Offer for Forge-foundry Project

The chances are becoming brighter for implementing two important public sector projects, namely, the forge-foundry project and the dye-stuff intermediate project. The Government had made certain proposals concerning the former about payment to Czechoslovakia, which has now made a counter-offer to India. The Indian Government is now examining how far the latest Czechoslovakian offer agrees with its own. The size of project has been enlarged to meet the requirements of the integrated heavy machine-building project now entrusted to the Russians. The cost of the project is placed at Rs. 30 crores, of which 50 percent, representing the foreign exchange expenditure, will be accepted in deferred payment by Czechoslovakia. The dyestuff project is being negotiated with Messrs Bayers of West Germany. The foreign exchange part of the outlay will come from West Germany with the repayment spread over a number of years.

Trade Agreement with Yugoslavia

An agreement was recently concluded between the State Trading Corporation and Intertrade of Yugoslavia, under which payments for Indian imports from Yugoslavia will be made in rupees. The proceeds will be credited into a special account of Intertrade with the State Bank of India. The money in the special account will be utilised by Intertrade for the purchase of specified Indian goods. This has become almost a common method of trade by communist countries. The question asked is whether the rupee funds so built will be used genuinely for the purchase of Indian goods.

Agreement with Shipyard Consultants

The extended term of the agreement, with the Government of India's technical consultants, the *Societe Anonyme des Ateliers et Chantiers de la Loire* for the Hindustan Shipbuilding Yard, will come to an end on 15th July, 1958. The arrangements for technical advice thereafter are under active consideration and will be settled shortly. A change is expected.

Achievements of the Patel Mission

The Principal Secretary to the Central Ministry of Finance, Mr. H. M. Patel, has returned to New Delhi after visiting the U.K., West Germany, Switzerland and Italy from his "invest in India mission". Another member, Mr. Bhoothalingam, Secretary, Central Ministry of Iron and Steel, has proceeded to Moscow to discuss certain matters relating to the steel plant in Bhilai. From a long-term point of view, the Patel mission was a success. Although the details of the moratorium on payments for the Rourkela steel plant, under construction in collaboration with West Germans, have still to be worked out, the mission has been able to arrange that the payment of monthly instalments will no longer have to be made. West European countries, it is said, are interested in increasing exports and may be willing to extend long-term credit. They are not interested in advancing loans or extending floating credit for development purposes as such. But negotiations on the basis of individual projects can now be undertaken with some of countries which the Patel mission has visited.

No New Concern for Sewing Machines

The application of Mahindra and Mahindra Ltd. of Bombay for the manufacture of 12,000 industrial sewing machines, 8,000 artisan household sewing machines and 10,000 Singer 15 K.S.V. sewing machines a year, in collaboration with the Singer Manufacturing Company of the U.S.A. has been rejected by the Government, it is learnt. It is explained that India has been making steady progress in the manufacture of sewing machines. The industry has been able to meet the domestic demand and also to develop an export market. There are six units in the organised sector engaged in the manufacture of the domestic type of sewing machines. As for industrial sewing machines, Jay Engineering Works has produced a sample, which is being tested.

Economy in Central Expenditure

The Prime Minister laid on the table of the Lok Sabha, during its last session, a statement showing a saving of over Rs. 23 crores in the administrative expenditure of the Centre. He explained that the economy drive was aimed not so much at bringing about a reduction in the total outlay, but rather at ensuring that the expenditure on non-essential and less important items was reduced and men and resources were diverted to items which were essential. From the beginning of the economy drive, he said, it had been decided that retrenchment should, as far as possible, be avoided. Economies had been sought almost entirely by reducing the demand for the creation of new posts and leaving sanctioned posts unfilled. According to *Employment News*, the official organ of the Central Ministry of Labour, total employment under the Central Government excluding the railways increased by 2,908 to 678,999 in the five months ended August 1957. During this period, the number of executive and other administrative personnel declined by 5,683, while that of clerks increased by 14,411. Between December 1951 and August 1957, the number of clerks went up by 89,097 to 231,947. The following are the figures relating to clerical employment during the first eight months of 1957:

January	216,798
February	217,236
March	217,536
April	217,325
May	220,280
June	222,432
July	231,805
August	231,947

No Fixed Quota for Sugar Exports

The Government of India, it is understood, has not fixed any particular target for the export of sugar from the current year's production. Recent reports that a quota of 200,000 tons has been granted for export during 1957-58 through the Indian Sugar Mills Association are described here as incorrect. The Government's policy is to permit the export of as much surplus sugar as is possible, taking into account the production during a year and the demand for domestic consumption. The Indian Sugar Mills Association, which acted as the sole exporting agency for the year 1956-57, was able to sell about 153,000 tons of sugar, out of which approximately 146,000 tons have already been shipped. It is understood that as exports now will involve a loss, the system so far followed by the Indian Sugar Mills Association is no longer adequate for the continuance of exports. The Government has yet to decide on the agency or the arrangement through which exports of sugar will be made in future.

Request for W. German Business Delegation

An informal request has been made to the West German authorities to sponsor the visit of a delegation of representatives of business houses and departmental stores to India to study the Indian market and build closer contacts with exporters in this country.

Manufacture of Special Steels

A scheme for the manufacture of special alloy and stainless steels is being examined by the Government of India, it is learned. It is hoped that the construction of the plant will be completed in time for production to begin early in 1961. This is subject to technical details and the terms of credit being settled satisfactorily.

Progress of Irrigation to be Reviewed

The Standing Committee of the National Development Council, which will be meeting in New

Delhi on 12th January under the chairmanship of the Prime Minister, will discuss the progress made in various States in the utilisation of the irrigation potential of major and medium schemes, the steps taken to implement minor irrigation works as a popular programme and their maintenance, especially of tanks and wells. It will review the progress made in the development of local manurial resources (green manures, farmyard manure, urban compost, rural compost, pilot work in the utilisation of night soil in villages) and the steps taken for the multiplication and distribution of improved seeds. On the organisational side, the agenda includes a review of the efforts made to reach every village and every family through N.E.S. blocks and community projects, the steps taken to strengthen agricultural departments at the block, district and State levels and for agricultural research, and to enlist non-official leadership in the programmes of development. Another item relates to co-operative credit. The steps taken to link agricultural credit with production and to ensure the proper use of credit will be discussed.

Import of Country Craft Restricted

The Government of India has decided not to renew the O.G.L. for country craft which expired on 31st December, 1957. Experience has shown that importers have been using country craft to import some of the otherwise banned goods.

Imports on Private Account

The following statement gives the figures of foreign exchange released for the import of principal commodities required by the private sector for three years:

Name of the Commodity	1955-56	1956-57	1957-58 (April-June)
	(In crores of rupees)		
1. Cotton, raw and waste	57.6	48.2	6.1
2. Jute, raw and waste	18.4	7.8	1.5
3. Dyes and colours	15.7	15.0	3.6
4. Chemicals	21.8	28.9	5.6
5. Machinery	107.6	151.2	44.3
6. Iron and steel and manufactures	58.4	119.4	26.8
7. Other metals and manufactures	23.7	37.2	10.2
	303.2	407.7	98.1

The figures also include certain payments for public sector imports which were channelled through the private sector, such as iron and steel for Government use, and equipment and raw materials for some projects in the public sector. The total value of the payments for all imports (c.i.f.) on private account which includes the commodities in the table, is as follows:

		(in crores of rupees)
1955-56		611.7
1956-57		795.9
1957	(April-Sept.)	380.3

Parliament Adjourns

Parliament was adjourned last week. It will reassemble for the Budget session on 10th February. In the concluding stages of the session, Parliament adopted two important Bills, namely, the Mines and Minerals (Regulation and Development) Bill and the Additional Duties of Excise (Goods of Sepcial Importance) Bills. It should be a matter for some concern that the first Bill was rushed through on the last day of the session in both Houses of Parliament.

A card-castle for Kamini

at 20,000 feet up..

320 miles an hour!

Four turbo-props mean such smooth, vibration-free, flight aboard the Viscount

BUILD a card-castle, talk to your neighbour, write a letter—it's all so easy aboard the Viscount. The four turbo-props mean such smooth, vibration-free flight; the pressurized, sound-proof cabin creates such a pleasant, relaxing atmosphere; the adjustable armchair seats are so comfortable!

Brought to India by I.A.C., the Vickers Viscount cruises at 20,000 feet—high above the weather; and it eats up the distances at a steady 320-miles-an-hour!

Whether you're travelling on pleasure, or on your way to fulfil urgent business commitments—fly there by swift, luxurious Viscount. You'll agree the Viscount means travel at its finest!

The Viscount will fly on the Delhi/Calcutta, Calcutta/Rangoon, Bombay/Delhi, Bombay/Karachi, Bombay/Calcutta, Delhi/Karachi, Bombay/Colombo via Madras and Tiruchirapalli, Delhi/Madras via Hyderabad and Madras/Calcutta routes.

The first service was inaugurated on October 10, 1957 and since then the Viscount has been introduced on several other routes.

O.E.E.C. SURVEYS U.K. ECONOMIC POLICIES

RISE IN COST OF LIVING

(FROM OUR LONDON CORRESPONDENT)

FOR the first time since the U.K. more or less adopted the five-day-week idea, Christmas day fell on a Wednesday, with the result that most employees enjoyed a longer holiday for Christmas than ever before. The majority of large offices closed on Tuesday evening for the rest of the week. This extension of the non-working period has intensified the normal paucity of news around this time of year, and but for the fact that this despatch covers the events of two weeks instead of one, its compilation might have proved even more difficult. Headaches have been widespread, and not all occasioned by an over-indulgence in the good things of life either. In spite of the credit squeeze, people indulged in an unprecedented spending spree to carry the active note circulation to a new peak of £2,118.5 million; the Post Office, with the help of some hundreds of thousands of temporary workers, handled its heaviest Christmas mail yet; and all transport services worked to capacity without completely meeting the demand and there were serious traffic jams almost everywhere. By and large, it will be gathered, everyone appears to have enjoyed a bumper Christmas, and, at least for the moment, put aside consideration of the economic problems which still afflict the British. These problems were recently the subject of a critical review by the Organisation for European Economic Co-operation which has suggested that it is too early to say whether the new restraints imposed by the U.K. Government will succeed in damping down wage pressures and produce greater price stability while avoiding a significant check to output and productivity. The test, it feels, has still to come.

Movements of the Price Indices

The varying movements of the latest price indices issued by the Board of Trade are a reminder of the need for a more careful approach to the economic outlook. There was a further fall of 1.7 percent between October and November in the basic materials index, caused mainly by lower prices for raw wool, raw cotton, raw rubber, lead, imported steel scrap, hides and skins and zinc, which more than offset higher prices for copper, raw jute, linseed oil and a few other items. In view of this, it is disappointing to find that the official index figure which measures changes in the average level of retail prices—the cost of living index—rose one point between 15th October and 12th November, when it stood at 108. The rise was due mainly to increases in coal prices and in rents, although the impact of the latter is still only slight and amounts to little more than a quarter of the total increase. The significant factor, however, is that whereas the cost of living index has risen from 103.1 in November 1956, to 107.7 in November 1957, basic materials (excluding fuel) used by British manufacturing industry have shown a fall in price levels since the downward trend started to manifest itself last May of a little more than 8 percent. There are indications, also, that the steady rise in export prices which has gone on for the past three years may be coming to an end. The terms of trade index number in November was unchanged at 93, with the indices for both import and export prices unchanged at 103 and 111, respectively. Announcing this, the Board of Trade also analyses the detailed overseas trade figures for November to present a picture rather less optimistic than was conjured up by the preliminary figures. Though it was a good month, exports did not reach the high points of the spring, and it is possible that adverse developments in certain markets, such as India and France, are not being offset by improvements elsewhere. Taking October and November together, the fall in imports was more than accounted for by lower prices, for in terms of volume, imports are running about 2 percent above the level earlier this year and 4 percent above 1956.

Discriminating Restriction of Credit

The latest quarterly returns of the British Bankers Association show that the credit squeeze is not only working out along traditional lines in view of the measures taken, but that the banks are in fact using quite a fair amount of discrimination in its aplication. Between August and November, the total of advances dropped by £123 million to £1,931.3 million, or roughly the same figure at which it stood 12 months earlier. Principal contributors to the quarter's cut came from personal and professional overdrafts, nearly £15 million down; "other financial" down by over £34 million; loans to H.-P. finance companies over £4 million less; and advances to stockbrokers about half of £8.8 million a year ago. The discrimination with which the banks are interpreting the Chancellor's request is better indicated by the annual as opposed to the quarterly figures, for as compared with November 1956, the banks have had £44 million more to lend as a result of the Treasury having taken over the financing of the nationalised industries' permanent capital needs. This "saving" has been handed out to heavy industry, for one finds that shipping and shipbuilding were in receipt of £13 million more in advances at the end of November 1957, than the £29 million they had in November 1956, the engineering industry was receiving £8 million more at £221 million, and the iron and steel trades £11 million more at £50 million. Loans to the cotton trade rose £6 million to £26 million and to wool firms by £13 million to £44 million. Changes in most other categories were negligible, with the £7 million increase to hire-purchase companies as probably the most important.

Reinforcing the Reserves

Although there has been some improvement in the economic outlook of late as the full effects of the Government's emergency measures of last September started to be felt, and in official quarters it is still regarded as quite likely that there will be a large surplus on the balance of payments on current account during the 12 months to next July; it was generally expected that in support of the policy of building up the gold and dollar reserves and strengthening the pound whenever opportunity offered, Mr. Thorneycroft would decide to take advantage of the agreements recently negotiated with the American and Canadian Governments to postpone the payment of the capital and interest due on the postwar loans from those countries. This will represent a saving to the reserves in December of no less than $(U.S.)175 million. This sum will now fall due for payment after the year 2000, meantime carrying interest at 2 percent a year. A few critics felt that the annual instalments should continue to be met, but the majority agree that although the reserves are strong enough at the moment to justify that, from the long-term point of view, it is more prudent to build them up until they reach a level which could meet any possible strain, especially when this can be done under favourable conditions.

Much the same arguments apply to the negotiation with the International Monetary Fund of a one-year extension of the stand-by arrangement under which the British Government may draw up to $(U.S.)738,530,000 at any time to supplement the sterling area's gold and dollar reserves. Originally arranged at the height of the financial crisis caused by the Suez incident, the right was not used during the initial year, which ended on 22nd December, 1957. That it was available if required was a sufficient warning to speculators against the pound that the reserves would be large enough, at a pinch, to meet any attack. As a service fee of less than $(U.S.)2 million a year is all that is involved until a drawing is made, it is a cheap and practical means of reinforcing the reserves, for there is certainly no intention at the moment of making any drawings against it, nor may any be necessary unless the U.K.'s dollar purchases in 1958 rise at a rate greater than its ability to earn dollars with its exports. The success of the recent visit to the U.K. of a top-level Canadian trade mission augurs well for the latter in the not-so-distant future, while the hopes of the National Coal Board to end imports of coal from the United States this year, at the expiry of the present contracts, should make a big difference to the dollar imports bill.

Dollars for Pakistan

The World Bank has just announced its agreement to the granting of a loan of $(U.S.)4.2 million to the Pakistan Industrial Credit and Investment Corporation, formed last October by Pakistani, British, American and Japanese interests to assist in the expansion and modernisation of small and medium industries and to create new ones, and thereby extend its support to the fourth privately-owned corporation of this kind. The loan, which is guaranteed by the Government of Pakistan, is for 15 years with interest at 5¾ percent, and will cover the cost of imported equipment, materials and services needed to carry out the industrial projects financed by the Corporation. British investors, comprising some of the eastern exchange banks, a number of insurance companies, four industrial concerns and the Commonwealth Development Finance Company, have subscribed Rs. 30 lakhs to the initial share capital of Rs. 2 crores, of which Pakistani investors hold shares amounting to Rs. 1.2 crores, with American investors contributing Rs. 30 lakhs and a Japanese investing group comprising the 12 Japanese foreign exchange banks putting up Rs. 20 lakhs.

There were announcements concerning other development projects in the east last week. In a joint statement, the Telegraph Construction Company and British Insulated Callender's Cables announce the formation of a company, Malayan Cables Ltd., in the Federation of Malaya with an initial authorised capital of 5 million Malayan dollars. A factory is being erected in Kuala Lumpur which, at the outset, will produce solid and stranded overhead conductors and thermoplastic and rubber insulated cables. In due course, the scope of manufacture will be extended to other types of cable. The British sponsors will provide technical and commercial advice to the company. In Burma it is expected an agreement will be signed shortly between the Government and the British-owned Mawchi Mines for the joint operation of the mine in east central Burma containing the largest wolfram deposit in the world. The Burmese Government, it is expected, will participate on a 50-50 capital basis. Finally, Messrs Binnie, Deacon and Gurley, the London civil engineering consultants, are to design and supervise the construction of an earth dam on the river Jhelum in Pakistan to irrigate 3 million acres and supply about 300,000 kilowatts of electrical power. Believed to be the largest dam of its kind in the world, it will take eight to ten years to complete and cost about £50 million.

Brevities

Two leading tea producers, Dooars and Empire of India and Ceylon, have decided not to pay the half-yearly dividends which were due on 1st January on their preference stocks and announce that the year's trading results are expected to show substantial losses because of lower selling prices.

Baraoora (Sylhet) Tea Company, having received a remittance of £37,500, being about half of the estimated profits for 1956, has decided to pay 20 percent of the forecast 22½ percent tax-free dividend forthwith.

It tops them all !

CRISIS IN THE CLOTH INDUSTRY

MILLOWNERS REPLY TO TRADE UNION CHARGES

(FROM A BOMBAY CORRESPONDENT)

THE general secretary of the Rashtriya Mill Mazdoor Sangh, Mr. G. D. Ambekar, has asked the Government to be ready to take over those textile mills which are threatening partial or complete closure. He has told a Press conference here that the "present crisis" in the textile industry is the creation of the industrialists themselves. The closure or threatened closure of mills is not the immediate problem facing labour, but the non-engagement by mills of substitute personnel to fill the posts of casual absentees. As a result of this practice, he says, some 10,000 textile labourers are idle in Bombay; the industry's claim that there is a heavy accumulation of cloth stocks in Bombay is incorrect. He estimates that production in Bombay is approximately 88,000 bales, each of 1.500 yards, a month He maintains that actual stocks with mills at present are only 111,000 bales. Industrialists ridiculed the Planning Commission's target of 18 yards *per capita* at the end of the second five year plan and insisted on a 22-yard target, although the actual increase in *per capita* consumption was only 1½ yards—from 15 to 16½ yards—during the first plan period.

The Bombay Millowners Association, quick to retaliate, has described Mr. Ambekar's statement as being replete with "mis-statements of facts." It says that the *per capita* consumption, according to figures complied by the Government, was 9.7 yards in 1950 and 15.9 yards in 1955—an increase of 6.2 yards over the five-year period. Referring to the crisis attributed by Mr. Ambekar to the machinations of "greedy industrialists" in order to secure more spindles and looms, the Association says that in the textile policy statement of 18th June, 1956, the Government had sanctioned the installation of 2.1 million spindles to enable the various sectors of the industry to achieve an increased output of 1,700 million yards of cloth by the end of the second plan. It further says that the accumulation of cloth stocks is not a "mere cry of the industry but a sober fact."

Accumulated Stocks

Meanwhile, stocks of cloth and yarn, both unsold and sold but not lifted by the trade, are reliably reported to have reached new highs. The comparison of stocks at the end of August 1956, and August 1957, is interesting (figures for August 1956 are in brackets) as shown in the following lines. Cloth, 507.5 million yards (231.5 million yards); yarn, 27.2 million lbs (4.3 million lbs); and staple fibre, 488 tons (54 tons). The production figures during January to August 1957 and 1956 (the latter shown in brackets) are the following: Cloth 3.588 million yards (3,536 million yards); and yarn 1,185 million lbs (1.082 million lbs). The increase in stocks may be due merely to larger production and need cause no anxiety unless the rise in stocks is disproportionate to the increase in output, it is pointed out.

New Shipping Concern

A Rs. 6-crore shipping line which aims to operate a regular monthly service between India and the United States is expected to open here shortly. Registered as the Indian Overseas Shipping Company Ltd., it is said to have the backing of some leading Bombay business men and former rulers, including Mr. Morarji J. Vaidya, the Maharaja of Porbundar and the Nawab of Palanpur. The necessary official sanction for the authorised capital is now awaited, it is learned. Trade between India and the United States is increasing rapidly. It accounts for nearly 15 percent of India's foreign trade, which places it second to the volume of trade done between India and Britain and which amounts to about 40 percent of the country's overall overseas trade. The managing agents of the new shipping concern will be the Varuna Syndicate (Private) Ltd., which will have as its managing director, Mr. S. N. Haji, who has been associated with the shipping industry for some 30 years.

Anxiety of Rayon Producers

The chairman of the Bombay Silk and Art Silk Mills Association, Mr. D. N. Shroff, has described the present import quota of rayon yarn at Rs. 2 a loom a shift as inadequate to keep the industry running. He says that this has caused serious concern to producers of rayon fabrics and has threatened to dislocate the industry severely. Pointing to the fact that the rayon weaving industry is treated on par with the cotton textile industry for taxation, he says that there is an urgent need that the former should be treated as a light consumer industry. The replacement of the sales tax on rayon fabrics by additional excise duty will merely raise the financial burden on the industry. He has appealed to members to participate wholeheartedly in the export promotion drive. While there is a growing shortage of rayon yarn on the one hand, the productive capacity of the rayon weaving industry, on the other, has considerably increased in recent years. The report of the Office of the Textile Commissioner shows that there are 47,000 looms registered now against 38,000 in 1954. This means that the rayon weaving industry's productive capacity is much higher than the estimated 600 million yards, but that this capacity cannot be fully utilised due to the shortage of yarn, thus limiting actual production to about 400 million yards during the past year.

New Pharmaceutical Projects

Three major pharmaceutical projects designed to cover a wide range of national needs in basic and synthetic drugs, alkaloids, anti-biotics and vitamins are to be set up by the Central Government in 1958. This was said here by the Central Minister for Industries, Mr. Manubhai Shah, when inaugurating the tenth session of the Indian Pharmaceutical Congress.

Tisco Shareholders Want Bonus Shares

A group of equity shareholders of the Tata Iron and Steel Co. Ltd. has asked the management for a bonus issue in the ratio of one share for every four shares as the company completes 50 years of operation. The shareholders point out that the Central Government, the managing agents and labour get their due share while they are the only class who have no agreements and no unions and depend solely on the goodwill and fair-mindedness of the agents. As those who provided the company with financial support from the commencement, they have suggested the issue of bonus shares on the following lines: "The total number of ordinary shares of the company is 2,570,000 and to distribute one free bonus share for every four shares held requires issuing 642.500 shares which means issuing capital of the value of Rs. 4,81,87,500. There are already in the share premium account two sums collected from the shareholders, that is, Rs. 96,92,000 collected as premium on deferred shares and Rs. 3,78,29,970 as premium on ordinary shares, making in all Rs. 4,75,21,970. Thus if it is decided to issue one new bonus share for the present four shares held, there will be a temporary deficit of only Rs. 6,65,630, which can very well be appropriated from the same account for the time being and can be adjusted later against the amount of Rs. 7,20,030 to be collected as premium on the unissued 24,001 shares. Ultimately there will be a surplus of Rs. 54.500 in the premium account. Thus the bonus shares can be issued without any hitch or burden. The bonus tax is not leviable on shares issued from the share premium account. Recently Scindia Steam Navigation Co. Ltd., and the Punjab National Bank Ltd. issued such shares to their shareholders without payment of any bonus tax." The suggestion is to be considered by the board of directors.

Dividend Hopes for B.B. Petrol

The chairman of the British Burmah Petroleum Co. Ltd., Mr. Tricumdas Dwarkadas, has predicted the possibility that the company will recommend a dividend to shareholders for the year ended 31st March, 1958. He expects that the management fees for the year will be less and that the interest on 525 redeemable preference shares received from the British Burmah Petroleum Co. (South Africa) (Proprietory) Ltd. as a result of the re-organisation of the capital of that company will amount to £35,000. He has pointed out that the declaration of dividend was not recommended for the past year because of the diminution in value of the share investments to the extent of £99,772, mainly due to the holding in the B.B.P.S.A., which stood at £701,263 as at the end of March 1956, being written down to £630,000. The position in Burma has remained static. There has not been any heavy fluctuations in the shares which are valued at £359,820.

Better Results of Kirloskar Electric

The Kirloskar Electric Co. Ltd. has recorded a profit of Rs. 5.42 lakhs for the year ended 30th June, 1957, against Rs. 4.36 lakhs in the preceding year, after providing Rs. 8.75 lakhs for taxation. Sales rose steeply from Rs. 1.08 crores to Rs. 1.70 crores. The directors have recommended a higher dividend of 7½ percent, free of tax, against 6 percent in the preceding year. The production of electric motors and transformers recorded further progress during the year and the demand for these products continues to be satisfactory. Good progress continued to be made in the company's expansion programme. Apart from normal expansion of production in existing lines, the company has schemes on hand for new lines of manufacture, all of which will need additional finance. The directors, therefore, propose to issue additional capital amounting to Rs. 5 lakhs.

Oilseeds Quiet

In the Bombay oilseed market, castorseed staged a poor start while groundnut, linseed and cottonseed ruled more or less quiet during the past week. Castorseed futures registered a sharp fall on the opening day, touching new lows of the season. Due to the prevailing disparity in the Indian quotation and the price quoted by competing countries, it was generally felt by shippers that India will not be able to book any appreciable business with foreign countries, particularly with the United States. The export of castor oil in 1957 exceeded 40,000 tons and it will be difficult to repeat the performance in the new year, it is anticipated by trade circles. Castorseed May delivery opened at Rs. 140.75, declined to Rs. 139 on heavy selling, and closed at Rs. 141.75. Ready Madras and ready Kanpur moved from Rs. 29.25 to Rs. 29.37, and Rs. 28 to Rs 27.85, respectively. Oil B.S.S. was quoted around Rs. 16.25, while oil commercial was quoted between Rs. 14.69 and Rs. 14.75. Groundnut oil attracted the attention of vanaspati producers, while crushers covered their sales of oil by the purchase of spot groundnut. One crusher purchased about 1,000 tons of groundnut delivery up to 20th January at Rs. 32.12 to Rs. 32.37. Groundnut February delivery commenced at Rs. 158.50, declined to Rs. 157.50 on selling, and closed at Rs. 159. Bold ready was wanted at around Rs. 32.25, while Commercial R. steadied from Rs. 33 to Rs. 33.75. Khandesh quality steadied by 25nP to Rs. 33.25. Oil railway receipt and ex-mill touched Rs. 17.85 and Rs. 16.12, respectively. Linseed May delivery opened at Rs. 31.56, remained subdued throughout the past week, and closed at Rs. 31.37. Bold ready moved from Rs. 31 12 to Rs. 30.87, while oil ready was quoted from Rs. 16.87 to Rs. 16.75. Cottonseed opened at Rs 95.25 and closed at Rs. 96.25.

Unsettled Conditions in Cotton

Unsettled conditions prevailed on the Bombay cotton market during the past week. I.C.C. Maglai Jarilla March 1958 opened at Rs. 663 against the previous week's closing of Rs. 664.25, and dropped to Rs. 658.75. It, however, improved to Rs. 660.75 on increased buying, declined again to Rs. 652, later recovering to Rs. 662.75 to close at Rs. 664. In the spot section at Sewri, quiet activity was noted with mill demand continuing to be meagre, resulting in easier prices. Spot rates at Broach lines declined by about 15 points. Some enquiries were, however, evident in good quality Vijay, Berar, Khandesh and Jarilla. In the export section, prices for Bengal growths declined further. It was generally felt that any export quota would not be issued before the meeting of the Cotton Advisory Board scheduled to be held on 10th January, 1958. The foreign section remained more or less neglected.

Jute

NEW HIGH LEVEL OF RAW JUTE ARRIVALS IN NOVEMBER

LITTLE OVERSEAS INTEREST IN GUNNIES

IN spite of a lack of support from the gunny markets, business was undertaken in raw jute on a fairly wide scale throughout the fortnight under review. Many buyers thought that the bottom of the market had been reached, and all the transactions concluded were at low rates. Sellers were not keen for business at these levels, due to the continued disparity between upcountry and local indications. But they invariably accepted any business offered them Imports, both locally and in the agencies, remained small, and with heavy covering taking place against existing high-priced contracts, competition was keen for the limited supplies available. An encouraging feature to the market in general was the raw jute arrivals for the month of November. The highest figures for the year are usually recorded in that month, and this year was no exception. In fact, arrivals rose to a new high level, for any one month, both those from India, and the grand total. At 810,550 bales, total arrivals showed an increase on the previous month of 196,300 bales. November figures were made up of 80,650 bales from Pakistan (an increase of 21,200 bales) and 729,900 bales from India (an increase of 175.110 bales). Total arrivals for the period July to November 1957, are now 2,443,250 bales. Out of this. 80,650 came from Pakistan—a drop of 3.250 compared with 1956—and 2.135.300 from India, which was 109,900 below 1956. This gives a total of 113 150 bales less than for the corresponding period of the last season.

The slump in the goods market continued, and price levels did nothing to encourage mills to sell. Overseas consumers showed little interest, in spite of lower rates, and no genuine business was reported. Speculation, however, was rife, and fatka activities caused alternate periods of bullish and bearish sentiment. Rumours of business with overseas parties, however small, caused repercussions far in excess of that warranted by the amounts purported to be involved. In variably the rumours proved unfounded, and the prices were discounted with almost equal rapidity Shippers were anxious to buy from mills to cover higher priced contracts, but even small premiums found mills unwilling to operate at the prices offered. Provisional shipping figures for the first three weeks of November were good, and gave bull speculators some confidence. But the resulting rise in the *fatka* was not maintained. The majority of fabrics are showing a small premium for forward shipment, and speculative buying in these positions has been going on in anticipation of foreign buyers coming into the market. There is still no indication of American interest, but prices in the forward section of the hessian market have been maintained mainly as a result of the expectation of business.

Raw Jute: There was brisk activity during the period under review, and nearly all mills took advantage of the low prices ruling to take up fairly large quantities. It is estimated that during the last fortnight, Calcutta mills bought not less than 400,000 maunds of jute. In spite of the fact that sellers represented themselves as reserved, the majority accepted any business that came their way. Imports upcountry showed no improvement and the price discrepancy between mofussil and Calcutta rates continued. Heavy covering business in the local markets against higher priced contracts prevented rates from falling, and many operators, with Rs. 2 to Rs. 3 in hand, offered small premiums to obtain their requirements. Assam jute opened on the basis of Rs. 26.50 for Assam Bottoms but improved to Rs 26.75 when small business was reported. Just before the closure for the Christmas holidays, rates advanced to Rs. 27 following heavy transactions involving several mills. General quotations remained at this level for the rest of the period, but business was put through at 25—50nP below this rate on several subsequent occasions before the close.

Business was reported in Assam jute at Rs. 26.50 to Rs. 27 a maund for December-January shipment, and Northern jute at a discount of 25nP. Assam and Northern Tossa fetched Rs. 29 to Rs. 29.50 for the same shipment. Mesta was in good demand, and prices paid varied from Rs 23.25 to Rs. 23.50 for Daissee Mesta, to Rs. 23.50 to Rs. 23.75 for Northern Mesta. Desal Mesta was also done at Rs. 23.50 to Rs. 23.75. Large quantities of Daissee were involved in the transactions and buyers paid Rs. 29 to Rs. 30 for December-January shipment. Small lots of jungli white fetched Rs. 20.50 while B. Bots sold at Rs. 18.

In Cossipore, all arrivals found ready buyers as operators attempted to cover previous contracts. High prices were paid and rates in this section were well maintained. Wagon arrivals for the period 19th to 30th December totalled 1,150 wagons, which was well above the same period last year. Arrivals consisted mainly of western fibre and mesta, good Assam jute being in short supply.

When this report was closed on Monday, 30th December, quotations for raw jute were as follows:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	27	January
Northern	27	"
Purnea Desal	24.25	"
Daissee	30	"
Assam Tossa	30	"
Northern Ex Calcutta	26	"
Local Packing	23	"
Mesta:		
Assam-Northern	24.25	"
Desal	24	"
Daissee	23.75	"
Murshidabad	23.50	"
Jungli	21.25	"
Bimli F.A.Q.	22.50	"
Pakistan Cuttings	74 a bale	"

THE JUTE MARKETS

Manufactured Goods: Rumours of overseas interest at the opening of the market on 19th December, caused a temporary improvement in the gunny market, and prices hardened. Shortage of P.D.C.'s caused ready rates to advance rapidly, but in the absence of confirmation of business prices fell back to former levels. Ready B. Twills were quoted at Rs. 106.50, which was a premium of 25nP on forward rates. Hessians were slightly better at Rs. 39.85 for ready shipment, this being at a discount of 35—40nP on forward shipment rates. Prices fluctuated rapidly over the next few days as a result of heavy speculative activity and the mills' lack of interest, and in general the tendency was downwards B. Twills dropped Re 1 while hessians lost 50nP. But rates staged a slow recovery, until just before the Christmas holidays when opening levels were reached. Again rumours played an important part in the general trend of events, and talk of business with the Sudan, Australia and Burma caused a flurry of activity in the speculative market which pushed up prices. In spite of buying pressure from shippers and local bazaar operators mills showed no interest in the market, and very little genuine business was recorded. B. Twill rates fluctuated round the Rs. 106.25 mark. but now forward shipment stood at a premium of about 50nP. There was little alteration in hessian prices, and after the Christmas holidays 40in. 10oz. hessian quotations were based on Rs. 39.40 and Rs. 40, respectively, for the near and forward positions. Over the next few days minor fluctuations indicated speculative activity. The end of the year approached with still no sign of any foreign interest, and the market dull and idle.

On Monday 30th December opening quotations were as follows:

	Dec. Rs.	Jan. Rs.	Jan.-Mar. Rs.	April-June Rs.
40in 8oz.	32.43	32.35	32.25	32
40in 10oz.	39.30	39.50	39.50	39 90
B Twills	105.80	105.80	106	106.25
Heavy Cees (Plain)	104	105.50	106	106.25
A Twills	128	129.25	129.25	129.25
Liverpools	122	121.30	121.25	121.25
Cornsacks	106.25	106.25	107	107.25

THE FOREIGN JUTE MARKETS

LACK OF BUSINESS IN YARNS AND CLOTH

(FROM OUR DUNDEE CORRESPONDENT)

FLUCTUATIONS have recently occurred in prices for raw jute, but, on the whole, there is not much actual change in the level which was prevailing some time ago. Shippers in Pakistan are occasionally reserved, and offers are not too freely made, especially of good quality material. Spinners here are complaining that jute of inferior quality is coming in and naturally, they cannot risk buying unknown marks. The delegation from the United Kingdom to the World Jute Conference has issued a statement, a résumé of what was said at a meeting of the Association of Jute Spinners and Manufacturers and the Jute Importers Association. The statement says that the main achievement of the first conference is the establishment of closer understanding between Pakistan and world raw jute buyers. It is to be hoped that the degree of mutual confidence achieved will be maintained to assist future trade relations. One of the topics for discussion at the conference was the problem of erratic deliveries of raw jute. Traders here believe that there is a prospect of simpler export procedures. Internal transport in Pakistan appears to be working under great handicaps. But the position can only be eased if the harbour and transport systems there are given the assistance from the Government. Both London and Dundee Jute Association contracts were endorsed with only minor changes. It is essential that these well-proved systems should continue. As for raw jute prices, it is felt by traders that within the limits of practical expectation much was done to clarify issues at the conference. The official statement that Pakistan is not interested in creating artificial shortages has been welcomed.

Raw jute prices are now lowest at £116 for Mill Firsts, £99 for Mill Lightnings, £89 for Mill Hearts and £77 for grade Hearts, with good marks of Daissee-2/3 from £98 and grade £91, and grade Tossa-2/3 from £105 and grade Tossa-4 £98, all c.i.f. U.K., January-February. Little fresh transactions are reported because of the lack of business in yarns and cloth. These are quiet but unchanged. Calcutta goods have ruled quiet and the lower terms quoted for shipment have led to a drop in the "depressed range" of goods. These are the ordinary 40in. 10oz. and 36in. hessians, and 45in. 11oz. The value of 10oz. has been reduced to 92s from 95s on spot in the United Kingdom. Shipment quotations are 60s for 40in. 10oz. and 46s 3.4d for 7½oz. January and 60s 3d and 46s 3d February-March, with B Twills at 160s for January to March, all f.o.b., Calcutta.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in November continued to decline. At 63 million yards, it was 12 million yards less than during October and 18 million yards less than during November 1956. More rigid inventory control by bag piece-goods users has been evident. This with business conditions generally quieter and smaller crops in some sections of the country has brought about a lower demand, particularly on the west coast. U.S. burlap stocks moved slightly upwards. At 224 million yards, 113 million yards were spot and 111 million yards were afloat stocks. Total stocks, however, are 44 million yards lower than a year before. Appearing below are two tables which include the November figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (Million yards)

1st to 20th October, 1957	20,697.2	1,135.5	21,832.7

Plantation Topics

A DIFFICULT YEAR FOR THE TEA TRADE

GROWING ANXIETY ABOUT OUTLOOK FOR COMMON GRADES

IN his address from the chair at the annual general meeting of the Calcutta Tea Traders Association, Sir Richard Duckworth said: "In his speech made at the 1956 annual general meeting my predecessor, Mr. K. Ghosh, felt justified in offering a reasonably optimistic view of the market as it then stood. I wish that it were still possible for me to do likewise, but I would be wrong to conceal the anxiety felt by members of our Association as to what the future holds in store for many of the teas on offer in this market, not necessarily for the remainder of the 1957 season sales, but thereafter.

"Dealing firstly with the market as it has so far developed this year, the disposal of the 1956 crop was completed earlier than in the previous season. By 8th April and the middle of June, respectively, Leaf and Dust had been disposed of. The buying pressure originating with the Suez crisis undoubtedly expedited the sale of the 1956 crop and falsely stimulated the demand to an extent which, it is to be feared, caused our market to suffer once the crisis had passed. The first sale of new season's teas out of the 1957 crop was held on 10th June but met with rather poor demand, an aftermath in itself of the past crisis. Darjeeling teas however were generally in fair demand and attractive invoices sold, in some cases, outstandingly well.

Limited Demand

"Otherwise, the season opened with limited demand and buying was extremely selective, teas having little or no quality being difficult to sell; on the other hand, the brighter kinds successfully maintained their prices. Good liquoring C.T.C.'s and medium Assams, as also tippy kinds, fetched high prices. During July, useful second flush teas were seen and these, together with well made whole leaf grades and Darjeelings, continued to sell well. August was a selective month but poor liquoring teas suffered and with them went secondary C.T.C. types with dull and ordinary character. Demand, on the other hand, from Middle East and Russia acted in favour of orthodox manufacture. Similar conditions prevailed in September but October saw a strengthening in the demand for 'teas for price' and clean black fannings. November showed continued strengthening in Middle Eastern types but the C.T.C. market remained weak. Legg-cut teas which had previously met with a rather restricted enquiry sold at better rates.

"The internal market has shown fair demand throughout the season but realisations have shown a general drop of a quite substantial order in comparison with last year's prices. It is not certain that this is necessarily a harmful feature for the market since in the offering of cheaper teas to the population of India it is to be hoped that the industry is storing up, albeit at some cost, a fast growing outlet for the less attractive kinds which are now finding it increasingly difficult to compete in world markets. The sale of Dusts has, from the sellers' point of view, been a source of some disappointment, particularly for the great weight of C.T.C. Dusts on offer here. It would seem that in this kind of teas, there is a risk of reaching saturation point shortly unless outlets in overseas markets can be found or our members in the packet tea industry are able to develop further demand in India for their Dust packets. It is particularly the large leafy types of Dust which have met with less demand all round, both for internal consumption and for export.

Export of Dusts

"The decision by the Government of India, which the trade learnt in October, that Dusts might be exported without export rights resulted in increased demand for black leafy Dusts and this is certainly a desirable result. It remains, however, to learn the Government's decision as to whether or not the export of these Dusts without licence is to result in any corresponding reduction in the weight of tea permitted for export with licences out of India. In the confident belief that the Government will not permit the place of good exportable teas to be supplanted in the world market by normally less attractive Dusts, we sincerely trust that no account will be taken of the Dusts now being exported without licence and we feel safe in assuming that the possible effect of any other decision on the part of the Government is fully understood.

"To summarise, it is unfortunate that the reduction in our north-Indian crop has been fully offset by the marked increase in the Ceylon production figures and by a bumper south-Indian crop. It is nevertheless to be recognised that in coming years we cannot count on a recurring shortfall in north-Indian or other world producing areas' crops and the excess world production which we have this year noted seems likely to be perpetuated or even to grow in later years unless producing countries can come together and agree as to the extent they are prepared to limit the amounts of tea they will respectively export from their territories. Otherwise, it seems more than likely that the cry will soon be 'backs to the wall' for large sections of this country's industry and more so for certain other producing countries in the world. At least we in India can comfort ourselves with the thought that a large and expanding internal market lies behind us.

"In referring to our expanding internal market it would be proper to comment that even during recent months the north-Indian industry can be thankful to internal market operators for the fact that prices in our auctions did not record as early a fall as might have been expected from a study of world sentiment and demand. The presence of these operators with their readiness to take up types and kinds which may not always be sufficiently attractive for sale overseas is beginning to constitute a degree of insurance to the Indian producer which, I am almost happy to say, is denied other producing countries. We are certain in our minds that no efforts will be spared either by the Government or by the internal distributors themselves to go on developing the ready-made market on our doorstep and it is, therefore, reasonable for the Indian producer to feel that at least in this aspect, if not in cost of production, he stands at a real advantage compared with his fellow producers overseas.

Expenditure on Publicity

"In the growth of our internal market it is right that we should look to the distributors of tea in hygienically sealed packages as the mainstay of this development. I believe it is true to say at this date that the amount of funds expended by package distributors in publicity has already reached such magnitude as even to deserve comparison with that expended in India by the Government out of funds collected from the Indian industry. Though it is true and only fit that these distributors' publicity should be aimed at the betterment of the distributing companies themselves, it is nevertheless inescapable that expenditure on publicity connected with the distribution of tea, whether properly incurred on public or private account, must in the long run contribute to the general advantage of all. It is, therefore, our hope that no steps are contemplated by the authorities in any way to restrict the activity of packet traders or so to curtail their reasonable profits that an insufficient margin is left them for their future publicity campaign. The people of India being by nature susceptible to popular appeal, there is no doubt that they form at this moment an ideal subject for well-directed propaganda in favour of the tea drinking habit and, as we are aware, this habit comes very close to the hearts of the Party in power, as a happy counter-blast to the effects of alcohol.

"Although it must be admitted that the fall in the north-Indian crop has assisted the position, it can be said that at least until November the position of both arrivals and deliveries of teas in the port had been satisfactory from the trade's point of view. As at 14th December a total of 1,639,135 chests arrived in the public sale warehouses and a total of 1,174,820 chests had been collected by buyers. Speaking, however, of the inland steamer companies through whose services arrived 73.6 percent of the total teas disposed of through this port, we feel that 1957 has proved an especially difficult year. Not only have they been handicapped by their own domestic difficulties but the situation in the port has deprived them of the main arrival point of No. 3 King George's dock. This in itself has constituted a serious source of delay in the turnround of their steamers. In late November the warehouse position reached saturation point and in spite of limited acceptance of teas from upcountry *ghats*, it has proved to be that river arrivals have exceeded the amount which can be handled through the existing sale storage facilities.

Limited Port Facilities

"In studying the position of arrivals and deliveries this year it is impossible to overlook conditions which have prevailed in a general context throughout the port of Calcutta. As the weight of import cargo has grown with the development of the second five year plan so, unfortunately, the capacity of the port to turn round ocean steamers expeditiously lagged sadly far behind, until emergent measures were taken to restore a position which by the middle of this year was verging on disaster.

"Unfortunately, in achieving this major object, it is inevitable that some sections of the interests customarily using the port must suffer and I am afraid that this is true of the tea trade. It was to release a vitally needed deep-water berth that the steamer companies and, therefore, the trade, have been deprived of No. 3 King George's Dock as an arrival point and it was also the reason that our area of warehouses for the reception of teas in the port had to be notably reduced. Whereas in 1955 it was possible for the transit and sale storage areas to accommodate in time of emergency a total of 1,057 320 chests, it is distressing to find that this year saturation point has been reached by 3rd December with a total of 844.960 chests only, but the overall position has admittedly been improved in recent weeks.

"Common teas have this year constituted the subject of continual anxiety and study for all sections of our trade, no less for the producer associations and for the Tea Board. The subject has been examined intensively by your committee which submitted a report thereon to the Tea Board and has since been represented at discussions which took place in Coonoor in August. As an association of traders, it is not within our sphere to dwell unduly on the economy of the producers concerned with common teas, but only on the need to see that they are as well placed as they can be to bring their production to this market and to dispose of it to their best advantage. Whether or not their prices are indeed to their advantage is a matter for the producers themselves and for the Government of the country. It is not that this or any other trading association can do more for the tea producer. It is certainly possibly and feasible for a trader to ensure that teas are offered in countries most likely to be propitious both to the producer and to the trader himself, but no one can arbitrarily say that a pound of tea must fetch so much or so much and compel the buyers in question to pay this price. It is for the world consumer to decide that. Within the limits set by this world price, it must remain for the producer to derive his operational costs and a fair profit for his investors.

Costs of Producers

"I have said we should not be unduly concerned in the whys and wherefores of a producer's costs, but in the long run we must be concerned if the natural development of common tea prices were, as I sincerely trust it will not, to end in the closure of estates, for in such closures would lie a grave loss of business to this association's members, sellers, brokers and buyers. Looking at this picture with the eye of a trader, it often seems to me that the almost never-ending growth of enforced costs in the form of fresh and larger taxes, octrois, duties and labour awards does strangely little to help the section of producers whose business it is to make common, or for that matter, any other kind of tea.

"This common tea business and the talk of how to better the present state of affairs sometimes sounds too much like that of the man who wanted to have his cake and to eat it. The country, on the one hand, certainly wants her cake and ensures that she gets it in the form of tax, revenue and employment; on the other hand, this—from the country's point of view—satisfactory state of affairs cannot for long continue if the producer's return is not to be commensurate with the efforts he has expended and also commensurate with returns which might be expected in other industries. Surely the position is best stated as this. The world price for a pound of common tea is perhaps Rs. 1.50 today—and that is all we can get. No intervention either on the part of our Government or on the part of this trade is going to alter that.

"At a time when the attention of the trade was in large part occupied with the seeming loss of competitive ability on the part of Indian teas in certain world markets, the survey of the industry and trade carried out by the Plantation Enquiry Commission, which was published earlier in the year, came as a disheartening reminder that the need to foster the already depleted resources of the industry and trade was not, so I believe, as widely appreciated as we might have hoped circumstances would have demanded. Although the research work of that Commission was undoubtedly valuable in some respects it may be felt that its report did not reflect a true position either of the industry's efforts to produce competitive teas or the trade's efforts to market these teas profitably to India in the face of growing world competition. The Association commented at length on those of the Commission's findings which were directly related to our trade and, at least at this stage there are grounds for some qualified relief for the fact that the business and practices of our trade appear to remain unchanged as the result of the Commission's findings. I would here express a fervent hope that there will be no attempt made on the part of any authorities concerned to introduce any substantial re-organisation of our day-to-day methods without the fullest consultations with the sections of the trade who will be concerned therein.

Export Problems

"In the meantime, there has been another Government report which has gone some way to adjust the adverse balance struck by the enquiry committee. The report of the Export Promotion Committee has been recently published and, though the report deals with Indian export problems as a whole, it has some very cogent things to say on the export of tea and the means whereby it may be expanded. Unfortunately, whereas the report makes a positive recommendation that common teas may be assisted in their struggle by a reduction in export duty, a recent announcement in the Press stated that the Central Government is not presently contemplating any such reduction. Judging from the report, it would appear that members of the committee envisaged few, if any, other alternatives for assisting these teas to face keen competition abroad. It is to be hoped that further thought will even yet be given to this proposal.

"Another interesting comment made in the report concerns the annual decision by the Government of India to limit the extent to which teas may be shipped from India for sale in the U.K. auction. The report does not gainsay the contention that the growth of auctions in India will be in the national interest. Of this I am not entirely certain myself, since the report postulates that directly comparable prices (less the cost of shipping) should be obtainable for teas awaiting shipment in Calcutta warehouses and teas placed in the London 'shop-window'. I mean of course the London warehouses. However this may be, the committee is of the opinion that in our pressing need to increase foreign exchange earnings, it is perhaps not wise to interfere with normal trade practice at present. While this Association's buyer members are not unnaturally concerned with an increase in the scope of offerings available to them, and in a desire to see that as much of the earnings accruing therefrom are gained in this country, I feel sure they will all be the first to confess that our foreign earnings must count above all to the country. For this reason, if for no other, it is to be hoped that our Government will not be tempted to press down unduly hard on the ceiling which already bears on the heads of many U.K. shippers at present."

COCHIN TEA SALES

At Dust Sale Z, 550,000 lbs of tea were on offer. There was a good general demand. Prices were about steady except for a few good mediums which were easier.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.4 percent to 107.2 during the week ended 14th December, 1957, compared with 107.6 (revised) for the previous week. The index was lower by 2.4 percent and 0.9 percent, respectively, when compared with the corresponding weeks of the previous month and that of a year ago. Lower prices of onions in Delhi (−16%), milk in Calcutta (−12%), rice in Mercara (−9%), in Balurghat (−7%) and in Sadar (Cooch Behar) (−6%), potatoes (−9%), gram in Patna and urad in Madras (−8% each), jowar in Jhansi (−7%) and in Ujjain (−5%), arhar in Patna (−7%), mustard oil in Kanpur and eggs in Madras (−6% each), gingelly oil in Bombay and mung (−5% each), fish and gur (−4% each), tea and cardamoms (−3% each) ragi (−2%) and barley, masur and sugar (−1% each) brought down the index for Food Articles by 0.8 percent to 104.3 compared with 105.1 (revised) for the previous week. The prices of onions in Calcutta (+16%), maize in Dohad (+13%), bananas in Bombay and turmeric in Calcutta (+10% each), oranges in Shillong (+9%), mustard oil in Calcutta and cloves (+8% each), rice in Hailakandi and in Shimoga, ghee in Kaithal and black pepper in Madras (+5% each) groundnut oil and coconut oil (+3% each) and wheat and salt (+1% each) showed advances. The index for Tobacco remained stationary at its previous week's level of 97. In spite of variations in the prices of castor oil in Kanpur (−5%), in Bombay (+3%) and in Madras (+2%), the index for the Fuel, Power, Light and Lubricants group remained unchanged at the previous week's level of 115. A rise in the prices of tanning materials in Calcutta (+9%), cottonseed in Amravati and raw skins in Kanpur (+6% each), copra (+2%) and raw jute and raw hides (+1% each) was neutralised by a fall in the prices of raw silk in Malda (−7%), rapeseed in Delhi (−6%), lac (−3%), castorseed and gingellyseed (−2% each) and linseed (−1%), and the group index for Industrial Raw Materials stood unchanged at the earlier week's revised level of 115.5. The index for Intermediate Products rose by 0.2 percent to 105.9 due to an advance in the prices of linseed oil and rayon yarn (+1% each). The prices of lead (6%) and zinc and tin (−1% each), however, showed declines. The index for Finished Products stood at 107.9 against 108 in the previous week. The prices of glass (window medium size) in Calcutta (+5%) and oilcakes (−2%) showed variations.

HIGHER COAL PRICES TO MEET INCREASE IN WAGES

An increase in prices of coal, ranging from Rs. 2 to Rs. 5 a ton, was granted in July 1956 and a further uniform increase of Rs. 1.50 a ton was granted in July 1957 to enable collieries to meet the commitments arising out of the wage increases and other concessions to labour under the awards of the All-India Industrial Tribunal (Colliery Disputes) and the Labour Appellate Tribunal, respectively. This was stated by the Union Deputy Minister for Labour, Mr. Abid Ali, in reply to a question in the Rajya Sabha. Asked what percentage of the mine workers earned various bonuses according to the award, Mr. Abid Ali said that about 50 percent or a little less had earned quarterly bonus.

Engineering and Transport

ACTIVITIES OF BURMAH-SHELL SURVEYED

STEADY SUPPLY OF PETROLEUM GOODS DESPITE SUEZ TROUBLE

THE *Survey of Activities*—1956 published by Burmah-Shell deals with the salient features of its activities during that year. The total consumption of petroleum products in India increased by approximately 8 percent. This rise was largely reflected in two products, namely, kerosene, which is extensively used as an illuminant in the villages where 70 percent of the population live, and high speed diesel oil which is required both by the rapidly expanding diesel transport and in the construction of industries. Supplies of petroleum products were well maintained throughout the year in spite of the closure of the Suez Canal in the last two months of the year. Prices of the products remained steady in sharp contrast to the wholesale price index, which rose from 368 to 429 during 1956. The period was the first full year of operation of Burmah-Shell Refineries Ltd. in Bombay. All the motor spirit and furnace oil and most of the high speed diesel oil which the company sells in India is now being produced in the refinery; sufficient kerosene and light diesel oil is produced for the Bombay rail-fed supply area. The pattern of supply has changed, for, whereas imports of all products used to be made direct to the main installation in Cochin, Madras, Visakhapatnam, Calcutta, Okha and Kandla, now coastal transfers by tanker from Bombay are being made for motor spirit, furnace oil and high speed diesel oil. Over 820,000 tons of products were transferred by this means last year. The company's distribution network of seven installations and 579 upcountry depôts is being improved and expanded. For example, a large new depôt with a storage capacity of over 3,700,000 gallons was opened in Shakurbasti near Delhi during the year to enable full use to be made of the shortest supply route to Delhi area *via* Kandla. Referring to the financial results of Burmah-Shell and its supplying companies, the pamphlet says that out of the gross proceeds amounting to Rs. 115.23 crores, no less than 28.23 percent was paid to the Government in the shape of duties and taxes; the f.o.b. value of the oil accounted for 35.80 percent of trading receipts; distribution charges for 28.30 percent and ocean freights for 4.80 percent. The balance amounting to Rs. 3.31 crores, or 2.87 percent of receipts, represents earnings after payment of Indian and U.K. taxes.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Millls Association, sugar production during December was 104.000 tons (excluding 31,000 tons produced prior to November 1957 for the 1957-58 season), against 97,500 tons (excluding 18,500 tons produced prior to November 1956 for the 1956-57 season) during the corresponding period of last season. The offtake of sugar from factories during December 1957 was 151,000 tons, against 152,000 tons during the corresponding period of last season. The total closing stocks of sugar with factories on 30th November, 1957, were 410,000 tons, as against 488,000 tons on the same date of last season.

Head Office: Oriental Buildings, BOMBAY-1.

Calcutta Markets

FREIGHT MARKETS REMAIN QUIET

DURING last week, the chartering market remained weak. Trans-atlantic coal rate has again fallen. Two vessels have been fixed Hampton Roads to Rotterdam at 25s a ton. In view of the lack of cargoes, there is no sign of improvement in the near future in the freight market. Far Eastern trades were also quiet. The Australian grain shippers were not in the market, but there were enquiries for *Liberty* size and for two 5,000 tonners for coals from Sydney or Newcastle to one safe port Korea; ideas 42s 6d f.i.o. and trimmed. Two London-controlled vessels were fixed for U.S. wheat to Karachi, but charterers are now looking for tonnage under American flags only for the same trade. The last fixture was concluded at $(U.S.)10 3,500 tons, 10 percent cement Karachi-Chittagong paid 41s f.i.o. and stowed. Marmugao shippers concluded a fixture at 43s f.i.o., but further tonnage was reported agreed for west Italy at 37s 6d. The time charter section also did not show any improvement—a motor vessel 9,148 tons d.w delivery Antwerp voyage out Persian Gulf was fixed at 21s 6d.

HIDES AND SKINS DULL

The market was dull. Stocks were higher than in the previous fortnight.

Bazaar Sales

(Between 17th December and 30th December, 1957)

Cowhides: Wet Salted (Ord.) 24,600 pcs. on the basis of Rs. 10.37 to Rs. 11.75; Wet Salted (Slaughtered) 21,500 pcs. on the basis of Rs. 13.50 to Rs. 21.

Goatskins: Wet Salted 49,000 pcs. on the basis of Rs. 325 to Rs. 335, Rs. 360 to Rs. 370 and Rs. 400 to Rs. 415; Assam-Dinajpur 11,000 pcs. on the basis of Rs. 295 to Rs. 335; Purneah-Kissenganj 8,000 pcs. on the basis of Rs. 380; Patna-Pakur (Kurbani) 2,000 pcs. on the basis of Rs. 280; Patna (Heavy) 3,000 pcs. on the basis of Rs. 365.

Bazaar Stocks

(30th December, 1957)

Cowhides: Wet Salted 1,22,000 pcs.

Goatskins: Wet Salted 6,000 pcs.; Assam-Dinajpur 96,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 308,000 pcs.

SHELLAC QUIET

During the week ended 27th December, the market was steady at the beginning and quiet at the end. The range of quotations was as follows:

Pure Bottonlac	Rs. 90 to 91 buyers.
Lemon No. 1 Shellac	Rs. 92 done and buyers; 93.50 to 92 buyers.
Lemon No. 2 shellac	Rs 87.50, 90 done and buyers; 88 to 87.50 buyers.
F.O. Std. 1 Shellac	Rs. 80.50, 83, 82, 82.50 buyers.
Pure TN Shellac	Rs 75 to 77 basis buyers; 76.50. 75.50, 76 buyers.
4% I.T.N. Shellac	Rs 64.50 value; 64 done and buyers; 64. 64.50 value.
No. 1 Kusmi Seedlac	Rs. 80 to 85 buyers.
No. 2 Kusmi Seedlac	Rs. 75 buyers; 80 to 79 value.
Fine Bysaky Seedlac (Manbhum)	73.50, 75, 73.50 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 70 buyers, 72 done and buyers; 71 to 69.50 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 63.50, 64.50, 64 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 57 buyers; 59 done and buyers; 58. 58.50 buyers.
Kireelac	Rs. 24.50 buyers.

COMPANY AND PUBLIC NOTICES.

THE BORMAH JAN TEA COMPANY (1936) LIMITED.

NOTICE is hereby given that the 22nd Annual General Meeting of the Shareholders of The Bormah Jan Tea Co. (1936), Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 16th January, 1958, at 3-00 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. R. K. Dutt the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 3rd January, 1958 to 16th January, 1958, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3 Netaji Subhas Road,
Calcutta. 18th December, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividends, if declared, will be made on or after 27th January, 1958, only to those members whose names are registered in the Books of the Company on 16th January, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE TELOIJAN TEA COMPANY, LIMITED.

NOTICE is hereby given that the 36th Annual General Meeting of the Shareholders of The Teloijan Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 16th January, 1958, at 3-30 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. D. P. Kanoria, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and, if thought fit, to pass the following resolution:—

"That Mr. S. K. Mukherjee be and is hereby appointed a Director whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 3rd January, 1958 to 16th January, 1958, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3 Netaji Subhas Road,
Calcutta. 18th December, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 27th January, 1958, only to those members whose names are registered in the Books of the Company on 16th January, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT.

Mr. S. K. Mukherjee was appointed by the Board as an Additional Director in August 1957 and vacates office at this Annual General Meeting under Article No. 111 of the Company's Articles of Association and Section 260 of the Companies Act, 1956. The resolution mentioned in item No. 5 of the above Notice is intended to effect the re-appointment of Mr. Mukherjee as a Director liable to retirement by rotation.

BAGHMARI TEA COMPANY, LIMITED.

NOTICE is hereby given that the 39th Annual General Meeting of the Shareholders of Baghmari Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 16th January, 1958, at 3-10 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. O. N. Goenka, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. O. N. Goenka be and is hereby re-appointed a Director of the Company."

Special Notice dated 12th December, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. O. N. Goenka is presently a Director of this Company which is a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 3rd January, 1958 to 16th January, 1958, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3 Netaji Subhas Road,
Calcutta, 18th December, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 27th January, 1958, only to those members whose names are registered in the Books of the Company on 16th January, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE BENGAL PAPER MILL CO. LTD.

NOTICE is hereby given that the Board of the above Company has declared the following Interim Dividends on the undermentioned shares of the Company for the year ending 31st December, 1957, payable on or after 15th January, 1958, to those members whose names are registered in the Register of Members of the Company on 15th January, 1958. Dividend Warrants will be despatched to members and no application to the Company is necessary.

Ordinary Shares	6‰
Cumulative Preference Shares (Free of Income Tax)	3½%
'A' Cumulative Preference Shares (Free of Income Tax)	3½%
'B' Cumulative Preference Shares (Subject to deduction of Indian Income Tax)	3%

Payment of these dividends is not to be regarded as an indication of the amount of final dividend, if any, which the Board may recommend. Any such recommendation can only be made when the final results of the year's working are known.

Notice is also hereby given that the Transfer Books and the Register of Members of the Company will be closed from 6th January, 1958 to 15th January, 1958, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
D. MANSON,
Secretary.

21, Netaji Subhas Road,
Calcutta, 24th December, 1957.

RAJAHBHAT TEA COMPANY, LIMITED.

NOTICE is hereby given that the 48th Annual General Meeting of the Shareholders of Rajahbhat Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 30th January, 1958, at 3-10 P.M. for the following purposes:—

1. To consider the Profit & Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 16th December, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is presently a Director of Amlukhie Tea Co., Ltd., which is a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2(3) (c) (1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors, and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th January, 1958 to 30th January, 1958, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 27th December, 1957.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 7th February, 1958, only to those members whose names are registered in the Books of the Company on 30th January, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

McLEOD & CO. LTD.

AS the publication of the Accounts of this Company for the year ended 31st December, 1956, has been unavoidably delayed, the Directors have declared an interim dividend at the rate of 8% or Rs. 8.00 per Ordinary Share and at the rate of 3% or 30 nP per Deferred Ordinary Share on account of that year, payable on or after 15th January, 1958, to those persons whose names appear in the Company's Register of Members on the 30th December, 1957, as the registered holders of those shares.

By Order of the Board,
C. HOCKLEY,
Secretary.

THE TINGAMIRA TEA SEED COMPANY, LIMITED.

NOTICE is hereby given that the 33rd Annual General Meeting of the Shareholders of The Tingamira Tea Seed Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 30th January, 1958, at 3-00 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st March, 1957, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. Max. H. Burton, who retires by rotation at the Meeting and who seeks re-election and, in this connection to consider, and if thought fit, to pass the following resolution in conformity with the provisions of Section 281 of the Companies Act, 1956:—

"Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Mr. Max. H. Burton who has attained the age of 66 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed in Section 280 of the said Act shall not apply to him".

Special Notice of intention to propose the foregoing resolution has been received by the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th January, 1958 to 30th January, 1958, both days inclusive.

(S) (Option to repay at par on a month's notice). At any time after 1st October. 1966.

(T) (Option to repay at par on 6 months' notice) after 31-3-63.

(U) (Option to repay on 3 months' notice). At any time after 31st December 1960.

(V) May be redeemed at par on 30-6-66 or any subsequent interest date on one month's notice.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O., Po., F and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

GREATER REALISM FROM THE I.N.T.U.C. PRESIDENT

THE RELATIONSHIP BETWEEN PRODUCTION, PRICES AND WAGES

FEW will disagree that 1957 has been a poor year for employer-employee relations, in Government establishments as well as in private industry. Whatever the statistics for the full year may show about the total number of man-days lost in industrial disputes, the fact remains that in terms of bickering, argument and animosity labour relations have touched a new low in India's post-independence history. For this, the Government's inability to evolve a rational labour policy has been primarily responsible. For years, this policy has consisted of stumbling along from one expedient to the next, of appeasing organised labour at the cost of the country as a whole, and of relying on exhortations when effective action has been urgently necessary. But during 1957, three major factors have intervened to show up the inadequacy of this policy and to pinpoint the grave dangers inherent in it. Firstly, there has been a general election which gave fresh impetus to political manoeuvring in the trade union movement, although with less damaging consequences than was at one time feared. Secondly, there has been a sharp rise in prices, especially of essential consumer goods, which has been brought about by the Government's inflationary policies and which has become a widespread cause of labour unrest. Thirdly, as industrial indiscipline has coincided with a period when the second five year plan has run into trouble in other ways, the prospect has come to be clearly seen that the plan will be left an even worse wreck if a labour policy more closely attuned to the needs of a developing economy cannot be framed. From this re-thinking has emerged a new appreciation of the problems involved; and the speeches made by Mr. G. L. Nanda, Central Minister for Planning and Labour, and Mr. S. R. Vasavada, president of the Indian National Trade Union Congress, at the I.N.T.U.C. annual session in Madurai last week offer signs of a new and refreshing sobriety in circles where that quality has not always been clearly evident.

Both Mr. Nanda and Mr. Vasavada have emphasised that the most important need at the present time is increased production. Low productivity in agriculture is primarily responsible for the shortage of food which, by raising prices, tends to reduce the workers' standard of living in real terms. But, as Mr. Nanda points out, the feature is not confined to agriculture; low productivity in industry too is a major handicap for economic progress. It is in the light of this fact that demands for better amenities, more social services and higher returns for labour have to be considered; there is, in addition, the need to set aside resources for investment, on which a future rise in living standards depends. Mr. Vasavada has put the matter even more succinctly by saying: "Our problem is that we want to raise the living standards in this country by increasing our real wages and thereby increasing our purchasing power. This can be achieved only by higher and better production." His remarks on the relationship between wages and prices are especially important: "A mere wage increase is not going to help them (industrial workers). Reduction in prices is absolutely necessary and this is possible only by stepping up production. If the level of production remains where it is and if the wages rise, we will be paying more for our consumer goods, and our economic position will not only remain the same but may even deteriorate." Some may ruefully reflect that it is only a year since certain I.N.T.U.C. leaders, in their pre-election fever, were asking for a blanket 25 percent increase in wages in a number of major industries. It is perhaps uncharitable to recall that their inflated demands brought them no electoral benefit; the greater measure of realism which has now come to prevail, as reflected in Mr. Vasavada's speech, suggests that the inexorable facts of economic progress are being more keenly appreciated, in relative isolation from the pressures of political expediency.

If the fundamental relationship between wages, prices and productivity were better understood in the trade union movement, the gain to the country would be immeasurable. No enlightened employer is opposed to an increase in wages and amenities for labour as such; but the fact has to be faced that any increase must be backed by a rise in productivity in order to maintain the working of an enterprise or an industry at an economic level. The condition of the cotton textile industry, which enjoyed relative prosperity until recently but no longer does, has pinpointed the dangers of allowing fiscal and labour burdens to rise too high: productive capacity is gradually being discarded by the shutting down of uneconomic units, so that an industry which in any progressive, underdeveloped economy should be a vigorously expanding one, is now actually showing a tendency to shrink. The same applies to India's two biggest foreign-exchange earners, the jute and tea industries; units have gone out of production, or are threatened with extinction, because a rise in labour charges has left them unable to compete in international markets where low-cost producers from other countries have become increasingly dominant. The shrinkage in employment that must inevitably result if more and more units become uneconomic can only be delayed, not stopped, by legislation of the sort (on retrenchment benefits, for instance) so dear to the heart of Mr. Vasavada. Labour leaders have still to learn the lesson that the best assurance of security for the workers they represent lies in enabling productive enterprise to remain economic and efficient, and in enabling it to keep its cost structure flexible.

If Mr. Vasavada's speech represents the beginning of a sincere effort on the part of the I.N.T.U.C. to shift the emphasis in its activities from raising wages to reducing prices, it deserves warm support. But it is open to question whether the methods by which it is intended to bring about a reduction in prices are soundly conceived by Mr. Vasavada. It is essential, as he rightly says, to increase production, and in this context efforts to raise the output of food and other essential consumer goods deserve the highest priority. But it is doubtful whether the most rational increase in production, as far as industry is concerned, can be achieved through Mr. Vasavada's suggestion that there be "complete decentralisation.....giving productive employment to all able-bodied men in this country." Self-interest alone would indicate that the trade union movement might well hesitate before suggesting such a policy; most of its strength derives from the organisation that is possible in the larger industries, and it is not difficult to foresee that decentralisation could substantially weaken trade unions of the sort over which it is Mr. Vasavada's pleasure to preside.

Decentralised industry undoubtedly has an importance in the general economic set-up, but that importance has been greatly exaggerated in recent years. A major reason, for instance, why the production of cloth remains inadequate and its price too high is to be found in the efforts to decentralise that industry—by bolstering inefficient units with special facilities on the excuse that employment is thereby increased. The "complete decentralisation" of the textile industry (such as Mr. Vasavada appears to favour) could alone ensure a substantial rise in cloth prices, and therefore in workers' living costs (which he says he is anxious to avoid). The I.N.T.U.C. president's speech is an interesting example of the way in which charming theoretical concepts still tend to befog the real aims of economic planning. It remains to be seen to what extent the latest reorientation of I.N.T.U.C. policy is supported by similar re-thinking in other sectors of the trade union movement. At the moment, the prospects for such re-thinking do not seem very hopeful. Much of the inspiration for trade union activities is essentially political, and has nothing to do with workers' claims for social or economic justice. The sobriety expressed by the I.N.T.U.C. may be but only one aspect of the sobriety which has featured Congress Party circles generally since the discovery that the second plan cannot be fulfilled. But the inability to fulfil the plan, and the need to salvage as much of it as possible, cannot be expected to produce similar reactions among the opposition Parties. Their power in the trade unions, and their continuing intransigence, may remain to be reckoned with.

INDIA AND THE COMMONWEALTH

ONLY men totally ignorant of the ways of the British can ever have harboured apprehensions that a change of Government in the United Kingdom after 1947 might in some unstated manner alter Indo-British relations. Sir Winston Churchill, a consistent and unsparing critic of Indian nationalism, was the Prime Minister of the first Conservative Government after Indian independence. New Delhi never once had occasion to complain that there had been the slightest change in Whitehall's attitude to this country. And now Mr. Harold Macmillan, a Tory, is the first Prime Minister in office to visit India. The welcome he received in the Indian capital yesterday was not as tumultuous as the reception given to some other visitors. An ovation of that order would probably have embarrassed Mr. Macmillan instead of pleasing him. It is not, however, the size of the crowd at the airport which is the surest indication of the sincerity of a reception. Old friends reinforcing old ties can do without the fanfare of publicity.

There have been times in the past ten years at which questions have been asked here: what has the Commonwealth done for India? Especially after the Suez *débâcle*, India's attitude to which was widely misunderstood in Britain, there were some to ask in London: what has India done for the Commonwealth? Both queries, with built-in answers, were however confined to a few cynics in both countries. Tabloids screamed and the hotheads howled, but Commonwealth co-operation went on even in the political field where there are important and mutually recognised differences between London and New Delhi. These differences do not portend the end of the Commonwealth. Quite the contrary. They are, rather, a measure of the strength of the Commonwealth, for it is difficult to think of many associations which would have survived these.

Neither Britain nor India has a right to take the Commonwealth for granted and then pursue policies as though the other did not exist or did not have to be consulted. There have been instances of such behaviour on the part of each at different times, but there are indications that the folly of this is now better realised in both capitals. What Mr. Macmillan will discuss with Mr. Nehru in the next few days nobody knows. It is known that there is no fixed agenda, which should not be

allowed to mean that there are not specific points to be ironed out. It should be added immediately that these specific points should relate more to the present and the future than to the past. On his return from Washington recently, Mr. Macmillan spoke of the need for inter-dependence between Britain and the United States. The value of that alliance is not in question. At the same time, there is at least as much need for inter-dependence among the members of the Commonwealth, and the current visit to some Commonwealth countries by the Prime Minister of the United Kingdom can do nothing but good.

The Commonwealth Parliamentary Conference, which met early last month in New Delhi, is only one of the many institutions that work quietly and bring the different members of the Commonwealth together from time to time. Mr. Nehru spoke of the "common temper of democracy" as the factor that united the members of the Commonwealth. With due respect to the Prime Minister, this is not a complete definition—as indeed it cannot have been meant to be. South Africa is an imperfect democracy, and Ghana in recent months has done several things inconsistent with democracy as it is understood in, say, India. It may be better to recognise that the Commonwealth is not an association which lends itself to a precise definition. To reiterate a point made before, it does not require a definition for existing still in a very real sense.

* * * *

It is in the economic sphere that unspectacular but steady co-operation has gone on between India and the Commonwealth. The Colombo Plan may not have received the publicity accorded to expansive gestures from certain countries, but the good work it does, especially in technological exchanges, continues just the same to the advantage of all parties, the under-developed countries in particular. The larger part of foreign investment in India is still British in origin, and India is without a doubt one of Britain's most valuable markets. Many think that primary producers such as India may be heading for a crisis in the not-too-distant future, and Britain has her own problems in the matter of exporting her manufactures which will not all be solved with the emergence of a European Common Market. The need for greater co-operation in the Commonwealth will, if anything, increase in the years to come.

This co-operation will be the easier to achieve if there is mutual recognition that there are areas in which the Indian point of view will in the nature of things be different from the British, although these differences are capable of unnecessary exaggeration. Even here there is more in common between the two countries than is usually believed. There has been, for instance, no retreat from India's well-known stand on what is still called colonialism. But, perhaps chastened by the experience of Egypt and later of Indonesia, India no longer flogs the dead horse of imperialism quite as hard as before. Economic difficulties have a semblance of justification only when they impart to the sufferer some political realism, and Mr. Macmillan must have received ample evidence in London that India is firmly moving in that direction.

* * * *

While opponents of the Commonwealth tie, both here and in Britain, lose their case by not being able to prove that any harm has come to either by maintaining it, there may be good reasons why the positive aspects of the connection should be in the public view a little oftener and more steadily. It is entirely justified that diplomacy, in which field there is much greater co-operation than many know, is not conducted in the open; that American methods, now the practice in the United Nations, have led to nothing but disaster or open acrimony making hard agreements harder to reach. Wisely, the Commonwealth acts quietly in its unseen but continuous efforts to solve disputes both inside and outside its own not inconsiderable area.

After all is said and done, the Commonwealth is the only alliance in which Hungaries do not happen and unrepresentative *régimes* do not have to be propped up on bayonets and/or largesse. On its future may depend the future and pattern of other alliances. The extensive visit Mr. Harold Macmillan has imaginatively planned has the great opportunity of showing to the members of the Commonwealth that Britain wholeheartedly accepts the new world she lives in, and to the rest of the world that domination by fear—or lure—is no substitute for free and equal partnership.

THE COST OF DEAR MONEY POLICIES

REASONS FOR IMPROVEMENT IN U.K. EXTERNAL FINANCES

It might be thought that the United Kingdom's financial experience in the last quarter of 1957 would have settled, one way or the other, the dispute between the advocates and the antagonists of dear money. In fact, the experience itself is inconclusive, and the two factions are no nearer to agreement on the question whether the qualified improvement in external finances since the crisis of August-September is attributable primarily to dear money or to other causes. There is no doubt that the drastic measures of September, especially the raising of Bank rate from 5 percent to 7 percent, impressed opinion abroad and stopped the flight from sterling, even if they did not fully restore confidence in the currency. But critics of the present policy in London are disturbed by the idea that internal policy can be so dictated by external events as it was in 1957. A dramatic gesture, such as a sharp increase in Bank rate, may demonstrate a firm intention to defend the currency, but the other implications of such an act should not be ignored. A sudden, hasty act that is intended, perhaps, to be mainly psychological may have practical effects that conflict with its main purpose.

From this point of view, the objection to high interest rates is not so much that they restrict activity at home—which may be necessary for the sake of the balance of payments—as that they raise the cost of the overseas balances held in London, thereby imposing additional burdens on the balance of payments. The sterling balances relevant to this calculation amount to some £3,500 million, and the cost of servicing them is now nearly £150 million a year more than it was immediately before the policy of cheap money was abandoned (or, at that time, modified) in 1951. This figure for additional expenditure—which is, of course, entirely unproductive—may not be very large in relation to the U.K.'s total expenditure abroad, but in relation to the balance of payments it is very large indeed. The official aspiration is a surplus of £300 million to £350 million a year, and the actual surplus is usually much less. In unfavourable circumstances the additional expenditure attributable to high interest rates could make the difference between surplus and deficit. In any case, it wipes out the entire earnings abroad of the U.K.'s financial services (insurance, banking, broking, etcetera), which the Treasury has lately estimated—rather optimistically, some outsiders feel—at £125 million for 1956.

* * * *

If the only purpose of defending the pound were to maintain Britain's status as an international financier, so that it could earn a good net income from its financial services, raising Bank rate would evidently be an unsuitable method of defence. It may be that the recently-increased cost of Britain's services, to those who use them, has increased the income from them, but it has certainly not increased it enough to offset the extra cost of servicing the sterling balances. However, there are other reasons for defending the pound, such as the need to defend the standard of living at home and the obligation (not always observed in the past) to maintain the real value of debts owed abroad. It may be said that the cost of high interest rates is unimportant if high interest rates can effectively defend the pound. The advocates of "dear money" assert that the rise in Bank rate has already proved itself effective for the purpose: the antagonists of such a policy remain sceptical. There is no scientific proof one way or the other, and the difference of opinion arises mostly from a difference of interpretation of the evidence.

It is a fact that Britain's external finances were in a very precarious state in 1951, and that after Bank rate had been raised late in that year and again early in 1952 the position improved rapidly. *Post hoc, ergo propter hoc* is not, however, sound reasoning. The recovery was quite possibly due more to other factors than to the raising of Bank rate. If the main cause of the deterioration in 1951 was the high cost of imports in the Korean boom, the subsequent improvement can reasonably be attributed to the cheapening of imports in the post-Korean slump. It may be that after this experience, which seemed superficially to show that Bank rate was an effective instrument, the British authorities felt unmerited respect for high Bank rates. Having lowered the rate in the meantime, they raised it again early in 1955—and again the protagonists of dear money could argue that the deterioration that required a readjustment of policy would not have occurred if Bank rate had not been prematurely reduced. Another move upward followed a month later, yet another a year later. Thus, by early 1956, the *régime* of dear money was firmly established.

* * * *

In that phase, however, the results of raising Bank rate were decidedly unimpressive, and the reduction in February 1957 from the postwar peak of 5½ percent, reached a year earlier, to 5 percent suggested that the authorities were disillusioned with the policy rather than satisfied that the policy had done its work. Yet only seven months later they put the rate up dramatically to 7 percent, the highest rate not only of the postwar period but of any year since 1921. The British authorities were certainly influenced last September not only by the immediate crisis but also by the rises in other countries' Bank rates in the preceding months. Since September, however, Britain's money rates have generally been above the world level—the more so recently, as other countries' rates have tended downward. Very rarely in the hundreds of years of the Bank of England's history has Bank rate remained above 6 percent for any considerable time, but at present the authorities show no inclination to reduce it from 7 percent. It may, however, be questioned whether the authorities realised all the implications of their "dramatic gesture" last September, and whether that "gesture" had the intended effect on opinion abroad. The fact is that sterling did not seriously begin to recover until the seasonal influences were favourable, and until there were signs that the rise in British wages might be halted.

COAL PRODUCTION AND RESERVES

THE address of Mr. D. C. Driver, chairman, at the recent annual general meeting of the Coal Consumers Association of India, contains an interesting survey of coal problems. Mr. Driver shares the belief that because of the many adverse factors which producers have had to face, it might take a year or 18 months beyond the end of the second plan period to achieve the output target of 60 million tons annually. Some of the important new mines in the public sector will be worked by the open-cast method; the potentialities of this method are considerable, and it has yielded encouraging results in the U.K. Mr. Driver says that the rigidity shown by officials in interpreting Government rules and regulations has proved frustrating for the private sector. Many of these rules and regulations can now be relaxed because new discoveries of enormous deposits of coking and non-coking coal of good quality have been made by the Geological Survey. Estimates based on these discoveries have brought a revolutionary change "in the size of the country's reserves of good coal, coking and non-coking", and should "alter fundamentally the outlook on Indian coal problems of conservation, distribution and transport." It is unnecessary now to enforce rigidly the rules and regulations on such matters as the mining and opening of new mines, and the conservation of coal. The rules were framed on the assumption that reserves of coking coal and good quality non-coking coal were very limited. Now they need to be relaxed, and the Coal Areas Acquisition Act passed recently by Parliament needs to be amended. In view of these discoveries and in view of the proposal to raise output during the third plan period to 100 or 120 million tons (160 to 200 million tons in the fourth plan period), the nationalisation of private mines becomes unnecessary. By the end of these plans, he points out, most of the important private collieries will have been exhausted and production from the State collieries will exceed the private output. The Government has enough power already to prevent the occurrence of "any untoward activity".

* * * *

The real problem now is the management of State collieries. They are to be expanded enormously, but their working has been unsatisfactory. So Mr. Driver suggests a new form of management for them. He feels that regional and autonomous corporations should be set up in coal-producing States, the shareholders being the State concerned, the Centre and the general public. The boards of directors should consist of the representatives of Central and State Governments, the Central Fuel Research Institute, the private sector and consumers. The day-to-day management of State collieries, however should be entrusted to experienced managing agents from the private sector. This, Mr. Driver maintains, will help improve efficiency. Discussing the activities of the Central Fuel Research Institute, he compliments it on its research work and pilot experiments concerning the problem of replacing washed coals by weakly coking or semi-coking coals from the Raniganj and Madhya Pradesh coalfields, with or without the admixture of coke breeze. As a result of its research and experiments, about 12 million tons of washed coal will be saved annually during the third plan. This will be a great help to the economy. Mr. Driver fears that the present unsatisfactory supply of coal—referring both to quality and quantity and to the delay in transit—will worsen for private consumers during the rest of the second plan period, as the demands of the public sector will be increasing. The movement of coal at block-rates to industries, as has been proposed, will also tend to increase the indifferent quality of coal loaded by producers in order to avoid demurrage.

Resident Field Engineer

The unique
HOLLERITH SERVICE

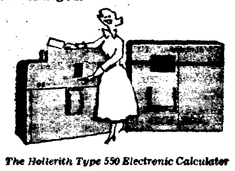
The accountant's visitor had come to see what sort of job Hollerith punched card machines were doing. "Tell me," he asked, "what sort of service did Hollerith give you?" This time the accountant looked surprised. "Did?" he queried, "Surely you know that one of the big things about Hollerith is the *continuous service.*"

The two reports

In Hollerith installations your equipment is, as it were, 'hand-tailored'. Your problems are very fully studied before the first careful report is presented to you. No fee is charged for this service. The second report is a detailed working plan in which the flow of work—every facet of the operation—is set out in full.

First careful report

Consultant, guide and friend



The Technical Service Man sees your installation in. Trains your staff. Stays with you till you are absolutely at home with your mechanised office. The maintenance of your machines is now in the hands of the Field Engineer who is always very quickly available.

Responsible advice

Modern business, because its control is based on figures, points all the time to mechanisation. You may only need simple punched card equipment. You might even be ready for an electronic computer. An electronics specialist is available to discuss this with you. Why not send for him? No fee is charged.

Trains your staff

The Hollerith Type 550 Electronic Calculator

Footnote

Hollerith is a vast organisation with immense research facilities, a network of offices throughout India, and a very long experience of Indian business needs.

CURRENT COIN

Share Offer from Anil Hardboards.—The hardboard manufacturing concern of Anil Hardboards Ltd., Bombay, proposes to offer for public subscription 15,000 ordinary shares of Rs. 100 each and 10,000 8 percent taxable redeemable cumulative participating preference shares of Rs. 100 each at par on 14th January. (Fuller details of the issue appear on later pages.) A feature of the preference shares is that their holders will get an extra dividend—at 1 percent a year if the dividend on the ordinary shares is 10 percent or more but less than 15 percent, and at 2 percent a year if the distribution on the equity capital is 15 percent or more. The total issued capital of the company is Rs. 40 lakhs, of which Rs. 30 lakhs is in ordinary shares and Rs. 10 lakhs in preference shares. The promoters and their friends have already subscribed for 12,000 ordinary shares. The licensed capacity of the factory, which will be located near Kanjur in Bombay State on the Central Railway main line, is 6,000 tons a year, but the plant which is to be set up will have a rated capacity of 8,000 tons a year. The estimated cost of the factory is Rs. 68 lakhs. It will be financed out of the share capital to the extent of Rs. 40 lakhs; the balance will be secured through a deferred payment arrangement with Messrs Aktiebolget Defibrator of Sweden, with which the company has an agreement for the supply of plant and machinery and the erection of the factory. The Swedish firm will also render technical assistance. Anil Hardboards has reserved 3,000 ordinary shares for cash subscription by Aktiebolaget Defibrator. The directors say that there is at present no factory in India for the manufacture of hardboard. They estimate that the minimum demand now for this product is 10,000 tons a year; it is expected that it will increase with indigenous supplies coming on to the market. It is, therefore, hoped that on the basis of the existing hardboard prices in the country, their concern stands a good chance of earning reasonable profits.

employment. Speaking at the annual general meeting of the Engineering Association of India, Mr. R. M. Agrawal, president, has said: "To my mind, the import of raw materials is as high a priority item as, if not more than, food, and certainly more important than anything else, even our electricity projects, big heavy industries and many consumer industries." Many small factories have been depending on cuttings of tinplates, plate, sheets, wires, rods, bars, etcetera, as their raw materials. But the bigger manufacturers have started diverting these items to other uses. The railways have also withheld supplies of these items from small fabricators, with the result that the latter are unable to maintain production. Mr. Agrawal says that until important raw materials are available in adequate quantities for small units, the diversion of supplies should be postponed. Commenting on this Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, has pointed out that the foreign exchange shortage does not allow more liberal imports. But there are indications that certain essential categories of steel might be available in quantities over and above the planned imports. Concerted efforts are necessary to tide over the present difficulties. The Bombay Committee of the Association has established an independent raw material purchase organisation called the Engineering Raw Material Consumers Corporation, which has been recognised by the Iron and Steel Controller as a controlled stockist. Mr. Agrawal says that "in Calcutta also a similar organisation will soon be established. Members are requested to take advantage of these organisations so that we help ourselves and also the Government."

* * * *

Engineers Without Jobs.—In spite of industrial development proceeding at a rapid pace until a few months ago, the number of engineering graduates seeking employment appears to have increased. The statistics imply that the supply is in excess of demand in their case, but official spokesmen have been suggesting that an essential pre-requisite for accelerating the tempo of industrial progress is to increase the number of qualified engineers. Although it is arguable that it is difficult to avoid an imbalance between supply and demand in the transitional period, it is evident that there has not been enough technical man-power planning to absorb a large number of engineers in different avenues of employment. Greater co-ordination between the technical institutes, on the one hand, and industries, on the other, might have provided a partial remedy to this state of affairs. The position at present cannot be viewed with equanimity. A recent review of the activities of the Directorate-General of Resettlement and Employment suggests that the number of engineering graduates on the live register increased from 354 in March 1957 to 602 at the end of September 1957. The distribution of unemployed engineers by States shows that 485, or 81 percent, of them were concentrated in Bombay, Delhi, Mysore and West Bengal. The review says that the majority of the graduates were inexperienced; the percentage of freshers was the highest, as usual, among civil engineers. For example, only 50, or 8 percent, of the graduates on the live register had experience of two years or more. Faced with bleak prospects of getting jobs as soon as they complete their education. it is hardly surprising that these graduates expect a fairly small salary. The review suggests that 393. or 65 percent, of the graduates expected a minimum salary of between Rs. 200 and Rs. 300 a month. The prospects are no better for diploma holders, 385 or 72 percent of whom expected a minimum salary in the range of Rs. 100 to Rs. 200 a month. Foreign-qualified engineers who go abroad for training often take up lucrative employment there, and do not always look forward to returning and seeking jobs in India. If it is true that there is a shortage of qualified engineers here, as the planners allege, their employment abroad is a loss to this country. Unemployment among engineers is a serious wastage of technical man-power; it can be averted, firstly, by raising educational standards, and, secondly, by ensuring that proper remuneration and conditions of work are given to those who are well qualified.

* * * *

Mechanisation at Singareni Collieries.—An official spokesman has told a Press conference in Hyderabad that the output of coal from the Singareni group of collieries can be increased considerably by mechanising production in some of the pits where obsolete methods are still being followed. Picks, shovels and buckets, for instance, are at present being used to remove coal from some of the new pits. The cost of production can be reduced by using pneumatic drills, grab-loaders and other mechanical devices. Mechanisation, according to the spokesman, will not involve the displacement of labour, as was feared, but will improve efficiency and output while reducing costs. The Andhra Pradesh Government has decided to develop the collieries during the second plan period by spending Rs. 4 crores. The production at Singareni during 1957 was about 2 million tons, as against 1.5 million tons in the previous year. It is proposed to increase this figure to 3 million tons a year by the end of the second plan period. The spokesman claims that the Singareni group of collieries constitute the biggest coal unit in the country. The investment on development will result in an annual saving of about Rs. 4 crores on freight to the Central Government on the transport of coal. The development programme is to be spread over a period of years. Foreign exchange has been obtained for the import of machinery. The Central Government is expected to give financial assistance, and has agreed to capital participation in the collieries provided it has control over the management. The State Government, however, does not favour transferring the management to the Central Government, but has agreed to give the latter representation on the board of directors. Another proposal is that the Centre should advance the amount required for implementing the development programme as a loan.

* * * *

Industrial Estates in Bombay.—The Bombay Government plans to establish 16 industrial estates in the State by setting apart certain areas for development. For this purpose, road and rail communications, cheap water facilities, postal and telegraph communications, etcetera, will be provided. Speaking at the annual general meeting of the Maharashtra Chamber of Commerce, Mr. B. D. Garware, president, has said that the estates are likely to help in creating fresh employment opportunities. In course of time, they will promote the decentralisation of industries and diffusion of employment in mofussil areas. "In order to attract industrialists to take special interest in these estates, I may suggest to the Government to publish brochures giving in detail the advantages, concessions and facilities for establishing their industries in these estates, and the Government should also give additional special facilities, such as housing accommodation to employees in Government-built housing colonies, land on long-lease basis, telephones on direct-rate basis, loans for factory construction at low rates, import licences for machinery, etcetera." Medium-sized units may be located in industrial estates, so that labour, power, water and other facilities are available for the general benefit. The State Bank has initiated a pilot scheme for extending credit facilities to small-scale units at reasonable rates of interest. In the Bombay circle, it chose Bombay, Kolhapur and Surat as experimental centres for 1956. The scheme has now been extended to Nagpur, Poona and Sholapur. At these pilot centres, credit facilities are offered to small-scale industries for working capital purposes. While appreciating the efforts of the Government in giving financial help, Mr. Garware says that there does not seem to be enough co-ordination between the various schemes. Small entrepreneurs find it difficult to approach the proper agencies for financial assistance. "The activities of the pilot scheme of the State Bank, State aid to industries scheme, Small Industries Service Institute, the National Small Industries Corporation Private Ltd., and the State Financial Corporation, should be of a co-ordinating nature, and there should be a liaison officer to assist and guide the applicants for approaching the proper institutions for their financial and other aid." The State Bank should consider extending its activities in industrial estates since this will help the growth and progress of industries. Small-scale industries have not made any appreciable progress in Bombay as they have done in Punjab and West Bengal, so the State Government should take the initiative in establishing such industries, keeping in mind the natural resources and the potentialities of development.

* * * *

The Octopus of Bureaucracy.—The Indian people have been asked to tighten their belts in a welfare State so as to achieve the goal of a socialist pattern of society. They have seen the abolition of the *zamindari* system, the nationalisation of industries and increasing State intervention in almost all spheres of trade and commerce, including State trading in minerals, ores and even milk powder. Furthermore, there have been severe restrictions on the import of consumer goods, controls over production and exports, and an apparently endless series of taxes. Speaking at the annual general meeting of the Indian Council of Economic Affairs, Mr. D. N. Bhattacherjee, president, has said that planning, if it is to justify the name, should seek to eliminate the wastage which is supposed to result from unregulated private enterprise. "The mixed economy has been accepted as the pattern of economic organisation most appropriate to our needs. But there are, from time to time, doctrinaire attempts to alter the proportions of the mixture. And in many instances the extension of the State sector has only resulted in slowing down the pace of development." The extension of bureaucratic control over industry has ensured neither efficiency nor economy. On the contrary, it has led to a considerable wastage of resources. Experienced administrators have been placed in control of industrial or commercial undertakings where they feel embarrassed. People who by their hard work have built industrial enterprises are finding their field severely circumscribed. Soon they may have no scope for showing their enterprise other than by organising forums of free enterprise, Mr. Bhattacherjee says. Entrepreneurial ability is not something which the Government can get to order. It has to be acquired in the hard school of experience. "Sending teams of officials on purchase missions abroad may enable them to see the world at the Government's expense, but will not turn them into business men. In India, conditions in the past have not been very favourable for the growth of indigenous talent in business organisation and management, and it will be the height of improvidence to allow departmentalism to block the utilisation of all talent outside the charmed circle of Government servants, in the fulfilment of the tasks of planned development." The economic use of human material is the key to the effective utilisation of resources. If it were ensured and persons with experience of industry were taken into greater confidence in drawing plans of industrialisation, Mr. Bhattacherjee believes it would have been possible to avoid many of the difficulties which the plan has run into.

* * * *

More Traffic in Madras Port.—The latest report of the Madras Port Trust shows a rise of over Rs. 51 lakhs in its income during 1956-57. Receipts were larger because total trade increased (in spite of a fall in exports) and because demurrage collections were bigger. Expenditure also rose, but the ratio of working expenses fell a little. More shipping entered the port; grain imports showed a substantial increase but coal arrivals were smaller. In order to cope with the increase in traffic, dock labour worked a third shift from June 1956. Passenger traffic also rose and more people landed at Madras than embarked from there. A feature was the fall in the number of sailing vessels cleared. Tankers now use the port regularly and Rumanian and Bulgarian ships came for the first time in 1956-67. Extensions and improvements made during the year included a marshalling yard costing Rs. 17.4 lakhs. A new dredger is to be acquired. Practically all stores are now bought in India. A regrettable feature was that thefts in the harbour increased but greater vigilance led to more arrests. Electric cranes on the quay and the construction of a wet dock are included in the development programme of the Port Trust. Special yards for coal and ore are to be built, and the coal yard now being used by the ore trade is to be equipped with flood-lit towers.

* * * *

Science and Society.—In industrial growth, the rôle of science is fundamental. As such, it needs the full support of society for its progress. India has now arrived at a stage where she must do all she can to promote the education and spirit of science; she must also make the best use of her scientific man-power, especially since it is still inadequate for her purposes. It cannot be said that this is what she has been doing, and many young individuals working in the field of pure science feel frustrated because their talent is not encouraged. The reasons are mainly two: firstly, a general lack of research facilities and of resources in the country; and, secondly (a factor which is psychologically more important), the unfortunate practice of nepotism in making appointments to Government jobs. Industry has yet to provide adequate employment to the growing number of scientists. So a social awareness of the part that the scientist has to play becomes significant. Professor M. S. Thacker, presiding at this year's Indian Science Congress, has done well to stress this fact at the Madras session of that body. Science Congress sessions are usually attended by the Prime Minister, who addresses the scientists, and as such they attract the attention of the country. The president has, therefore, chosen the most appropriate occasion to express his conviction that without "an abundance of science and technology and without establishing them on a self-perpetuating and exponentially expanding basis," he sees little hope of progress. While much has been done during the past decade to train people in a variety of scientific skills and knowledge in the effort to raise production, he feels impatient at the inadequate progress and declares, that enough has not been done; "the real solution can emerge only when a serious effort is made to seek out all those who have the talent to profit by a scientific career." The country is richly endowed with human wealth, and "there can be no dearth of men and women gifted with curiosity and imbued with a passion for enquiry. The task is to stimulate these human endowments wherever they lie latent. No systematic 'talent search' appears to have been so far undertaken on a nationwide scale." Professor Thacker's comments on the conditions under which scientists often have to work in Government service are interesting, especially as he happens to be Secretary to the Central Ministry of Natural Resources and Scientific Research. "I have often asked myself whether the conditions in which some of our able scientists are functioning are such as to get the best out of them. Too often we load the scientists with routine and other non-productive work Our administrative machinery .....tends to bring scientists and others into a common rigid steel frame." Professor Thacker makes some important suggestions for the better utilisation of scientists; among them is one to set up a system of exchange of personnel between those providing the training and those who are concerned with utilising scientific personnel. This, he says, will not only vitalise individual institutions, but will serve the larger interests of the country by inducing a greater sense of urgency in implementing plan programmes.

1897

WE have rung out the old year and have rung in the new. We trust that it may be a better one for India than that which has fled. The Queen's Jubilee year has indeed been a terrible one for India, and it may be said of the people that behind a smiling face they concealed an aching heart. The following lines from *Truth* are very much in point:

"Long reigns may be a lengthened curse,
And not in any sense a blessing.
To praise your Queen's protracted rule,
But puts the case most incompletely;
Your praise is chiefly due because
She's reigned so wisely, so discreetly.
Her sixty years would little mean
Save constitutional tenacity;
The real 'record' scored by her
Has been in wisdom and sagacity.

* * *

"Statesmen may come, statesmen may go,
Prime Ministers may faint and falter,
Your Queen above all parties sits,
With principles that never alter.
Honour her, then, I say once more;
Love her, revere her, never doubt her,
And pray the day may distant be
When you'll be called to do without her."

In the beautiful Litany of the Church we pray that we may be delivered from tempest, pestilence, famine, battle, sedition, privy conspiracy and rebellion; but apparently the Government of India are not in the position of the righteous man whose effectual fervent prayer availeth much, because the land has been visited with all of these terrible afflictions. The year opened with a terrible pestilence in Bombay, and we are sorry to say that at the close, it, like the poor, is still with us. The damage done to the Bombay Presidency by this fell visitation must have been enormous and is difficult to estimate rightly, but the following figures of the value of the imports and exports for the year ended November 30, 1897, contrasted with those of the previous year, tell an instructive lesson:

Year ended 31st of October	1896 Rs	1897 Rs.
Imports	29.90.60.986	22.97.25.490
Exports	38.47.79.161	26.41.31.849

This means a shrinkage of trade of nearly 19 crores of rupees!

FROM

CAPITAL

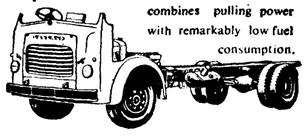
6th January, 1898

Millions of tons of goods await transport by road. The Heavy duty Leyland Comet can clear more goods in a shorter time.

The LEYLAND Comet carries in two trips what others do in three or more!

YES, Leyland Comet can carry 50% more goods every time than any other chassis made in India. Just think what this means to your operating costs. You save on time, save on fuel and save on maintenance. And you get more business from satisfied customers.

The Leyland Comet is built to carry heavy loads over long distances. Any Leyland operator will tell you that you can depend on it to give you trouble-free, low-cost operation year after year.



Leyland 'COMET'

The only 7½ ton payload chassis made in India

Every chassis is designed to carry a specific load. The 'F' form specifies it. Too frequently, overloading is adopted to enhance revenue with consequent increases on the incidence of breakdown and in the cost of operation. You don't have to overload a Leyland Comet. It's built to carry 50% more than any other chassis made in India.

The Forward-Controlled Leyland Comet Chassis is designed specially to combine large body space with easy handling. The quick starting, long life Leyland Diesel engine, with its high torque output, combines pulling power with remarkably low fuel consumption.

SOME CASES IN THE ENGLISH COURTS

CLAIM FOR DAMAGES FOR LOSS OF EARNINGS

(FROM OUR LEGAL CORRESPONDENT)

HERE is a case of interest to married men going on leave to Britain. A husband who was in England on leave from very remunerative employment abroad was slightly injured in a motor accident caused by the defendant's negligence. His wife was very severely injured in the same accident, and because of his anxiety for his wife and the problem of the care of his children while she was unable to look after them, the husband remained in England, it being found that it was reasonable for him to do so up to one month after her discharge from hospital. Can he claim damages for loss of earnings calculated by the difference between what he would have earned had he returned at the end of his leave to his employment abroad and what he could have earned in England while it was reasonable for him to remain there?

"No," said Diplock J. The husband has a claim for damages for loss of *consortium*, which is in the nature of a quasi-proprietary right and is limited to the loss of the comfort and services of his wife. To this may be added the cost of medical treatment, convalescence. etcetera, which claim may lie in the husband's legal duty to provide proper maintenance and comfort for his wife (as it may also in the case of a parent of an injured infant). But the claim for loss of earnings comes under neither of these heads and is *damnum absque injuria* (that is, a loss not amounting to legal injury). Said the learned judge: "Visits by a spouse may well be a factor in the recovery of a patient, and a visit to a wife in hospital may thus be a proper step in mitigating the damage sustained by loss of *consortium* by reducing the period during which the *consortium* is lost; but if the sole justification for the visit is the comfort or pleasure that it gives to the husband, then its cost is not recoverable." 3. All E.R. 153. *Kirkham* v *Boughey*. (1957).

* * * *

Every family lawyer sooner or later comes across a problem of this kind; in fact, he probably has to deal with it not infrequently because it is becoming increasingly common. An elderly couple, well known and respected and in a good position, have lived happily together during many years as man and wife. Actually they are not married, although all their wide circle of acquaintances believe them to be. Perhaps one or other of them has a spouse still living. The time comes when the male partner feels that he can no longer postpone duly providing for the other's future by making his will in her favour. Can he safely refer to the lady in his will as "my wife"? Or will he by so doing invalidate the bequest to her? *Law Notes* deals with the problem in so far as it is governed by the law in England but not in India in one of its interesting series: "What is wrong here"?

"On John Doe's death it was found that he had duly executed a will leaving his whole estate 'to my wife Jane Doe'. James Doe, the son of the testator by his first marriage and his only issue, was highly indignant. 'To be disinherited in favour of a step-mother would be bad enough,' he cried, 'even if she had been the true wife of my father. But this woman calling herself Jane Doe was not his wife at all. They went through a form of marriage but her husband was still alive. She ought to get nothing at all'. His friend tried to pacify him. 'Don't worry James. If you can prove those facts, no court would uphold such a will. The will must certainly be set aside and then you will inherit on intestacy.'" Is this correct? You are invited to think that one over before looking at the answer which appears at the end of this article.

* * * *

Meanwhile, here is another decision on wills which one presents with considerable reserve. A lady, by her will, left all her property to her husband, and "in the event of my husband and myself both dying at the same time" to three other persons. The husband and wife did not die at the same time; in fact, the husband pre-deceased his wife. Are those "three other persons" entitled to the property?

Now the writer would especially like the reader, particularly the non-legal reader, to think this one over for himself because an ounce of common sense is worth a ton of theory, though the trouble in a problem like this is, what answer does common sense dictate? Admitted that he is a bold man, even an insolent one, who ventures to disagree with the unanimous opinion and decision of three Lord Justices of Appeal, especially when one of them, Romer L. J., bears an almost hereditary title to respect for sound learning. Nevertheless, we are all of us entitled to our own opinion and the writer finds the decision surprising and even startling. Moreover, he does not believe it will be followed in India, and hopes that it will not.

The Court of Appeal (Jenkins, Romer and Sellers L.J.J.) held that the three other persons were entitled to the property. "While the Court should be very sparing of implying words into a will, it was reasonably plain that what the testatrix set out to do was to provide for the contingency of her husband not surviving her and that, through some mischance, some necessary words were omitted." [*Whitrick Re: Suteliffe* v *Suteliffe*. (1957) 2. All E.R. 467. 76 L.N. *(August)* 1957. 189.]

Now let us think it out. It is an interesting subject, that one of simultaneous death, and we will leave the main issue for a minute or two to consider it. To begin with, not once in a million times is it possible for it actually to happen. If the word "simultaneous" means, as it does, occurring at the same identical instant of time, then, not even in a cataclysmic event like the Hiroshima bombing would a man and his wife die simultaneously. One heart would beat longer than the other. This is not a mere technical, legalistic point. Far from it. In Britain the matter has been settled since 1925 by statute. The older of the two would be presumed to die first. Quite illogical, you may say, and so it is; the younger may have heart disease and die without being hit at all. But, at any rate, it gives us finality. There is no such statute in India, Burma and Pakistan, and no one knows with precision what the law is.

Consequently, in this country the courts have to be guided by presumptive evidence. For example, if a man and his wife are drowned at sea, one being able to swim and the other not, the swimmer would be presumed to outlive the non-swimmer. It was, in fact, not until the *Titanic* disaster, when a considerable number of married couples were drowned, together with consequent litigation where each had a separate estate, that people began to make provision in their wills for what we will colloquially term "simultaneous" death. With the bombing in the first world war, the practice became more general, still more widespread, especially in Calcutta in the second world war, and now with the possibility of simultaneous extinction of whole masses of people, a clause providing for simultaneous death of husband and wife should be a common form one in every married person's will.

And that brings us to our main objection to this decision apart from the simple common sense one that a testator should be presumed to mean exactly what he or she says and nothing more or less. When a lady sits down and makes a special provision in her will for the event of her husband and herself dying together, she must have been concentrating her mind, as every married testator has to do, unhappily, in Britain these days, on that possibility coming to pass and no other. Surely she cannot be presumed to have intended those words to cover not only "simultaneous" death but her husband's death before her own. It would have been perfectly easy for her to provide for his predeceasing her by a separate clause in the will. Possibly she forgot all about making any such provision. However that may be, one reader of the case, with due humility, does not understand how such an important addition to the will can be read into it, without its being actually there. All this lady did, so far as actual words were concerned, was to make provision for three persons in the event of the "simultaneous" death of her husband and herself. She may have had sound reason for not providing for them if her husband pre-deceased her. For instance, her husband may have made provision for them in his own will. Every testator is dead before his will takes effect, and, therefore, cannot explain any ambiguity or omission in it. Surviving persons may be able to. Interested persons. And the implying of words not actually there into a will opens the door to the possibility of fraud.

* * * *

Answer to "What is wrong here"? In England, this issue came before the High Court in (1953) Probate P. 277. "It is clear that the false description 'wife' does not by itself invalidate a gift..... The gift is only invalidated if it is procured by the fraud of the person falsely described." [L.N. 76. (1957) August 52.] But you will note that to obtain this decision upholding the will involved contested proceedings in the High Court and all the attendant expense, publicity and delay. In India, as the writer happens to know, the delay would be some five or six years, during which the "wife" might be penniless and the costs, thousands of rupees. Besides, disappointed next of kin are a cantankerous lot and litigation-minded. They might allege fraud, too, or undue influence. The only safe way is to face up to the facts. The word "wife" should not be used and the lady should have her correct names set out in full in the will. The witnesses should comprise a medical man and a lawyer whose independent evidence if required later would go far towards disposing of any suggestion of undue influence. The lady could change her surname by deed poll to that of her "husband" before the will is made.

Now...
high-quality
ACC
FIREBRICKS

for Cement Kilns • Foundries
Smelting Furnaces • Boilers

FROM the ACC's Firebricks Factory at Katni, now expanded and modernised, come high quality refractories with medium, high and super alumina content to meet all your requirements.

Because of their great resistance to spalling and abrasion, these refractories ensure *long* and *trouble-free* service and *low maintenance cost*. Complying fully with the I.S. Specifications 6-1953 and 8-1953, ACC refractories are made to the shape, size and quality you require. They are *far more economical than* ordinary firebricks. And the ACC hallmark on them is your guarantee of high quality and dependability.

A DITCHER'S DIARY

THE mood in which people survey the New Year Honours Lists these days all too often reflects as much disgust as anticipation. But however much we in India might marvel at the way some particularly useless nonentity back home has managed to get his this or that, it is difficult to escape the conclusion that what meagre honours are bestowed on British nationals in this country are usually well deserved. I cannot, for instance, remember a single knighthood announced during the past few years which is likely to be more welcomed in British business circles here than the one which has just been conferred on Oscar Jenkins, last year's President of the Bengal Chamber and Assocham. Among the long list of holders of supreme office in this august institution, Sir Oscar will go down as one of the brightest, most efficient, and most popular. Perhaps the best tribute that can be paid to him in times like these is that his humorous and refreshing personality seems, during his term of office, to have been as much appreciated in Government and official circles as it is among Calcutta's business and social community. This is an honour richly deserved. I know I express more than my own personal view when I offer him and his wife most sincere congratulations on their new designations.

* * * *

Some newspaper hard up for a sensational story (which we all hate in public and love to read in private) starts a hare, and then there is no stopping it. So it was with the hospitals in Calcutta, and now it is gangsterism in Howrah. Not as though either problem is to be treated lightly. Medical facilities in this city are woefully inadequate for the poor, who need them more in the nature of things, and there have been far too many premeditated murders in Howrah for anyone to be complacent, least of all the police. What I find less than satisfying is that these deficiencies of life in Calcutta receive only spasmodic attention, and the result is that there is no sense of proportion. After our newspapers have done with them, the average citizen is to be forgiven for being scared of going to hospital —or to Howrah. This, I am sure, is far from what our newspapers intend. They know that more and more people should go to hospital, and they know that in an industrialised suburban town certain tensions are inevitable. Everything should, of course, be done to improve the hospitals, and the West Bengal police can have no excuse for allowing gangs to flourish in Howrah until the newspapers begin to scream. In spite of what the Chairman of the Howrah Municipality has said, the suggestion that some political parties are behind the criminals in Howrah should be investigated vigorously. Connivance at crime for support in the elections, as has been widely alleged, will not only endanger civic security; before long it will also vitiate political life in the country. Having thus agreed with what the Calcutta Press has been saying, I suggest that more sustained attention be paid to civic problems. I recently read in some American magazine—or does it call itself a newsmagazine? —the slogan of some small-town newspaper editor. If the town was Greenville, Miss., he said: Cover the world, but don't forget Greenville. Not forgetting Calcutta, and Howrah and Titaghur and Baraset, will do no harm at all to the Calcutta dailies. I have been enjoying the stories about the South Pole, but now and then I like to see Alipore in the newspapers too.

* * * *

Like most people, I know very little about the technicalities of the West Irian dispute, although unlike many others who must know even less, I refuse to base my views on the kind of crude anti-colonialism—or what is all too often the same thing in Asia today, thanks to clever Russian propaganda, anti-westernism—which we hear so much of from less responsible opinion in this country. I should have thought the first point to strike any ordinary decent citizen is that any nation is clearly reprehensible when it permits the official victimisation of a foreign minority community as a reprisal for the actions of the United Nations; because, if my memory serves me correctly, Indonesia took action against her Dutch residents in answer to that body's refusal to discuss her claim. I may be wrong, but this seems to me an act unbecoming a modern self-governing civilised nation. If it is not an established principle of international law that foreign nationals should not be regarded as hostages for the decisions of the U.N., then it certainly ought to be. How, I wonder, would Indonesia's sympathisers in this country react if South Africa, say, were to expel all her Indian nationals because this international body refused to agree to its apartheid policies. No, I must say I have been amazed at the measure of approval which some individuals in this country—who themselves would never dream of emulating this sorry example of the kind of minority persecution which has not been rivalled in scale since Hitler's days—have expressed for the Indonesians in their actions. Clearly this is putting fellow-feeling above the dictates of simple human decency. As Mr. Nehru said the other day when questioned about the possibility of India using similar techniques over Goa: "We follow different ways and different policies". Yet it is odd how many Indians seem to have forgotten that fact. For myself, I cannot help but sympathise with the individual Dutch, who have no responsibility for their Government's or the U.N.'s actions, and yet are being forced to suffer for them. I see they can now be detained in Indonesia against their will to suit the convenience of the Indonesian Government, just like enemy nationals in wartime. As for the claim to West Irian, I would not like to express an opinion except to say that if the Indonesians based their's less on legalistic grounds and more on the question of the future welfare of its peoples, I would be more inclined to listen to them.

* * * *

The seasonal dearth of news during the Christmas holiday may have been partly responsible for the sudden access of interest on Fleet Street, towards the end of last month, in Indian affairs; but it cannot wholly account for the fact (reported to me by a London correspondent) that the *News Chronicle* and the *Manchester Guardian* featured Mr. Haridas Mundhra's affairs as the principal item in their City columns on Christmas eve. For, of course, Mr. Mundhra is not unknown in the City of London; some three or four years ago he unsuccessfully attempted to corner the ordinary shares of the Assam Company and, according to reports, burnt his fingers rather badly. This episode has been rather lost to sight in the later stages of the Mundhra saga. There were, I believe, one or two other minor forays into the London market, though the latter has proved, in the main, an unrewarding field for deployment of the "take-over" technique. The city editor of the *News Chronicle* considers that the Mundhra *débâcle* will have unfortunate repercussions outside the affairs of the companies immediately affected: thus, it will discourage the movement of private foreign capital to India and make the authorities in New Delhi if anything more suspicious of the *bona fides* of the private sector and stronger in their determination to create a socialist pattern of society. On a pleasanter note my correspondent tells me that the Indian film *Pather Panchali*, now showing at the Academy in London, is being hailed as a masterpiece. Out of a dozen ecstatic notices, my correspondent notes Miss Lejeune who says in the *Observer*: "This lovely thing comes to us from Bengal and takes us altogether by surprise." *Pather Panchali* is, I believe, based on a popular Bengali novel which was serialised in the local Press about twenty years ago. Anyhow, its director Satyajit Ray seems to have achieved international fame overnight.

* * * * *

I mentioned in my last paragraph the Assam Company, which is the oldest tea producing concern in India. It was formed in 1839, and fittingly its long story has just been written by Mr. H. A. Antrobus under the title of *The History of the Assam Company 1839-1953* (printed and published for the company by T & A Constable Ltd., Edinburgh). Mr. Antrobus, it will be recalled, some years ago wrote the history of another pioneer in the tea industry, *viz.*, the Jorehaut Company, which came into existence twenty years after the older Assam Company. Both books are marked by a close practical knowledge of the tea industry, real scholarship and meticulous attention to detail. Many people think there is something like a glut in companies' histories at the moment, and certainly the number of centenary volumes which are now appearing is very large—the 1850's represent a decade of unprecedented activity in British expansion overseas. Mr. Antrobus's 500-page volume on the Assam Company is not, I think, a book for the general public; but for anyone making a serious study of the tea industry it is indispensable. Also there must be many others, shareholders and the like, who have a direct personal interest in the story of this old and successful sterling tea company.

Viscount Waverley, whose death in London last Saturday may have saddened some more people in this part of the world than have expressed themselves to this effect, was that rare combination: a seasoned bureaucrat with unusual imagination and initiative. By training a civil servant, he was in his time called upon to deal with not a few very uncivil problems. It is but natural, therefore, that in large areas he was not popular in the vulgar sense of the term. He knew, and did not much regret, that there is a certain inherent incompatibility between doing one's duty, often unpleasant of necessity, and wooing public affection. To be respected for ability was thus his ambition, which he achieved in diverse lands and assignments. From his desk in London he was sent to Ireland and Bengal, which two areas have a deal in common in temperament, at times when they were troubled. With as much tact as possible and as much firmness as necessary, Sir John Anderson (as he then was) addressed himself to his difficult tasks, and the extension given him as Governor of Bengal in 1936 was but the first of the many compliments he was to earn in the years to come in recognition of his outstanding administrative talent. On his return home after the Indian interlude, not exactly a peaceful one, he was called upon to adorn such high offices as Home Secretary and Chancellor of the Exchequer, and after a rather brief business career he became Chairman of the Port of London Authority. His membership of the General Advisory Council of the British Broadcasting Corporation is only a small indication of the variety of his interests. The Order of Merit he received in hospital only a few weeks before his death was deserved recognition of a rounded personality. The many offices he held in a long life will not remain vacant; no office does. But they are unlikely to be filled often by men as able as Viscount Waverley was in every one of them.

INTRODUCING
a new, extra cheap class

With effect from April 1, 1958, KLM is introducing a new class called the Economy Class, on its Amsterdam—New York air route (subject to approval by the Governments concerned). The single fare for this stretch will be Rs. 1,295/- only which is approximately half the De Luxe class fare.

The twice-weekly services operated by KLM from Calcutta to Amsterdam offer excellent connections at Amterdam to New York.

For Business or Pleasure... FLY KLM

1. A copy of this Prospectus has been delivered for registration to the Registrar of Companies, Bombay, as required by Section 60 of the Companies Act, 1956.

2. "CONSENT of the Central Government has been obtained to this issue, by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them".

3. "A Licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it".

4. The list for Public Subscription will open at 10-30 A.M. on Tuesday the Fourteenth day of January, 1958, and will close on Tuesday the Twentyeighth day of January, 1958, or earlier as may be decided by the Directors, but not before Saturday the 18th day of January, 1958.

5. ANIL HARDBOARDS LIMITED

BOMBAY

(Incorporated under the Companies Act, 1956.)

PROSPECTUS

Authorised and Issued Capital:—	Authorised	Issued
	Rs.	Rs.
50,000 Ordinary Shares of Rs. 100 each	50,00,000	30,00,000
50,000 Preference Shares of Rs. 100 each	50,00,000	10,00,000
	1,00,00,000	40,00,000

6. Out of the total Issued Capital, 12,000 Ordinary Shares of Rs. 100 each having a total nominal value of Rs. 12 lacs have been subscribed by the Promoters and their friends and a sum of Rs. 50 per share has been paid thereon.

A further 3,000 Ordinary Shares having a total nominal value of Rs. 3 lacs are being reserved for issue to Messrs. Aktiebolaget Defibrator of Sweden against payment in cash.

The balance of the Issued Capital, viz.:—

15,000 Ordinary Shares of Rs. 100 each, viz. ... ... —Rs. 15,00,000

10,000 8% Taxable Redeemable Cumulative Participating Preference Shares of Rs. 100 each, viz.—Rs. 10,00,000

is offered for public subscription in terms of this Prospectus at par payable as follows:—

(a) On application ... ... Rs. 25 per Share

(b) On allotment ... ... Rs. 25 per Share

The balance of Rs. 50 in respect of each Share either Ordinary or Preference will be payable in such calls as may be determined by the Directors provided that no call shall exceed Rs. 25 per Share and that there shall be an interval of at least one month between two calls.

7. AN APPLICATION HAS BEEN MADE TO THE STOCK EXCHANGE, BOMBAY, FOR PERMISSION TO DEAL IN THE WHOLE OF THE ISSUED ORDINARY AND PREFERENCE SHARES AND IN DUE COURSE FOR AN OFFICIAL QUOTATION.

8. Applications for Preference and Ordinary Shares should be made on the respective Forms accompanying this Prospectus and delivered before the close of the subscription list to The Bank of India Ltd., at its Head Office at Mahatma Gandhi Road, Fort, Bombay, or its Branch Offices at Ahmedabad, Amritsar, Bangalore, Bhuj (Kutch), Calcutta, Coimbatore, Delhi, Gandhidham (Kutch), Hyderabad (Deccan), Jamshedpur, Junagadh, Kozhikode, Madras, Nagpur, Poona, Rajkot, Surat. Sholapur and Veraval, together with a remittance of the amount payable on application.

9. Further copies of the Prospectus and the Application Forms will be available at the said Offices of the Bank, from the Brokers to the issue named below, from the Underwriters and from the Company's Registered Office. Where no allotment is made the deposit will be returned by cheque on a Bombay Bank and where a partial allotment is made the unutilised balance will be returned by cheque on a Bombay Bank. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted when due will render previous payments liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which may be inspected at the Registered Office of the Company during office hours. The Share Certificates will be issued within 6 months of the date of allotment.

10. The following is a summary of the rights, privileges and restrictions attached to the Preference and Ordinary Shares of the Company and the limitations upon borrowings and the creation of further shares :—

The Preference Shares confer on the holders thereof the right to a fixed cumulative Preference dividend at the rate of 8 % taxable per annum on the capital for the time being paid up on such shares and the right to an extra dividend, at 1% per annum on such paid up capital if the dividend on Ordinary Shares is 10% or more but less than 15% and at 2% per annum if the dividend on Ordinary Shares is 15% or more. The Preference Shares shall have a right to rank in winding up both as regards capital and dividend up to the date of the commencement, of the winding up, whether declared or not, in priority to the Ordinary Shares of the Company.

TERMS OF REDEMPTION

The Preference Shares shall be definitely redeemable at par after the expiry of 10 years from their date of issue without any option to the Company to redeem earlier or later.

VOTING

On a show of hands every member entitled to vote and present in person shall have one vote. His voting right on a poll shall be in proportion to his share of the paid up equity capital of the Company. The holder of Preference Shares shall in respect of the Preference Share capital held by him have a right to vote as provided in Section 87 sub clause (2) a and b of the Companies Act, 1956.

Where the holder of Preference Shares has a right to vote on any resolution his voting right on a poll shall be in accordance with provisions of Section 87 (2) (c) of the Act.

VARIATION OF RIGHTS

The special rights attached to any class of shares may be varied or abrogated with the consent in writing of the holders of three-fourths of the issued shares of the class or with the sanction of a Special Resolution passed at a separate Meeting of the holders of the shares of the class, but not otherwise.

RESTRICTION ON TRANSFER OF SHARES

The Directors may, subject to the right of appeal under Section 111 of the Act, at their own absolute and uncontrolled discretion, decline to register or acknowledge any transfer of shares.

SHARE CERTIFICATES

Every member shall be entitled without payment to one Certificate for all the Shares of each class registered in his name. If the Directors so approve and upon payment of such fee, if any, not exceeding annas -/8/- per Certificate as the Directors may from time to time determine in respect of each class of shares, a member shall be entitled to more than one Certificate for shares of each class.

BORROWINGS

Subject to the restrictions imposed by Section 293 of the Companies Act, 1956, the Directors may exercise all the powers of the Company to borrow money and to mortgage or charge its undertaking, property and uncalled capital or any part thereof and to issue debentures and other Securities.

12. OBJECTS OF THE COMPANY

The Company was incorporated on the 10th December 1956, generally for the purpose of carrying on all or any of the objects or purposes mentioned in its Memorandum of Association and particularly to carry on business as manufacturers of Hardboard and its by-products.

The main objects of the Company as contained in the Company's Memorandum of Association are:—

(a) To carry on business as manufacturers of hardboard and its by-products.

(b) To carry on business as manufacturers of and dealers in articles of any description made or prepared out of hardboard and its by-products.

(c) To buy, sell, grow, prepare for market, manipulate, import, export, and deal in wood of all kinds and/or by-products of wood of all kinds and to manufacture and deal in articles of all kinds in the manufacture of which wood or any by-product of wood is used.

(d) To buy, acquire, plant and work wood estates.

ANIL HARDBOARDS LIMITED—*Cont'd.*

13. HARDBOARD TRADE AND INDUSTRY

At present there is no factory in India for the manufacture of Hardboard. It is estimated that there is an immediate minimum demand for 10,000 tons per year and that this will increase rapidly as indigenous supplies become available.

The licensed capacity of the factory is at present 6,000 tons per year but the plant being installed will be guaranteed capable of producing 8,000 tons and the layout has been arranged for subsequent expansion.

Hardboard is a relatively unfamiliar material in India at present, largely due to import restrictions. Ready availability will, it is confidently expected, not only increase the demand for existing uses but also widen the range of uses. The main uses at present are for:—

(1) Building Construction: Partitions, panelling, ceilings, flush doors.

(2) Furniture: Counters and shop fittings, desk drawer bottoms, cabinet backs, file cases and holders.

(3) Vehicles: Panelling for interiors of motor-buses and railway-coaches.

14. PLANT AND MACHINERY

The Company has entered into an Agreement for supply of Plant and Machinery and erection of the Factory with Messrs. Aktiebolaget Defibrator of Sweden, one of the leading manufacturers of Hardboard Plant in the world, on the following terms of payment:—

30% against shipping documents
10% 11 months after main shipment
20% 23 months after main shipment
20% 35 months after main shipment
20% 47 months after main shipment

The Company has arranged for a guarantee of the deferred payments required by Aktiebolaget Defibrator to be provided by The Oriental Fire & General Insurance Co., Ltd., Bombay. The Guarantee Bond dated 26th October, 1957, will be secured *inter alia* by a mortgage of the Company's fixed assets.

15. TECHNICAL ASSISTANCE

Aktiebolaget Defibrator have agreed to supply full technical services including the necessary technicians for erection and during the first two years of operation. They have also promised to arrange for the training of Indian personnel in a similar factory in Sweden.

16. IMPORT LICENCES

The Central Government has granted to the Company Licences for all the imported capital equipment needed for the new Plant and the requisite Letters of Credit have already been opened.

17. FINANCIAL REQUIREMENTS

The total cost of the proposed plant having a capacity to manufacture 8,000 tons of Hardboard has been estimated, including the Working Capital, as follows:—

	Rs.
Payable to Aktiebolaget Defibrator for Plant & Machinery, Spare Parts and Engineering fees ...	40,20,000
Freight, Insurance, Customs Duty, etc.	5,55,000
Cost of Land, Railroad and Power Connection etc.	2,90,000
Cost of Foundations, Factory Buildings, Labour Quarters, etc. ...	10,30,000
Cost of Erection, Local Fabrication, etc.	2,65,000
Working Capital, etc. ...	6,40,000
Total	68,00,000

18. SOURCE OF FUNDS

The total requirements of Rs. 68 lacs will be met as follows:—

	Rs.
(a) By the issue of Ordinary Shares	30,00,000
(b) By the issue of 8% Taxable Preference Shares ...	10,00,000
(c) Through Deferred Payments (arranged with the Suppliers)	28,00,000
Total	68,00,000

19. Hardboard can be manufactured from a variety of raw materials, prominent among which is the fibre from waste wood, firewood, etc., not suitable for use as building material in its natural state. Such material is available in ample quantities to meet all present and future needs of the factory from the forest areas of Bombay State and also from the West Coast. Exhaustive tests have been carried out on the timber species and qualities available from these areas by Defibrators and it has been established that they are extremely suitable for the production of high quality Hardboard. Special mention may be made of the commonly available Ain (Terminalia Tomentosa) which gives particularly good results. Sawmill waste will also provide an additional source of good quality raw material.

The Government of Bombay have agreed in letter dated 18th October, 1957, to make available to the Company a minimum supply of 10,000 tons of fuel wood in the first year which will be raised to 20,000 tons in the fifth year, at market rates. Negotiations are in progress for the supply of fuel wood by the Mysore State Government also.

The Company has also concluded an agreement with S. S. Haldipur, a Private Contractor, for the supply of 7,500 tons of firewood of which 2,500 tons will be made available from January to May, 1958, and 5,000 tons from October 1958 to May 1959. These supplies will be sufficient for the initial needs of the plant.

20. SITE

The plant will be located near Kanjur between Vikhroli and Bhandup on the Central Railway Main Line.

Agreements have been concluded for the acquisition of land measuring approximately 47,310 sq. yds. sufficient for the installation of plant and for stock piling for the present and future needs of the Company, as follows:—

(a) Jolly Brothers Private Ltd. have entered into an Agreement dated 5th March, 1957, with Sir Mohamed Yusuf, Kt., for the sub-lease for a period of 999 years of lands measuring 34,000 sq. yds. at Kanjur for Rs. 42,500/-. The sub-lease remains to be executed.

(b) Jolly Brothers Private Ltd. have also entered into an Agreement dated 13th June, 1957, with Messrs. Bhiwandiwalla Industries for the purchase of land measuring 2 acres 30 gunthas for Rs. 23,637/-.

By arrangement between the respective parties, the above sub-lease and purchase will be executed in favour of the Company, as the nominees of Jolly Brothers Private Ltd.

21. ELECTRICITY AND WATER SUPPLY

Arrangements have been made with the Tata Hydro-Electric Power Supply Co., Ltd., for the supply of electricity up to 1,000 kW. the maximum power that the Company will require.

Arrangements have also been made with the Bombay Municipal Corporation for the supply of water sufficient for all the needs of the factory.

22. PROFITS

The Directors having estimated the cost of Production on a very conservative basis are satisfied that after meeting all expenses, a substantial margin of profit will be available on the basis of the existing prices for hardboard prevailing in the market.

The Company will enjoy the special benefits available to new projects under the Income-tax Acts as regards Development Rebate, Depreciation Allowances, etc.

The Company will not be required to make deposits with Government as required by sub-section 10(2B) of the Income-tax Act in the immediate future, since under the Income-tax Allowances (Current Profits Deposit) Rules, 1957, the utilisation of the financial resources of the Company will be for an "approved purpose" as defined in Rule (2) of the said Rules.

Given the continuance of reasonable trading conditions, the estimated profits, after providing for the dividends on the Preference Shares and deferred payments in respect of the machinery and for allocations to reserves, should enable a dividend to be paid on the Ordinary Shares after the first full year's operation of the plant.

23. PRELIMINARY EXPENSES

Preliminary expenses, brokerage and underwriting commission payable by the Company are estimated at about Rs. 2,00,000. This amount includes the sum of Rs 1,00,000 paid to Messrs. Jolly Brothers Private Ltd., for reimbursement of expenses incurred on investigations overseas and for technical services rendered.

AUDITORS' CERTIFICATE

1. We have audited the Books of Accounts of Messrs Anil Hardboards Limited, Bombay, and do hereby certify that the foregoing statement of Receipts and Payments made for the period, 10th December, 1956 to 11th December, 1957 of the Company is true and correct.
2. That the Anil Hardboards Limited since its incorporation on 10th December 1956 and since obtaining a Certificate for commencement of business of 4th March, 1957, till 11th December 1957 no business as such was carried on by the Company and that no profits were made.
3. That the Company has not declared any dividend since its incorporation.

Sd/- J. K DOSHI & CO.,
Chartered Accountants.

Bombay, 14th December, 1957.

ANIL HARDBOARDS LIMITED—*Cont'd.*

25. MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present issue upon which the Directors will proceed to allotment is Rs. 22 lacs. Subscription of this amount is assured by reason of the underwriting as mentioned herein.

This sum together with amounts subscribed by the Promoters, Manufacturers, and the amounts assured by Directors in terms of the Prospectus aggregating to Rs. 18 lacs will cover the immediate financial requirements of the Project.

This aggregate sum of Rs. 40 lacs raised by this issue, and already subscribed by the Promoters and Manufacturers will be utilised as follows :—

Payable to Defibrator towards machinery, Duty, freight and Insurance	Rs.	17,55,000
Cost of land, Rail Road, and Power connection ...	Rs.	2,90,000
Cost of erection, local fabrication, cost of foundation, factory building, labour quarters, etc.	Rs.	12,95,000
Preliminary Expenses ...	Rs.	2,00,000
Working Capital	Rs.	4,60,000
Total	Rs.	40,00,000

26. UNDERWRITING

Certain Directors of the Company in their personal capacities have satisfied The Industrial Credit and Investment Corporation of India Ltd., that they will apply for the 3,000 Ordinary Shares of the total nominal value of Rs. 3 lacs in terms of this Prospectus.

The Industrial Credit and Investment Corporation of India Ltd., Fort House, 221, Dadabhoy Naoroji Road, Fort, Bombay, 1, have agreed to underwrite 12,000 Ordinary Shares of Rs. 100 each and 10,000 Preference Shares of Rs. 100 each of the aggregate nominal value of Rs. 22 lacs. The Directors are of the opinion that the resources of the Underwriters are sufficient to discharge their underwriting obligations.

27. UNDERWRITING COMMISSION

Underwriting Commission at the rate of 2½% of the nominal value of the shares underwritten by them is payable to The Industrial Credit and Investment Corporation of India Ltd., in accordance with the terms of agreement contained in letter dated 23rd December 1957 from these Underwriters and the Company's acceptance thereof.

28. BROKERAGE

Brokerage will be paid by the Company to recognised Brokers and Banks at the rate of 1% on the nominal value of shares allotted in respect of application bearing their stamps.

Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Ltd., on allotments in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps.

29. EXPENSES OF THE ISSUE

The expenses of the issue, other than brokerage and underwriting commission are estimated to amount to Rs. 1,00,000 and will be payable by the Company.

30. DIRECTORS' QUALIFICATION AND REMUNERATION

The number of Directors shall not be less than four nor more than twelve. The qualification of a Director shall be the holding of 50 Ordinary Shares in the Company of the total nominal value of Rs. 5,000. The remuneration of a Director for his services shall be such a sum as may be fixed by the Directors not exceeding Rupees two hundred for each meeting attended by him. The Directors may allow and pay to any Director, who is not a bonafide resident in Bombay, and who shall come to Bombay for the purpose of attending a meeting, such a sum as the Directors may consider fair compensation for his expenses and loss of time in connection therewith in addition to his fee for attending such meeting.

If any Director, other than a Special Director, shall be called upon to go or reside out of Bombay on the Company's business, or otherwise perform extra services the Board may arrange with such Director for such special remuneration for such services, either by way of salary, commission, or the payment of a stated sum of money as they shall think fit, in addition to or in substitution for his remuneration above provided.

31. MANAGING AGENTS

Messrs. Jolly Industrial Agencies Private Ltd., have been appointed the Managing Agents of the Company by an Agreement dated 15th November 1957. The Managing Agents are a Private Limited Company with a Subscribed and Paid-up Capital of Rs. 1,00,000. The Government of India have approved their appointment as Managing Agents on the following conditions:—

(a) For a period of 15 years from the date of their appointment.

(b) On a remuneration of 10% commission on the net profits of the Company.

(c) A minimum remuneration in the absence of or inadequacy of profits at Rs. 12,000 per annum.

(d) Reimbursement of Expenses incurred on behalf of the Company.

32. NATURE AND EXTENT OF THE INTEREST OF THE DIRECTORS

The following Directors of the Company are also Directors in the Managing Agency Company:—

Shri G. R. Jolly, Shri K. L. Jolly } Directors of the Company are also Directors of the Managing Agency Company, and of Jolly Brothers Private Ltd., an associate of Managing Agency Co.

They are therefore interested in the said Managing Agency Agreement.

Mr. Arne Asplund, a Director of the Company is also the Managing Director of Messrs. Aktiebolaget Defibrator of Sweden, with whom a Contract has been entered into for the supply of machinery.

33. The following is a statement of the names, addresses, descriptions and occupations of the signatories of the Memorandum and the number of shares subscribed for by them:—

Name of Subscribers.	Addresses and Description of Subscribers.	Number of equity Shares taken by each Subscriber.
G. R. Jolly	198, Churchgate Reclamation, Fort, Bombay. Merchant.	5

Money

THE CALCUTTA MONEY MARKET

BUSY SEASON DEMANDS GAINING MOMENTUM

Wednesday, 8th January.

THERE has been a substantial increase in the demand for funds in the Calcutta money market during the past week, which indicates that the busy season is getting into full swing. Accommodation on account of cotton and sugar has increased considerably. Advances against grains and seeds are also slightly higher. Jute credit shows a minor decrease. Conditions in the interbank market have not changed much and the call rate remains at 2½ percent.

The exchange market has been very dull. The number of bills passing remains small, most of them being on account of tea. Remittance has been on a poor scale. Sterling eased slightly when Mr. Peter Thorneycroft's resignation as Chancellor of the Exchequer was announced, but it is still remarkably steady.

* * * *

Silver was steady during the past week because the price rose in Bombay following demand from Madras. The Calcutta rate advanced from the previous week's level of Rs. 184 to Rs. 184.25, quoted today. The rate for forward delivery was Rs. 184. The London price was unchanged at 77⅛d and in New York it was 89⅜ cents.

Gold improved in sympathy with silver to Rs. 110.25. The sovereign at Rs. 71.25 showed little change.

* * * *

During the week ended 3rd January, Government of India Treasury bills for Rs. 111,82,50,000 were sold in favour of the Reserve Bank.

* * * *

Rises of Rs. 16.27 crores to Rs. 1,523.06 crores in active notes and of Rs. 8.87 crores to Rs. 1,532.18 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 3rd January, 1958. The currency expansion was covered by increasing rupee securities by Rs. 9.94 crores to Rs. 1,007.20 crores. Deposits of the Government of India increased by Rs. 1.04 crores to Rs. 53.54 crores, while other Government accounts fell by Rs. 4.91 crores to Rs. 8.10 crores. Balances of commercial banks at Rs. 70.69 crores showed a rise of Rs. 4.32 crores. Balances held abroad declined further by Rs. 4.46 crores to Rs. 17.96 crores. Investments were Rs. 1.38 crores lower at Rs. 243.74 crores. Other loans and advances rose from Rs. 60.04 crores to Rs. 67.41 crores, of which advances to scheduled banks against usance bills amounted to Rs. 24.92 crores against Rs. 1.07 crores. Ways and means advances stood at Rs. 34.60 crores (Rs. 35.03 crores).

* * * *

The statement of the position of scheduled banks for the week ended 27th December, 1957, shows Demand and Time liabilities at Rs. 718.01 crores (Rs. 17.40 crores on account of borrowings from banks) and Rs. 687.54 crores (20.68 crores), compared with Rs. 714.47 crores (Rs. 17.48 crores) and Rs. 684.06 crores (Rs. 22.19 crores), respectively, in the previous week. Cash has increased by Rs. 97 lakhs to Rs. 38.84 crores, while balances with the Reserve Bank have decreased by Rs. 2.91 crores to Rs. 67.61 crores. There is a rise of Rs. 31 lakhs to Rs. 432.96 crores in investments. Advances and bills discounted at Rs. 858.02 crores show a rise of Rs. 10.35 crores. The ratios to total liabilities of cash and balances are, in consequence, shown at 7.6 percent and 61.0 percent, against 7.7 percent and 60.6 percent.

* * * *

Provisional figures of India's foreign trade by all routes—sea, air and land—on private and Government accounts during September 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise:* excluding transit trade of Pakistan and other overland foreign countries, namely, Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 6,115 lakhs, re-exports Rs. 39 lakhs, imports Rs. 8,342 lakhs, total trade Rs. 14,496 lakhs. *Treasure:* exports (including re-exports) of currency notes Rs. 9 lakhs, others negligible; imports of gold Rs. 3 lakhs, currency notes Rs. 365 lakhs, other nil. *Balance of Trade:* The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustments. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 2,191 lakhs.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of October 1957 :

	Rs.
(1) At the Reserve Bank of India in India	35,29,79,000
(2) At treasuries in India	14,80,000
(3) In England (Sterling converted at 18d the Rupee)	2,00,62,000
Total	37,45,21,000

FOREIGN LIABILITIES AND ASSETS SURVEYED

NET CREDITOR POSITION OF INDIA REDUCED

THE Reserve Bank has compiled a report embodying the results of a survey conducted by it of the country's foreign liabilities and assets as at the end of 1955. Like the two previous enquiries of this nature, namely, *Census of Foreign Liabilities and Assets* as on 30th June, 1948, published in 1951, and *Survey of Foreign Liabilities and Assets* as on 31st December, 1953, published in 1955, the present survey provides an indication of the country's international investment position and an analysis of foreign business investments.

India's total liabilities and assets at the end of 1955 amounted to Rs. 766.3 crores and Rs. 1,251.8 crores, respectively, indicating a net creditor position of Rs. 485.5 crores. Country-wise, India was a net creditor in relation to the United Kingdom (Rs. 408.5 crores) and Pakistan (Rs. 269.5 crores) while it was a net debtor in relation to the United States (Rs. 104.7 crores) and most of the other countries. Between 30th June, 1948, and 31st December, 1955, India's net creditor position was reduced by Rs. 1,019 crores as a result of a fall in assets of Rs. 757 crores and an increase in liabilities of Rs. 262 crores. Most of this change occurred during the period prior to 1953. India's creditor position was reduced only to the extent of Rs. 72 crores between 31st December, 1953, and 31st December, 1955.

Likely Change

Though India emerged as a net creditor country at the end of 1955, it is very likely that by the end of 1957 it has already become a net debtor country as a result of the large reduction in the country's sterling assets and substantial additions to its liabilities to the United States, the International Monetary Fund and the International Bank for Reconstruction and Development. India's net creditor position at the end of 1955 was wholly due to the official sector, which had a net creditor position of Rs. 960.8 crores, the non-official sector being a net debtor to the extent of Rs. 475.3 crores. A large part of the decline in the net assets of the country between 30th June, 1948, and 31st December, 1955, was also accounted for by the official sector; its assets declined by Rs. 769 crores while its liabilities increased by Rs. 32 crores. The net debtor position of the non-official sector increased by Rs. 218 crores; its liabilities increased by Rs. 230 crores while its assets showed a small rise of Rs. 12 crores.

Foreign Business Investments

Foreign business investments in India at the end of 1955 amounted to Rs. 481 crores. Investments in manufacturing activities were the largest, namely, Rs. 163 crores; the share of trading was Rs. 102 crores, of plantation Rs. 87 crores, and of utilities and transport Rs. 53 crores. Investment in the rest of the industries was Rs. 75 crores. Included in the totals are Rs. 104 crores of investments in petroleum activities, namely, trading (Rs. 76 crores) and manufacturing (Rs. 28 crores). Branches, subsidiaries and other foreign-controlled enterprises together accounted for Rs. 411.3 crores or nearly 85 percent of total foreign business investments in the country at the end of 1955. Investments not accompanied by control are estimated at Rs. 69.4 crores. The United Kingdom continued to occupy the predominant position among the investing countries, with an aggregate investment of Rs. 392 crores. The United States provided Rs. 41 crores, while other countries taken as a whole accounted for Rs. 48 crores.

Revaluation of Assets

Between July 1948 and December 1955 foreign business investments increased by Rs. 193 crores, of which the increase during 1954 and 1955 was Rs. 61 crores. Since the rise of about Rs. 35 crores was due to the revaluation of assets by companies, the net investment for the entire period was about Rs. 160 crores. The banking capital, mostly in the nature of liquid or floating assets, showed an outflow of Rs. 12 crores during the period. The total non-banking investments during the seven and a half years ended December 1955 thus amounted to something like Rs. 170 crores. Of this, about Rs. 135 crores was invested during July 1948 to December 1953, and the balance of Rs. 35 crores during 1954 and 1955. Petroleum activities (trading and manufacturing) accounted for about Rs. 80 crores of the new investments while manufacturing (other than petroleum) enterprises received more than Rs. 60 crores of capital. Other activities taken as a whole accounted for Rs. 30 crores.

Industrially advanced countries have, over the period, added to their investments substantially. Four industrial countries, namely, the United Kingdom, the United States, West Germany and Switzerland increased their investments by nearly Rs. 175 crores; investments from other countries showed a reduction of about Rs. 5 crores.

The chairman, board of directors, New Victoria Mills Co. Ltd., Mr. J. K. Srivastava, has been re-elected President of the Upper India Chamber of Commerce, **Kanpur**, for the year 1958.

GILT-EDGED RISE STEADILY IN STOCK MARKETS

CAUTIOUS MOOD AFTER RESIGNATION OF MR. THORNEYCROFT

London, 8th January.

WITH hardly one week of the new year gone, the stock markets received their first major disturbance in the resignation of Mr. Thorneycroft, Chancellor of the Exchequer. Prior to this surprise, they were making steady progress, which was stimulated by the better trend of Wall Street and optimistic forecasts about the American business outlook. The better U.K. gold and dollar reserve figures helped; with sterling growing stronger daily, brokers were able to report that clients were showing more interest and that increased enquiries were being made. Actual business, however, remained small. With the Chancellor's resignation, enthusiasm was dampened, so prices eased. It remained to be seen how the new situation would be received outside the U.K., but at first little selling occurred. In fact, after the initial marking down, some recovery was made. The feature was the steady advance in gilt-edged, with institutions joining in the buying. Mr. Thorneycroft's resignation arrested business for some time, but the general view was that gilt-edged would rise further. They were certainly well away from their 1957 low levels. New issues were a restraining influence, but the market recalled that those which had been launched had been completely successful. The subscription list for the new Rhodesia-Nyasaland loan was closed in five minutes. In the foreign bond market, Japanese issues were favoured, while trans-atlantic stocks rose in sympathy with Wall Street. Highly selective buying occurred in industrial equities, with tobaccos in demand in anticipation of dividend announcements. There was a quiet and selective demand for gold shares, while coppers moved erratically. Diamonds eased on the reported Russian discovery. Oils were mostly uncertain and were restrained by the immediate outlook for the industry. Rubbers and teas were quiet throughout.

The Money Market

The year-end was not difficult for the money market, and although there was a vast turnover of funds, the difficulties were surmounted quite well. The last day of the old year found conditions quite easy, and they remained comfortable even afterwards. However, there was no sign of any general easing of the credit situation and supplies were only just about adequate to meet market needs. Rates fluctuated between 6 percent and 5 percent, with the higher rates paid for the earlier loans subsequently tapering off. Bill business was done on a fair scale.

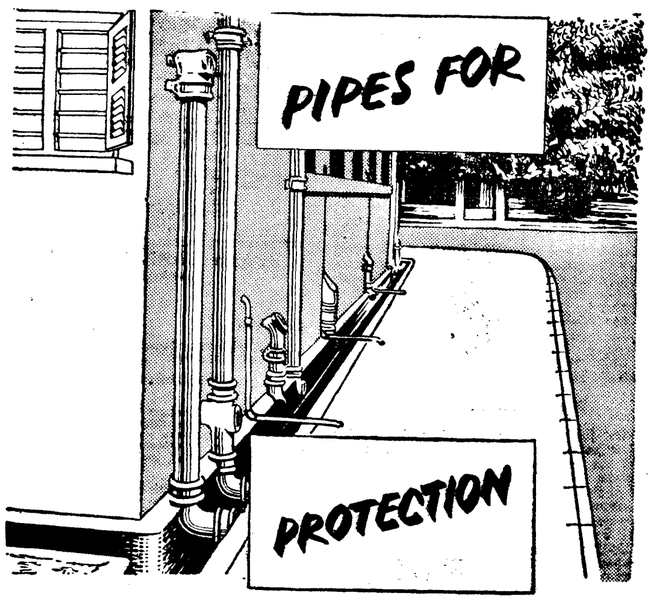
U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 1st January shows that gold stocks rose by $11 million to $22,781 million. Foreign deposits fell by $30 million to $356 million and foreign investments declined by $47 million to $3,729 million. The Federal Reserve bought $84 million worth of bills and $135 million worth of securities under repurchase agreements, but sold $1 million worth of certificates, so the total of U.S. Government securities increased by $218 million to $24,238 million. Total discounts and advances fell sharply by $739 million to only $55 million, while the aggregate excess reserves of member banks fell by $493 million to only $39 million. The daily average excess reserves of member banks rose by $15 million to $724 million, while their daily average borrowings fell by $125 million to $656 million. Business loans of the New York city banks fell by $105 million to $11,700 million, compared with a fall of $211 million to $11,260 million in the corresponding week a year ago.

Steady Undertone in Hongkong Gold

Trading in the Hongkong gold market during the past week was limited, but the undertone was steady due to the tightness of gold supplies and easier sterling. Bullion traders believed that the market was unlikely to make much headway as demand was limited and there was little incentive in the international situation. They thought that the improvement in the U.K. economic position also checked any advances in gold in Hongkong. Opening the period at $(H)256¾, the market reached a high of $(H)256¾, finally closing at $(H)256¾. Carry-over charges were 105 cents in sellers' favour. The official offtake totalled 1,800 taels and the unofficial 8,600 taels. Arrivals were 45,000 ounces. Forward contracts were done at $(U.S.)37.89.

Paris Gold Slumps



The Paris gold market slumped heavily last week. Large sales of ingots, in particular, brought prices down. Though most business was done for the account of the dealers themselves, at cheaper levels some hoarder selling was also evident. The decline was attributed mainly to domestic considerations. The French Finance Minister's success in obtaining the 1958 Budget vote and the brighter outlook for France's external payments were mostly responsible for the trend. There were hopes that the Algerian situation would improve and would reduce the heavy burden on the French Treasury. The rise in gold prices of the last two months due to the difficult financial position has now been fully erased. The market thus reflected the return of confidence because of the improvement of the franc in foreign markets.

Moderate Trading in Vegetable Oils

Moderate trading was noted in most sections of the oil and oilseeds market during the past week, although consumer interest was still of a hand-to-mouth character. Indian castor oil was featured by a sharp price cut by one prominent re-seller, who reduced rates to at least £3 a ton below the general selling ideas but only succeeded in getting one or two small orders. Linseed oil ruled fully steady, with February deliveries ex-tank London and Hull, making £114½ a ton. Argentine oil was cautiously offered, with sellers wanting £1 a ton higher. Finally, however, sharply reduced advices about Canadian linseed made buyers hesitate. Resale parcels of Straits coconut oil were open to near bids but European buyers were not keen to go over £100 a ton, c.i.f. On the other hand, Ceylonese oil appeared firmer on selling caution at the origin aided by reports of moderate trading in prompt shipments to Canada. Spot and early arrival parcels of Nigerian groundnut oil were selling for £122 a ton, ex-tank Rotterdam, but buyers of forward shipments rarely bid over £120½ c.i.f. Hamburg bid £120 c.i.f. for January-February shipments of Argentine oil but most sellers only had freight to Rotterdam and in any case wanted £1 more. The new export quotas for Indian nigerseed and kardiseed oils caused no excitement since first-hand prices were considered hopelessly dear compared with the likely buying levels for European ports. Groundnuts failed to attract support even in the case of re-sale parcels of Nigerian for January shipment to Rotterdam down to £64½ net terms. An early cargo of over 2,000 tons of Gambia groundnuts priced at £63 c.i.f. was creating bearish feeling in the market.

Dutch Shipping Business Affected

Dutch shipping officials say that their business will be seriously affected by the recent agreement reached privately between Japan and Indonesia, under which the latter will receive 75,000 tons of shipping from Japan. Indonesia is to use 26 Japanese freighters, tankers and passenger ferriers to run inter-island services to replace the Dutch K.P.M. vessels. However, shipbrokers in Hongkong say that the arrangement does not disturb them at present because most Hongkong vessels are fully employed. A leading shipbroker has said that the Japanese might feel the pinch in the near future because it is no easy task to run a shipping service in Indonesia. Dock facilities in that country are so poor that it takes five months to repair a vessel. A Japanese shipping executive has claimed that his country is able to supply an even bigger tonnage to the Indonesian market in view of the recession over the past few months.

Stocks and Shares

INDIAN IRON OUTPUT FIGURES HELP UP EQUITY PRICES

OPERATORS MORE HOPEFUL ABOUT INDIA GETTING FOREIGN AID

Wednesday Evening.

THERE has been an improvement in the stock market during the past week on fresh support combined with short-covering. The higher output figures of the Indian Iron and Steel Company have been a helpful factor; it is believed that part of the company's expansion programme is likely to be completed shortly. Operators are inclined to take a hopeful view about the prospects of getting foreign financial assistance.

Jutes and coals have been neglected. National Jute, however, has risen further on interested support. Selected miscellaneous shares have attracted attention but business remains restricted. Tea shares are subdued as uncertainty prevails about the outlook for common grades.

The offer of a 4½ percent debenture loan for Rs. 75 lakhs by the Calcutta Improvement Trust is expected to meet with a good response. At the issue price of Rs. 99.50 percent, the yield is attractive.

Details of the week's trading follow.

* * * *

Government securities were steady, although business was restricted by the shortage of scrip. Three percent Conversion Loan 1986 improved fractionally to Rs. 71.05 and 3% Non-terminable Paper was transacted at Rs. 71.50. Among short-dated stocks, 2½% 1961 increased to Rs. 94.50 and 2¾% 1960 were placed at Rs. 97.25; 2¾% 1962 were fractionally shaded at Rs 94.65 and 3% 1958 were wanted at Rs. 99.75. In the medium-dated group, 3% 1959-61 improved to Rs. 98.95 and 3% 1963-65 were in demand at Rs. 93.72; 3% 1964 were transacted at Rs. 93.90, 3½% 1962 were quoted at Rs. 97.80 and 3½% 1964 were in demand at Rs. 97.75. Among long-dated loans, 3% 1966-68 came to hand at Rs. 91.38 and 3% 1970-75 were transacted at Rs. 85.70. State loans were firm but business was restricted in the absence of sellers. Four percent 1967 West Bengal were taken at Rs. 98.90 and 4% 1967 Madras met with demand at Rs. 97.10.

There were few transactions in preference shares. In spite of a fair enquiry for selected miscellaneous scrip, business was restricted. Alkali and Chemical were taken at Rs. 97 and Birds Investments were transacted at Rs. 54. British India Corporation found buyers at Rs. 100.50 and Indian Iron were transacted at Rs. 95.50. Sellers predominated in jutes. Empire were done at Rs 87 and Gourepore were transacted at Rs. 70 ex-dividend. Waverley were placed at Rs. 30.

In banks, Punjab National were taken at Rs. 46.50 and United Bank of India "D" were transacted at Rs. 4.19.

Indian Iron were steady at Rs. 19.10 in the engineering group. Investment support lifted Indian Standard Wagon to Rs. 97. Richardson and Cruddas rallied to Rs. 8.87 on replacement buying, but Jessops were offered at Rs 21.75. Textile Machinery recovered to Rs. 16.10 on short-covering.

National were a strong feature in the jute section and improved further to Rs. 23.50 on interested buying. Elsewhere, sellers predominated and prices were lower on balance. Anglo-India came to hand at Rs. 133. Howrah declined to Rs. 13.12. Reliance were available at Rs. 5.62 and Presidency were done at Rs. 3.28.

Business was restricted in coal shares and routine turnover was seen. Bengal were taken at Rs. 228, and Burrakur at Rs. 22 showed little variation. Central India improved fractionally to Rs. 6.12 and West Jamuria were quoted at Rs. 5.81.

Cotton shares were neglected, and Elgin declined to Rs. 13. Jayshree Textile were offered at Rs. 6 and New Victoria found little support at Rs. 1.81.

Among mining shares, Indian Copper were idle at Rs. 2.82 and Burma Mines were quoted at Rs. 1.72. Metal Corporation came to hand at Rs. 5.06.

Prices of miscellaneous shares were maintained but business was restricted. In the cement section, Sone Valley were done at Rs 4.56. Alkali and Chemical were transacted at Rs. 13.25. British India Corporation recovered to Rs. 4.15 on bear-covering. Dunlop Rubber were bought at Rs. 20.50 on investment account and Hindustan Lever were steady at Rs. 20. Indian Cable were taken at Rs 25 on the prospects of a rights issue. Martin Burn were steady at Rs. 24.19 and National Insulated Cable were bought at Rs 23.33. Philips India declined fractionally to Rs. 14.06 and Rohtas Industries were quoted at Rs. 15.56.

In the paper section, Orient Paper closed at Rs. 23.30 ex-dividend and Titaghur were steady at Rs 32. Shree Gopal came to hand at Rs. 14.50.

Sugar shares were neglected and Durbhanga were offered at Rs. 17.69.

Business in tea shares was subdued. Among Assam gardens, Dufflaghur were bought at Rs. 27.87 and Hoograjuli were quoted at Rs. 28. Brahmapootra declined further to Rs. 2.91 on selling pressure, while Seajuli were wanted at Rs. 17.12. In the Dooars group, New Dooars were quoted at Rs. 248 and Hantapara were sold at Rs. 109. Among Terai gardens, Gungaram were lower at Rs. 101.50 and Teesta Valley were offered at Rs. 21.37.

* * * *

The profit of the TELOIJAN TEA COMPANY has increased by Rs. 1.03 lakhs to Rs. 5.70 lakhs for the year ended December 1956. Providing Rs. 2.06 lakhs for taxation, bringing in Rs. 62,519 and making other adjustments, there is a balance of Rs. 3,98,981. The dividend has been increased from 25 percent to 35 percent, including an interim of 15 percent. Buildings and machinery reserve is allocated Rs. 1.25 lakhs. There is a balance of Rs. 64,681 to be carried forward. The crop declined from 10,032 maunds to 9,653 maunds but the average sale price increased from 33.55 annas to 40.55 annas a lb. Estimates for 1957 provide for a crop of 9,750 maunds at a cost of Rs. 11.96 lakhs.

* * * *

The AGARPARA (JUTE) COMPANY has made a profit of Rs. 1.08 lakhs for the year ended last March. The ordinary dividend has been halved to 2½ percent, leaving a carry-forward of Rs. 18,786, after transferring Rs. 75,000 from general reserve.

* * * *

There is a profit of Rs. 2.10 lakhs for the WESTERN BENGAL COALFIELDS LTD. for the year en-

ded last March, against Rs. 2.19 lakhs. Bringing in Rs. 7,262, there is a balance of Rs. 261,443. A dividend of 50nP has been declared to absorb Rs. 2,49,900. The carry-forward is Rs. 11,543. Raisings amounted to 198,893 tons and despatches were shown at 202,320 tons.

* * * *

Providing Rs. 1.90 lakhs (Rs. 1.47 lakhs) for depreciation and Rs. 31.42 lakhs (Rs. 28 lakhs) for taxation, bringing in 1,44,443 and making other adjustments, there remains an amount of Rs. 38,66,836 for the year ended last March. The dividend has been maintained at 20 percent on the increased capital. Dividend equalisation fund is allocated Rs. 5 lakhs and general reserve receives Rs. 15 lakhs. Transferring Rs. 4 lakhs to expansion reserve, there is a carry-forward of Rs. 2,67,636. The directors mention that "sales in the current year so far are satisfactory and the prospects appear to be good, although production was adversely affected by the closure of the factory for two months."

* * * *

The profit of the AMLUCKIE TEA COMPANY has amounted to Rs. 7 lakhs for the year ended December 1956. Making all adjustments, the available balance has amounted to Rs. 4,00,783. A dividend of 50 percent (19 percent) has been declared, including an interim of 15 percent. The crop declined from 10,669 maunds to 9,635 maunds and the average sale price rose from 33.98 annas to 43.34 annas a lb. Estimates for 1957 have been made for a crop of 10,400 maunds at a cost of Rs. 12.18 lakhs.

* * * *

Providing Rs. 8.75 lakhs for taxation and making other adjustments, the KIRLOSKAR ELECTRIC COMPANY has made a profit of Rs. 5.43 lakhs for the year ended last June. Bringing in Rs. 6,836, there is an available balance of Rs. 5,49,377. A dividend of 7½ percent has been declared. General reserve is allocated Rs. 1.21 lakhs. Dividend equalisation fund receives Rs. 15,000. Rehabilitation reserve is given an allocation of Rs. 75,000, leaving a carry-forward of Rs. 6,010. The company proposes to issue new shares worth Rs. 5 lakhs to finance expansion plans.

* * * *

Providing Rs. 1.56 crores (Rs. 1.34 crores) for depreciation and Rs. 1.17 crores (same) for taxation, the net profit of the ASSOCIATED CEMENT COMPANIES has amounted to Rs. 1.90 crores (Rs. 2.53 crores) for the year ended last July. Bringing in Rs. 2,93,968, there is a balance of Rs. 1,93,09,844. Plant reinstatement reserve is allocated Rs. 35 lakhs. The dividend is reduced from Rs. 10 to Rs. 9 a share, leaving a carry-forward of Rs. 2,58,821. The directors say that the profit has declined because of a rise in production costs as "a result mainly of the increased price of coal, enhanced railway freight rates and terminal charges, increases in wage rates and dearness allowance, higher prices of stores and spares, and last, but not least, the high cost of expansion reflected in the higher charge for depreciation. Added to this is the incidence of the increase in the rates of income tax and corporation tax and the levy of wealth tax, all of which affected the profits of the year under report." They add that the company is applying to the Controller of Capital Issues for sanction to issue debentures of Rs. 5 crores to provide additional resources required partly for investment in the heavy engineering project which the company may undertake in collaboration with Vickers Ltd. and Babcock and Wilcox Ltd., and partly for immediate needs relating to expansion plans.

* * * *

The output of the INDIAN IRON AND STEEL COMPANY during the quarter ended last December, compared with the previous quarter, was as follows: pig iron 190,484 tons against 171,397 tons; steel ingots 125,194 tons against 119,172 tons; and semi-finished steel for sale 19,210 tons against 13,837 tons. Finished steel decreased from 82,978 tons to 82,936 tons.

* * * *

Tata Industries Private Limited, managing agents for the TATA IRON AND STEEL COMPANY, report that the total approximate production of iron and steel at the steel works in Jamshedpur during December 1957 was: pig iron 95,100 tons, steel ingots 100,500 tons; semis for sale 19,600 tons and finished steel 54,600 tons.

Bombay Market

SHARE PRICES MAINTAINED

BETTER BUSINESS IN CLOTH HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market closed on a steady note during the past week and prices were maintained in the absence of selling pressure. The higher output figures of the steel companies, combined with an improvement in the cloth trade, helped improve sentiment. The prospect of an increase in the price of rayon yarn was bullishly interpreted.

Tata Steels were higher at Rs. 164.50 and Indian Irons were quoted at Rs. 19.10 on interest from Lyons Range. Tata Locomotive were steady at Rs. 137.50 and Premier Construction were wanted at Rs. 157.25. Alcock Ashdown declined to Rs. 220. Automobile shares were freely offered and prices fell on balance. Premier Automobiles came to hand at Rs. 87.70 and Hindustan Motors declined to Rs. 5.50.

Mill shares showed fractional gains on short-covering. Bombay Dyeing recovered to Rs. 50.40 and Svadeshi were quoted at Rs. 170.15. Kohinoor met with investment support at Rs. 264 and Century were taken at Rs. 390. Simplex came to hand at Rs. 159 and Central were done at Rs. 77. Apollo were transacted at Rs. 2.02, while India United Ordinary were freely offered at Rs. 9.42.

In the miscellaneous group, sugar shares were steady and Belapur were bought at Rs. 234. Phalton changed hands at Rs. 147.25. Cement shares were maintained, and Associated Cement were quoted at Rs. 150.25 on the report that the company would raise fresh capital by issuing debentures to finance its heavy engineering project. Digvijay Cement were quoted at Rs. 134. Steamship company shares were steady, and Scindia Steam came to hand at Rs. 17.06. Great Eastern Shipping were shaded at Rs. 19.72 on pressure. Mining shares were subdued, and Shivrajpur Syndicate were available at Rs. 84.50. National Rayon improved to Rs. 216 on replacement buying, but Tata Chemical were lower at Rs. 12.44 on pressure. Bombay Burmah recovered to Rs. 205.

Banking shares were steady on the hope that profits for the past year would show an improvement. Bank of Baroda were wanted at Rs. 105.50 and Bank of India were quoted at Rs. 132.75. Insurance shares were idle, and New India Assurance were offered at Rs. 50.25.

There was scattered interest in electricity supply shares, and Ahmedabad Electric were bought at Rs. 94.50. Tata Power came to hand at Rs. 1,133.75.

How banking serves the RUBBER INDUSTRY

RUBBER was first planted commercially in India in 1902. Today Indian rubber plantations, concentrated in Travancore-Cochin and Malabar, produce 20,000 tons of rubber every year, valued at four and a half crores of rupees. More than 250 Indian factories depend on this output for their production of finished goods.

Without banking, this growth could never have taken place. The facilities and guidance offered by a good bank, such as the availability of ready funds when needed and the collection of dues in any part of the country, have become part of the structure of the rubber industry.

We at Palai are proud that so many important rubber producers, and indeed leading firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Bill Collection—Letters of Credit—Deposits—Investments—Loans & Overdrafts—Confidential Credit Reports, etc.

* * * * *

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA.

Branches at: **Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc.**

Also at: Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

BASIS FOR FIXING PRICES OF PETROLEUM PRODUCTS

PATTERNS OF OUTPUT AND DEMAND IN INDIA

(FROM OUR NEW DELHI CORRESPONDENT)

THE c.i.f. prices of the main petroleum products used in India represent a combination of the publicly quoted f.o.b. price ruling in the Persian Gulf area, ocean freight from the Persian Gulf to Indian ports and other incidental charges such as transit losses and insurance. To these c.i.f. prices are added the distributing costs and a remuneration margin to arrive at the delivered or f.o.r. price at Indian consuming centres. The f.o.b. price in the Persian Gulf reflects the competing interests of over 50 million tons of refining capacity located in that area. This refining capacity is owned not only by the so-called major companies, but also by independent American, French and other groups. The concentration of refining capacity in the Persian Gulf, which is at once massive in size and heterogenous in composition, ensures that the posted price in the area is a competitive one.

Ocean freight is calculated on the basis of assessments made independently by tanker brokers in London. These are published in leading financial newspapers. The assessments take into account tankers owned by the oil companies as well as those chartered by them on both short and long-term basis; a weighted average is calculated from these various factors. Of the world tanker fleet, only 40 percent is owned by the oil industry, the balance of 60 percent being owned and operated by independent interests.

The basic pattern of c.i.f. prices is univérsal and is fixed on the same basis as in other parts of the world, including western Europe. It is well known, for example, that west European refineries operating on Middle East crude, sell their products at prices which are based on quotations in the U.S. Gulf and Caribbean area, plus ocean freight and transportation incidentals from that region to western Europe. This is the essence of the now famous "import parity principle".

Although refining capacity in India almost approximates to the current demand for petroleum products, she is dependent to the extent of something like 35 percent on imported supplies. This is because there is an imbalance between the pattern of Indian consumption and the pattern of refinery output. This imbalance is not a peculiarly Indian characteristic. It reflects the fact that there are numerous elements which limit the flexibility of refinery operation, rendering it impossible to match refined output exactly with the pattern of demand. In western Europe, for example, where the refining capacity exceeds total demand, there is a chronic shortage of furnace oil which has to be made up by imports from other regions.

Import Parity Principle

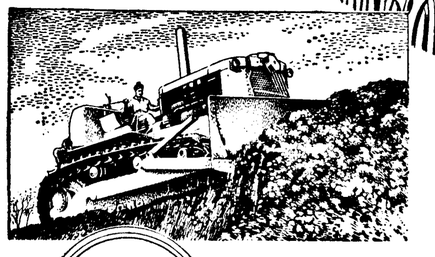
Briefly speaking, at least three factors limit the flexibility of refinery output: (1) the characteristics of the crude processed, placing inherent limitation on the range of products which can be produced and the proportion of each which can be refined from a given quantity of crude; (2) the capacity of installed refinery equipment; and (3) the specifications laid down, determining the characteristics of the refined products sold. It might, however, be contended that the import parity principle should not be applied to indigenously refined products. Three arguments have to be stated in this connection:

(a) The principle of import parity is applied to indigenously refined products in most countries of the world, including western Europe.

(b) The international character of the oil industry and the necessity to maintain international flexibility of supply to meet emergencies and chronic disparities between output and demand in individual countries. This balancing must be based on some form of unified pricing system. (c) In the refinery agreements concluded with the oil companies operating in India, the principle of import parity has been accepted for price fixing.

Post-c.i.f. factors are a compound of certain things, many of which are outside the control of the oil companies, such as (i) wharfage and port facilities charges; (ii) octroi, municipal taxes, duties and various governmental levies; (iii) rail freight; and (iv) legislation governing the facilities provided for distribution, storage, selling, etcetera.

In considering the question of oil prices it has to be recognised that petroleum is a product the demand for which is continuously expanding. This imposes on the industry the need constantly to explore and locate fresh sources of what is basically a wasting asset. The essential difference between petroleum and other extractive industries lies in the fact that unlike, for example, coal, the search for petroleum is not only extremely expensive, but also exceedingly hazardous. There is no means known to science yet whereby the location of oil can be exactly determined. It follows from this that all the expense of exploration has to be undertaken in the knowledge that the search might well be fruitless. The second specific characteristic of oil arises from the fact that it is a volatile liquid. This implies the need for specialised transportation facilities, whether they be ocean-going tankers, trans-desert pipelines, rail tank-wagons or bulk lorries. The transportation agencies used in a modernised oil industry are unlike transportation facilities in ony other industry in the sense that these can be utilised only for the carriage of petroleum. For example, the investment in a tanker has to pay off in oil carriage freights, and oil carriage freights alone. Tankers cannot to any significant degree be used for the carriage of other products, for the simple reason that oil is perhaps the only liquid (apart from whisky and wine) which travels internationally in bulk.



A comparison with other extractive industries can also be extended to refining. The transformation of coal from the earth to coal in the kitchen is a simple process when compared with the complex operations which change crude oil into, say, high octane gasoline or kerosene. The vast and expensive apparatus employed in the refining industry implies immense expenditure on capital, especially since refinery equipment is subject to a very large obsolescence factor.

Vast Capital Requirements

The vast capital required by the oil industry can no longer be obtained from the traditional source of corporate finance—the stock market. If the industry is to continue, it has to generate by its own operation the vast quantities of finance required to keep it in motion. Surveys made by the Chase Manhattan Bank and other agencies clearly prove that the profits of the oil industry, to a very large extent, have to be retained in the business to finance its expansion.

Lastly, it may be observed that price stability, by itself, is evidence neither of the existence or the non-existence of competition. Two horses may run neck to neck throughout a race, but this does not mean that they are not competing with each other.

Tomorrow's fertile farmlands can be built today by

To reach our goal of self-sufficiency in food production, millions of acres of arid land are being reclaimed for cultivation. Huge dams are being erected, miles of canals are being dug and vast tracts of land being cleared and levelled.

In all such major projects, construction engineers and contractors everywhere invariably rely on Caterpillar equipment for their rugged strength and versatility.

New Delhi

THREE NEW PHARMACEUTICAL UNITS TO BE SET UP IN PUBLIC SECTOR

WORK ON FOUNDRY-FORGE PROJECT EXPECTED TO START SOON

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Minister for Industry, Mr. Manubhai Shah, has held out the hope that 1958 is going to be the "pharmaceutical year" because three new units in the public sector covering a wide range of medical needs will be established. One of these projects concerns the complete programme of basic intermediates required for the drug and chemical industries. Another, comprising one or more units, covers a wide range of synthetic drugs. The third is for the manufacture of antibiotics, alkaloids and vitamins. The major collaborators in these projects will be Russia, although an American firm, Sharp and Dolime, and a German firm, Merck, have shown some interest. The Russians, following the report by their experts, have informally offered credit for the implementation of the projects.

The necessity of developing a drug industry in India was realised long ago. The Central Ministry of Commerce and Industry appointed a special committee in 1953 (the Pharmaceutical Enquiry Committee) to study the conditions of drug manufacture and to make recommendations for their improvement. On the basis of that Committee's report, the Ministry has worked out a programme for the development of the drug industry during the second plan period. It shows the scale of production of the most important drugs which it is proposed to achieve at the end of the plan period. The Pharmaceutical Sub-committee of the Planning Commission has also drawn up a scheme based on the same Committee's enquiry report, expressing the view that an integrated plant for the production of drugs and intermediates should be set up.

The Russian experts in their report have expressed the opinion that "the present position of the pharmaceutical industry is aggravated by the fact that the biggest plants directly depend on foreign firms. According to the report of the Pharmaceutical Enquiry Committee, out of 93 pharmaceutical plants, 32 are private enterprises under foreign control or working in collaboration with foreign companies. These plants produce over 50 percent of the total value of the finished drugs made in the country, employing only 15 percent of the total number of workers. It is remarkable that in one year they purchased imported raw materials valued at Rs. 42 million and indigenous raw materials valued only at Rs. 6 million. There is no doubt that by this method, foreign firms use their monopoly position for the production of drugs to maintain high selling prices. For instance, chlortetracyclin produced from the imported penultimate (only purification is made) is being sold in the Indian market at the price of Rs. 9-8 to Rs. 10-8 a gram. For one course of treatment of one patient, 15 and more grams are required, namely, of the value of Rs. 150 and more. Meanwhile, the cost of starting material for the production of one gram of this drug, even according to the existing prices at the moment, does not exceed one anna and the ex-factory price of the finished drug is 5 annas. Streptomycin is sold for Re. 1 a gram. One course of treatment requires from 50 to 100 grams of streptomycin. Therefore, the cost of treatment of a T.B. patient for streptomycin alone is Rs. 50 to Rs. 100. Tentative calculations show that after the production of streptomycin in India is started, its cost of production will be half the imported price. The position is similar concerning other drugs, particularly if they are new, and a foreign firm is producing them on a monopoly basis. Thus, the Indian pharmaceutical industry has developed without a proper foundation and, to a large extent, is dependent on the import of finished drugs and penultimates for the production of drugs."

Scope for Production

On the basis of the work carried out in co-operation with Indian specialists and the calculations made, the experts consider that there is every possibility of India starting her own production of the most important drugs, synthetic vitamins and necessary intermediates, using mainly the local raw materials.

A list of important drugs and vitamins as given by the Russian experts includes the names of 41 drugs and light vitamins, the output of which, according to the experience of many countries, usually amounts to 70 to 75 percent of the total value of the output of drugs. Their annual production in India, under the Russian scheme, will amount to 2,781 tons and will have a total value of Rs. 27 crores comprising 93 tons of vitamins of the value of Rs. 22 crores and 2,688 tons of other drugs of the value of Rs. 24.8 crores of which antibiotics are Rs. 17.3 crores in value, which is nearly 70 percent. This production is about two and a half times the actual amount of the listed drugs and vitamins imported in 1955. These estimates are based on approximate figures of import prices available at that time.

The following measures have been recommended to establish this capacity:

(a) The Hindustan Antibiotics plant in Pimpri should be expanded in order to increase its production to 40 million mega units a year (the existing level of production is approximately 15 million mega units a year) and new units for the production of streptomycin, chloretracylin and other antibiotics with an annual output of 85 tons and vitamins D-2 and B-12 should be established. The capital investment for this expansion is estimated at approximately Rs. 3.5 crores, based on the assumption that 1 cubic metre of the factory with equipment costs Rs. 220

(b) A new antibiotic plant should be set up to manufacture penicillin, streptomycin and other antibiotics, dextran, and vitamins B-2 and B-12. The capital investment will be approximately Rs. 8.5 crores, based on the assumption that the factory with equipment costs Rs. 250 a cubic metre.

(c) In setting up a new chemical-pharmaceutical plant with the capacity of 2,300 tons a year of synthetic drugs and vitamins, provision should be made to produce a number of intermediates in quantities totalling 2,300 tons. The capital investment will be approximately Rs. 1.1 crores based on the assumption that a factory with equipment costs Rs. 230 a cubic metre.

(d) A unit for the production of endocrines should be constructed at the new slaughter-house of Bombay.

Thus, by setting up plants at a cost of Rs. 23 crores, it will be possible to produce the most essential drugs and vitamins in quantities required to meet the urgent requirements of the population and medical institutions of the country. The deciding factor in starting the production of essential antibiotics, synthetic drugs and vitamins in India, say the experts, is the creation of sources of intermediates from indigenous raw materials.

Output of Intermediates

Proposals are made for the production of a number of intermediates required in small quantities totalling 2,700 tons a year at the chemical-pharmaceutical plant and antibiotics plant along with the drugs, and for building a special plant for producing the intermediates required on a large scale. The experts say that the total output of the plant should be 94,600 tons a year, including 58,400 tons to be used for conversion into other intermediates; 17,700 tons to be supplied to the chemical-pharmaceutical plant and 15,500 tons to the dye, plastic and other industries. In addition, 4,500 tons of hydro-chloric acid produced as a waste product in the intermediates plant will be supplied to the chemical-pharmaceutical plant for the production of drugs. The total capital cost will be approximately Rs. 11.5 crores, on the assumption that the construction of this plant should be carried out in two stages. The first stage is to provide for an output of 63,000 tons of raw materials and intermediates, 41,060 tons of which quantity will be utilised at the plant itself. 10,400 tons supplied to the chemical-pharmaceutical plant and 11,600 tons for other industries. The total capital investment for the first stage of construction will be about Rs. 8.5 crores approximately. Tentative calculations show that the cost of production of intermediates at the plant, when in full production, will annually be Rs. 2.4 crores less than the cost calculated at the existing prices. Thus after four to five years of the working of the plant, the saving in the cost of production, when compared with import prices, will completely compensate for the capital investment for the plant. In addition, the availability of cheaper intermediates will ensure a further reduction in the production cost of drugs.

For the production of antibiotics, synthetic drugs and vitamins, in addition to the intermediates and chemical raw materials made available from the intermediates plant, 33,400 tons a year of various other raw materials will be required. For the intermediates plant, about 59,900 tons of mineral and chemical raw materials will be required. Thus the total requirements of raw materials will be 93,300 tons a year.

A preliminary study of the possibility of obtaining these raw materials showed that 69,000 tons a year of 33 items could be supplied from the existing plants; for the supply of 10,800 tons of raw material of 22 items, it is necessary to expand or to set up new capacities at the existing plants. These include acetic anhydride, acetone, acetic acid, butyl acetate, butyl alcohol, lactose, methanol, pyridine, pyridine bases, diethyl-acetate, etcetera. The rest of the raw materials, amounting to 29 items and totalling 3,500 tons a year can be imported. Out of these raw materials, 12 items will be required in quantities of 100 to 400 tons. The remaining 17 items will be required in the quantities of seven to 70 tons. In addition, for the production of sulphuric acid, 10,000 tons of sulphur will be required to be imported.

Two firms, Glaxo and Voltas, are planning to manufacture ten million mega units a year of Vitamin A.

Czech Offer for Foundry-Forge Project

With the technical and financial participation of Czechoslovakia, work on the foundry-forge project in the public sector should commence at an early date. The total cost of the project is estimated at Rs. 30 crores, the ultimate capacity being 45,000 tons a year. It will be completed in two stages. At the first stage in 1962, production will be 22,000 tons, and the second stage will be completed in 1964. According to the Czechs, the foreign exchange element in the project expenditure will be of the order of Rs. 16½ crores, which will be repayable on easy terms, the first payment commencing not earlier than 1st April, 1962. Czechoslovakia's investment will carry a 4.5 percent rate of interest a year. It has stipulated that it would like the payment in Indian rupees of a sum not exceeding Rs. 1 crore during the period ended 31st March, 1961, to be utilised for the purchase and import into Czechoslovakia of Indian goods. Czechoslovakia's offer, it is understood, is being accepted.

Extension of Trade Agreements

Letters were exchanged last week extending by another year the validity of the schedules attached to the Indo-Russian trade agreement, extending the validity of the Indo-Italian trade agreement till December 1958 and extending certain privileges to the nationals of India and Japan in the matters of trade, shipping, navigation, air traffic, etcetera, till 31st March, 1958. During this extended period, the Governments of India and Japan hope to complete discussions for the conclusion of a trade agreement. The Indo-Italian trade agreement was concluded on 29th July, 1954, and was initially valid up to December 1955. It was extended from time to time up to December 1957. Under the trade agreement, Italy has agreed to treat India on par with the countries in the Organisation for European Economic Co-operation. About 98 percent of the imports into Italy from these countries have been liberalised. Italy has been, and continues to be, one of India's important trade partners. The total value of imports into India from Italy during 1956-57 amounted to Rs. 26.6 crores. The important commodities of import were machinery, iron and steel and manufactures, vehicles and textiles. The value of India's exports to Italy during 1956-57 amounted to Rs. 7 crores. The main commodities of export were iron and manganese ores, mica, lac, hides and skins, spices, coffee, hemp, coir manufactures, etcetera. Her exports to Italy have not increased significantly, mainly because of the decline in the exports of vegetable oils. India is however a sizable producer of a large number of commodities which are imported by Italy.

Indo-Russian Trade

The Indo-Russian agreement which was signed on 2nd December, 1953, is valid for a period of five years. To Schedule "A" which lists the items available for import into India from Russia, zinc and ammonium sulphate have been added. Schedule "B", which mentions items for export from India to that country, has also been expanded to include coir products, dyeing and tanning substances, woollen carpets of high as well as ordinary quality and woollen hosiery fabrics. Among the items for export from India mentioned in the schedule are tea, jute manufactures, raw wool, coffee, spices, shellac, hides and skins, cashewnuts, mica, unmanufactured tobacco, footwear and fruits and vegetables.

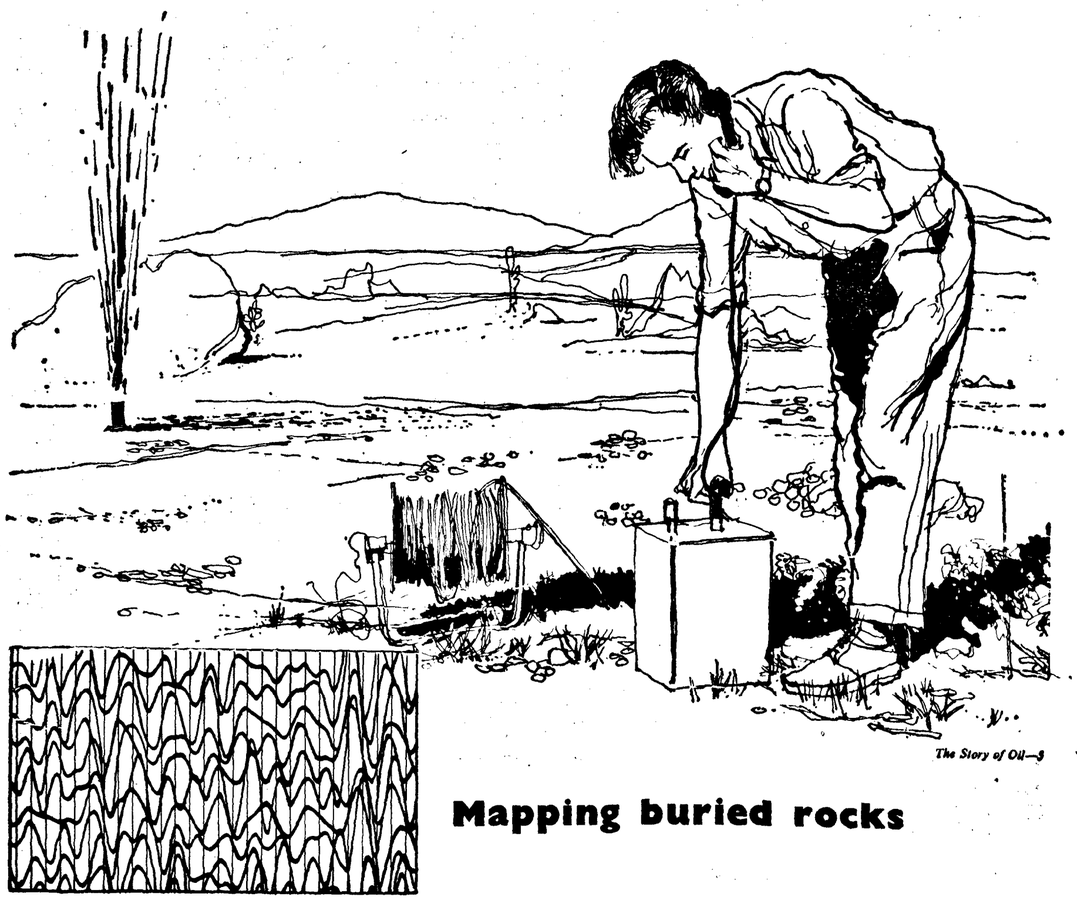
The chief items of imports from Russia mentioned in the schedule are iron and steel manufactures, metals other than iron and steel, mining equipment, heavy electrical plant and equipment, textile machinery, machine tools, ball and roller bearings. Since the signing of the Agreement in 1953, Indo-Russian trade has increased steadily. While the total trade between the two countries stood at Rs. 1.75 crores during 1953-54, the figure for 1956-57 was Rs. 32.41 crores. India had a favourable balance of trade to the extent of Rs. 55 lakhs during 1953-54. During 1956-57, however, the balance of trade was against India to the extent of Rs. 1.41 crores. This was mainly accounted for by large imports of iron and steel products comprising nearly 80 percent of Russian exports to this country. There has also been an appreciable increase in Indian exports to Russia, and several products such as tea, coffee, spices, cashewnuts, footwear, woollen fabrics, jute manufactures, tobacco and hides and skins have entered into the trade against only three items four years ago.

Tax Relief for Tobacco

Representations have been received for some time past urging the reduction of excise duties on certain categories of unmanufactured tobacco and cigarettes. The Government has considered these requests in the context of the additional excise duties recently imposed replacing the sales tax on these commodities. It has been decided to give relief in the basic excise duty to the extent of 3nP a lb for unmanufactured tobacco other than flue-cured, and mainly used for *hookah*, chewing, cigars and snuff. Thus the additional excise duty of 3nP a lb, recently imposed on these varieties will be absorbed in the basic excise duty resulting in a substantial relief to consumers. It has also been decided to reduce the basic excise duty by amounts ranging from 35nP to Rs. 4.10 a thousand for certain varieties of cigarettes which were affected by the merger of the surcharge in the basic duty in 1955.

Import and Export Advisory Council Meetings

The Import Advisory Council will meet in New Delhi on 8th February, 1958. The Export Advisory



Council will meet on the next day. Mr. Morarji Desai, Central Minister for Commerce and Industry and chairman of the two Councils, will preside.

Talks on Double Taxation Relief

A three-man delegation from West Germany was here to negotiate an agreement with the Government of India for the avoidance of double taxation. Similar negotiations are at present in progress with the U.S.A., Sweden and Switzerland. A mission from United Kingdom is expected towards the end of January. The absence of such agreements has stood in the way of foreign investments in India. During his recent tour abroad the Finance Minister, Mr. T. T. Krishnamachari, realised this fact. Under the existing practice, India has been acting on the formula that the country in which profits were earned would retain the taxes on them. Double taxation on incomes ranges from 85 to 92 percent. So far as the existing investments are concerned, three countries, namely, India, the U.K. and the U.S.A., give unilateral relief under which taxes paid to the foreign or the home Government, whichever are less, are refunded. But this procedure, it is said, will have to be changed for new investments. Under the changed circumstances, India has to create a proper climate for attracting foreign investments. Hence the present negotiations. The West German mission left New Delhi on 6th January. Negotiations with the U.S.A. will probably commence in Washington as soon as India has received and studied the American case.

Financial Dependence of States

The Prime Minister, speaking at the annual session of the Associated Chambers of Commerce in Calcutta and also at a Press conference last week, has referred to the growing habit of dependence in the country. The State Governments increasingly ask the Centre for their food requirements and the latter, in turn, asks foreign Governments. It may be pointed out that the remedy for this lies only with the Central Government. For the past ten years, it has been foisting its own schemes on State Governments, and giving them financial aid for implementation. Education, for example, has been a State subject since 1921. Constitutionally, even university education belongs to the jurisdiction of the States. Yet the Government of India has been doling out money for primary and secondary education. As for food, a closer examination will show that the planners' dreams of abundance through irrigation projects are proving a nightmare. In the case of the Damodar Valley, a demand has been made to supply irrigation water with "the compliments of the Government". The Mahanadi delta scheme was to be completed by the Orissa Government. But one million acres of land there have yet to be irrigated. The Hyderabad side of the Tungabhadra Project has similarly been neglected. In the Bhakra-Nangal project, the collection of betterment levy has been in arrears. Higher production of food through increased irrigation facilities is among the main aims of the multi-purpose river development projects. But irrigation facilities for over 2 million acres remain unutilised. The financial basis of the river valley development projects has also been totally upset. The State Governments seem to assert that a period of high prices is not the proper time for levying betterment fees. But in a low-price period, they demand price support for foodgrains and oppose betterment fees. In the ultimate analysis it is politics which is regulating the economic activities of the Government. It will be fair, therefore, to tell the taxpayer that river valley projects, for example, have been undertaken to create employment and impress foreign visitors. They are not intended to be financially sound or to raise additional foodgrains.

The Story of Oil—9

Mapping buried rocks

Geophysics, which is the science of the earth's physical structure, aids the search for petroleum by making it possible to study the characteristics of rock layers buried deep in the earth's crust.

The geophysicist's main "tools" for this job are the gravity meter, the magnetometer, and the seismograph. The gravity meter and the magnetometer, as their names imply, measure the pull of gravity and the magnetic force of the earth. For the sedimentary rocks which may contain oil are lighter than others, and they are less "magnetic" than the harder rocks which never contain oil.

With the seismograph, the geophysicist can measure the intensity and timing of earth tremors. The men of a seismic crew bore a shallow hole in the ground, lower a charge of dynamite into it and set it off. The shock waves produced by this miniature earthquake travel down, hit the layers of rocks beneath and bounce back to the surface where they are recorded by the seismograph. The waves are reflected strongly from hard rock and less strongly from soft rock. The length of time they take to reach a particular layer and to return indicates the depth of the rock.

All this information is recorded in the form of wavy lines on a chart. By setting off explosions at a number of points it is possible to map the various buried rock formations with a fair degree of accuracy.

When all the results of a geophysical survey have been compared, it may be possible to locate a rock formation that might prove to be oil-bearing. But even if such a trap is found, the only way of proving whether or not it contains oil is by drilling a test well.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

London

MR. THORNEYCROFT RESIGNS

CONFLICT ON MOVE TO RESTRICT GOVERNMENT EXPENDITURE

(FROM OUR LONDON CORRESPONDENT)

THE big news this week has been the resignation of Mr. Peter Thorneycroft as Chancellor of the Exchequer. He has been succeeded in that office by Mr. Derrick Heathcoat-Amory, who has hitherto been the Minister of Agriculture. Mr. Thorneycroft has resigned because many members of the Cabinet do not agree with his proposals on restricting Government expenditure. The City of London, meanwhile, has turned its thoughts to a review of his policy to fight inflation by keeping the supply of money down and allowing it to rise only with rises in production. It is thought that the policy failed in its purpose so far as the spending spree over Christmas is concerned. The latest figures from the bankers' clearing house show that the public wrote something like 10 percent more cheques (in value) in December 1957, than in the corresponding month of 1956, which represents about £1,300 million. In consequence, by Christmas Day the note circulation had risen to £2,128 million, or 7 percent higher than on Christmas Eve in the previous year. It is certain that production did not justify this increase, for the November index for all industries, after seasonal adjustment, was provisionally given as 138-139 (1948 equals 100), against 137 for the same month in 1956, and for the first 11 months of 1957 averaged 138, compared with 137 in 1956. The highest total index for a whole year was 137 in 1955; it was 136 in 1956, and should be just a bit better for 1957, which might have been much better but for the shipbuilding and engineering strikes in March and April, and the influenza epidemic in September and October last. By and large, the "plateau" year has ended on a cheerful note for the retail trade; and a cautiously optimistic one for industry and the City, with the pound sterling reaching its best level of the year on the exchange markets on 31st December. The Budget is likely to be the next hurdle, for the balance of payments is still believed to be yielding a large surplus on current account. Another rise has just been announced in the end-December gold and dollar reserves, and there has been some easing of withdrawals of sterling balances from London.

Encouraging Treasury Returns

Prior to the Prime Minister's departure on his Commonwealth tour, the Cabinet has been kept busy clearing up all outstanding business. Not a little of this has been concerned with the economic outlook and the various departmental estimates now being completed. Some expect that the harshness of the next Budget will prove a shock to the Conservative Party; others say that much of the harshness shown in the measures of last September will be relaxed. So much of the Government's thinking will be conditioned by developments overseas and over which it can have little or no control that it will be surprising if it does not fall back on the middle course of "the mixture as before." The Treasury returns for the first three quarters of the financial year show a marked decrease in the Exchequer deficit customary at this stage. Revenue has fallen short of expenditure by £444 million, against £584.7 million a year ago, total ordinary revenue being £3,365.5 million and ordinary expenditure £3,809.4 million, against the estimate for the whole year of £5,609.4 million and £5,149.8 million, respectively. Below the line there is a deficit of £451.9 million, compared with £340.9 million a year ago, so there is a cumulative deficit of £895.8 million, which is closely comparable though slightly better than the £925.6 million at which it stood at the end of 1956. So far this year interest on and management of the national debt have taken £497.3 million, which is about £73 million less than before.

As a complement to this picture, the year-end Treasury *Bulletin for Industry* says that the total output of goods and services in the first half of 1957 was 2 percent greater than in the same period of 1956, and that incomes rose by 5 percent. There was thus an increase in home costs a unit of output of about 3 percent. World commodity prices declined by 10 percent during the year, but there has as yet been no significant fall in the wholesale prices of non-food manufactures, which have been kept up by rising home costs. As for the course of prices in 1958, the *Bulletin* says that this will depend on the trend of home costs and the speed and extent to which changes in commodity and import prices are passed on. In the eight years, 1948-56, it finds that the "standard of living" rose by 16 percent, or about half as fast as the rise in the total volume of goods and services available. Export, investment and defence absorbed the additional 15 percent.

Industrial Achievements

Industrial achievements are an inevitable accompaniment of the end of the year, and in the case of the more important industries—those capable of earning more dollars or cutting Britain's imports from dollar sources—it is encouraging to find that good progress has been made, often with the setting up of new records. The motor-car industry has done particularly well. Both Vauxhalls and British Motor Corporation have not only set up new production records but also exported record numbers of motor vehicles to the dollar markets and even doubled their earnings from that source. The steel industry has done even better on the production side and has now got surplus capacity so far as home demand is concerned. Output in 1957 totalled 21.7 million tons, against a production capacity of 22.4 million tons, and in 1958 it is planned to raise the latter to 23½ million tons and operate around 90 percent of capacity in accordance with the level of demand as regulated by the ceilings of investment urged by Government policy.

The shipbuilding industry's output fell short of its theoretical capacity to produce 1¾ million tons and in 1957 the strike, local stoppages and some inadequacy of steel supplies limited it to under 1½ million gross tons. More than 1,650,000 tons of new merchant shipping orders were booked in British yards during the year, nearly 23 percent for foreign account, to bring the order book total to 6,750,000 tons, worth nearly £1,000 million. A further reduction in coal imports is likely in 1958 if the British miners continue to work as they have done in 1957, when they produced a total of 223,600,300 tons, or 1,594,300 tons more than they did in 1956. Of this total, the deep-mined tonnage (210,018,500) increased by 93,100 tons and the open-cast by 1,501,200 tons to 13,581,800 tons, so at least some of the credit must go to the better weather conditions aiding open-cast working. In point of fact, five of the nine divisions of the National Coal Board actually showed declines in output, but these were just offset by the slight increases in the other four. For all-round improvement, however, the life insurance offices undoubtedly take the palm. So far 33 of these have issued figures of net new sums assured during 1957 and the total, at over £771 million, exceeds by a considerable margin the record established in 1956.

New Hire-purchase Legislation

New legislation came into force on 1st January to help customers buying goods on an instalment basis to see exactly what terms are being offered by the shopkeeper. The Board of Trade explained that traders advertising hire-purchase or credit sale facilities will be obliged to set out full particulars of their basic terms if they wish to give details of either the deposit or of the instalments which they are prepared to take. This means that they must normally state, in addition to the cash price, the down payment, the instalments (size and number), and the period of repayment. They must not unduly emphasise the more attractive items in the terms of payment, and they must distinguish clearly between the terms they offer on hire-purchase and those offered for a credit sale.

Joint Ventures in Burma

Trouble between shareholders and the chairman, Mr. Robert Annan, at the annual meeting of Mawchi Mines resulted in an adjournment for one month. The company operates tin and wolfram properties in Burma and incurred a £117,000 loss in its last financial year. Members stayed on after the close of the formal business and formed a four-man committee to approach the directors for discussion of the company's affairs. It is understood that a meeting with the board will take place soon. Mr. Annan's opening statement was heard in silence, but his subsequent remarks were frequently interrupted.

Joint-venture concerns in Burma do not seem to be doing too well at present. It is disclosed that the profits of the Burma Corporation (1951), which is jointly owned by Burma Mines and the Union Government, are sharply lower and the dividend is cut to 5¼ percent, free of Burma tax, against 10 percent. The net profit is halved at £275,234, against £526,107. Shareholders are reminded that the dividend is receivable by Burma Mines on its share interest in the Corporation and is not a declaration of dividend by Burma Mines.

Restrictions Concerning Suez Canal Stocks

Reports from Paris say that the French Office des Changes has prohibited the buying or selling of Suez Canal stocks against security dollars or pounds. This follows the Canal Company's transition from an international corporation to a French company by the decree of 17th December. Under the new regulations, foreign buyers must pay with transferable francs, while those who wish to sell Suez Canal stocks abroad will need a permit from the Office des Changes. The restrictions caused a setback to the company's stocks on the Paris Bourse and a big turnover in London, where they had been a firm market before the Christmas holiday.

Dollar Trade Mission

While the Prime Minister is on his Commonwealth tour, another of his Ministerial colleagues, Sir David Eccles, President of the Board of Trade, is on an overseas marketing mission in the opposite direction. He has just flown by the Polar route to Vancouver, from where he will go on to San Francisco, Mexico and Venezuela to spend about a fortnight prospecting for new dollar markets for British exports. Before leaving, Sir David said that his visit to Canada was to follow up the visit of the Canadian trade mission to Britain. Both Venezuela and Mexico, he said, were making tremendous economic progress and they both paid in dollars. He hoped to push British exports, and especially ships, capital projects and electrical equipment, and nuclear power plants.

Brevities

The Mercantile Bank of India has changed its name to Mercantile Bank, Limited.

London's position as the world's gold centre was further enhanced by a rise in the bullion market's turnover during 1957. In their annual review, Mocatta and Goldsmid quote estimates of up to a 30 percent increase in sales, in spite of a reduction in speculation and hoarding.

Bombay

PROGRESS OF THE AUTOMOBILE INDUSTRY

NEED TO PRODUCE CHEAP BABY MOTOR-CARS STRESSED

(FROM OUR BOMBAY CORRESPONDENT)

THE Central Minister for Industries, Mr. Manubhai M. Shah, has categorically stated here that the Government will not permit new automobile manufacturing units to be established, nor accord permission for the production of models other than those already being turned out in the country. He has said this while outlining the Government's policy on the automobile industry. The proposal for producing a cheap baby motor-car for India's middle-class population will be shelved until the industry reaches the optimum level of production. The Minister has reminded his listeners that the progress of the industry all over the world has been slow. Russia, for instance, produced only 200,000 motor-cars in 1956, and 325,000 last year. Seventy-five percent of the world's automobiles are produced in the United States. Mr. Shah says that the small volume of consumption is the biggest limiting factor in the Indian automobile industry.

Complimenting manufacturers on the quality of their products, he has said that the question of accelerating the development of the industry has been engaging the attention of both the Government and the Tariff Commission. The tempo could be increased by the production of a cheap baby motor-car which might be bought by an average middle-class family. To produce a cheap baby motor-car, it is proposed to restrict the number of manufacturers to the present six. Among the passenger vehicles produced here today are the Willys Jeep, Fiat 1100, Hindusthan Ambassador, Standard Ten and Vanguard. Heavy trucks are manufactured by Tata-Mercedes-Benz, Premier Automobiles and Ashok-Leyland. The Minister has said that the excise duty of Rs. 3,000 on big motor-cars will not be removed. He thinks this duty will indirectly stimulate the demand for smaller cars and predicts that the prices of passenger cars will drop in the next few years. The value of indigenous automobile products has risen from Rs. 6 crores in 1948 to Rs. 55 crores in 1957—an increase without parallel, he says.

Restrictions on Scrap Exports

An appeal to the Central Government to remove the restrictions imposed on the scrap processing industry has been made in a memorandum submitted to New Delhi by the Scrap Traders and Exporters Association here. It says that the industry could play an important rôle in economic development, but the general policy has been to by-pass it by a control system which has succeeded in preventing it from taking shape with the result that a large percentage of the country's scrap wealth has remained unexploited. The Association, urges the Government to recognise the industry on par with others; permit the export of all grades of scrap; remove the system of allocation which amounts to a levy on exports and subsidisation of the steel industry at the cost of the scrap industry; reduce railway freight by 50 percent for wagons carrying scrap consigned to sea ports; decontrol scrap prices and abolish the system of declaring controlled sources of scrap; and simplify the export procedure. The biggest handicap the industry faces today is the restriction affecting the exports of all grades of scrap. If a ceiling on exports is to be imposed, the Association suggests that it should be made sufficiently high so that scrap resources could be exploited to a greater degree. A minimum quota of 500 tons should be sanction to each established quota-holder as it is not possible to secure a small contract for a bulk commodity like scrap. The present controlled prices are grossly inadequate to encourage collection. The world price of heavy melting scrap is 85 percent of pig iron prices, whereas in India it is only 42 percent.

Government Decision on Cotton Yarn Exports

The decision of the Government of India to allow exports of cotton yarn up to 60,000 bales during the first half of the year has been hailed by shippers here. They feel that export prospects have brightened in spite of the fact that foreign enquiries for yarn are less at present. It is also felt that if exports are to increase, the quality of yarn should be improved and rates lowered. Exports in the second half of last year totalled some 20,000 bales, against the export quota of 67,500 bales. Foreign competition has been steadily increasing and India's share in the recent Burmese tender for yarn was negligible. In addition to Japan and Pakistan, China has emerged as a major yarn supplier. One heartening feature, however, has been the steady lowering of prices here—a fact which inspires shippers to predict that Indian yarn will eventually become competitive in world markets. While quotations of 20s and 10s dropped by approximately a rupee a bundle in recent weeks, 40s came down by nearly Rs. 2. The decline in finer counts such as 60s and 80s was more pronounced, rates registering a drop of about Rs. 3 a bundle of 10 lbs.

Import of U.S. Cotton

The Central Government's proposal to import more foodgrains from the United States this year is likely to result in the withdrawal of the priority given to cotton in the Indo-U.S. Trade Agreement, according to informed sources here. It is said that a beginning has already been made, and the unused P.L. 480 allocation for cotton is reported to have been diverted to finance the import of foodgrains. The Government, it is pointed out, has noted the

industry's poor response to the move to import American "aid" cotton. The industry needs 500,000 bales of imported cotton each year. On account of favourable prices, cotton available from the sterling area will amount to 300,000 bales this year. Since the funds involved in the Indo-U.S. Agreement could still cover the costs of some 300,000 bales of U.S. cotton to be imported in equal quantities over a two-year period it is thought that foodgrains will be given priority over cotton in 1959 as well. Some, however, point out that the demand for U.S. cotton will increase greatly after April.

Textile Conference

Stating that Indian textiles are on par with the best in the world, the Central Minister for Power and Irrigation, Mr. S. K. Patil, has said that the prosperity of the country is linked with the prosperity of the textile industry, and it remains for the Government, the manufacturer and the consumer to overcome all obstacles which they might face in the course of its development. While inaugurating the 15th All-India Textile Conference of the Textile Association (India) at the All-India Textile Exhibition here, Mr. Patil has admitted that the country's general economic condition has become a matter of some concern. He has called for efforts and discipline on the part of the industry to help reconstruct the economy.

Cotton Market Sluggish

In the absence of any encouraging factors, the cotton market continued sluggish during the past week. Fluctuations in futures were wide and erratic. I.C.C. Jarilla March, however, met with resistance around the level of Rs. 660. The partial rally to Rs. 670.50 during mid-week was due to heavy short-covering following the reports of a severe winter in Saurashtra and bad weather in the Broach cotton-growing area. The general belief that the Government will release an export quota of 50,000 bales for Bengal Deshi and 100,000 bales for cotton stapling 1in. and below, also aided the rally. But sentiment turned weak during the latter half of the past week.

The spot market in Sewri gave a better performance with prices recovering by about 10 points. As a result of hectic short-covering, December delivery contract quotations recorded sharp gains. Good quality cotton evinced enquiries, while staple varieties attracted the attention of the mills. Khandesh and Berar were the chief attractions.

Commodity Markets

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) receded further by 0.3 percent to 106.9 during the week ended 21st December, 1957, compared with 107.2 for the previous week. The index was lower by 2.2 percent and 0.8 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles declined by 0.5 percent to 103.9 compared with 104.4 (revised) for the previous week due to a decline in the prices of potatoes in Delhi (−15%), salt in Tuticorin (−11%), onions (−10%), maize in Khagaria and bananas in Bombay (−9% each), ghee in Madras and Kaithal and black pepper in Calcutta (−7% each), arhar in Bombay and groundnut oil in Calcutta (−6% each), jowar in Jhalawar and cashewnuts in Mangalore (−5% each). gram, masur and tea (−2% each) and rice, bajra, chillies and cardamoms (−1% each). There was, however, a rise in the prices of oranges in Madras (+9%), jowar in Rohtak and gur in Patna (+7% each). potatoes in Mandi and coconut oil in Calcutta (+6% each), urd in Bombay and cloves (+5% each) fish (+3%), gingelly oil (+2%) and mung, milk eggs and sugar (+1% each). A fall in the price of raw tobacco (Motihar medium) in Calcutta (−4%) was responsible for a decline of 1 percent to 96 in the index for Tobacco. The index for Fuel, Power, Light and Lubricants declined slightly by 0.2 percent to 114.8 due to a decrease in the price of castor oil (−3%). The index for Industrial Raw Materials stood at 115.8 against 115.6 (revised) for the earlier week. The prices of castorseed in Bhagalpur (−13%). tanning materials (−7%) cottonseed (−2%) and rapeseed (−1%) witnessed a fall while those of linseed (+5%), copra (+8%), raw skins (+2%) and raw jute and gingellyseed (+1% each) showed advances. Lower prices of coir yarn and lead (−2% each) and linseed oil and cotton yarn (−1% each) brought down the index for Intermediate Products by 0.4 percent to 105.5 notwithstanding a rise in the prices of zinc and German silver (+3% each) and rayon yarn and copper (+1% each). The index for Finished Products moved down from 107.9 to 107.7. Items which showed variations were: jute manufactures (−2%), oilcakes and glass (+2% each) and paper and newsprint (+1%).

EXPORT QUOTA FOR NIGERSEED FIXED

The Government of India has reviewed the export policy of nigerseed and has decided to release a quota of 5,000 tons for export by all shippers during the period January-September 1958. Licensing procedure is being notified by the export trade control authorities at the ports.

U.K. MANUFACTURERS TO SUPPLY TRACK EQUIPMENT TO INDIAN RAILWAYS

British makers of rails, sleepers, and fishplates are to supply the Indian railways with equipment worth £2,250,000 during 1958. It will consist of 30,000 tons of rails, 15,000 tons of steel sleepers, and 1,000 tons of fishplates.

Jute

THOUGHTS OF RECESSION IN WORLD TRADE AFFECT GUNNY MARKETS

TRENDS IN U.S. ECONOMIC ACTIVITY BEING CLOSELY WATCHED

THE generally cautious and nervous tendency in world trade has been reflected in the Calcutta jute goods markets during the past week. In sacking, B Twills have touched their lowest level since early August 1956, and under the prevailing conditions there appears to be little hope of any great improvement. It is generally thought that present trends are likely to continue for some time, and that the future depends mainly on the United States. Economic confidence in that country has been severely tested in recent weeks, so Calcutta operators have been reluctant to enter into new commitments. But it remains to be seen how long America can hold out before being forced into the hessian market. At the current rate of consumption, which is very low, her stocks, both spot and afloat, will last for three months; her spot stocks are sufficient for only 1½ months. They are unusually small, and indicate that consumers might be turning to substitutes. Some say that bulk handling and substitutes have a greater hold now on markets than ever before and are the main reasons why U.S. burlap stocks have been allowed to drop so low. This is also true of other countries. The drop in demand from Australia for grain sacks can be pinpointed to bulk handling. The fall in Burma's offtake, as pointed out recently, is due mainly to the opening of mills in that country.

There has been one encouraging feature in the local markets of late, however, and that is the confidence shown by operators in the forward section, especially of sacking. In the past few weeks, prices for April-June and July-September shipment have shown a distinct improvement. They now enjoy a premium of Re. 1 or more over the near positions, whereas up to the middle of December they were showing a discount for forward shipment. This is not due to any genuine demand but reflects the sentiment of bazaar operators, who have been quietly buying up forward goods in anticipation of strong enquiries towards the middle of the year. Hessians have shown a premium in the forward section for some months, dating from the time when mills began to transfer looms from hessian to sacking manufacture. Since the beginning of the current jute season, the proportion of sacking produced, as compared with hessian, has increased by 5 percent, with a corresponding increase in raw jute consumption. In some quarters, this is expected to create a shortage of hessian in coming months. Over the past month, while heavy goods have fallen by Rs. 70 a ton, hessians have lost only about Rs. 25 a ton.

Pakistani Jute Crop Estimates

It is reported from Dacca that the jute crop figures for the 1957-58 season have been revised. The latest estimates given by the jute regulation staff indicate that the total acreage under jute has increased by 63,618 acres to 1,563,618 acres since the estimates of 15th August last year.

THE JUTE MARKETS

Manufactured Goods: The Calcutta jute goods markets showed a slight improvement at the opening after the new year on reports of foreign enquiries. These, combined with heavy fatka operations, caused a rise in heavy goods rates. Mills showed little interest, and reports of genuine business were few. Opening prices of B Twills last Thursday were based on Rs. 106 for ready shipment with April-June shipment at a premium of Rs. 1. Hessians opened at Rs. 39.50 for 40in. 10oz. and in this section the premium for forward shipment was 50nP. The next two days' operations showed very little change in rates, but in the absence of real business, the undertone of the market eased towards the week-end, and prices began to drop rapidly. By Monday, ready B Twills had fallen by Rs. 2.25 from the opening levels, and this was followed by heavy fatka liquidation by nervous holders, which brought Tuesday's rates down to a new low level of Rs. 103.70. At this stage, the depression was confined to the near delivery sections, as April-June shipment was called over at a premium of Rs. 1.50. Meanwhile, hessians lost ground in sympathy with sacking, but to a lesser extent. Monday's quotations indicated 40in. 10oz. at Rs. 39.10 for ready shipment and Rs. 39.85 for April-June shipment, but on Tuesday, while sacking slumped, ready hessians actually improved to Rs. 39.20. This was mainly due to covering against previous contracts for steamers loading in port, and was confined to near deliveries, the forward section recording fractional losses.

At the close, the market was slightly steadier, and opening quotations on Wednesday morning were as follows:

	Jan. Rs.	Feb. Rs.	March Rs.	April-June Rs.
40in. 8oz	32.35	32.20	32	31.95
40in. 10oz.	39.45	39.60	39.70	39.90
B Twills	104.10	104.35	104.50	104.80
Heavy Cees (Plain)	104	104.35	104.40	104.80
A Twills	127	127	127	127
Liverpools	120	119.50	119.50	119.25
Cornsacks	105	105.25	105.25	105.75

Raw Jute: Compared with previous weeks, the business conducted in the fibre markets during the past week was negligible. The fall in manufactured goods prices gave mills no incentive to buy, and prices fell rapidly after the week-end. Up-country markets, however, did not follow Calcutta, so the price gap between the two widened. Imports remained low and mofussil sellers were willing to pay a small premium to secure good jute against higher-priced contracts. Because of the price differences, many Calcutta sellers looked reserved in the opening sessions, and were reluctant to meet any small indications at the lower rates which the mills offered. Towards the close, however, nervous stockists of jute held locally became keen sellers, and were willing to meet buyers' counterbids in order to cut their losses. Opening quotations after the new year were based on Assam jute at Rs. 27.25 a maund for January-February shipment, but over the next few days, prices dropped by 25nP a day. By Monday, they were down to Rs. 26.75. Business was transacted below these levels, however, and on Tuesday indications fell to Rs. 26.50, with signs of a further fall in sympathy with the weak manufactured goods market.

Business was reported in Assam jute at Rs. 26.50 to Rs. 27 a maund, and Northern at Rs. 26.50 to Rs. 26.75. Tossa from the Northern agencies was done at Rs. 29.75. Desal white was reported at Rs. 24 and jungli at Rs. 21 a maund basis Bottoms. A fair amount of business was done in Daissee-Tossa at prices ranging from Rs. 29.50 to Rs. 30 a maund, and in Daissee mesta at Rs. 23 to Rs. 24 a maund. Northern and Desal mesta fetched Rs. 23.25 to Rs. 23.75.

In Cossipore, wagon arrivals from 2nd January to 7th January totalled 958, but this included a backlog of about 250 wagons which had accumulated over the new year holidays. Most of the arrivals were from the western and jungli districts, and heavy covering business was reported in these fibres. Quotations at the close were based on Kishenganj jute at Rs. 24.50 a maund for garsat quality.

On Wednesday morning, the market was quiet, and opening quotations were based on the following:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	26.75	January-February
Northern	26.50	"
Purnea Desal	23.75	"

Pakistan Cuttings	73 a bale	"

GUNNY SHIPMENTS DURING NOVEMBER

The following are the total net figures of manufactured jute goods shipped from Calcutta during November, 1957, after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	3,359.1	32,347.4	35,706.5
Short Shipped November, 1957	355.4	1,148.6	1,504.0
(Net) October, 1957	3,003.7	31,198.8	34,202.5
(Net) September, 1957	2,549.2	19,697.5	22,246.7
(Net)	3,196.5	30,470.2	33,666.7
	Sacking		
Gross	41,375.1	864.3	42,239.4
Short Shipped November, 1957	1,923.8	58.1	1,981.9
(Net) October, 1957	39,451.3	806.2	40,257.5
(Net) September, 1957	33 256.1	1,446.3	34,702.4
(Net)	45,955.4	542.9	46,498.3

I.J.M.A. STOCK FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of December as follows:

Description	31st December, 1957 Lakh Yds.	000 Tons	30th November, 1957 Lakh Yds.	000 Tons	Increase over (+) or decrease from (−) last month Lakh Yds.	000 Tons	31st December, 1956 Lakh Yds.	000 Tons
Hessian cloth and bag	9.27	25.0	9.67	26.0	−40	−1.0	6,98	19.7
Sacking cloth and bag	9,34	39.2	8.42	35.2	+92	+4.0	15,41	64.7
Others		11.4		9.8		+1.6		11.3
Grand Total (000 Tons only)		75.6		71.0		+4.6		95.7

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE PAKISTANI JUTE MARKETS

SLIGHT IMPROVEMENT IN ARRIVALS

(FROM A NARAYANGANJ CORRESPONDENT)

THE new year ushers in the second half of the jute season, and in 1957, like the preceding year, there has been a distinct pause after the rush of the first few months. This leads one to expect a rush of business again towards the end of the season. In the past, the situation differed in so far as one got a steady flow of supplies until, say, January or February, which tapered off into the slack season, when little business was done. Throughout the current season, the dominating factor has been the strength of the cultivator or primary seller. During June and July, there were very high prices, but two months later they gradually receded with very slight fluctuations. Judging by the way in which overseas buyers have forced down rates, one would have expected a far greater price reduction in the interior. This expectation has not been realised, and it has only been with the greatest difficulty that balers have managed to push prices down. To the overseas buyer, it appears that there has been a considerable decline. In fact, however, the rupee price a maund has not dropped as much as the sterling price for the simple reason that the sale value of cuttings has dropped considerably, thereby reducing the sterling equivalent. As was expected, jute during the current season has been rather heavily rooted, and the percentage of higher qualities has been small. This, added to the fact that India has increased her production of mesta and bimli, thus reducing her consumption of cuttings, has helped bring down the prices of the latter so that they stand at present in Narayanganj at less than half their value in July last. Overseas offtake has also been reduced. This is partly due to the building up of stocks at the beginning of the season. It is also due to the closure of mills, mainly in Italy and Belgium, and a reduction in the output of other Continental mills.

Reports indicate that most balers have had an unfortunate season. Certain individual sales have been covered profitably. But very few balers could have sold short their total production, so that although there were profits on sales, these were offset by losses on other qualities which were not simultaneously sold, such as cuttings and Hearts, which have been hard to sell. The beparis, as is to be expected in a falling market, have also had a bad season. The grower, on the other hand, has had nothing to complain of—and his position has been financially stronger. Prices have never fallen to an uneconomical level except for a very short period. By the law of averages, East Pakistan should have a large crop and ample rain in 1958-59. These should induce the grower to unload. As reports indicate that 50 percent of the crop still has to come in, there should be ample jute available at reasonable prices. Unfortunately, even if prices come down, there is nothing to indicate either an improvement in cuttings or interest from overseas buyers. If a baler cannot sell his cuttings, he cannot afford to go on buying loose jute even at an economical price.

The present position in Narayanganj is that there is a slight improvement in the rate of arrivals, but unfortunately there is a tendency for more moist jute to come in. Neither the quality of the jute nor the high percentage of cuttings shows any improvement and although there has been some slight recession in prices, this does not apply to the higher quality jute. Overseas buyers, who have kept the market down, have been enjoying their holidays, and as a result little or no business is reported. There is every likelihood of buyers being able to cover at such low prices as £98 for Export Firsts, in view of the fact that very few Pakistani shippers have a healthy short position.

Pakistani mills have had, on the whole, a fairly good season since they have been able to get their jute cheap. Although overseas sacking prices are low, jute prices still make it profitable for Pakistani mills. The hessian position is not quite so happy, and probably for this reason not much Pakistani hessians are being offered at present. In Karachi, the sacking market stands about 8 annas below the Calcutta market. This is partly due to the lack of business and partly to the flooding of that market by mills. Some time ago, the Pakistani authorities allowed mills to open bonded warehouses in Karachi. This means that the goods may be despatched from here to Karachi without the payment of sales tax or excise duty. When they reach Karachi, the mills either sell them to Iran or if, as at present, there is little demand from that quarter, they can try to sell them in Karachi, paying only sales tax and excise duty. The Karachi hessian market, although weak, is still well

above Calcutta levels. It must be remembered that at this time of year, the demand for jute goods in East Pakistan and in Iran always declines.

THE FOREIGN JUTE MARKETS

FIBRE PRICES MAINTAINED

(FROM OUR DUNDEE CORRESPONDENT)

THE local mills and factories were closed for the first two days of the new year, but business has been interrupted for some time on account of the festive season. Raw jute prices have been more or less maintained, and sellers have done few transactions with spinners, who have been content to purchase only small lots for assorting purposes. Spinners are less inclined to buy jute, because of the shortage of business in jute yarns. Buyers in that section continue to operate from hand to mouth, and there is no inclination to purchase for forward despatch. The same applies to jute cloth and bags, which can be easily obtained from most sellers. There is no question of paying extra for quick delivery, as has been the case before. There are plenty of offers of raw jute, and there is a good variation in the prices quoted. Spinners are anxious to purchase good quality if it is offered at reasonable terms, but there are so many new marks that it will take spinners some time to test them all.

Good quality is not easily available and prices of Mill Firsts rule from £116 to £122 a ton, Mill Lightnings from £99 to £102, Mill Hearts from £89 to £92 and grade Hearts from £77 to £80. Dark jute is offered quite freely from £99 for good marks of Daissee-2/3 and £90 10s for grade, and grade Tossa-2/3 from £106 to £109 and grade Tossa-4 from £98, all c.i.f. U.K., January-February. In the case of Tossa, most parcels arriving are very well reported, but not so most of the other qualities. The value of common 8 lb cops C.H.V. is still 15.14d a lb. and of medium 2 lbs spools J.C.H. 15.72d a lb. Carpet yarns are in fair demand and rove has also been wanted in larger quantities. Movement of cloth and bags is slow at the moment, but an improvement can be expected in the not too distant future. Calcutta goods are quoted at 60s for 40in. 10oz. and 46s for 7½oz., January, 60s 3d and 46s February-March and 60s 6d and 46s 3d April-June, with B Twills at 160s, 160s and 160s 6d for the respective positions of shipment, all f.o.b., Calcutta.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

Hessian

	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th December, 1957	933.6	17,666.0	18,599.6
1st to 25th November, 1957	1,955.6	25,092.0	27,047.6
1st to 25th October, 1957	1,517.3	15,347.8	16,865.1

1st to 25th December, 1957	23,174.8	561.2	23,736.0
1st to 25th November, 1957	32.803.8	583.9	33,387.7
1st to 25th October, 1957	22,945.1	1,158.4	24,103.5

WEST GERMAN JUTE INDUSTRY DEMANDS PROTECTION

A strong plea for protection to the home jute industry against "dumping competition" from India and Pakistan was advanced at the annual conference of the German Jute Association held recently in Bremen, reports the *Jute Bulletin* of the Indian Central Jute Committee. It is pointed out in the Association's annual report that other European countries, in view of the special position occupied by jute, have recognised the need for protection, a fact which has also been acknowledged by the O.E.E.C. The safeguarding of the supply of bags for the food industry and agriculture, it says, must not be left at the mercy of foreign suppliers. Meanwhile, figures of exports recently released for the eight-month period, January to August 1957, show a slight improvement in the West German jute industry's position in foreign markets, with the total increasing to 4,733 tons from 4,550 tons in the same period a year previously. The largest buyer was the United States, taking 2,618 tons against 2,468 tons in January-August 1956. Among the major European buyers were Switzerland, Sweden, Norway and Denmark.

Engineering and Transport

U.K.-RUSSIAN AGREEMENT ON DIRECT AIR SERVICE

REPORT ON I.A.C. FARES AND FREIGHTS SUBMITTED

(FROM OUR NEW DELHI CORRESPONDENT)

THE U.K. and Russia have signed a civil aviation agreement for a London-Moscow air service. Since there has been no direct, regular air service between the countries, and as the U.K. has no precise and complete knowledge about civil aircraft procedures and facilities in Russia, the agreement will come into force only when both parties have satisfied themselves on a comprehensive range of technical matters. Among the subjects which will have to be settled are navigational safety and the noise levels of aircraft. The exchange of information will begin forthwith and a U.K. technical mission will shortly go to Moscow for a study on the spot. A similar Russian mission to the U.K. will follow.

Indo-Russian Air Negotiations

An Indian technical mission is shortly leaving for Moscow with a similar object. This will be a prelude to an Indo-Russian air agreement. Russia is anxious to operate an air service to New Delhi. This service will be *via* Kabul. Actually, a New Delhi-Moscow service *via* Kabul has been in operation for almost a year; it is being worked in conjunction with the Afghan airline. But Russia wants to operate a direct service herself. She, it may be added, is not yet an I.A.T.A. member and is not bound by that body's decisions to regulate her air fares. India is so, she cannot charge fares lower than those fixed by I.A.T.A. Russian fares are already sufficiently low. One *via media* which has been suggested by India is to pool the earnings and share them in a fixed ratio. Russia does not agree to that.

Fare and Freight Rates for I.A.C.

The Air Transport Council has submitted its report on fare and freight rates for the Indian Airlines Corporation. It has expressed the view that the current passenger fares of I.A.C. services are generally low compared with those of the domestic services of foreign airlines. It has suggested that the objectives of rate-making should be: to stimulate the maximum economic volume of traffic; to generate surplus revenue on high-density traffic routes which would offset, to the largest extent possible, the gap between costs and revenues on weak traffic routes; and to sustain and promote air traffic by creating a preference for it on account of its inherent advantages. It has been unanimously recommended by the Council that the fare structure should be constructed on a single tapering design. For all existing types of aircraft, it has recommended the following fare structure: one to 30 miles, annas 6½: 31 to 100 miles, annas 5; 101 to 200 miles, annas 4 pies 9; 201 to 500 miles, annas 4¼; 501 to 900 miles, annas 4 pies 3 and 901 and above, annas 4—all a passenger mile.

Some of the other recommendations of the Council are: Any increase in the 10 percent discount of the one-way fare for the round-trip journeys will not be in the best interests of the public or the Corporation. It should be left to the discretion of the Corporation to introduce an appropriate concessional fare schemes for special purposes, *e.g.*, to arrest traffic declines, to meet seasonal fluctuations, to give relief in distress, to provide for student concessions, family travel, etcetera. Whenever feasible, the Corporation should establish appropriate fare differentials between faster and slower services, and where there is an appreciable difference between the standards of passenger comfort of two services. As there is a long halt at Nagpur on the night airmail services during an inconvenient hour which breaks the passenger's sleep, the current practice of a 10 percent fare differential between the day services and night airmail services should continue. Where the cost of operation is significantly higher on account of the difficult nature of operations, an upward adjustment of the maximum fare rate is justified. Fares should be computed on the basis of point-to-point mileage except when there is a regular service between two points by a shorter route, in which case the fare should be related to the shorter route distance. Frequent or marked fluctuations should be avoided as far as possible.

Freight Rates

As for freight rates, the Council is of the view that as the demand for promotional treatment of air cargo is being adequately met, the current practice of equating the basic cargo rate to the passenger fare rate or the excess baggage rate should continue, although theoretically, it costs less to transport air cargo than air passengers. It has been recommended that a start should be made towards the standardisation of class rates, specific commodity rates, bulk rates and back-haul rates. In this connection, the Council has stated that such rate-fixing is not easy and will require some period of trial and error to give fair results.

Journalists on Tour

Forty-three journalists from nine different countries arrived in New Delhi on 2nd January on a goodwill visit. They are flying round the world on the pre-inaugural flight arranged by Qantas Empire Airways, Australian associates of B.O.A.C., preparatory to a regular round-the-world service which is due to begin on 14th January. The journalists include 18 Americans, five Australians, four Britishers and one each from India, Pakistan, Thailand, Malaya, West Germany and New Zealand. They are flying in a *Super-Constellation*.

New S.A.S. Economy Class Service

"Globetrotter economy class" flights at the lowest round-the-year fares in the history of transatlantic air travel will be introduced by the Scandinavian Airlines System on 1st April, 1958, the airline has announced. The new daily Europe-north America flight will feature specially-tailored in-flight passenger services. The round-trip Copenhagen-New York fare will be $(U.S.)522.20. This will be $(U.S.)113.40 below the increased tourist-class fare which is scheduled to come into effect next April. S.A.S. will inaugurate the service on its Europe-U.S. trans-atlantic and trans-polar routes with the start of its next summer schedule.

Prospects for Civil Aviation

In a review of the situation of the international air transport industry, mainly discussing the prospects for the coming year, Sir William P. Hildred, Director-General of the International Air Transport Association, has said: "International air transport faces a busy and challenging year in 1958. In the same months during which they must carry an expanding traffic, the world's airlines must also prepare for the imminent introduction into service of large numbers of the new turbine-powered airliners. Governments willing and general economic conditions permitting, 1958 should be a good year for the world's airlines. Readjustment of general fares and rates' levels to reflect the mounting costs of airline operation should, if the traffic keeps up, improve their net earnings position. Meanwhile, the planned introduction of the new 'economy' class over the north Atlantic and the continuation of other tried and proven promotional fares and rates throughout the world should help assure that traffic will keep up. Indeed, there is real hope that the rate of annual increase during 1958 will even exceed the steady 15 percent rise of past years.

"More new turboprops will come into service, and the first of the jets should take their place on the flight line before the end of the year. These latter aircraft will be the heralds of the scores and hundreds which will be coming along in 1959 and 1960 and underline the fact that only a relatively few months remain before the problems of the jet age become critical. In that time, with the help of Governments and other international organisations, preparations must be completed to phase these new planes into normal operations all over the globe. Their requirements are many and imposing. They will depend, in even a greater measure than today's aircraft, on a system of ground bases and navigation aids which is already complex and which must develop in pace with the new speeds of the flying machines. They will also require a much greater precision of flight planning and operation than we have ever known in order to achieve acceptably economic operation."

U.K. ELECTRICAL GROUP PLANS NEW WORKS NEAR BOMBAY

Reporting the worldwide activities of the Crompton Parkinson group of electrical engineering companies at the recent annual general meeting held in London, the chairman, Mr. Albert Parkinson, has said that in India the picture remained one of intense activity. He says that the economic expediency of India relying, to the greatest extent possible, on home-produced manufactures is facing the group's factory "with a challenge which it is doing its utmost to meet, in the interests of that country. The purchase of a site near Bombay has now been completed, and building work has commenced on a new works which will greatly improve the capacity of the Indian manufacturing company." During the year Crompton Parkinson has become interested, with other leading British companies, in a consortium which has as its purpose the supply of a complete motor-tyre factory to Russia which will be the largest of its kind in Europe. A contract has already been signed, and senior executives of the company have visited Moscow for discussions.

T.W.A. PLANS FOR EXPANSION OF SERVICES

Trans World Airlines is planning for the transportation of the 30,000 tourists expected to go round the world by 1960. The figure of 30,000 global air tourists within the next two years is a conservative estimate made by Mr. E. O. Cocke, T.W.A. senior sales vice-president. T.W.A. has begun scheduled services on its certificated routes beyond India and Ceylon to Bangkok and Manila on 1st January, 1958. Passengers will fly directly from U. S. cities across the Atlantic to these Far East points *via* the British Isles, Europe, the Middle East, India and Ceylon. At Manila, T.W.A. passengers will transfer on a through-ticket basis to Northwest Orient Airlines flights, to Hongkong and Tokyo, and across the Pacific back to the U.S.A. Similar routing flying west across the Pacific and *via* Manila to the U.S.A is also available. The joint schedules provide a complete round-the-world air service. From New York, T.W.A. schedules several flights daily across the Atlantic beyond Athens. These schedules to India, Ceylon, Bangkok and Manila will be twice weekly. As the demand for space develops, T.W.A. plans to increase its schedule frequency beyond Athens with the permission of the other Governments involved. T.W.A. is also planning, in co-operation with Northwest and experienced tour operators, a series of all-inclusive packaged tours for round-the-world travel. These will be announced in the near future.

Plantation Topics

INTERIM WAGE INCREASE FOR PLANTATION WORKERS

SETTLEMENT REACHED AT KERALA TRIPARTITE CONFERENCE

PLANTATION workers in Kerala will get an interim increase in their wages as a result of the settlement reached at a tripartite conference presided over by Kerala's Labour Minister, Mr. T. V. Thomas in Ernakulam on 31st December, 1957. The agreement, which is mainly applicable to tea and rubber estates in the State, is to come into effect retrospectively from 1st November, 1957. The new increased wages, which will vary for the different categories of estate workers according to the type of work they do, will cover workers employed only in estates above 100 acres in the case of tea and those above 200 acres in the case of rubber. For estates below this acreage, both in the case of tea and rubber, a flat rate increment of one anna in the present wages will be given to all.

The conference has decided to extend the minimum wages notification of the erstwhile Travancore-Cochin Government, dated 30th June, 1952, with all the subsequent amendments, to the Malabar area as well. Accordingly, the piece rate system in the Travancore-Cochin area will be applicable to plantations in Malabar. A sub-committee has been appointed by the conference to draft details of the agreement. This body will consist of four representatives each of plantation management and labour and will be presided over by the Labour Commissioner. A separate tripartite conference is expected to be convened shortly to discuss and decide upon interim wage increases in coffee plantations in Malabar.

Rates of Wage Increase

The rates of increase for each category of workers as agreed to at the conference are: Time-rated field workers: men 2 annas (from Rs. 1-9-6 to Rs. 1-11-6); time-rated field workers: women 1 anna 9 pies (from Rs. 1-3-3 to Rs. 1-5); adolescents: 1 anna from Rs. 1 to Rs. 1-1; children: from 12 annas to 13 annas; women tappers: from Rs. 1-6-6 to Rs. 1-8; factory workers: a flat increase of 1 anna from Rs. 1-13 to Rs. 1-14. Guaranteed time-rates have been increased as follows: Men: tappers from 12 annas 6 pies to 14 annas; pluckers in tea estates: from 9 annas 6 pies to 11 annas; adolescents from 7 annas 10 pies to 9 annas and children from 6 annas 3 pies to 7 annas 3 pies.

Tea Promotion Campaign in Canada

The Executive Director of the Tea Council of Canada, Mr. Donald M. Langton recently visited the Nilgiris and had discussions with representatives of the United Planters Association of Southern India and other planters' associations on tea promotional activities in Canada. He explained to planters with the aid of films and slides the advertising and publicity campaign of the Tea Council of Canada with a view to popularising tea in his country. The Secretary of the United Planters Association of Southern India, Mr. D. C. Barr, thanked Mr. Langton for his visit and hoped that more Indian tea would be consumed in Canada. Mr. Langton was accompanied by Mr. K. Venkatachari, Deputy Director of Propaganda, Indian Tea Board. During the course of his stay in the Nilgiris, Mr. Langton visited certain estates and the U.P.A.S.I.'s research station in Devershola.

New Propaganda Policy of Coffee Board

In pursuance of the Coffee Board's new propaganda policy, more coffee houses are being closed down in south India. The latest to go out of the field are the coffee houses in Trivandrum, Kozhikode and Palamcottah. Distribution centres for dry coffee seeds and powder are expected to start functioning in these centres this month. The main features of the new propaganda policy of the Board are that propaganda through sales in coffee houses is given up, and the activities of the propaganda department are restricted to educating the public to drink more and better coffee, and feeding recognised coffee restaurants run by private individuals with pure coffee powder both for their direct consumption and resale to the general public at fixed rates.

Rubber Crop Figures for November

India's rubber crop figures for November 1957 show yet another record harvest. The output of 2,855 tons is 87 tons higher than in October and 55 tons higher than in November 1956. Manufacturers consumed 2,702 tons of natural rubber in the month. Production and consumption for the 11 months ended November 1957 amounted to 21,217 tons and 28,923 tons, respectively, against 20,530 tons and 26,349 tons, respectively, for the corresponding period in 1956. A notable feature is the record increase in stocks which amounted to 10,082 tons by the end of November compared with 8,311 tons during the corresponding period in the previous year.

Pepper Crop Estimates

New crop pepper has started to move in substantial quantities to the terminal markets in India. The season started two months ago in Kerala and picking is likely to be completed within two or three months from now. The new crop is estimated by the trade at 24,000 tons against the official estimate of 32,000 tons. The latter estimate does not include production in Madras State. Market circles think that the official estimate, as usual, is too high. Prices are ruling rather steady in the terminal market in India, the latest quotations from Alleppey being Rs. 525 and Rs. 500 a candy, respectively, for superior and inferior varieties. The disturbed political situation in Indonesia—another important producer of pepper—does not seem to have seriously affected world market trends, although reports from London say that pepper prices there have been fluctuating widely in sympathy with movements in Singapore. Short-covering orders were difficult to place there except at advanced rates. But quotations from London do not show any appreciable fluctuations at present. Last season's pepper might have moved out of Indonesia before the outbreak of the recent political unrest. The U.S. and Continental markets are not unduly disturbed, although prices are rising due to speculative support.

Kerala Land Reforms Bill

Plantations have been excluded from the scope of the Land Reforms Bill of the Kerala Government. The Bill was introduced in the State Legislature on 21st December, 1957, and is being circulated to elicit public opinion up to 20th February, 1958.

In the third session of the Kerala legislature, the Agricultural Income Tax Act was amended to close certain lacunae. The major amendment was in Section 2 of the Act, wherein the term "company" meant a company registered under the Indian Companies Act, 1956. This definition did not take in foreign companies within the meaning of Section 691 of that Act and foreign associations included in the original definition of the parent legislation, the Travancore-Cochin Agricultural Income Tax Act of 1950. The result was that such bodies could not be assessed to tax in the same manner as rupee companies. They had to be treated like individuals. It, therefore, became necessary to amend the definition of the term "company". The amendment is as follows: "Company means a company as defined in Section 3 of the Companies Act, 1956 (Central Act 1 of 1956), and includes a foreign company within the meaning of Section 591 of that Act and any foreign association, whether incorporated or not, which the Government may, by general or special order, declare to be a company for the purpose of this Act."

The next amendment says that firm, partner and partnership have the same meaning as in the Indian Partnership Act, 1932, but the expression partner "shall also include any person who, being a minor, has been admitted to the benefits of partnership." Section 16 of the Act has been amended. In the proviso to sub-section 1 of Section 16 of the principal Act, for the world "from among the judicial officers not below the rank of a district judge", the following words have been substituted: "From among persons who are or have been judicial officers not below the rank of a district judge". This is to enable the Government to appoint retired judicial officers also on the Appellate Tribunal. The amendments have been given retrospective effect from 1st April, 1957.

The Indebted Agriculturists Bill introduced in the last session of the Kerala Legislative Assembly is likely to reduce credit facilities for the agricultural community, including planters in Kerala. Some of the provisions make it too risky for a financier to advance any loan.

Lawlessness in Plantations

In reply to a question in the Assembly, the Chief Minister of Kerala has said that his Government has no proposal at present to constitute a court of enquiry to investigate allegations of lawlessness in the plantations. It may be recalled that the Labour Minister of Kerala announced, soon after his return from the Labour Ministers conference convened by the Union Minister for Labour in New Delhi, that the State Government proposed to appoint a court of enquiry presided over by a person not below the status of a high court judge. Since the scope of this enquiry, as visualised by the Kerala Labour Minister, was very limited, the planters refused to co-operate with it. Probably it is on account of their protests that the Communist Government has dropped the idea. What the planters have been demanding is a fair and unprejudiced enquiry into their complaints of lawlessness. This the State Government appears to be unwilling to initiate.

Mr. Morarji Desai Criticised

The statement made by the Central Industries Minister, Mr. Morarji Desai, that the higher taxation, wages and bonus in Kerala are acting as disincentives to industrialists and planters, has irritated some members of the ruling Party in the State. They are protesting against the statement at the public meetings they organise. This issue has been the subject of a short-notice question in the State Assembly.

Minimum Wages Committee

The Kerala Government has constituted a Minimum Wages Advisory Committee to advise it about revising the minimum rates of wages fixed for employment in the cashew-processing industry. The Committee will also work as a standardisation committee for the purpose of fixing work loads and wage rates in the industry on a non-statutory basis.

COCHIN TEA SALES

At Dust Sale A, 700,000 lbs of tea were on offer. There was a very good demand. Coloury mediums were 5nP to 10nP dearer while other grades eased irregularly by 5nP.

At Sale No. 1, 1,700,000 lbs of tea were on offer. There was a very good general demand particularly for improved quality teas which were considerably dearer. Others improved irregularly by 10nP or 15nP except plain types which were about steady.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty at Rs. 3.02 a lb against Rs. 3.35 a lb in force from 1st December, 1957. There is no change in the existing rate of duty of 38nP a lb.

TWO-MONTH TRAINING COURSE IN TOBACCO CURING ARRANGED

The Indian Central Tobacco Committee of the Central Ministry of Food and Agriculture has arranged a two-month training course which commences from January 1958, in flue-curing of cigarette tobacco for the benefit of growers and curers at the committee's research institute in Rajahmundry and the research sub-station in Guntur. Forty candidates will be trained at the two centres, 20 in each. India produces high quality cigarette tobacco of which the prominent types are flue-cured Virginia, sun-cured Natu and white Burley. Most of this is grown in Andhra Pradesh and apart from meeting the domestic demand brings to the country over Rs. 12 crores in foreign exchange. The course comprising general theoretical and practical training in various phases of curing is open to those who have either grown Virginia tobacco on at least five acres of land and have at least two seasons' experience in curing or those who have cured for three successive seasons.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for December 1957:

Upper Assam: Cold weather has set in and the season is closed; weather dry in Dibrugarh and Panitola.

Central Assam: The cold weather has set in and the season has closed; weather generally seasonable; outturn normal but is considerably under 1956 in Moran.

Lower Assam: Cold weather has set in and the season has closed; outturn slightly over in Mangaldai and considerably under 1956 in Tezpur.

North Cachar: Cold weather has set in and the season is closed; outturn poor; despatch delayed by rivers drying up.

South Cachar: Weather seasonable but abnormally dry; rain badly wanted in Hallakandi and Longai; outturn generally below 1956; the season has closed.

Eastern Dooars: Weather seasonable; outturn in December about normal, the season has closed; no blights reported.

Central Dooars: Cold weather has set in and the season is closed; outturn about normal but is considerably below 1956.

Western Dooars: Weather seasonable and the season has closed; outturn last month about normal but production to date is considerably under 1956; helopeltis and blister blight prevalent in some districts.

Darjeeling: Weather seasonable.

Terai: The season has closed.

SOUTH EASTERN RAILWAY TENDERS.
EXTENSION OF THE DATE OF OPENING OF TENDERS
The opening date of tender No. CON/GM/43/F2-H/57 for supply of mechanical and electrical signalling materials as published in this paper previously is hereby extended from 24.1.58 to 31.1.58.

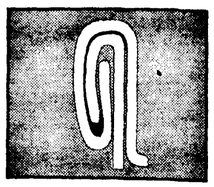
a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them :



Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

STRONG GENERAL DEMAND AT TEA EXPORT SALE

GOOD SUPPORT FOR DUSTS

AT Sale No. 27, held on 6th and 7th January, the offerings at the Export auction amounted to 61,988 packages, for which there was a strong and *general demand at generally* dearer rates. Black Fannings, especially those with a clean black leaf appearance was the strongest feature of the Sale. "Teas for price" sold well and were dearer by 6nP to 10nP. There was a good demand for common and medium brokens which were 8nP to 10nP dearer, the Fannings grades in these categories being 10nP to 14nP dearer and sometimes more. Medium B.O.P.'s with any quality sold well, but others in this category were irregular and a weak feature. Medium O. Fgs. met with more demand and often sold well above valuations. C.T.C. Assams were fairly well supported and generally sold well, particularly the Fannings grades which were often dearer. Non-wither Dooars met with keen competition and were irregularly 10nP to 20nP dearer. Well made whole leaf grades and stylish B.P's met with a good enquiry at generally dearer rates. The few Darjeelings on offer also sold well.

Quotations

	1958	1957
	Rs.	Rs.
Clean Black Pekoe	2.30 to 2.35	2 5 6
Plain B. P.	1.58 to 1.62	2 4 0
Plain Fannings	1.68 to 1.72	
Medium B. P.	1.64 to 1.68	2 5 6
Medium Fannings	1.78 to 1.82	
Best Assam C.T.C. B. P.	2.60 to 2.80	2 13 6
Best Assam C.T.C. Fngs.	2.50 to 2.60	

At the Internal Sale, 19,789 chests of Dust were on offer. There was a good general demand for all descriptions with the exception of the fibrous and plain liquoring C.T.C. Assams. Bright liquoring medium and best liquoring C.T.C. Assams were the strongest feature of the Sale and were considerably dearer, but the remainder in this category were irregular and generally up to 10nP easier. There was fair enquiry from the Middle East for black leafy descriptions, while orthodox kinds from all districts were keenly sought after at prices which were up to 2nP below valuations.

Medium Assam Grainy Dust	1.62 to 1.64
Medium Assam C.T.C. Dust	1.90
Best Assam C.T.C. Dust	2.50 to 2.80

There was a greatly improved demand for the 1,837 chests of leaf on offer and prices were dearer. The green tea on offer sold well with prices generally above valuations.

FREIGHT MARKETS QUIET

CHARTERING activity in the freight markets has remained very quiet during the past week. A December ship took 25s for a single voyage to the *Continent in the* trans-atlantic coal trade. An interesting fixture of a 2,200 tonner Newcastle (N.S.W.)-Hongkong coal has been reported, but further particulars are not available yet. Charterers are also open for 7,000 tons, 10 percent, Newcastle (N.S.W.) to San Nicolas, ideas 52s 6d f.i.o. It is reported that tonnage has been booked Karachi-Chittagong salt at 35s. A fixture of foodgrains 9,300 tons 5 percent from Northern Range to West Coast India has been concluded at 65s. In the time charter section, the market was slack; an oilburner 10,775 tons d.w. voyage out delivery Alexandria, redelivery Indonesia paid 16s.

LINSEED UNCHANGED

Prices have been fairly well *maintained during* the past week, but the market has been rather stagnant and general conditions have remained unchanged. Both buyers and sellers have been reserved. Although supplies of seeds have been more freely offered, the offtake of oil has been poor and crushers have been operating on a limited scale. The overseas market for linseed oil has been more active with a few enquiries from buyers. Latest quotations were as follows: Ready January Rs. 23 a maund.

HIDES AND SKINS DULL

The market continued dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 31st December, 1957 and 6th January, 1958)

Cowhides: Wet salted 25,000 pcs. on the basis of Rs. 9.37 to Rs. 11.75; Wet salted (Slaughtered) on the basis of Rs. 13.50 to Rs. 21.50.

(6th January, 1958)

Cowhides: Wet salted 91,500 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia and killed) 50,000 pcs.; Assam-Dinajpur 92,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 378,000 pcs.

COMPANY AND PUBLIC NOTICES

THE INDIAN CARDBOARD INDUSTRIES, LIMITED

NOTICE.

NOTICE is hereby given that an Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Wednesday, the 29th January, 1958 at 3-40 p.m., for the following purposes :—

AGENDA.

(1) To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st March, 1957 and the Balance Sheet as at that date.

(2) To declare a Dividend.

(3) To elect a Director.

(4) To appoint Auditors and fix their remuneration.

(5) *As Special Business.*

To consider and, if thought fit, to pass, with or without modification, the following resolutions, namely :—

(i) *(As an Ordinary Resolution).*—"That, as from the 1st day of April, 1956, Kilburn & Co. Private Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Kilburn & Co. Private Limited, in terms of the said draft which has been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

(ii) *(As a Special Resolution).*—"That the Articles of Association of the Company be altered in manner following :—

Article 126A shall be deleted and the following two new Articles 126A and 126B substituted therefor :—

"126A. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2(17) of the Companies Act, 1956) commencing after the 1st day of April, 1956, or in respect of any part of a financial year;

(a) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 10,000/- per annum, and

(b) Such further sum, if any, as together with the said sum of Rs. 10,000/- shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 10,000/- payable under (a) above shall be paid by the Company by equal monthly instalments payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (a) above together with the remuneration paid to Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 10,000/- the remuneration payable under (a) above shall abate and be repayable to the Company accordingly.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting."

"126B. The remuneration payable under Article 126A shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other Company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company, the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise) Provident and Superannuation Fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time otherwise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

(iii) *(As an Ordinary Resolution)*—"That, as provided in Clause 9 of the said draft Agreement referred to in the foregoing Resolution No. 5(i) Kilburn & Co. Private Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission of other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

(iv) *(As a Special Resolution)*—"That, as provided in Clause 12 of the said draft Agreement referred to in the foregoing Resolution No. 5 (i) Kilburn & Co. Private Limited be and are hereby authorised to provide the Company with suitable office accommodation at Calcutta and also, if so required by the Company, at any other place or places in which Kilburn & Co. Private Limited may be able to provide such accommodation, and the Company shall pay to Kilburn & Co. Private Limited such portion of the rent and outgoings payable by Kilburn & Co. Private Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

(v) *(As a Special Resolution)*—That the Articles of Association of the Company be altered in manner following :—

The first sentence of Article 112 shall be deleted and the following substituted therefor :—

"With effect from the 1st April, 1956, and unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the Funds of the Company for his services in attending meetings of the Board, a fee of Rs 100/- per meeting of the Board attended by him."

The Share Transfer Books of the Company will be closed from 22nd to 29th January, 1958, both days inclusive.

By Order of the Board,

NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Fifty-fourth Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday, the 29th January, 1958, at 11-0 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—
   (a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1957.
   (b) That the Articles of Association of the Company be altered in manner following:—
      (i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:
      "82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(i) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors".
      "83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".
      (ii) Article 87 shall be deleted and the following new Article substituted therefor:
      "87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".
      (iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.
      (iv) Article 176 shall be deleted and the following new Article substituted therefor:
      "176. At every Annual General Meeting the Directors shall lay before the Company a Profit & Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit & Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".
      (v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.
      (vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd January, 1958 to the 29th January, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA,
Director,

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TRENDS IN FOREIGN BUSINESS INVESTMENT IN INDIA

RESERVE BANK SURVEY INDICATES SHRINKING INFLOW

FROM July 1948 to December 1953, the average annual rate of capital inflow into India was Rs. 24 crores or Rs. 25 crores. During 1954 and 1955, this figure shrank to Rs. 17 crores or Rs. 18 crores. This is the most important fact brought out by the latest *Survey of India's Foreign Liabilities and Assets* issued by the Reserve Bank of India. The *Survey* carries forward to the end of 1955 the story hitherto given by two of its predecessors only up to 1953. Although part of what it says will inevitably be out of date already, many useful points emerge as a lesson for those who have framed India's economic policies during recent years. Statistics are notoriously liable to be interpreted according to the predilections of those who analyse them, but it would be unfortunate if the facts outlined in the latest *Survey* gave rise to complacency. The most significant lessons they convey are: firstly, during 1954 and 1955, India was still attracting foreign capital for business investments; secondly, the pace at which this capital was flowing in had decreased noticeably; thirdly, the rate of inflow was grossly inadequate in relation to the country's economic ambitions; and, fourthly, considering the broader evidence, the inflow of foreign capital seemed extraordinarily small in view of the possibilities of profitable investment which appeared to exist. It is to be remembered that 1954 and 1955 were years of buoyancy and optimism in the Indian economy. The impact of the first five year plan had begun to be felt; a good monsoon had relieved the food shortages which in earlier years had upset the process of economic growth: prices were fairly stable; and industrial expansion seemed to be proceeding smoothly. If a decline took place in the inflow of foreign capital at a time when the prospects for the economy looked good, the reason may have been that confidence was shaken by the growing sway of political ideology, especially by the Congress Party dedicating itself to the creation of a socialistic pattern of society.

The *Survey* estimates that foreign-held business investments in India increased by Rs. 61 crores during 1954 and 1955, and stood at Rs. 481 crores at the end of the latter year. But since some valuation changes took place during this period, the figure of Rs. 61 crores did not correspond to the net movement of capital. The most important of the valuation changes took place in the case of tea companies. During 1954 and 1955, a number of them resorted to the revaluation of their fixed assets to an unusual extent and, as a result, the foreign investments in this sector were written up by as much as Rs. 20 crores. The revaluation of fixed assets in other industries, however, appeared to be small, and was estimated at not more than Rs. 2 crores. As for valuation changes concerning floating assets, it is presumed that they cannot have been significant considering that the years 1953 to 1955 were a period of price stability.

The net change in foreign investments during 1954 and 1955 thus came to Rs. 39 crores after adjusting for valuation changes, as against Rs. 61 crores before adjustment. Of the former figure, Rs. 4 crores represented banking capital, which was mostly in the nature of liquid or floating assets. The balance of Rs. 35 crores, representing non-banking investments, was the net result of various outward and inward movements of capital. The *Survey* points out that the outward movements were mainly cash transfers, representing the sale proceeds of shares and other foreign-held assets, as well as the repatriation of the accumulated profits. The inward movements appeared to have been largely in the form of investments in kind and additions to business reserves through retained profits. It is noteworthy that cash transfers on account of the repatriation of foreign business investments (Rs. 10 crores) exceeded the inward remittances for investment purposes (Rs. 3 crores) quite considerably. Such net increase in foreign investments as took place was accounted for mainly by retained earnings (Rs. 23 crores net), and to a smaller extent by investments in kind, etcetera (Rs. 19 crores). In simple, everyday language, these statistics seem to imply that the foreign lender of liquid capital was losing interest in India. Concerns already here saw possibilities of economic expansion and so they retained earnings, although probably to a smaller extent than did the mainly Indian-owned companies. Suppliers of investment goods responded to the more competitive conditions in international markets by pushing sales through investments in kind.

The distribution of the new foreign investments in various sectors of activity is of considerable interest. The biggest increase during 1954 and 1955 took place, as might be expected, in the manufacturing group. Trading, too, showed a substantial increase (but apparently only because of petroleum). It was the investment in petroleum activities that was largely responsible for the net increase under these two heads. As the *Survey* points out, "taking both the trading and manufacturing sectors together, under petroleum there was a net inflow of Rs 26.8 crores during 1954 and 1955"; this compared with the overall net inflow of Rs. 35.2 crores. The inflow of investment into fields other than petroleum appears to have been small, but there is some consolation in the fact that a large part of the new foreign investment which came to India during the two years covered by the latest *Survey* went into manufacturing activities. However, a sector which suffered a considerable amount of disinvestment was plantations; the *Survey* estimates that this industry repatriated assets to the extent of Rs. 4 crores. It says that part of the reason for the decline in plantations investment (after taking into account valuation adjustments) was the transfer of estates from non-resident to resident hands after the tea boom of 1954. But "a much more important reason", the *Survey* suggests, was "the greater reliance on the part of the foreign-owned tea plantations on the local resources for financing their operations." These are perhaps understatements. In fact, the foreign disinvestment in plantations in recent years has arisen primarily from the fact that the steady rise in production costs has been threatening to make the Indian industry uneconomic.

The two main features of changes in foreign non-banking business investments in India therefore are: firstly, the biggest portion of the new foreign investments has gone into petroleum manufacturing and trading; and, secondly, the biggest repatriation of foreign investments has taken place in the plantations, especially the tea industry. But excluding petroleum and the plantations, there have been a number of interesting changes in other manufacturing investments also. As the *Survey* points out, "some of the older industries, such as the jute and the coir and the cotton piecegoods industries, recorded an outflow of capital during 1954 and 1955. On the other hand, industries like the medicine and pharmaceuticals, the electrical goods, iron and steel products, and the machinery and machine tools, received considerable foreign capital." The evidence suggests that the pattern of investment of the new foreign capital has been in consonance with the needs of a developing economy, in that it has promoted the diversification of activity and supported some of its most important branches. As the economy has progressed, new demands have arisen, and foreign capital has moved in to satisfy them.

It is significant that during 1954 and 1955, Britain maintained her position as the leading investor of capital in India. Adjusting for the revaluation of assets, her investments increased by Rs. 11 crores or Rs. 12 crores a year. This rate of increase, however, was much smaller than the earlier average annual inflow of Rs. 22 crores—the shrinkage reflecting partly India's decline as an investment attraction and partly Britain's growing difficulties in finding the money to invest abroad. The United States invested more in India, but mainly in connection with petroleum activities. West German investments also showed a marked increase, although their total is still small. As the Birla delegation recently pointed out, it is these countries (possibly also France and Switzerland) that are likely to be the most promising sources of capital and credit for India in years to come. To what extent that capital and credit will be obtained, will depend largely on India herself. The Reserve Bank *Survey* shows that India's attractions for the foreign investor have been declining; a subsequent edition might show that they declined so far as to make 1956 and 1957 the most dismal years in Indian history —for the foreign investor no less than for the domestic one.

THE SMALLNESS OF SMALL SAVINGS

THE small savings campaign made good progress during the first five year plan, but collections during the initial years of the second quinquennium have fallen far short of the annual target. The reasons are not difficult to discern. For one thing, the target under the first plan was relatively modest: it has been doubled under the second. For another, the steady rise in the price of food and other necessities of life has reduced the saving capacity of that section of the people on whose support the scheme has primarily to rely—the urban middle classes. Industrial workers and farmers have hardly developed saving habits of the sort that would be of much consequence for it. Moreover, for a long time, the campaign suffered from a serious defect. It continued to be based on a system which took little account of the returns offered by comparative investments or the price of money in the market. The Government has now modified the scheme to make it more attractive to the investor by, for instance, raising the interest on the 15-year annuity certificates, and by providing facilities for the hypothecation of 12-year national plan savings certificates with scheduled banks, co-operative institutions and State financial concerns. This latter change has thus converted what used to be considered illiquid assets into relatively negotiable ones. Certain other measures have also been taken with the same purpose in view; the ten-year treasury saving deposit certificates are now issued in small denominations of Rs. 50 each, the Payment of Wages Act has been amended to receive contributions from workers at source, of course on a voluntary basis, in private firms and establishments. Also, the post office rules and regulations relating to the purchase, sale and encashment of small savings investments are being revised to make them less irksome and dilatory. Not a little of the discouragement in the past to the investor came from these.

These measures apart, a vigorous drive by the States, who are hereafter going to be greater beneficiaries of the scheme, will have to be made. It is

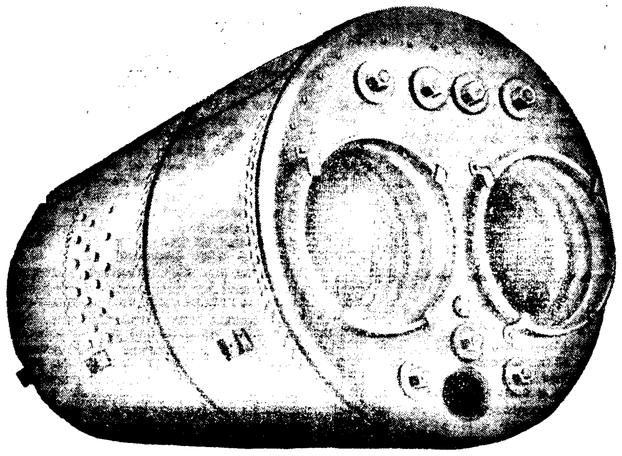
a happy sign that some of them have woken quickly to this necessity. It was ingenious of Mr. Krishnamachari to have persuaded most States not to issue market loans by promising them in return a bigger share in the collections from small savings. He has, in effect, compelled them to put in more efforts for the campaign now. Administratively, the States have been given concurrent jurisdiction with the Centre. In his address at the recent Western Zone Small Savings Conference, the Chief Minister of Bombay, Mr. Y. B. Chavan, has rightly pointed out: "The year 1957 marks the turning point in the emphasis on small savings from a Centrally-sponsored campaign to a matter of concurrent jurisdiction with the States with the growing responsibility and financial stake of the State Governments in the annual fortunes of the net collections." He is also right in expecting greater help from the Centre, the Reserve Bank, the Posts and Telegraphs Department and the National Savings Commissioner. Judging from the concern which Mr. Krishnamachari now shows about the shortfall in small savings—and it is only right that in a society which is becoming more and more egalitarian the people lower down the scale should make their contribution to the plan—it is quite on the cards that the Centre will be willing to do all it can in this matter.



At the conference, Mr. Chavan has made some suggestions which in his opinion will materially help in raising the level of collections. In the first place, he suggests that the ten-year treasury savings deposit certificates should be allowed to be sold by commission agents at a rate of 8 annas per cent commission, and the decision be implemented quickly by issuing the requisite orders, rules and regulations. Secondly, he says that the existing elaborate forms should be replaced by some sort of pass books at least in large establishments employing more than 50 persons each, so that investment in small savings issues are regularly and automatically made within the establishment itself. In cities with a population of 50,000 and over, small savings information and investment bureaus should be set up; they should sell not merely the 12-year national plan savings certificates but also the ten-year treasury savings deposit certificates. In prosperous rural areas growing commercial crops, mobile postal facilities should be provided so that the cultivators can contribute their savings on the spot as well as in agricultural market yards. New post offices should be set up for every alternate village with a population of over 2,000, and the condition of guaranteed *clientèle* or deposits should not be demanded in advance. These suggestions seem practical. Since the Centre wants the States to raise as much resources as possible by themselves, and small savings promise to become an important source, the former should carefully consider the suggestions made by the Chief Minister of a State whose record in this matter has been encouraging.

BOILERS
AND PRESSURE VESSELS

Marine Boilers are now being manufactured by us in India in addition to locomotive and vertical boilers, air-receivers etc. By this new addition to our range of products, we march in step with India's progress towards self-sufficiency.

Illustrated below is one of the Marine type Boilers made by us—Working Pressure 200 lb. per sq. inch; Heating Surface 1530 sq. ft; Evaporation 7250 lb. per hour.

RECESSION WITH A DIFFERENCE

PROSPECTS OF AN INCREASE IN GOVERNMENT SPENDING

THE main topic of discussion in many business circles at the beginning of 1958 is the possibility that the American recession will develop during the year into an American, and worldwide, "depression" of the prewar type. The omens are, indeed, in some respects unfavourable. Industrial capacity that has been greatly expanded in the postwar era is not being fully used, and production of commodities that has been geared to this capacity is already temporarily excessive. Trade between primary producing and manufacturing countries is tending to diminish, in both directions. Various countries have already in the past year restricted their imports, either by direct controls or by indirect restraints on consumption: and the problem of the means of payment will inevitably grow worse this year. This situation contains the elements of a classical "depression" much more severe than the "recessions" or "adjustments" hitherto characteristic of the postwar era. Yet few people believe that a "depression' of the prewar type is possible in modern times. Two big changes, it is argued, have occurred within the past 20 years: a practical change in the supply of money, and a psychological change in the use of money. These monetary changes, the argument concludes, put an effective brake on the downward progress of the cycle of trade.

For the classical "depressions", one must look further back than 20 years. It is on the period around 1930 that the pessimists' thoughts are focussed now. But it may be that the slump that began in 1921 is even more significant, not by way of comparison but by way of contrast. Only three years after the first world war ended, there occurred a slump in which prices collapsed and trade and employment were severely reduced. At the end of the second world war, many people waited apprehensively for a similar disaster: it did not occur. The second great cyclical relapse of the interwar period began 11 years after the end of the first world war, and some people expected a similar relapse about 1956. Again, the pessimists have not been proved right. This time, however, they have not yet been conclusively proved wrong, except in details of timing. What develops from now on will be determined by a conflict of fact and psychology. The fact is abundance of money; but over a wide range of business, psychology will regulate the use of it. Caution and anxiety will make individuals spend less on consumer goods and firms spend less on capital equipment. Every piece of evidence that prices are coming down, that employment is less secure, that the profits of production are diminishing, persuades people to defer their spending. The process is cumulative, inside each country and internationally.

* * * *

If the only factor in economic trends were individual decisions in the private sector, we could reasonably expect a severe contraction of business, especially in the capital trades, which have suffered most in the past. But in these times, when "free enterprise" is a qualified concept, spending by public authorities is so vast that it may well be the deciding factor. It is calculated that in the United States the total of Federal and State spending will be about three times the total of the private sector's capital spending this year, and that in Britain the public sector's capital spending, though proportionally somewhat reduced in recent years, is roughly equal to the private sector's capital spending. If Governments, and the organisations under their control, increase their spending, "recession" can surely not develop very far. The question arises, then, whether Governments are willing to counteract the downward trend by inflationary methods. The monetary authorities in the United States maintained a sternly restrictive policy until they were satisfied that inflation was under control, and their subsequent policy of "reflation" has been noticeably cautious. The monetary authorities in Britain have declared, and repeated, their intention to stabilise the nation's money, even if this policy causes unemployment. Years earlier—to take another important case—the West German Government had undertaken a drastic reform of its currency, with results that convinced many outside observers that scarcity could be a beneficial attribute of money.

Germans who can think back as far as the end of the first world war have terrible memories of inflation. Britons of the same generation are obsessed with the errors of the crude deflation that culminated in the general strike of 1926. Critics of Mr. Peter Thorneycroft regarded him as a very strict Chancellor of the Exchequer, but nothing that he said or did suggested that he had any idea of reverting to the policy of extreme austerity that characterised the 1920s—a policy that put sterling back on the gold standard at a deliberately over-valued rate and forced the economy to adapt itself to the over-valuation. In the late 1950s, many people in many countries are weary of inflation. But neither the older generation that remembers deflation nor the newer generation that has never known mass unemployment would tolerate the consequences of a really austere policy. This newer generation is expansive; it expects rising salaries and wages, and it spends its income freely. This free spending, as well as the high rate of spending by public authorities, is putting a brake on the recession of business.

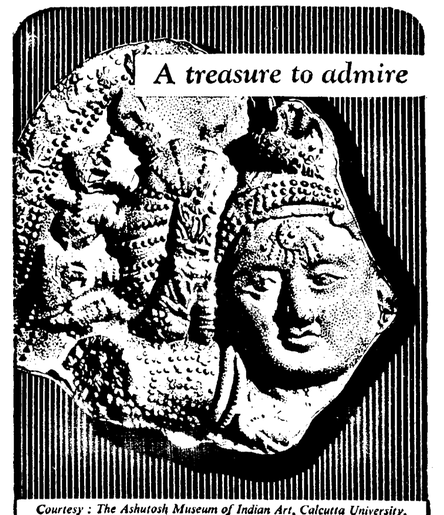
* * * *

In these changed circumstances a nation is permanently inclined to over-spend: not enough is saved to finance investment programmes on the modern scale. Governments' requirements seem insatiable; budgets are not balanced; more new money than new wealth is created. Some people believe that this era of easy money is nearly ended. Certainly, the British Government has been compelled to enforce a new discipline, to prevent the disintegration of sterling as an international currency. But the financial community has yet to be convinced that the whole attitude towards money is changing, so that it will no longer be regarded as the servant of a policy of full employment and expansion. Many people believe that money should be such a servant, if only because a protracted recession of business would have political consequences that they would not welcome. But for Britain, which will lose its financial status if it cannot restore its currency's integrity, the choice of policy will be peculiarly difficult in 1958.

BUSINESS OUTLOOK IN THE UNITED STATES

THE holiday season has brought further evidence of a business downtrend in the United States, according to the latest monthly letter of the First National City Bank of New York on U.S. business and economic conditions. Cutbacks in factory operations have been more marked than usual, as might be expected in a time of declining order backlogs, ample inventories and conservative buying policies. Steel ingot output dropped below 70 percent of capacity in December, while leading automobile manufacturers laid off 90,000 workers over the holidays. A more than seasonal curtailment is reported in some other lines. A last-minute shopping rush brought Christmas sales to high totals, apparently equalling 1956's, but not up to retailers' hopes. Latest figures show unemployment and short time rising moderately, and personal income declining a little. There are few signs of an early reversal of the trend. Expectations of increased Government spending seem to be borne out by unofficial estimates of the new federal budget and by the release of federal funds for housing and new defence contracts. As yet, however, there is little discounting of such anticipations. Increased unemployment insurance payments and other so-called "automatic stabilisers" are at work cushioning the decline in income, but the predictions sometimes heard that rising consumer expenditures will, at a minimum, offset declining business spending have found little factual support. The disappointed Christmas hopes of retailers, in spite of sales which in fact were very good, typify much of 1957. All too often the year's results fell short of expectations. People who expected an autumn rise in consumer buying, a further stretch-out of record plant and equipment spending, or a revival of business ordering found that they had indulged in wishful-thinking. As a result, and because it ended in a downtrend, 1957 may not get as much credit as it deserves for being a good business year. On the record, it was probably the best year in the nation's history.

Latest figures indicate that in 1957 the gross national product—the aggregate value of goods and services produced—set a new record by a sizeable margin, as did personal income and consumer spending. Even aggregate corporate profits are not likely to wind up very far from the good 1956 level. If the final figures on Christmas sales confirm early indications, they will bring total 1957 retail sales up to the $200 billion mark for the first time—a 5 percent rise over 1956 and an immense volume of merchandise for any year. Construction rose to a new peak for the eleventh successive year, and business investment in new plant and equipment expanded to the unprecedented total of $37 billion. Altogether, more Americans were at work in 1957 and earning higher wages than ever before. Many of these records look less imposing, however, if allowance is made for the higher level of prices during 1957. Consumer prices averaged 3½ percent more than in 1956, and wholesale prices were up 2.9 percent. Gross national production will show some rise after allowance for price changes, but doubtless a slower rate of increase than in 1955 or 1956. Industrial production averages out at about the same as in 1956. The overall purchasing power of consumer income is still likely to set a new record. If both prices and population growth are taken into account, however, there has been little increase in "real" *per capita* disposable income since the last quarter of 1955.



The promptness with which business firms adjust their inventories and the speed of the decline in plant and equipment spending will have much to do with the trend of the next few months and with determining how soon the economy is ready to rally and start a recovery. The amount and timing of fiscal and monetary measures to counteract recessionary trends are also vital but unknown elements in the 1958 outlook. One thing is certain: 1958 will be a highly competitive year. More than ever before, management's interest will be centred on cutting costs, improving efficiency, and turning out products designed and priced to attract the customer. Many industries are experiencing declines, but the fact that many of them have already gone through substantial adjustments in the past two years should help limit the size and duration of further adjustments. The prospect of an accelerated defence programme and the possibility of moderate but continued expansion in public works, home-building and some other types of construction encourage the belief that the second half-year may see an end to the recession. In business plant and equipment expenditure, however, there is no precedent for expecting a fresh upturn in so short a time.

CURRENT COIN

The Outlook for Jessops.—The managing director of Jessop and Company Ltd., Mr. S. S. H. Sitwell, has told shareholders at the latest annual general meeting that the business of the concern during the accounting year ended 31st October, 1957, was satisfactory (a fuller version of the speech appears on a later page). Sales rose to Rs. 7½ crores, from Rs. 6½ crores in the previous year. Although the activities of the import and trading departments continued to deteriorate, those of the works increased by 40 percent. The manufacture of diesel road rollers was started and during the period January to September 1957, 100 such rollers were completed. Production, however, was interrupted in the autumn due to a shortage of steel, and it is proving difficult to produce economically a standardised product like a road roller with the steel supply situation still remaining tight. The working results of other departments have been good. The new factory for the manufacture of electric and other railway coaches is now virtually complete, and a small amount of work has already started. It will be in full operation during the second half of 1958. The company's order book has been excellent and now stands at over Rs. 20 crores. A contract for 34 cranes came from the Bombay Port Trust, all of which have been supplied, and a further contract for 54 cranes has been signed with the same authority. There are orders

in hand for nine cranes for Calcutta and four for Madras ports also. These cranes are entirely designed and manufactured in India, "only some special electrical equipment and such items as ball and roller bearings being imported." The company has earned a satisfactory margin of profit, and provided it keeps receiving adequate supplies of steel, "there is no reason why it should not continue to do so." A reassuring factor is that "a very large portion of its activities are concentrated on the manufacture of rolling stock for the railways which carries top priority for steel supplies," and the remainder of the orders concern contracts which have a high degree of priority in the allocation of steel also. Mr. Sitwell feels sure that the company will receive its full share of "what steel supplies are available." He denies the rumour that any administrator or receiver has been appointed by the Government or any other party. The Life Insurance Corporation, which holds just under 20 percent of the ordinary shares and 70 percent of the preference shares of the concern, has a director on the board, but he joined after the other directors had invited the Corporation to nominate a representative. Mr. H. D. Mundhra has already vacated his seat, and the board has been strengthened by the co-option of two more directors, namely, Messrs B. P. Khaitan and B. N. Chaturvedi. The annual general meeting, which was called to consider the accounts for the year ended 31st October, 1956, decided that Jessops should pay no ordinary dividend at all for that year. The directors had earlier recommended a distribution of 12½ percent. The move against paying any dividend was initiated by the Life Insurance Corporation.

* * * *

Electricity Costs in U.P.—The State-owned electricity undertakings in Uttar Pradesh have come in for a good deal of criticism on the score of inefficiency and high costs. The failure of the irrigation works in the eastern districts of the State is the immediate cause of the probe, which has brought to light several disturbing features. Since 1950, when the Electricity Department was created, there has been a steady decline in its operational efficiency. In 1955-56, it gave only 1,913 kW hours of energy for every kW unit of installation, against an all-India average of 3,214 kWh. In the same year, when the first five year plan was completed, the installed capacity increased to 140,015 kW but the generation increased to only 26.79 million kWh. The State Government could have produced the total energy generated in 1955-56 by a mere increase of 15,000 kW if the pre-plan operational efficiency had been maintained. The increase of 90,000 kW has resulted in over-capitalisation and the locking up of resources. The cost of the electricity produced by the U.P. Government is perhaps the highest in the country. During 1955, the average all-India price of electricity was 1.113 annas a unit for all types of energy. The comparative price of hydro-electric power produced in U.P. was 1.22 annas, in spite of the fact that hydel power is the cheapest. The detailed financial accounts of the various electrical undertakings in the State are not available, but it appears that the Ganga grid, which remains the major undertaking, has been showing declining returns on the capital outlay. From 15.96 percent in 1951 on the total outlay, the return came down to 11.24 percent in 1955. The loss of energy in transformation and transmission in U.P. works out to 21.88 percent of the total energy produced, and this figure too is higher than the all-India average. An enquiry which was formally conducted a couple of years ago showed that most of the works were defective. The transmission mains were under-size; the transformers were overloaded; and the planning and execution of works showed grave defects. The overall effect of the inefficiency of the Electricity Department is a setback to the State's programme of agricultural development and industrialisation.

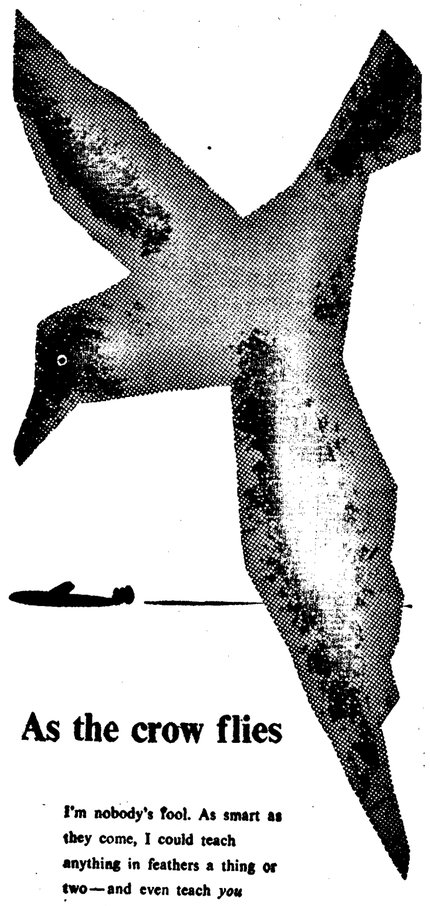
* * * *

Unemployment among Graduates.—The first of a series of employment and unemployment studies which have been undertaken by the Man-power Division of the Directorate of Employment Exchanges, Central Ministry of Labour and Employment, has shown that the problem of unemployment among graduates is more widespread in West Bengal, Uttar Pradesh, Bombay and Delhi than in other States. The incidence of unemployment among women graduates is the highest in Kerala. The analysis has been made on the basis of registration details furnished by 151 employment exchanges concerning graduates seeking work through them. Particulars of 26,297 graduates were received and a detailed analysis was made of 25,785. The survey shows that 84 percent of them held Bachelor's degrees in Arts, Science or Commerce. In order to examine the relative incidence of unemployment among various degree-holders, the annual outturn from universities was taken into consideration as it provided an indication of the addition to the labour force every year. Comparing this with the percentage of unemployed registrants degree-wise, it was found that unemployment was higher among those holding B.Com. and B.Com. (Hons.) degrees than among those with B.Sc. and B.A. degrees. It has also been found that unemployment among M.Com.'s is more acute than among M.Sc.'s and M.A.'s. This is surprising, since it is often said that commerce graduates have a better chance of finding employment than arts graduates. It is probable that the proportion of the former has increased in recent years. But the more plausible reason for unemployment among commerce graduates is the increase in the number of those who have no first class qualifications. The survey shows that of the total number of unemployed graduates, only 2.3 percent had secured first class, 28.4 percent second class and the remaining 72.9 percent third class—which included those who took degrees where no class was assigned. Yet another cause of unemployment among them might be their lack of practical experience. This conclusion is supported by the survey, which shows that 76.7 percent of the unemployed graduates had no previous jobs.

* * * *

Labour Politics.—The rôle of adjudication in industrial disputes has wittily, and not without a degree of truth, been defined as "awarding with much unction the lion's share to the lion." If trade unions get more than their share under this system, the lambs might be expected to react to the situation with the answer: "Get yourselves organised, buy a lion's mane and start roaring." Whether or not the tenor of recent legislation setting up compulsory arbitration machinery is that it is to be invoked only when negotiation has failed, the fact remains that resort to it has become the first rather than the last step in any industrial dispute. Mr. V. V. Giri, Governor of Uttar Pradesh, has said that he could not deplore this trend too strongly. In his address at the first all-India Labour Economic Conference organised by the Economics Department of Lucknow University a few days ago, Mr. Giri, who has been a labour leader for the best part of his life, declares that "so long as compulsory adjudication forms part of the statute book, the employers and workers will hesitate to put their cards on the table and they will give secondary importance to collective bargaining and voluntary conciliation." He compares compulsory adjudication with the position of a policeman who is watching out for signs of discontent and who, at the slightest provocation, takes the parties to court for a dose of costly and not wholly satisfactory justice. In his view, any decision by a third party cannot be as good as one evolved from within and based on mutual trust and confidence. Mr. Giri's touching faith in collective bargaining is not, however, fully shared by the U.P. Chief Minister, Dr. Sampurnanand, who feels there is a fundamental flaw in the idea that the level of wages agreed is entirely a matter for the industry and of no concern to anyone else. Collective bargaining, he says, is as much concerned with what prices shall be charged for the products of the industry as it is about how the revenue of the industry shall be divided between wages and profits. "Labour relations and labour economics," he declares, "must fall within the general, social and economic framework of national life." He is not prepared to concede that the interests of labour must be considered paramount to those of society. "The man with business talents should have as much right to exercise them as a person who possesses special capacities in other directions." He warns labour that though it may be able to put up a fight against private industrialists, "it will find itself terribly handicapped in raising its head against the State in the event of nationalisation." Such plain-speaking may not endear Dr. Sampurnanand to labour leaders, but it is nevertheless welcome as evidence of fresh thinking on the subject of labour economics—and politics.

* * * *



Exporting Vegetable Oils.—A memorandum submitted by the Calcutta Grain, Oilseed and Rice Association and the Oil Millers Association of Bengal to Mr. S. N. Bilgrami, Chief Controller of Imports and Exports, refers to the difficulties experienced in exporting vegetable oils and oil-cakes. Violent fluctuations in the export price of linseed oil have more or less been a normal feature for some time. In spite of the belated action taken by the Government in abolishing the export duty and giving the concession of excise duty drawback, linseed oil can hardly compete in overseas markets because of lower quotations especially from Argentina. "The prices of Indian linseed oil can be made competitive if free export of linseed oil is simultaneously continued for a long time up to December 1958 along with free export of linseed cake. It is, therefore, desirable that the Government should allow free export of linseed cake to enable Indian linseed oil to regain its lost markets in foreign countries." The memorandum adds that export duty on the oil should not be imposed without consulting the trade. Since the Government is eager to launch an export promotion campaign, it is necessary to remove the export duty on oils, wherever possible. Burma has a special preference for mohwa oil, which is used for the preparation of yellow soap, but the heavy export duty is hampering exports from India. The export of groundnut oil has been banned since July 1956. World demand for the oil is great, and a substantial amount of foreign exchange could be earned by selling it abroad. Referring to the high price of mustard oil in West Bengal, the memorandum suggests that the Government should issue *ad hoc* licences for West Bengal mills to import mustard-seed from communist countries. Mills in the State face big handicaps in exporting vegetable oils because the supply of oilseeds from upcountry centres is not regular. Their movement is given low priority by the railways. There is also a disparity "in the railway freight rate structure, which adds to the export price, making it less competitive compared with other States."

* * * *

Pitfalls in Agricultural Planning.—Agricultural programmes and the steps taken by State Governments to increase food production have recently been discussed by the standing committee of the National Development Council. The meeting has given special attention to the lag in the utilisation of irrigation potential, and has pointed out that one of the reasons for this is the failure to construct distributaries and field channels. It has been emphasised that in community project areas it should be the responsibility of the project authorities to have village channels constructed by local voluntary labour. After considering the relative yields of rice and wheat an acre in different States, the committee has decided that the Planning Commission should be asked to set up a special study group to examine the disparities in the average yield and to analyse the reasons for these disparities. The Prime Minister has stressed the importance of programmes such as soil conservation and green manuring, and has suggested that greater interest be taken in the development of subsidiary foods. He thinks that the potential for India's food production is much greater than is commonly thought. "It is quite extraordinary how pessimistic we are about our capacity and about the capacity of the country. Naturally, food production does not increase by itself. It requires organised effort. Therefore, the fault is in ourselves, not in our stars. The fault is in the steps we take or the inadequacy of the steps, whatever they may be." It is necessary to increase food production through intensive methods. The latter should be applied where water or irrigation facilities are available or where there is assured rainfall. The suggestion that India should go on importing food year after year is a defeatist approach, according to Mr. Nehru. "If we function at that rate, even our rate of progress will be so slow that our great grandchildren will be drawing up some wretched five year plan for another six inches of growth. We have to move faster than this and have a more dynamic approach to this matter."

* * * *

Eastern Freight Tussle.—Fears of a freight war in the Far East are expressed in British shipping circles as a result of developments in the Hongkong-Japan Freight Agreement. The executive committee has decided to allow its 39 shipping-line members to quote rates freely for consignments of more than 30 tons. This measure, it is thought, has been taken in order to preserve the structure of the Agreement in face of the withdrawal of eight major shipping lines from it. The Dutch-owned Interocean Line is withdrawing at once, and seven other lines have expressed their intention to follow suit in the next three months. Trouble seems to have arisen when some members began offering secret rebates about six months ago. A spokesman of the Japanese Nippon Yusen Kaisha Company said recently that foreign companies had alleged that Japanese owners were under-cutting Conference tariffs by paying rebates. As in some shipping quarters the Agreement had been considered a farce since the under-cutting began, the steps taken by the eight withdrawing lines were not unexpected. It now seems that lower rates and cut-throat competition over the next few months in at least this sector of the Far East trade are unavoidable. Meanwhile, reports from Hamburg suggest that in an attempt to stabilise the European tramp market a European Tramp Shipping Conference, with its seat in Amsterdam, might be formed shortly. It would fix minimum rates for the four main commodity groups—timber, coal, fertilisers and grain.

As the crow flies

I'm nobody's fool. As smart as
they come, I could teach
anything in feathers a thing or
two—and even teach *you*
when it comes to flying.'

But A-I.I.—they're a different
proposition! Like me, they too
fly swift and straight. And
although I hate to admit it,
they're a trifle faster than I am.
So let them fly your goods
to Tokyo. Air-India flies
to Bangkok, Hong Kong and
Tokyo twice a week—
Every Sunday and Thursday.
Fly as the crow flies.
Be first on the market.

CURRENCY REFORM

THE despatch of the Government of India of 16th September, the memorial of the merchants and bankers of London of 15th October and the letter of the Bengal Chamber of Commerce, dated 22nd December, coupled with the present deplorable state of the Indian money markets, indicate that the time has come when steps should be taken to establish an effective gold standard in India. It is understood that the financial authorities are disposed to welcome the public discussion of any practical plan for fixing India's sterling exchange, and we take this opportunity of submitting for criticism Mr. Lindsay's scheme which has from the first commended itself to us as the one method of establishing a gold standard without a gold currency that has stood the test of a prolonged trial. As already intimated we propose to open our correspondence columns to any well-considered arguments for or against the plan, but we must request all opponents of the gold standard to take notice that disquisitions on bimetallism and a silver standard are not wanted. The discussion must be confined to the practical question of the hour, *viz.*, how to establish fixity of sterling exchange within convenient limits with safety at a moderate cost. The efficiency and economy of the proposed method of convertibility, the sufficiency and location of the gold or sterling reserve, the limits fixed for issue and conversion of rupees, the effect on the money market of automatic regulation at fixed sterling rates, and all other points of the scheme should be criticised freely; but it is hoped that the discussion will be based as far as possible on arguments and authoritative opinions and precedents. Currency questions are thorny subjects, and, as Sir Walter Scott said, the disputants are often as irritable as Balaam and as obstinate as his ass; but it is hoped that the controversy on this occasion will be distinguished by courtesy, fair play and a desire to have our currency machinery made as perfect as possible with due regard to ways and means.

BATTERIES are our business

For over 60 years Chloride have been making batteries and nothing else. Our products provide an unfailing source of power in Generating Stations, Sub-Stations, Telephone Exchanges, Industrial Factories, Railway Coaches, Aircraft and Exide Batteries are fitted on more motor vehicles in India, new and old, than any other make.

Industries, Electric Supply and Development Projects, Railways and Transport Operators depend on Chloride and Exide products as do India's motor vehicle manufacturers. They are thus assured of a quality product unequalled in performance and reliability and backed by an efficient and comprehensive Service Organisation.

Manufacturing more than 150,000 Storage Batteries per year of all kinds, the Exide Factory near Calcutta, is India's largest and foremost producer and ranks with the world's leading and best equipped Storage Battery Factories. Continuous research and development keep us consistently ahead of the times in all that is new in battery development.

THE DEFENCE OF COMMON EMPLOYMENT

(FROM OUR LEGAL CORRESPONDENT)

CONTINUING this series of comments on English cases decided in 1957, the law in which may not, but probably will, be accepted as correctly laid down by the courts in this country, we come to the accident sustained by a Mr. Staton and the public service rendered, albeit unintentionally, by him in hammering one of the last remaining nails into the coffin of the illogical doctrine of "common employment". Mr. Staton was severely injured while in the employment of the National Coal Board. The injuries were caused by the negligence of a fellow servant who, at the time of the accident, had finished his work and was cycling along a road on his employer's premises to the pay office in order to collect his wages. Were the National Coal Board, as Mr. Staton's "masters", vicariously liable to him for the injuries caused to him by his fellow servant's negligence? Do not confuse this claim with one under the Workmen's Compensation Act for periodical compensation. It was a suit for lump-sum damages where the party sued, that is, the employer, had in fact been guilty of no actual negligence whatever. The basis of the claim was the duty which rests on an employer to provide a sound and safe system of working, and to take care for the safety of his workmen. The obligation is threefold. It is "the provision of a competent staff of men, adequate material and a proper system, including effective supervision."[1]

The defence was that of "common employment" which was referred to in a recent case, on which we comment later, by Hilbery J. as "that highly artificial and now unfashionable legal fiction known as the doctrine of common employment." Under it, the law has, with more and more uneasiness as the years have passed and the consequences been ascertained, assumed an implied term as forming part of every contract of service, that is, the parties are presumed to have agreed upon a term to which they did not agree and which they did not even consider. The implied term is, or, as we may soon have to say, was, that a servant must be supposed to have envisaged and agreed to take the risk of any injury occasioned to him from acts of carelessness or negligence on the part of fellow servants; and, therefore, the master would not be answerable to him either by reason of the threefold obligation stated above or on the principle of *respondeat superior* ('let the person in superior control be answerable"); on the contrary, the servant—assuming the doctrine to be sound—would find his claim defeated against his employer by the effect of that other maxim *volanti non fit injuria* ("no legal right to sue to anyone who willingly runs the risk").

Here the writer stops to apologise for his increasing use latterly of these Latin tags. He abominates the practice and tries to avoid it. "Why not write in plain English?" you may ask. Nevertheless, there is sometimes no better way of rubbing in the meaning of a venerable principle of law, than these terse Latin maxims consisting usually of no more than three or four words. The four words last quoted dating back to the *Roman Digest* sum up the principle behind the defence of the National Coal Board in 1957, just as the two laconic words *"respondeat superior"* represent the basis of Mr. Staton's claim against the Board for injuries caused not by the Board but by a fellow servant, who had finished his day's work and was on his way to collect his wages.

* * * *

If Mr. Staton was engaged in hammering the last nails into the coffin of the common employment doctrine in 1957, the final obsequies had been actually begun almost precisely ten years before. The warning knell had been tolled by a young London bus conductress in 1947. This young "clippee" was talkative. It is the badge of their tribe. So, though she was actually off duty and had got off her bus, instead of going home she remained on the road chatting to her bus driver. While thus engaged she did not observe and was struck by another bus carelessly driven by one of her employers' other drivers. This driver brought his bus alongside the other in circumstances not only exhibiting negligence on his part, but in breach of an important rule which prohibited moving a bus backwards without having the guidance of its own conductor. If the girl had not been engrossed in chatting to the driver of her own bus in the road, she might have seen the other bus coming at her backwards and skipped out of the way of it. Anyway, she neither saw nor skipped and was knocked down and injured by it; whereupon, on recovery, she sued her employers, the London Passenger Transport Board, for damages on account of injuries caused by the negligence of their servant who was also her fellow servant.

Here we will stray from the main point for a moment. If you choose to stand in a busy road, full of constant motor traffic, by the side of a stationary motor-car chatting to your friend who is the owner of and at the wheel of the same, would you consider yourself guilty of contributory negligence by so doing if you were injured through another motor-car backing into you and knocking you down? Personally, though not without doubt, the writer would answer "yes". The right of a pedestrian on a public road is to pass and repass, not to hold a conversazione. It would be, it is suggested, a case of contributory negligence. However, even as one writes down the answer, one doubts its accuracy. Anyway, the point does not appear to have been raised in Miss Dorrington's case. The defence was common employment, that the negligent driver was her fellow servant, and she must be deemed to have taken the risk of any injury caused by his negligence as such. Hilbery J. held that the defence could not prevail. [*Dorrington* v *London Passenger Transport Board.* (1947). 2 All E. R. 84.] You will have noticed that Miss Dorrington was off duty when the accident occurred. While that may have made her position stronger in that she might claim to be suing as an ordinary member of the public to whom the defence of common employment did not apply, the fact of her status made no real difference. In the case, strange to say, of another bus conductress decided in the same year, 1947, the young lady was on duty when her bus was run into from behind by another bus. The House of Lords held the defence of common employment not to be available. [*Glasgow Corporation* v *Neilson.* (1947). 2. All E. R. 346.]

Returning to Mr. Staton's case, Finnemore J. held that the National Coal Board was vicariously liable to him for the injuries negligently caused by his fellow servant. True it was that the latter had finished his work. But the negligent servant was still in the course of his employment while cycling *on his master's premises* to collect his wages. His lordship added, however: "Speaking for myself, it is plain that, when a servant is off the master's premises—for example, when he is on the Queen's highway on the way to his place of employment to get his wages—it would be argued, I think with success, that he was not in the course of his employment." [*Staton* v *National Coal Board.* (1957. N .N. Vol. 76. p192)]. In short, going back reluctantly to our Latin tags, *respondeat superior* prevailed and *volenti non fit injuria* was sunk.

All the same, and "though the tocsin sound ere long", the corpse of common employment still has a spasmodic wriggle or two left in it. The defence still comes off sometimes. Here is a case which it is a real pleasure to cite to the non-legal reader, for it is one in which, if we could only attribute sinister motives to one or two of the participants in it instead of the recklessness and carelessness which were all they were in fact guilty of, would make an excellent Agatha Christie thriller. The perfect crime perpetrated openly in the presence of a thousand witnesses or so all closely watching. The plaintiff in *Fanton* v *Demville* (1932) 2. K. B. 309 was an actor employed by the defendant in a touring company. In one of the scenes of the play he had to act the part of a murderer condemned to death. The defendant, the owner of the show, was a realist and portrayed on the stage the actual execution. The latter turned out to be more realistic than the defendant intended. The actor had to purport to be hanged by the neck until he was dead, and at this particular performance he very nearly was. The execution was shown on modern lines, that is, the condemned man was positioned on a scaffold with a noose about his neck: he stood on a trap door, which when the hangman pressed a lever, would fall and down would go the murderer to die, legally by hanging but, actually, of course of a broken neck.

It is an employer's duty to see to it that competent and responsible persons in such a case take proper precautions to check the actor's fall. In this case, it was held by the Court of Appeal that the defendant had appointed competent and responsible persons to check the fall but that the competent and responsible persons did not on this particular occasion do so through the carelessness of one or more of them. An odd sort of competent and responsible person you may think. Anyway, when the "condemned man" dropped out of sight, he nearly dropped out of life, too; sustained severe injuries and on recovery sued his employer for damages.

The defence was the doctrine of common employment and it succeeded. The actor lost his case. But that happened 25 years ago. We may doubt whether the result would be the same today.

Now... high-quality

ACC FIREBRICKS

for Cement Kilns • Foundries
Smelting Furnaces • Boilers

FROM the ACC's Firebricks Factory at Katni, now expanded and modernised, come high quality refractories with medium, high and super alumina content to meet all your requirements.

Because of their great resistance to spalling and abrasion, these refractories ensure *long* and *trouble-free* service and *low maintenance cost.* Complying fully with the I.S. Specifications 6-1953 and 8-1953, ACC refractories are made to the shape, size and quality you require. They are *far more economical than* ordinary firebricks. And the ACC hallmark on them is your guarantee of high quality and dependability.

For further advice and for details regarding price, delivery, etc. write to:

FROM almost every point of view that I can think of, Mr. Macmillan's Indian visit was a complete success. So far as I am concerned, the final proof thereof is that there has been no joint *communiqué.* The so-called unknown Prime Minister of the United Kingdom is now making himself known not only to his Commonwealth colleagues, whom he personally knew anyway, but also to the peoples of the countries he is visiting. For this latter, some had thought Mr. Macmillan's personality rather too cold and remote. They were wrong, and some of them have since said so in print. New Delhi has staged and witnessed quite a few political circuses in recent months, but while the people probably enjoy them up to a point, Mr. Nehru's own fondness for such "spectaculars" may well be exaggerated. He knows as much as anyone else that *communiqués* conceal much more than they reveal, that diplomacy is not conducted best in the market place or with manners more appropriate to show business. Mr. Macmillan is not entirely lacking in what is called the popular touch, as the peasants near Delhi saw for themselves, but his more important asset is that he inspires confidence in the people he meets. No vulgar demonstration of friendship for him, no extravagant promises of support for this and that. He talked business, and did only that amount of public relations necessary for conducting business in a democracy. For the rest, most of the meetings between the two Prime Ministers were informal exchanges of views in which both spoke frankly and cordially. There was no breach to repair, as there was in Washington. It was only an open and necessary demonstration of an old friendship. I say necessary, because I remember the wise Dr. Johnson once told an audience that friendships should be kept in constant repair. I was disappointed to read recently that it was Mr. Nehru's idea that Mr. Macmillan should come here. Why can't Whitehall be a trifle imaginative now and then for a change?

* * * *

Mr. Nehru should not be unduly surprised if he finds that, so far as the atmosphere of a circus or carnival is concerned, the sixty-third session of the Congress is not far different from the previous sixty-two. Those who are quietly disregarding the Prime Minister's request for a businesslike session may well turn round and ask whether the main idea of holding these annual sessions is not in many ways akin to that of a circus or carnival. It is difficult to believe that the presence of enormous crowds is considered essential by anyone for the taking of decisions on national problems and international covenants. The object, I should think, is to inform the public of decisions made earlier in secret, to explain them to the people, and to create in them a measure of enthusiasm. Indiscipline such as is seen often on these occasions is only the result of excessive zeal, the fault being more in the excess than in the zeal. Limited as is my enthusiasm for crowds anywhere, any Congress session is probably an improvement on what I see, in the newsreels, and hear, from friends, of American political jamborees. Mr. Nehru must know how boisterous they are, how dominated by public relations experts and advertising tycoons. The Democrats and the Republicans fight as Coca-Cola and Pepsicola might, and with about the same weapons, the same techniques and the same ruthlessness. Serious discussion is difficult in the kind of sessions the Congress has, but in the United States politics must be mentioned only at great intervals, and then political personalities rather than principles. If a political convention is to be likened to a circus, it is surely the American; but that is probably appropriate enough where one Party can think of nothing better for its symbol than an ass, while the other chooses an elephant.

* * * *

Wheels within wheels I had heard of, but this Socialist Forum within the socialistic Congress Party puzzles me more than somewhat—unless somebody does not mean what he says. Variously described as the "ginger group" and a successor to the defunct Congress Socialist Party, the Forum has been heard again in Pragjyotishpur. (Couldn't they find a shorter name for the venue of the Congress session?) Its organisers cannot be unaware that this Indian version of the Bevanites in Britain comes at a time when Bevan himself has ceased to be a Bevanite and Bevanism is on its way out. It is possible that the needs of the two countries are different, although I would not be certain that the greatest or the most urgent of the needs of this country is a larger dose of socialism. Disapproval of the direction internal criticism within the Congress may take does not, however, mean that the emergence of a young and questioning group inside the Party is not a good thing. I think it is, for although I do not believe that anybody, least of all Mr. Nehru, has really suppressed the critical spirit, the fact is that it has not been very conspicuous in recent years. And all of us need some criticism to keep ourselves on our toes. A political Party that does not criticise itself soon begins to stagnate, a fate not many Indian patriots will wish for the Congress, which has much to give to the country yet.

* * * *

Of all the so-called conveniences of modern life, the telephone is probably the most irritating. At home, verbose callers invariably ring up in the midst of slumber on a Sunday afternoon. In office, business discussions are liable to be punctuated by half-hourly bulletins from wives about wet napkins and burnt cakes. And when, in turn, one has to telephone somebody oneself, there is more often than not a tiresome stream of sputnik bleeps from engaged numbers. Yet I must confess that the irritations today are nothing compared with, say, six years ago, before the Calcutta telephone authorities launched their automatisation scheme. The completion of the scheme this week, with the Salkia and Sibpur exchanges going over to the automatic system, will therefore be widely welcomed. The passing of the nightingales who coo-ed back from the former manually-operated telephone exchanges—usually about five or ten minutes after one had lifted the receiver—is not likely to be deeply regretted, what they cost the city in terms of frayed nerves and lost tempers will not be easily calculated or soon forgotten. Far be it from me, however, to suggest that the telephone system is now approaching perfection; when there are breakdowns—and they are not always due to mishandling by ignorant users—the arrival of repair teams remains less than prompt. One of the greatest needs to which the telephone authorities should, I feel, direct their attention is the provision of more public call-boxes. I have heard it suggested that, apart from the shortage of equipment, a major reason why this cannot be done quicker is a certain lack of civic conscience—for instance, directories get pilfered, or equipment is damaged by petty hoodlums. But this argument would be more acceptable if there were a larger number of telephone booths in, say, the post offices, where a close watch is easily possible over equipment and ancillary property. Apart from the provision of public call-boxes, I have two other minor suggestions to make to our local telephone authorities. One is that when they happen to see a new road built or an old one re-surfaced, they should resist the itch to dig it up for laying a telephone cable. The second is that to improve their relations with the public, it is wiser to spend effort and resources on making the service more efficient, rather than on distributing greetings cards, apparently at the Government's expense, during the festive season. Certain telephone officials, who recently spent their Christmas doing this, might well realise that it does not give a taxpayer much pleasure to receive a card for which he knows he himself has paid.

* * * *

Dr. Triguna Sen, Mayor of Calcutta, deserves commendation for the prize under-statement of the year. He has said that charges of corruption against the Corporation of Calcutta are not baseless, on which admission I do not expect to see a dissentient opinion. Of all the public bodies I know, none enjoys a less enviable reputation, and it would appear that repeated spells of supersession by the State Government have improved the position but slightly. The trouble is that the Corporation—and all local self-government in India—started on the wrong foot, in as much as the dominant political Party, the Congress, captured these bodies only to wreck them, as was publicly proclaimed at the time in so many words. Today Dr. Sen says that recruitment of staff must be strictly on the basis of merit. If he is able to do anything in this direction something will be done for the first time in its history. Even in the technical departments, appointments were on a political basis, and things may have been worse in recent years. The electoral roll is a joke, to manipulate which (or to cause it to be manipulated) is a surer guarantee of being returned than any appeal to the people or any promise of civic improvement. For all its service to the country, which nobody will deny, the Indian National Congress is perhaps more responsible for the sorry state in which local government is in India today than any other agency, and only conscious acceptance of this fact can lead to the search for a cure, which will have to be much more drastic than is indicated by the Mayor's decision not to punish the one official he recently caught in the act of accepting graft. Official complaints that corruption is hard to detect, which it is, are difficult to reconcile with forgiveness for those few who are caught.

* * * *

Once upon a time there were two tycoons—millionaires and old friends. One day, one of them did the other a quite spontaneous good turn of a kind which seemed to call for a tangible expression of gratitude. So he rang up his pal, who already possessed about everything imaginable, and asked what he would like. The latter, after much protestation and cogitation, admitted that, as a matter of fact, he *would* like some golf clubs. Six months later, he received a telegram reading: "I have not forgotten you but so far have only been able to buy four golf clubs and regret that only two have swimming pools!"

JESSOP & COMPANY, LIMITED

MR. S. S. H. SITWELL'S REVIEW

The Twenty-fifth Annual General Meeting of Jessop & Co., Ltd. was held on the 9th January, 1958 at 63, Netaji Subhas Road, Calcutta.

The following speech was delivered by Mr. S. S. H. Sitwell, Managing Director of the Company :—

Gentlemen :

The next item on the Agenda today is to receive and consider the Accounts together with the Reports of the Directors and Auditors for the year ending 31st October, 1956. These documents have been in your hands for some time and you have heard the Acting Secretary read the Auditors' Report. With your permission I will not read the Directors' Report which in the main covers the period up to 31st October, 1956 though it also reveals certain important happenings after that date. I think, however, that it will be in the general interest to correct certain misapprehensions that have received some currency and to bring you even more up to date before I move the adoption of the Report and Accounts and so give you an opportunity to discuss them.

Early in December 1957 your Board was advised that by reason of certain actions on his part Mr. H. D. Mundhra had vacated his seat on the Board, the Registrar of Companies was advised accordingly, the date being December 5th.

I would now like to draw your attention to some changes that have taken place in the composition of your Board of Directors since the Report was printed.

Firstly, Mr. K. N. Tapuriah tendered his resignation as a Director on 2nd January, 1958. Your Directors accepted this resignation with regret for they have always found him a useful and likeable fellow worker.

Secondly, Mr S. D. Srinivasan was co-opted as a Director under Clause 107 of the Company's Articles on December 13th, 1957, and this calls for some explanation.

Large Shareholder

Some of you will know that the Life Insurance Corporation of India is a large shareholder in your Company. In fact it owns just under 20% of the Ordinary Shares and about 70% of the Preference Shares In view of this fact your Directors, some months ago, approached the Life Insurance Corporation with the suggestion that they nominate a Director on your Board. This suggestion culminated early in December by the Corporation nominating Sir Dhiren Mitra before, incidentally, he took up other appointments which have recently been in the public eye. Sir Dhiren is over 65 years of age and therefore under the Companies Act cannot be brought onto the Board except at a General Meeting. You will note that a Proposal to that effect will be moved later today. In the meantime your Directors co-opted Mr. Srinivasan, the Zonal Manager of the Corporation here in Calcutta so that the Life Insurance Corporation should not go unrepresented. Mr. Srinivasan retires at this Meeting and is not standing for re-election.

I would remark at this stage that contrary to impressions in various quarters, no Administrator, Receiver or other Official has been appointed for this Company by the Government or any other party. Your Directors themselves, as I have already said, invited the Life Insurance Corporation to nominate a Director and also took an opportunity to strengthen the Board by co-opting Mr. B. P. Khaitan the well known Calcutta Solicitor and Mr. B. N. Chaturvedi, who is, *inter alia*, the Chairman of the Calcutta Stock Exchange Association.

Unfortunately the Meeting today is very much over due. I would remark however that those of you who are Shareholders of long standing will remember that our Annual General Meetings were usually held about July In 1956, by a very great effort, we held the Meeting in February but experience then gained showed that with the large and varied nature of our business the time between February and the closure of the Company's Accounts at the end of October was too short. It had been our intention to hold this Meeting during June or July 1957 but we delayed in the hope that so doing would aid us in recovering the monies due to the Company.

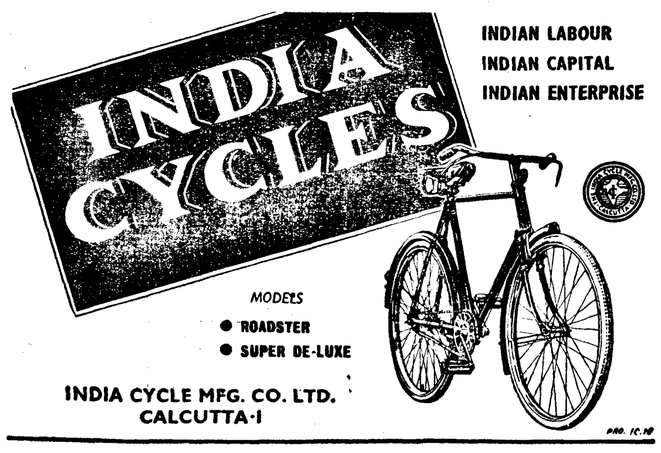
In view of the fact that another of our financial years ended on 31st October 1957 I can tell you today a little of the more recent working of the Company. I must be brief and you must appreciate that figures must in many cases be approximate.

The Sales this last year increased to over 7¼ crores as against 6¼ crores for the period we are reviewing today and the margins have remained at a satisfactory level. As forecast in the Report now in your hands the activities of the Import and Trading Departments continued to deteriorate but those of the Works increased by over 40% during 1957 as against 1956.

The increased activity in the Works was of a general nature though one new project, the manufacture of Diesel Road Rollers, got fairly on its way. During the period January to September 1957 the Company completed 100 Rollers but in the Autumn production came to a halt for lack of steel. Production is now continuing but the steel situation is very difficult and it is not easy to see how we can economically produce a standardised article such as a Road Roller unless we can get some real continuity of supplies of raw material.

The new Factory built for the manufacture of Electric and other Railway Coaches is now virtually complete and a small amount of work has already started. This Factory will be in full operation during the second half of this year.

On the end cover of the Report you will see a photograph of Level Luffing Wharf Cranes at Alexandra Dock, Bombay. These form part of a contract for 34 cranes for the Bombay Port Trust the last of which has just completed 12 months service. We have orders in hand for 9 similar cranes for Calcutta and 4 for Madras and we have just received a further contract from Bombay for another 54 cranes. These cranes are entirely designed and manufactured here in India, only some special electrical equipment and such items as ball and roller bearings being imported. The local manufacture content is of the order of 75% so that on the new contract from Bombay, which totals about 164 lakhs, this Company saves India some 120 lakhs in foreign exchange. I think I am right in saying that, apart from Japan, India is the only country outside Europe and North America where such cranes are being designed and manufactured, and in this country your Company is the only one so doing.



Order Book

It remains to add that the Company's Order Book now stands at the remarkable figure of over 20 crores and that the Works and their connected staff and employees are in an excellent position to tackle this great volume of business. I am glad to say in this connection that our relations with our employees have been consistently good throughout the year just ended and the satisfactory working results that I have been able to forecast are chiefly due to the sustained efforts of all the Company's employees to whom all thanks are due.

As I have already told you your Company has a very good Order Book on which it is earning satisfactory margins. There is no reason why it should not continue to do so provided that it continues to receive adequate supplies of steel, a commodity which unfortunately is in increasingly short supply with little prospect of easement within the next two years. Fortunately a very large portion of our activities are concentrated on the manufacture of rolling stock for the railways which carries top priority for steel supplies while the remainder of our Order Book covers contracts having a very high degree of priority, thus we can be sure of obtaining our full share of what steel supplies are available.

Turning back to the past I would emphasise that what is now revealed in the Directors' Report in fact happened over a year ago and that as soon as the position was known prompt steps were taken which prevented any further happenings of the same sort. There is no disguising the fact that your Company has suffered severe damage but, to adopt medical terms, the wound is not mortal, bleeding was promptly stopped and the patient is on the road to recovery. However the days of convalescence are frequently difficult ones and there is no exception in the case of your Company. It is now obvious that we were entangled in a mesh of events the full extent is only now becoming apparent. I use the past tense advisedly for I believe that we have succeeded in disentangling ourselves from the net, but it still remains obvious that any measure that can be taken to conserve the Company's resources will materially assist in making its recovery more sure and more swift.

(NOTE : This does not purport to be a record of the proceedings of the Annual General Meeting).

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 15th January.

THE Calcutta money market seems to have had a quieter spell during the past week and the general level of advances has not changed very much. Accommodation for sugar has increased slightly. But as for the other major categories, such as cotton, jute and grains and seeds, the level of credit is about the same as it was a week ago. There is little new to report from the interbank market where the call rate remains at 2¾ percent.

A slightly larger number of tea as well as gunny bills has passed in the exchange market this week but, in general, activity is still small. Remittance has been on a moderate scale. Sterling is strong against the dollar and Continental currencies.

* * * *

Bullion was firm because of a steady offtake and a restricted supply. Silver advanced from the previous week's level of Rs. 184.25 to Rs. 185.75, quoted today for ready delivery. The rate for forward delivery was Rs. 184.75. The price in London was 76⅝d and in New York it was 89¾ cents.

Gold maintained a steady tone in sympathy with silver, and the price increased from Rs. 110.25 to Rs. 110.75. The sovereign at Rs. 71.75 showed a gain of 50nP.

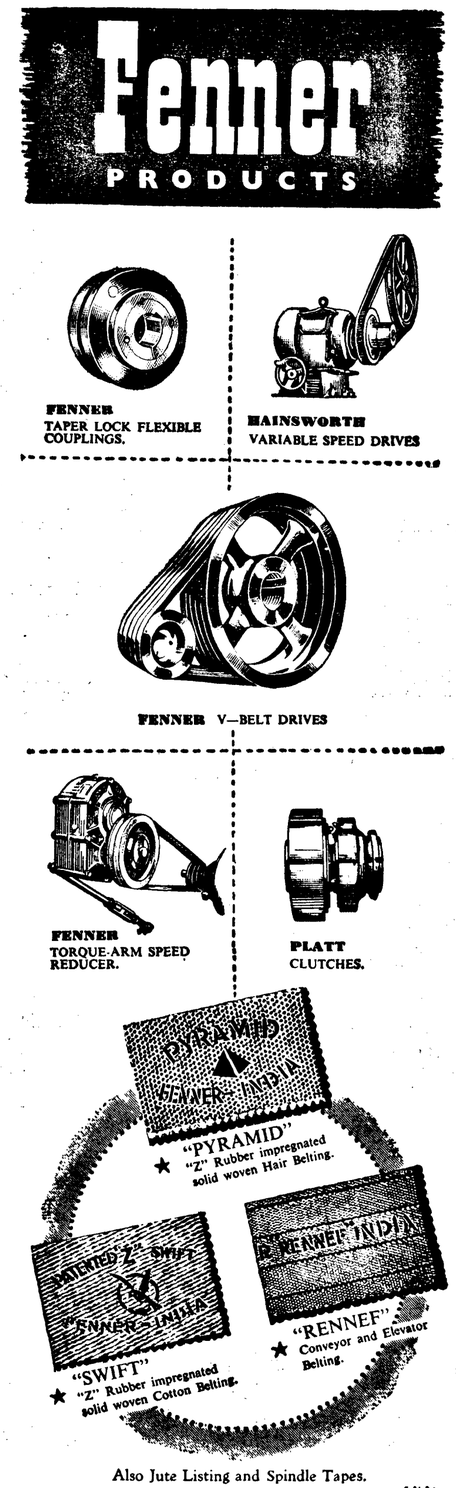
* * * *

During the week ended 10th January, Government of India Treasury bills for Rs. 100,02,50,000 were sold in favour of the Reserve Bank.

* * * *

Rises of Rs. 18.75 crores to Rs. 1,550.93 crores in the total note issue, and of Rs. 17.66 crores to Rs. 1,540.72 crores in active notes, were the notable features of the return of the Reserve Bank of India for the week ended 10th January, 1958. The currency expansion was covered by reducing foreign securities by Rs. 4.97 crores to Rs. 270.26 crores and increasing rupee securities by Rs. 24.90 crores to Rs. 1,032.10 crores. As a result of the transfer of securities from the Issue Department to the Banking Department, balances held abroad rose by Rs. 1.67 crores to Rs 19.63 crores. Deposits of the Government of India declined by Rs. 2.81 crores to Rs. 49.69 crores, while other Government accounts rose by Rs. 8.06 crores to Rs. 16.16 crores. Balances of commercial banks at Rs. 60.29 crores were Rs. 6.08 crores lower. Investments declined by Rs. 11.87 crores to Rs. 231.87 crores. Other loans and advances increased from Rs. 67.41 crores to Rs. 73.47 crores, of which advances to scheduled banks against usance bills amounted to Rs. 30.29 crores against Rs. 24.92 crores. Ways and means advances stood at Rs. 34.62 crores (Rs. 24.60 crores).

* * * *



The return of the State Bank of India for the week ended 3rd January, 1958, shows a rise of Rs. 1.49 crores to Rs. 366.47 crores in total deposits. Investments in Government securities are up by Rs. 9 lakhs to Rs. 173.73 crores, while other authorised investments show a rise of Rs. 10 lakhs to Rs. 10.13 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have risen by Rs. 4.01 crores to Rs. 174.93 crores. Cash and balances are, in consequence, shown at Rs. 21.26 crores or Rs. 5.86 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 3rd January, 1958, shows Demand and Time liabilities at Rs. 706.10 crores (Rs. 15.61 crores on account of borrowings from banks) and Rs. 692.71 crores (Rs. 17.94 crores), compared with Rs. 718.01 crores (Rs. 17.40 crores) and Rs. 587.54 crores (Rs. 20.68 crores), respectively, in the previous week. Cash has increased by Rs. 1.47 crores to Rs. 40.31 crores, while balances with the Reserve Bank have decreased by Rs. 1.21 crores to Rs 66.40 crores. There is a rise of Rs. 52 lakhs to Rs. 433.48 crores in investments. Advances and bills discounted at Rs. 880.63 crores show an increase of Rs. 22.61 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.6 percent and 63.0 percent, against 7.6 percent and 61.0 percent.

* * * *

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea, land and air Customs revenue collected in the Indian Union during September 1957, amounted to Rs. 1,595 lakhs compared with Rs. 1,517 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year, except in the case of air Customs for which the previous year's figures are not separately available. Of the total Customs revenue collections, import duties accounted for Rs. 1,306 lakhs against Rs. 1,217 lakhs, export duties for Rs. 231 lakhs against Rs. 260 lakhs, land Customs and miscellaneous for Rs. 44 lakhs against Rs. 40 lakhs, and air Customs for Rs. 14 lakhs. The total gross collection of Union excise duties amounted to Rs. 2,216 lakhs compared with Rs. 1,542 lakhs. During the six months, April to September 1957, the grand total of gross Customs and Union excise revenue realised was Rs. 21,844 lakhs compared with Rs. 16,647 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 8,185 lakhs against Rs. 6,645 lakhs, export duties for Rs. 1,043 lakhs against Rs. 1,211 lakhs, land Customs and miscellaneous for Rs. 212 lakhs against Rs. 164 lakhs, air Customs for Rs. 20 lakhs, and Union excise duties for Rs. 12,384 lakhs against Rs. 8,627 lakhs.

Also Jute Listing and Spindle Tapes.

EFFICIENT

INSULATION

part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials... it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

STOCK MARKET ACTIVITY AT LOW LEVEL

INDUSTRIALS AND GILT-EDGED DULL

London, 15th January.

BUSINESS in the stock markets remained at a low level during the past week due to the resignation of Mr. Thorneycroft as Chancellor of the Exchequer. While the news precipitated very little selling in the markets, it effectively checked the incipient rally which had been developing. In addition, the markets had to contend with the rising flow of new issues, the uncertain behaviour of Wall Street and the approaching end of the account. On balance, most sections were lower, although gilt-edged securities resisted the downward trend prior to the week-end. The announcement at the end of the week of an issue of £500 million Exchequer 5½ percent 1966 stock had very little effect on British Funds, but this market turned dull after the week-end in the absence of any support. The December overseas trade figures had little influence either on the industrial or the gilt-edged market. The latter also failed to respond to the strength of sterling abroad. Among foreign bonds, Japanese issues continued to improve, while among rails, Canadian Pacifics were firm, together with a number of other Canadian issues. Distinctly dull conditions developed in the industrial market and widespread small losses were recorded on balance. South African gold shares fluctuated within narrow limits and were mainly a few pence lower. Base metals were also easier with coppers depressed by the weakness of the price of the metal. Oil shares were generally uncertain. Shell Transport were lower in advance of the announcement of the issue price of the new shares. Rubber shares provided a number of good features mainly on bid talk. Indonesian issues were better. Tea shares generally were quiet and dull with Ceylon issues often around 1s lower.

The Money Market

The start of the main tax gathering season did not have its effect on the short loan position until the end of last week. Prior to that, several factors, such as a large return of currency from circulation, Government disbursements and excess bill maturities, made for fairly comfortable conditions. The supply of credit was not plentiful and early morning conditions were usually rather uncertain with borrowers paying up to 6 percent for accommodation. Easier conditions were experienced during the afternoons and the rate for day-to-day loans would sag to 5 percent. Last Thursday, which was the main day for tax transfers, the position was surprisingly comfortable, but thereafter the situation changed and credit conditions became rather difficult. A good demand was experienced for the sale of end-March and April bills by discount houses to the banks, the rate being 6 7/30 percent for the most part, while 6¼ percent was conceded on odd occasions. The money market made no change in its bid at last Friday's Treasury bill tender, and the average rate was almost unchanged at £6 6s 6.25d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 8th January shows that the gold stock remained unchanged at $22,781 million. Foreign deposits declined by $14 million to $342 million, but foreign investments were $15 million higher at $3,744 million. The Federal Reserve sold $84 million worth of Treasury bills and $409 million worth of securities under repurchase agreements —the total of U.S. Government securities decreasing by $493 million to $23,745 million. Total discounts and advances were $652 million higher at $707 million, while the aggregate excess reserves of member banks rose by $489 million to $528 million. The daily average excess reserves of member banks rose by $19 million to $743 million, while their daily average borrowings rose by $46 million to $702 million. Business loans of the New York city banks fell by $246 million to $11,454 million, compared with a fall of $142 million to $11,118 million in the corresponding week a year ago.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "After a modest advance on small investment demand, industrials in the London Stock Exchange have paused. Gold shares continue to enjoy selective demand and a favourable technical position. The rally in Wall Street might meet with some resistance. Markets have been distinctly brighter. Industrials may turn quieter and slightly lower as new issues will engage the attention of large investors."

Rally Fails in Hongkong Gold

The Hongkong gold market last week was stimulated at first by Mr. Thorneycroft's resignation as U.K. Chancellor of the Exchequer, some traders believing that this would lead to easiness in sterling. Many bulls, however, who had entered the market on this belief, later disposed of their holdings when sterling did not show any appreciable fall. The tightness of supplies also aided the market in the early stages, but later due to profit-taking, there was a recession in values. Carry-over charges totalled 85 cents in sellers' favour. The official turnover was 2,530 taels and the unofficial 6,500 taels. Arrivals were 50,000 ounces. Forward contracts were done at $(U.S.)37.88, c.i.f., Macao.

Stocks and Shares

DOLLAR LOAN HOPES KEEP MARKET STEADY

LESS PESSIMISM ABOUT JESSOPS

Wednesday Evening.

THE undertone in the stock market has been steady during the past week and prices of selected shares have risen. The report that India will get a dollar loan in the near future has encouraged operators, and so also has good corporate news. Although it is hoped that there will be some relief for private enterprise in the coming Budget, the market takes a cautious view as the shortage of foreign exchange might, it is feared, force imports to be cut down much more heavily than before.

Indian Iron are steady on the belief that a portion of the company's expansion scheme is likely to be completed shortly. Jessop have attracted replacement buying on an assurance from the managing director, in his address at the annual general meeting of shareholders, that the business of the company is running at a very satisfactory level. The company has also taken steps to repair the damage sustained in the recent past.

Tea shares have improved substantially as the statistical position has become less bearish. It is believed that floods might affect output in Ceylon, and the overall supply from Ceylon and Indonesia might suffer. Dock labour troubles in Colombo have interfered with exports from that centre, and recent developments in Indonesia might disrupt normal supplies from there.

Miscellaneous shares have been selectively supported on good corporate news. Attention has centred on Dunlop, Metal Box and India Steamship.

Government securities are steady and enquiry is particularly keen for short-dated stocks.

Details of the week's trading follow.

* * * *

Prices of Government securities were maintained and there was good demand in medium and short-dated stocks, but business was difficult in the absence of sellers. Three percent Conversion Loan 1986 was steady at Rs. 71.05 and 3% Non-terminable Paper was quoted at Rs. 71.50. In the short-dated group, 3% 1958 was placed at Rs. 99.75 and 2¾% 1960 was quoted at Rs. 97.25 ex-voucher; 3½% 1962 realised Rs. 97.90 and 3½% 1961 was done at Rs. 99.63. Good enquiry lifted prices of medium-dated stocks. In this group, 2¾% 1962 was higher at Rs. 94.70 and 3% 1963-65 improved to Rs. 93.75; 3% 1964 was taken at Rs. 94 and 3½% 1964 was quoted at Rs. 97.75. Among long-dated stocks, 3% 1963-65 improved to Rs. 93.75 and 3¾% 1974 was quoted at Rs. 98.25; 3% 1970-75 at Rs. 85.70 showed little alteration. In spite of a fair enquiry in State loans, business was restricted by the shortage of scrip. Four percent 1967 West Bengal was done at Rs. 98.90 and 4% 1967 Bombay was transacted at Rs. 98.25. Four percent 1963 Madras came to hand at Rs. 98.25.

Miscellaneous preference shares met with good demand, while jutes were freely offered at cut rates. In the miscellaneous group, British India Corporation were taken at Rs. 101, and Cawnpore Sugar were bought at Rs. 109. Business passed in Calcutta Electric at Rs. 9.94 and Indian Iron were transacted at Rs. 95.50. Birds Investments were crossed at Rs. 54 and Borrea Coal came to hand at Rs. 90. Burn 7% were done at Rs. 99 and Dunlop Rubber were wanted at Rs. 112. Equitable Coal were transacted at Rs. 88. Among jutes, Empire declined to Rs. 87 and Gourepore were freely offered at Rs. 70 ex-dividend. Northbrook were lowered to Rs. 75 and Waverley were crossed at Rs. 30.

In the banking section, Punjab National were transacted at Rs. 50 and business was done in United Bank "D" at Rs. 4.31.

Sellers predominated in cotton mill shares, and Kesoram were transacted at Rs. 10.19. Cawnpore Textiles came to hand at Rs. 4.87.

Restricted business passed in coal shares, and fluctuations were narrow. Bengal changed hands at Rs. 231 and Central India were fractionally higher at Rs. 6.44. Burrakur were maintained at Rs. 22.32.

In the jute section, National were a strong feature on interested support and closed at Rs. 25.85, after touching the higher level of Rs. 26.50. Other jute shares were mostly on offer. New Central came to hand at Rs. 12 and Howrah were transacted at Rs. 13. Reliance were done at Rs. 5.62 and Anglo-India realised Rs. 136.

Among engineering shares, Indian Iron were a narrow market around Rs. 19.28. Jessop recovered to Rs. 21.37 and Richardson and Cruddas were steady at Rs. 8.50. Burn were maintained at Rs. 310 and Texmaco closed at Rs. 16.30, after fluctuating narrowly both ways.

In mining, Indian Copper recovered to Rs. 2.83 after Rs. 2.76. Burma Mines were taken at Rs. 1.68 and Orissa Mineral were steady at Rs. 19.69.

Cement shares showed little variation, and Rohtas were fractionally better at Rs. 15.69. Among electrics, Calcutta Electric were taken at Rs. 13.68.

Selected miscellaneous shares were supported and prices increased on balance. Dunlop Rubber improved to Rs. 21 and Metal Box were higher at Rs. 27.50. India Steamship gained at Rs. 12.06 and National Insulated Cable were bought at Rs. 23.62. British India Corporation declined to Rs. 3.97 on pressure, while Alkali and Chemical were steady at Rs. 13.25. Philips were transacted at Rs. 13.94 and National Carbon came to hand at Rs. 24.19.

Paper shares were steady, and Orient improved to Rs. 23.50 on influential support. Bengal changed hands at Rs. 80 and Titaghur were bought at Rs. 31.87.

Sugar shares were freely offered at lower rates. Ramnugger Cane were sold at Rs. 18.94 and S.K.G. were done at Rs. 8.87.

Tea shares gained all round. Among Assam gardens, Bishnauth rallied to Rs. 19.44 and Grob "A" were higher at Rs. 22.81. Brooke Bond recovered to Rs. 16 and Baghmari were wanted at Rs. 17.25. Brahmapootra fetched Rs. 3.19. In the Dooars group, Hantapara improved to Rs. 121 and Hasimara were quoted higher at Rs. 22.62. Other tea shares were steady and price changes were minor. Patrakola were transacted at Rs. 125.

* * * *

There is a profit of Rs. 2.56 lakhs for the RAJABHAT TEA COMPANY LTD. for the year ended December 1956, against a loss of Rs. 70,914. Bringing in Rs. 13,527. there is an available balance of Rs. 2,69,982. The dividend is the same at 12½ percent, including an interim of 5 percent. Buildings and machinery reserve is allocated Rs. 75,000. The carry-forward is Rs. 41,380. The crop increased from 9,135 maunds to 10,071 maunds and the average sale price rose from 29.49 to 34.29 annas a lb.

* * * *

The profit of the UNITED BREWERIES LTD. has increased by Rs 5,000 to Rs. 1.21 lakhs for the year ended last March. A dividend of Rs. 15 a share has been maintained, including an interim of Rs. 7-8 a share. There is a carry-forward of

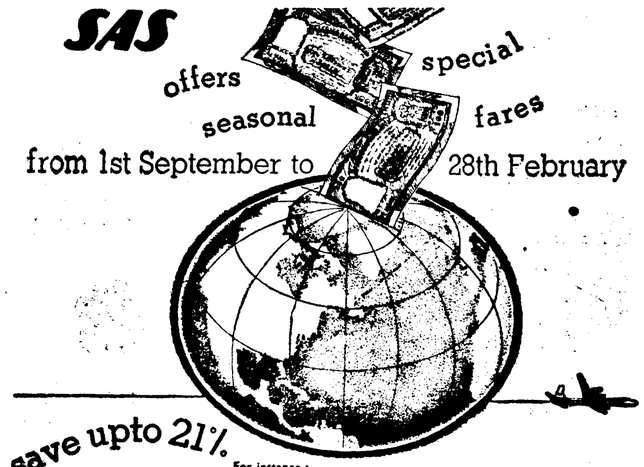
Rs. 6,022, against Rs. 4,679 brought in. The directors state that apart from the threat of total Prohibition, the prospects appear to be very satisfactory. They add that "there has been a further sharp increase in the demand for the company's beer due to a drastic reduction in the value of licences granted for the import of beer during the January-June 1957 licensing period and the complete suspension of the issue of import licences for beer since 1st July, 1957."

* * * *

The profit of the BAGHMARI TEA COMPANY has improved by Rs. 2.62 lakhs to Rs. 5.43 lakhs for the year ended December 1956. The dividend has been declared at 25 percent against 10 percent. Buildings and machinery reserve is allocated Rs. 2 lakhs, leaving a carry-forward of Rs. 42,752, compared with Rs. 36,051 brought in. The crop increased from 9,155 maunds to 10,453 maunds and the average sale price rose from 33.99 annas to 38.52 annas a lb. Estimates for 1957 provide for a crop of 10,060 maunds at a cost of Rs. 12.52 lakhs.

* * * *

The profit of the CENTRAL HYDRAULIC PRESS COMPANY has amounted to Rs. 1.37 lakhs for the year ended last June, against Rs. 66,695 in the previous year. Bringing in Rs. 26,289 and transferring Rs. 78,000 (Rs. 30,000) to taxation provision, there is a balance of Rs. 85,418. The dividend has been maintained at Rs. 6 a share but a bonus of Rs. 4 a share has also been paid, leaving a carry-forward of Rs. 35,418.



* * * *

The net profit of the SINGARENI COLLIERIES COMPANY has declined from Rs. 21.28 lakhs to Rs. 16.70 lakhs for the year ended December 1956. A dividend of 10 percent has been declared. The taxation provision has amounted to Rs. 6.75 lakhs. Dividend equalisation reserve is allocated Rs. 75,000, leaving a carry-forward of Rs. 20,557 against Rs. 7,310 brought in. Output increased from 1,526,570 tons to 1,681,577 tons. Despatches were higher at 1,566,529 tons (1,462,112 tons).

Bombay Market

STEADY TREND IN SHARES

HOPES OF BONUS ISSUE FROM TATA STEEL

Wednesday Evening.

THE Bombay stock market was steady during the past week and fluctuations were narrow. Prices rose at first on reports of an improvement in the cloth trade. Tata Steel were supported on rumours that the directors were considering celebrating the golden jubilee by issuing ordinary bonus shares in the proportion of one share for every five held. The prospect of an early American loan induced a good deal of short-covering, but bulls were inclined to proceed cautiously because of uncertainties concerning the forthcoming Budget in February.

Tata Steel were steady at Rs. 265.25 and Indian Iron closed at Rs. 19.22 on support from Calcutta interests. Alcock Ashdown were offered at Rs. 216.25, while Premier Construction attracted support at Rs. 158.50 from knowledgeable quarters. Tata Locomotive were steady at Rs. 137. Among automobile shares, Premier Automobile were idle at Rs. 87.10 and Hindustan Motor were freely offered at Rs. 5.76.

Earlier gains in the mill group were not maintained and prices closed lower on balance. Bombay Dyeing were quoted at Rs. 50.70 and Century came to hand at Rs. 396. Svadeshi were transacted at Rs. 169.25 and Simplex were taken at Rs. 159. There was some quiet investment buying in Kohinoor at Rs 264 and Central were freely offered at Rs. 83. India United Ordinary were quiet at Rs. 9.64 and Apollo were sold down to Rs. 2.02.

Miscellaneous shares showed a mixed trend. Cements were steady, and Associated Cement were taken at Rs. 149.25. Digvijay changed hands at Rs. 135.50. Steamship company shares were steady on reports of good working. Scindia Steam were bought at Rs. 17.16 and India Steamship were firm at Rs. 12.06 on outside support. Mining shares were subdued and sellers predominated because of the uncertain outlook for metals. Shivrajpur Syndicate were offered at Rs. 84.50. Sugar shares were steady on good corporate news. Belapur were bought at Rs. 232 and Phalton were fractionally higher at Rs. 148. Bombay Burmah reacted to Rs. 522.50 on selling pressure as the dividend fell below market expectations. National Rayon recovered to Rs. 215.50 on the prospect of an increase in the price of rayon. Tata Chemicals were quiet at Rs. 12.28.

Banking shares met with quiet investment support in the belief that the past year's results would show an improvement. Bank of Baroda were bought at Rs. 106 and Bank of India came to hand at Rs. 133.75. There was little interest in insurance shares and routine business was transacted. New India Assurance changed hands at Rs. 50.

Electricity supply shares were steady, and Ahmedabad Electric were transacted at Rs. 94.50. Tata Hydro changed hands at Rs. 113.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations, Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean Naye Paise.]

Rajabhat—Rs. 15/00—15/06—15/00—15/06.
Sapoi—Rs 23/75—25/50—23/75—25/50—(28).
Sungma—Rs 9/87—10/25—9/87—10/25—(10-14).
Teloijan—Rs. 24/00—24/00—24/00—24/00.
Tukvar—Rs. 8/62—8/62—8/62—8/62.

DEBENTURES

5½% Agarpara Jute—Rs. 90/50—90/50—90/50—90/50.
6 % Jaipur Udyog—Rs. 111/00—111/00—111/00—111/00.
5½% Orient Paper Mill—Rs 91/00—91/00—91/00—91/00.
4 % (1953-63) Calcutta Port Trust—Rs. 98/25—98/25—98/25—98/25.

SOUTH EASTERN RAILWAY
TENDER FOR CONDUCTING AUCTION

Tenders are invited for conducting sales by Public Auction of scrap, unserviceable and surplus Railway materials on the entire system of the South Eastern Railway for a period of two years from 1-4-1958. Tenders will be opened at 12-00 noon on 11-2-58.

Tender forms No. GM/SI/S/2/E (not transferable) are available from the Controller of Stores (Sales Section) at Rs. 5/- (not refundable) to be paid by Money Order to him direct in case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23 by local firms. Tender forms should accompany the receipt for earnest money of Rs. 2,000/- from the Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected.

from goodwill to good business

"Wherever we went, there was much goodwill for India. These countries are willing to do business with us"—this is the recurring theme in survey reports of Trade Delegations sent out by the Engineering Export Promotion Council. Every visit has been followed by profitable orders for Indian firms and the Council has taken on new functions to step up exports. The Council registers exporters and their brands and recommends import of raw materials and replenishment of pig iron and steel used up in exports. Our activities are constantly widening. Many have profited by them and, may be, we can put some good business your way, too.

WEST GERMAN INVESTMENT ABROAD

OLD-AGE PENSION SCHEME FOR SELF-EMPLOYED IN AUSTRIA

(FROM A CORRESPONDENT)

DURING the first three quarters of 1957, the participation of West German enterprises in foreign projects involved an investment of 127,5 million deutschemarks. Investments in foreign countries, reported since 1952, have now reached a total of approximately 1,660 million deutschemarks. Of this, 547 million deutschemarks and 505 million deutschemarks have been put in Europe and central or south America.

Increasing Retail Trade .

During the first nine months of last year, retail trade turnover increased by 8 percent in volume and 5 percent in value. In such sectors as clothing, underwear and shoes, and for retail trade sales of household utensils and furnishings, the increase was particularly marked.

Bigger Tourist Trade

The past year, it is estimated, had a record tourist traffic. The number of nights spent at hotels during the first six months of 1957 was 41.2 million, or 15 percent more than during the same period of the previous year. The number of nights spent by foreigners was higher by 10 percent at 3.3 million, while the foreign exchange expenditure of foreign visitors increased by 18 percent.

West German coal and steel production during the following months of 1957 were as follows (in thousands of tons):

	August	September	October
Hard coal	10,838	10,046	11,747
Pit coke	3,498	3,358	3,498
Soft coal	8,061	8,039	8,927
Pig iron	1,565	1,561	1,663
Crude steel	2,121	2,064	2,225
Rolled-steel finished products	1,408	1,384	1,530

Sales by Industry

The volume of orders booked by the industries in September again rose—the index went up by 13 percent to 175 (base 1951=100). Especially as a result of an upward trend in the textile industry, following the earlier pause, the orders for the consumer goods industry rose by as much as 36 percent, although they were less than the level of the previous September. In the capital goods industry, on the other hand, the order volume exceeded that for the previous month by about 4 percent, and by 7.5 percent over that of September 1956. In the case of foreign orders, the increase in September 1957 over the previous month was 10 percent, while the volume of home market orders increased by almost 14 percent.

Austrian Pension Scheme

The special committee appointed by the Austrian Government to prepare a draft Bill on the pension insurance of self-employed persons in the small industry and trade sector has completed its work. The Bill has been placed before Parliament. Under the proposed legislation, approximately 235,000 small industrialists and merchants will be included in the pension insurance scheme from July 1958. They will thereby acquire a claim to old-age pension benefits, at the age 65 for men and 60 for women. Furthermore, the Bill covers a pension programme for disabled small industrialists and merchants, and provides for assistance to surviving widows and orphans in case of death.

The implementation of the pension insurance scheme will be the responsibility of the Pension Insurance Board of Commerce. The contributions under the new Bill range, according to income, from 27.50 to 270 schillings a month. In the first year of operation of the new Board, the old-age pensions to be paid to persons on the benefit roll will progressively rise in amounts from 190 to 722 schillings a head, a month, to be increased later to 203 to 2,016 schillings a month by 1973. The rate of increase of benefits will be based on the duration of the occupational activity of individual small industrialists or merchants insured under the new system. The minimum period required for basic benefits will be 15 years, while 35 years are stipulated for the attainment of maximum benefits.

Date of Operation

Particular importance is to be attached to the provision of the Bill which grants persons formerly self-employed in the small industry and trade sector transitional pension benefits from July 1958, although they had not been making any contributions to old-age pension funds. The distribution of these transitional benefits, in amounts substantially lower than the full rates payable in future years, will be financed from funds to be provided immediately by the Federal Administration, which will allocate approximately 50 million schillings to the Pension Insurance Board of Commerce to cover its operations in the second half of 1958. For the coming years, the Federal contribution, it is proposed, will amount to 100 million schillings annually. Simultaneously with the initiation of an old-age pension programme for small industrialists and merchants, another Bill submitted to Parliament provides for the payment of a basic pension to self-employed farmers who, for reasons of old age, transfer their enterprises and property rights to the ownership of their children.

Swiss Industries Fair

The forty-second Swiss Industries Fair will be held, in Basle, from 12th to 22nd April. More than 2,300 exhibitors will take part in it, spread over 17 trade groups. There will be a particularly well-organised display, with an appeal to all the markets of the world, of goods produced by the machine and metallurgical industries, the machine tool industry and that specialising in tools for the metal-working industry, the electrical industry and the watch-making and textile industries. The interest shown abroad in the Swiss National Fair is clearly demonstrated by the fact that no fewer than 30,000 foreign visitors came to it in 1957. This year, the exhibition space will be increased still further, as a new machine hall is at present in the course of construction, which will bring the total exhibition space to some 1,400,000 square feet.

Switzerland and G.A.T.T.

Having drawn up the draft for a new Customs tariff, Switzerland has now declared that she is ready to negotiate on Customs matters with the members of G.A.T.T., in order to become affiliated provisionally to this organisation in the capacity of an associated country. So far, some 15 countries have stated their readiness to open Customs negotiations with Switzerland. The attitude adopted by the United States in this matter is not known as yet, and wil depend on the results of other negotiations.

Benelux Economic Union

The inter-parliamentary Benelux Council, consisting of members of the paliaments of the Netherlands, Belgium and Luxemburg, has discussed the draft treaty for the establishment of an economic union between the three countries. The Council has agreed to the main outlines of the treaty and accepted by 41 votes to two all the recommendations and resolutions which came up for discussion.

Third Petroleum Refinery in Holland

Early in 1958, Esso Nederland N.V., a subsidiary of the Standard Oil Company of New Jersey (the U.S.A.), will start the construction of a petroleum refinery at the third petroleum harbour in the Botlek area on the southern bank of the waterway connecting Rotterdam with the sea. The refinery, which is expected to be opened early in 1960, will have a capacity of 4½ million tons of crude oil a year. A considerable part of the production is intended for export. The oil to be processed will originate partly from Netherlands soil (700,000 tons, half the annual production of the Nederlandse Aardolie Maatschappij in which Standard Oil has a 50 percent interest).

Automation, for instance by means of electronic control and regulating apparatus, will be applied in all stages of processing. The construction of the refinery on a 172-hectare (430 acres) site will be entrusted as far as possible to Dutch industry, which will also supply most of the equipment. N. V. Petroleum Industries Maatschappij, a subsidiary of Esso Nederland N.V., owns four tankers with a total carrying capacity of 74,000 tons for the transport of oil. In the next few years, this fleet will be enlarged by three tankers totalling 117,000 tons, including one 47,000 tonner. They are to be built by Dutch shipyards.

The new refinery, the third in the Netherlands after that belonging to N.V. De Bataafsche Petroleum Maatschappij (Royal Dutch-Shell Group) and the Caltex Petroleum Maatschappij, requires an investment of 180 million florins, while 130 million florins will be required for the building of the new tankers to be added to the fleet before mid-1961. The oil refinery of the Caltex Petroleum Maatschappij, N.V., Pernis (near Rotterdam), will be expanded so as to have a processing capacity early in 1960 of about 5.5 million tons of petroleum a year, namely, more than twice its present capacity. Extensions comprise the construction of a second crude oil distillation plant and a second platformer for the manufacture of high O.N. and low-surphur gasoline (platinum gasoline). In addition, the storage capacities for crude oil and end-products will be increased, workshops and jetties will be enlarged, etcetera. The company will acquire a 100-hectare (250 acres) site in the Botlek area which will mainly be used for the storage of crude oil. Up to 1961, these expansions will involve a total investment of 120 million florins.

New Delhi

VISIT OF THE U. K. PRIME MINISTER

INDIA ASSURED OF HELP IN GETTING FINANCIAL AID

(FROM OUR NEW DELHI CORRESPONDENT)

THE Prime Minister of the United Kingdom, Mr. Harold Macmillan, accompanied by Lady Dorothy Macmillan, last week arrived in New Delhi on a four-day visit to India. At the airport, he was received by Mr. Nehru, Central Cabinet Ministers, members of the diplomatic corps, members of Parliament, and high-ranking officials. He inspected a guard of honour there. Mr. Macmillan stayed with the Prime Minister of India. In the course of his stay, he visited Rajghat to lay a wreath at Mahatma Gandhi's *samadhi*, called on the Vice-President of India and visited a community development project. Mr. Nehru gave a banquet in Mr. Macmillan's honour. Among his other engagements were a call on the President, with whom he lunched, the laying of the foundation stone of the new United Kingdom High Commission building at Chanakyapuri, and attending a civic reception in New Delhi. A dinner party was given by the United Kingdom High Commissioner. Mr. Macmillan addressed a Press conference at which he declared complete British neutrality in the Kashmir issue and stressed the importance of Indo-British economic relations. These points were reinforced in his broadcast talk over the air. A reception was given in his honour by the Vice-President of India. Mr. Macmillan left for Karachi on 12th January, to continue his tour of Commonwealth countries.

Those accompanying the British Prime Minister include Sir Norman Brook, Secretary of the Cabinet; Mr. J. M. C. James, Assistant Under-Secretary of State, Commonwealth Relations Office; Mr. S. H. Evans, Public Relations Adviser to the Prime Minister; and Mr. N. F. Cairncross and Mr. J. E. R. Wyndham, his Private Secretaries.

Talks with Mr. Krishnamachari

The British Prime Minister and Mr. T. T. Krishnamachari had prolonged talks on economic problems. They covered a variety of subjects, including the sterling balances, the stability of the pound, India's import policy and export drive, Communism and the tea trade. According to informed sources, these talks were a continuation of the discussions they had earlier in London. They revealed a large area of agreement. It became clear that neither Britain nor India was out to take advantage of the other's difficulties. Mr. Macmillan was fully apprised of India's financial difficulties. He was told that the problem could not be overcome during the current plan period, although the situation might ease considerably after 1958-59. The system of deferred payments and its operations, including the phasing of repayments, were fully explained. India would continue to import capital goods and industrial raw materials on a large scale, but she would have to maintain a strict vigilance over the import of consumer goods. To pay for the growing volume of her imports, India, it was told, had planned an export drive. As for Communism, the danger spot was not so much Kerala as West Bengal, where the growing influx of refugees from East Pakistan was always a latent threat to security. India fully appreciated the value of the British tea market, but Mr. Macmillan's attention was drawn to the growing imports of tea in Britain from East Africa. So far as sterling was concerned, Britain was assured of India's support in maintaining its stability. Mr. Macmillan, on his part, said that he would continue to use his good offices in securing financial assistance for India.

Foundry-Forge Plant

The foundry and forge plant, referred to in these columns last week, represents the metallurgical base for the machine-building industry, in as much as it will produce the basic material, namely, castings and forgings for the production of different capital goods. The foundry and forge plant will basically include the following production shops: grey iron foundry for the production of grey iron castings up to 100 tons of piece weight; steel foundry for the production of steel casting up to 125 tons of piece weight; non-ferrous metal foundry for the production of non-ferrous castings; forge shop for the production of forgings up to 100 tons of piece weight; rough machining shop for the rough machining mainly of steel castings and forgings up to 125 tons of piece weight. The plant will include a pattern shop, a joiner's shop and power supply units, namely, a compressed air unit, an oxygen unit and an auxiliary diesel power set, and all up-to-date welfare, transport and management facilities. In order to utilise the established facilities properly, and to make the plant an economical unit, a department for the production of dyes and a special bay for the production of finished rolls for the roll mills will form part of the rough machining shop. In its final shape, the plant will have yearly output capacities corresponding to the production of 80,000 tons of final products in the heavy machine-building plant.

The plant will be installed in three successive stages in balanced proportion to the progressive establishment of a heavy machine-building plant. The first two stages will be carried out closely one after another, while the third stage will be accomplished after the production schedules of the second stage have been successfully completed. The first and second stages will meet the requirements of castings and forgings of heavy machinery in the first stage of the heavy machine-building plant, namely, 45,000 tons of final products.

The annual production capacities in the second stage of the foundry and forge plant will be as follows:

Grey iron foundry ...	... 38,300 tons
Steel foundry ...	... 66,000 tons
Forge shop ...	... 27,700 tons
Non-ferrous metal foundry	... 700 tons
Rough machining shop	... 39,185 tons
Finished rolls ...	... 13,000 tons

The plant will be established together with the heavy machine-building plant in the neighbourhood of Ranchi. Ranchi will thus become an important industrial centre. The plant is being installed in collaboration with the Czechoslovakian Government, which will supply equipment on deferred payment terms, the payment under which will commence from 1st April, 1961.

Analysis of Income Tax Returns

Some interesting details are available from the analysis, group-wise, of income tax returns for the year 1956-57. The total number of assessments completed by the Income Tax Department during that year were 923,286. The distribution of the total assessed income and tax among the different categories of assessees is given below:

1956-57

	No. of assessees	Income assessed (in crores of rupees)	Tax (in crores of rupees)
Individuals	499,621	551.8	87.6
Hindu undivided families	39,492	63.4	11.0
Unregistered firms and association of persons	23,458	32.7	1.6
Registered firms	6,551	51.9	1.6
Companies	10,780	235.9	108.5
	5,79,902	935.7	216.6

It will be seen that some 86 percent of the assessees are individuals. However, they account for only 59 percent of the total income and the tax demanded from them works out to 40 percent of the total. On the other hand, companies, which are only 10,780 in number out of a total of 579,902 assessees, account for 25 percent of the total income and as much as 50 percent of the total tax demand. Hindu undivided families and un-registered firms meet a relatively smaller proportion of the tax demand. Registered firms feature in this analysis only for 1956-57, because only from that year have registered firms with an income of Rs. 40,000 and more had to pay tax as such.

Sources of Income

Business and Professions: The most important source of income is "Business and Professions" which accounts for a total income of Rs. 575 crores, and Rs. 174 crores of tax, compared with Rs. 452 crores and Rs 138 crores, respectively, for the year 1955-56. Of the various business groups, the assessees in the class "Commerce, Transport and Communications" account for the largest income, at Rs. 245 crores, the tax contribution being Rs. 47 crores. The assessees engaged in "Finance" (banking, insurance, money-lending, etcetera) come next, their income and tax being Rs. 80 crores and Rs. 28 crores, respectively. Those engaged in "Processing and Manufacturing Textile and Leather and products thereof" come thereafter, the income and tax figures being Rs. 55 crores and Rs. 27 crores, respectively.

Salaries: The total income from "Salary" comes to Rs. 207.3 crores, the tax assessed being Rs. 22.7 crores, compared with Rs. 206.5 crores and Rs. 22.2 crores, respectively, in the preceding year. Government servants account for Rs. 62 crores of the income assessed, the tax on which was Rs. 4.2 crores. The number of salary earners assessed to tax increased from 235,291 in 1955-56 to 244,037 in 1956-57.

Dividends. Property and Interest on Securities: Income from dividends assessed to tax was Rs. 55 crores, the tax thereon being Rs. 24.5 crores. Of the total dividend income, companies account for Rs. 20 crores (36 percent) and individuals for Rs. 31 crores (50 percent). Income from dividends earned by assessees with an income of over Rs. 1 lakh is Rs. 30 crores or 55 percent of the total dividend-income assessed and account for Rs. 18.4 crores (73 percent) of the tax. Assessees having income from property number 156,982, the income earned and the tax on it being Rs. 34 crores and Rs. 7 crores, respectively. Individuals (122,643) have the maximum income from property, it being assessed at Rs. 24 crores (71 percent), the tax coming to Rs. 4.3 crores (60 percent). The total income assessed from securities is Rs. 14 crores, yielding a tax of Rs. 6.4 crores. Companies (1,881) have the major part of this income assessed from securities, namely, Rs. 9 crores (64 percent), the tax involved being Rs. 5.2 crores (81 percent). Income from dividends, interest on securities and property, as also the tax on it, have increased compared with the preceding year, the increase in the case of dividends being more marked than in others.

Grades of Income

The maximum number of assessees is in the income ranges below Rs. 20,000—the super-tax limit. While there are 510,173 assessees (88 percent) in these ranges, the tax yield from them is only Rs. 20.9 crores (10 percent). Assessees with an income below Rs. 10,000 are 390,571, but their contribution is only Rs. 7.8 crores (4 percent). Those with an income between Rs. 20,000 and Rs. 50,000 and Rs. 50,000 and Rs. 1 lakh account for a tax of Rs. 29.8 crores (14 percent) and of Rs. 24.9 crores (12 percent), respectively. There are only 6,727 assessees with an income of over Rs. 1 lakh and the tax demanded from them is Rs. 141 crores (65.1 percent), compared with 4,757 assessees and Rs. 116.7 crores (64.2 percent) in the preceding year. These 6,272 assessees consist of 2,182 individuals, 2,439 companies, 271 Hindu undivided families, 257 un-registered firms and 1,123 registered firms. The share of tax on individuals and companies in this group is Rs. 30.9 crores and Rs. 100.9 crores, respectively. Before tax, there are 2,182 individual assessees with an income of over Rs. 1 lakh and having an aggregate income of Rs. 47.6 crores, but after the payment of the tax, this number is reduced to 242 with an income of Rs. 5.3 crores.

Assessees with incomes of over Rs. 5 lakhs (1,017) account for a total tax of Rs. 95.1 crores (44 percent), the share of the companies (847) alone being Rs. 83.7 crores. Individual assessees having incomes of over Rs. 5 lakhs number 113, with an income of Rs. 11.7 crores before tax, but after it, the number declines to nine, the amount of the retained income being Rs. 1.2 crores. Individuals in the income ranges below Rs. 20,000 pay 5 percent of their income as tax, while those between Rs. 20,000 to Rs. 1 lakh pay 25 percent. Individual assessees with over Rs. 1 lakh of income pay 65 percent of it as tax.

Refunds and Rebates

The principal items on which refunds and rebates are allowed pertain to double taxation relief, losses, income accruing or arising in Pakistan, undistributed profits, insurance premia, donations to charities, and contributions to provident funds. The total amount of loss set off in assessments is Rs. 9.9 crores as a result of which the taxation liability is reduced by Rs. 4.8 crores, compared with Rs. 9.4 crores of losses and Rs. 4.4 crores of tax reduction in 1955-56. Double income tax relief resulted in a reduction of tax to the tune of Rs. 1.9 crores, compared with Rs. 1.6 crores in the preceding year. In addition, 433 assessees got tax relief amounting to Rs. 70 lakhs on account of agreements for the avoidance of double taxation on an income of Rs. 2 crores accruing or arising in Pakistan, compared with 646 assessees, Rs. 1.3 crores of income and Rs. 60 lakhs of tax relief in 1955-56. As for undistributed profits, 1,979 companies got an income tax rebate of Rs. 1.1 crores. Total contributions to provident funds and superannuation funds entitled to a rebate under the Act came to Rs. 9.8 crores, the rebate working out to Rs. 86 lakhs. In 1955-56, the relevant figures were Rs. 8.9 crores and Rs. 82 lakhs, respectively. A rebate of Rs. 2.4 crores is allowed on Rs. 22.7 crores, being the amount of insurance premia entitled to relief under Section 15. In 1955-56, the relevant figures were Rs. 1.9 crores and Rs. 19.5 crores, respectively. Some 3,108 persons earned tax rebate to the tune of Rs. 20 lakhs on account of contributions to charitable institutions. The total amount of contributions eligible for rebate under Section 15-B come to Rs. 80 lakhs.

Government of India Missions

Three top-ranking officials are about to go abroad. The Principal Secretary to the Central Ministry of Finance, Mr. H. M. Patel, is going to Bonn again to finalise the deferred payment terms for the Rourkela steel plant, now being erected in collaboration with Messrs Krupps-Demag. The West German Government has agreed in principle to provide finance for the project, the repayment for which will commence from 1st April, 1961. The Secretary to the Economic Affairs Ministry, Mr. B. K. Nehru, is leaving for Washington to follow up the efforts made by the Finance Minister for dollar assistance. The Joint Secretary to the Ministry of Commerce, Mr. K. B. Lall, is leaving for Tokyo primarily to negotiate an Indo-Japanese trade treaty and a settlement on the question relating to wartime enemy property in India and Japan. He will also negotiate terms for Japanese collaboration in India's industrial expansion for which a yen credit has been offered. Mr. Nagindra Singh, Joint Secretary, Central Ministry of Transport, and Mr. M. Hayat, Member, Central Water and Power Commission, are accompanying Mr. K. B. Lall to Japan. Mr. Nagindra Singh is in charge of shipping and Mr. Hayat is in charge of electric power. It is probable that the Lall mission to Japan will utilise the yen credit for the purchase of ships and for securing electric generation equipment. On the export side, it is expected to make an effort for Japan buying more of Indian iron ore, salt and cotton. After staying for about a week in Japan, Mr. Lall will proceed on his export promotion mission to the Philippines,

Honolulu, San Francisco, Los Angeles, Washington, New York, London and Beirut.

Priority for Rihand Project

The Rihand project in Uttar Pradesh has now been included in the core of the second five year plan. The Koyna project in Bombay and the Chambal project in Madhya Pradesh have also been given high priorities because of the likelihood of getting foreign assistance for them. The Koyna project, it is expected, will get finance from the World Bank. The Kosi project in Bihar, the Nagarjunsagar or Nandikonda project in Andhra and the Sheravath hydro-electric project in south India have, however, been excluded from the core of the plan.

Irrigation Facilities Unutilised

The first five year plan placed the additional area to be irrigated by major and medium irrigation projects at 8.5 million acres. From the figures furnished by the States in connection with the preparation of the second plan, this total was calculated to be about 6.3 million acres or 2.2 million acres less than the first plan target. The progress reports submitted to the Government by the Planning Commission have calculated this area at about 4 million acres or 2.3 million less than the acreage claimed by the States, although the irrigation potential availability for utilisation in March 1956 was over 7.5 million acres. In other words, irrigation facilities for over 3.5 million acres were not utilised by the States during the first plan period. As for the second five year plan, out of the target of 12 million acres, 1.88 million acres, it had been proposed, would be irrigated during 1956-57, against which the actual additional acreage brought under irrigation was 700,000. It is curious that the Central Government should have been making grants for the grow more food campaign and for the import of foodgrains without making proper enquiries about the failure of the State Governments to make full use of the irrigation facilities provided for them. As for food imports, the figure of *per capita* consumption which should be the basis for assessing the total requirements of the country, is not yet available. In some cases, States have demanded extra food supplies without doing their best to procure all available local supplies. Take the case of Madhya Pradesh, for example. It asked for more food from the Centre. But the latter, instead of complying with the request, directed the State to impose a cordon, thereby preventing the movement of foodgrains to outside areas. This was done, with the result that food prices have come down and the State officials no longer say that Madhya Pradesh is deficit in food. The foreign exchange crisis was responsible for this. The tussle between the Ministry of Finance and the Ministry of Agriculture and Food for allocation of foreign exchange to import fertilisers and foodgrains has led to a probe into the much-advertised achievements of the grow more food campaign. The gross neglect of irrigation facilities created at a considerable cost was one discovery of the enquiry.

Aid from Canada

Information has been received in New Delhi that the Canadian Minister for Trade and Commerce last week placed a proposal before the Canadian Parliament for the allocation of $30 million to $35 million aid for all Colombo Plan countries. Of this, India's purchase of 400,000 tons of Canadian wheat would account for $25 million. In addition, the Canadian Minister has announced the decision to increase Colombo Plan allotments by $15 million to enable free wheat shipments. Of this, India, it is said, can expect a fair share.

Major Contract for British Firm

A British firm, English Electric Company, has been selected to supply electrical equipment for the Nangal fertiliser and heavy water project. The equipment, estimated to cost about Rs. 2 crores, will include transformers and rectifiers for an electric sub-station for the large electricity requirements of the project. The power requirements which will be of the order of 160,000 kW, are to be supplied by the Bhakra dam project. Satisfactory deferred payment terms, it is understood, have been agreed to by the suppliers. An immediate first payment of 10 percent of the value as well as a second payment of 10 percent of shipment will both be made in rupees, thus avoiding a strain on foreign exchange resources. The balance will be paid in sterling over a period of two to three years after the plant goes into production some time in April 1960. This is the third major order to be placed by the project authorities. The first contract, for electrolysers valued at about Rs. 3.5 crores, was placed in March 1957 with an Italian firm. This was followed by the second and the biggest contract so far, that for the fertiliser group of plants, valued at about Rs. 7.5 crores. This was awarded to a French firm. Both these contracts have been placed on deferred payment terms.

Indo-W. German Agreement on Double Taxation

In order to attract foreign investment to India, the Government has accepted the principle of avoiding double taxation. India's stand has been that the country where profits are earned should keep the taxes levied on them. It follows that one of the two Governments should give relief to the taxpayer. The Indo-West German understanding reached last week generally follows this principle. Some outstanding points which still need to be settled include that of the world income which at present is taken into account in determining the rate of taxation. An Indian delegation, it is expected, will visit West Germany shortly to finalise the agreement.

London

SIGNIFICANCE OF CHANGES IN THE U.K. TREASURY

CONFLICT OVER A POINT OF PRINCIPLE

(FROM OUR LONDON CORRESPONDENT)

THE resignation of Mr. Peter Thorneycroft and his two junior Ministers at the Treasury, in the words of Mr. Butler, "forms one more page in the difficult history of the British economy." The full effects of the move will not be obvious until Parliament reassembles later this month and all the facts become available. Mr. Thorneycroft, Mr. Birch and Mr. Enoch Powell felt that it was a matter of principle that the Government should stick to its declared intention of maintaining Government expenditure in the coming year at a total no higher than that actually spent this year, in spite of the fact that rising prices and other uncontrollable factors had raised departmental estimates by as much as £250 million. In the end the figure was reduced to a rise of no more than £50 million, or 1 percent of total expenditure, and to cut it further would, the former Chancellor of the Exchequer's Cabinet colleagues felt, necessitate cutting the welfare services or family allowances with disastrous results on the cost of living, and other consequences which might well jeopardise the limited success which had already been achieved in the fight against inflation and in restoring confidence in the pound. Mr. Thorneycroft disagreed, and resigned, and his two lieutenants followed suit. Their right to do so and their courage in exercising it are both unquestioned. Whether they were justified in implying that the Government is weakening in its fight against inflation is at least a moot point which time alone can prove or disprove.

Changes in the Government

It is unfortunate that the Prime Minister should have been faced with an internal crisis of this nature on the eve of his departure for the Commonwealth tour, but it says much for his equanimity and his confidence in the support of his other colleagues and his Party following that he did not postpone the trip. Instead, he quickly filled the essential gaps with Mr. Heathcoat Amory replacing Mr. Thorneycroft as Chancellor (the office, it now appears, he was originally to have been offered in the Macmillan Cabinet but he asked to be allowed to stay on as Minister of Agriculture and Fisheries), Mr. John Hare moving from the War Ministry to replace Mr. Amory, Mr. Christopher Soames replacing Mr. Hare and relinquishing his post as Financial Secretary to the Admiralty, Mr. J. E. S. Simon, G.C., an Under-Secretary in the Home Office, replacing Mr. Powell as Financial Secretary to the Treasury. Mr. Nigel Birch, the Economic Secretary to the Treasury is not being replaced, but Mr. Reginald Maudling, the Paymaster General, will in future assist the Chancellor over the whole range of economic matters in addition to his other duties, and is fast becoming the "Pooh Bah" of the present Government. Successors to Mr. Soames and Mr. Simon will be appointed by the Prime Minister while on his tour.

The new Chancellor lost no time in making it clear that the change in the incumbency of that office meant no change in the economic or financial policy of the Government, and he has since reinforced this public announcement by personal conversations with the representatives of the business community in all spheres of industry and trade. His Ministerial colleagues have rallied round with a series of speeches backing this argument, and although it is apparent that some Conservative back-benchers support Mr. Thorneycroft and subscribe to his views and will, therefore, call for adequate reassurances from Mr. Amory when Parliament reassembles, it is unlikely to develop into quite the split the Opposition would like to see in view of the fact that both Mr. Thorneycroft and Mr. Birch have emphasised that there is no question of a revolt and that they wish the Government every success.

Effect of the Resignation

So far as the City is concerned, the immediate effect of the resignation was to induce a nervousness which pervaded practically all markets. Mr. Thorneycroft was popular in business circles; he was regarded as epitomising the Government's anti-inflationary toughness of policy, so that his withdrawal, and the manner in which it came about, naturally gave rise to considerable uncertainty. A sharp drop in sterling on the exchange market was followed by a decline in gilt-edged prices. Within two or three days, however, these setbacks had been recovered, and but for the fact that the future of the Government was still a matter for discussion, it might be thought that the "crisis" had been forgotten. Much will depend on the reactions of the Conservative Party when Parliament reassembles. That will settle the short-term aspect. For the long-term aspect, it may be necessary to await Mr. Amory's first Budget as an indication of the Government's intentions. The real danger to the economy is not so much a matter of immediacy as of the ability of sterling to withstand the inevitable pressures which will develop later in the year and against which it has been desirable that the gold and dollar reserves should be reinforced as much as possible now when conditions are reasonably good.

Rise in Gold and Dollar Reserves

The December return, showed that the sterling area's gold and dollar reserves increased by $88 million, against $92 million in November and $243 million in October, to stand at the end of the year at $2,273 million, compared with $2,133 million at the end of December 1956. Since the September crisis and the raising of Bank rate, the reserves have regained $423 million of the $531 million which were lost in the preceding three months. By themselves the December figures are not unsatisfactory. They include special payments of $15.5 million, about half of which was the usual quarterly payment on the Canadian loan. The actual residual surplus for the month was $109 million, which the Treasury felt that the trend towards recovery had continued at about the same rate as in November. On the other hand, it must be remembered that this has been made possible by the postponement of the interest and capital payments of $175 million on the two main north American postwar loans, that Britain had a provisional deficit with the E.P.U. of £6.1 million (compared with only £1 million in November) believed to be due to temporary withdrawal of French and other foreign funds for year-end "window dressing" of balance-sheets, and that she has only another six months' respite before the seasonal pressure starts again next July.

News of the Budget

The new Chancellor will have his hands full in preparing for his Budget, which is expected to be the first business before Parliament when it reassembles after the Easter recess on 15th April. The departmental estimates, drawn up in accordance with a circular issued under the then Chancellor's authority last October, reached the Treasury in December and have been under searching scrutiny since then. It is evident that a great deal of pruning has already been accomplished, and no doubt Mr. Amory will be anxious to see whether he can do any more before the "vote on account" to cover the first few months of the financial year makes its appearance in February. It seems doubtful whether the annual "statement on defence" can be published around the same time in view of the many aspects of defence policy remaining to be settled as a result of recent discussions at the N.A.T.O. meeting, so an estimate of total Government spending may not be possible then, but some idea concerning the trends ought to be available from the estimates of the civil departments which start making their appearance early in March.

The Budget proposals are still anyone's guess, but it is understood that one clause in the Finance Bill will cover proposals by the Inland Revenue to make fully effective existing penalties for attempting to avoid paying death duty, as a step towards which new forms of affidavit for the detailing of assets have recently been introduced. The Association of British Chambers of Commerce has got in early with its suggestions to the Chancellor, including a reduction in income tax by eliminating the additional pence now featuring in the standard rate slabs and a "substantial reduction" in the tax on petrol and diesel oil. It also suggests that purchase tax be removed from goods used in industry; depreciation allowance adjusted to the decline in money value to stimulate investment in new machinery; viability of "family business" improved by valuation for death duties on the market price of shares; and a flat rate of profits tax.

Savings Disappointment

National savings last year, which looked like setting up new records on the basis of the showing of the first six months, did not ultimately come up to expectations. They totalled £1,665 million, but withdrawals from past savings totalled £1,589 million, giving an excess of saving of only £76 million. The main cause for the setback was the enormous drain which occurred in December—the biggest ever experienced. The total remaining invested at the end of 1957 was £6,240 million. Premium bond sales kept up well, or the year's figures might have been even worse.

Last quarter's provisional figures for the U.K. Board of Trade approvals on industrial building schemes do not in themselves suggest that the intensified credit squeeze has put any brake on new enterprise. While the 13.9 million square feet of building covered is about 23 percent below the previous quarter's, the fall is no larger, proportionately, than that between the last two quarters of 1956, when the drop was from 20 million to 15.4 million square feet. For the whole of 1957, the area fell by 10 percent on 1956 after 1956's drop of 22 percent from 1955.

Nor, for that matter, has the credit squeeze had much effect on hire-purchase sales of motor-vehicles. In December, contracts numbered 57,555, compared with 76,893 in the previous month, but with only 30,315 in December 1956, when petrol rationing was introduced. For the full year, hire-purchase sales of motor vehicles exceeded one million for the first time. At 1,088,506, the total was nearly 60 percent higher than that for 1956.

Brevities

Sir William Steward, M.P., chairman of the House of Commons Kitchen Committee, will spend about a fortnight in India and Pakistan studying new curry dishes which he hopes to introduce into England.

Lungla (Sylhet) Tea has made a bid for the ordinary and preference capital of Looksan Tea. The offer is on the basis of a straight exchange of ordinary shares and the exchange of five Lungia 6 percent preference for six 5 percent preference shares in Looksan. The boards believe that the grouping of the two companies will be of advantage.

During recent months, there have been vague but persistent rumours of a take-over bid for the shares of the Central Provinces Manganese Ore Company. The directors now state that no negotiations are taking place and that any suggestion that the board is seeking a change of ownership of the company is entirely without foundation.

Bombay

JAPANESE TEAM STUDYING IRON ORE MINES

UNSOLD CLOTH STOCKS REDUCED

(FROM A BOMBAY CORRESPONDENT)

THE 40-man Japanese investigating mission which arrived in India early last month and is now engaged in assessing the various phases of development of India's iron mines, including related projects such as the construction of harbour facilities and railroads, is nearing the end of its labours. It will assemble in Calcutta early next month where the members will discuss their conclusions and work out probable arrangements for the purchase of iron ore with the Indian Government and private sector officials, it is learned. Japan's steel industry needs to import 3 million tons of iron ore a year and the industrialists, it is reported, are eager to enter into arrangements with India which will ensure them a dependable source of supply.

Imports of various kinds of yarn into the Bombay port during 1957 were lower than in 1956. Art silk yarn, which forms the bulk of these imports, dropped to 36 million lbs, compared with 43.9 million lbs in 1956. Imports are expected to fall still further during the current year because of the tighter import restrictions. Yarn import figures for 1957 and 1956 are given below :

(In lakhs of lbs)

Yarn	1957	1956
Art silk	360.00	439.94
Staple fibre	2.90	5.67
Spun silk	0.32	0.32
Woollen	22.77	*111.81
Cotton	14.98	15.80

*This includes woollen tops.

Better Outlook for Staple Fibre Industry

The staple fibre industry, which had been in the doldrums during the past few months due to a surfeit of imported stocks, is beginning to look up. Production, which had been severely cut, is to be considerably stepped up. Imports of staple fibre into Bombay in 1957 fell to 8,367,000 lbs, from 24.9 million lbs in 1956. Raw silk imports last year amounted to some 100,000 lbs, compared with 45,500 lbs in 1956.

Disappointment over Export Quotas

Cotton trade circles have expressed disappointment over the recommendations of the Cotton Advisory Board for an additional export quota of 50,000 bales of Bengal Deshi and 25,000 bales of old cotton of three-quarter inch staple and below. No recommendation for a reduction in the export duty has been made while the absence of any reference to the export of three-quarter inch staple from the current crop has caused uneasiness. Trade circles feel that the Board did not decide on a quota along these lines because of the tight supply position, with consumption expected to touch 4.7 million bales out of a crop of 4.9 million bales in the current season.

Shipping Co-ordinating Committee Welcomed

Shipping circles hail the Indian Government's decision to appoint a Co-ordinating Committee on shipping on a permanent basis as a step in the right direction. Indian shipowners have long wanted to expand their fleet, but had been chary of doing so in the absence of any guarantee that their ships would be used to carry cargo on overseas routes. Indian ships often lie idle, for want of cargoes, it is pointed out, and more than 90 percent of the country's overseas trade continues to be carried annually by foreign-owned ships. The Government is today the biggest user of ships and Indian shipowners consider it unfair that they should be denied a fair share. The reason for it is the independent manner in which each Ministry makes its requisitions of shipping space, these circles say.

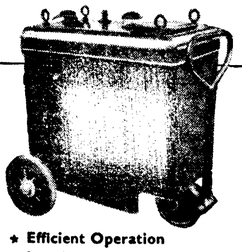
Downward Trend in Oilseeds

The uncertain export policy concerning oils and oilcakes last week made trading in the oilseeds market hazardous as well as speculative. The trend was downward, with prices of some oils touching new lows. Export business in castor oil was at a standstill. Due to increasing competition from Brazil, which has virtually priced Indian oil out of the world markets, the prospects for Indian oil do not look bright now. Also, the expectation of a big relief in export duty has kept potential buyers like the U.K. on the sidelines. There were suggestions that the authorities would soon release export quotas for groundnut oil and oilcake, expeller variety, and reduce the export duty on castor oil. However, in the absence of any such move, castor oil slumped. Bulls liquidated nervously. Groundnut also reacted, following heavy arrivals and bear selling.

New Delhi's announcement extending the shipment period of the unutilised export quota of linseed cake up to March 1958, was unexpected, but shippers lost no time in putting through fresh business with the United Kingdom and some European countries at around £27 10s a ton. Linseed futures steadied earlier but subsequently declined on selling. The market reacted sharply over the increase from 100 shillings to 130 shillings a ton in freight rates for oilcakes from 1st January. There was a substantial fall in foreign business as a result.

Cotton Market Improves

The cotton market last week took a turn for the better. The downward trend at last came to a halt, and a sharp rise in prices was recorded. The changed sentiment was attributed to excellent advices on the cloth front. It is understood that mills were able to dispose of more than 75,000 bales of cloth during the week. Further improvements are expected, and it is hoped that in the coming weeks, the burden of unsold stocks, both with mills and dealers, will be considerably reduced, due mainly to the relief in excise duty on medium cloth and the compounding of sales tax on unsold stocks.



The spot market in Sewri was in a state of ferment. Mill activity seemed to have revived, raising the prices of all varieties by about 10 points. With the increasing demand, prices of Khandesh and Vijay particularly, shot up by 15 to 50 points. Enquiries broadened considerably in Berar and Khandesh crops. Vijay was in the limelight and this was attributed to short covering by Bombay merchants at upcountry centres. Vijay delivery prices shot up to Rs. 678, or 33 points higher than the last clearing rate. In the export section, the quotation of Bengal and of other exportable varieties hardened, following the rumours of an export quota and a reduction in export duty. In the foreign section, further changes were reported in the matter of issuing mill quotas for the Sudan cotton out of the recent allocation of 30,000 bales.

GLAXO LABORATORIES CHAIRMAN VISITING INDIA

Sir Harry Jephcott, chairman of Glaxo Laboratories Ltd., and Mr. H. W. Palmer, managing director, have been visiting the Indian company's headquarters in Bombay. Sir Harry has been chairman of Glaxo Laboratories since 1945, and was managing director until his retirement from that position early in 1956. He was appointed chairman of the Council for Scientific and Industrial Research in 1956. Other public appointments held include the chairmanship of the Association of British Chemical Manufacturers (1947-48) and the presidentship of the Royal Institute of Chemistry (1953-55). During the last war, Sir Harry was Manufactured Foods Adviser to the British Ministry of Food, and visited the U.S.A. on behalf of the Ministry of Supply to report on penicillin production. He has been chairman of the Council of the School of Pharmacy at London University since 1948 and is a governor of the London School of Economics. Sir Harry expects to be in India for about two weeks.

QUASI-ARC MEANS GOOD WELDING

Born of nearly fifty years experience and research in all fields of arc welding, manufactured to the highest engineering standards, Quasi-Arc electric arc welding equipment and accessories meet the demand for heavy duty and fast production.

* Efficient Operation
* Low Maintenance Costs
* Long Life
* Wide Range of Sets

The first welding name in the world

Quasi-Arc

THE INDIAN OXYGEN & ACETYLENE CO. PRIVATE LTD.

STATE BANK OF INDIA'S RUPEE TRAVELLERS CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA 5-58-15

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

PROSPECTS OF BUSINESS RECESSION

(FROM A SPECIAL CORRESPONDENT)

IT was forecast some time ago by those who give special attention to such matters that a business recession in the United Kingdom was near at hand. Certainly, various factors were then to be seen which pointed that way, including a lower volume of orders for several important industries. In the meanwhile, however, when the Christmas season arrived, purchases the country over reached a record high figure. It is true that heavy industries were scarcely affected by this demonstration of goodwill. Nevertheless, the spending spree extended over a greater range than usual. A business setback has possibly taken place in some directions, in spite of these manifestations of exuberance. At any rate, it is a fact that the pronouncements made by several leading companies since Christmas had been rather pessimistic as for prospects. The enormous rush to subscribe to the issue of British Petroleum debentures seemed to refute those who contended that an acute shortage of capital existed. But it should be borne in mind that the relative proportion of those who intended to keep the debentures as an investment and those who intended to enjoy an early profit is unknown. Probably, it would be wise to suspend judgment for a month or two on whether those who look for a business recession are simply pessimists.

U.K. Exports of Cotton Goods

The Manchester Cotton Board, in its latest statement to members of the British cotton industry, observes that the world output of cotton textiles continued to run at or near a record level during 1957. It emphasies that British exports of cotton goods, after a relatively stable period, are declining once more, while imports are running well above the previous year's level. Up to the third quarter of 1957, merchants showed no tendency to reduce their stocks, but the raising of Bank rate to 7 percent has subsequently caused some traders to reduce their commitments. "On the other hand, prices of raw cotton are more likely to increase than to decrease, and this should discourage too severe a reduction in commitments." The whole position has been balanced on the right side for many merchants and manufacturers, by the fact that the home market demand for cotton textiles has been maintained at a high level. Where the industry would have been with the export trend as it is now, if there were a sharp setback in home demand, is an anxious query underlying much of the thinking today. It is not surprising that executives in this industry (as in certain others) are not enthusiastic about restraining inflation, although for loyalty's sake they would go a good part of the way in accepting anything that the Government proposed on the subject. But they do appreciate that until some fresh favourable development in exports occurs (such as the consummation of the idea of the European free trade area), prosperity is closely bound up with keeping home demand as high as possible. This can hardly be done if any considerable reduction in the purchasing power of consumers is brought about.

Monetary Measures

As a matter of fact, the monetary measures so far enforced by the Government have not affected the mass of high spenders. It might be interpreted that the second view is held by many who noted that at the Bank rate tribunal proceedings the revelation was made that the imposition of a 7 percent rate was the result of a suggestion by the Bank of England Court, rather than part of a well-thought-out plan on the part of the Chancellor of the Exchequer, as had been generally supposed until then. However, if the Government is going to try in earnest, and with skill hitherto undisplayed, to bring down purchasing power and thus (theoretically) enable it to rise again to yet higher levels, then a period of considerable unsettlement lies ahead. It can be said that the majority of industrialists, benefiting from the existing buttress of the home market, will rather forgo such unsettlement.

But the Government has ever in mind the problem of the value of sterling, to which, in the present international economic set-up, it relates the major part of its own hopes and fears, if no account is taken of the manifold expressions of political casuistry with which Britain is confronted at present. So the industrial outlook for 1958 cannot be expected to be free from the major reactions caused by governmental policies. There will also be the adjustments necessitated by the further evolution of industry as a whole, and already indicated by the technical developments now moving from research establishments into workaday life. Then there is the changing nature of the demands for armaments, the more drastic influence of the obsolescence factor and the increasing resort to standardisation, the latter compelling widespread scrapping and replacement. To this troublous company must be added Britain's familiar minor problem—increasing tariffs imposed by its friends (in spite of the efforts of G.A.T.T.) and keener foreign competition in specific directions.

Discourse on Dyeing Process

There is now available a reprint of the George Douglas Lecture delivered by Mr. George J. S. White of the Imperial Chemical Industries on 7th February, 1957. Its sub-title helpfully informs the reader about "a subjective assessment of recent advances in dyeing technique, covering machinery, research into the mechanism of the dyeing process, and new types of dyes for application to textiles." As a simple recapitulation, the lecture has its own value. The author draws largely upon other lecturers and acknowledges his debt to them. Five examples of dyeing research are mentioned and some common factors enumerated. Mr. White concludes that the future of conventional dye ranges may be looked at in three lights—blue, green and red if you are a physicist; or blue, yellow and red if you are a dyer. The blue group may include chrome dyes, certain acid wool dyes, metallised and metallisable direct dyes, and disperse dyes. "The bright component in light is green, giving the 'go ahead' to the best of the vat dyes, to the new reactive dyes, to the painting of fabrics with pigments and polymers, and to the incorporation of pigments during fibre manufacture. The red light stands out against alizarin, soluble vat dyes, appropriately against azoic dyes, and perhaps against indigo."

Symposium on Free Radicals

To those who like their appetites whetted for things to come, even although the material for savour is at present slight, there should soon be forthcoming a report of the symposium on the formation and stabilisation of free radicals. This symposium was recently held in the United States under the auspices of the U.S. National Bureau of Standards, but the line of exploration, now becoming more definite as an outcome of the application of new techniques, is being followed with interest by industrial scientists in the United Kingdom. The importance attached to the gathering is shown by the fact that over 400 scientists attended from the United States, the United Kingdom, France, Canada and Italy—a surprising total having regard to the comparative remoteness of the subjects discussed.

"Radical" in chemistry, it may be said, has been defined in text-books for a long time past, and indeed some inkling of what has just been discussed was in scientists' minds as far back as the beginning of the nineteenth century. That definition is: "A group of atoms which passes unchanged through a series of reactions, but is normally incapable of separate existence." It is only during the past few years that a method has been developed for capturing and storing these atoms. "Ordinarily they exist for only a few thousandths of a second, in systems such as flames and hot gases. However, by freezing the products of an electric discharge at a few degrees above absolute zero, for example, it is possible to trap free radicals in a highly excited state, in which they can be kept for hours, and studied by a number of physical and chemical techniques." Other methods of capturing and storage have also been discovered. It is claimed that a new field of research is being opened for both the chemist and the physicist. Unfortunately, the free radicals are at present attracting a good deal of attention for their possibilities as fuel for rockets and similar purposes, and one of the principal sponsors of research is a department of the U. S. Army. But now that new techniques for detection and identification have been evolved (notably those classified under electron spin resonance), the field of employment is likely to broaden rapidly. Indeed they have already been shown to be of importance in the study of biological processes.

Pan American's southern route takes you home the sunniest, most direct, most scenic way. You fly on the mighty Clippers* to the great capitals of southern Europe — Istanbul, Rome, Madrid. Then wing your way on to Paris, London, Glasgow, or continue onwards to New York and Bermuda.

All the way you're aboard the world's most experienced airline, the airline that pioneered flight service around the world.

So if you're planning a trip home, remember, the FAIR WEATHER Route is *the* way to go. For free information or reservations, call your Travel Agent or Pan American in :

Jute

MARKET HOPING FOR HESSIAN ORDERS FROM UNITED STATES

STATISTICAL POSITION OF INDIAN JUTE GOODS CONSIDERED ENCOURAGING

THE Calcutta markets have shown a marked improvement during the past week, but as far as gunnies are concerned, it is not on the strength of business done. Rather, it is a reaction following the depression of the previous weeks. Operators are still waiting for business from America, and some orders have in fact come. Local shippers have also been covering against previous contracts for north American destinations, taking advantage of the reduction in freight rates to ports in that area. Since 11th January, 1958, jute and gunny freight rates have been reduced for Canadian Atlantic ports, U.S. north Atlantic ports, U.S. Gulf ports and Pacific ports. It is hoped that the reduction in freight rates might induce greater interest from the American market. In anticipation of this, speculative buying has increased. The publication of the gunny production and stock statistics has helped steady the market. Sacking production increased last month, with a corresponding decrease in hessian output, and now constitutes 58.9 percent of the total. This is the highest for many years, but is not considered too high, as the market in general views the prospects for sacking with confidence. With the increase in production last month, there was an increase in mills' stocks, but the latter's total of 75,600 tons was not excessive, and was still over 20,000 tons less than a year previously. This is the first time this season (that is, in the last six months) that stocks have shown an increase. Since July 1956, total stocks have actually dropped by 32,800 tons, or just over 30 percent.

There has been brisk activity in the fibre markets and it is estimated that mills have purchased about 400,000 maunds of jute. A feature is the interest shown in cheap jute. At the present low price of gunnies, mills cannot afford to pay high prices, and it is estimated that of the total business done, about 75 percent has been for mesta type fibres. This is a considerable portion of the crop, so rates for this fibre have naturally increased. The main purchaser has insisted on delivery by rail from most of the districts, since in previous contracts when lorry and boat options were given most of the jute supplied did not come from the agencies contracted for, but consisted mainly of jungli fibre purchased in Cossipore. Genuine mesta sellers have been hard hit by this insistence on rail delivery, as many of them own boats, and to ship by rail means a considerable loss to them. For other types of fibre, sellers are inclined to be reserved due to the high prices ruling in most agencies. Large quantities of jute have been covered during the past week, mostly against high-priced contracts, so it is almost impossible to find fibre at the current rates. Imports upcountry continue to be small, and prices are tending higher. There seems to be no prospect in the near future of any reduction in prices at the agencies, as mill agents are always buying and are always prepared to pay premiums to secure the jute they require. The arrivals in the Cossipore markets appear to contradict statements about poor imports upcountry, as last week over 750 wagons were reported at the Cossipore sidings. More than half of these, however, contained mesta fibre, so arrivals from upcountry agencies were small in spite of the increase in wagon arrivals.

At the close the market was quiet and opening quotations on Wednesday morning were as follows:

	Jan.	Feb.	March	Apl.-June
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32.80	32.75	32.70	32.70
40in. 10oz.	39.90	40.05	40.15	40.40
B Twills	104.80	105.20	105.50	106
Heavy Cees (Plain)	104.75	105.25	105.50	106
A Twills	126.25	126.50	127	127
Liverpools	120	120.50	120.50	120.50
Cornsacks	106	106.50	107	107.50

Raw Jute: Calcutta mills bought large quantities of jute, business being conducted almost daily. The main interest was in mesta fibres, and good purchases were made from Daissee, Desal and Northern districts. There was little interest in other grades of jute, and sellers, although they could not exactly be termed reserved, were less inclined to entertain counterbids from buyers. In this, they were influenced mainly by the smallness of imports in all the upcountry areas, where rates were well above the parity of those quoted to Calcutta mills. In spite of the amount of business done, raw jute rates showed little variation, and even mesta prices advanced by only about 25nP, which was an indication of the amount of this fibre available. Most mills were seeking a low assortment in their purchases, and sellers were having difficulty in selling their balance assortment, which was mainly middle quality jute.

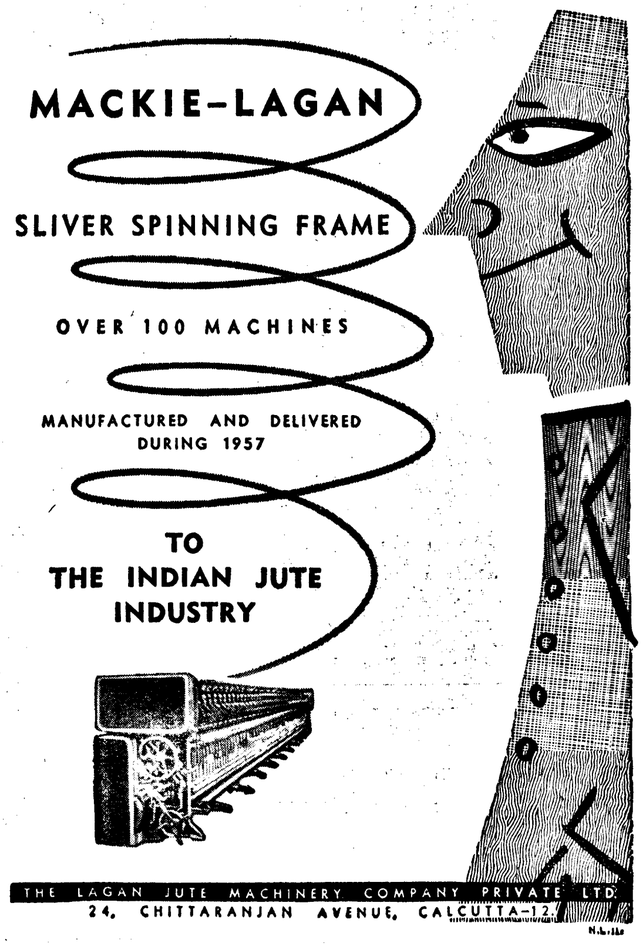
Opening quotations last Thursday were based on Assam jute at Rs. 26.50 basis Bottoms for January-February shipment, and this price ruled until the week-end. On Monday, prices advanced 25nP or 50nP and the market ruled steady, but by Wednesday quotations had fallen back to Rs. 26.75 in sympathy with the weaker jute goods market.

Business was reported in Assam-Dhubri white jute and Rs. 26.25 to Rs. 26.75 a maund basis Bottoms for January-February shipment, and in Northern white at Rs. 26.50. The main business was done in mesta; mills paid Rs. 23 to Rs. 23.25 for Daissee and Desal mesta and Rs. 23.25 to Rs. 23.50 for Dhubri and Northern mesta. Small lots of Daissee and Tossa were also done at Rs. 29.50 to Rs. Rs. 30.50. Bimli changed hands at Rs. 20.50 for F.A.Q. and cuttings were reported at Rs. 73.75 a bale.

In Cossipore, wagon arrivals from 8th January to 14th January totalled 835, most of which contained mesta and low-quality jungli fibres. All arrivals were quickly taken up, and any good-quality jute fetched high prices. Mill representatives were particularly active but had very little success in getting high-grade jute, of which there was a distinct shortage. At the close, Kishenganj jute was quoted at Rs. 24.50 to Rs. 25 a maund for garsat quality.

On Wednesday morning, the market was quiet in sympathy with goods, and opening quotations were based on the following:

Indian Jute:	Landed at Mills	Shipment
	Rs. a md. basis Bottoms	
Assam	26.50	January-February
Northern	26.50	"
Purnea Desal	24.25	"
Daissee	30	"
Assam Tossa	30	"
Northern ex Calcutta	25.50	"
Mesta:		
Assam-Northern	23.75	"
Desal	23.75	"
Daissee	23.50	"
Murshidabad	22.75	"
Jungli	21.50	"
Bimli F.A.Q.	20.75	"
Pakistan Cuttings	73 a bale	"



THE JUTE MARKETS

Manufactured Goods: The market opened with a steady tone in both sacking and hessian. There was not a great deal of activity and prices only moved within narrow limits. Some business was reported in cornsacks, so this category rose markedly, but other types showed very little change. Shippers also covered sales in cornsacks and Liverpools, which helped to keep the market steady. Generally speaking, however, there were few overseas enquiries in either hessian or sacking, and most of the business done by the mills was absorbed in the local bazaar. At one stage, an easier tendency developed as a result of speculative selling, but later sentiment improved on reports of small overseas enquiries. At the beginning of the period, speculative activity in preparation for settling day caused sacking prices to rise, but a reaction set in once the settlement had been effected.

The week opened with B Twills quoted at Rs. 104.40 for January shipment, forward shipment being at a premium of Re. 1. With the approach of fatka settling day (10th January), prices fluctuated rapidly, the general tendency being to rise, but they fell back to just above the opening levels by the week-end. Hessians moved up in sympathy, and 40in. 10oz., after opening at Rs. 39.45 for January shipment, was quoted at Rs. 39.60 by Saturday morning. In this section, the premium for forward shipment was about 50nP. After the week-end, the market ruled steady on reports of covering business. January B Twills jumped to Rs. 105.10 and 40in. 10oz. to Rs. 30.90. Prices continued to rise as small business was reported, but toward the close the market was comparatively weaker in sacking due to speculative activity. Cornsacks came in for a great deal of interest in the forward section and April-June shipment recorded a Rs. 2 rise.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment

from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 5th January, 1958	415.0	5,129.1	5,544.1
1st to 5th December 1957	283.5	10,612.8	10 896.3
1st to 5th November, 1957	1,144.3	13,036.6	14,180.9
	Sacking		
1st to 5th January, 1958	2,687.6	8.3	2,695.9
1st to 5th December, 1957	8,336.2	95.4	8,431.6
1st to 5th November, 1957	15,285.3	308.8	15,594.1

I.J.M.A. PRODUCTION FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total production of jute goods during December as follows:

	Description	Quantity
1	**Gunny Bags**	
	(a) Hessian	2,665 tons
		93.8 lakh yds.
	(b) Sacking	74.3 lakh Nos.
		53.713 tons
		12.86.9 lakh yds.
		5,32.3 lakh Nos.
2	**Gunny Cloth**	
	(a) Hessian	29,451 tons
	(b) Sacking	
		11.37.8 lakh yds.
		982 tons
3	Other Manufactures	21.8 lakh yds
4.	Total production (above figures combined)	5,976 tons
	(a) All kinds	92.787 tons
	(b) Hessian (both bags and cloth)	12.31.6 lakh. yds.
	(c) Sacking (do)	13.08.7 lakh yds.

Summary

	(00,000 Yds)			(000 Tons)		
	1957 Dec.	1957 Nov.	1956 Dec.	1957 Dec.	1957 Nov.	1956 Dec.
Hessian	12 32	12 66	14,27	32.1	33.4	37.7
Sacking	13.09	12,67	9,56	54.7	53.2	41.3
Others				6.0	5.3	5.9
Grand Total				92.8	91.9	84.9
Hours worked				209.0	206.0	206.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

THE FOREIGN JUTE MARKETS

LACK OF BUSINESS IN YARNS

(FROM OUR DUNDEE CORRESPONDENT)

THE markets are gradually getting normal again after the seasonal holidays, but, unfortunately, business is not showing much improvement. Consumers of jute yarns and cloth are still inclined to satisfy only their immediate needs and producers are unable to build up decent order books. Forward delivery is of little or no interest, although there seems to be nothing to warrant any expectations that prices are to show any weakness this season. Offers of the fibre are being made in plenty, but sellers are reluctant to allow prices to fall. Yet a slight weakness is noticeable from day to day, and prices have been reduced by about 20s a ton on some grades. Mill Firsts are offered at from £114 and Mill Lightnings from £98, but these grades and higher qualities are difficult to secure in Pakistan and offerings are small. Mill Hearts are now lowest at £87 10s and grade Hearts at £76, while good marks of Daissee-2/3 are from £97 10s and grade from £89 10s, also grade Tossa-2/3 from £105 and grade Tossa-4 from £89 10s, all c.i.f. U.K., January-February. Spinners are buying only small quantities where prices appear to be reasonable for the marks offered. They are very selective in their purchases.

Spinners have little incentive to make forward purchases of jute because of the lack of business in jute yarns. In the case of hessian descriptions, orders consist of small lots as a rule, at 15.14d a lb for common 8 lb cops and 15.72d for 8 lb spools. Twist is in fair demand because of the better prospects for the carpet industry, and there are some orders going through in rove at £101 10s for 48 lbs and £80 for 200 lbs. The small yarns are more

'Phone: 22-3279 'Gram: KRISHISAKHA

or less neglected. In spite of the low prices now ruling for the depressed widths of imported goods, on the basis of 92s for 40in. 10oz. a 100 yards, it is reported that some local manufacturers are competing in order to keep their output moving. The Dundee price for 40in. 10oz. is 12.88d a yard, less the usual 3 percent, and for 8oz. 11.01d. Calcutta goods have fluctuated only slightly, prices closing at 60s for 40in. 10oz. and 46s 3d for 7½oz. January-March and 60s 6d and 46s April-June, with B Twills at 158s and 1658s 6d for the respective positions of shipment, all f.o.b., Calcutta.

THE PAKISTANI JUTE MARKETS

FIBRE PRICES EASE SLIGHTLY

(FROM A NARAYANGANJ CORRESPONDENT)

IN the Narayanganj jute market, prices have eased slightly, and there is greater selling pressure Loose jute at first became more moist but at the end of the past week prices also decreased somewhat. They still remain above overseas parities. With the threatened glut of cuttings, balers find it difficult to decide on what basis to calculate their prices when converting their loose jute purchases into sterling. Most of them are reported to be calculating at Rs 7. which makes the c.i.f. price approximately £101 for Export Firsts and £93 for Export Lightnings, against overseas indications of £98 and £88, respectively. There has reportedly been a slight increase in arrivals in Narayanganj in the last few days, but this is probably not correct since the report originates from the fact that some press houses are working reduced hours and others are on strike over labour rates. The "closed door" operation against smugglers has had little effect so far on prices, except that the Jute Marketing Corporation is receiving more jute. For this reason it has probably extended its limit for lifting jute from the borders beyond 31st December.

The main item of news during the past week is the Pakistan Jute Association's annual general meeting. The chief guest was the Chief Minister. His speech gives the impression that the Pakistani authorities are not at all satisfied with the results of the International Jute Conference and feel that something must be done to increase the prices paid to growers.

DROUGHT AFFECTS QUALITY OF PAKISTANI JUTE CROPS

P.J.A. PRESIDENT WORRIED ABOUT FALL IN FIBRE EXPORTS

IN his address at the annual general meeting of the Pakistan Jute Association on 8th January (which was attended by the Chief Minister of East Pakistan), Mr. O. W. Lugg, president, said that the crop of the jute season 1956-57, according to trade estimates, amounted to 6.5 million bales inclusive of the 200,000 bales carry-over from the previous year. Out of this, 3.9 million bales were shipped overseas and 600,000 bales to India. The consumption of Pakistani jute mills and other small industries amounted to 1.2 million bales. About 500,000 bales were smuggled to India. There was a negligible carry-over of about 250,000 bales for the season commencing from July 1957. It is to be viewed, not without concern, that exports to overseas and India dropped by 450,000 bales and 850,000 bales, respectively, from the previous season. This year, sales registered with the State Bank as at 15th December, 1957, show that the total sales from July are about 400,000 bales less than in the corresponding period of the previous year.

"We have come to expect natural phenomena affecting the crop and were not wrong this year, when, with the exception of Tippera and Mymensingh districts, rains were late and sparse, and severe drought was experienced in many parts of the country. This has adversely affected the quality of the crop," Mr. Lugg says. The trade estimate of the supply of jute this season is about 6.5 million bales. Up to the end of December, approximately 2.1 million bales have been shipped overseas and 400,000 bales to India. Considering that 1.2 million bales will be required for Pakistani mills' and others' consumption, it is estimated that there will again be a small carry-over.

International Jute Conference

The Association organised the International Jute Conference, which was held in Dacca from 25th November to 30th November, 1957. The main achievement of the conference was to create a closer understanding between Pakistan and world buyers of raw jute. It gave an opportunity to buyers and sellers to make personal contacts with each other. Government policies and objectives were clarified and deeply appreciated by all delegates. The London Jute Association contract was amended to mutual satisfaction and it was agreed to draw up a Pakistan Jute Association contract modelled upon the L.J.A. contract with suitable amendments to be brought in after consultation with foreign buyers. This would be used for the sale of Pakistani jute to countries which did not transact business on the terms and conditions of the London Jute Association contract. "This conference was an historic event in our annals. We had the clear guidance of the Government of Pakistan's jute policies propounded to us by the Central Government delegates and we are indebted to your jute department for the part it took in our proceedings," Mr. Lugg said.

Calcutta Markets

PRICES RISE AT TEA EXPORT SALE

DEARER RATES FOR DUSTS

AT Sale No 28, held on 13th and 14th January, offerings at the Export auction amounted to 55,372 packages There was again a strong and general demand most sorts selling at dearer rates. Clean well-made teas and those with bright liquors were the strongest feature, especially the O.Fgs. in this category, which appreciated by about 10nP and sometimes more, while the B.O.P.'s of this description frequently sold above valuations. The remaining B.O.P s, however, again tended easier and were the weakest feature of the Sale. "Teas for price" were 2 to 4nP dearer while plain and medium B.P.'s and Fannings were well supported at 2 to 4nP above last rates Non-wither Doars were irregularly 6 to 8nP dearer, especially those with bright liquors. There was a fair demand for C.T.C. teas at about last rates some of the bright liquoring types selling at a premium. There was fair competition for whole leaf grades and B.P.'s and prices were irregularly dearer Darjeelings met with much better demand and sold well

	Quotations 1958 Rs.	1957 Rs.
Clean Black Pekoe	2.30 to 2.40	2 6 0
Plain B.P.	1.80 to 1.64	2 3 0
Plain Fannings	1.70 to 1.74	
Medium B.P.	1.68 to 1.72	2 4 6 to 2 5 0
Medium Fannings	1.80 to 1.84	
Best Assam C.T.C. B.P	2.60 to 2.80(nom.)	2 12 0 (nom.)
Best Assam C.T.C. Fgs.	2.50 to 2.60(nom.)	

At the Internal Sale, Dust offerings amounted to 18,083 packages. There was a very good general demand and the better liquoring mediums and the best liquoring C.T.C. Assams were once again the strongest features of the Sale, selling at appreciably dearer rates. The fibrous descriptions with ordinary liquors were also in great demand and were firm to dearer. All descriptions of orthodox manufacture were firm and occasionally dearer, while there was continued support for clean black leafy types from the exporters.

	Quotations 1958 Rs.	1957 Rs.
Medium Doors Dust	1.62 to 1.64	2 1 -0
Medium Assam Grainy Dust	1.64 to 1.66	2 1 0 to 2 2 0
Medium Assam C.T.C Dust	2.90 to 2.30	2 4 6
Best Assam C.T.C. Dust	2.80 to 3.05	2 9 0 to 2 11 6

There was a good demand for the 1,890 chests of Leaf offered and prices were firm and often dearer.

MORE ACTIVITY IN FREIGHT MARKET

ALTHOUGH rates do not appear to be improving the volume of chartering, particularly in the grain trade, in the freight market, was well maintained during the past week. More cargoes were available than before the Christmas holidays. Several fixtures were also noted in the trans-atlantic coal trades at the previous rate of 25s. Fixtures of grain January shipment, northern range to west coast india were concluded at 65s with 1,000 tons discharge free, whereas Northern Range-Karachi paid $(U.S.) 22.75. In the Pacific, a 9,500 tonner has been fixed to load wheat 15th and 31st January from British Columbia to Japan at $(U.S.) 6 with 1,000 tons discharge free. Coal chartererers in Newcastle (N.S.W.) have made two more interesting fixtures to Japan at $37 f.i.o. trimmed. Ore shippers in Marmugao are looking for tonnage to move 9,500 to 10,000 tons ore February shipment to Moji-Yawata range. There was some activity for Visakhapatnam ore and two vessels 9,500 tons, 10 percent. manganese ore 3rd to 25th February, were fixed at $(U.S.) 10.25.

LINSEED WEAKER

There has been a slightly weaker undertone in the market during the past week due to lack of enquiries. Local crushers have reduced their output to a great extent because of the absence of parity. Oil prices have declined but the price of seeds has not fallen to the same extent. Overseas advices for linseed oil were far from encouraging, and cheaper offers of Argentine oil failed to attract buyers. In the Calcutta market, demand has been sluggish Latest quotations were as follows: January-February Rs. 22-12 a maund.

HIDES AND SKINS QUIETLY STEADY

The market was quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 7th January, 1958 and 13th January, 1958)

Cowhides: Wet salted 6,500 pcs. on the basis of Rs. 9.62 to Rs. 11.75; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 13.50 to Rs. 22.

Goatskins: Wet salted (Patna, Daissee and Kustia) 36,300 pcs. on the basis of Rs. 300 to Rs. 320, (she-killed) on the basis of Rs. 370 and Rs. 380 to Rs. 390; Wet salted (he-killed) Rs. 4 a piece; Assam-Dinajpur 3,500 pcs. on the basis of Rs. 310 to Rs. 325.

Bazaar Stocks

(13th January, 1958)

Cowhides: Wet salted 1,06,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia and Killed) 33,000 pcs; Assam-Dinajpur 83,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 3,85,000 pcs.

Engineering and Transport

A.-I.I. DELHI-MOSCOW SERVICE MAY START SOON

TECHNICAL MISSION TO STUDY POSSIBILITIES OF AIR LINK

(FROM OUR NEW DELHI CORRESPONDENT)

THE general manager of Air-India International, Mr. B. R. Patel, is leading a technical mission to Moscow to study the possibilities of a New Delhi-Moscow air service *via* Kabul. His report should form the basis of a Indo-Russian air agreement. Moscow, it will be recalled, has asked for permission to start a Moscow-New Delhi air service. A New Delhi-Moscow air service by Air-India International seems likely to be inaugurated before long.

Direct London-India Service of A.-I.I.

From 15th January, Air-India International is running its London-India service for the first time direct to New Delhi. The planes leave London and New Delhi on Tuesdays, operating through Zürich, Prague, Beirut and Damascus.

New Delhi as an International Airport

New Delhi is fastly developing into an international air centre. Air France, which had its head office in Calcutta, is now shifting it to New Delhi. B.O.A.C has acquired new premises for its head office in Connaught Place.

Revision of Indo-Australian Agreement

A revision of the Indo-Australian air agreement is now being considered. A beginning was made last year although the talks proved abortive. India is unhappy about the state of traffic on the Sydney-India route.

K.L.M. Far Eastern Services

The Indonesian troubles are likely to have serious repercussions on the Far Eastern services of K.L.M. Dutch residents in Indonesia made this service lucrative. K.L.M. had five services a week to Indonesia, all of which now terminate at Singapore. In addition, it has three services a week to Japan, one to Sydney (Australia) and one to Biak (New Guinea).

Plans for New T.W.A. Terminal

T.W.A. has announced plans for a $12-million terminal at Idlewild in New York to be completed by 1960. Construction will begin in April 1958, with the first phase to be completed in time for T.W.A.'s *Boeing 707* operations, scheduled to begin early in 1959. The facility will handle 14 *707s* at once. An underground fuelling system will serve the ramp.

Investment Programme of U.S. Domestic Airlines

U.S. domestic airlines will need to invest an additional $560 million for jet aircraft, over and above the $2,000 million which they are now committed to pay out by 1961. The Air Transport Association submitted this figure in connection with the C.A.B's general passenger fare investigation. It does not include the requirements of five carriers, such as T.W.A. and Eastern. The biggest single new jet requirement is that of American for 40 unspecified jet aircraft, which the A.T.A. estimates will cost $165 million. Other estimates are National $110 million; United $90 million; Capital $90 million; N.W.A. $66 million; Northeast $30 million; and Braniff $9 million. Most of the airlines have advised the C.A.B. that their estimates are the minimum, all subject to an upward revision.

Air Agreement Between Portugal and W. Germany

An air agreement concluded between West Germany and Portugal authorises the German airlines to operate a number of services to Lisbon with intermediate stops in Switzerland, France and Spain and on to points in the Caribbean and Central and South America. Portuguese airlines are given rights to operate several services to West Germany, with intermediate stops in Spain, France and Switzerland and beyond West Germany to points to be agreed upon at a later date.

New Jet Transport Overhaul Base

The Port of New York Authority has approved a contract for the construction of a $10 million jet transport overhaul base to be used by B.O.A.C., Air France, K.L.M., Deutsche Lufthansa and Sabena at Idlewild. B.O.A.C. will use two of the six aircraft bays, and the other carriers one each. The construction work will be financed by the Port Authority and the airlines will hold a joint lease for 20 years.

Proposal for Civil Use of U.S. Military Planes

The U.S. Military Air Transport Service has announced a programme under which civil carriers will be requested to operate ten military aircraft under contract. The purpose is to determine the advantages and disadvantages of airline operation of military planes. The proposal is that five *C-118s (DC-6s)* will be operated in the Pacific area for the carriage of passengers and five *C-54s* will be used for an Atlantic cargo service.

B.E.A. London-Brussels Flights

B.E.A. will operate five daily London-Brussels flights from April 1958, using *Viscount 800s*. It is scheduled to take delivery of the faster model *Viscounts* this year.

B.O.A.C. Britannia Establishes New Record

A B.O.A.C. *Britannia 312* flew from London to New York non-stop on 15th November in ten hours five minutes, establishing what is believed to be a new record for civil airliners. In March 1957, a P.A.A. *DC-7C* made the flight in ten hours nine minutes.

S.A.S. has applied to Japan for permission to increase its present twice-weekly trans-polar services between Tokyo and Copenhagen to three flights a week beginning from 1st April next.

Alitalia-L.A.I. Wants Smaller Aircraft

Alitalia-L.A.I. wants an aircraft somewhat smaller than either the *DC-8* or the *Boeing 707* for operations across the south Atlantic and to South Africa, but capable of flying over the north Atlantic as well. Orders for new equipment cannot be expected until early next year.

E.C.A.F.E. SEMINAR ON LOW-COST ROADS

IMPORTANCE OF STABILISATION OF SOIL STRESSED

A SEMINAR on low-cost roads and soil stabilisation under the auspices of the E.C.A.F.E. has recently been inaugurated in New Delhi by Mr. Lal Bahadur Shastri, Central Minister for Transport and Communications. Ordinary country and village roads in the E.C.A.F.E. region consist of a track cleared by cutting down vegetation and trees, or at best of an earth embankment. Such roads are dusty in the dry weather and become impassably slushy during the rainy season. In sandy areas, an earth road is not easily negotiable by wheeled traffic. The alternative of providing a properly metalled road is often costly, particularly when stone is not locally available. Furthermore, traffic on most of the roads in question is so small that it is not always necessary to have a full-fledged metalled road. If some means could be found of improving the local soils by a proper blending of locally available materials, it would be possible to provide good all-weather surfaces for light traffic. Such a road would not become slushy in rain, nor a heap of loose fluffy dust in dry weather Being built mainly out of locally available materials, its cost would be comparatively low.

Blending of Local Materials

This blending of local materials such as clay, sand, gravel, and soft aggregates with *kankar* or broken brick, to provide a reasonably hard surface, is called stabilisation of soil. The science is of recent orgin and has been extensively used in the Western countries. Stabilised soil roads can provide a solution to the problem of inadequate road transport facilities in many parts of the E.C.A.F.E. region. The method ensures a saving of 30 percent to 50 percent compared with the construction of a metalled road. A low-cost stabilised soil road can serve the immediate needs of most parts of the region.

Road Research in India

In India, about 300 miles of roads built according to the scientific technique of soil stabilisation have been in use for some years—about 200 miles being in Punjab and 70 miles in Madras and a few miles in other States. The correct application of the technique is fairly simple but requires some knowledge of soil science and some simple equipment for testing soils and determining the correct blends. To provide this know-how, road research stations are being set up in most States—more than half the number of States already have such stations. The Central Road Research Institute in New Delhi has been working in this field for some years. A scheme is being implemented by the Union Department of Transport (Roads Wing) and the Central Road Research Institute to build low-cost, stabilised soil roads all over the country in different conditions of soils, climate and traffic in order to demonstrate the technique, its possibilities and limitations.

Problems in the E.C.A.F.E. Region

In the E.C.A.F.E. region, large areas with rich resources are comparatively isolated for lack of adequate transport facilities. Furthermore, in many countries of the region, because of the difficulties of transporting industrial and agricultural products, prices at consuming centres are high. Although extensive highway development projects are proposed in various plans of the countries of the region, serious financial limitations continue to stand in the way of rapid development. The problem of providing adequate transport facilities at the cheapest cost has, therefore, been engaging the attention of Governments for some time.

Recommendations of the Sub-Committee

The Highway Sub-Committee of the E.C.A.F.E., at its second session, recommended the inclusion of a high priority work project on the construction and maintenance of low-cost roads and soil stabilisation. At its third session it recommended that after adequate technical information had been collected, a seminar be convened in a suitable country within the region. In view of its interest in the subject of soil stabilisation, the Railway Sub-Committee at its fourth session recommended that railway experts might also participate in the proposed seminar. The recommendations of the two Sub-Committees were approved by the Inland Transport Committee at its sixth session and by the Commission at its 13th session. At the sixth session of the Inland Transport Committee, the representative of the Government of India extended an invitation to hold the seminar in India around the time the annual session of the Indian Roads Congress meets early in January 1958. It was, therefore, proposed to convene the seminar in New Delhi, in co-operation with the U. N. Technical Assistance Administration, from 10th January to 21st January, 1958, following the session of the Indian Roads Congress. The main purpose of the seminar is to provide a forum for discussions between technical experts and officials at the policy-making level on current problems of low-cost roads and soil stabilisation, for pooling knowledge and experience and making practical recommendations.

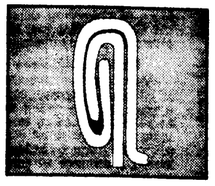
a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack :

Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	



MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base : year ended March 1953=100) receded by 0.5 percent to 106.3 during the week ended 28th December, 1957, compared with 106.8 (revised) for the previous week. The index was lower by 2.1 percent and 0.6 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The average for December 1957 worked out to 107.0 compared with 109.3 for November 1957 and 108.1 for December 1956. The calendar year average for 1957 stood at 108.7 compared with 102.6 for 1956. The index for Food Articles fell by 0.7 percent to 102.9 compared with 103.6 (revised) for the previous week due to a decline in the prices of potatoes (−21%), fish (Rohu) in Calcutta (−11%), ghee (−9%) and oranges in Madras (−8%), eggs (−6%), jowar in Mohal, maize in Chandausi, onions, mustard oil in Kanpur and black pepper in Cochin (−5% each), gur (−3%) and wheat, gingelly oil and chillies (−1% each). The prices of oranges in Calcutta (+15%), gram in Patna and arhar in Bombay (+8% each), bajra in Anakapalli (+5%) and barley, masur and groundnut oil (+1% each), however, showed advances. The index for Tobacco receded further by 1 percent to 95 as a result of a decline in the prices of Pollah raw tobacco in Calcutta (−4%) and snuff tobacco in Madras (−1%). The index for the Fuel, Power, Light and Lubricants group remained stationary at its previous week's level of 114.8. Lower prices of Linseed in Nagpur (−7%), rapeseed (−6%), castorseed (−2%) and raw cotton, groundnuts and copra (−1% each) brought down the index for Industrial Raw Materials by 0.9 percent to 114.8 compared with 115.8 for the previous week. The prices of cottonseed (+2%) and gingellyseed (+1%), however, moved up. The index for Intermediate Products stood at 105.6 compared with 105.5 for the earlier week. Items which showed noticeable changes during the week were : Aluminium circle (Indian) in Bombay (+14%), copper and tin (+3% each), rayon yarn and coir yarn (+2% each), German silver (−3%) and linseed oil and brass (−2% each). The index for Finished Products remained unchanged at the previous week's level of 107.7 in spite of variations in the prices of sodium hydro-sulphate (+10%), oilcakes (+2%) and jute manufactures (−1%).

FRESH LAWLESSNESS IN KERALA PLANTATIONS

STATE MINISTER REPLIES TO U.P.A.S.I. CHARGES

(FROM A SOUTH INDIAN CORRESPONDENT)

A FRESH wave of lawlessness has been reported from Kerala plantations. The labour situation in the Vandiperiyar-Peermade plantation district, which has been causing serious concern to the industry during the past several months, has now become more grave because of the death of two and injury to several persons as a result of clashes between two groups of workers on the Semini Valley Estates in Peermade. In view of the tense atmosphere that was prevailing there and the threat of violence, the managerial staff left the estate and the managing agents, Messrs Parkins Limited of Kottayam, have announced the closure of the estate until conditions improve. The United Planters Association of Southern India has reported "mob violence" in two other estates in the same district. It has said in a statement: "Unrest and worsening of workers' discipline continue in Kerala plantations. In some cases the situation is markedly worse than in others, but in most areas an uneasy quiet prevails."

Kerala's Minister for Law and Order, Mr. V. R. Krishna Iyer, in a rejoinder to the U.P.A.S.I., accuses it of raising a "bogey of lawlessness" which is "part of the plantation politics promoted by the U.P.A.S.I.". He goes to the extent of alleging that "Christophers" (members of a Christian volunteer organisation against whom the communists are engaged in a tirade) are playing a "macabre rôle in provoking violent situations in plantations in the Kottayam district."

Lock-out in Semini Valley Estate

The lock-out in Semini Valley being a case which affected over 1,000 workers under communist leadership, the State Government took immediate measures to restart work on the estate. It conducted negotiations with the management, gave the assurance that police patrols on the estate would be intensified and if the necessity arose, personal protection to the manager, members of the staff and workers would be provided. The State Labour Minister would visit the estate to create a better atmosphere. On the basis of this understanding, the management agreed to resume work from 12th January, 1958.

Higher Wages for Tea and Rubber Workers

Representatives of the plantation management and workers have signed an agreement on 5th January in Kottayam under which workers on tea and rubber estates in Kerala will get increased rates of wages and other benefits. Field workers' minimum time-rate wages have been raised from Rs. 1-8-6 to Rs. 1-11-6 a day. In the case of factory workers, men who are getting Rs. 1-13 and above will be given an increase of one anna in their existing wages. The guaranteed time rate has been raised to 14 annas a day. Proportionate increases have been granted to women, children and adolescent workers both in the field and in the factory.

This increase will apply to tea estates which measure 100 acres in bearing and above and rubber estates which measure 200 acres in bearing and above. Workers in other estates will get a flat rate of increase of one anna for adults, both in the minimum time rates. The rate of increase to be given to adolescents will be 9 pies and to children 6 pies. As the increased wages under this agreement are more favourable to workers than the prescribed rates under the minimum wages notification of 30th June, 1952, issued by the former Travancore-Cochin Government, the parties have agreed that clause 4 of the notification on sliding scales of dearness allowance should be abolished and that it should have no retrospective effect.

This agreement is subject to the publication of a further notification by the Government to give effect to this joint request. It is also subject to any decision that may be taken by a tripartite conference to be convened by the Government after the receipt of the report of the wages revision committee or subject to the findings of any wage board appointed by the Central Government. The agreement comes into effect as from 1st November, 1957, in the Travancore-Cochin area and as from 1st January, 1958, in the Malabar area.

Research on Cashewshell Oil

The industrial laboratory attached to the Department of Industries and Commerce of the Kerala Government, after intensive research, has evolved a satisfactory process to refine the second grade oil produced from cashewnut shell. It has now been made possible to raise its quality so as to be on par with the first grade oil. The laboratory has also evolved a process by which the quality of the third grade oil could be improved considerably. Cashewshell oil is an important by-product of the cashew processing industry of Kerala. It has become an almost indispensable raw material for the manufacture of several important types of polymerisation products such as brake linings, oil stops, insulators in the ignition system of aircraft, etcetera. Kerala enjoys a near monopoly in this product and exports to Britain and to the United States cashewshell oil worth Rs. 50 lakhs or Rs. 60 lakhs a year.

There are mainly three grades of oil now in the market. Till recently, the first and second grade oils were exported, while the third grade, known in the market as *kari* oil, could not be exported, as it did not satisfy the needs of buyers abroad. A year ago the main buyers of this commodity introduced a new specification called the "oven test", evidently to prevent large-scale mixing of inferior oil with good quality oil. It was then found that the second grade did not pass this test. Although the first grade oil passes the test, it is not economical to export this variety as such, without the addition of second grade oil to it. This has resulted in a heavy decline in its exports. The loss is estimated at about 3,000 tons and is worth Rs. 30 lakhs. Consequently, some of the manufacturers of this oil sought the help of the laboratory in evolving methods to refine the second grade oil, so that it could conform to the oven test.

Satisfactory Process

As a result of the intensive research carried out both on laboratory and pilot plant scales, a satisfactory process has been evolved which not only makes the second grade oil conform to the oven test, but, in addition, raises its quality to the level of the first grade oil. This means that the second grade oil, after rectification, will fetch a 100 percent increase in its price. The *kari* oil was not hitherto exported on account of its poor quality. Though the problem of improving its quality had been engaging the attention of many laboratories for a long time, there was no means even for removing the large amount of suspended fine carbon contained in it. The industrial laboratory has evolved a process by which the quality of the third grade oil might be improved considerably, particularly in effecting the removal of fine carbon and other suspended impurities and increasing the iodine value. Rectification by this method will make it possible to export the oil, which has very little value at present. *Bona fide* users can get further information from the Industrial Research Laboratory in Trivandrum.

New Body of Cashew Processors

Cashew processors in Quilon have formed a syndicate for the purchase and distribution of raw cashewnut with the object of checking an unreasonable rise in its price and to avoid unfair competition among the processors. This body is now negotiating for the import of African nuts, and a final agreement is expected to be reached within the next few days. Raw nut prices now quote Rs. 700 to 725 a ton. In normal years, the import of African nuts begins in December. But it was delayed up to March or April last year as many of the processing units in and around Quilon remained closed on account of the prolonged dispute with labour. As these factories started work rather late, they were not faced with the shortage of raw nuts and did not stop work as usual in August or September.

In spite of the late beginning of work last year, the processors manufactured more than 1.3 million cases of cashew kernel (one case contains 50 lbs) in 1957. The total supply, including the carry-over from the previous year, amounted to 1.5 million cases. Out of this, 1.3 million cases were exported and 200,000 cases have been carried over to 1958. It is estimated that the raw nut supply amounted to 150,000 tons in 1957, comprising 60,000 tons of Indian and 90,000 tons of African nuts. At least the same is expected this year also. The cashew industry's prospects for 1958 are considered fairly bright provided there is no major labour trouble.

TEA BOARD

EXPORT QUOTA 1958-59

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April, 1958 to 31st March, 1959 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February, 1958. No export quota will be allotted unless an application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 1-A, Vansittart Row, Calcutta-1, and in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin-1, South India.

P. V. Govindan,
Controller of Licensing.

COCHIN TEA SALES

At Sale No. 2, 1,300,000 lbs of tea were on offer. The market opened quietly but it later strengthened. The closing prices were dearer for everything, particularly improved mediums and high growns.

CALCUTTA TEA AUCTIONS IN DECEMBER

GOOD ENQUIRY FOR QUALITY GRADES

ONLY three sales were held during December, and offerings totalled about 188,000 packages. The first sale of the new year took place on 6th and 7th January. The decline in prices noticed in recent weeks continued, and there were appreciable withdrawals, although there was a better tone in the last sale of the month. Common B.P.'s closed at 15nP below last month's quotations, but Fannings grades showed less decline being only about 8nP lower. Ordinary medium B.O.P.'s continued to be a weak feature and were about 30nP to 40nP lower on balance, but B.P.'s and P.F.'s were only 6nP to 8nP easier, while O.F.'s which have been a weak feature almost throughout the season, showed a comparatively small decline, say Messrs Carritt Moran and Co. Private Ltd. in their monthly tea market review. Where quality showed improvement, there was a good enquiry and teas of this description sold well, frequently above valuations. The price of best C.T.C. teas, which declined in quality during the month, was quoted at 60nP below the level ruling at the end of November and the lower priced teas in this category being already little above common tea rates, showed less decline. Legg-cut Dooars teas, after November's renewed interest, again lost ground and eased by 20nP or 25nP a lb, although a few of the best on offer sold well. Whole leaf grades generally were the strongest feature, and clean black Pekoe was only quoted about 5nP lower over the month, while tippy teas sold well at fair but irregular rates. There was a limited enquiry for Darjeeling teas which were easier to buy each week, apart from the few bright liquoring invoices which were firm to dearer.

The quality of Darjeeling teas was still mainly of a rains description, although they were of a very satisfactory standard, and leaf appearance was on the whole maintained. A few invoices, however, were brighter in cup and had a little early cold weather flavour. In the first sale of the month, quality of Assam teas was of a very ordinary rains description with few exceptions, but in the later sales there was an improving trend, a number of invoices being brighter in cup. Leaf appearance continued satisfactory but a little more stalk and fibre were noticeable in the lower grades of orthodox teas, and these grades tended in many cases to be duller in appearance. Most of the C. T. C. teas on offer were secondary grades, or the poorer types, which were not attractive, being rather brown and fibrous. There was little change to note in the leaf appearance or cup quality of the teas from Dooars, which were about average for late rains manufacture. A few quite bright liquoring invoices of non-wither Legg-cut tea were on offer, but in general these teas were a little duller and more fibrous than previously.

Sale No. 26 " " ...	1.50	2.34

Internal Market

A total of 6,492 chests of Leaf was offered. There was a fair demand but prices were irregular and generally in buyers' favour. A total of 59,980 chests of Dust was offered for sale. Quantity generally continued to be of an ordinary rains description. Demand was restricted in the two earlier sales but showed some improvement in the final sale. Prices for all descriptions declined in the first half of the month but with the improved demand in the final sale, prices rose, with particular interest being shown in the black clean leaf grades and the better liquoring C. T. C. Assams.

Quotations

	1957-58 Rs. nP	1956-57 Rs. nP
Sale No. 24 Clean Common Dust	1.68	1.94
Sale No. 25 " " "	1.60	1.84
Sale No. 26 " " "	1.62	1.96

Export sales up to and including Sale No. 26 totalled 1,185,564 chests at an average price of Rs. 2.31 compared with 1,240,509 chests at an average price of Rs. 2.55 during the corresponding period of the 1956-57 season. Internal sales at 43,113 chests of Leaf and 401,274 chests of Dust (Rs. 1.51 and Rs. 1.91) go against 28,746 and 407,390 chests (Rs. 1.64 and Rs. 2.24) for the same period last season.

The estimated north Indian crop to the end of November 1957 was 509,501,952 lbs compared with 538,626,584 lbs to the same date of the previous year. The average figure at this date for the three years 1954-1956 was 522,314,619 lbs. There was a slight decline in the price of export quota during the month and business was transacted at prices varying between 12nP and 16nP. During the second week, however, there was a sharp decline and for a day or two business was transacted at 8nP. Thereafter, there was a rise, and last business transacted was at 15nP a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th November, 1957 to 23rd December, 1957 with the corresponding figures of the previous year in parentheses were as follows: by steamer 347,793 (335,727), by rail 155,568 (173,311), by air 22,279 (21,884) making a total of 525,640 (530,922). Since the beginning of the season 1st April, 1957 to 23rd December, 1957 arrivals have been: by steamer 2,234,130 (2,570,916), by rail 864,187 (865,497) and by air 155,847 (132,291), making a total of 3,404,164 (3,568,704) chests.

COMPANY AND PUBLIC NOTICES

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Twenty-first Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, 4, Lyons Range, Calcutta, at 12 noon on Wednesday the 19th day of February, 1958, for the following purposes:—

(1) To consider and approve the audited accounts of the Company for the year ended 30th September, 1957, and to receive the Directors' and Auditors' Reports thereon.

(2) To declare the dividends recommended by the Directors.

(3) To elect a Director in place of Mr. S. B. Bose who retires by rotation and being 69 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice, as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION:—

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re elected as a Director of the Company, whose period of office as such Director will be liable to determination by retirement of Directors by rotation."

(4) To elect Directors in place of Mr. K. F. L. Harris and Mr. N. D. Bangur who also retire at this Meeting.

(5) To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member of the Company.

The Share Transfer Registers of the Company will be closed from 5th February, 1958 to 19th February, 1958, both days inclusive.

By Order of the Directors,
LOVELOCK & LEWES,
Secretaries.

Calcutta,
16th January, 1958.

NOTE: Dividends, if declared, will be paid to Registered Shareholders or their mandatees only.

EXPLANATORY STATEMENT.

In the Special Notice given to the Company of the resolution under Item No. 3 of the above Notice, it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company, and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors.

TYROON TEA COMPANY, LIMITED.

NOTICE is hereby given that the 67th Annual General Meeting of the Shareholders of Tyroon Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 6th February, 1958, at 3-30 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.

To declare a Dividend.

To appoint a Director in place of Mr G T. Routledge, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 24th December, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is presently a Director of this Company which is a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 25th January, 1958 to 6th February, 1958 both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road.
Calcutta, 10th January, 1958.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 14th February, 1958, only to those members whose names are registered in the Books of the Company on 6th February, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE.

NOTICE is hereby given that the Annual General Meeting (being the Eighty-second Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday the 10th February, 1958 at 11-0 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1957.

(b) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that act, at such times and places as may be determined by the Directors".

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

(ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

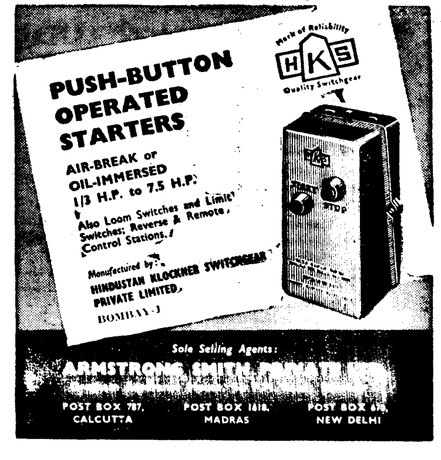
(iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:

(iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".

(v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

(vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor:



(c) That subject to the approval of the Central Government under Section 268 of the Companies Act, 1956, Article 109 of the Articles of Association of the Company be altered by deleting therefrom the third sentence thereof.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 4th February, 1958 to the 10th February, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Director,
Managing Agents.

12, Mission Row,
Calcutta-1.
The 13th January, 1958.

MUTTRA ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Fifty-eighth Ordinary General Meeting (not being an Annual General Meeting) of the abovenamed Company will be held at the Registered Office, No. 15, Shib Thakur Lane, Calcutta-7, on the 31st January, 1958, at 4-45 p.m., for the following purposes :—

1. To receive and consider the Audited Accounts for the half-year ended 30th September, 1956, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

2. To declare a dividend on the Ordinary Shares.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 24th January, 1958 to the 31st January, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,
G. D. BHAGAT,
Chairman.

Calcutta, the 20th December, 1957.

NOTE—The dividend, if declared, will be paid on or after the 31st January, 1958, to those persons who are registered as holders of Ordinary Shares as at that date, or to their mandatees.

Transfer to qualify for the dividend must be LODGED at the Registered Office of the Company by 4 p.m. on the 22nd January, 1958.

EXPLANATORY STATEMENT.

This meeting is being convened to consider the Accounts for the half-year ended 30th September, 1956, in accordance with the provisions of the Company's Articles of Association.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED.

(Incorporated in England)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £3½ per cent net (tax applicable at 8s. 6d. in the £) for the year ended 31st March, 1958. Payment will be made on 15th February, 1958, to those stock-holders whose names are registered in the Company's Stock Register on 27th January, 1958.

Applications for transfers received in this Office before 12 O'clock noon on Monday, the 27th January, 1958, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
I. A. MACPHERSON,
Agent.

VICTORIA HOUSE,
Calcutta, 9th January, 1958.

GONE are the spacious days of the palki, the horse, the camel and the elephant. Today, for speed and comfort, the way to travel is by air—and wherever possible—by Viscount.

The Viscount represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets.

the Viscount way

To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P against the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE U.S.A. GRANTS A BREATHING SPACE

SIGNIFICANCE OF THE NEW LOAN

THE American aid to India announced last week has not come a moment too soon. The drain on the reserves has lessened—thanks to the measures which might, with advantage, have been taken sooner. But the drag on industrial progress has already begun to be felt, and could be expected only to get worse. So might the anxiety and despondency which have been so obvious lately, and which themselves are a serious handicap to any development programme. Now there is some excuse for renewed confidence, thanks to the United States—although there is none for the mismanagement and cheerful disregard for reality which were the main causes of the foreign exchange shortage in the first place. There is nothing in the size of this loan, nor in the way it is to be granted, to suggest that India can now go ahead with all her development schemes, however ambitious and wasteful they might be. It is true that it will probably be the first of many. But there is no reason to suspect that others will follow freely if the Export-Import Bank, or the World Bank should it decide to increase its own commitments to this country, are not satisfied that their resources have been put to good use. There has never been a time when careful house-keeping, realistic budgeting and the maintenance of a strict order of economic priorities, are more essential than they are at this particular moment.

A number of interesting features can be noted about this aid grant. To begin with, it is small compared with India's total needs. That may be the only way obvious to the American authorities of reconciling it with two other intriguing points: that it has had to be granted without the formal approval of Congress and that India has been given priority over a large number of the United States' military allies. This last fact is probably due not so much to the attractions of ensuring this country's neutrality, as some would like to believe—and certainly not to the unflattering references which are made here from time to time about American foreign policies—as to India's reputation as a good credit risk, and to her obvious ability to use resources profitably. It is, after all, one of the unfortunate features of America's military associates that, outside Europe, they are usually unstable, reactionary and wholly unreliable. It is not, therefore, necessary that India align herself with the United States in order that the necessary flow of aid should continue—whatever some people seem to fear. What is essential is that India should go on proving that what is given will be properly used. This probably explains in no small measure the fact that by far the larger part of the American aid will go into projects which have the Export-Import Bank's approval, instead of going straight into the hands of the Indian Government. The Government itself should welcome a safeguard of this kind, considering the number of calls made on its resources which are of doubtful economic merit, but nevertheless difficult to resist for political reasons.

The fact that the United States is prepared to back the Indian economy, even if in a guarded and experimental fashion, owes a good deal to the explanations given by Mr. Krishnamachari and his delegation in Washington last year. And the waiving of the usual provision governing all Export-Import Bank loans—that they must go exclusively to projects in the private sector—shows that the Americans have grasped the notion that in India government initiative is indispensable to rapid progress. This shows a welcome appreciation of the Indian position, and one which probably does not come easily to the American mind. But there is obviously no inclination to take risks with the kind of impracticable socialistic ambitions which resulted, for example, in the fixing of the present coal-output targets in the second five year plan. The money will go to specific projects, and the choice of these will now, presumably, be made on severely practical rather than ideological grounds. This is a measure of American good sense, and can be welcomed in India by anybody with the long-term interests of the country at heart. The proposal for increased food shipments under PL 480, is also a mark of wisdom. But, as Mr. Nehru appeared to feel when he emphasised the need for increased home food production at the Pragjyotishpur Congress session last week-end, this willingness to supply India's marginal food requirements is no invitation to neglect the problem involved. Steel plants and heavy engineering factories have excellent propaganda appeal and can be useful at election times. But they are no substitute for a full stomach, and against the day when capitalistic America is no longer willing or able to underwrite India's socialistic economy, realistic plans are needed to ensure that whatever happens to the more spectacular development projects, the people of India will at least have enough to eat.

There is, of course, a number of disadvantages in the way the aid has been granted. The most noticeable is that the loan from the Export-Import Bank will have to be spent in the United States itself. This will ensure the best quality equipment; but it also means that the $157-million loan will not be worth as much as it would if spent on the world's markets. It is not, however, likely to narrow the choice of purchases; the United States produces everything India is likely to need. But the disadvantages of not being able to spend the money in the cheapest market is not one which can be overlooked, and to it must be added the fact that the loan will be useless for meeting commitments already outstanding. Another aspect of this kind of tied assistance is that it does not help, directly, to maintain the value of the rupee. This is probably not of great importance at the present time; there are already enough controls to ensure that a *de jure* devaluation will be unnecessary, and anyway the $67-million allotment from President Eisenhower's special fund will help the general reserves. But there is still little support here against the kind of *de facto* devaluation which occurs on the world's free markets and which can be damaging enough for the long-term health of India's currency and trade. Yet another disadvantage is probably the fact that *one more* agency has now been added to the already impressive total of those directing United States assistance to this country. Finally, there is the telling point that a small loan of this kind, implying though not promising further grants later, does not permit the kind of long-term planning which is necessary for large-scale projects such as railway extensions, steel plants and heavy machinery factories. The only consolation here is that by encouraging India to go ahead with what she has planned, the United States is committing itself morally to see the job through to the end—provided there is no radical change in this country's determination to progress.

This latest grant of loan assistance, with the probability of more to follow, now makes a considerable difference to India's economic prospects as a whole, and to those of the private sector in particular. There seems little doubt that it will encourage the growth of the kind of efficient, far-sighted capitalism which alone will convince the present advocates of pure socialism, or even communism, that they are backing the wrong horse. Whatever has been said at last week-end's Pragjyotishpur Congress session about policies being unchangeable, reality and time are bound to modify established views, and it is better that these should be reshaped in the optimistic light of economic progress, than according to the despair which would follow complete collapse. If India does not intend to leave her *tight-rope voluntarily*, this aid should guarantee that she is not forced off. In this newly-ensured freedom of action, however, it would certainly be unwise, either by word or deed, to make it difficult, for the United States to continue being generous in future.

The faith which the United States now appears to be renewing in this country should encourage others. Already there is West German assistance to count on. Certain credit facilities from the French Government appear to have been made available, while a credit from Japan is in process of negotiation. Although it is too early yet to set a figure for all these possibilities, the total should not fall far short of $600 million, or round about, say, Rs. 300 crores. This is less than half the Rs. 800 crores which has been estimated to be the foreign exchange gap in the second plan. But it is a substantial step towards it, and is certainly large enough to dispel many of the fears which were being expressed a few months ago. It now remains to take full advantage of the breathing space so generously provided.

CONGRESS LOOKS ITS AGE

THAT the Indian National Congress, at its sixty-third session, should look its age, would be no serious criticism of the country's premier political party were it not for the fact that the art of growing old—a very difficult one for individuals, and perhaps more so for institutions—does not appear to have been learnt very well. The result was an inordinate tendency for what the Americans inelegantly but vividly call "me-tooism." The Conservative Party of Great Britain, with which the Congress may have more in common than the latter will readily admit, also suffers from the same weakness to some extent, but in its effort to be younger than the youngest—which really means being what again the Americans vulgarly call the "mostest" in radicalism—the Congress creates more problems than it solves. The consequent contradictions within the Party became painfully apparent when some delegates complained that very little progress had been made towards the achievement of socialism (by which different Congressmen mean different things) and Mr. Nehru had to declare in rather exaggerated terms that no Power in the world would be able to deflect India from her chosen path of democratic socialism. The terms seemed exaggerated because, first, there are doubters in the Congress itself so far as socialism is concerned, and second, no foreign Power has shown any marked desire to subvert Indian socialism.

The session ended one day earlier than scheduled, and reports do not conceal that there was a visible lack of enthusiasm on the second day. Characteristically enough, it is Mr. Nehru (still the hero of the Party, regardless of who occupies the Presidential pillow) who was disappointed at this absence of popular zeal, although it was he who had earlier asked for a businesslike session. Be that as it may, some business was transacted all right, and the few who might have expected any sharp departure from accepted policies have only themselves to thank for their disappointment. Sharp changes in Party line indicate more weakness than strength, and if consistency were the only criterion of Party strength, the Congress could well claim that it has emerged stronger after its sixty-third session.

It is a measure of the Congress leadership's hold on the rank and file that, after only a very limited amount of debate, all the six resolutions were passed unanimously, including the one on language. This last created the maximum controversy—fur-

ther evidence of the emotional cleavage the threat to impose Hindi has already led to. The original resolution, which sought to chide the opponents of Hindi, was modified, and it now seems probable that English will continue to be at least one of the official languages of India even after 1965. It has already been suggested in some quarters that the Hindi militants may have staged what looks like a strategic retreat. Whatever the truth of this, the fact that the notion is widespread makes it almost certain that some form of agitation will continue on the assumption, which only the north can dispel, that only popular pressure wrenched the recent concession from the Congress High Command and no less will be needed to prevent large areas and their people being suddenly placed at a language disadvantage. That there has been no abandonment of the intention of the north to have Hindi as the official language of the country is obvious from the compromise resolution.

The Congress rightly congratulates itself on the national support its foreign policy enjoys, although here too the concrete contents of the policy probably mean different things to different Congressmen. In the last of his ten public speeches, on Sunday, Mr. Nehru again sounded rather exaggerated, and this when India's policy of non-alignment had begun to be understood better in many capitals hitherto critical. He was wholly right in refusing to change his foreign policy either under the threat of political intimidation or under the temptation of economic aid; few potential helpers have in fact thought in these terms. But vague references to foreign attempts to undermine India's sovereignty create in the emotional masses a certain antipathy to the world outside—clearly the reverse of Mr. Nehru's intention. The past week has seen welcome indications of much-needed aid from a variety of sources, and it would be unfortunate if Indian appreciation of this, which is undoubtedly genuine, appeared inadequate to India's friends.

* * * *

Although nobody said so in so many words, on land reform Congress thinking is perhaps slowly veering towards realism. It is no secret that such changes in the land tenure system as have been brought about may or may not have led to greater social justice but they certainly have not resulted in increased food production, the country's first need. A system, inefficient in all conscience, was suddenly abolished, and nothing adequate has so far been put in its place. Some of the non-official reforms carried out by other types of persuasion may also have led to a greater fragmentation of holdings than is good for organised agriculture. Hence the new emphasis on co-operatives. Welcome as this is, it is yet to be proved that the Indian peasant is fully prepared for it. The record of co-operation in India (except in the Punjab) is a dismal one; and the Congress may well be wrong in underrating the need for rural leadership, which for some time may have to come from outside the villages.

On education there was more discussion than is usual at these Congress sessions, which is not to say that anything very valuable came of it. Once again the dichotomy within the Congress showed itself, and accusations that leaders and Ministers sent their children to schools very different from those they recommended to the country were not adequately answered. A nostalgic attitude to basic education still rules the heart of too many Congressmen, and those who practise otherwise than they profess have not the courage yet to reject beliefs proven false by experience.

* * * *

Organisationally, the Congress has yet to repair itself to the extent needed. Amendments to the Party's constitution have not been found insurmountable by those unwilling to part with offices they have held for years. At one time the Congress used to send to the Government only its second-raters, keeping the best in the Party. Wholly rightly, the reverse is the case today. On the other hand, the Party needs brains too and these have not been in abundance in recent years. This has inevitably led to a complete identification of the Party with the Government, at least in the popular mind, and something of the aversion to office the Congress itself created in its non-co-operating days still attaches to the Congress Party. This unhelpful popular attitude to office is encouraged by the contemptuous terms in which some Ministers, not excluding the Prime Minister, often speak of the unimportance of holding office.

There was a youth congregation at Pragjyotishpur, and in its smallness may lie the most disturbing aspect of the future of the Congress Party. It is just not attracting the youth, which sees few opportunities of a share in the leadership because of the old guard's unconcealed determination to cling to power—both in the Party and in the Government—until death do them part. In too many minds is the Congress regarded as the Party of yesterday. That the Congress should take note of this is all to the good, but to conclude therefrom that, to redress this, it must adopt adolescent postures on socialism, etcetera, may do the Party more harm than good. Being itself may be a better answer than trying to be something else.

THE CITY OF LONDON AND THE STERLING AREA

THE British Broadcasting Corporation operates a Third Programme, directed towards the minority of the public that is interested in serious subjects. One of the subjects recently discussed on this programme was the sterling area. In relation to this subject, two financial experts gave their estimates of the value in foreign exchange of the services of the City of London; and their estimates were astonishingly different. Mr. A. C. L. Day, Reader in the University of London, suggested that the net earnings arising from the international financial services provided by London were probably not more than £20 million a year and would certainly not exceed £30 million. Mr. John Wood, who works in the City (in a merchant bank), estimated these earnings at approximately £110 million a year.

Such a disparity is of more than academic interest. Much of the controversy concerning the sterling area is focussed on the question whether it is worth preserving as a support for Britain's "invisible" earnings—for otherwise, so many people argue these days, it has no obvious advantages for Britain. There ought to be an authoritative, and reasonably accurate, estimate of the earnings from these financial services. The Treasury makes its own estimate when it calculates the half-yearly balance of payments, but bankers suspect that there is as much guesswork as precise calculation in the estimate. Mr. Day and Mr. Wood were probably calculating on different bases. Mr. Day did not explain his workings, whereas Mr. Wood presented figures to support his conclusion. Besides banking and related services, Mr. Wood included insurance, commodity trading, and the commissions earned on negotiation of shipping freights on the Baltic Exchange. Insurance was, indeed, his biggest item, calculated to earn about £40 million annually in foreign exchange. Second he put the commodity and merchanting markets, with a figure of £30 million net; third the Baltic Exchange, £20 million. Thus, the services more strictly related to banking account for a relatively small part of these "invisibles", in Mr. Wood's estimation. He allowed £10 million for fees and commissions on loans and credits, in their various forms, £10 million for general banking services (including foreign exchange).

Even if we accept the much larger of these two estimates of the external earnings of the City of London, we are not very near to an estimate of the monetary value of the sterling area. The sterling countries may predominate in this business, but they do not account for all of it. As members of the sterling area they may turn naturally to London for such services, but there is no reason to suppose that they would promptly withdraw their business from London if the sterling area were disbanded. The truth is that in financial services as in other respects the sterling countries use London only while it is useful to them. These countries tend naturally to develop their own financial services as their economies mature, and it must be supposed that they will gradually move their business away from London, whether the sterling area continues in its present form or not.

* * * *

An essential of the sterling area is the pooling in a central reserve of most of the gold and dollars earned in international commerce. In the past the reserve has benefited Britain more than the overseas territories, for Britain has a deficit in her trade with the dollar area and can use the surplus dollars of other sterling countries to balance her accounts. This function is now mainly inoperative and, in any case, less important than in the past. As a whole, the overseas sterling countries are tending to draw from the reserve more than they contribute to it. Britain, on the other hand, has increased her exports to the dollar area so that her own deficiency of dollars on commercial account is of manageable proportions. However, she needs a surplus to provide for such special outgoings as the repayment of dollar credits and the interest thereon. It is at this point that criticism of the sterling area becomes vocal in London. People are questioning the merits of a system that can impose a severe strain on the reserve in times such as the present, when sterling countries need money for development and to balance trading deficits at the same time as Britain is struggling to build up the reserve and stabilise the currency.

The overseas territories have their own grievances. They have contributed substantially to the central reserve in the past and have, by this and other means, built up large sterling balances in London; but they have not been able to draw all the dollars that they could usefully have spent, nor has it always been easy to negotiate drafts on their sterling balances. Moreover, the value of these balances has seriously depreciated. The devaluation of sterling in 1949 devalued the sterling balances, especially in terms of dollars. To the extent that they have been invested in Government stocks they have suffered from the severe depreciation of these securities, and even money invested in Treasury bills has at times suffered severe temporary depreciation. All these troubles have resulted from the failure of the British authorities to maintain the internal value of the currency, in terms of goods and services. The Stationery Office published at the end of November a booklet entitled *The Pound and our Future*, which stated as one of its main arguments for stable money: "The reserves of many countries are held in our currency; we have a duty to maintain its value." To which the owners of those reserves may well reply: "Better late than never."

The sterling area is now performing a reasonable service for the overseas countries, but it cannot provide them with all the capital that they need for their development nor all the "unrequited" British exports that the sterling balances might pay for. The system's benefits to Britain are diminishing. Yet the sterling area will probably remain until made superfluous by convertibility of sterling.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

MOST WORLD BANK LOANS FOR ASIA

AS the demand for private foreign capital is increasing, it should gratify the under-developed countries, especially those in Asia, that the World Bank has come to be an important source of development funds. It is true that its loans are not a complete substitute for the former, as they do not bring with them the managerial and technical expertise which private capital usually does. But where projects concerning transport, power, ports and other basic facilities for large-scale industrial development are financed with funds borrowed from the Bank, they provide valuable relief to the countries concerned by reducing the strain on their balance of payments and on their domestic resources. The figures relating to the Bank's operations during the past year show that its 26 loans totalling $502.4 million went to finance such projects. Asia got 70 percent of the total, while Africa got 15 percent, Latin America 10 percent and Europe 5 percent. The loans were made to finance specific projects such as highway schemes, railway and other transport plans, electric power development, industry and agriculture. The first two, between them, received most of the loans; power projects were a distant second, with industry, general development and agriculture following in that order. The projects which were completed with the loans from the Bank were Tatas' 125,000 kW electric plant in Trombay, India, the big highway scheme of Ethiopia which has led to a doubling of the shipment of that country's main exports, Australia's imports of essential equipment for various sectors of her economy, and a big newsprint mill in Chile. Iran came for a loan for the first time and was among the larger borrowers, with $75 million for her seven year plan. Thailand took $66 million for the Yanhee electricity power project and the Belgian Congo borrowed $40 million for road construction schemes. An agreement with Italy, to co-operate in a scheme for studying the preliminaries of a nuclear power station to be set up in that country, marked a decisive stage in the diversification of the Bank's activities. It is an experience from which many member countries might benefit in the future.

* * * *

The Bank's sister institution, the International Monetary Fund had a more active year than ever before. It provided member countries with credits totalling $1,000 million, whereas the aggregate of all transactions in previous years totalled $2,000 million. Considering the present state of international trade and the payments disequilibrium which some major trading nations of Europe and developing nations of Asia face from time to time, it is possible that the operations of the Fund for the current year may be on an equally large scale. Apart from providing credit for immediate needs, it has entered into standby arrangements with a number of countries, especially the U.K. The arrangement with the U.K. is the largest of its kind made so far, the amount involved being $1,300 million in currencies held by the Bank. The arrangement was to expire on 22nd December, 1957, but has been extended by a year at the U.K.'s request. India figures among the larger borrowers of credit. She was lent $200 million during the year. Other countries which drew big amounts were France ($262 million), Japan ($125 million) and Argentina ($75 million). Denmark, Belgium, the Netherlands and Brazil also borrowed fairly large amounts. New members of the Fund during the year were Ghana, Ireland, Saudi Arabia and Sudan. An important feature of the Fund's operations was the big demand for U.S. dollars, which is a grim reminder of the fact that the world shortage of the currency persists. The Fund twice had to replenish its holdings of U.S. dollars in amounts of $300 million each time—by selling an equivalent amount of gold to the U.S. Treasury.

* * * *

The new member of this family of international financial institutions—the International Finance Corporation, which was established in July 1956—is proving increasingly popular. Its membership rose to 53 during 1957. During the first full calendar year of its operations, it has agreed to make five investments totalling $5.98 million in electrical, engineering, copper mining and aircraft-repairing enterprises. Almost all its investments are to be made in Latin America, the only other continent being Australia, where the Corporation will participate in a lumber business. It is to be hoped that, in years to come, as the institution gathers more strength, its activities will be extended to the countries of Asia, many of which are now its members.

CURRENT COIN

Ordinaries from Indian Oxygen.—It is reliably reported that an attractive equity offer is likely to be announced soon by Indian Oxygen Ltd., the public company which has been formed from Indian Oxygen and Acetylene Co. Private Ltd. The offer will consist of 600,000 ordinary shares of Rs 10 each, and they will be offered for public subscription at a premium of Rs 3-8 a share. It is expected that the dividend on these shares will be 10 percent, in which case the yield would be 7.4 percent at an issue price of Rs 13-8 a share. This dividend, it is stated, would be four times covered by the past year's profit. The total paid-up capital of the company was recently increased to Rs 2 crores, divided into 2 million shares of Rs 10 each, by the sale of additional shares to the British Oxygen Co. Ltd. Apart from offering a reasonable current yield, the shares seem to have promising prospects for the future. The work which Indian Oxygen does is closely related to industrial development, and its expansion programme is making satisfactory progress. The new factory in Burnpur will, it is expected, go into production shortly and another new one in Khardah, near Calcutta, will be completed soon. It is believed that all the money obtained from the proposed share offer will be used, for the time being, to finance the company's business in this country. Apart from helping meet the rupee counterpart expenditure of the development programme, there will be no need to repatriate any part of the share sale proceeds outside India.

* * * *

Manufacture of Industrial Machinery.—The present production of industrial machinery is worth about Rs. 35 crores a year, compared with less than Rs. 10 crores in 1951 and almost nothing in 1947. It might well exceed Rs. 100 crores in value by the end of the second plan, but will still be only a third of the total estimated requirements. In his presidential address at the Conference of Engineering Industries and Trades convened by the Federation of Indian Chambers of Commerce and Industry, Mr. Babubhai M. Chinai has said that considerable progress is likely to be made during the second plan in diversifying the pattern of production of industrial machinery. Apart from expanding the manufacture of cotton, jute and sugar machinery, as well as machine tools, capacity is being created for making cement and paper machinery. The National Industrial Development Corporation proposes to establish a heavy steel foundry and forge shop, which is essential for the production of heavy and complex machinery. As a result of the surveys made by two expert teams, one from Russia and the other from the United Kingdom, the foundation is to be laid for the creation of capacity for making heavy machinery, including the setting up of an integrated machine-building plant, a heavy structural works, and a heavy plate and vessel works. A plant for manufacturing heavy electrical equipment is already planned for the public sector. "The creation of this capacity should strengthen the base for our industrial development and tend to reduce our dependence on supplies from overseas. One must, of course, state here that it is neither possible nor desirable to become self-sufficient in the matter of production of all types of industrial machinery. As the economy expands, the demand for newer and newer varieties of industrial machinery is bound to grow." Machinery imports amounted to Rs. 110 crores in 1955 and rose to about Rs. 150 crores in 1956. If imports of certain types of electrical machinery, apparatus and appliances are also taken into account, the figure for 1956 would come to Rs. 175 crores or so. The estimated imports of machinery, including electrical machinery, apparatus and appliances are likely to have been around Rs. 220 crores in 1957. The increased imports of industrial machinery and raw materials needed for manufacturing engineering goods have been mainly responsible for the balance of payments crisis, Mr Chinai says.

* * * *

Raw Materials for Foundries.—The shortage of foreign exchange has adversely affected the import of raw materials and capital equipment which the foundries need. Of the 1,500 foundries working, about 300 are receiving their raw material from the Central Government and about 1,200 from State Governments. The demand for pig iron, the main raw material, is estimated at 600,000 tons a year, of which about 450,000 tons is required for the foundry industry in the private sector. Speaking at the annual general meeting of the Indian Foundry Association, Mr. K. L. Jalan, president, has said that the industry has been receiving insufficient allocations for a number of years but the past year has been the worst. The method of allocation has differed from time to time. The variation in the minimum and maximum quarterly allocations has been considerable. They have differed from foundry to foundry. "In the circumstances, it can easily be appreciated as to how difficult it is for a foundry's work to run smoothly and that too without any labour trouble or a rise in the cost of production. Not only have allocations been uneven, but deliveries have been very much delayed with the result that it has not been possible for the foundries to carry on their activity economically." Certain units which consume only graded pig iron find it difficult to get. Similarly, foundries interested in consuming high-grade manganese pig iron have had to accept the low-grade variety because the supply is irregular. A few years ago, sufficient quantities of good scrap were available from the railways, but for the last two years or so the foundries have not received any supply from this source. Because of the shortage, the price of scrap has shot up from Rs. 115 or Rs. 120 a ton to Rs. 280 a ton. Mr. Jalan suggests that

Arabia

In the desert areas of this vast peninsula, time has stood still for centuries. Today, the nomads of the desert still follow the pattern of life laid out generations before them. The form of dress particularly—and this applies throughout Arabia—has not changed with the passing of time. For centuries the Arab woman has worn the loose robe covered by material which can be draped to suit individual tastes.

There is no end to the variety of costumes all over the world.

Wherever you go

—they're good

the supply from the railways should be controlled and distributed by the Government. The supply of hard coke, another important raw material, has also been inadequate. At times, the position has become so serious that some firms have been forced to close their foundries. The shortage of basic raw materials, such as pig iron and hard coke, has been aggravated by the inadequacy of transport facilities. "We consider that in the matter of wagon allotments, some realistic approach should be made particularly for the movement of coal and coke. Simultaneously, vigorous steps should be taken to see that no shortages occur in transit as a result of theft and pilferage, quotas should not be allowed to lapse."

* * * *

New Industries in U.P.—The Planning Commission has sanctioned the establishment of two new factories in Uttar Pradesh. The first of these, a factory for heavy electrical goods, will be set up by G.E.C. in Allahabad. The aluminium factory in Pipri was originally planned for the public sector, but it has now been settled that it will be set up by the Birlas in collaboration with a foreign firm. As for the synthetic rubber factory in Bareilly, it appears that the matter is no longer "under active consideration," so the question whether it will be in the private or the public sector does not arise. The Government of U.P., which has all along been complaining that the allotment of foreign exchange for the State under the second plan was almost entirely for the private sector, may be gratified that the Planning Commission has already granted foreign exchange worth Rs. 4 crores to the public sector in the coming year of the plan and that a similar sum has been promised for the third year. With the current availability of foreign exchange, work on the Rihand Dam will proceed without interruption, and the scheme for doubling the output of the Government cement factory in Churk will also get under way. On the whole, it is expected that the State's plan budget for the coming year will be Rs. 48 crores, of which Rs. 26 crores will come from the Centre. The Chief Minister, Dr. Sampurnanand, has said that his Government does not propose to levy any fresh taxes in the coming budget year although its resources position has suffered slightly on account of the recent changes in the sales tax law and the difficulties in realising the proceeds of tax on inter-State sales. According to him, the understanding between the State Finance Ministers and the Centre not to raise loans in the market individually applies only to the current financial year, and the U.P. Government has every intention of approaching the market for loans in the coming year.

* * * *

Exporting Engineering Goods.—In his presidential speech at the annual general meeting of the Engineering Export Promotion Council, Mr. K. L. Chowdhury has said that the detailed survey of 19 engineering industries which has been undertaken is in its final stages. In addition, the 21 surveys completed last year have been kept up to date. "The Council has been trying to remove the difficulties brought out as a result of these surveys by representing them to the Government or by taking other suitable measures as were found necessary. For the same purpose, the work of collection and compilation of statistics was reorganised". At present India is exporting 112 engineering items to as many as 42 countries. For various reasons, manufacturers have not been as aware of the need to export as has been necessary. There are a number of difficulties which are "inhibiting our efforts at export promotion." Some of them relate to the shortage of raw materials and the lack of competitive strength in certain export markets. The Council has carried out extensive market surveys in Burma, British East Africa, Ethiopia, Sudan, Egypt, Thailand and certain countries of the Middle East. Trade missions have been sent to many countries to create confidence among buyers there. The Council is sending its fourth trade delegation to south-east Asian countries. It will make on-the-spot market surveys, examine the possibilities of exports of engineering goods in that region, study such handicaps as import restrictions and import duties, and arrange for a closer relationship between Indian exporters and overseas importers. According to Mr. Chowdhury, market surveys and the reports of trade delegations have shown that there is very little knowledge of the progress India has achieved since independence and of the range of engineering goods which she can export. "The Council has, therefore, given special attention towards display of engineering goods abroad. In collaboration with the Exhibition Directorate, we have persuaded important engineering firms to participate in exhibitions in Bangkok, Damascus and Peking and in Government showrooms in Teheran, Cairo, Colombo, Bangkok and Djakarta. These displays have invariably been followed by enquiries for our products." As a result, exports of many engineering goods have increased. This seems remarkable considering that many engineering concerns have idle capacity because of the shortage of essential raw materials such as pig iron and steel. There is keen competition in international markets from highly industrialised Western countries and Japan. Referring to the need to increase exports of relatively small items such as metal artware, cutlery, locks and brassware, Mr. Chowdhury suggests the establishment of an Export Promotion Corporation which should act as a commercial organisation. The export trade in these items, when organised, is likely to earn more foreign exchange, he says.

* * * *

An Agricultural University.—It is many years now since the University Education Commission recommended that "agricultural education be recognised as a major national issue." Over these years, the merits and defects of rural universities have been discussed at considerable length, but hardly any action has followed. If all goes well, the first agricultural university in the country will start functioning from July 1959 in Uttar Pradesh. Located in Rudrapur in the Nainital district, the 16,000-acre State-owned Tarai farm will provide the setting for the campus. There will be five separate colleges under a common administration and with an integrated system of teaching. These colleges will be concerned with agriculture, animal husbandry, agricultural technology, home science and basic sciences. The entire Tarai farm, with its estimated assets of Rs. 1½ crores, will be transferred to the university. The Planning Commission has extended its approval and two officers of the U.P. Government are being deputed to the United States to study the working of the Land Grant College there, on which the Rudrapur University is to be modelled. According to the University Education Commission, "the Four-H Clubs represent the best that land grant education affords. The four Hs are the Head, Heart, Hand and Health. They represent the expression of the soul, intellect, hand and bodily welfare." In designing the syllabus at the new university, therefore, care might have to be taken to see that the "students hunger for Shakespeare as well as for soya beans." Agricultural education tends to reflect the national agricultural policy, which at the moment is sadly befogged by the controversy whether collective or co-operative farming can make two ears of corn grow where only one grew before. This was one of the reasons why the University Education Commission, while recommending the establishment of agricultural universities, also strongly pleaded for the setting up of an institute of agricultural policy for research and study aimed at clarifying the overall long-term agricultural policy which may be in accordance with the fundamental aims of the Indian Constitution.

* * * *

Bonus for Colliery Labour.—The Central Deputy Minister for Labour, Mr. Abid Ali, said in reply to a question in the Rajya Sabha recently that about 50 percent or a little less of colliery labour had earned the quarterly bonus since July 1956. The accuracy of the statement has been doubted in coal circles in Calcutta, and an important company has made an analysis of the bonus earned by various categories of labour in its collieries. It is stated that as the collieries are situated in the Jharia and Raniganga fields, they can be considered to represent a cross-section of the industry. An analysis of the figures obtained points to three main conclusions. Firstly, including monthly paid labour, the percentage of workers regularly earning bonus is nearer 65. Secondly, the percentage falls below 50 only in the case of miners and loaders; this generally happens during the second and third quarters, when this type of labour returns to the villages for planting and harvesting before and after the monsoons. Thirdly, of the regular colliery workers (that is, other than miners and loaders), the average number of bonus-earning workers is nearer 80 percent.

* * * *

Cotton-Growing in West U.P.—Something has obviously gone wrong with the U.P. Government's drive for self-sufficiency in cotton. In 1935-36 the State had 800,000 acres under the crop. By 1950-51, the acreage had come down to 150,000. Competition from sugarcane is cited as one of the causes of the steep fall, but it evidently does not account for the whole of it. Under the second five year plan, it is proposed to increase the acreage under cotton to at least 300,000, but so far not more than 65,000 acres have been added. The Cotton Development Officer of U.P. has stated that the high cost of tube-well water is hindering cotton cultivation in west U.P. An acre of canal irrigation costs Rs. 4, but for tube-well water the cost is as high as Rs. 9. If tube-well rates cannot be brought down, the only alternative is for the Government to subsidise the cultivator to the extent of Rs. 5 an acre of one filling. The price of seeds is high at sowing time and the cultivator has difficulty in marketing the crop. At many *mandis* in the State, the price of long-staple cotton is less than that of the *desi* variety. There is hardly any local demand for it, as the American variety cannot be used for filling quilts and mattresses on account of the difficulty of carding. It can only be used by textile mills, but considering the present state of the textile industry in Uttar Pradesh it is doubtful whether the Government's advice to the mills to set up purchasing agencies for long-staple cotton will be acted upon readily. The total consumption of cotton by textile mills in U.P. is about 350,000 bales, all of which are purchased from outside the State. The State itself produces only about 50,000 bales. About 40,000 bales are absorbed in domestic consumption, Gandhi ashrams, etcetera. That leaves the cultivator with 10,000 bales, which are unsaleable. Whether, under the circumstances, the Government should persist in its objective of self-sufficiency in cotton is not quite clear. There is still time to abandon the project, or to shelve it, before more effort and money are sunk.

* * * *

Guaranteeing Export Credits.—In view of the volume of business it handles—about 14 percent of U.K. exports are insured with it—the Export Credits Guarantee Department probably has more experience of the risks of international trade than any other body in the world. The annual accounts just published are unfortunately out of date, being for the financial year ended 31st March, 1957, but they show some of the trends that might be expected in a world in which money has been getting tighter. First, the demand for the services of the Department has greatly increased. Its commercial business in the year 1956-57 totalled £726 million, against £486 million in the previous year. To some extent, the increase is due to a difference in the timing of policies, but it must also be the result of an increase in the desire of the trading community to cover itself by insurance. Next, the claims paid have increased, amounting to £5,411,245, against £2,300,003. It is estimated that over three-quarters of the claims paid will eventually be recovered, from which it may be inferred that this proportion is on account of Governments, as in the exchange difficulties that have arisen in Colombia. This has been a characteristic of trade risks in postwar years: it has been Governments who have failed to find foreign exchange—or even in some cases to balance their Budgets—and who have failed in their commitments, not private customers. Such a state of affairs is typical of inflation and it is a pity that the E.C.G.D. does not distinguish in its accounts between governmental and private defaults. The trends of the two might be a useful pointer to the monetary condition of the world. The heavy losses in the postwar years have been in Brazil, Turkey and Colombia. The last-named made a big contribution to the 1956-57 total of claims paid. Brazil is now, however, contributing on the credit side. Payments from that country must be responsible for a big figure that appears for recoveries. £5,397,007 for 1956-57, against £4,655,940. Recoveries and premium income together exceeded claims paid, with the result that the Department's cumulative credit balance for commercial business rose from £4,781,371 to £8,123,135. The result is satisfactory, but it should be noted that there are enormous liabilities outstanding and that the climate of international payments has deteriorated. The Department's reserves could be quickly used up if a big market for British exports—such as India—got behind with payments.

WORKING HOURS IN JUTE MILLS

As our readers are aware, we have steadily advocated a Saturday half-holiday for our jute mill assistants, and in our issue of January 6th we mentioned that a representation had been made to the Chamber of Commerce with a view to securing a general Saturday half-holiday. The Government of Bengal are also of opinion that the mills should be closed early on Saturday, and on August 12th last addressed a letter to the Jute Manufacturers' Association asking them to arrange for a Saturday half-holiday, failing which there was a gentle hint that the Government might arrange it for them. We are sorry to see that the mills have not been able to come to a right understanding on this matter; indeed there seems to be an unfortunate spirit of distrust among them, and as a result the Committee have addressed the Government stating that the Members of the Association have unanimously expressed their approval of the principle of closing the mills early on Saturday afternoons, but that they are unable to arrive at any practicable plan for carrying the object aimed at into effect by voluntary agreement. This, of course, is nothing more or less than a request to Government to legislate, and we trust that the Government will take the matter in hand promptly. Our own idea is that the mills should be prohibited from working before five in the morning or after eight at night, and that there should be a total prohibition of working on Saturdays and Sundays This would give five days of fifteen hours per day, equal to 75 hours per week, which is considerably in excess of the hours of working in Dundee. There should not of course be any prohibition against repairs being effected on Saturdays or Sundays, but there should be an absolute prohibition of working on Sundays and on Saturdays unless some other day in the week is substituted as a holiday for it.

A DITCHER'S DIARY

THEY do say one should never believe what one reads in newspapers. Although I would never include *Capital*, I am beginning to see the point. When I arrived back from a short visit to Tokyo last week, where I had gone as a guest of Air France, my friends commiserated with me about the weather I had been having. They quoted newspaper reports which appeared while I was away as referring to blizzards, ice and intense cold. In fact, Tokyo experienced nothing of the kind. The weather was just what an English spring ought to be, but so seldom is these days. I was left to conclude that, if Press cables take anything like the time which letters do between Japan and India, these reports were relevant to last winter, not this. The weather was, in fact, one of the reasons I enjoyed my brief stay in Japan; the main one, of course, was the generous hospitality of Air France, who were inaugurating their new service between Delhi and Tokyo. It is an occasional consolation in my profession to be invited somewhere or other to sample this or that. Not all the opportunities turn out to be as enjoyable as this one; not all of them. I regret to say, are as replete with champagne and considerate attention. Now that India's economic ties with Japan are growing, I can see this service becoming increasingly popular in years to come. It might even provide a regular escape for officials and business men from dry, dull Delhi to brighter places further east. It certainly has much to recommend it in this respect; a few hours in Tokyo are enough to remind one that there are places in Asia where people still enjoy themselves and do not attempt to subsist on a diet of economics, politics, traditional culture and enforced morality. By the way, I found another point on which certain Indian newspapers are not to be taken seriously; I might suggest that those who report the rupee as a widely acceptable currency should try to change it sometime, somewhere. I already knew it was not particularly acceptable west and south of India; now I find it is not welcomed to the east either. In fact, the only places I have ever been able to change rupees at the official rate have been London and Singapore. Outside those two centres it is not easy to dispose of them at any price; in Tokyo, nobody will touch them.

* * * *

It is difficult not to agree with Mr. Ananthasayanam Ayyangar, Speaker of the Lok Sabha, that it is time the Hindi-English controversy was ended. If this year's Congress meeting at Pragjyotishpur has done nothing else, it has shown the depth of feeling which exists on both sides, and therefore the need for realistic compromises if the national interest is not to be damaged irreparably. But I must confess surprise at the reason he appears to have given at Tirupati the other day for adopting Hindi. He is reported to have referred to the "embarrassing situation" created in international gatherings due to "our continuing the use of English". And he quoted an incident in which the late Marshal Stalin embarrassed Mrs. Vijayalakshmi Pandit, who was presenting her credentials in English, by asking her whether India had no language of her own. Personally, I would have thought that any embarrassment caused should have been Marshal Stalin's, due to his ignorance and lack of tact. A straightforward answer that India has about fifteen of them might have turned the tables, even if it did not serve India diplomatically. Anyway, surely the vital question of this country's national language is not going to be settled by the probably unpremeditated remarks of a blood-thirsty old tyrant whose talents were never said to include a broad-minded understanding of the problems which existed outside his own frontiers. When looked at like this, I cannot help but feel that Mr. Ayyangar's reasons for subjecting India to the inconveniences and heartaches of promoting Hindi as the national language are rather less than adequate. Nevertheless, his words do give the main clue to the problem, although not necessarily to how it can be solved. The support for Hindi is chiefly the urge of national pride. That is all very well. But national pride is not always an unmixed virtue. It is my guess that if a count were taken, more nations have been destroyed by this single factor than have ever been swept to greatness by it. It would be a pity if a surfeit were to lead to the break-up of this young country before it has time to consolidate itself permanently as a united whole. It is too early to compare the present antagonism between north and south over the language issue with the kind of feelings which led to the break between the northern and southern States of America, and ultimately to the civil war. Let us hope a real comparison will never arise.

* * * *

Some writers too have been prolific producers of personal letters, although this is something I, as a scribe, entirely fail to understand. The reason, of course, is that I am not paid to compose letters. And I am not sure that Mr. Bulganin's letters, numerous, are any more paying from any point of view. Apart from the law of diminishing returns, which operates in more fields than the purely economic, the missives from Moscow are beginning to look rather repetitive, and the one addressed to Mr. Nehru recently is not frightfully original either. The amount of time expended on writing these letters and their replies must be considerable, and when it is remembered that statesmen who should be better engaged in useful work are now wasting their time and energy in writing useless letters, the cynical might wonder whether this is not among the Russian objectives. These diverters of attention do probably attain something by way of propaganda advantage, in as much as some guileless people believe them to be sincere. But it is not by letters, the number thereof, that peace is going to be ensured. In criticising the unreality of a certain variety of prose in the English fiction of pre-Joyce years, George Orwell spoke of the Geneva prose—vague generalities replacing the particular emotions of living men and women. The more strident the demand for another summit conference in Geneva, the more I think of Orwell's phrase, and its application to international diplomacy is surely inconsistent with the urgent times we are told we live in. Heads of Governments meeting in Geneva will generate in the hearts of peoples hopes impossible to satisfy with platitudes unaccompanied by deeds, and a deepening of bitterness will be difficult to avert. I should have thought this was the last thing anybody wanted. Nor is it obvious why an important party to the proposed negotiations should be so resolutely opposed to preparations before meeting. Surely, the former can only contribute to the success of the latter.

* * * *

It was Vic Oliver, the comedian, I think, who once affected surprise at the report that the dockers in Britain had been on strike. He said, "What, the Dockers on strike? They never did a stroke of work, and I know both of them very well." The pun was not a brilliant one. Sir Bernard and Lady Docker had been in the news about that time, and that is what made it mildly amusing. To my knowledge the dockers of Calcutta port have never been famous for overwork either, but what has been going on there recently—meaning, nothing has been going on—is interesting only as further evidence of the continuing weakness of trade unionism in India. As far as I can gather, there was a settlement between authority and the union leaders, and then the latter found they were not really leading anybody except themselves. I am not sure that the union in question is the only one in this position. The strength of others has just not been tested, and so the myth persists that a union leader, merely by virtue of holding office, in fact speaks for his flock. Calcutta must be one of the most expensive ports in the world, and although I have seen almost everybody blamed for this state of affairs—and by people who ought to know better—I cannot remember that labour with its leadership has ever got its due. To bargain for higher and higher wages is undoubtedly a chief function of trade unions, but when they fail to enforce on their members the settlements arrived at by themselves they forfeit their right to represent anybody. It is for workers to choose their spokesmen wisely and well, but since employers have to pay the price for weaknesses in the union or unions (as is often the case) perhaps there should be some method by which employers can satisfy themselves of the representative character of the labour leaders they negotiate with—*before* negotiations begin.

* * * *

French post-impressionist paintings have, I see, regained their place as the world's best hedge against inflation. Oil tankers are just not a good speculation any more. In 1956, thanks to President Nasser, they were easily the best buy, gaining in value about 300 percent. Last year they dropped about 63 percent. All the same, with 237 percent still in hand, there must be many a millionaire who still says a prayer for the impetuous colonel before he tucks into his champagne and caviar. But the demand for collector pieces, whether paintings or rare books and manuscripts, increases steadily, according to the annual review of monetary affairs for 1957, published by our old friend Dr. Pick. It puzzles me sometimes whether the author of the *Pick's World Currency Report* has sufficient faith left in the value of money ever to bother drawing his month's salary cheque. The dismal news, for instance, that in 1957 new "historic lows" were recorded in no less than seventeen world currencies, is enough to shake the most determined optimist. And that was during a year when the only war worth mentioning was a purely local one in Algeria. I see, by the way, that the world's strongest currency was the Hungarian Forint. The year before, it had been the weakest, so I suppose this is a reflection of the more stable conditions the Red Army has managed so efficiently to impose. Next to the Forint for strength came the Yugoslav Dinar—for what reason is difficult to appreciate. The U.S. dollar lost 3 percent of its value: which may disgust Dr. Pick, but which many countries will regard as an extremely modest performance. It will be interesting to see what the *Sputniks* will do to the dollar during 1958; already they have been responsible for the death of that most cherished of Republican Party precepts, the balanced budget. Gold hoarding still appears to retain its fascination as a hedge, I see, although only in countries where the value of money fell by more than 6 percent—a category which would include India, I suppose. And investors in this country were not alone in finding equities a bad risk during 1957; on Wall Street the average loss on industrials was 11.2 percent while railroads lost 36.1 percent. Clearly, the rewards for thrift and providence were even less in 1957 than they have usually been in these post-war years.

BETTER TONE IN STOCK MARKETS

INDUSTRIAL SHARES AND GILT-EDGED RISE

London, 21st January.

ALTHOUGH activity in the stock markets was less throughout the past week, a better tendency developed with the opening of the new account last Wednesday, and the markets generally presented a fairly satisfactory appearance. The main exception were South African gold shares which were out of favour and recorded small losses. Movements in prices, in keeping with the volume of business, were small in other directions. The improvement in the trend, which developed at the opening of the new account, reflected satisfaction with the December overseas trade figures, a rise on Wall Street and President Eisenhower's hopeful views on the U.S. business outlook. The cut in U.S. margin requirements from 70 percent to 50 percent gave an additional stimulus, but the effect was soon lost following Wall Street's disappointing response to the news. Very quiet conditions prevailed after the week-end. There was barely sufficient business to create a decided trend, but the general tone remained satisfactory. The outstanding feature was the renewed firmness of gilt-edged securities in spite of the modest setback in sterling which followed the various statements made after Mr. Thorneycroft's resignation. Small buying persisted in gilt-edged securities, encouraged by the fall in interest rates in the United States and West Germany and a further reduction in the U.K. Treasury bill rate last Friday. The new £500 million Exchequer 5½ percent stock opened around the issue price of £99½ and improved slightly after the week-end. German bonds tended higher in an otherwise quiet foreign bond and rail market. Dollar stocks were slightly higher on balance, but below the best. The better tendency in the industrial market was responsible for numerous small gains, particularly among leading issues, although the general appearance on balance was somewhat irregular. South African gold shares receded steadily with the quarterly reports failing to stimulate interest. Diamonds, however, were firm. Copper and tin shares lost ground. Oil shares at one time showed appreciable gains, but later reacted, and there was little change on balance. The announcement of the issue prices of the new Royal Dutch and Shell Transport shares had no great effect. Selective buying imparted a firmer trend to rubber shares; bid hopes and expectations of overseas trade corporation benefits were the main reasons. Tea shares improved in response to the better trend at the auctions.

The Money Market

The seasonal tax payments bore down more heavily on the money market last week, and credit was in short supply. Application money for the new Government Exchequer stock added to the market's discomfiture. However, there were one or two offsetting factors, such as Government department disbursements and a large number of 63-day maturities which helped cushion the tax payments. These fell due last Thursday when the market had a fairly comfortable day in spite of the fact that the main portion of the week's tax transfers was passed through to the Revenue Department. Monday of last week was an extremely bad day for the market, and due to the stringent supply position which then obtained, the market had to borrow several million from the Bank of England on Tuesday when the Government loan subscriptions opened. The authorities gave sufficient help to keep the market out of the Bank. The bulk of day-to-day loans was obtained at 5½ percent to 6 percent, with a high of 6¼ percent paid during the most acute periods, while a little money was obtained last Thursday at cheaper rates down to 5¼ percent. There was a fair offtake of April and hot bills, mostly at 6⅞ percent, with 6¼ percent conceded under pressure. In spite of the week's difficult conditions, the rate for Treasury bills at the weekly offer fell to £6 5s 10.33d percent. The money market tendered 3d more for the bills at £98 8s 7d in view of the increased competition from outside quarters.

Activity on Wall Street

Long-term U.S. Government obligations last week suffered their sharpest setback in more than two months of rising prices. The Federal bonds gave ground rapidly, dropping more than a point from their recent 1957-58 peak levels in response to the news that the Treasury was considering a new long-term issue in connection with the huge refinancing programme of February. High quality corporates retreated early with the Treasury list, but eventually moved higher on a fair volume. Speculative rail lines were steady, although turnover in them was restricted. Convertibles followed the pattern of the stock market and finished the week higher. In the foreign division, German Nationals were a feature, extending their recent gains by fractions to a couple of points or more. Italians were mixed and Norwegians steady on a light volume. Denmark 4½ percents were traded at their 1957-58 high of $101¼. Greek 6 percents dropped a point early in the period, but later recouped the loss. Australians were mostly higher and Japanese issues lower. Union of South Africa 4½ percents fluctuated to close with a small loss. Chile 3 percents eased a point before attracting support.

Hongkong Gold Steady

The Hongkong gold market ruled comparatively steady last week with the easier trend of sterling counter-acted by the British Chancellor's assurance that sterling would be defended. After initial easiness, the market steadied to close around the week's opening levels. Carry-over charges totalled 110 cents in sellers' favour. The official offtake totalled 2,370 taels, and the unofficial 8,700 taels. Arrivals were 45,000 ounces Forward contracts were done at $(U.S.)37.88 c.i.f., Macao.

Lower Close in Rubber

Although traders in the rubber market last week reported only a moderate aggregate turnover, there were indications of a gradual broadening of interest at current prices. Orders came from Russia, Poland, Czechoslovakia, West Germany, Yugoslavia and Spain. British factories also were in the market. Interest was shown in near and forward shipments of No. 1 sheet and also in the lower grades. Prices eased a little when demand subsided, but there was not much evidence of selling pressure. The close was quiet and an interim gain of 1d a lb was lost. Values finally were about 1d a lb lower on the week. The offtake of sole crepe was very small and supplies on dealers' shelves tended to increase. Sellers tried unsuccessfully to maintain the recent prices, but eventually offers were made freely on the lower basis of 30d a lb for ⅛th inch smooth No. 1 on the spot.

Moderate Buying in Vegetable Oils

From the trading standpoint, most sections of the vegetable oil and oilseeds market found the going heavier last week. Moderate buying interest was detected, but usually at some distance away from selling levels. Higher rates were sought for Canadian linseed and the recent interest on U.K. and French account petered out. Price cuts in groundnuts became more general, but castorseed was still offered with reserve and relatively quiet conditions prevailed. Linseed oil tended to languish, in spite of the rise in seed Groundnut oil again suffered the ill effects of the lower prices taken for nuts and requests for lower bids rarely bore fruit. Castorseed oil was talked a shade higher in India, but further talk of export duty reductions and attractive offers from Brazil kept interest in check.

THE CALCUTTA MONEY MARKET

STERLING RULES STRONG

Tuesday, 21st January.

THERE has been little change in the general level of advances in the Calcutta money market during the past week. The tendency has, of course, been seasonal, and what movement has taken place has been upwards. The interbank market is reported to be dull, but there has been a change in the call rate from 2½ percent to 3 percent. The number of tea and gunny bills which has come to hand during the past week has been normal. Remittance has also been at about the usual level. Sterling has continued strong against the dollar and Continental currencies.

* * * *

Bullion was firm last week and prices improved substantially because of strong bull support in the face of limited arrivals. Silver closed at Rs. 186.12. The price was the same at 76-7/8d in London and the New York quotation stood at 89-7/8 cents.

Gold improved to Rs. 112.25 and there was strong upcountry demand.

* * * *

The return of the State Bank of India for the week ended 10th January, 1958, shows a drop of Rs. 3.24 crores to Rs. 363.24 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 20 lakhs and Rs. 10 lakhs to Rs. 173.93 crores and Rs. 10.23 crores, respectively. Advances, including loans, cash credits, overdrafts and bills bought and discounted have increased by Rs. 5.89 crores to Rs. 180.83 crores. Cash and balances are, in consequence, shown at Rs. 18.08 crores or Rs. 3.18 crores less.

* * * *

The statement of the position of scheduled banks for the week ended 10th January, 1958, shows Demand and Time liabilities at Rs. 699.70 crores (Rs. 15.84 crores on account of borrowings from banks) and Rs. 690.59 crores (Rs. 17.95 crores), compared with Rs. 706.10 crores (Rs. 15.61 crores) and Rs. 692.71 crores (Rs. 17.94 crores), respectively. Cash and balances with the Reserve Bank have declined by Rs. 1.81 crores and Rs. 8.12 crores to Rs. 38.50 crores and Rs. 58.28 crores, respectively. There is a rise of Rs 58 lakhs to Rs. 434.06 crores in investments. Advances and bills discounted at Rs. 881.16 crores show an increase of Rs. 53 lakhs. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.0 percent and 63.4 percent, against 7.6 percent and 63.0 percent.

* * * *

The DEVKARAN NANJEE BANKING COMPANY has made a profit of Rs. 19.30 lakhs, including Rs. 2,13,141 brought in, for the year ended last December. The dividend has been declared at 6 percent, including an interim of 2½ percent. Reserve fund is allocated Rs. 5 lakhs and investment reserve receives Rs. 50,000. The taxation provision amounts to Rs. 8 lakhs, leaving a carry-forward of Rs. 2,80,320.

LONDON FINANCIAL LETTER

PROSPECTS OF CHANGE IN MONETARY POLICY

By Air Mail.

IT is a curious thought that the change of the Treasury Ministers may produce the opposite result to that intended by the Prime Minister and his associates in the dispute. It is now clear that much more was involved than the marginal £50 million of expenditure which was the ostensible reason for the resignation of Mr. Peter Thorneycroft and his two juniors and that the defeat of their policy could have implied a major change in Britain's monetary affairs. But the mere idea caused so much alarm in British financial circles that the Government will probably be compelled to continue, even to reinforce, the policy of monetary stringency—at least until opinion has been lulled into complacency, if it can ever in a situation which is never very far from a crisis. Foreign reaction has been encouraging for its surprising moderation. Indeed, one is tempted to suggest that if the issues had been more clearly understood, sterling would have weakened more and remained weak longer. But, as matters have turned out, there was some reason for confidence. Governments cannot be unquestioningly trusted to follow unpopular policies to their proper conclusion; but if it is shown that the policies are widely supported at home, there is not much opportunity to change them.

The situation is now, however, more than usually confusing. Many people who cannot be accused of political weakness and economic "appeasement" feel that some change of policy is due. Economists as well as business men had noted with approval the new emphasis on expansion in the speeches of the Prime Minister and of some of his colleagues —an emphasis which was noticeably lacking in the statements of the former Chancellor of the Exchequer. If Mr. Thorneycroft had shown his policy to be flexible enough to adapt itself to changing circumstances (and circumstances have certainly changed since severe stringency was imposed last September), these observers would not have been apprehensive. The public is left with the uncomfortable conclusion that, within the Cabinet, both sides in this dispute were in some measure wrong.

THE CENTRAL PROVINCES MANGANESE ORE COMPANY LIMITED

During recent months there have been vague but persistent rumours of take-over bids for the Shares of this Company. The Board wish to state that no negotiations are taking place in this connection and that any suggestion that the Board is seeking a change of ownership of the Company is entirely without foundation.

There are few organisations in the World capable of providing every type of system needed for modern telecommunications networks on a continental or inter-continental scale. S.T.C. is just such an organisation. During three-quarters of a century S.T.C. has developed its resources to embrace every aspect of the art of telecommunications. Radio broadcasting, communication, navigation; line transmission; television transmission; submarine communications; telephony; telegraphy — these are but some examples of S.T.C. activity in research, development and manufacture. Nothing pleases S.T.C. more than to assist in solving new problems in telecommunications. So please remember S.T.C. is at your service for consultation.

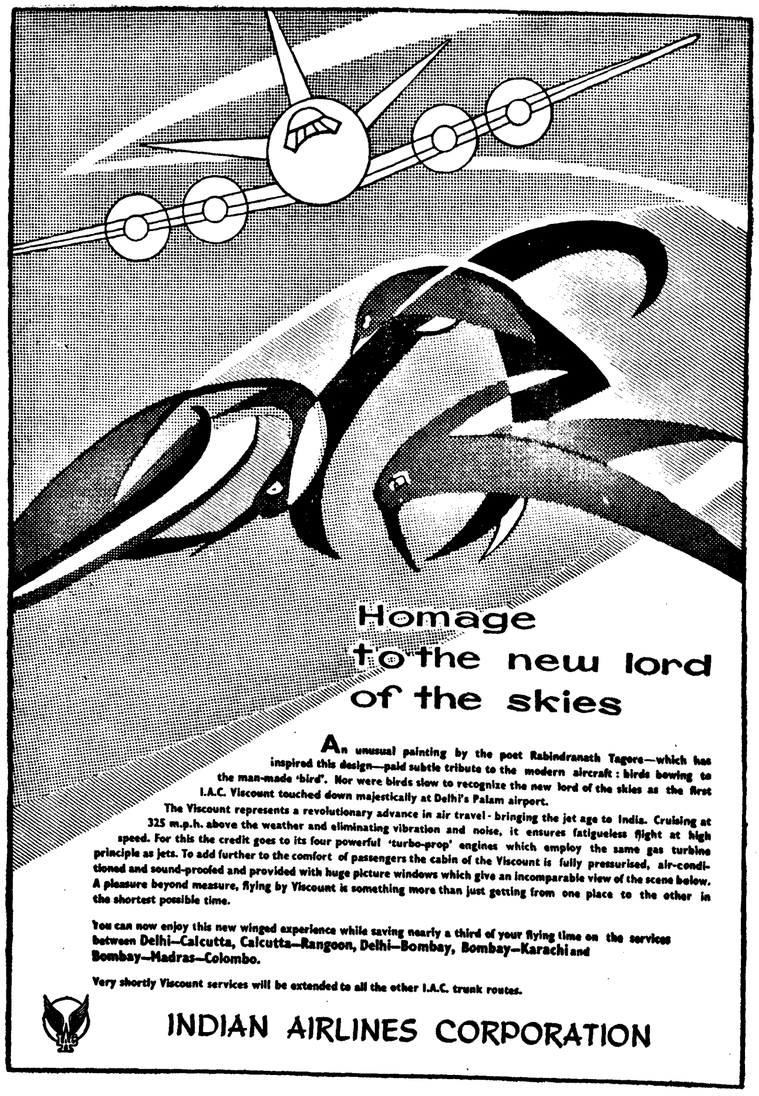
Mr. Thorneycroft and his supporters were, perhaps, too rigid. Mr. Macmillan and his supporters were evidently prepared to commit again the sin that had bedevilled every attempt to overcome inflation in the past: to allow public expenditure to go on increasing because the head of every Government department insists that the needed economies shall be imposed on any other department than his own. For this reason, the City of London has been inclined to deliver its verdict in favour of Mr. Thorneycroft. If the Government cannot get to grips with its own financial problems, it cannot hope to solve the financial problems of the nation. So the new regime may be compelled to continue Mr. Thorneycroft's policy, with a team which lacks the dedication of the one that has resigned.

Declining Interest Rates



One effect of the change of personnel is to raise much earlier than usual discussion of the Budget which is due in April. With the question of Budgetary policy must now be related the question of interest rates. To say that the new Chancellor, Mr. Heathcoat-Amory, is committed to his predecessor's policy of restraint is not to say that he will necessarily use the same means of enforcing that policy. He could, for instance, introduce a very austere Budget and at the same time reduce Bank rate to bring British money rates into line with those of other countries. World interest rates, as seen from London, appear to be moving decidedly downwards. The deliberate easing of policy in the United States is, of course, an important factor in this movement, but there is another important one, which, if permanent, is more fundamental. The high level of interest rates in recent years is attributable, essentially, to the capital hunger of a developing world. But in many countries the pace of development is slowing down. The fall in commodity prices has checked the momentum in the primary-producing countries, and in the manufacturing countries the more urgent post-war tasks have been fulfilled—indeed, some increases in productive capacity have run ahead of effective requirements. It may be that a basic scarcity of capital exists, and will exist for many years; but in the present phase the scarcity does not seem to justify a quite abnormal level of interest rates such as prevails in Britain.

The modification of the capital position, as well as the trend of monetary policies in other countries, must enter into the British Chancellor's calculations. He must not appear to relax; and the idea that he may "toughen" the Budget to allow some latitude in interest rates may not seem convincing when it was prospective laxity in the Budget which caused the recent upheaval. But, as the Budget will be scrutinised with peculiarly little sympathy this year, it may be surprisingly "honest", and a Chancellor who is seeking any means to effect economy will not be indifferent to the fact that the rise in interest rates has raised the annual cost of the national debt by some £200 million since the use of Bank rate as an instrument of control was again taken up in 1951.

Cost of Borrowing

This month's issue of £500 million 5½ percent Exchequer stock maturing about eight years hence may not imply that the authorities foresee an early decline in the cost of borrowing, but it does suggest that they are unwilling to commit themselves to a heavy burden of interest for a long time to come. It is, indeed, the latter interpretation that seems the more convincing in the light of the Treasury's operations in the comparatively recent past. In the main, early maturing issues have been avoided, because it might be difficult to arrange combined repayment and conversion without additional borrowing through the inflationary medium of Treasury bills. The alternative has been the costly procedure of offering long-dated stocks on unfavourable terms. These stocks have been in the hands of Government departments and have not been effectively a part of the national debt until sold. It seems that a large proportion of them has been sold (the expansion of Treasury bills in the period of deficit before the beginning of the current quarter-year was thereby moderated) and that the new issue is intended to supplement the departments' supply, for subsequent sale at comparatively moderate interest rates.

The market is not yet willing to absorb a substantial quantity of Government stock at one time, but there is no doubt that money, available for investment, is accumulating. The nation's savings last year were much more impressive than would appear from the net surplus of only £76 million contributed to National Savings (the "small savings" media of the Government), large amounts having flowed into life assurance companies and building societies, and also into hire-purchase finance companies. Much of such savings is not even indirectly made available to the Government, and the diversion from National Savings has made the Government's financing problem more difficult.

An unusual painting by the poet Rabindranath Tagore—which has inspired this design—paid subtle tribute to the modern aircraft: birds bowing to the man-made 'bird'. Nor were birds slow to recognize the new lord of the skies as the first I.A.C. Viscount touched down majestically at Delhi's Palam airport.

The Viscount represents a revolutionary advance in air travel - bringing the jet age to India. Cruising at 325 m.p.h. above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets. To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below. A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience while saving nearly a third of your flying time on the services between Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

INDIAN AIRLINES CORPORATION

Stocks and Shares

SENTIMENT IMPROVES ON U.S. LOAN AND T.I.S.C.O. BONUS ANNOUNCEMENTS

SLIGHT PROFIT-TAKING IN TEAS

Tuesday Evening.

THE Indian economy's shot in the arm—the $225 million U.S. loan—has helped to put new life into the stock market this week. Share prices responded by moving up on a wide front. Indian Irons crossed Rs. 20 for the first time since March 1957 and, in most other sections, notable increases were recorded. Another piece of encouraging news that helped the recovery was the announcement of the T.I.S.C.O. jubilee bonus issue of one new share for every five held. It is true that business is still small and the biggest gains have been mostly in the speculative counters, but it is several months since the market saw even the limited activity which has taken place in the past week.

There is no tendency to exaggerate the significance of these events, or to believe that the investment outlook has radically changed for the better. The amount of the U.S. loan is, in itself, small and will not go very far towards filling the foreign exchange gap in the plan. Even allowing for prospects of further aid from the same source, the moratorium on Rourkela payments to West Germany and small amounts from Russia, France and Switzerland, operators are aware that the resources problem is still far from being solved. The T.I.S.C.O. bonus issue is of interest chiefly to the shareholders concerned and has hardly any wider significance.

Market interest centres at present on the prospects that next month's Budget will contain some tax concessions of importance. So far as can be judged from the proceedings at Pragjyotishpur, the signs are not propitious. Protestations of continued devotion to Avadi ideals, assurance that banks "and other things" will be nationalised when the time comes, declarations that hopes of foreign aid would not deflect the Government either from its foreign policy or its socialism, do not sound to market ears like the prelude to a more liberal policy towards private enterprise. As long as such uncertainties persist—that is until they are dispelled by the Budget—it is thought unlikely that any recovery movement can go far.

Sentiment in the coal section was adversely affected by the postponement of any announcement about the selling prices of coal until after March.

Tea shares improved further, as a result of higher auction prices, and hopes of some measure of tax relief in the form of a reduction in export duty on common teas. The higher share prices however attracted some healthy profit-taking towards the close.

Due to the comfortable conditions in the money market, there was a good enquiry for selected short and medium-dated Government loans. Long-dated issues, however, were inclined to have more sellers than buyers. Three percent Conversion Loan 1986 was well maintained at Rs. 71.05 with the Reserve Bank a buyer at Rs. 71.

Except for a small enquiry for selected miscellaneous preference shares, this section was dull and neglected.

Bank shares were steady with Punjab National and United Commercial being supported at the higher rates of Rs. 52 and Rs. 61.75, against opening quotations of Rs. 50.50 and Rs. 60, respectively.

Railway shares were featureless and only one transaction was recorded, in Dehri-Rohtas at Rs. 10.

There was nothing of interest in cotton shares except for a slight improvement in Elgin mills from Rs. 12.87 to Rs. 13.12. Kesoram in contrast were marked down from Rs. 10.37 to Rs. 10.25 and New Victoria from Rs. 1.31 to Rs. 1.21.

The coal section experienced one of its dullest sessions. Only four shares were transacted during the week, namely Bengal around Rs. 233, Bharat Collieries at Rs. 6, Burrakur at Rs. 22.12 and Central India at Rs. 6.37, which were approximately the rates at which these were quoted a week ago.

Jute shares displayed a mixed trend as will be seen from the following table:

	Opening 16th Jan., 1958	Closing 21st Jan., 1958
	Rs.	Rs.
Birla	14.25	14.37
Howrah	13.62	13.87
Kinnison	117	112
Orient	80	78
Union	102	105

The recent enquiry for National Jute shares appears to have abated temporarily and the price was marked down from Rs. 25.85 to Rs. 24.95.

In electrics, the feature was Agra which improved from Rs. 118 to Rs. 122.

In sugar, Carew were slightly better at Rs 5.94, S.K.G recovered from Rs 8.75 to Rs. 9, and Ramnugger from Rs 18.94 to Rs. 19.50.

In engineering, Indian Iron and Steel fluctuated between Rs. 19.28 and Rs. 20.11, to close at the latter rate. Braithwaite rose from Rs. 26.12 to Rs. 26.50 and Guest, Keen, Williams were strong at Rs. 28.87. Jessop and Co. were fairly steady at around Rs. 20.75 and Textile Machinery at Rs. 16.55.

In paper, India Paper Pulp were better at Rs. 19.31, as were Titaghur at Rs. 32.12. Orient Paper were taken at Rs. 23.80 against an opening price of Rs. 23.50.

In cement, Ashoka were better at Rs. 7.87 and Orissa changed hands at Rs. 12.62. Sone Valley were neglected at Rs. 4.50.

In shipping, India Steamship were shaded at Rs. 11.81 after being done up to Rs. 12. India General Navigation spurted from Rs. 53 to Rs. 55.50.

In the miscellaneous group, Alkali and Chemical were better at Rs. 13.37 as were Angelo Brothers at Rs. 17.75. British India Corporation were dull at Rs. 3.85 while Dunlop Rubber were well supported at the higher rate of Rs. 22. Hindustan Motors rose today from Rs. 5.69 to Rs. 6.19. India Aluminium were slightly easier at Rs. 12.75 but Indian Cables were in demand at the higher rate of Rs. 26.37. Indian Wood Products were better at Rs. 42.87 as were National Carbon at Rs. 24.50. Rohtas Industries were supported at Rs. 16. National Rubber at Rs. 6.50 and Philips India at Rs. 13.94. Rallis spurted today to Rs. 28.50.

In the mining group, Indian Copper moved narrowly around Rs. 2.88 and Burma Mines were depressed at Rs. 1.66. Metal Corporation recovered smartly from Rs. 5.12 to Rs. 5.81.

Tea shares met with profit-taking at the higher level and prices were trimmed down at the close as will be seen from the following table:

	Opening 16th Jan., 1958	Closing 21st Jan., 1958
	Rs.	Rs.
Bishnauth ...	19.62	18.75
Brooke Bond ...	17.62	17.25
Duffla ghur ...	30.25	30
Hasimara ...	23.50	23.25

after allocating Rs. 2.05 lakhs for taxation provision. The ordinary dividend has been halved to 5 percent to absorb Rs. 1 lakh. Capital reserve is allocated Rs. 14,733, while an amount of Rs. 73,000 has been transferred from reserve. The carry-forward is Rs. 14,532, against Rs. 37,612 brought in. The directors do not consider the results satisfactory. The company's holdings in jute mills, collieries, tea and miscellaneous companies have shown "a decrease in dividends, and the interest charge on the company's overdrafts has shown a marked increase because of successive rises in the rates of interest charged by the banks. Coupled with this is the very heavy burden of taxation imposed by the Finance (No. 2) Act, 1957, and the Wealth Tax Act, 1957, which has resulted in a further charge for the assessment year 1957-58 of over Rs. 34,000, and a provision for wealth tax amounting to Rs. 38,600." The total market value of the investments for which quotations are available, together with the unquoted investments as valued by the directors, exceeds the book value as at 30th September, 1957, by Rs. 9,299.

* * * *

The revenue profit of the UNITED PROVINCES ELECTRIC SUPPLY COMPANY has improved from Rs. 86 lakhs to Rs. 90.98 lakhs for the year ended last March. The dividend has been maintained at 5 percent for the half-year ended last March to absorb Rs. 2.80 lakhs. General reserve is allocated Rs. 3.30 lakhs. An amount of Rs. 2 lakhs is transferred to the debenture redemption reserve and the statutory contingencies reserve receives Rs. 1.71 lakhs, leaving a carry-forward of Rs. 80,072, against Rs. 80,728 brought in. The directors state that satisfactory progress is being maintained and in view of the stabilised position, the cash discount for prompt payment of bills covered by the company's scale of charges has been raised from 3nP to 6nP for each whole rupee of the consumer's bill from 1st January, 1958.

* * * *

The profit of the NAGA HILLS TEA CO. LTD. has improved from Rs. 60,580 to Rs. 1,72,996 for the year ended December 1956. An interim dividend of Rs. 3 a share was paid, and this has been declared as the final dividend for the year. Taxation reserve is allocated Rs. 82,000 and an amount of Rs. 774 is transferred to capital reserve. The carry-forward is Rs. 2,027 against Rs. 5,571 brought in. The crop increased from 8,344 maunds to 9,248 maunds. The average sale price rose from 26.98 annas to 28.40 annas a lb. Estimates for 1957 have been framed for a crop of 8,500 maunds at a cost of Rs. 9.19 lakhs.

Bombay Market

PRICES STEADY BUT INVESTORS REMAIN CAUTIOUS

INCREASED CLOTH PRODUCTION HELPS SENTIMENT

Tuesday Evening

THE Bombay stock market was steady last week and speculative counters in particular received most attention. Investors made selective purchases and were inclined to be cautious in view of the forthcoming Budget. An improvement in the cloth market, coupled with increased production of piecegoods last year, helped sentiment but business in mill shares was slow.

Tata Steel were boosted up to Rs. 173.50 on the report that the directors of the company have decided to issue ordinary bonus shares in the proportion of one for every five held. Strong support from Calcutta interests were also regarded as an additional stimulating factor. Indian Iron rose to Rs. 19.08. Tata Locomotive gained at Rs. 143.75 on replacement buying and Premier Construction were higher at Rs. 163. Alcock Ashdown were neglected at Rs. 217.50, as the Bombay stock market has banned trading in a large number of Mundhra group of shares. Automobile shares were neglected, and Premier Automobiles were bought at Rs. 88. Hindustan Motors at Rs. 5.88 evoked practically no buying interest.

Mill shares were steady and only minor gains were made. Bombay Dyeing were transacted at Rs. 52 and Svadeshi came to hand at Rs. 173. Kohinoor were bought at Rs. 269 and Simplex realised Rs. 160.50. India United Ordinary were sold at Rs. 9.92 and Apollo were shaded at Rs. 2. Century came to hand at Rs. 400 and influential support was seen in the scrip.

Among miscellaneous shares, Associated Cement were maintained at Rs. 154.50 and Digvijay were bought at Rs. 134.50. Sugar shares were steady, and Belapur were done at Rs. 234.75. Phalton were placed at Rs. 149. Steamship company shares were firm on prospects of increased earnings. Business passed in India Steamship at the higher price of Rs. 11.69 and Scindia Steam were transacted at Rs. 17.52. Great Eastern Shipping were a shade higher at Rs. 20.04 on bear-covering. Mining shares were quiet because of further falls in the price of metals. Shivrajpur Syndicate were sold at Rs. 85. National Rayon recovered to Rs. 223 on strong speculative support and Bombay-Burmah reacted to Rs. 540 on profit-taking. Tata Chemicals declined further to Rs. 12.56 on pressure of new shares.

Good reports from the banking companies for the year ended last December helped improve sentiment in the section. Bank of Baroda were quoted at Rs. 106 and Central Bank were done at Rs. 52.80. Insurance shares were neglected and fluctuations were narrow. New India Assurance were transacted at Rs. 49.50.

Electricity supply companies met with scattered investment interest, and Ahmedabad Electric were maintained at Rs. 94.80. Tata Power came to hand at Rs. 1,138.75.

The Story of Oil—5

Mapping buried rocks

Geophysics, which is the science of the earth's physical structure, aids the search for petroleum by making it possible to study the characteristics of rock layers buried deep in the earth's crust.

The geophysicist's main "tools" for this job are the gravity meter, the magnetometer, and the seismograph. The gravity meter and the magnetometer, as their names imply, measure the pull of gravity and the magnetic force of the earth. For the sedimentary rocks which may contain oil are lighter than others, and they are less "magnetic" than the harder rocks which never contain oil.

With the seismograph, the geophysicist can measure the intensity and timing of earth tremors. The men of a seismic crew bore a shallow hole in the ground, lower a charge of dynamite into it and set it off. The shock waves produced by this miniature earthquake travel down, hit the layers of rocks beneath and bounce back to the surface where they are recorded by the seismograph. The waves are reflected strongly from hard rock and less strongly from soft rock. The length of time they take to reach a particular layer and to return indicates the depth of the rock.

All this information is recorded in the form of wavy lines on a chart. By setting off explosions at a number of points it is possible to map the various buried rock formations with a fair degree of accuracy.

When all the results of a geophysical survey have been compared, it may be possible to locate a rock formation that might prove to be oil-bearing. But even if such a trap is found, the only way of proving whether or not it contains oil is by drilling a test well.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

B.O.A.C. ORDERS GIANT VC-10 JET AIRLINERS

B.O.A.C. has signed a £60 million contract for 35 Vickers *VC-10* jet airliners: The *VC-10*, which is expected to make its first flight in 1961, will be the biggest British airliner ever, capable of seating up to 150 passengers. The B.O.A.C. order does not include the cost of spares, but it is the biggest airline order ever placed in Britain, and the Corporation has taken an option on 20 more *VC-10s*. The giant airliner will be powered by four Rolls-Royce Conway engines, mounted in the rear, making for an exceptionally quiet cabin. The *VC-10*, described by the airline as a potential world-beater, was originally intended for its eastern and African routes, but will now also be used for non-stop trans-atlantic flights. The design of the airliner incorporates a number of features giving exceptionally good airfield performance, particularly in conditions of high temperature and high aerodrome altitude. Other key points are its economy and flexibility. The whole *VC-10* project is Vickers-financed, and a substantial fleet is expected to be delivered by 1963. The Managing Director (Aircraft) of Vickers-Armstrongs Ltd., Mr. George R. Edwards, has stated that the *VC-10*, though later than American competitors, offers significant advantages in ability to carry substantial payloads long distances over routes on which difficult airfields are encountered.

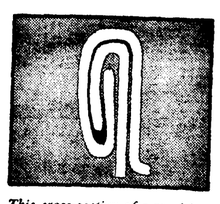
a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:



Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

MB OPEN TOP CAN

A METAL BOX PILFER-PROOF CONTAINER

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound-lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

NEW U. S. LOAN TO INDIA ANNOUNCED

EXPORT-IMPORT BANK FUNDS TO BE UTILISED FOR PURCHASING AMERICAN GOODS

(FROM OUR NEW DELHI CORRESPONDENT)

IT was announced here last week that "the United States Government desires to assist the Government of India in meeting its current economic problems. It has, accordingly, informed the Government of India of its willingness to discuss a loan programme of approximately $225 million from the currently available resources of the U.S. Export-Import Bank and the Development Loan Fund. In addition, the United States Government is considering, on an urgent basis, further measures to assist India in meeting her present grain shortage."

The U.S. Government has invited the Government of India to send representatives to discuss these matters further. The latter has accepted this invitation; the delegation which will leave India for Washington shortly will consist of—Mr. B. K. Nehru, Secretary, Department of Economic Affairs, Ministry of Finance, (leader); Mr. C. S. Krishnamoorthi, Deputy Secretary, Department of Economic Affairs, Ministry of Finance; and Dr. A. K. Ghosh, Assistant Economic Adviser, Ministry of Commerce and Industry.

In a statement to the Press, the U.S. Ambassador, Mr. Ellsworth Bunker has said: "The $225 million loan which my Government is now offering the Government of India is part of a programme which goes back to the early days of Indian independence. The first substantial loan was made in 1951 when the United States made a long-term loan of $190 million to the Indian Government for the purchase of wheat. This was followed in 1952 by an agreement extending technical and development assistance to India. Grants and loans under this agreement, which was renewed last year, have amounted to $401.1 million. The Agricultural Commodities Agreement of 1956 provides for grants and loans amounting to $288 million from the proceeds of the sale for rupees to India of United States surplus commodities. With this present loan the total of United States assistance, both public and private, since independence, comes to about $1,275 million (Rs. 606 crores).

"This latest amount represents, it seems to me, at least two things. First, it is aimed at assisting India at a crucial period in her economic development. Second, and perhaps even more important, this programme offers further evidence of the United States Government's deep interest and confidence in the imaginative and courageous effort India is making to build a better life for all her people. This assistance, I am sure, will be helpful not only to India but to other countries in this area as well. For a strong and economically healthy India can be vital as a stabilising influence for all of Asia. Furthermore, India is demonstrating that economic progress can be accomplished in Asia by a free democratic society. This programme, we are sure, is concrete, continuing evidence of our belief that India and the United States will continue to be linked as in the past in a partnership of mutual respect and friendship."

Normal U.S. Aid

Ambassador Bunker has explained that India has normally been receiving by way of loans and grants, under the technical co-operation agreement, an average of Rs. 50 to Rs. 60 crores a year. In the current U.S. fiscal year ended 30th June, 1958, the U.S. Government "has substituted the Development Fund for T.C.M. Under the Fund, only loans are advanced." The loan programme of $225 million envisaged by the U.S. Government includes 30 percent, or about $67 million, from the Development Fund. In addition, India will be eligible for $7.5 million in technical assistance. To assist India in her food and foreign exchange difficulties, two further steps are contemplated by the U.S.A. It is proposed to enter into a barter deal under which 200,000 tons of manganese ore will be exchanged for wheat over and above the normal intake of manganese ore by the U.S.A. Secondly, wheat is being substituted for cotton under the Agricultural Commodities Agreement. The U.S. President has asked Congress to extend both the P.L. 480 Act and the Development Fund Law under which India will get assistance. It has been made clear that the purchases out of the Export-Import Bank loan can only be of U.S. goods.

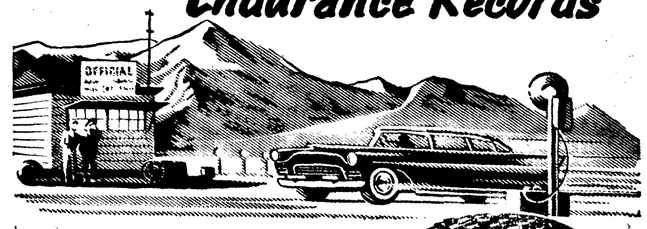
The Principal Secretary to the Ministry of Finance, Mr. H. M. Patel, and the Secretary to the Economic Affairs Ministry, Mr. B. K. Nehru, in further elucidation, have said that India sent 75 projects to the U.S. Government for financial assistance. All these projects form an integral part of the hard core of the plan. They are in both the public and the private sectors. Their total estimated cost is placed at Rs. 1,700 crores, including Rs. 900 crores worth of foreign exchange. Provision has already been made for Rs. 275 crores worth of foreign exchange, leaving an uncovered gap of just over Rs. 700 crores. On the credit side, the proposed U.S. loan will amount to $225 million. Some $100 million has already been advanced by the World Bank and 600 million deutschemarks are expected from the West German Government. A yen loan has been promised by Japan. India's total foreign liability to date amounts to Rs. 600 crores.

Total American Assistance

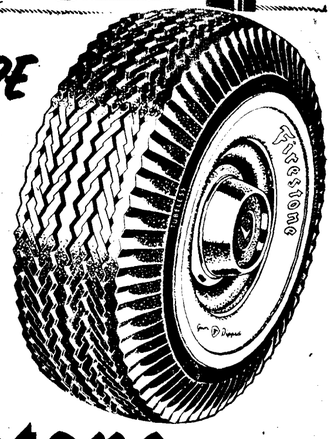
The new U.S. loan to India of approximately $225 million announced last week brings the total U.S. assistance since independence to about $1,275 million (Rs. 606 crores). Of this total, about $1,188 million (Rs. 565 crores) has been from Governmental funds, and the remainder has come from private sources—foundations, and educational, philanthropic and religious organisations. Except for the Agricultural Commodities Agreement of 1956, the new loans are the single largest item of U.S. assistance to India. Under the commodities agreement, commonly known as Public Law 480, India is receiving wheat, rice and other agricultural products of the value of $360 million without having to spend dollars. From the rupee sales receipts from these products in India, the Indian Government is receiving the rupee equivalent of $288 million in loans and grants from the United States. U.S. assistance to India may be broken down as follows:

	(Millions of U.S. dollars)
U.S. Export-Import Bank and Development Loan Fund (the new credit) approx.	225
Technical assistance and economic aid under the Indo-U.S. Technical Co-operation Programme (1952-57)	401
Wheat loan of 1951	190
Agricultural Commodities Agreement of 1956	288
Milo (grain) assistance of 1951 ...	12
Agricultural commodities distributed through U.S. voluntary agencies programme	61.9
Ocean freight assistance to voluntary agencies	.6
Fulbright and Smith-Mundt educational grants	3.5
Flood relief	6.4
	1,188.5
Assistance from private U.S. sources:	
American voluntary agencies ...	5.4
Ford Foundation	25.6
Rockfeller Foundation	5.4
American Red Cross	.8
Estimate of gifts in kind or cash from other American educational, philanthropic or religious groups and foundations	50
	87.2

U.K. Preference for Indian Rice



Under the Indo-British Trade Agreement, India enjoys a preference on her exports of rice to Britain and her possessions. The pattern of trade since the agreement was made has changed considerably. For one thing, India is a major importer of rice, and, therefore, needs no protection for her rice. The retention of preference, however, hampers the trade of British rice millers. Negotiations between India and Britain are, therefore, in progress to do away with the preference given to Indian rice. Reference may also be made to the growing imports of Indian textiles into Britain and their repercussion on the Lancashire textile industry. Lancashire interests, it is learned, have invited the representatives of the Indian textile industry to resume talks which, but for the attitude adopted by Hongkong textile interests, might have provided some relief to Lancashire last year. A *via media* suggested is to fix a ceiling on Indian textile imports into Britain. Enquiries show that Indian textile interests are not anxious to resume talks, at any rate in the U.K. Unrestricted entry of Commonwealth manufactures into Britain is a likely subject on the agenda of the forthcoming Commonwealth trade conference. Trade, it is said, is regulated by reciprocity. On the model of Commonwealth countries, Britain might be forced to protect the interests of her industries.



Structural, Vessel and Plate Projects

Some publicity has been given to the negotiations which India and Britain may start for setting up the heavy structural, plate and vessel plants in India. Neither the Indian Government nor the British High Commissioner would confirm the report that "a team of experts from the United Kingdom is expected to arrive in New Delhi by the end of January."

Three projects awaiting implementation are those for (1) heavy machine tools (2) heavy struc-

Stock Car Endurance Records

proved the TYRE for Safer motoring

America's incredible stock car endurance record—50,000 miles at an average speed of 108 miles per hour—was set on Firestone tyres, without a single tyre failure. The manufacturing skill and quality control that built such endurance into those tyres ensure supreme safety and dependability in the Firestone tyres for your car.

turals, and—(3) plates and vessels. Of these, British collaboration is expected in only the last two. For some time now, the Government of India has been wanting the preparation of project reports for them through the agency of the Colombo Plan. The main difficulty is, however, that of finance, since due to the credit squeeze, British manufacturers have not been able to find the money. Although the Colombo Plan agency is not entirely British, it is prudent to make provision for finances before project reports are prepared. India has a heap of project reports, many of which have become useless by now. So far as the heavy machine tool project is concerned, it is true that the Government would like it to be worked in collaboration with the German firm of Wagner. The Germans are equally anxious to undertake the work. But here, too, lack of funds has been delaying the execution of the project.

Czech Textile Machinery

Negotiations are in progress here between the Government of Czechoslovakia and the State Trading Corporation for the supply of textile machinery on a deferred payment basis—10 percent on placing the contract, another 10 percent on the presentation of shipping documents and the balance in ten equal half-yearly instalments. The amount will carry 6 percent interest. Different items of textile machinery will be supplied by Czechoslovakia to the Indian mills. Such contracts will be registered with the State Trading Corporation, which will guarantee their fulfilment.

Competition and Quality

India's foreign exchange difficulties are being widely exploited. Free competition has practically been shut out. Even before the foreign exchange crisis, the only protection acceptable to some Indian industrialists was a total ban on imports. And now even "token imports" to maintain the quality of Indian goods have been stopped. Two developments are noticed. Most industrialists are now demanding concessions to earn foreign exchange. "Impressive earnings of foreign exchange by the Indian sugar industry", for example, were publicised last week in order to make out a case for the refund of sugarcane cess and other State and Central taxes relating to sugar exported. The Indian consumer, whose sacrifice is at the root of this industry, does not come into the picture. It was recently stated that the consumer has paid Rs. 71 crores in the shape of protective duties and pays an aggregate of Rs. 12.87 a maund in various taxes on sugar. It is also said that unless sugar is exported, internal prices will come down, necessitating a curtailment of production.

The other development relates to increasing foreign participation in Indian industries. The foreign producer, having realised the seriousness of India's foreign exchange difficulties and consequential restrictions on imports, has commenced participating, financially and technically, in Indian industries. The new countries, which have come in with technical and financial aid, include West Germany, France, Italy and Japan. The total number of cases of foreign collaboration in 1957 were three times that of 1955. The oft-quoted arrangement in which India has a 51 percent share in capital and management has been overdone, it is explained here. The oil refineries are a case in point. In the other case, two British firms have been permitted to set up a unit for the manufacture of card clothing. So far as new projects are concerned, each proposal is examined on its merits. Small units with a high potential of foreign exchange saving, which cannot make arrangements for deferred payments, are generally licensed. Similarly, an undertaking is permitted if it is very important and is linked to what is already committed to, including the core of the plan.

Stages of Heavy Electrical Project

The heavy electrical equipment project is now likely to be implemented in two major phases. The cost of the first phase will be about Rs. 14 crores, against the estimated total of Rs. 35 crores for the entire scheme. Four of the nine categories of items originally proposed for production are included in this phase, namely, transformers, switch gears, control gears and capacitors. The approximate annual output will be Rs. 7 crores instead of Rs. 13 crores for the complete project. The five heavier categories of equipment, including turbines and heavy rotating plants, have been left over for manufacture after 1960-61, when it is expected that the first stage will have been completed.

Oil India Private Ltd.

An agreement between the Government of India and the Burmah Oil and Assam Oil companies was signed last week Under it, a new company, to be named Oil India Private Ltd., will be incorporated and registered in the State of Assam with an authorised capital of Rs. 50 crores divided into 500,000 shares of Rs. 1,000 each. Two-thirds of the capital will be provided by the Burmah Oil Company Ltd. (of which the Assam Oil Company Ltd. is a wholly-owned subsidiary) and one-third by the Government of India. The new company will take over the assets of the Assam Oil Company in the newly discovered oil areas of the Brahmaputra valley, where 36 deep wells, most of them good producers of oil, have already been completed. The oil produced by the rupee company will be sold to two refineries to be established in the public sector. The delivered price of crude oil payable by each such refinery will be either the lowest price delivered in Calcutta at which such crude oil can be secured by the refinery from any alternative source or the cost incurred by the company together with a reasonable commercial return, whichever is less, such price being fixed by the company with the approval of the Government of India after examination of costs and subject to review every half-year. The Burmah Oil Company has offered to advance a sterling loan to the extent of £10 million to the rupee company to meet the foreign exchange content of the cost of the first stage of the construction of the pipeline and other related facilities. It is proposed to have a refinery located at the intermediate stage between the oilfields and Barauni.

Stopping Wastage of Food

The Central Food Ministry has written to State Governments and other Central Ministries about the need to avoid wastage of foodstuffs, particularly foodgrains. It has urged greater economy in the consumption of cereals, especially rice. The letter, it is understood, points out that while every attempt should be made to avoid causing a scare, people should be enlightened on the part they can play in contributing towards a more comfortable food situation by avoiding waste, exercising self-restraint in the consumption of foodgrains and taking steps to conserve what each has got. Considerable waste often occurs in restaurants, hotels and similar institutions. Also, foodstuffs are often wasted at large feasts and banquets. Such waste should be avoided and the number of people invited to functions where cereals are served should be limited. As for restrictions on the consumption of rice, the letter says that people should be encouraged to change over partly to wheat or other grains in place of rice. Even from the nutritional point of view, such a change-over would be good. Organised attempts may be made to introduce substitute foods and to encourage a balanced diet, "even though this may involve a change in the pattern of food consumption." The production and consumption of vegetables should be encouraged, as also the consumption of fish.

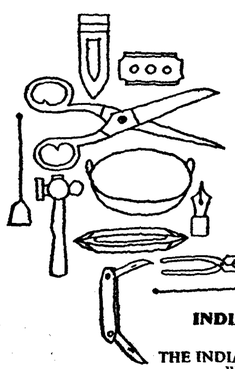
Industries Advisory Council

The standing committee of the Central Advisory Council of Industries will meet in New Delhi on 10th February. The Minister for Commerce and Industry, Mr. Morarji Desai, who is chairman of the Council, will preside. The standing committee will review the working of the cement and automobile industries. The progress of projects in the public sector, under the Ministry of Commerce and Industry, will also be considered. This will be the second meeting of the standing committee. At its first meeting held in December, the Council considered the working of the cotton textile and jute industries. The committee was set up by the Central Advisory Council of Industries at its last session in July 1957, for more frequent and informal consideration of the problems affecting industrial development.

Trade Pacts with Hungary and Ceylon

Two more trade agreements were signed last week, one with Hungary and the other with Ceylon. Under the Indo-Hungarian agreement, payments for commercial and other transactions between the two countries will be made in Indian rupees. Steps will be taken to encourage the export to Hungary of Indian consumer goods such as cotton, woollen and silk textiles, shoes and other leather goods, spices, coffee, tea, hydrogenated oils, handicrafts, shellac, jute goods, tobacco and tobacco manufactures. In the schedule for imports from Hungary, the important commodities listed are metals, iron and steel and manufactures thereof, cutlery, hardware, implements and instruments, electrical goods and appliances, machinery of all kinds, metals other than iron and steel, chemicals, drugs and medicines. Among the items for export from India are iron ore, mica, raw goat and sheep skins, cordage and ropes, paints, lacquers, and tapioca. Since the signing of an agreement in 1954, Indo-Hungarian trade has increased steadily. While the total between the two countries stood at Rs. 12 lakhs during 1953-54, the corresponding figure for 1956-57 was Rs. 1.15 crores. India had a favourable balance of trade to the extent of Rs. 9 lakhs during 1954-55. During 1955-56 and 1956-57, the balance of trade was against India to the extent of Rs. 33 lakhs and Rs. 17 lakhs, respectively. This was mainly because of large imports of iron and steel products, accounting for nearly 75 percent of Hungarian sales to India. There has been an appreciable increase in the export of Indian products such as spices, mica, iron ore, raw hides and skins and coir yarn and vegetable fibres.

No French Loan to India



The report that France has offered India a loan of 20,000 million francs has been officially denied. No such loan or line of credit has been offered by France to India, it is said. What has been offered is a ceiling of 20,000 million francs on export guarantees. In other words, the French export guarantee organisation will, in future, accept liabilities up to that amount on exports made to India on mutually acceptable terms. Enquiries show that until now French export terms were unacceptable to this country.

Loan Negotiating Team for Washington

Mr. B. K. Nehru and other members of the mission set up last week to negotiate the terms of the U.S. loan offer to India will leave on 26th January for Washington. Mr. Nehru will spend a couple of days in London before going to the U.S. capital in the first week of February.

STEEL AND YOU

Day and night you are using steel. Steel builds your houses, roads and bridges, spins your thread and weaves your garments. Steel tames the raging rivers to bring water to your fields, power to industry and light to your homes. Steel carries you and even your words across vast distances.
But India needs more of these modern amenities—her per capita consumption of steel is amongst the lowest in the world.

Night and day The Indian Iron & Steel Company Limited is working to help India fulfil her target for steel—your target for a prosperous tomorrow.

STEEL IS THE STARTING POINT

Use steel only when you must today, there will be more tomorrow.

PARLIAMENT TO DEBATE TREASURY CHANGES

FORMER MINISTERS EXPLAIN RESIGNATIONS

(FROM OUR LONDON CORRESPONDENT)

THE reassembly of Parliament on 21st January was awaited with more than usual interest, for it was impossible to forecast what might be the outcome of the debate which the Opposition had requested on the ministerial resignations from the Treasury and their bearing on the Government's economic policy. The debate is expected to take place towards the end of this week or early next week, and Labour, which will no doubt table a motion of no confidence, is hoping that Conservative back-benchers will revolt at least to the extent of abstaining. All three of the Ministers concerned have now explained their actions, and in doing so have made it clear that where they parted company with their colleagues was in their insistence that in 1958 estimated Government expenditure should be held at the actual 1957 level which, in spite of considerable cuts made departmentally in response to the Treasury's warnings from time to time, will prove, when the supplementary estimates are presented shortly, to have been substantially higher than was estimated.

In support of the pound and the stability of prices, every sacrifice had to be made and no spending was sacrosanct. Having got down to within 1 percent of Mr. Thorneycroft's figure, his Cabinet colleagues felt further cuts would imperil Government policy and suggested a halt. Mr. Thorneycroft disagreed and resigned, his junior Ministers agreed with him and did likewise, but all three have emphasised that they are not in revolt and remain "a bank-bench member of the Conservative Party and a supporter of the Government," as the ex-Chancellor put it. They have been accorded the support of their constituents and not a few of their Parliamentary colleagues, but although there may be some back-bench criticism of the Government when the debate is held, it will be surprising if its supporters do not give it the further time which is undoubtedly necessary to demonstrate that the fight against inflation has by no means been abandoned.

Preparing the Ground

As a prelude to what is to come, the new Chancellor of the Exchequer has quietly continued with his series of consultations with industrial representatives—the British Employers Confederation and the T.U.C. figured on his list last week—and his detailed scrutiny of the departmental estimates. Through these informal discussions he is no doubt trying to establish that he will continue the anti-inflationary battle by every possible means and seeking support in doing so. The estimates, on the other hand, it is believed are still being pruned, though by this time many of them, and especially the defence estimates, should have been finalised. He is also collecting "advice" in the framing of his Budget. The latest contribution is from the chairman of the Institute of Directors, which "does not wish to advocate anything which might have an inflationary effect" but nevertheless seeks six concessions, including the raising of the present starting limit of £2,000 a year for surtax, a graduated scheme for estate duty to replace the five-year *inter vivos* gift period, amendment of the Schedule Expenses rule, implementation of the Royal Commission on Taxation's recommendation concerning surtax on undistributed income, the introduction of a flat rate profits tax, and raising of the maxima limits on the remuneration of controlling directors for profits tax purposes.

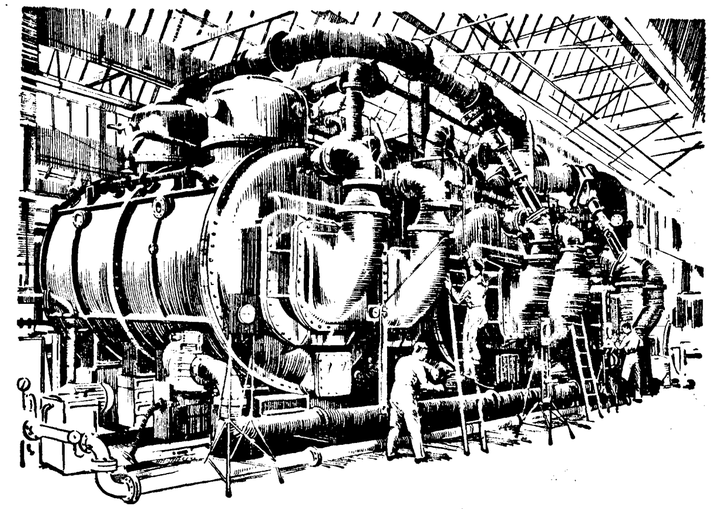
Nor have the markets shown any inclination to allow recent events to have a dampening effect. The pound has continued strong on the exchange markets, while gilt-edged prices have actually improved, and the Government's £500 million funding operation of a 5½ percent Exchequer Stock, 1956, issued at £99½ proved sufficiently attractive to secure an estimated £150 million worth of applications from the banks and an initial quotation at the issue price instead of the slight discount which was anticipated earlier. The bulk of the offer was taken up by public departments to be sold through the market as a "tap" stock by the Government broker, and will come in useful in later redemption operations this year.

Good Trade Figures

Sterling's recovery also received a fillip from the preliminary trade figures for December, which showed that the striking improvement shown in November was not only maintained but was actually improved. The trade gap, measured by the excess of imports over exports, was narrowed by a further £3 million to £19.1 million. Apart from October 1954, when the figures were affected by the dock strike, and in November 1956, when Suez shipping delays were an important factor, last month's trade gap was the smallest recorded for seven years. Exports in December at £282.4 million were £4.5 million less than in November, but 2 percent above the average for the first 11 months of last year. Imports were £6 million down at £313.7 million compared with November and as much as 8½ percent below the rate for the first 11 months of 1957. This fall, which mainly reflects lower import prices, followed a reduction of £33 million in November compared with October. In December, at £34 million, exports to north America were £4 million down from the November level, but this was due to seasonal influences. For the whole of last year they reached £432 million, a rise of 8½ percent on 1956.

Once again however, it is necessary to issue a warning that too much must not be read into the experience of the last two months. A comparison of the year 1957 with 1956 helps bring the picture into perspective. The total of exports was £3,326 million, an increase of £154 million or nearly 5 percent over the previous year. This is a record, but if appropriate adjustments are made, it appears that the increase in volume was of little more than 2 percent while the increase in export prices accounted for 4 percent. Imports also reached a record level at £4,079 million, an increase of £193 million or 5 percent in value. Making appropriate allowances the increase in volume is about 2 percent. Import prices, in spite of a sharp fall in the latter part of the year, were 1½ percent higher on average than in 1956. So it appears that in terms of volume and disregarding changes in price levels, which are largely outside Britain's control, both exports and Imports increased by a like percentage and in point of fact there was neither an improvement nor a deterioration in Britain's trading position.

Orders for Machine Tools



The fear that the raising of Bank rate and other financial measures introduced in September would have an adverse effect on British industrial re-equipment was apparently unfounded, to judge from the latest figures issued by the Machine Tool Trades Association. These refer to October and indicate that buyers both in Britain and abroad were not deterred by the higher cost of money or by difficulty in finding it. New orders for the home trade were £4,603,000, compared with £4,308,000 in September, and for export were £1,801,000 against £1,122,000, in September. It is true that home orders in October 1956 totalled as much as £5,105,000, but that was an exceptionally good month. The export orders last October were actually higher than those in October 1956. Deliveries have risen to a record level, a fact which will be welcomed by all buyers. The home trade received £6,777,000 worth in October 1957, which is the highest total yet achieved, while overseas buyers received as much as £2,201,000 worth, which is also a higher figure than usual without being a record. Unfulfilled orders have been cut from £102,000,000 in October 1956, to £82,260,000 in October 1957, representing a fall of almost 20 percent in those for the home trade and of nearly 10 percent for export, and delivery dates are at last showing some signs of getting back to something like normal.

Indian Engineers in Britain

The first group of engineers who are being trained to man the new Durgapur steel works have arrived in Britain to start their periods of training at various mills and factories. They received their initial briefing in London last week from Mr. W. S. Hindson, who is the Chief Consultant for the project. Before they disperse to individual attachments for the next six to 12 months, they are to undergo a week's lecture course on industry and government arranged specially for them by the British Council. There are 24 young men in the group, graduates of Indian universities in mechanical, electrical and chemical engineering who have been selected for specialised training for particular posts at Durgapur. They have been brought to Britain under the technical co-operation training scheme of the Colombo Plan, which means that the British Government is paying their travelling expenses and covering the cost of their maintenance and training. In all some 300 Indian engineers are expected to come to the United Kingdom in connection with the project before it finally goes into operation.

Capital of Oil India

Oil India, the new company to be formed by Burmah Oil and the Indian Government to exploit the oil resources in Assam, will have a capital of £37½ million, with two-thirds of the shares owned the Burmah Oil Company and the remainder by the Government of India. The company will be required to lend £10 million towards the cost of building a pipeline to two oil refineries to be built by the Indian Government, one in Assam and the other in Bihar, the first of which is expected to be ready in three years. These capital commitments appear substantially to exceed Burmah Oil's holdings of gilt-edged securities and cash as disclosed in the last balance-sheet, namely, £5.8 million, and in City circles here it is pointed out that the company is a large shareholder in Shell Transport and Trading, which is about to make a £40 million to £55 million "rights" issue, which it will probably want to take up and which will involve it in a further commitment of between £1.5 million and £2 million, according to the price at which the Shell shares are issued. In view of all these demands on its funds, it is thought that Burmah Oil may decide to realise part of its investment in British Petroleum, which at the present market value is about £120 million.

Weir

SEA WATER EVAPORATING & DISTILLING PLANTS

by providing ample supplies of fresh water distilled from sea water, have made possible the economic development of many areas with no natural supply of fresh water.

Ships too with Weir Evaporators can make the longest voyages without buying fresh water en route, leaving more room for paying cargo, and always being sure of pure fresh water for all the ship's services.

TRADING IN MUNDHRA GROUP SHARES BANNED

FORWARD BUSINESS SUSPENDED IN B.I.C. SCRIP

(FROM A BOMBAY CORRESPONDENT)

THE governing body of the Bombay Stock Exchange has prohibited its members from transacting business in the shares of nine companies, the names of which it has notified. Their shares, which are listed by the Calcutta Stock Exchange, are not officially quoted in Bombay, but transactions in them have hitherto been permitted. The companies concerned are Angelo Brothers Ltd., Smith Stanistreet and Co. Ltd., Richardson and Cruddas Ltd., the Osler Electric Lamp Manufacturing Co. Ltd., Jessop and Co. Ltd., Duncan Stratton Co. Ltd., Brahmapootra Tea Co. Ltd., Turner Morrison, and F & C. Osler Ltd. The action is interpreted here as a "precautionary measure" in the light of certain recent developments. It is also thought that the market authorities have made this decision in order to safeguard the interests of the members and the investing public in view of reports that the shares of some of these companies are in currency in duplicates and triplicates. It is reported that a certain company has refused to accept the shares sent for registration in its books. Pending the setting up of suitable machinery for the verification of the share certificates, it has been decided to suspend business in these shares. Meanwhile, forward business in B. I. C. shares, which are officially quoted in Bombay, has been restricted now only to the squaring up of the outstanding position as on 14th January. New commitments entail the delivery and acceptance of shares. The Bombay Stock Exchange authorities, it is said, have requested the British India Corporation to make arrangements for the verification of its share certificates.

Unutilised Import Licences

The suggestion that all unutilised licences be cancelled and later revalidated has been rejected by the Government of India. Mr. S. N. Bilgrami, Chief Controller of Imports and Exports, made this announcement when speaking at a reception held in his honour by the All-India Importers and Exporters Association here. "Though the foreign exchange crisis justified such a drastic step, the Government did not favour it, as it might have dislocated normal trade channels and shocked our importers' trading partners abroad," he said. Mr. Bilgrami explained that the Government had decided to bring the situation "gradually under control" with a view to securing a correct assessment of the position concerning outstanding import licences. This was being done by administrative measures such as a shorter validity period of licences. He promised to consider the question of remittances against import licences in consultation with the Board of Revenue. He hinted that the Government might be prepared to permit the import of certain machinery which could be helpful in augmenting India's exports of manufactured goods.

Indian exporters, manufacturers and industrialists had not displayed as much zeal in the export of manufactured goods as they did in the export or raw materials. It was only in the field of cotton textiles, in his view, that great enterprise had been shown. It was the policy of the Government of India to encourage co-operative societies by the allocation of certain export quotas. Referring to the shortage of some imported chemicals, he promised that the position would be re-assessed. There was no shortage of drugs and medicines. The president of the Importers Association, Mr. Shantilal M. Shah, in welcoming Mr. Bilgrami, touched on such issues as the plea for an extension of the validity period for small value licences, basic period extension, remittances against import licences, the sale of bleaching paste and bleaching powder to municipalities and the need for bigger imports of essential items.

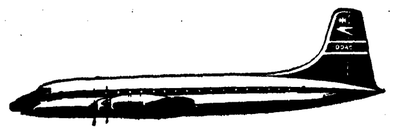
Modest Rise in Mill Cloth Production

The output of cotton cloth and yarn by mills in 1957 recorded a modest improvement over that of the previous year, according to provisional figures available here The relevant figures show that the production of cloth rose from 5.282 million yards in 1956 to 5,302 million yards in 1957, while yarn output went up from 1,667 million lbs to 1,773 million lbs.

Export Prospects for Rayon

The rayon mill industry has made rapid progress in regaining its export markets. Shipments of rayon piecegoods, it is estimated, have gone up by Rs. 20 lakhs to Rs. 1 crore in 1957, due to the improvement in quality, introduction of new attractive designs at competitive prices and efforts at standardisation. The export promotion scheme started by the Government for about 40 commodities has found favour with manufacturers, and many prospective shippers have applied for the import of yarn on a guarantee of doubling exports in the coming six months. Established exporters, who have been asking for the import of yarn against their past performances, however, resent the Government's insistence on such a guarantee, and are reluctant to execute the bond. Meanwhile, the scarcity of art silk yarn has become more acute and prices have moved up further in both Bombay and Calcutta. The February delivery for 120d went up to Rs 916, or only about Rs. 9 a case lower than the ceiling fixed recently by the Association. Spot rates improved further by 1 anna a lb. Staple fibre yarn continued firm with 2/40 February deliveries touching a new high at Rs. 603 a bale on reports that indigenous manufacturers of the fibre have raised their prices by about 2 annas a lb.

Export Quota for Cotton Yarn



The Government of India will continue to grant cotton yarn export quotas to mills for January-June 1958, says an announcement issued by the Joint Chief Controller of Exports, Bombay. Allotment to mills for packings during the quarter January-March 1958, will be made in April, while allotments for packings during April-June 1958 will be made in July. The announcement further says that for the purpose of working out the quarterly quota, the total actual quantity of cotton yarn (except staple fibre yarn) packed by mills in counts up to 79s or above during the relevant period will be taken into consideration It is, therefore, not necessary for mills to indicate the packings in two counts or groups separately. But allotments will be made in counts 1-78s only, and the mills will be allowed to export cotton yarn in any count up to 78s. The last date for effecting shipment will be six months from the date of issue of the allotment memo. No extension for shipments will be allowed.

Irregular Trend in Cotton

Forward rates in the local cotton exchange moved erratically both ways on occasional spells of buying and selling, and sentiment was largely influenced by the price pattern of the ready cotton market. In contrast to the hectic rise witnessed early last week, there was a downward tendency in the futures section, largely due to the reaction in the spot market in the second half of the week. Prices in Berar centres declined sharply on increased hedging touched off by an upward revision of the crop estimate to 900,000 bales. Activity in spot cotton was restricted following the withdrawal of mill demand. The undertone remained steady at the close on increased short-covering attracted by the lower levels. In the export section, steady enquiries were noted from France. A further export quota of 50,000 bales of Bengal Deshi was considered to be imminent. This is expected to be followed by the announcement of an export quota of 25,000 bales of old crop cotton stapling ⅜in and below, with an export duty of Rs. 25 a bale. Bengal prices hardened on the prospect. A sudden revival of mill demand for American cotton was noted after a protracted period of inactivity. Business to the tune of about 20,000 bales was put through by mills for February-March shipment.

Cautious Optimism in Oilseeds

Cautious optimism prevailed throughout last week in the oilseeds market. It seems that the worst is over both in castor and in groundnut. Prices recovered especially earlier in the week, mainly on renewed replacement buying and short-covering Castorseed, particularly, staged a marked improvement on hopes of a reduction in the import duty. Although the trend was downward during the later part of the week on increased profit-taking and heavy liquidation, the undertone appeared to have improved. Castorseed made a notable recovery following fresh support from upcountry centres and growing optimism about a revival in overseas demand. The outlook for castor oil brightened further, following rumours of an impending cut in the export duty to the extent of Rs. 75 a ton. The general feeling appeared to be that any relief would be welcomed by the trade, although it would be difficult to push up exports in spite of a reduction in duty as the Brazilian quotation is already lower by about £10 a ton. However, after a lapse of nearly four months, exporters, it was reported, sold about 750 tons of castor oil since the turn of last week, of which nearly 200 tons consisted of B.S.S. sold at around £121 to £122 in bulk.

Jute

GUNNY PRICES EASE ON SPECULATIVE ACTIVITY AND DOCK TROUBLES

MORE JUTE COMING FROM PAKISTAN

FOR some time now, great emphasis has been laid on the U.S. burlap consumption and stock figures in predicting buying intentions in America. The Calcutta markets are quick to react to any changes in the figures, and the publication of the December consumption statistics has been no exception, although the results have been much less pronounced than was anticipated, judging by the eagerness with which they were awaited. Compared with the previous month, consumption in America during December has increased by 8 million yards to 71 million yards, bringing the average monthly consumption for 1957 to 69 million yards. Hessian prices have been virtually unchanged and have shown little reaction. A bigger reaction has been in the sacking market, which is governed by speculators; at first, they considered the statistical position good, so rates rose. If operators have been expecting greater American interest as a result of the increase in burlap consumption, they have been disappointed. Overseas enquiries, especially from the United States, remain negligible and the general state of the market is dull. Small business has been done, but this is mainly local bazaar operations. Rumours of an Indian Government B Twill order have caused a flurry of activity in the sacking market towards the close, but any gains resulting from this have been nullified by speculative activity on account of due date. Meanwhile, the position at the Calcutta docks is being closely watched. Only partial working has been carried on in most ships since the week-end, and although those carrying gunnies have not been seriously affected yet, if the strike spreads it may have far-reaching repercussions.

Raw Jute Arrivals

Raw jute arrivals in Calcutta and mill stations during December amounted to 788,500 bales, consisting of 105,100 bales from Pakistan and 683,400 bales from India. Although this was 22,650 bales less than in the previous month, arrivals from Pakistan were the highest since March 1956 (that is, for 22 months). This, it is thought, was because most shippers tried to get as much through in December before their licences expired, for fear that they may not be revalidated. Arrivals last month compared very favourably with those in December 1956, mainly because of the larger arrivals from Pakistan, which showed an increase of 45,000 bales. Arrivals from India, on the other hand, dropped by 8,200 bales, making an overall increase of 36,800 bales. Total arrivals for July to December 1957, now amount to 3,232,350 bales, made up of 413,650 bales from Pakistan and 2,818,700 bales of Indian origin. During the same period in 1956, arrivals were 3,308,100 bales, 371,300 bales being from Pakistan and 2,936,800 bales from India. Thus, in the current season, arrivals have fallen short of the same period of last season by 75,750 bales in spite of the fact that arrivals from Pakistan are 42,350 bales higher. Indian arrivals are 118,100 bales less. During the first six months of the current season, the estimated consumption of raw jute was 3,042,300 bales, so arrivals are now slightly ahead of consumption.

The business concluded in the fibre section during the past week has amounted to about 300,000 maunds. This is much less than in the previous week, and it has had litle effect on prices. Sellers, however, are reserved at the current levels mainly because most of them have fairly large sales on their books still uncovered from previous weeks. So far, they have been unable to cover any of these contracts at a profit due to the continued steadiness in upcountry markets. Prices in the agencies are well above Calcutta parity because imports are small and little business has been reported. Mills still show a preference for the cheaper fibres, although some business has been done in Middles alone by a hessian group of mills. Other mills have taken interest in forward shipment Business has been reported as far forward as March and April, but the number of sellers willing to make deals on this basis is limited. There is much speculation about the position of cuttings from Pakistan, and business has been offered by sellers in anticipation of licences being issued. So far, no official information has been given, and there is no confirmation that any licences have actually been received. Reports of a labour strike in Cossipore have made sellers reserved, but no official confirmation has been received. The trouble appears to arise from a dispute concerning certain workers in that area.

THE JUTE MARKETS

Manufactured Goods: There was very little real business during the past week in gunnies, most price movements having their origin in speculative activity. Hessian prices ruled steady throughout, mainly because of the American burlap consumption figures and operators' hopes of early orders from there. However, no enquiries were received, and towards the close the undertone of the hessian section weakened although prices were unaltered. Sacking, as usual, was dominated by speculative activity, but price fluctuations were within a narrower margin than recently. Due date covering in fatka accounted for many transactions, and genuine business was scare. Mills, however, were reported to be keen sellers for all shipments, but buyers showed little interest in ready delivery, confining their purchases to small lots of forward goods. This probably accounted for the steadiness in the forward section of all fabrics, which continued to show premiums over near goods. The ready section was quiet, and even the speculative B Twill counter stood at a discount.

Opening quotations of hessian and B Twills last Thursday showed an improvement due to the better burlap consumption figures from the U.S.A. Ready B Twills stood at Rs. 105.20, with April-June shipment at Rs. 106.35. Mills were keen to sell at the higher price, but only small business was reported, and selling pressure in the fatka soon brought down rates. On Friday morning, ready B Twills were down by nearly Re. 1, but forward shipment was practically unchanged. Speculators continued to depress the market by selling in the fatka and Saturday saw a further drop to Rs. 104. There was little change over the week-end, but after the opening on Monday prices continued to fall as a result of the strike in the Calcutta docks and the poor shipment figures for this month. Throughout the week, hessian prices remained stable in spite of the fluctuations in heavy goods. Opening at Rs. 39.90 for January shipment 40in. 10oz. hessian varied by only 25np all the week, and the undertone was steady. Towards the close, the undertone weakened, and rates showed a small decline. Forward shipment was quoted at a premium of 50nP or 60nP throughout.

On Tuesday morning, opening quotations were based on the following:

	Jan. Rs.	Feb. Rs.	March Rs.	Apl.-June Rs.
40in. 8oz.	32.50	32.50	32.50	32.50
40in. 10oz.	39 75	39 95	43.10	43.35
B Twills	104.60	105.35	106	106.10
Heavy Cees (Plain)	103.25	105	105.50	106
A Twills	125.50	126	106.60	106.10
Liverpools	119	119.20	119.25	119.35
Cornsacks	106.25	107	107.25	107.50

Raw Jute: Calcutta mills continued to buy jute during the past week but on a restricted scale. It is estimated that purchases amounted to 250,000 or 300,000 maunds, mostly of the mesta variety. Sellers were reserved for all types of fibre, and the prices paid were about 25nP higher than in the previous week's transactions. Imports upcountry remained small, and sellers were more intent on covering previous sales than on entering into fresh business. For this reason, only small quantities of jute were put on offer for fresh business, which made imports look smaller than they really were. Uncertainty existed about the true state of the market, and upcountry buyers showed a certain amount of reluctance to do business under the present conditions. Raw jute quotations in Calcutta remained stable at Rs. 26.50 a maund for Assam Bottoms for January-February shipment and most of the business was conducted on that basis.

Business was reported in Assam-Dhubri jute at Rs. 26.50 to Rs. 26.75 a maund basis Bottoms, and Northern at Rs. 26.75. Northern Middles alone fetched Rs. 29. Selected Murshidabad Tossa passed at Rs. 29.50 a maund, and small lots of middles only at Rs. 32. Small interest was shown in Daissee at Rs. 29.75 to Rs. 30, but Daissee mesta found many buyers at Rs 23.25 for January-February shipment. Desal mesta was also done at Rs. 23.25 to Rs 23.50, the same price being paid for Northern mesta.

In Cossipore, there were conflicting reports about the so-called strike, and no details concerning wagon arrivals were available. Covering business was reported and the market ruled steady. At the close, Kishengani jute was quoted at Rs. 25 a maund for garsat quality.

Opening quotations on Tuesday morning were based on the following:

Indian Jute:	Landed at Mills Rs. a md. basis Bottoms	Shipment
Assam	26.50	January February
Northern	26.75	"
Purnea Desal	24.50	"
Daissee	30	"
Assam Tossa	29.75	"
Northern ex Calcutta	25.50	"
Mesta:		
Assam-Northern	23.75	"
Desal	23.50	"
Daissee	23.25	"
Murshidabad	23	"
Jungli	22	"
Bimli F.A.Q.	21	"

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th January, 1958	960.8	10,200.3	11.161.1
1st to 15th December, 1957	472.8	15,274.3	15,747.7
1st to 15th November, 1957	1,338.2	21,103.1	22,441.3
Sacking			
1st to 15th January, 1958	11,678.5	48.0	11,726.5
1st to 15th December, 1957	18,597.6	263.9	18,861.5
1st to 15th November, 1957	25,910.1	429.2	26,339.3

THE PAKISTANI JUTE MARKETS

PERCENTAGE OF HIGHER GRADE FIBRE IMPROVES

(FROM A NARAYANGANJ CORRESPONDENT)

BOTH the overseas and local markets have reacted downwards during the past week, and in accordance with the trend which has been noticeable throughout this season, sellers have promptly reduced their imports. Similar reports have come in from upcountry centres indicating that the sellers are resisting a reduction in prices. Even more disturbing is the report that the percentage of moisture in jute is increasing. Some areas report a slight improvement in the percentage of higher grade jute. This is quite probable since the sellers have been strong enough this season to hold back their higher qualities and only to release them when the low qualities are no longer saleable. E.P.C. registrations, although still 350,000 bales behind last year, are higher than one would have expected from the amount of business transacted. It has generally been agreed that the only thing likely to give any strength to the market is the entry of such bulk buyers as Russia or China. It is interesting to note that during December, the Russians bought over 46.000 bales without any report that they were out to purchase in the market. While E.P.C. registrations are still behind last year, shipments this year have been about 60,000 bales more. In spite of the strength of the grower it is difficult to hold a bullish view on the Narayanganj jute market.

Recent reports indicate that Mr. Sanwar Ali has been transferred to the western wing of Pakistan and is being replaced by somebody else in the jute secretariat.

THE FOREIGN JUTE MARKETS

FIBRE BUSINESS REMAINS SMALL

(FROM OUR DUNDEE CORRESPONDENT)

JUST before Christmas, raw jute prices recovered by a few pounds a ton. Although the trend has again been easier in the interval, there has not yet been a return to the former levels. Reports from Pakistan continue to indicate an ample supply of the fibre to meet all requirements, but a scarcity of the better class jute persists. Offers of Mill Firsts and higher grades are not being freely made. Shippers appear to be making certain that they will not fall into the same mistake as a year ago, when they lost a lot of money by their inability to cover sales made at cheap rates. It is believed that a good deal of jute is being held back upcountry in the hope of better prices.

Consumers of the fibre in most centres are content to purchase small lots. They believe that values will fall as the season progresses. While good quality jute may be somewhat scarce this season, values of the lower grades of white jute and Daissee and Tossa should be marked down because they are plentiful. Mill Firsts are lowest at £114, but up to £120 is still wanted by some sellers. Mill Lightnings are from £97. Mill Hearts from £87 and grade Hearts from £75, with good marks of Daissee-2/3 from £97 10s and grade from £89. Grade Tossa 2/3 is from £105 and grade Tossa-4 from £97 10s, all c.i.f. U.K., January-February.

Business in jute yarns is quiet. Buyers are still operating on a hand-to-mouth basis, being generally successful in picking up any supplies they may require for delivery in a few days. Hessian yarns are firm on the basis of 15.14d a lb for common 8 lbs C.H.W. cops and 15.72d for 8 lbs J.C.H. warp, with twist in better demand from the carpet industry. Rove is quietly steady and the small yarns are dull. Very little business is being done in sacking yarns. The cloth end of the trade is quiet and transactions are confined to small quantities at 12.88d a yard for 40in. 10oz. and 11.01d for 8oz.

The Calcutta goods market has varied slightly, closing at 60s 6d for 40in. 10oz. and 46s 6d for 7½oz., January-March, and 61s and 46s 6d April-June, with B Twills at 157s 9d and 158s 6d, respectively, f.o.b. Calcutta.

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Good Wishes to Rourkela

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 106.2 during the week ended 4th January, 1958, compared with 106.3 for the previous week. The index was lower by 1.3 and 0.6 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago. The index for Food Articles stood at 102.8 compared with 102.9 for the previous week. Items which showed appreciable variations during the week were: onions (−18%), rice in Gaya (−13%) and in Contai (−7%), jowar in Nagpur (−12%) and in Surat (−6%), fish (Pomfret) in Bombay (−11%), potatoes in Kanpur (−10%), ragi in Bangalore, bananas in Calcutta, black pepper in Cochin and mustard oil (−6% each), eggs in Bombay (−5%), cashewnuts (−4%), ghee and cardamoms (−3% each), groundnut oil gingelly oil, chillies and cummin (−2% each), potatoes in Shillong (+29%), oranges in Calcutta (+25%), fish (Prawn) Tirur (+14%) and Rohu in Calcutta (+12%), masur in Bombay (+11%), wheat in Saugar and urd in Bombay (+8% each), rice in Nizamabad (+7%) and in Kotma (+5%), arhar in Bombay and coconut oil in Calcutta (+7% each), bajra in Rajkot (+6%), jowar in Mohal and maize in Chandausi (+5% each), cloves (+4%) and salt (+2%). There was a rise of 8 percent in the price of sugar due to the levy of the additional excise duty. The index for Tobacco rose by 1 percent to 97 compared with 96 (revised) for the previous week because of an advance in the price of bidi tobacco in Calcutta (+7%): the price of tobacco snuff in Madras (−3%), however, showed a fall. The index for the Fuel, Power, Light and Lubricants group moved down from 114.8 to 114.7 as a result of a fall in the prices of castor oil (−8%). Lower prices of loose hemp in Calcutta (−13%), linseed and rapeseed (−4% each), castorseed (−2%) and raw cotton, raw silk and gingellyseed (−1% each) brought down the index for Industrial Raw Materials by 0.6 percent to 114.1 although the prices of wet salted cowhides (north India) in Kanpur (+11%), groundnuts in Hyderabad (+5%), cottonseed (+2%) and copra and lac (+1% each), witnessed an increase. The index for Intermediate Products advanced by 1.1 percent to 106.8 due to a rise in the prices of rayon yarn (+6%), zinc (+3%), brass and copper (+2% each) and linseed oil, cotton yarn and tin (+1% each). The prices of aluminium circles (Indian) in Bombay (−8%) and coir yarn (−1%) were, however, marked down. The index for Finished Products remained stationary at the previous week's level of 107.7 in spite of variations in the prices of oilcakes (−3%), glass (−2%), silk and rayon manufactures (+2%) and cycles (+1%).

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production during December 1957 was 357,000 tons bringing the total production up to 31st December, 1957, to 493,000 tons. The corresponding figures for the 1956-57 season were 336,000 tons and 452,000 tons, respectively. The offtake of sugar from factories (including despatches for exports) during December 1957, was 141,000 tons against 166,000 tons during the corresponding period of last season. The total closing stock of sugar with factories on 31st December, 1957, was 627,000 tons against 660,000 tons on the same date of last season.

Plantation Topics

PEPPER PRICES LOWEST FOR TEN YEARS

BIGGER COFFEE ALLOCATIONS FOR INTERNAL MARKET

(FROM A SOUTH INDIAN CORRESPONDENT)

FOR the first time since 1947, pepper prices have fallen below Rs. 475 a candy of 6 cwts. in the terminal markets in India. The new crop is being harvested and a substantial amount of it is coming into the market. Arrivals in Alleppey are estimated at 200 candies a day and in Cochin at 100 candies a day. The other terminal market, Kozhikode, too, is receiving substantial quantities of the new crop Trade sources stick to their previous estimate of 24,000 tons, which will be about the same as the last season's crop. A feature of the new season is the buyers' price consciousness: business takes place only at lower rates. Overproduction is mainly responsible for this. World output of pepper has more than doubled within the past five or six years. Until 1950, it was less than 30,000 tons, with the output in India amounting to nearly 18,000 tons. By 1952-53 the position had changed entirely. In Indonesia and Sarawak, new plantings of the postwar years gave handsome yields. The production of Indonesia had gone down from the prewar level of 50,000 tons to the insignificant figure of 3,500 tons during the period 1947-50, but since then it has been recovering quickly and it is estimated that her latest harvest was 19,000 tons. Her new plantings have not yet reached the full bearing age, and when they do, the output is likely to rise by a few thousand tons. The other important producer, Sarawak, yielded less than 100 tons for the three or four years immediately after the second world war. But now, the output there is over 19,000 tons. She, too, has extensive areas of new plantings capable of producing a still larger crop.

Bigger World Output

The world production of pepper in 1956, it is estimated, was nearly 70,000 tons, compared with less than 30,000 tons in 1947-50. It was a little lower during the past year. The 1956 output was contributed as follows: India 24,000 tons, Indonesia 20,000 tons, Sarawak 19,000 tons and other countries 7,000 tons. This steep rise has completely upset the balance between supply and demand. The United States has been the largest consumer of pepper. For the last two years it has been importing lesser quantities from India. Besides, buyers there have become highly price conscious. They are no longer prepared to accept the price which sellers quote. Britain and other west European countries have switched over to Indonesia and Sarawak. Russia and her satellites as well as China have been buying pepper from India for the past two or three years, and their purchases have been offering a certain amount of support to the market. With the steep decline in price, internal consumption has been increasing. It is estimated that as much as 45 to 50 percent of the production in India is now consumed locally.

Yet the overall position is that the output is in excess of demand That is the principal factor behind the fall in the price of this commodity; it was once selling at prices nine to ten times higher than the present level. It is suggested that the principal producers should get together as the coffee and tea planters have done, and take jointly certain measures to arrest the fall in prices. The regulation of export and sales promotional activities are necessary. The Government has certain schemes to expand production. But it has yet to take any effective step, other than setting up an export promotion council (which, too, has failed to do anything tangible in the over two years of its existence), to arrest the price decline.

Coffee and Tea Bonus Disputes Settled

All bonus disputes raised by the workers in coffee and tea plantations in Madras State have been settled through the intervention of the State Minister for Industries and Labour, Mr. R. Venkataraman. The representatives of the management and labour signed an agreement before the Labour Commissioner on 15th January. According to the terms, the managements have agreed to pay the workers employed in coffee estates an additional bonus for each year from 1952 to 1956 at 2.5 percent calculated on the respective earnings of the years in question, regardless of profits or losses, without prejudice to the rights and contentions of the either party. Workers employed in all tea estates will be paid an additional bonus for 1955 and 1956 at the rate of 4.5 percent calculated on the same basis. Mixed estates having an acreage of 25 percent and over of tea will pay the bonus at the rate applicable to all tea estates. It has also been agreed that the payment of bonus covered by the agreement will be made within a month.

Higher Coffee Consumption in India

The internal offtake of coffee touched a new record in 1957 at 26,230 tons, which was over 10 percent more than in 1956 and 17 percent higher than in 1955. As the internal market is expected to consume more in 1958, the Coffee Board has made bigger allocations for it. The outlook for coffee in the world market being uncertain, an expanding home market is a valuable asset for this industry. Nevertheless, with the large expansion in output, the industry will still have to rely on foreign markets for the disposal of its surplus. The crop last year was 42,000 tons and the Coffee Board had a hard task in finding a market for it. The estimate for the current season is 37,000 tons, but a larger crop is expected in 1958-59. It has long been realised that the present system of auctions by sealed tenders, while adequate for the needs of the internal market, is unpopular with foreign buyers. So the Board has a plan to introduce open export auctions. The chairman of the Coffee Lands and Industries (Mysore) Ltd. feels that this will be a step in the right direction, although its early effects may not be quite encouraging. In his opinion the industry can hardly feel secure until it has an established exchange for marketing its produce on lines similar to the tea markets in Cochin, Calcutta or Colombo.

With the prospects of lower export prices ahead, the industry cannot afford to rely on an inadequate marketing system. The present curing facilities are considered insufficient, too. The preparation of coffee for the export market will have to be quick if export markets are to be maintained. Last year's bumper crop taxed the capacity of the curing works to the maximum. The latest newsletter of the Coffee Board says that on account of the delay in curing, the first export sale of the new season, which was scheduled for early January, has had to be postponed until the first week of February. It is not enough, the industry feels, merely to expand the capacity of the existing curing establishments; new entrants will have to be attracted to the field.

COCHIN TEA SALES

At Dust Sale B, 625,000 lbs of tea were on offer. There was a very strong general demand, and prices improved irregularly by 10nP or 15nP.

EASIER TREND AT TEA EXPORT SALE

FAIR DEMAND FOR DUSTS

AT Sale No. 29, held on 20th and 21st January, offerings at the Export auction amounted to 58,041 packages. There was good general demand, but prices showed an easier tendency. Medium and common broken grades declined by about 2 to 4nP while the Fannings grades were about 4nP lower except those with clean black appearance which were firm and occasionally dearer. "Teas for price" were a little irregular. Bright liquoring Assam B.O.P.'s were steady, while the O. Fgs. of the same sort were frequently dearer. The ordinary B.O.P.'s were 5 to 10nP easier and sometimes more, but the O. Fgs. did not decline to the same extent and were only up to 5nP below last rates. C.T.C. teas were in good demand, the best being fully firm and occasionally dearer. The lower qualities, however, tended to be easier and frequently sold 10nP below valuations. Leg-cut teas were generally 4 to 6nP easier, but those which had bright liquors sold well, sometimes above valuations. There was a good demand for whole leaf grades and these were the strongest feature of the Sale. Darjeelings sold well, especially those which had stylish leaf appearance of flavoury liquor.

Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.35 to 2.40	2 6 0
Plain B. P.	1.58 to 1.52	2 3 0
Plain Fannings	1.66 to 1.70	2 4 6 to 2 5 0
Medium B. P.	1.66 to 1.70	
Medium Fannings	1.76 to 1.80	
Best C. T. C. Assam B. P.	2.80 to 2.80	2 12 0 (Nom.)
Best C T. C. Assam Fannings	2.50 to 2.60	

At the Internale Sale, a total of 19,781 chests of Dust was on offer, for which there was a fair demand at generally easier rates. All orthodox descriptions were from 2 to 4nP easier, while nonwither Dooars were in less demand and shared in the general decline of the market. The better mediums and the best liquoring C.T.C.'s were the strongest features of the Sale and were fully firm, but the more ordinary kinds were sometimes up to 10nP easier.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.60 to 1.62	2 1 0
Medium Assam Grainy Dust	1.62 to 1.64	2 1 0 to 2 2 0
Medium Assam C.T.C. Dust	2.00 to 2.20	2 4 6
Best Assam C.T.C. Dust	2.85 to 3.05	2 9 0 to 2 11 0

There was a fair general demand for the 2,603 chests of Leaf on offer, but prices were irregularly easier.

FREIGHT MARKETS UNCHANGED

THE freight markets remain unchanged. The trans-atlantic coal charterers paid 25s. In the grain trade, fixtures were reported Gulf to Karachi at $(U.S.)24.75 and in the Pacific a 7,000 tonner was fixed for Madras or Bombay at 90s f.i.o. stowed. One of the most interesting features of last week was the booking of the first tonnage for wheat from Canada to Australia. The ore charterers paid Mormugao-Genoa 37s 6d f.i.o., Mormugao to Antwerp-Hamburg Range 47s 6d. From Visakhapatnam 9,500 tons, 10 percent manganese ore to Northern Range has been fixed at $(U.S.)9.75. A small vessel for 4,000 tons, 5 percent, manganese ore Calcutta to Oxelosund has been fixed at $(U.S.)9 f.i.o., trimmed. Coal charterers have paid $(U.S.)8 discharge free, 9,500 tons, 10 percent, coal Hampton Roads to Japan whereas 7,000 tons, 10 percent, special anthracite coal Calcutta-Japan has been fixed at 57s f.i.o. trimmed. For 7,000 tons, 10 percent, coals for three consecutive Calcutta-Chittagong has paid 25s under the usual Calcutta coal charter party. In the time charter section, a motor vessel of 10,650 tons d.w. has been fixed delivery Antwerp-Hamburg range, 13th to 15th February—redelivery India-Pakistan at 18s, option round voyage 17s. The present stevedores' labour trouble in conjunction with the bore tides for three days may again cause congestion in the Calcutta port towards the end of this month.

LINSEED EASIER

A further decline was recorded during the past week and trading continued to be very dull. Arrivals of seeds were small, and local stocks of both seeds and oil were limited. Crushers were operating very cautiously. The oil market was dull; local demand was sluggish, while overseas markets were easier with sellers offering at reduced prices. Latest quotations were as follows: January-February Rs. 22-4 a maund.

SUGAR MARKET STEADY

During the week ended 21st January, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 2,000 bags and stocks totalled 125,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 36-8 for ordinary grain and Rs. 38-10 for big grain. Ex-mill prices ranged from Rs. 34-8 to Rs. 35-8. The market was steady.

HIDES AND SKINS QUIET

The market in skins ruled quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 14th January and 20th January, 1958)

Cowhides: Wet Salted (Ord.) 22,800 pcs. on the basis of Rs. 9.75 to Rs 11.75: Wet Salted (Slaughtered) 13,300 pcs. on the basis of Rs. 12.50.

COMPANY AND PUBLIC NOTICES

ROOPACHERRA TEA CO. LTD.

NOTICE is hereby given that the 49th Annual General Meeting of the Shareholders of Roopacherra Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 20th February, 1958, at 3-30 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. D. N. Mukerji, the Director retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

   "That Mr. D. N. Mukerji be and is hereby re-appointed a Director of the Company."

   Special Notice dated 10th January, 1958, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261 (1) (f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. D. N. Mukherji is presently a Director of Tyroon Tea Co. Ltd., which is a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2 (3) (c) (1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 8th February, 1958 to 20th February, 1958 both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 20th January, 1958.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.
2. Payment of the proposed Dividend, if declared, will be made on or after 27th February, 1958, only to those members whose names are registered in the Books of the Company on 20th February, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the members of the abovenamed Company will be held at the Registered Office at Gillander House, Netaji Subhas Road, Calcutta, on Monday the 10th day of February 1958, at 10 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as a SPECIAL RESOLUTION namely:—

"That the Regulations contained in the draft submitted to the meeting and for the purpose of identification subscribed by the Chairman thereof, be and the same are hereby approved and adopted as the Articles of Association of the Company, in substitution for and to the exclusion of all the existing Articles thereof."

By Order of the Board,
STEEL BROTHERS AND COMPANY LIMITED,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta. 16th January, 1958.

Notes:—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) An Explanatory Statement concerning this Resolution as required by Section 173 (2) of the Companies Act, 1956, has been posted to the members.

THE SOOM TEA CO. LTD.

NOTICE is hereby given that an Interim Dividend for Season 1957 of 15% has been declared payable on or after 6th February, 1958.

BANKS

H indicates that Share capital is half paid. O C. and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE FUTURE PROSPECTS FOR INTERNATIONAL AID

ADLAI STEVENSON LENDS SUPPORT

IN October last year an article appeared on this page reviewing the prospects of S.U.N.F.E.D., which was about to be discussed by the General Assembly of the United Nations. The most that can be said for this project at the moment is that it is still under consideration. But apart from a charming name—which means Special United Nations Fund for Economic Development—there is a great deal to recommend a scheme of this kind, as was pointed out at the time. Since then, there have been two important developments concerning India which should give the idea of an internationally administered development fund even greater attractions for this country. They are: the recent American loan, its disadvantages; and the prospects that the sterling area will soon see radical changes, or might even break up altogether. And these are not the only reasons why the topic of S.U.N.F.E.D. is worth a further reference. In an article published in the *Sunday Times* dated 29th December, 1957, Mr. Adlai Stevenson suggests, in words of his own, a scheme substantially the same as this one, as an antidote to the present success which Russian propaganda and imperialistic expansion is having among under-developed countries. Mr. Stevenson is not the President of the United States, and his chances of assuming that office are probably worse now than they have ever been, thanks to the unwritten convention that a twice-defeated candidate cannot have a third try. But he already has a toe-hold in the State Department as an adviser to the disastrous Mr. Dulles and the likelihood of his someday becoming Secretary of State after the present incumbent has presented the world with his one and only diplomatic triumph—his resignation—appears to be fairly high. With Mr. Dulles's probable successor, therefore, already working on the idea, and the language in which he is expressing himself being of the kind which should appeal to even the most shell-backed of America's H-bomb and rocket advocates, the theory behind S.U.N.F.E.D. might have a more promising future than the one prophesied for it last October.

Perhaps the most interesting feature of Mr. Stevenson's article is the appreciation it expresses of the past economic achievements of colonialism; a perspective of this kind used to be as rare in the United States as it still is in Asia. While, of course, not recommending anything so retrograde as a return to that system, he does at least see the United States in the rôle of chief sponsor of an international organisation designed to provide the kind of investment which used to reach Asia through colonial channels. Assistance has also been arriving in recent years through the mechanism of the sterling area. Mr. Stevenson points a fact which is seldom appreciated when questions about British aid to India are asked—that the equivalent of the whole Marshall Plan aid to Britain has been passed to this country through the release of the sterling balances. Now that colonialism is—as Mr. Stevenson puts it—a "dead horse", and fresh thinking about the sterling area is in progress, it is time the question of development aid to Asia was placed on a fresh footing. As Mr. Stevenson points out, the survival of the free world and its efforts to counter the spread of communism, may well depend upon it.

The two main reasons why it is so much in India's interests, and in those of other under-developed Asian countries, to support the theory behind Mr. Stevenson's proposal, require further examination and qualification. The disadvantages of the aid which the United States is prepared to give to under-developed countries at the moment are well enough known: it tends to follow political alignments; it has been known to have strings attached; it favours military projects rather than development ones; it is inadequate; and it is not always acceptable in the spirit it is offered. Not all these features are wholly bad. The "strings", for example, are often exaggerated by newly-independent countries jealous of their independence, although singularly lacking in sound ideas about how financial aid can be used. Generally speaking, the distinction between imposed political conditions and the economic kind—which are certainly justified in so far as they ensure the money is not wasted—becomes confused in the minds of former colonial peoples in a way which is damaging both to themselves and to the cause of the free world. In India's case, although there is no question of political strings, the kind of aid represented by the major part of the loan which has just been granted by the United States carries the inevitable disadvantages that it is useable only in that country itself, that it is aid for specific projects, that it does little to support the rupee, and that it is not large enough to allow for continuous planning. Most of these drawbacks could at least be modified if the aid were to come from an international multilateral fund. The fact that all nations would not necessarily contribute to such a fund if the element of cold-war competition were absent, must be faced. But for the free world, there would be the obvious advantage that if the Soviet Union, for instance, still preferred to go it alone—to quote Mr. Stevenson—"the inference would be obvious to all". The same might be said of the motives of any other country whether suspected of communism, colonialism or merely self-interest.

The advantages which this country has derived from the sterling area link are not always apparent because the money belongs to India in the first place. But when the sterling balances have disappeared, there is no reason to suspect that drawing rights will necessarily end abruptly, unless, of course, Britain's economic situation remains desperate for an indefinite period. Records for the sterling area over the past few years show that the British economy itself has achieved a fairly substantial surplus. This has, of course, been cancelled out by the drawings of other members. The time has now arrived when Britain is wondering seriously whether the benefits she derives from being the banker for half the world are large enough to compensate for this loss of capital. The problem may become acute for Britain if another large contributor to the central reserve—Malaya—decides to follow more independent economic policies, which she is now in a position to do. If this should mean the ultimate break-up of the sterling area, a large number of under-developed countries in both Asia and Africa, including India, are likely to lose an important source of development capital, and one which can only adequately be replaced by an international multilateral fund.

The difficulties of ever establishing a project of this kind were dealt with at some length in the article last October. Mr. Stevenson also refers to them in his own article. Briefly, they are to be found in the attitude which both potential borrowers and lenders have towards colonialism. When, for instance, a fair proportion of the resources will have to come from ex-colonial powers, it would be contrary to human nature to give money anonymously to nations whose sole contribution to world affairs is a continuous denouncement of their benefactors as impenitent rogues. Similarly, it is not easy to persuade jealously-independent nations to accept the kind of direction—even if exercised internationally—without which no donor in his right senses would consent to the kind of renunciation of control over his aid which an international agency would involve. Although there have been signs lately that some re-thinking about old prejudices has been going on in high places in India, there is still little sign of it elsewhere in Asia. Even here, the declaration made by Mr. Nehru at the closing session of the Pragjyotishpur Congress meeting this month, was not altogether reassuring. While Mr. Stevenson may represent a fair proportion of progressive opinion in the United States, there is still little inclination there to forgo the supposed advantages of direct aid; while the attitude of Europe varies from outright hostility to a sneaking suspicion that this might be one way of conveniently leaving it to the other fellow. Certainly, it is not going to be easy to encourage the kind of mutual recognition of facts, and overall willingness to sink prejudice and the dictates of self-interest, which would make it possible to establish a fund of this kind.

But whatever the difficulties, the effort would be worth while, and there is no reason why India, considering all she stands to gain, should not be the leader in making it. Mr. Stevenson is obviously seized of the advantages which such a fund would have for the cause of the free world; it should not be impossible for the newly-independent countries to appreciate what benefit it would have for themselves. If Mr. Stevenson can put into practice the idea he has sponsored in his article—or even cause to be put into practice—he will have done more for his country and the free world than any American statesmen since the war, including President Truman and Mr. George Marshall. The trouble is that he will need a great deal of help from countries which, at the moment, are temperamentally least able to give it.

THE EIGHT-YEAR-OLD REPUBLIC

IT was significant, and entirely proper, that from abroad unqualified congratulations and good wishes came to India on the eighth anniversary of the proclamation of the Republic, while the country's own celebrations on the occasion were characterised by sober and restrained jubilation. There were spectacular parades in New Delhi and the State capitals, but in almost all authoritative orations on the day there was an unmistakable note of anxiety. It says something for the maturity of a people which can rejoice and re-think simultaneously, be visibly happy and introspective at the same time. The President of India invoked a spirit of happiness and good cheer, as was but natural and fit, but spoke at much greater length on the many problems facing the world in general and India in particular. It was what Mr. Nehru might have called a "bread-and-butter" broadcast.

Breaking down the speech further it will be found that there was more about bread and less about butter, which is truly reflective of the state of the Republic. The grave food problem, the President said, he was not inclined to gloss over. Gone is the extravagant mood in which the Prime Minister once spoke of India exporting food in the near future. What is happening, instead, is that India has to import increasing quantities of food for scarce and precious foreign exchange, when the latter is desperately needed for machinery and equipment without which the country cannot industrialise itself. India's industrial ambitions deserve the respect they are receiving, in very concrete form, from a variety of foreign sources, but it was ever an illusion to imagine that industrial progress was possible without ensuring a sound agricultural base for the industrial superstructure. Stalin could, and did, deliberately starve vast numbers of Russians when there was not enough food to go round. Unfortunately, meaning very fortunately, Mr. Nehru cannot, and will not, do anything of the kind.

Self-sufficiency, the President said, must be India's target in the matter of food, and to this end he urged the country to work. While this urgent attention to what is and may long remain the chief aspect of the Indian economy is wholly welcome, there may be a danger that, just as once

nobody would think of anything but industry, now nothing but agriculture will be on anybody's mind. The first need for economic planning, surely, is planned thinking on economics. Imbalance in exports or imports is in the final analysis less important and harmful than imbalance in thinking, and the Government of India has not always been immune from its incidence. There is, after all, nothing sacred about the goal of self-sufficiency; indeed, in purely economic terms, self-sufficiency is essentially a retrograde concept. Increased production of food for India's fast growing population is at once necessary and feasible. Only a little improvement in technique and equipment is capable of adding millions of tons of rice and wheat to India's granaries. Only a little effort to stop waste, in the fields and in the kitchens and on dining tables, will add millions of tons to existing stocks. All this should be done, but self-sufficiency in food is not a target the country need hold before itself.

There are two very good reasons for this. One is that, as the Asoka Mehta Committee made abundantly clear, self-sufficiency will not be attained for many years to come, and imports will be impossible to avoid. Second, self-sufficiency, pursued at the expense of industrial effort, is likely to leave the economy just where it is with no further progress being made and, in the fullness of time, even the maximum agricultural effort possible will not be enough. After all, producing one's own food is not the only way of keeping oneself fed. In fact, it is the poorest way of keeping alive, and that barely. There is nothing ignominious or shameful about importing food. Some very respectable countries live on imported food and, if they had wasted their energy and resources in trying to be self-sufficient they would have been very backward indeed today. To improve agriculture to the highest point of efficiency is one thing; it is quite another to make a fetish of self-sufficiency—not merely in food, but in anything.

* * * *

This difference in emphasis apart, the country is probably wise to keep the second plan before itself as something everyone must strive to fulfil as far as possible. In spite of heroic assertions to the contrary, the plan is unlikely to be implemented in five years. It is already obvious that, calling spades by other names, changes have been made and more may be inescapable. But there is no warrant at all for abandoning the industrial ambitions, and the leaders of the country are right to stress the need for endeavour in this direction.

While the attention given to economic problems is a welcome index of a reorientation in public thinking, the President also spoke of international affairs. The approach was as expected and the greetings extended to this country by such unlike sources as the *New York Times* and *Pravda* are not the first evidence of increased international appreciation of India's foreign policy. India can indeed view her record in international diplomacy with some justified satisfaction.

Mature countries, of which India is fast becoming one, do not change suddenly or on an appointed date. Republic Day is only an occasion for looking backward in a spirit of self-criticism and forward in a spirit of self-confidence. Both attitudes were well represented last Sunday, and if one must state what specific changes took place in India between the seventh anniversary and the eighth the most obvious and striking perhaps is this: International affairs ceased to dominate thought, and internal problems, especially those economic, began to receive the attention due to them. This is not merely a compliment; it is a good augury for the future of India.

PROBLEMS OF ENGINEERING EXPANSION

THERE has been an impressive rise in production in all branches of the Indian engineering industry over the past few years, thanks to the demands of five year plans. According to the speech of Mr. Manubhai Shah, Union Minister of Industry, at the recent engineering conference in Calcutta, light electrical industries increased the value of their output from Rs. 5 crores in 1948 to Rs. 25 crores last year, light mechanical industries turned out goods from 20 percent to 90 percent more in 1957 than in the previous year, heavy electrical industries increased production by more than six times between 1948 and 1957, and in the heavy engineering group, the motor-car industry "has gone forward" with almost a nine-fold increase in its output between 1948 and 1957. The indigenous production of components for trucks, jeeps and cars has also risen progressively. The machine-building industry has made a promising start, and the value of goods turned out totalled Rs. 35 crores. Among the goods produced by this new industry are the machines for the textile, jute, sugar and cement industries. The economy, said Mr. Shah, needs to import machinery worth Rs. 150 crores a year, and the gap to be made up is obviously large.

The Minister explained to his audience the various steps which the Government has taken to step up output in this sector; plans have been finalised for establishing the heavy machinery building plant in Ranchi with Russian collaboration. This plant, when fully operative, will produce one complete steel plant every two years. Also in Ranchi will be set up the foundry-forge plant, in collaboration with another communist country, Czechoslovakia, in order to ensure a prompt supply of heavy castings and forgings for the heavy machinery plant. "This will be an integrated plant so that these two units will form a complete unit taking care of all machinery, equipment and components of steel plant and heavy machinery required by chemical, engineering and other industries", he added. The Russians, too, are collaborating in the establishment of a heavy mining equipment plant with a projected capacity of 30,000 tons a year, which will be located in Durgapur. Negotiations are in progress with U.K. interests to secure their assistance for putting up plants for producing heavy plate and vessels and heavy structurals. "Along with these, a heavy machine tool plant with German collaboration will complete the first round in our great march forward towards laying foundations of heavy machine building in our country," Mr. Shah said. Another notable project, the heavy electrical equipment plant, has begun to be implemented in Bhopal in co-operation with the Associated Electrical Industries of the U.K. When completed, it will produce machinery worth Rs. 25 crores a year.

* * * *

Mr. Shah is correct in claiming that the engineering industry as a whole has made fairly rapid strides. But the prospects for future expansion are by no means so reassuring. In the first place, the foreign exchange difficulty has already begun to tell on the expansion plans of many private units. Machinery imports are now being strictly rationed, and not only according to the amount of foreign currency available; imports are not, for instance, being allowed in all cases even if deferred payment terms can be arranged. Mr. Shah is right in saying that "deferred payment is payment after all." What is deferred today will have to be met tomorrow, and over-burdening the economy with future commitments has its dangers. The other big difficulty at present is that of an adequate supply of raw materials. Engineering industries have for some time been complaining of an acute scarcity of steel and pig iron, and Mr. Shah was unable completely to assure them that an adequate supply would be forthcoming. Domestic production of steel and pig iron is increasing and imports are being made as much as possible within the limits of the availability of foreign exchange. But he was obliged to ask industrialists to be a little more resourceful and manage things by substituting other lighter metals wherever that is possible. On a longer view of this problem, however, the biggest worry may be the supply of non-ferrous metals. These are as essential in engineering production as iron and steel. According to known facts, India has not enough of these natural resources even for her present needs. Aluminium provides the sole exception. Unless big deposits of copper, zinc and tin are discovered through extensive geological prospecting, she will have to continue to depend for her increasing requirements upon imports. Mr. Shah's suggestion that industrialists should set up smelters to process imported ores of these metals in order to minimise the cost, is plausible without being very sound. As the trend goes, primary producing countries now show a greater disinclination to export their ores for which they will get a lower value than if they exported them in the metal form.

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd., which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies, they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

CURRENT COIN

Developing Small-scale Industries.—The Government has given special emphasis to the development of small-scale industries under the second plan. Against a meagre provision of about Rs. 25 crores in the first plan, it has provided Rs. 200 crores during the second. The pattern of financial assistance to State Governments has been considerably liberalised for development schemes. No less than 750 State Government schemes have been sanctioned since the beginning of the second plan. Speaking at the recent meeting of the Small-scale Industries Board in Calcutta, Mr. Manubhai Shah, Central Minister of Industry, said that the plan allocation for this year for the State schemes is Rs. 400 lakhs, although the sanctions exceed Rs. 450 lakhs. Among the various measures introduced for rendering assistance to these industries, the Government felt the need for providing credit on liberalised terms at an early stage of their development. In consultation with the Small-scale Industries Board, the terms and conditions under which loans are advanced by State Governments have been liberalised, and now it is possible for small industrialists in most States to get loans up to Rs. 1,000 on personal bond, up to Rs. 5,000 on one or more sound sureties and above that amount on 75 percent of the security offered, which also includes land, building, plant, machinery, stocks and other assets created out of the loan. The rate of interest payable by industrial co-operative societies is only 2½ percent for amounts up to Rs. 2 lakhs and 3 percent from other credit agencies for amounts up to Rs. 50,000. The loans are repayable in easy instalments spread over ten years and are advanced by State Governments through their Directors of Industry. In spite of the liberalisation of credit facilities by almost all the State Governments, the grant of loans to small-scale units is still hampered on account of "avoidable" procedural delays. "I would earnestly urge upon you all to study this problem in each of the States in detail and try to avoid the bottlenecks and simplify procedure, take some risk wherever possible, so that the assistance given to small units is timely and effective." Referring to the creation of industrial estates to provide suitable factory accommodation to small-scale units, Mr. Shah has said that the Government has decided to set up such estates in about 100 towns. Some of the estates are also being established in the community and pilot project areas in villages. Considerable progress has been made in the direction of setting up a full-fledged Small-scale Industries Development Institute which is to be established in Calcutta with the co-operation of the Japanese Government. "The Howrah area, the Kalyani area and the Durgapur area round about Calcutta are fast developing into active centres of small-scale and other industries, and I have no doubt that the very big institute to be established in Calcutta with the co-operation of the Japanese Government and Japanese experts will be a great source of development and promotion of small-scale industries in West Bengal," the Minister said.

* * * *

U.P. Financial Corporation.—A recent analysis of the balance-sheets of 750 public limited industrial companies by the Reserve Bank of India showed that as much as 62 percent of the increase in their financial resources had to come from internal savings such as depreciation reserves, general reserve, taxation reserves, etcetera. Part of the long-term finance required had to be found from bank advances—a fact also stressed in the White Paper in the 1957-58 Central Budget. The Paper observed: "This indicates the inadequacy of corporate savings for financing the programmes in the private sector." Although the problem of finance for the private sector can be effectively solved only by Central action, it is in itself a good thing that the States, too, should do their own bit by way of extending financial facilities to medium and small-scale industries. The proposed increase in the share capital of the U.P. Financial Corporation from Rs. 1 crore to Rs. 1.75 crores is, therefore, to be welcomed. The additional capital investment has been found necessary to encourage industrial expansion in the State. Net sanctions of loans by the Corporation as on 31st December, 1957, amounted to Rs. 88.59 lakhs, while demands for loans totalled Rs. 5.24 crores. Set up in November 1954, the Corporation received during the first three years of its existence 236 applications of which only 59 could be accommodated. A remarkable feature of its activities, according to an official statement, is the regular and full repayment of the instalments on the loans without resort to any coercive measure. There has been no case of bad or doubtful debt so far. The financial assistance extended by the Corporation has led to the establishment or expansion of 24 industries, important among them being cycles and cycle parts, sugar, ice and cold storage, electrical goods, railway track material, fruit preservation and canning, leather, chemicals, power alcohol, paints and varnishes and locks.

* * * *

Expansion of Glaxo.—During his recent visit to Madras, Sir Harry Jephcott, chairman of Glaxo Laboratories Ltd., took the opportunity to express his and his company's faith in the future of India. His company's plans of expansion might lead to the establishment of a second factory, he said. Glaxo Laboratories Ltd. is among the largest pharmaceutical manufacturers in India, and it proposes to invest more in this country. Recently, Sir Alexander Fleck, chairman of I.C.I., mentioned in Madras that his company had proposals for expansion in India. Sir Harry's statement followed soon after. Import restrictions, it is said, are not going to hinder Glaxo's development programme. The sale of infant foods is not likely to suffer because of any increase in the supply of fresh milk, and Sir Harry told a journalist that in Britain the sale of infant milk foods was still on the increase. The expansion of Glaxo's production and sales, and consequent higher profits, has led to an increased dividend on the larger capital, and further overseas expansion is calculated to lead to higher prosperity. Sir Harry is of the opinion that Hindustan Antibiotics is in no way a rival to Glaxo. The company's Indian associate has received assistance from the Government in starting production of essential medicines and other products in the country.

* * * *

Banking in Kerala.—In a memorandum to the Select Committee which is examining the new debt relief Bill before the State Legislature, the Kerala Banks Association has urged that the banks in the State should be treated on a par with the co-operative societies in applying the provisions of this new legislation to them. It has been pointed out that the banks pay high rates on deposits and they finance agriculture as well as industry. This special situation (92 of the banks are small and use paid-up capital for lending operations) should be a reason for distinguishing them from private moneylenders. The Bill fixes 5 percent as the maximum rate for loans and provides for the re-opening of cases in law courts relating to mortgaged property even where sold. The Association considers these as dangerous to credit. The Bill apparently is designed to give relief to agriculturists, but because of many other such provisions, its enactment may lead to a tightening of credit, making lending in future risky. The Association feels that the new Bill is likely to hamper the consolidation of banking in Kerala. The Enquiry Committee which reviewed in 1956 the banking position in the former Travancore-Cochin State suggested that in view of the scales of wages and salaries paid by many of the banks, amalgamation, or consolidation of smaller banks into larger units, was desirable.

* * * *

Tamil for Administrators.—An experiment involving the use of Tamil as the medium of correspondence in public administration has been started in Madras. Standing orders and manuals are to be translated and an official glossary is being prepared. Not all the city offices have changed over to Tamil yet, and the public is fortunately not obliged to use the language in letters to officials. The important change involving the use of typewriters with a Tamil keyboard is still to come, but the Government hopes to prove that until typists are available, the smaller offices can create and use a vocabulary which will adopt familiar Urdu and English words. The provision of new Hindi glossaries may not do much good, for that script is far from familiar; the plea has been made that the Roman script for Indian languages must become general before any departure in administration can be thought of. Whether the Record Office can help in devising new Tamil terms for administration is doubted. The East India Company used Persian and Telugu in correspondence and the work of translation may devolve on the Board of Revenue charged with the task of preparing codes and manuals in Tamil. Incidentally, it will make the Board important once again as the supervisory agency of general district administration. Local bodies are likely to approve of the change-over to Tamil and the planners have already been doing much to conduct publicity in that language. While some say that Madras will be turned into a single-language State, many think that the step is really connected with the preservation of English for inter-State purposes; the Madras Government is opposing the introduction of Hindi not only by upholding the continued use of English, but also by bringing in Tamil which is familiar to the lower courts and to village officials.

* * * *

U.P. Agricultural Labour.—An enquiry conducted by the Institute of Social Sciences, Agra University, has arrived at the conclusion that a rise in agricultural productivity is essential before minimum wages can be effectively enforced. The enquiry, which was carried out by Dr. R. C. Mathur of the Institute, was confined to western U.P. In the whole State, surplus agricultural labour is estimated at a little over one million, but this number is growing. In western U.P. alone, there has been a significant increase of 24.3 percent. According to the All-India Agricultural Labour Enquiry Committee, the casual labourer is employed for 251 days on agricultural work, for 22 days on non-agricultural work and for the remaining 92 days he remains unemployed. According to the Agra survey, the annual value of *per capita* consumption of the landless labourer amounts to Rs. 129.3 and of the cultivating labourer to Rs. 132.6, and there is very little difference between the two. Itemwise, 79.8 percent of the expenditure is on food, 7.8 percent on clothing and footwear, 0.8 percent on lighting, 0.8 percent on housing, 0.6 percent on tobacco and 0.4 percent for saving. Social ceremonies account for 3.7 percent. The calorific value of the daily diet of an agricultural labourer in western U.P. is estimated at 2,200 a consumption unit, which falls short of the normal requirement of 3,000 calories by 800 calories or 27 percent. On the mode of payment, Dr. Mathur says: "Since food forms the bulk of the budget of an agricultural labourer, a system of giving grain together with cash will suit him most. The system of paying in kind at the time of *rabi* harvesting should continue as such, because it is convenient to both the employer and the labourer. It also tends to keep the cost of living low since the labourer has not to purchase the grain for consumption." The abolition of *zamindari* has by no means diminished the size of the landless labour problem in the State. On the other hand, there has been a tendency for the conflict between the agriculturists and labourers to harden, which is expressing itself in a new form of communal rivalry. The *Ahirs, Kurmis* and *Kumbis*, who constitute a very substantial proportion of the labouring classes in U.P. villages, have joined together under such an organisation called the Triveni Sangh.

* * * *

Journal for Planters.—The *Planters' Chronicle*, the official organ of the U.P.A.S.I., published fortnightly from Coonoor, is an interesting publication of its kind. It is the successor to *Planting Opinion* started in September 1895. In the past, its interests extended far beyond planting enterprise, but since 1920 the journal has been concerned chiefly with this industry's affairs, keeping however an eye on development in Africa and the U.S.A. It now devotes space to planters at play too. Government loans made for replanting, mergers of north Indian tea companies, new markets for pepper, cashew export figures, and the problem of rising wages are treated regularly with a fair degree of objectivity. The statistical tables make for easy reference. Market reports are assembled in a convenient form. An editorial note in the latest issue discusses Kerala's food deficit problem and suggests that it may throw new burdens on the plantation industry because of the workers' preference for rice. The industry closed its rice department some time ago in the belief that the estates in Kerala would not experience any food shortage for their workers again.

MANAGEMENT OF FINANCES

THE *Economist*, while giving utterance to identically the same views in regard to "India's Financial Independence" as those upheld by *Capital*, is equally in accord with this paper in discrediting the financial talent of the Anglo-Indian administrator. This estimate of the fiscal genius which flourishes on the breezy and deodar-clad heights of Simla, is caustically embodied in one of the reasons given by our contemporary why India should discharge her own monetary obligations. The *Economist* observes: "If the financiers produced by the bureaucracy of India (who have rarely or never been men of genius) are relieved of painful pressure by English grants, they will never improve their cumbersome system of taxation, or lay down any scheme which will work successfully for a generation. They are, in fact, not thinking of generations, but of five years' terms, after which all ruling men of India, except the great soldiers and one or two administrators, retire into indistinguishable obscurity." Now, let it be cheerfully admitted that a financial genius like any other genius is not a common commodity; but, on the other hand, it must be confessed that something a great deal less than "financial genius" would, had it been freely exercised, have prevented the existing muddle in Indian finances. As a counterbalancing thought to this, let it also be readily granted that the administration of a country with so vast a population as India by a few leading men, is an exceptionally difficult task; and therefore while criticism may be thoroughly unsparing, let it be judicially impartial not losing sight for an instant of those disabilities under which a bureaucracy must necessarily labour. It is quite possible that eventually we shall be able to evolve a better balanced bureaucracy than we have at present, with a greater leaven of the true financial talent therein. The Government of India moves in relatively so narrow a sphere that it is far too ready, unconsciously as it were, to believe that the quintessence of administrative wisdom is contained within the Council Chamber. And yet it is perfectly certain that a body of men representing the banking, commercial and manufacturing interests of this country might easily be gathered together from Calcutta, Bombay and Madras, who would bring to bear on the intricate problems of the currency question more real practical knowledge and a firmer grasp of the issues at stake than we can hope to see made manifest in a decade of Supreme Councils.

Without Prejudice

THE RESPONSIBILITIES OF A LANDLORD

RISK IN ACCEPTING A FEMALE TENANT

(FROM OUR LEGAL CORRESPONDENT)

HERE is a rather startling eye-opener for owners of property who let out flats or rooms at inflated rents to single ladies. If the lady earns her living by and uses the flat or room for the purposes of prostitution, the landlord may find himself facing the ugly criminal charge of living "wholly or *in part* on the proceeds of prostitution". Note the italicised words. The landlord may be a substantial citizen carrying on his own legitimate business but he may be criminally liable if he, for example, exacts from this particular lady a rent appreciably in excess of that which he charges other tenants in the same block of flats for similar accommodation. The difference, if substantial, between the exorbitant rent charged to the lady and the normal rent charged to the other tenants might be held to be the actual amount by which "in part" he lived "on the proceeds", in short, his profit on the prostitution. Moreover, the difference in the respective rents would be presumptive evidence, though rebuttable, that he knew the purposes for which the premises were used. That seems to be the lesson of the recent English case of *R* v *Thomas*, 1957. 101. *Solicitors' Journal*. 430; in which a decision to the contrary effect in 1956 in *R* v *Silver* was not followed. In the former case, which was affirmed on appeal by the Court of Criminal Appeal, Pilcher J. held that if there is evidence that the accused has let a room, or a flat, at an inflated rent to a prostitute, allowing her to ply her immoral trade therein, then it is a question for the jury to determine on the facts of each particular case, whether the accused is, in fact, knowingly living wholly or in part on the proceeds of prostitution. Personally the writer finds *R* v *Thomas* an astonishing decision and does not believe for one moment that it will be accepted as good law in India. It seems to place an intolerable burden on law-abiding landlords, particularly property owners on a big scale. In effect, it compels a landlord to guarantee the respectability and good conduct of any female tenant to whom he lets a flat or room at a rent which some magistrates later on may deem excessive; and he will have to make detailed investigation into the personal character and morals of any woman who wishes to become his tenant, thereby risking a suit for defamation if he refuses to let the room and the lady finds out about his enquiries.

* * * *

And, talking of flats, here is one of those practical legal conundrums periodically set by the English periodical *Law Notes* for debate and voting upon by the law debating societies throughout the country. The societies came down heavily—eight societies to one—on one side, but as the total voting of the members was in the proportion of roughly 5 to 4 and as two of them depended on the chairman's casting vote, the non-legal reader's commonsense vote is quite as likely to be right as any lawyer's. This is the Moot: "In January 1955 Landon (the landlord) granted Tallent (the tenant) a yearly tenancy of a four-roomed flat on the eighth floor of a house at Enraf, in the country of Essex which he (Landon) had converted into flats in 1938. There was no undertaking by Landon in the tenancy agreement to keep the common staircase in order or to light or maintain a system of lighting. A lift was provided, but only to the fifth floor. The electric lights on the staircase were controlled in the hall porter's office on the ground floor and were turned out when the hall porter went off duty, which was very seldom, perhaps three or four times a year, before 10.15 p.m. and never after 11 p.m. On the evening of 15th March last, Tallent's wife, who was expecting a baby, was taken ill suddenly, and at 10.10 p.m., Tallent, as there was not a telephone in his flat, left the flat to ring up her doctor from the house telephone in the ground floor hall, which he was entitled to use. He found the common staircase in darkness, and in the extreme urgency of the moment, he proceeded downstairs by holding on to the banister. Between the seventh and sixth floors, he missed his footing in the dark and fell down the stairs to the sixth landing, breaking his arm and his leg besides seriously injuring his back. Can Tallent successfully sue Landon for the damages he (Tallent) has sustained?" Think it out before you look at the majority decision which appears at the end of this note.

* * * *

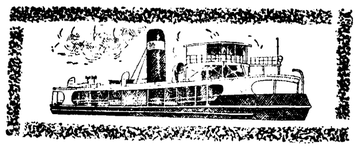
One workman plays a practical joke on another while both are at work under the same employer. By this skylarking he injures, of course, unintentionally his mate. Is the employer liable in damages to the injured workman for the injuries sustained?

That was the issue in the English case, *Hudson* v *Ridge Manufacturing Co. Ltd.* (1957). 101. *Solicitors' Journal*. 409.

The facts were that for nearly four years one of the master's servants had been in the habit of tripping people up or otherwise engaging in horseplay and skylarking. He had been frequently reprimanded by the foreman and told that if he continued in this habit, someone would be hurt but he was not dismissed or threatened with dismissal for his conduct. You may assume that, apart from his habit of rough practical joking, he was a reliable and steady young workman. On this particular occasion, he caught hold of a fellow workman who was engaged in his work and the latter fell to the ground and fractured his wrist in trying to save himself from falling. The injured man sued his employers for damages.

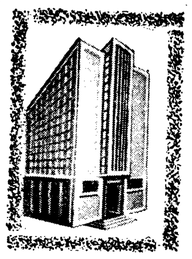
Now when you think this one out do not mix it up with a claim for periodical compensation under the Workmen's Compensation Act. Under that statute there is little doubt that a claim could not succeed as the man's injury has to be by accident "arising out of, and in the course of, his employment" and both in England and Scotland it has been held that indulgence in horseplay is not within the scope of a man's employment. This is a claim for damages at common law, so we must consider what the common law responsibility of an employer or "master" as he is called (and nowadays miscalled) is. It is, in the words of a great judge, broadly speaking, this three-fold obligation: "the provision of a competent staff of men, adequate material, and a proper system including effective supervision." (Lord Wright in *Wilsons and Clyde Coal Co. Ltd.* v *English.*)

Note those words "effective supervision"; and remember also that "it is the common law duty of a master to take reasonable care that his servant be not exposed to unnecessary risks." (*Smith* v *Baker.*)

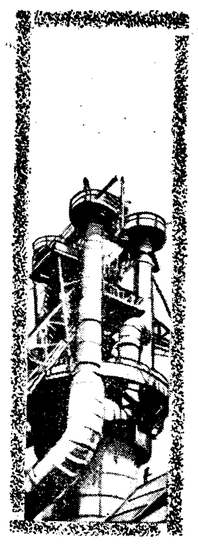


Is it "effective supervision" for a foreman who knows that a man has been up to his dangerous practical jokes and skylarking for some four years merely to reprimand him again and again?

Streatfield J. held that the employers were liable in damages as they were in breach of their duty of care by failing to remove a servant who was to their knowledge likely to be a source of danger to his fellow servants.



One trusts the case will go further by way of appeal. In the writer's view, the employers could not have dismissed the practical joker. His indulgence in animal high spirits without the slightest ill-feeling against or intention to injure his mate surely could not be termed "misconduct" such as to justify dismissal. Moreover, dismissal for mere horseplay would probably bring a whole union out on strike; and also, with hardly a shadow of doubt, the firm would have been made to reinstate the man in proceedings under the Industrial Disputes Act If that is a correct view the decision seems to be a dubious one. The young man had been skylarking, on and off, for four years without hitherto injuring anyone. The occurrence was totally unexpected, fortuitous, unintended by anyone, characterised solely by chance and could not reasonably have been foreseen by the employers. Almost an Act of God, you might say, or an inevitable accident. However, the Court held otherwise, and mulcted the employer in damages. But the reason is worth noting. The employer was liable because he was guilty of negligence in that knowing (by his foreman) of the young workman's addiction to dangerous horseplay, he (the employer) did not, over a period of four years, take effective steps to put an end to the practice. If it had been an isolated "joke", no doubt, the result would have been different.



Answer to the conundrum in paragraph 2: nine societies debated it. One society, Leicester, voted in favour of Tallent—the tenant—and was awarded the second prize for so doing. The first prize winner, Preston, voted for the landlord and was supported by the seven other competitors; but in each case the voting was a close thing. You may agree with the writer that the majority decision was a correct one on the broad ground that the tenant, knowing the risk, voluntarily took a chance in the dark. *Volenti non fit injuria*, which, being roughly interpreted means: "He had had it with only himself to thank for it."

A DITCHER'S DIARY

COMPLAINTS about too many people receiving honours on Republic Day, I am afraid I do not fully understand. After all, this is an enormous country with a very large population and, in some fields at least, talent is by no means scarce. As in some other spheres, application of British standards is just irrelevant. Although it is some sort of scarcity value which invests the richly merited award of Padma Bhushan to Sir Jehangir Ghandy (for whom it is not an entirely novel experience) with additional importance, the point should be made that commerce and industry continue to be under a cloud so far as official recognition is concerned. The distinction is made the more striking by the many—some have said too many—laurels heaped upon film directors, stars, artists and musicians. The absence of a writer in the list, I am sure, is evidence of official ignorance rather than of any lack of talent in the Indian literatures. Bharat Ratna, I take it, is the highest honour the Republic of India confers, and no less was deserved by Dr. D. K. Karve. This 99-year-old social worker dedicated himself to social reform and women's education at a time when politics had only begun to be the obsession of every Indian patriot, and even when nationalism in the narrow political sense swept the country, Dr. Karve declined to be deflected from his chosen path of serving his country and its people. It is an imperfect society which honours only its politicians. Looking at the honours list closely, I wonder whether there has not been an attempt to maintain a sort of parity between regions and personalities, and perhaps at the expense of more valuable criteria. I would not know whether Ustad Alauddin Khan should be placed on the same footing as Mr. Ariyakudi Ramanuja Iyengar, for my knowledge of both north Indian and Karnatic music is woefully limited, but I do know that there is something not quite right in awarding the same honour to Satyajit Ray and, say, Nargis or Devaki Bose, very distinguished though the latter two doubtless are. A Calcutta contemporary has spoken of inflationary trends in the giving of honours, and as a student of economic affairs I feel bound to endorse the warning.

* * * *

With so many people rising half an hour earlier these mornings to read the latest revelations of the Chagla Commission, Calcutta's servant population should be in a good position to confirm the significance which matters of this kind have for all of us nowadays, however remote our connection with high finance. Whatever the outcome of the enquiry—and the opinions I have been hearing range from hardened cynicism to downright astonishment—the fact that it is being held at all is a first-class tribute to India's determination to improve her standards of business and political morality. This feature may not appear to be uppermost in the minds of the thousands who have queued for a seat at the enquiry, or who have devoured the columns of the newspapers with more than their customary appetite for enlightenment, but it is certainly there all the same. The precautions which have been taken to see that the matter is handled swiftly, competently and impartially, in spite of earlier fears, are the manifestations of political wisdom. Democratic electorates may not always bristle with intelligence, but they have an uncanny instinct for realising when they are being cheated and any government which is unable or refuses to satisfy them is unlikely to last very long. It was probably this fact more than the scanty evidence available which persuaded the British Government to agree to an enquiry into the allegations about the Bank-rate leakage. The tribunal, I see, has vindicated all concerned and the benefit to the reputation of London as a world financial centre is second only to the confidence which the British people have been able to retain in the integrity of their political and financial institutions. Enquiries of this kind can do nothing but good. They are one of democracy's best guarantees against revolution, and even if they eventually come to nothing, it is seldom that they do not throw welcome light on the principles involved. Up to now, that looks like being the chief outcome of the Chagla Commission's enquiry. And while I am in an approving mood, I should like to congratulate the Press, especially the so-called "yellow" section of it, on the work it has done in prodding an understandably reluctant Government in the direction it ought to go. Perhaps this will be a lesson to the stuffy advocates of perpetual journalistic good taste that there is a place in a healthy democracy for all kinds of newspapers, whether strictly "responsible" or not.

* * * *

Reading through that last sentence, it strikes me that perhaps some qualification is called for. Not for a moment do I condone the kind of "yellow" journalism responsible for the inconvenience and embarrassment caused to the parents of a Dutch girl whose murdered body was found near an Essex farmhouse recently. That business was a disgrace to British journalism, and to refer it to the Press Council was the only proper course to take. Similarly, I hold no brief for the habit of making sensations out of unimportant matters to justify larger point headlines. Such behaviour is bad for the public, the newspapers and the unfortunate journalists who have to do it to earn a living. It is a pity that this sort of thing generally goes with the kind of newspaper mentality which does not hesitate to dig into a public scandal, does not fear getting its hands dirty, and generally fulfils the social purpose of keeping a nation's conscience in matters often conveniently considered below the level of good taste. In fact, it is the unwillingness to accept the restrictions of this most insidious of middle-class criteria which makes these publications so valuable nowadays—because it is certainly a far mealier-mouthed world than it was even fifty years ago. The extent to which the Press can be stifled by so-called "good manners" is nowhere better illustrated than in the case of the British Royal Family. For the last three decades Fleet Street has maintained a conspiracy of silence about all but the most trivial of Royalty's doings, which has made the British people the least informed in the world about the affairs of their own monarchy. Who, for instance, were the last to learn about Mrs. Simpson and Peter Townsend? This is good for nobody, except perhaps the enemies of the institution of monarchy. If a newspaper can combine curiosity with courage and accuracy with outspokenness then and then only is it doing its job well. The important thing to avoid is respectability.

* * * *

One of the great illusions of the immediate past has been the idea that the Russians have no scientific tradition and that in fact they have crammed into thirty years the leisurely scientific progress which the rest of the West took the best part of a century to achieve. Nothing is further from the truth. A friend of mine with considerable experience of the American oil industry told me some time ago that its finances were dominated by Jews and its administration by others; but that if one looked at its scientific and technological departments one would be surprised to find how many of the top men had Russian names or were of Russian extraction. Now I see that in the latest issue of *Lloyds Bank Review*, Professor John Jewkes, discussing sources of invention in general, discloses that some of the more important early scientific writings on high-altitude rockets, published in 1903, were those of a Russian schoolmaster, K. E. Ziolkowsky, who made "many fundamental contributions to rocket technology". Professor Jewkes adds: 'Russia was probably further ahead of other countries in thought and work on rockets in 1903 than now". So that while nobody wishes to detract from the achievement of the *Sputnik*, it is, in fact, directly in an earlier pre-revolutionary Russian tradition. The wartime development of the V2 rocket, which did so much damage to London and southern England, was the work of German scientists. It could cover a distance of 120 miles with a deflection of only 2½ miles from the target, reach a speed of 3,000 miles an hour and a height of 60 miles. From that moment, says Professor Jewkes, there was no doubt that a *satellite* could be placed in the sky and no great mystery about how it could be done. When the Third Reich was finally overrun the German rocket experts of Peenemunde were scattered—some to the United States and Britain, but most finished up in Russia where doubtless they and the Soviet experts soon put their hard little heads together.

* * * *

It had to happen, of course; but it is natural enough to feel disappointed when everything appeared to be going so smoothly. I am referring to the change from annas to naya paisa, and the dispute which Calcutta Tramways had with its employees last week over it. My sympathies are with both sides; whenever I have had to deal with the two currencies at once, I have simply reconciled myself to being robbed and taken the consolation that anyway it could not be of very much. Fortunately, I am not to a naya paisa here and there, but if I had to be, or if I were in the kind of business where a large number of small items amounted to a great deal of money—as it does with the tramways—I would be heartily sick of the whole business by now. Which raises the question whether it is really necessary to have the two units circulating together for so long. I know the reasons which were put forward originally: the need for people to get used to the new coinage; the social desirability of having a smooth changeover, and so on But I wonder whether they are so strong now as to justify the inconvenience and irritation—to say nothing of the dangers—of having to accept both coins at the bidding of those whose choice is most likely to be dictated by their own prospects of gain. Up to now people have been remarkably patient: they may not always be so, and ugly situations are common enough in this country without giving scope for more. When the metric system of weights and measures is introduced as well, and we have even more complicated conversions to deal with at the same time, the possibilities are frightening; we are not all higher mathematicians. There is everything to be said for adopting the metric system, and if India does not do it now she never will. But one thing at a time is an excellent principle when caution is so much needed. And to withdraw the anna coinage without further delay would remove one important irritant without, as I see it at the moment, causing intolerable inconvenience. So far as the citizens of Calcutta are concerned, it would be far worse to have to do without the tramcars for a spell.

Copies of these Licences are open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting these Licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of this Offer for Sale, having attached thereto the documents specified below, has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation for the whole of the issued share capital of the Company.

The Application Lists will open at 10 a.m. on Tuesday, the 4th day of February, 1958 and will close at 10 a.m. on Friday, the 7th day of February, 1958 or later at the discretion of the Offeror.

INDIAN OXYGEN LIMITED

(Incorporated under the Companies Act, 1913.)

CAPITAL

Authorized		Issued and Fully Paid
Rs.		Rs.

The Offeror will receive through the Company's Bankers, The Chartered Bank, applications for the above Ordinary Shares payable in full (i.e. Rs. 13.50 per share) on application.

It is intended to reserve a maximum of 30,000 (i.e. 5%) of the above 6,00,000 shares for offer in the first instance to employees of the Company. To the extent to which these shares are not taken up by employees they will be available to meet applications from the public.

Applications which, unless made by employees of the Company must be for 50 shares or multiples thereof, must be made on the accompanying form and lodged, together with the full amount payable, before the close of the application lists, with any branch in India of The Chartered Bank. Employees of the Company may apply for 25 shares or multiples thereof and a special form of application, coloured blue, is provided for this purpose with copies of this Offer for Sale issued to employees.

Further instructions regarding application for shares appear later in this Offer for Sale and also on the Application Forms.

All expenses of the offer, including stamp duty, payable on the first transfer of shares (from the Offeror to the applicant), will be paid by the Offeror.

The shares now being offered will confer the right to any dividend declared in respect of the Company's financial year ending 30th September, 1958. No dividend has yet been declared in respect of such financial year.

PARTICULARS.

History and Business

Indian Oxygen Ltd. was incorporated and registered in West Bengal on the 24th January, 1935, as a private company limited by shares under the name of "The Indian Oxygen & Acetylene Co., Limited." On the introduction of the Companies Act, 1956, the name of the Company was changed to "The Indian Oxygen & Acetylene Co., Private Limited." The Company was converted into a public company on the 15th day of January, 1958 and at the same time its name was altered to "Indian Oxygen Limited".

The Company was originally formed for the purpose of taking over (and, after incorporation, did take over) as going concerns the businesses then carried on :—

Firstly : By The Lightfoot Refrigeration Company Limited at Calcutta, Bombay, Lahore, Jamshedpur, Giridih and Kargali and at Colombo in connection with the manufacture and sale of Oxygen Gas and Liquid Oxygen Explosives and appliances therefor.

Secondly : By The Gas Accumulator Co. (India) Limited at Calcutta in connection with the manufacture and sale of Oxygen and Acetylene Gases and appliances therefor.

Thirdly : By Allen Liversidge (India) Limited at Bombay in connection with the manufacture and sale of Acetylene Gas and appliances therefor.

The Company is a subsidiary of The British Oxygen Company Limited and, as such, is a unit of an organisation having subsidiary and associated companies in Africa, Australia, Burma, Canada, Ceylon, Eire, Hongkong, Malaya, New Zealand, Norway, Pakistan and the United Kingdom.

New companies were formed in Pakistan, Burma and Ceylon, as subsidiaries of The British Oxygen Company Limited to commence operations as from the 1st August, 1949, after taking over the capital assets, stocks and certain other assets, together with certain liabilities of The Indian Oxygen & Acetylene Co., Limited in those territories. The Indian Oxygen & Acetylene Co., Limited ceased trading in those territories as from the 1st August, 1949, consequent upon the formation of the new companies.

The Company's present business consists of the manufacture and sale of Industrial and Medical Gases (including Oxygen, Acetylene, Nitrous Oxide and Dry Breathing Oxygen) and Electrodes and of the assembly, manufacture and sale of Welding and Cutting Apparatus and Equipment, and other similar articles.

The business is carried on in India at the Company's Head Office and factories in Calcutta and at branch factories and offices at Ahmedabad, Bangalore, Bombay, Burnpur, Delhi, Jamshedpur, Kanpur, Madras, Tiruchirapalli and Visakhapatnam and through depots at Bombay City, Baroda, Cochin, Delhi, Gauhati, Howrah, Hubli, Hyderabad, Jaipur Jullundur, Kolhapur, Ludhiana, Madurai, Nagpur, Patna, Poona and Vijayawada.

Development

Since its incorporation the Company has progressively expanded both its volume of production and its range of products and it is now the main supplier of India's requirements of Industrial and Medical Gases and Equipment for Welding and various other processes involving the use of Industrial Gases.

An indication of this progressive expansion is given by the following figures showing the total sales turnover during the last ten years :—

1948	1949	1950	1951	1952
Rs.	Rs.	Rs.	Rs.	Rs.
1,08,52,445	1,36,59,064	1,33,03,772	1,53,97,836	1,89,25,955
1953	**1954**	**1955**	**1956**	**1957**
Rs.	Rs.	Rs.	Rs.	Rs.
1,97,39,770	2,34,03,420	2,67,96,882	3,45,59,726	4,17,74,429

NOTE :—Sales in Pakistan, Burma and Ceylon up to 31st July, 1949, have been included in the above figures. After that date separate companies were, as mentioned above, incorporated in these countries to take over the business previously carried on there by this Company.

In order to meet the increasing demand for its products the Company has throughout adopted a

INDIAN OXYGEN LIMITED—*Cont'd.*

progressive policy both as regards expansion of its factories and facilities and as regards replacement of old plant and machinery by modern equipment.

The industrial development plans initiated by the Government of India, and in particular the expansion in steel production envisaged by the Second Five Year Plan, are expected to give rise to a further very substantial increase in the demand for the Company's products. With this in mind the Directors have therefore drawn up a replacement and expansion programme. This programme involves the setting up of new factories and expansion and modernisation of existing factories and includes provision for the progressive manufacture in this country of certain equipment and accessories used in the process of Welding and Cutting which presently have to be imported from abroad. As indicated by the headnote on the first page of this Offer for Sale, Licences under the Industries (Development and Regulation) Act, 1951, have been obtained for the establishment of a new industrial undertaking for the manufacture of Gas Welding and Cutting Equipment and for effecting a substantial expansion to the Company's existing industrial undertaking for electrode manufacture. In the light of a recent Government Notification the Company has been advised by the Ministry of Commerce and Industry that Government now considers that Industrial Gases, Oxygen and Dissolved Acetylene, and also Fluxes of all types, are covered by the Act. This will necessitate the obtaining of certain further Licences under the Act and the necessary applications have been submitted.

The Replacement and Expansion programme, which is already in hand, is planned to be completed by approximately 1960 at an estimated cost of Rs. 3,20,86,423. Of this sum expenditure of Rs. 99,59,423 had already been incurred up to the 30th September, 1957, leaving a balance of Rs. 2,21,27,000 to be expended during the three years to the 30th September, 1960. The expenditure incurred to date has been financed, on a temporary basis, by The British Oxygen Company Limited partly by means of the Special Loan Account referred to on the first page of this Offer for Sale and partly by allowing the Company to withhold payment of amounts due to The British Oxygen Company Limited on Current Account.

Shortly before this Offer for Sale 6,80,000 Ordinary Shares of Rs. 10 each were issued to The British Oxygen Company Limited at par. Out of the total issue price (Rs. 68,00,000) Rs. 29,23,333 was paid by liquidation of a loan from The British Oxygen Company Limited then outstanding. The balance of Rs. 38,76,667 was remitted to the Company in cash.

The Offeror (The British Oxygen Company Limited) has agreed to leave the net proceeds of sale of the present Offer for Sale, less Capital Gains Tax, if any, payable by the Offeror in respect thereof, on loan to the Company for a period of seven years at the rate of interest from time to time applicable to loans from The British Oxygen Company Limited to the Company. Such rate of interest is subject to adjustment in the light of prevailing conditions but at present stands at 6 per cent per annum.

In planning the financing of the Replacement and Expansion Programme the Directors have had due regard to the necessity of providing for adequate foreign exchange for the import of capital goods. In this connection the subscription by The British Oxygen Company Limited of the sterling equivalent of Rs. 68,00,000 (partly by liquidation of an outstanding loan to the Company and partly by remittance in cash) will be of great assistance but it is estimated that further foreign exchange to the extent of approximately Rs. 75,00,000 will be required for the Replacement and Expansion Programme. The Company is therefore engaged in negotiations with The Industrial Credit and Investment Corporation of India Limited and intends to open negotiations with the Commonwealth Development Finance Company Limited of London and it is hoped that these two Companies between them will lend to the Company a total of Rs. 75,00,000 available as foreign exchange. Should these negotiations for any reason prove unsuccessful it will be necessary to explore other possible means of raising the required amount of foreign exchange.

The balance in the hands of the Company resulting from the recent issue of 6,80,000 shares to The British Oxygen Company Limited ; the net proceeds of this Offer for Sale (less Capital Gains Tax, if any) to be lent to the Company by the Offeror ; the foreign exchange loans referred to above ; (assuming the negotiations are successful) and the amount that is estimated to be available from the Company's internal resources (after making due allowance for the working capital which will be required during the three years to the 30th September 1960) will be used to finance the Replacement and Expansion Programme including expenditure already incurred. It is proposed in the first instance to pay off the amount due to The British Oxygen Company Limited on the Special Loan Account and also at the earliest opportunity to pay off the sum presently due to that Company on Current Account.

Management, Staff and Technical Facilities

The Company has an experienced technical and executive staff, a large proportion of whom have been trained by the Offeror in the United Kingdom, and provides work for over 2,000 employees.

As a wholly owned subsidiary of The British Oxygen Company Limited the Company has had the benefit of the wide technical experience and "know how" of that Company. Consequent upon the conversion of the Company into a public company with a view to the present Offer for Sale by the Offeror to the Indian public of a substantial part of the Offeror's shareholding, it is proposed to enter into an Agreement with the Offeror for a period of 5 years for the undertaking of joint research in the Offeror's research establishments in the United Kingdom, each party to pay an appropriate proportion of the cost of such research, subject to a maximum annual payment by the Indian Company of £30,000, and for the continuance of the various training and technical assistance facilities heretofore provided by the Offeror. The Agreement will also make provision for the continued use by the Company of registered designs, trade marks, patents, processes and inventions of the Offeror and for reciprocal facilities to be given by the Company to the Offeror. Application has been made to the Reserve Bank of India for its consent to the proposed Agreement.

Working Capital

Taking into account bank facilities the Directors consider that the Company has adequate working capital for its present requirements and the financial arrangements referred to above provide for working capital during the period of the Replacement and Expansion Programme.

Future Prospects

The growth of the Company's sales is reflected in the profit figures over the past five years. Whilst no assurance can be given as to future profits or prospects, it is considered that with the planned rise in steel production in this country there should be a ready absorption of the Company's present and proposed increased production.

The Directors anticipate that, in the absence of circumstances beyond their control, the profits of the current financial year should be sufficient to justify recommending a dividend for the year of 10% free of income tax.

Auditors' Report

The following is a copy of a Report which has been received from Messrs. Price, Waterhouse & Co. :—

The Directors,
The Indian Oxygen & Acetylene Co. Private Limited,
48/1, Diamond Harbour Road,
Calcutta-27.

B4, Gillander House,
Calcutta,
8th January, 1958.

Dear Sirs,

We have examined the books and accounts of The Indian Oxygen & Acetylene Co. Private Ltd., which are kept in Calcutta and in which are incorporated the audited returns from the Branches, for the five years ended 30th September, 1957, and report that the profits of the Company are as set out below. These profits have been arrived at after charging all expenses of working and management including provision for normal depreciation as allowable for taxation and after making such adjustments as are, in our opinion, appropriate :—

INCOME	Year ended 30th September, 1953. Rs.	Year ended 30th September, 1954. Rs.	Year ended 30th September, 1955. Rs.	Year ended 30th September, 1956. Rs.	Year ended 30th September, 1957. Rs.
Sales and Recoveries	1,97,39,770	2,34,03,420	2,67,96,882	3,45,59,726	4,17,74,429
Miscellaneous Income	70,197	51,066	60,273	27,587	20,725
	1,98,09,967	2,34,54,486	2,68,57,155	3,45,87,313	4,17,95,154
EXPENDITURE					
Cost of Sales and Recoveries	1,19,34,762	1,39,02,828	1,55,34,830	2,10,94,178	2,61,57,756
Staff—Salaries, Wages and Incidental Expenses	23,59,363	25,22,067	27,89,111	30,88,457	38,32,438
Office and Administration	7,57,456	9,06,700	11,04,009	11,95,504	16,39,582
Selling Expenses	7,07,112	7,57,048	8,15,635	9,76,022	11,65,763
Miscellaneous Expenses	4,28,607	3,26,073	2,66,327	3,40,338	7,47,702
	1,61,87,300	1,84,14,716	2,05,09,912	2,66,94,499	3,35,43,241
Net Profit before Depreciation and Taxation	36,22,667	50,39,770	63,47,243	78,92,814	82,51,913
Normal Depreciation	8,81,672	9,41,439	10,30,414	10,78,659	12,54,773
Net Profit before Taxation	27,40,995	40,98,331	53,16,829	68,14,155	69,97,140
Taxation after allowance of normal depreciation only	12,03,768	17,93,266	25,13,682	38,21,367*	38,48,416
NET PROFITS :	15,37,227	23,05,065	28,03,147	29,92,788	31,48,724

*Exclusive of Rs. 7,50,000 Super Tax payable in respect of Bonus Shares issued during the year.

Depreciation and Development Rebate figures not included above are as follows :—

Extra Shift Allowance	1,15,390	1,18,601	1,13,220	97,523	97,523
Double Allowance	5,90,895	6,33,658	7,05,480	7,32,010	8,84,798
Initial Allowance	4,10,819	2,90,933	2,03,955	2,61,756	.....
Development Rebate	.....	3,99,562	72,094	1,55,013	1,62,112
	11,17,104	14,42,754	10,94,749	12,46,302	11,44,433

We also report that the assets and liabilities of the Company as at 30th September, 1957, which is the last date to which the Company's Accounts were made up, prior to the date of this report, are as set out below. These assets and liabilities have been arrived at after making such adjustments as are, in our opinion, appropriate :—

ASSETS.

	Rs.	Rs.
Capital Assets *less* Depreciation, Capital Work-in-Progress and Capital Goods in Transit		2,51,11,147
India Government Securities and other Investments at Cost		4,46,023
Stocks on hand and Goods in Transit		1,49,52,898
Sundry Debtors and Advance Payments *less* provision for Doubtful Debts		98,22,230

In respect of the year ended 30th September, 1957	10% per annum	13,20,000

Yours faithfully,

Sd. Price, Waterhouse & Co.

INDIAN OXYGEN LIMITED—*Cont'd.*

Statutory and General Information

The shares now being offered for sale were acquired by the Offeror prior to 1947. No part of the proceeds of this Offer for Sale is payable directly to the Company but, as mentioned above, the entire net proceeds less Capital Gains Tax, if any, payable by the Offeror in respect thereof will be loaned to the Company by the Offeror. The expenses of this Offer for Sale, which are payable by the Offeror, inclusive of underwriting commission, brokerage, stamp duty, printing charges, Registrars' fees and legal and other charges are estimated at Rs 5,20,000. This does not take into account Capital Gains Tax, if any, payable by the Offeror.

No share or loan capital is under option or agreed to be put under option.

The main objects specified in the Company's Memorandum, apart from the taking over of the businesses of The Lightfoot Refrigeration Co. Ltd., The Gas Accumulator Co. (India) Ltd. and Allen Liversidge (India) Ltd. referred to above, are :—

"To carry on the business of manufacturing and compressing oxygen, hydrogen, nitrogen, carbonic acid, acetylene and other gases of kindred substances or any compounds, thereof by any process, and of selling or applying such gases, substances and compounds or any of them to such purposes as the Company may from time to time think desirable, and to manufacture, buy, sell, let on hire, and deal in engines, cylinders, compressors, machines and other apparatus and conveniences which may seem calculated to promote (directly or indirectly) the consumption of gases.

To manufacture and deal in metals, substances and materials of all kinds (including glass) which may be usefully or conveniently employed in the manufacture of receivers for compressed or liquefied or other gases, and all machinery, appliances, tools, articles and things used or capable of being used for closing or in the manufacture of appliances for closing such receivers or for closing or stoppering bottles or for liberating the gases or other contents of any such receivers or the tools required for or used in the manufacture of any such articles or things or for any of the purposes aforesaid.

To carry on the business of manufacturing, buying and selling dissolved acetylene, acetylene lamps, generators and plants, acetylene apparatus and accessories and other apparatus, appliances, articles and things which may seem calculated to promote or to be capable of being used in connection with the consumption of dissolved acetylene.

To carry on the business of chemists, druggists, importers and manufacturers of and dealers in carbide of calcium and other pharmaceutical, medicinal, chemical, industrial and other preparations and articles, compounds, cements, oils, paints, pigments and varnishes, makers of and dealers in proprietary articles of all kinds, and electrical, chemical, photographical, surgical and scientific apparatus and materials."

No shares or debentures have been issued or agreed to be issued within the two years preceding the date of this Offer for Sale as fully or partly paid up otherwise than in cash and no shares have been issued at a premium within the said two years, nor are any shares presently intended to be issued at a premium.

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

No amount or benefit has been paid or given within the two years preceding the date of this Offer for Sale or is intended to be paid or given to any promoter or officer of the Company save as remuneration for services as a director, managing director or employee of the Company.

On a show of hands every member present in person has one vote and every person present as a General Proxy (i.e. any Proxy other than a Proxy appointed for a specified meeting only) or as a representative for a body corporate, if he is not entitled to a vote in his own right, has one vote. On a poll the voting rights of members are as specified in Section 87 of the Companies Act, that is to say, every Ordinary shareholder has a right to vote on every Resolution in proportion to his share of the paid up equity capital of the Company.

No member may exercise any voting rights either personally or by Proxy at any meeting of the Company in respect of any shares registered in his name on which any calls or other sums presently payable by him have not been paid or in regard to which the Company has or has exercised any right of lien.

The Board are authorised to borrow and secure the payment of any sums of money for the purposes of the Company but they may not, without the sanction of a General Meeting, so borrow any sum of money which will make the amount borrowed by the Company (exclusive of temporary loans obtained from the Company's bankers in the ordinary course of business) and then outstanding exceed the aggregate for the time being of the paid up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose.

The general powers of management of the Company are vested in the Board subject to the provisions of the Companies Act or any other statute, to the provisions of the Memorandum and Articles of the Company and to any regulations not inconsistent therewith duly made thereunder, including regulations made by the Company in General Meeting.

There has been no revaluation of the assets of the Company during the two years preceding the date of this Offer for Sale.

The following capitalisations of reserves or profits of the Company have taken place :—

Bonus Issue of 24,111 fully paid Ordinary shares of Rs. 10/- each in March 1940.

Bonus Issue of 24,111 fully paid Ordinary shares of Rs. 10/- each in April 1941.

Bonus Issue of 24,112 fully paid Ordinary shares of Rs. 10/- each in April 1942.

Bonus Issue of 40,000 fully paid Ordinary shares of Rs. 10/- each in December 1944.

Bonus Issue of 40,000 fully paid Ordinary shares of Rs. 10/- each in August 1945.

Bonus Issue of 2,40,000 fully paid Ordinary shares of Rs. 10/- each in May 1946.

Bonus Issue of 1,80,000 fully paid Ordinary shares of Rs. 10/- each in February 1947.

Bonus Issue of 35,000 fully paid Ordinary shares of Rs. 10/- each in November 1949.

Bonus Issue of 2,50,000 fullly paid Ordinary shares of Rs. 10/- each in January 1956.

During the two years preceding the date of this Offer for Sale no commissions, discounts, brokerage or other such terms, except as herein mentioned, have been granted to any person in connection with the issue or sale of any stock, shares or securities of the Company.

Contracts

The following contracts, not being contracts in the ordinary course of business, have been entered into by the Company with the parties mentioned during the two years preceding the date hereof and are or may be material :—

(1) Dated 20th January, 1958 with Jardine Henderson Limited whereby the latter were appointed Registrars and Share Transfer Agents to the Company at a fee of Rs. 30,000/- per annum and also undertook to perform various services for The British Oxygen Company Limited in connection with this Offer for Sale for a fee of Rs. 50,000/-. (2) Dated 10th July, 1956, with The British Oxygen Company Limited being an order placed by the Company for a Liquid Oxygen Plant for Bombay Branch for Rs. 7,66,670/-. (3) Dated 29th April, 1957, with The British Oxygen Company Limited being an order placed by the Company for a Liquid Oxygen Plant for Burnpur Branch for Rs. 8,76,820/-. (4) Dated 29th April, 1957, with The British Oxygen Company Limited being an order placed by the Company for a 1,000 cubic feet Mobile Oxygen Plant for Rs. 2,88,000/-. (5) Dated on various dates between 10th February, 1956 and 27th September, 1957 with The British Oxygen Company Limited being orders placed by the Company for plant and machinery comprising cylinders, evaporators, oxygen compressors, liquid oxygen transport tanks, portable equipment for steel process work, water receivers, conversion units, filter units, alumina driers, pipeline supply components, machinery for manufacture of welding fluxes and nozzles for a total sum of Rs. 76,42,058/-. (6) Dated on various dates between 17th January, 1956 and 2nd December, 1957 with Dalbhum Trades & Industries Ltd., Aluminium Manufacturing Co. Ltd., G. C. M. Burman, Indian Galvanizing Co. (1926) Ltd., Parry & Co. Ltd., General Electric Company of India Private Ltd., Cumberland & Martin Ltd., Process Plant Engineers, A. Reyrolle & Co. Ltd., (Indian Agency), Braithwaite & Co. (India) Ltd., C. A. Parson & Co. Ltd. (Indian Agency), Alfred Herbert (India) Private Ltd., H. G. Fewkes & Co. Private Ltd., Avery Co. of India Private Ltd., Martin Burn Ltd., Garden Reach Workshops Ltd., William Jacks & Co. Ltd., Batliboi & Co., Biyani & Sons (Private) Ltd., Bombay Company Private Limited, Madras, Nigam Brothers, Crompton Engineering Co., Parkeen Brothers, W. H. Brady & Co. Ltd., and Quasi-Arc Co. Ltd., being orders placed by the Company for miscellaneous items of plant and machinery for a total sum of Rs. 5,69,559/-. (7) Dated 18th October, 1956, with Bosana & Co. being an order placed by the Company for site preparation at Khardah for an Electrode Factory for Rs. 2,05,000/-. (8) Dated 4th March, 1957, with Bridge & Roof Co. (India) Ltd. for the construction of factory buildings for the new Electrode Factory at Khardah at an estimated cost of Rs. 15,30,000/-. (9) Dated 11th September, 1957, with the General Electric Company of India Private Limited being an order placed by the Company for electric installations at the new Electrode Factory at Khardah at an estimated cost of Rs. 78,000/-. (10) Dated 1st November, 1957, with H. G. Fewkes & Company Private Limited being an order placed by the Company for sanitary installation at the new Electrode Factory at Khardah at an estimated cost of Rs 35,000/-. (11) Dated 5th August, 1957, with Mr. N Guha for the construction of factory and office buildings at a new site at Burnpur at an estimated cost of Rs. 11,50,000/-. (12) Dated 14th October, 1957, with the General Electrical Company of India Private Limited being an order placed by the Company for electric installations at the factory and office buildings at the new site at Burnpur at an estimated cost of Rs. 1 15,000/-. (13) Dated 5th August, 1957, with Mr. N. Guha for the construction of staff quarters at Jamshedpur at an estimated cost of Rs. 4,40,000/-. (14) Dated 5th July, 1956, with the Governor of the State of West Bengal regarding acquisition on behalf of the Company, at an approximate cost of Rs. 1.50,000/-, of an area of approximately 17.76 acres of land in Burnpur for an oxygen and acetylene factory and other buildings. (15) Dated 11th February, 1956, with the Gas Accumulator Company (India) Limited for assignment to the Company of quota rights held by that Company. (16) Dated 11th February, 1956, with the Gas Accumulator Company (India) Limited for the transfer of quota rights by the Company to that Company. (17) Dated 7th May, 1957, with Deloro Stellite Limited whereby the latter granted exclusive resale rights to the Company in India in respect of hard facing rods and electrodes as from the 1st April, 1957. (18) Dated 27th December, 1957, between the Company and Mr. R. G. C. Stephenson whereby Mr. Stephenson was re-appointed Managing Director of the Company from the 1st January, 1958, for a period of five years at a salary of Rs. 4,150/- per month from the 1st January, 1958 to the 30th June, 1960, and Rs. 4,500/- per month from the 1st July, 1960 to the 31st December, 1962, together with such allowances, appropriate to his appointment, as are determined by the Board.

Directors are interested to the extent that Mr. J. S. Hutchison is a Director and Member of the Offeror Company Mr. A. D. Vickers is a Partner in the firm of Messrs. Orr, Dignam & Co., Solicitors to the Company, he and Mr. S. K. Sinha are Directors of Jardine Henderson Limited, the Registrars, and Mr. T. R. Shields is a Member of the Offeror Company.

The Articles of Association contain *(inter alia)* provisions to the following effect :—

Subject to the provisions of Section 111 of the Companies Act the Board, without assigning any reason for such refusal, may, within two months from the date on which the instrument of transfer was delivered to the Company, decline to register any transfer of shares upon which the Company has a lien, and, in the case of shares not fully paid up, may refuse to register a transfer to a transferee of whom the Board do not approve.

Unless otherwise determined by the Company in General Meeting the qualification of a director shall be the holding in his own name or jointly with any other person, whether beneficially or as a trustee or otherwise, of 100 shares in the Company.

Unless otherwise determined by the Company in General Meeting the Chairman of the Board shall be entitled to receive out of the funds of the Company a fee of Rs. 20,000/- per annum and each other director who is neither a Managing Director nor a director in the whole time employment of the Company shall be entitled to receive out of the funds of the Company for his services in attending meetings of the Board a fee of Rs. 500/- per mensem. All other remuneration, if any, payable by the Company to each director, whether in respect of his services as a Managing Director or a director in the whole or part time employment of the Company shall be determined in accordance with and subject to the provisions of the Articles and of the Companies Act. The Directors shall be entitled to be paid their reasonable travelling and hotel and other expenses incurred in consequence of their attending at Board and Committee meetings and otherwise in the execution of their duties as directors.

If any director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company or as a member of a committee of the Board, then, subject to Sections 198, 309 and 310 of the Companies Act, the Board may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise and such remuneration may be either in addition to or in substitution for any other remuneration to which he may be entitled.

Subject to the provisions of Section 297 of the Companies Act a director shall not be disqualified from contracting with the Company either as vendor, purchaser or otherwise for goods, materials or services or for underwriting the subscription of any shares in or debentures of the Company nor shall any such contract or arrangement entered into by or on behalf of the Company with a relative of such director, or a firm in which such director or relative is a partner, or any other partner in any such firm, or a private company of which such director is a member or director, be avoided nor shall any director so contracting or being a member or so interested be liable to account to the Company for any profit realised by any such contract or arrangement by reason of such director holding office or of the fiduciary relation thereby established.

Subject to the provisions of Sections 267, 268, 269, 316 and 317 of the Act, the Board may, from time to time, appoint one or more directors to be managing director or managing directors of the Company.

Subject to the provisions of Sections 309, 310 and 311 of the Act, a managing director shall, in addition to the remuneration payable to him as a director of the Company under the Articles, receive such additional remuneration as may from time to time be sanctioned by the Company.

Every director, manager, secretary or officer of the Company or any person (whether an officer of the Company or not) employed by the Company as auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such director, manager, secretary, officer or auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted or in connection with any application under Section 663 of the Companies Act in which relief is granted to him by the Court.

Application for Shares

Applications by persons other than employees of the Company must be for 50 shares or multiples of 50 shares and must be made on the white form accompanying this Offer for Sale. Employees of the Company may apply for 25 shares or multiples of 25 shares in which case they must do so on the blue form accompanying the copies of this Offer for Sale issued to them. All application forms, properly completed, must be lodged together with the full amount (Rs. 13.50 per share) payable on application, with any branch in India of The Chartered Bank, viz. at Amritsar, Bombay, Calcutta, Chowringhee (Calcutta), Cochin, Delhi, Kanpur, Kozhikode, Madras and New Delhi. Payment should be made by cheque or draft in favour of "The Chartered Bank A/c British Oxygen" and should, for the applicant's protection, be crossed "A/c payee only". A separate cheque or draft must accompany each application. Cheques or drafts drawn on The Chartered Bank, or drawn on any bank in the same town as that in which the branch of The Chartered Bank with which the application is lodged is situated, need include no allowance for collection charges. All other cheques or drafts must include bank charges at the rate of 25 nP. per Rs. 100/-.

Applications from persons resident outside India will not be considered.

Acceptance will be notified by the despatch of an Acceptance Letter but the Offeror reserves the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or the balance, as the case may be, of the application money received will be refunded to the applicant by post at his risk and any bank charges will be payable by the applicant. The Company has agreed to waive the first payment of transfer registration fees in respect of the transfer of shares from the Offeror to applicants whose applications are accepted and for which Letters of Acceptance are issued. Share certificates will be available for issue in exchange for Letters of Acceptance on or after the 25th April, 1958.

Brokerage at the rate of 12 nP. per share will be paid by the Offeror on acceptances made in respect of applications bearing the stamp of a recognised stock broker or banker. Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Limited, in addition to the underwriting commission, on acceptances made in respect of applications made or procured by them provided that the relative forms of application bear their stamp.

Messrs. Price Waterhouse & Co. have given and have not withdrawn their written consent to the issue of this Offer for Sale with a copy of their Report included therein in the form and context in which it is included. A copy of such consent, together with a statement of the adjustments made by that firm in arriving at the profits and assets and liabilities shown in the Report and giving the reasons therefor, copies of the consents of the auditors, solicitors, bankers and brokers to the Company to act in those capacities and copies of the material contracts specified above have been attached to the copy of this Offer for Sale which has been delivered to the Registrar of Companies for registration.

A print of the Memorandum and Articles of Association of the Company, copies of the material contracts and of the agreement proposed to be entered into between the Company and the Offeror referred to above, the Report of the Auditors and their Statement of Adjustments and the Audited Accounts of the Company for the last five financial years may be inspected at the registered office of the Company during usual business hours (Saturdays excepted) for a period of fourteen days from the date of publication of this Offer for Sale or until the closing of the application list, whichever is earlier.

Copies of this Offer for Sale and forms of application can be obtained from any branch in India of The Chartered Bank and from any of the Brokers specified above.

Dated the 21st day of January, 1958.

LLOYDS BANK LIMITED

THE STERLING & WORLD ECONOMY

The annual general meeting of Lloyds Bank Limited will be held on 14th February, 1958 in London.

The following are extracts from the statement by the chairman, The Right Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., circulated with the report and accounts for the year 1957 :

The profit for the year, at £2,502,391 is slightly lower, by £39,402 than last year and we propose to repeat the 1956 dividend of 13 per cent per annum.

Although high rates as well as a high degree of activity in all sections of our business have again benefited our earnings, our operating costs continue to rise inexorably.

Our loans and advances are lower by some £9 millions than they were a year ago. The reduction would have been greater but for the two particular categories of lending I referred to in my statement last year. Our advances in the East have expanded along with our general business there, and we have continued to interest ourselves in the important and specialised field of medium-term credits to facilitate the export of major capital goods, a category of advances excluded from the operation of the general restrictions upon bank lending.

Eastern Branches

A heavy and sustained demand for bank advances has been a pronounced feature of our operations in India during the past year. Both there and in Pakistan, a shortage of foreign exchange has led to a curtailment of imports, the financing of which is an important part of our business.

Our thanks are due to the Eastern staff for their devoted work in difficult conditions.

The External Problems of Sterling

As a member of the Radcliffe Committee, I cannot comment upon monetary developments at home during the past year. Instead, I propose to discuss some of our problems, certainly no less important, in the sphere of international payments.

I do not mean to imply that our external problems and our domestic policies can be divided into separate compartments. We cannot argue that our payments difficulties arose purely out of our position as a world banker and had no connection with the state of the United Kingdom economy : for the fear that inflation might continue played a large part in disturbing international confidence in sterling. Unfortunately, it is also true that to avoid further inflation will not automatically ensure success in the vital task of rebuilding the reserves. Sterling being an international currency, we are necessarily affected by the general climate of world trade. The course of events is bound to depend not only upon our own policies but also, in some considerable degree, upon those followed by other countries, above all by the United States and our fellow-members in the sterling area.

Nothing can change our dependence upon overseas trade for a living, but our persistent external difficulties have led to suggestions that we should be better off if we shed our role as banker to the sterling area. On the face of it, this system is well designed to promote the interests of its members and of the world economy as a whole. It means that individual sterling countries do not have to keep an extract balance either in their trade with each other or with the outside world, provided that deficits are matched by surpluses elsewhere in the area. The use of sterling as an exchange reserve keeps down competition for the world's limited supplies of monetary gold. Both these features tend to promote the expansion of world trade as does the natural alliance of the financial machinery of the City of London with the use of a common currency for the settlement of transactions.

Sterling balances held by countries outside the area are now fairly small compared with those of the overseas sterling countries. That a large proportion of these latter balances is earmarked for such purposes as currency reserves affords no great comfort, since the example of India has shown that local currency laws can easily be amended. Still the fact that all the members have a common stake in the preservation of the pound is some safeguard. From the collective point of view nothing could be more urgent than to build up the reserves again. Yet individual governments find it difficult to believe that any objective can really merit a higher priority than their own development programmes.

Possible Deflation Ahead

What of the relationship between sterling and other currencies ? Is by out-lawing beggar-my-neighbour policies and helping to clear the jungle of exchange restrictions left over from the war, the Bretton Woods system has rendered the world good service. To say that the system has served us well hitherto is not, of course, to say that this must always be so. For the time being, the post-war boom in the world as a whole has lost much of its impetus. That being so, our preoccupations during the next phase may become those of deflation rather than inflation. Should the course of events take this direction, it means that, if the Bretton Woods system is to work successfully, the policies followed by creditor countries will be of decisive importance.

A condition for a smooth functioning of the Bretton Woods system is an adequate level of monetary reserves. At present the problem centres upon the distribution of existing exchange reserves rather than their absolute magnitude. Nearly half the total is now held by the United States and Germany, though the United States has large short-term liabilities to the outside world. By contrast, sterling finances perhaps 40 per cent. of world trade, yet the United Kingdom reserves are about half those of Germany and less than 4 per cent. of the world total.

That is the most important single fact in the world currency situation. Measures to ensure the stability of the sterling area and measures to ensure the smooth working of the Bretton Woods system must alike be directed to the removal of that anomaly.

Once we have brought about a substantial increase in the reserves by our own efforts, therefore, the question may arise of their being further fortified by some kind of stabilisation operation.

It might be that an operation of this kind should take an international rather than a national form. In that case, the International Monetary Fund would be the obvious instrument. There might be general advantage for the world, however, if the Fund could move in the direction of becoming a supercentral bank. This implies that the controllers of the Fund should be permitted greater discretion in their operations than is accorded under the present articles. Secondly, it means that countries should be prepared to deposit exchange reserves with the Fund and treat the Fund's certificates of indebtedness as exchange reserves, in the same way that some European countries already treat as part of their exchange reserves their stake in the European Payments Union.

Position Summed Up

To sum up, the problems of the sterling area and of the world economy as a whole are essentially those of reconciling the aims of individual nations and their governments with the general requirements of an international order. They are therefore merely one aspect of the far wider problem which the free nations have to solve : that of adapting their political ideas and political institutions to the facts of their growing interdependence, in economic as in military affairs.

STOCK MARKETS UNCERTAIN

INDUSTRIALS DULL: RISE IN GILT-EDGED

London, 29th January.

QUIET and generally uncertain conditions persisted in most sections of the London Stock Exchange during the past week. The main, and virtually the only exception, was provided by gilt-edged securities which made further headway under renewed investment buying. The market had a good deal of news to contend with during the week. Some of it favourable, but most made for renewed uncertainty. Among the adverse influences were the obscure U.S. business outlook, the Government's obvious determination to press home its disinflationary policy and fears of labour troubles arising from the London busmen's wage claim. On the other hand, the strength of sterling in foreign exchanges, the findings of the Bank rate leak tribunal and falling interest rates in the United States, Canada and West Germany were all favourable factors, which stimulated interest mainly in gilt-edged securities. These developments were considered in many quarters to bring closer the date for a possible reduction in the U.K. Bank rate. Interest in foreign bonds and rails was very limited. Dollar stocks fluctuated with Wall Street and were usually higher on the week. Business in the industrial market was very limited, but sellers predominated and the market presented a dull appearance on balance. Multiple stores shares were particularly depressed on fears of increasing competition following price cuts announced by Marks and Spencer. South African gold shares tended lower, but rallied at the end of the week on vague rumours that the U.S.A. was planning to raise the international price of gold. Washington later denied these rumours and the market relapsed again to record small losses on balance. Base metals reflected the weakness of metal prices. Oil shares were an erratic market and showed very little change on balance.

Selective buying of rubber shares on dividend and bid hopes gave the market a generally firm appearance. Teas tended higher and recorded numerous small improvements, but dull spots included Colombo Commercial following financial results.

The Money Market

In the absence of any special movements of money, the market last week felt the full weight of the seasonal heavy tax payments and on three occasions, it was forced to borrow from the Bank of England due to the acute stringency of funds. Borrowers paid up to 6¼ percent for their requirements during the most acute phases while 6 per-cent was the general rate. There was a moderate demand for April and hot bills from the market, with the banks buying them at 6-3/16 percent and at times at 6-7/32 percent. The tight credit conditions forced market houses to make no change in their joint bid at last Friday's tender. The easing of rates abroad however led to a keener outside competition with the result that the market secured only a small number of the bills. The total amount of bills on offer were also on a reduced scale. The average rate for bills was about 2d lower at £6 5s 56d percent.

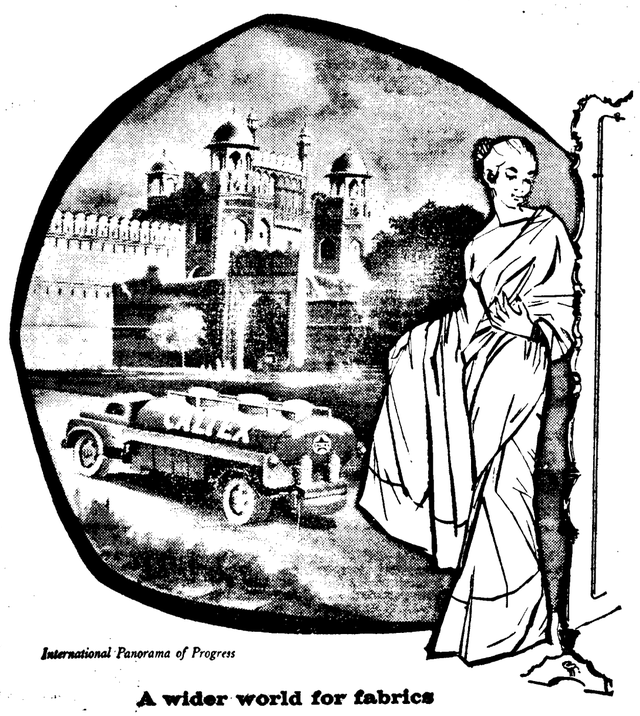
U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 22nd January shows that the gold stock remained unchanged at $22,782 million. Foreign deposits rose by $15 million to $294 million and foreign investments gained $18 million at $3,798 million. The Federal Reserve sold $299 million worth of bills, $1 million worth of certificates and $75 million worth of securities under repurchase agreements, total holdings of U.S. Government securities thereby declining $375 million at $23,333 million. Total discounts and advances rose by $107 million to $392 million, while the aggregate excess reserves of member banks rose by $64 million to $664 million. The daily average excess reserves of member banks fell by $98 million to $525 million, while their daily average borrowings fell by $220 million to $355 million. Business loans of the New York city banks fell by $229 million to $11,132 million, compared with a fall of $58 million to $11,034 million in the corresponding week a year ago.

Hongkong Gold Steady

The Hongkong gold market was steady for most of the past week due to persistent demand for U.S. dollars, coupled with a slight easiness of sterling abroad. There was some easing from the opening levels, but a stronger tone developed and the market closed higher on the week, although below the top levels due to week-end profit-taking. Carry-over charges moved in sellers' favour. The turnover was comparatively light as influential traders kept to the sidelines because of lack of incentives and tightness of money with the approaching Chinese New Year. The official offtake was 3,280 taels and the unofficial 6,100 taels. Arrivals from Macao totalled 34,000 ounces. Forward contracts were at $(U.S.)37.88 c.i.f., Macao.

Mixed Trend in Vegetable Oils



Reports that Russia was buying 30,000 tons of Argentine linseed oil arrested the recent decline in rates and evoked reserve among sellers. Shipment offers from Argentina were mostly withdrawn with the shippers in London awaiting confirmation of the Russian deal, while the rates for ex-tank U.K. supplies were lifted to £113 a ton aided by business in Indian bulk oil on the basis of £111½ c.i.f. January-February shipment. Coconut oil was talked dearer, backed by further hardening in copra prices and reported business at $192 c.i.f. February-March shipments of Philippine copra. However, buyers of Straits oil were not keen to pay more than £100 c.i.f.. Lack of direction from India and the absence of buying interest left castorseed oil featureless and virtually unchanged in price. Groundnut oil was again subject to price shading, with buyers still holding off. Groundnuts drifted lower with unconfirmed reports that the Nigerian Board is selling several thousand tons of Nigerian oil down to £59½ c.i.f., Genoa. American cotton and soyabean oils both dropped $3 a ton without any business reported.

Tin Export Quotas

Detailed figures about the export quota percentages and tonnages of tin producing countries, fixed by the International Tin Council at its recent London meeting, were given at a Press conference last week. According to Mr. W. Fox, Secretary of the Council, the total permissible exports for producing countries during the second control period from 1st April to 30th June next, which have been fixed at 23,000 tons, represent a cut of 40 percent. This equals the percentage allowed in the first period, which is 27,000 tons for a period exceeding three months by 17 days.

U.S. Silver Imports

The return of lend-lease silver accounted for the bulk of the U.S. silver imports in 1957, according to Messrs Handy and Harman of New York. In their annual review they say that imports reached a postwar high of 198.4 million ounces of which the lend-lease metal totalled 138.3 million ounces. Last year was a period for repayment of second world war lend-lease obligations subject to certain extension provisions. The original obligations amounting to 410.8 million ounces have all been repaid except for 27.7 million ounces still owed by Saudi Arabia and Ethiopia, the firm adds. While the significance of the stepped-up defence programme on silver consumption cannot yet be evaluated, Messrs Handy and Harmon remark that "it is already apparent that there are new and growing uses of silver in the missile field and other advanced weapons."

International Panorama of Progress

A wider world for fabrics

CALTEX
PETROLEUM PRODUCTS

In many countries, the subtle influences of past traditions and customs have been combined with modern materials and design to create new trends in fashion. This resurgence-in-textiles on the part of European and other nations has broadened their panorama of progress, created a wider world for fabrics through expanded production, employment and opportunity. The textile industry is just one of many nourished by Caltex quality fuels and lubricants. Through the power of petroleum, Caltex keeps industry and every segment of society expanding, aiding the prosperity of today and holding forth the promise of an even brighter tomorrow to over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

Money

THE CALCUTTA MONEY MARKET

ADVANCES CONTINUE RISING

Wednesday, 29th January.

THE total quantity of bank advances has increased in the Calcutta money market during the past week. A sharp rise has taken place in funds to the sugar industry, while the requirements of both cotton and jute mills show slight increases. Outstandings against grain and seeds storage in upcountry areas remain about the same. The interbank market has been rather easier, although it is still difficult to get money over long periods. The call rate is unchanged at 3 percent.

Some improvement has taken place in the number of gunny bills seen in the exchange market this week. Tea bills have remained scarce. There has been a fair demand for remittance. Sterling has continued steady against Continental currencies and has improved against the U.S. dollar.

* * * *

Bullion was quietly steady. Offtake nearly balanced arrivals. The price of silver advanced from the previous week's level of Rs. 185.75 to Rs. 186.50. quoted today for ready delivery. and the rate for forward delivery was quoted at Rs. 186.25. The London price was the same at 76¾d and the New York quotation stood at 89¼c.

Gold. in sympathy with silver. was firm and the price rose from Rs 110.75 to Rs. 111.75. The sovereign at Rs. 72 showed a rise of 25nP.

During the week ended 24th January, Government of India Treasury bills for Rs. 99,12,00,000 were sold in favour of the Reserve Bank.

* * * *

A decline of Rs. 6.62 crores to Rs. 1.533.63 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 24th January. 1958, while the total note issue was Rs 66 lakhs higher at Rs. 1.551.67 crores. Notes held in the Banking Department consequently rose by Rs 7.28 crores to Rs 18.04 crores. Deposits of the Government of India increased by Rs. 10.32 crores to Rs. 62.43 crores but other Government accounts fell by Rs. 7.50 crores to Rs. 23.85 crores. Balances of commercial banks at Rs. 73.84 crores showed a gain of Rs. 8.64 crores. Balances held abroad declined further by Rs 2.31 crores to Rs. 39.89 crores and investments were shaded by Rs. 36 lakhs to Rs. 255.07 crores. Other loans and advances fell from Rs. 72.36 crores to Rs. 61.64 crores, of which advances to scheduled banks against usance bills amounted to Rs. 21.37 crores (Rs. 30.65 crores). Ways and means advances stood at Rs. 36.37 crores against Rs. 35.37 crores.

* * * *

The return of the State Bank of India for the week ended 17th January, 1958, shows a rise of Rs. 7.82 crores to Rs 371.05 crores in total deposits. Investments in Government securities remain unchanged at Rs. 173.93 crores, while other authorised investments are down by Rs. 10 lakhs to Rs. 10.13 crores. Advances, including loans. cash credits, overdrafts and bills discounted and purchased have increased by Rs 3.13 crores to Rs. 183.96 crores. Cash and balances are, in consequence, shown at Rs. 23.43 crores or Rs. 5.35 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 17th January, 1958, shows Demand and Time liabilities at Rs. 712.86 crores (Rs. 14.01 crores on account of borrowings from banks) and Rs. 690.15 crores (Rs. 18.11 crores) compared with Rs. 699.70 crores (Rs. 15.84 crores) and Rs. 690.59 crores (Rs. 17.95 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 57 lakhs and Rs 1.82 crores to Rs. 39.07 crores and Rs. 60.10 crores. respectively. There is a drop of Rs. 3 lakhs to Rs. 434.03 crores in investments. Advances and bills discounted at Rs 890 17 crores show a rise of Rs. 9.01 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.1 percent and 63.4 percent against 7.0 percent and 63.4 percent.

* * * *

The profit of the PUNJAB NATIONAL BANK has amounted to Rs. 1.17 crores, including Rs. 6.20 lakhs brought in, for the year ended last December. Reserve fund is allocated Rs. 22½ lakhs. Taxation provision is Rs. 50 lakhs. An interim dividend of Rs. 2.50 a share was paid. A final dividend of Rs. 2.50 a share has been declared. making 20 percent for the year, leaving a carry-forward of Rs. 4.56 lakhs.

* * * *

The UNITED COMMERCIAL BANK has made a profit of Rs. 59,99,433. including Rs. 29.420 brought in, for the year ended last December. A dividend of 7½ percent has been declared. Reserve fund is allocated Rs 19 lakhs An amount of Rs. 18½ lakhs is transferred to taxation reserve, leaving a carry-forward of Rs. 49,432.

* * * *

The BANK OF INDIA has made a profit of Rs. 1.09 crores for the year ended last December. An interim dividend of 6 percent was paid. The final dividend has been declared at 10 percent, making a total distribution of 16 percent for the year. Taxation provision absorbs Rs. 30 lakhs leaving a carry-forward of Rs. 31,02,381, subject to the payment of staff bonus.

COMMERCIAL TRENDS IN EUROPE AND ASIA

JAPANESE EXPORT DRIVE SLOWS DOWN

(FROM A CORRESPONDENT)

DURING the period January to October 1957, Japan's exports totalled $2,300 million, a rise of 15 percent over the same period of 1956. Her exports have been rising steadily since 1954. But recent indications are that this growth may be levelling off. Contributing to this increase have been such factors as an expansion in production, greater competitive power, an intensified publicity campaign and the rise in international demand for her products, especially by the United States. There are new signs that the rate of export growth is falling off. According to the relevant statistics, the rate of the increase in 1955 and 1956 averaged 24 percent. It dropped to 15 percent last year, and the latest figures show that the rate has further declined to a 10 percent annual rate. This slowing down is due to the fact that the percentage increase in Japanese exports in the past years has been unusually large (the world rate of increase in exports in 1955 and 1956 was 10 percent, and it is estimated that it was about 13.2 percent in the January-October period of last year, and sooner or later the Japanese rate was bound to decline. Moreover, restrictions placed on the quantity of exports by Japan, the disinflationary policy in advanced countries and a rapid fall in the foreign currency holdings of some under-developed countries have also led to this fall. Japanese trade circles hold that unless a determined export drive is made, there is little possibility of the exports resuming their upward trend, in view of the balance of payments difficulties of many countries in the world, and those of south-east Asia in particular.

The following is a brief outline of the foreign trade position of Japan between January and October last year. Viewed by markets, exports to almost all of them have generally increased, except for Argentina, Brazil. Indonesia, Hongkong and Pakistan; exports to these latter have registered a sharp decline, compared with the corresponding period of 1956. Also, in terms of value, 14 countries bought more than $50 million worth of goods compared with only nine countries in the January to October period of 1956, excluding I.C.A. purchases. Undoubtedly, the United States was the largest market of them all, showing an increase of $26 million, or 5.2 percent. This, however, compares unfavourably with the 31 percent increase in 1955. The slow-down in U.S. production and investments in the latter half of 1957 as also the export adjustment measures adopted by Japan were responsible for the decline which has been lately noticed. Liberia was next to the United States, ranking as Japan's second largest market. The increase in her exports to that country amounted to $83.6 million in 1957, or 56 percent over the same period of the previous year. This was the largest gain of all because of increased orders for shipbuilding. Ships contracted for construction during the peak in the shipbuilding boom between the winter of 1954 and the spring of 1955 are now being delivered.

British colonies were the third best market. Singapore and East and West Africa were Japan's best customers for textiles. Her exports to the British colonies have since been smaller, but with Ghana and Malaya thrown in, the increase last year amounted to $21.2 million, or one of 13 percent. Exports to Hongkong decreased from the corresponding period of 1956, as re-exports to such major destinations as Indonesia and Thailand fell off. The deterioration in Indonesia's foreign exchange situation and a rise in direct exports to Thailand were also responsible.

Sales to India

Sales to India were higher than in the same period of 1956, because of the country's difficult balance of payments situation. It was also due to the fact that most of the exports consisted of iron and steel machinery for which delivery terms were longer, the proportion of consumption goods being negligible. Exports to the U.K. rose due largely to the fact that commodities (especially foodstuffs), scheduled for shipments in 1956, were exported in 1957 because of a considerable delay in arriving at the present commercial agreement. Exports to Indonesia and Canada dropped. A deterioration in the foreign exchange holdings of those countries as well as competition from communist China in the case of the former, and high iron and steel prices in the case of the latter, caused the fall. Export to Formosa and the Byukyus continued to increase.

Sales to communist China increased somewhat, with the value of exports being the largest in January and February of the year. They have lately declined. This, it is believed, is due to China's reluctance to buy because of an excess of Japanese exports in certain categories of goods. Japanese exports of cotton cloth and staple fabrics to the Philippines expanded greatly and captured the lead from American products. They have fallen off recently, however, because of an import ban placed on certain commodities by that country. Exports to West Germany rose sharply. This was due to a greater liberalisation of trade and expansion of West German imports. Demand for cotton cloth and staple fabrics was especially strong. It was in Argentina and Brazil that the sharpest losses were registered. Exports to Argentina totalled $43.8 million in the January-October period of 1956, whereas in the same period of 1957, they were only $7.3 million. This was because Japanese products could not compete with European and American products as a result of the abolition of the open-account formula by the Argentine and also because there was less demand for the iron and steel products of Japan. In the case of Brazil, exports last year amounted to $21 million, against $42 million in 1956, because of a drop in iron and steel goods.

Item-wise, of the exports in the January-October period of the past year, machinery recorded the biggest gain, followed by textiles. On the other hand, the exports of foodstuffs, beverages, metals and ores and ceramic products decreased. The increase in machinery exports consisted principally of vessels, which reached $330 million in value, against $231 million in the January-October period of 1956. Among textiles, there was a striking increase in cotton cloth, synthetic and wool fabrics. Cotton cloth shipments in the January-October period last year totalled 1,183 million yards, while staple fabrics reached 743 million yards compared with 540 million yards in the preceding year. This was due entirely to increased competitive strength. The exports of Japan's cotton cloth alone continue to grow in spite of a contraction in the overall world textile trade. She also ranks first in the field of synthetic fabrics, since the volume of exports by competing nations is extremely small. This trend is still continuing. Other products which showed remarkable gains were rubber products, chemical fertilisers, electrical communications equipment and optical equipment—all of which recorded an increase of over $10 million each. Among items which did very poorly were iron and steel particularly, while lumber, chemical drugs, copper, aluminium, cement and bicycles were among the other products which showed smaller falls.

Industrial Production in Norway

Provisional figures indicate that the industrial production of Norway in 1957 was 4 percent greater than in the previous year, according to a survey by the president of the Federation of Norwegian Industries. The increase was the largest in the export industry, being 6 percent, against 3 percent in other industries.

Balance of Payments Surplus

Norway will have a surplus in its balance of payments of about 50 million kroners (£2.5 million) in 1957, according to preliminary figures from the Bureau of Statistics. There was a deficit of 60 million kroners in 1956. The net export surplus in goods and services, based on average estimates for the last weeks of 1957, is set at 215 million kroners (£53.75 million). Capital payments abroad, amounted to a net figure of 165 million kroners. The net surplus, therefore, was 50 million kroners.

The industrial production index of Sweden rose to 225 in October last year (base 1935=100), from 254 in the same month of 1956. The seasonally adjusted index for October 1957 was 240, against 246 for September. Commenting on these figures, the Federation of Swedish Industries says that the trend towards a slowing down of the rate of increase in industrial output has become noticeable, although it should be kept in mind that production during the last quarter of 1956 was maintained at a very high level. Engineering employment, which earlier last year was about 4 percent higher than in the corresponding period of 1956, showed some decline in October. Timber and pulp output was also lower. Iron ore mining, on the other hand, registered a marked increase in October, as did the output of the iron and steel works. In the paper industry, there was an increase of about 10 percent over the figure for October 1956. The textile industry, figures for which are available for January to September 1957 only, showed a rise in output of 3 percent, compared with the first three quarters of 1956.

Anglo-Swedish Trade Agreement

An Anglo-Swedish trade agreement was concluded in London on 18th December. As practically all commodity exchanges between the two countries have already been liberalised, the agreement covers less than 5 percent of the about 3,500 million kroners of the normal trade. U.K. shipments of coal to Sweden have been raised by 250,000 tons to 350,000 tons and coke exports by 50,000 tons to 350,000 tons under the new agreement. British shipments of steel are expected to rise to 135,000 tons, including 50,000 tons of shipbuilding material and 45,000 tons of sheet steel. Unchanged or larger quotas have been obtained for Swedish products still subject to import restrictions in Britain. Higher quotas have been granted for leather, certain wooden articles, cameras, cash registers and plastics-coated paper, while new quotas have been fixed for parking meters and certain instruments.

Dutch Foreign Exchange Regulations

The Netherlands Bank has once more permitted the foreign exchange banks to grant credits by order of non-residents in favour of residents relating payment for commodities bought on a three-monthly basis; and to discount three-monthly bills of exchange of non-residents where such bills are drawn by non-residents on residents against supplies of commodities. This means the withdrawal of two more measures taken by the Bank in August 1957 to counteract undesirable currency speculations.

The Netherlands will remit an amount of $(U.S.)1,092,500 to the United Nations as its contribution towards expenditure in under-developed areas in 1958. It is thus the fifth nation in the world to have done this. The other four are the U.S.A., the U.K., Canada and France. Up to 1st November, 1957, a total of 74 countries had promised similar contributions for 1958.

Switzerland and Free Trade Zone

The latest report of the Swiss Trade and Industrial Union contains some interesting observations on that country's position in relation to the proposed European integration. While following a policy of independence and neutrality, Switzerland will also join the free trade zone. In the country's foreign trade relations, the nations belonging to this zone occupy a more important position than those of the Common Market. Nevertheless, Switzerland will only be able to adhere to the Free Trade Zone system, consistent with her desire to maintain trade with the whole world. Whatever decision Switzerland takes in this matter, certain risks will be involved. Should she remain aloof, she would be threatened with trade discrimination by those countries which are going to collaborate in the scheme. But if she enters into the Free Trade Zone arrangement, she will have to face the risks arising from the extremely unstable monetary conditions of a number of participating countries. The safguearding clauses which are provided mean that in case of the depreciation of a currency, attempts will be made to remedy this by means of the re-introduction of quantitative restrictions. But that could be harmful for a country which, like Switzerland, has a hard currency.

Austrian Trade Balances Improve

According to preliminary data available to the Central Office of Statistics, the deficit in the Austrian foreign trade balance rose from 329 million schillings in October 1957, to 381 million schillings in November. The value of both imports and exports decreased, compared with the previous month, from 2,585 million schillings to 2,479 million schillings and from 2,256 to 2,098 million schillings respectively, or by 4 and 7 percent. However, the import surplus rose by 33 percent from September to October 1957, but it fell to 16 percent in November.

Outlook for German Exports

According to Dresdner Bank, the sales possibilities for German goods on the world markets will deteriorate. This becomes obvious, too, from the declining trend which has been observed for some time in the orders placed by foreign customers with West German industrial enterprises. The foreign trade results up to October have not shown any decline. Exports in that month were on a more than average level. "The fact that the currency reserves of the Bundesbank rose by 33 million deutschemarks only (in September by 1,104 million deutschemarks) and even decreased by 97 million deutschemarks in the first half of November is especially accounted for by the efflux of foreign monies and by increased German capital exports, the bank says. Exports will only fall if the pressure of competition is aggravated by rising prices in West Germany, it adds.

Russo-Italian Trade Agreement

The long-drawn-out commercial talks in Rome between Italy and Russia have come to a conclusion, with a new commercial and payments agreement signed between them. It came into force from 1st January, and will be in operation until 31st December, 1961. Considerably increased business is envisaged, the total value of trade both ways being fixed at 320 billion lire ($(U.S.) 500 million) over the four-year period of the agreement. In 1958, Italy's exports to Russia will include industrial machinery and equipment, steel sheetings, electric cables, agrumes, raw cork, flock, rayon, wool yarns for knitting, woollens, sulphur, essential oils, chemical products, etcetera, while Russian exports to Italy will include sawn and building timber, cellulose, hard wheat, anthracite, manganese and chrome ore, pig iron, chrome iron, crude oil, fuel oils, paraffin, benzol, toluene, cotton, linen, graphite electrodes, platinum, fur and skins.

Stocks and Shares

FIRM UNDERTONE CONTINUES IN SHARE MARKET

PRE-BUDGET CONSIDERATIONS INFLUENCING INVESTORS

Wednesday Evening.

IT has been a week of restricted trading in the Calcutta share market on account of holidays, which left only four working days. But the undertone was firm and the gains recorded last week were maintained. In some cases, they were improved on. So far the advance has been limited to the more speculative counters and no substantial broadening of investment interest is expected with the Budget casting its shadow over the market. Mr. Krishnamachari's performance last May is still fresh in the market's memory and not everybody is convinced that the major tax changes required for the plan have been completed, and that there will be no further shocks for investors at the end of February.

Subject to this reservation, sentiment is better than it has been for a long time. Prospects of increased foreign aid have been welcomed and anxiety over the foreign exchange situation has diminished. The end of the strike by reserve pool workers in the Calcutta port, following the declaration of an emergency, has removed fears that jute and tea shipments and urgently needed food imports would be held up.

Steels were buoyant as a result of the T.I.S.C.O. jubilee bonus issue and prospects of increased production without a corresponding increase in the labour force. Indian Irons rose in sympathy, aided by the rumour that it would follow the T.I.S.C.O. example and distribute bonus shares out of its share-premium account. More cautious operators regarded such reports with scepticism, pointing out that the paid-up capital had already been doubled by last year's rights issue and that any further expansion of the capital structure in the near future was unlikely. The Government, it is believed, may be persuaded to permit the maintenance of the dividend on the present enlarged capital, but not if the capital were further increased.

The present strong position is partly due to covering purchases against a substantial bear account that had been built up earlier. Operators believe that once this supporting element is withdrawn, pre-Budget caution will create a spell of quiet trading.

The Indian Oxygen issue has been well received. The terms are regarded as attractive and, as in other issues of foreign controlled concerns, it seems assured of strong support by the Indian investing public.

The outcome of the enquiry into the Mundhra investments by the Life Insurance Corporation is eagerly awaited. One point that worries observers is the effect of these events on the investment policy of the Corporation. Conflict of opinion appears to prevail on the extent to which the L.I.C. ought to act as a stabilising influence on the stock market. Operators as well as the investing public would welcome an authoritative clarification on this important point.

Government securities ruled steady throughout and prices improved fractionally in most cases. The exception was 3% Conversion Loan 1946-86, which was unchanged at Rs. 71.05.

In the banking section, Punjab National met with profit-taking and came back to Rs. 51.50 from Rs. 52.25. Hind Bank, however, hardened to Rs. 48.25.

Business in preference shares was on a restricted scale, although there was a fair enquiry in the miscellaneous group for Indian Iron & Steel, Cawnpore Sugar, Alkali & Chemical, Dunlop Rubber 1st and 2nd and Indian Aluminium. Jute preference shares were freely offered without attracting enquiry.

A solitary transaction was reported in the railway section in Dehri-Rohtas around Rs. 10.

Cotton shares were featureless.

Coal shares recorded a general improvement after many months of neglect and in some cases the rise in prices was substantial, as will be seen from the following table:

	Opening 22nd January, 1958. Rs.	Closing 29th January, 1958. Rs.
Amalgamated	15.12	17
Bengal	233	248
Borrea	15.69	17.75
Karanpura Collieries	75	85
Pench Valley	17.25	19.25

Jute shares also improved in sympathy, but the enquiry was not as widespread as in the coal section. Delta improved from Rs. 100 to Rs. 105 and Union from Rs. 105 to Rs. 111 (after Rs. 115). There was less activity in National during the week and the price fluctuated narrowly around Rs. 24.10. New Central improved from Rs. 12 to Rs. 13 following reports that the company has applied to the Controller of Capital Issues for permission to issue ordinary bonus shares in the proportion of one for two.

In electrics, the feature was U.P., which improved from Rs. 116 to Rs. 119. Calcutta were steady at Rs. 13.44 x.d.

There were two features in the sugar and brewery section, namely, Carew and Dyer Meakin which rose from Rs. 6.19 to Rs. 6.56 and Rs. 7.37 to Rs. 7.75, respectively.

In the engineering section, Indian Iron & Steel opened at Rs. 19.90 and at one time were reported up to Rs. 20.56; the closing quotation tonight was slightly lower at Rs. 20.36. due to settlement considerations. Jessops were active and improved from Rs. 20.19 to Rs. 21.62. Burn & Company was the outstanding feature and spurted from Rs. 312 to Rs. 326. Dealings in Richardson & Cruddas ordinary shares continue to be banned by the Stock Exchange authorities. Textile Machinery spurted to Rs. 17.60.

Paper shares were firm. Orient improved to Rs. 25.25, Sirpur to Rs. 8.94 and Titaghur to Rs. 32.87. In contrast, Shree Gopal were marked down from Rs. 14.44 to Rs. 14.

In cement, Sone Valley recovered smartly from Rs. 4.50 to Rs. 5.25.

In shipping, India Steamship were well maintained at around Rs. 11.78, as were India General Navigation at Rs. 55.50.

Among miscellaneous industrials, Angelo Brothers were steady at 18.25 and Balmer Lawrie at Rs. 148. British India Corporation were offered at Rs. 3.80 while there was a good enquiry for Clive Row Investment at the higher rate of Rs. 8.75. Dunlop Rubber improved further to Rs. 22.50 as did Indian Cables to Rs. 27.12. Philips India were unchanged at Rs. 13.94 and Indian Aluminium at Rs. 12.62. National Carbon were crossed at Rs. 24.50. Gillanders Arbuthnot had buyers at the higher rate of Rs. 12.25.

In the mining section, Indian Copper were steady at Rs. 2.91 and Metal Corporation improved from Rs. 6. to Rs. 6.50.

Tea shares were a quiet market and prices on the whole were shaded.

* * * *

The profit of the TYROON TEA COMPANY has improved by Rs. 3.13 lakhs to Rs. 11.80 lakhs for the year ended December 1956. The dividend has been increased from 30 percent to 45 percent. Buildings and machinery reserve is allocated Rs. 5 lakhs, leaving a carry-forward of Rs. 86,908 (Rs. 98,341). The crop declined from 15 693 maunds to 15,118 maunds and the average sale price was higher from 38.22 annas to 46.40 annas a lb. Estimates for 1957 provide for a crop of 16,366 maunds.

* * * *

The profit of the CHERRA CHHATAK ROPEWAY COMPANY has amounted to Rs. 1.96 lakhs for the year ended last March. Bringing in a debit balance of Rs. 45,383 and providing Rs. 98,500 for taxation provision there is a balance of Rs. 51,316. A dividend of 10 percent has been declared to absorb Rs. 47,500, leaving a carry-forward of Rs. 3,816.

* * * *

The BURMA CORPORATION (1951) LTD. (incorporated in Burma and jointly owned by the Burma Mines Ltd. and the Government of Burma) has incurred a loss of £19,777 for the quarter ended last September, compared with a profit of £1,875 in the previous quarter. Gross revenue amounted to £475,177. Depreciation is allocated £18,412 and capital expenditure absorbed £31,785. Sales of most products were less in volume in the previous quarter and proceeds as also the valuation of stocks on hand were adversely affected by further declines in metal prices.

Bombay Market

STEEL SHARES LEAD IN STEADY TRADING

FOREIGN AID PROSPECTS HELP SENTIMENT

Wednesday Evening.

THE Bombay stock market was very steady last week. Attention centred on steel scrip, because of the decision of the Tata Iron and Steel Company to issue ordinary bonus shares. A section of operators was inclined to think that the Indian Iron and Steel Company would take similar action. Prospects of increased output following the progress in the expansion schemes of steel companies helped improve sentiment.

It was believed that substantial financial assistance will be forthcoming from the U.S.A., West Germany and France, and the country's foreign exchange situation will improve considerably. Hopes of tax reliefs in the coming Budget, to be presented in February, were regarded as a helpful factor. Good corporate news encouraged bulls to increase their commitments while bears covered their positions, being inclined to take a more constructive view.

Tata Steel soared to Rs. 173 and Indian Iron im-

bined with fresh support, especially from Calcutta interests. Premier Construction were bought at Rs. 162.50 by knowledgeable quarters, but Alcock Ashdown were freely offered at Rs. 217.50 on pressure. Automobile shares were fairly steady, and Hindustan Motor were fractionally higher at Rs. 6.24 on reports of improved working. Premier Automobile gained at Rs. 87.20 on reports of expansion in activity. Tata Locomotive were higher at Rs. 142.50 on replacement buying.

Cotton mill shares were higher on balance, and Standard Mills attracted interest at the higher price of Rs. 405 on suggestions of a bonus issue. Bombay Dyeing recovered to Rs. 511.40 and Century gained at Rs. 394.25. Simplex were bought at Rs. 160.50 and Kohinoor came to hand at Rs. 268.50. Svadeshi were transacted at Rs. 171.50 and India United Ordinary changed hands at Rs. 9.56. Apollo were available at Rs. 2.

In the miscellaneous group, sugar shares were steady, and Phalton improved to Rs. 154.50 on expectations of a bonus issue. Belapur Sugar were higher at Rs. 237. Cement shares were firm, and Associated Cement gained at Rs. 152 in the belief that the Tariff Commission would recommend an increase in the price of the commodity. Digvijay Cement were dealt in at Rs. 136.75. Steamship company shares were steady on prospects of increased business along the coast. Scindia Steam came to hand at Rs. 17.40 and India Steamship were bought at Rs. 11.78. Bombay-Burmah reacted to Rs. 535.50 on profit-taking and Tata Chemical were lower at Rs. 12.52 on pressure of new shares. National Rayon improved to Rs. 221.50 on influential support. Mining shares were subdued as prices of metals declined. Shivrajpur Syndicate were sold at Rs. 93.50.

Banking shares met with steady support on good dividend announcements, and Punjab National were transacted at Rs. 53.50. Bank of Baroda were taken at Rs. 106. Little interest was taken in insurance shares and fluctuations were narrow. New India Assurance were done at Rs. 49.50.

Scattered interest was taken in electricity supply companies, and Ahmedabad Electric were transacted at Rs. 94.90. Tata Power came to hand at Rs. 1,132.50.

New Delhi

CHARACTER OF THE GRADUATE UNEMPLOYMENT PROBLEM

MAJORITY SEEKING CLERICAL JOBS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Director of Employment Exchanges, Mr. Hugh Davenport, has made an interesting study of the employment position among graduates. His study was undertaken to examine the pattern of unemployment among graduates according to the degrees they possess, the subject of specialisation, the class obtained, the age distribution, their previous employment and their job preferences. The problem has been examined with reference to the graduates who were seeking employment through the employment exchanges on 15th May, 1957. Particulars of 26,297 graduates were obtained from 151 employment exchanges. Of these a detailed analysis has been made of 25,785. The following are the conclusions on the pattern of unemployment among the graduates registered:

(a) A large number of unemployed graduates was recorded in West Bengal, Uttar Pradesh, Bombay and Delhi. Among those registered as unemployed, the problem of women graduates was the worst in Kerala State.

(b) Among the graduates registered at employment exchanges, 84 percent held a Bachelor's degree in Arts, Science or Commerce, consisting of 48.5 percent B.A.'s, 22.7 percent B.Sc.'s and 12.8 percent B.Com.'s. Considering, however, the relative incidence of unemployment among degree holders based on the outturn of universities, the problem was most acute among graduates with B.Com. and B.Com. (Hons.) degrees than with B.Sc. and B.A. degrees.

(c) Among the unemployed graduates in Arts, a large number had specialised in Economics, History, Politics and Philosophy. In a similar way, a large number of science graduates had specialised in the groups Physics, Chemistry and Mathematics. But the relative incidence of unemployment as between various subject groups has not been examined.

(d) Among the unemployed graduates, 2.3 percent had secured first-class honours degrees, 24.8 percent second-class honours, and the remaining 72.9 percent third-class—including those who took degrees where no class was assigned. Considering, however, the relative incidence of unemployment among first-class honours graduates, B.Com.'s were better placed than B.A.'s and B.Sc.'s.

(e) Some 34.6 percent of the unemployed graduates were aged 25 years and above, compared with 25.2 percent of all the applicants unemployed in the same age group.

(f) Of the unemployed graduates, 76.7 percent had no previous employment and were looking for work for the first time. Only 23.3 percent had reported previous employment. The proportion of B.A.'s and B.Com.'s having previous employment was higher than for B.Sc.'s.

Clerical Employment

Analysing the unemployed graduates according to the nature of the jobs they sought, 60.4 percent were registered for clerical employment, 19.5 percent for professional and technical jobs, 15.7 percent for administrative and executive posts and the remaining 4.4 percent for other types of jobs. Of the 15,580 graduates seeking work in clerical occupations, as many as 14,822 desired employment as clerks or assistants, 522 as accounts clerks, 102 as stenographers, 66 as typists, 63 as computors and 5 as punch operators. *Prima facie*, this appears to be a waste of university education. It also reflects the state of the employment market as far as graduates are concerned. The fact that about 72 percent of them only had a third-class or ordinary pass degree, however, needs to be taken into consideration.

The graduates seeking employment in all clerical occupations were also classified by the degree they possessed: B.A.'s—8,702, B.Sc.'s—3,480, B.Com.'s—2,523, M.A.'s—384, M.Sc.'s—37, M.Com.'s—111, and 343 other graduates. This shows that 14,705 out of 15,580 graduates, namely, nearly 95 percent of those seeking clerical work, were graduates holding a Bachelor's degree in Arts, Science and Commerce.

Some 5,035 graduates were seeking employment in professional and technical jobs. Of these, 2,488 were registered for the teaching profession, 1,320 for the posts as scientists such as chemists, laboratory assistants, geologists and demonstrators, 214 as engineers, 169 as doctors and 143 for jobs requiring legal qualifications. Among the rest, were 352 seeking jobs as accountants or auditors, 139 as statisticians, 31 as botanists, 11 as zoologists and 12 as entomologists. The graduates seeking employment in professional and technical jobs were also classified by the degree they held: B.A.'s—1,548, B.Sc.'s—1 477, B.Com.'s—254, M.A.'s—613, M.Sc.'s—504, M.Com.'s—108 and 531 other graduates. Those graduates seeking administrative and executive employment numbered 4,058 of whom 3,357 were registered as inspectors, 218 as investigators, 80 as office superintendents and 409 for other types of jobs.

Growing More Food

A reference was recently made in these columns to the Grow More Food Campaign. Enquiries show that about 45 percent of the grants sanctioned by the Union Government during 1956-57 for grow more food schemes were not used by State Governments and have accordingly lapsed. Out of a total grant of Rs. 2.66 crores, the States used only Rs. 1.58 crores, the balance having had to lapse. Madhya Pradesh topped the list of the States which could not use the larger portion of the grant. Out of a grant of Rs. 31.61 lakhs, this State did not use as much as Rs. 23.887 lakhs during 1956-57. In Hyderabad, out of a grant of Rs. 7.08 lakhs, Rs. 5.92 lakhs was not used. In Madhya Bharat, Rs. 22.93 lakhs lapsed out of a grant of Rs. 25.22 lakhs. In Mysore, Rs. 3.86 lakhs lapsed out of a total grant of Rs. 4.81 lakhs. Saurashtra could not use Rs. 5.99 lakhs out of a grant of Rs. 11.66 lakhs. In Kerala, a food deficit area, Rs. 2.39 lakhs was not used from a grant of Rs. 6.93 lakhs. In Delhi, out of a grant of Rs. 3.87 lakhs, Rs. 2.51 lakhs remained unused. In Bombay, the amount which lapsed was Rs. 4.54 lakhs out of a total grant of Rs. 6.50 lakhs.

Maintenance of Irrigation Works

Minor irrigation is an integral part of the Grow More Food Campaign. In 1955, the Government of India set up a committee to look into the maintenance of minor irrigation works. That is as important as the construction of new ones because it is easy to maintain old works at a comparatively low cost. Little attention has, however, been paid to this aspect. Even the periodical surveys have not been undertaken by the various States to determine the extent of such works going out of use due to one cause or the other, and hence no such data are available. Some figures made available to the Grow More Food Enquiry Committee, 1952, revealed that only 70 percent of the total number of wells were actually in use in the States of Bombay and Uttar Pradesh. The condition of other minor irrigation works might probably be the same in other States as well. A survey undertaken in West Bengal indicated that about 39,000 tanks were in a dereiict condition. In Hyderabad, the number of breached tanks requiring repairs was reported as 2,836. The observations of the Grow More Food Enquiry Committee in this connection were as follows: "Thus while new wells or tanks, etcetera, are being constructed as a part of the Grow More Food Campaign, a number of existing works are going out of use every year. It may be that a proportion of them are not worth repairing, but where this is not the case, the maintenance of wells and tanks in good condition is more important than the construction of new works as under the former, irrigation can be secured at a low cost."

Russian Electro-logging Party

One electro-logging party of Russian experts—Messrs Mirolyubov, Makovetski, Drozdov and Iskenderov—has arrived in Dehra Dun. It is shortly going to log the Jawalamukhi well. Messrs Shreider and Petrov have arrived recently from Russia to examine the working of the Russian geophysical instruments and exploration equipment obtained by the Oil and Natural Gas Commission from that country. Mr. Shreider is a Geophysicist of the Ministry of Geology and Mr. Petrov is the chief engineer of the Geophysical Institute of Moscow which manufactures geophysical instruments and equipment.

Rising Demand for Petroleum Products

The current annual demand for petroleum products in India is of the order of 4.3 million tons, compared with 4 million tons in 1956. The increase in this demand has been partly due to the successful completion of various development projects. Of the major products consumed, the demand for kerosene and high-speed diesel oil is on the increase. It has been estimated that India's demand may rise to 7 million tons in 1960.

Foreign Credit for New Refineries

The Government of India is now sounding oil interests in the U.K., the U.S.A., Russia, France, Italy and Rumania to supply equipment, on a deferred payment basis, for the two projected oil refineries in the public sector. The credit is needed for the foreign exchange part of the expenditure for the two refineries. Three experts, deputed by the Roster Wheeler Corporation of the U.S.A., have visited the proposed sites of the two refineries, namely, Barauni, Gauhati, Kokroja, and Jogigopa. They have also had discussions with the Bihar and Assam Governments, with the Assam Oil Company in Digboi and with the oil companies in Bombay. They have been able to collect most of the data required for the preparation of the project studies and will meet the pipeline consultants appointed by the rupee company soon to obtain details of the pipeline costs, alignment, etcetera. The preliminary economic and technical report from the consultants is expected early in February. This will make interim recommendations on the sizes, location, approximate patterns of production and approximate costs. The detailed project report will be available by the end of March 1958 or early in April 1958.

Crude Content of New Oil

The contents of the crude oil from the newly discovered field in Assam might change the pattern of village economy, at least in Assam and its adjoining districts. The crude contains a very large proportion of wax, which may be used in making candles, and thereby replacing kerosene lamps or lanterns. The problem is under consideration here.

Oil and Gas Areas

According to recent estimates, the main sedimentary areas of India with potentialities for oil and gas are as follows:

		Approximate area in square miles.
1.	The region of Assam including Tripura and Manipur	30,000
2.	The West Bengal basin (including parts of coastal Orissa and the Sundarbans)	30,000
3.	Punjab (including Himachal Pradesh), Jammu and Kashmir	50,000
4.	Rajasthan	46,500
5.	Cambay-Kutch	68,500
6.	Ganga Valley	142,000
7.	Madras Coast	17,000
8.	Andhra Coast	9,500
9.	Travancore Coast	6,000
10.	Andaman Islands	3,000
		402,500

These figures are based mainly on the break-up given by the Russian experts in their report. The extent of the area for a few regions not included in their report has been calculated. This figure of a little over 400,000 square miles agrees with the estimate of Dr. Bentz, a German expert, who stated in his report that approximately one million square kilometers are worth being investigated for oil and gas.

Indian Goods in U.S. Fair

The Government of India has reserved 1,000 square feet of floor space at the Washington State International Trade Fair through the Indian Consulate-General in San Francisco. The trade fair will be held from 11th to 20th April in the National Guard Armory in Seattle. Private firms from New Delhi and Farrukhabad, near Agra, have signed up for an additional two booths for displaying handprinted cotton bedspreads, silk prints, table covers and other textiles, handbags and brasswork. Handwrought items developed by the All-India Handicraft Board will be included among the national exhibits. Mr. R. W. Richards, the trade fair vice-president in charge of merchandise, has praised Indian fabrics, ivory carvings, jewellery, brass, jute products and pottery shown at the sixth fair in May. "Indian products took four awards last year for excellence of design and craftsmanship," Mr. Richards said. "We anticipate another outstanding display at the seventh fair."

Company Law Department

The final decision, it is believed, has been reached to re-transfer the Company Law Department from the Central Ministry of Finance to the Central Ministry of Commerce and Industry. Originally, the Company Law Administration was under the Commerce Ministry.

Coal Target for Third Plan

The second meeting of the Coal Council of India was held recently. The most important decisions taken by the Council are: (1) The target of production of coal during the third five year plan period should be tentatively fixed at 100 million tons, a final decision being taken some time after April 1958, when fuller data concerning the extent to which second plan targets will be achieved, as well as on the financial position—both external and internal—will be available. (2) A fuel efficiency committee should be set up, assisted by a technical cell located in the Fuel Research Institute, to deal with the problems relating to the planned utilisation of coal and the promotion of fuel efficiency. (3) A steering committee of the Council should be set up, the functions of which will be: (a) to provide a standing body which could undertake a review of the work done by the individual committees from time to time and co-ordinate the work to the extent necessary; and (b) to assess the recommendations of the individual committees, initiate such routine action as may be necessary in between meetings of the Coal Council and prepare the agenda and notes for meetings of the Council.

Statutory Wage Boards

The Government proposes introducing legislation to place wage boards on a statutory basis, specifying the general character of their composition and the terms of reference. So far, wage boards have been set up by executive order. The Government apparently has taken note of the earlier criticism against the composition of wage boards, so an economist has been included on the latest wage board for the sugar industry. Some more wage boards are in the offing. Meanwhile a committee is being appointed to recommend if and when a wage board for the plantation industry should be set up. There was a proposal to set up two wage boards for the plantation industry—one for the north and the other for the south. The south Indian plantation industry however has already reached an agreement with its labour on the wage question. This agreement will expire in 1961; hence the need for a committee. The proposed legislation for wage boards may be brought before Parliament during its forthcoming Budget session.

World Bank Loan for Ports

The Secretary to the Central Ministry of Transport, Mr. R. L. Gupta, is about to leave for Washington to negotiate a loan for port development from the World Bank. He will be accompanied by a representative of the port trusts.

London

U.K. ECONOMIC POLICY UNCHANGED

SIGNIFICANCE OF BANK RATE TRIBUNAL REPORT

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Government's economic policy is unchanged—stable prices at home and a strong pound overseas—and there is to be no letting up in the fight against inflation. That formed the basis of Mr. Heathcoat Amory's first speech as Chancellor of the Exchequer in the House of Commons, and he went on to explain Mr. Thorneycroft's resignation as arising from the fact that, although Departmental Ministers had accepted substantial cuts in their estimates, his predecessor had insisted that still further cuts were necessary. That, his Cabinet colleagues felt, would jeopardise rather than assist the anti-inflation battle. Mr. Amory felt the seriousness of the position was being better realised generally and obviously had hopes that greater co-operation in holding prices was at least possible, while there was encouragement also in the greater confidence now being shown in sterling. For the Opposition, Mr. Gaitskell contended that far from trying to do too much, there had been economic stagnation for the past two years with the result that unemployment was spreading, while it was nonsense to grant relief to surtax payers and yet suggest that the social services needed to be cut. He expressed sympathy with Mr. Thorneycroft, which the latter hardly merited for he followed with a speech specifically contradicting Mr. Gaitskell's well-made points. It was evident in advance that there was no possibility of any backbench revolt—on which Labour hopes were set—and the division gave the Government a majority of 62 in the motion of confidence moved.

It was unfortunate, just the same, that the economic debate had been preceded by the announcement of the first of the supplementary estimates for the current financial year, amounting to over £54 million to cover additional expenditure on farm subsidies and food, with the former requiring £44 million. Further supplementaries will be presented next month, and in all it is understood that the estimates will have been exceeded by something like £200 million. In the face of figures like that, Mr. Thorneycroft's stand takes on a new light, and it is not surprising that under Mr. Butler's guidance, in the absence of the Prime Minister, the Cabinet and other Ministers have lately been in serious conclave on future expenditure over a wide field.

Fight against Inflation

The new Chancellor had already made his position clear earlier last week, for not only did he follow up his discussions with employers' representatives by a meeting with the Chairman and General Secretary of the Trades Union Congress, but he had also secured a good reception to an outline of what he intended to do from the Conservative backbenchers, whom he addressed prior to the economic debate and thereby ensured that there would be no adverse repercussions in Parliament to Mr. Thorneycroft's action. What he said to them was no doubt much the same as he said to a meeting in Shaldon, in Devon. Referring to his own task he said: "Inflation is still the arch enemy. Two aims will remain paramount with me—maintaining the strength of the pound and internal price stability. The tough, drastic, deflationary policies that the Government adopted in September will be continued without relaxation until success has been achieved. They were undertaken with the entire approval of us all. We have supported them wholeheartedly since. They have already had some success. It would, indeed, be folly to lay them aside or weaken them. And I have not the smallest intention of doing so. There is no soft way through our inflationary difficulties. Whatever steps we take, if they are to be effective, are bound to hurt."

He assured his audience that there would be no economic appeasement. There was no main sector of national expenditure which would be "sacrosanct against cuts," and when it came to the social services "we have got to cut our coat according to our cloth there too." The selection of the precise cuts, however, must be a matter of judgment since economy was not an end in itself but a means to an end—the beating of inflation. In making the cuts the chief test had to be whether a particular action would help or damage the anti-inflationary effort. Some actions would not be likely to strike people generally as fair or helpful and would be unlikely to help in reaching the main objective. The Government, he concluded, would not make extra money available for further inflationary wage increases, and its attitude to those it employed directly would be in line with what it expected from others. Meantime, Mr. Amory continues to receive advice about his Budget. The Income Tax Payers Society has just suggested a reduction of 2s in the pound in the standard rate of income tax on the ground that no single measure would be better calculated to increase British development and enterprise; raising the starting point for surtax from £2,000 to £3,000 because of the fall in the value of money; bringing the Schedule E expenses rule into line with that applicable to Schedule D; the abolition of differential rates of Profits Tax; and an increase in the statutory repairs allowance, especially for smaller houses.

Bank Rate Leak Enquiry

Last week was hardly a good week for the Labour Party, more especially as it was marked by a newspaper interview by Mr. Gaitskell in which he enlarged on the widespread and heavy attacks which it was intended to make against the Government in Parliament during the current session when the Opposition has greater scope for selecting subjects to be debated. Apart from the defeat in the economic debate, the ground has been virtually cut from under Labour's feet on the Bank rate leak issue by the appearance of the Tribunal's report. This is to be debated this week, but in view of the fact that it finds no justification for allegations of an improper disclosure of information on the raising of Bank rate and that none of the people who appeared before it behaved in any way improperly, while those given advance information of restrictive financial measures, other than the change in Bank rate, treated it as confidential and made no use of it for private gain, the Opposition's "attack" will be switched to the propriety of recruiting the Board of the Bank of England from business men holding other directorships—to which the report refers without expressing an opinion—regardless of the fact that it was a Labour Government which nationalised the Bank and drew up the constitution under which it works. The report certainly came as a tonic to Government supporters, and no doubt had some influence on the attitude during the economic debate. It might also have influenced Mr. Butler's categorical assertion that the Government had no intention of calling a general election and intended to "see things through." The Tribunal's report has certainly done a great deal of good to the City, not only in enhancing its reputation for financial integrity, as Mr. Cameron Cobbold, the Governor of the Bank, hoped it would, but also in restoring confidence in sterling and in the Government's intentions on the economic front.

Improving Terms of Trade

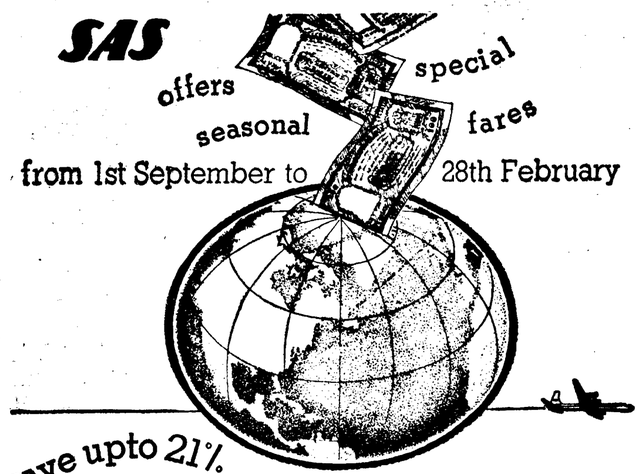
A most encouraging development so far as the U.K.'s balance of payments problem is concerned was the news, after three months of "no change", that the terms of trade, as measured by the ratio of import to export prices, again moved in its favour in December. The Board of Trade index number (1954=100) dropped from 93 to 91, due entirely to a further drop in import prices whose index fell by 2 points from 103 to 101, while the export price index was steady at 111 because of slightly higher prices for engineering exports offsetting lower prices for miscellaneous manufactured export goods. At 91, the terms of trade index was 9 per cent lower than in April last, and although it is likely that ultimately the export price index will react downward in arriving at these figures suggests that this improvement may be expected to continue for at least the next few months. As might be expected from the above, in December also the prices of basic materials used in British industry fell for the eighth successive month, the Board of Trade index (30th June, 1949=100) dropped from 146.2 to 144.2, a level over 10 percent lower than in April last. Prices for wool, copper, cotton, lead and zinc all fell, more than offsetting rises in the prices of raw rubber and some imported vegetable oils. Still unaffected, however, is the retail prices index, the cost of living, which at 108 on 10th December was the same as on 12th November (January 1956=100), against 103 a year ago. Actually, there was an increase of half a point, but the index is taken to nearest full number.

While it is true that industrial production as a whole is levelling off—and it is Government policy that it should give time for consolidation—many sections of British industry produce figures to refute the Labour contention that stagnation is the U.K.'s main problem and that the economy needs further expansion. Business covered last year by the Export Credits Guarantee Department reached the record total of £485.4 million, which is 19¼ percent greater than for 1956; exports of cars and the total exports of all vehicles reached record levels last year at nearly 550,000, or 6,700 more than the previous record set up in 1950; and exports of Scotch Whisky at 17,907,375 gallons earned the record value of £52,136,829, some £4¼ million more than in 1956. Only coal production is lagging, and absenteeism is given by the National Coal Board as the principal cause.

Suez Canal Company

A conference in connection with the future of the Suez Canal Company was held in London last week at which Mr. M. J. Georges-Picot, the chairman and managing director, expressed the hope that negotiations with the Egyptian Government on the compensation question would open either in February or March, and it has since been confirmed that a meeting has now been fixed for next month in Rome. Before that, on 5th February a general meeting will be held in Paris at which the approval of the shareholders for the procedure to be followed will be sought. A study of the company's investments shows that 35 percent are in the British Empire and from 20 to 25 percent in north America, with the balance in France, Europe and Africa, and there is no free money awaiting investment.

Brevities



Mr. E. J. Pakes has been elected a director of the Chartered Bank.

A contract for 27 diesel and steam cranes, valued at nearly £300,000, has been given by the Indian Government to the Yorkshire firm of Thomas Smith and Sons (Rodley) Ltd.

On the capital increased by a one-for-three scrip issue and later one-for-four cash issue, Attock Oil announces an interim dividend of 5 percent tax free, against 3¾ percent tax free a year ago on the smaller capital. Directors say they hope to bring the total rate for 1957 to 13¼ percent tax free, against an equivalent 12½ percent tax free.

Imperial Chemical Industries, which already has substantial investment in India, is engaged in putting up new chemical plants for three separate companies in which I.C.I. is in partnership or in association with Indian capital. These, when completed in a year or 15 months, will add £9 million to the total investment in the Indian chemical industry. Further schemes at present under discussion may raise this total to £12 million.

A new Federation, the Electric Cable Makers Federation, has been formed to act as a forum at which problems of the industry and matters of common interest can be discussed on the widest basis. About 40 British cable makers have become members.

Bombay

NEW SHIPPING COMPANY INCORPORATED

VESSELS TO SERVE COASTAL AND FOREIGN PORTS

(FROM A BOMBAY CORRESPONDENT)

WITH an authorised capital of Rs. 2.5 crores divided into 250,000 ordinary shares of Rs. 100 each, a new shipping company, known as Victory Navigation Company Limited, has recently been incorporated with its headquarters in Bombay. Its prospectus will be issued as soon as permission is received from the Controller of Capital Issues, New Delhi. It is learned that the company's ships will serve coastal as well as foreign ports. It plans to handle cargo and passenger traffic. It is understood that the company has already successfully negotiated the purchase of four ships of the total tonnage of 14,112. It is believed it will not be long before the company starts operations once the necessary formalities are completed. The directorate is composed of industrialists, business men and princes from Saurashtra and Maharashtra.

Rise in Vanaspati Output

The vanaspati industry registered a steep increase in output during 1957, when its production rose from 255,000 tons to a new high of 305,000 tons. While domestic sales were good, exports in 1957 amounted to 3,500 tons against some 10,000 tons in 1956 and 16,000 tons in 1955. Growing competition from Holland and other European countries, who use whale oil as raw material, is said to have caused the decline in exports. Whale oil is cheaper than Indian groundnut oil by about £35 a ton.

Debenture Offer of Premier Automobiles

The chairman of Premier Automobiles, Mr. Lalchand Hirachand, has given details here of a proposed issue of debentures to the extent of Rs. 2 crores to be made with a view to finding finance for the company's expansion programme. Of these, debentures of the value of Rs. 1.60 crores will be offered for subscription at the present time. The rate of interest will be 6½ percent a year, subject to income tax, and the debentures will be redeemed at par at the end of 15 years from the date of allotment with an option to the company to redeem them at par any time after ten years from the date of allotment on giving six months' notice in writing. The debentures will be convertible into "A" ordinary shares under certain conditions. They will be offered to the shareholders in the first instance. Out of the proceeds of the issue of debentures of Rs. 1.60 crores, the balance of the loan, namely, Rs. 45 lakhs, now due to the Industrial Finance Corporation of India, will be paid off. Negotiations for underwriting this issue have reached an advanced stage. Referring to the progress made by the company in its manufacturing programme, the chairman has revealed that the manufacture of components for Fiat 1100 motor-cars has already begun. The machining of engine components has been completed, and the Fiat engine is well on the production line and its imports have been discontinued. Import licences for machinery for the manufacture of transmission and rear axles for Fiat motor-cars, on the basis of deferred payment terms, are now awaited. The chairman has also said that the progress on Timken axles is well advanced. Orders have been placed for the machine tools and fixtures needed for the manufacture of these axles. The company expects to commence production of important components for the front and rear axle for trucks within a few months.

Rising Prices for Paper Products

Prices of different grades of paper here have hardened on account of rising demand and diminishing supplies of imported material. A hardening tendency in cardboards is also noticeable. The quotation of imported tissue paper, for instance, went up by about a rupee to Rs. 15 a ream in the course of the past week, while bond paper registered a rise of one anna to Rs. 1.75 a lb. Prices of paper and wrapping paper also moved up. Dealers attribute the sustained firmness to inadequate supplies in the market. It is felt that the Government should increase the import quotas in the next licensing period in view of the gap between internal production and rising demand. Although foreign exchange considerations may not permit liberal imports, it is pointed out that imports of a token nature in the case of several categories will help bring down the prices from the current high levels.

Piece Rate for Iron and Steel Cargoes

An agreement on the basis for payment of wages for handling iron and steel cargoes was reached between the Transport and Dock Workers Union, on the one hand, and the Stevedores Association and the Port Trust, on the other. As a result of this agreement, the stage is set for the introduction of the piece-rate scheme for iron and steel cargoes from 1st February, 1958. The Labour Appellate Tribunal, which dealt with the piece-rate scheme, decided to continue to keep iron and steel in the limited category of items handled on a time-rate basis. This led to an incongruous situation in the docks with piece-rated goods being expeditiously handled, while the unloading of iron and steel, which constituted the bulk of imports, after foodgrains, was very slow. Grain cargoes were piece-rated some months ago, and it was inevitable that iron and steel should be brought within the scope of the piece-rate system. The Government of India, as the largest importer of iron and steel, desired the application of the piece-rate system to those commodities.

Oilseeds Weak

All the principal varieties of oilseeds—with the exception of castorseed—displayed a weak trend during the past week. Castorseed futures developed an irregularly higher tendency. For most part of the past week, this section ruled firm because of increased optimism about the relief in the export duty and prospects of overseas enquiries in oil. The United Kingdom was reported to have bought about 125 tons commercial at £113 a ton in bulk. Yugoslavia was said to have bought about 400 tons of oil. At the end of the week, news of a reduction in oil freight in bulk by 26d aided sentiment. The Conference Lines were reported to have reduced the freight rate from 206d to 180d for United Kingdom and the Continent up to the end of March.

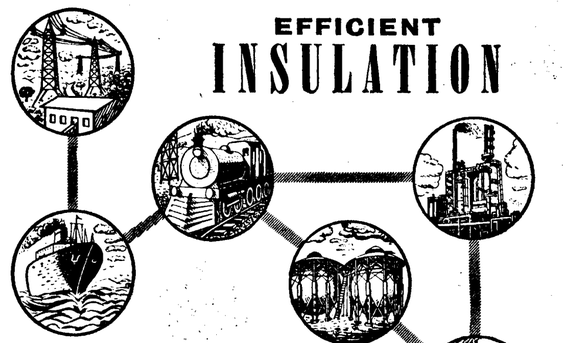
Selling Pressure in Cotton

After initial firmness, cotton futures moved irregularly higher during the earlier part of the past week, but subsequently paved the way for heavy selling pressure. Discouraging upcountry advices and lack of buying in the spot section at higher levels were the chief factors which induced the selling pressure. Trading in Jarilla May contract commenced last week. The new contract, it was felt, would start its career at par with the Jarilla March contract, but it opened just about six points lower than the existing one. Due to increased switchover operations, the spread between the two contracts narrowed down to 3.75 points, which was the narrowest recorded for a long time. I.C.C. Moglai Jarilla March opened at Rs. 691.50 and shot up to Rs. 697.50 on heavy buying. F.M.C. news brought down the price to Rs. 691, which, however, gradually rose to Rs. 694.25 on renewed buying. Declining sharply to Rs. 684.25, it closed at Rs. 691.75. The new contract May opened at Rs. 685.25 and moved up to Rs. 690. It slowly slipped back to Rs. 681 to close at Rs. 688. The spread between the two contracts fluctuated from Rs. 6 to Rs. 3.75. In the spot market, mill activity dropped. Vijay delivery contract firmed up to Rs. 905, but soon declined to Rs. 885 on increased selling. In the export section, activity revived to some extent. Bengal prices were well maintained. Shippers were in the market for Bengal and old crop ⅜in. cotton below "fully good" in quality in anticipation of an export quota for these growths. In the foreign section, East African attracted attention of southern mills while American cotton also continued to evoke interest.

United Bank of India Ltd.

Head Office:
4, CLIVE GHAT STREET, CALCUTTA

TOTAL ASSETS
OVER Rs. 45,00,00,000/-



Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

EFFICIENT INSULATION

part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.3 percent to 105.9 during the week ended 11th January, compared with 106.2 for the previous week. The index was lower by 1.2 percent and 0.9 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The index for Food Articles receded by 0.4 percent to 102.5 compared with 102.9 (revised) for the previous week, due to a fall in the prices of potatoes (−24%), onions in Calcutta (−20%), fish (*Rohu*) in Calcutta (−11%), mustard oil in Delhi (−9%), bajra in Rajkot and arhar in Bombay (−8% each), jowar in Surat and chillies (−6% each), rice in Kakinada (−5%), gur (−4%), gingelly oil (−3%), groundnut oil (−2%) and barley and coconut oil (−1% each). The prices of tea reappeared at a higher level. Maize in Bhilwara (+8%), eggs (+6%), mung in Madras, urad in Bombay and cloves (+5% each) and wheat, ragi and ghee, (+1% each) also showed a rise. The index for Tobacco remained stationary at the previous week's level of 97 in spite of variations in the prices of manufactured tobacco—Capstan medium tobacco (+10%) and Passing Show cigarettes (−4%). The index for the Fuel, Power, Light and Lubricants group also remained unchanged at 114.7. The price of castor oil (−1%), however, showed a fall. The prices of rapeseed in Delhi (−8%), gingellyseed in Bombay (−5%), castorseed (−4%) and copra (=1%) moved down while those of linseed in Nagpur, rapeseed in Kanpur and lac (+5% each), raw silk (+3%) and raw cotton, groundnuts and cottonseed (+1% each) witnessed an increase, and in the result, the index for Industrial Raw Materials showed a rise of 0.2 percent to 114.3. The index for Intermediate Products declined by 0.4 percent to 106.4 due to a fall in the prices of cotton yarn, coir yarn, zinc and brass (−1% each). The prices of aluminium and tin (+1% each), however, recorded an advance. The index for Finished Products fell by 0.2 percent to 107.5 because of a decline in the prices of paints (Red Lead Dry Genuine) in Calcutta and quinine sulphate (foreign) in Bombay (−5% each) and jute manufactures and oilcakes (−1% each).

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to December 1957. As compared with November, the December Indices for Food and Clothing indicate drops of 4 points and 6 points, respectively, while that for Miscellaneous shows a rise of 1 point. The index for Fuel and Lighting remains unchanged at 281 points.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living declined by 3 points during December 1957.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939 = 100.

OIL LOCATED AT NEW WELL IN MORAN

DRILLING COMPLETED IN RECORD TIME

OIL has been struck at the Moran well No. 6, the latest well in the Assam Oil Company's exploration and drilling programme in the Brahmaputra valley. Announcing this from Digboi, the company has stated that the new well, which began drilling on 18th November, 1957, was completed on 1st January this year at a depth of 11,622 feet in the record time (for Moran) of 40 drilling days. Recent production tests of the well are described by A.O.C. engineers as "very promising." Driller-in-charge at the Moran well No. 6 was Mr A. S. Mukherjee, a senior A.O.C. driller. Of the six wells so far completed in Moran, four are capable of producing oil and two are failures. Drilling is now in progress at the Moran well No. 7 and further well locations are on the way.

In Nahorkatiya, well No. 31 was spudded-in on 5th January. No drilling speed records will be broken at this location as extensive coring will be needed to provide an up-to-date assessment of geological conditions in this area. Five more locations are being prepared.

Oil from the New Company

As already announced a new company, Oil India Ltd., is being formed to operate the new oil areas in the Assam valley, and when pipeline facilities are established, it will sell its crude to two new Government-sponsored refineries, one in Assam and the other in Barauni in Bihar.

Increased Output from Digboi

Crude throughput to the A.O.C oil refinery in Digboi totalled 113,969,000 gallons in 1957. This is an increase of more than 9 percent on the previous year's throughput and constitutes a record for the company. Roughly half the products were consumed in the B.O.C. marketing area of Assam, the balance being despatched to markets in other parts of India, chiefly the north and north-eastern regions.

U.K. FIRM WINS CONTRACT TO SUPPLY CRANES TO INDIAN RAILWAYS

A British engineering firm has gained a contract to supply 27 diesel and steam cranes, worth some £300,000, to the Indian railways, as a result of a tour made by the joint managing director of the firm, Thomas Smith and Sons (Rodley) Ltd. Work has already started on the contract, a member of the Rodley (Leeds) firm has said in an interview, and it is hoped that deliveries will begin in October. The cranes are part of large orders placed in connection with the electrification plans of the Indian railways. This is the third successive year that Thomas Smith has received orders from India.

E.M.I. ANNUAL REPORT SHOWS INCREASED SALES IN INDIA

The Electric and Musical Industries (E.M.I.) Ltd.—a group better known under its trade mark of "His Master's Voice"—reports an expansion of its activities in India. In the annual report of the company Mr. J. F. Lockwood, chairman, has said that total sales in India for the year ended 30th June moved slightly upwards, with increases in all three of the main products made in the group's factory, where 1,700 workers are employed. Improved sales were achieved in gramophone records, radio sets, and radiograms. The sales of professional recording equipment and tapes, mainly to All India Radio and other Government departments, also rose during the year. E.M.I. interests cover most European countries as well as the Commonwealth and extend to the United States and South America, and concern a variety of recording and electronic equipment, radio and television and household appliances. The group has now entered the field of photographic printing, and has obtained the marketing and manufacturing rights in the eastern hemisphere for the Logetronic system. This method greatly increases the value of aerial survey pictures and X-ray negatives. Cinema films can be balanced quickly and easily for exposure variations, and even amateur snapshots will yield the best possible results without skilled or individual handling.

SCHEME TO STABILISE COMMODITY PRICES

Utilising World Abundance, by Mr. St. Clare Grondona (Allen and Unwin, 21s), makes its appearance at an appropriate time, for the steady decline in world commodity prices in 1957, though welcome to many countries faced with balance of payments difficulties, has given rise to fresh fears of a widespread slump from which there might come untold harm to the world's economy. So far as the producer countries are concerned, thoughts are again turning to the need for price stabilisation. In the long run, the need for this is generally accepted. The difficulty is to devise a system which will accomplish this. Most of the schemes hitherto considered suffer from two weaknesses: they rely too much on altruism, and they call for a greater degree of international co-operation than is readily forthcoming. On the face of it, the system devised by Mr. St. Clare Grondona (and outlined in his book) should overcome these difficulties. Briefly, what he proposes is that individual Governments should establish their own commodity reserves. A price stabilising body will undertake to buy unlimited quantities of particular commodities at predetermined prices, fixed in the first place some way below those prevailing in recent years. This will put a floor in the market. There will also be a ceiling price, though this will apply only after stocks have accumulated. But given the normal market fluctuations, this will not be long in coming about and, once there is a stock in existence, no one will pay more than the reserve's selling price. These prices will not be fixed once and for all, but will move up and down automatically, according to whether the stocks are piling up or running down. The important gain, however, is that prices will move gradually and predictably; there will no longer be headlong rises and declines. The scheme is thought out in ingenious detail. Mr. Grondona shows, for example that the U.S. and Canadian Governments might find it worth while to consign part of their huge wheat surpluses to such a sheeme on terms that will be advantageous to the consumer and yet not disrupt the normal flow of trade. The scheme certainly marks an advance on earlier thinking and justifies careful consideration.

Jute

SPECULATIVE ACTIVITY BRINGS SHARP RISE IN PRICES

RAW JUTE CROP FORECAST DISAPPOINTS

THE Calcutta goods markets sprang to life last week after a long period of idleness. The rise was not, however, caused by any renewal of genuine business, but was due almost entirely to speculative activity in the fatka market. It is reported that a prominent speculator from western India has begun operations in Calcutta, and holds very bullish ideas. His initial purchases caused an immediate upward reaction. Mills attempted to take advantage of the rise, and most of them became keen sellers. But the selling pressure brought little reward because there were no buyers for real goods. The market eventually reacted and the upward tendency was checked, but there was still no interest from overseas buyers. Local shippers also paused in their activities due to the uncertainty of the shipping position, but with the return to work at the docks, they proceeded to cover small lots for immediate shipment. Unconfirmed reports about a Government of India order for B Twills continued to circulate, but any effect this may have had on the market had already been discounted. In the absence of fresh enquiries the market situation became false, and profit-taking by speculators towards the end of the period, with the consequent easing of prices, emphasised the weakness of the market and the lack of holding power on the part of the majority of operators.

The publication of the forecast of the all-India final estimate of the raw jute crop for 1957-58 came as a surprise to the fibre markets. According to this report the acreage under jute and the output are both liable to be considerably reduced. Acreage has fallen by about 8 percent from 1,860,000 acres to 1,754,000 acres with a consequent reduction of about 212,000 bales. In view of India's attempts to achieve self-sufficiency, these figures appear surprising, but on reflection it is obvious that this is not the result of any change of policy. Rather it is a matter of circumstances beyond the Government's control. The reductions may be generally attributed to the lateness of last year's monsoon. Many farmers are in the habit of laying down a jute crop which, when harvested, is immediately followed by another crop of a different commodity. The lateness of the monsoon, however, made it impossible for the two crops to be grown in the time left, and so the majority cut out their jute sowings and went straight into their second crop, with the consequent setback to jute output.

The question of Pakistani cuttings has come in for a great deal of attention during the past few weeks. Most of Calcutta's mills have had their applications for import licences for cuttings turned down, some of them for the second time. Stockists of cuttings in Calcutta have attempted to take advantage of this situation, and have offered, and done, small business at very large premiums. Some seller interests also, who are confident of obtaining licences, have offered jute under sellers' licence at a premium. Only small business was reported on this basis, however, as most consumers are of the opinion that licences will still be issued, and that when they are the interests of the consumers will be looked after first. Prolonged enquiries have elicited no definite information from the Controller of Imports and Exports, and the situation thus created is ripe for speculation. Several speculative contracts have already been reported and more are in the offing.

On Saturday last the jute markets were closed as a mark of respect, on the death of Mr. L. P. Goenka, a well-known Calcutta jute merchant.

THE JUTE MARKETS

Manufactured Goods: Due to the holidays last week, this report only covers three and a half days, and during this period the goods market showed many changes. After a quiet opening last Wednesday, speculative activity became prominent under the influence of outside elements, and prices shot up by about Rs. 2 over the holiday period. Mills were naturally keen sellers at the enhanced rates, but it was a false market in that there were no buyers for real goods, and mills' selling pressure eventually had the effect of reducing prices to their former levels. Towards the close quieter conditions prevailed and prices fluctuated within narrow limits. Throughout the week all price variations originated from the sacking section, hessians merely moving in sympathy. The possibility of an Indian Government order in sacking was instrumental in maintaining rates, but the advantages gained by this rumour were in the main already discounted. Towards the close the market was quiet, and appeared to be settling down once more to idle conditions.

Prices at the opening last Wednesday showed little change from last week's closing rates. January B Twills were quoted at Rs. 104.65 and April-June shipment at Rs. 106.20; 40in. 10oz. hessians were unchanged at Rs. 39.75 and Rs. 40.35 for the near and forward positions, respectively. During the two days' holidays that followed, brisk speculative activity in the fatka market made prices soar, and on Saturday sacking showed a gain of Rs. 2.05, and hessians 40nP. Over the week-end the upward tendency continued, and by Monday morning ready B Twills stood at Rs. 107.20. At this stage, hessians were unchanged and no overseas interest was reported. Heavy selling pressure from mills, most of it unsuccessful, brought prices down rapidly. On Tuesday morning sacking was reduced by Re. 1 and the general undertone of the market was easier.

At the close, the market was easier and opening quotations on Wednesday morning were as follows:

	Jan. Rs.	Feb. Rs.	March Rs.	Apr.-June Rs.
40in. 8oz.	32.50	32.50	32.50	32.50
40in. 10oz.	39.80	40	40.10	40.30
B Twills	106	106.60	106.75	106.90
Heavy Cees (Plain)	103.75	105.25	105.75	106.25
A Twills	126.25	126.75	127.25	127.50
Liverpools	120	120.50	120.75	120.75
Cornsacks	107.75	108	108	108.25

Raw Jute: Business in the fibre markets last week was on a very restricted scale. Prices advanced in sympathy with the finished goods market, but buyers were not anxious to follow the rise and only small business was reported. There was a fair amount of inter-seller covering business, however, and many of these transactions were conducted at prices which bore no relationship to the present market. For the first time for several weeks raw jute received some support from the goods section, and with prices in both sacking and hessian advancing, the market developed a very steady tendency with sellers reserved. Mill representatives, both upcountry and in Cossipore were again active and although the business concluded in these centres was not as large as formerly, it was enough to prevent prices from falling. Consequently, upcountry markets continue to rule above the parity of those in Calcutta. Quotations at the beginning of the week were based on Assam jute at Rs. 26.50 a maund for January-February shipment, but this soon advanced to Rs. 27 in sympathy with the rising goods market. When goods prices fell back after the week-end, fibre prices followed suit.

During the week, business was reported in Assam-Northern and Dhubri at Rs. 26.50 to Rs. 26.75 for assortment, and Rs. 29.75 for Middles only. Tossa and Daissee were done at Rs. 29.50 to Rs. 30. Mesta still came in for a great deal of interest and Daissee mesta passed at Rs. 23.50, Northern and Desal at Rs. 23.62 to Rs. 23.75 and jungli at Rs. 21.50. Total business during the week was reported to be about 150,000 maunds.

In Cossipore, wagon arrivals last week amounted to only about 350 wagons, as against 850 during the corresponding week last year. Most of the imports were jungli jute and mesta. Stocks of Northern-Assam jute and tossa are small, and good quality jute is at a premium. Upcountry markets are steady due to small imports and covering business. At the close in Cossipore, Kishenganj jute was quoted at Rs. 25.50 a maund for garsat quality.

At the close of this report on Wednesday morning, the market was easier and quotations were based on the following:

Indian Jute:	Landed at Mills. Rs. a md. basis Bottoms.	Shipment.
Assam	26.75	February-March
Northern	26.75	,,
Purnea Desal	25	,,
Daissee	30	,,
Assam Tossa	29.75	,,
Northern ex Calcutta	25.75	,,
Mesta:		
Assam-Northern	23.75	,,
Desal	23.75	,,
Daissee	23.50	,,
Jungli	22	,,
Bimli F.A.Q.	21.50	,,
Pakistani Cuttings	74 a bale	,,

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th January, 1958	1,148.0	11,409.2	12,557.2
1st to 20th December, 1957	771.9	16,313.5	17,085.4
1st to 20th November, 1957	1,484.1	23,257.7	24,741.8
	Sacking		
1st to 20th January, 1958	15,881.0	92.3	15,973.3
1st to 20th December, 1957	21,194.6	446.0	21,640.6
1st to 20th November, 1957	27,764.9	513.6	28,278.5

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in December was 8 million yards more than during November, but was 1 million yards below that of December 1956. Total estimated burlap consumption for 1957 at 831 million yards was 5 percent lower than for 1956. It is interesting to note that the decline in burlap consumption last year approximated that for shipping sack paper, the tonnage of which was off about 4½ percent. U.S. burlap stocks showed little change. At 225 million yards, 114 million yards were spots and 111 million yards were afloats. (Total estimated stocks at the end of December were 42 million yards lower than a year ago.) Appearing below are two tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

NEED FOR LOWER FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THERE was evidently a motive when the Pakistani Jute Association withdrew the minimum prices for the various grades of raw jute a few months ago. The prices are now being controlled through the issue of E.P.C.'s. Anyone who sells below the day's quotations is refused an E.P.C. That is why the bids made slightly under the shippers' quotations are being turned down. It is a most annoying state of affairs since the industry is demanding cheaper raw jute while sellers are not allowed to accept business at their own prices. It is time the Pakistanis appreciated the need for lower raw jute prices so that the industry can compete with substitutes.

Offers had been made more freely last week, and there had been a tendency for shippers to quote cheaper terms. Mill Firsts might be obtained at £113, but there are also quotations up to £118, with Mill Lightnings from £97 10s and Mill Hearts from £87, while grade Hearts are down to £74, good marks of Daissee-2/3 from £98 and grade £89, grade Tossa-2/3 from £105 and grade Tossa-4 from £97 10s, all c.i.f. U.K., January-February. All these prices are well above the old fixed minimum rates, and they could be reduced. It is well known that cultivators in both India and Pakistan are now more prosperous than they were before. Orders for jute cloth and bags are now more scarce than they were in the past, and there is more competition for them so that manufacturers are compelled to quote low prices—so low in fact that no profits can be made. Jute spinning and weaving firms in the Continent are going out of business and the Indian jute mills surely cannot go on making losses indefinitely. Share prices are very low, and the ordinaries of the Dundee-managed mills of Samnuggur, Titaghur and Victoria have fallen to around 6s to 6s 6d.

Prices for Calcutta goods are nominal because of holidays, but the latest were 60s 3d for 40in. 10oz. and 46s for 7¼oz., January, 60s 6d and 46s February-March and 61s and 46s 3d April-June, f.o.b. Calcutta. Some business has been done with the Jute Control at 59s 11d, it is reported. Business in jute yarns and cloth remains quiet, but there is still no change in prices.

Plantation Topics

RECORD TEA PRODUCTION IN SOUTH INDIA

LOWER AVERAGE PRICE AT COCHIN AUCTIONS

(FROM A SOUTH INDIAN CORRESPONDENT)

SOUTH India produced a record volume of tea during 1957. It is estimated that the region's output amounted to nearly 145 million lbs compared with 126.9 million lbs in 1956. The weather was so favourable last year that south India could produce a bumber crop in spite of continuous labour troubles on the estates in Kerala. More could have been produced if labour was more co-operative. As for exports, 1957, too, was a record year. Tea exports from Cochin amounted to 85 million lbs compared with 80 million lbs in the previous year. The U.K. took 47.3 million lbs against 45 million lbs in the previous year. The U.S. off-take amounted to 7 million lbs and Canada took another 6 million lbs. Exports to Australia were of the order of 6.5 million lbs. Another 6.4 million lbs went to other foreign countries, and shipments to Indian ports, which were mainly for internal consumption, amounted to 11.7 million lbs, showing an increase of 4.6 million lbs over that of the previous year. Shipments from Kozhikode, another venue of export of south Indian teas, amounted to 4 million lbs in 1957 compared with 3.8 million lbs in 1956. But prices at which south Indian teas were sold last year were comparatively low. The average price realised at the Cochin auctions was only Rs. 1.93 a lb compared with Rs. 2.23 a lb in 1956.

Revision of Statutory Rubber Price

Rubber growers in Kerala are pleading for a revision of the tariff price for raw rubber which was fixed in 1955, on the ground that the cost of production has increased considerably during the last two years on account of heavy taxation and additional labour costs. They argue that the present price has no relation to the cost. The Quilon District Planters Association has submitted a memorandum to the Central Minister for Commerce and Industry, Mr. Morarji Desai, stressing the need for an immediate revision of the statutory price for rubber.

Raising Coconut Production

The Indian Central Coconut Committee is meeting in Kozhikode for four days from 28th January. A discussion of the means and methods to increase the production of coconuts to make India self-sufficient is the main item on the agenda of this meeting. According to the estimate of the committee, India has at present some 1,570,000 acres under coconut trees and her production amounts to 4,131 million coconuts a years. The country has a deficit to the extent of 30 percent of its requirements, which is covered through imports from Ceylon and other sources. To increase the level of production will not be an easy task. As far as Kerala is concerned, where 70 percent of the total area under coconut cultivation is concentrated, almost all the available land suitable for this cultivation has been utilised. So an increase in production in Kerala can be achieved only through under-planting of the existing areas with quality seedlings and through the intensive manuring and proper cultural care of the coconut palms. Quality seedlings are now being supplied at subsidised rates from the nurseries attached to the research stations of the Coconut Committee and to the N.E.S. blocks in Kerala.

It has been found from experience that proper manuring and cultural care will definitely raise the yield. The effect of manuring will be noticeable only after three or four years, and growers who belong to the average income-groups cannot afford to manure properly and extend the proper cultural care to their coconut palms. On the recommendation of the committee, the State and Central Governments are considering the need to supply balanced fertilisers to growers on a loan basis, to be recovered in easy instalments. Private agencies also have to be encouraged to supply them fertilisers on easy terms.

Leaf and Root Disease

Another problem of great magnitude is the devastating leaf and root disease that has affected nearly 7 million trees on an extensive area of about 100,000 acres stretching from Nedumangadu in south Travancore to Kanayannur in Cochin. As a result of this, the yield in this area has gone down to one-fourth of the normal produce. The extent of the loss in yield is estimated at Rs. 2 crores a year. The State Government, at the initiative of the Coconut Committee, has launched a comprehensive spraying scheme using 1,000 spraying sets. The crown of affected trees has to be sprayed with a mixture of fungicides and insecticides thrice a year for four or five years to eradicate the disease. It is estimated that to cover the entire affected area, some 5,000 sprayers have to be employed for five years which will involve an expenditure of Rs. 2½ crores. The Government now collects only 1 anna a tree from growers for the spraying expenses.

Increasing Arecanut Output

The president of the Indian Central Arecanut Committee, Dr. M. S. Randhawa, has given an outline of the development schemes for arecanuts envisaged under the second five year plan, in his address at the annual conference of the committee recently held in Kozhikode. He says that it is proposed to extend arecanut cultivation to an area of about 9,200 acres for which 7.4 million seedlings are required. To supply them, it has been decided to establish 27 nurseries in addition to those now attached to the arecanut research stations. Out of this, five will be located in Kerala, four in Mysore, 12 in Assam, three in West Bengal and three in Orissa. Apart from these, a total of 300 village nurseries are being planned—120 in Kerala, 100 in Mysore, 50 in Assam and 30 in West Bengal. When these will reach their full production stage, they will produce 3,065,000 quality seedlings a year, and the total supply for the second plan period will amount to 9.2 million seedlings. Dr. Randhawa says that through this and other methods it is proposed to raise production from 2.2 million maunds to 2.7 million maunds. He adds that the maintenance of import duty on arecanut at the 1956-57 level of Re. 1 a lb should provide sufficient incentive to growers to adopt improved methods of cultivation, such as the use of fertilisers to increase the average yield. Arecanut-growing States should take up, on a high priority basis, the selection of high-yielding palms—a step necessary to raise quality seedlings.

The Kerala Minister, Mr. C. Achutha Menon, has said in his inaugural address at the conference that the people of Kerala are perturbed over the news that the headquarters of the committee is proposed to be shifted from Kozhikode. He has assured his audience that all facilities will be provided by the State Government for maintaining its offices there. It is necessary to take up improved and intensive methods of cultivation to make India self-sufficient in arecanuts. The Kerala Government has a scheme to give loans to growers to dig irrigation wells and to distribute fertilisers on a loan basis. India now imports on an average about 1 million maunds of arecanuts worth about Rs. 3 crores to Rs. 4 crores a year. Her production is about 2.2 million maunds which is about two-thirds of her annual requirements.

COCHIN TEA SALES

At Sale No. 3, 900,000 lbs of tea were on offer. There was a strong general demand for everything, particularly whole leaf types. Low medium and medium descriptions improved by 15nP or 20nP. Better grades quoted higher following quality.

At Dust Sale C, 575,000 lbs of tea were on offer. There was a very good demand but prices were irregular. Low mediums and mediums were fully firm. Others were occasionally easier.

Calcutta Markets

FAIR GENERAL DEMAND AT TEA EXPORT SALE

DECLINE IN DUSTS

AT Sale No. 30, held on 27th and 28th January, the 63,782 packages on offer at the Export auction, met with a fair general demand. Plain and medium B.P.'s declined by 4 to 6nP, while Fannings were from 6 to 8nP easier except where they had a clean leaf appearance or bright liquors when they were about steady. Medium B.O.P.'s were again a weak feature and were 10 to 20nP easier except where quality showed improvement. Medium O.F. however were the strongest feature of the Sale and although a few lines were sold slightly below valuations, most were considerably dearer, especially those which were bright in cup. There was only a fair demand for C.T.C.'s which irregularly declined by up to 20nP. Fannings grades generally receiving more support than brokens. A few best liquoring invoices on offer, however, sold well at about valuations. There was a fair demand for brown Dooars teas, although these were sold generally 6 to 8nP below last rates. The few best liquoring invoices in this category were, however, well supported at about valuations. Darjeelings sold well and where quality showed improvement, prices were generally above valuations. Whole leaf grades came in for fair competition although prices tended to be a little irregular.

Quotations

	1958 Rs.	1957 Rs.
Medium Dooars Dust	1.56 to 1.58	1 12 6
Medium Assam Grainy Dust	1.58 to 1.60	1 13 0
Medium Assam C.T.C. Dust	1.80 to 2.00	2 1 0
Best Assam C.T.C Dust	2.70 to 2.90(nom.)	2 9 0

At the Internal Sale, a total of 20,285 chests of Dust was on offer. Demand continued to be fairly general, but prices showed a further decline. Buyers for the Middle East showed certain interest although at lower rates. Commons, Dooars and Assams of orthodox manufacture were generally up to 6nP easier and occasionally more. C.T.C. Assams were the weakest feature of the Sale, and with the exception of a few bright liquoring invoices, prices were often up to 20nP lower and sometimes more. The few Darjeeling invoices with attractive flavour sold well.

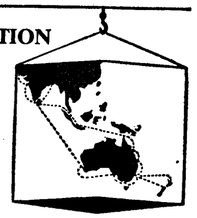
Quotations

	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.35	2 3 6 to 2 4 0
Plain B.P.	1.52 to 1.56	1 15 6 to 2 0 0
Plain Fannings	1.60 to 1.64	
Medium B.P.	1.60 to 1.64	2 1 6
Medium Fannings	1.68 to 1.72	
Best C.T.C. Assam B.P.	2.50 to 2.70	2 9 0 to 2 10 0
Best C.T.C. Assam Fannings	2.40 to 2.50	

There were 2,427 chests of Leaf on offer. There was again a fairly good general demand, but prices were irregularly easier.

GRAIN FIXTURES DOMINATE FREIGHT MARKETS

IN the freight markets last week, the grain market was comparatively busy. A number of fixtures were noted from Pacific to west coast India at 62s 6d. but, it is understood, one vessel was fixed to west coast India at the reduced rate of 60s only. U.S. Gulf to Chittagong or Chalna port cargo 8,000 tons, 10 percent was fixed at $(U.S.)13.50 free discharge. More fixtures of grain from the north Pacific to Australia was reported at 58s 9d discharge free. There was no improvement in the trans-atlantic coal trade; moreover, there has been a rumour of the very low rate of 20s having been paid for coal Hampton Roads to the Continent. Mormugao ore shippers paid 47s for 9,500 tons 10 percent, 46s 6d for Holland, 47s for Emden, 1,000 load at 2s 6d, 2,000 discharge at 2s 9d. The feature of the coal trade, Calcutta-East Pakistan, was the booking of two more vessels Calcutta-Chittagong or Chalna at 24s 6d under the usual Calcutta coal charter party. In the time charter section, the most interesting development was the fixture of a vessel 10,550 tons of d.w. 505,000 bale, ten to 10½ knot on 26 to 27 tons, voyage across delivery Visakhapatnam 5th to 25th March, re-delivery northern range at $(U.S.)1.



LINSEED QUIET

The market tendency was quiet last week. While prices declined to some extent there was an increase in trading. An improved demand for seeds from crushers resulted in a fair daily turnover with sellers showing a keen interest for forward delivery; ready goods were scarce. Oil prices remained unchanged, but some enquiries from local shippers led to an increased offtake of oil. Overseas prices were quiet and no fresh export business was reported. Latest quotations were as follows: January-February Rs. 21-14 a maund.

SUGAR QUIET

During the week ended 29th January, sugar sales in the Calcutta market averaged 5,500 bags daily. Arrivals a day were 2,500 bags and stocks totalled 100,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 36-8 for ordinary grain and Rs. 38-10 for big grain. The market was quiet.

For INFORMATION on AUSTRALIA, NEW ZEALAND, and FIJI

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

Enquiries may be made through your own bankers or direct to:—

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for tender No. PA/COS/2/364/GB5(58) for supply of 300 Imp. Gallons of Paint Red Lead ready mixed non-setting to Specn: IS-102-1950.

Tender Forms (not transferable) are obtainable from the office of the undermentioned. 11, Garden Reach Road, Calcutta-23 at Rs. 2/- (not refundable) per copy of form. Tenders will be accepted up to 12 Noon on 18-2-58. Tender Form should accompany a receipt for earnest money of Rs. 225/- (Approx.) from this Railway's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1,000/- are exempted.

CONTROLLER OF STORES.

COMPANY AND PUBLIC NOTICES

ANGELO BROS., LIMITED.

NOTICE is hereby given that the Fifty-first Annual General Meeting of Shareholders of Angelo Bros., Limited will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Wednesday, the 26th February, 1958, at 3-30 p.m. to transact the following business:—

1. To receive and adopt the Directors' report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st August, 1957.
2. To consider and declare a dividend in respect of the year ended 31st August, 1957.
3a. To appoint a Director in place of Sir D. N. Mitra, C.B.E., who retires by rotation under Article 107 of the Company's Articles of Association and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956, and to consider and if thought fit to pass the following Resolution of which special notice, as required by Section 281 of the Companies Act, has been received by the Company:—

Resolved that, pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir D. N. Mitra, C.B.E., who has attained the age of 66 years and who retires by rotation be and is hereby re-appointed a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him.

AS SPECIAL BUSINESS.

3b. To appoint a Director in place of Mr. J. A. Gloag, who has resigned the Directorship of the Company on his retirement from India and in this connection to consider and, if thought fit, adopt the following Resolution, which will be proposed as a Special Resolution:—

"That Mr. A. H. Hume, a Director and a Manager of Turner, Morrison & Co. Private Ltd., the Managing Agents of the Company and as such Director and Manager an associate, officer and employee thereof, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation."

[Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co. Private Ltd. are the Managing Agents of the Company and Mr. A. H. Hume a Director and a Manager of the Managing Agents is an associate, officer and employee thereof in terms of Section 261 (1) (f) of the Act, (2) the Managing Agents are a private company and as such managing agents hold an office or place of profit under the Company and Mr. A. H. Hume is an officer and employee of the Managing Agents as aforesaid in terms of Section 261 (1) (c) of the Act, and (3) the Managing Agents also being a body corporate holding the office or place of profit as aforesaid Mr. A. H. Hume is an officer and employee thereof in terms of Section 261 (1) (d) of the Act.]

To appoint a Director in place of Mr. L. W. Balcombe who retires from the Board and is eligible for re-appointment subject to compliance with Section 261 of the Companies Act, 1956, and in this connection to consider and, if thought fit, to adopt the following Resolution which will be proposed as a Special Resolution:—

"That Mr. L. W. Balcombe, a Director and a Manager of Turner, Morrison & Co. Private Ltd., the Managing Agents of the Company, and as such Director and Manager an associate, officer and employee thereof, be and is hereby re-appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation."

[Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co. Private Ltd are the Managing Agents of the Company and Mr. L. W. Balcombe, a Director and a Manager of the Managing Agents, is an associate, officer and employee thereof in terms of Section 261 (1) (f) of the Act, (2) the Managing Agents are a private company and as such managing agents hold an office or place of profit under the Company and Mr. L. W. Balcombe is an officer and employee of the Managing Agents as aforesaid in terms of Section 261 (1) (c) of the Act, and (3) the Managing Agents also being a body corporate holding the office or place of profit as aforesaid Mr. L. W. Balcombe is an officer and employee thereof in terms of Section 261 (1) (d) of the Act.]

4. To appoint Auditors and to fix their remuneration.

NOTE:—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The Share Transfer Register of the Company will be closed from 12th February, 1958, to 26th February, 1958, both days inclusive.

Warrants for the dividend when declared will be forwarded in accordance with registered instructions, but if no such instructions have been received to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,

TURNER, MORRISON & CO., PRIVATE LIMITED,
C. O. FOUNTAIN,
Director,
Managing Agents.

Calcutta, 22nd January, 1958.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

Item 3a.—Sir D. N. Mitra, C.B.E., who retires by rotation and is eligible for re-appointment, has attained the age of 66 years and hence his re-appointment needs your approval by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such special notice from a member, notifying his intention to move the Resolution as set out in the body of the Notice. Sir D. N. Mitra, C.B.E., joined the Board of Directors of the Company in 1954. During the period of his association with the Company he has rendered very valuable service and it is in the interests of the Company that the Board should avail of his valuable advice by retaining him as a Director of the Company.

Items 3b & 3c.—Under the Articles of Association of the Company, Turner, Morrison & Co., Private Ltd., the Managing Agents, are authorised to appoint a director or directors to the Board of the Company. Section 261 of the Companies Act, 1956, provides that in such a case certain persons shall not be appointed as directors of the Company whose period of office is liable to determination by retirement of directors by rotation except by a special resolution passed by the Company, of which special notice shall have been given to the Company in accordance with the Act. Such persons include (1) any associate, officer or employee of the Managing Agent, in terms of Section 261 (1) (f) of the Act, (2) any officer or employee of a private company where any office or place of profit under the Company is held by such private company in terms of Section 261 (1) (c) of the Act, and (3) any officer or employee of a body corporate where any such office or place of profit under the Company is held by such body corporate in terms of Section 261 (1) (d) of the Act. The Managing Agents are a private company and body corporate holding an office or place of profit under the Company and Mr. A. H. Hume and Mr. L. W. Balcombe are Directors and Managers of the Managing Agents and as such associates, officers and employees thereof. Mr. A. H. Hume and Mr. L. W. Balcombe therefore fall within the categories of persons specified in Sections 261 (1) (f), (c) and (d) above. The Company has received Special Notices from members notifying their intention to move Special Resolutions as set out in the body of the Notice. Mr. A. H. Hume and Mr. L. W. Balcombe are Senior Directors and Managers of your Managing Agents and it is considered desirable to avail of their advice and utilise their services as Directors of the Company.

MARTIN BURN LIMITED.

NOTICE.

AT a meeting of the Board of Directors of Martin Burn Ltd. held on the 22nd January, 1958, the Directors have recommended the payment of a dividend at the rate of Rs. 1.50 nP and a cash bonus of 62 nP per share both without deduction of Income Tax on the Ordinary Shares of the Company ranking for dividend for the year ended 30th September, 1957. These recommendations await sanction by the Shareholders at the Annual General Meeting of the Company to be held on Thursday, the 27th February, 1958.

The Ordinary Share Registers of the Company will be closed from the 20th to 27th February, 1958, both days inclusive, and the dividend and cash bonus, if sanctioned, will be paid on or after the 1st April, 1958.

By Order of the Board,

MARTIN BURN LIMITED,
A. G. GIDLEY,
Secretary.

12, Mission Row,
Calcutta,
The 22nd January, 1958.

BANKS

H indicates that Share capital is half paid. O C and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

LABOUR PARTICIPATION IN MANAGEMENT

THE NEED FOR A CLEARER PICTURE

IT would be interesting to know on exactly what grounds the Union Labour Minister, Mr. Nanda, justifies the optimism he expressed in New Delhi last week concerning the future prospects of labour participation in industrial management. It is not clear either why he expects the goal of a "socialistic pattern of society" to be furthered, unless he has in mind the old type of syndicalist socialism which appears to have died out everywhere else in the world, even if shades of it still persist in Delhi. In fact, apart from a few vague references to joint consultation and the affirmation of hope unlimited, official pronouncements on this subject generally are lacking in reliable evidence of the way in which the Government's mind is working. Mr. Nanda's speech was no exception to the rule, although the item of news he did make public—that already thirty industrial undertakings from both the private and public sectors have expressed a readiness to try the idea—makes it quite clear that the topic is now one for urgent discussion. The way events are shaping up, individual units are going to be up to their ears in such schemes before they have any clear idea of what they are trying to achieve by them. On another page of this issue of *Capital* is the news that the U.P. Government is already making experiments with joint consultation committees and works councils, while the seminar Mr. Nanda was addressing concluded with a definite decision about the size, constitution, and powers of bodies of this kind. The movement is, therefore, under way, and that being the case, it is time some constructive thinking was done on the problems and prospects involved.

The multitude of these problems and the doubtful nature of many of the prospects, are what makes Mr. Nanda's optimism so difficult to understand. The Minister considers labour participation would give the worker a "sense of belonging". But would this constitute a feeling on the part of the worker that he belonged to the industrial concern, or that it belonged to him? On the answer to this question depends, for instance, whether any benefits accruing to labour will outweigh the disadvantages to society as a whole. And if, as Mr. Nanda no doubt desires, the worker does acquire that sense of participation which would overcome so many of the frustrations at present interfering with the efficient running of industry, might this not be counterbalanced by a new set of frustrations visited on the management? Is it possible to have a share in managing a concern without having a stake in its profits or losses? If it is not, then what is to prevent an unholy alliance between management and labour for the exploitation of the consumer and the community as a whole? Will consultation with completely illiterate workers actually improve efficiency, or will the whole scheme deteriorate into an excuse for more talk and less work? Will participation be limited to subjects of a welfare nature and not extend to the technical management of the industry? And finally, will the difficulties which are bound to be caused the trade unions be an advantage or not to the progress of industrial development? Not all these questions are completely relevant. Some of them probably need not be asked at all. But questions there are and it is time some were formulated. Otherwise the country will embark on yet another bright-eyed scheme without thought of the consequences and with the prospects of landing up facing more problems than were originally intended for solution. There is no excuse for this. Nor, one suspects, for Mr. Nanda's optimism. At the best, the road to worker participation in management is going to be a hard one, and its rewards may be fewer than at present expected.

The difficulties involved are certainly no good reason why the scheme should not be given sympathetic consideration. There may be considerable truth in the claim that it will give the worker a sense of belonging. If it does, efficiency should benefit and the less responsible trade union practices be weakened. There is nothing to conflict with modern ideas about labour management in putting the worker in touch with the overall production or welfare picture and listening to his opinions on it. Certainly in the narrower field in which he himself operates, they should be well worth listening to. The gain to the worker in terms of self-respect could be valuable to both sides, while the opportunity for learning some of the truths of industrial life would make him a better citizen all round. He might even, in time, come to appreciate the fact, so often forgotten by trade unions, management and government alike these days, that industry has a third partner, the shareholder, or, in the public sector, the community. In other words, the economy would stand to benefit immeasurably from the improvement in labour morale, efficiency and responsibility, while the mischief-making powers of self-seeking demagogues of trade union leaders would be mercifully curbed.

This, of course, is worker participation as everybody would like it to be. But, at the moment, there is little indication that it will turn out this way. In the first place, the trade unions are vaguely antagonistic because of fears that it will weaken their unity. Managements are all too apt to regard this as a blessing; it need not be. A good union is better than a bad one, and it is doubtful if any trade union can operate properly when the allegiance of its members is divided. There is no guarantee that workers will be happier and therefore more efficient under such circumstances. The result might be that the members of the consultative committees would become increasingly estranged from their workmates, and more and more identified with the management. This could not be avoided by changing the members frequently; such a course would only weaken the effectiveness of the committees themselves due to the low common level of experience. The alternative might be to make the trade unions responsible for the representation. But where two or more unions existed in the same industry this would only provide more opportunities for time-wasting squabbles. Under such circumstances both workers and management would soon become disillusioned with the whole thing and the committees would degenerate into talking shops where the only ideas expressed would be those better dealt with in private between trade union representatives and personnel managers. There is also the point to be considered when seeking to introduce democracy into industry, where it is intended the final control should lie. If management is always to have the casting vote there is little point in consultation anyway, and workers themselves will not take long to appreciate the fact. But if it is intended that labour should have the power, under certain circumstances, to over-rule the management, what possible checks can be kept on any abuses which might arise, when the worker will no doubt insist on all the usual safeguards against dismissal? This can be a very real problem; to imagine that clashes of interest are never going to arise is simply to be unrealistic.

The answer to such a dilemma might be to grant the worker a share in the profits of industry and impose some of the conditions of service which have to be shouldered by managements. The latter possibility is something which can be dismissed as impracticable under present conditions; the former requires further investigation. While it is true that some industrial concerns in advanced countries have adopted profit-sharing schemes, it must still be appreciated that none of them started that way. To introduce the idea in India would be a conspiracy against shareholders which would make the raising of new capital even more difficult than it is at the moment, while its effect on prices would be added fuel to an internal financial situation which threatens to remain inflationary for at least as long as industrial development continues.

It is possible that the Government intends none of these things by its scheme. But if that is so, then what exactly does it intend? For every problem touched on here, a dozen no less important have been ignored. Unless the scheme is eventually launched with a minimum of mental preparation it is likely to founder in a depressingly short space of time. At the moment, both sides of industry are toying with the idea without having any particular clue as to what it really means. It is clearly the Government's responsibility now to acquaint them with the results of its own thinking on the subject, if any. In the meantime, it is no measure of defeatism to suggest that things might stay as they are, accompanied, of course, by much-needed efforts to improve on existing institutions, especially the trade unions. A relevant point here is that a good trade union movement, properly seized of the advantages of increased productivity, could achieve most of the benefits which worker participation is designed to secure without a tithe of the problems. In India, the danger of attempting to associate illiterate or semi-literate employees with the intricacies of modern management is probably greater than might be imagined. To be consulted is to appreciate the risk of being cheated; to be cheated is something which demands satisfaction. There is no reason to suspect that the worker does not feel more comfortable at his present stage of development with those leaders, institutions and responsibilities he knows rather than with an entirely novel set which are understood by few and trusted by none.

PLAIN THINKING ON HIGH FLYING

HOWEVER fast our latest aircraft fly and however high they may soar, they never completely sever the terrestrial connection—they had better not—and airports still have to be at least as good as aeroplanes. The former is a mundane subject in more senses than one, not nearly as thrilling as details of *TU-104*s and *Boeings* and *Comets*, but at least the United States is beginning to wake up to the problems these wonders of the air have brought in their trail. Other countries too are in varying degrees of wakefulness, and India, with at least three international airports, cannot afford to remain backward in the matter without risking loss of business in the coming jet age. A measure of what other countries are doing in this matter was recently given by *Newsweek*, from which are taken the following figures. New York's Idlewild had a new terminal in December last at a cost of $30 million; Los Angeles's jet field cost $46 million; and France is putting $60 million into modernising Orly. Against this background, the recent report that nothing much was being done to bring Dum Dum into line with today's requirements was truly depressing; it is, after all, one of the ten busiest airports in the world.

The sanction already given for the modernisation of Santa Cruz in Bombay is evidence that the Government of India is not wholly unaware of the demands of the jet age. What stands in the way of more rapid advance in this department of civil aviation is what impedes progress elsewhere: the lack of funds. This, however, is only a challenge to the country, compelling it to fix priorities and plan development according to means and needs. The heights attained by modern aeroplanes often appear to encourage a kind of cloudy and grandiose thinking—inconsonant with existing resources.

Air travellers have been described by somebody as the most pampered people in the world—and with some truth. In the highly competitive business of international aviation, nothing but the best is good enough. If one airline gives free champagne and pneumatic seats, others can do no less. Not very different are the requirements of modern airports. Comfort and safety devices are absolutely essential, and any international airport which does not provide the facilities offered by others is sure to be neglected. Here false economy, the sort of cheeseparing every Government is very good at, would be a grave error. The latest mechanical aids to landing will be necessary in Calcutta, Bombay and Delhi, and they must be installed whatever the cost. And austerity—a fetish at least in public speeches, with many of the leaders

of the present day—is just out of place in airports where about as many people arrive for business as for pleasure. This is no call for conspicuous extravagance, but only for judicious investment in luxury, paid for in the long run by the consumer.

* * * *

Here it may be useful to refer to Aeroflot, Russia's civil aviation organisation and the biggest in the world in size and extent of operation. The spectacular metro stations of Moscow and Leningrad are already famous, but however proud Muscovites and Leningraders may be of these showpieces it is unlikely that every Russian is equally convinced of the wisdom of expending money and material and energy on such projects. At least the civil aviation authorities in Russia have made no such mistake. With a few exceptions, Russian airports as a rule are very "utility" ones indeed. India and Britain. to say nothing of the United States, would not perhaps look on most of them even as landing grounds. Very little is known, because very little is made public, about Aeroflot's safety record, travel is not nearly as free as elsewhere, and air journeys for pleasure can probably be afforded by very few. The Russian example may still have a lesson for India. Anything consistent with safety and reasonable comfort should do for internal airports. There is no competition here, or hardly any. Some customers will complain, and some will probably switch over to air-conditioned trains. This may be a risk worth taking, for the majority travel in this country under some kind of compulsion—especially by air. (Tourists are, of course, a different category and can be dealt with differently.)

Whether this is politically feasible is more than can be said with certainty. The rivalry, detrimental to progress, displayed in the matter of steel plants and oil refineries may show up here too. Since the question of unemployment is involved in these, a better parallel may be the craze for a university every State in India has. A State capital may begin to feel that, without a fancy airport, it has not quite come into its own. Statal prestige can be a hindrance to overall and national progress in civil aviation, as in much else, and the record of the Centre in the suppression of these tendencies is not such as to inspire immediate confidence.

* * * *

Aviation is not a field where there is limitless room for austerity, and some of the excesses of our social reformers should be curbed at least in airports and on aeroplanes. if not elsewhere too. At the same time, there is much room for economy at least in the construction of internal airports and aerodrome offices. Utility and efficiency should be the first objectives, and frills and furbelows can come later. There are many places where tourists rarely go, and in them an airstrip with a small office and waiting room should suffice. If reports are to be believed, many wartime landing grounds are now unuseable only because nobody thought of maintenance.

Will dull, unimpressive structures at airports disgrace India or hurt her national pride? They should not. As a matter of fact a look at most aerodromes in India, usually in the suburbs for obvious reasons, strikes visitors first with their incongruity, their utter lack of harmony with their surroundings. Mud-huts outside magnificent aerodromes and beggars on the way to the city office of the airline wipe out any favourable impressions created by the structure of the airport buildings and the excellence of the cuisine in the airport restaurant. On the other hand, efficiency in operation and seriousness of purpose may impress the more because the visitor then knows that India is really sacrificing for the second plan and doing first things first.

THE UNDER-VALUED POUND

IT may seem strange that, when many people are troubled by the prospective difficulty of maintaining the value of the pound in the latter part of this year, others are considering the idea that the present official value of the currency may be too low. An outstanding contribution to this discussion is a recent article in the London *Financial Times* by Sir Ralph Hawtrey, one of Britain's most eminent economists. Sir Ralph has been out of line with the general view on Britain's troubles for some time, and his latest essay in reasoning reaches the definite conclusion that sterling, having been reduced to an unrealistic value in 1949, has remained under-valued ever since. Sir Ralph Hawtrey, is one of the more statistical economists, and he has made various calculations from the available figures to reveal the relative changes in costs in British and American industry. Believing that the main error occurred in the devaluation of sterling in 1949, he has made a comparison between the conditions of 1949 and those of 1938. It shows that productivity increased more in the U.S. than in the U.K. between those years; but before the devaluation to $2.80 in 1949, sterling had already been devalued from an average of $4.89 in 1938 to $4.03; and, as this adjustment almost exactly compensated the disadvantage in productivity, the relative costs of British and American manufacturing were virtually the same in 1949 (before the big devaluation) as in 1938.

This authority deduces that the devaluation of 1949 under-valued sterling by more than 30 percent. Subsequent changes in relative costs have narrowed the disparity, but the under-valuation was still last year—according to Sir Ralph's calculations—nearly 20 percent. Statistical calculations are not, in such matters, conclusive, but Sir Ralph sees "primary evidence" of the under-valuation of the pound in the intense demand for labour, of which the persistent rise in wages—so often adduced as a reason why the pound must ultimately be devalued again—is one symptom. So we reach the startling conclusion that "the under-valuation of the pound must be ended either by a rise of wages up to the limit allowed by its existing dollar value, or by a raising of the dollar value". Ordinary bankers and business men. watching the struggle to keep sterling firm around $2.80, may wonder how abstract calculations can reach such peculiar conclusions. But the pound is a complex currency, and periods of weakness in its value are not necessarily inconsistent with basic under-valuation.

Sterling is not simply the U.K.'s currency. and there are times when the deficiencies of other sterling countries weaken it, even while the U.K.'s current position is healthy. London's function as international banker involves large-scale movements of capital, and if the movements are away from London, not even a substantial surplus on current account can maintain the quotations for sterling. Relative interest-rates are therefore a factor in the position: but there is no doubt that confidence is a more important factor.

* * * *

The decline in money rates in New York has opened a wide gap between that centre's and London's, but the transfer of capital to take advantage of London's higher rates has been on a very modest scale. It does not appear that confidence has been restored sufficiently to provide much support for sterling. and the advance in the sterling-dollar rate to the region of its upper limit of $2.82 must be explained by seasonal factors: for commercial reasons, non-sterling countries' demand for sterling is relatively large and sterling countries' demand for non-sterling currencies is relatively small about this time of year. If the sterling-dollar rate were maintained above $2.80 throughout the year, and at the same time the gold and dollar reserve were increasing. there would be evidence that sterling was under-valued at the official rate—unless the strengthening of the position could be attributed entirely to an influx of short-term capital. Movements in the exchanges and in the reserve must always be viewed together. The authorities could always (if they had sufficient resources) keep the exchange-rates firm by selling dollars against sterling, but the decline in the reserve that would result from such a policy would show that sterling's apparent stability was unreal A persistently strong demand for sterling would be reflected in a growing reserve rather in the exchange-rates, because at the permitted upper limit of $2.82 the authorities would be obliged to absorb the "surplus" foreign currency on offer.

One's mind goes back to the huge increase in the West German reserve last year, which seemed at the time to be clear evidence of under-valuation of the D-mark. Opinion on this point is no longer so sure (Sir Ralph Hawtrey seems to regard the D-mark and sterling as appropriately valued in terms of each other and both under-valued in terms of the dollar), and we can now see that what the increase in the reserve showed definitely was not that the D-mark was under-valued but that world opinion was convinced that its value would be raised. Conversely, the recurring weakness of the sterling area's reserve is not evidence that sterling is over-valued but only evidence that world opinion believes sometimes that its value may be reduced. The world is certainly not now thinking in terms of an increase in the value of sterling. and no big speculative movements are confusing the issue one way or the other. In this situation the recovery of the sterling-dollar rate this year to levels reaced in 1954 is interesting; for in 1954 the tion of sterling, or at least of widening the margins to allow freer appreciation. The deficit in the U.K.'s visible-trade account has been reduced by the cheapening of imports; the invisibles are, doubtless, providing a substantial overall surplus; the reserve is recovering much of last year's losses. But the conditions of trade, both for the U.K. and for the overseas sterling countries, are tending to deteriorate this year. To maintain the current rates for sterling will not be easy. To convince the world that the currency was under-valued would be, one must admit, impossible.

METRIC SYSTEM OF WEIGHTS AND MEASURES IN INDIA

THE problem of standardising weights and measures in India is an old one. There are as many as 100 types of these in the country, and together they form a chaotic variety. The disadvantages, naturally, are many. The worst trouble, as Mr. K. V. Venkatachalam, Joint Secretary to the Union Ministry of Commerce and Industry, points out in an article in the inaugural issue of *Metric Measures*, just published by the Government of India to popularise the subject, is "that there is not even one complete system among all these which covers weights, and lengths and capacity measures." As far back as 1870, an attempt was made to standardise indigenous weights and measures, preferably through the metric system, but the then Secretary of State over-ruled the Indian Government on the ground that the time was inopportune for so drastic a measure. From then on the matter was allowed to rest until 1956, when the Indian Parliament enacted a law to introduce the metric system of weights and measures in suitable stages over a period of ten years with a view completely to replacing all local varieties. The current year has been tentatively fixed as the starting point. The decimal system of currency, which is a complementary measure, has been in force during the past year and the change-over has been going on with remarkably little dislocation. Also, since January 1957, the report of daily temperatures has been given in degress Centigrade and of rainfall in millimetres.

* * * *

Theoretically, the metric system is considered to have the most advantages of all the systems, if only because it makes calculations simpler. Almost all countries of the world barring the advanced economies of the U.S.A., the U.K., Canada and a few countries of Asia and Africa and Australia (these follow the inch-pound system), have adopted metric weights and measures. To India in particular, its advantages will be great. In his message to this issue of *Metric Measures*, Mr. Nehru correctly stresses: "All our work will be simplified and made more speedy. Children in schools will also profit by this change. But, above all, in the development of science, industry and new techniques the use of the metric system is essential. Indeed it has to be used anyhow. To have two systems in the country, one for our growing industry and science and one for the other purposes of daily life, will not only be confusing and wasteful but a burden to all concerned." Yet the practical difficulties of introducing the system to all parts of the country are immense. In the first place, some 40 million units of weights will have to be produced to meet at all levels the demands of trade and industry. This will easily tax the capacity of the engineering industry to which their manufacture will be entrusted. The Indian Standards Institution has already drawn up specifications for weights and capacity measures, and those for length and scales will soon follow. Even so, there is little chance of the metric system being officially inaugurated during the current year, although some of the major industries have decided to go ahead with their own arrangements to switch over to it. The jute industry is the latest to have decided to make a beginning with metric weights and measures on an optional basis from 1st July. At first this will be confined to the purchases of raw jute by mills and the sale of their products.

* * * *

This problem of producing the requisite number of weights apart, there will also be the difficulty of making the common people understand the various units of the system such as "deca", "hecto", "kilo", "deci", "centi" and "milli". Intelligible Hindi terms are yet to be devised for these. For the educated classes, it will be relatively easy to follow the system. and those who have not yet familiarised themselves with it will do well to obtain a copy of the above-mentioned issue of *Metric Measures*. It contains articles on all technical aspects, while conversion tables relating to the pound-foot system and the standard seers and maunds now used in the country have also been given. As soon as suitable Hindi equivalents have been devised, it will be necessary to produce pamphlets for the benefit of the common masses in all major languages of India. Also, wide newspaper publicity, such as preceded the introduction of decimal coinage, will have to be given.

It is difficult to understand why the Government, which was responsible for the Standards of Weights and Measures Act, 1956, specifying a period of ten years for the complete introduction of the system, is proceeding at such a leisurely pace. Ministers and officials continue to emphasise that it will be relatively easy to introduce the system now when industrial development of the country has not gone very far. They also stress that the more industrially advanced a country is, the greater are the complications of changing over to a new system of weights and measures. Why then is this strange indifference to matters of practical detail?

CURRENT COIN

Indian Oxygen Issue.—It is reported in market circles that the offer of 600,000 ordinary shares in Indian Oxygen Ltd. is arousing considerable interest. The company's prospectus was published in last week's issue of *Capital*. The shares are of the value of Rs. 10 each and are to be issued at a premium of Rs. 3.50 a share. The company's directors have expressed the hope that profits for the current year will be adequate to support a dividend of 10 percent, in which the shares offered will participate. This is, in fact, the granting of a full year's dividend for money invested for only eight months. The dividend is more than three times covered. The trading results of the company are good. Sales and profits have increased steadily during the past few years. In the year ended last September, total sales rose to Rs. 4.18 crores, compared with Rs. 1.97 crores in 1953. Profits stood at Rs. 69.97 lakhs against Rs. 27.41 lakhs in 1953. Future prospects are equally promising. There will be a sure demand for the company's products in India's economic development programmes. The present expansion and replacement programme of the company is to be completed by 1960 at an approximate cost of Rs. 3.21 crores. The foreign exchange portion of this amount will be financed. to a large extent, by the British Oxygen Company's willingness to leave the proceeds of this share sale in India. Additional amounts of foreign exchange totalling Rs. 75 lakhs are being arranged for. The present business of the company covers manufacture and sale of industrial and medical gases and electrodes and of the assembly, manufacture and sale of welding and cutting apparatus and equipment, and similar articles.

Capital Needs of Chemical Industry.—The chemical industry is capital-intensive. The initial gross fixed capital requirement a worker in the industry works out at more than six times that for all the industries covered by the *Census of Manufactures*, that is, Rs. 19,700 against Rs. 3,200. Contrary to the popular impression, the working capital requirements are also high. the average for all the "Census industries" in 1954 being Rs. 2,800 a worker against Rs. 7,000 for the chemical industry. The plan target calls for an increase in investment in the industry from Rs. 26 crores in the first plan to Rs. 132 crores in the second. Speaking at the recent annual general meeting of the Indian Chemical Manufacturers Association (a fuller version appears on another page of this issue of *Capital*) Mr. Charat Ram, president, said that the industry had earned only 3 percent after paying taxes on its net worth during the period 1951-55, against an overall corporate figure of 7.9 percent. When compared with other capital-intensive industries such as steel, paper and cement. the picture is truly depressing and must cause concern to all interested in achieving the investment target of the industry. According to a survey carried out by the Reserve Bank, the retained profits of 750 public limited companies were 39 percent of the pre-tax profits. The comparable figure in the chemical industry is only 1.2 percent. This may be compared with the other capital-intensive industries, being 66 percent in steel, 55 percent in paper and 39 percent in cement. "Capital costs are increasing at an average annual rate of 8 percent to 9 percent and a continuous adjustment in capital cost estimates has to be made of these increases, for the estimates we make in one year become out of date for another year." Business must provide for basic capital charges in its cost and profit structure, namely. depreciation, rehabilitation reserve, dividends, interest on loans, repayment of loans, and a fair net return on investment. If capital erosion is to be avoided, these charges will have to be made in a realistic way. "It is not easy for any industry, and much less for the chemical industry, to raise capital in the share market these days. The procurement of capital, however. must be looked at very much in the same way as the procurement of raw materials or any other services. that is. the cheapest source must be tapped." The use of internal capital is the cheapest source, for there is no fixed charge for dividends as in the case of share capital. nor of interest on loan and provision for the repayment of loan. Referring to the increase in production of chemical products. Mr. Charat Ram says that there is still considerable scope for using the installed manufacturing capacity.

* * * *

Higher Price for Cement.—Speaking at the annual general meeting of the Associated Cement Companies, Limited, Mr. Dharamsey M. Khatau, chairman, said that the various expansion projects had made satisfactory progress. The extensions planned at the Kistna cement works have been completed, but the additional capacity could not be fully utilised during the year because of transport difficulties. The extension work at Sindri and Chaibasa has also made good progress. A floatation plant is to be installed in the latter place to use low-grade limestone. Although the company produced and sold 250,000 tons more cement than in the previous year, there was a slump in its profits due to a sharp rise in manufacturing costs—such as higher cost of coal, enhanced railway freights and terminal charges. "Other adverse factors were a higher wage bill and an increased charge for depreciation. Further, the heavy incidence of taxation resulting from the increase in the rates of income tax and corporation tax, and the imposition of the wealth tax had left very much lower profits to the company." The industry cannot operate and expand under these conditions. The Government has directed the Tariff Commission to examine the cost of production of cement and determine a fair price to be paid to manufacturers. The company has placed its case before the Commission. Mr. Khatau hopes that the Government will sanction an enhanced price which will cover the rising costs of production and "also enable it both to plough back a reasonable portion of profits for rehabilitation and modernisation and also to finance its expansion programme under the second five year plan." The company has to sell its entire output to the State Trading Corporation at Rs. 54.50 a ton f.o.r. Including some incidental expenditure such as selling expenses and packing charges. this makes a total of Rs. 69.64 a ton. But the Corporation sells the cement to consumers at the controlled price of Rs. 117.50 f.o.r. destination. Allowing for the average incidence of railway freight from works to destination at a little over Rs. 15 a ton, and Rs. 20 a ton for excise duty, the Corporation is left with a net profit of about Rs. 12.50 a ton. As there is likely to be practically no further substantial imports of cement which the Corporation will be required to subsidise so as to sell those at an equalised price, and as the losses on such small imports as may still have to come in to fulfil existing commitments will be a fraction of the enormous profit which the Corporation has already amassed, there is no reason at all why it should any longer make any profit from cement, Mr. Khatau said.

In Health **PHILIPS** aid the science of healing

INDIA's doctors need the most modern medical aids in tackling their tremendous problems. They are aided in this noble task by organisations like Philips who are proud to place their many years of research and experience at their disposal. Whether it's the highly intricate X-Ray unit, which is one of modern science's contributions to accurate diagnosis; or the super-sensitive cardiograph which registers every tremor of the heart; or whether it's the assured supply of flawless lighting or a whole range of tested pharmaceuticals, Philips aid in many ways the noble science of healing and point the way to recovery.

PHILIPS INDIA LIMITED

PHILIPS *Contributing today to India's future*

Referring to the enormous capital outlay necessitated by the company's various projects of modernisation and expansion, he pointed out that requirements of working capital have increased substantially, and will increase further in the next few years with the increasing tempo of production. "Your board has therefore decided, subject to the sanction of the Controller of Capital Issues, to make a further issue of debentures of Rs. 5 crores on suitable terms during the course of this year," said Mr. Khatau.

* * * *

Unused Irrigation.—The charge that existing irrigation facilities are not being fully used is by no means a new one, but it is the first time that an official admission of this has been made. A note circulated by the U.P. State Planning Board says that for one reason or another the offtake of water by the peasants has been disappointingly low. The Chief Minister. Dr. Sampurnanand, maintains that the blame must be shouldered by the peasants themselves for their failure to construct water channels to their fields. Addressing a public meeting in Lucknow recently, the Union Food Minister, Mr. A. P. Jain, declared that during the first five year plan period, and the first two years of the second, facilities for irrigating 8 million acres had been provided throughout the country, but only 4 million acres could actually be irrigated. Crores of rupees have been expended on these irrigation works, and Mr. Jain's statement that "it is a matter of shame that we cannot fully utilise the benefit," is understandable. While U.P.'s Chief Minister is inclined to blame the peasant, Mr. Jain holds various departments of State Governments responsible for contributory negligence. Co-operation among the Agriculture, Co-operative and Irrigation Departments in the matter, in his view, has been inadequate. To state the problem, however, is not the same thing as solving it. If Mr. Jain feels strongly that a high-level enquiry into the causes of not utilising irrigation facilities is called for, there is nothing to prevent him from instituting one, although State Governments cannot be expected to welcome it.

* * * *

State of Economy in U.P.—At the latest meeting of the U.P. Development Board, there was some discussion whether the State was economically backward or advanced. The Chief Minister, Dr. Sampurnanand, was particularly critical of the Centre's attitude to U.P. which, he said, was reflected in the denial, at first, of a heavy electrical goods industry to the State on the plea that the soil was too soft to bear the weight of such a factory. To that the State Government's reply was that it had big granite mountains which could sustain even heavier factories. An example of the Centre's inconsistency, cited by Dr. Sampurnanand, was about co-operatives. At one time, the State was advised that larger co-operatives were more efficient and economical. But when larger co-operatives developed, the Centre pointed out that they ceased to be co-operative in spirit and were functioning more or less like big commercial concerns. On the main question of the progress of the economy itself, U.P.'s official review covering the years 1954-57 does not present a happy picture. Wherever an increase in production has been achieved, it is less than the all-India average. Although the State's national income and per *capita* income have risen somewhat in terms of current prices, they have declined in real terms. Whereas the failure of agricultural production is attributed to natural calamities, the lack of an industrial climate in the State accounts for the closure of many oil mills during the past few years. The power alcohol industry has an installed capacity of 12 million gallons, but it is producing about 8 million gallons. The textile industry is plagued by excessive stocks on hand. Even the Government offer of a loan of Rs. 12 lakhs to the Northern India Textile Research Association to establish a research laboratory in Kanpur has been turned down. Sugar, which is U.P.'s second biggest industry, is not faring well either, and although the Government has advised many factories to shift to more suitable sites they have not accepted the suggestion. Wages in U.P. during 1955-56 continued at almost the same level as in the previous year, but the real wages index which rose from 140 in 1954 to 142 in 1955, fell to 125 in 1956 because of urban consumer prices which have been steadily rising since January 1956.

* * * *

Cheaper Roads.—There is little doubt that industrial development calls for more and better roads as an essential prerequisite, more especially in the poorer countries which find the costs of road construction up to modern standards beyond their means. If these costs could be lowered substantially, it would make a great difference to economic development everywhere. One of the most hopeful economies is in the direct use of soils which would formerly have been regarded as too weak to stand up to traffic, by compacting or stabilising them on the spot with cement, bitumen or some other substance. A valuable review of the progress made in the use of "stabilised soil" for roadbeds has been contributed by Messrs D. J. Maclean and K. E. Clare, of the Road Research Laboratory, to the current issue of the journal of the International Road Federation. They conclude that sufficient experience of roads based on "stabilised soils" has been obtained to make the method well worth consideration for many main-road schemes, as well as for residential roads. They also consider that "stabilised soil" can be used with advantage for airport runways in suitable places. The main runway at Southend's municipal airport was made with cement-stabilised soil, and it has proved entirely satisfactory for passenger aircraft and for heavy freight machines. The cost is estimated to have been about one-half the cost of construction by more traditional methods. The "stabilisers" that have been used successfully include Portland cement, lime, bitumen and tar. Messrs Maclean and Clare explain that the choice of stabilisers depends partly on the economics of what is available and partly on the type of soil to be stabilised. In England, where most places are within easy haulage reach of a cement works, cement is commonly convenient, and it is technically suitable for many types of English soil. In the Middle East, particularly within reasonable distance of oilfields, bitumen has obvious advantages. The "full possibilities" of lime as a stabilising agent have not yet emerged, "but there are reasons for believing that it will prove to be particularly applicable in the remoter parts of Africa and South America, to which haulage of cement or bitumen is uneconomical, but where a local lime-burning industry could be established." Further research by local road organisations seems to be necessary, and could prove most rewarding.

* * * *

E.C.A.F.E. Seminar on Low-Cost Roads.—The discussions at the recent E.C.A.F.E. seminar in New Delhi on different aspects of low cost road-making and soil stabilisation and the conclusions which emerged from them, are expected to be of interest to all under-developed countries of the world. The U.N. Technical Assistance Administration co-operated in them, and some 90 top-grade engineers and experts in soil stabilisation from 11 member countries of the E.C.A.F.E. participated in the discussions. It was acknowledged that a balanced development of different classes of roads is desirable, but particular stress has to be laid on the development of rural roads as one of the first steps to the quick development of a region. Not all members of the E.C.A.F.E. have the facility for conducting research or training engineers in the technique of low cost road-making. Only India, the Philippines and a few others have set up research institutes and other centres to study the technique on a wide scale. The seminar, therefore, stressed the need for making available to engineers in all member countries facilities for research in these countries through scholarships from international aid agencies. Accordingly, the E.C.A.F.E. Secretariat has undertaken to explore possibilities of obtaining scholarships from the Colombo Plan authorities, the U.N. Technical Administration and the International Co-operation Administration and other such aid programmes. An important recommendation of the seminar is that all member countries of the E.C.A.F.E. should set up a road fund "to increase the tempo of road development." This fund should be built, it has been suggested, with all revenues derived directly from the tax on petrol, diesel and other fuel oils, lubricants, the tax on motor vehicle registration, licence fees, tolls on roads and bridges and other taxes such as the surcharge on transport fares and freights; an appropriate portion of this fund should be earmarked for rural roads. Full details of the recommendations will be available from the seminar's report when it is presented to the E.C.A.F.E. Inland Transport Commission at its forthcoming Bangkok meeting. Technical discussions on various aspects of this question, and the general principles of low cost road surfacing and drainage crossings, typical designs for which have been appended, are contained in the report. On the soil stabilisation problem, knowledge has been pooled so that the study will be useful under varying conditions. The report will also provide a general guidance for future research and indicates the nature of the data which will have to be collected for it.

* * * *

Works Councils.—The U.P. Government has devised a scheme for associating workers with the management in State-owned industrial undertakings. Within two months from now, all the important concerns under the State Government, including the State Co-operative Bank, are to be managed by a works council which will be formed with the representatives of the Government and the workers in equal proportions. To begin with, the experiment will be tried in such Government establishments as have 100 or more employees on the pay roll. Among them are the Government cement factory in Churk, the Precision Instruments Factory in Lucknow, the Government presses in Allahabad and Lucknow, the Kanpur Electric Supply Administration and the U.P. Government organisation for roadways. Every works council will have a Government-appointed director or manager of the establishment as chairman. In case of difference of opinion between the two wings, the dispute will be referred to the State Conciliation Board on which also Government nominees and workers' representatives are equally represented. It is the State Government's hope that the new scheme, which has its origin in a resolution passed by the State Legislative Assembly a year ago, will ensure industrial peace for all these establishments, the maximum utilisation of manpower and greater efficiency. Progress towards industrial democracy is desirable, but there has been little agreement on what it means or how it should be achieved. The U.P. experiment will, therefore, be watched with great interest in other parts of the country.

* * * *

Crisis for Handlooms.—References were made to the crisis in the handloom industry in Madras at the recent conference of co-operatives in that State. It was argued that the replacement of State sales tax by Central excise put mill cloth at an advantage, so handloom goods were in need of State subsidy. The State Minister for Industries declared that the local Government was in favour of complete protection, but it is not certain how far the Centre will now be prepared to go with the State. The price of yarn sold by mills to handloom co-operatives has been reduced, and, therefore, a reduction in the rebate granted on handloom cloth sales is being considered. But the co-operatives urge that the rebate be maintained in full. Accumulated stock, they say, can be cleared only by cutting the price and making the Government bear the loss which means that higher rebates are wanted. Even with 220 depôts, sales have fallen steadily since September. Andhra and Madras, in particular, show large falls. It was, therefore, urged by the co-operatives that the Centre, which has encouraged the sale of handloom goods, should now help maintain the rebate of 8nP in the rupee. The drop in India's exports of mill cloth last year is regarded as the reason for intensified competition by the mills, who, it is said, have an extra advantage as they weave yarn. So the co-operatives now demand that the sales tax on yarn sold to them should be removed. But in that case, the States which import handloom goods from Madras may also ask for a rebate equal to the sales tax in Madras. The situation for handlooms may get worse if yarn supplies in the coming months are reduced by the power cut which has been imposed for six months in the State. They also demand that a higher cess on mill cloth be imposed, but there seems to be little prospect of that. The handloom co-operatives are making efforts to convince the State Government that the subsidy granted in the form of rebate on sales must continue indefinitely. It will be unfair if the mills are further discriminated against. The Madura Mills have decided to pay only a 15 percent dividend for 1957 (against 17½ percent for 1956) and that too by drawing Rs. 25 lakhs from accumulated reserves. They all produce yarn, which suggests that in spite of the increased handloom production, the mills have received no particular benefit from that line of activity.

EXPERIMENT IN NOTE ISSUE

THE announcement that a Bill has been introduced into the Legislative Council at Calcutta to enable the Treasury to issue notes against gold held in London has been well received in London. The telegram adds that the experiment is to be tried for a period of six months. The experiment, if successful, will, it is hoped, obviate the necessity of transmitting bullion with all its attendant risks and expenses. With an 11 percent bank rate at Calcutta and 12 percent at Bombay it was to be expected that the India Council would have no difficulty in the disposal of its drafts. Nevertheless the amount of the applications and the prices tendered are regarded as highly satisfactory. For the 40 lakhs offered the market applied for 64 lakhs while the lowest price offered, which was not accepted, was 1s 3 7/16d. per rupee. The average price accepted was about 1s. 4 1/16d. per rupee, while exchange continues steady at 1s. 4.3/32d. The general opinion is, however, that as the export season becomes slackened the present rate cannot be maintained, but until the late spring it seems inevitable that the money markets must continue stringent.

Without Prejudice

KILLING THE GOOSE THAT LAYS A GOLDEN EGG

NO BENEFIT FROM THE WILL OF A VICTIM

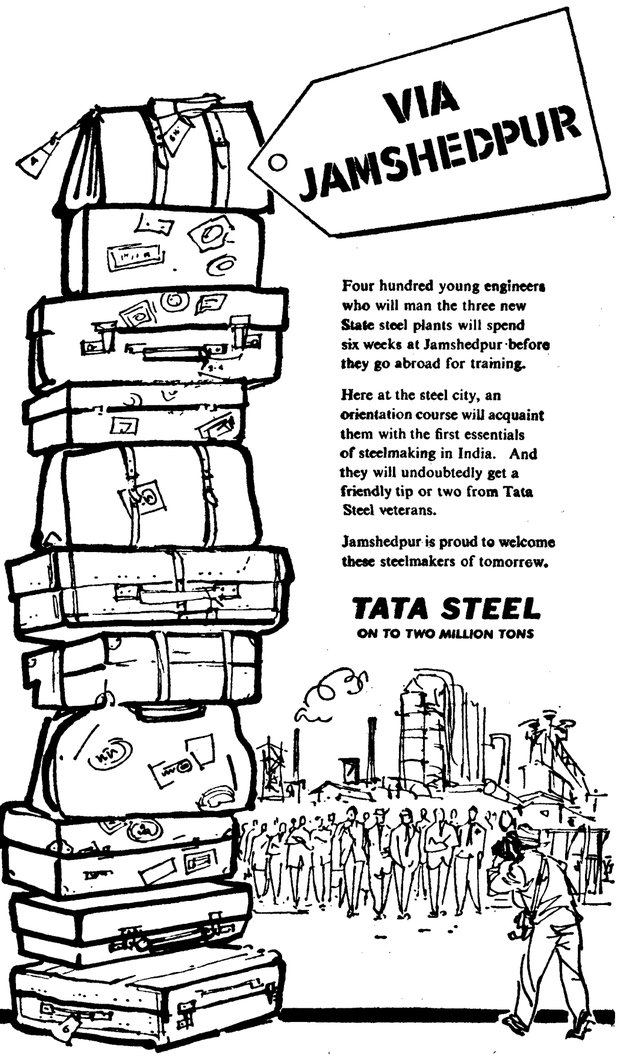
(FROM OUR LEGAL CORRESPONDENT)

LAST year, in our notes on English decisions, we considered—although only tentatively and without being able to come to any definite conclusion—the question whether, when a person being a legatee under the will of another, accidentally, unintentionally but negligently kills that other person, he can still claim the legacy bequeathed to him notwithstanding the fact that it was he himself who had brought about the death of the testator By the word "negligently" we mean criminal negligence. Serious it may be, so as to constitute manslaughter, or slight, just sufficient to amount to one of the numerous other offences, mere misdemeanours not felonies which are the creation of modern protective legislation such as the English Road Traffic Act. In view of the thousands of convictions every year for motoring offences, the point is bound sooner or later to arise for decision and what we are concerned with in this note is the position of him whom we may term the innocent misdemeanant in such a case. A man, say, and his wife are a devoted couple. They have separate estates and have made mutual wills in one another's favour. The husband suffers from diabetes and knows he so suffers. He takes his wife out for a drive, he being the driver. By so doing he is, it seems, according to a decision we commented on last year, guilty of lack of proper care. While driving, through his complaint, he has a momentary black out; and in that second or two, he drives into another car and his wife is killed in the accident. Later he is summoned before a magistrate's court and convicted and fined for causing death by dangerous driving. Has he forfeited his bequest under his wife's will? You may think, as the writer certainly does, that it would be monstrous injustice to answer the question in the affirmative. But "hard cases make bad law" or so some cynical judge of old time observed, we think inaccurately, and we will trace the principle involved. It originated in the consequences of a conviction for murder and was this: "By a rule of public policy, a murderer forfeits all benefits under the will or intestacy of his victim." The reason behind the principle is enunciated by Sir Samuel Evans P. in the probate proceedings arising out of the sudden death of a well-known ear specialist, one Herbert Hawley Crippen, M.D. Dr. Crippen murdered his wife and was hanged for it in 1911. He was devisee and legatee under her will. But neither he nor his executors could benefit under it. Stating the doctrine as just quoted, the learned President said: "The human mind revolts at the very idea that any other doctrine could be possible in our system of jurisprudence." Please note those words: "The human mind revolts...." At least one other human mind revolts at the subsequent development of the doctrine. Everyone will agree with it as applied to murder. But from murder we step down to manslaughter. Now manslaughter or, as we call it in India, culpable homicide not amounting to murder may be of two kinds: (a) voluntary and (b) involuntary. We all know that juries, especially, in the writer's experience in India, Bengali juries, are swayed by sentiment when they know that the result of a verdict of guilty will be that the man they have convicted will probably be hanged; and even though the judge may direct them that the offence is murder or nothing, will, with merciful obstinacy, return a verdict of manslaughter that is "unlawful homicide without malice aforethought" (*e.g.* with violent and sudden provocation). That is voluntary manslaughter; and the human mind does not revolt at Hamilton L.J. laying it down that ".....a man shall not slay his benefactor and thereby take his bounty" and holding that the slayer, though not technically a murderer, cannot benefit under his victim's will or intestacy. No, it does not revolt, but it begins to quiver when it realises that the doctrine is an absolute hard and fast one, not subject to exceptions: and especially when the results are visualised. For, consider involuntary manslaughter. Here, there may be no enmity, no quarrel, no violence, but prefect friendship, even deep affection and lasting sorrow and bereavement thereafter. It is causing death by carelessness. Involuntary manslaughter. Said Upjohn J. last year in *Re Peacock*: "If you have the misfortune to drive your car negligently and kill your wife—assuming that it amounts to manslaughter—it is just as if you had murdered her for the purposes of this rule." (*The Times*, 5th March, 1957 and *Law Notes*, April 1957, p94). That, one submits does "revolt the human mind". His lordship was alluding to a purely hypothetical case, but if the *dictum* were read by a husband bereaved in such circumstances he would consider it harsh and brutal. Nevertheless, it seems he could not profit under his wife's will. That would be in the words of another great judge, Lord Atkin, "to claim a benefit from his crime". (Beresford's case). "Crime" is a sinister word. It means an act punishable by law. Wilful murder is a crime; but so is driving to the danger of the public, and, personally, the writer does not believe that in India a legatee causing unintentionally a testator's death by negligence would be deprived by the court of his right to benefit under the latter's will. But it looks as if he would be in England.

* * * *

A medical man, Dr. Edwards, was employed as a house physician at the West Herts Group Hospital. He was required, as one of the terms of his employment, to live in a hostel near the hospital. He was not a free occupant. On the contrary, he had to pay a fixed annual sum for board and lodging to the hospital management committee. This sum was deducted from his salary. Some of his belongings were stolen from the hostel, whereupon the doctor sued the management committee for the loss. Is the committee responsible?

"No," said the County Court Judge and the doctor appealed. The Court of Appeal (Hodson, Morris and Sellers L.JJ.) upheld the decision of the lower court. "The defendants owed the plaintiff no duty of care in tort since an invitor is liable only for loss caused by defects in the premises. Further, since the use of the hostel arose from the contract of service, and the defendants were not in the position of boarding house keepers, no term could be implied in the contract to extend the master's liability for personal injuries suffered by his servant as a result of an unsafe system of work, to loss similarly incurred of the servant's belongings.



* * * *

Now, here is an ordinary, everyday business question to which one is almost convinced that the average astute commercial reader, even the one whose own line of business is that to which the question relates, will give a wrong answer; one also in which the average commercial lawyer, even after he has looked up the authorities, is quite likely to come to a wrong conclusion too. The writer had no hesitation in coming to his own conclusion. It was the wrong one. And the only consolation is that one of our most distinguished commercial judges, a Lord Justice of Appeal is in the same condemnation.

In June 1955, the defendant, a Mr. Williams, sold to the plaintiffs, Oscar Chess Limited, who were motor dealers, a second-hand Morris car for £290, which the defendant had obtained in 1954 and which was shown in the registration book as first registered in 1948. There had been five changes of ownership between 1948 and 1954. The defendant, not fraudulently but incorrectly, described and represented the car to the plaintiffs as "a 1948 model" and showed them the registration book. The plaintiffs, who had seen the car and believed the representation that it was a 1948 model, calculated the price on that basis and bought the car. It was, in fact, not a 1948 model but a 1939 one. Eight months after the sale, the plaintiffs discovered that the car was only a 1939 model; and they sued the defendants, claiming the difference in value on the ground that either it was a condition of the contract that it was a 1948 model or there was a collateral warranty to that effect. Were they entitled to recover? Well, we record the answer without professing to understand it, being of opinion that the whole basis of the transaction was that the car was a 1948 model, and that the plaintiffs should have recovered damages.

The Court of Appeal (Denning and Hodson L.JJ., Morris L.J. dissenting) held that the defendant was not liable to pay damages for breach of a condition of the contract or breach of warranty. Having regard to all the circumstances and, in particular, to the fact that the defendant had no personal knowledge of the date of manufacture, the defendant only made an innocent misrepresentation. And Denning L.J. observed that both parties were under a mistake of fact; although fundamental this did not make the contract void *ab initio* but merely entitled the plaintiffs to have the contract set aside in equity; and they were now too late even for that relief.

(*Oscar Chess Limited* v *Williams*, 1957, 101. S.J. 186; 76 *Law Notes*. 60).

Four hundred young engineers who will man the three new Steel steel plants will spend six weeks at Jamshedpur before they go abroad for training.

Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.

Jamshedpur is proud to welcome these steelmakers of tomorrow.

A DITCHER'S DIARY

IT is difficult to raise much enthusiasm for America's *Sputnik*; one is reminded too much of that phrase used so often to describe Britain's early efforts in two world wars—"too little and too late". The Americans may derive what consolation they wish, but other nations are more likely to consider that this belated appearance on the cosmic scene serves only to emphasise Russia's superiority. The great pity is that it matters so much; if it were not for the cold war, nations might be able to take more pride in the achievements of the human race as a whole and forget such bitter rivalry. It is, for instance, interesting to note that in the American announcement, half apology though it is, the original excuse for starting this bitter rat race—the geophysical year—is scarcely mentioned at all. Both sides share the blame, of course, although the disappointment is common to us all. It is to be hoped that now the United States has satisfied itself it can put a satellite into the sky, it will not try to match Russia *Sputnik* for *Sputnik*. The ludicrous situation which might follow such an attempt was brilliantly prophesied in a humorous article published in the *Economist* about the beginning of this year. It is all too easy for a people like the Americans to lose their heads when Russian *Sputniks* are sailing overhead. But the point they ought to remember is that their own science and technology is probably superior in almost every other respect. It is true that some who should know better concluded from the appearance of the first *Sputnik* that, overnight, the balance of military superiority had suddenly passed to the Soviet Union. That was certainly not true. And if it had been, there would still have been little to recommend a policy designed to meet Russia's challenge weapon for weapon and entirely on grounds of her own choosing. The real superiority of the United States lies in its overall economic strength, which is still three times that of the Soviet Union. If they still need a consolation, the Americans can always derive it from the fact that when the Russian people eventually assert their right to representative government, there will no longer be any question of putting expensive propaganda weapons like *Sputniks* before the provision of a modern and adequate standard of living.

* * * *

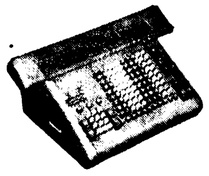
February, I sometimes think, is the cruellest month—for Government departments that is. What in the case of an individual would have been a source of supreme satisfaction—that not all the money has been spent—finds officials inconsolably grieved. It comes, therefore, as no surprise when an orgy of spending takes place, so that funds allocated earlier may not have to be returned and the coming year's allotment not reduced. The well-known difference between the two principles of personal and governmental budgeting is no longer observed, but there were good reasons why individuals used to organise their expenses according to their mostly inflexible incomes and why governments used to raise revenue only to the extent of their estimated expenditure. A third principle has now been brought into play in India, under which the State feels morally entitled to take as much as it likes from individuals on the specious plea that there must be no accumulation of wealth in citizens' hands. This, we are told, is to bring about the wonderful welfare State, the socialistic pattern of society. There is a number of ill-digested Keynesian sayings to support the view that saving is a despicable thing for anybody to do, although that great economist, always fond of a telling phrase even if it was an exaggeration, wrote of a very different set of circumstances from those which obtain now in India and elsewhere. Extravagance is the result, and the country suffers in the long run. I am fully aware of the officials' explanation. They spend because (a) their earlier estimates would otherwise be proven wrong and that would be a shame; (b) nobody would give them credit for economising, and (c) they would be penalised for it in the following year by not being given what may be their minimum requirement. There is an element of truth in all three, but I do not see that they add up to anything like a justification for year-end profligacy. No less, I understand, is happening at this very moment in a number of departments in New Delhi and all other State capitals.

* * * *

It is probably harder to extinguish wealth than many people might suppose. Take the case of the United Kingdom which, with more than half a century of death duties and swingeing income taxes behind it, is producing more rich people than ever before. At least that seems to be one of the conclusions to be drawn from the latest report of the Commissioners for Inland Revenue, which shows that the number of people with net (after tax) incomes of £6,000 a year trebled between 1955 and 1956; in fact, the number of these fortunate few rose from 200 to 600, and in the financial year 1956-57 they had between them a gross income of approximately £39 million which yielded an average gross income of £61,500 each. After they had been through the Inland Revenue's hands, £32 million was claimed in income-tax and sur-tax which left each a net income of rather less than £8,000 a year. So they paid in tax more than six-sevenths of their gross income. Out of a total of approximately 20 million income-tax and super-tax payers in the United Kingdom only 340,000 had gross incomes of £2,000 a year (the rate at which sur-tax begins) or over, and of these only 11,000 had gross incomes of between £10,000 and £20,000 a year, while only 2,500 had gross incomes exceeding £20,000 a year. The increase in the number of people enjoying a net income of £6,000 a year or more was partly due to the reduction in the standard rate of income-tax from nine shillings to eight shillings and sixpence in the pound. But a much more important reason was probably the long bull market in stocks, shares and other financial counters. This is a common feature of an inflation, and of course these figures take no account of the fall in the purchasing power of money. Incidentally, this is the 100th annual report of the Board of Inland Revenue, which is an indication of the age of some of our so-called modern fiscal devices.

* * * *

Among the more notable casualties of the great depression in the U.K. was the guild socialist movement, of which Professor G. D. H. Cole was one of the principal architects. Since that time, this particular brand of socialism has rightly been treated as something of an intellectual museum piece. But the grand old man is now, apparently, out to bring the movement back to life. The book, *The Case for Industrial Partnership*, is his first obvious attempt, and his case, so far as I can understand it, is this: The industrial worker, so as to be able to feel the social equal of his employers, should be called "a partner in industry", and this new status should be reinforced by safeguards against arbitrary dismissal for reasons of either discipline or redundancy. It seems to me the Professor is flogging a dead horse. The industrial worker in the U.K. already enjoys all the safeguards against arbitrary dismissal that could conceivably be devised, while as for retrenchment, the welfare State and full employment have robbed that of almost all its hardships. And whether he is formally called a partner in industry or not, he is, in effect, more than an equal partner already. In insisting on that formal designation, Professor Cole is, of course, merely being true to his guild socialism; if my memory serves me right, one of its original demands was that payment to a worker should not be called "wages", because the word was an offence to his dignity. What I particularly fail to understand is the Professor's opposition to workers being given shares in the concerns for which they work. He considers this to be merely another device for corrupting the worker into an *ersatz* capitalist, or a capitalist of an "inferior sort", to quote his words. But surely, if partnership status is to have any meaning, the worker must have a real stake in industry. Opposition from vested interests notwithstanding, where a worker is offered an interest in the concern he works for, he generally takes it—and eagerly. Professor Cole may be a good socialist in the orthodox sense of that term, but like most of his breed, he is a poor student of human nature.



* * * * *

Indians have been seen to be mildly proud that they are more internationally minded than most other peoples, as proof whereof it is pointed out that Indian newspapers carry more foreign news than the popular Press in many countries in the West. I will neither endorse nor dispute the claim. It has also been suggested more than once that excessive dependence upon Reuters gives India only the British point of view on international affairs, to remedy which unestablished deficiency there should be more Indian correspondents in the important world capitals. I will not claim that Reuters is a perfect news agency (although I cannot offhand think of many better ones) and there is no reason at all why Indian correspondents should not file stories from, say, New York or Ankara I have chosen these two cities because the Press Trust of India has correspondents there, and the recent performances of these two gentlemen make me wonder whether Indianisation of reporting is the complete answer to whatever problem there may be. None of us, I suppose, can be wholly objective in reporting, but a correspondent serves his country and his people very ill indeed if his despatches contain only what he imagines will be popular—at least as much with Authority as with his readers. As far as I am aware, the extreme unpopularity of a certain Indian representative abroad has never been so much as mentioned by any of P.T.I.'s men. (Fancy U.S. correspondents telling the American people that Mr. Dulles is regarded as a darling everywhere!) It may be a pity that on a certain issue the majority of the members of the Security Council find themselves unable to support India, but I do not know that any good is done by telling Indian readers a different story. India is wholly within her rights to dislike the Baghdad Pact, and I have no doubt at all that at the recent Ankara meeting there were many differences of opinion among its members. But going by P.T.I. reports one would have thought a fierce fight was in the offing and that soon there will be no such thing as a Baghdad Pact at all—which is probably just not true. The country is entitled to correct information, however unpleasant, and I agree that it should not depend only on foreign correspondents for receiving it.

INDIAN CHEMICAL MANUFACTURERS ASSOCIATION

SEVENTEENTH ANNUAL GENERAL MEETING HELD IN CALCUTTA ON 4th FEBRUARY, 1958.

PRESIDENTIAL ADDRESS OF MR. CHARAT RAM

Hon'ble Shri Manubhai Shah, Friends and Fellow Delegates,

It is my privilege to welcome you, Sir, once again in our midst today, to inaugurate the Annual Session of our Association. We are conscious that you have fulfilled our hope expressed last year here on a similar occasion, that the inauguration of the Annual Session of the Indian Chemical Manufacturers Association by the Minister for Industries of the Government of India, would become a precedent to be continued year after year. The Chemical and Pharmaceutical Industry recognise in you one of themselves. We particularly value the consultation and confidence, which you and your Ministry have sought to foster between the Industry and the Government, for it is only by co-operative effort that our national objectives can best be achieved.

General Review

From the Industry's point of view, the most notable event of the year was the desperate situation of foreign exchange resources resulting in practically a blanket ban on imports. It was a shock from which most of us are only now gradually recovering. The shock was not so much on account of the extent of the foreign exchange shortage, as on account of the sudden manner in which all of us appeared to be having to face it one fine morning, in a condition of complete unpreparedness. It would be futile to find fault with the planners of our economic future, ostensibly for the lack of forethought about such an eventuality, for mistakes are sometimes inevitable, particularly when we do not have the wealth of experience, fiscal and industrial, to guide us. What however would be tragic, nationally, is, if we were to draw no lesson from such failures, and they were repeated for the lack of an adaptable approach in views, ideas, and means of achieving our national objectives. As one in industry, I must say that I consider this desperate situation a blessing. It is a call to each one of us to bring forth the traditional resourcefulness of the private entrepreneur in meeting the needs of the country from indigenous production, what was met so far from imports. A vastly changed approach to work and philosophy of business is what is expected from us men of industry today.

We have had another year of great upsurge in production all along the line, and consequently of consumption too. This is a welcome trend, but it would be wise to acknowledge, that this year's progress has been achieved at the cost of great stresses on the economic foundations of industry. Faced with mounting raw material costs, pressing labour demands, labour welfare measures, increased railway freights, higher costs of capital goods and spares and higher interest rates, on the one hand, and a desire on the part of the Government to keep the prices low on the other, the industry has had to dip deeply into its operating margins and reserves. Disregarding this cost-price squeeze on the industry, increased taxation was imposed in the year, reducing greatly the resources of the industry. I should express a note of warning, that another year or two of this type of operations, would surely ruin the economic foundations of the Industry and enfeeble it to a degree that it may not be able to meet the demands of production expected of it. I say so with all the greater emphasis, knowing that it is the Government's desire to strengthen the sinews of industry to the utmost, to enable it to play its necessary part in the development of the country's resources, and what has happened has been somewhat in spite of the Government's wishes.

Mention must be made of the spectre of inflation that has been with us throughout the past year when compared to 1956 and 1955, even though there has been some downward adjustment in the latter part of the year. More it bids to be with us indefinitely, if we do not make a determined bid to get rid of it. Over a year ago the Prime Minister had warned that increased food production was pivotal to the entire Plan, and that there must be a near 40% increase in food output if the Plan was not to be endangered. Sir, the real core of the Plan is not steel or transport, but food. I should be pardoned for saying that in this matter, the Government needs to make a critical reappraisal of the country's organisation, efforts and results, and without fear or favour make such shifts urgently as are needed. If food production is not increased and food prices not brought lower, it is no use hoping to meet the threat of inflation. Food accounts for no less than 60% of consumer expenditure, and even a slight rise in food prices affects greatly the consumer cost of living index all along the line. The food price-line, Sir, has not only to be held, but surely to be brought down.

Production

The momentum of industrial production was not only maintained during 1957; it also acquired greater substance and speed. The general index of industrial production, which stood at 133 in 1956 rose to 149 in the first 9 months of the year. Considering the strain, in view of the need to conserve foreign exchange resources, it is creditable that there was no dimunition in the output of even those industries which depend on imported raw materials and components. An impressive range of new articles were manufactured for the first time during the year, such as sewing machine needles, hypodermic needles, automobile ancillaries like clutch and brake assemblies, synthetic detergents, raw materials for plastics etc. Production increases in the Chemical and Pharmaceutical industries have more than kept pace with the performance in other sectors of the industry. The production of caustic soda, soda ash, sulphuric acid, superphosphate, chlorine, D.D.T., Penicillin, pharmaceuticals, dye-stuffs, etc. was all round higher. I should not burden you with the production statistics, as we are all familiar with them by now. Despite these impressive increases, there is considerable scope still for improving the utilisation percentage of the country's installed manufacturing capacity. For some unknown reason we continue to assess the capacity of the industry on the basis of 300/330 working days a year. Sir, in the Chemical Industry our target should be an effective utilisation of nearer 360 working days in the year. Given adequate emphasis on preventive maintenance by industry, I am confident that this is not difficult of achievement. This should give us more than a 10% boost in our output, for little or no additional foreign exchange requirements.

While on the subject of production, I should refer to the Industries Licencing Policy of the Government. Instances have been brought to us, where applications for such items as chloroform, chloral-hydrate, aspirin, sodium salicylate, methyl salicylate, P.A.S., DDS, and gamapicoline have been disallowed on the ground that similar projects were under consideration for the public sector. Sir, we presume that the Government are interested now in putting their resources and energies into only those projects where initiative or finance is not forthcoming from the private sector. We place the case for the sanction of these small projects for your consideration.

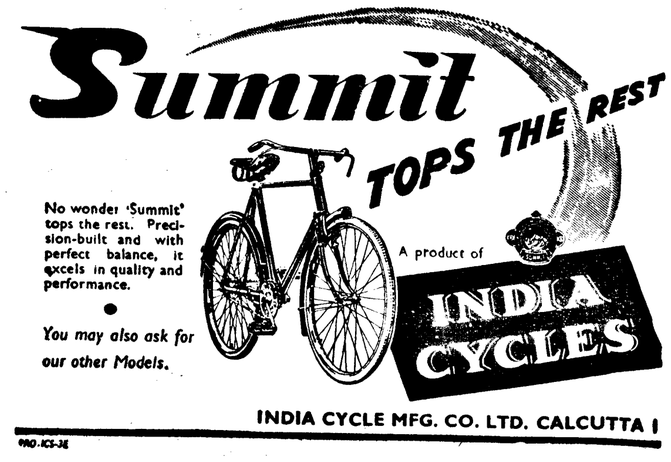
Supplies of the products of the Chemical and Pharmaceutical Industry to the D.G.S. & D. form no mean part of the industry's production. We should not hesitate to place before you that in spite of best efforts on all sides, dealing with the D.G.S. & D. continues to be on the whole a frustrating business, whether it is in the matter of testing of samples, or getting the goods approved, or receiving first and final payments. So long as this Department will not change its basic approach and place its transactions on a normal commercial basis and not deal with suppliers from a position of strength, no improvement could really be expected. It is easier to make supplies to scores of other parties, including the Government controlled industrial Companies, as they deal in a commercial manner, but not so with the D.G.S. & D. with whom time and money of the supplier are of no value. We have to suggest that purchases by the D.G.S. & D. should be made by specifications and not by 'brands', that in all cases no less than 98% advance payment can be made by them, as the average rejection percentage could not be as much as 2%, and that inspection at the works site would be of great assistance to both the suppliers and the indentors. Furthermore, the liability of the suppliers for the goods supplied should cease once the goods which have been approved are put on rail. Under the present rules, the contractor remains liable even for pilferages in transit.

Easing of the problems of the Pharmaceutical Industry, arising out of the Drugs and connected rules, would go a long way towards facilitating production. A complete uniformity in the enforcement of the Drugs Act in all the States is called for, and the Union Government should see that no State makes any local variations in matters connected with these Acts and Rules. We believe that at least in matters pertaining to industrial development, the country could be considered as one centrally administered unit, and that Industries and Excise Departments of the States would not attempt to consider themselves as law unto themselves.

A special reference to the slow development of production in the superphosphate industry is called for, as there is a real danger of a great short-fall in the production of this industry against the targets of the 2nd Plan. A production target for superphosphate of over 7 lakh tons in the remaining three years of the Plan period is to be reached as against the current annual rate of production of over 1 lakh tons only. I had highlighted this problem last year also, stating, that if the Plan target is to remain, not only a target, as was the case in the First Plan, a directed and purposive effort cannot be avoided. Production of superphosphate is dependent exclusively on its consumption. It is unfortunate that nitrogenous fertilisers are still considered a cure-all for our agricultural problems. Whereas almost without exception, the ratio of nitrogen to P_2O_5 used in other countries is 100:115, in India it is 100:30. Developing an effective system of subsidy as in the U.K., readjustment of railway freights on the same levels as for manures, and more liberal granting of taqavi loans are some of the measures which will prove of use in attaining the targets of production of superphosphates.

Increase of superphosphate production acquires an infinitely greater significance in today's context of foreign exchange shortage. Imported nitrogen could be replaced by indigenously produced superphosphates in many areas, without affecting food production adversely, saving the drain on foreign exchange. A memorandum has been submitted in this matter to the Prime Minister by the Fertilizer Association of India, which could be usefully followed up in your Ministry.

Capital Requirements and Resources of the Chemical Industry



A reference has been made earlier to the cost-price squeeze and increased taxation which have reduced greatly the none too generous resources of the Chemical Industry. Chemical Industries, Sir, are capital-intensive.

The initial gross fixed capital requirement per worker in the Chemical Industry works out to more than six times as high as the requirement for all the industries covered by the Census of Manufactures, i.e., Rs. 19,700 as against Rs. 3,200. Contrary to popular impression, the working capital requirements are also high in the chemical industries, the average for all the Census industries in 1954 being Rs. 2,800 per worker, as against Rs. 7,000 for the chemical industries. The Second Plan targets call for a spurt in investment in the chemical industries from Rs. 26 crores in the First Plan to Rs. 132 crores in the Second Plan period. And a serious problem of finance availability arises. Chemical industries earned only 3% after paying taxes on their net worth during the period 1951-55 as against an overall corporate figure of 7.9%. When compared with other capital-intensive industries like steel, paper, cement, etc., the picture is truly depressing and must cause concern to all interested in the attainment of the investment targets of the chemical industries, as the following figures show :—

Industry	Ratio of profits after taxes to net worth
Iron & Steel ...	17.6%
Paper ...	10.6%
Cement ...	11.0%
Chemicals ...	3.0%

According to a survey carried out by the Reserve Bank, the retained profits of 750 Public Limited Companies were 39% of the pre-tax profits. In the chemical industries, Sir, the comparable figure is only 1.2%. This may be compared with the retention in the other capital-intensive industries, being 66% in steel, 55% in paper and 39% in cement.

It will be obvious that the planning of the supply of capital is no less important than the planning of the supply of raw materials, utilities, etc. We had occasion lately to make an assessment of the capital needs of the caustic soda industry and were amazed to find that, as against the general idea of the capital requirement of Rs. 3/4 lakhs per ton-year of caustic soda, on the basis of latest costs, Rs. 6/7 per ton-year of caustic soda were needed i.e., a total requirement of nearly Rs. 20 crores for meeting the Second Plan targets for the balance of the Plan period. Capital needs for other chemical products are likely to indicate capital requirements on a similar scale. Capital costs are increasing at an average annual rate of 8% to 9%, and a continuous adjustment in capital cost estimates has to be made of these increases, for the estimates we make in one year become out of date for another year. There are usually three sources of capital availability open to any business, viz., share capital, loan capital, and internal capital. Whatever the source of capital, however, business must provide for basic 'capital-charges' in its cost and profit structure, viz., depreciation, rehabilitation reserve, dividends, interest on loan, repayment of loan, and a fair net return on investment, and if we wish to avoid capital erosion, an acceptance of these capital charges in a realistic way will need to be made. It is not easy for any industry, and much less for the Chemical Industry, to raise capital in the share market

No wonder 'Summit' tops the rest. Precision-built and with perfect balance, it excels in quality and performance.

You may also ask for our other Models.

PRO-ICS-36

these days. The procurement of capital however, must be looked at very much in the same way as the procurement of raw materials or any other services, i.e., the cheapest source must be tapped. Sir, the use of "Internal Capital" is the cheapest source of capital procurement, for there is no fixed charge for dividends as in the case of share capital, nor of interest on loan and provision for repayment of loan as in the case of loans. All this is not a matter of opinion but a fact, and I have to commend that if an objective study does uphold this conclusion, then the Government and the Tariff Commission should in their consideration of fair prices of products keep this aspect in view. For correct guidance as to the direction which our effort should take for tapping sources of capital for the Chemical Industry, we need to begin to visualise in a general way, the extent of the needs of the 3rd Plan from now on, for such a long range approach will help direct our thinking into practical channels.

Development of Geological Resources

Geological resources are a source of great potential wealth for any country. In a vast country like India, there must be an unlimited store of wealth lying hidden underground, waiting to be tapped. Geological industries are primary industries, on the development of which are dependent scores of chemical and engineering industries, the development of which would open up vistas of prosperity undreamt of. Intensive and extensive development of our geological resources would provide large scale employment at home, and much needed raw ores and finished goods for export earnings on the other.

We know in the case of coal and iron ore how intensified development has increased our knowledge of our wealth, and we are well on the way to becoming a leading producer and exporter of these items. In the chemical field there are so many of our industries which are totally dependent on geological industries, e.g., aluminium on bauxite, ammonium sulphate on gypsum, caustic soda on salt and so on. There are numerous other chemical industries which could be set up on a sound footing only if they could be fed adequately by well-developed geological industries. Bleaching earths need bentonite, bleaching powder and calcium carbide need good lime, superphosphates need rock phosphate, sulphuric acid needs pyrites and gypsum and so on. Sir, in high-lighting the importance of geological development for the development of chemical industries, I should like to mention that this aspect of our development as a vast potential source of national wealth appears to be somewhat under-rated. There is need probably for a closer liaison between the Ministries of Industries and Mines for a fuller exploitation of these resources. We could with advantage increase the educational institutions and also improve greatly the quantity and quality of the graduates that our educational institutes turn out in the geological field. Geological development should not prove a great burden on our resources, for in the early stages there will be greater need of human resources rather than of equipment.

I should like to suggest that the organisational structure in the field of geological survey and development may be put on product-wise basis rather than on region-wise basis, or in the alternative, for selected products at least, separate cells or groups headed by senior people should be formed for achievement of quicker and more dependable results. To my knowledge this has already been done, for instance, for oil, coal and steel—these product-wise specialised divisions could be extended to cover many more items.

Chemical Industries and Foreign Exchange Crisis

Last year I had mentioned that the size of our Second Plan will be largely determined by our ability to provide adequate foreign exchange resources. The events during the year have testified to this view. I should like to repeat what I said last year, that it is a primary duty of us industrialists to give a new slant to our production plans for specifically augmenting the country's foreign exchange resources by canalising the development of the industry into :

(a) products which will reduce imports, and

(b) products which will increase exports.

It is the Chemical and Engineering industries which the Government and the people are now increasingly looking to, for solving this difficult situation. The items exportable by the Chemical Industry are varied in character, such as bleaching powder, bichromates, magnesium and calcium chlorides, Azo-dyes, calcium carbonate, animal glue, phenyl, D.D.T., Penicillin, etc. We also need to change our approach to production capacities, from planning for self-sufficiency only to planning for surpluses for export. At present even the planning for internal consumption becomes inadequate, by the time the planned capacities have matured. There is no reason why even the Government factories producing ammonium sulphate, D.D.T., Penicillin, etc., should not plan for exports straightaway. Furthermore, instead of setting up new units of production, which would need far larger resources, we should proceed on the basis of expanding capacities in the existing units.

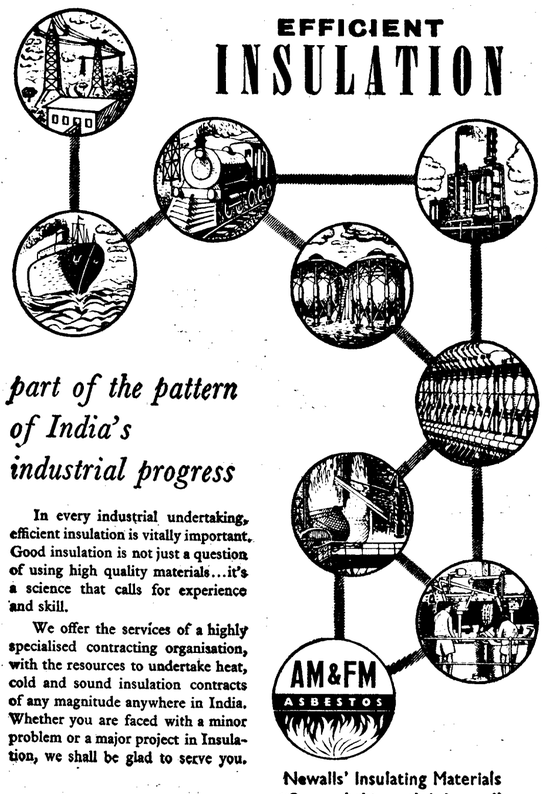
The trade agreements concluded with different countries as well as direct enquiries, have brought out the fact that not only adjacent countries such as Malaya, Indonesia, Thailand, Ceylon, Egypt and Burma are important prospective customers for us, but even industrially advanced countries such as the U.S.A., the U.K., Canada and West Germany would buy some of our products. Prospecting for such exports has not been made so far in any systematic manner. I have to recommend that when negotiations for trade agreements are taking place with any country, representatives of the Chemical Industry through the Association may be given an opportunity for consultations with your Ministry. Such consultation at the time of the negotiations should be of considerable help in placing the export possibilities of the Chemical Industry in an appropriate perspective.

Unless the matter of foreign exchange is tackled on an austere basis, it will not be possible to have a rapid development of the country. I am one of those, Sir, who believe that the present generation will have to undergo hardships in the shape of restraint in consumption today, for investing in exports for the building up of India of tomorrow. I am glad that the Directorate of Export Promotion has set certain export targets for the chemical industries in the current year totelling over Rs. 5 crores. Expansion in manufacturing capacity, which is bound to arise by 1961 or later, and the importance of building up connections alike, demand that even if our exports should involve some sacrifice of domestic consumption, this risk should be deliberately taken. Informed opinion does appreciate this point, as I find from the Annual Report of the Directors of the Reserve Bank.

As an aid to exports, the Association sponsored the setting up of a Chemical & Allied Products Export Promotion Council, which we hope would be inaugurated shortly. I plead that we should bring to bear on the problem of export promotion a great sense of urgency and no delays should be allowed to occur in the licensing of exports, assigning freight priorities, draw-backs of duties, etc.

I should like to repeat this year again what was mentioned with regard to the sulphur needs of the country. Sulphur requirements have doubled to 80,000 tons at the beginning of the Second Plan period as compared to the First Plan period, and will rise drastically during the next five years. We need to look for basic long-term solutions for self-sufficiency by the two-pronged drive for exploitation of the processes utilising pyrites and gypsum by the help of technical aid from Norway, Germany, Poland, etc. A great deal of time, Sir, has elapsed in considering these matters and it must be possible to concretize decisions now, for sulphur, apart from being a key raw material, is draining away several crore rupees worth of foreign exchange resources, which could be easily saved.

Need for Sound Organisation and Good Management



In emphasizing the need for sound management to my colleagues in industry here, I have in mind the requirements of our Plans for economic development. The Second Five Year Plan provides a model of economic growth in which per capita income would double by 1973-74, i.e., by about the middle of the Fifth Plan period. For this to happen, the planners envisage an increase of the investment effort of the community, so that India will make a net investment during the Fifth Plan period of over Rs. 20,000 crores, which is over six times as large as the investment during the First Plan period; or to put the same thing in a different way, in the Fifth Plan, 30% more investment is expected to be made in a single year than was done during the entire First Plan period. It is difficult to over-emphasize the collateral need for management skills, proceeding and flowing from our attempt at economic progress, the abundant quantity of management skills required, their qualitative adequacy and of their continuity in time and uniformity of spread. Good management which must result in general prosperity is not something which comes about by chance. It is the result of the skill with which the affairs of a country or a business are managed. It will be found that a country has nationally bad business when businessmen are drifting, and that business is good when businessmen take hold of their own affairs, put leadership into them and push forward in spite of all obstacles. Only disaster can result when fundamental principles of sound management are disregarded, and, what looks like the easiest way is taken. These fundamentals of good management, as I know them, are :

1. to make an ever increasingly large quantity of goods of the best possible quality, to make them in the most economical fashion, and to push them in the market;
2. to strive always for higher quality and lower prices, as well as lower costs;
3. to raise wages gradually but continuously, and never to cut them;
4. to get the goods to the consumer in the most economical manner, so that the benefits of low cost of production may reach him.

In addressing this to my colleagues, I am conscious that we have come to show a vigorous determination to take difficulties in our stride, and that the business fabric of India, and by that I mean the intellectual and moral calibre of our businessmen, is far stronger today than ever before, for there is growing appreciation that there is no gain comparable to that achieved by sound management practices.

I have attempted to place before you, Sir, and my colleagues in Industry, such important points as I feel need consideration. Before I close, I should record my appreciation of the co-operation and assistance which we have had from your Ministry at all levels. I wish also to express my thanks to the members of the Association, my colleagues on the Committee and the Secretary of the Association and his staff whose valued co-operation and assistance have been of great help to me during my second term of office. I am grateful to the members for the confidence they have expressed in me by re-electing me to a third term.

Gentlemen, I thank you for responding to our invitation and for giving me a patient hearing. I thank you, Sir, again most heartily and request you to inaugurate the Seventeenth Annual General Meeting of our Association.

part of the pattern of India's industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

THE ASSOCIATED CEMENT COMPANIES LIMITED

CHAIRMAN MR. DHARAMSEY M. KHATAU'S REVIEW

Speaking at the Twenty-first Annual General Meeting of the Associated Cement Companies, Limited, held in Bombay on 31st January, 1958, the Chairman, Mr. Dharamsey M. Khatau, observed that he did not propose to comment upon major developments during the year in the economic and industrial field. There were many subjects demanding urgent attention, he continued: "But the fact is that so much has been said by so many with such little effect upon the course of events, that it seems pointless to take up your time by adding to the impressive volume of constructive criticism on current affairs already available to those who care to listen."

Deficit Finance

Saying that he would therefore content himself with making one or two observations concerning Deficit Financing, Mr. Khatau remarked: "The quality of Deficit Financing, unlike that of Mercy which Shakespeare so lauded, is exceedingly strained, for it blesseth neither him that gives nor him that takes. That is to say, both the public as well as the Government..... are ultimately the sufferers, because Deficit Finance soon over-reaches itself as has already happened in this country. The most disquieting feature of our approach to Deficit Financing just at present is that while Government appear to have recognised its dangers, judging by the recent speeches of their leading spokesmen, there is still no evidence of the impact of this recognition either upon the assessment of the resources for the Second Five-Year Plan or, consequently, upon the magnitude of the Plan. The estimates of proceeds from taxation, from current surpluses of Central and State Governments, and from net borrowings, whether by the issue of public loans or from small savings, continue to be over-optimistic with the result that (i) the projected Plan Expenditure continues to be maintained at a level unattainable in terms of available resources; and, (ii) the erroneous belief persists that, even at that level of expenditure, Deficit Financing will somehow be successfully kept at a low level. The truth is that the expected volume of funds is quite unlikely to materialise from the sources indicated, with the consequence that, if the Plan Expenditure is maintained so high as is still contemplated, a vast magnitude of Deficit Finance, with all that it entails in terms of over-investment, run-away inflation, rising prices (especially agricultural and raw materials prices) etc., is inescapable." In these circumstances, the Chairman hoped that in the next budget there would be evidence of sober and conservative appraisement of external and internal resources, on the one hand, and a grimly realistic re-phasing of Plan Expenditure, on the other, such as would minimise our reliance on Deficit Finance.

Production and Profits

Turning to the affairs of the Company, Mr. Khatau observed that "the year under review had been one of mixed fortune: of distinct achievement, yet of poor reward." Though the Company produced and sold 2.5 lakh tons more cement than in the previous year, paradoxically enough, there had been a slump in the Company's profits, owing to a sharp rise in the manufacturing costs due to factors outside the Company's control such as higher cost of coal, enhanced railway freights and terminal charges, higher cost of stores and spares, etc. Other adverse factors were a higher wage-bill and an increased charge for depreciation. Further, the heavy incidence of taxation resulting from the increase in the rates of Income-Tax and Corporation Tax, and the imposition of the Wealth Tax had left very much lower profits to the Company.

Tariff Commission

Continuing, Mr. Khatau said that the Industry could not continue to operate and expand under those conditions and that Government had therefore directed the Tariff Commission to examine the cost of production of cement and determine anew a fair price to be paid to cement manufacturers. The ACC had placed its case fully before the Commission for an increase in price, and hoped that Government would sanction such an enhanced price as would cover the rising costs of production and also enable it both to plough back a reasonable portion of profits for rehabilitation and modernisation and also to finance its expansion programme under the Second Five-Year Plan.

The Chairman pointed out that the increase in price asked for need not necessarily involve any increase in the present price of cement to the consumer f.o.r. destination. "Indeed, I would go so far as to say that it must not be so, both in the interests of the consumer and of the Industry. As you know, we have to sell our entire output to the State Trading Corporation at Rs. 54.50 per ton f.o.r Works for neat (unpacked) cement, *plus* Rs. 1.50 for selling expenses, *plus* a packing charge which varies every quarter depending on the price of gunny bags and presently stands at Rs. 13.64 per ton. This makes a total of Rs. 69.64 per ton. But the State Trading Corporation sells the cement to the consumer at the controlled price of Rs. 117.50 f.o.r. destination. Allowing for the average incidence of railway freight from Works to destination at a little over Rs. 15/- per ton, and Rs. 20/- per ton for Excise Duty, the State Trading Corporation is left with a net profit of about Rs. 12.50 per ton. As there is likely to be practically no further substantial import of cement which the State Trading Corporation would be required to subsidise so as to sell such imports at an equalised price, and as the losses on such small imports as may still have to come in to fulfil existing commitments will be only a fraction of the enormous profit which the State Trading Corporation has already amassed, there is no reason at all why the State Trading Corporation should any longer make any profit from cement. Furthermore, the present Excise Duty of Rs. 20/- per ton includes the increase of Rs. 15/- per ton imposed in May 1957 with a view to inhibiting the demand for cement. Thus the present price of cement to the consumer includes two inflationary elements: a profit of Rs. 12.50 per ton for the State Trading Corporation and the enhancement in Excise Duty at Rs. 15/- per ton. If now simultaneously with the refixation of the cement price for the producers, this 'loading' of Rs. 27.50 per ton already imposed on the consumer is taken off, there will, I may assure you, be no need to increase any further the present price of cement to the consumer."

Expansion

Mr. Khatau then reported that the various expansion projects that the ACC had in hand had made satisfactory progress. The extensions planned at the Kistna Cement Works had been completed but the additional capacity could not be fully utilized during the year owing to transport difficulties in respect of raw materials. The extension work at Sindri and Chaibasa had also made good progress. He revealed that a flotation plant was to be installed at Chaibasa to enable the use of low-grade limestone. The extensions at Kymore and Shahabad were also well under way.

New Plants

The Chairman informed the meeting that the ACC's new factory at Mancherial which is to use the dry process of manufacture would begin production in September 1958. He also announced that the Mancherial Plant would be duplicated in preference to the immediate construction of a new factory at Porbandar, which would be taken in hand again, later.

Firebricks

Mr. Khatau reported that the Katni Firebricks Factory, working at full capacity, not only met all the requirements of the ACC but was in a position to sell some 7,000 tons of refractories to steel plants, other cement concerns and to any industrial undertaking using heat-resistant firebricks.

Silvicrete

The ACC's white cement—produced at Porbandar and marketed under the trade name of *'Silvicrete'* was becoming increasingly popular.

Collieries

Raisings from the Company's two collieries at Nowrozabad and Kotma had been fairly satisfactory and certain new schemes to increase their output had been sanctioned.

Technical Training Institute

The Chairman continued: "The building, equipping and staffing of the Company's Technical Training Institute at Kymore was completed during the year and the first batch of 75 apprentices is now undergoing training.....Intended primarily for the sons and relatives of the Company's employees, the Institute offers the best available training in India for our purpose, and most of the trained technicians will, in due course, form part of the specially trained skilled personnel of our cement Works...The curriculum also aims at turning out good citizens and I think the Company may well regard the Institute with justifiable pride."

Finance for Expansion Projects

Speaking about the enormous capital outlay entailed by the Company's various projects of modernisation and expansion, Mr. Khatau stated that the Company's requirements of working capital had increased appreciably, and would increase still further in the next few years with the increasing tempo of production. The funds that the Company had already raised, whether from internal resources or by borrowing or by offering large issue of equity capital, were totally inadequate for the purpose.

"Your Board has therefore decided," he said, "subject to the sanction of the Controller of Capital Issues, to make a further issue of Debentures of Rs. 5 crores on suitable terms and at the proper time during the course of this year. The proceeds of this issue will, however, be utilised partly for our investment in the Heavy Engineering Project which we may set up in collaboration with Messrs Vickers Ltd. and Babcock & Wilcox Ltd., to which I made reference last year, and partly for our substantially increased Working Capital requirements in the context of our steadily increasing production. A part of the proceeds may also be used for our immediate needs of the expansion programme.

"Even so, the funds at our disposal including the proceeds of the proposed Debenture Issue and the further internal resources which will accrue over the next few years, will still remain insufficient to meet the heavy capital outlay implicit in our major expansion effort. Your Company has, therefore, represented to the Tariff Commission the urgent need for the grant of an adequate Expansion Allowance in addition to a Rehabilitation Allowance in the new price of cement to be fixed in the near future. I earnestly trust that this request will meet a sympathetic if not a generous response, both from the Tariff Commission and from Government, because it is quite plain that without such an Allowance we shall be compelled to abandon many of the expansion plans and projects we have in view, for the simple reason that no further funds would be available from internal or external sources to finance them."

Austerity

Referring to the slowing down of the tempo of work on the Company's expansion projects as a result of the uncertainty of financial resources and difficulties in obtaining foreign exchange, the Chairman mentioned that a good deal of capital had been locked up in the form of large quantities of equipment and stores including steel. The liquidation of these was receiving priority attention and an 'austerity' drive had been launched "not only to abandon, postpone or prune the purchase of stores, but also to minimise all other forms of expenditure."

Pakistan

The Chairman stated that the Company's two factories in Pakistan were operating satisfactorily, but that the return earned by the Company in Pakistan was very poor. The prices of coal, stores and other materials had sharply risen in that country, and the price increase sanctioned by the Pakistan Government in response to the Company's representation was altogether inadequate. In view of further increases in the cost of coal and other essential materials, the Chairman announced that the Company had again represented its case to the Pakistan Government. Mr. Khatau also mentioned that the total incidence of Income-Tax, Corporation Tax and Business Profits Tax in that country had risen from 56.25 per cent to 62.50 per cent.

Labour-management Relations

Turning to labour-management relations, the Chairman observed: "You will be glad to know that the improvement in our relations with our employees has been maintained during the year under review. Once again there were no strikes or stoppages of work to tarnish our record of round-the-clock production—a matter so vital for keeping down costs and for the fulfilment of the targets set under the Second Five-Year Plan. This is a sure index of growing goodwill and mutual trust, and augurs well for our future. I of credit to our employees for their praiseworthy contribution to our joint endeavour.

"It was this atmosphere of harmonious industrial relations that encouraged us to initiate talks with our workers' representatives with a view to reaching, if possible, a long-term agreement on an all-Works basis. In the course of these negotiations it came to be appreciated, however, that one overall agreement, covering the variety of conditions at all our Works, was difficult to achieve and that the purpose in view would perhaps be best served by negotiating individual unit-wise settlements.

"It gives me great pleasure to be able to report that after patient negotiations, we have now reached such three-year agreements with our Workers' Unions at six of our factories.

"The agreements include such important matters as wage-grades, dearness allowance, house-rent allowance and leave facilities. Negotiations at some of the other Works are still in progress, and I hope the day is not too distant when relations between labour and management at all A.C.C. Works will be regulated by similar settlements.

"To my mind the signing of these six settlements is one of the most significant events within the A.C.C., because the spirit which has brought forth these agreements should certainly lead to better industrial relations in the coming years and consequently to greater prosperity for the Company and, in the same measure, for those who work in it."

Shares for Employees

The Chairman stated that 12,202 shares out of the new issue of 6,35,928 shares had remained unapplied for by the shareholders as at 31st October, 1957. The Board had therefore decided to offer these 12,202 shares to the permanent employees of the Company at the face value of Rs. 100/- plus the premium of Rs. 20/- per share, and the consent of the Controller of Capital Issues had been obtained. Mr. Khatau expressed the hope that this would not only enable the Company's employees to make a valuable investment, but would also give them a greater stake in the prosperity of the Company. The Chairman added that the offer of shares would have to be confined to the Company's employees in India and would not be made to employees in Pakistan; because the State Bank of Pakistan had declined to grant necessary permission.

Bonus and Appreciation

The Chairman announced that the Board had decided to pay a bonus to all the employees in appreciation of their excellent work: to those employees drawing up to Rs. 1,000 per month by way of basic earnings a bonus equivalent to one-fourth of their basic earnings during the year; to those drawing over Rs. 1,000 a bonus equivalent to one-fifth of their basic earnings during the year. The Chairman concluded by recording the Company's warm appreciation of the wholehearted co-operation and sustained hard work put in by all members of the Company's staff during the year.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting which will be sent separately to Shareholders on request.

Money

THE CALCUTTA MONEY MARKET

STERLING STRONGER

Wednesday, 5th February.

THE seasonal increase in bank advances has continued this week. Funds to the jute industry particularly have shown a big jump. All other major sources of demand, including cotton and sugar mills, and grain and seeds storage, have increased their offtake of funds. The condition of the interbank market is unchanged on the week's trading and the call rate has remained at 3 percent.

It has been a quiet week in the exchange market, with a few tea bills only coming to hand. Remittance has been on a larger scale. The pound sterling continued to improve against the dollar and the majority of Continental currencies, although it is, in fact, down against the D-mark. The reason for the improvement, apart from the seasonal factor, can be traced to the encouraging figures for January sterling area reserve movements which have just been published.

* * * *

Bullion was firm on strong support in the face of limited arrivals. Silver advanced from the previous week's level of Rs. 186.50 to Rs. 187.25, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 186.25. In New York, the price stood at 88⅜ cents and in London it was quoted at 75⅞d.

Gold was firm in sympathy with silver and because of poor arrivals. The price rose from Rs. 111.75 to Rs. 114. Sovereign at Rs. 72 showed a rise of 25nP.

* * * *

During the week ended 31st January, Government of India Treasury bills for Rs. 110,46,50,000 were sold in favour of the Reserve Bank of India.

* * * *

The return of the Reserve Bank of India for the week ended 31st January, 1958, shows a decline of Rs. 2.43 crores to Rs. 1,531.20 crores in active notes, while the total note issue was Rs. 25 lakhs higher at Rs. 1,551.92 crores. Notes held in the Banking Department consequently rose by Rs. 2.68 crores to Rs. 20.72 crores. Deposits of the Government of India fell by Rs. 4.30 crores to Rs. 58.13 crores but other Government accounts were Rs. 3.49 crores higher at Rs. 27.34 crores. Balances of commercial banks declined by Rs. 11 lakhs to Rs. 75.73 crores. Balances held abroad declined further by Rs. 2.14 crores to Rs. 37.75 crores. Investments at Rs. 254.72 crores showed a decline of Rs. 35 lakhs Other loans and advances increased from Rs. 61.64 crores to Rs. 65.27 crores, of which advances to scheduled banks against usance bills amounted to Rs. 24.21 crores against Rs. 21.37 crores. Ways and means advances stood at Rs. 36.04 crores (Rs. 36.37 crores).

* * * *

The return of the State Bank of India for the week ended 24th January, 1958, shows a rise of Rs. 20.53 crores to Rs. 391.58 crores in total deposits. Investments in Government securities are up by Rs. 9 lakhs to Rs. 174.02 crores, while other authorised investments remain unchanged at Rs. 10.13 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 3.20 crores to Rs. 187.16 crores. Cash and balances are, in consequence, shown at Rs. 30.28 crores or Rs. 6.85 crores higher.

* * * *

The statement of the position of scheduled banks for the week ended 24th January, 1958, shows Demand and Time liabilities at Rs. 736.01 crores (Rs. 18.03 crores on account of borrowings from banks) and Rs. 696.47 crores (Rs. 17.33 crores) compared with Rs. 712.86 crores (Rs. 14.01 crores) and Rs. 690.15 crores (Rs. 18.11 crores), respectively, in the previous week. Cash has decreased by Rs. 1.66 crores to Rs. 37.41 crores, while balances with the Reserve Bank have increased by Rs. 13.87 crores to Rs. 73.97 crores. There is a drop of Rs. 4 lakhs to Rs. 433.99 crores in investments. Advances and bills discounted at Rs. 901.86 crores show an increase of Rs. 11.69 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 7.8 percent and 63 percent against 7.1 percent and 63.4 percent.

* * * *

The following is a statement of the cash balances of the Central Government on the last day of November 1957:

	Rs.
(1) At the Reserve Bank of India in India ...	53,89,55,000
(2) At treasuries in India	(—)11,86,000
(3) In England (sterling converted at 18d the rupee) ...	2,02,22,000
Total ...	55,79,91,000

* * * *

The INDIAN BANK LTD., Madras, has made a profit of Rs. 40,14,675, including the amount brought in, for the year ended last December. The dividend has been declared at 13 percent, including an interim of 6½ percent. A golden jubilee bonus of 2 percent has also been recommended. An amount of Rs. 28.25 lakhs is transferred to reserve and other funds.

City Cable

STOCK MARKETS FIRMER

FURTHER RISE IN GILT-EDGED

London, 5th February.

A renewed advance in gilt-edged securities provided the outstanding feature of the stock markets during the past week. This helped sentiment in other sections which generally presented a firmer appearance on balance. The main driving force was the rising hope of a fall in interest rates following the reductions in the United States, West Germany and Holland. It is widely thought that a reduction in the United Kingdom Bank rate cannot be far off, as interest rates in the U.K. are now well out of line with those ruling elsewhere. Outside the gilt-edged market, business remained at a low level, but a number of factors assisted sentiment. Primarily, there was the successful launching by the United States of its earth statellite. Wall Street responded to this news, although not very strongly, but it favourably influenced the London markets. The bus men's decision to take their wages dispute to arbitration eased the tension on the wages front. Against the favourable factors was the interim statement of General Electric which referred to a marked decline in its profits and announced a cut in its interim dividend. This brought the incipient rally in the industrial market to a halt prior to the week-end, but the advance was resumed later. Gilt-edged securities went strongly ahead on hopes of falling interest rates, the strength of sterling in the foreign exchange market and expectations that the monthly gold reserve figures would show a sharp rise during January. Very little interest developed in foreign bonds and rails, although Baltic issues improved on speculative demand. Dollar stocks fluctuated somewhat, but were mainly higher on balance, reflecting the improvement on Wall Street following the satellite news. The General Electric Company's interim statement caused a modest reaction in the industrial market at one time, but the advance was resumed later and a widespread improvement was recorded on balance. South African gold shares moved irregularly and showed very little change on balance. Base metals developed a better trend and were firmer. Oil shares recorded modest gains under American influence. Rubber shares were quieter with some irregular price movements. Tea shares ruled quiet and showed no definite trend with price movements small.

The Money Market

Largely due to the fact of a very small take-up of bills by discount houses and to a large excess of maturities, money was surplus to requirements in the early part of last week's operations on the market. The authorities, however, skimmed off the surplus money and in the later stages of the week with the main tax transfers taking place, there was a complete change in the picture with difficult conditions again prevailing. The market was then forced to seek assistance from the Bank of England. The rate for day-to-day loans ranged from 5 percent to 6¼ percent. There was a good demand for bills from the banks with April and hot dates changing hands at 6-3/16 percent, in view of the increased competition for U.K. Treasury bills. As a result of lower interest rates abroad, there was a sharp drop in the Treasury bill rate at last Friday's tender of 3s to £6 2s 6.50d percent. In order to secure as many of the bills offered the market raised its bid by 10d to £98 9s 5d, and managed to secure 44 percent of the bills offered at its price against 24 percent in the previous week.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 24th January shows that the gold stock rose by $1 million to $22,783 million. Foreign deposits declined by $37 million to $257 million, while foreign investments fell by $31 million to $3,767 million. The Federal Reserve bought $100 million worth of bills, but sold $73 million worth of securities held under repurchase agreements. Total U. S. Government securities thus rose by $27 million to $23,360 million. Total discounts and advances fell by $139 million to $253 million, while the aggregate excess reserves of member banks declined by $234 million to $430 million. The daily average excess reserves of member banks fell by $14 million to $511 million, while their daily average borrowings declined by $60 million to $295 million. Business loans of the New York city banks rose by $29 million to $11,161 million, compared with a fall of $4 million to $11,030 million in the corresponding week of last year.

U.S. Buying of Strategic Materials to End

The Director of the Office of Defence Mobilisation, Mr. Gordon Gray, told Congress that U.S. buying of strategic materials for the national stockpile is about to end—except for mica and beryl. He said this to an appropriations subcommittee of the House of Representatives when he appeared before that body on 15th January to ask for operating funds for the fiscal year beginning 1st July. His testimony has recently been made public. He said that a purchase programme of domestically produced mica had a target of 25,000 tons by 30th June, 1962, but up to the end of September last year only 12,173 tons had been bought. As for domestic purchases of beryl, there was a goal of 4,500 short tons by 30th June, 1962, but up to last September only 1,581 tons had been bought. Questioned on oil imports and their impact on unemployment in the coal mines, Mr. Gray admitted that his department was conscious of the impact of these imports on the economy. But he declared that any decision concerning such purchases abroad would be made on the grounds of national security and economic stress.

Stocks and Shares

LOWER PRICES AND DEPRESSED SENTIMENT IN SHARE MARKET

PRIME MINISTER'S SPEECH CAUSES CONSTERNATION

Wednesday Evening.

A distinct change in sentiment occurred in the Stock Exchange last week-end. Until the close of business on Friday, buoyant conditions continued despite slight profit-taking. But on Monday, a sharp setback sent Indian Irons below Rs. 20, only two days after the opening of the new blast furnace at Burnpur by the Vice-President of the World Bank had highlighted the progress of the company's expansion programme. There followed an all-round marking down of prices and decline of activity.

In part, the change is a reflection of mounting anxiety over the approach of Budget day. In the light of past experience, it is a natural precaution to cut commitments and await developments. Investors are worried by the fact that, in addition to whatever fiscal burdens are being devised at the Finance Ministry (apart from the gift tax, of which advance notice has been given), State Governments are expected to dip into tax-payers' pockets to the extent of some Rs. 200 crores. A further cause of uncertainty are the persistent reports of the impending resignation of the Finance Minister. Should this take place, however, it seems unlikely that it will make any difference to the Budget. On a longer view, of course, the personality of the Finance Minister is obviously of the greatest importance to market operators, investors and business men.

A minor reason for the decline in activity could be the siphoning of funds into the Indian Oxygen issue, which is believed to be going well. Some nervousness was caused by the failure of a prominent operator in the gunny market to meet his commitments. But the most important single factor that transformed market sentiment was the Prime Minister's outburst against Stock Exchanges at the jubilee meeting of the Indian Merchants Chamber. The feeling is that, if this is the attitude which will determine future economic policy, the outlook for private investment is grim indeed.

Here are the details of the week's trading.

Government securities continue to rule steady with 3% Conversion Loan 1946-48 quoted at the previous rate of Rs. 71.05.

Bank shares met with some profit-taking owing to a revival of nationalisation fears, with Punjab National dropping to Rs. 51, United Commercial to Rs. 60.50 and Hind Bank to Rs. 47.

Selected miscellaneous preference shares met with small enquiry but jute scrip were freely offered.

The recent enquiry for coal shares was short-lived and profit-taking led to lower prices. Bengal were marked down to Rs. 238 from Rs. 244, Equitable to Rs. 25 and Pench Valley to Rs. 19.

In cotton, Bengal-Nagpur recovered to Rs. 4.19, while other issues were unchanged.

Electric shares met with investment enquiry with Agra advancing to Rs. 130 and United Provinces to Rs. 123. In contrast, Calcutta eased from Rs. 13.44 to 13.12.

In engineerings, Indian Iron & Steel receded steadily from Rs. 20.48 to close at Rs. 19.42. Jessops met with investment enquiry and were wanted at one time up to Rs. 22, but closed easier at Rs. 21.25. Guest, Keen, Williams were marked at Rs. 28.31 x.d. and Burn & Company eased to Rs. 322. Textile Machinery were knocked down from Rs. 17.85 to Rs. 16.95.

Reports that most jute mills on the river are unable, at present, to do simultaneous business on a profitable basis brought out sellers of jute shares and prices were marked down slightly on a broad front.

In paper, Titaghur were at one time enquired for up to Rs. 34 but closed slightly below the best. Orient reacted from Rs. 25.50 to Rs. 24.05.

In sugar, Dyer Meakin continued to be supported and advanced further to Rs 8.62. Other sugar shares were dull and neglected with the exception of United Provinces which closed slightly better at Rs. 13.12.

In the miscellaneous section, Angelos improved further to Rs. 18.50 and Britannia Biscuits to Rs. 12.62. Clive Row Investment were steady at Rs. 8.87 but Dunlop Rubber were softer at Rs. 21.87. Imperial Tobacco were lower at Rs. 11.65 as were Indian Aluminium at Rs. 12.37. India Steamships were taken at the lower rate of Rs. 11.62 while India General Navigation advanced to Rs. 61. National Carbons were well maintained at Rs. 24.50 while Indian Cables were a good feature in a dull market advancing to Rs. 28.31. Rohtas Industries were marked down to Rs. 15.87 and National Rubber (now Rs. 7.50 paid-up) were quoted at around Rs. 9.12. Philips India were shaded at Rs. 13.87.

Lower prices at the auctions coupled with expectations of smaller tea dividends for 1957 had a depressing effect on tea shares and prices moved to lower levels with few declared buyers.

In the mining group, Indian Copper, after recovering to Rs. 2.93, reacted at the close to Rs. 2.86. Orissa Minerals were steady and rose from Rs. 20.62 to Rs. 21.50.

* * * *

Bringing in Rs. 23,188, the profit of the Raneegunge Coal Association has amounted to Rs. 9.64 lakhs for the year ended last March, against Rs. 5.51 lakhs. Taxation provision absorbs Rs. 1.60 lakhs. The dividend has been maintained at 12 annas a share to absorb Rs. 1.80 lakhs, leaving a carry-forward of Rs. 29,060.

Raisings rose from 349,758 to 431,402 tons and despatches stood at 409,316 tons against 381,924 tons.

* * * *

The profit of Smith, Stanistreet and Company has increased by Rs. 27,000 to Rs. 7.42 lakhs for the year ended last June. The ordinary dividend has been maintained at 20 percent. The taxation provision is Rs. 71,000 higher at Rs. 4.01 lakhs and general reserve is allocated Rs. 1 lakh, leaving a carry-forward of Rs. 87,365, against Rs. 1,18,395 brought in.

As the company has ceased to be a subsidiary of the British India Corporation Ltd., changes in the board of directors have been made.

* * * *

Providing Rs. 5.15 lakhs (Rs. 6.07 lakhs) for taxation provision and Rs. 1.36 lakhs (Rs. 85,260) for depreciation, the profit of the Bisra Stone Lime Company has amounted to Rs. 3.32 lakhs (against Rs. 6.78 lakhs) for the year ended last March. Notable allocations include general reserve Rs. 15,977, mechanisation reserve Rs. 1.25 lakhs, contingency reserve Rs. 8,000 and development rebate reserve Rs. 9,575. An interim dividend of 87 nP was paid and a final dividend of 88 nP has been declared, leaving a carry-forward of Rs. 18,440 (Rs. 20,179).

Raisings of limestone rose from 804,487 tons to 819,208 tons. Sales fell from 784,662 tons to 780,026 tons. Dolomite output increased from 36,950 tons to 49,795 tons. Lime production improved to 1,273,549 mds. and sales were 120,465 mds. higher at 1,265,697 mds.

* * * *

The profit of Martin Burn Ltd., for the year ended last September, has declined by Rs. 6.49 lakhs to Rs. 89,94,087. An ordinary dividend of Rs. 2.12 a share has been declared, including a cash bonus of 62nP a share, against Rs. 2.2 a share. The taxation provision is Rs. 1 lakh lower at Rs. 50½ lakhs. An amount of Rs. 1 lakh has been transferred to provision for contingencies, against Rs 3 lakhs. General reserve allocation has been reduced by Rs. 4½ lakhs to Rs. 3 lakhs. Capital redemption reserve fund is allocated the same amount of Rs. 2 lakhs. The carry-forward is Rs. 2,35,312, against Rs. 2,70,207 brought in.

Bombay Market

MARKET TURNS BEARISH AFTER PRIME MINISTER'S SPEECH

INDIAN IRON BONUS RUMOUR DISCOUNTED

Wednesday Evening.

THE Bombay stock market closed on a quiet tone last week after remaining steady during the early part of the period under review. Sentiment deteriorated and there was nervous liquidation because of the observation made by Mr Nehru at the Indian Merchants Chamber meeting. His interpretation of the existing taxation structure was construed bearishly. Selling pressure from Calcutta interests, following the report of default by a prominent operator in the Calcutta gunny market, demoralised holders.

Tata Steel sank to Rs. 169.50 and Indian Iron slumped to Rs. 19.50. The rumour of a bonus issue by the Indian Iron and Steel Company by capitalising the share premium reserve appears to have been discounted. Tata Locomotive were shaded at Rs. 139.50 and Alcock Ashdown were freely offered at Rs. 212.50. Automobile shares lost fractionally in sympathy. Premier Automobile were taken at Rs. 86 and Hindustan Motors were quoted at Rs 6.12.

Cotton shares were quietly steady and changes were minor. Bombay Dyeing came to hand at Rs. 50.80 and Kohinoor were bought at Rs. 266. Swadeshi changed hands at Rs. 168 and Century realised Rs. 390.75. Central received support at Rs. 83 from influential quarters on suggestions of a bonus issue. Apollo were sold at Rs 2 and India United Ordinary were taken at Rs. 9.44.

In the miscellaneous group, cement shares were steady on the belief that the Tariff Commission will recommend an increase in the price of the commodity. Associated Cement were done at Rs. 153 and Digvijay Cement were transacted at Rs. 135. Among sugar shares, Phalton improved to Rs. 140.50 on paying a higher distribution of Rs. 12

a share, including a bouns of Rs. 3 a share. Belapur were taken at Rs. 236.50. Mining shares were subdued, but Shivrajpur Syndicate were supported at Rs. 92.20 on rumours of a bonus issue. Steamship company shares were steady on reports of increased freight along the coast. Scindia Steam were transacted at Rs. 17.20 and Great Eastern Shipping changed hands at Rs. 19.80. Bombay-Burmah were steady at Rs. 539 on a satisfactory report, combined with the suggestion that the company might go in for a scrip issue. Tata Chemical were quiet at Rs. 12.72, while National Rayon declined to Rs. 215.50 on fears of a further increase in capital.

Banking shares met with scattered interest, and Punjab National were transacted at Rs. 52 on paying a higher dividend. Bank of Baroda were taken at Rs. 105.50. Little interest was shown in insurance shares, and Oriental were bought at Rs. 3,980.

Electricity supply company shares were steady and fluctuations were narrow. Tata Hydro were done at Rs. 113.25 and Ahmedabad Electric were taken at Rs. 94.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations. Quotations for the Corresponding Closing Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. CALCUTTA PORT HANDLES INCREASED TRADE

The total tonnage handled by Calcutta port during 1956-57 was 8,869,210 against 8,030,735 in the previous year. There was thus an increase of 838,475 tons or about 10.44 percent in the total trade passing through the port compared with 1955-56. The revenue receipts of the Port Commissioners for the year were Rs. 10,86,61,288 against Rs. 9,96,93,011 in the previous year. The expenditure for the year amounted to Rs. 9,59,88,125 compared with Rs. 9,34,41,109 in the previous year. The year ended with a surplus of Rs. 1,26,73,163. The number of vessels which entered the port during the year was 1,383 against 1,285 in the previous year and the total gross tonnage increased from 8,092,143 to 8,562,955. The Government of India has viewed with appreciation the achievement of Calcutta Port Commissioners during the year.

"CAPITAL" STOCKS AND SHARES INDEX*

The *Capital* Stocks and Shares Index (base : 1939) has now been brought up to November 1957. Compared with October, the November indices for Government securities and preference shares show declines of 0.5 points and 0.8 points, respectively.

There were decreases in cottons 2.5 points, coals 1.0 point, jutes 3.5 points, minings and oils 4.9 points, cements 3.2 points, engineerings 4.7 points and miscellaneous 6.7 points, while increases occurred in banks 3.1 points, teas 7.6 points, papers 17.9 points and sugars 0.4 points.

Correlating all the factors, the *Capital* variable yield securities index declined by 2.0 points during November 1957.

DEVELOPMENTS IN THE KORBA COALFIELD

INDIA'S MAIN SOURCE OF ADDITIONAL COAL PRODUCTION

FROM the statement made by the Minister for Steel, Mines and Fuel in the Lok Sabha on 12th December, 1957, it is now clear that the Korba coalfield is to be the main source of additional coal production, to be achieved from newly-opened fields in the public sector during the second five year plan. That fact, naturally, makes this field of considerable interest and importance today. It is, in one way, an unusual coalfield although without doubt, of great potential value. A memorandum, written in September 1955 by one closely associated with the early history of the field, remains one of the clearest descriptions of its special problems, even in the light of later knowledge. Its title is: *The Korba Coalfield and Indian Industrial Development.* Speaking of the field as a whole, it likens the shape to that of a glove—a right handed glove, of gauntlet—lying palm uppermost on the map, the fingers to the west, the cuff to the east with the river Hasdeo flowing from north to south across the wrist and cutting the field in two. From the tip of the fingers to the hem of the cuff is 34 miles. Across the wrist, at the narrowest part, just west of the Hasdeo, is a distance of six miles. It is, therefore, a large field, but it has limitations. The memorandum quoted says: "Technically the field has special interest by reason of two of its seams, very different though they be in character. The Ghordewa seam, about six feet thick, provides coal of selected grade, a quality much better than is usually found in Madhya Pradesh.....the thick seam, drilled at one place to a thickness of 156 feet and at another place to 118 feet, provides a mass of low-grade fuel which, properly handled, can provide economical power for many years".

This same memorandum pointed out the main characteristics of the field as they then appeared: that the dip seemed to be consistently to the south; that the good coal of the Ghordewa seam lay about 490 feet above the grey-green Talchir shales; that above the Ghordewa seam lay some seams of second-class coal; and then, about 2,000 feet above the Ghordewa, geologically reckoned, that "mass of low-grade and shaley coal which we call the thick seam". Above the thick seam lay other seams of poor quality coal.

New Knowledge

That, as a matter of history, was written one month before the commencement of the large-scale drilling operations by the Bureau of Mines. Since then a great deal of detailed knowledge has been gained, but the broad outline of the picture has not changed. The writer of the 1955 memorandum himself posed the question whether there might not be, in the field, one more seam of the good quality of the Ghordewa seam. He answered the question by saying that while it was possible, it seemed unlikely. Enough drilling had already been carried out across the narrow wrist of the field to make it likely that such a seam, if it existed, would already have been found. That is pretty much the case today. The possibility of another "Ghordewa seam" somewhere in the large field cannot be excluded, but it has still to be found.

Indeed it is fair comment that, after a long, thorough, and, of necessity, costly, programme of intensive drilling the main characteristics of the field are basically as they were set out in the memorandum. Along the top of the field—along the outer edge of the thumb as it were—there stretches the outcrop strike of the good, but thin, Ghordewa seam. From the village of Ghordewa, on the banks of the little river Aharan, in the land west of the river Hasdeo, whence the seam takes its name, it has been traced in a sweeping crescent, through Dangania, across the Hasdeo to Korba where the Ramsagar incline is being sunk, and on eastwards to Rajgambar and further north-east. It may well be found still further west than Ghordewa. To win this good coal of the Ghordewa seam is a normal problem of mining technique.

Technical Problems

It is around the programme for the mining of the Jatraj thick seam that a good deal of the technical discussion has taken place. There is no shortage of the raw material. Quarry sites exist both east and west of the Hasdeo. Today a large quarry has been opened by the N.C.D.C. just by Korba station where the coal is being dug out by mechanical means. Here the seam is about 80 feet thick. Further to the west, across the Hasdeo, it is ever thicker. But the characteristics are the same. It is a huge bed of fuel varying from almost pure shale, through shaley coal, to poor quality coal, in successive mixed bands of varying thickness. From top to bottom the average ash content of the whole is about 40 percent. There are one or two thin bands of coal in the whole mass which have an ash content of just under 20 percent, but they are not worth working separately. The plan for dealing with this Jatraj seam, as explained recently by the Fuel Research Institute, is to mine the seam as a whole by modern mechanical means. Thirty percent, being practically shale, will have to be rejected. The remaining 70 percent will be put through a coal washing plant, which is to be erected at Korba. From this plant will come three grades. First, there will be coal with an ash content of 20 percent, to be used in hand-fired boilers. Then there will be a small coal, of 22 percent ash, for shipment away to electric power stations. And finally a residue, with about 37 percent ash, which will be burnt in the special grates of the Korba thermal power plant. It will be realised that this is a complicated programme, and is somewhat of an innovation in India. Its success depends on many things turning out right. Above all, its operation must await the arrival of the coal washing plant. That seems likely to be a year or two away, for the agreement whereby the Soviet Union would provide this machinery on long-term credit was only signed on 14th December last.

Already the target figure for the output from the Korba field for the end of the second five year plan, has been lowered from 4 million to 2.6 million tons a year. As will be realised, there is not a great deal of time left even for the achievement of this reduced figure. It is also permissible to wonder whether this 2.5 million tons includes shale and ash, or is in terms of output from the washery and the Ghordewa seam. Clearly, a considerable amount of public money is being spent on Korba and heavy commitments are being shouldered in the form of repayments due to the Soviet Union. The planners of the programme seem to be confident that economical working will pay for this large capital expenditure.

ECONOMIC THOUGHT OF JAMES STEUART

The Economics of Sir James Steuart. By S. R. Sen (Published by the London School of Economics; received from Orient Longmans, Calcutta. Price 25s, pages 207).

Sir James Steuart was a contemporary of Adam Smith. He acted as adviser to the East India Company and wrote for it a report on "The principles of money applied to the present state of the coin of Bengal". That was, in fact, one of the earliest authoritative studies of Indian economic problems. A book of his was also the first in the English language to bear the title, *Principles of Political Economy.* This work was published in 1767, nine years before Adam Smith's *Wealth of Nations,* and it influenced Continental, particularly German, economic thought.

Dr. Sen's work describes, at greater length than has hitherto been attempted, the life and work of Sir James Steuart. In doing so, it sheds useful light on the history of economic doctrines in the eighteenth century. It begins with a biographical sketch of Steuart, describes his philosophical background and gives a critical account of his economic analyses. It then proceeds to analyse his theory of economic policy, which in some ways resembles contemporary theories of economic control. "Steuart's prescription of deficit financing and granaries as buffer stock is certainly interesting in view of modern discussions" (Page 154). His ideas on external debt, public expenditure, money and banking are also advanced and one is inclined to agree with Dr. Sen when he says: "Keynes's ideas on economic policy, especially on the rôle of taxation, public debt, public works and money as instruments for correcting economic maladjustments have a family resemblance to those of Steuart." The chapter on "Steuart and India" is very readable and deals with his proposals for Indian coinage reform. Dr. Sen is lucid in his exposition, and earnest in his plea that Steuart be given his proper place in the history of economic thought.

LABOUR RELATIONS

Trade Union Movement in India. By A. S. Mathur and J. S. Mathur. Published by Chaitanya Publishing House, Allahabad. Price Rs. 8, pages 303).

The authors appear to have taken great pains to collect information, but they do not appear to have digested it properly. They have made a number of observations with which many will not agree. On page 269, it is stated that "the British Government's policy of hostility to mass movements is changed"—an assertion which is questionable. The present Government's views about law and order do not strike some as being very different from those of the former British *régime.* Another surprising observation appears on page 242: "The objective that the Congress has kept before itself is a socialistic pattern of society. In view of this, it is dubious to condemn Congress-sponsored labour organisations as reformists." The authors mean that the Congress is for "fundamental changes in the existing social and economic order." While much gloss has been put on the Avadi phrase about a "socialistic pattern", it is doubtful whether the Congress is for "fundamental changes". The authors occasionally appear to contradict themselves, to the bewilderment of the reader. On page 178, they remark: "Usually there is no political programme and political activities are not undertaken directly." But in the very next paragraph they remark that "union activities are overshadowed by political considerations." The book ends with a strange call: "There should be no rest till the objective is attained. The struggle must go on, for the battle of freedom is never done and the field never quiet." One fails to understand their concept of freedom in industrial relations. As the authors are not politicians but college professors, one would expect sobriety and clarity in their observations.

New Delhi

DECISION ON RESIGNATION OF FINANCE MINISTER AWAITS ENQUIRY FINDINGS

MR. NEHRU MAY PRESENT BUDGET

(FROM OUR NEW DELHI CORRESPONDENT)

IT is learned from reliable sources here that the Finance Minister, Mr. T. T. Krishnamachari, has asked the Prime Minister to relieve him of his post. It was reported from authentic quarters during the Congress Session in Gauhati, a week before the Chagla Commission began its hearing, that the Finance Minister had made this request to Mr. Nehru, on purely Constitutional grounds. Since then the trend of the Chagla Enquiry has assumed such a character that Mr. T. T. Krishnamachari appears to have felt it necessary to persist in his demand that his resignation be accepted. The Prime Minister, however, has not yet complied. The Chagla Commission's report is expected here by 10th February when Parliament opens for the Budget session. It will be discussed first by the Congress Party and later in Parliament. While if would be presumptuous to forecast the Commission's findings, it is presumed here that Mr. T. T. Krishnamachari's resignation might be accepted on either of two grounds. These are: if there is any reflection on his conduct and integrity, or if his officers are blamed for the transactions. In the latter case, it will be a question for the Prime Minister's judgement whether or not such a drastic step is called for.

In case the Finance Minister's resignation does become effective during this month, it is expected that the Prime Minister will present the annual Budget to Parliament on 28th February.

Raw Film Project

The raw film project was not included in the second five year plan. The Planning Commission, however, has now agreed to consider it, provided it involves no extra foreign exchange outlay, or if satisfactory credit arrangements can be made with foreign suppliers of plant. The project report for the raw film industry was prepared by the East German Government, which has offered to finance the whole scheme on a deferred payment basis. Kodaikanal in Madras State has been given the first preference as the site for the project, which, it is estimated, will cost Rs. 8 crores.

U.K. Investment in India

The credit squeeze in the U.K. is having its repercussions on British investments in India. The proposed British collaboration with Associated Cement Companies for the manufacture of cement machinery is likely to be put off, it is learned.

Foreign Credits and Repayments

For financing the pharmaceutical projects, no formal request for financial assistance has yet been made to Russia, enquiries show. Moreover, the schemes are outside the second five year plan. There is, however, the possibility of India sounding Russia for technical and financial assistance later. The more important question is that of repayment. The liabilities in 1961 will be not only in terms of credits to be repaid but also in terms of projects to be completed, especially those projects which would be carried forward from the second plan to the third plan period. An appraisement of the 1961 liability in these terms is in progress.

U.K. and W. German Assistance

The Government of India will shortly approach the British Government to send a technical team under the Colombo Plan to this country to prepare detailed reports on the heavy structural and plate and vessel projects. These projects were included in the report of Sir Eric Coates's mission on heavy engineering industries. As for the heavy machine tool project, which had been recommended in the Russian and Coates's Mission's reports, negotiations are in progress with the West German Government for financing it on a credit basis.

U.S. Team Report on Machine Tools

The American report on the machine tool industry has been under scrutiny. Some important considerations are involved in the subject of machine tools. The cost of tools, labour costs and the size of the market are the main ones. As labour costs rise, machine tools replace the former. The problem for consideration, therefore, is what should be the balance between men and machines. The automobile industry in the U.S.A. provides an example. Demand for motor-cars in the U.S.A. is so large that a manufacturer can afford to spend big sums on machine tools to produce a model and consign them to the lumber room the following year. The size of the market justifies that. But conditions are different in Europe, where due to a comparatively limited market, manufacturers cannot afford to change motor-car models every year. In other words, they have to use the same machine tools for a longer period than in the United States.

Relieving Congestion in Ports

The report of the British team which came to India under the Colombo Plan to suggest measures for relieving congestion in Indian ports is now available. The chairman of the team, Mr. P. Eric Millbourne, in an introductory note to the report, says: "It seems to me that the complete answer to the port congestion problem cannot be found in remedial measures capable of immediate application. The problem, and its possible solution, falls into three parts; the first may bring quick results but only to a marginal extent; the second, needing immediate attention, will take somewhat longer to bring results but should go some way towards extensive and permanent improvements; the third is a matter for the longer term. The problem which should be tackled immediately is the handling of special cargoes—foodgrains and mineral ores. Dealing with this will make a substantial contribution towards improvement in all the ports and may well free the country from a position where freights are already high because of the poor reputation of the ports, and where there is a recurrent danger of increased liner freight charges.

Major Cause

"One of the major causes of congestion is that large quantities of bulk grain are being discharged at ports which have neither the machinery to handle them nor proper storage in which to place them. The consequence is that the ships are taking almost as many days to discharge as they should take hours. Further, the lack of proper storage facilities adds to the problem of efficient and economical distribution. A similar situation exists in the case of the export of mineral ores. Lack of adequate port storage and mechanical loading equipment means that vessels coming to Indian ports to load ore spend time occupying berths urgently required for other purposes almost to the extent that I have stated above in the case of grain ships.

"In my view, plans must be made for the installation of storage silos of not less than 50,000 tons capacity each at the three main importing ports together with pneumatic grain-discharging machinery of approximately 500 tons an hour. It is also essential to organise efficient distribution of the commodity to the consuming areas. In the case of mineral ores, suitable and fully mechanical operating equipment should be installed for their shipment through certain selected ports. Measures to deal more expeditiously and economically with these two commodities will not only lower the present high cost of transporting them; by relieving congestion in the handling of the two major commodities, it will release berths and facilities for other cargoes, and thus will make a very important contribution to clearing congestion in all ports.

"I realise that the introduction of mechanical handling devices on a fairly large scale is likely to cause labour problems, but in my view, these could be overcome by negotiations between employers and workers. There is ample time for conducting such negotiations during the period while the equipment is being obtained. As a matter of practical economics, I should add that the introduction of mechanical devices would pay dividends even if, to begin with, all the original workers were retained on full pay; in the worst case, it should be possible to arrange for reducing the numbers of workers over a period by a process of 'natural wastage'."

Report on Calcutta Port

Two members of the British team deputed to study the problems of port congestion in India—Messrs Francis H. Cave and A. H. Smith in their report on Calcutta port say: "We have visited the port installations and facilities and have examined the working of the port and the use being made of it by both ships and cargo. We have also read the very full report written by Mr. K. Mitter for submission to the World Bank mission and do not propose to criticise it in detail; but from our personal observations we wish to make certain comments connected with the operation of the port. These will first deal with the principal alongside berthing centres and will be followed by observations of more general application.

"1. *Calcutta Jetties:* The jetties are old and to a great extent out of date, but much useful work is done at them. They are unsuitable for the general use of mechanical appliances on the piled fronts which extend to about 80 feet from the coping. We feel that we should draw attention to the serious subsidence which is occurring in this area and are glad to be informed that steps are being taken to remedy this. In addition, the decking is in bad condition and requires considerable maintenance and renewal. There is a great demand for open storage space, particularly for heavy lifts on the land behind the piled jetties. We think that four mobile cranes (two of two tons' and two of six tons' capacity) would be of great assistance, and we would also recommend the provision of two shunting tractors which would increase the flexibility of positioning railway wagons and free locomotives for trip working. The Mullick Ghat heavy lift yard is quite inadequate to serve this area, especially in view of the chronic shortage of suitable railway stock of which mention will be made later in this report.

"2. *Kidderpore Docks:* The dock walls in No 1 dock are in bad condition as a result of which there are serious limitations of weight on the quay margins. We understand that the rehabilitation of these walls is envisaged, but work has not yet been commenced as it will be necessary to put berths out of commission, one at a time, while the work is being done. In spite of the difficulty which this will cause we feel that the rehabilitation is urgently needed and should be undertaken as soon as possible. There is a general shortage of auxiliary mechanical aids in this system and we suggest that the following should be obtained: (a) six six-ton extended jib mobile cranes, (b) four ten-ton mobile cranes, (c) six shunting tractors for positioning railway wagons (including two for coal berths).

"3. *King George's Dock and Garden Reach Jetties:* We comment at a later stage on the new shed at present under construction. We are of the opinion that six ten-ton mobile cranes are required to deal with the heavy-lift cargoes at this dock.

"4. *Tea Warehouses:* We recommend the provision of four shunting tractors at these warehouses.

"5. *Port Railway System:* The lay-out of the marshalling yard and the connections with the main lines are unsatisfactory, especially in relation to the short shunting neck which has a length sufficient for only 24 wagons. This results in slow and wasteful operations. We recommend that the proposed new marshalling yard be put in hand as soon as possible. We draw attention to the undue proportion of locomotives which are out of commission for repairs and servicing. Out of a total of 72 locomotives belonging to the Port Commissioners, we were informed that only 38 were operational.

General Observations

"1. *Limitation of Draft of Vessels:* We are informed that on 197 days in 1956, the ruling draft for ships of 12 knots or over was less than 26 feet. We do not propose to examine this highly complicated problem in detail, but feel it necessary to express the view that such a limitation tends to cause bunching of vessels with consequent congestion in the port. It is quite out of line with the requirements of a great port serving so vast a hinterland and we are glad to hear that investigations are proceeding for building deep water facilities lower down the river. In our opinion a modern port should be capable of dealing with ships drawing up to 35 feet.

"2. *Movement of Ships:* The movement of ships in the port is hampered by the shortage of assistant harbour masters. We are informed that the Port Commissioners have at the present time 12 vacancies for these officers. It is of urgent importance that these vacancies should be filled as quickly as possible in order to avoid delays to vessels.

"3. *Movement of Cargo:* The volume of general cargo imported and exported through the port amounted in 1956-57 to:

Imports	...	3,192,516 tons
Exports	...	1,636,896 tons
Total	...	4,829,412 tons

"Special facilities are provided for the import of oil and the export of coal and ores which are not included in the above figures. In our opinion, this tonnage should be well within the capacity of the port with the essential proviso that the goods are kept moving freely. It must never be forgotten that a port is by its very nature a transit area and any serious impediment to the transit of goods will inevitably cause congestion. We feel that the failure to carry out this elementary principle has been the primary cause of past congestion and, in spite of the admirable efforts which have been made in the past few months, congestion will recur unless further steps are taken to ensure a free and continuous movement of cargo. The principal difficulties which are being experienced seem to us to be the following: (a) the shortage of suitable railway wagons, (b) the lack of adequate facilities for dealing with road traffic, (c) delays in Customs formalities, (d) the absence of a sense of urgency on the part of importers or their agents, and (e) the lack of mechanical aids. Each of these factors will be dealt with separately in subsequent sections.

Shortage of Railway Wagons

"In conversation with very senior railway officers we have been assured that the supply of special-type wagons to the port is adequate, although it is admitted that when an exceptional volume of heavy-lift imports is received there may be a temporary shortage. It is also claimed that the present supply shows a considerable percentage increase over 1956. We are not really concerned with the relationship between the supply in 1957 and 1956, but the Port Commissioners' officers have given us figures as to the present requirements and the daily supply which seem to show that the position is extremely unsatisfactory; and from our own observation it is quite clear that both currently and for some time past, the railways serving the port have been unable to provide the necessary number and types of wagons required for the prompt forwarding of import cargo, especially the heavy-lift traffic for the present five year plan projects and for the removal of railway material imports which we refer to later. There is a general shortage of open wagons but the most serious delays arise from a complete inability to supply more than a small proportion of the daily requirements of the following types: B.F.R., B.F.U., K.F., and K.U.

"The cumulative effect of this shortage was to cause serious congestion at the import berths. A most creditable drive has recently been made for the removal of heavy-lift cargo to special yards away from the berths, but unless the cargo in these yards can be cleared at a rate commensurate

with current imports it is inevitable that the previous congestion will recur.

Most Important Single Factor

"This problem seems to us to be by far the most important single factor in keeping the port free from congestion and consequent delays to ships. It is made still more intractable by the landing of very large quantities of railway material on to the quays from which it is ultimately moved by special types of wagons, which are in such short supply, to railway yards on the opposite bank of the river which possess or can improvise the necessary equipment for taking delivery direct from lighters. We have actually seen heavy railway material which had been discharged by the importing ship into lighters being discharged in turn from the lighters at the Commissioners' docks for ultimate removal by rail to the railway yards across the river. Some of the railway material lying on the quay has been there for well over a month awaiting suitable types of wagons. There can be no justification for such wasteful and nonsensical procedure. We recommend that whenever it is physically possible, railway material should be discharged overside into lighters for direct removal to the railways' riverside depôts.

"We also feel that improvement could be obtained if there were better liaison between the railways and the Port Commissioners. The present arrangement is that a senior railway officer attends a monthly port meeting. We suggest that senior railway operating and stores officers attend the weekly meetings of the Port Working Committee and that one officer of district rank should attend the daily berthing meetings and should, if possible, have a seat in the Port Commissioners' office. The prompt clearance of cargo through the port is of such vital importance that we recommend that priority be given to the port's requirements of special types of wagons until the supply has caught up with the general demand.

Facilities for Road Wagons

"We are informed that approximately 33 percent of general import cargo and 20 percent of general export cargo are moved to and from the port by road. Broadly speaking, the facilities for loading and unloading road vehicles at the transit sheds are very poor. The only places at which road vehicles can approach the quay floor of the transit sheds at many of the more modern berths is on the quayside, which may interfere with ships' working, or at either end of the 400 feet sheds where there is room for a total of four vehicles. This is quite inadequate and we refer later to the continuance of this lay-out at new berths which are at present being built. Road traffic has been increasing in volume over the past years and, unless India follows an entirely different pattern from other countries, it will increase to a much greater extent in years to come. Every opportunity should, therefore, be taken to improve the facilities for this traffic.

"It is extremely difficult without very heavy expense to make alterations to the existing sheds which were designed primarily to deal with railway traffic. We suggest however that the railway lines at the back of the sheds should be filled so as to allow road vehicles to back up to the shed platform and that the island platforms serving the upper floors should be removed to allow easy access. Consideration might also be given to providing a roadway inside the wider sheds throughout their length, but we recognise that this proposal presents special difficulties due to the difference in level between the shed floors and the exterior of the sheds.

Customs Formalities

"We received many complaints as to delays caused by Customs formalities. We realise the need for care by the Customs in ensuring that their important requirements are properly protected, but we think that the methods by which they carry out their work should so far as possible be directed to helping the rapid movement of cargo through the port. This is a matter which could perhaps be examined by the Customs Reorganisation Committee.

No Sense of Urgency

"Many items of import cargo remain on the quays through failure on the part of importers to take prompt and decisive steps to clear them. The reasons for this may be manifold, namely, waiting for finance or favourable market conditions; delays in dealing with their Customs entries; late arrival of documents; lack of knowledge of the proper procedure; general dilatoriness; and several others. None of these reasons is the responsibility of the Port Commissioners and we suggest: (a) that a proper rent or demurrage should always be charged by the Commissioners for the occupation of its property. At the present time such rents are automatically reduced in certain cases and we think that this practice should be terminated unless the Commissioners are themselves directly at fault. In parenthesis, we would add that failure by the railways to supply wagons *is no fault of the Commissioners*; (b) that a penal rate or rent or demurrage should be charged on all goods which are still on the quays a week after landing and that the standard of penal rent should be raised after each three-day period so that it will become a financial necessity for the owner to remove them. In our experience, unpleasant though such a procedure may be, it is the only way of ensuring that certain cargo owners take the necessary urgent steps to remove their goods from the transit area. (c) In the event of cargo still remaining in the transit area, the Commissioners should have power to sell the goods by auction at the expiration of one month after landing.

Lack of Mechanical Aids

"We have suggested earlier in this report the provision of a number of special appliances for the various berths and docks. We would also suggest that three Scammell 'horses' and 12 trailers should be provided for general use. We are not at this stage making any recommendations about the general mechanisation of cargo handling which is a matter which we shall discuss in our final report.

Mechanical Maintenance

"We have already mentioned the undue proportion of locomotives which are out of commission and we have formed the opinion that mechanical maintenance in general is sadly in arrears. It must always be remembered that any delays in maintenance are cumulative and the position may quickly get out of hand. There is only one workshop for mechanical and electrical work and we suggest that consideration should be given to setting up three distinct shops for marine, shore and electrical work, respectively. At present we think there is a tendency to hold up work in progress if new work, especially marine, comes to hand.
